phoric, described, 244 ; splpharic, described 244 ; 244 ; phos
phoric, described, 244 ; splphuric, described, 244 ; properties of Aconitum chinense, 182
Aerides Brookei, 518
Æschynanthus, its cultivation, 537, 849; grandiflorus, 54, 598 Eschynanthus, its cultivation, 537, 849; grandifio
maculatus, 344 ; ramosissimus, at Rollisson's, 119 Agapanthus umbellatus, hardy, 309
Agave americana, adv., 497; soil for, 688
Agricultural works for emigrants, 688
Agriculture, applications of science to, 831 ; connexion between science and practice, 814; in Asia Minor, 264 ; its progress in India, 598
ir, delmed, 100 ; furnishes plants with carbon, 23
Ale, spoiled, a manure, 417
Algæ. to dry, 569
Alkalies, the perfect development of a plant dependent on, 119 Allcard, Mr., his garden noticed, 119,599
Allnut, Mr., his garden noticed, 400
Aloe, a new hybrid, 183; the American at Abergele, 107
Alopecurus nigricans, its value, 311
Aloysia citriodora, its treatment, 799
Alstrcemeria acntifolia, hardy, $105 ;$ Neillii, 413 ; raised from seed, 151, 353 ; to grow, 121 ; soil for, 689
Alumine, described, 340
Alum, its use in bread, 486
Amaranthus, Chinese, 183
maryllis, adv., Lockhart, 657. Belladonna, its cultivation, 201 ;
formosissima, its treatment, 601 ; formosissima,
flower, 505 its treatment, 601; management of, 620 ; to nower, 505
Amberican plants, ady. 17
Ammocharis, its cultivation, 137
Ammonia, described 292 ; its nature, 212 ; its effects, 488 ; how formed, 196 ; how supplied to plants, 7,119 ; exists in every part nchusa capens
ndromedas casis, at Biel, 23, 309; petiolata, 215
Anemones, adv., Groom, 17; Sclater and Son, 409; Sutton and
Son, 577 ; Carter, 681 . Origin of garden varieties, 265 ; their treatment, 457 , 5
Angrecum bilobum, 503
Animal substances, their
Animal substances, their value fin the soll, 516
house, 134; most showy for autumn-sowing 849; new green-
autumn-blooming, 505 ; Californian sown in antomn, 521,617
Antarctic expedition, news of, 215, 551
Anthylis erinacea, hardy, 309
Antivermis mixtare, Whitaker's, its effects, 975
Antrobus, Sir E., his garden noticed, 87
Ants, their destruction, $25,37,329,734$; remored by camphor, 71 preveated from ascending trees, 329
Aotus lanigera, 436
Aphides described, $595,628,684,747$; destroyed, 153, 297, 313, 329 , Aphis lanigera, its destructio
ponogeton distachyon, a hardy aquatic, 169,213 ; its cultiva-
tion, 197; curious property in the seeds noticed, 517
Apple, adv;, Burgess, 193; Dillistone, 681 ; Maclean's Favourite,
769 ; good selectionfin, its merits, 672 ; best 12 for suceession,
Forfarshire, 169 ; for the north, 769 ; for North Wales, 53 ; ; on
storing, 717 ; on sweating, 704 ; to gather, 644 ; results of root-
of, 688 graing, 299 ; reason for blooming in autumn, 632 ; drainage
Apple-trees, canker how produced, 297; their treatment, 201,
779 ; treatment oot-proment to remove When old, 601 - in India, 198 ; to train espalier, 797 Apricots, for a seuth wall, 137 ; for the north, 769 ; from Can-
dahar, 767 ; steriles 881 ; reason for fruit dropping; 617 ; caterpillar destroyed, 281 ; reason for fruit dropping, 617; caterAquarium, description of a stove, 36 ; zine as a lining for, 136 Aquilegia glandulosa, its culture, 117
Araceæ, cells of peculiar structure in, 43
Arancaria imbricata, adv,, Youell, 366 ; Rendle, 593 ; Van Geert,
609 ; Skirving, $625:$ at Plymouth, 23 ; flowered, 279 ; har 600 Co9; Skirving, 625 : at Plymouth, 23 ; flowered, 279 ; hardy, 600 Arbutus, its propagation, 705 ; treatment of cuttings, $6 / 2$ Arctostaphyllos nitida, 799
Argyreia cuneata, 23
Armeria fasciculata, 6, 24
Arnott's stoves, 88,89 ; for a greenhouse, 505, 781; when ex-
tinguished, 217 Arrow-root, Indian,
Arsenic, its action on plants, $\$ 18$
Art defned, 413
Asclepias curassavica, an emetic, 649

Ash, kinds to work on the common, 659 ; to renovate an old, 647 , 2. large root of 215 ; with an inscription, 828 ; mowntain, its value, 457
Asia Minor, its vegetation, 263
Asiatic Society, Proceedings reviewed, 23
Asparagus at Abergele, 229 ; its cultivation, 86,649 ; to force, 121 seaweed as a manure for, 137
Asphalte, as a protecting material, 100 ; coverings for frames, A spidiotus, its destruction, 265
Assafoetida at Saharunpur, 217
Asterotrichion sidoides, 71, 118
Aster seed, adv., Appelius and Eichel, 713
Atmosphere, of what composed, 115 ; to obtain a moist, 147, 198 Audibert's Narsery, its destruction, $\delta 6$
Auriculas, adv., Groom, 1,209; Clegg, 465 ; Sliter, 593 ; Lodge, $681 ;$ varieties of, 228 ; soil for, 41 ; cultivation, 396,737 ; properties of, 228
Azaleas, frame, construction of, 350 Ansell. 609. Yonell, 361 Azaleas, adv., Low and Co., 393 ; Ansell, $009 ;$, double red, 247 ; white, 342 ; new varieties, 261 ; treatment of greenhouse, 705
Ayres' Cultivation of Cucumber, edv., 16; reviewed, 248

## B.

Baines's Flora of Yorkshire, reviewed, 56
Balsam seed, adv., Appelius and Eichel, 713 ; soil for, 473
Banbary Nursery, adv., 825
Banyan-tree described, 415
Barchard, Mr., his garden noticed, sot
Barentin's Vegetation in the March of Brandenburg, reviewed, 167 Bark, its average price for 10 years, 19 ; price of oak, 365 ; mono Barley, blue, 4 ; varieties described, 735 ; disease in, 454 Barometz, its derivation, $56 \%$
Barton, Crocuses at, 183

# THE GARDENERS' CHRONICLE. 

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY

No. 1.
fe Gardeneers CHRONICLE The Horticultural part Edited by Professor Lindley Gardening is admitted to be better understood in Great Britain subject prove the patronago fitseceves, and the desire there in in to extend the knowiedge of is various branches. Man tho

 Dane OGARARDENNG OPERATIONS, given in great detail, and
Bo adapted to the varying seasons as to form a constant assist-

 have the improvements in their respective pursuits recorded. GARDENING is in many respects the art of creating an Arti-

PHYSIOLOGICALINQUIRIES, and all those interesting topics which elucidate the harmony of nature, and the dependence of
the various parts of the creation each on the other, will also form Another peculiar feature will be the introduction of information relating to FORESTING, or ABORICULTURE. This is one of the most important subjects to which the attention of the pub-
lic can be directed; for it is often little understood by those who
have occasion to practise it, althongh the amount of property affected by the management of timber stands second only to that of land. The natural laws which govern the production of tim-
ber and regulate its growth, the value of it, the extent to which it is influenced by soil, and consequently to what circumstances cies grown in different places, are all points to which attention
will be given. We shall endeavour to $o$ ollect information upon that very important but much-neglected subject, the diseases of
trees, and the cause of their decay; whether natural or accidentrees, as and the cause of their decay; whether natural or acciden-
to convey the earliest netices of the introduction of ta, as well as to convey the earliest aesces of the beauty or value
new species, which promise ta increase either the bep
of woodland property. When to plant, to prume, and to fell, wilz Be stated weskly in the Cal
Wiserly Garden Opisations.
Although it is not intended to occupy our columns with the Farming, it would beimpossible, even if it were desirable, to exclede the general principles which relate to the cultivation of
plants, whether upon a large or a smallscale. Whatever, thereplants, whecher upon a large or a smallscale. Whatever, there-
fore, may be found important in that respect to the Parmer will be constantly reported. only because everything relating to those rare and beautiful pro-
ductions which are his peculiar care will be constantly treated of in such a manner as to make him thoroughly acquainted with
the merits or demerits of new varieties, and with their best modes the merits or demerits of new varieties, and with theirbest modes
of cultivation, but also because we shall take care that such opinions as may be given are the results of an hovest examination by competent judges unbiassed by personal interest. domestic and political News which is usually found in a weekly paper. We consider it nnnecessary to dwell on this head further
than to say, that we do not intend to range ourselves under the banners of any party; on the contrary, our best endeavours will be to make The Gardeners' Chronicle a full and comprehen-word-leaving the reader to form his own conclusion and opilaws of nature, not of man. The reader will thus be provided, in addition to the peculiar feature of the Journal, with such a variety the aecessity of providing himself with any other Joursal. The proprietors are happy to an nounce that they have already received promises of contributions from great numbers of their
friends and supporters : among whom the following may be more

SATURDAY, JANUARY 2, 1841

THE NEW PERPETUAL ROSE, Amateurs, that he is deputed by Mons. Laffay, of Paris, to sell by Roses, Strong Budded Plants, $\begin{aligned} & \text { livered to Subscribers early in May next, in pots, in a growing } \\ & \text { tate, all of which will bloom freely the following summer and }\end{aligned}$ state, all of which will bloom freely the following summer and
autumn. M. Laffay originated this fine Rose from seed of the autumn. M. Laffay originated this fine Rose from seed of the fertilised with the pollen of some Damask and Hybrid China Roses.
Description - plant vigorous and very hardy, branches of me. dium length, not too luxuriant in growth, but enough so to form
a fine and graceffl tree, either as a Dwarf or Standard. Every branch produces from one to three flowers, rarely more; these, Autumnal Roses, open freely, and are produced abundantly from deep glaucous green, from five to seven lyaflets on eachipetiole. In mild winters the plant is nearly evergreen. Flowers distinguished dry. Colour bright crimson, shaded with maroon purple, in the
way of that well-knewn Rose George the 4th. A figure painted by a celebrated Parisian artist was taken on the 15th of Novemcold and. moisture of autumn give this tint to all crimson Roses. This figure will be exhibited at Mr. Kernan's during the spring. Form of Flowers-cupped, a little inclined to globular, closely
resembling in that respect the Hybrid China Rose Fulgens. When resembling in that respect the Hybrid China Rose Fulgens. When
the flowers are fully expanded, the central stamens are seen. In conclusion. T Rivers begs strongly to recommend this Rose as one of the finest of its class, and better calculated than any other forman Antumnal Rose Avenue.
Plants will be delivered to Subs
Plants will be delivered to Subscribers, carriage free, at Mr.
Kernan's, 4, Great Russell-street, Covent Garden Kernan's, 4, Great Russell-street, Covent Garden, at $21 s$. each,
ready money. As the number is limited, T.R. begs that all who wish for plants will send their names to him for entry in a Sub-
A LBION ROAD NURSERY, STOKE solicit the attention of the Nobllity, Gentry, and Public, to his General Collection of Plants, particularly to those in want of fine specimens for Conservatories, \&c. \&c., including Stove, Greenhouse, Half-hardy, and a Superior Collection of Herbaceous Plants; also Hardy Americans, Evergreens, and
Shrubs, Trained Trees, \&ce., \&c.:--Rhododendron arboreum, and hybridum; Camellias from 1 to 12 feet, Rhodod Celsif, Araucaria excelsa, Correas of sorts, Grevillea robusta, Acacia pubescens. Fine worked Cactuses of sorts:-Bonapartea juncēa, Bourbon Palms, Musa Cavendishii, Strelitzia Regina; Euphorbias of sorts; also some fine Specimens of Orchidaceous plants, Acacias sorts, Tree Pronias, \&c. \&cc. The above are fine specimen plants. J.M. has also a fine collection of the dollowing, viz., Verbenas
of sorts, Calceolarias of sorts, Clematis Sieboldii and azorea grandiffora ; Passifforas of sorts, Kennedeas of sorts, Gly cines of sorts, Lilium lancifolium and longifolium, album, punctatum,
and venustum ; Ericas of sorts, fipe young plants; Epacrises of sorts, Anazallises of sorts, Statices of sorts, Gloxinia rubra, and others; Fuchsia Justicia and Mnjestica; Glycine Backhousiana,
Stephanotus floribuada, Chorozemis of sorts, Mimatases or sorts, 1pomeas of sorts, Mirbelias of sorts, Geraniums of the newest kinds; a fire collection of Auricalas, Pinks, Carnations, and Pico
tees; collections of Standard and Dwarf Roses in great variety Also a large collection of otber plants too numerous to insert in this Advertisement.
$\mathbf{V}^{\text {ESSISS. TYSO mand SoN, walling- }}$ FORD, BERKS, respectfully invite the attention of the his deservedly an UNCULUSES to their extensive collection of 100

neovoester plaice, King's ROAD, CHELSEA, leave to invite the attention of the Nobility, Gentry, and Hort culturists, to inspect their premises, where may be seen a variety of Horticultural Works upon improved principles. A large
stock of Forcing Frames, Glazed Lights, and other Horticultural stock of Forciog Frames, , lazed L .
erections always kept ready made.
Their Hot Water Apparatus, which is kept in action is the most simple and economical construction. References may be had and their works seen at Mrs. Lawrence's, Ealing Park; Messrs. Hendersons, Pine-apple Nursery, Edgeware-road; Mr
Gaines's Nursery, Battersea; Mr. Knight's Nursery, Chelsea Maines's Nursery, Battersea; Mr. Knigh's Nursery, Chelsea Lodge, Windsor; Sir Edmund Antrobus, Cheam; and at thei
Horticultural Manufactory, Gloncester-place, Chelsea, near sloane-square.

THE GREAT CHATSWORTH CON SERVATORY, -One of the most important features in the erection of this magnificent Conservatory, is the entirely new
mode of Glazing adopted there. Its striking novelty and beauty mode of Glazing adopted there, Its striking novelty and beauty most satisfactorily all the various trials to which every alteration riment may be regarded as complete. It has established its great superiority to every other method now in use, both as regard advantages of durability and exemption from those canses breakage dependant upon weather, and being beyond all comparison unrivalled in the qualities necessary for the retention of
heat and the transmission of light, the worl at Chatsworth may be safely pronounced to be an example of the most perfect system JOSEPH DBATE
Edgeware-road, London, to whom the erecution of, and 100 , worth Glazing was intrusted, is honoured by his Grace the Duke of Devonshire's entire approbation of the manner in which it has to signify by a most gratifying testimonial; and in soliciting the ticultural purposes, to the Glass and Mode of Glazing which horbeen so successfully employed at Chatsworth, he has the kind permiation of Mr. Paxton, under whose judicious management ence to him for any information that in sucted, to make may be ree-
ene quired; and J. DRAKE begs respectfully to add, that he shall at all times be happy to furnish Lists of Prices of the Glass, orany other particulars which it may be deemed desirable to obtain,
upon application by letter, addreased to g , Jernyyn-street, St . James's.

## BRITISH SHRET-GLASS for HORTICULTURAL PURPOSEs,

OBLEMEN, GENTLEMEN, and HORTICULTURISTS generally, are respectfully informed cular regarding the above article, which has been adopted so and Crown Glass Warehop, upoa applicationto. St. Junes's, and 100, Edgeware-romad.
Homses हcecurately ent large quantities of Glass for Lights or cated upon the lowest wholesale terms. Wisdow Lead, Solder, Putty, Prepared Cement, and every repuisite for Garden Glazing.
CUTHILL's MELON, \& SNOW's CUCUMproved to be the earliegt and most certain bearer; it has ripened for four years from the Sth to the 10th of May, and obsflavod medals Also Snow's Horticultural prize CUCUMBER , has taken ninmeen seen by hundreds of Gand other places, which must have flavour, a high bloom, length 16 to 23 inches. The seed never sent out before. Packets of the Melon, containing ten seeds; on the Forcing of Melons, will be sent on the receipt of 2 s .6 d . each. Address to J. Cutnitt, Florist and Horticuiturist, Love ral handreds of stroug plants of Lisianthus Russellianus for
sale.-An Apprentice wanted by Febrnary.

FUCHSIA CORYMBIFLORA.
I STANDISH, NURSERYMAN, BAGstioT, begs to recommend the above splendid Plant to
pablic. Strong Plaats at 21 s , each.-See Bofanical Regintwr

## The Gatdeners Chtonicte.

## SATURDAY, JAVUARY 2, 1841.

The general plan upon which the Newspaper now offered to the public will be conducted is so fully explained in our Prospectus, (see the first page) that it is scarcely necessary on the present occasion to do more than advert in the briefest possible manner to the principal subjects which our Journal is intended to embrace.
Gardening in all its numerous branches forms the general subject of elucidation. Market Gardens, Kitchen Gardens, Orchards, Forcing Houses, Shrubberies, Flower Gardens, Conservatories, Lawns, Nurseries, Plantations, Forests, Rural and Garden Architecture, Landscapé Gardening, Walks, Roads, and all the multifarious matters connected with these branches of rural economy, are the points towards which our attention will be more particu-

With regard to what are celled Florists' Flowers, we are prepared to give them all the attention such beautiful productions really deserve; but we shall not allow them to become the subject of wrangling and abuse, as is too often the case, to the destruction of their value in the eyes of the public, and to the disgrace of those who are concerned in such proceedings.
The humblest branch of Gardening is essentially founded upon physiological principles, and the whole art advances in exact proportion to our knowledge of the laws that regulate the general economy of vegetable life. The embellishment of gardens is partly in proportion to the number of new flowers that are introduced from foreign climates; the successful cultivation of these exotics depends upon the skill with which the soil and climate that are natural to them are understood and initated; the imitation of climate depends upon the arts of heating, ventilating, glazing, and other processes of the like nature ; and the latter involve the necessity of some acquaintance with the laws of heat, and of the motion of fluids. Hence it is exident that many more subjects than the mere art of Gardening must find a place in a Newspaper intended either for the general improvement of the profession, or for the information of those who consider Gardening merely as amateurs: and, indeed, it is with reference to the last-mentioned topics that a Weekly Paper is more particularly necessary, for the art of Gardening would soon be deprived of all novelty and interest, if it were not for the daily discoveries of science, and the application of them as they arise to the practice of cultivation. For these reasons Vegetable Physiology, Systematic Botany as far as handsome or useful plants are concerned and Vegetable Chemistry, are more especially matters upon Which information may be constantly expected. Let not our readers, however, fear lest we oppress them with too much learning. We perfectly understand that our general duty is to write for those who have little acquaintance with science, and to instruct the uninformed rather than to gather information for men, of science, who can always collect it for themselves from its original sources.
The actual condition of Gardeners, and the natare of the education they ought to receive in order to fit them for fulfilling the duties of their station, will constantly occupy our attention. We certainly do not think with an ingenious writer on gardening affairs, that "dancing, boxing, and fiddling" are necessary accomplishments, or that it is eren desirable for a Gardener to consume his leisure time in studying Greek, Dutch, and Italian. But, if we have no sympathy with this kind of speculation, we do think that there is room for very great improvement in a Gardener's education, and that such improvement would tend essentially to increase both his personal comfort and his ralue to his employer, and consequently to raise him in the scale of society. With regard to the rights of Gardeners as a peculiar class, it must never be forgotten that their employers have also rights which require to be considered, and we shall not be found disposed to overlook either the one or the other. Our columns will always be open to temperate discussion upon these points, and we shall ourselves take frequent occasion of adverting to them.

The Gardening and Agriculture of the British Colonies will constantly receive our serinus attention. The improvement of their natural resources is becoming every year of more importance to the colonists; and we trust to render them good service by calling their attention either to the best means of cultivating the plants they already possess, or to the sources from which they may
of exciting a spirit of inquiry into these subjents has
already been sensibly felt in British India, and cannot fail to be appreciated by degrees in all our other foreign possessions. We especially invite correspondence upon this very important subject.
An unpleasant but necessary part of our duty is to expose fraud wherever we can ascertain that it is practised. The misrepresentations that exist about inventions of all sorts, new flowers, new fruits, and many other things professing to be new, produce great loss to individuals, disgust them with Gardening, and effect an injury to fair dealers not the less serious because it is indirect. We have for many years had an eye upon such matters, and our rigilance will not relax now that we possess the best
of all means of exercising it usefully. of all means of exercising it usefully.
With respect to Agriculture, it is obvious that so extensive a subject must in itself require all the space which a Weekly Newspaper can afford, if the many details connected with it are allowed to form a prominent object. All that we can pretend to do is, to notice whatever bears upon the principles of caltivation, or general management, and such new varieties of plants as may be found suitable to agricultural purposes.
Our great object, in fine, will be to make our Paper, in the truest sense of the word, the Gabdenere's Friend ; collecting what is useful to him, opposing wrong, defending right, and maintaining by every proper means the legitimate interests of all branches of knowledge connected with the subjects to which our Journal is devoted.
One word, in conclusion, with respect to Political matters. There art no politics in Gardening, and We hold ourselves perfectly independent of all parties. Whenever public measures which we approve of relating to Botanical or Horticultural affairs are proposed, they will have our earnest support; and whenever we think them wrong, we shall oppose them by every meansin our power. At the expiration of every year we shall publish an Inder of the horticultural matter contained in our pages, which will thus become a permanent and accessible record of the progress of Botany and Gardening.

Some very absurd letters have lately appeared in the newspapers concerning a plan said to be entertained by Government for altering a portion of Kensington Gardens. We advert to the subject just now only for the sake of stating, in the first place, that nothing has been finally determined upon by the Commissioners of Woods and Forests; and secondly, that we shall be prepared to defend the plan which has been under consideration, in case it should be eventually adopted, as we hope it will be.

Tere printed regulations of the Horticultural Society for the exhibitions at the garden in the ensuing year have been issued, and contain some rather important alterations. Melon-shaped Cacti and Alstromerias are excluded from competition for special prizes, and will have to be shown as miscellaneous articles. Heaths are to be shown in twenties, not thirties; which will have the effect of making the specimens more select. In Pelargoniums there is a most essential alteration. The number to be shown for the principal prizes is to be six, not twelve, and the size of the pots is limited to twelves. In order, however, to admit large specimens, it is decided that they shall be shown by themselves, in threes, in pots of unlimited size ; the large silver medal being offered for the best exhibition of that kind. A new class of collections of stove and greenhouse plants is opened, by which three separate modes of showing are provided. An exhibitor may show in collections of from fifty to sixty plants, or in collections of from fifteen to twenty plants, or in collections of six. But the gold medal is removed from the last class and assigned to the second. Possessors of small collections will appreciate the value to them of this most important change. Calceolarias are to be shown in sixes, not twelves. Plants not in flower are no longer allowed to form a separate class, but are either excluded or referred to miscellaneous articles. Finally, a gold Banksian and two silver medals are offered as prizesfor the best collection of stove or greenhouse climbers; thus constitating an entirely new and very interesting class of exhibitions. In other respects the regulations appear to be the same, except that no person exbibiting articles for which medals are not specifcally offered will be entitled to passes of admission in the afternoon.

We also understand that it is the intention of the council to discontinue in future years the meetings held in Regentstreet on the third Tuesday in the months of August, September, and October.

THE ARBORETCM.
As the importance of cultivating the hardy trees of other countries for the sake of their timber, or for their classical associations, or because of their beauty as ornamental
objects and the variety they give to the landscape, is at length appreciated by the great landed proprietors of England, we glady avail ourselves of the offer of a friend intimately acquainted with the subject to furnish us occa-
sionally with a series of critical and descriptive articles
concerning trees and shrubs. We shall insert them from
tine to time, as opportunities offer, and as our cortime to time, as opportunities offer, and as our cor-
respondent overcomes what he is pleased to call his "natural laziness.
No. 1.-British Oars.- That there are in this counno two well-defined and perfectly distinct species of oak marks can for an instant doubt. One of them, the Red marks can for an instant doubt. One of them, the Red the other, or White Oak, is the Quscus pellunculata of
those who like Latin better than plain English. Their those who like Latin better than plain English. Their
common names are derived from the prevailing colour of their wood, which, in the first, is ustally of a light brownish red, like that of the Spanish chestnut. for which it has often been mistaken by ignorant persons. and in the other is very pale, with scarcely any reduess in most cases.
Besides the colour, the timber of these species is distinguished by marks of a more precise nature. In the red oak, the silver grain consists of plates which are wide apart and scarcely run into each other except at lons intervals; and for this reasun the cleavage is imperfect, and the timber cannot be readily rent up into the rough boards that are used for paling, and other rustic purposes In the white oak, the silver grain is formed of plates so near the one to the other that there is but little longitidinal fibre to separate them; the clearage is consequently much more perfect, and the timber may be easily rent.
So well-marked are these differences, that a man must have something less than an eje who cannot recognise the two species by their timber alone. They have, however, ex ternal marks by which they are distinguished with equal facility. The red oak has glossy leaves, of a firm texture, with long yellow stalks, and shallow, rather regular indentations; its acorns also sit close upon the branch, or at least have very short stalks. The white oak, on the contrary, has thin dull leaves, with very short green stalks and very irregular rather deep indentations; and its acorms are invariably placed on each side of a long slender stalk Such being their difference, it is not a little strange that any one shonld now contend that they are mere varieties of each other. It was well for Linnzus to entertain that opinion, for he did not know what has just been stated but at the present day all that has been described should be familiar to persons conversant with forest-trees. That mules are to be found between the two is very hikely; and these unnatural productions will he intermediate between either plant; but they do not prove the parents to be the same
If, however, the differences between the wood, the reaves, and the fruit of our two native oaks are thus ma-
nifest, the respectire quality of their timber is by no means so clearly settled. The late Sir James Smith industriously propagated a story of the red oak timber being very in-
ferior to that of the white oak, which has hence been called ferior to that of the white oak, which has hence been called
the true British oak; but this was positively contradicted by the late Mr. Atkinson, who, in the course of his extensive experience an architect, had ample opportunities of ascertaining the fact. This gentleman asserted that although the wood of the red oak may be bent with a less weight than that of the white oak, yet it requires a much purposes, it was highly probable that the old Sovereign of the Seas, a ship which lasted 47 years before she was broken up, was constructed of the red oak. He also believed from the experience he had gained, that red oak is the more durable of the two.
In this respect he is supported by a late writer upon oaks, in the Penny Cyclopredia, who speaky of the timber of the two species thus :- "It (the white oak) has the reputation of being the true British oak, whose timber is alove suited for naval purposes on account of its durability and hardness; but this is a mere fable, the wood of the nest species being as suitable in all respects under equal circumstances. The timber of the oak, like all otber wood, is materially affected by the nature of the soil in which it grows; and this has probably given rise to the often-repeated assertion that Susser oak, which chiefly consists of white oak, is the best kind that can be employed in ship-building."

The timber of this (the red oak) has been supposed, although very erromeously, to be inferior to that of the
white oak. Experiments as to strength and toughness have shorn that there is no material difference between the two in those respects: and the durability of the wood of the red oak is attested by the well-known fact, that the roof of Westminster Hall is constructed in, It has been found to be the timber of some of the most ancient buildings in this country and elsewhere: an innmease beam in an old Shropshire house, now called Stene itouse, was of red oak ; and the oak usually obtained time bugs, where it must have lain for centuries, has often yrured to

## be the same.'

Red oak is now scarce in this country, for which the author just quoted accounts thus :-"It is a much bandand therefore is by far the most adrantageous kind for the planter. Its comparative scarcity at the present day preference as long as any of it remained in the ancient frests, which its inferiority in size to the other species would render probable; and not haring been replaced, it would thus become graduaily exterminated."
So far as my experience goes, it is in accordance with these quotations; and I may add, that among the specimens of heart-of-oak of the best description now collected in the museum of the Surveyor of the Navy, Somerset
Fouse, are undoubted specimens of red ois. The ren
iverage quantity of the timber of these two speciei is
this ; and I therefore trust I shall find ameng your readers, many correspondents who will each contribute what he knows regarding this, the most important question con neeted with British Foresting. (I am glad to see you employ this genuine English term, in preference to so pe dantic and unnecessary a word as Ar-bo-ri-cul-ture.) -Jael.
[We entirely agree with our correspondent as to the very great importance of ascertaining by multiplied eridence what the facts really are regarding the timber of the red and white oak, or the Quercus sessiliffora and pedunculata; and we most particularly invite our cor respondents each to send us what he knows upon the sub ect. Experiments or eridence as to durability unde隹 circumstances, and the comparative value of the mber of each species in the eyes of the timber-merchant will be of great public importance. In order to render the description of our correspondent the more clear, we subjoin a woodicut of the two.]

HOME CORRESPONDENCE
Blue Leschenaultia.-A friend of mine has lately purchased a plant cailed a Blue Leschenaultia, said to be a most beautiful bush, from Swan River. I understand a great price was paid for it, and I hear that the fair pessessor is
louking with anxious eyes for the first bud of her new flower. Do yon know anything about such a plant? or is she doomed to be disappointed in this as she has been in many another purchase, for the sake of a fine-sounding name: - Rufus, Southampton. [There are two or three species of Leschenaultia with blue flowers in the Swan River Colony, and charming shrubs they are: but whether or not the plant alluded to is one of them, we do not know. Some of the nurserymen near London think they have it; but its foliage is so much possible to be certain upon the subject, ontil the flowers appear. We advise no one to buy at present. We have seen Burtonia conjerta, a papilionaceous plant, miscalled the Blue Leschenaultia.]

The Oriental Plane.- I was told by an eminent Prussian botanist lately in this country, that the true Oriental He said tiat of that rare species no individuals occur out of Greece : that it is ton tender to bear the climate of England; and that it is readhly recognised by its leaves being divided almost to the base into narrow segments. He inspecies me that near $W$ isticza is an enormous tree of this during the last war, a rumour spread that the Turks threatened to cut it down, the peasintry flocked in great numbers to its defence. On the sarae autherity I learned, that the $P$ l. orientalis of our plantations is $P$. senenta ; and that the great Plane tree of Bujukderé, the finest in Turkey, ab-
ways referred to $P$. orientalis, is probably $P$. acerifolia, our Spanish Plane. As you inclade arboriculture in the plan of your Chroniclo, perhaps either yourself or some of your readers can tell me what is knowa upon this sub-

Aruieva Trees of the Spanish Chestnut.-Atthough certainly not a native of this country, England produces some exceedingiy remarkable specimens of this valuable tree. In Betchworth Park, near Dorking, there are some age, certainly the largest and oldest in that part of the country. There are about eighty trees, all of large dimen-
sions: the subjoined table exhibits the circumference of some of the largest, taken about three feet from the ground No. 1 . . $1 i \mathrm{fft} .2 \mathrm{in}$. No. 8 . $18 f t .0 \mathrm{in}$. with others, I could not help regretting that so fine a this should be utterly neglected.-H., Bath

FOREIGN CORRESPONDENCE.
Madras, Oct. 20, 1840.-I have this day received you prospectus of the Garden newspaper, which I shall b most happy to support as opportunities occur. D
Wight is now engaged with a very interesting iriquiry Wight is now engaged with a very interesting inquiry on
the extraction of sugar, of very superior quality, from paln juice, or toddy, as it is called. A sample now lying before me is as white as this paper, and in taste not read the be distinguished from the finest cane sugar. The subject of sugar is engaging so much attention among us now that I should not be surprised to find 20,000 tons ex ported from the Madras presidency annually, before the expiration of five years. Cotton. too, is augmentiog immensely in the amount exported. One port rhich when I visited it five years ago, could not give employmen When I visited it five years ago, could not give employmen to a single screw, now employs two coustantly, and two
more are building. All this looks well. -Indigo is also on the rise, and the improvement, within the last fe years, in its quality, is so decided, that Madras manufac turers are in hopes of soon being able to compete with
Bengal. One manufacturer extracts it very largely from the Pala-tree (Wrightia tinctoria), and so excellent appearance, that when brought as a prize article in com petition with genuine indigo, good judges could not, from appearance, distinguish the difference; but it is said not to afford so permanent a dye as the other, and does not realise in the English market more than $4 s$. $6 d$., while the other sells for from $7 s$ s. to $8 s$. 'This, however, promise to prove a valuable addition to our exports, as the tree is abundant, and in the best state during the hottest season, when nearly all other work is at a stand-still. Dr. Wight is now burrying out, with all possible despatch, part firs of his second volume of Icones, and he expects to bave published next week. It contains 100 plates, executed in
a very superior style, at least as compared to most of a very superior style, at least as compared to most of
those that have gone before. He has also got the plates for one-third of his second volume of illustrations ready and these he hopes to publish about the beginning of the year. They might be out mach sooner, but his publisher and printer annually publishes a large almanack, which will keep him back ; but such things cannot well be helpe here. Through the hot season here the heat of the soil is quite intense, and burns everything. This season (in May) I planted nearly half my garden with sweet potatoes Convovilus Batas , a nearly ten months we had scarcely a shower of rain, the grew so luxuriantly, without a drop of water too, that in
few weeks they covered the ground with such a thick carpet of herbag. ceeded, even in wet weather. The thermometer in the soil under these was lower by about 10 degrees than in exposed soil, at four inches under the surface. Farther ex periments are in progress. Availing myself of the hint, ou young orchard is to be planted with them next hot season to keep the soil cool and moist, through the hot weathe hope to be able to raise coffee plantations, hitherto desideratum in Madras.

Munich, Dec. 3, 1840.-You will learn with surprise that M. de Karwinski has returned to Mexico at the ex pense of the Russian government. This is a serious undertaking for a man of sixty, and it is feared we shal scarcely see him again. He has engaged to furnish all sorts of objects of natural history for, I think, a score learned Russian Societies. Another young Bavarian, Dr Roth, son of the President of the Ecclesiastical P'wiestant
College, is eogared as assistant to the Commis,ion which College, is ef British government, is about to survey the eastern provinces of India. He embarked for Bumbay in the month of August, and, we hear, is to be enpluyed in the first instance in examining the new British pussessions on the Burmese frontier. Great things are e:pected of this young man. Professor Zuccarini is diligently occupied in a revision of the Coniferous order, and has ascertained, it is said, among other things, that Don's genus Athrotaxis 3ifferent from Cunninghamio botanic gardener here, has been advanced by the king to the charge of all the royal gardens.
Paris, Dec. 20, 1840.-Very few persons in England have any idea of the vast number of flowers which are daily exposed for sale in the markets of Paris. Almost the whole of the florists in or near the city are engaged in this branch of the trade. The priacipal market is held under a double avenue of trees, on the Quai aus Freurs and here are assembled in the open air, both in summet for their produce at about the average price of eight solus. The extent of this trade may seemı strange to thiose unac customed to the manners of the French. It is the curtum with all classes in this country to make presents to their friends on their birth-day, or the fite of their patron sint, and among other things plants and flowers are alway given; this necessarily causes a large demand; a bom marche "is, however, everything-quality generally gives place to quantity : not that all the plants are of an orru nary description; on the contrary, there are min) 0 of thase usually found in the Loudon markets and may whers o a superior character hot often met with in (cinme zir en glaneixstma, semgifolin, spectubilis, trinervan, formethonda, as well as paradora; and anuong roses, in-ieat, or addition to the old China, Indica minor, olli Protence. and moss, many of the best Bengales, Boubons, proplewiles, ac., Marie Leonidas, Mos Jaune, beau camantes , Gloire des Rosomanes, Mdlip. Deapre: Reime des Isles Bourbon, provins panaché (village maid!, nos pompon, ferruginense, \&ce. meet you at almost every
stand; and as all these propagate very freely by buds, cuttings, and leaves, the others are thrown into the back-
ground. Gloire des Rosomanes, although only semi-double, would no doubt sell well in English markets; it has the good properties of being an early and free bloomer, with a
large flower of a splendid crimson colour, and is, moreover, more easily multiplied than any other variety. Any one Who has seen the collection which Mr. Lane, of Berkhamp-
stead, has forced for the last two or three years for the early exhibitions, will readily believe with what advantages these kinds may be put to market purposes; but the grand resource in France is the perpetuer in
which is cultivated to an almost incredible extent, in waich is half-standards, and standards, and is, without exdwarfs, half-standards, and standards, and is, wor forcing, ception, the most suitable and best yet raised for forcing,
whether as regards habit, colour, or early blooming. There are also several varieties of neriums, lantanas, glycine,
\&c. The tree violet is always in demand, and readily sells at twenty and thirty sous; another favourite is the myrtle, not grown bushy, as in England, but with a round
head upon a stem from eight to ten inches high, after the manner of the orange-tree; mignionette is usually trained in the same way. There are no such forcing establishments in Paris as those of Messrs. Henderson of Pineapple Place, or Mr. the (generally called monster) establishment on the Boulevard du Mont Parnasse, for the express purpose of supplying the better sorts of plants and forced fiowers, stocratic quarter of Paris, together with every requisite to stocratic quarter of Paris, together with every requisite to contemplated to furnish not only Paris, but even London and Brussels, with bouquets of camellias; the speculation, however, turned out a complete failure, and four short
years have seen it change hands three times, with loss to each, from some cause or other. Large nurseries are not flourishing in Paris; the expenses for labour, firing, and land are quite as much, if not more, than in London, while plants do not fetch half the price. The greater part of dens, of about an acre of ground ; upon this are erected one or more span-roofed houses, about ten feet wide, resting down the middle; some few are heated with hot water. down the middle; some few are heated with hot water.
These, together with frames sunk in the earth, are found to answer the purposes of malliplication and forcing. The winter covering is paillassons (straw mats) and leaves; and plants thus excluded from light, air, or fire-heat, are preserved for one or two months in a perfectly healthy
state. Peat is used for almost everything,-roses, castate. Peat is used for almost everything,-roses, ca-
mellias, geraniums, Fuchsias, verbenas, \&c.- and it answers the purpose by insuring a rapid growth and good flowering.
flowering.
The weather has been severe for the last three weeks, as you

dies that corn is heir to, whether from the atracks of parasitica fungi or of insects. For this parpose he selected Pepperbrand or
Bani, Smut, Rust. Mildew, and Ergot, as examples of injury produced by the first class; and the Ear-cockle and itheat-midge
as those of the second class. The nature of all these was illus The Professor first adverted to the opinion that such produc tions as parasitical fungi are spontaneous, or accidental; and he
proceeded to show that they are all too exactly organised to ren proceded show that they are alt too exactly organised to ren
der such a supposition admissible, which, hs he truly stated, in
vin the generally-received theory, that ali living creatures proceed trom similariy organised parents, called into existence by the
will of the Almighty.
The Bunt fongus (Uredo caries), called also Smatballs and Teppeftbrand, was described asa powder oceupying the interior of it to consist of minute balls, $4,000,000$ of which mas bepe included In a grain of wheat ; and each bell is filled with minute seeds o stored up in a single grain. Hence the excessive minuteness o effects which alkaline substances, such as potash. lime, \&c. produce in destroying the smut, when seed-corn is dressed with
those substances, was supposed to be owing to their forming soapy compound with the oil of the fungi. which is then more greasiness makes it adhere.
The Smut, or Dust-bran
In wanting its disgusting odour, and in escaping from the las in wasting ithe infected grain, in the form of a sooty ponder. It
sadely attacks wheat, but is a common enemy of oats and barley. rarely attacks wheat, but is a common enemy of oats and barley
The uspal palliative of this eril is steeping, os in the case o the fast. Mr. Henslow advised, however, that many new
experiments should be tried upon this subject, and he suggested the modes of carrying them into execution. He, in particular, recommended the practice of raising seed-corn apart from the
general crop, as one of the most probable means of securing Rust (Uredu rubi go) was deserib
from the inner chaftion asan orange powder exading and blotches on various parts of corn-plants. In Itself it is
pest of comparatively small importance; but he (Professor Hen slow) has made the very curious discovery that it is the young o
the Mildew, the Puccinia grumsinum of botanists, which is so destructive when it attacks the straw. He stated that these fung
are at first spherical, or nearly so, and then constitute the Uredo, or rust ; but by degiees the spheres lengthen, acquire a
stalk, contract in the middle, and so form the head of the Puccinia. So that two supposed genera of botanists are undoubtedly
the same species, in different states of development Ergot was regarded as a manstrous state of the
inute fungus, which cange, so exceedingly oily theo it horn somethiug like a cockspur. It is of a candle. The action of ergotised corn has been ascertained to be highly deleterious, bnth to man and animals; the latter, in
deed, preferred stavvation to feediog apon it, even when mixed deed, preferred stanvation to feeding apon it, even when mixed
with good flour. A duck, which had been fed with ergot mixed
with fin with fisur, in the proportion (say) of 1 in 17 , died in ten days,
after having had the end of its tongue rotted off, and drops of blackish blod oozing from its nostrils. A pig was poisoned in
like manner in twenty-three days; the ears and the flesh of the like manner in twenty-three day, the ears and the fiesh of the
tail having rotted away, and the legs having mortified. Fortu-
nately we know litte of this pest in England: for it is equally nately we horrible effects upon man, as has been amply prove
fatal in its hori in France. A case, however, was meationed as being recurded
in the parish register of Wattisham, a place in Sufrolls, which occurred in witcheraft, a poor family were lamentably poisoned, their legs and feet rotting off. A girl of sixteen lost both her legs, and desh decayed from the leg bones; a girl of fourteen lost one foot
at the ankle, and the other leg at the knee; a chld of ten years old lost a foot; of two boys. one lost his feet, and the other bis
legs. This dreadful calamity was referred by the Professor, with the Revet-wheat of the neighboorhood of Wattisham, a kiad o grain on which this ill- fated family was fed. Draining was men-
Ear-cockles are produced by an animalcule called the Vibrio Tritici, Which may be compared to the eels in paste on a smain
scale. They form a cotoony mass in the interior of the grain. Which, when the latter is ground, will not pass through the cioth, but remain behind in the bran. Although this creature
is microscopically small when young, it is a giant at its full growth, becoming a quarter of an inch long. Nevertheless, Mr.
Bauer had calculated that 50,000 of the young might be continined in one grain of wheat. Scalding water whe mentioned as the
 was described. This tiny insect, millions of millions of which
infest every wheat- feld, is hardly known by farmers to do them any wrong; and yet, on an a verage, it destroys 1 -20th of a crop, and may possibiv dentroy a grea aneangore. the chaff of the corn. I is, therefore, reasonable to snppose that if all the chaff left by
the thresher up to that season were regularly burnt, the race of Theat-midges might in time be annihlated

Organic Chemistry, and its Application to Agricullure Physiolngy. By Justus Liebig, M.D. Translated by
Lyon Playfair, Ph. D. 8vo. London: Taylor and WalLyon Playfa
TaE evident connexion between the laws of chemistry and vegetable physiology has long since attracted the attention of philosophers, and led them to apply tee the results of these attempts, up the year 18?1, in the Elements of Agricultural Chemistry of Davy, who brought to the investigation the highest chemical attainments of his day, and a general knowledge of the phenomena of growth in plants, as far as they were at that time understood. At a later
period other essays have appeared, having in view the same end, namely, the explanation of certain well. lonown facts by chemical reasoning, and the improvement of agricultural or horticultural practice by the same means. That both these important arts have been benefited by such inauiries cannot be doubted ; but at the same time it must be confessed, that the advantage has been practically so much less than might have been expected, that many excellent farmers and gardeners estinsate hut has certainl not arisen from any want of skill on the part of the chemists whose attention nor from their deficiency in practical knowiedge of gardening and farming, for Davy at least had the advantage of the best opinions that England could afford. It has rather been dependant upon the imperfect condition of the science of Vegetable Physiology itself; for until lately the commonest functions of vegetable
Until Edwards and Colin ascertained the fact, in the year 1838, it was not known that plants have the power of decomposing water; but it was thought that the oxygen evolved by them at certain periods of their growth resulted exclusively from the decomposition of carbonic acid gas.
And the knowledge of nitrogen being a necessary element in vegetable organization, was not discovered much earlier for the experiments of Boussingault, Payen, and Rigg, all of which were announced in 1838 , can hardly be said to have been anticipated by the suspicions or isolated facts of 'Théodore de Saussure and Chevalier. Yet the decomposition of water, and the necessity of nitrogen in enabling plants to perform their functions, are capital facts, affecting the whole foundation of vegetable physiology.

It is not to be wondered at, that, with these important deficiencies in their knowledge of regetable functions, Sir Humphry Dary and his followers should have so often failed to perceive the real nature of the connexion between chemistry and the details of practice. Hence arose their doubts and uncertainty regarding the effect of fallowing burning, \&c. ; their inability to refer the action of soils to any other than mechanical causes or their respective powers of absorbing moisture, and all the looseness.and vagueness of the expression " soluble matter," which Dary assumed to be the nutritious part of manure.
The appearance, then, of a new work on the application f organic chemistry to agriculture, by one of the most learned chemists of the present day, is calculated to excite in no common degree the attention of all persons interested in gardening and farming; for there can be no manner of doubt, that if the practice of the gardener and husbandman is to be rapidly improved, it must be by a correct appreciation of the true principles upon which well-known raluable operations depeod for their success. To employ the words of Professor Liebig

The development of the stem, leaves, blossoms, and fruit of plants is dependent on certain conditions, the nowleage of which enables us to exercise some infuence is the duty of the natural philosopher to discover what is the duty of the natural philosopher to discover what
those conditions are; for the fundamental principles of those conditions are; for the fundamental princi
agriculture must be based on a knoreledge of them.

The methods employed in the cultivation of land are different in every country and in every district; and when we inquire the cause of these differences, we receive the answer, that they depend upon circumstances. (Les circonstances font les assolemens.) No answer could show ignorance more plainly, since no one has ever yet devoted also, when we inain what these circumstances are. Thus are answered by the most intelligent men, that its action is covered by the veil of Isis ; and when we demand farther what this means, we discover merely that the excrements of men and animals are supposed to contain an incoopprehensible something which assists in the nutrition of plants,
and increases their size. This opinion is embraced with and increases their size. This opinion is embraced with-
out even an attempt being made to discover the component parts of manure, or to become aequainted with its nature.

- In addition to the general conditions, such as heat light, moisture, and the component parts of the atmosphere, which are necessary for the growth of all plants, certain substances are found to exercise a peculiar intuence stances either are already contained in the soil, or are supplied to it in the form of the matters known under the general name of manure. But what does the soil contain,
manure? Until these points are satisfactorily determined. a rational system of agriculture cannot exist. The power and knowledge of the phrsiologist, of the agriculturist, and chemist, must be united for the complete solation of these questions ; and in order to attain this end, a commencement must be made

The general object of agriculture is to produce, in the most adsantageous manner, certain qualities, or a maximum size, in certain parts of organs of particular plants.
Now, this object can be attained only by the application of those substances which we know to be indispensable to the development of these parts or organs, or by supplying the conditions necessary to the production of the qualities desired."-p. 138.
The work now under review is partly chemical, partly practical; but the two subjects are necessarily so much the otherp, that the one can har to select those parts mor especially which concern the practical operations of the gardener and farmer ; but in doing so we must necessarily show
them.

In laying before our readers the views of the author we shall not eractly follow the order of matter in his book, for we regard the arrangement of his facts as capable of much improvement. What we propose to do is, firstly, to state his views in the form of general propositions, and
then to illustrate each proposition by such extracts as bear then to illustrate each proposition by such extract
most directly upon it as evidence or illustration.
Professor Liebig divides his subject into two parts; the first of which treats of "the chemical processes in the nutrition of vegetables," and may be regarded as essen fially practical; the second relates to "the chemicai pro less relation to practice. We shall chiefly occupy ournelves with the former
When reduced to their simplest form the views of the author may be reduced to the following eighteen propo-sitions:-

1. The constituent elements of plants ${ }^{-}$are compounds of carbon with oxygen and hydrogen, nitrogen, and organic
cids, generally combined with inorganic bases. p.
acid, derived from the atmosphere-p. 15 -or generated in soil by the decay of vegetable matter.-p. 32 .
2. Under the influence of light and moisture the leares and other green parts of plant
3. Hydrogen is obtained by the decomposition of water, and is assimilated along with carbonic acid, while the oxygen of the water is liberated.-p. 63
4. Nitrogen must be essential to the nutrition of plants, because this element exists in every part of the vegetable structure.-p. 69.
5. Nitrogen can only be obtained by plants in the form of ammonia. The nitrogen of the atmosphere cannot be the source of supply, becsuse it cannot be made to enter into combination with any element except oxvgen, even by the employment of the most powerful chemical means. -p. 70.
6. Ammonia exists in every part of plants, in the roots, in the stem, and in all blossoms and fruits in an unripe condition.-p. 80. It is supplied by rain-water, which carries it down from the air, in which it is suspenced, in consequence of the putrefaction of animal and regetable matters-p. 70. This ammonia affords all wegetables, wio out exception, the nitrogen thich enters into the
7. A certain portion of the ammonia which falls with rain evaporates again with the water ; but another portion is taken $u p$ by the roots of plants, and, entering into new combinations, produces albumen, gluten, and a number of other compounds, containing nitrogen.-p.
8. But it is not so much the quantity of ammonia that important to plants, as the forin in which it is presented to them. When in a volatile state, it is in great measure lost before it can be imbibed. When fixed, in the state of salts, its volatility is overcome, and not the smallest portion of the ammonia is lost to the plants, for it is all dissolsed by water and imbibed by the roots.-p. 86.
9. From the continued assimilation of the elementary constituents of plants, new products result, and serve for the formation of woody fibre, and all solid matters of a simlar composition. The leaves produce sugar, starch, and acids, which were previously formed by roots, when necessary for the development of the stem, buds, leaves, and branches-p. ว0.

During the chemical transformations that result in plants from the separation and recombination of thei elements, two compounds are necessarily formed, one of which remains as a component part, while the other is separated by the roots, in the form of excrementitious matter. No process of nutrition can be conceived to subist without a separation of effete matters.-p. 31.
12. Hence carbonic acid, water, and ammonia, contain elements necessary for the support of vegetables, bnt not the onir elements. Certain inorganic constituents are not the only elements.
13. Phosplate of magnesia in consbination with ammonia is an invariable constituent of the seeds of all kinds of grasses.-p.93. The acids found in the different famiies of plants are of rarious kinds. It cannot be supposed that their presence and peculiarty are the result of acci-dent.-r. 94. If then acids are constantly present and necessary to life, it is equally certain that some alkaine base is also indispeasable, in order to enter into combination with the acids, which are always found in the sta salts, (that is, in combination with alkalies.) -p.
14. If a plant does not produce more of its peculiar
acids than it requires for its own existence, a plant mast
contain an invariable quantity of alkaline bases.-p. 94. For these reasons alkalies must be considered with the strictest attention both by the cultivator and the physio-logist.-p. 94.
15. The proportion of alkaline bases in a plant is indicated by the quantity of ashes they yield. The quantity of ashes obtained from the same quantity of vegetable matter varies constantly in different species. Therefore the proportion of alkaline bases varies in different species and consequently different species demand a different amount of alkaline food in the soil.-p. 104.
16. The perfect development of a plant is therefore dependant on the presence of alkalies or alkaline matter for when these instances are totally wanting, growth will be arrested; and when they are deficient, it must be im peded in proportion.-p. 164
17. But other substances besides alkalies are required to sustain the life of plants.-p. 153. Phosphoric acid has
been found in the ashes of all plants hitherto examined,-P. 154; and common salt, sulphate of potash, nitre, chiloride of potassium, and other matters, may be regar
18. Therefore it is indispensable that every plant should find in the soil it is cultivated in those inorganic constituents which nature has rendered necessary to it, just as
 food the phosphates of lime and magnesia, which harden their bones.
As these propositions include all the most important parts of Professor Liebig's views, so far as practical matters are concerned, and may in fact be considered to constitute the very foundation of vegetable physiology, we hhall proceed, in the first place, to consider each proposition separately, with reference to the evidence by which it is supported, and the explanations it affords of common phenomena, or the rules of cultivation.

A Pocket Botanical Dictionary; comprising the names, history, and culture of all plants known in Britain;
Patton, F.L.S.S. 8vo. Andrews. Tris is a very remarkable book. In the space of 354 mall 8ro pages it comprehends the most counplete catalogue that exists of handsome garden plants; and there fore literally forms a pocket-book for the amateur and gardener. This has been effected by the employment of a very small, but beautifully distinct type, and by the omission of all those names of species which are never seen in ornamental gardens, such as grasses, umbelliferous plants, and the like. The arrangement is alphabetical, in itself no small convenience, for who wants to consult a system when he is hunting for a name, or considering what blanks in his collection he is desirous of filling up? In addition to the common features of a catalogue, we have the colour of the flowers, and the general character of the species, tugether with a short account or habis of each genus, and the origin of its name. Besides all this, each genus and species is marked with the quantity of its syllables, much the best way of teaching unlearned persons how to pronounce them. By this means, accents, which often mislead the gardener, are avoided, and the principles of pronunciation are reduced to the same classical standard as is applied to names when not used for natural history purposes.

The Farmer's Almanac and Calendar, for 1841. By C. W. Johnston and W. Shaw. Ridgway. Tre best of all almanacstents of such books, it conently of the ordinary contents of such books, it contains a fund of useful information relating more particularly to agricultural affairs. An ample calendar of work to be done in each month - lists of fairs. clubs, marketinglables, corn-duties, taxes, agricultural laws, and the rule of societies-together with useful tables for calculating the rate of manuring and planting, and measuring cattle and land, form the prominent features of the work. In ad dition, there is a considerable amount of information relating to the theory of agriculture, concerning which we shall probabl have some observations to offer hereafter The price at which it is sold is so small as to place i The price at whin the reach of every farmer's labourer who can read

Proceedingz of the Horticultural Socioty of London 1840. No. IX.

Anong the many useful acts of the Horticultural Societ we regard the publication of their Proceedings as by no means the least important; for as they are distributed gratuitously to the Fellows, it enables gentlemen to put useful horticultural information into the hands of the meanest of their labourers, without expense. The Part
 between the -1 st January and the 17th March, 1310. It contains some valuable practical papers, from which the following are extracts:

A paper was read from Mr. Robert Errington, upon his method of foroing peaches. On iormer occasions very remarkable specimens of this fruit had been receivel from Mr. Errington, and four meeldals bad been arrarded him for them in four successive years. paper was to whinis the fruit in question bad been prodaced, pand to explain bis method of forcing it. The author atated that the house which covers the tree is metallic, and has an angle of fitty degrees, with an upright front sash three feet from the ground level. It is heated wing leaded, with a hole in the centre for the escape of excarated to the depth of forty-two inches, and the width
foot in depth with old bricks and stones, on which was
laid three inches of lime rubbish, out of which all small particles had been carefully sifted. The latter was cosered with thin turfs of heath soil; and finally, a crevices. The whole was then covered to the depth of twenty-four inches with a compost consisting of good maiden Loam, leaves in a fresh state, horse-dung, sharp sand, andelene-waste. The best tree on the open walls
was selectel in the end of January for placing in the homos, and its roots were cut the jear previous, to check luxuriance. The pruning-knife had been severely applied
to the young wood previons to removal, more especially as regards thinning; but the old wood was not interfered with, as the author has a strong objection to cutting large or old The from peach-trees, unless in cases of strong necessity. root was as carefully trained as the ehoots, care being taken to carry a large portion of the superior roots through the front arches, into the outside border. In the first mixture of sof soap, sulphur, and tobaccu-water, rubbed carefilly into every crexice; and shen perfectly dry, the paint. Forcing begins ing the middle of February, but the heat for the first fortnight does not exceed $50^{\circ}$ by lay and $36^{\circ}$ by night. The house is steamed profusely morning
and night all the season, with the exception of the flowering time, and during the ripening of the fruit. After the blossoms are set the heat is increased slowly, and for siuk generally as low as $38^{\circ} \mathrm{at}$ night. The tree ripened about eight dozen peaches in the same summer in which It was planted, it has produced at least 2.400 large and fing seven tiue Inget pea h ever gathered weighed $12 \frac{1}{2}$ oz.'; hundreds in Ocember, 1839, was 9 to 11 oz. in weight. The tree in December, 1839, was exposed to the weather, and full feet. The author nest proceeded to detail the general manazement of the peach-tree, as practised at Oulton
Park. He regards draining of the greatest importance Park. He regirds draining of the greatest importance,
and alon that the soil should not be too rich. A loam about hulf way between stiff and sandy he finds the best ; and ia his opinion, the less manure the better, providing thes luam be a int is termed 'maiden soil,' from old restland. If any matare be considered necessary, it should be chiefly bunc-manuice. If peach-trees show sigus of tion, the author bas recourse to top-dressing, laying it on heavily in the wincer, ad reriance takes place, he the the points of the roots without hesitation, taking care to reduve then in proportion to the degree of superfluous
lusuriance. Tiis root-cutting system he has pureued for lusuriance. Tiis root-cutting system he has pursued for saren years at least, and finds it everything that can be desiret. In winter pruning he thins his young wood to a great extent. This plan, with a continual thinning and leare of the shouts intended for the next year's crop, readers the luds plump and well-ripened. After the winter pruning, he immediately stops every wound, whether from pruning or from ascident, with a coat of thick white pant; this is repeated on all the larger wounds. with sulphur blended with sawdust, and burnt in shallow pans; and he afterwards dresses the tree two or three times wich soft soap, suiphur, and tobacro-water, brushing it carefuliy into every bud and crevice with a painting.
brash: tinis misuture is not made so strong as recommended by sone gardening authors, as Mr. Errington depends much on the careful brushing and flooding every part of the tree. The author next took occasion to advert to the
injuriots effects in forcing if the gardener preserves high tempertture it $n$ ght; he had had his thermometer as iw is an at night, when the fruit was as large as peas, nevessity in in whaterer; this was orivinally through probably hase kept it to nety to get fruit early, he would that heat; but he is conrinced that it would have been worse for the tree. From the period that the fruit begin to swell off until they commence ripening, the
treas must have most copious syringings and steamings, exceping that in the months of February or March, in cold dull weather, be is a li the more niggardly of
Water, taking care especially that if he syringes in the afternoon, it is done early, so as to have the leaves dry by the evening; for a temperature of $34^{\circ}$ to $40^{\circ}$ by night and z reet teat roulld by no means agree. The of green ty. As fur the red spider first appearance management, sees one. The young wood receives the utmost attention through all the growing period; every robher is stopped with the finger and thumb as soon as it is about four eyes long; every superfioons shoot that is
mot wanted for the next year's bearing is talsen away, and not wanted for the next year's bearing is taken away, and
all the inferior shoots, which are much below the proper strength, are trained with the growing points as nearly parpendicular as possible, in order to decoy the sap into
the.. As soge as the author perceives the least change therivaly in in the fruit, he stops the points of all Hout, we the lown part of the tree, and these he keeps
 anomdance of tip is giver both night and day, and every
leaf itint shites tha frait is entirely removed. He is of oninatim that peackes cannot ripen too slow! ; the slower ther riven, if not absolutely starved, the better. Syringing
4... . . . ! ! t
as soon as the last fruit is gathered the tree is completel bhut up early in the afternoon with a thermometer of $90^{\circ}$ to $95^{\circ}$ of sunheat when it wan be obtained ; and this course is persisted in until the leaves turn colour, when the heat by sunshine is allowed to range even higher still the author has had it as high as $100^{\circ}$ at three to four
o'clock in the afternoon. By these means the wood is most completely ripened, and in pruning cuts more like oak than peach-wood. During all the ripening process the border inside the house is allowed to become very dry; in fact. Water is entirely withheld from the moment the towards ripening. The author concludes by adverting to an opinion which once prevailed very generally, that hights were removed during the rest season; this he finds quite erroneous, for the lights of his peach-tree have never been taken off since it was planted.'

## SUMMARY.

A.s advertisement in the first page of this Journal, and the principal leading article, will together explain the purposes for which it has been established. Our readers may rely with all confidence upon those eads being worked out to the extent of our means.--For some observations upon a supposed plan of altering Kensington Gardens, and for the new regulations of the Exhibitions in the Garden of the Horticultaral Society, we refer to two other articles the latter deserves the especial attention of extibitors. The important subject of British Oak is treated of by a contributor who signs himself "Jael," from whom we shall have many more communications.-Our Madras correspondent mentions some interesting facts relative to that Presidency, especially with regard to a new source from whicls Indigo may be obtained for commercial purposes; and in the Paris letter will be found some useful information concerning the winter flower-market of that capital.- In the Report of the Proceedings of the Swansea Horticultural Society is a statement regarding Cottages, to which we wish to call particular attention.-Among the Reviews is the commencement of a critical examination of Liebig's celebrated book on the application of chemistry to cultivation-a work which, to be of use to gardeners, re quires much simplification and re-arrangement, and concerning which we shall have more to say. There is also an extract from a valuable paper by Mr. Errington upon Peach-forcing, for the original of which we must refer our readers to the Proceedings of the Horticultural Society, in which it is published.-Some interesting facts are mentioned in our Garden Memoranda, particularly with regard to Pontey's Nursery at Plymouth.-The manner in which Mr. Paxton intends to manage the Weekly Calendar will be apparent from the specimen now given.-The Meteorological Notices will also explain the plan on which they are to be drawn up. We give, in the first place, the focts as to the weather just experienced, and, secondly, the facts as to the average weather near London for the last fifteen years in the week about to follow. These will, we believe, be found of more interest and ralue than a dozen pages of prophecies.

## WEEKLY CALENDAR OF OPERATIONS For the ensuing Week.

Mech of the pleasure and nearly all the satisfaction be obtained from a garden, at this season, depends upon a strict attention on the part of the gardener to neatness and cleanliness in every department; and as this, in the majority of cases, requires attention rather than much additional labour, we hope the importance we attach to it may be felt by our readers. The gardener will do well to go round with the determination of finding fault with this is productive of good, and much more satisfactory than if it emanated from his employer. The operations recommended must not be considered as peremptory duties, but probable ones, depending on circumstances and the weather. The young gardener has now much leisure-time; let us and study. and study.
-IITCHEN GARDEN AND ORCHARD.
In-Dour and Forcing Department.
Pinzer.- If the tan beda have become cool great caution must be observed in watering; for very little water in such a case will will produce abotorn heat of $70^{\circ}$ or $80^{\circ}$. Which is the bark bed a temperature to he sept up by frie heat at this season. $60=$ by
fire hear stould be the maximun, uuless it in wanted to furct plants into early frut. When there is no fermentation in the

draw a little earth to those already up; and should serere meal draw a little earth to those already up; and should severe wea-
ther occar, protect bem with fr branches or dry liter.
Oachan - Prepare ground in ouen weather, and plant all
 standard fruit, aiso prume and nall wall-pears, plumes, and cher-
ries; dig between the rows ol raspberres, gioneberries, and currants which have been pruped. Fits trees should have been II.-FLOWER GARDEN AND SHRUBBERY.

Stovgs.-Repot orchidaceons plants as they become dry encugh
or remoral.
Bog-moss (Sphagnum) will be found the begr cor remoral. Bog-moss (Sphagnum) will be found the best ma-
terial to put them in, except the kinds which require Iaising abo Cerial to pot themi in, except the kinds which require raising above
the pots, as stanhopas. for which peat must be used; give air GRENP. Hovsk.-GIve air when postible, and make fires only
in frosty or very wet weather.
 on fine days, but watir sparingly and always in the morning.
Seeds of Baisams, Cucisconibs, and other tender annuals, for
 may be introduced in any convenient stituation.
Out Door Department.
Should the weather prove favourable, all kinds of deciduons
hrubs may be shitted, and pruned, cut deciduls thrubs may be shitted, and pruned; eut deciduous hedges; dig evergreens planted in autumn would receive benfeft by being now nualched.

NURSERY AND FOREST DEPARTMENT.
Nurskry.-Cut the tip-roots of such two-year old seedling
aaks, chentnut-, and beceh, as have been sown in drills, and are intented to remain another year. Filt up vacancies, and dig be tween the rows of plants; gather cones of the Fir tribe, and lay
them in a dry loft untul the season for taling vut the sted arrives;
 Fonkstand Coppice Wood.-Trench and drain ground in-
tended for pianting. Pit thene places where draining is unneces

 ing of deculuast trees tri the firmatuon of coppices may be pro-
ceeded with, if the weather be baveurable ant the ground dry
but in low wet situ . tions it io beter to deter it to

 nut thinming at all. Let tellug be proceeded with if good timber
is cesired instead of bark. ENTOMOLOGICAL NOTICES.
CUnder this heat it is our mitention briefy to describe the prime pal insects injurious to thie gaddener and the farmer at the
time when hey are mot readily destroyed, and to point out the January is generaly so severe that few insects appear abose ground, ether in the larra, or is the perfect state. Notwithstand-
ing this ot is an excellent season for clearing ground infested
 crops, by destro, ing the lower leaves and roots, and is not less hurtiul to young trees and seedlings in nurseries. At this season
of the year it is found in a torpid state under ground geverally at the roots of plants, in the form of a large white fieshy grut, with a brownish head furnished with large jaws, and having six legs
on the three joints next the head. They are now readily destroyed by turning up the earth and exposing them to trost; and
whon thus ex, the crow, and other birds, which eagery search for aud devour
them. Thus, at this seasun of the year, we constantly observe these birds fullowing the track of the plough, not, as is geverally
supposed, for the purpose of destruying seeits in the earth, but in search of these fleshy grubs. The mole also pursues them with great avidity; and even the different species of groundvantage in picking up and destroying these pests at so muph

## Notices to Correspondents.

The number of letters giving us advice upon the subject of this underataking is sog gratat ssto vender aseparate repl| to each imposisibe. We therefere truat that our oorres pondents will consider the present a general answer to
offers of assistance and support. The matual interests support.
The mutual interests of gardeners and their employers, of horticulture, and the collateral branches of knowledge for $m$ the great object of the Gardeners' Chronicle; and advice, correspondence, or assistance in the attainment
of these ends, will be gladly received. We shall be found to treat nothing in a self-seeking, prejudiced, or personal manner; but, on the contrary, we invite fair discussion apon all horticultural questions, provided it is conducted with good feeling and good temper. It is, indeed, as an easy means of rapld correspondence that we hope
to make the (rardeners Chronicle of the greatest value to all who are interested in horticultural and botanical affairs. There are few gardeners, and still fewer amateurs, who do not on occasion require immediate inform ation upon various points of practice. But either from an
unwillingness to inquire, or from not knowing of whom to make the inquiry, they too often fail to obtain the information they are in want of. Let all such persons communicate with us, putting their questions as clearly as they can, and stating on what grounds they ask them. The substance of such questions will be printed in our columns, and
answers will be sure to be returned either by ourselves or by nome of our numeroas friends. And let no one be
alarmed lest his questions should appear trifling, or those
of a person ignorant of that which he ought to know. He is the wisest man who is conscious of his ignorance ; for how little do the wisest really know !-except that they know little. If one man is unacquainted with a fact, however common, it is probable that hundreds of others in the same position as himself are equally in want of similar information. To ask a question, then, is to consult the good of others as well as of one's self. In this part of our correspondence we require no real names to either questions o answers. When, however, a practical man sends a reply

Among the many things for which we are disposed to respass upon the leisure of our practical friends, are th results of their experiments. Attempts to improve or vary the details of routine are the soul of improvement, and generally convey both instruction and amusement, even if they prove to be failures; for the latter, like adversity often teach more wisdom than is gained from success.
Whether by post or not, to wrap them in tissue.paper before they are packed in cotton or tow. If this hittle precaution is
taken, the dititulty of examining flowers is much increased; the fibres of the cotton stick to the surface of the leaves and petals, and quite insigure them. After fowers have been separately
wrapped inssue-paper, they should be inclosed 111 a sheet of
wet brown paper. By this means the ctmosphere that surrounds them is kept in a state of uniform moisture.
$R$.- We are obliged for his advice, but we fear it will be impos. sible to find room fir a weehly accuant of the progress of science
generally. Wc shall endeavour to give immediate notice of
everythile new in the sciences connected with Gardening and everything new in the sciences c
Botany; but there we must stop.
$\mathbf{K}^{\text {. is right. It will always be }}$
$h$. is right. It will always be "a prime object of our Paper
to ameliorate the condition of the profession" whenever an opportunity arises of doing so in a proper manner.
J. T.-The orchidaceous plant was a fine-coloured and new variety of Zygopetalum crinitum. Of the two grases, the one
with a single spike was Seturia dasyuru; the other was a new genus allied to Urochloa.
Lord C.-Nothing has
method of cultivating truffes. The books that concerning thie men on the subject, few as they are, are either not to be believed or they lead to no practical conclusions. We have a promise of
some really valuable information concerning this carious subject, and if we receive it, we shall publish it furthwith. Should
we be disappointed, its place will be supplied by suggestions as advantageously
G.S. must not hope for a situation through our means. Do
we not know that he is given to drinking, and that he lost his last place in consequence?
To answer Sir George C. briefly would be useless, to do so at length would occupy more space than we can at present spare.
As the subject does not press, be will, we hope, be satisfied with an answer sonse time darigg January. He will readily recognise it if he looksthrough our columns.
It is nut true that either a botanist
gardener accompanied the expedition to Chusan. A very good naturalist, however, Dr. Cantor, is somewhere with the fleet
proposal, and agree to his The plants from Newcastle-under-Line are Odontoglossum Ros. siz, Salvia inrolucrata, and Olea fragruns.
G.'s letter is most discreditable to him. Does this man think that the sole object of masters is to plunder their men? If $G$.
were a servant of ours, we should be very much afraid he would plunder us if he could.
T. $B$. Will see that his soggestion was anticipated. By catting

deners. The "Benerolent Institution for the relief of Aged and Indigent Gardeners and their Widows," is in every way deserv. ing of support; for trustees, andurors, committee, and officers are alike respectable and trustworthy. But as for other schemes, the
best advice we can give our correspngdent is to recommend them to take care of their pockets, and above all things to distrust the prufessions and counsels of clever men of bad reputation. That
Sir Thom/zs H.-There is no doubt that Kyanised wnod is in-
jurious to plants in hothouses under certain circumstances. Bnt it is possible that its injunous effects wear cff. Where, however the wood is well pailited, and the atmosphere of the house is not consequences from its use. As a protection arainst decay, we Decay in timber is only sumetimes produced by the attacks of ising proces .
An Irish Clergyman recommends that in order to cure the drunkenness of Gardeners, it should be made a rule in all Horticultural societies that no prize should ever be given to a man
whose emplnyer does not report him to be perfertly sober and strictly hnnest, and aloo that his garden is kept in gcod order.
This would not be a bad regulation if it could be acted upon; but the dificulty lies here; no one in this country will keep a
gardener to whom the does not believe that he could give such a certificate; tur masters are uracquanted with the private ha-
bits of their men. Every exliditor, therefore, would have the requisite certuficaie, and matters would reman exactly where hey are. We must, moreover, say, with regard to Engli,h gar-
deners, that althongh some of them do no doubt disgrace them selves by their habits of drinking, yet the majority, and all the respectable men, are iree trom this vice. No man should keep a
drunkers gardener in his service.

## NEWS OF THE WEEK.

Winter, Grumio tells us, " tames man, woman, and beast:" but he spoke of ordinary seasons ; the present, with the thermometer unusually depressed, has tamed even politicians, and the past week has been one of unusual quiet. The Chronicler therefore trusts he shall be excused if his revord be less eventful than might have been anticipated. Ere the riulet "shall strew the green lap" of the spring there will be matter enough, and of stirring interest, o engage attention.
Her Majesty and the Court have remored to Windsor, where the christening of the Princess is expected to take place. The season has been marked by the usual distribution of the royal bounty, and of private benevolence. Several Parliamentary changes are talked of preparatory to the opening of the Session; and arrangements are in progress for taking the new census. In the money market, the principal feature of the week is the introduction of a new Government security, called Trinity Bonds ; and the Funds, which declined on the first news from Egypt, have risen since it was ascertained that a second treaty had been concluded. Ireland is still agitated with the repeal question, and the Ulster Association has resolved that the franchise ought to be reduced to $6 l$. in boroughs and 10l. in counties.
The fortification of Paris and the probability of a rupture with Morocco are the principal topics of discussion in the French papers; but the interest excited by the funeral of Napoleon has not yet subsided, and nearly a million of persons are said to have visited the tomb during the past week. Apprehensions have been entertained lest the longpending disputes between Spain and. Portugal respecting the navigation of the Douro might lead to hostilities; both countries assumed a hostile attitude, and immediate war was threatened, but the mediation of Great Britain has been accepted, and no doubt is now felt as to a pacific result. Recent letters confirm this belief, and state, although the preparations for war continue, the Spanish Government will leave the question in statu quo until the Portuguese Cortes shall have had au opportunity of taking it into consideration. In Germany and the north of Italy warlike measures of a precantionary nature are in progress, although there is reason to believe that the peace of Europe will not be disturbed. In Egypt the ratification of the convention between Commodore Napier and the Pacha has been refused by Admiral Stopford, on the ground that the Commodore acted without authority; but a second treaty has been concluded by the Admiral, whereby the Pacha concedes every point demanded, and submits unconditionally to the Sultan. The Egyptian army has evacuated Syria and is marching towards Egypt. -The election of President of the United States has terminated in the return of Gen. Harrison, who enters office with a pledge to retain it only for four years.

The French Minister of Finance has brought forward the estimates for 1842 , which are calculated to exceed 52,640,0001. sterling, which he proposes to spread over a certain number of years.

The Court.-Her Majesty and Prince Albert are at Windsor. On Wednesday the Queen and the Duchess of Kent accompanied Prince Albert to the ice at Frog more to see the skating, and Her Majesty participated in the amusement by being driven on a sledge over the ic by
his Royal Highness.-Priace George of Cambridge has returned from his tour on the Continent. - In consequence of the failure of the vaccination of the Princess Royal, her Royal Highness was again vaccinated on Monday by Mr. Blagden, in the presence of Prince Albert, from the child of a lady residing at Brompton. The lady and her child left town for Windsor, in company with the Court physicians. It appears to be probable at Wiadsoristeming of the Princess will Pardament. The precise time will mainly depend upon the convenience of the King of the Belgians, who has signified his intention, as one of the sponsors, to be present at the ceremony, if possible. The 10th of next month, being the anniversary of ler Majesty's marriage, is spoken of as the day likely to be fixed
Her Majesty's Royal bounty and gate alms were distributed last week under the orders of the Lord High Almoner. The bounty was conferred upon upwards of 950 persons, who received 5s, each. The Ruyal gate alms were given to 163 persons, at 13 s . each. All the recipuents were above sixty years of age, and many of them very infirm and disabled

Her Majesty the Queen has formarded, through Sir Henry Wheatley, the sum of 50\%. towards the erection of Poulton Church, Lancashire; and the Gueen Dowager has given 201. to the sudscription rals
the Rev. J. M. Kirby, of Stuurbridge.

The Queen Dowager has forwarded to the Rev. Isaac Gosset, the vicar of Windsor the sum of 506, to be distributed amongst the deserving poor at this incle-
ment seasun of the year in blankets, fannel, and sheeting. ment seasun of the year in blankets, Hanuel, and sheeting
It may be worthy of remark that tie Queen Dowager during the periud she was Queen Consort contributed most liberally towards the whole of the numerous chariWies connected with the town and neighbourhood of Windsor; and since that period her Majesty bas continued them to the same liberal extent.

## 

The Metropolis.- The inmates of the metropolitan end suburban Workhouses, to the amount of upwards of
80,000 , received a plentiful supply of the staple fare of Old England, on Christmas-day. The Earl of Errol, as Lord steward of Her Majesty's Heusehold, benevolently forwarded to the Deputy Marshal a liberal Christmas doPrison, each of whom received a plentiful supply of beef, bread, porter, and coals, with 1s. 6d. in money.
in the sugar horse Messrs. out in the sugar-house of Messrs. Goodhart and Son, in
Rateliff-highway. The premises covered an extensive space of ground at the back of the dwelling-house ; they
were eight or nine stories in height, and extended in depth into Pennington-street, opposite the London Docks. Unfortunately, although a large number of engines were on the spot, aided by several of the firemen from the West of England, their efforts were of little avail, and the entire building, which was one of the most extensive in London, became enveloped in one vast body of flame, destroying uncontrolled fury, and it was not until five houses were destroyed or injured that it was got under. There had been no fire in the sugar-house for several davs past, nor
thad there been any lights whatever in the building. Suspicions are entertained that the fire was not accidental. The loss is estimated at $25,000 \%$ : the property is insured for 10,0002. - On Saturday morning, about half-past four, a dreadful fire broke out in the extensive timber-yard and workshops belonging to Mr. Lawrence, carpenter and
builder, Pitfieldi-street, Hoxton. No lives were lost, but builder, Pitfield-street, Hoxton. No lives were lost, but the York and West of England offices.-The destruction of property by fire in the metropolis, during the last three davs, has been to a irightful extent. $I_{\mathrm{n}}$ addition to the above, it is said that no fewer than twenty-one fires have orn.
The IVeather.-Friday last, in London, was in reality and
and even fire, indicating it to be such. On Thursday evening, at 6 o'clock. the thermometer stood at 26 degrees, and by midnight it had sunk to 21, and towards morning
it became still lower. At 6 o'clock on Friday morning it hid. however, risen to 26 ; hut as the day advanced, the cold increased in severity, and at noon the mercury had again fallen to 21 , and at 6 o'clock p.m. to 18, 14 degrees below freezing point. During the day the atmosphere Was very dense and hazy, while in the outskirts, and for miles round, there was a thick fog from 8 o'clock in the morning.s. which greatly increased in density towards even-
ing. The estreme coldness did not, howeyer, deter large masses of persons from crowding the ice. The Serpeatine was thronged with skaters, and it is computed that during the day 40,000 persons ventured on it. In Kensingtongardens the ponds were thronged with fahionable comp-
pany. In St. James's-park about 5,000 persons were no accident whatever was reported. The masses of ice which have been floating on the river for some days past have much increased in size, greatly impeding the navi. gation, especially of small craft. Between Deptford and reatly injured by their cables being cutssels have bee their drifting against each other. The watermen could not pass from shore to shore without great labour and peril. up , and the paddles broken by the masses of jce thrown up by them. About midnight on Wednesday, the ther nometer having reached 39 degrees, a rapid thaw com menced, and at six o'clock on Thursday the mercury stoo at 40 degrees, the rain still continuing. At noon the thermometer stood as high as 46, but towards the after noon the wind shifted to the north-west, and as the even having, at six o'clock, fallen down to freezing point
Parliamentary Movements.-It is expected that Mr W. A. Williams, M.P. for Monmouthshire, will accept the Chiltern Hundreds. The Hon. C. H. Tracy, eldest son of Lord Sudeley, and Sir D. Mackworth, are named candinate does not intend J. Mladstone has offered himself of Carlow. Mr . M. Gladstone has offered himself as a candidate for the representation of the borough of Walsall. now that Colonel Perguson, nephew of the late member, will be returned for the Kirkaldy burghs. The daily paper have published the particulars of an inquiry respecting the proceedings of Mr. William Tooke, the new liberal candidate for Finsbury, who has been charged by Mr Duncombe, one of the sitting members, with using hi influence, as Treasurer of the Society for the Diffusion of Useful Knowledge, to proeure signatures to a requisition calling upon him to come forward at the next vacancy The sub-committee appointed by the chairman. Lor Brougham, to investigate the charge, revorted that Mr. Tooke had employed his influence as Treasurer with the tradesmen of the Society, and that he had used the agency of the Secretary for that purpose. It is understood tha Mr. Tooke has since resigned the treasurership -It is reported that Lord Oxmantown is to be brought forwar as a candidate for Dublin University on the first vacancy, and that Mr. Alderman John Johnson, of London, will be put in nomination whenever a vacancy shall occur in the representation of Plymouth.
Census of 1841.-We understand that T. H. Lister, Esq., the Hon. E. Phipps, and T. Vardon, Esq., are the Commissioners for taking account of the population of Great Britain, in July next, pursuant to the new Act The first-named gentleman, in his capacity of Registrar general, is specially constituted a commissioner by the cerms of the act; the others have been recently asso ciated with him by her Majesty. Mr. Mann, of the General
The Army and tho Police.-Colonel Molyneux, of the 8th Hussars, quartered in Norwich, has appeared before the Mayor and magistrates, and complained of not being saluted by the policemen of the city when they met him or the officers of the regiment. He thought it necessary, as the servants of her Masty that due nespect should be paid to them. The Mayor and Mr. Palmer said they were but individual magistrates, and could ot be said to have the control of the police. The Colene said if an order were not made out, he should write to head quarters about it ; he was determined that proper respect should be paid to her Majesty's officers. The magistrates asked if it had been the custom, or if there had been complaints from any other regiment; and it was said that this was the first time an officer had ever made such a demand. in consequence of the cemplaints of the gallant Colonel the superintendent said he had himself made sach an order on the book, but the Police Committee ordered it to be erased. The magistrates said they would consult on the question.
Sir Richard Bourke General is about to quit the atelier of Bailey, the Academician, for its destination, Sydney; it may be considered the first great work of art for which that distant
colony will be indebted to the talents of the mother country.
New Larvs.-It is stated that upon the meeting of Parliament a bill will be introduced for the formation of the militia upon a most efficient plan; and as it is found that the navy can be completed with volunteers, without im pressment, so it is intended that the same plan should be resorted to as regards the militia, and that the system of ballot will be abolished. It is also said that arrange ments are making for the purpose of bringing before Par liament a plan for a thorough revision of the law of libel.
Sudden Deaths.-An inquest was held on Monday on the body of Lieutenant-General Sir William Henry Pringle,
aged 68 . The deceased was of robust constitution and in aged 68. The deceased was of robust constitution and in afternon lajoyment of good heaith. Oa Wel take walk, and returned shortly after three, when he appeared as usual. The servants, hearing the library bell ring, wen there, and on entering the room saw deceased lying on the floor, and Lady Pringle kneeling down by his side supporting his head. A surgeon immediately applied mus-card-ponitices to deceassed's feet, at the same time expressof no avail, as deceased was dying. In a few minutes afterwards life was extinct. Mr. Wakley said he had no doubt the deceased's death was. occasioned by disease of the heart, which was now fearfolly prevalent, and which an
emisent physician had recently told him was the cause of ninety-five sudden deaths out of a hundred. Verdiet "Natural denth." The deceased officer was col nnel of the 4.t regiment ; had served under the Duke of Wellington ne Peninsular war, and had distinguished himself in various engag-ments. He had been nearly fifty years in the army.-On the same day an inquest was heid upon Mrs. Juliana Napier, an elderly maiden lady, who bad been found dead in her apartment. The decceased was on five sisters, all maiden ladies, with the exception of the youngest, whe was the widow of a German Prince. On Christmas day Madame Ducken, the widow, went out to
dine, leaving her sister rather the worse for liymor lodger in the house went into her room in the evening, and found her dead. The Coroner, being unable to ascertuin the age of the deceased, sent for one of her sisters, who refused to be sworn, and, after saying that her sister's age wa forty-nine, entreated the Coroner that he would not allow her sister to be buried upon new-year's day, because if that was the case the other sisters might all expect to di the way. "And you won't (continued the sister) prevent her having her clean things." Coroner-No. SisterThank you, sir: and she may be buried in St. James' burial-ground, may she? The Coroner assured her that her wishes should be attended to, and the old lady retired As she was being led down stairs the old maid told the As she was being led down stairs the old maid told the sister's age was seventy-seven. Verdict, "Died by the no less than six inquest at Gay's hospital, all arising from accidents.

The Guiana Expedition has left this country to explore and settle the boundaries of that colony, which was con quered from the Dutch, and ceded to Great Britain by the treaty of Paris. This country, therefore, is entitled Dutch; and, Great Britain clains the right to extend her boundary as far as the Dutch outposts and possessions extended. the Braziltian government, however, has lately laid claim to a large portion of the country claimed by, and hitherto supposed to belong to Great Britain. It has encroached largely on the south-western boundary of the colony, and seized upon Pirara, a village in which English colonists were settled as early as 1811. Her Majesty's government has, therefore, resolved to ascertain the exact boundaries of the colony. The commissioner se tensirely acquainted with the colony, to the exploring of which he has already devoted sereral years. The Prussian goverament has applied for permission to appoint an leman to the expedition, who would collect specimens natural history and plants for their institutions. The consent of our government has been given, and Mr
Richard Schomburgk, a brother of the British commissioner, accordingly accompanies the expedition for that
Diabiility of Parishes as to Exposed Children and Dend Bodies.-At an inquisition held at Kensington, before Mr. Wakley, on the body of a child found exposed on the 28th, in the parish of Paddington, and who died in a few hours, question arose as to the power of the parish officers o guardians to offer a reward for the discovery of the parents, which has drawn from the poor-law commissioners an opinion that, "As parish officers have no power to incur any expenses for the prosecution of vagrants, and have no duty to provide for the burial of a corpse found in the parity for their incurring expense in advertising for the dis overy of the person who exposed such child or such corpse. If, indeed, upon any such advertisement the part were discovered, a prosecation might be instituted, but the commissioners do not know how any reimbursement of the expense incurred could be compulsorily obtained from such party." The result appears to be, that there are no furd whatever applicable to the prosecution of persons exposing their children, even should the offence amount to murder aor to advertising a description of the child, or offering a reward for the apprehension of the delinquents.
New Railway Communications.-The Worcester and Port Dynllaen line of communication between Dablin and London has been declared by the government commissioners to be the shortest both in distance and time, and has been shown by Mr. Brunel to be that which alone affords an opportunity of answering letters between the two capitals by the return of post.-A public meeting from the metropolis to that town. The meeting highly approved of the plan for the construction of the railway and Wirmingham to Gloucester bas taken place; the trains Birmingham to Gloucester las the slightest accilent. the traversed the line without distance in two huurs and a hrst-class performing the drom Gloucester and from Chel tenham are now open by uninterrupted. lines of railway to Derbyshire, Staffordshire, Lancashire, and Yorkshire -The Viaduct on the Mancliester and Birmingham Railway has been brought to completion. The work consists of twenty-one arches of sixty-three feet span and nearly three hundred feet in height. It is about twentyone months since the foundation was begun, and during that period 400.000 cubic feet of building bave been rected, and more than $11,000,000$ bricks consumed This wonderful structure connects the counties of Lancaster and Chester at Stuckport.-Last week an engine passed for the first time on the part of the Bolton and
Preston Railway just completed, from Rawstome-bridge
pleted to Buxton, on the North Union Line, which it will
be during 1841, it will afford a much quicker transit for be during 1841, it will afford a much quicker transit for
passengers from Preston to Manchester, than by tha present route. - A meeting was held on Wednesday in Suf-folk-street, for the purpose of considering the propriety of
establishing a railway to join the Northern and Easter Railway at Bishop's Stortford, to Norwich and Yarmouth by Cambridge, Newmarket, and Thetford. The Marquis of Douro and numerous other gentlemen connected with those toms and the neighbouring counties severally spoke in favour of the object of the meeting, and resolutions wer was formed immediately, and a large number of shares subscribed for in the room.-Two accidents happened to the American engines on the Gloucester and Birmingham Railwar, on Sunday morning ; both, fortunately, unattended by any other consequences to the passengers than delay The first took place soon after the train left the Spetchle station : one of the small wheels of the engine broke; th passengers, driver, and stoker, escaped without injury. In another case, some hundred yards from Camphill station, the fire-bars, and consequently the fire, tumbled out on the road, leaving the train to be hauled to its destination, after a delay of some hours. We have since learned that another accident occurred on Monday, by the breaking of another of the small wheels. These engines were im very superior construction and enduring quality.

## IRELAND

Dublin.-A distressing accident took place on Christ mas morning in the Roman Catholic chapel, Francisstreet, which has led to the death of nine individuals, an enions injuries to others. An immense crowd thronged the planks upon which the people are accustomed to kneel in the body of the chapel, owing to the pressure of the people standing on it, broke. The noise of the timber breaking, and some persons crying out that the gallery was falling, spread terror into all. and a tremendous rush was at the approach was the principal cause of the loss of life or when the front ranks were prostrated, the persons folowing fell or trampled upon those down, and thus a hea of more than 100 persons were lying together. The police were promptly on the spot, but no efforts of theirs could stay the rushing of the cruwds from within. The cries of women and children, the horror-stricken appearance of the entire mass of the people, each apprehensive that some sented a spectacle of the most horrifying nature. The greatest difficulty was experienced in removing the dead and the injured to the hospitals, such was the anniety of the multitude to obtain a sight of the sufferers. The affect-
ing news soon spread throughout the city, and during ing news soon spread throughout the city, and during chapel and the hospitals. The total number of persons injured is not yet ascertained.
A Temperance Festival was held on Thursday, at which
Mr. O'Cinnell presided, and declared that he had become tee-totaller
The weekly meeting of the Repeal Association took place Dec. 28, at the Corn Exchange. Mr. O'Connell adrocated the necessity of establishing an indemnity fund in aid of the voters of Ireiand; and stated that emancipation was cansed in a great measure through the assist ancea by the last census, amounted to $8,000,000$. Tha railway census showed, by the printed report, three years ago, the population of Ireland to be $8,500,000$, and he took it in all likelihood to be at the present day increased to $9,000,000$ : and he calculated that out of this number there were three or four millions who had taken up the re-
peal question, and would be capable of supplving a fund of at least from 200 to 300,000 l. annually. He would be satisfied with one farthing a week, or one penny a month, or one shilling a year, with four weeks' discount (Laugher and cheers.) He asked if there was any one so poor the repeal of the union? (Hear.) Five millions of persons at one shilling a year each would produce the sum o rosed that measures should be taken to secure the next Ir. Baines's objection to remodel the commented on Mr. Baines sobjection to remodel the representation on Englan l and give them to Ireland; and replied to his ob jection that azitation might lead to a civil war, by declaring that the denger of incurring a civil war-if there were
danger at ail - Was the in fluence used among the Whigs to danger at ail-was the influence used among the Whigs to examined the subject carefully, and admitted that he had fot concur with some of the suggestions. He saw great ainger in commingling the phor lasw valuation with the franchise, because it would be thrown into the hands of mer who were inimical to his riews. He thought it giving it the most serious consideration, particularly the princip.e of rating as far as 61 . That principle migh possibly kave a most salutary effect, if carried into ope
cation, but be apprehended that the Eaglish farliament
ould turn the six into ten rould turn the six into tea. Instead of making, there fore a pawe report, he thought it would be better to in lister Association, !hat they might act as amicabls possible together, in order that their determination might e che stronger to resist the report on Lord Stanley's bill He mored that the terms which the Leeds Reform Asso ciation put forward as the basis of farther parliamentar feform, including the principles of household suffrage by
electoral districts, vote by ballot, triennial parliaments, Charlemont's letter in answer to an address which was sent him by the association, be postponed. He concladed by moving the adjournment of the association, at its rising to Thursday next. The weekly rent was announced to be 51l. 4 eeti Uwher Association. -The second special genera the chair. Then held. The Earl of Charlemont was in mendations contained in the report of the committee ap pointed at the former meeting relative to the registration and election laws. The Earl of Gosford addressed the meeting in support of the first resolution. The committee had originally recommended that the annual rent of $8 \%$. in boroughs and 10l. in counties should be the respective qualifications for the franchise; but they had since come to the decision that that was too high for the borough fran chise, and that it should be reduced to ation in the report, he moved its adoption was seconded and carried. By the second resolution Which was moved by , with full authority to adopt such measures as they might deem expedient to promote th introduction of a bill into Parliament embodying the recom mendations of the report referred to in the first resolu tion. Lorus Gosford and Charlemont, the Hon. Mr Caultield, Mr. Ross, aud Mr. Sharman Crawford, ex pressed themselves in favour of household suffrage, and formers of Liead

Irish Manufactures. - A meeting has been held on this subject in the city of Waterford. A series of resolutions was adopted, elaur arem ex ension manufactures and a general encouragement of native pro duce would prove an effectual remedy for many of the evil which afflict Ireland; that combination amongst the opera tives had been showa by the ablest economists to be the certain destruction of the best interests of the operatives themselves ; that they regarded the prosperity of the sister country, with which they hoped Ireland would ever be connected, as arising from the division of labour amongst her population ; that the barriers which heretofore had been opposed to the introduction of capital into Ireland were almost entirely rentoved by the improved condition of the people; that capital could be as well laid out in Ireland as in any other country, in consequence of her great national resources and advantages; that a pleasing eature in the present movement was its having brought together men of all parties; and, finally, that a committee of trade be formed in the city of Waterford for the purpose of carrying into effect the objects of the resolutions, and to co-operate with the general board of trade in Dublin, particularly in impressing upon the British Government the necessity of exteading to freland in some degree the benefits enjoyed in England by intereourse of railroads.

## SCOTLAND.

Edinburgh. - The auxiliary committee for completing the national testimonial to Sir Walter Scotr, are unflagging in their exertions. The subscription proceeds well, and returns are daily received from varion towns in the provinces. Within these few days a subscrip tion of $10 \%$, has been sent by Lady Willoughby d'Eresby and the Edinburgh Choral Society have tendered their ser vices to give a concert in aid of the fund.
drran.-On the 10th instant this island was visited by one of the most alarming inuadatons and harricanes ex perienced for several years. In the morning dark cloud were seen covering Mullan Gaoith (Windmill-hill), Torr na-Ndean, and Crag Na-hiolcrach (Eagle-rock), and soon after the streams that issue from their bosoms poured down in torrents into the Glencoy river, which overflowed its banks, aud covered immense tracts of arable fields, plantations, gardens, roads, \&cc. The cottage at the foot of the glen was surrounded, and the family compelled to fly rather half swim, to a more elevated spot. Below this an aninterrupted expanse of water presented itself, covering several square miles, and deep enough to float large wher ries. Glen Sherrag and Glen Roza were subjected to similar visitation, the torrents rushing down with dreadful violence. From the reservoir for supplying Brodick Mill at least 500 feet above the sea, there was as grand a water fall as Niagara, both in length and width. The Roza rive looded extensively above the bridge, near the church, covered the road leading to Brodick hive a canal. The storm extended also to Lochranza with the same fury ; and the roads by Cor, Samnox, aco, have been torn and cut up, as if bombshells had been emploved. At Balmichael it was particularly violent. Towards Shiskan the damage has been very great, and one of the bridges has been destroyed.
Glasgow. - Mr. Alston, the bonorary treasurer to the Asylum for the Blind, has just completed his great national work of printing a complete edition of the Bible exeniplification of the advantages of the system of education pursued in the institution was given last which Mr. Alston produced his fifteen volumes of the Old Testament (the New Testament, with the Scottish version of the Psalms, having been printed in four volume s.me months ago); and the younger pupuls read in sue cession from the whole fifteen volumes indiscriminately The singular delicacy of touch and rapidity of manipula tion exhibited by the boys and girls, together with the ease, fluency, and accuracy of their reading, astomishe every one in the room. -The murrain has made its ap pearance in the neighbourhood of Glasgow, and has spread with great rapidity. It presails in no fewer than nine o tea adjoining parishes ; but it has hitherto proved of
comparatively mild description.-A fatal coal- pit accident mappened at Carronhall on Thursday week last. A youn -a very dangerous operation-and when a girl went below with his breakfast, no answer was returned to her calls An alarm beiug immediately given, it was discovered that the roof had given way, and buried him beneath the mass, - Information has been forwarded to the metropolit police-offices of the following murder, perpetrated on th railway at Crosshill, near Bishop-bridge, Lanarkshire the morning of the 10 th ult., on the person of John Green a labourer on the railway. The unfortunate man was cond at the Crosshill-cut, lying upon his back, quit cold and stiff, and several cuts and bruises on his person. Not one farthing of money was found upon the deceased Doolan, who had been employed on the works on the pre ond a reward of 1006 . is offered for his appreheusion.

## 月labíncial Néos.

Wales.-A deputation of the members of the Mont gomeryshire Lordship assented, and has presented to the society his valuable agricultural library.- Bryrntirion, the beautiful seat of C. J. Harford, Esq., in Merionethshire, has been baind the ground, together with the fine collection could be saved. The fire originated from a beam in th chimney.

Dover.-On Thursday morning, about one o'clock, as Lieutenant Smith and Mr. Everatt of the 54th were proceeding from the theatre to the garrison, they met som sailors, with whom they had high words. One of the sail ors, after collaring Mr. Everatt, threw hin down with such violence as to fracture his skull. Mr. Everatt only sar vived about four hours. The sailors escaped, but have since been apprehended. Their names are James Curwi and John Gravenor, the former a mariner and the latter shipwright, both belonging to Dover. A coroner's inques was held the same day. The principal witness was the surgeon, who deposed to the cause of death being a bruise on the skull, and extravasated blood on the brain. The jury returned a verdict of "Manslaughter against John Gravenor, and that James Curwin aided and abetted therein." The prisoners were committed take their trial at the next assizes. The body of

Nottingham.-The lace-workers of this neighbourhood, who were induced to emigrate to America under pretence of high wages, give a dreadful account of the fruuds prac tised upon them. Any amount of wages is offered to the
poor fellow, but they tell him he can only be paid in six months; he goes on working, and fancies he is gaining fortune, but when the pay-day comes the master tells him that he has no money, and he is obliged to bring an action months, during which time he is starving.

Chatham.-On Sunday morning, about two o'clock, fise broke out in the establishment of Mr. D. West, linen and woollen draper, in High-street. The fire had been raging nearly three-quarters of an hour before the engines arrived. It is supposed that the fire originated from a stove in the shop becoming overheated, as was perceived at nine o'clock to be nearly red-hot. The stock in trade, it is understood, is insured to the amount of $3,000 \%$., but the destruction of property is said to far exceed that amount

Cornwall. - A communication from Sir C. Lemon states that a majority of the mine adventurers having mining school, he does not deem it necessary to procee any further in the business, and therefore withdraws his offer of contribating to the establishment of such an institution, and of making an endowment for its maintenance bereafter. It is in contemplation to form a joint stock company for maintaining a regular communication by firs class steamers twice a-week between Falmouth, Plymonth and Southampton, and thence by railway to London

Somerset.-Mr. Beckford has determined to dismantle Landsdown-tower, near Bath, and sell by auction all the articles of vertu it contains. The reason assigned for this circumstance is, that the tower has been several times at tempted to be hroken open by expert thieves, who be fears will mutilate what they cannot take away
Liverpool.- A Changeling.-On Tuesday last, a plainlooking woman, with a child in her arms, walked into the Hanging Birch, at Whiddon, and called fur a glass of ale. The landlady immediately went down stairs to draw the beer, leaving ber owninfant in the cradle asleep. On her return from the cellar, she found her customer had vanished ; but no suspicion arose at the moment of anythin being wrong. In a little while, however, the child in th cradie having become restless, the mother stooped to take itjin her arms, when she found the infant black in the fuce Thinking it was labouring under strong convulsions, she posted off fur medical assistance. The medical man de clared that nothing on earth was the matter with the child it being as healthy a babe as had lately come under his inspection ; and as for the darkness of its face, it was produced by natural causea-the fact being that the chlla wa born black, for no other reason than because its progenito must have been of the same colour. In fact, her own had substituted thad been carried off by the strunger, wisl had substituted this pickaninny of ebony, on the principle
that "eschange is no robbery." An alarm was instantily raised, but witinout leading to the discovery of the perpo trator of the ontrage.

Manchester.- A robbery has been committed upon
the bank of this town, the extent of which cannot be at present ascertained, but which is supposed to be to a serious amount, and under circumstances which seem to
leave little doubt that it was the result of some deep-laid scheme. On Saturday morning, at the time the delivery of the letters took place, a person presented himself in
the passage where application is made for letters addressed to parties who have boxes at the Post-office, and called out the number of the box assigned to the bank of Man-
chester. The parcel of letters for the bank was delivered chester. The parcel of letters for the bank was delivered The letters of which he got possession were from fifteen to twenty in number. Shortly after this occurrence, letters, came in the usual course, and found that they and the services of the police were put in requisition. The notices sent to the bankers were effective in one instance, and it is hoped will be so eventually in affording a clue
to the parties concerned in this transaction. On the same morning a check was presented at the bank of Messrs. Jones, Loyd, \& Co., for between 451. and 50l., by a lad.
He stated that he had been sent there to get it cashed br He stated that he had been sent there to get it cashed by a
gentleman from Preston, whom he could bring to the oftice. He was instantly placed under surveillance, and a messenger despatched to inquire into the state of the case that he however, some suspicion, probably from the delay, that he was in peril, the robber contrived to elude the vigi-
lance of the party employed to watch him, and got clear off. Since this a young man has been taken, and brought to the Borough Court for examination. Sufficient particulars
were stated to satisfy the magistrates that there were grounds on which to remand him: he has been seen by a
clerk at the Post-office, and identified as the man to whom the letters were delivered.-Another robbery in the Postoffice here is talked of, the particulars of which have been It ithheld, pending the examination of the suspected parties. firm in the town were abstracted. One of them having been made payable in London, had been already presented and paid before notice could be given. Measures are in adoption of adequate measures for the prevention of similar frauds.

Leeds.-On Monday Mr. Oddy, woollen-manufacturer, appeared before the magistrates, to answer to three informations for offences against the Factory Act, committed at
his mill at Beeston Royds. The first charge was for working a girl above twelve hours a day, only allowing out of that time three half-hours for meals, instead of two half-hours for breakfast, \&c., and one for dinner, as
directed by the Act; the second charge was for employing younger children more than forty-eight hours in the week and the third, for not having the hours of work regularly entered in the registry of workers. The manager stated that he did not exactly understand what he was required to do ; and as to their working longer hours, they had had The magistrates inflicted a penalty of 20 s .; the amount of the costs of the three informations was $2 l$. $18 s$.

Essex.-About ten days ago a gentlemanly-looking man, calling himself Thomas Simmons, stopped at the Angel Inn, Halsted, where he represented that he had been a builder and surveyor at Ipswich, that he belonged to the order of Masons, and that he had a wife possessed of
$7,000 l$., upon the interest of which he was living. It appears he ran up a score amounting to 13 s .8 d ., and then left for the purpose of patronizing the Rose and Crown, ahother house in the town, where he had sufficient address to persuade the landlady that he was uncle to her, and that he was worth a great deal of property. He said he in-
tended to make her husband a present of $300 l$. or 4007 ., and the landlady, quite elated at the idea of possessing so iberal an utrcle, wrote a letter to her husband, who was in Suffolk, to acquaint him with their good fortune. He also agreed to marry a young woman who was staying at the
inn, and in the event of breaking his word, he vowed he inn, and in the event of breaking his word, he vowed he
would forfeit 100 . The constable of Halsted, hearing him make these assertions, suspected all was not right, and hinted to the landlady that she ought to send in her
bill. No money being forthcoming, he was given into custody. Numerous bills, from different tradesmen at Colchester, to a considerable amount, were found upon him ; and he was coumitted for trial upon three distinct charges.

Bury.-On the morning of Christmas day the farming premises of the R.F. J. T. Bennet, at Chevely, were disvery speedily on the spot, but in consequence of water having been left in it which was frozen, the machinery gave way, and it was utterly useless. Owig to caase, and the ponds being also frozen up, but little could be done to stay the fury of the flames, and a barn, two
stables, a coachbouse, and other buildings, together with four valuable horses, two cows, four pigs, some hay, straw, and coals, were destroyed. It is supposed that it was the act of a malicious incendiary.
Norwich.-On Saturday last two ladies came before the mayor and magistrates. One of them gave her name Turney, and was well dressed; the other was younger, but band kept the Ram, in New Lakenham. where she had on the previous night been rohbed of about 6l. under the following circumstances:-A gentleman was there on Thursday, and saw witness put some money into the bureau, in her own room. During that afternoon this lady came, and was with him half an hour. The gentleman
slept there, and did not get up till one or two o'clock on the Friday. As soon as he was up, witness found that
her bureau had been broken open, and six sovereigns did not know what had become of him ; but the lady coming again, she detained her. The lady said his name was Clifford, and that about twelve months since he was married to a lady of this city. She had been in the married travelling with him; but having bish her husband to know of the acquaintance. She assured the magistrates she did not know where he then was, and she the nothing of Mrs. Turney's money. She would lend wanted to see him, having lent him 56. of her own money before she was married, of which her husband knew nothing The magistrates wished to know who she most disgraceful business for a woman of her appearance A warrant was issued for the apprehension of Mr. Clifford on a charge of felony.
Exeler.-An old woman, well known as a teller of fortunes, was found dead in her bed on Saturday. She occur pied a tenement in a back court, consisting of two rooms of the smallest conceivable dimensions. The only articles of furniture in her rooms were two deal chairs, a table, tea-kettle, and some vessels of earthenware. The window was completely covered with cobwebs. There was a fire place in the room, but she had never been known to have bire in it, and her kettle was boiled for her by a neigh bour, who was paid 7d. a-week for her trouble. About the room were scattered several packs of cards, in which she pretended to read fortunes to the simple fair ones who resorted to her. She had numerous visitors, many from among the more respectable classes of society ; and on a market-day especially her ante-room was thronged with customers. The beadie of the corporation stated that he had made a search of the room, and had found about 942 Other small sums were found wrapped in dirty pieces of rag or paper, in other parts of the room ; a great deal of the money was quite black and cankered, and had evi dently not been disturbed for several years. An inquest The old woman was not known to have a relative in the world, but immediately on her death, and the discover world, but immediately on her death, and the discovery
of the money becoming known, more than one person was found to claim kindred with her.

Mansfield.-On Christmas morning, the extensive cotcon factory of Messrs. Hollins, Siddon, and Co., at Pleasley, was destroyed by firs. The valuable machinery and the stock in trade were entirely consumed, and the building reduced to a wreck. Nearly 300 hands will, by this ca lamity, be deprived of employment. The loss is estimated aid could be rendered : by the time engines were obtained, the fire had so far advanced as to render them useless. The building and machinery were insured in the Royal Ex change and Norwich offices, but the insurance will not, is expected, cover the loss.

Witshire.-Imporlant Case.-Mr. Palmer, of Devizes, during the summer employed poor persons to pick hawthorn leaves, which were about to be forwarded to London; When the Excise officers obtained a warrant, and on the 27th and 28th of July made seizares to the amount o upwards of $2,000 \mathrm{lbs}$. weight, and charged Mr. Palmer on manacturing the leaves in imitation of tea, contrary to the stat. 17 Geo. IIs., cap. 29. The case was heard in the charge had been established, and that the defendant must be conyicted of having 40 lb . of hawthorn leaves in his possession, manufactured in imitation of tea, and that he had thereby incurred the penalty of 2006 ., which he was adjudged to pay. There was a second information; but, upon its being understood that the defendant would not seck to disturb the judgment on the first, or give the Excise any forther trouble in the matter, it was withdrawn. A warrant, with the consent of the defendant, was then granted for burning the leaves.

Windsor.-A few evening since, as Mr. Baldwin, a respectable farmer, residing at Winlfield, was proceeding in stopped by five labouring men in a lonely place called Falling-lane. The thieves dragged him out of his cart, pinioned him, and robbed him of $100 l$. in gold; one $10 l$.
and six $5 l$. Bank of England notes; and a 10l. note of the and six $5 l$. Bank of England notes; and a 10l. note of the the precaution to secrete his money in his smallclothes, which was secured by being sewn in various parts. The robbers, from their movements, were evidently aware of this; they nearly stripped him of his breeches, which were literally cut into shreds. A reward of forty guineas has been offered for their appreheasion, bat no traces of them have yet been discovered.

Northampton.-A young man, named John Haslock, clerk in the employ of Messrs. Whitworth, bankers, North ampton, absconded on Saturday last, and taking with him 800 sovereigns, four guineas, and $6 s$. worth of four-penny-pieces. The robbery was not discovered until Monday morning, when the cash was missing, and the absence of Haslock at once threw suspicion upon him as being the perpetrator of the roubery. It was ascertained that he had walked to the Blisworth railway-station, ahout midnight on Saturday, in company with his brother, and by the for London, at half-past two the following morning, apprehension.

Worcester. -Three or four months ago an abortive attempt was made to plunder the Romsn Catholic Chapel at Coughrt The the seat or Rhe late Cise but were foiled in their endeavours to force the iron chest
deposited in the restry, and were disappointed, obtaining pains. The same articles of little or no value for their in the night of Saturday doubt, by the same persons; when better success attended them. It seems in this instance they made their may int the chapel through one of the widows, the iron way int which they wrenched off; then taking the iron chest from its fixing in the vestry wall, they convered it into an ad joining field, where they picked the lock, and possessed plate plate, \&sc., altogether of the value of about 201.

Ely - A dreadful fire took place on Monday morning upon the premises of Mr. Cropley, which raged with the greatest furyšfor twelve hours. The fire was first seen issuing from a large stack of corn, consisting of about 360 quarters of wheat in twelve divisions. It spread with such rapidity, that in less than an hour from its being observed ten of the twelve divisions were one mass of fire, which baffled all exertions. The loss is estimated at about 1000\%. The property was insured, but whether sufficiently to cover the loss is uncertain. No doubt is entertained of its being the work of an incendiary

Woolwich.-Serious Confragration.-On the morning Mrs. Stafford, No. 2, Clarence-terrace, and was the oo serious which has happened in the to and was the most Three engines from the barracks were brought years. no water was to be obtained for a considerable time; and fire house and furniture were completely destroyed. The caught, and speedils fell me mastery, the adjoing hous The fury with which the fire now raged baflled ail attempts to stop it ; for the four next honses, being the remainder of the terrace, caught, and were burning almost simulta neously; the whole were gutted, onls the bare walls bein left standing. A messenger the metropolitan engines; but, owing to the slippery stat of the roads, it was near four o'clock before the call was obeyed. The houses destroyed, although separated by party walls, are said to have been built under one roo ford's barn letter of thanks to the offeers and men of the garrison fo their prompt assistance. The total loss is estimated at 10,0001 .-A fever has made its appearance among the con ricts in the Royal Arsenal, and has proved fatal to seren an inquest has been held, and the jury, after examining the bodies, have agreed to a verdict "Died by the visita tion of God, of fever."

## CITY

The Great Western, steamer, arrived in Kingsroad on Thursday, Dec. 24, at 4 o'clock, after a passage of 14 nuous easterly gales and head-winds for 10 days out of the 4 ; she has 69 passengers (exclusive of servants), a full reight of cotton, \&c., with nearly 200,000 dollars in spe dent's message, but a continued snow-storm for three days had prevented that document from reach for three days upon the 9 th. The commercial accounts are again com paratively encouraging. There was once more a hope of he Pennsylvania banks resuming specie payments on the 5 th of January, as required to save their charters. Under this expectation, the exchange at Philadelphia, on New York, had improved from 3 to $1 \frac{1}{2}$ per cent. A con siderable amount of coin is reported as having been for pendence packet has since arrived, but brings no important news.
A ner species of security has been introduced into the Stock-Exchange, called Trinity Bonds. They are issued an account of the erection of lighthouses and beacons on various points on the coast of the Lnited Kingdom, and
are understood to have the guarantee of the Government. They are to bear interest at 4 per cent., and the holders will have the power of requiring payment in full after six months' notice. No quotation of them, however, has as yet been given.
The Funds, Jan. 1.-In the English market prices were steadily supported, but in the foreign house the quotations receded a little towards the close of basiness, sill left of $88 \frac{1}{3}$ to $\frac{7}{5}$. ex. div., for the opening; Exchequer
Bills 4 s . to 6 s . prem.; Bank Stock 157 to 8 . Brazilian
 o 4, Mexican 38 , to $9 \frac{1}{4}$; Five per cent. Portuguese $31 \frac{1}{4}$
o $2 \frac{1}{4}$; and Active Spanish $2 \frac{3}{4}$ to 5 .

## CHRISTMAS THEATRICALS

Drury Lave.-Notwithstanding the pantomimic at tractions of the other theatres, Mr. Eliasux's entertainment drew together one of the most crowded audiences of the season. The promenade was crammed to overtlowing, sell attended. The bill of fare was unusually grod, and comprised many admirable and popular pieces.
Corest-Gardes.-The gates of the reaim of pantomime were op-ned to the puhlic, with grand celebration, country of humour. It was, in a word, pantumime almost in a new furm. The theatre was early filled to the slips; but the many-headed monster called Multitude seemed to hold in respect the drawing-roon aspect and habits of Madame Testris' temple, and noise and viclence did not so infinitely abound as is the wont on holidays. The subject selected for the pantomime was The Castle of Otranto, or

Harlequin and the Giant Helmet, and a good subject it was. The far-famed Seven Champions, a goodly array of Scoltish Chiefg, the veiled Nun, the dark mysterious
$\boldsymbol{F}$ 'austus, and we know not how many others, from time F'austus, and we know not how many others, from time
remote down to Ivanhoe, appeared upon the stage. Tom Thumb and the Two Kings of Brentfurd strutted before us-nay even Don Quixote, filched in some former day
from the opposing power, was ready spear in hand to charge the whole castle by himself, for he was "all alone" without his Squire. These would have been sufficient of this jovial emmpany was covered by a whole regiment of bashet cavalry capering and cutting such figures as romance was already lost in the theatre. The perform. ances concluded with a durama consisting of a series of views painted by the Messrs. Grieve, and embracing in succession the leading topics of the year. The whole concluded with an allegorical national tableau, indicating Britunnia as the Queen of Prowess, with her navy as
the wings of war sweeping her unto victory over the world. the wings of war sweeping her unto rictory over the world.
ADELPHI. The pantomime was founded on a familiar Adelphi. - The pantomime "as founded on a familiar
tory in the "Arabian Nights," and was entitled, Harlequin and the Enchanted Fish, or the Genii of the Brazen
Bottle. The crowds that besieged the doors of this theatre long before the hour of opening, proved that the Christ mas cheer provided by Yates was specielly alluring to the holiday folks. Pit and gallery were crammed a very few pocments ater ingess whe tion to sittiug room in the hoxes. [pon the whole the audience were pleased with the pantomime, and Wieland announced it for repetition amidst much applause, and only a few dissentient

## fliscrllancous

A grey parrot has been purchased by Prince Albert for fifty pounds. It is three years of age, and has been in this country about fifteen months. It is master of upwards
of 800 words in the English language, and can speak several sentences in French. It sings the first verse of "The flag that braved a thousand years," and likewise the first verse of "Jim Crow," and afterwards whistles and jumps it in a most luticrous mamer. If Poll sees a person about sing out, ". Her Majesty Queen Virtorias good health.' occasionally varying the toast to "The health of his Royal Highness Prince Albert," and "The Princess Royal's good health, and God bless her
ob Miller.-Althoagh this persomage- is constantiy quoted, very few persons know who he was. His name matic pices. Ho was areadfully trombled several dramatic pieces, he mas arreury troabled with the gout quently from writing, and he was confined to his bed-reom ind years: bat ander all these circumstances he main tained a cheerful temper, and gave to the world, about the
vear 1720 , the bool that bears the title of "Joe Miller" Jests." Mottley wrote a portion of the popular farce called "The Devil to Pay." Queen Caroline (wife of George I1.), when Princess of Wales, commanded a play to be performed for Mottley's benefit, and disposed of a room, and mont of them were paid fur in gold.
Legal Chrix!?us Boxes.-In the report of the Commissioners for inquiring into the duties, salaries, and emoIuments of the judges, sec. of the courts of justice in Court of Queen's Bench, "according to ancient usage," receives annually a Christmas four yards ofroad cloti sented to him by the particular officers on the plea side of the court; and that each puisne judge receives annually from the same officers a small silver plate and eighteen loaves of sugar.
Did you Ever. - Did you ever know a tradesman asking for his aucount, who had not "a bill to take up on Friwith any change about him? The Yurg Sultan. - The lafmic Gasette informs us Mehemet Ali's portrait in Egypt, proceeded to Const antianple, where he was admitted to the Sublime Porte, for the purpose of painting the pirtrait of the Sultan. Howr his first neting a few days atar. The fuitan wore a blue cout with reat onils, not untike the uniforra of the Promian eandirneers. On kis breast was displayed the Nishan. that distinguashed thtyonsh ondier, composed of sparkling
brilliants. The embrodery on his outer garment ghttered with gold and precious stones. "He fixed his eyes on

Which he was desirous that I should paint him, and said, - I feel assured that you will answer my expectations in the and I had an abundance of time to study the interesting phy siognomy of this youthful sovereign. It is less bandsome than intelligent. The smallpox has left deep ravage on his countenance. Ems complexion is pale. He lighteen years of age. His beard is tolerably strong at the chin but the mustachios are scanty. Amiability and goodness of disposition are perceptible in his features-they even breathe from the tones or his voice. His organ is at once soft and sonorous, and his conversation is interesting Fatigued by diplomatic receptions and visits of etiquette the Sultan seemed to take much pleasure in our little fami liar interview. He appeared to be interested even in the details respecting my family, as to which he inquired with some minuteness, and spoke of the pleasure it would afford him to perform an agreeable service for an European directed you to make my portrait. That will be flattering to your relations; but, I pray you, do not flatter me.'Thrs royal jeu d'espril was accompanied by a smile." The Sultan gave the young artist six sittings in all. The porrait was pronounced to be a perfect likeness, and the Sultan gave Herr Kret-cloner permission take a copy

## for his own use, and have it lithographed.

M. Agassiz.-Lord Francis Egerton, on being given to understand that by purchasing the drawings of M. Agassiz's reat work, his "Poissons Fossiles," he would enable hat distinguished naturalist to extend his researches, has offered to give him 5001 . for them, and to leave them with him at Neufchatel as long as he requires them

A Blue-jacket's Opinion of Steamers.-"While things was as they was, d ye see. we blue-jackets had it all our own O Belabub srere spiteful, and ses whilst British satlor gets his grog and his prog, d'ye see, I shall never be able to shove my oar in his boat, and turn the world topsy turvy, d'ye see? So he plans with the tee-totallers and
the saints, and tries to disrate the grog-tab and promote the tea-lettle, d'e see. But he culd not thomb halves, for which, d'ye see may there be a that frost in his fire-place, and his coals run short! So, haring partly failed, what does he do? Having got hold of the right hint he turns the tea-kettle into a boiler-claps wheels to the ship's sides, as if they were no better than backney-coaches, or so many dung-carts-and thus ruins the out-and-out blue-water English sailor for ever. I've done it, savs he; and I never hears one of these varmint steamers sputtering, fizzing, hissing, but I thinks I hear him $a$-saying, 'Ah, Jack, you willain, I've done you at Rustic Cr
rife, in creduty.-A few days ago an honest farmer' wife, in the neighbourhood of Biggar, was waited upon by curtain of futurity, and give her a peep of what was in store for her for a mere trifle. After showing oft some her cantrips, and making the unsuspecting housewife be-
lieve that she, like Glendower, had the gift of "calling spirits from the vasty deep," she prevailed upon her to part with a pound note. in the conviction that in a quarter ar an hour by her auld timmer clock, a braw horned the second come routin to the door! This being done and Mrs. Look-for-Crumbie solus. It is hardly necessa to say that the cow did not make her appearance to add to the dramatis personce.-Scolsman.
Statistics.-In Great Britain the number of persons in a state to bear arms, from the age of 15 to 60 , is $2,744,84 \overline{7}$. The number of marriages is about 98,030 yearly. The
number of deaths is about 332,700 yearly, which makes nearly 25,592 monthly, 6,398 weekly, 914 daily, and 40 hourly. The deaths amnng women are, in proportion to men, as $5^{17}$ to 54 . Married momen lire lunger than those who continue in cellbacy. In the country, the mean number of childiren by each marriage is 4 ; in townes, ; for every two marriages. The number of married women is to the general number of the sex as 1 to 3 ; the number of married men, as 3 to 5 . The number of widows is to that of widowers as 3 to 1 ; the number of midums who marry again is to that of widowers in the same case as 7 onger $h$ ose of the whole number of deaths oncur before the age of 17 . The number of twins is to that of ordinary births as 1 to One individual only in 3,126 attains the age of 100 ears. The number of births of the male sex is to that of he female sex as 96 to 95.-Edinburgh Phil. Journal. Paris Police Correctionnolle.-A tal! and ricorons Picard, Pierre Allamorurnyname, was charged before the tr:bunal as a ragabond. President.-What ! You do not work, thoug Yon are so tall and yrung? months' imprisonment.
Court Martial
Court Martial.-Lieutenant W. J. P. Wade, of the
Royal Artillery, was tried by a Court-martial, at the Cape of Good Hope, in July last, on four charges-First, for conduct highly disgraceful and unbecoming an officer aud a gentleman, in stating to Major Armstrong, and subse quently writing, that he, on coming of age, was entitled ti he (Lieutenant W.) knew to be false; secondly, for producing a letter, purporting to have been written by hil mother, in which was a paragraph stating him to be enti tled to a legacy of 6,000 ., the said paragraph being hand-writing, for the purpose of misleading Major Arm strong; thirdly, for practising gross deceit ; and fourthly for having fraudulently obtained several sumas of money by drawing bills on Messrs. Cox and Co., Arny Agents, in London, knowing at the time he had no funds in their hands to meet such bills, which accordingly cam whole of the charges, atul sentenced t.) be d...nissed This sentence bas since been confirmed by her Majesty. Broech has published a declaration in the Munich Journa in which, after describing bis castle and possessions, he says, it is very melancholy to behold none but myse in my looking-glass. I have, therefore, resolved to marr like other simpletons; and since it is affirmed that mar my wishes to all young ladies, through the medium of th newspapers. The one 1 wish to marry must be between
16 and 20 years of age; she must have fine harr, fine teeth, and beautiful little feet. She must be born
honest parents, and her fame must be spotless. She mus dress elegantly, but plainly, in either silk or velvet, but no o:her materials. She mest not wear ear-rings, chains,
rings, or any silly ornaments of that descrintion; neithe must she wear slippers, caps, ribands, false hair, 8 cc ., no
have her dresses made after existing fashions, nothin being so foolish as to follow other human beings, as com follow one another. She must have ber clothea made, and wear them according to her own taste and fime. heredles of what the herd of foshionable namell way sty about i. She must know or learn how to ride or driwe. We mus never knit, that being a mere manual occupation to con ceal stupidity. She shall he allow. perfect in that art, it being tiresmue to listen to the ba
performers who anomoy visitors in so many hou-s. Shat shall be mistress of the house in all domestic a atters, an I, myself, shall be happy to yield to her reasonabie alims being a great eneuly to slavish obedience an. I subimisait in my opinion a shame that a man showld gon aboet living in splendour
married couples, fore must not, as is the cas: won mos cons iend to coax her husband, as many a bigh-minded Whaterer I have expressed by the worl mmat is not slavery, but a conumet entered into for her real welfare. the day of her marriage she shall receive 30,000 torins she wilt, however, be obliged to spend as may sut he pleasure, no vice being mare abominable than avarica my wife frisk about like an idiot. If she have properts I mer own, I will not take it from her on marrying tert years old, actording to the almanael, but oniy twinty-fin judging by my health and strength. I am always theerfal It seek for pleasure wherever the strictest honnar atimes ci girl, willing to bustle about on horseback, in travelling, of at home with an old mand, atill hale, hearty, and necive
slie may write to me, and I will go and mit hat, to se she may write to me, and I will go and $m$ it $h$, , inise leagues of Munich, but not further, engagint in nuy with of honour that her mame never shall be vicir. I. Th b-ld barmen's worl as to his halenens of constitution seem to bave been taken so literally, that the number of fair ip plicants who replied oecasioned some press of business thowismd proposals within a short period, and that ctolice has fallen on a young lady of Munleh.

 Eirder") and "Berjamin Greene", sercatat to Militon. The poet mas bind at the time of the signature, neererthe
less his autograph is remarkably clear and regylarly writen. The coprright of the poem was sold for 102 , there teing 5 , paid in adranee, and 5 . at the expiration
of tuo years, when 1,300 copies had been old. . For each
edithen edition not exceeding 1,500 copies, the poet was to be
 serenty guineas, it is said, was the purchase-money for even the agreement! It is now framed and glazed, and ocecupies a conspicuous position in the poet's drelling in

## THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEy

## No <br> SATURDAY, JANUARY 9, 1841.

 The Horticultural part Edited by Professor Lindley. Garliening is admitted to be better understood in Great Britain subject prove the patronage it receives, and the desire there is to extend the knowledge of its various branches. Many thou-
sand persons are engaged in the business of Horticulture as a
means of existence, and a vast number more are interested in the subject, for gardeng are now an indispensable part of the domes-
qic establishment of every person who can afford the expense.
No one will, therefore, doubt the advantage which may be derived from the establishment of a Journal conducted in an honest cheap means of intercommunication on professional subjects. The plan proposed to be followed in the management of The
Garinevers Chrovicie, is in the pirgt prace to make it a
weekly record of every thing that bears upon Horticulture or
Garden Botany, and to introduce such Natural History as has a Garden Botany, and to introduce such Natural History as has a
relatiou to Gardeming. tngether with Notices and Criticisms of
cvery work of importance on the subject which may appear. Connected with thin part of the plan will be a WEEKLY CALENso artapted to the varsing seasons as to form a constant assist-
ance to the memory-Foreign aud Domestic Correspondence
ipon Horticultural subjects-Keportsof Horticultural Exhibitions and Proceedings-Notices of Novelties; in short, everything that
 G.IRDENING is in many respects the art of creating an ARTInu:d evidence, h.werer, regarding the real nature of climate, PHYSIOLOGIGALINQUIRIES, and all those interesting topics which elucidate the harmony of nature, and the dependence of subject of discussion.
Another pecaliar feature will be the introduction of informaof the most important subjects to which the attention of the pabaffected by the management of timber stands second of property to that uf land. The natural laws which govern the production of tim-
!ipe a and regulate its growth, the value of it, the extent to which
it is infuenced by soil, and consequently to what circumstances
are to be ascribod the great inferiority in puality of the same spe cies grown in different places, are all points to which attention that very important but much-neglected subject, the diseases on
trees, aud the cause of their decay, whether natiral or acciden tal, as well as to convey the earliest notices of the introd accidenow species, which promise to increase either the beaty or value
of woodand property. When to plant, to prune, and to fell, wILL Although it is not intended to occupy our columns with the arming, it would be impossible, even if it were desirable, to ez pants, whiether upon a large or a smallscale. Whatever, therelore, may be found
be constantly reported.
To the FLURIST our Miscellany will have much interest, not oaly because everything relating to those rare and beautiful proir such a manner as to make him thoroughly acquainted with he merits or demerits of new varieties, and with their best modes piniuns as may be given are the results of an honest examinaIn TRB SBCOND PLACB, we shall introduce that description of
domestic and political News which is asaully fonnd in a wreel paper. We consider it nnnecessary to dwell on this head farther
 wo Reword of Fruets caly-a Newspriper in the true sense of the
urd-leaving the reater to form his own conclusion and opimons; our object beng the elucidation and discussion of the
laws of nature, mot of man. The reader will thus be provided, in of information concerning the events of the day as will supersede The propretors ine to wither Journal. The proprietors are happy to announce that they have already mends and supporters: among whom the following may be more urticularly named:

Covent Garden, London; and 106, Deans ${ }^{\text {Sate, Manchester, }}$ embrace this medium nf inviting the attention of Nobleraen, Gien-
Ulemen, and others, to their extensive Stock of American Evergreen and Flowering Shrabs, Forest ind Ornamental Trees Fruit trees, dwarf and standard, trained and untraneed, at their
Nurseries, situate as above, on the great Dover Road; to which place persons are conveyed in ten minutes by the Croydon Railway, from the terminus at London Bridge.- Horticultural Jm-
provements designed, and the Ground arranged and planted.-
Garden Seeds of Garden-Seeds of the best quautr and most approned thed butbs,
Train Seeds of excellent sorts, saved from transplan manded by the author of the "Hortus Graminens Woburnensis." the late Mr. George Sinclair). C.,. S., and O. having supplied to
the extent of 22,000 acres with the sreatest N. B. The Embankments and Slopes of several Railways have been rendered more secured in consequence of a close mated
sward being early produced by an animizure of Gras-Beeds
obtained tromen obtained from their establishmen $\qquad$
HOT WATER APPARATUS FOR HEATING CHURCHES, and MANUFACTRRIES, upon improved principles, and at Very moderate charges, erected by DANIEL and
EDWARD BALEY, $2 \bar{\tau} 2$, HOLBORN.
D. aud E. Ballesy having devoted much time to the considera. tion of this subject, and had ruch experience in the erection of
apparatus for the abueve-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heat durability in the apparatus with economy in the chargc. They
have erected apparatus in England, Scotland, and Ireland, for many noblemen and kentlemen, and have had the honour to be the works of their splendid Conservatory, lately erected at Chis. wick, from the desigus of Alfred Aioget, Eeq- all descriptions of Horticultural Buildiigs and Sashes, and iavite noblemen, gentlemen, aud the pablic to an inspection of their vanious drawings and mudels at 272, Holborn, where they have the opportuniry
exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the con tinued supply of hot water, and an arrangement of the oven
more complete than has hitherto been brought before the pablic. D. and E. Bailury were the first to introduce metallic curviliattached to the Pantheorists, and can refer to the Conservain others in this country and on the Continent.
THE GREAT CHATSWORTH CONSERVAGlazing adoptent Conservatory, is the entrely new mode of Glazing adopted there. Its striking novelty and beauty of ap-
pearance are acknowledked; and Laving now undergone mos pearance are acknowledged; and kaving now undergole most
satisfactorily all the various trials to which every alteration of season and temperature can subject it, its success as an expe-
riment may be regarded as complete. It has established its great
superiority superiority to every other methed now in nse, both as regards
the Glass employed and the mode of Gilazing it, in securing the adrantages of duraability and exemption from thise causes of
breakage dependant upon weather, and beiur berond all comp heat and the transmission of ilight, the work the Chatsworth may be safely pronounced to be an example of the most perfect system
of Horticulturar Glazing that has yet been devised.
 worth Glazing was intrusted, is honoured by his Grace the Duke of Devorishire's entire approbation of the manner in which it has
been completed ; which' approbation his Grace bas been pleased
 attention of such Noblemen, Gentlenien, and Horriculturists ge-
nerally, as may contemplate the erection of any building for hor ticultural purposes, to the Glass and Mode of Glazing which have been so successfully employed at Chatswnth, he has the kind
permission of Mr. Paxton, under whose judicious management the works at the Conservatory were conducted, to make reterence to him for any information that in such cases may be re-
quired; and $J$. Drame begs re:pectully to add, that he shall at all times be happy to furnish Lists of prices of the Glass, or any other particulars which it may be deemed desirable to obtain,

SATERDAY，J．N゙でARY 9， 1841

## Tuesdas

$W_{E}$ again request the attention of our readers to the Proceedings of the Swansea and Neath Horticultural Societs，as reported in our last number．By this society the improvement of the condition of the labouring classes Las been regarded as one of the most important objects to which its means could be applied；and its efforts have been crowned with such success that a very extensive culti－ vation of vegetables has already arisen；in addition to which substantial benefit，＂cottage－gardens are now seen cultivated with taste，ornamental plants are neatly trained against the dwellings，and in many instances comfort now reisns $w$ here formorly misspent time，to say the least，gave no return．＇
We regard this fact as one that deserves the most serious consideration，not only of the managers of local horticultural societies，but of the humane and benevolent in all parts of the kingdom．In order to improve the condition of the poor man，one of the first stens is to give him a more powerful motive for spending his leisure at home than for wasting it abroad ；for if the latter happens， the beershop or the public－house is almost his only re－ source．But to keep him at home he nust have an occu－ pation，and not only such an one as is suited to his habits of life and his slender means，but which he can readily understand，and which leads to some ulterior advantage． To cultivate the piece of ground before his cottage with reget－ables is an intelligible object，and may be thought to cariy mith it its own inducement；but it is often coupled in the labourer＇s mind with the notion of labour，and of that he has enough in his daily work．Besides，le dnes not know what seeds to som，or at what times to sow them， or how to manage his crop most advantageously when he has raised it，or in what way to expend his means，such
as they are，in the most economical manner．These therefore，are difficulties which require to be removed． With regard to decorating his house，that is the rosult of hasing gained a step in the scale of civilusation，and will only take place when his home is endeared to him by finding it the source of more happiness than he can pro－ ure clsewhere．It must necessarily be some time before lins mind，and，therefore his feelings require to be roused hos imind，and，therefore his feelings require to be roused by some stimulus．To give him something to be proud
of in lus humble abode is，probably，the most easy of all of in lus humble abode is，probably，the most easy of all
means of iuciting him to exertion．The prizes of horti－ cultural societies afford this incentive．There are no per－ sons more sensifle of the value of such results as those When hare been arrived at by Mr．Vivian aud his friends than Engish gentlemen；and we are certaiu they would gladly lend their powerful aid to local horticultural so－ cieties 14 working out so good an end．We therefore strongly recummend the subject to the consideration of them and of the upper classes of society in general ；and we shall lend our own lumble assistance upon all occasions．

OAK BARK AND TANNERS＇MONOPOLI IBEG to call the attention of the proprictors of oak to a gystem of combination pursued by tanners，materially affecting the value of the bark of that tree．It is now ten years since I became manager of the woods at and riod the best oah bark upon the estate sold for 8 l per rod the best oak bark upon the estate sold for 8 l．per cood or load；since then the price has fallen about 10 s． ittie more than one－half wiat it did in 1830 ，and this without any material change occurring in the value of raw or tanned hides．I endeavoured in 1835 to stem this iery great and regular depreciation of the price，by stack－ ing the bark and holding bark the supply in my neigh bourhoou，but did not succeed，because other great bark owners solu theirs ：and at length I fisund the depreciation Was caused by the principal tamers at the commencement rade，at whing season cailin；a private meeting of the is determintu upon．This be given that year for bark fore appeared a riddle，Tiz diecurery explained what be－ the same unvarying tale of that every tanner should tell ere same unvarying tale of falling prorits；ald that，how． ore gieat their cotamaints of trade and of each other， they an should be admirably agreed upon the one ma－ Tial point，of a reduction in the price of bark．
The price of British bark is now only about half what it was in laju，whist foreign bark has only decreased about 1\％．jer ton，as will be seen by the annexed tables： a wost undir propertion，when the consider that the ex－ pense attendant 0.3 the carriage of forelisis barla from Hull or any other seia－pore，is ceriainly more than equiralent to the price paid for peeling at home，which is usually de－ frayed by the tanner．The prices of foremsa bark given in tise table were procured from one of the greatest impurters in Hull；but find upon referring to the published re－
turns of London prices，that the best bark averages $2 l$
average price of bark for ten years．

## NOTES ON THE DAHLIA．

The Dallia is subject to vary so much in different situations and seasons，that great difieulty exiats in gaining an accurate knowledge of the merits of each kind，expeciaily of those which have been only seen for one sea－on．The circumstaners under which it is growa are alsn कo various， that unless you see the plant，you cannut farly juige the maprits of the flower．A great deal of atention 1－re－ quister．in ordur if possibie to find out what jartientar exampla，whether the shoots have been rman，thinneu，the flowers shaded，a great deal of manure given．ar none at all，sce．All these circumstances shothd be inquired inta or how ean we expect to get tine flowers froms new lrinds The following facts with regard to new sinds of Dahlha shoutd always be horno it mind before condemning thea

1．That the seedling plorit is much debritate 1 by pro payation，and thereture the wwers ary rarely as god the
second season as they are the frst and third．This cir－ cumstance slome aecounts in a great measure for the dis－ satisfaction expressed of late years concerning the merits new Dahlias
．That the best flowers are obtained from these plantz

As soon as the plants are ahout two inches above yround they should be potted off into small sixty-sized pots: and whenever the plants appear to have nearly filled tho rots with roots, ther should be removed into pots a size larger; for as much of the suciess of growing them well denends upon the paying proper attention to their re-potting as upon ans other part of their management, a good deal also depends upon the keeping up a proper degree of heat in the bed; it should never by any means be allowed to get cold; the plants will not be easily injured, so long as the heat is not sufficiently strong to burn their roots. Too much heat to their roots can howerer be easily guarded against, br the material in which the pots are plunged being of sufficient thickness to allow the pots are plunged being of suffient thickness to allow
of their being plunged, little or much, according to circumof their being plunged, little or much, according to circum-
stances. For this purpose I have used sarr-dust ; old decayed tan would however answer just as well. When it is an object to have the plants of a dwarf growth, they should be kept as near as possible to the glass; never allowing them to be more than a few inches from it. The most proper degree of atmospheric heat I consider to be sisty deg. in the night; and in clear sunshiny weather, with plenty of air, seventy deg. in the day ; but better to give a little air, even should it prevent the heat of the bed from rising higher in the day than during the night. A high temperature, without the benefit of the
ON THE RENOVATION OF DECAYED FRUIT-

## TREES

Having made a series of experiments for about 5 years on a hollow fruit tree, on a principle the reverse of that of the late Mr. Forsyth, that is, clearing out the decayed and hollow parts, and exposing them to the sun,
sun's assistance, would evidently force the phants into a recocions growth; or in other words, would cause a flow of sap, greater than would be the correspading powse, for converting it into the proyer juices necessary for the well being of the plant. Indeed air is so indispensably necessary, that without a constderable share of it, during the whole of their growth, the plants, instead of beirg of a dwarf bushy growth, will be what is generally termed "drawn up," which will not only detract from their fine appearance, but will likemise prevent the flowers from attaining their proper size.
Whenerer it is found that the bed is much decayed. and too cold at the bottom of the pots, recourse should be had to a new one, as it will be found that making a new bed will, in the end, be attended with less trouble than the continually applying linings to an old one.
Care should also be taken. at the re-potting, to have the pots clean and sweet; in fact, the newer the pots are the better. The mould in the pots should never be allowed to get very dry. Pots of the size called sixteens will be sufficiently large for the last shifting.
To sum up in a few words; the success of growing cockcombs well depends priacipally upon paying attention to giving them a good mild bottom heat, plenty of air, plenty of pot room, plenty of water, with as much light as possible, and plenty of room between the plants in the bed.A. Saul, Lancaster, December 21st, 1840.
instead of filling them with a cataplasm, which only covers the disease, without curing it, I send you a wood engraving, with references to the various parts of the tree, $\& \mathrm{c}$.

## 

 moved as barrenaved as barren. reconty reb New wood, fall of fruit in the summer of 1838 . There was also fruit of a fine flavour, though diminished in size, and less in quantity, in the summer of 1839 and 1840 ; after which the tree was, by way of experiment, headed down to the second branch from the root, between the letters $e$ and $b b$. It should be observed, that the two lowermost branches, which are the latest and the strongest, are on the side which has a southern aspect: the influence of the $\operatorname{sun}^{\prime}$ s the being calculated the last efforts of vitality here, by mains of the alburnum.
c Lateral shoots, or spurs, left for variety to take their chance.
d Decayed spurs, lately removed.
e Large branches removed long since.
$f$ The point where the hollow part begins; from which it extends, in a circuitous manner, to the very root.
$g$ A strong shoot recently formed in consequence of cutting off one just below and another abore.

Fresh mould occasionally heaped up behind; in order to hourish the small fibres of the roots, which grow between the ree and the wall.
N.B.-The soft, decayed, and spongy substance, which about fifteen years since was discovered filling almost the whole of the interior of the truak, from $e, e, f$ to $h, h$, and formed akind of invisible nidus, or nest, for worms, earwigs, and every variety of deleterious vernin, has heen long removed. This operation of bo tinucal surgery was performed as a mere experiment; which may crsinv, in opposition to that of the cataplasm. or Forsyth plaster. The esperimen: having suc ceeded, by preducing the finest fruit repeated!y in a tree which had not borne any hefure for many years, it is preswame that it may fairly be recommended to general attention.
For the aceompanying woodcut, hlustratinx this communicat.on. ${ }^{2}$ liave to express our of Triuity Colege. I
cluster of the Incomparable brought fruit, as in mild sea. sons, not appearing to suffer in the least from the temperature that was death to the blooms of such varieties as Glout morrert", Be'rré Diel, Maric Louise. Passe Colmar, and many others, all of which were in the same state of forwardness in their blossoming; the ouly varieties that appeared to approximate in hardiness were the Althorp Crasanne and the WinterCrasanne of Mr. Knight, and a common prolific pear known in Spitalfields as the Grey Beurré. The Hacon's Incomparable pear is remarkable for producing better fruit as a standard than on a wall; its origin is worthy of being recorded. As the history of the parent tree, now apparently about 60 years old, and in a fine healthy state, growing in the yard of Mr. Clark, a baher, at Downhan, in Norfolk, is unknown, I was inclined to think it of accidental origin, from seed at Downham ; but very lately I have heard that an old tree is growing in the kitchen-garden of the late Admiral Harvey, at Chigwell, Essex. I have never yet received this variety from France or Belgium, and I find it inserted in the French catalugues under its English name. From this, and also from finding its blossoms hardy like our well-authenticated English varieties, I am induced to think it decidedly English, and I hope more worth our boasting of than the new French pear with the long name of Van Mons Leon le Clenc, which ripens in October, when our tables are full of pears of first-rate quality.-I also send a few specimens of Beurre Rance, from standards, remarkable for having ripened full three months before their usual period, but very juicy, and I think of rather higher flavour than from walls.-Now I am on the subject of pears, you will perhaps allow me to notice the wide departure of many varietiea this season from their usual period of ripening. The influence of soil and seasons on most of the new pears is almost incredible. By different correspondents giving their experience on this head, a mass of valuable intelligence may be collected ; it will, however, be necessary to give soil and situation, and to state whether grafted on a quince or a pear stock. The following have ripened prematurely, although kept in a cool airy cellar, in which I have in most seasons kept Beurré Rance till June; they are all from standards :-Althorp Crasanne; usual seasom January, fully ripe the end of November. Beurre d Aremberg; usual season January, fully ripe the beginning of December. Beurre Diel, usua season December, Yuly season December, fully ripe the middle of November. Marie Loouise ; usual season the end of October and November, fully ripe the end of September. Winter Nelis; usual season January, fully ripe the end of November. Winter Crasanne; usual season January to February, fully ripe the beginning of December.
At Audley End, the seat of Lord Braybrooke, some Marie Louise pears ripened on the trees in September, as did also the Crasanne; but Mr. Young, the gardener, informs me that owing to the lightness of the soilall the varieties of pears ripen there much before their proper season. Those I have enumerated were taken from trees planted over a surface of 35 acres, in soil varying from strong clay to tion of soil mend to my brethren of the "ancient art" to send any remarkable specimens of fruit to you; they will now be sure of impartial and correct judgment as to their qualitien and nomenclature. It will be particularly interesting to know whether the quince stock is apt to deteriorate the favour of pears in all soils : in light and dry soils I have much reason to think it does. Evelyn says, in his "French Gardener," 3rd edition, 1672 , "All sorts of peartrees may be grafted after any of the four preceding lalluding to four now well-known modes of gratting; methods, but they succeed incomparably upon the quince, and produce their fruit much earlier, and that fairer, ruddy, and of greater size, than when they are grafted upon the freestock. Again he says, page 4, same edition,-- Peore, the pear or temale quince (which hath the fruit like a calabasse), the great Portugal quince (pointed at both extremes) ; the first is the least, the ordinary is the nest, that of the Portugal much more excellent, and abounding in sap." The first sort is that used now by the French for stocks, as it strikes freely from cottings; the last is comparatively scarce, being propagated by budding on the common quince. These worked plants used as stocks would probably be excellent for pears; for "double wortiing " is often well known to have a good effect on fruit-trees.-T. Rivers, jun. Sawbridgeworth, Dec. 1810.
[Hacon's Incomparable is, in our opinion, the best winter pear yet produced. It was first brought into notice, through the Horticultural Society, by Mr. Motteux, a great authority in all matters relating to the dessert. The specimens of both it and the Beurré Rance, another firstrate pear, from Mr. Rivers, were perfect

Duarf Perr-trees. -Haring often been struck by the large crops of fruit produced by pear and apple-trees trained en quenouille, both in Flanders and France, obtained from Mr. Rivers, of Sawbridgeworth, in the course of the autumn of $1: 39$ and spring of 18 80, a collection of smill trees. sn trained ; these had been treated in the manner suggested in his paper in the last part of the Horticultural Transactions, viz., the tap, or principal reot, had been pruned, and for two or three years the roots hail been cut round, so that when the plants reached me that was a siall mass of fibrous roots attached, very much the a pant which hal grown in a prot. Thene were pham Carctany, in sume rich suil; the hul. sell crained, alr althougth the last sprity was very unfaviaratie to nenly planted trees, yet nearly civery tree produced fruit, and all the trees are now covered with blossom-buds. As I had
hitherto waited patiently for six or eight years for a crop
of fruit on the pear-trees I had planted, I think I shall be doing your readers a service in calling their attention to this mode of proceeding, by which early and sure pruning the roots every two years, as suggested by Mr. Rivers: you become independent of soil; a barrowful of
good mould, and half a barrow of manure, will afford sufficient nourishment to your tree : and you need no longer be under apprehension of the roots travelling down intocold clay, \&xc., as has been the case with all the trees
which I planted in the common mode some eight or ten years ago, the result being either the production of a few
specimens of bad fruit, or a cart-load of ranpant unfruitful branches. These small-bearing trees enable you to plant them in a spot where the bloom is more readily sheltered a square of the patent netting which would cover a bed containing four or five dozen of the trees, and at once protect them from frost in spring, and from birds in sum-
mer.-H.K. Cheshunt. $\underset{\text { P.S. I may mention an }}{ }$
eceived, one of superior excellence, virious sorts which I Patent Net for Fruit-trees.-Having covered a large bed of strawberries and currants with some of the patent net, stretched on a frame about three feet from the ground, as a protection from the birds, whilst under it I fancied I as regards the wind, although blowing hard, it was not felt under the net. It occurred to me that this cover-
ing during the blooming season would be a material protection against cold winds and perpendicular frosts; and I intend to cover both wall-trees, strawberry beds, and a patent net during the ensoing spring. I mention this to you, in hopes that some of your readers may be induced to try the same experiment, and, as I shall do, send you the result.- $\boldsymbol{H} . \boldsymbol{K}$., Cheshant.
end you for theGardeners'Chbonicue, the occasionally send you for the Gardiners' Chzonicle, the appearance
of which I hail with great satisfaction, a few practical of which I hail with great satisfaction, a few practical
remarks apon the treatment of varioas plants which I have been successful in cultivating, and 1 know of none that is more deserving of notice than the subject of this letter, nor any the merits of which are so little appreciated.
I believe I may safely attribute this neglect to the very different appearance which the plant assumes when treated as I have too frequently seen it, and cinchonaceous plant, found on the mountuins of Nepaul where it attains the size of a small much-branching tree. It was introduced in 1823, but is not yet found in collecThe plant from which I gathered the flowers and foliage now sent you was planted out about two years ago in the border of a conservatory, into which abundance of air is
usually admitted, and which is kept at a very low temperausually admitted, and which is kept at a very low tempera-
ture ; indeed little artificial heat is employed beyond what will exclude frost, and the thermometer has frequently been
as low as $36^{\circ}$ Fahr. The dimensions of my plant are as low as $36^{\circ}$ Fahr. The dimensions of my plant are,
height 7 ft., diameter (measuring through the branches) height 7 ft ., diameter (measuring through the branches)
5 ft .6 in ; diameter of a cyme of towers 7 in., average length of leaves 12 in . The border in which it grows was excavated 2 ft .6 in . deep, in the bottom of which is a stratum of drainage composed of brickbats and coarse of heath-mould rough from the common, upon which, ayain, is placed the compost, consisting of one-third strong rich loam and two-thirds sandy heath-mould (or as it is commonly but erroneously called, peat-soil) coarsely
broken and well blended, but on no account screened. I consider this drainage very important to plants in general,
and absolutely indispensable for Luculia, the complete and absolutely indispensable for Luculia, the complete
success of which will materially depend upon this being attended to. During the summer and early autumnal months water should be freely supplied, and the under surface of the leaves, as well as the whole plant, repeat-
edly washed with the fine rose of the syringe I surface of the leaves, because of being subject to the attacks of red spider, which I need hardly observe will. if undisturbed for any length of time, greatly injure it. I know of no more effectual rar thod of entirely preventing the inroads of these minute but formidable euemies than ally some liquid manure is applied, but this requires caution, and must not be repeated too often, and not at all after the summer season. The general waterings must also be gradually diminished in September, and afterwards administered very sparingly, for the fine fibrous roots are easily injured by tio much moisture. Under this easy management Luculia is a splendid plant, cuvered with cymes of beautiful flesh-coloured fragrant flowers, which
continue in perfection during the dull months of ber, December, and January. Its foliage, too, is luxariant, dark, and green, and cuntrasts adnirably with the successfully cultivating this beautiful plant should obserse that it rectuires a much cooler treatment than it generally receives, and should never be grown in a pot when it can be planted out in a conservatory. In the hot-house, the roliage is liable to injury from the sun's rays, unless
shaded. I have not yet tried Lucalia upon a tcall, but I think, jadging from all I have observed of its habits, that it would succeedi in such a situation, and if so it would tea splendid object.- Hortuluitus. [The observations of our correspondent agree in all respects with our experience of this plant, which is cften overnursed.
It is one of the finest exotics in the country. The apecimens he sent were in the most perfect health.]
Fruit Trees.-Mry ground is poor sand, formeriy part
much for it: but below this is the unbroken pure sand In planting I took all possible precautions, dug holes but so soon as the roots push beyond this artificial soil the trees canker. Can anything be d
cost to remedy this? - E., Weylridge.
This question is connected with a very common error. When a border is to be made for fruit trees, it is supposed that it cannot be either too deep or too rich; but this is a
capital mistake. The object of a gardener should be to keep the roots of his fruit trees as near the surface of the ground as possible, in order that they may profit by
the warmth of the sun, and a free communication with the atmosphere. It is obvions that all attempts to induce fruit trees to send their roots downwards instead of horizontally must be injurious, and that a deep border is have lept his soil shallow, say two two done, was to deep, and to have extended the circumference of his prepared soil. All that he now can do is to ascertain how soil, a foot deep, into which they can penetrate; but they will soon reach their new boundary and again canker To remedy the evil effectually, the trees should be lifted; the coarse roots that shoot downwards shonld be cut
away; and before the trees are re-planted some artificial means of preventing their roots again pushing downwards should be employed ; such for instance as putting slates at the bottom of the hole.
Gooseberry and Currant Trees.-All my trees are disposed to throw out suckers to such a degree as to prevent them bearing either abundant or fine fruit. I have places, but they all degenerate as fruit-bearers. The soil is rich and very damp, and the garden surrounded with running water. What course should I pursue
[Train the gooseberry and currant trees to a short single stem, and check the suckers on their very first
appearance. If however this has been already ineffectually tried, the evil must be owing to the wetness of the subsoil, and the remedy will accordingly consist in lowering, if possible, the stream of water, or otherwise draining

## FOREIGN CORRESPONDENCE

Hobarton, Tasmannia, 18th May, 1840. -The fern-trees grow in almost every shady humid ravine in the colony, where other trees protect them from the sun's rays and from the effects of the winds. On the south, west, and northern parts of the island, extensive forests exist, where the trees grow so large, and so thick together, as to exand in those sit air in a great deg, bound and attain height of 25 feet or more, with fronds 12 or 18 feet long, They appear to like an even temperature; but yet they must endure considerable cold, as they abound on the southern side of Mount Wellington, as high as 1500 feet in the cold region of the Surrev Hills. Humidity and a soil composed of rich decayed vegetable matter are essential to them. I have seen them grow out of the rotten heart of an old tree eight feet from the ground-the outer
wood of the tree being sound. In these humid places when a fern-tree falls down, the crown appears to have power to form roots immediately, and turn upwards; in fact, the top will grow, even if torn from the lower part of the trunk, in these humid forests, and two fine living plants have been sent home, formed from the heads of prostrate trunks; the trunks having decayed. Annually the old leaves decay and fall down, hanging perpendicularly to the trunk for some time, until they gradually decay and drop to the ground, new leaves as regularly forming, and thus tree fre the height of the trunk. The crown of the fern tree frequently becomes a complete receptacle for rotten leaves from the trees overhead, and seeds vegetate abun-
dantly on them, so that I have seen trees of Cryptocarya dantly on them, so that I have seen trees of Cryptncarya
glaucescens 212 glaucescens $2 \frac{1}{2}$ feet in circumference, and upwards of 30 feet
high, growing out of the side of a fern tree ten feet from the high, growing out of the side of a fern tree ten feet from the
ground, the roots of the Cruptocarya surrounding the trunk of the fern until they reached the ground. Tasmannia aromatica may be seen growing out at right angles, sumetimes as if it had been put into an auger-hole in the trunk. Pittosporum bicolor has also a pecuiliar affection for ferntrees, and attains tu a large size on them. These, and oceasionally a Pomaderris elliptica, are the principal, but not the only ones seen. Eucalypti never grow on the fernsat least I have not seen any. In addition to these plants which take root in the tops of the ferns, and at the base of their decayed leaves, the trunks, in many cases (or rather most cases, where very damp), become completely enveloped with the membranous ferns, such as Triehomanes
and $H_{y}$ menophyllum. Polypodiums, Aspleniums, and $P_{0} i-$ lotum truncatum, also help to cover the trunks, and make them green and beautiful to the ere. The trunks of the tree fern sent to England were from an open situation, where the trees had long been remured firum about themso that they were drier and more likely to cravel well, but certainly not so interestin,, as they woud have been from England, shade and shelter from sun and wind are vitally necessary ; but there appears notising to prevent their growing in a grove of evergreens in any warm valley ; but they certainly will not do where they are merely shaded in
summer by deciduous trees.

PROCEEDINIS OF SUCIETIES.
 A second lectise was delivered by the Rev. Heary Caitel,

[^1]
ployed in sugar-refining in London, and being able to
stand the heat of the process over the boilers better than most other workmen, were selected for this purpose; but tered into their heads to grow the sugar-cane; and from a letter we have receired from the principal person engaged in it, dated 23 i July last, there is mon mention mate of
any such seleme. Indeed the land they have purclused fust their operations, which it is stated is much more than sufficient for their ubject, would not be enough for a sugar
plantation, and the latitude of Sydney itself would not do for the plant.

The Almeria Grape.-As this is now sold in Covent Garden Market, we gladly publish a memorandum con logical friend. The Almeria Grape is not mentioned by that name in "Clemente's Essay on the Vines of Spain." the "White Raisin Grape of Langley," and the White Raisyn of "Prince"s Treatise on the Vine.
Fictoria Regia-Seeds of this, the queen of hothouse aquatic plants, have at length been procured in a fresh state by friends, has left a few for sale in the hands of Mr: Pamplin, Queen-street, Soho. These seeds were procured after the coloured man who acted as cockswain during Mr. Schomregion where the plant grows. The two previous times he region where the plant grows. The two previous times he and consequently perished. On his return from the second trip, he brought two more plants to George-town, which are reported to be growing at Mr. Bach's, who has planted them in a pond in his garden. It is, therefore, probable that we may succeed in getting the plant alive
to England; but some fear is entertained that it is, like Eurgale, an annual.

Apiaries.-We understand that Dr. Beran, the celebrated writer upon Apiarian affairs, is occupied in an interesting tombing bees during winter.

Araucaria imbricata.-A fine crop of this rare plant has been raised by Mr. Ponter, Nurseryman, of Plymouth. A correspondent tells us that the large almond-like seeds were pricked into the gromnd for only a third of their to a brisk buttom heat. He describes the daily progress of the young seedlings, under these circunistances, as something quite beautiful; every step in deselopment water has yet been given them, and they will in a short time be removed to a cooler situation.
Seed Wheat.-It gives us sincere pleasure to observe, that Col. Le Couteur has been elected a Vice-President of
the "Institut i $^{\text {A Afrique" of Paris, and that his work }}$ on wheat is so much apireciated in France as to bare procured for the author a silver medal, from the Academy of Agricultural, Manufacturing, and Commercial Industry. We do not know any person more worthy of such dis-
tinctions, or one who has laboured more faithfully and earnestly for these rewards than our gallant friend, who is one of the few agriculturists that have attempted systematically to improve the races of wheat. Attention to this subject was strongly recommended the other evening by
Professor Henslow in his lecture before the Agricultural Society; and we are glad of an opportunity of adding our own testimony to the paramount importance of doing so, with a view to increase the qualits and quantity of the
wheat crop. wheat crop.

## GARDEN MEMORANDA.

 minute crystalline spicule, interspersed with invumerable pale,
fragrant, highly in inammable realnous globulet, whence it has derived the name of the Salty Bircti
A Catalogue of the Plants grovering in Bombey and its vicinity. By John Graham. Bombay: 1339. Tris is a descriptive catalogue, in English, of the plants known to the author and his friends as inhabiting the
Bombay Presidency. It contains a considerable number of species, and some genera supposed to be new. To residents at Bombav it must prove a usetul work in the absence of one more extensive; and to persons in other countries it is an acquisition, from its pointing ont what the plants are which may be procured from Bombay The author unfortunately died while his work was passing through the press, and it was completed by Mr. Nimmo Such a book afords but little matter for extract. The following, are however, interesting facts :-
The $\mathrm{I}^{\prime}$ arrunna, Cratueva Roxburghii, a middle-sized tree with trifoliate leares and showy greenish white flowers that is generally to be met with about temples and Mussulman tombs, is also a native of the society Is lands, where it is planted near the aboudes of the dead, the same as in India. This argues strongly for all
The celebrated plain of "Plassey" in Beagal, where Lord Clive defeated Surajah Dowlah in 1757, derives it name from a venerable and holy Palasi tree, Butea fromdosa, which grew upon it. This is a magnificent tree, whose flowers are of a deep red shaded with orange, and closely clustered in large bunches.

Gum Arabic tree, Acucis urabica, called the Ba bool tree, is common in the Deccan, where it thrive equally well on a black or red soil. It grows rapidly, and requires no water. When covered with round heads of yellow flowers it is very ornamental. Moore has happily introduced it in an Arabian scene.

Our rocks are rough, but smiling there
The Acacia wares her yellow hair,
Lonely and sweet, urr loved the less
For flowering in a wilderness."-Lalla Roohh.
There is a variety or distinct species in Kandeish, called Ram Kanta-a tall erect-grawing broom-like tree; and another in the Buglana districts, which abounds much more in gum than the common Babool, and differs from it in the form and colour of its legumes. The seeds and pods of these trees are of great value to the shepherd in the hot season, as food for his flock, when grazing is scarce
Argyreia crneata, a plant not unknown in this country under the name of Ipomeea atrosanguinen, is spoken of a a species of great beauty, on account of the deep brigh
purple colour of its flowers. It is common in the Mawul purple colour of its flowers. It is common in the Mawul
districts, above the Ghauts, and in Bombay and Deccan gardens. This species is entitled "to the first place
among the convolvulaceous order." Two other Bombay species, viz. Ipnmoen bracteata, and I. pulchella, are also mentioned as handsome species.
In addition to the Banyan trees (Ficus indica) of enormous size already on record, a new case is added upon the authority of Col. Sykes, who mentions one at the village of Mhow, in the Poona Collectorate, with 68 stems descending from the branches, and capable of affording shade, with a vertical sun, to $20,0 \% 1$ men. Kabir Bhur near Broach, is now the gloomy recess of superstition, and near Broach, is now the glowy recess of hount firds, owls and flying foxes
the baunt of hateful birds, owls and fying inves.
We add for the information of our scientifie friends, that of the new genera proposed in Mr. Graham's work, that called Anictocleia is the same as Tetrameles, Eurychiton is a species of Statice, and Lepurandra is identical with Antiaris
In case this work should rpach a second edition, we trust its editor will give a good index of native names, whiel would add much to its utility as a book of reference.
Organic Chemistry, and its Application to Agriculture and
Physiol. gy . By Justus Liebig, M.D. Translated by Lyon Playfair, Ph. D. 8vo. London: Taylor and Wal ton. 1840. (Second Notice.)
We now proceed to consider uvon what evidence the fore going propositions rest, according to Dr. Liebig.
 carbon trith orygen absit hatrogen, nitrayen, and orguma aculs, nenerally conbinert with inorganic thats.
2. Carb $n$ is oblained by plants in the furm of rarbonic acid, derited from the atmosphere, of genterated in soil by the decay of cegetable matter.
It is frequently repertid by the author that the air, alone furnishes the carbionic acid from which plants obtain their charcoal, or as the chemists call it, their carbon. And he illastrates this position by a reference to the condition of reget
state of things
${ }^{\text {CI }}$ In former periods (he says) of the earth's history, its suritec was covered with plants, the remains of which are stiil found in the coal formations. These plants-the gigantic monocotyledons, ferns, palms, and reeds-belong
to a class to which nature has given the power, by means to a class to which nature has given the power, by means
of an immense extension of their leaves, to dispense with nourishment from the soil. They resemble, for this re
and which live while young upon the substances contained in their seed, and require no food from the soil when their exterior organs of nutrition are formed. This class of plants is, even at present, ranked amongst those which do not exhaust the soil

And in another place he farther explains this point by considering it a necessary consequence of the order in
which matter was created upon our planet. The dark Which matter was created upon our planet. The dark
substance which remains when manure is thoroughly rotted, and which colours the soil black, is by chemists called Humus. Without going into any technical examination of this product, we may state that it is a substance formed by the decay of plants, and very rich in carbon. The atmosphere, acting upon it, causes the production of what is called carbonic acid, and the latter when it is absorbed, or mixes with the atmosphere, and is inhaled by the leaves. To prove that this must be so, and can be no otherwise, the anthor adverts to the origin of vegetation. He says, "In attempting to explain the origin of carbon in plants, it has never been considered that the question is intimately connected with that of the origin of Humus. It is universally admitted that Humus arises from the decay of plants. No primitive Humus, therefore, can have existed ; for plants must have preceded the Humus," and consequently the atmospher sists of carbonic scid. The atmosphere obtains the car bonic acid thus necessary to plants from various sources partly from the respiration of animals, and more especially oxygen'and form carbonic acid. This perpetual augmentation of the latter substance would prove fatal to anima life if it were not consumed by some compensating means which means are plants. The latter are perpetually di minishing the quantity of noxions sir in the atmosphere.

The immense masses of carbonic acid which annually flow into the atmosphere from so many causes, ought perceptibly to increase its quantity from year to year. as from one-half to ten times greater than that which it has at the present time; so that we can hence at most conclude that it has diminished

But although the atmosphere is thus regarded as the great and exclusive source from which a supply of carbonic soil does in reality now, whatever may have happened in former ages, furnish a large proportion of what it contain to the atmosphere,-for all other sources of supply would be insufficient without the aid of the great magazine of carbon contaised in the soil. The latter, sa has already been stated, is Humus,--that is, the black matter resulting from the decay of previonsly existing plants. It is, however, neither. in a solid form nor in a state of solution that Humus becomes the food of plants. Professor Liebig dwells upon this point at length.

The opinion (he says) that the substance called Humus is extracted from the soil by the roots of plants, and that the carbon entering into its composition serves in some form or other to nourish their tissues, is so general and so firmly established, that hitherto any new argument in its favour has been considered unnecessary; the obvious difference in the growth of plants according to the known
abundance or scarcity of Humus in the soil, seems to abundance or scarcity of Humus in the soil, seems to
afford incontestable proof of its correctness. Yet this poafford incontestable proof of its correctness. Yet this po-
sition, when submitted to a strict examination, is found to be untenable, and it becomes evident, from most conclusis proofs, that Humus, in the form in which it exists in the soil, does not field the smallest nourishment to plants."

We are, we confess, surprised that the author should have thought it worth his while to raise such phantom for the mere pleasure of subduing it ; for we opinion that Humus is in itself the food of plants. Every student of Botany is taught that Humus becomes the food of plants only by combining with the oxygen of the at-
mosphere and forming carbonic acid gas; and hence the great importance of preserving the roots of plants in communication with the atmosphere, which is the great source of orygen. The author illustrates this fact as follows :"All plants die in soils and water which contain no oxygen; absence of air acts exactly in the same manner as an excess of carbonic acid. Stagnant water on a marshy soil excludes air, but a renewal of water has the sam effect as a renewal of air, because water contains it in so-
lution. If the water is withdrawn from a marsh, free lution. If the water is withdrawn from a marsh, free access is given
fraitful meadow

If any one inquires whence comes the oxygen which i thus perpetually consumed in rendering the food of plants fit for them, the anthor answers thus

The proper, constant, and inexhaustible sources of oxygen gat are the tropics and warm climates, where a sky, seldom clouded, percaits the glowing rays of the sun The temperate and cold zones, where artificial warmth must replace deficient heat of the sun, produce, on the contrary, carbonic acid in superabundance. which ex pended in the nutrition of the tropical plants. The same stream of air which moves by the revolution of the earth
from the equator to the Poles, brings to us, in its passage from the equator, the oxygen generted there, and carries away the carbonic acid formed daring our winter.
These facts show the extreme importance of giving may feed upon the air that surrounds it, and of keeping its roots in such a condition that they also may freely surrounds them may be converted into carbonic acid, san 30 rendered fit for the food of the roots.

There is, however, a fact to mhich Professor Liebig has not adverted, which seems to show that plants hare a special power of feeding upon solid carbon
two garden pots, and the one is left unoccupie placed in two garden pots, and the one is left unoccupied, while the other is planted with some cuarse fibrous-rooted plant, such as peppermint, and they are both watered with the same quantity of water for the duration of a summer,
it will be found at the end of the season that there is much less charcoal in the pot containing the mint plant than in the uther; therefore the mint plant must in some manner have fed upon the charcoal. This may arise from the decomposition of water by roots; in which case the hydrogen so liherated may be immediately appropriated. while the freed oxygen combines with the charcoal and the volume of charcoal is more rapidly consumed than if left to the action of the atmosphere without the aid of roots.

## SUMMARY OF CONTENTS

Is our leading article, which press of matter compels us to compress, will be found some remarks on cottagegardens, to which we entreat the consideration of, benevowill find an important document upon oak bark, which materially affects their revenue-A short paper from an experienced Dablia-grower deserves attentive perusal explains why so much disappointment is often experienced about this favourite flower, and teaches amateurs in what way to guard against it.--A new mode of propagating pinks, and some observations on the Cockscomb, will interest our florist friends.--A communication, for which we are indebted to the liberality of the Master of Trinity College, Oxford, affords some useful hints to the possessors of old gardens.- Among our home correspondence are some interesting observations upon fruit-trees.-A Van Diemen's Land letter gives some account of the habits of the beautiful tree ferns of that island.In the proceedings of the West London Gardeners' Association is some practical information relating to the cultivation of Brocoli; and in those of the Botanical Society of Edinburgh, an interesting account of some ancient Spanimh Cypresses.-Those who are interested in acclimatising plants will be surprised to find among our Garden Memoranda what akill will effect in a high northern latitude.-Among reviews is a notice of Mr.Leighton's entertaining Flora of Shropshire, and a continuation of our notice of Liebig's Organic Chemistry. We trust that each succeeding namber will impress upon the minds of our readers the necessity of adding this work to their library. Our notices are only intended to call attention to its importance.-A Calendar of Operations, with the thermometer somewhere near zero, can apply but little to any except in-door gardening. There is, however, some entomological information that the farmer will do well to profit by.
CALENDAR OF OPERATIONS for the ensuing Week. WF are aware that the operations recommended to be performed we present them, that our readers may be reminded what might vartage of the earliest favourable opportumty of redeeming the lost time. Within doors it is different; the time may be
proftably employed in thoroughly cleaning every part of the proftably employed in thoroughly cleaning every part of the
houses and other buildings, in cleaning seeds, arranging them with their labels ready for sowing. and in many other occupations. I.-EITCHEN GARDEN AND ORCHARD.

REPORT ON COVENT GARDEN MARKET FOR TELB WMER

## Notices to Correspondents.

The number of letters giving us advice upon the subject of this undertaking is so great as to render a separate reply pondents will consider the present a genera! answer to offers of assistance and support
The mutual interests of gardeners and their employers and the rapid dispersion of knowledge relating to every part of horticulture, and the collateral branches of know-
ledge, form the great object of the Gardeners' and advice, correspondence, or assistance in the attainment of these ends, will be gladly received. We shall be found to treat nuthing in a self-seeking. prejudiced, or per-
sonal manner; but, on the cuntrary, we invite fair discussion upon all horticultural questions, provided it is ronducted with good feeing and good temper. It is, indeed, as an easy means of rapid correspondence that we hope to
make the Gardeners' Chronicle of the greatest walue to all who are interested in horticultural and botanical affairs. There are few gardeners, and still fewer amateurs, who do not on occasion require immediate information upon va rious points of practice. But either from an un willingthe inquiry, they too often fail to obtaln the information they are in want of. Let all such persons communicate with us, putting their questions as clearly as they can, and atating on what grounds they ask them. The substance
of such questions will be printed in our columns, and of such questions will be printed in our columns, and
answers will be sure to be returned either by ourselves or by sone of our numerous friends. And let no one be alarmed lest his questions should appear trifling, or those of a person ignorant of that which he ought to know. He is the wisest man who is conscious of his ignorance; for know little. If one man is unacquainted with a fact, however common, it is probable that hundreds of others in the information. To ask a question, then, is to consult the good of others as well as of one's self. In this part of our correspondence we require no real names to either
questions or answers. When, however, a practical man questions or answers. When, however, a practical man
sends a reply founded upon his own knowledge, his name will no doubt give authority to the advice he may conver.
Among the many things for which we" are disposed to trespass upon the leisure of our practical friends, are the results of their cxperiments. Attempts to improve or vary generally convey both inetruction and ampusement and they prove to be failures; for the latter, like adversity often teach miore wisdom than is gained from success.
We will endeavour to meet $M \mathrm{Mr}$. Hoonters viem of the Which Liebis's book should be managed; and we hope the logical connection of the matter will nat be lost singht of os . the proceed. experimental investes shath endeavour to inerest practical men in

Mr. Coward will find that he cannt do better than apply for
the microscope he wants to Mr. Ross, Optician, Regent's Circus,
 mixes the ingredients of his wash for fruit-trees? The following
is his owa answer:-" The mixture I have hitherto used is as
follows -1 oz. soft soap, $1,1 \mathrm{t}$. tobacco paper. follows -1 oz. soft soap, 1 ib. twbacco paper, 4handfuls sul, thur,
to I gallun water. As I stated in my paper (which you tran-
geribed in your first Number of the (iardener's chronicle". I have not deemed it necesiary to depend on the strength of the
mixture alone, as f, like other adventurers, have before now - burat my fingers' in tuis way; but I have rather relied on a
good sound rubling with a painter's brush, taking care to use
plenty of the liquor, and of course to flood every part of the tree. This, und the circumstance of my going over it three times,
I have always found quite sufficient." have always found quite sufficient."
$S$. inqures how to get rid of a great nuisance. The ants have furmed a nest in hus conservatory, under a fine orange tree,
and his gardener is afraid to try boiling water, lest it shoald kill
the orange tree, although he has found it most effectual ongravel the nrange tree, although he has found it most effectual ongravel
walks.- We presume the orange tree is in a tub. In that case
the best way is to plunge the wnole tub into a pond of water for half an hour. The ants will enderfour t.) escave, and in doing be easily destroyed. Afterwards the plant may be restored to the couservatory. If the tree is plunged in the ground, it had better
be taken up, and treated thus; when the soll itself may be inua dated with boiling water in the usual way.
H. Thumus asks for a list of all the species of Epacris now in repondent answer this question?
Phollobulb says, ${ }^{\circ}$ As I am making a collection of bulbous plants, should feel deeply indebted to any of your readers who woul kindly assist me in so doing. I have some duplicates which calarly acceptable:-Hzppenstrum, Ammacharis, Ismene, Puncritiums, Hymenocullis, Cyrlanthus, Nerine, Habranthus, Amaryllis
blanda, Lilium, dc. acc. Anything may be left for me at Mesar Houlston and Hughes, 154 , Strand, London.
J.D. says, "I have in my possession a large heap of sawless than 100 loads, which I am anxious to get rid of, by employing it as manoure in some way or other, and for thas purplose it have already laid the foundation for two large dunghills, with sawdust had lain for some little time to mbibe the drainings
from the manure, which would otherwise sink into f it were turned and well incorporated with a quantity of road sweepings, ditch scourings, leaf mould, \&ic., fermentation would calde place, when it might be employed as a top dressing for an
old meadow, or un may turnip land of the present season. How ever, sume of my neishbours, mure wise in these matters than myself, tell me I shall certainly spoil not only the heap of com-
post, but also the ground on which it is laid. I ama a ware that
sawdust might be lourned, and the ashes nsed advantageonsly sawdust might be lourned, and the ashes used advantageousty
for drulling is the turnip crop, but the dificulty in barning it is very considerable, and the quantity of ashes obtainable is ex-
ceedingly small. I might aiso add that there is a large chalk-pit ceedingly small. I might aiso add that there is a large chalk-pit
within a thousand yards of the heap of sawdust, into which some of my friends have already seriously advised me to throw it. am, nevertheless, inclined to give it a fair trial in the way I have
tirst deccribed, should no one intervene with nis opinion to Lirst described, should no one intervene with nis opinion to
prevent me." Sawdust is agood manure when rotten, but not
till then. Fermentation will decay it more quickiy then other means. The most collious way of producmg this would
be to mix it with fresh stable litter in alternate lavers be to mix it with fresh stable litter in alternate layers, and to
keep turning the nass over as it heats, in the usval manner Perhaps sume Corresponiteut can suggest a mere ready means. The crowded state of our columas compels us to defer seplies
to nany other Correspondent. We shall eadeavour to find room next week $10 r$ those sot answered to-day.
For the present we are overwhelmed with communications, and we entreat our correspondents' patience till we can find room for them. They must nut suppose that they are ondervalued or neylected becau-e they do nut mmedately fiud a place in uur
colunns. All will be attended to as fast as the space at our disposal and onter exigencies will permit.
Received communacations from Professor Hensisic, $R$. Purnell, I. R., D. Bentun, H.L.C. J. WF., MF. W" hiansis.

## NEWS OF THE WEEK

At home, the thunder-storm of Sunday, and the severe weather which has again set in, have chiefly occupied attention. The storm estended to the remotest parts of the empire; and the cold has been so severe, that the thermometer in the neighboarhood of London has fallen as low as $1 \frac{1}{2}$ below zero, a degree of cold seldom experienced in
this country. We learn from the Provinces that the offender who committed the robbery in the Bank of Manchester has been apprehended, and that a clue has been obtained which may lead to the discovery of the murderers of Mr. Westwood and Eliza Grimwood.-In Scotland the Church question continues to occupy attention; and a fire has occurred in Dundee, by which three churches have been destroyed.-In Ireland, an atrocious murder has been committed in Armagh; Mr ()'Connell has agaia called attention to the subject of emigration, and propused new measures for the collection of the R -peal rent.
The news from abroad is of great importance, tspecilly from India and China.-The King of Lahore is dead; Shere Sing has ascended the throne, and the British troops are in the neighbourhood of the Punjanb. The defeat and surrender of Dost Mohammed, and the undisputed succession of Schah Soojah restores peace to Affyhanistan; and the arrival of Admiral Elliot in the Peitio who promises, it is said, to pay an indemnity of threp millions sterling, leads to the belief that the dappates with China will soon be satisfactorily settled.
The Turco-Esyptian question presents no new features. Ibrahim Pacha is at Damascus ; and arrangewents are in progress to facilitate his return by sea from Syria to Egypt. He is closely watched by the Turkish army, which now occupies all the former positions of the Egyptians, and is prepared to prevent any hostile movement towards the coast. Recent letters announce that
the arming of the mountaineers has made them virtually independent, and apprehensions are entertained that they may avail themselves of this power to resist the authority of the Sultan. In France the King and his Ministers have confirmed the previous impression that the peace of Europe will not be disturbed. The mediation of Enyland has been accepted both by Spain and Portugal; the rucent elections in Spain have been favourable to the Regencr. and the Government bas given to the ambassadors of Eng'and and Portugal assurances of its pactic views. In Portugal a general desire for peace prevails, and it is therefore confidently believed that the differences between the two countries will be amicably adjusted.
The Foreign news of the weels, particularly the prospect of the near settiement of the China question, produced a beneficial effect upon the English Funds, and a considerable depression in the Tea Market. The Funds rose on the receipt of that intelligence, and coutinue firms.

The Count.-Her Majesty, Prince Albert, and the Princess Royal, remain at Windsor and are all in good health. Her Majesty, on several days during the week, accompanied the Prince to the lake at Frogmore, and was is stated that the in a stedge by His Royal Highness. At on the anniversary of Her Majesty's murriage.
Her Majenty the Queen Dowager still remains at Sudbury. During the week it has been announced that she has subscribed 2000\%. towards the establishment of colonial bishoprics : 501 . towards the monument to be erected to the late Lord Collingwood at the mouth of the Tyne ; and 20l. to the Asylum for Decayed Freemasons.
Parliamentary.-It is generally reported that Lord Albert Conyngham will retire from the representation of
Canterbury as soon as Parliament re-assembles: that H. P. Gipps, Esq. has withdrawn, and the Hon. Mr Smythe intends to come forward as a candidate. - At Waluall, Mr. J. B. Smith, President of the Anti Corn Law Association, has entered the field against Mr. Gladstone, founding his claims to the suffrages and support of the electors on his C. M. Bro to the present system of corn-laws.- Mir. addressed the electors of Waisall on the liberal interest.Mr. Tracy has replied to the Monmouthshire requisition, and expressed his readiness to offer himself as their reprtsen tative whenever the present member, Mr. Will:ans, shall relinquish his seat. -The death of Earl Somers ceettes a vacancy in Reigate, as the present member, Hoc
Eastnor, succeeds to the titie and seat in that Hose of Eeastnor, succeeds to the tithe and seat has announced himsel: as a cin lidate on the conservative interest. - It is unlerst id that Mir. C.
B. Adderlev, of Hams Hall, Warwich =hire, whil ifer himself B. Adderley, of Hams Hall, Warwich hare, wil wifer himself
for North Staffordshire, in coniuaction witi, Mr. D. W. Russelt, in the event of a dissolution.- Cot. Fergusun has met the electors of the Kirkaity Burghs, for the puipose Laws, and at the end of each session meet the electurs, and deliver up his charge if his votes did not give satisfaction. -The Conservative member for the county of Monaghan, Mr. Lacas, has announced his determination to retire into private life at the close of the present Parliament.
The Revenue.- The accounts for the year just ended have been published. The decrease, as compared with 1839-40, is 254,0091 . On the Cutzoma there is a decreane of $85,973 \mathrm{l}, \mathrm{i}$ in the Pont-ofices the decrease on the jear
pared with the precturer quarner. 2.53, nond ; this, as fomy eart-otfice if 622,310 . - The Lords of the Treasury having certitional Debt, that the actual expenditure has exceeded the actual revenue for the rear ending the 10 th Oct. 1840, by
the sum of $1,560,6406$. 10 g . $8 \frac{1}{2} d$, the Commissioners have given notice that no sum will be applied by them on acount of the Sinking Fand.
The Navy.-In compari
The Navy.-In comparing the list of ships now in
ommission with the list of last January, we find the commission with the list of last January, we find the
strength of the navy at sea is increased by three firstand seven first-class steamers, forming an addition to our
defence of 794 guns and 6,300 men; the whole in addition to any estimate proposed to Parliament. The number of -The Lords of the Admiralty have given orders that the best of Dibdin's songs shall be distributed throughout the The Army. - A report prevails in military circles that
Lord Hill is about to retire from the Horse Guards, and that the post of Commander-in-Chief will be put in comters of public notoriety, have been mentioned as grounds

South Australia,-The new Governor has left London, to embark for Adelaide. It was the intention of the South
Australian Society to have invited his Excellency to a unable to spare time for the entertainment. The commitReyistration of Letters address on his departure ations came into operation, by which asystem of registration was adopted, applicable to all letters without distinction, whether they contain coin or not. The registration
fee is $1 s$., which, with the postage, must be pail in adrance. Forcign, colonial, or ship letters' registration mial not,
Mowever, extend beyond the purt of despratch.
Medical Hefurms.- The College of Physicians hare determined to abolish the class of estra licentiates, and to henceforth to be elected. The cullegent and council are determmed upou creating a new class, to be styled Feliows, and to be consposed of the lecturers and renognised teachers of anatumy, thysiulngy, and suryery, and of surgeons and assistant surgeors thespitais; and funther. that tinis new
class shatl ejon henceforth the pruilege nf electing onePaif of their members of the Council of the College.
Prison Discipline. - The Fifth Report of the Ins of Prisons has been published It appears from it that considerable progress has been made with the model prison on the separate system, now in the course of erection in Copeuhagen Fields; but that mucia remaios to be done towards the amendment of the metropohtan gaols, more rough Compter. The inspectors advert to the evils arising from the dswociation of prisoners, and the cunsequent contamination of the uminititted in guilt. They state that
some wards from ten to fifteen prisoners are confined to gether day and night, anrestrained by the presence of an habits: some innocent of the imputed charge, and for the first time inmates of a prison; others hardened in crime, and of the most depraved and reckless character. The sons of the metropolis. The whole number of prisoners of every description confined in Newgate in the year ending Moy one time, 376 . The daily average, 196. Of this number 532 were under 17 years of age. Of the whole number in castody, but 709 (one-fifth) conld read and and the greatest number sick at one time 20. There have been two deaths. The annual cost of the prison diet per head has been nearly 6\%.7s. 10d. The daily cost of each Giltspar-street Compter, during the last year, the greatest number in confinement at any one time was 209, the the greatest number siek at one time 19. There hare bee three deaths. The annual cost of the prison diet per head is 76.98 ., that of the prison clothing and bedding is estimated at 26.11 s. 10d. The daily cost of each prisoner, acluding every expense, is 1 s .10 d .

Fravce. - The Moniteur of Saturday publiahes the addreases delivered to the King by the diplomatic corps, by the Presidents of the Chambers of Peers and Deputies, and
other great dizniaries, The address of the P: esdent of the Chamber of Deputies did not enter upon the gret . trstions of peace, war, or
the late events. The Kins, in hiss replr, said that war should only be undertaken as a sa.red duty; that he was determined to preserve peace, and that the peace which he had preserved left the country nothing to regret either in the way of dignity or honour." The Austrian amiasoadur.
in the naine of the diplumatic corps, comeratuated his Majesty on tle preservation of peace. The President of power founded by a warikie genius was not the most durable, and that the foundations of a dynasty were better laid by more peaceful hands. Tuese expressions of upinion were receive. with approbation by the friends of peace. - The committee of the Chamber of Deputies charged renolved -finit, that the enoeimet centinue and the
pocoully, that the whule simuitaneonsly executed; an pleted in the course of three jears. The comnittee, moreover, decided that detached forts should be construiteri on the height of Romsinville, at Noisy, and at Nogent which command all the roads by which an invading army
adrancing from the frontiers of the north and east could adrancing from the frontiers of the north and east could
reach Paris. - In the speech addressed to the king on the Ist instant, by M. Villemain, in the name of the Univeropened establishments of education in 11,000 communes of France, that the elementary achools had been aug-
mented by upwards of $1,200,000$ pupils, and that they were multiplying all over the country.-The municipal
council of Lyons has received a communication from India, announcing that the Supreme Court of Calrutta had ordered that 50,100 . sterling, part of the legacy of
Major-General Martin, who died in Judia in 1800 , should be paid to that city, on account upon the still unliquidated portion. According to the will, the amount remaining
after payment of legacies was to be divided equally between after payment of legacies was to be divided equally between
the cities of Lyons, Lucknow, and Calcutta. The municipal council have voted the erection of a statue at Lyon in honour of the testator. - The marriage settlement behe sword of Erancis and the Princess de Montfort make rome Bonaparte, part of the Princess's dower, and declares that it shall pass down to her descendants; or, in default issue, belong absolutely to Count Demidoff. A protes to Prince Jerome, declaring that Napoleon had no right to dispose of an histurical mouument won by the armies of France, as his own private property; and moreover, that it was a perversion of his will to deliver this trophy to Russian subject. - In reference to the affairs of Spain, M Guizot has declared that it is the policy of the govern-
ment not to interfere directly or indirectly; that it resperted the liberty of the Queen's government, and would no enter ioto the struggles of parties. If the government of Queen Isabella were menaced in its existence, the French government would not be found ranting to its old policy of support ; but, short of that, it would not meddle with the struggles of domestic parties in Spain, but would leave all hiberty to the government of that country; and if that government made sincere efforts to uphold a regular ad ministration, it should be supported. The King' 8 govern ment would support any government, , e faeto, in that
countiy, which laboured to guide Spain in regular and pactic ways, but would not be responsible for her present ministers.-The storm which was so severely felt in Great Britain on Sundav, was also experienced in France. At
Boulogne, about tour oclock, two French ressels ran on shore within 100 yards of the Northern Pier, in an attempt to enter the harbour. The wind at the time was blowing a perfect harricane. The larger of the vessels, a fine West Indiaman, of from 200 to 300 tons, fired minute-guns for a considerable time, but it was impossible to render her assistanet. The crew, upwards of sixty in number, remained on board until it was nearly low water, when they all walked ashore in safety. The smaller vessel, which was 150 ine degree protected by the other, was a brig of abou and bound for Boulogne ; her crew and cargo are saved.

Letters from Algiers state that since the opening of th campaign in 1s40, the deaths in the French arnoy have been 10 ufficers and 1,598 sub-officers and soldiers, and that there are now about 11,000 sick in the hospitals at tion a chasseur found near the tent of anative tribe a sack of considerable magnitude. Without seeking to know its contents, he fastened it on the crupper of his horse. Ere long he heard a human voice isste from his burden, and dismounted to solve the mystery. On opening the sack, he discorered a beautiful female, between 16 and 1 ; years of age, and a valise containing about 10,000 franes. The young womans was the wife of an Arab, who had thus packed her up with his money as his two greatest valu bles,
bet in his terror had abandoned both. The soldier placed his living prize on one of the ammunition waggons, and divided the money among his comrades.
The papers state that Mme. Laffarge is to undergo her confinement for life in the prison of Cadillac, in the Gironde, and is to be placed in the cell which was occupied by the woman Bancal, who obtained such horrible celebrity in the Fualdes case. The servant, who has never quitted Mme, Laffarge from her first arrest, is not allowed to accompany her. She is said to be resigned to her fate, but shows some repugnance at the idea of being obliged to wear the prison dress of grey cloth. She has aldressed an affecting letter to the Queen, thanking her Majesty for saving her from being exposed on the pillory.- Further improvements have been effeeted in the Daguerréotype. Hicherto it has been impossible to fix the impression of anr moving object, such as clouds, the sails of a ressel, \&c. M. Diguerre, however, has authorised M. Arago to announce to the this dil des sciences that he has succeeded in of thing complete image of any moring object in less than a secund.

The Marseilles papers contain further accounts of the b. the Scamandre steamer, in which the French Envoy to the
Pacha of Egypt, Count Walewski, was a passenger. She feft Leghorn on the 22dult. for Marseilles, and encountered heavy stornt the same evening. Next morning she was off the islands of Hyeres, but was struck, about 11, by a tremendous sma, that carried away her larboard paddle-bos. It was inmediately found that the inold had fuur feet water in it, and that it was impossibie for the ship to keep her course for Marseilles. The coals got into the hold, and the pumps wonld not work; the fires, too, of the engine could not be
kept up. The passengers bebaved with great zeal, at:
 !aboared incessantly for 24 hours. The Commander a length got the pumps to act, but the sea kept washing oret
the deck, and scalding water from the boiler was so dep in the engine-room and hold, that it was only by dint the greatest exertions the service of the ship could be kept a lady, who was caught by the water in bed, was nearly drowned. The passengers subscribed 750f. for the crem
before leaving the slip; but the men refused to accept it
able purposes.
Belgium. - The Queen has given to the Museam of Natural History at Brissels a valuable collection of castu
ot the most remarkable fossils in the genlogical gallery of the Jardin dos Plantex. - On Monday monniag a lirr ab well-defineri halo, with initeal chours, was seen tron Brussels surrounding ti.e shan : and at hie extremith- wif: vertical and herizontal diameters purieda, or moci smas
were more or less distinctly maiked. Terough the zenith its convex side turned towards the sun, also appeared, and assumed a parabolic rather than a circular curve. Thit

Ressia. - Several provinces have taxed themselves voluntarily to raise funds for the preservation of
historical monuments. At Pultava sixty thousand roubles have been approprialed to - restore the ahi church in which Peter the Great retarned thanks able sum is allotted to perent the woin of oner Walls of the town, which were defended by the inhalitants against Stephen Bathory and (Fustavus Adolphos. A new monument has been raised at Lipetsk, hy a mereloant, to Peier the Great, the fummar of the e, It is said that government intend to assemble in Poland in the spring an army of 150,000 men ready for the field.
Spain and Portugal.-It is confidently stated that tions sre sion of England wil be accepted. -The elec and advices from the provinces give no reason to fear unpleasant results. Letters from Gundalajare mention that it is in contemplation to establiah a road from thence to France, which would pass throurh that province an! these of Soria, Logrono, and Nasarre-The Madial ciuzetle in answer to the journals which had affirmed that the Regeney would aceede to any proposition of the English Cabinet, respecting the navigation of the Douro, officially declares that the Spanish Government had acted, and would act, in that affair with all the independence and
liberty required by the honour and interest of the country liberty required by the honour and interest of the country that negotiations had mise their success; but that the question would be solve in an honourable and profitable manner for spain, and that her interests would not be sacrificed to any foreign infuence. The inilitary forces of Spain amount to
bettalions of infantry, 96 squatrons of caralry, and 12 hat teries of artillery. The effective force of the infontry tion of the Ordnance has isşued orders for the immediate organization of several batteries of artillery, and troops an continually marching towards the Portuguese frontier.
The Regency, in the mean time, has given the ambassadort of England and Portugal assurances of its pacife tions, and of its determination to settle the difference by means of diplomatic negotiations.
Grrmant.- The papers mention a report, that one of the first Catholic princes of Germany-meaning, it was example of Charles $V$., and pass the remainder of his days in a monastery.-A list uf Generals to be employed by the different States of the Confederation, in ease
need, is in circulation. The King of Wirtemberg is an need, is in circulation. The king of wirtemberg is an-
nouncefl as generalissimo: the Landgrave of Hesse Humburg. Prince Charles of Prussia, the Princes nt Saxumy Hesse, and Baden, are also on the list- - turites from Darmstadt of the 2 fith ult. mention the activity mhich prevails in preparing articles for the army. Saddlery to and only two months are allored for the whote sapply. The same activity is shown in all the States of the Confederation.
Italy.-A letter from Leghorn of the 23 d wilt. announces that Queen Christina sailed on the preceding day for Civita Vecchia; and that she 1 ould proceed thence to Rome, where her mother, the Dowager-Queen of Naples,
had gone to meet her. Advices from Milan annurnce that had gone to meet her. Adrices from Milan anneunce that
the Archduke Regnier will continue to govern Tenetian Lumbardy as Viceroy, although his resignation hat been talked of. They state that the Austrian army in that country is in a full state of preparation for war, and that the garrisons of Terona and Mantua have been greatly inceded. We learn from Naples that the Mmister of P. lice has published a return ine 1839, of the population of the con pupulation augniented during that year by 39.194 indiciduals, and on the lst of January, 1815, it consisted of 6, 133,25 ' souls, tiz.. 3, no9.00
females. The births amounted
bnys, aud lu9.945 girls: the deaths to luis 43 , viz. 96,273 men, and 9 , 620 women. Anvong the latter wero 37 persons upwards of 100 years of age- 15 men, and 22 kingdom 29,783 seeular clergymen, 12,751 monks, 10,449 nuns, 25,572 civil and military officers, 5,981 persons en-

int INDIA AND CEINA.-A telegrayhic degpatch reached that hisg suceeor. Non. Nehal Singh, during his funeral, perished by wethert. and tices siry h hatl aseended the terminated ; that the English are to receive three millions
steling as indennitr; and that Dost Mahomed has defi-
and nitely surrembered to the Eugh Int. Expreses have situce
arrived with the Indian mails, bringing the following partivulars :-I India-.-From Affghanistan we learn that Dost Mahomed was defeated near Bamean on Nov. 2, by Gen.
Sir Robert Sale, atter a severe engagement, in which the
2d Cavalry suffered zeverely, Lieut. Moftat being the only
 the mail ; but Dr. Loril, Lieut. Broadfoot, Capt. Conolly,
and Lieut. Crispin, have been killed. Capt Pononty and Capt. Eraser, wounded. Dost Mahopmed, after the engagement. was nuissing, but inmeediately rode to Caboul
with one tullower, announcell himself to Sir W. M1: तagh-
 deeed. It is said that he had 200 well-armed and tolerably Mounted men, who fought well. The surrender of Dost lasted twa years, and leaves Schal soojah undisputed master of the throne. - The news from the Punjaub is im-
poortant. The King, Khurruck Singh, is dead, and his only son, Nou-Nehal Singh, was killed accidentally by the falling of a beam when passing through a gateway during Singh, a natural son of Ranjeet, who has been prochimed Sovereign of the Puojaub by the Lahore Durbar. Two of Nou-Nehal Singh's wives, it is stated, and two slave girls, ascended the funeral pyre, and were consumed with his
boly. One of his wives, however, was sared, and is said to bee in the third month of her pregnancy. By a treaty with Runjeet Singh, Great Britain is said to guarantee the
lineal sucuesion of his descendants to the Cruddee of the Puija.b, so that the birth of a child might interfere with the title of Sinere sugh. Tue British troops were still at
the immelliate neigibourhood of the Punjanb. The accounts from Scinde are favourable. Khelat has been retahen; on the 4th Nov. General Nott marched into that city. The people were rejoicing in English protection, use of the advantages of peace. Previously to this, howhorse, attacked and plundered Dadur, and made an attempt on the British intrenched camp, but were repulsed; on onr troups taking possession of their lines, Lieutemant Loveday, the late agent at Khelat, was found barharously The body was found warm by the Britist troops under Major Boscawen, and a faithful servant who attended the Lieutenant to the last told the details.--China.-
The accounts received from Chusan bring our Chisese news down to the 1st of October. Admiral Elliot and the Ausust. On the IIth Captain Elliot proceeded into of mouth of the river in the steamer, with the men-of-war's boats, manned and armed; on arriving at the bar the with a flas of truce. The forts at the entrance dispatched a mandarin boat to receive the admiral's letter. After the the Emper received, stating that the Emperor required ten days to consider, when an in-
terview took place between Captain Elliot and Khe Shan, the imperial commissioner, the third man in the empire, a mandarin of the first class, and a red button. The partistated that the Emperor has agreed to send Khe Shan to Canton for the purpose of conducting the negotiations. The Emperor is said to agree to a renewal of commercial intercourse, provided the British evacuate Chusan and trade with Canton as before; he is also willing to give up that Lin has exceeded his instructions, and that he will suffer whatever punishment the English shall think fit, if it be proved, after an inrestigation, that the representacorrect. The sum to contained in the admiral s letter are misivuser Lin is snid to be $2,(00 t), 0$ poln, and anotber milion is mentioned for the expenses of the expeuition. Great sicinness irevailed amongst the tronps at Chusan,
only 130 men of the Cameronians, and 220 of the 49 th, being fit for daty. The former had 345 men unfit for service. Cant. Anstruther, of the Eagineers, was cap-
tured by the (hinese while sketching within a mile of the tomn, and was taherl to Ninapo, where the crews of two transrorts which have been wrecked were also confined. The admiral had gone to the authorities to reclaim themWe learn from Macao that a Mr. Stanton, officiating chaplain there, had gone ont to bathe beyond the Portuguese to Canton. The British anthorities demanded him of Lin, who, instead of delivering him up, sent down a large foree to Maca, and fortified the coast. Captain Smith, the. brought up his ships, battered the forts, and landing his
marines and volunteers, dispersed the Chinese. The
governor of Macao immediately sent an officer for the purpose of laying beiure Lin the struagcot demands for the private letter has been received, communicating the intelligence, that her Majesty's ships of war had forced the passage of the Bocca Tigris, captured the Bogue Forts, and proceeded on towards Canton.
-Intelligence has been received from Alexandria steamer from Falmouth to Alexandria is the shortest on 12 days and 11 hours only were spent at sea. The plagut and 3 death had and 3 deaths had been officially notified. The Indian and escort passens the Desert by atsard of 60 horsemen furnished by the Pacha to protect them from the Bedouin Arabs, who had lately become hostile, seizing the Pacha: stores and attacking the pilgrims en route from Cairo to Mecca. Ibrahim Pacha was still rith his army at Damascus to which he had returned in ill health and beset by the mountaineers, hoping, it is said, to avail himself of the Napier convention to return to Egypt by sea. Sir Charles intervier with the Pacha, after which he left Alexandria in the Great Liverpool. Three subjects of the conversation have transpired-the interference of Russia, to which the Pacha is said to attribute the greater part of the opposition his propositions have experienced at Constantinople; the which Ibrahim Pacha is compelled to remain in Syria. A the conclusion of the interview the Pacha sent a despatch o Admiral Stopford, stating that the communication by land with Syria is completely interrupted in consequence of the anarchy in which that province is plunged; and au courant, by that route, of the results of the late nego tiations. He proposes to send another messenger to Ibrahim, and to make arrangements for his return by sea tion for thus appear. carried out after all. The proprietors of the Great Liverpool sent the Pacha by that vessel a present of some varieties of young apple trees and strawberry plants, specinens of preserved fruits of every kind that England could furnish, and some fresh turbot and salmon brought out in ice. The Pacha was much pleased with these tokens of acknowledgment, and was particularly struck with the fine condition of the fish, brought 3,000 miles, and still as fresh as if just caught. Mehemet Ali, it is said, is again turning his thoughts to agriculture, and it is decided that his younger son, Said Bey, is to be invested with the management of a Chiftlik or estate in the Delta.
further intelligence of affairs in Syria him, with from 10,000 to 12,000 men, retreated to Damas cus. There he levied beasts of burden, provisions, and money, and was to have set of southwards in the last days November. Accounts in the Austrian Ooserner State that it was his intention to proceed by the Pigrims road Egypt. Though the Haouran is in insurrectiou along this road, and the Arab tribes much to be feared by a discom fited army, still it is a plain country, where surprise may be avoided. and an army kept together, provided it brings food, fidelity, and patience with it. It is stated, however, that it was Ibrahin's intention to quit the road at El Mezareib. and march some hundred leagues of mountain road by Erbad, Omkeis, Bisau, and Dijeuni, to Gaza. This road is said to be beset by the fierce onsurgents at. Naplous, and Turkish troops have been despatched from Beyrout to occupy Jerusalem and intercept his passage. Should he attempt it, it is expected that he will be obliged to surrender, or take refuge under the guns of Acre.-Intelli gence has been receired, that after lbrahim had evacuated his camp of Zable, on Nov. 21, the Emir Bechir immediately occupied his positions, and received the submission of the sheiks of Celosyria. The united Egyptian garrisons of Northern Syria, under Achmet Pacha, forming together a corps of 20,000 men, well provided with artil lery, had marched from Aleppo to Damascus, in order to join Ibrahim. On the 26th the Turkish Commander-inChief hearing that the latter was preparing to effect his retreat across the Desert, detached several corps to observe his movements, and to protect the inhabitants, who had made their submission to the Sultan. A brigade of the Imperial Guard was sent to Jaffa for the purpose, and other troops had been stationed at Jernsalem and Gaza. Serious sickness had prevailed at Acre. The storm that visited the coast of Syria with such violence on the $2 d$ and $3 d$ ult, had produced an alarming scarcity at Beyront had stopped the supplies of grain, and the mountaineers were again nearly driven into collision with the authorities by desperation. No hope appears to be entertained that the Porte will be able to govern Lebanon, now that the population is re-armed. The distribution of 31,000 stand of arms amongst the mountaiacers has rendered them virtually indepeadent of the Sultan, and henceforth it is expected that they will govern themselves according to their own notions of right and wrong. Ibrahim Pachaa re the precsution to put his troops into winter quarters, placing them in houses throughout the eity, which he had Sheik, Jowanourf to evacuate for their abs. The Druce attuck a body of Egyptian troops encamped outside the city, but the assailants were murrounded by a superior
force, and nearly nll destroyed. Eleven prisoners had their hends cut off before the gates, and suspended over the walls,
as a warning to the mountaneers, who it is sail will find ao opportunty, before the Egyptians leare the country, to retaliate.
Turi
Turiry.-On the Tth uit. Her Majesty's Consul-Geneal addressed a letter to the British metchants at Constanupation of the coast of Syria by the the Sublime Porte has ordered the blockade of the ports and eschelles of that coast to be raised.
West Indies.- Letters received by the last packet state that the soil of Trinidad was found to be well suited to the culture of tobacco. The seed ptneured from Siparis was sown last summer in poor land, and its growth not particularly attended to. When it leaf and manafactured it was highy approved by competent judges. The
grower, an American, stated that the land was beiter fitte i for its cultivation than that in the l nited states. and the ravages of insects were less to be apprehended. It was intended to open a tobacco plantation, and the Governor had recommended the cultirator of the first sample to the notice of the Agricultural Society. Should there be, it i said, oaly sumcient saised for the consumption of the island, it would save the necessity of importing to the amount of 50,000 Spanish dollars morth of the articl annually.-The long continuance of dry weat er had been sererely felt in Barbadoes. Antigua, and (irenada. A earthquake was felt at Ant:gua on the 20 th Oet, but no erious consequences are mentioned.
Solth America.- Recent letters have prought ac counts from Buenos Ayres down to the 10th Oct. They state that lives and property are deprived of ail security
Houses of parties suspected of being friendly to Rosa Houses of parties suspected of being friendly to Rosa
are nightly broken open, the men taken out and shot, and are nightly broken open, the men taken out and shot, and
the women flogged. About 400 persons are supposed to have been confined in the prisons, but how many remain still alive of those prisoners is unknown. The French orce is said to amount to 53 ressels in cammission, includ ing frigates and schooners ; and four steamers are hourly expected. The blockade is said to have given a great im pettus to Montevideo. Thousands of Frenels artisans, tion of the city has increased more than duuble since they arrived.
Australia - There are now seven newspapers published in Sydney, 1 daily, 5 three times a-week, and 1 twice a-week; Meloourne has 3 published twice a-week, In Van Diemen's Land. Hobart Town has 6, and Iaun ceston 2 , publishad weekl wice a-week, 2 weekly, and 1 occasional. Swan Rive has 1 weekly juurnal; and New Zealand, which may be considered an Australian colony, has 2. The desire at Por Phillip is to make it an independent colony. and the press urging it with some earnestness. Several murder had been committed in the Geelong district, principally on hepherds. Business was said to be increasing, and rising rapidly in wealth iu comparison with the ather colomiet. A Western Port some very excellent strata of coll had bee discovered, and at Phillip Island it was sail to exist in bundance. New Zealand papers do not contain much information. Captain Hobson was in better health, and was reported to have purchased a property at the Bay Islands, but there was mech specalation as to whethe Port Nicholson would or would not be the centre of government.

## CITY

Portuguese Bondholders.-A meeting of bovdholders was held on Wednesday, which was very fully attended. The resolutions proposed and adopted set forth that the Government ought to devote all its revenues to the repay aent of the bondholders, as it was pledged to do; that the decree of the Portuguese Government of the 2nd of November was a breach of faith; that the British Govern ment should be called upon to exert its influence to obtain the settlement of the claims. They also complained of the supineness of the contractors for the Peninsula Loans with respect to the claims of the bondbolders: and they stated that those clams amount to no less than one hundred millions s:erling.
Stock Exchange, Jan. 8.-Consols for the opening closed at $89 \frac{3}{8}$ to $\frac{3}{4}$; ditto for imoney, $89 \frac{3}{3}$ buyers; Three per Cents. Reduced, $01 \frac{1}{8}$; Three and a-half per Cent. Re Bank Stock, $162 \frac{1}{2}$ to $3 \frac{1}{2}$; Exchequer Bills 11 s . to 13 s . piem.

## ffetropolis and its Ericinity.

Thunder-storm.-Sunday morning, between five and is o'dock, the metronolis and its vicinity were visited by about an hour and a half, accompanied ty a frill of hailabout an hour and a half, accompanied inn serse: a fire kroke stones of very large dimensions. An church; the alarm was out in the steegle of old stased by the police, whom stated they distinctly sew the lightning strile the steeple, and enrelop for an instant the whole steeple and tower, Soon after this he perceived the steeple on fire. By the time the engines reached the spot the steeple was wheliy destroyed. and the flames were descending into the beliry in the tower, and asso into the body of the church. The firemen got the engines into great exertion succeeded in saving the tuwer and the rest of the edifice. The destruction of the stteple is stated to cause a loss of 5001 . The charch is insured in the Union fire-office to the amonnt of $3,000 /$.- The
storm did considerable damage in the eatarn part of

 being afraid to enter. The roof of the house at the corne of Wood-street, near the church, also received damage The effects of the storm was strongly felt nver efery part of the metropolis: the barometer fell upwards o an lach from If on saturday night till 7 on Sunda morning. A remarkable change in temperature also took day morning was $44^{\circ}$, at a quarter past i stood at $31^{\circ} \mathrm{F}$ Very violent gaste of wind prevailed during the whole night, and a few minutes after 6 on Sunday minrning the
lightning was very vivid. By the recent winds many trees in Hainault and Epping Eorests have been blown down, and the lower districts inundated.
Hackney, at $70^{\prime}$ clock, the thermometer stood at $27^{\circ} \mathrm{F}$. at noon there was a considerable fall of snow; towards the evening the thermometer rose and gave indications of a thaw. - At Greenwich the storm on Sunday morning was severely fett : it was foliowed by a long-continued and the glass of the market-gardens in that neigle damage to

The Weather.-At six $0^{\circ}$ clock on Weduestay evening the thermometer st, od at 20 degrees, and the streets of the metropolis and the roads in the ulutsints became so slippery as to render walking difficalt and dangerous. As
the night advanced the frost increased in severity, and at midnight the thermometer had fallen 2 degrees; but according to the statements of the police in the outskirts of the metropolis, it. was from three to six o'clock on ThursThey stated that about three o'clock the clouds cleared away from the N.E., when the moon shone brilliantly, and the cold became so intense as to affect their respiration, and render them drowsy. At six o'clock the thermometer low freeaing point, with the sind 10 derds of 22 degrees beo'elock there was a thick fog round the neighbourhood of London, from which ithe metropolis was exempt. So slippery during the day were the roads everywhere that many omnibus proprietors kept some of their vehicles at
home. In the evening the frost still continued with undiminished severity. At six $0^{\prime}$ clock the mercury stood at 14 degrees, with every indication of the frost increasing in intensity during the night. - In Kensington-gardens, notwithstanding the intense frost, the ice on the Roand-pond and Long-water is far from being firm, and is intersected by numerous cracks. About noon, a proof of the severity of the weather was given in the follouing incident:-For vering above a spot on which a starling was pieking up a few crumbs that had been thrown at it by enpectator, when suddenly it fiew down, and seizing the starling in its feet, rose up with it into the air ; but before it had flow above thirty yards, the magpie let its prisoner go, and it fell to the ground. It was picked up alive, but considerably injured by the magpie, which is a bird that does not become carnivarous while other food is to be obtained. On the Serpentine, although the ice is far from being secure, owing to the number of cracks that have run across it, there have been many skaters. During Thursday immense flights of skylarks passed over Hyde Park, from a northerly direction, to the south, which is said to indicate ice was firm, and the attendance of skaters numerous.-In the Regent's Park the attendance of skaters daily has not been less than 10.040 . The principal members of the Skating Club continue to make this park their resort and have erected a marquee on the banks of the ice. With the except.on of several contusions from falls on the ice, no upon reference to our Meteorological return, that on Thursday night the thermometer fell to $6^{\circ} \mathrm{Fahr}$. We understand, however, that it was observed, between Peckham and Camberwell so low as $1 \frac{1}{2}$ a below zero, a legree of cold that is seldoni experienced in this country. Fires.- Sunday morning a fire bruke out in the Vic On the arrival of the engines the fire was extinguished wing to the exertions of the men employed in the jard. It appears that by some accident a quantity of rice or flames. The damage done is small-On Saturday night a tire brohe we in the upper part of No. 50 , Museumbeen atrended wain tuss of life. soon gor under. - On Tuesdaynight a fire was diecopered to be raging in theinterior of "Salem Chapel," recentlyerected ship for the first time on Sunday last. It appears that the interior fittings of tise building not being completed, workmen were empinyed in the chapel up to a late bour on Tuesday, and they had used a fire in their operations, Which it is believed was the cause of the mischief. The fire was got under before mach damage was done.
Diaths by Durning. - Baturday alveruoon a
severe. Westminster Hospita, from the effects of arcidentally catching fire. Within the last mine days fourreen choldrea burnt by their clothes catching fire hare been brought into this hospital, seven of which have ter Brixton, on the body of a midow lady, who was burnt to death in the Brixton-road. On Mondyy evening her sitting by the table. About ten minutes afterwards the servants heard a heavy fall in the parlour. On going up they found their mistress completely enveloped in flames. Instant exertions were made to put the fire olit, during
which the old lady was on the floor. At length her appa rel was extinguished, but not before it was nearly all co sumed to tinder, and the person of the deceased shockingly partly consumed. A surgeon, residing in the neighbur hood, was immediately sent for, but she sunk from the hock her constitution had sustained, and died on Tues day night. The sieeve of her dress caught fire whilst she
was holding some toast to the fire. Verdict "Accidental death.

Dealh from the I'apour of Charcoal. - Thursday morn ing a fatal accident occurred in the Archbishop's Palace,
Lambeth, amongst the workmen employed in the repairs f that erlifice. It appears that the painters had been hol day-making the previous night, and had not had any rest. Owing to the intensity of the cold they heated a large pan of charcoal in the roomsin which they were at work. Between 11 and 12 o'clock the foreman discovered several of the men sleeping in the room in which the charcoal was burning, and at that time the state of the atmosphere was such as seriously to affect the breath. It was with the utmost difficuity that the men could be roused, and two of them wer apparently lifeless. Medical men for a considerable time adopted measures of restoration, by which one of the men the other. The surgeons stated that, had not the men been discorered at the time, the whole of them must have perished from the noxious vapour.
Fires during the past Year in London and its Suburbs. Mr. Braidwood, the superintendent of the London Fire Brigade, has made his annual report to the directors of the insurance establishments. The number and extent of the fires bave been greater than in any former rear since the establishment of the brigade force in the year 1833, notwithstanding which the number of buildings "totally destroyed" is under the average. The number of fires in 1840 amounted to 863 . It appeared from the report that they had chieffy originated in consequence of intoxi cation or carelessness by workmen. Out of the entire humber, however, 204 fires had taken place in private ouses. The number of fires that have taken place since the establishment of the brigade amount to 3,628 ; the number of buildings totally destroyed, 195 ; seriousiy damaged, 957 ; slightly damaged, 2,482 . The number of ves lost doring the pust year by fires was 22.
Further Mortality of Covvicts.-On Tuesday an in quest was held at Woolwich, on the bodies of two con yard, went to prove that the death of the deceased con victs occurred from natural causes, and the jury returned a verdict to that effect. One of the jury inquired of Mr Bossy if it was true that the convicts in the dockyard wer compelled to wash every Saturday aight in cold water M. Bossy answered that the co
turday, but the water was warm.

Accidents.-An accident occurred to the Hon. C. A Murray, master of the Queen's household, on Wednesdey wile returning in his carriage to Windsor Castle. In turning a corner of the road, near Leatherhead, the car riage was accidentally upset, and Mr. Murray received some cuts on his hands from the broken window, but was not otherwise injured. His servant, who was riding behind, received a severe cut over the eye, and was other wise bruised.-On Tuesday morning, between 1 and 2 o'clock, Mr. W. H. Meredith, a gentleman residing in York-street, Bryanstone-square, was nearly burnt to death, from smoking a cigar in bed. It is supposed that he dropped asleep, and the lighted cigar fell on the bed clothes, which ignited. Befure he was
danger he was burnt in a dreadful manner.

IFater Companies. - Marylebone vestry has appointed a comonittee to watch the bills about to be brought into Parliament for securing to the metropolis a supply of pure water by two companies-one from the river Wandle, and the other from deep aprings in Bushy-hall meadows near Watford.

India.mubber.-A patent is zaid to have been taken out for paving the streets of London with India-rubber! There to be a substratum of wod, on which is to be put a to a depth of several inches!

Chartists in London. - Monday afternoon the Chartists assembled on Clerkenwell-green, and went in procession to White Conduit-house, "to memorialize the Queen and
petitiun both Houses of Parliament for the immediate recal of Frost, Williams, and Jones, the Welsh Chartists, and the release of the other political victims." Prior to the bour for forming into procession, two men planted themselves in the centre of the green, supporting a large banner. whilst the musical performers played various tunes, stirrounded by a numeruas body of working men. On the arrival of the procession a: White Condut-house the spaciuus assembly-room was immeliately tilled to overlowing, and 1,500 persons are supposed to have been present. Resolutions were entered into in favour of the objects of the meeting; and petitions were prepared for presentation to Parliament.

In
The Murder of wessions, on saturdar, a (rrm.coud. At the Huil sessiuns, on saturday, a inan caling Limself John Arthor Robarts, was convicted of obtainius money under false pretences, and sentenced to seven years
tramportacion. At thetime of his approluemsion s number
of watches. some plate, and a variety of jewellery, were
found either in the possession of the prisoner or in that
a female with whom he cohabited; and it now appears that they are both implicated in circumstances connected with the murder and robbery of Mr. Westwood, the watchcrime, or at deast as possessors of some of tixe stolell proomething about the death of Eliza Grimwood, whose murder in Wellington-terrace, Waterloo-bridge-road, has Carey, and accompanied the prisoner from London to Mull. About three months ago she preferred a charge of
forgery against him, to the effect that he had drawn 150 . of her money from the bank of Jones, Loyd, \& Co., by 3. each to larger sums ; there appeared no doubt of the fact, but she did not appear at the second examination. The exposure, however, excited the suspicion of sereral lasing circulated a false account of his having recovere redulite in others fancring themselves entitled to property ras excited, and on their visiting him a few pounds were easily extorted from them. The prisoner being convicted
on one charge of this kind, the ends of justice were considered satisfied, especially as matter of more serious
import seemed to attach to him. It is believed that the prisoner is a native of Reading, that his real name is
Rubinson or Robertson, and that he is or has been a watchmaker. During his residence in Hull he has as sumed a ligher station, and has been a leading personage. quence of his long cross-examination of witnesses, and character of a barrister. Thursilay at the Coutt of Bankruptcy, to choose assignees under the new fiat obtained by Messrs. Dyneley and Coverappointed for the commencement of the proceedings. The lebts and liabilities were said to approach a million and a half. The bankrupts bad no less than 2,500 banking accounts, and the amount of debts proved in the course of the number of creditors proving were about 700 . The following gentlemen were appointed assignees :-T. Barnewall, Esil.; II. Blount, Esq.; C. Wild, Esq., barristerwourd, of Covent-garden, seedsman.
The Metropolitan Police.-The official returns of the sick in the different divisions of this force given in on Thursday were 11 serjeants and 144 constables disabled fion duty on the prerious night, the total amount of men
being 4,350 of all ranks, and making an average of less than 4 per cent. This, although a larger proportion of sick than usual, is less than might have been expected from the sererity of the season. It is to be taken into account hkewise, that from the extension of the limits of the metropolitan police, the force is 700 men stronger than at this period last year, when the average sickness was much less. The commissioners have given orders to the country divisions, that every indulgence consistent with public security shall be given to the men, so as to render their duties easy.

Slides on the Pavement.-On Tharslay an inquest was held by Mr. Wakley, on the body of James Maghee, an Hannstead-road last week, was observed to fall heavily on the pavement, and roll thence into the gutter. He was conveyed to the huepital, where he died on Sunday night conveyed to the hiopital, where he died on Sunday night
last. On examining the spot where the deceased fell, it was found that he had trodden on a "slide?" Verdiet, Accidental death.
Relief of the Poor.-In consequence of the inclemency of the season, the parish of St. Andrew, Holborn, have distithuted bills over the parish; calling mpon the inhabitants to asemble in the seatry-room, to take into consideration the best meanis to relieve the distressed poor of the parish, and to raise a subscription for that laudable purpose. Other parishes are adopting similar messures, and meetings will be immediately held.

## 租robimcial Necus

The Storm of Sunday morning was felt in many parts of the country. In Essex, at Southend, Braintree, Gevcral trees were torn up by the roots in Mr. Tufnell's Mrk, at Great Waltham, and a horse was struck dead in han was twe: remembered at the storm was more serere was annompani at ly a fall of snow and hail. - At Wallay wis the wind commenced blowing at two 0 'lock, and y is berane a perfect hurricane, accompanied by
lightnins: a fre-bal! fell about two miles from the town, Mear the stathen. I: without doing any damage.-It Birmis and the anmenced between four and five, neverty acie. The pe thunder were unusually long aw. pulonged, and the lightning remarkably vivid. -
Wolverhampton was also visited by a violent storm of thunder and lightning, accompanied with snow and rain.
The storm cormmenced about half-p:at four, and had coninued sbont a grapter of an wur, when the clectric fluid strank the threr of the colle, iate church, and set fire to of lighted woud were continually lodging in the crevices
should reach the belfry. After some delay. the firemen ascended the tower, and in the course of ten minutes succeeded in cutting away the burning part, the fragments of which fell upon the roof of the chancel. This ras soon occupied, and the burning pieces thrown into the graverard without further damage--At Cambridge the storm was of unusual violence. A little after tive the wind increased to a perfect hurricane, accompanied by rain, hail, and lightning. the tempest was, howerer, of short duration

Prosincial Fires.-On Cbristmas-night a fire broke out in the mill of Messrs. Roberts, Brothers, at Haddersfield, and such was its rapidity that scarcely building, with its valuable contents, was reduced to a mass of ruins. The loss is estimated at from 13,0001 . to 15,000 . One of the walls, which had been left standing in a dangerous state, has since given way to the pressure of the wind, and, falling outwards on the cottage of Mr. Bairstow, the engineer, broke through the roor to
 Four of the, children miraculously. escaped, by making a way througha window. Nollingham. On Sunday morning the power-loom lace manufactory at Lenton, called Hall's Mills, was on fire, and the noise of the ponderous ma chines falling through the floors of the burning building was terrible: the greater part of the premises were consumed, and the damage to the machinery is calculated at more than 2,000\%.
Northan.pton.-Haslock, the clerk in Messrs. Whit worth's bank in this town, who, after robbing his ent ployers of 800 sovereigns, made his escape on Monday night, appears to have laid his plans beforehand for his reception in the metropolis and safe expatriation. It has come to light that on Sundey Haslock went to town by the railway and ireturned the same day; on Monday evening he and his brother obtained clothes and other articles they had ordered from the tailors, \&c., and got a supper on credit before they left the town ; they then waiked together to the station, and went to London by the night-train. Since then no tidings have been heard of them.

Wales.-At the Brecon sessions an information was laid against Capt. Williams, a magistrate for the county, for swearing profane oaths whilst acting in his magisterial capacity. The magistrates retired to consult together, there being some doubts on the minds of part of the bench as to whether the oaths used were protane or not; on their return they found the defendant guilty, inflicting a fine of five shillings and costs.
Cornwall.-During the past week this county has been visited by heavy falls of snow, so as to render travelling impossible where it has drifted; the frost bas been very severe, strong north-east winds prevailing. Such incleWest Cornwall generally has not been known for many years The mails have been six or eight hours behind time Falmouth, Jan. 2.-The Oriental steamer left to-day, with the mails for the Mediterranean and East Indies, and sixty-four passengers. The Great Liverpool steamer, which sailed from this port on the 2 d of December, arrived at Gibraltar on the 12 th , having performed the passage in 112 hours. Subsequent accounts announce her arrival at Malta on the llth, thus effecting the voyage from England to Malta in nine days and two hours (including stoppage at Gibraltar), being twenty-four hours within the time allowed by the Admiralty Courts.
Hants.-Gipsey Festival.-The twelfth anniversary meeting of reformed and wandering gipseys, at Spring Hill House, the residence of the Rev. James Crabb, the "Gipsey's Friend," was held on Tuesday. There were about 110 of the wandering tribe present, but few of the reformed were amongst the number, as sereral of them are in service, and others who are now living in a creditable manner, are now ashamed to associate with their former companions. After a religious service a collection was made in aid of the benevolent designs of Mr. Crabb which was productive of a considerable amount. A good dinner, consisting of old English fare-beef and plum-pudding-was then set before the gipseys. Two families present expressed their desire to abandon their wandering habits. Their case will be investigated, and if approred of, assistance will be rendered them, to accomplish their object. After dinner erery family was furnished with a blanket, a pair of stochings, \&c., for each member; and a copy of the scriptures was presented to every family.
Bucks.-Cruelty to a Pauper.-On Saturday the county magistrates investigated a charge against Howe, the keeper of the Eton Union workhouse, for an assault on a feruale pauper. It appeared that Howe had twice placed her in the "black hole," under the most frivolous pretences, besides otherwise ill-treating her. The magitrates haring deliberated for about half-an hour, declared themselves satisfied that the assault was fully proved, and sentenced the defendant to pay a fine of $10 \%$. to the Queen, and 15 s . Gd. costs, or in default of payment to be committed to the Howse of Correction for three munths. - Death of a Miser. - In incuest was held at Colnbrook, on Tuesday, on the boly of William Fuller, aged 1.0 . After a shust investigation as to deceased's death, and the circumstances connected with the discovery of lis b. ds, the jury returned was for of "Died by the nisitation of God. Decteased eccentric character by the inlabitants of the neighburrhood. His habitation was a small filthy cabin, out of Which he vcarcely ever ventured except for the common with his abode. In this state, however, he seemed to
take particular delight, for on no account would he ever whom had of his neighbours to enter his cabin, many of often, when cquently oftered to assist in cleaning it, and refusing their assistance. When his body was discovered a gold watch, chain, and key, valued at 201. , were found in one of his pockets, and upwards of 401. in gold and silve were found concealed in an old pair of smallelothes. Yet with all this wealth, he constantly represented himself to be exceedingly poor, and unpossessed of a farthing. He has left no reldatiuns nor friends, and was never known to have any, except a sister, who died some three or four years since. This woman was also as mean and miserly in her disposition; she, like her brother, constantly asserted ferent persons property to the amount of $700 \%$. or $800 \%$.
Rochester.-An investigation has been going on for some time past before the magistrates into a variety of Charges against James Miles, the master of the Ho Union workhouse, of cruelty towards the female children under his care. The evidence shows that Miles has re peatedly flogged girls of eleven and twelve years of age with great barbarity. At six o'clock on Wednesday even ing the inquiry was again adjnurned till Monday next. Windsor.-Monday night the officers of the Rifle Brigade, with the assistance of the two Miss Mordaunts, performed the play of Charles the Tweljth, an interlude and the farce of The Wuas of Windsor, for the benefit of the poor. The house was crowded, and standing room could not be obtained. These gentlemen played some time since, and gave to an excelient clarity in this town the sum of $61 \%$.

Kingston.-At the Surrey Sessions on Monday, it was referred to a committee to determine on the necessity of maintaining the gaol of this town, which holds only Asylum was also read, by which it appeared that a further grant of $12,000 \%$. wonld be required, in addition to the 75,000 already expended in its erection, and it was ex pected the building would be completed, and ready for the reception of patients, at the next Quarter Sessions. The Court finally agreed to the grant of 15,000 l. for the above purposes.-On Friday night a fire broke out at the mansion of Lord de Roos, at Long Ditton, near Kingston. As the female seryants were about to retire to bed, on passing through the hall they discovered that the fiooring of the hall was in flames. They immediately gave an alarm, and by prompt exertions the fire was speedily extinguished without serious damage. It appeared upon investigation that the fire was occasioned by a flue that passes under the hali to warm the conservatory, and it befiure it burst forth
Norvich.-The Army and the Police. - We last week noticed the complaint of the Hon. Colonel Molyneux to the magistrates-that the police did not salute him as an officer in her Majesty's service. In consequence, the magistrates thought right to apply to the lume-office for instructions. Lord Normandy in answer to their inquiry, stated that the Metropolitan Police have no orders to salute military officers, and that it is not the practice of that force to do so, and that no order to that effect has been made with respect to the officers appointed under the County Constables' Act.
Chartist Meetings in the Procinces.-At Manchester on Friday, a meeting of the Cbartists was held to memorialize the Queen for a remission of the sentence passed upon Frost, Williams, and Jones, and a number of resolutions passed, condematory of the course adopted by Government, which they set forth as unconstitutional and unjust. A memorial to Her Majesty was adopted, imploring the Crown to extend the Royal pardon to the convicts, and also praying Her Majesty to direct that they be restored to their native land. =otwithstandiog its being a general holiday, the number present did not exceed 400 people, including a few females who were seated on the platform.-A similiar meeting was held at Bath on Monday.-Mr. Liddell, M. P. has declined to support the petition from Sunderland to the Queen and Parliament in behalf of Frost, but says that he will present any document entrusted to him, provided it be respectfully worded.-A meeting, for the purpose of petitioning Parlimment for the liberation of Frost, dc. and the immediate release of all political prisoners, was held Jan. 1, at Newport. Preparations were made by the swearing-in of special constables, and instructions were given to the pulice and military, in case of emergency. The principal speakers said the his commanions home and a resolution was passed pledypardor Froat, Wibilians, and Junes.-On Fiday a Chartist pardor of ation people took place at li-rthy Tydvil, for the same purpose. Several well-dwown ithe rant agitators addressed the assembly; son.e speabins in the Welch languare. The affair pissed ef whent any breach of the peace. Circulars had bewn sene round to the clergy inviting them to attem the neeting, but
 town, about 500 in hamion 5, :anay or then in mournmg. On arriving in the Ranctphee the procussion talted,
and Mr. Dover, to the peot ie. The = recies wer in favour of the aiberation of Fros: and ti.. : her convicts. Do uisturbaue took phace, and etery piscation to prevent a rum was tahen
erreronto--an inquest was helh at Suncierland, on Wednesday week, on the body of W. B. Brown, whase death had been caused by the bite of a dog, which he had
received seven weeks gon . On the 1 nth November his
doa bit him on the flexhar part of the thomh. Th. wnund wastafier sever, and blel a itwe He beate whand Sunday weck. having complainal on the sturday if stifiuess in the hand. On Sunciay night he was attacked With sickness, and was a great deal worse. On the

Sere Cenuus af Irelund. -The Lord Lieutenant has
 Constabulary of the Prowinge Esq., Inspector of Esq, Captain in the Royal Enyizeers, to superintend the carrying into effect the provisions of the said act.

The Sturn.-Dublin was risited on Sulday with a ter rific sterm, accompanied by a fill of snow, which prevailed all night ; towards morning the wind abated, but the snom continued to fali at intervals, with a probabinty of its con
tinuance. The mails frem Loudon have been all frum tinuance. The mails from London have been all from
twelve to fourteen hours later, the wind bema from the west. The communication with the provinces was delared only on the northern road, and that but ior a fers l.ours from the heavy fall of snow

Itrocious Musder in Armegh. -On Saturduy even:n last. six men. armed, called at the hotise of Mr. Pomet surveyor to Mr. Quan, at Nerrtorntamilton, county A naga. The door was opened by the sarvant-mank, ind Four of the party then rushed furward, and, eaverims tid partor where Mr. Poxell was sittin, with his tou dusp ters, peremptorily demanded what he ras divi. " abohi of erectun on Mi. Quinas estate, unary his sulymind eace. Mr. Powell rephed by ashing how they dared U pon hiouse ia the manner and at the how beving bea couragenusly held back by one of the young ladies) seized hos of him ; and notwithstanding that he being a powe him outside griled desperately, they succeeded him through the heart! The ruffian who remained insido struggling with the daughter at length freed himself froun her grasp, by striking her on the forehead with the ba senseless pistol, fracturing her skull, and prostrating bew a few mo his fet , Tus horrible tragedy occupied escaped by a back door, ran to the adjoining village, an nlarmed the inhahitants. But assistance came too late nate father was found at the door; his death, from the
nature of the wound, must have been instantaneous. The and is not considered in danger. Four men are in

## SCOTLAND.

The Presbytery of Strathbogie met at Keith on Wed. nesday, the 3elh ult. hen Mr. Edwards, the presentee that parish, renewed his application for induction. service copy of the decree, ordaining the Preshytery, and menhers thereof, "forthwith thidmit and receive the
said Mr. John Edwards as minister of the church and parish of Marnoch, according to law, and to take all the necessary and competent steps for that purpose, was
read it was thereapon unanimously resolved, "That the Presbytery, finding that no other course remained for them than to obey this peremptory order of the Sapreme
Court, or to incur the guilt, and subject themselves to the pains and penalties of disobedience, resolve to meet at the purpose of receiving and admitting the said Mr. J. noch, according to the rules of the church.

The motion
The Presbytery of Edinburgh met on the same day. the intimation he sent each of them, that he intended to comi laining of the decision of the Court of Session in the Marnoch case. From his absence in the country, he was
not able to send round the intimation till the end of last reek; and it has since been represented that this notice was tho brief, considering the inportance of the question.
Lider these circumstances, he agreed to delay the quesCnder these circumstances, he agreed to delay the ques-
tion ; and he had now to propove that the Presbytery should meet again that day week, when he would move that the Presbrtery should adout a memorial to Government, which wodd complain of the recent decision of the iod, but a violation of the law of the land, and an invasion of the rights and hberties of the Church of Scotland as secured to her by the comstitution of the country.
Dumbee. Jan. 3.-An alaming contfagration happened bere this tmonnine, w!ich destroyed three churches of the here thist ment. The fire is said to have originated from the stoves in the North or (ross (Church becoming over-
heated, "umi ignitins the wooden fittings; this charch suon becmete a pre; to the thanes, as well as the South Chureh
and the Ent or Old Church. A great public loos has als.) vecariol from the valuable Church library composed of many rare oht books and manuscripts in black letter having heen totilly dentroied. These churches were, of the "Second (ienra, ", as Dundee was called from the religious zeal of its entizens at the Reformation; prior to dedcated to the Virgin, and was an interesting memento of the diys of Catholicism. It is said tiat when General Monk stormed Dundee, his soldiers quartered their horses end of the sisteenth century. has little historical association. One church has been saved-that contiguous with the abbev, by David, Earl of Huntingdon, on his with the abbev, by David, Earl of Huntingdon, on his
return from the famed crusade commanded by Richard Coeur de Lion.

Trade.-It appears from the Brokers Circular, that the consumption of cotton in Scotland fo the year just ended, amounts to 122,946 bales, a gaim of last year of 24,521 bales. The consumption per week for 1810 amounted to 2,364 bales, while in 1839 it only amounted to 1,893 , showing an increase per week of 471 bales, being very nearly one-fourth more than the consumption of the previous year
Profis of the Collon Trads.-A case was last weels tried in Glaegow, which threw considerable light on the rinits of this trade. The trastees of the Clyde Navigathey proposed to remove the works of Messrs. Todd and $\mathrm{Hi}_{\mathrm{b}}$ F5enhoti im, at Springfield. Amongst the witnesses were vent sentlemen from Mancheter, who spoke to the effect of remoral in deteri rating a businesis sucls as that of Mr. Hygenbotham, and attested the estimation which the firm enjoyed in the manufacturing world. The details laid before the court were, in many respects, extraordinary, as disclosing the immense returns of the trade, when jodiciously managed. The works contained 16,000 spindles, printing and Turkey-red dyeing-works, and about 20 looms; the manafucture was entirely for the home market; the total number of hands employed was 889 ; the average 1840 inclusive, wras of druss and dye stuffs from 1835 to furnishings for the same period was $4,556 \%$. The average produce in the printing and dyeing department was ing a difference of only 414. In money the average anuual rales amounted to 151,264 . In estimating the capital employed, 5 per centinterest on the whole was
deducted before the net profits were taken ; and in the year 1840 that interest amounted to 5,4000 . reprosenting a capitat of 108,000 . This interest, and all charges, being deducted, the average annual net profits for the six yeave
from 1835 to 1840 were 11,689 . The compensation tendered by the trustees was 6,250 . The jury found for Higgenbotham 43,7331. ; for Todd's executors, 8,119t.
Forgery. - The Glasgour papers stete that two respoctable the charge of forgery and fruud. The particulars are stated
procured several blank acceptances of a mercantile clerk in London, filled them up from time to time, and disconnted the bills at the city of Glasgow and other banks, in Lundon, and as residing at a place in London where he never resided, but where a gentleman of the same name lived. Inquiry being naade as to the circumstances of the gentlemen at the address given, the banks were satisfied, and consequently induced, it is said, to cash the bills; and the drawers taking care to remit funds to London on for a considerable time. One or two of the bills, how ever, being returned dishonoured, inquiry was set on foot, and the gentlemen have been taken up on a charge of for gery and fraud. By consent of the Lord Adrocate, they
have since been admitted to bail under a penalty of $: 60 \mathrm{l} l$ The gentlemen, it is said, deny that they gave a fals The gentlemen, it is said, deny that they
representation of the acceptor to the banks.

## Aliscellaneous.

Another Extraordinary Purrot.-Mr. Hance, of Ludlow has a parrot in his possession almost as highly accomplished as that lately purchased by Prince Albert. This and dance, "Jump Jim Crow," sings "Pretty, pretty Polly Hopkins," "Polly put the ke'tle on," "All the blue bonnets are over the border." He says, "Hip, hip, cries "Wild duck, oh ! fat duck, oh ! " spells several words of one syllable, calls people by their names, and imitates almost every sound

The Anemometer:-An ingenious marhine, called by its inventor, Mr. Osler, of Birmingham, the anemoneter has been some time in preparation at the Polytechnic In stitution, and was yesterday put into operation at that establishment. Its object is to indicate the direction and force of the wiad, which is accomplished by means of the building and or tube with the machine in one of the apartments below. At the lower extremity of this tube is a small pinion, working in a rack, which slides backwards and forwards as the wind moves the rane. To this rack a pencil is attached which marks the direction of the wind on a paper having the cardinal points, and so adjucted as to progress The the rate half an inch per hour, by means of a clork The force of the wind is at the same time ascertamed by phate one foot square, placed at right angles to the vane,
supported by tro light bars, rumning on friction rollers, and communicating with a spiral spring in such a way that the plate cannot be affected by the wind's pressure without instantly acting on this spring, and communicating the amount of its action by a light copper mire passint dorn the centre of the tube to another pencil below. Wincin thms registers its degree of force. The thme at which any tain and mode of falling. The importance of self.registering instrumento for obtaining a sufficiently extensive and ac curate record of meteorological facts is admitted by all.
The Battle of the Beggars.-A couple of those blind mendicants who perambulate the streets accompanied by dogs holding little caps in their mouth for the purpose of receiving the donations of the charitable, happened to be pursuing their "calling," on Thursday, in the New Road, but with this difference, that while the one endeavoured to procure a livelihood by vending those necessary appendages to the female toilet termed "stay-hees," the other contented himself with exhibiting his sightless orbs, and simply uttering the pathetic cry of "poor blind! The two chanced to be going in opposite directions, and on the same side of the way, "tapping" the pavement with their iron-shod sticks, and varying the monotony of "stay "taps" with the alternate cries of poralship exist between them, and on nearing each other it was observed that the "tapping" became much more energetic, and the tone of their voices much louder and less supplicatory The very curs seemed to partake in the excitement of their masters, for they dropped their caps, pricked up their ears, and commenced tugging away at their strings Their engerness quickly brought their owners in contact and the battle commenced by the anionals worrying each other. At first the efforts of the beggars were directed to separating their four-legged companions, and which, after considerable difficulty, was effected, and, e ach dog being secured under the arm of its respective master, the following colloquy commenced: "An" its you that ought to be ashaned of yerself, ye dirty Scotch thafe, to be atter taking the bread out of the mouth of myself and the children, by coming with your mongrel baste across the baste with yer dirty laces as rutcenas a dry rush frum the buis of Ballyshannon. Och! and it's the treadmill that's too good for the likes of you, ye dirty spalpeen of a Sootch beggar." "Whist, whist," retorted the other, "Je're self in sic fashion. Canna ye jost quietly gang yero way, $\mathrm{an}^{2}$ let me gang mine, withont fashen yersel aboot me an' my wee bits o laces? Bergar, too! na, na, I'm nue beggar. I dinna gang aboot wirs a with you Irish Iunzies (beggars), winueli at the head o" je." This was enough. The worl "Dan" had an electric effect upon the nerves of the frivimen, Who, guided by the speaker's voice, dealt him a blow with - wtick that sent his hat whirling to the distance The biow was immediately returned ; the two blind men atruck repeatedly at each other, and the fight was beeoming serious, when some friends of the men separated the
combatants, who a short time afterwards were see tapping" their respective ways, as orderly as thongh no poor blind" and "stay-la
An Amatenr Gardener.-It is the nature of man to be have ; whatever may be his age and his position, he must intellectual. An excellent and worthy man, M. Fromageot, of whom it cannot be said that age had whitened his had cast off that ornament as a superflaity which hair-
 not long since exercised the profession of haberdasher, in with scrupulous exactitude; but he had a clerls and kep morn to dewy eve his shop was crowded with purch but here again he kept apprentices, whose duts it was unfold, exhibit, and re-fold his wares. II. Fromageot had reserved for himself no special task but that, as he expressed himself, of keeping an eye on everstitug, meaning that he spent the whole day in circulating, with his hands in his breeches-pockets, from the shop to the counter, from the counter to the shop, stimulating with a standing a Neserthelesi Madame Fromareot a lady who from time to time does her friends the houour to exchange remarks on the state of the temperature or the demand for night-caps, does not remember a single instance during the last twenty years, of her husband going to bed without exclaiming, "What a weary lite? Wen shall But this is the accustomed exclamation of all who labo to gain a living or save a competency; and the moment this retirement has arrived, they all look on the repose so ane wishes in about the same light as repose nageot that respectable personage enjoys his house where all the comforts of existence are to be found in the following manner, from the first day of the year to the last:-At four in the morning in summer, at seven in winter, he throws himself from a bed of thrice-driven down ; he puts on a blouse, steps into an enormous pair of shoes, defends his head with a night-cap stripped blue and white, heaps upon his shoulder a spade, a pickare, and a dibber t wherein are methodically arranged his catbage, sal id. and strawberry plants, and away lie trudges to kis garden. There he sticks for twelve or tittern hours, his opine con
tinually bent, makinc hoies in the giound, tracins turrow, planting endire and lettuce, weeding bean, digging potaturs, with all the ardour of the most inveterate mar-ces-ation to his labnitrs. Yesterday he m?s picking caternillars from his plum-trees; to day he is renewing a lenoth. thyme which is not more han 600 leet ia tril his vines and peach-trees. Thourb the wind blow rin th peal the blous
 hairs of his beard stiffen with the sleet of January, he is stanch to his post, stanch as a brave soldier on the field of glory; a visit from his dearest friend could not induce him to forego one stroke of his spade; and if, peradven ture, the temptation of satisfying his vanity should lead him for a fex moments from his work in order to display with pride his gigantic pumplin to an admiring amateur, or to recount the history of some marvellous graft, he would take eare, on going to bed. to advance his alarum one hour that he might, as he would say, recover lust time. He often forgets his breakfast hour, and the same thing would happen with his dinner, were it not tbat his wire, after having in vain called him two or three tinces, te:- him almost by force from lis well-beloved plantagard. When a violent storm, or a hard frost, renders all grarening operations impracticable, looks like a perturbed spirit; he wanders fretfolly from one room to another, descends into the cellar, goes up into the garret, quarrels with his wife, scolds his servant, until he is struck, as with lightning, with the brilliant idea of splitting wood, or making a new railing for his rabbit hutch. For such repose has M. Fromageot amassed framo on franc for the last twenty years, until he has realized a capital of 2iw, hrof., and he reckons on enjoging this sweet repose for the next thirty years, unless it procure bim some infimmation of the chest to carry himon prematurely. Thus M. Fromageot, nfter repociag anit the while he fancied be was working, works all the while he fancies he is reposing.-Chariveri.

## che fandeners' Cbrantict.

SATURDAY, JANUARY 16, 1841,

In the Court of Chancery, on the 16 th of last De cember, the Lord Chancellor delivered a judgment of great importance to the owners of timber or of tithes; the effect of which was to declare that no tithes can be claimed upon coppice-wood of more than twenty years' growth, upon its loppings, or its bark. The case as reported in the newspapers was this:-

Loson $\nabla$. Pryse.-A bill was filed by the Rector of a parish in the county of Cardigan, to obtain a declaration an favour of his claim to the tithe of wood of above twenty years growth, if such wood grew from old stools, and was not the original produce of the acorn. The ques-
tion was argued at some length in May last, when it was tion was argued at some length in May last, when it was
contended that the only case in favour of such a claim as contended that the only case in favour of such a claim as
that of the Rector was Chichester $v$. Sheldan, a point of the same description, arising out of a contest between the Rector and the parishioners of the same parish, and decided by Sir Thomas Plumer. This case had been followed with reluctance by Chief Baron Alexander, in Evans $v$. Rowe, and it was argued that the decisions on the question were conalicting,
The Lord Chancellor now gave his judgment. His Lordship stated the question as it was raised in the pleadings, and observed that the defendant in his answer claimed to have such wood exempt from tithe under the statute of he 45 th of Edward III., chap. 3 , which protected a gros bois from payment of tithe, thole words having been subsequently construed to signify all trees above the age
of twienty years. The question now before the Court was, of twenty years. The question now before the Court was,
Whether timber trees of above twenty years Whether timber trees of above twenty years growth were was intended to protect such trees, and the case of Wal bank $v$. Hayward (1775) was the first in opposition to a construction of the statute which had prevailed for 400 ears. There was no doubt in his Lordship's mind that wood of that description, growing from old stools, and attaining the age of twenty years, came within the protection of the statate. As the question was one of very great importance to landlords and tenants, as well as to tithe-owner", his Lordship had considered it his duty to examine ail the decisions, for the purpose of ascertaning the precise grounds on which they proceeded in holding
wood of such a description to be subject to tithe, in defance of the language of the statute, which Lord Coke was of opinion gave a positive exemption. For this purpose his Lordship took a review of all the cases from Walton $v$. Tryon, decided by Lord Hardwicke, down to
Evans $r$. Rowe, which was decided in the Exchequer in Evans $\%$ Rowe, which was decided in the Exchequer in
1825 . In that case the Chief Baron felt bound by the 1825. In that case the Chief Baron felt bound by the strong opinion that such wood was not sylva ceedua, or coppice-wood, and that it was exempted by the statute. Now, although it was very inconvenient to unsettle the law as it was found to be established by a series of decided cases, yet, at the same time, it was still more inconvenient to permit an error to become permanent. His Lordship, therefore, conceived it to be his duty, however reluctant he might be to orerturn such decisions, to correct that which he found to be an erroneous judgment. He could not decree to one man what he felt to be the property of another, and he was satisfied he was at liberty o uphold the statute. His Lordship then said that gro bois, or timber of above twenty years' growth, ought to be declared exempt from tithe; he therefore decreed in avour of the defendant, and dismissed the plaintiff's ill, but, under the circumstances, without costs.
The statute of Edward the Third, referred to in this cause, was enacted in consequence of the clergy proceeding against certain petitioners for tithes of gros bois, of the age of twenty or forty years or more, which gros bois was sold to merchants to their own proft, or in aid of the King in his wars. The petitioners stated that this claim for tithes was set up in the name of the wood called sylva cadua, and obstructed the sale of their wood "to the very value," to the great damage of the petitioners and the realm. It seems, therefore, clear that the claim was made to depend upon the supposition that sylec ceedua, or underwood, being titheable, whaterer had once been of that description would remain underwood for an indefinite period; for it must be observed that no timber had been ever considered liable to tithe. The real question, therefore, turns upon whether at the age of twenty years shoots
become gros bois, or timber. It is upon this point only
thant we bave any remarks to make.
It appears, from the observations of De Candolle, whose evidence upon the subject is the best we possess, that an oak tree, growing near Annecy, in France, which was about 130 years old when examined, had gained a diameter of $4 \frac{1}{2}$ inches in the first ten years of its growth, and that in the next ten years its diameter increased rather more than five inches; so that, when twenty years old, its wood, exclusive of bark, must have been nearly $2 \frac{1}{2}$ feet in circumference. Now as oaks, if raised from acorns, do not at the most acquire, under ordinary circumstances, a greater diameter than $4_{2}^{\frac{1}{2}}$ inches in the first twenty jears of their growth, it is probable that the tree at Annecy was the produce of a stool: for all gardeners and foresters are aware that the progress made by seedlings during the first twenty years of their growth is extremely small compared with that of shoots from an old stump.
The same author found that an Elm Tree, 335 years old, which had been felled near Morges in France, although it had not gained more than 5 inches in diameter in the first 20 years, had nevertheless formed more than 13 inches additional wood between its 30th and 60th years. Now this being its maximum of growth, and the most rapid increase in such trees, if springing from old stools, occurring in the first twenty years, it is probable that the circumference of such an Elm, springing up as coppice, would have been at least three feet by the time it attained its 20th year
But evidence upon this point may be found in any plantation. A shoot from astool is in fact the same thing as a limb frow the trunk of a tree, with this difference, that in consequence of the whole force of vegetation resident in the roots of an old tree being directed into a few shoots, the latter grow faster than the ordinary limbs of trees under common circumstances. Now some specimens before us collected at random, show the following rates of growth: The White Oal, 3 inches in diameter in 7 years, or nearly 9 inches in 20 years; the Ash 3 inches in 7 years ; the Hertfordshire Elm $6 \frac{1}{2}$ inches in 12 years; the Norway Maple 4 inches in 12 years: the Walnut 4 inches in 11 years; the Spanish Chesnut 4 inches in 12 years; and the lime Tree 4 inches in 8 years. Had these limbs been shoots from healthy stools they would have grown much faster.
But this is not the only point of view under which this question is to be considered. What is sylva cadua, or coppice-wood? Is it wood that has been once cut down? or is it wood which springs up from the stools of trees which were timber when felled? We presume it to be the former, and that it is immaterial whether the stool was five or five hundred years old. Now in the nurseries which supply planters with trees, it is the universal practice to allow all Oaks and Spanish Chesnuts to grow from two to four or more years without praning, and then to cut them down to the ground, when, of the shoots which spring up, one is selected, to form the stem. It may be said that such plants are not " the original produce of the acorn," but must be regarded as coppice-wood in the sense in which that expression seems to have been understood by the plaintiff in the above case; and if so, all the Oaks and Spanish Chesnuts that have been planted in this country for timber during the last half century would bave been liable to tithes, if the decision of the Lord Chancellor had not negatived the plaintiff's claim.

## THE ARBORETUM

No, II.-The Manna Oak.-It is now generally admitted that honey dew is neither a substance fallen from heaven, nor a varnish smeared orer trees by aphides, but that it is a natural exudation or excretion from trees in dry and hot summers, when the fluids of the leaves are so much thickened as to be unable to flow back into the barl with their accustomed rapility; on which occasion the sugary particles find their way to the surface. this not unacquainted with the honey dew of the Oak in the country, out we know nothing of its occurrence to Mr. Brant, H. M. Consul at Erzeroum. Hear what he Mr. Brant,

- The Koordistan Manna oozes from the upper surface the leaves of this oak, during the hottest months of the year. The natives cut the branches and steep them in解 sistence taken out, and the fluid eraporachaped into the round cakes, which are sold as a sweetmeat. The trees produce it only every fourth or fifth rear; no galls are gathered from them; and I was told that it hal no purgative properties. An Armenian doctor at Tan informen me that he lad frequently preseribed it to nurses to promote the flow of milk : the largest dose aduinistered by him at a time was of 71 drachms aroirdupois. The native call it Ghezen- olhevée, Ghivk-helvahsie, and Koodret helvahsée; and from the circumstance of its being found on the upper surface of the leaves, as well as upon stones,
pretend that it drons from the sky: hence the appeilation of "Ghial-heivaissé (the sweetmeat of henven. The Willows 㓍 Van while I wos there were covered wit a syrapy flaid, which in taste and appearance exactly re sembled the Oak-manna; and the doctor said that it was the production of a small insect (I believe a species of
much mised with impurities, but has a very sweet taste with the mucilaginous quality of gam, and the stickiness of boiled suar. At a temperature mach below that
of boiling water, it hecomes fluid, and may be casily made into cakes. When cold it is hard and brittle
Along with the figures of the Red and White Oak, given in our first number, was that of a fragment of this
Manna Oak, which the editor of the Botanical Register has regarded as a distinct species and called Quercus mannifera. I have examined specimens of this plant sent by Dr. Dickson to a friend, and I doubt if it is pally distinet from the Red Oak. Its leaves indeed are much arger than they usually are in this country, and the eaf-stalks and young shoots seem to have been of a deep brownish purple, instead of the yellow so generally noticed he latter that I am sceptical as to its the anpearance of the latter that I am sceptical as to its specific difference. Now that 1 amm apon thrs subject it is as well to add that
the Monghol Oak (Q. Mongholica) is also to all appearance another form of the Red Oak, with leaves however much tapering to the base. and dilated towards the upper
end. That plant has the usual pale footstalks and end. That plant has the usual
young shoots of the Red oak. Juel.

ON GARDENS AND GARDENING.
To the mechanic, the sedentary person, the man who is compelled during most of the day to breathe the confined essential that hed manufactory or warehouse, it is highly stirring nature. Now to such a one no employment can be found more conducire to bealth than that of cultivating a small garden. This will furnish exercise of the most beueficial kind to his limbs, and at the same time provide ample matter to amuse a contemplative mind. The outdoor labourer does not stand so much in need of exercise for the sake of his health; but to him also, a garden, besides being a source of profit and adding many little comforts to his life, will also provide amusement to his children, and be a means of bringing them up in habits of order and industry. And not the least advantage of a garden is, that it will furnish employment to him in his leisure hours, or when he may be out of work, and serve to keep him from those debasinc scenes where, for want of something better to do, too many spend their time, at the expense of their health, their reputation, and their money.
But the cottager who adoras the little plot of ground before his house, not only adds to his own comfort and provides an invigorating employment to his children, but he assists to raise the character of his country in the eyes of foreigners, and also produces a favourable opinion of his own character in the minds of passers-by. "I went by the field of the slothful, and by the vineyard of the man void of understanding; and 10 , it was all grown over
with thorns, and nettles had covered the face thereof." And as it was in the days of Solomon so it is now; the state of the garden may be taken as a pretty good criterion of the character of the possessor. If the garden is neglected, dirty, and unoultivated, it is rare that industry, order, and economy will be found within. While on this subject, I cannot help expressing my regret that public beanic gardens, which are in themselves calculated to of the inhal,itants of our large towns, shoull by imipolitic restrictions have become in many places uppopula, and have failed of that support which they would otherwise have received. Air and enercise are absolutely necessary to the jaded mechanic, and where can he take them so profitably or with so little danger of moral contagion as in these establishments, where his mind is enlarged, and his contemplations excited, by the forms of vegetable beauty by which he is surroanded : natives of every clianate collected in one sput. many of then the orisimal sources of these articles which are daily used in his housa, or of the materials upou which his daily lahours are emplored?
In conclusion, I may observe that the love of a garden and its products appears to be a principde inher nt in
human nature. The most uncultivated, and the most refined, seem to be equally capable of admiriny a garden. Flowers form one of the first delights of eur! y chilihood, and perhaps one of the list lingering pleasures of age. Many of the greatest men of ancient and of motern times have been lovers of a garden; by almost every heathen nation. gardens lave becn thow ind indispensable in the description of a fature state of Hiss. The fol
lomers of Mohammed have their famed lowers of Mohammed have their famed inrause; the un-
tutored sarames of Nurth Ameriea ? the theasant gardens, and the molished Grachs and Romans thei Etysian fistds. But besides these classical recollections, there are associations of a yet byther nature connect with a garden. When man caune forth pare from his Maker's hands, a garden tras silected as the fittest scenc for the life of happiness and virtue which he was to lead and when suferiny innocence was exhibited, groanng intense that overwhelming wed in tie $1:$. ise, a garden was the scene.-A Gardener. Sullativ, Hat.
UPON THE CULTIVATH: IE WINTER AND Hative been very su: - $\therefore$ in in grc.rima Winter and Spring cucumbers, I ar atced so sis you a detailed

 thonta ind in font, and tire ye an in tive an into tirree compartments. A trougin of hichwork is crried along the bottom from end to end in the cantre;
this is constructed by first laving two bricks thick one
foot wide, and then forming the two sides of the trough with bricks on edge, the whole being so cemented as to

The pit is heated with hot water by means of a branch of two-and-a-half inch pipes proceeding from the boiler which heats a store at a short distance. The hot water flows along the back and front of the pit, but the return pipes are placed in the trough first described, which is filled with water, or partly so, as circumstances may require, by means of a small pipe that leads to the ourside. Another small pipe is laid in the bottom of the trough for letting for in very dark damp weather a dryer heat is required.
The soil that I grow my plants in is collected at least is months before it is wanted for use, and consists of turf, not more than three inches thick, of strong maiden loam, built up in narrow ridges, with a layer alternately of an equal quantity of fresh horse-dung, and a good portion of straw. When wanted for use it is chopped up with a
spade, is not sifted, and oue third of well-decayed leafmould is added.
In order to have a succession of fruit it is requisite to sow the seed at three different times, the 1 st and 20 th of September, and the 5th of November. The first and second sowing I fruit in No. 2 pots, and the third I plant out. In placing the plants in the fruiting pots, I first add a quantity of large potsherds at the bottom, with some large pieces of turf and dung in order to insure a good drainage. The plants are put sufficiently deep to leave unree or our inches of the top of the pot, so thed up as they adrance in growth. When the pots are filled with roots, a good supply of water is given of the same temperature as that of the air they are grown in. place one plant in the centre of each light, taking care the water in the trough and the return pipe. The branches are trained on a temporary trellis, and the fruit is allowed to hang down. From the plants sown on the 1 st of September I cut the first fruit on the 4 th of November; from that date to the 4 th of December I have cut from three lights, or three plants, forty beautiful fruit of the Sion House kind, varying from twelve to fifteen inches in length. The same plants will continue bearing till about Christmas. I have just begun to cut from the second sowing which will continue bearing through March. The plants of the first sowing are are planted out in their place.
When I plant in a bed, I form the bottom of the bed by laying some strong stakes across the trough, and will leave a cavity round the back and front of the trough, so as to allow the heat and moisture to rise from the bottom. The plants are put out in a narrow ridge, and earthed up in the usual way as they advance in growth,
and the branches are trained upon a trellis, in the aame and the branches are trained upon a trellis, in the same
way as for the plants in pots. These plants will bear well tbrough the Spring and Summer months. As soon as the first three lights can be spared, $\mathbf{I}$ introduce shelves fifteen inches from the glass, and fill them with strawberry plants; and the pit answers equally well as for cucumbers ; only for strawberries the water in the trough quires to be stopped off, which is done by means of a stuffing-box. The plants of course require a great quantity of air both night and day at first.

The aurantages gained by this pit, over anything that I habour and dung, which last af all tim, a great saving of littery and unsightly appearance ; secondly, the having a sufficient command of heat in severe and changeable weather; and thirdly, the return pipe being buried or partly buried in water, gives, when required, a sufficient bottom heat; and the constant vapour arising from it renders the plants so healthy and strong, that a good crop of for frut is certain.
For heating I employ the excellent plan of Messrs. Weeks of the King's-road, Chelsea. The above plan, I believe, is new, and I can with confidence recommend it as being superior to anything that I have ever seen. I John Green, Gardener to Sir E. Antrobus, Bart. ORCHIDACEOLS HOLSE AND STOVE AQUARILM AT EALING PARK.
The beautiful condition of the Orchidaceous plants and tore A quatics at this place has induced us to take adgardence there, to layunication from Mr. Butcher, the arrangenents which Mrs. Lawrence has adopted. We are the more mxious to do so. because the plan of the house is precisely that which theory would have suggested for such a purpnse; namely, the exposure of a large surface of water for the purpose of heeping up a damp atmosphere, and the heating that water for the growth of Nympheas and similar plants. For the materials from which the accompanying plan is taken. We are obliged to Mr. Henry Hayward. of Acton, who constructed the building.
The root consists of three spans, which cover a breadth by colvmns (Fig. 1. C C), to which creepers are trained In the centre is an irreyular piece of water Figs. 1 ant 2, A) ealled the ". lake," sarrounded by boi'er, beated by pipes passing through it firm the the house and the shelies ( $B^{\bullet} B$ ) are of slate. Parallel of the lake haif above, the level of the floor, and each furnisbed in the middle with a tank (Fig. 2, C), the water of which is heated by a turn of pipe passing through it. At the north
end the house is closed by a solid wall, covered with bark and rough projections for ferns and such plants; at the two doors. The heating apparatus consists of a boiler (Fig. 2, B) at the close end, and of pipes running through "ater and under the slate shelve.
The heating apparatus," Mr. Butcher says, "is found to suit admirably as regards the temperature both of the
house and of the lake and tanks of water. The circulation house and of the lake and tanks of water. The circulation
of heat being continued under water, communicates sufficient warmth for the double purpose of creating an evaporation beneficial to the plants, and making the water of pot house above the temperature of the plant-stove, connected with and heated by the same apparatus-an arrangement of some importance, all ant for placing in the plantwhen in a state of rest. The boiler is formed of cylindrical pipes placed in rows alternately above each other, drical pipes placed in two fires at pleasure. The heating
all解 junior, in 1839 and has been found to answer well the purpose for which it was intended. From the roof, as well as from trees placed in the centre of the lake, we suspend the Orchi dacea in baskets and on logs of wood; on the two large raised pits and wide shelves around the house, which complete the internal arrangements, we place plants in pots.

Those of your readers conversant with floricultura affairs during that period, may remember the many prizes which bave been awarded to specimens from our collection and as this fact forbids the charge of presumption, I will explain our mode of treatment by taking the genus Zygopetalum for an instance. When the plants are commencing their growth (generally about the month of October), a pot of suitable size is filled three parts full of potsherds, and the remainder with close peat, which is raised about three inches above the rim of the pot. The plant is then secured in its position with small pieces o close peat fastened down with pegs of wood. I prefer
close peat for this genus, as I have found it do better than in lighter or more fibrous peat. The plant so potted is then placed in the Orchidaceous House, temperature ranging from sixty to seventy degrees, the atmosphere moist, the plant kept moist, and more liberally supplied with water as it advances in growth. When it has completed its growth it is remored to the plant and ateris given sparingly ; but the plant is never allowed to become given sparingly; bot the plant is never allowed to become growth, when it. undergoes the same routine as before."

Fig. 2.
HOME CORRESPONDENCE
Firs in North Britain.-The various new varieties of Pines and Firs which the Horticultural Society of London has been the means of dispersing over the kingdom, are likely to prove exceedingly beneficial to future generations. The Larch is douithss in many respects most valuable; but the Scotch fir is generally so full of
knots, as inclosed portions of branches are sometiones
called, that it is unfit for the finer departments of carpen. try. We are not aware of any of these species haring ghe farther nortio the height of about 13 feet, and has stood very severe wea ther, growing as rapidly as the larch. The pines Ninbilis, Sabini, and Taurica, together with Cluies Morindu growing vigorously. L'nless, however, these new, sorts shall produce seeds, it may be difficult to have sufficient numbers to clothe our wastes. The late Mr. Knight suc ceeded in grafting some of them on the larch, and it is not unlikely that others may take on the spruce or silver-fir. being practised for too expensive a mettions. The or their bearing seed musing large planguinely entertained for many trees grow to a very great size without producing seeds. For example, there is a Spanish chestnut tree in Ross-shire, which has attained more than six feet diameter at that height from the ground, yet never bears seed what is very remarkable, this splendid tree bore none in 1826, when trees not more than 30 or 40 years old ripened their chestnuts, plants from which are now growing ar Coul. It is not owing so much to the high latitude Scotland, even the most northern parts of it, that fruits do not ripen well, as the circumstance of the interception of the sun's rays by the vapours from the North Sea and the Atlantic. In respect to sunshine, the climate of Now. Were the sun permitted to shine fully during the summer the sun perntsed tise is wa the soil is excellent and the winters generally mild, on account of the vicinity of the northern part of Scotland to the sea. But unhappily as the summers have become less genial, so have the winters become too mild. It has been shown by Mr. Knight, that the greater the cold to which plants are exposed during winter, so that it is not too severe, so as to destroy their testure, the more easily are thes excited when warmth approaches. Heat without light is of no use, as is now well known. It might be a good speculation for any one to make an attempt to import seeds of such valuable species as Abies Douglasii from Poinseltiountry
Poinsettia pulcherrima.-Haring flowered the Poinsettia pulcherrima better this year than I have seen it
elsewhere, I send you my mode of culture. I raise the plants from single eyes (like vines) from the hard ripened wood of last year, and repot them in sandy loam and lealmould; keeping them in a cucumber-frame, and then in a low stove, as near the glass as possible. They do pretty well in a greenhouse or pit in July and August, if kept near the glass, and not drawn, and then put into the storo that have been watering freely when in flowero leaves so large as a young plant raised from eyes, or cattings, with one stem. A plant in flower here measares 20 inchen one stem. A plant in liower here measures is said to have been grown in the stoves at Philadelphia), and is fusk extending, and of the most dazzling scarlet,--the lewn large and of a beautiful green. The white variety grom the same way measures 12 inches across, but is not 50 showy. Aphelandra cristata may be managed the same Way, and no plant will more amply repay the care
tention bestowed on it.-W. Tillery, Welbeck.
Moss on Gravel-ualks.-You asked me for some notice of an experiment which I mentioned to you I had made served any accurate account of the results, pertaps the following may induce others to repeat and improve upon what I attempted :-A shaded gravel-walk in my garden was always covered with a mat of moss, and beit in parallel and transverse strips with solutions of different salts, to see whether any of them would destroy the moss and prevent its growing again. Several appeared to kill the moss, which, however, was replaced in mosolutions
in a very short time. I shall notice three of the solut as having produced more permanent effects; these were, corrosive sublimate, sulphate of iron (green vitriol), and sulphate of copper (blue vitriol). The first two seemed to ane moss immediately, but they also turned it the surface of the gravel, black instead of green. But the effect produced by the sulphate of copper was remarkable. The moss entirely disappeared, and at the end of the yeer, Then the rest of the walk was again completely carpeted, the strip which had been watered with this solution was perfectly bare. My quitting Cambridge put an end to further observations. Perhaps this hint may induce some of your correspondents to take up the subject; and copper or
think it very probable that eitier the sulphate of coper think it very probable that eitner the sulphate of ceping the walks of gardens in squares and other confined situgtions free from moss. My mode of operatiou was to procur saturated solutions, and then mix them in different propore tions with water in a watering-pot.-J.
Criticism.-As I see you profess to include in the plan of your newspaper, "Notices and criticisms of every work of importance on the subject (of botany and gardening) which may appear," "I trust you will excuse my expresur
a hope that you will do something more than gire your readers a bare notice of such thinge, but that you wil exercise Your critical skill upon the bookwrights who swarm in the columns of publishers advertisements. Aboep all things. if you regard your own credit, you will setp an eye to the communications of your corresp. nded in the not allow all sorts of nonsense to be promulgated. If you will only take this piece of advice, you will really do us plain country folks a good service by your paper, and I
hope it will prosper. But if you are lazy and negligent,
why then I lope you will be soon replaced by a better man. You see I like plain-speaking, and so I think do you. I shall now proceed to show you and your readers, your attention thus in the very outset without having good reasun for doing so. We have not a much better book than Loudon's Gardeners' Malazine. Iet the blunders are astounding. In one of his last numbers he allows a Mr. Alexander Gordon to assert that there are nalural orange groves all over East Florida, though evergbody knows that and Central Asia. This same gentleman even tallss of the "wild or native" orange having been used as a stock for the finer kinds of that fruit. There is a Mr. Main who includes Quercus virens and phellos, two American species, of which the former is unknown as a forest-tree, and never can become so, on account of its tenderness, and the latter
is hardly more common. The same author, who writes specially on forest-trees, tells us that our Durmast Oak is Quercus pubescens, a species only known in a wild state
in the south of Europe; and he includes in his list of elms the continental Ulmus effusa, of which he cannot point out a single specimen in the country, unless in somit
botanic garden. If I take more learned books, I find similar cause of complaint. Sir William Hooker, in his British Flora, professes to give the accentuation of the example, Exa'cum for Ex'acum, Alro'pa for A'tropa, your Botanical Register, gravely tell us that the name fying colour; but there is no such word in the Greek language. Now these things are, in the opinion of myself and many others, instances of a very slovenly way of writing, which ought to be guarded against; for we measure you by a different standard from the illiterate pretenders to
science who swarm in these days of diffusion of knowledge. science who swarm in these days of
Mortality among Mayduke Cherries.-Can you, or any of your correspondents, inform me of the cause of the ages, in a great number of orchards in different parts of Kent, have this year died; and I am not aware that any ufficient reason has yet been given.-M.

Common Birch used in Medicine.-Can you tell me the name of the inclosed specimen of wood? A patient of mine had it prescribed for him while in Spain, and he has
found it most beneficial in a urinary complaint. The decoction, in which form it is taken, is mawkish and mucilaginous. G.-[It is the young branches of the common
birch, Betula alba. Nothing is known of the medical properties of this plant ; but as its bark yields, by distillation, the oil that is employed in Russia to dress leather, it contains some active principle that degerves examination. 1

Whitaker's Anti-vermis Mixture.- Prom the flourishing account of this substance given in the advertisements of it, 1 was induced to give it a trial. But I found it perfectly useless for any purpose except that of killing slugs and worms, which it effects with much the same certainty as lime-water, and not with more. I cannot discover that twroduces any effect upon the scale or the mealy, bug, the
tweat pests of gardeners.- $V$. [Our experience agrees With that of our correspondent. It seems, however, to sulphur, as to render any mdditional means of destroying ture will kill the plants to which it is not taken, the mixture will kill the plants to which it is applied.]
Phosphorescent Plants.-In looking over an
Phosphorescent Plants.-In looking over an old newsaccount of luminous plants:-The most remarkable cases of phosphorescence among vegetables are to be found in those curious plants called rhizomorphas, - plants which botanista seem pretty well agreed upon referring to Fungi. They are found most commonly hanging down from the fissures in raults and cellars, where they have a subcylindrical form, and when their luminous qualities are very feeble. But ines the focesses of coal mines, at many hundred feet distance from the action of almost unknown, that their singular qualities are most remarkable. In such places they divide into multitudes dazzling whiteness. With gossamer, and of the most dazzling whiteness. With these they form a sort of
natural drapery to the coal-mines; and by the intertexture natural drapery to the coal-mines; and by the intertexture
of their amorphous branches create forms of the most grotesque appearance, which almost give truth to the wildest pictures of Eastern fable, and which are all lighted up by their own internal fires.- These statements referred, 1 believe, to the coal-mines of Germany. Can
any of your correspondents point out similar instances in this country :-S.V., Torquay.
Soil for Epiphytes.-I ouserved, when at the Cambridge and used for fuel, is adme turf which is cut in the fens especially when suspended by copper wires, and fixed to the wall. Vigorous specimens might be obtained with light carriage
St. Edmunds.
Christmas Holly.-A correspondent writes to us that the vestry of Mary lebone have aathorised the payment of
$4 l$. fur holly for the churches. Knowing that the collectors f this beautitul evergreen help themselves wherever it is to be found, without the least regard to " mine or thine," to the destruction or disfigurement of the trees, he regrets
honoured in the breach than the observance." It is a
moderate calculation, he says, to estimate the destruction of holly-trees at several acres of twenty-five jears' growth for the Christmas supply of the metropolis. Add to this
the damage done to orchards and plantations in gathering the damage done to orchards and plantations in gathering
mistletoe, the companion of the holly in almost every kitchen, he cannot agree with the writer, who gives among other reasons for liking this season, that the hollies and other evergreens which people bring into the cities make a kind of summer in winter, and remind us that he "poetry of earth is never dead"
Dry Rot.-It will be in the recollection of some of your readers that about five years since a portion o stroyed by fire. On taking down the ruined walls I was surprised to find that the very large chain plates, formed of Baltic fir timber, inserted in the middle of thick and most excellent brickwork, at a height of forty feet from the earth, were in the last stage of decay and disintegration
from the disease commonly called dry-rot. They were from the disease commonly called dry-rot. They were
coated with a profusion of light feathery-looking fungus, Which under the microscope presented the usual appearance of extremely slender stalks surmounted by cluster-beaded ing of any a phenomenon in such a position in a build erected only a few years, without auy regard to expense, it was quite astonishing. On closer examination I discovered that the timbers in question had been bedded in and surrounded by clay, as a substitute for the mortar usually employed; and on referring to the specification prepared by Mr. Wilkins, the architect, I found the in structions for so imbedding certain of the timbers in pulling down, other timbers of inferior importance (architecturally) came into sight ; these not having been deemed worthy of the clay protection, had been, as usual, bedded in common lime mortar, and were, without exception, per-
fectly sound. Other instances of both sorts were obfectly sound. Other instances of both sorts were obtained ; and it is requisite only to say that all the clayimbedded fir was totally rotten, and all that in mortar was stance reflects the slightest discredit on Mr. Wilkins; the practice was, I believe, not peculiar to him, and there existed in the profession a very general notion that mortar and particularly chalk-lime mortar, occasionally produced the dry-rot. Whether the clay was intended merely as a shield between the timber and the mortar in the wall or as an air-tight casing which should prevent vegetation, or was supposed to have any specific virtue, I do not know. The result would almost lead to an inference that clay exerted some specific energy in the production of dry-rot, and at all eveuts, the case is, I think, interesting to the of if phylogist, as wel as to the architect. a disease of rapid growth, bearing no analogy to that sort of decay which is produced by alternations of moisture and dryness, or by continual moisture in small degree, within well-warmed and protected buildings, and which is the real $d r y$ rot. The great visible distinction between the disease commonly called dry-rot and the decay produced by time and exposure to the weat the latter, some portions of the material matter unconnnected and unsupported, and easily broken or destroyed. In the former the change appears to be wholly chemical; under its influence a piece of fir loses
nearly half its weight, and nineteen-twentieths of its strength, without any visible loss of substance, or change of form, except sometimes a concavity towards the side most diseased, and a corresponding convexity on the protected side. A Norway deal, or batten, which when sound would have borne a hundred weight, breaks when diseased within a few months, as easily and as shori as a carrot. Yet in this state of utter destruction as regards strength and tenacity, it exhibits under the highest powers of the microscope not the slightest difference from new and perfect timber. The coniferous dises, the medullary rays, the dotted markings, are all as perfect and as well defined -the tubes as compact and unbroken-as in the most reeent wood; a fact which dispro eompletely the idea somewhere promulgated that dry-root is a disruption of the parts effected by the violent penetrating force of the filaments of the fungus. It may be more correctly com-
pared, I think, to a change somehow produced in the ma pared, I think, to a change somehow produced in the ma. terial of the regetable tissue, from a condition something sembling the fragility of wax, but unaccompanied by any change of form or position. Recurring once more to the architectural view of the subject, there can be no doubt that the clay casing was the immediate cause of the disease ; and though this may be sufficient for the builder, it will be interesting, perhaps, to the physiologist to discover the mode of operation. Timber is notoriously more subject to dry-rot upon clayey soils than upon gravel ; but here it has been supposed to be a mere consequence of the clay's retaining moisture or preventing evaporation. In the case ander consideration it can scarcely be supposed that the clay would remain moist, and therefore air-tight, long enough to preveat that evaporation from the timber which tales place through the pores of ordinary brickwork, but which is sometimes fatally stopped by the superior closeness of stone. It is unquestionable that locking ap the moisture of green wood by contings of paint is one very effectual means of producing dry-rot, although paint is a protection against the decay which anses from exposure to the vicissitudes of the weather. The clay casing when exposed was found very much shrunk in dimension, as if it had been applied in a semi-fluid or very wet state: and it was reduced to the condition of powder. It might,
however, have remained nearly air-tight long enough to have prodaced the same effect as paint in stopping th the only solution of the difficulty which nccurs to me.A. Ainger, Doughty-street.
this case. It is worth ascertaining chemical action in described by Mr. Ainger has not lost its nitrogen. Paren has ascertained that all wood contains azotised matter, and he considers that the substances emplosed to prevent the decomposition of wood produce their effect by coarulating the azotised matter and rendering it insoluble in water gen, and this element is name large quantities of nitro the principle called fungine being very analogous to anima matter. 15 it not possible that fungi separate the nitroge from the tissue of the wood, and so disintegrate it?]
To destroy Ans.-A question is asked in the last Chronicle, how to get rid of antz? I beg to inform you effectually drive them away, if poured round the roots of plants, without injuring the latter. I was much troubled with them also in my house, and by using it in the place they frequented they were completely expelled. Two ap -G. R. (From another correspondent). Take 2 oz fine bread-crumbs, well dried and rubbed very small oz. loaf-sugar, well pounded and made very fine; and 1 oz. of levigated mercury ; mix the whole well together on sheet of paper, and then put it into a bottle, or othe convenient place, which must be kept very dry. By laying mall portions of the mirture in the runs of the insect hear their nests every day for a short period, an effectual Pears.-My
Pears.-My experience in regard to the pears of this year is the very reverse of Mr. Rivers's; and as a proo
I send you two Chaumontels, which, I imagine, you will think equal to Jersey ones; they are but just ripe at thi date, though their season in general begins in November They are gathered from a standard tree about thirty-fiv years old; the soil light garden soil, on gravel. My gar dener thinned the tree about the latter ead of Juy and hrew away a large barrowfal of the thin his year I shall have two thinnings, one earlier, one later, an those he insed to My gardener says they are finer row on a wall in his former place. This is the fifth yea the former gardener refused to thin them, because "he had never heard of such a thing," and they were utterly had never heard of such a thing, and they were utterly et aware of the ralue of thinning choice apple and pear rees; so many objects attained by it, one large apple, and only one core, instead of two small ones, and two cores, the flavour and beauty increased, and the tree not
[We received the two pears, which were certainly mor England.]

FOREIGN CORRESPONDENCE
Agriculture in the Bermidas.-A few months since an griculturist and gardener were sent out to these islands at the request of the Agricultaral Association formed there, and they have been occupied, under the anspices of the principal men in the colony, in improving the practical kill in husbandry of the raral population. To manage crowd of coral reefs just emerged from the ocean, is not, however, so easy an affair as some people may imagine ; common difficulty to contend with, notwithstanding the countenance afforded him by Colonel Reid, the governor. We find, however, from the Royal cazette of Bermuda, that the good effects of introducing European skill are begianing to be felt, as the following extract will show :-

Ploughing Match.-Agreeably to notice given in our last Gazette, the ploughing match got up by the members of the Agricultural Society took place on Thursday Notwithstanding the threatening appearance of the wea ther on the morning of the day, and the heary rains at the hour appointed for the commencement of the match, thiere petition by noon. There perse on the ground three ploughing-horses, and two pair of fine draught usen, all f which were brought into requisition during the day, The umpire on the occasion was the Superinteniaat Agriculture, Mr. Fox. At the conclusion of the match, the whole of the ploughs, five in number, were put operation at one and the same time, among which we were pleased to see a horse and plouga belonging to H Exeellency the Governor, brought there for that purpose. There was a donkey there also, with its diminative plough which attracted much attention. This fittle animal seemed very tractable, and went throwh its work well. Maay persons present, who had never given the matter consideration, were forcibly struck with the conviction, that here to our small farmers, as they not only possess great strength, but are exceedingly hardy, and what is of still greater in good condition. His Excellency the Governor, the patron of the Society, with his customary attention to al matters whereiu the welare or the comforts of the iona the ground, and remained there during the continuance of the exhibition, evidently taking great interest in the whol proceeding. The affair was well got up, and did infinite kind tere winesern, thes ine exhbition of terel trust that it will be marked se an important epoch in the
history of the Bermudas-a period from which to date an
increased aitenti $n$ and mauy $1 m p r o v e m e n t s ~ t o ~ t h e ~ c u l t i-~$ increased attulim and mauy mprovements to the culti-
vation of the soil; for suh pructical proufs are fund even in old agricultural countries, to have more influence in the advancement of the science, than all that can b We have also further particulars from a private letter dated Bermuda, Nov. 12, 1010. Our correspondent saysThe ploughs are very much approved of ; and 1 am i The ploughing-match did a great deal of good; and many who had never seen a plough used before, were convinced of its usefulness for cultivating the land speeduly Those who cultivate land here, have great ditticulty in ub taining labourers at the time they want them. "Darkee" is then independent; and they have, with one or two excertions, been in the habit of putting in the crops with leaves the land fuul. The plough will be of great service here, not only in cultivating the land in much less time, but as a more effectual mode of cultivation ; and also ren dering the proprietor or occupier independent of the caprice of the lavourers. People here are surprised at the quantity of land gone over in the time. I have su-
perintended the puttiug in of several crops with the plough, and they have all done well. A crop of arrowroot was put in under my direction; it is doing well, and did not cost one-third of what the former crop cost."

PROCEEAIV(iS OF SOCIETIES
AGRICULTURAL AND HORTICULTLRAL SOCIETY OF Tirs first presentation to the society was a specimen of over dried plantains from Dacca, which raised a hepe that the drred
lananas of India might compete with the dried ings of the Levant. A sample of hemp grown and manufactured in Bengal after the Belgian manner, was accompanied by a letter from the the Russian and Manilla hemp, which fetches from $\pm 22$ to $x \cdot 2$ per ton in the English market. A specimen of undressed flax the Monghyt, where an expleriment of growing flas on a large the sentiments nit the flax committee on the quanity of the fibre A letter from Dr. Royle was then read on the subject of the com, and many other grains, were solted to Bengal in the rhe cold monthis, swited to the plains of northern India, and to the summer of the Himalayas. He said there were, pas-
ture-grasses peculiar to the table-land of Mysore, and to the plains of India and the Himalayas, at the same time stating that gigantic pasture-grasses of Brazil into Bengal, and of Italy
into the north of India. The Himalayas, he said, possessed so many valuable pasture-grasses that it was probable they
would have more to give than to receive. A resolution was that wher eas in no previous year more than special groun sugar lad been exported, in the present year the export
would exceed 00,000 tons, showing the power of augmenting the cultare of the sugar-cane. Two letters were then read on the cultivation of cotton by the instrumentality of Amerioan
agriculturists. The Americans are advised to go up to the northwest provinces of Bengal, and not to grow the western cottons soin formed from the remains of trap formations. When these Americans have tauzht the natives how to gather cotton, it is recommended that the latter should be sent to teach other na-
tives, and so on. A report on Arracan liemp stated that it would suit the home market weli: and on a specimen of Rhea hem bly for cordage, nets, coarse and perhaps fine cloths, and if more careffily prepared, would become an article of large export. A note from the Saugor district me
growing there were " beautiful.

neither the one nor the ofher of those circumben
 the plant in the fioticatituan Gurcuent. Buat sine an assertion is
destitute of all proof, and Dr Royle by he who had snch ample means of studying Indian firs in theur
native mountains, merely say
 the Horticnltural Garden is not A. Smithiana, whatever that may
prove to be. Mr. Gordon zays that the cones of A. Smithiana are
pot haif the size of those of . Khutrow. Now the cones
 $\delta$ inches in length; the cones of the forear, as itigured by br
Wallich, are 5 inches 6 -10ths and a half long ; a difference which in such matters anounts to nothing. It is clear, therefore, that
the cone- Mr. Gortlon has examired are not cones of A. Sithyoung seedings of what he calls A. Smithiana are much sien-
derer and smaller than those of A. Morinda ; a circumstance completely at rariance with the character of the former species
That Dr. Rovle, who says he immediately recognised it. And it tions. While, however. Mr.
toresented sition that the Abies Morinda of the Horticultural Garden A. Smithiana, he is certainly right in saying that he has two
distinct kinds of cones of the Abies genus from British India. There are donbtless two Hirmalayan Spruces, of which one may be called A. Khatrow, while the other bears the name A. IA belongs cannot be determined for the present.-Botanical Reg.

## MISCELLANEOUS

Heartsease.-The following will be as good a collection of Heartsease as an amateur would wish to posvess. Some of the varieties ase ofd, but as they have not been surpassed in their class we are unwilling to omit them On another occasion we shall give the names of the best of the new kinds exclusively:-
Jehu; Robespierre; Queen Dowager: Olympia Christophe; Ultra Flora; Prince Albert; Tamburini Grand Turk; Optima; Grace Darling; Best Cream Charles the Tenth; Imogene; Lady Glenallan; Colone Dundas; Prince Charles; Aurora; Jewess; Miranda Sir Robert Peel; Rival Dake; Lord Durham; Flor superba; Grand Duke of Russia; Earl of Clarendon Lady F. Hastings ; King of Purples ; Enterprise; Ealing Hero ; Purpurea elegans ; Master-piece ; King of Heartsease; Pomona superba ; Ida; Lady Fuller; Dr. Lindley Reliance superb: Julius: Diadem; Miss Stainforth Eclipse; Grand Duke ; Criterion ; Rival Yellow ; Cham Eion; Sir John Sebright ; Topaz; Sovereigm
Rogal Society. -The Marquess of Northampton has issued cards of invitation to the Fellows of the Societs for soirées on the following Saturdays, viz.:-Feb. $2 \frac{1}{4}$ March 13th and 27 th, and April 3rd.
First-rate Fruits.-Cattings of the following varieties were last season specially distributed by the Horti-
cultural Society, on account of their proved excellence. Apples.-Summer Golden Pippin; an excellent earl variety. Adams's Pearmain; a handsome dessert winter apple. Downton Nonpareit ; larger than the Old Nonparell, of a brisk flavour and keeps late in the season. It is believed to be the best of all the apples raised by Mr. Knight. Pears.-Délices d'Lardenpont ; season, Norember, resembles Passe Colmar. Beurté Bosc; highe flavoured than the Marie Lonise. Winter Crassanie this is not so gritty as the Old Crassane, and it often Wippens that the latter bears but sparingly on a wall; the Winter Crassane however bears most abundantly on
standard, the fruit being of good size and flavour Monsieur le Curé; this is the same as the "Vicar of Winkfield" pear, as was proved by means of fruit and grafts sent to the Society by the Rev. R. H. Rham, of Winkfield; it is large from a standard, and in a warm season from a wall it has the appearance of $[$ vedale's St. Germain, but is melting and buttery; season, December and January. Plums.-Coe's Fine Late Retl; the same as the St. Martin Rouge of the French ; it is considered the very best late plum. Royale Hative and Reine Claude Violette ; these rival the Green Gage in point of. flavour, and are the best purple plams of their point of. flavour, and are the best purple plams of their
respective seasons. The Royale Hative is almost new in this country ; it ripens nearly a fortnight earlier than the Reine Claude Violette. Ceerries.-The Late Duke, not so sweet as the May Duke, but much larger, and very
abundant, ripening as late as the month of August. Bi garreau A apoleon, a sort well deserving of cultivation: it s a more abundant bearer than the Common Bigarreaty and the fruit is larger and darker coloured.
Cold in High Latitudes.-The observations of Mr. McPherson. recorded in the last number of the Elinburgh Veur Philosophical Journal, and showing the temperatare of Fort Simpson in North America, in Lat. 620 11 N., ar exceedingly interesting in connexion with the fact that barley ripens at this station in three months, and that oat form an advantageous crop. The mean temperature of January 1838 , the coldest month, was nearly $20^{\circ}$ Fahr below zero. The mean temperature of June at 2 P. м
was $73^{\circ}$, of July $70^{\circ}$, of August $65^{\circ}$, of September $60^{\circ}$ October $28^{\circ}$, exclading decimals.
The late Frosh.-The injury done by the late cold weather cannot be at present ascertained. We, however, do not anticipate very serious mischief; for the wood of tree was well nipened, and the long period of cold which pre that tendexcy to premature growth which proved so disat
trous in 1837-8. We hear that near ('amberwell the stemen of the common bronm are split, and that in s, me places the thermometer fell to $1 \frac{10}{}$ belope zero: indved, a correspondent from Stowe infirins us that it sank to 4 belom zero at eight o'clock in the morning of January the 8rth and even to $3^{\circ}$ below zero at eleven $p . m$. ou the sam night. But these are the Garden of the Horticultural Sucicty, the thermomete did not sink below $6^{\circ}$; and in that place little damage at present apparent among the out-door plants. The lowest point at which the thermonieter was noticed at
Rolleston Hall, near Burton-on-Trent, where the thermo d with much care, where the thermo At Welberk the thermometer fell to $2^{20}$ below zaro 0 Thursday night; and in the Bury Post we are told that at halt-past one on Saturday morning it was $\tau^{\circ}$ beluw zero or $39^{\circ}$ below the freezing-point, in the botanic garden of that town. We have heard of nothing like this elsewher Dahlias.-We have received from a corresp the following list of Dahlias as among the best now on sale ; an amateur friend has added his opinion in the form of abbreviations

##  <br> 

## GARDEN MEMORANDA

Hon. and Very Rev. W. Herbert's, Spofforth, ne ar thetherby. 20 years; the thermometer stood at $13^{\circ}$, and in the latt har winter it only fell to $10^{\circ}$. In the huthose a heautitith new butb
ous plant is in flower, from the Andes \& Perru. Mr. Herber
calls it Eustephia Macleanica. The flowers half long, red below, with all the segments green upwards.
blooms without the leaves, which died at the approach of winter and were bright green, very long, with the ends hangiog dont to the erownit. There is a neck to the bulb.-Jan. of on the even

 and on the morning of the gh it fell to $5^{\circ}$, the lhwert point
 years. The leaves of the common Lavirel are much dischind
and it in feared that plant will suffer nearly as much as it did
183 than it was in that year. Berberis Aquifolium is also injured.
Nount Edgcumbe. - This traly beantiful place exceeds all had heard of it in situation and climate and extent, for it wouk we a fina pice anywhere without the sea, or its other pecus
adrantares. It is now, I am liapiy to say, in the hands of pos. sessors whin hare taste
and improve it; and from having been rather neglected for sont
years

 they are wonderfully picturesque in all stages of growth and decay. The copses are filled fith a profusion of the broad-learc
Italian Laurustinus, which I think the handsomest sort; miat ficent bays, ilex, arbutus, and the largest laurels I ever saw : ver

## The Eastern Arboretum; or, Rural Register of all the

 remarkable Trees, Seats, Gardens, gc. in the County ofNorfolk. By James Grigor. Illustrated by Drawings Of Trees, etched in Copper by H. Ninham. - Longman,
London; and Stacey, Norwich. 8vo. Parts I. to VIII. ThOUGH lying on the eastern coast, and exposed to the of England,-richly wooded, well watered, thickly spotted would be, therefore, difficult to select a district better suited to the purposes to which the author of this work has applied himself, or one of which the particular facts have a more general and useful bearing. For here, if anywhere, is ledge, in overcoming natural difficulties, and converting a barren solitude into a fertile residence.
Of course, Mr. Grigor's work has an interest principally chiefly concerned with; but it also embraces a variety of considerations and numerous facts to which all persons having country-seats should attend. For the causes which the author shows to have produced their good results in the general principles of criticism, in regard to the country residences of that county, apply with equal force to other parts of England. The author is an enthusiast in his way, and, like all writers of that class, is apt to be led into descriptions and statements which border closely upon the extravagant ; a remarkable instance of which occurs in his
of Felthorpe Park-a place on which, he says,
Heaven has apparently frowned from the beginning, and which bore nothing but ling and lichen, the lowest products in the scum of vegetable life," until the present proprietor Mr. Geldart, acquired it about 17 years ago, and converted it into one of the most delightfal retreats in the neighbourin parta bog, or rather swamp, abounding in various plants, bout it; and in part a rising slope of bad farming scattered about it; and in part a rising slope of bad farming land, by
no means ill-suited to planting. There is, however, in no means ill-suited to planting. There is, however, in general, so much good sense and good feeling, and gen cannot quarrel even with his exaggeration.
Such a work is not suited to a formal examination ; we therefore, content ourselves with a few extracts, to show

## The hispirit and manner of the whole,

that of man. Our first parents in Paradise had their trees ; and though the tree of life, with others pleasing to the sight, were lost at the fall, enough has survived this wreck of all things to interest us in their propagation. They come down to us hallowed by the first circumstances of interest upon earth, and loaded, as it were, with the
associations of poets and philosophers, and holy men of old. They were at "the beginning' of the beautiful apparel which Nature put on in her dewy infancy, ere yet she had become estranged from her Maker, and, when her happy Speaking of the Hawthorn and tt eautiful park of Lord Starn and marks in which we cordially agree. Surely the White-thorn, with its fragrant flowers, is the queen of our native shrubs. "But the trees which pleased us most of all, and which we found here in great abundance, belong to a genus which is not prized sufficiently in the present day, and which some writers have attempted to depreciate-we mean the hawthorn, the common thorn of our hedge, being, in our opinion, one of the most ornamental trees that we have. Some may consider this a strange fancy, yet we maintain liest objects of the lawn. What although the flowers of this tree may wither, does it not leave us ruby records that it has not flowered in vain, which are perhaps as beautiful as the blossoming? The fruit of some of this genus resemble branches of coral, others are as large as crab-apples,
Whilst some are of a jet-black colour. Gilpin, by some Whilst some are of a jet-black colour. Gilpin, by some
strange fatuity or other, was led to call them unintereststrange fatuity or other, was led to call them uninterest-
ing: he says, 'the bloom is spread over them in too much profusion !' - so that it must be so, we suppose.
The following account of Holkham, once an oasis in a desert, will be read with interest.

In common language, we say that the individual who none existed before, is a benefact of grass to grow where shall be said, then, to signalise our high appreciation of those blessings, both physically and socially considered, Whictr spring from a vast tract of barbarous nature being
brought into such keeping, and made to teem with such fertility, as is now stretched around us? The simple announcement inscribed over the entrance of this hall is, that -This seat, on an open barren estate, was planned, planted, built, decorated, and inhabited in the middle of the eighteenth century, by Thomas Coke, Earl of Leicester." It was, it is said, an open barren estate; a description which conveys to us all that is cheerless and uniaviting. Cinder the hand of improvement, however, this pieture has long since given way: instead of the waste, we have tracts of country, either heary with the best of timber-the seat of grand and solemn groves, or stretching away in carefully cultivated, garden-like fields, laden with grain."
At Mr. Peter's, of Westwick, the author found there was "a very good effect produced by covering a circle at
one end of the house with the club-moss (Lycopodium den-
sum ), a beautiful growing depressed plant, and having the
The best description of trees for the purpose of forming presume, the double purpose of retaining the moisture about the roots of these trees, and affording a complete and
To the Yew Mr. Grigor seems to think the world atdervalue this our British '
the scenery of the Wve, and the following wint recommend "At present, few people see any beauty in a yew: it sequently it is very often cut short in its career before it displays what beauty it possesses. Though a gloomy ob other tree can fill so well. About the cemetery and ruinel tower it has a charm which even the pine and cypres tribes do not wear: its deep green and impervious foliage accords better with the solemnity of such places than any for such situations in all civilised countries.

Speaking of churchyards, the author is too general in his ensure. "No foreigner, who had not visited our rural districts, would believe that the places which contain the of land, where thated friends are shrubless, treeless patches and where the storm and the tempest riot as they may. It is obvious to every one, that a few trees would not only afford shelter to such places, but induce birds to perch there and give their song. Shall we be asked what real use the singing of a bird would be in such a situation tered over England, in which are preserved all the solemn accessories that characterise the resting-place of those we once loved well. The ivy-covered porch and tower, the grassy mounds, the thick shadow of neighbouring trees, the grey and venerable walls, and in many places the solemn foliage of the yew itself, are in rural districts the common accompaniments of a village churchyard.
handsomest and most Pyracantha, the handsomest and most durable perennial decoration of a a remarkable spreading trained tree of the evergreen tho (Cratagus Pyracantha), clad with large bunches of bril liant scarlet berries. This tree forms an unusual spectacl of beauty amidst the desolations of November, and deserves more general calture. It covers a space of 24 yards in length.

The anthor justly condemns the ill-considered language of those thoughtless persons who, when speaking of na tural objects, call this thing ugly, that hideous, and so on There is one thing of which we are certain, and that i作 in nature, disgusting or ugly ; but we are inclined to beleve, that if the grand trath were continually borne in mind-namely, that this tree, or anything else of the kind cannot by possibility be different from what its Maker intended it
thought of
We quite agree with Mr. Grigor in what he says of the Lombardy Poplar, the use of which is often misunderstood
" Besides Gilpin, there is a host of writers who condemn this tree. As already observed, Muskau says, 'it is too fluttering.' Cobbett represents it as 'a great ugly tree; little hesitation in stating, that what is here said as to the tree should have been applied to the disposition or mode planted landscapes, which, in many in tances, is tiresome and uninteresting. No individuals of any other genus grow so like to each other, and, by conse quence, none are so likely to offend by their formality. All planting of them, therefore, in lines and avenues, or where-
ever a continued repetition of them takes place, shows miserable taste, and ought never to be indulged in. The tree of itself, however, is unquestionably beautiful: its pyramidical and stately outline, and lofty growth withal ornament in every country where it thrives.
In conclusion, we must not pass by the clever etchings, by Mr. Ninham, without a word of praise. Few artists have been so successful in representing the characteristic features of trees.
Proceedings of the Horticultural Society of London. 1840. No. X.

Another Number of these Proceedings has appeared. We find in it many things well deserving of perusal. In the first place, there is the substance of a paper by Mr.
Rivers, of Sawbridgeworth, upon the advantage of pruning the roots of Pear-trees ; from which we give the following digest :- It appears that, in consequence of the confusion in the names of pears, the author was induced to plant specimen trees of all the varieties he then possessed: but fearing that much ground would be wasted in the experiment, he endearoured to discover some means of arrestin superabundant growth, and inducing early fruitfulness firming previously remarked that apple-trees growing in consecutively, acquired a stunted and prolific habit, it occurred to him that if he could keep the roots of his peartrees in the same state by frequent removals, be should make them also acquire the habit he had so long observed the author But in attempting to remove his pear-trees. a treach round them that it would be less trouble to dig a trench round them, and cut all their roots at a certain
distance from the stem; and in this respect his anticip.itions were completely fuiflled. Specimeus of various kinds of pear-trees thus treated were exhibited in support of the author's views.
with round well-formed heads, or plants trained en que
nouille, or dwarfs in the usual bush fashion. For imnaediate effect, these should be prepared by annual root pruning for one, two, or three years in the nursery ; and
digging a trench round the trees, and removing large roots by means of a sharp spade. In the course of years a perfect ball of fibrous roots will be formed, which will only require the occasional operation of a trench being dug and the ball being pared down, to ascertain whethes large feeders are making their escape from it. But as this circular mass of soil will in a few years be exhausted, there
is left round each tree a slight depression in the soil; or is left round each tree a slight depression in the soil; or
in other words, the trench is not quite filled in ; and this circular furrow is filled with liquid manare ; or common dung may be laid round each tree in the autumn, and suffered to be washed in by the rains of winter, or dram in by the worms. The author stated that he had also practised root-yruning on apple-trees for two years, and has reason to hope for perfect success; as also with plums and cherries.

At the anniversary meeting, May 1, 1840, a Report upon the financial state of the Society, for the year ending 31st March 1840, wras read. The auditors announced a satisfactory result of their investigation, both as to the state of the Society's finances, and the form in which they were enabled to lay the accounts before the meet ing. It appeared that the actual receipts had exceeded the' expenditure of the year 'by 15611. 7s. ; or if allow ance be made for the arrears of 1839, not charged in the expenditure of previous years, the excess mould have been 1991/. 7s. The cash receipts of the year exceeded those or the previous year by 8396. 7s. 6d. In addition to bonds the year on account $2,36 \ell .-s$. $-d$. hat heen paid during debt of the Society was $9150 \%$. At the same time the property of the Society was much increased in value by the erection of the splendid conservatory at the garden. On May 5 , there was read a highly important paper by Mr. Rogers, on Heating with Hot Water. The original is well worth perusal : we can only give a few extracts.
Among other things, the author commented upon the general desire of gardeners to possess an apparatus that will get up heat in a short time, and upon the value of the ordinary test of excellence in a hot-water apparatus, by inquiring how speedily water can be made to boil. Upon this Mr. Rogers observed, that where an apparatus is proprith constructed, such an oject can apparatus, constructed on the most perfect principles, will take as many hours to heat to the boiling point as the pipes which contain are inches aneter and it will als cool in the same ratio. Four-inch pipes will accordingly they can be heated to the boiling point in one hour only by the conamption of four suffice if properly applied; or, in fact, allowing for th waste of heat by the chimney, which increases under such
circumstances very rapidly, five or six times as much fuel circumstances very rapidly, five or six times as much fue as is really necessary mil beoratus. Mr. Rogers con sidered of the honour of. that it shall contain fuel enough to supply the pipes wit as much heat as they can radiate during the night, and which may be depended upon for burning steadily and perfectly whatever fuel is put into

In determining the proportion that should be borne by the surface of pipe to the surface of glass, the author re ferred in terms of great praise to Mr. Charles Hood' most valuable treatise on hot-water apparatus. Formerlys mitted on this point ; almost all the earlier apparatus were mitted on this point ; almost all the eariner apparatus were incompetent to the work required of them, the quantity of the boiler being large, and of rery defective construction a vast quantity of fuel was burnt to waste. The gardene finding his heat deficient, naturally stoked up his fire and threw on fuel, in the hope of increasing it, but the only result of his labour was the more rapid destruction of the cansed the principle of circulation in hot-water apparatus to be better understood. If, however, the earlier apparatus were mostly deficient in the quantity of pipe employed, many of those more recently erected err in the opposite extreme; the error arising not from any defect in the data or in the calculations, but from assuming as the minimum of external air' a temperature which very rarely occurs in
this country, and which lasts for so very short a time that no building has time to coll down to a erresponding temperature; a power of $30^{\circ}$ for greentandse and of 4. $5^{\mathrm{a}}$ for hothouses is. in Mr. Rogers' - Hinmm. ample under any circumstances. It may ! wread that it is always easy to work an apparatia in its power, and within certain limits, is true: but if the quantity of pipe materially exeeeds what is :. .andy, the oniy means of keeping the house at a min inate temperature is by leaciag the furnace dour opens and a
economy of fuel, newsearlly restits
the great import ance of reynlating with precision the amount of moisture a the atmongluse of a loone for planss. The most cries able suriaces of water a moist atmuphere is oy considerburfaces ought always to exceed by a few degriees to mean temperature of the house. The troughs cummonly employed are objectionable ouly in as far as they are much too small, and becoming quickly empty, afford a very tem
porary supply. To be really efficient, such troughs ought depth, and they should extend the whole length of the house, affording something like one square foot of water surface for every 15 square feet of glass in the roof. In Orehidaceous houses, and those destined to the cultivation of tropical plants, a still greater surface of water is desirable ; and for this purpose slate cisterns, fixed immediately over the heating pipes, as broad as the front shelves, and from one Their temperature will always exceed that of the house by a few degrees, and the great surface affords an abundant though gradual supply of moisture; they act also as par tial reserroirs of heat, and afford the only efficient means o cultivating the beautiful but moch-neglected tribe of stove aquatics. The culture of these plants has become almos extinct, solely on account of an almost universal failure in from the improper constriction and position of the cisterns in which they are grown. In the few houses where cistern are introduced, they are generally provided more for use than ornament ; the position in which they are placed, and being warmed; aind, in fact, the temperature of the water contained in them is always some degrees below that of the house. Under these circumstances no tender aquatics as here recommended, and formed of slate, their temperature will always by a few degrees exceed the mean temperature of the house; and if their situation be light enough stove-aquatics will flourish in them in great perfection.
Nomenclator Botanicus, seu Synonymia Plentarum, Botanical Vame-Book, or Cniversal Synonymy Plants: enumerating in alphabstical order the to flovering plants by Linnceus and subsequent Botani1 Writers By E. T. Steudel. M.D. 2d Edition. 8vo Pamplin, London. Parts I.-VI
Antrovgh a mere catalogue of names, and therefore oue of the most unreadable of books, yet this work is o considerable importance to those who are occupied with the plants of either gardens or herbaria. It is the greatest of all the reproaches to which Botanists are liable, that the names of plants are continually and needlessly changed by them, and that consequently no one, except the person whose whole time is occupied by the pursuit, is capable of following them in their unsteady path. That such reproaches are merited by writers hire spaci, and a few thers, is true, but in general they are undeserved; fo uently consequent the discovery of error. This is not, however, the place in hich to discnss such a question. The fact is that, from whetever canse, changes in the names of plants are very frequent and embarrassing. Dr. Steudel's book is intended alleriate this evil, by collecting in alphabetical orde all the names that have beeu published since the days of Linnsens, and referring those which are obsolete to the names generally adopted by the best living writers. To effect this, he has followed the double plan of giving the recognised name with all its synonyms on the one hand and the synonyms with the recognised names on the ther. Thus, suppose a person wished to find Hippion ciliatum, he would on tarning to H. ascertain that it is the same plant as Gentiana cinata of Linnseus; and again pon turning to the place of Gentiana ciliata under abe iven to that species. As an example of the importance of this find of information, let is take the well-known rinns Pritillaris. It appears, from Dr. Stendel's list, that here are 76 names of species to be found in books, but hat of this number 44 are repetitions, or synonyms, and nis 32 are really distinct from each other
In addition to the names, the author has added to each enus its natural order in the different systems of Bo tanists, and to each species its native country and general character, whether annual, perennial, shrub, or tree. The work appears in octavo Numbers, each containing 128 pages; they are pubiished at short intervals, are beauti fully printed, and remarkably cheap. We have received he 6th Part, which ends with Hippion.
The Genera and species of Orchidaceous Plants. By John Lindley, Ph. U. Ridgway. 8vo.
Thrs work, which was commenced in April 1830, is now completed. It contains a systematical account of 1980 pecies, and will be succeeded by a revision of the order ino, illustrated with numerous figures of genera. The following are extracts from the authors preface:

This work would have been long since brought to a dose lud the subject been less difficult, or one which demanded less exact examination. It has, however, provad a mont lahorious task to analyze with the neces ary care so large number of plants of a very intricate structure, in a dried state ; and the author's other engage. ments have left him little hioure for the steady prosecution of this inquiry, so that is has been impracticable to
odvance with greater speed. This explanation is due to advance with greater speed. This explanation is due to
those friends of science whon collections have been entrusted to the author for all this long period

With respect to the revimion of the order, whic Whes anciagtion, the author will be grateful for

quote in the intended 'Revision' of the order, the numbers attached to the specimens sent to him and preserved
by him ; so that if those who are so obliging as to communicate them will preserve duplicates with similar numbers, they will be able, when that work
accertain what their plants have proved to be.

## SUMMARY OF CONTENT

In our leading article will be found an account of most important decision of the Lord Chancellor respecting the tithes of wood.-A paper by Mr. Green on his man ner of growing Wiater Cucumbers is well deserving per usal, as the result of the experience of an excellent prac tical gardener.-A sketch of the arrangements observe in the Orchidaceous honse at Ealing Parls, where such plants, and stove aquatics, are gromn with great success, illustrates the principles upon which such houses should be constructed.-The suspension of operations by Horticultural Societies enables us to extend our Home Cor respondence, under which head we particularly direct notic to an account of a case of dry-rot in the main-timbers of University College, London.--The memoranda from Bermuda deserve the attention of persons interested in colonial agriculture. - In the notice of the tenth number of the Proceedings of the Horticultural Society we have given a short extract of Mr. Rivers's mode of managing is Dwarf Pear-trees, and some extracts from a highly interesting paper by Mr. Rogers, upon heating Hothouses. CALENDAR OF OPERATIONS for the ensuing Week Now hat severe frosts and celd wind preevil we wont can pion our readers against their effects upon plants,
pecially young evergrens, which frequently suffer more injury
from piercing winds than from frost ; these, therefore, should be protected by coverings of mats, straw, fern, or such, other mate-
rials a the gardener may have at bis command. In the managerials as the gardener may have at bis command. In the manage-
ment of glass structures we would impress the importance using means for excluding cold, with the use of as little fire as
possible of using water very sparingly; and of admitting air possible;
cautiously emperature to decline at the expense of fire heat, in fact, one of the things which should be constantly borne in mind, and
more especially in the forcing season is the mosteffectual mean of keeping up the requisite temperature in the hothonses with
the least fuel, not only for economy's sake, bat to prevent the generation of impure gases, which deteriorate the air and the sequently injure vegetation, by cansing a weak and unheallhy development of buds and blossomss, sickly a foliage, and nultimate sulphureous acid gas, which is given out largely from many kinds of coal, proves deatructive to tender plants in a few hours. These
observations of course apply principally to houses heated by observations of coarse apply principally to houses heated by
brick fiues, which are still in very general use. In heating by brick fiues, which are still in very general use. In heating
hot water or steam, the same objections do not become so appa rent, although a weakly growth is the sure consequence of $a$ bigh temperature maintained by fireheat, whatever plan of artificial heating be adopted; and we therefore recommend in all cases wher
practicable the use of external coverings, which, if properi practicable the use of external coverings, which, if propers
used, will reader strong arces in a great measure unnecessury We uise some coverings at Chats worth constantly at night, which makes from 10 to 15 degrees difference in the temperature of the houses where they are applied, and to maintain which withou them would consume three times the quantity of sary; but of these, and their construction, we shall have to
speak more at large. Another evil to be puarded against at season is the too free admission of cold air, which, if the heat is
maintained by the aid of coverings and small fires, it will b scarcely necessary to admit, except under the sun's infuence; and this will remove in a great measure the probability of danger from the ill- understood, and very frequently erroneous, application
of ventilation, which is at this season of mare importance for the escape of noxious vapours generated by fre-reat, than fer
the well-doing of the plants, which it is purposely given to benefit I.-KITCHEN GARDEN AND ORCHARD.

Psngizf. - Supply water moderately to the plants now in fruit and place them together in the warmest part of the house; us grear caution with the fires daring boisterous weather, as more
injury is occasioned by over-heated fues during windy weather than at any uther time.
Vivera.- Continue to keep gentle fires in the day-time where late grapes are still hanging, ziving air at the same time: rub
alt weak and superfluous buds as they adrance, and those le will be invizorated thereby. The temperature of the house com
menced last mouth mav now be increased to $60^{\circ}$ minimum an -0 maximum; give air upon every fitting oecasion, and damp the vines night and morning.
Prach-Houss.- Remove all foreright and ill-placed shoots when forced tries are weak, and have made but short growt h, the bioom will be forud hughly beneficial to them.
Cecumbras. - Do not allow the heat to decline suddenty, an ase every precaution in lining the frames, that the dung use sweet and well prepared by frequent turnings; as soon as new
made becs become free from disagreeable emavia, and the tem perature becomes steady in the hills of soil at. $60^{\circ}$ or $85^{\circ}$, the plants may be trusted in them. Sow Melon-seeds of the early kinds, and a succession of Cucumbers in case of failure.
Muskroous.-Make heds fur spring supplies.
When the weather permits, continue to prepase ground for future crope by diggiug, trenchiog, manuring, \&cc.
Cabbagis.-at the earliest opportanity some of the larges plants from the seed beds of Early Yorl should be planted out early.
Honsirnanisi. - Make new plantations ; plant crowns eighteen
nches deep with a dibple, and cover thom vith old tan or very light soil.
leaved kind, in a warm situation
Por-bizas, as Mint, Tarragon, se., if required, thon be in out such of the cifl ones as ars it for use, and let them be boiled, to destroy the egge of insects; heat old cast-metal nails
red-hot, to clean them, and them simmer them in linseed oii, painting.
5.-FLOWER GARDEN AND SHRUBBERY

Stove. -at this season a more moderate temperature should be maintained, especially during the night, to prevent a too early excitement in the plact in siving water.
Gits ExHOUSE.-Give abundance of air when the we mits, and if watering becomea necesmary in dall weather, let at
be given sparingly, and gentle fres lept during the day to dias pate the suparfivens motsture.
Pite Ary Paines, Collect the dead leaves from Geminms

Salvias, and other store plants and cuttings; use every means in
your power to prevent damp, by watering sparingly and on clear mornings, by giving air upon every favourable occacion intro
duce a succession of flowering plants to firce, fumigate with tobacco the plants infested with green in A Ahtis. Amaryilis,
Tabe-roses, and other bulbs showing indications of growth should be immediately potted and placed in heat; ; Bow Ranunca
lus seeds in pans, and plant roots in pots for early flowering.

Protect regularly -all half. hardy plants and beds of florists doweres ; when the weather permits contioue all ground improve. ments, such as plating, pruning, digging borders, and laying NURSERY AND FOREST DEPARTMENT. NCRSERY.-Protect young evergreens and seedings; elean

and arrange seds for sowing; turr over frequently the berries
of plants which have been mixed with sand to rot their oater
 bole of the plant, using due caution not to lacerate the bark,
but if this should inaderertently happen it is of minor consequece
to learis a dead stump protriding, it should never be necessary
t. remore a large branch, nor many aremore a large branch, nor many small ones at one time, but
regular progressive pruning slould be bearly performed : an
branches which are gaining an undue ascendancy brem should be shortened, to uprevent it becoming eventuall
scrocked; some persons are very tenacious of cutting their
coll forest-trees, but this, in our opition, is more absurd than not to
plant them when it mas be done with advantage.- Joseph ${ }^{\text {Pas to }}$ Chatsworth. ENTOMOLOGICAL NOTICES.
Continue to turn up the earth and search for the grubs of the norne granary to destroy the brownibh-white cocons of the
corno deccribed in our last number. Should the weather
continue open, all piece of land corn-moth, described in our last number. Should the weather
continue open, all pieces of land infested wwith the wireworm
should be stirred. The wireworm is the grub of the click-beetle (Cataphugus leineatuss) it is slender, flat, shining, smooth, and of
a brown colour. It remains five years in the grub state, and commits a great devastation among pinks, carnations, and othe
plants, and is so well known to the gardener, that it is only ne
cessary to say a few words as to the best manner of getting rin plants, and is so well known to the gardener, that it is only ne-
cessary to say a few worrs as the best manner of gettiog rid
of it. The easiest method is to turn up the scil, and leave them a prey to birds; or strew over the ground slices of potatoes,
lettuce staks, which attract the wireworm, and they may thuy
be collected in great quantities and destroyed. The mule and be collected in great quantities and destruyed. The mote and
the pheasant are very servicathe in destrying the wirewnmm
and instances are known where the latter on being shot has
 times to such an extent as to render it necessary to plough u
the ground, and sow again. It is, however, the opinion of som huthors that they only attack the roots of grain and grass whe they are very numerous, and unable to find a supply of their pro-
per food. Besides the grubs of the wireworm and cockchafer and the cocoons of the corn-moth, there are many others which
should be destroyed at this season whenever they are found ; fo example, the cocoons of the dart-moth (Agrotis segetum), one of
the most injurious insects to winter grain, and which will form
state of the Weather near London for the Week ending Jan
ary 14, 1841 , as observed at the Garden of the Horticultura
society, Chiswicc.

 Phe highest degree of temperature during the above period, in
this portion of January, occurred on the 29d, in 1834, thermome
 mometer then indicatiag $u$ coes. The unprecedented amoint of destraction amongst exotic vegetation which this occasioned
generally known, and the occurrence is hence recollected as a generally known, and the occarrence is bence recollected
geport on covent garden marker for the whi Notwithstanding the unfavoqrabie state of the weather, the market has been tolerably well supplied with froit and force flowers; and vegetables are not scarce, thoush somewhat indiif
ferent. Fruit.-Black $J$ Jmaica, Enville, and Providence Pines good, but not plentiful; Queens are, gencrally small, aad
ripe. The supply of foreign grapes is pretty good, and of tole

 Lemuns ts abundant, and the fruit gond; the fory
2u. to $3 x$. per doz., and the latter from 1 , od, to $2 s$.

## Notices to Corresponden

The mutual interests of gardeners and their employers, and the rapid dispersion of knowledge relating to every part of horticulture, and the collateral branches of knowand advice, correspondence, or assistance in the attainment of these ends, will be gladly received. We shall be found to treat nothing in a self-seeking, prejudiced, or per-
sonal manner; but, on the contrary, we invite fair discussion upon all horticultural questions, provided it is conducted with good feeling and good temper. It is, indeed, as an easy means of rapid correspondence that we hope to make the Gardeners' Chronicle of the greatest value to all There are few gardeners, and still fewer amateurs, who do not on occasion require immediate information upon rarious points of practice. But either from an unwiling the inquiry, they too oftea fail to obtain the information they are in want of. Let all such persons communicate with us, putting their questions as ciearly as they can, and of such questions will be printed in our columns, and answers will be sure to be returned either by ourselves or by some of our numerous friends. And let no one be alarmed lest his questions should appear trifling, or those of a person ignorant of that which he ought to know. He
is the wisest man who is conscious of his ignorance; for how little do the wisest really know!-except that they know little. If one man is unacquainted with a fact, howsame pusition as himself are equally in want of similar information. To ask a question, then, is to consult the good of others as well as of one's self. In this part of questions or answers. When, however, a practical man sends a reply founded upon his own knowledge, his name will no doubt give authority to the advice he may convey Among the many things for which we are disposed to results of their experiments. Attempts to improve or vary the details of routine are the soul of improvement, and generally convey b.th instruction and amusement, even if they prove to be failures; for the latter, like adversity, often teach more wisdom than is gained from success. in which he assista our undertaking. We hope often to hear from him.
If Mr. If
would contribute, and we thinli them useful, weshall be happy to agree to his proposal
We regret that
We regret that Mr. Lambert's opinion does not coincide with
our own. He will however see, upon reconsideration, that his arguments do not apply to the case of Alies Khutrow, as stated in have figured, but what whe originally figured by Dr. Wallich.

G. R. G. R. Will find his statement that road-scrapings prevent
the, clubbing of the roots of cabbage-plants, corroborated by Mr.
Sherwood, in his paper on the cultivation of brocoli, p. 22 of this
Chronicle. Mr. Sherwood does not indeed mention cahbages
bui as the discas. is the same in both subicet. ani

## NEWS OF THE WEEK

Two important documents have been received this week, -the Speech of the Queen of Portugal on opening the Cortes, and the Message of the President of the United States, Mr. Van Buren. The Queen of Portugal declares that the demand of Spain relative to the navigation of the Douro cannot be acceded to without certain modifications that the Government has claimed from this country the fulfilment of those treaties by which England is bound to protect Portugal from aggression; that measures have been taken to place the country in a state of defence ships of war have been fitted out, and new battalions have been raised. But these preparations are, it is hoped, merely precautionary, and expectations afe held out that the peace of the Peninsula will not be disturbed.-The President's Message is unusually long ; it breathes through out a spirit of peace, and enters fully into the whole system of American affairs both at home and abroad ; the passag relating to the Boundary question expresses the desire of the government to bring it to a final settlement as spee dily as possible. The Message further states, that the suppression of the African Slave Trade has received the attention of the Executive, and that measures have been taken to prevent that traffic being carried on under the American flag.-From France we learn that M. Thiers has made his Report on the Fortifications, and that it is con sidered satisfactory by the Government, with whose view it agrees in its material points. This result is regarded a an evidence of the increasing moderation of the war party, and as a favourable augury of the stability of the present Ministry. Intelligence has been received that peace has been concluded with Buenos Ayres, and that a treaty to this effect has arrived in Paris.-Advices from Berlin announce that the differences which have so long existed betwee Rome and Prussia on the subject of Ecclesiastical affairs, are on the point of being amicably terminated. - A dispatch has reached Vienna, confirming the report tha the Sultan has revoked the decree deposing Mehemet Ali and confirmed him in the hereditary Government of Egypt.
At home, a ministerial circular has been issued to the supporters of government, officially announcing that Par liament will meet on Tuesday the 26 th. Several remark able changes in the weather, both in the metropolis and the provinces, have occurred, aud the distress thereby oc casioned has been severely felt by the poor and by labourers of all classes. A rumonr has reached torm of fatal accident to a skaiting party on the ice at Whittlesea Mere, by which 100 persons are said to have been drowned but no particulars have been received.

## 7home Nefos

The Court.-Her Majesty, Prince Albert, and the Princess Royal, continue at Windsor, and are in good health. During the frost Her Majesty and Prince Albert have been almost daily visitors to the lake at Frogmor Lodge, where Her Majesty has been driven over the ice in a sledge by His Royal Highness. Her Majesty has again orwarded $50 l$. to be distributer to the poor wibl and 20l. to the poor at Clewer. Prince Albert has also forwarded 251 . for the poor of Windsor.-The Queen Dowager is still at Sudbury-hal ; Her Majesty has bestowed 50l. on the poor of Windsor, and has contributed 25l. towards the building of Sunday and infant schoois at Whitechapel.
Parliamentary. - It is said that Lord Brabazon, member for the county of Dublin, and the Hon. Grantley Berkeley, ne of the me for the mestarn dirision of Gloncesterhire, will move and second the address of the House o Commons to Her Majesty, on the speech from the throne at the opening of the ensuing session of Parliament
Marchmont Peerage.-The claim of Captain Sir.F. D. Home, Bart., to this peerdge, which has occupied the time of the Committee of Privileges during the last three sessions of Parliament, and which has already received nine lengthened hearings of the house, will, it is said, come under the final review of the Lord Chancellor for decision immediately after the meeting of Parliament. Sir Francis, now in his 54th vear, is one of the campaigners under Sir John Moore: was close by the person of Sir John when he received his death wound in the field of Cornnna, and was afterwards in many of the principal actions of the war. It afterwards in many of the priacipar the representation in is said that he unites in his peraon the male line of the ancient border falies of Home of Wedderburn, and Home of Polwarth or Marchmont

The late Captain Hewett-A subseription has been opened for the relief of the widow and orphans of this omicer, who peall has published an appeal to the public in their behalf, in which he bears testimony to the value of Capt. Hewett's services as a hydrographer. After describing his survers of Ro Janeiro, Mernambuco, and other scribing his survers:ays, that he surveyed the networis of shoals in the North Sea, lying between the east coast of Great Britain and the Continent, with a minuteness hereGreat Britain and the Continent, with a minuteness here-

## Total

The Niger Expedition.-The Soudan, one of the three iron steam-vessels destined for the expedition, is now lying in Deptford Docks. The Soudan the name is a corruption of Habib-es-Sudan, or friend of the Blacks) rivers; for conveying intelligence or invalids, and especially for sounding ahead of the other vessels in difficult or unnnown navigation. A free circulation of fresh air between decks has been ensured by the erection of a ventilating apparatus, fitted under the superintendence of Dr. Reid. half in breadth, and eight inches in thickness, extending all round the sides of the vessel, and provided with mouth which may be opened or closed at pleasure. The air is driven into this case by means of a large circular fan, axle of the paddles, or, when the engine is not in play, to a wheel which may be turned by manual labour. By means of this apparatus the entire vessel, or any single department, may be thoroughly ventilated, and the ship's company protected from the ill effects of the miasma that usually prevails in alluvial soils on those coasts where these ressels are destined to navigate. Connected with this there is a chamber containing woollen cloths, lime, \&c., through suspected, the air shall pass previonsly to being circulated by the veatilating apparatus.

Post-Optice Money-Orders. -The daily papers observe that it is not generally known that the Post-Office will pay money-onders throught a banker. The increase of moneyorders since the reduction of the fees in November last is aid to be about threefold in London.
Bankruptcies in 1840. - The total number of bankruptcies in England and Wales gazetted the last year was persons connected with manafactures there were in 1840 no less than 336 bankraptcies, being an excess of 113 over the previous year. In the pursuits of agriculture there were 126, being an excese of 21 ; and in miscellaneous professions and trades there were 963 , being an excess of there were last year 38 bankruptcies, being 13 less than in 1839; and in the silk trade there were 7, being a decrease woollen trade 46 , being an excess of 20 ; in the linen trade 14 , being an excess of 10 ; in iron foundries 29 , being 25 more than last year ; in various iron wares 24, being an excess of 5 ; in building trades 49 , being an excess of 2 ; and in miscellaneous manufactures 129 , being an increase bankrupts, whilst the previculture there were 4 farmers every other department under this heat there was an increase. Ot corn, hay, and hop dealers and millers there were 43, being an excess of 2 ; of cattle and wool dealers 31, being an increase of 8 ; of dealers in coaches and horses distillers 36, being an increase of 11. In miscellaneous trades there was a decrease onily amongst innkeepers and victuallera, of which the numbers were 106, being 8 less than last year. In the comprehensive class of merchants, bankers, warehousemen, agents, brokers, ship-owners, and wholesale dealers, there were 247 bankruptcies, being an increase of 70 ; in tradesmen, shopkeepers, and retail dealers, there were 524 , being 103 more than last year and in miscellaneous pursuits there were 86 , being an ercess of 43. In the three counties of Westmoreland Ratland, and Huntingdon, there were no bankruptcies. The largest number, of $2 \%$, was in Middleses, being an excess of 15 ; ind in Yorkshire 194, making an increase of 5. In the whole of Waies there were 52, giving an increase of 35 . In two counties the numbers for the two years were equal, it Gwetter being 28, and in Shropshire wall, Cumberland, Derby, Devon, Dorset, Essex, Herts, The suasex, where there were but 9 , being a decrease of 11 . the rumber being 16 , increase war in Monmout Warwick there were 93, being an excess of 36 ; and in Gloweester. Surrey, and Stafford, the numbers were 56 each. Darham, 27 each: in Kent, 24 ; in Northumberland, 20 : in Nottingham. 17 ; in Hants and Monmouth, 16 ; in Oxford and Suffolk, 15 ; in Leicester, 14 ; in Lincoln and Norfolk, 13 ; in Northampton, 12 ; in Hereford, 11; in Worcester and Berks, 10 each; in Suasex and Wilte, 9 ;
in Salop, 7 ; ia Cambridge aad Derty, 6 ; ia Bedta and

France.-M. Thiers's Report on the fortifications of the French capital has arrived. The document takes up
no less than eleven columns of the official Moniteur ; and it is said that unanimity has characterised the essential points agreed on by the committee. The total expense of $\left(5,320,000 \ell_{0}\right)$, but this is believed the mark. No limit is fixed fo
works, so that the scheme cannot works, so that the scheme cannot be completion of the as an immediate menace to Europe. The Royalist Print still regard it as a mere pretext to turn detached fort
against Paris, and in this view they are joined by the Bo napartist press. The papers generally admit that the upon the Report are expected to be favourable to the existing Ministry

## Peace between France and Buenos Ayres,-Govern- ment received on Tuesday the following telegraphic despatch, which had been delayed by the unfavonrable state of the atmosphere :--"Brest, Jan. 11, 8 unfavourabl Maritime Prefect to the Minister of Marine.-Peace has

 been concluded at Buenos Ayres. M. Page, Leeutenant de vaisseau, who arrived yesterday on board the Cussard will set out for Paris by the first courier with the treaty.' M. de Terran, aide-de-camp of Marshal Soult, left Pari a few days since for Bourges, charged, it is said, with mission to Don Carlos, whom the French Governmen mission to Don Carlos, whom the French Governmentpropose to liberate on parole. The friends of the Prince propose to liberate on parole. The friends of the Prince were, however, of opinion that, as he was not a prisoner of
war, he would decline those terms. It is stated that the war, he would decline those terms. It is stated that the
mere surveillance exercised over Don Carlos costs the French Government $100,000 f$, a year. We learn from Foix that the garrison have been obliged to take up arms, in consequence of the Spanish refugees at Pamiers haviug refused to obey the municipal authorities, by whom they had been ajoined to return to Spain, and claim the benefit of the amnesty recently proclaimed by the Spanish Government. The Prefect of Foix immediately proceeded to Pamiers ana by his firm language calmed the irritation which prethem to set out for Spain without having recourse to milithem to set out for Spain without having recourse to mili-
tary force. Their colonel read a proclamation from Don Carlos, thanking them for their attachment, and recommending them still to place their reliance in God that better days might come for their cause. The Prince declared in this document that he could never give his conWent to a marriage between his son and Donna Isabella. When the reading of the proclamation was finished, the colonel ordered all present to renew their oath of fidelity to Don Carlos, which was done accordingly.
From a comparative statement of the commercial prospects and resources of France, it appears that she has but $43,000,000 f$. engaged in trade beyond the Cape of Good Hope; that is, $5,000,000$ f. with her own Indian possessions, $7,000,000$ f. with those of the Dutch, $21,000,000$. with those of England, 3,000,000f. with China and the Philippines, and $7,000,000 f$. with Egypt. With Turkey her
trade is $43,000,000 \mathrm{f}$. In respect of territory, Russia trade is $43,000,000 \mathrm{f}$. In respect of territory, Russia and its
dependencies count $60,000,000$ of population, and $5,912,000$ square miles. England and its dependencies count 142 millions of population, and $4,470,000$ square miles;
France, 32 milliuns of population to 188,000 square miles
Some of the papers give the following account of an affair between an English and a French ship in the Red Sea, said to have been transmitted from Chandernagore to a member of the Chamber of Deputies :-" A commercial vessel belonging to Bordeanx, armed with six guns, and laden with muslets, had entered into communication with the Arabs on the east coast of the Red Sea, when the Elphinstone, one of the East India Company's ships, cruising in the same latitude, and acquainted, no doubt, With the natare of the cargo of the French vessel, ordered
her to leave the shore without delivering her freight. The brig refused to desist. The English ship, which carried 26 guns, had recourse to force. An engagement ensued. After exchanging shots for several hours, the Englishman master of the fiel sail for Cacutta, leaving the Bordelais denied by the Moniteur and other journals, which affirm that no engagement has taken place.
The Aeadémie Française have elected M. Vietor Hugo and the Count St. Aulaire, ambassador at Vienna, members of the Academy, in place of M. Nepomucene Lemerier, and the Marquis de Pastoret, who died last year
Poetueal.-Lisoon, Jan. 4, 2 P. M. -The ordinary Cortes was opened on the $2 d$ inst. by her Majesty in person, Who delivered a speech in which the Douro question was
the prominent feature. Her Majesty stated that the de mand of Spain could not possibly be acceded to ; that the government appealed to Great Britain in order to claim the fulfilment of the treaties of alliance between the two crowns, and that measures had been taken to place the country in a state of defence against any foreign aggression. Private letters state that the mediation of England is looked for with great interest; many members of the Cortes, it is said, have come to the determination that until Spain shall withdraw or considerably modify the altimathom of the sth of December last, which has been asked for by the government and negatived, and which they regard as placing an interdiction upon an inde-
pendent deliberation, it cannot be brought ander discuspendent deliberation, it cannot be brought under discusbarges down the Douro, to be bonded at Oporto for ex portation, is said to be one of the stipulations likely to meed with the greatest opposition, the landed proprietors,
ous concession, and in the two provinces of Estremaduraand Alemtejo, meetings have been held, and petitions numer the crown have to contend on the dilemma, the advisers of the fulfilment of their promise, athe on the , ther sith for powerful resistance of those in ti.e acricultural intercat sion, as well as to keep domsin aur poilitieal cosist inva Some newly-raised battalions are alreat; armed and ac. cuutred, and mounted grard at tire Palace das Necessi dades, the Bank, Niral Ansenal, and other mullitary
stations. Sixty-five pieces of cannon, of variuus caltbre have been planted on the lines; the ships of war are
rapidly being fitted out, and rigid impressments continue The government has come to) the resomention to pay who served in the Portog pensions due to British officer war and subsequenty 1,400 contos de reis ( 320,000 . sterling), in ten four-
no demonstration on the part of the Nerfectly tranquil, and taken place on new-year's day of the National Guard had An event has occurred in Madrid which is considered Mikely to compromise the Regency with the Court of Rome M. Ramirez Arellano, who eh ezised the functions of Apostolical Nuncio, although
Vice, in powers, since the death of the Archish
all the all the papers of the Nunciature have been put under
seal. Señor Arellano was appointed provisional Nuncio seal. Señor Arellano was appointed provisional Nuncio upon himself the permanent duties of the office. The Madrid Gasette of the 1st contains the official order for his expulsion, but does not assiga any reason for the mea by his poblic correspondent says that it has been caused stant communications with the leading Carlists. All his ecclesiastical revenues in Spain are seized by the state, but his private property is respected. The Tribunal of the Rota is suppressed by the same order. The Gazette also publishes an order extending the benefits of the amnest to persons in Spanish possessions beyond sea.-Ad
vices from Barcelona mention that the new mole in that port has been much damaged during the late storms, and many of the works on it destroyed.-The state of Cati lonia, where the manufacturing interests are much impaired and which has been visited by some bands of Carlists, give the government considerable uneasiness. There is, it stated, general discontent amongst all classes of enoployés Letters from Cadiz state that a portrait of the Duke de la Victoria was to be inaugarated in the conference Chamber of the Ayuntamiento of that city, with a procession and all due solemnity. At Logrono a statue is to be raised to the Duke, but matters are not yet sufficiently advanced, he subscription which had been set on foot for that purpose having as yet only produced the small sum of 7,200 reals (12l.) The College of Jesuits at Loyola has been
definitively closed, much to the regret of the country and without sufficient time being allowed for the students return to their families.-1t appears that the government intends to build at Passages six steamers of 400 -horse power each.
d'Apstria.-A letter from Vienna states that Count Metternich and also with information as to the result frince funeral of Napoleon, which had excited expectations of a distarbance. The calm which pervaded France on that occasion appeared to Prince Metternich an anditional motive for repeating remonstrances against the armaments of
the French Cabinet. Consequently Count d'Appony has been again instructed to declare to M. Guizot, that Austria considers the maintenance of an army of 500,000 men, added to $1,000,000$ National Guards, as incompatible with the pacific protestations of the cabinet of ()ctober $29-$ that the powers who have signed the treaty of Londom, placed by the conduct of France, have decided upon taking measures to constrain her to give to her policy a decisive character either for peace or for war, in the hope that this step will lead to the reduction of the French army to 300,000 men, and then to a general disarmament of Europe. The assertion that Austria has remonstrated against the fortification of Paris is unfounded. This plan having beer examined by engineer officers, has been considered as requiring an expenditure of at least $500,000,000$ which, added to the present deficit in the budget of France cannot fail to embarrass her in her finances, and weaken rather than render her more redoubtable to other power. Moreover, Austria, who since 1830 has fortified herself at every point of her vast empire, cannot conceive it to be fications of Paris appear at the same time to be calculated to stifle for ever the spirit of revolutionary propagandism the absolute Powers cannot but approve of them. I reference to the demand of the great Powers as to the continued armaments, advices from Frankfort state that the answer given by the French Cabinet is pacific. M. Guisot was much pleased at this demand being made in a confidential manner, since a note from the Germanic Confederation would have threatened the existence of the Ministry of October 29. The Powers are told that the present Ministry found affairs, and especially the arma ments, in the same state in which they notr are ; that was impossibie to suspend them abruptly. or to reduce the army as long as France remained isolated; that, convinced would ase all possible efforts to attain this object, and that
difficulties in voting the enormous sums required for state that a courier who left Constantinople the 20th ult. revocation by the Porte of the déchéance of Mehemet Ali. Prussta.-We learn that an order has been given to frontier, into a state of defence. Great activity is displayed in the arrangements for the Coburg railroad, which is to
connect Coburg, Hildburghausen, Meiningen. Gotha, Weimar, Erfurt, and Eisenart, and to join the Prussian when this is finished, a traveller may go in two days to from Banberg, the junction of the Maine and the navigation of the Ludwig Canal, to Berlin, Bremen, or Hamburg.
Hanover.-Letters state that the Crown Prince bas Hanover.-Letters state that the Crown Prince has to the Prince an ancient copy of the Bible, in which the
names of Luther and Melancthon are inserted in their own bandwriting. English lawyers are said to be at Hanover Who, in conjunction with some members of the cabinet,
are making investirations to ascertain what part of the jewels of the English crown claimed by the King of Han posed that these lawyers are sent as commissioners by the English government to endeavour to settle this difficult that they are engaged on the part of the King to collect materials and the depositions of witnesses, according to the usage of the English courts of justice, for the lawsuit
which the King of Hanover intends to institute against Queen Victoria, on account of these jewels.
Holmand. - The King has promulgated the concordat with the Pope, signed in 1828, bat held in suspense by bishops. He has also suppressed the office of secretarygeneral, the sole minister having a responsible signature, and established the constitutional plan of each minister Colonies has declared that the extra dividend to be given by the Commercial Company to the shareholders will, proThe journals contain general orders issued by the Minister promotions, tending to reduce the expense and simplify the organisation. The commercial treaty concluded beCustoms Union, which expires in the year 1842, will probably be renewed, but with certain modifications.
Russia. - The Slate Gazette mentions that the Emperor has conferred the order of St. George, third class, in which the Emperor announced to Admiral Stopford his admission into the second class of the order was couched to sive you a proof of our especial good-will, for., wishing like deeds and extraordinary services by which you showed your zeal in favour of our alliance with his Highness the great martyr and conqueror George, of the second class. We herewith transmit you the insignia of the order, and we assure you of our good-will." The Northern Bee is
filled with a description of the betrothing of the Czarewitsch to the Princess Maria of Darmstadt-- solemnity, in the words of the writer, which shakes the globe, from The name of the Princess, after her re-baptism and admisssion into the Greek church, is Maria Alexandrowna. The ceremony was performed on the jour de fele of the Emperor, on the 6 th ( 18 th ) of December. Intelligence agents are exciting the Circassians to revolt. Three vessels laden with ammunition, which was forwarded froma Bir lately intercepted and captared by the Russian flotilla. lately intercepted and captured by the Russian flotilla.
-We learn from Poland that the ner fortress of Demblin and the chain of fortifications which Russia has raised against its western neighbours beyond the Vistula are completed, and the old ones enlarged, so that Russia has now most formidable points of defence in Poland, in Zamose,
Bresze, Lowsa, Demblin, Medlin, and the citadel of Warsaw. The military foree on the line against the Circassians is stated to be 31,000 infantry, 4,000 cavalry, 36 field-pieces, bejond the Cancasus is atil on this side, so that she might suddenly send an immense

issariat readiness for the Danish contingent to the army of the German confederation, to talke the field in carmy it should be suddenly ordered to march. The amount of the revenue for 1839 is made up, and will be speedily published; year. The estates of Jutland have rejected the propositions of the royal commissioner to impose shackles on the press, and have declared thenrselves in favour of its making for an election of the provincial states, and all parties are actively canvassing for their favourite candi-
dates. It is stated that in the event of the liberal paty dates. It is stated that in the event of the liberal party voking the Chambers of the kingdom, in spite of the remonstrances of Prussia and Russia.
that the differences which had arisen the 31st ult. states Sardinia, on account of the intention of the latter to remain meutrai, in the event of a war between France and
the former powr, was in process of adjustment. According
to the same letter, Austria and England had set their oeto
upon the French Levant steamers being allowed to touch
at Messina, or any other harbour of Sicily, on their passage to and from Marseilles and the East, as proposed in between France and Japles. The reason assigned for this opposition on the part of England and Austria, was the fear of France gaining an ascendancy in that island. It is exception of the Two Sicilies, have been invited by Austria to join the great Powers in their armaments, so as to be ready against a War, and that the answers retarned
have been satisfactory.-Letters from Milan of the 27 th alt. state that the communications between that city an Turin continue to be extremely active. The Anstrian
army quartered in the Lombardo-Venetian kingdom was army quartered in the Lombardo-Venetian kingdom was
computed at 100,000 men, and would, it was expected, be reinforced by 50,000 more. Milan was so encumbered with troops, that part of the artillery was obliged to encamp in the arena, which was filled with waggons laden thate negotiations have commenced between the Court of Por to be certain that the Prince will at length renounce his claim to the throne, and will continue to reside at Rome with the title of Majesty and Prince of Braganza. portion of his large domains in Portugal will be secured
to him by the Portuguese Government, but without leaving the direct control in his hands. Queen Christina of Spain has arrived, and has been received by the Pope with all the distinction due to her Majesty.-The new
Minister of Prussia has had an audience of the Pope, who declared again that he attached great importance to the friendly dispositions of Prussia, and that the kind feelings of the King towards his Catholic subjects gave him great pleasare. A
was expected.
Switerbland.-The Journals mention that a Prench artist has lately made a drawing of a certain part of Mont Blanc, which, taken in a particular point of view, presents a death-bed. The sketch has been lithographed, and innumerable copies sold. For a long time one of the summits of the mountain has borne the name of the Chapeau de
${ }^{\prime}$ Empereur. Accounts from the south mention that the fall of snow in the Alps has been so heavy as to interrupt the communications with Italy. The Crown Prince of Bavaria, who is on his way to Greece, was stopped for two days at Udine by the accumulation of snow. According to the latest account he reached Trieste on the 19th the steamer, for Athens.
Greece.-The Maita and other papers have lately contained accounts of a system of torture practised at Athens by the Mirarch Tzinos. It appears from the denied, but that the several acts of torture are tacitly admitted. The thumb-screw, the bastinade and picketing, the suspension by the heels-the bending of the body till the head was forced between the feet, and lept there bound for hours - the red-hot helmet, are said to be in use, in order to extort confessions of imputed crimes.
Turrex.-The Government having represented to Chosrew Pacha that his numerous creditors were claiming from him immense sums, and having demanded what means he possessed for paying his debts, he replied that he possessed 5,000 purses (about $3,300,000$.) ; but that this sum was destined to carry him to the end of his career, and that in consequence his goods had better be put up to auction. This has accordingly been done. Accounts from Rodosto state that he has given up for ever the dress of a dervish, walks about the streets of Rodosto with a long stick in his hand, and leads a melancholy life. It is said that Reschid Pacha has declared that, in case of Mehemet Ali being allowed to retain Egypt, the hattischeriff of Gulhané should be made obligatory throughout his pachalic. Mustapha Pacha, Governor of Candia, has been officially invested with the pachalic of that island by the Porte- -Sir David Wilkie, who has been at Constantinople upwards of two months, is engaged in taking the likeness of the Sultan, who has already given him two sittings. The picture will, it is said, be presented to Queen Victoria. - The Smyrna steamer has brought 300 deserters in chains; being part of the corps which escaped from their transports on their way to Syria, from Marmorice Bay, 18th ult, quoted by the Comfrom Marmorice Bay, 18th ult, quoted by the Com-
merce, states that when Commodore Napier sailed in merce, states that when Commodore Napier sailed in
there, on his return from Aleandria, in the Powerful, the crews of the other ships anchored in the bay saluted him with three cheers. The Hecate steamer had salled with engineer officers to repair the fortifications of Beyrout. means tranquil. A meeting of the Kmetes, from all districts, has been convened at Kragujewatz, and they have signed an agreement not to listen to any proposal for the return of the men who have been banished. Hints are also thrown out of secret communications which have taken that the Rajahs of the of Bulgarian villages, and it is said a wistful eye at the advantages enjoyed by the Servians. These advantages were, however, gained by the Servians them arms in their hands, and cannot easily be taken from adem or gained by other provinces which have less natura Porte will endeavour to exert a more immediate authority in Servia, and that it intends inviting the joung Prince Michael and hir mother, the Princess Lubitska, to Constantinople. The Servian devire that the Prince shall
of the Porte's attempt to limit the Servian privilege would be to throw the country back into the hands of Russia, from which it is now de facto liberated

Syria. - The French official papers represent Ibrahim's position as far from desperate, and state the truth of the position as far from desperate, and state the truth of the
report that he had defeated the Arabs of the Haouran. report that he had defeated the Arabs of the Haouran
He was said to have 40,000 men, and not to have evaco ated Damascus on the 8 th. The British and Turkish atmirals and Generals had signified to him that the orders sent for the evacnation s sria in consequence of Com modore Napier's convention were nall.
Egypt.-Accounts recently received state that the
Nile now wears the aspeet of a European river. It is to be seen constantly traversed by four steam-boats can veying mails and passengers. That of Mr. Galloway is said to be the most rapid, having made the passage from Boulac to Rosetta in seventeen hours less time than the Pacha's steamer. On the river are also three gut-boat with the Roman flag flying over them. They have on board the columas from Upper Egypt, which Meheme Ali has given to the Pope. The Arabs are said to gaze with astonishment at these flags, which represent St Peter and St. Paul at full length, with flowing beards, and ask whether they are not standards of the Jews, as the
countenances of the figares are decidedly Jewish. Sine Mehemet Ali lost the command of the deserts of Arabia overland communications are intercepted at all points, an even the caravans from Suez are plondered.
Canada. - The Union.-Lettery from Montreal state that though nothing certain is yet known regarding the future seat of the Colonial Government, it is presumed that it will not be at Quebec, as orders have been given by the Governor-General to intimate to the proprietors of Government offices there, that they will not be required afte the 30th of April, and all the Government books and papers are to be sent to Montreal without delay. Thi of the provinces will be made immediately, and that warrants for the election of members to serve in the United House of Assembly will be issued at an early date thereafter. Montreal is not to be the seat of Govera ment, at least during the first Parliament, owing, to the Legislature ; and as the same reason applies to every other portion of the province, with the exception of To onto, it is concluded that there the Parliament will meet United States.-The Sheffield packet arrived at Li verpool on Monday, bringing the President's Message breathes throughout a spirit of peace. In regard to the Boundary Question, the following extract, giving an exac account of the present state of the negotiation, has bee considered satisfactory:--" The excitement which grew out of the territorial controversy between the Unite States and Great Britain having in a great measure sub sided, it is hoped that a favourable period is approaching
for its final settlement. Both Governments must now be eonvinced of the dangers with which the question is fraught and it mast be their desire, as it is their interest, that this perpetual cause of irritation should be removed as speedil as practicable. In my last annual message you were informed that the proposition for a commission of exploratiots and survey promised by Great Britain had been received, and that a connter-project, including also a provi isn for the certain and final adjustmede the a pro in dispute, was then before the Britis Corerment for it panied by additional propositions of its own, was received, through its Minister here, since your separation. These were promptly considered; such as were deemed correct ia principle, and consistent with a due regard to the just ights of the United States and of the State of Maine, concurred in; and the reasons for dissenting from the residue, with an additional suggestion on our part, comMinicated by the Secretary of State to Mr. Fox. That Minister, not feeling himself sufficiently instructed upon some of the points raised in the discussion, felt it to be his duty to refer the matter to his own Government for its its advisement, a speedy answer may be confidently expected. From the character of the points still in difference, and the undoubted disposition of hoth parties to bring the matter to an early conclugion, I look with entire negotiation. Three commissioners were appointed shortly atter the adjournment of Congress, $n$ der the act of the last session providing for the exploration and surver of the last session providing for the exploration and survey of the line which separates the States of Maine and New Hamp-
shire from the British provinces; they have been actively shire from the British provinces; they have been actively employed until their progress was interropted by the soon as praeticable in the ensping year. It is understood that their respective examinations will throw a light upon the subject in controversy, and serve to remove many erroneous impressions which may have been made elsewhere prejudicial to the rights of the United States. It was, among other reasons, with a view of preventing the embarrassments which, in our peculiar system of government, impede and complicate negotiations involving the territorial rights of a State, that I thought it my duty, as you have been informed on a previous occasion, to propose to the British Government, through its Minister at Washington, that early steps should be taken to adjust the points of difference on the line of boundary from the entrance of Lake Superior to the most north-western point
of the Lake of the Woods, by the arbitration of a friendly power, in conformity with the seventh article of the tranty of Ghent. No answer has yet been returned by the British

States, that the relations of the Linited States with all the they are bnund by no entangling aliidnces, and are fre they are bound by no entangling ahinnces, and are free
from all interference with the dumestic and political relations of other states; that the suppression of the Africal Slave-Trade has received the attention of the Government and that vessels of war have been sent to the coast of Africa, to prevent the traffic being carried on under the pidly recovering from her late embarrassments, and the Reports of the Treasury, with the estimates for the cur Cabinet, it is said that Mr. Weitactory. In regard to the Secretaryship of State or the mission to England, and that Mr. Clay would dectine accepting office
mich s.and has been received, Which states that a band of 1.5 Texans, having joined the
Federalists, were betrayed by them into the hands of the Government troops, at Sultillo; and that it was agreed by Generals Montago, Arista, and others, that they hould all be put to death. In the uean time the Mexicans were received into the houses of the inhabitants, who, in cele made the soldier tipeen the Centrahsts and Feleralists, orderd by their gencrals to destroy the Texans; but the latter intrenched themelves behind some walls, resolving which 400 Mexicaus were killed, and only four of the Texans, who then took up their line of march and escaped out of the Mexican territories. The Texan Congress is in
session, but nothing of moment has transpired. The susion, but nothing of moment has transpired. The States, in $1 \times 39$, nas $1,890,, 362$ lbs., valued at 240,130
dollars.-We have received advices from Guatemala. Our correspondent infurms us that the goverament was just about to expel all foreigners without distinction, when the opportune arrival of H.M.S. Comus deranged the plan. To the consternation of the authorities, the Comus is reported to be the forerunner of a squadron

The Houses of Parliament.-Numbers of workmen are both Hy ing ion either building. In the House of Lords the seats and carpets have been remored to be cleaned. The canvas on the stranger, gallery are to be raised to atfur back of better view of the body of the Honse. Tise space behind the bar is now gradually raised up to the wall, so that the to see and hear the proceerlings as well as those cluse to the bar. The House of Commons is re-painting, and the cushions on the seats, together with the matting on the
floor, will be thoroughly repaired. The fittings for the Bude light have been tastefully painted, and are otherwise mach improved in appearance since last session. The galleries and seats will remain unaltered.

Mail Tenters. - The post-office has issued tenders for carrying letter-bags in the London district. They differ permit the carriage of in intimating a readiness to description, as well those taking passengers as thuse taking only parcels. It appears also that such conreyances, Whilst carrying the bags, are to enjoy the privileges of the mails in being exempt from tolls, and having their con-
ductors equipped in the Post-oftice uniform. The insignia of the mail will stamp the conveyance with the character of speed and punctuality. It is expected that this arrangemest will lead to the establishment of single-horse carriayes to carry two or three passengers, and parcels re-

Marylebone Vestry.-On Saturday, the report of the for siving a pura supply inquire into the means proposed brought up. The committee had examined several witnesses, and highly opproved of the measure, which promised to be a ivantagevus to the iniabitants at large, and Houses of Parlizment in support of the Bill to be bor duced next sessiman by the company. The committee were requested to renew their labours, and the report was ana nimously adopted. Mr. Kirby then brought before the vestry the great distress previlug amonyst the poorer in-
habitants. There were now 2.0 , house. and 4.000 outdon poor: there were ldst week 1.50 applications fur relief, and on suturday erill new applica tions were made. In addition to this, there were many poor respectabie people suffering must suberely who will not ask for parochial relief. After some short diseussion meeting of the inhabitants to raise a fund to relieve the deserving poor. A public meeting was held on Wednesand resolutiuss entered into for a general subseription and resolutivas entered into for a general subseription throughout the parish
Infanticide. - On Suturday an inquest was held on the
ody of a nemly-born maje ctild, found dead in a haglet body of a nemly-born maje clild, found dead in a bagket
in Queen-square, Bloomsbury. Suspicions were entertained that it was born alive, and had been made away with; it
was quite dend when foand. The jury returned a verdict,
"Found dead, but by what means death was caused there is no eridence to prove."-(On Tueday an inguest was
held on the body of a child found on Waterloo-bridge. It appears that a gentieman was passing over the bridge, when his attention nas drawn to a payer pareet lying the payement, and found a coarse towel on
which a new calico sheet presented itself, which was found to contain tine remains of a male child entirely dismemarms cut off above the wrists, and again divided above the elbows. Tiue trunk was sawn in two, and the legs were separated from the body. Mr. Havers, surgeon, we amined the chill, said, on couparing the parts of the
hody, which was divided into eight, he should think the clilit had been born ahwut three days, but owing to an interiur portion being missins he was unable to state pasi-
tively whether it was born alive or not. The neck had evidently been stretched to its fullest extent before the head had been detached from the body, which had been done with a knife, either before or immediately after puses. Verdict. "Williul beender fur anatomical pur persons unknown."-An inquest has been held at Gireen wich, on the body of a female infant, the illegitimate chili of Mary Ann Hoskins, a widuw. The surgeons stated that that the child was born alive. The lungs and gullet were orged with blood; death was caused by violent suffocation, produced by pressure on the windpipe. A policeman
proved that, in consequence of infurmation he received, he went to the gravedigger's and found the box containio the child. The gravedigger stated that he had received the box, which he was to bury for Is. 6d. It was stated to him that the child had been "still born." Several wit nesses proved that the child had been born alive. The that the chil 3 mur have bee. injured in ther, who state hoped that the jury would be merciful to her. The Coroner said, that the most important part of the evidence was the death medical gentlemen, bof whom had sworn two hours' consultation, a verdict of "Wilful Murder" was returned against the mother.
Fires.-On Monday morning a fire broke out on the Works and dockyard belunging to the General Steam Navigation Company, near the Royal Victualling-yard and Arsenal, and opposite the Dreadnought hospital-ship It appears to have originated in the engineering departalarm was raised, and means adopted to extinguish the flames ; but it was beyond all power to stop their progress. From the engineering department the fire communicated to the fitting department, sailmakers' work shops, smiths shops, sail stores, oil stores, loped in flames. Engines from the Victualling-yard were soun on the spot, as were those belonging to the parishes soun on the spot, as mere those belonging to the parishes
of Deptord and Greenwich, but none of them could be got into operation from want of water. Shortly after two o'cluck three of the brigade engines arrived, and obtaine a supply from the river. It was a considerable time before by the frestigisted. There are nine houses damaged Company Pleasant-row, which adjoins the works. The is estimated at $8,000 \%$.
Acoidents. - Singular death of Scott, the Diver.Monday afternoon a fatal accident occurred to the man known as "Sam Scott, the American diver," while prethe Thames. For some days previousiy, a placard had been posted throughout the metropolis, of which the fol lowing is a copy:-" Challenge to the world for 100 guineas.-On Monday next, January 11, 1841, and during hro week, Samuel Scott, the American diver, will run
from Godrey's, White Lion, Drury Lane, to Waterloobridge, and leap into the water forty feet high from the bridge, and return back within the hour, every day between one and two o clock. S. S. will be in attendance announce the above house open to any wager. This bridge a great concourse of persons. A scaffolding had been erected, consisting of five poles, two placed perpenfeet from one another Scott on mikion his ane immeditely immer a rope, proceeded to the top pole, giving a tin box to his
friends to make a collection for him. He then commenced by placing his head in the noose of the rope, and suspending himself by the chin for two or three minutes. His next feat was to perform a similar evolution with his feet in the rope. He then ascended the summit of the seaffolding for the third time, and having divested himselt of the handkerchief round his head, and attached it to one of the perpendicular poles, exclaimed at the top of his coice, then now show youce mure how I can dance his head in the noose, and swang himself off. He had hung for three or fiour minutes, when a person, who was standing near, observed that be thought he was hanging - Oh no. he has not huns one of Scott's friends replied, an instant after shouts were half his usual trome yet." In all sides to "cut him down." U"pon hearing this, a man ascended the ladder aud lifted up Seott's arns, which fell heavily back to the man's side. The shouts now became general, with cries of "Cut him down." Some bystanders and police got up the scaffold, and after some delay succeeded in cutting the rope and removing Scott to the
bridge. Mr. Havers, surgeon, and Sir Charles Aldis
opened by them, b,ut thiy the arm, wh the jugalar, were fowed. Scott was then eonsere! a - Neciny ds ind to Charing-cross hospital; and athutuh lite appored to ce extinet, he was subjected to the Kramic itwems, to warmug beth, but without effict. The wiurientee is atro buted to the knot of the a.moe hasin; sipped from utider the chin towards the neek in sueh a manner a- to protose sufficition. An inquest isas held on the bedy or 'lueadas and evidence entered into in regard to the pattewars of
the accident. Mr. Poweil, survevor of tile Waterlo bridse Company, attetuled to stite that it mas eritirely false statement had been made to thin was ereeted. man who superiutended the fixiog of it that he had the tained authonity from the able discusion having taken place amonest the jury the company having permitted the scaffolding to the erected, they retired, and after much cliscussion the
majurity returned with a verdiet of .c - On saturday afternoon an inquat st was held on Janes Gates, who was hilled in the ruius of thas late Roval Erchange. From the evidence it appeared that the decenea was engaged on Friday murning in undernining a portion of the foundation, and had made some progress at bi gave way, and the man was buried underneath. Serer workmen from different parts of the ruins came to his rescue, but some time elapsed before they attained ther object, when the unfortunate man was found crushed to atoms. Verdict, "Accidental death."-A nother acenden has occurred at the Royal Exchange, in consequence of the workmen having used gunpowder for the removal of the ruins. An explusion took place, which destruyed th alarm. The magistrates ordered the contractor to pay for the damage, and cersiured the employment of gunpurde for such a purpose.
day, at St. Bartholomew's Hospital were held on Scturday, at St. Bartholomew's Hospital, on the bodies of
Edward Bennett, aged three jears, and Martha Pollard aged seven years. In the case of Beanett it appeared that on Thursday last deceased was left in the care of two children not much older than himself, while his mothe went out on an errand. He lit a piece of paper at the fir and the whole of his cloplaying, when fily frock ignited was dreadfully burnt, and died two hours after lhs admis sion to the hospital. At the request of the jury the mother was admonished for not taking better care of her children.- In the case of Martha Pollard it appeared that she was reaching a book from the mantel-piece, when her pinafore took fire. She ran iato the yard, and the flame were quenched by one of the lodgers rolling her in the snow. She was taken to the hospital, where she expire.
from the effects of the burus on Friday. Verdicis of "Aceidental death" were returned in buth cases.-() Monday morning another inuquest was held on the body of Mary Burke, aged five years, who was bumed to death under the following circuinstances:-The mother stated out to fetch some water, when she left deceased with another daughter, two years old, in the room, telling them not to go near the fire. On her return she found decuased onveloped in flames, and the bedstead and counterpane burning. The fiames were extinguished, and deceased was
convered to the St. Giles's infirmary, where she expired The child was standing in front of the fire reaching someby the draft towards the grate, ignited.
dental death."-A secund inquest was held on the body of a little boy, aged three years, whose death occurred pre cisely under similar circumstances. A verdict of "Acel
dental death"" having been recorded, the Cormer sid that dental death" having been recorded, the Cormer said that held on children who were burned to death, and which more frequently occurred in the families of pror prople He should strongly adrise the removal of all mantel-pieees from the havitations of such persons, fur the accidents generally happened through thie children trsing to reacb
Further Mortality amony the Concict of W
nother inquest has been held oa the bodies of four consicts. From the evidence of the surgeon, it appeared that three of the men died from intlammation of the chest and fever, and the other from scrofula. Dr. Bussy stated that when any of the convicts complain of illness they are heir state of heark until seen by the surgeou, accordingly. The accommodation of the houpital-ship will nut allow of all that complain being sent there; he makes a list of such persuns as he imarines should be exetupted rom labour, which is presented to the Gusernor. Every question with respect to their treatment. Coroner-Di question with respect to their treatuent. Corouer-Do
you think their clohing sufficient? I observel the cloth seems very thin. Dr. Bossy-The clothing is provided y the Secretary of state. They are allowed to wear anyjury extra that may be given them by their friends. . We returned a verdict "That the deceased men died from natural causes." It was mentioned that a great number of the convicts are suffering from violent coughs and colds. The jury spoke very highty of the cleanly state in whicia they found the hospital-ship.
The Weather.-During the week several remarkable changes in the weather have occurred. The minimum temperature in the Zoological Gardens was at six A.M. on
Wednesday, when the thermometer stood at $19^{\circ}$ Fabrenheit.

At Hackney, the thermometer at ten P.M. on Tuesday
was $33^{\prime \prime}$; on Wednesday, at seven A.M., $28^{\prime \prime}$; and at noon. $35^{\prime \prime}$. About noon there was also a fall of rain, which soon
afterwards turned to snow, which in many protected parts settled deep. It lasted for four hours, and when it ceased the mercury had fallen to $33^{\prime \prime}$. During the night the thaw progressed slowly, and throughout Thursday morning the roads and paths round the metropolis were most dangerous, the coating of thick ice with which they were covered not slippery by melted snow. At six o'clock A.m. the thermometer was 33', with the wind north-east. Towards noon the wind rose, and between twelve and one o clock
a snow-storm commenced. The wind was high, and a snow-storm commenced. The wind was high, and the ground to the depth of several inches. In the Parks,
although the surface is covered by water, the ice was not although the surface is covered by water, the ice was not
affected by the thair. On the River, on Thursday afternoon, in consequence of the unmooring of a collier, a
sheet of ice about 100 yards in length, and extending half-way across the river off Shadwell, was drifted up with the tide, and did considerable damage to the vessels in its progress. A lighter laden with staves was driven against stove in, and the wood dispersed about the river: schooner was forced by the wind on the bed of ice, where time stopped by obstructions, and the crew of the schooner endeavoured to cut their way out, but the ice was so thick that they could not effect their object, and when it again anchor of Wapping was the next obstacle, and the strain on the cable was so great that the men were compelled to let go 13 or 14 fathoms of chain, which eased the ship
away, and enabled the ice to pass it. At London-bridge, the ice was divided by the piers of the arches, and did no further mischief. Although the thaw and rain have in some measure diminished the quantity of ice, there still remain vast fields of it in various parts of the river.The frost and snow in the neighbourhood of London Many labourers of all classes, especially gardeners and agriculturists generally, are out of employ, and have to the loss of wages, they are the least able to do so. Several meetings for the relief of the poor have taken place in parish of I'ottenham prompt attention has been displayed in this respect. A general meeting of the inhabitants has been convened, at the request of the clergy and the
churchwardens, and subscriptions to the amount of 1811 . have been reported, which have been siace increased to nearly 3001 ., with numerous offers of a second subscription should such be required. Already about 700 families have been provided with a sack of coals each, upon the simall payment of $1 s$. ; and the committee of relief has a
discretionary power vested in it to give away such other articles as may appear necessary.

## 鲃robimial Netos

Falmouth.-Intelligence has been received of the melancholy loss, during a violent snow-storm, of the steamer Thames, on her voyage from Dublin to London, on the rocks of the Scilly Islands, and all on board, consisting of from 60 to $i 0$ persons, drowned, with the exception of the ressel mas discovered by the islanders, their boats were aground, but with great efforts they succeeded in launching a whale-boat through the breakers, and getting her on the females being first hoisted thereinander insisted nately, as soon as a lady and two stewardesses had been placed therc, the boat broke adrift, and drove off the land. This was perceived by a sailing-boat, which took her in tow, and succeeded, with great risk, in bringing her to the
shore in safety. By this time the wind increased almost o a hurricane, which rendered it impossible for any othe boat to approach the vessel. The captain then formed a raft, on which a great many of the crew got; but it was almost immediately dashed against the rocks, and all tho was a watery grave, with the exception of one man, mained till the following day, when he was rescued he re ressel became a complete wreck, and the remainder of the crew perished. It is stated by the surviving seaman, that the weather being exceedingly boisterous, with showers of the St. Anow, they lost their reckoning, an mistaking ships (near the Land's End), ran on the Cribewidden rock. he had shipped a heary sea, hich Streck the roc and was a principal cause of the catastrophe. Amongst number. The roung ladyment of soldiers, about 25 in number. The young lady saved is named Morris; she father. The scaman owes his life, after he had by her the Isle of Rosevear, to the circumstance porter being driven on shore, the head of which be conGray, the commander, had only been married three Captain Bristol.-On Monday a Chartist meeting was held in the from the son of Mr. Frost, -of agreeing to a petition to prisoners,-and also for making a subscription towards was derived from a letter, which Mr. Frost, jun. saill had been recently received from his father. It was addressed
to Mrs. Frost, and stated that they were exactly four
months from England, and anchored in the Derwent, before Hobart Town, on the last day of June. Three days after their arriral, they received notice that they would be sent
to Port Arthur, a penal settlement, althongh it does not Frost says ""I been intented as a punishment. Mr rery worst of men are sent, and where human misery may be seen to probably its greatest extent. I was not, how ever, sent here for what is called punishment. The Gn Arthur as a punishment, but to fill certain offices. Wil liams is a superintendent in the coal-mines; Jones fills ituation at the juvenile establishment; and $I$ am in th office of the Commandant-that is, the Governor of Por Arthur. I am acting here as a clerk, and hitherto the
labour has not been heavy. I am in excellent health. never was better; and my spirits are very good, conside ing all things-much better than I could possibly hav anticipated.

Lancaster.-At the sessions the Hon. Capt. Plunkett was charged with having committed a violent assault upon one of the monitors in the castle while in the execution o his duty. Defendant pleaded guilty. Mr. Wilkins (for the defendant) urged extenuating circumstances, especially wronged this man Iam willing to make any compensation." Since his release he has joined his regiment, by He has resumed his duties, and has himelf bey He has resumed his duties, and has himself been recently His regiment has been ordered to the Mauritius. If the court think proper to deal with him with rigour, he will pay a fine, or to he will most readily submit think fit to impose. The chairman, after considerable deliberation, then called upon Capt. Plunkett, and said, "The sentence of this court dale House of Correction for tmo months.' The sentence is said to have produced a considerable sensation amongst the bystanders.

Kent. - The Hoo Union.-The inquiry into the conduct of Mills, the master of the union workhouse, has terminated in the decision of the magistrates that the case should be sent for trial at the ensuing assizes. Mr. Mills has been ordered to enter into his own recognizances in 501 ., and find two sureties of $25 l$. each, to appear and take his trial. Carlisle.-F raudulen. Lelter-acrilers. Considerabli excitement has been manifested in Carisle by the exami nation of a schoomaster, who stood charged with stealing five sorereigns and some other valuables with wheh he had been entrusted as the writer of letters for the plaintiff that young woman of whom be was the lover. It seems, nortis kept the wrom, the female, ackno ledging the receipt of it. He has been committed for trial. Ashton.-Investigations are going on respecting the Trades Cnion Combinations and the murders recently committed in this neighbourhood, and it is now stated that the perpetrator (or perpetrators) of the murder of Benjamin Cooper has been discovered. Thirteen individuals charged with conspiracy have been admitted to bail, persons who had been liberate persons who had been liberated on bail have been again veyed to this place, where they will undergo an examina veyed to this place, where they will undergo an examina tion on that charge. Government has offered a reward
of $\mathbf{i} 00$ l. for the discovery of the murderers of Garland
York.-A person named James Hallett, a labourer, and seven or eight other persons, were going from York to Fulford Church-lane, they met a young man named Moor an articled clerk to Messrs. Sharp, architects. Hallett went up to him and shouted "Boh!" On this Moor said, "Stand back, or I'll blow your brains out!" at the doing time drang a pistol from his pocket. Hallett no head, near fired and lodged the ball brought to the temples. A surge still lingers in great danger was extracted, but the man place before ge lawer. A exa has taken place before tue magistrates. Al loor atad, that he wa but struck by the man, and that he fred in self-defence, but the comrades of Hallett give a different version of the story. He also stated, that he had taken the pistol with bim because he had before been annoyed on the road. He was committed to Xork Castle, to take his trial on the capital churge at the next assizes, but bail was afterwards taken for his appearance.
Nurthumpton.-Bank Robbery.-Messrs. Whitworth the geceived intimation of the route taken by Hasloc: and houng man who had robbed them of 890\%. in gold Who traced ther, sent one of the police to London, whe where the fugitives obtained passports for France ander the names of Hardy; they then paid 201. to the captain The Wellington steamer to take them to Boulogne tion reached him that the brothers had gone to Havre is terming town a few days since. The younger continued his tlight by diligenec to Roven. Mr. Whitworth and a Bow-street officer are on las track, and are contident of securing hims.
Coul-pic lecitents - fatal asceident occurred last Coul-pit Areidents.-A fatal acceident occurred last pit ; the rope broke, and precipitated both to the bottom. One was killed, and the other sir dreadfully mutilated that hitlle hopes are entertained of his recovery.-An explosion
of fire-damp has also taken place in a cannel pit at

Moor, by which four persons lost their lives, and two others were severely injured. An inquest was held, when the jury returned a verdict, "That the deceased were cidentally killed by an explosion of fire-damp. Horcester.-The Foung Wheats.-The severe frosts and heary fail of snow will prove most beneficial to the growing crops, should no sulden and great change of tempearature take place. Owing to the extremely mild weather at the commencement of the vear, the plant was beginning to exhibit a tendency to rankness, which was checked by the frost, and fresh strength and vigour were imparted. After the unfavourable harrests which we have ears, the prospect of an abundant supply of bread-curn is particularly cheering and although it is, of course, early yet to speak with con-
fidence, much depends upon the time of sowing, and a few months subsequently, both of which have been estremely promising.
The Weather in the Country.-The Provincial papers he rmarkabe elanges experient the king dom. In a letter from Bowness. Windermere, dated on Saturday, the writer says, the delightful weather with which we were favoured towards the close of the past year has at length given way to a bitter storm of frost and snow, with a high and piercing northerly wind. The snow lies unusually deep on the ground, and on Thursday morning he lake was nearly frozen over.-From Shrewsbary we learn that the frost has been very severe; the Severn has been frozen over, and numerous persons amused themselves with skating on its surface. Saturday last was the lowest degree of temperature experienced this season, the thermometer being fourteen degrees Fahrenhett below freezing point. A strong wind from the south-east prevailed, in was followed in the evening by a storm of snow. He Monday, a still heavier fall took place, which, added to in the arrival of the mails.-In Halifax on Sunday morning a strong wind from north-west brought with it heavy fall of snow, which continued during the whole heavy fall in the neighbourhood of the town. The consequence of such a protracted snow-storm has been to retard ravelling, and the mail and other coaches have been thrown some hours out of their usual time, and several have travelled with six horses. It is said that four ars since so great a fall of snow was experience country in the same length of time. Accounts from various quarters descitibe the drifts as being of from At Hull, on Wis fall, and continued for nearly eight successive hours. Dur-保 fell than the oldest inha bitant can remember, the depth on level ground being nearly eighteen inches. The streets in the early part o the morning were almost impassable, and in the outskirts or the town still remain so. In the market-place and some of the principal thoroughfares carts have been continually employed carrying it away, so that locomotion is practicable, though by no means free from danger. It said that the fall has been exceedingly partial, not extend ing tweaty miles round the town. The Humber is begin ning to exhisit large floating hummocks of ice, whi continue to increase in size. Communication with the interior of the county is cut off, and the town must de pend for a supply dreals on the stock already there, or on a supply which may be brought by sea.-At Doncaster, the frost in the early part of the week was more sever than it has beeir for 21 years.-At W orcester the thermometer has stood at $2^{\prime \prime}$ below zero, a sererity of temperature which has not, it is said, occurred for many years; on Saturday evening some snow fell, followed by more on Sunday morning, and the drifts in many places were of considerable depth. The navigation of the Severn is entirely stopped, but the road traffic, as far as we can learn, has not been seriously inpeded in any part of the countr of wintelaven on Sunday morning was visited by a storm was followed by a snow-storm which continued at irterval until Thursday night, when the snow fell in such large quantities as to choke up the roads and thoroughfares The page aupears the have occurred on the a general stop counts from different parts of England and scotland, it seems that the storm has been general throughout Great Britain, and more severe in the south than in the northern districts.
Railways.-A collision unfortunately took place on the Manchester and Leeds Railmay last week under the folowing circumstances. A cattle train of nearis twenty and got on very well until aiter they pased the Dewsbury station. Before they could reach Coopor-hyidge station the water was exhausted; the engina wha then detached and proceeded to the Brighthouse siatirn for a supply of water. In the interval the next twain came up, and owing to the dense fog which prevant distance from it. Ti. an..... wis mor dintely reversed and breath applicul an and force of the sho x wh soun pace. Fan of tice carriages were broken, an the engne partintly thrown off the rails, but nune of the passeng-rs were imgred beyond a severe shate tron the conchosun, and the sheap sisn in the first
 and atier a ruid investigatuon the servants of the tompany were acyuitted of all blame. The engine of the cattle train, the Leeds, is stated to be inferior to others on the
line.-A fatal accident occurred on the Midland Counties
Railwav on Friday, the 8 th. The night merchandise train Rail way on Friday, the 8th. The night merchandise train left Leicester an hour and a half before the mail, and
passed the Spondon station three quarters of an hour previous to the mail. When within a mile and a quarter of Derby, the pumps of one of the engines were completely closed by the intense frost. The train came to a stand, and the usual precautions were taken of sending back the guards six or seven hundred yards with red signal lamps, While the effective engine conveyed the useless one to
Derby. The engine returned and got the remainder of the Derby. The engine returned and got the remainder of the luggage train again in motion; and having done 50 ,
signalised by the whistie for the guards to return. They had just got back, and the train was gathering speed, when the mail train came rapidly up; and though the red signal lamp on the last luggage waggon was in its right place, the
very thick fog prevented the siglit of it, and the engine with the mail and night carriages ran with estreme violence into the merchandise train. The death of the mail engine-driver, and of the stoker, was the consefull of passengers, was next the engine, providentially none of them were hurt; assistance being procured lay. An Inquest was held on Saturday, and evidence adduced to show that the accident could not have been foreseen; the jury returned a verdict of "A dental death, with a deodand of 300 I . on the engine. A collision took place on Sunday night between the Bir-
mingham and North Midland trains at Rugby, whilst the mingham and North Midiand trains at Rugby, whilst the
shifting of the carriages tools place, on which occasion two of the latter carriages were smashed to piecen, and three persons were so seriously injured that they were exoficial account:-"The mail train, which left the Eustonsquare station at half-past eight on Sunday night, on arriving at Rugby detached two carriages, which were to preceed in the act of being passed from the London and Birmingham down-line for this purpose, when the mail train, mingham down-line for this purpose, when the mail train,
which leaves Birminghm for London at twelve P.M., arriving very slowly at the station, ran anfortunately in contact with the crossing carriages, and caused contasions to four of the passengers, and a slight fracture of the colevery care taken of the parties. The immediate cause of the accident is now under investigation."-On Monday a meeting of the owners of property and houses within the parish of Kensington, who will be affected by the projected new railway from Knightsbridgegreen to Staines, was held, for the parpose of adopting citor for the opposition read from the book of reference attached to the plans the names of the parties whose proattached to the plans the natnes of the parties whose proamongst which were Messrs. Gunter, Hutchins, and
Poupart, the exten-ive marhet gardeners, \&cc. It also apPoupart, the exten-ive marhet gardeners, \&c. It also ap--
peared that the site of the new church and burial-ground peared that the site of the new church and burial-ground
at Brompton would be required for the purpose. The at Brompton would be required for the purpose. The
following resolutions were carried unanimously :- " That the meeting views with great alarm the proposal of an intended railway, to be cilled the Staines Railway, and Which in their opinion will most injuriously affect the pa-
rish of Kensington and destroy the interests of the neigh rish of Kensington and destroy the interests of the neigh-
bourhood. They therefore resolve to oppose the said railWay by every means in their power. That it is highly tually opposing the said measure in and out of Parliament." -An accident occurred on the Blackwall railway, on Tuesday evening last, which it is feared will terminate faon Tuesday evening last, which it is feared will terminate fa-
tally. At about a quarter past nine $0^{\circ}$ clock, as Mr. Bowles, cash-taker at the Blackwall terminus, was walking along the line between the New-road branch and the Poplar station, the down-train came up, and, proceeding on an inclined plane, it was at full speed. Mr. Bowles, being deaf, did not hear the approach of the train in time to escape from the line. He was knocked down, and when picked up was in a state of inseusibility. It was found, on examination, that his jaw-bone was broken, the lower lip inflicted in the neck, close to the base of the skull. The unfortunate gentleman was removed to his own residence, with but faint hopes of recovery

## IREL.AND.

As adjourned meeting of the National Repeal Association was held on Saturday last, when it was stated that the amount of subscriptions receiverl last year. was from Irelaud 2.3136. 3s. I .,.from England 35.i6. 14s., from Scot5s. 10d. ; total expronditure 2, fi9f. ss. 3d., leaving a balanee 5. 10d. ; total expenditure 2, 2 . 11 sis . 3d., leaving a balance his visit to Mullingar, where he said he was surrounded by at least 60,000 repealers. He nest adverted to the disturbed
state of the county of Limerick. He regretted that in that county some midnight miscreants were carrsing on a system of agrarian disturbance-above all. taking arms. Mr. Steele bad, howerer, gone amongst thenn with a white flag edged with green, on which was inseribed - "Whoever commits a crime strengthens the enemies of Ireland Hotally checking those disturbances. He regretted he should so soon start for Cork, otherwise it would amuse him to have some lisure to reply to Dr. Cooke, who had invited him to a discussion on the subject of repeal. After treating in a humorous strain the challenge of Dr. Cooke, he ments already entered into previous to the opening of Parliament. Besides, if he argued politics with Dr. Cooke,
he being at the head of the Presbyterians of Ulster, it
would be admitting that lhe was a political antagonist of
theirs, which was not the fact, as ke was desirous of serving them by every means in his power. Dr. Higgins, the Meath, were then enrolled as members of the Association, atter which the meeting separated.-The ordinary weekly meeting of the Association was held on Monday
of address from a Catholic tenant to a Conservative land ord was adopted, but nothing of public interest occurred
The papers announce the death of Major Sirr, one of the principal police magistrates of Dublin. Ite was particularly prominent in public life during the rebellion in 1798 and
1803 , and is said to have wounded Lord Edward Fitzgerald 1803 , and is said to have wounded Lord Edward Fitzgerall
He commenced life as an officer in the army, and served in Ireland and at Gibraltar. He quitted the service about 1790, and subsequently became Town-Major of Dublin. In 1808 the Duke of Wellington, then Chief Secretary formed the late police establishment, and the Major was Sirr continued to discharge these duties until 1826, when the office was consolidated with that of brigade-major, on Duhe of York, in reference to that part of his services, and conveying his Majesty's permission to retire from the olice on full pay, with liberty to retain his house in the
Castle, in consequence of his past services. Mr. Thorpe Porter, of the Leinster Bar, has been appointed to succeed Major Sirr at the Police Office
Murder of Mr. T. Pouvell.-An inquest has been held on the body of Mr. Powell, at which the Earl of Gosford and several stipendiary magistrates attended. The jury were unanimous in their verdict of "Wilful Murder, committed by Patrick Woods, of Tullyard, and others unknown." It is said that another person, named Hughes, has since At ide instance of the Earl of Gosford, the clerk of the peace has convened a meeting of magistrates, in the city of Armagh, to take into consideration the measures necessary to reader amenable to justice the parties concerned in the murder, and to take such steps as may appear requisite part of the protection of life and property in the southern a reward of $150 \%$. for the apprehension and conviction of che parties, besides those in custody, actually concerned, or a proportionate reward for the discovery and conviction on any one or more of them.
Court-Martial.-A general court-martial has been assembled at Clare-cnstle, for the trial of Lieatenant William Curteis, of the 36th regiment, "for conduct unbecoming the character of an officer and a gentleman, and highly sut)-
versive of military discipline, in having at Clare-castle, on or about the 12 th of Nor., 1840, sat down to the officers ${ }^{3}$ mess-table of the depot of the 36 th regiment to dinner in a state of intoxication, he having also been at the time on duty as officer of the day." Captain De Lacy stated the case against the prisoner, and was then heard in evidence When he swore that Lieutenant Curteis was intoxicated a
the dinner table. Lientenant Mauteverer swore he noticed the dinner table. Lieutenant Mauteverer swore he notice
the prisoner intoxicated at mess, and unfit for duty. Ensig Carew deposed that the prisoner was not intoxicated, o unfit for duty, but that he was not in a state
fentlemen; and Ensign Bruce, the last witness in support though nge, swore the prisoner was influenced by liguor with gentlemen. The prisoner entered upon his defence in a written statement, and examined thirteen witnesses, to prepare his rejoinder on the part of the prosecution, after which the court will determine upon a finding, to bo laid before her Majesty, but the result will not be known for some days to come

## SCOTLAND.

Edinburgh.-The Presbytery, upon the motion of the Rev. Mr. Cunningham, have memorialised her Majesty against the decision of the judges of the Court of Session, in ordering the majority of the Presbytery of Strathbogie to receive and admit the Rev. Mr. Edwards to be minister of the parish of Marnoch.
At the High Court of Justiciary, John Wilson was tried for the murder of his mother, in having on the 20th of Sept. inflicted a wound on her forehead and a contusion on her head, from which she died soon after. The prisoner pleaded " not guilty." The jury with one exception returned a verdict guilty of culpable homicide. It is said that the juryman who dissented from the rest was for a verdict of murder. A number of certificates from respectable individuals were produced in favour of the prisoner's former good character. The prisoner was sentenced to 14 yearb' transportation.
Court, Jane Petrise of the Lady Thief.-At the Circuit Court, Jane Petrise, or Harris, the young woman known
as the lady thief, was charged with having committed the following acts of theft:-1st. With having committed the in Stewart's Commercial Hotel, stulen from the pocket of Thomas Bayne, commercial traveller, the sum of 126.2 d . With having stolen from the pocket of Gilbert J. Mees, merchant, the sum of 86 . 3d. With having, in Carrick's Hotel, stolen from the pocket of John Crean, police-officer while undressed and in bed, two one-pound notes and a card-box. 4th. With having stolen from the pocket of Robert Paul, Esq., 7l. The prisoner pleaded not guilty. After the examination of witnesses, who detailed generally the circumstances of the robberies committed in the Com-
mercial and Royal Hotels, Glasgow, and the apprehension of the prisoner in Edinburgh, the jury found the prisoner Guility of the lst, 3d, and 4th charges, and she was sentenced to 18 months' imprisonment in Glasgow gaol.
On Saturday latt, Dugald Moore, the Ecotivh poet,

He is mentioned as an instance of a man rising above des
culties who had originally derived few advantagea from fortune or education. fortunately attended with loss of life. It is supposed to have been occasioned by the igniting of some sticks left by the side of the fire to kindle it in the morning. A number of neighbours were quickly on the spot; but the fire had gained such ground that it was impossible for the occapant
of the garret stories to escape by the stair. Attention of the garret stories to escape by the stair. Attention we
immediately directed to their rescue. A woman with a child in her arms was let out at the crreet window, slipped
down the siates, and handed down by a trap). Two other down the slates, and handed down by a trap. Two other children were taken out in the same manner; but in pot-
ting the last child out of the window the father loet balance and fell of the persons suspending the ladder, and shaking it so go ; but its life was happily preserved by one of the parties below catching it in his arms. The man received so severe a contasion on his head by the fall that he lived but a fee minutes. From the ground flat all got out in safety. tained was in the house, but which had been considered by the fireman thave been in one of the neighbouring house. One of the firemen, observing a -mell of flest burning directel the pipe towards the spot from which it proceeded and gaining admittance, extracted the ashes of the chrld The roof fell in, and the fire was got under, but not until The Weather.-We learn from Edinburgh that the weather continues very severe, and the mails are greatly
behind time. In the immediate ricinity of Edinburgh there has been comparatively little snow, but the col during last week has been very severe, the thermometer sometimes falling so low as to iz and it degrees of Fah renheit Berwick has been visited by the severe weather which has prevailed in the extremities of the island with little intermission for the last three weeks. The snow-
storm was very severe? at Stirling, and the thermometer storm was very severe? at Stirling, and the thermomettr
stood at 15 , being 17 degrees below the freezing point. There has, however, been little interruption to travelling on the roads in the neighbourhood, and 80 far as health concerned, the change is regarded as a happy one from the previous wet and changeable state of the weather. The snow-storm was very severe at Aberdeen, where the snow ceived, many of the roads and thoroughfares of the country are completely blocked up. At Huntly, it is said, there has not been such a depth of snow sioce 1837 ; to the west it is still deeper, and the mail has had six horses, At Ayr the thaw has been succeeded by a violent storm, the severe effeets of which were felt along the coast. In
the interior the snow lies several inches deep, and the frost having returned with great intensity, the rivers and lochs are again icebound and peopled with curlers and skaters.

THEATRICALS.
Aobipht-A new farce, called A Deed of Dreadfuc mistakes made by a husband and wife in cousequence of a wax figure of a man having been left by the wife's brothes
in a closet of their house, which the husband believes to be a corpse. Under apprehensions that his wife intend
to murder him, he arms himself with a dagger, resolving to sell his life dcarly if attarked. He falls asteep, his wite gets into the room without wahing him, and hears bim talk about nurder in bis sleep: shee, in her turn, suspeets suspicions are cuntirmed by seeing a dagyer in bis hand. She succeeds in disarning him, but whilst so doing awakes lim, and both husband and wife gaze on each other in horror. The rife takes to her heels; the husband resolves to pack up and fly the house; but whilst filling his pockets with his property, Tremor, a neighbour who is an admirer of the wife, and has convealed himself in a
cupboard, takes him for a thief; the husband takes him or a murderer; a partial esplanation ensues, and both conceal themselves behind the bed-curtains, just as the brother arrives to take away his way figure. The wife in orms him of her suspicions of her husband ; and just ais the whole scene is becoming involved in tenfold mystery who has in the police arrive to tase of the houses, oceasioned the falling of sundry tiles on the heads of persons in the street. This brings the affair to an explanation The wax figure is produced, and the fears and terrors of all are appeased by its presence. The farce, by the absurd misapprehensions of its dialogue, excited roars of laughter rom beginuing to eud, and was announced for repetition. It is stated that the Princess's Theatre, in Oxfordstreet, is to be the arena wherein the German operas are
to be produced, Mr. Bunn having entered into arrangeto be produced, Mr. Bunn having entered into arrange-
ments with Mr. Hamelet, the proprietor, for that purpose.

## fliscellancous.

The Queen's Great Cheese in Chancery.-It appears that this cheese, which was to have been placed on the Royal table at tie christening of the Princess, has, by an ing occuired among the proprietors, a part of them liad a model made of it and seat to London for the purpose of exhifition; the other proprietors finding what had occur-
red, immediately sent the original. The model had been placed in the Egyptian-hall for the purpose of exhibition, but was ejected therefrom by the other parties, and the original placed in its stead. In consequence an injunction parties from exhibiting the original. The cheese was ma-
nufactured for her Majesty hy the farmers of West Pen-
nard about 15 miles from Cheddar, from the united milk of 737 cows; it weighs near 11 cwt.; it is in shape an
octagon, in heicht 22 inches, and 3 feet 1 incll in diameter. The upper surface is ornamented with the ropal
arms, surrounded with a wreath of oak leaves, acorns, and laurel ; the rose, thistle, and shanrock are also embossed upon the surface. It is described as one of the wonders
of the tlairies of Somersesthire, and as the largest cheese ever produced from the presses.- On Thursday an appliaation was made to dissolve the injunction, and a long
history was given of the manufacture of the cheese, and of the procession of farners, dairymaids, and villagers by whom it was escorted on its journey to London. The present sufficiently ripe for presentation, dissolved the Early Gireth Peas the middle of the last centur early spring morning, about siderable fortune at Paris, being desirous of presenting something sery rare to a handsome young lady, inquired procured four half-pint pottles, for each of which he paid six louis d'or-a most extravagant price ; but it was the only valuable present he could think of, which the delicacy if the gentleman gate orders that she should be informed of the price, or whether the season of the year, and the
knowledge of their rarity, made her guess it ; howerer, as she was more of the coquette than the epicure, she could hought them had more money than wit., Her mother who was naturally avaricious, finding her of this opinion, proposed to sell the peas; and after some altercation she
got the better of her daughter's delicacy, and made her got the better of her daughter's delicacy, and made hee
consent to send them to market, where none had appeared nor indeed was such a rarity expected. The old lady
luckily was acquainted with a woman whose business it it Was to give intelligence to the stewards of people of quabe purchased. This woman undertook the commission to sell the peas, and set ont with the intention of carrying them superb entertainment that day to the foreign ministers. In the interval, another admirer of the young lady paid warduess of the spring, she accidentally mentioned the scarcity of green peas; whlich made him conjecture she
had a desire to taste them: he therefore shortened his had a desire to taste them; he therefore shortened his
visit, making some plausible excuse, and repaired to the most celebrated fruiterers in Paris: but, to luis mortification, all the intelligence he could procure was that none had yet appeared, except four pottles, which an old woman hopes of our innamorato now revived; he lost no time, and she reached the hotel, he thought himself very happy to emissary, equally overjoyed, reterned to her employers with
the money, and told the young lady who had purchesed them. But, though she had no objection to the money, she was extremely piqued on finding that her favouritelover for some formidable rival ; and in this conjecture she was confirmed by the abrupt manner in which he had shortened his visit and left her. Distracted by jealousy, she imearmestly employed in railing at the infidelity of mankind, When, behold! one of the servants of the suspected lover decorated with the flowers in season, from his master, nosegays, which being removed, the triumphant fair discovered the green peas; and thus her chagrin was instantly conrerted into immoderate fits of laughter at this droll adventure. As for the visitor, being quite familiar in the house, and fond of dainties, she insisted on eating the peas, that they might not cause any more confusion in the family. But as her motive was easily discerned, they Went no further than the rules of politeness required, and only dressed one pottle. After the lady was gone, a new mainder. The daughter had now no objection to sell them again; but the mother having a lawsuit in hand, thought which was accerdinterest to send them to her attorney which was accordingly done, and this occasioned a very warm dispute between him and his wife. Madame loved good cheer, and insisted on regaling her friends with this rarity; but the attorney knew better how to secure his had promised to precure him preferment But, who Were the peas set down upon the table, when the lover who had adorned the basket with flowers came in, to visit the Marquis, and seeing his present to his beloved lady thus, but took the first opportunity to pay a fisis resentment ous mistress, who very coolly thanked him for his peasadding, that they had an excellent flavour. Enraged at her carrying the natter so far, be then told her that she
must wait till the Marquis bad tasted them, before she gave an opinion of the goodness. The lady, at a loss to guess his meaning, and confounded at the violeace of his her the last incident; but she, not suspecting what had her the last incident; but she, not suspecting what had
happened, affirmed that they were not the same peas This enraged him still more, and he required to see the basket in which he himself had placed the pottles, and Which he adorned with flowers. Not being able to produce it, the quarrel seemed to admit of no terms of accommodation, when in came the peas again! The Marquis, who had a secret inclination for the lady (the greatest beanty
in Paris), thought them a very proper present for her.
Our lover was now fully convinced that the Marquis could not be so absurd as to send his mistress her present to
him, yet he was convinced that they were the peas; the mother, therefore, was obliged to confess the truth. It was then determined to sacrifice the travelling peas to the appetite; and they were accordingly consumed by the parties most deeply interested in their fate.
Retribution.-The following narrative is given by th Indian Papers:-1 Brahmin, with his daughter and her Moo children, left Jaulnah for a village on the road to
Moongetam. Resting near a well, the Brahmin resolved to possess himself of his daughter's jewels, and then murder her. He told her that the place was full of robbers, them to his tions, the young woman did as she was directed. The Brahmin wrapped the jewels in a piece of cloth and tied the cloth round his waist carefully. He then told his dustom. She and bathe lowed, ind went towards the well, and her father fol The Brahmin immediately departed. leaving the two children behind him. In her fall, his daughter very fortunately succeeded in taking hold of the root of a tree that projected out on one side of the well, and by this distance from the place the Brabmin returned, fearing lest the children might betray him. His surprise was great on finding his daughter clinging to the root of the tree, as mentioned, and he determined to put an end to her existnce in some other way; to effect which purpose, he wa venemous serpent that was under the stone bit him on the hand. The Brahmin fell down almost instantaneously and soon after expired. Attracted by the cries of the children, some Brinjarries went to the spot, who took the woman out of the well, restored her jewels, und conducted her and her children in safety back to Jaulnah.
Franklin on Spelling.-Dr. Franklin says, in one of his letters-" You need not be concerned, in writing to me, about bad spelling; it is generally the best, as con forming to the sound of the letters. To give you an in stance, a gentleman received a letter in which were these ords:- Not finding brown at hom, I delivered your messeg to his $y f$. The gentleman called his wife to help im to read it. Between them they picked all but the calling her chambermaid, understand. The lady proposed the best knack of reading bad spelling of any one I know.' Betty came, and was surprised that neither of them could tell what yf was; "Why," 8ays she, 'yf spells wife-what else can it spell?" And indeed it is much better, as well as a shorter method th

Mrs. Barbauld, the Poetess. - The chapel of the English Presbyterians at Newington-green has recently been repaired and renovated; and as Mrs. Barbauld's there, and as her mortal remains wed for many years parish, it was proposed to raise a tablet in the chapel to parish, it was proposed to raise a tablet in the chapel to
the memory of that gifted lady. It has been raised by he memory of that gifted lady. It has been raised by her nephew, Mr. C. R. Aikin, surgeon, to whom "Early
Lessons," \&c., were addressed, as her "Dear Charles;" and the inscription was composed by her elder nephew, Mr. A. Aikin, the late secretary to the Society of Arts Adelphi. Mrs. Barbauld was the sister of the celebrated Dr. Aikin.

Military Execution at the Mauritius.-A military execution took place without the town of Port Louis, in September last, of a private of the 87 th regt., who had soner said, was simply a mish to to the crime, the pricondemned by court-martial to be shot to death. The prisoner was marched from the condemned cell to the barrack escorted by the officers and soldiers of the guard that had been relieved, preceded by the band of his regt. and having the coffin which was to contain his remain the first mediately before him. Scarcely, however, had the first strokes of the muffled drums, and the first few notes of the "Dead March" in Saul, played by the band, been sounded, before five or six young recruits, who had recently come out to the colony, and who formed part of the guard which escorted the prisoner to the place of his execution, fell back to the rear, overcone with faintnese The prisoner himself, on the contrary, maintained during his progress the most perfect calmness and self-possession It was, however, observed, that as he approached the spo his his grave was already dug, and by the side of whic pale. But deposited, his countenance became deadl he had previously exhibited, knelt upon bis coff::, suffered his eyes to be bandaged, and submitted to his fate with firmness and resolution. When the firing party, which consisted of twelve men, commanded by a serjeant, wa called out, and the signal given to fire, one of the men was so overcome by his feelings that he fell down in fainting fit. Upon these occasions, in order to avoid the feelings of compunction which might, either at the moment or afterwards, arise in the breasts of any of the firing party, the men to whose lot it falls to form it are not althem indiscriminately, some being loaded with ball, and others with blank cartridge.
An American Toast.-The following was given by Mr. CThe a , Yonkers, New York, on a late occasion:May our farmers have good crops, fall ears, heavy grass, and no small potatoes."

 others.- Judgment was pronounced in this case by Baron Alder-
son. For the last two centuries or more the lord of the manor of
Ford, in Northumberland, has paid to the Teet Ford, in Northumberland, has paid to the rector the manor of
lieu of tithes, whearly, in
private property. has received himself, and disposed late period tonk. care to appoint the reator ubder an, and till a
gistron gistration. Plaintiff, who is rector of the parisn, in 1822 objected some years, filed a bull for their recovery in is28. The defence
set up by the Marquis of Waterford, who is lord of the manor,
and the other defendants, who are tenants, or assignees of pats and the other defendants, who are tenants, or assignees of parts
of it, was, that from time immemerial there had bee or it, was, that from time immemorial there had been a puyment
of $40 l$. yearly by the owner of the manor to the rector, in lieu of
tithes; and that the owner and his assion thad in respect of that payment, to have the tenth of all titheable things within the manor. The argenments and evidence in the case occupied no fewer than fourteen days after last Trinity erm. A number of receipts produced on that occasion proved
the payment of the 401 . as far back as 1690 , and ceedings in a suit in equity in 1638 , it appeared that the arrange ment was thien known. It further appeared that a part of the
manor, called Cutfordaw, which had been separated from and sold, paid tithes since the ssle, though the alleged componition
exempted the entire nianor.-Mr. Baron Alderson said, crempted the entire manor.-Mr. Baron Alderson said, the
first question was whether the prescription was valnd in point of law and fact. The prescfiption was double, the first
branch being an as-ertion of an ordinary branch being an assertion of an ordinary distinct modus
in lieu of ttithes, and if the evidence establisher it the addition of the other brauch would not vitiate it. But a noodus in
lien of tithes was inconsistent with the receipt of tithes by
any one, and, therefore, this defence any one, and, therefore, this defence filled is poiat of
fact. Then, as to its vaitity in point of law. Several cases had
estainished the posituon that a layman mitht tithes as a purtcnant to a manor or lands, on the supposition that before time of legal memory the owner of the manor or lands
might have, with the consent of the patron and ordinary, entered into a bargain with the parson to pay him a certain pension aud in lieu therenf to have the tithe- of the manor or lands, and
that by retainer he might enjoy those of his lands in bis own nccupation, and by prescriptive hargain with his tenants take
those due from their lands. Thus tithes might be appurtenant to a manor or lands, hut there was not one authority for saying or proprietor of lands, or his assigns, to take tithes from terre taking ti:hes assignable from one layman to another, which would make a layman capable of tith
boerefor, he doubted the valdity of the alleged prescription in
point of law. But independently of this there were circumstances which led him to the conclusion that no such arrange-
ments as were alleged by the defendants had been made before in
time of logal memors. He then entered into the leading facts of time of legal memory. He then entered intor the leading facts of
the case, and observed that the alleged prescription was plainly the case, and observed that the alleged prescription was plainly
of nodern orivin, and that it was probably succumbed to by the rectors, in consequence of the ind of the manor having always
taken care to appoint them, reserving to hmaself the power of
depriving them under the resignation bond. To this conclusion taken care to appoint them, reserving to himself the power of
depriving them under the resignation bond. To this conclusion
he was let, in srme measure, hy the fact of Catfordlaw paying
tithes nince its semaration from the manor. tithps nince its separation from the manor. It was alleged that
plaintift's claim was barred by a fine levied of the tithes, but his
opinion was that, as they still remained a spiritual claim, the opinion was that, as they still remained a spiritual claim, the
fine had no operation over tuem. Under all circumstances he
felt bound to decree for the plaintiff, with custs. The tithes of the manor being at present worth, with costs. The tithes of $1500 l$. a-year, and
plaintif being entitled, it is said, to recover all that have fallen
dne since 189 . due since 182
besides costs.

- Ibcondarins Court.-Gioing and Fulse Character to Seroants -Mattoy and others v. Rogerson.-An action was brought to named Yates, to whom defendant had given a good character, prisoned for 1: monaths. In June the plantiff; being and im of a clerk, were applied in hy Yates, and referred to defendant
for a chardeter, who deceribed him as a very respectable young man, possessing both abilities and character hiphly conmenda tory. In consequence of this, the clerk was engagea. On the
17 th of Oct. plaintiff; drew a check for 20 n . and Yates was sent to get it cashed, but he never raturned,
Plaintitus then heard for the first time that he had been convicted of roibing the directors of the Southampton Railway. They the Old Bailey, and sentenced was taken into custony, tried When : : :ehended, 102 . Were found in his possession, and the
account would stand thus:-The loss of the 200l.; reward, $20 l$. expense to offcer, printing, \&c.; total, 229l. 12s.; and deducting
$102 l .7$. $6 d$, found on him, which had been handed to the
plaintifs, left the balance $127 l$. 48 . $6 \mathbb{d}$. It was argued the plaintiffs, left the balance 127l. 45. 6d. It was argued that, as
men of business, the jury must know that defendant was not justified in concealing such serisus facts. Evidence having been
given of the pasment of the check to Yates, the payment of the reward, and the other expeoses, the jury instantly found for
plaintifs for the full amount, $12 \%$, . 4 . $6 d$. plaintifis for the full amount, $12 \%$, 4 s .6 C
Lord Misor's Courr. - Lockett F .
This case came before the Court as a claim for compenation for
the gond will and interent of Mr. Lockett in the Cock Taven
facin the gond wil and interent of Mr. Lockett in the Cock Taverw,
facing the late bcrih gate of the Royal Exchange, required for
improvements about to be effected by the Bank of England. The
ciaim amounted to the large sum of 18,09 th Sir W. Follett claim amounted to the large sum rf 18,094. Sir W. Follett
stated that in this cave the corporation of the Bank of England
de-ired the premises of Mr. Lockett, which had been a tavern of

HORTICULTURAL SOCIETY OF LONDON.

## Cine Gatornexs (eytamicle.

SATURDAY, JANUARY 23, 1841.

The remarks we made upon Cottage Gardens in a late number of this Journal, have produced us many communithe practice of encouraging the labourer in the cultivation of his garden, wherever the system has been adopted. They lead us to resume the subject much sooner than we intended.

A correspondent signing himself "A Member of the North Riding of Yorkshire Horticultural and Floriculturail Society," writes thus :-"The excellence of the system has been proved in this neighbourhood for a series of
years by the society to which I belong, aided by their noble president, the Earl of Tyrconnel, who places at the disposal of the committee Fl. annually, and the society adds another $5 l$., both of which sums are divided amongst the cottage labourers' classes at the September meeting in each year; and it is gratifying to see the stimulus thus given to that class of competitors. The prizes are strictly limited to labouring men, and such has been the effect that in many instances, I may almost say generally, their humbe productions, which are onions, carrots, turnips, potatoes, cabbages, and mangold-wurzel, have surpassed the pegular gardeners. This has a pleasing effect upon the compang, and is equally gratifying to themselves. Their stand is placed at a distance from the general exhibition of the society; each prize has the society's card placed upon it, with the name and residence of the successful owner, the name of the article winning the prize, together with its date; and this emblem of success is as carefully secured by the owner as if it were a piece of plate. The winners also receive a handsome reward. I have seen so
much of the beneficial result in practice, that I am certain if acted upon by other societies it will produce the same excellent effects.
Another correspondent, from Stowe, informs us that the Duke of Buckingham has instituted prizes for the purpose of rewarding those of his cottagers who cultivate their
gardens well ; and he says that although the past season was the first, a spirit of emulation was excited that was highly creditable to the peasantry. On the day of exlibition there were nearly forty competitors for the best collections of vegetables, fruits, and flowers; and many regretted afterwards that they did not contribute their mite. The Duke of Buckingham personally distributed the prizes, and gave the unsuccessful candidates a small
sum, as an encouragrnent to try again. The show of Plums, apples, celery, cabbages, cauliflowers, beans, peas, onions, carrots, turnips, parsneps, potatoes both for the garden and the field, and flowers, was really excellent. Many of the gardens were reported to have been well kept and profitably cropped, and all were much improved after the first visit or two of the judges. For example, a widow
who had attached to her cottage a very good piece of ground which for some years bad been a receptacle for rubbish, having had it suggested to her that it might be better occupied, has now an excellent crop of useful vegetables upon it.
The following is a copy of the printed regulations under Which the exhibition at Stowe was conducted :-
His Grace the Duke of Bucking bar and Chandos, with the intention of rewarding the most industrious of his Labourers and
Cottagers at

managed their cottagers' prizes; and as this Society has
been particularly successful, we print the rules, for the guidance of others.

It is our own intention to second these laudable efforts by every means in our power; and with a view to this end, we shall insert weekly, under the head of "Cottage Gardens," notices of the work that should be attended to
by the cottager. The subject will be commenced next week, which is as soon as his garden can be in a state to require attention. In the mean while we request our readers to turn to a short paper in another column. If we have thus in the outset of our undertaking given a prominent place to so humble a theme, it is because we are convinced that one of the most useful applications of gardening is to the improvement of the social and moral condition of the labouring classes.
ON THE MANAGEMENT OF THE FILBERT
Is it not rather surprising, when we see all the world s British cracking nuts after dinner, that the cultivation simple, so little understood by gardeners in general, and Surely a dish of tine filberts in the husk is more ornamental in the dessert, and mech less unwholesome, than the dried foreign nuts of the shops, which, in order to give them a bright outside appearance, have been half roasted perhaps half-a-dozen times, with brimstone. The reasons usually given for not adopting the Kentish system of cult tivating nuts are, first, that ground cannot be spared for
them ; and secondly, that the huts get mouldy, unsightly, and unpleasant to the smell when kept long after being gathered : but both these objections might be easily overcome. As regards space, if the trees are planted sixteen feet apart and eight feet in the mos, there will be
sufficient room for a row of gooseberry or currant tres sufficient room for a sow of gooseberry or currant ties
alternately roth the nuts, and where ground is more than usually valuable there might even be a row of strawberries between the gooseberries and nuts, although such a system of over-cropping the ground is by no means to be recommended. In regard to the preservation of the nuts the easiest and best method is to gather them when quite dry and stow them away in large garden pots or other earthen vessels, sprinkling a little salt amongst them from getting mouldy and rotten ; the pots should then be from getting mouldy and rotten; the pots should then be
turned bottom upwards on boards and buried in the ground, or kept air-tight by some other means : stone-ware jars with lids might be advantageously used for this par pose, and nuts of any kind will keep a long, time in this way. Ancthe" way of keening nuts is to deity out th:
natural moisture of the hacks by burning brimstone under them, as is done with the form nuts sold in the mothers but the best metlind for homs consume *ion undoubtedly is that first recommended. The e.livati-n, thea, of the filbert and other rawicies of the hazel nut, which is s sussex, omaha also to be understand and practised by oe?
 with the cornet tee. The phots dina he that ard a th
 nidus and rent or greater latin that h a iii si ci. on
 for pruning is in the curare, when th. wale if costumes as
 young shoots should he shortened to about half their length, all sackers should be carefinty removed. Formerly it was the practice to train the branches to nearly a horizontal position, which may still be seen in many old plantations well, and as good nuts, by allowing them to take a more
natural form. By way of manuring, some cultivators stem of the tree, and into this basin the small pruning leaves, the tree, and into this basin the small prunings leaves, \&e., are pat and dug in. By following the simple system of culture above detailed, the Kentish and sussex growers rarely fail in obtaining abundant crops of superior fruit, finer by far, and much more abundant, than th produce of those trees that are planted and ever after left to nature. It is therefore earnestly recommended to every one who has charge of a garden to lose no time in

## IMPORTATIONS OF SEEDS BY THE EAST

 INDIA COMPANYOUr readers are too well acquainted with the import ance of plants not to appreciate fully the advantages of any method which mar be devised for their more extensive diffusion. If any doubt this importance, they have only to consider the uses of plants to man, as affording him food or clothing, medicines, or materials for different mnnufac tares ; or they may calculate the amount of taxes paid by the farmer or gardener from the vegetable products of the
soil, or that which is levied at our Custom Houses on the raw or manufactured products of the vegetable kingdom Almost every one is aware that of the immense variety of plants diffused throughout the world, a great majority ar peculiar to different places, also that the inhabitants of different countries have from very early times been in the habit of introducing into their own country such plants a formed the riches or ornament of that of their neighbours. The result has been a complete change in the appearance and culture of many countries : so much so, indeed, that in some the chief articles of growth, as well for home con sumption as for foreign commerce, are not the plant originally natives of the country, but those which have been ind raced from other and often distant parts of the world. Limits can hardly be set to the successful intro-
duction of plants when correct principles are attended to. These consist in a strict attention to the climate and soil not only of the places where plants are indigenous, but also of those into which plants are to be introduced. In climate we require to attend not. only to the temperature but also to the dryness and moisture of the air. We must, moreover, observe not only the mean temperature of par heat, as well as the greatest degree of cold, to which perennials will be subjected. The summer temperature perennials will be subjected. $h$ howerer,"or that of the season of cultivation, may suffice for annuals. Of soil, it is not only the chemical constituens which require to be noticed, but also its physical state, that is, its greater or less consistency, its power o retaining water, or of absorbing air, or of becoming more or less warm by exposure to the sun. The accidental or
intentional attention to such principles has filled the gardens, shrubberies, greenhouses, and hothouses of Europe with a vast variety of useful and ornamental plant-, many of which seem as much at hame as in their of pies, introdus for a series of ayes. Tr o Persia, and the Turks many of our common flowers from the same direction into Constantinople. The discovery of America, and the passage to India round the Cape of Good Hope, were followed by the introduction of the potato, North America many plants for shrubberies and forests. The energetic operations of the Horticultural Society, combined with science and skill, hare proved to the 'est wiservint the manifold advantages to be derived from the introduction into this country of useful and ornamental plants from congenial climates. The object of these prefatory remarks is to call the attention of you readers to a great experiment which is in the course of being carried on lis the Court of Directors of concent em ire which is under their government is to Levite darin tage, but also this country and those who assist in its accomplishment. The Botanic Gardens which the Commany have established in different parts of India, have in produced into the country various useful plants from dit ferent parts of the word ; bat the great length of tho solace round the Cape of bipod Hope. the satiety of climates which require to be traversal. and the time which necessarily elapses, have always thrown consider be innpedments in the may of the free introduction of various useful and iamperiant plants into India which are well suited to different parts of the country. The speedy compumieation with India, which his been effected by spam navigation, afforded obsiohs duratages the Gowemor-spenteral, Whorl Auckland: Lis Lorthin

-

THE GARDENERS' CHRONICLE
eventually be of considerable importance to the country.
Some of these I shall refer to in a future communication, Some of these I shall refer to in a future communication,
as I fear I have already occupiell too much of your space. Before concluding, I may remark that though it may appear to many that India, being a hot country, has little to receive from, or to give to, temperate climates, it must be remembered that in the plains of India, they Rice and other tropical grains are cultivated, and in the other Wheat, Barley, and sucli regetables and flowers as are forced in our gardens in summer. The mountains,
which stretch over so large an extent of Indian territory, hare every diversity of climate, and at certain elerations, a vegetation which is analogous to that of European
countries. Of the hardy nature of this you cannot give a stronger proof than that many Himalayan plants which were exposed in the winter of $183 \overline{3}-33$ to a cold of from
$4 \frac{1}{3}$ to $12^{\circ}$ escaped with little or no injury, while many others which seemed naturalised in our shrubberies, perished and disappeared.-Indophilus.

## ENTOMOLOGY.

No. I.-The Hawk-Fly.-Intimately connected as insects are with plants, useful as they are to some, but injurious to a far greater number, remarks upon their readers. Whether we ramble amongst the heather, beat the fields and hedges, wade through the mazes of the wood, saunter along the plantations, or lounge in our garden, we always find abundance of amusement in the study of these small works of the Creator. Whilst I have been contemplating these subjects under the charming shade of a spreading Beech-tree, my attention has often been attracted
by an object suspended as it were before my eyes, like a by an object suspended as it were before my eyes, like a
hawk poised in the air, but with far less felonious intent somnetimes it rises, then it falls, in an instant it vanishes, but before rou can move it has resumed its station. This is a fly which I will presently describe, sufficiently well, for themselves, and perhaps some more favoured student of nature may help me out of a difficulty, for with all my ruminating I never could discover what these flies were out. but there were a pair of them, the secret would be are all males who are thus enjoying themselves. But to return, this fly called Sceera Ribesii is clothed With short hairs like relvet; he has two large eyes which
cover his head, they do not meet above in the females : the face and nose are horny and yellowish, with two little horns stuck on the forehead, each having a bristle; his jacket is greenish black, with a yellow bob behind, hanging over the body, which is flattened and oval, of a deep black three bands of the same colour, the first forming a double festoon; the wings are quite transparent, with a brownish tinge on the thicker nervares; when lying flat on his beyond the tail: the legs are slender and orange-coloured, the base of the thighs black: he is larger than a house-fly. I think it is the business of this fly to lay eggs, producing maggots that feed upon the this is the principal reason for my calling your attention to it; if not, he is a near neighbour of one which is cele-
brated for his prowess in that way. Sceeva Pyrastri, for such is his name, may be termed the "Aphis destroyer:" it is much larger than the foregoing species, but similar in form, with a brighter green trunk, the semicircular lobe dull ochreous ; on the back of the body are three pairs of
yelloxish ur almost white moon-shaped bands, the first pair the least so, and the tip of the tail is whitish; the wings are as clear as glass. On cabbages, turnips, sy-

Pyrustri, \&c., he says, "they sometimes appear in
myriads on the sea-coast, all flying in one direction and not even avoiding objects that lie in their course," loming probably on their narch to the hop-grounds of kent to of their larve.-Ruricola,

## COTTAGE GARDENS

we intend to give in this journal is, to point out to cottagers and farm-labourers the way in which their garden the same time to remind them of many little things which slould be attended to, if thes would obtain, in return for their expense and labour, the greatest benefits which those
essential accompaniments of the cottage are capable of essential accompaniments of the cottage are capable of regarded as a kind of cottage remembrancer and directory, and as such we shall endeavour to render it as familiar and
useful as possible. No one doubts the importance of a useful as possible. No one doubts the importance of a of ren to acoltaches him to his home and to his country ; induces sober, industrious, and domestic habits, and creates that feeling of independence which is the best security against pauperism. Nothing, indeed, is so wel attention to the sitration, construction, and clennliness of their cottages and gardens. As we know a man by the company he keeps, so do we ascertain the real character o lishment. If, on looking into his garden, we observe the fences broken down, while the bramble and briar render it inaccessible, and the thistle and other noxious weeds en cumber and impoverish the soil, we have only to enter the dwelling to encounter poverty, misery, filth, and disease. If, on the other hand, we find the garden blooming and carefully kept, we shall invariably find comfort, health and happiness within the cottage. The labourer of twent years ago is very different from one of the present day The contrast is striking to the commonest observer, and our own observations convince us that the change, wich has taken place is not only for the better, but that the be dens are beginning to be appreciated by the cottagers themselres. This important result is, in our opinion, in a great measure to be ascribed to the exertions of the numerous local horticultural societies which have sprung up of late years in all parts of the kingdom, and which, b the distribution of prizes as the reward of merit, bave
been the efficient instruments of elevating to a higher standard the moral character of the poorer classes of the community.
There is, however, another class of gardens to which we propose to direct our attention. The gardens of farmers are, we regret to say, in some counties in even a worse coainducements to exertion held out to the latter have alread produced so much improvement, it is most extraordinary that so small an advance should be often observable in the gardens of those to whom the cottager ought to look for an example. We are sure if our great landed proprietor their influence with their tenantry, we should soon find the garden attached to every farm-house as neat and as regularly cropped as the fields which the farmer cultivates Tre
We would strongly urge upon all Iandlords that no cottase, for either a farm labourer or others, should be built without a certain quantity of land being attached to it and that where cottages are already erected without any and his jrund being reserved for the use of the laboord ing to circmatances, should be allotted to them without delay. We know that in many of the rural districts of England, the best results have followed the adoption of the garden and allotment system, and it is to be hoped that all who have it in their power will assist in carrying out so good a work. Much might be done in this way by e garden to of the mod dition gen in thed athorized to procure an addenonal supply of seeds of th more useful vegetables, and to distribute them among such cottagers asare considered deserving of encouragement. We are acquainted with several places where his mode of as hope that others may be induced by this notice to follow their example. Besides the cultivation of a garden, we intend occasionally to direct attention to the management of Bees, which are more especially suited to a cottager garden, because they are not only valuable in a pecuniary point of view, but a source of instruction and amusemen unattended with much trouble or expense. M. E. H.

HOME CORHESPONDENCE
Self-sown Rhododendrons. - Not recollecting to have heard or read of the Rhododendrons growing from seeds dropped from the tree in any part of Britain, and having seen the trouble tahen in raising piants from seeds, in boxes placed in a warm temperature, it occurs to me that you may be pleased to learn that in this northern a...) my gardener was removing an Arbor Vitæ, near to sea: I sas statung by him, when he called my attentan a rumine f panto wheh were growing yade its
 seeds wit uros in the uphn ground. and next, that shade is favourable to tie developrnent of the plants. The soil
is poor, and the surface corered by nooss of dwarf growth
amongst which the seeds had dropped Rhododendrons they and the me perfectly in the poorest soin, in which grow rigorously. - The fact I have now tated suazests mode by which abundance of plants may he raised from green, which possessesa merit not perhaps generdlly known, that it is not attacked by hares or rabbits, and may form the finest possible cover for game, as it $\varepsilon^{2}$ vurs woll under
the shade of trees, in noist and in dry pdaces, and almost the shade of trees, in noist and in dry places, and almost
any suil suits it.- The latitude of this place is nearly junt any suit suits it.-The tatitude of this place is nearly junn,
and I have no doubt the Rhododendruns may grow mu.m farther north, and at much higher elevatinns here than
 you have given a notice of a lecture which was deliveren by me before the Members of the Reyal Acricultural the diseases of Wheat, and which has just of mine on No. 5 of their Journal. In mentioning the Whent-Midge, you have supposed me to be much more sanguine than
really am, of the possibility of externinating pest. But though I should consider any attempt at it extermination perfectly chimerical, I do imasine that its foundly ignorant of the mractical checked. Being pro foundy ignorant of the practical details of arriculture,
find that my sugrestion to burn or scail the chaff was find that my suggestion to burn or scald the chaff was
not likely to meet with many adrocates. I was not at all aware that the chaff was so raluable a commodity as I now understand it to be as food for horses. I have now been present at the operation of dressing the ITheat, and I find
that the pupre of the Midge are driven forward with the chaf from the winnowiug machine, and fall before it withi a space of about three sards.-Finding, also, that the chati is almays sifted before it is given to the horses, and that the pupr passed through the sieve with the dust, it occurred to me that if a wire-gauze sieve were placed before the chaff to fall upon it, and then roll from it so as to allow the pass through and might be caught with the dusin pass through, and might be caught with the dust in a tray periment and find it answer perfectly.-Two pieces of wire gauze were placed together at an angle, sloping like the roof of a house, and the chaff readily fell off on each side to the floor, whilst dust and pupæ passed through. If simple contrivance of this kind formed an appendaye to
every winnowing machine in the country, what myriads on every winnowing machine in the country, what myriads on The researches which 1 have made on the subject since m report was written, have satisfied me that the damage done by this minute insect is much greater than agriculturist respondents would assist in the more perfect elucidation of the history of this little creature-and especially as regard the habits of the ichneumon destined to keep it in cheerk I have thrown out (in my report) a conjecture upon the subject, which it may be considered north while to verify or disprove; but I also find that there arc many unchanged larve among the chaff, and whether tirese or sime of then are ichneumonized, as well as those which quit the ears also beg to call the attention of those who may be disposed to co-operate in these investigations. In the mea time I hope I shall persuade some persons to provid themselves with Midye-Sieves.-J.S. Henslow, Hitchum, Jant. 14.

Luculia gratissima.- In your second number I observe a valuable article by "Hortulanus" on the culture of the Incrlia gratissima; but as there are many people who might be inclined to grow this most delighitful and muchneglected plant who have not the means of panting it out I have found very successful of growing it in a pret. The point to be particularly observed, is that te is not inclined to grow naturally, and should not be stimulated, in the spring and early summer. During that period it should
 beginning of June, it should be planted out in a warm place rather sheltered from the sun. In August or September it should be taken up and repotted, and placel in a vinery or cool hothouse. It will then grow vigorously and form its heads of blossoms, which are both beautitul and fragrant and expand during the greater part of the winter. It may be kept in the drawing-room without injury till it has done flowering, and should then be returned to the greenhouse

Management of Birch in Wronds.-It may not he generally known that the common Birch will not only bear pruning, as underwood, but will thus secure a profit, independent of the advantage accruing to the main growers My plan of managing it is this: age of three or four years, when I engage a party of men
(besom or broom-makers, who are very numerous in this neighbourhood,) to go over the woods and take off all growers save four or five, but removing nothing from the be completed the tria, by which time their wor tied up in bundles of the trimmines of the Birch being ane day an pointed I meet them and ascertain the number of butdlas for which they then pay me. In three yars atter lasm engage men in a similar way, who trim $t$, a cert mhers floous wood, which is paid for in the same way as before :I thus hase my monds well pruned. an I cuecritly relisa 3 great protit from the bru-h. I am pracspals italaced an !dea that Burch, if pruned in the ehore manuer would bleed, which is not the case. Old growers nin boed considerably, hut young ones soareely at all-

tieal men will almit that Carrots are a very precarious crop, nut cnly in old garden-soils, but in many cases in those
which bave been for vears in an uncultivated state. Without waiting to investigate the causes, which may be many, liaving little to do in the case, I mill proceed at once to state a very simple yet effectual remedy, lately communicated to me hy Mr. Duncan, of the firm on Duncal Lespectable chemists in Ediuburgh. Lpon Mr. Duncan's estate near Laswade, carrots have been found
for years to fail. Three years ago, he prepared a piece of ground, by manaring and digging orer in October in the usual manner, to one-half of which he applied spirits of
tar, at the rate of about one gallon to every sixty or seventy square yards. The result was, that upon the half so prepared, an excellent crop of clean, well-formed roots was as usual a complete failure. This last season, by way of the usual manner, but did not apply the spirits of tar. This appears to prove two important points,', viz.- that the spirits of tar are beneficial only for one crop, and that they mode of using the spirits of tar is simple and escellent. He procures a cuantity of fine sand, which he saturates with upon the ground, previously to digging, in about the proportions stated atove. I have prepared about one quarter of an acre in a similar way; the result I shall have
pleasure in communicating to you.-C. M'Intosh, Dalkeith Palare Gardens, fith Dec., 1840.

Pelargonirms.-Having attended the exhibitions at the Gardens of the Horticultural Society last summer, I was surprised and delighted by the great size and surpassing Messrs. Cock, Catleugh, and Gaines, which, to a person fresh from the country, and unacquainted with the vast improvements effected within the last few years in the culture of this beautiful plant, were absolutely astonishing what can be done with the few indifferent sorts I y'ossess ; but having neither time nor convenience toexperimentalise I should be greatly obliged if any successful cultivator would farour me, through the Gardeners Chronicle, with a de-
tailed account of the most approved management, from the planting of the cuttings through all the various stages of growth to the perfect development of the plant, and
explaining likewise the proper method of dressing a plant explaining likewise the proper method of dressing a plant
for exhibition. What I want is, not a few general rules, such as Mr. Cock has given, which tell nothing more than everybody knew before, but a minute detail of those mino matters upon which superior cultivation so much depends for example, the particular constitution of the compost used at the different shiftings; the proper times for repotting, stopping, heading down, \&c.; temperature by tity of water requisite at different periods of growth syty of water requisite at different periods of growth, syringing, and degree of atmospheric moisture in the
house; with various other minutiæ. A descriptive list of house; with various other minutiæ. A descriptive list of
the very best sorts would be highly acceptable to-A Garthe very best sorts would
dener.- Jannary $14 / h$.
Striking from Leaves.-In the spring of 1838, previousl to his learing Downton, unfortunately never to return, it
occurred to Mr. Knight's inventive mind, that plants occurred to Mr. Knight's inventive mind, that plants
might be propagated from single buds and leaves only. Accordingly, he had several pots filled with a fine sandy loam; the pots were about twelve inches in diameter, to receive the cuttings, which he prepared himself. The buds and leaves were cut out, as is nsually done when intended for insertion in stocks, with but a very small porwere double Camellias, Magnolias, Metrosideros, Acacias, Neriums, Rhododendrons, and many others. The soil in the pots having been previously pressed firmly down, and serted with a dibber, so as just to corer the bud, when the soil was pressed firmly against it. The back of the leaf lying on the surface of the mould, was fed by absorbing moisture from it. The surface of the pots was quite coeach other ;-they were then gently sprinkled with water, covered with bell-glasses, and placed on the flue of a forcing-house. The sprinkling was afterwards frequently repeated, and the glasses shaded from the sun, by hanging
paper over them. In a short time, the buds were seen paper over them. In a short time, the buds were seen
breaking the surface of the mould, and by the end of summer some of them had made shoots six and eight inches long, especially the Camellias, which were then potted off. they were until the following equal progress remained as were potted, and found to be firmly rooted. Since that time, I have tried other sorts with equal success, but perhaps plants that have large leaves are best adapted for this mode of cu
be a deside-As economy, facility, and neatness should nicate to the public, through the medium of the Gardeners' 'Chranicle, a substantial method of glazing houses. di. for gardening purpuses, which I hare adopted for some pared for receiving the glass, I merely lay a good bed of prepared putty in the rebate, and place the glass firmly upon it, leaving the laps of each square as narrow as pos-
sible to be saff (say one-eighth of an inch) ; after which I run a little white paint with a small brush, almost a quarter
of an inch wide, down each side of the square ; when dry, this will be found to fix the glass securely. I have praccases, either for upright glass or otherwise. In the month of October 1838, I thus ghzed a Heath-house, thirty feet long, fourteen feet wide, ten feet high in the centre, with
a span roof, and upright front sashes; and I have never a span roof, and upright front sashes; and I have neve
had a broken square in it from frost from that time to this; and what is remarkable, the only apparatus I have for heating it is one "Chunk stove," which answers the
purpose of completely keeping out the frost. While I am writing the thermometer is in the open air $7^{\circ}$ Fahr., and in this house the mean temperature is $38^{\circ}$. The method now explained allows the glass to expand more freely, and enders the house much more secure from drip, if reguarly painted, than the old method of pattying the uppe and putty, and is much neater and more secure than the old method. In nine cases out of ten, where drip is troublesome, it arises from the top putty parting from the wood-work and letting in the water, which ultimately rots the putty and wood, and finds its way into the structure.-
William May, Hope Nursery, Leeming Lane, Ripon, January 18
Old Decaycd Fruit Trees.-In the Gardeners' Chrohicle I observe some experiments by Dr. Ingram on a with such instances, especially where at some previous period the trees had been headed down, or large branches had been removed. I agree with Dr. Ingram, that cata to fill the cavity of such trees with pure sand, or a mixture to fill the cavity of such trees with pure sand, or a mixture
of dry sand and powdered quicklime, with a view to preventing the vermin Dr. Ingram complains of lodging in the cavity and eluding the search. I am an old gardene and a decided adrocate for retaining old Green-gage Plum trees as long as they bear; for, though unsightly, they produce fruit of a much finer flavour than trees more healthy and better-looking.-c.
Fruit-Trecs in North Wales.-I live in one of the coldest parts of North Wales, and some distance from the Apple, ould you furnish me with a list of standard well, and also ripen here? My orchard is composed of light rich soil; but the subsoil is a rannel that most kinds of apple-trees canker in after they are planted two years. I have never tried pear or plum trees there; the kinds of apples that do not canker bear well. Would you recom planting in them? I have a real Rhododendron arboreum that is looking very well here, notwithstanding the late very severe frosts; it is under a single mat; this is now its third winter.-A Subscriber.-- The pears must consist
of Flemish, and other new varieties; for the old French sorts of Flemish, and other new varieties; for the old French sorts
will not succeed in North Wales as standards, and on subsoil which induces canker, a disease which they ar naturally subject to under comparatively favourable circumstances. We recommend the fullowing varieties :Aston Town, Beurré de Catomne, Comte de Lamise Bearré Bosc, Althorp Crassane, winter Crassane, Hacon Incomparable, Winter Nelis, Glout Morceau, Passe Col mar, Rouse Lench, Knight's Mouarch, Fondante de Bois, Ne plus Meuris, Beurré Rance. Apples : Early Harrest, Summer Golden Pippin, Oslin, Kerry Pippin, King of the Pippins, Herefordshire Pearmain, Hubbard's Pearmain Hughes's Golden Pippin, Golden Harvey, Pearson's Plate,
Braddick's Nonpareil, Scarlet Nonpareil, Downton Non pareil, Court-pendu Plat. Also for kitchen use : Keswick Codlin, Wormsley Pippin. Blenheim Pippin, Dumelow' Seedling, Bedfordshire Foundling, Alfreston. Plums : Royale Hâtive, Orleans, Nectarine, Green-gage, Reine Claude Tiolette, Kirke's, Washington, Fotheringham, Coe's Golden Drop, Ickworth Impératrice. Lider the circumstances our correspondent describes, planting on raised mounds will prove advantageous ; but he must also endeavour to oppose the descent of so roots inior, such as
soil, by introducing beneath them some barrier, slates, through which they cannot penetrate. If he would pare the bottom of the holes, at the depth of two feet, with fragments of slate, taking great care, however, to preserve perfect drainage, he would find his canker much diminished, or perhaps altogether prevented. With regard them ores if passe we advise tho them up carefuly, if wo large, in the anama, preserving every root capable of being extended in a horizontal position, and cutting away all that tend perpendicularly downwards. The ground should then be properly prepared for replanting. The reason for this proceeding is, that the roots, being much longer than when first planted, are more easily trained in a honizontal position near the surface, and having once acquired that direction, they cannot strike domnwards into the noxious subsoil the within the influre sum-heat and among the soil prepared for them. Laterals from these roots may, indeed, proceed downwards; but they cannot acquire great streagth, nor do so much injury to the tree wien they reach the bad subsoil, as the main roots of a young plant when they take a similar direction.
this subiect Bolen in thas been - 1 am glad to see this subject taken up; it has been too long negiected, and the treatment you complain of has been ton long tolerated, to the detriment of the shrubs, and with great injustice to the planter, whose "ultimate object of effect
is thus "blighted in the bud," the plants that survive is thus "blighted in the bud," the plants that survive being doomed to linger out their existence as
dwarfs, for want of sufficient food. The "robbing" you complain of does not end in sweeping up and carrying away the leaves; the continued scratching and raking
during the summer months increases the evil tenfold, by exposing the youns roots, the very feeders, to the scorching rays of the July sun. Huw often do we see shrubbery borders scarified, until they become some four
or five inches lower than the grass verges which divide or five inches lower than the grass verges which divide
them from the walks! Thus far then our iueas on the subject "jump," but you do not go far enough ; why dig
shrubbery borders at all? When leares fall off trees, and cover the ground at their feet, why not let them remain there to encourage their growth, instead of having them dug in, thus cutting and mutiating the roots? We all know that the best "feeders" of a plant are generally nearest the surface;-shrubberies, in mr opinion, should be so thick and dense in foliage as entirely to curer the surface; and this is easily managed, by an undergrowth of deciduous and ornamental trees, flowering shrub. - The specimen evergreens. may be so disposed overhead, as to give the true "gardenesque" effect, as was shown by the extensive shrubberies at Claremont, while under the management of Mr. Mc Intosh, and on a smaller scale at the Earl of Stair's, Oxenford Castle, N. 13. If this node of keeping shrubberies were followed, all leaves cuttings, or prunings, of which there are great quan tities every season, would be left on the ground, "t to
decay gradually", and become vegetable mould, yielding grateful nourishment to the young roots of the parent plant. Where there is sufficient to work upon, 1 have never found difficulty in forming vistas, recesses, on effective openings among the evergreens with the knife, but great difficulty and labour with the spade, where a shrubbery has been thinly planted, long ill-treated, and starved. The effect of such shrubberies as I have thu attempted to describe has' left an indelible impression on my mind. The striking contrast between the Golden wreathed and waning Laburnum, the Snow-white Fior and Gueldres Rose, the Crimson Hawthorn and the delicate Lilac, are heightened and " brought out, Whe well backed by the dark and shining green of the Holly,
Portugal Laurd, Alaternus, and Evergreen Oak.-W. H., Liverpool, 12 th January, 1811.

Suckers of Gooseberries and Currants.-We have se veral letters on this subject. The original inquiry by $H$.S (see Gardeners Chronicle, p. 21) was as to the manner of preventing his bushes producing suckers; and there can be no doubt that the only method of stopping them, when there is a tendency to produce them, is to remove them continually as they appear. As, however. we find the question interesting to many of our readers, we shall go into it rather more fully. A gooseberry or currant tree is raised from a cutting, which is a branch covered with buds that part of the cutting which is above ground forms oung branches covered with foliage, and the portion under ground emits roots; but the latter does not lose the power of lengthening its buds into branches at the time When it acquires the property of forming roots: on th contrary, there is a continual tendency on the part of the under-ground buds to become branches; and these are the suckers that we find so trooblesome in many kinds of soils. By continually stopping and woundiog them, how ever, they will in general perish ; and to do this is what w recommend. A ownsman, of Lancaster, mentions the following method as that adopted by the Lancashire gooseberry growers as the best means of preventing gooseberrie from throwing up suckers, and also an excellent plan of insuring an abundance of large fruit. "In the sketch, A is

the bush ; в, $\boldsymbol{B}$, is the soil, taken out about 18 inches all around the plant, and about 6 inches deep at c ; so that if there are any buds or suckers, they are sure to be seen and destroyed. This I do every year in December; and as soon as the soil is taken out, I spread some cowdung over the roots, as shown at B; after which I replace the earth that has been taken out, when the appearance of the plant and soil will be ss shown by the dotted lines D A. When have any new seedlings that I wish to propagate, I do not take out the soil, but lay the manure round them, and cover it with a layer of earth, which encourages the plant
to produce suckers. By these means good bushes are sooner obtained than by cuttings, and, generaly sheaking, weil-rooted suckers may be taken off in Octover, which produce fruit the following year. In consequence of the wet weather last year at the time of ripening, gooseberries, though large, were not of so fine a Havour as they would have been had the weather been warm and dry." -But although this plan may he the best way of destroying suckers effectually, we quite agree with our other correspondents in the option that the cuttings from which bushes of these truits are propagated should be deprived of all their under-ground eyes or buds betore they are put into the grount. If that precaution is taken, no tendency to form surkers aill exist, for the source of them vill have been deatroved - It lowing plan-viz. to take cuttings from 12 to 15 inches
long; to cut the upper end to a bud, leaving 3 or $t$ other long; to cut the upper end to a bud, leaving 3 or 4 other
buds below it; then to pare away all the other buds and to pick out the lowest of all, finishing. just below it by a horizontal clean cut. He says he has always pursued

The Vew Year's (Gift: a Penny Almanack for 18.41 Bians and Co., Bath: Simphin and ('o.. London.Publiahed under the sunction of the Buth Visiting So ciety.
Althotgh but a trifle, yet this is one of those mhich deserves honourable mention for its good feeling and kind intentions. We recommend it as a useful almanack for cottagers. The following is a specimen of the tone of the
bouk, and the information it convers:ouk, and the information it convers :

A greut wonder in a little thing.-What a wonderful thing a seed is . How wonderful that an acorn should an enormou: oak iticle plant, capable of growing up into of groming up into other oaks, and so on for ever! And yet there are seeds, not one hundredth part as big as an acorn, which produce trees, almost, if not quite, as large as the oak. Or think of a grain of wheat: it would be just mixed with a little bran. In fact, when it is ground, there is nothing else to be seen; but besides these, it it contains a little plant, too small to be made out by common sight. When one of these grains or seeds is put into moist earth, it begins to suck in water, which softens it and makes it swell. The little plant inside begins to grow, and in a fer days a small delicate root peeps out from one end of the seed. The seed is probably lying on its side, or perhaps with the root end uppermost: but the the seed, immediately turns downwards, and grows in that direction. Soon after a little white shoot comes out the other end, which turns upwards, and becomes green as soon as it gets into air and light; and thus we have a little plant. In the mean time the seed itself spoils and decays-or, as St. Paul calls it, dies. The flour changes into a kind of gummy sugar, which is sucked up by the young plant as its first nourishment; and the busk shrivels and rots : while the plant, grown up, becomes ten thousand times as large as the seed, and at last produces many other seeds, just as wonderful as that from which it grew. In all the works of man there is nothing like this. A watch is a remarkable invention: and a man would be set down as mad who should think it could be made by chance; but how much more wonderful would a watch be if it could make other watches like itself! Yet a seed does this ; and every coru-field in harvest time contain millions of seeds, each of which is far more wonderful than the hest watch. The reason is, that men make watches, men make watches comes from God, and should be acknowledged as his gift; but the more wonderful power by which a seed is made he keeps in his own hands : that we may know that we have a Maker and Master in heaven and may serve him with reverence and godly fear."
Organic Chemistry, and its Application to Agriculture and Physiology. By Justus Liebig, M.D. Translated
by Lvon Playfair, Ph. D. 8vo. London: Taylor and Walton. (Third notice.)
The next proposition we have to consider is that-
Under the influence of light and moisture the leaves and other green parts of
appropriate its carbon.
This is an axiom in Vegetable Physiology, concerning which no difference of opinion can exist. There ar those, however, who find it difficult to comprehend how so light and elastic a fluid as the air we breathe can be consolidated into the living forest, the fresh herbage, or the hesvy masses of timber which meet us in one shape or other at every tarn ; and certainly that is one of the most mysterious operations of Nature, which converts the breath of our bodies into the green leaf, the gay flower the luscious fruit, or the tall trunk of the monarch of the wood. Professor Liebig shows, however, by a forma calculation, that although the carbonic acid to be solidified dues not constitute more than one-tenth per cent. of th atmosphere, yet tbat this small proportion is sufficient to produce all the wonderful results which we witness. It is known, he says, that "a column of air of $2216-66 \mathrm{lbs}$. weight rests upon every square foot of the surface of the earth; the diameter of the earth, and its superficies, are likewise known, so that the weight of the atmosphere can be calculated with the greatest exactness. The thousandth 27 per cent. carbon. By this calculation it can be shown, that the atwosphere contains 3000 billion los. of carbon a quantity which amounts to more than the weight of al the plants and of all the strata of mineral or brown coal which exist upon the earth. This carbon is, therefore more than adecquate to all the purposes for which it is proportionally still greater."
 means the only element of their solidity. This leads as to the next propusition:
Hydrogen is obtained by the decompasition of veater and is assimilated along with carbonic acid, while the oxygen of the utater is literated.
Eutwards and Collian daring theirk, first proved by
germination : but Professor Licbig gives it a general application. We puints out that the decomposition of water hise the poser of gencruting was, cautchouc, and volatile oils. which contain much hydrogen, and also that
 any other bolirce than water. The author here tahes ocmore slowly than those in wich acids abound. He of course ascribes the decay of timber from atmospheric causes to the destruction of the carbon of the wood, by he formation of carbonic acid: now carbonic aeid can only be emitted by decaying regetable matter in proportion to the quantity of oxygen it contains; acids, therefore, abounding in oxygen, yield more carbo nic acid than substances consisting principally of hydrogen, such as resinous or waxy bodies: timber, therefore, of which the latter form an essential part, are slow in decaying.
bingen and de essential to the marition of plank structure.
This fact, although of very recent discovery, does not belong to Professor Liebig. It was previously indicated by Mr. Rigg, in the Philosophical Transactions for 1838 Boussingault had also ascertained that it was of general occurrence; and Paven in particular had found it beyond all question. Theodore de Saussure had indeed long previously ascertained that gerwinating seeds absorb nitrogen. What specially belongs to the author of the work before us is the discovery that it is exclusively from the ammonia of the atmosphere (a compound of nitrogen and hydrogen) that vegetables derive this important element.
Nitrogen can only be obtained by plants in the forms of ammonia. The nitrogen of the atmosphere camnot be the source of supply, because it cannot be made to enter into combination with any element axcept oxygot, coen oy the employment of the most powerful chenical means.
Here we find what may be regarded as 1)r. Liebig's chief discovery, so far as practical questions are concerned Boussingault had indeed suspectec that very small quan tities of ammoniacal vapour existing in the atmosphere might furnish the nitrogen required by plants ; but our author is, we believe, the first to show, what however mast have always been suapected, although not proved, that ammonia abounds in the atmosphere. He found in rain water and snow water, "possessing an offensive smell of perspiration and animal excrements-a fact which leaves no doubt respecting its origin. And indeed the quantity of ammonis given off from thousands of millions of putrifying animals must furnish an abuadant, an everlasting source of that principle. In illustration of the sufficiency of the supply of ammonia in the air for the purpose of vegetation, the author shows that if a pound of rain water contain only a quarter of a grain of ammonia, then a field of 40,000 square feet must annualiy receive upwards of 80 Jbs . of ammonia, or 6 J lbs . of nitrogen, "which is more than is contained in the form of vegetable albamen and glaten in 2650 lbs . of wood, 2800 lbs . of hay, or 100 tous of beet root, which are the yearly prounce of such a field; but it is less than the straw, roots, and grain of corn, which might grow on the same surface, would contain." Therefore a corn crop will require an additional nupply of ammonia in the form of animal manure. Ammonid exists in every part of plants, in the roois in the stem, and in all blossoms and fruits in an unripe down fron. It is supplied by rain-water, which carries down from the air, in which if suspended, in colse

- This ammonia aifords all vegetables, without exception, the nitrogen which enters into the composition of their constituent substances.
Acertain portion of the ammonia which falls with rain evaporates again with the water; but another por tion is taken up by the roots of plants, and, entering int new combinations, produces albumen, gluten, and a num ber of other compounds, containing nitrogen.
Upon this turns in a great measure the application of animal manure, which acts only by the formation of ame monia.
The quantity of gluten in wheat, under different kind of cultivation, illustrates this. Gluten is a substance rich in nitrogen, and the most nutritious part of corn But it has been found that the proportional quantity of glaten is very different in different samples of wheat, varying . the quality of the manure has been p. One hundred parts of wheat grown in a soll mamared with cotr-dung (a manare containg the a nitrogen), afforded only $11-95$ parts of glaten, and $64 \cdot 34$ parts of starch. But one hundred parts of wheat grown in a soil manured with human urine (which, Then pueri-
fied abounds in nitrogen under the form of amnuonidal fied, abounds in nitrogen under the form of
By means of this theory of the necessify of ammonia to plants, the anthor explains many other facts besides the relative value of diferent kinds of animal manures. Thus be ascribes the refreshing effects of a thunder-sturm after a long dronght to the great quantity of ammonia which is at that time dissolved by the rin and carried into the ground. Powdered charcoal. ferruginous soils, a ad burned clay, condense ammonia within their pores, and so beeom powerful manares. The former absorbs 90 times it volume of ammoniacal gas. which may be again separated by simply mostening it with water. Decayed wood ap proaches very pearly to charcoal in this power, afte proaches very nearly to charcoal in this power, after
baving been completely dried under the air-pump; and humus owes part of its utility to the same properiy.
In like manner we are told that gepsum actz as a manur
thus fixing in the soil, in the form of a soluble salt, the
ammonia which would otherwise be lost with the water ammonia which would otherwise be lost with the water
that evaporates. But fur ail the detils cuncerning the relative vaiues of manures, we must refor the reader to the work itself.
One word more, and we itre dome for the prevent. At p. 83 we find the assertion that .. The cquantity of food that amimals take fur therr nourishment diminishes or less of the suhstances containing at it contains more or be kept alive ly feedraty it with potatoes, which contain a rey! small पuantity "f nitromen: Bme lafo thous sumportent is a gratual stareation
se nor strength, and siuks under per ryedraimi.: Vorm with great deference to Prolessor Liebig, we doubt this act extremely. If we are not much mistaken, there are proofs to the contrary, especially in Ireland; and we should be glad to learn the experien
agricultural friends apon the subject.

## The Flora of Yorkshire. With two Plates. By H

 Baines. London: Longman, 1840. 8 Much has already been done towards collecting a com and others; still there is much to do, and this mas be more easily accomplished by incorporating with each other local Floras, like the Flora of Yorkshire, than by any full account of the physical geography of the country, in which it is stated that "Yorkshire is more rich in vege table forms than most other English counties ; its surface exhibits several distinct characters of soil and stratification, accompanied by gradations of elevation from the sea-shore to mountains of 2400 and even 2600 feet high its climate varies accordingly, and it lies in such a geo graphical position as to unite, in a considerable degree, the characters of Scottish and English vegetation." This great diversity of natural features prepares us for the interesting facts relating to the distribation of plants which follow. Of the 1002 flowering plants recorded in the catalogue, only Arabis hispida, Dryas uetopetala and Juncus polycephalus are peculiar to Yorkshire: Cor nus sucica flowers nowhere else in England; twelve attain their southern limit, amone which are Potentilla fruticost, Ribes petreum, and the beautiful Gentiand vernas and thirty-seven attain their northern limit, in clading Dianthus caryophyllus,-Hippophae thamnoides, and Cuscuto epithymum. Mr. Baines divides the county into eight Butanical divisions, and shows the relative position and extent of these by a map. Ife speaks o each division separately; giving the esternal configuration, the internal structure, slpect of regetation, and the dis which this part is arranged renders the principal geological and botanical featares of Yorkshire familar to all who will take the trouble even to glance over it. After this follows the ('atalogue of Plants, arranged according the natural system, and which, though a mere list o ames, Mr. Beines has managed to make entertaining b introduciny aneedotes respecting the plants, poetical allusions to them, and sometimes giving the names of such insects as are generally found on particular species: the
scientific and Enclish names, the time of flowering, the seientifie and English names, the time of flowering, the
duration, and a great number of localities are also men duration, and a great number of localities are also nien
tioned. Altogether this work is one of the best of it kind that has yet been produced, and we hope it may with Leighton's Flora of Shropshire, (reviewed in former number.) stimulate the local botanists in othe counties to publish the results of their researches.

## SUMMARY OF CONTENTS.

So many of our correspondents take an interest in Cottage Gardens, that we are induced to admit the subject again Into our leading article; we now leave it with confidence in the hands of those who have the means of acting upon the suggestions we have offered-An article signed "Indophilus "gives an account of the important proceedings of the East India Company, in introducing seeds by the overland mail; among the earliest results of which are thousands of young Deodar Cedars, now growing in the nurseries of those writh whom the Court of Directors are in communication. - A paper on the Hawlify commences a series of similar articles upon insects usefal and mischievous in gardens.-Some observations on the Management of the Filbert, and several letters in our Home Correspondence, will be interesting to practical men.-Professor Henslow's suggestions respecting the Wheat Midge will, we have no doubt, be acted upon by some of our agricultural friends. -The pressure of other matter compelis is to omit our Foreign Correspondence.-In Garden Memorenda will be found returns of the effect of the frost, from Derbyehire, Nottinghamshire, Devonshire, and Cornwall.-Among the Proceedings of Societies is a report of the meeting heid on Thursday by the Benevolent Institution for the Relief of Decayed Gardeners. On some other eccasion we shall call attention ts) the objects of this charity; it is impossible that in England, the most benevolent of all countries, and where Horticulture is so highly valued, there should be any wart of aupport for the aged and worn-out gardener, if the sympathy of those who cau reifere tis wants is properly appealed to.

## 

NEWS OF THE WEEK
At home the near approach of the Session of Parlia ment is the principal topic of attention, and the prepara tions for that event are nearly completed. Her Majesty will open the Session in person, in a Speech from the throne, to which, on account of the important events which it is expected to tuuch upon, all parties look for ward with nuusual interest. Several changes will take
place in the House of Commons, in consequence of racancies which have occurred during the recess, and the approaching elections are regarded with anxiety by the adherents of opposed parties. The recent floods have caused considerable damage both in the neighbourhood of the metropolis and the provinces; at Brentford they hat been attended with loss of life, and property to a large amount has been destroyed. Mr. O'Connell's progress in the North of Ireland has passed off without disturbance but the Repeal question does not appear to have been reeived with much enthusiasm in the Northern Provinces.
From France we learn that the Convention concladed between Admiral Mackau and the authorities of Bueno Ayres, has given rise to an energetic protest from th French residents in the republic ; and that it is adduced by parties opposed to the late administration, as a proof of the vacillating policy of M . Thiers ; it is, however, sup posed that the present Ministry will acecle ho its ratiaica tion. Much surprise is expressed at the statement of the Finance Minister, that a loan of 450 millions of francs necessary to cover the extraordinary expenses cause chiefly by the late warlike policy; and it is expected that thi demand upon the national resources, will tend still farthe to confirm the Government in the maintenance of peace. In witzeriand, disputes respecting electoral Reform and Ecclesiastical questions, have given rise to a civil war i two Protestant Cantons, which has already been attended with serious consequences; vigorous efforts have been made to suppress the outbreak, and it is now hoped that the dissensions will be arranged without further bloodshed Advices from the Peninsula state that Portugal has de manded a further delay, in order to replyto the ultimatum of Spain ; and that Spain has consented to wait until the 31st; on which day General Espartero has determined to invade the Portuguese territory, if the affair be not then`settled. From Constantinople, we learn that the submission of Mehemet Ali has been accepted, but the Porte will enter into no engagement respecting the hereditary possession of Egypt, until the Pach a fully complies with the conditions insisted on by the Divan. The submission of the Pacha is therefore regarded merely as a promise, upon the fulfiment of which his existence and authority as Viceroy depend.

## 

Thr Court.-Her Majesty, Prince Albert, an $\{$ the Court will leave Windsor for town this day. During the week, Her Majesty gave quadrille-parties to the distinguished visitors at the Castle, and the Priuce enjoyed the diversion of hunting in the Great Park. It is again announced that the charistening of the Princess will take plice on the 10th February
art it is finally arranged that Her Ma fesy will open the session on Tuesday next, with a speech from the throne. It is stated that the address of the Lords, in reply to Her Majesty's speech, will be moved by Lord Ducie, and seconded by Lord Lurgan. - The death of Capt. Alsager, M.P. for East Surrey, has created a va-
cancy, for which Mr. Antrobus, son of Sir E. Antrohns, has come forward on the Conservative interest ; and Mr . Larpent, a partner in an East India house in the City, as the Ministerial candidate. - Mr. D'Arcy has announced his intention of going to the poll in opposition to Lord Eastgan has on the Conservative interest; and Mr. Fenton, of Heywood, is spoken of as the Conservative candidate for Rochdale at the next racancy. - Intelligence bas reached Rochdale at tue next racancy.- - ntelligence bas reached
town of the suicide of Mr. Alexander (irant, ministerial candidate for the Elgin Burghs: unfortunate speculations in tas are mentioned as the suse Sir Hay, and Mr. Duff, of Haddo, are in the field for the representation of these burghs, at the next electio

Legal Changes.- It is stated that Justice Iitiledale has sent in his resignation, and that his fordslap retires immediately atter the present term. Rumnur gives the vacant seat to the attorney or solicitor-general. and ratichs conjectures are atioat as to their successur. Mincl, but Mr. Austin, and Mr. Dundas,
nothing appears to be decided.
Governar-General of India.-The ruacur; wh ith have been circulated lately respecting L.ad An kiml's return are said to be without foundati n. His hade ar , howerer, it is added, is most anvious to come hime: and if the news touching the new erthem. nt of the (ina question,
 correct, his resigntsion nsay be a vireted.
Greenurich Insspitul-Sir Robest sompord has ad cepted the governorship oi the isspital. The appoint ment lias bee $n$ wade without any reference to poatical
influence, and solely as au aeknowiedgment of his gallant services on the cuast of Syria.

Verl Penny Pieces.-Specimens of new coins have been issued from the Mint, consisting of penny pieces,
On one side is a medallion likensag of her Majenty,

Which occupies nearly the whole of one side of the pieces. The the fourpenny pieces, under which is placed the date in swh a manner as to afford ample protection to the fiçires in the boly when in use. Prosision is made for taking the number of persons who stall ikep in every house on the night of Wednesdav, the Both of June. This will happen during the sessions in =2 h tuwns will be increased by an influx of strangers
C'rthedral Choirs.-It is said to be in contemplation make a great increase in the effective strength of th choirs of cathedrals. men in regular attendance are of above twenty, including the boys, there will be a choi adequate, it appears, to give full effect to the sublime music of the cathedral service, but sufficient to perform it In a manner not unworthy of its character and purpose. founded, as any important measure of -improvemen rounded, as any important measure of in
metropolitan cathedral choirs is expecte

## to still greater improvements orer the whole kingdom

Singing-school for Schoolmasters.-Many distinguished persons have been conviaced of the advantage of cultivating the national taste by making instruction in as been conceived necessary that schoolmasters themselves should go through a course of musical instruction, that they may be flted a pupis. The schoo Ereter-Lall. Accordiag to the method to be adopted, inEtruction wial be given in two courses, in the first of which elementary primeiples are explained and inculcated, while the course concludes with exercises for the practice of intervals interspersed with songs. In the second course the
same instructions are repeated, but greater difficulties are encountered, and a wore extended range of music embraced. To prevent the claracter of this school from being compromised by the haste of pupils to put their instructions in practice, there is a wholesome regulation will not teach the method in any school until be shall rereive a certificate of competency from the conductor of the classes. The school is under the patronage of the Duke and Dachess of Sutherland, the Bishops of London, Dur many of the nobility.

## fforeign.

France.-The Convention concluded, on the 29th October, between Baron de Mackan, on behalf of the Affairs for the province of Buenos Ayres, has been pub lished. The treaty consists of seven articles, containing the folluwing stipulations:-18t. An iudemnity to be paid to Fruch subjects for losses sustained ; the amount to be determined by a commission, subject to the arbitration o a third power, to be selected by France, in case of disa-
greement. 2nd. The raising of the blockade of the Argentine ports; the evacuation of the isle of Martin Garcia within eight days of the ratification of the treaty by
Buenos Ayres, and the restoration of the captured ships 31. in aninesty to citizens of the republic who had been 1 ro-ciited since 1523 . th. The recognition of
thie absulute mdenendence of the eastern republic of Crueuay. 3th. Tiat until the conclusion of a treaty of commerce and navigationbetween Frauce and the repullic, the citizens of each, in either country, shall be treated as the subjectson the mast favour withstanding the provision of the preceding article, if before the conclusion of a treaty with France, the Argen-
tine repabli stould think fit to estend to the subjects of any states of suoth America special and peculiar privileges, these slall not be held $t$, estend to citizens of France. 7th. The excharge of ratifications at Paris within eight months, as soon after as possible. - Prirate letters state that esidenvention is regarded as unsatisfactory by the rench forwarded a protest, signed by 12,000 persons, to the Chenifer of Deputies, demanding the nour ratification of the Tresiy, on the groun? that it does not satisfy their interests in any respect, but, on the contrary, serinusly comproman the honour and dignity of France. The Paris proct that the policy of that Minister was the sime in Amerier as arsoria; and awirn that orders were sent to anticipation of a Eur. pean war.- The Paris papers are still occapied with the reiort of M. Thiers on the proposed
fortifications. Tirc orpoments to the measure appear to be as violent as ever, anil tven its alvocates seem to have derived from the Report nu fresh argument in its favour The belief seenas to gaing groum that the chamber will refuse to grant the sums required for the morns, which are nevertheless in progress in every derection. The inmabit ants begin to apprehend that they are destioel to cut uy Ejis die Beallzene, formerly so outskirts of pario: the waste-its teees cat down, and its walka destroyed; ad it twe pi. ent be pershaten in, the same ruin, it is said, muat occur to ...tice lungs of Paris. The Journal des wall is esturated at 11 leagues, and that of the line of detached forts at 23 ieagues-in all 34 leagues. The expense
of the construction of a front of fortification in another part of France is generally entimated at $1,000,000 \mathrm{f}$. In

Paris, however, it will be at least $3,000,000$ f. ; thus the
cost for 100 forts would be $300,000,000 \mathrm{f}_{\mathrm{o}} \quad 20$ detached fortresses, including the fortified points of Charenton,

 artillery and stores 20, (10), 108 f ., making the eformou pense of keeping them up during long years of peace, and The budget for the year 1942 amounts to $1,316,592,50$ tt thus exceeding by $190,186, \mathrm{~J} 88 \mathrm{f}$. the budget of 1841 . Tha Public Instruction, Interior, Agriculture, Commerce, and
Public Works, are the same as usual. The Minister of War and Mariue demunds $492,009.291$ f., thus excreding by the inerease of 176,246 men and 46,754 horses. The general effective body now consists of 493,41 men and military expenditure are for 62,000 new muskets, 452,000 additional kilogrammes ( $904,000 \mathrm{lbs}$.) of powder, $40,000,000$
of percussion caps. and improvements in fortification and onditary matérici. The Minister states that if these augmeatations be redured to the owest possible scale, there
niust be a necessary increase of 33,000 mien at least, and 12, (0),11 horses, which will occasion a difference of 70 mil ligu franes for the year 13+2, and that these additional
crpenses must be considered as permanent until some better re-crse system be adopted. The naval budget for 1042 amounts to $1: 2,290,400 \mathrm{f}$, including the expenses for Transatlantic packets. This increase is occasioned by he attitude assumed by France atter the treaty of July It exceeds by $43,202,100 \mathrm{f}$. the budget of 1840 . By means of this credit there wiil be an effective body of 20,628 men o serve in the ports and colonies, and $45,4 i 4$ seamen fit for serrice. and able to man 225 ships-siz. 20 line-of battie ships, 22 frigates, 21 corvettes, 22 brigs, 17 gun brigs, 35 gun-boats and small eraft, 33 transpo steamers. The principal expenses are $58,535,900 \mathrm{f}$. fo pay for officers and men, provisions, \&c. ; $52,39 \%, 400 \mathrm{f}$. for
repairs in the ports. The colonial service is estimated at repairs in the
Financial Measures.-On Monday last, M. Humann the Minister of Finance, presented to the Chamber of Depaties a project of law relative to the employment 450 millions of francs, the raising of which by loan has been recently proposed. several provisions of this project this regulate the amount of the sums to be appropriated it is said, 534 millions of francs, instead of the 72 millions voted last year by the Chambers. It is expecterl that the house of Rothschild will be the contractors for this loan.
The Inurdations.-A collection of 1513 f . has been made by the Britisi inhabitants of Boulogne, for the relief of sufferers frome the inundations. A similar subscription has been made on a rery liberal scale by the Britizh resi-
dents at Nice. The inhbitants of the valley of Essonne were roused from their beds on Tuesday night by a sudden inundation, caused by the rapid thawing of snow on the higher grounds. . Near Mennecey, several cottages were washed down, and some cattle lost. The road betweeu is conered with water, in consequence of the rise of the Seine
Railrouds.-It appears that several Deputies connected with the northern, southern, and eastern departments are Sea may be connected with the Mediterraviean by means of railroads, communicating with the Saone, the Rhone \&c. Three lines are particularly insisted upon-namely Paris to Lille, Paris to Chalons-sur-Saone, and another branch to Basle and Strasburgh.
Switzerland.-A civil war has unbappily broken out in the Canton of Argau, which has excited the most serious apprehensions throughout the States of the Confederation The following are the particulars :-A new constitution was lately adopted by the Grand Council of Soleure, and also by that of Argovie. Both made considerable change. especially in electoral voting, which might be considered Soleure was carried in the coral reform. The project o against 6 . It mas still to be poted by the people, and were it rejected, the law had established that the old constitution should be in rigur for ten years. In consequence of this, the Catholic and aristocratic party held a quence of this, the Catholic and aristocratic party held a
meeting at Mumliswyl on the 3 d , and roted a promeeting at Mumliswyl on the 3 d , and roted a pro-
test against the resolution of the Grand Council, claiming. test against the resolution of the Grand Council, claiming
in case of rejection of the project of $w n s t i t u t i o n, ~ t h e ~$ in case of rejection of the project of constitution, the new one. The government of Soleure immediately adopted measures to suppress the same. Several arrests took place. The petty coancil, the centre of the gorernment removed to the arsenal in order to hold its sittings, and asked the Corort of Berne for federal assistance, which was promptly granted. - The disturbances in tivis Cinton had scarcely been put dom, when similar events oc carred in Argau, where the refurm was even more liberal ince it allowed all inhabitants to vote, without distinction if their haring the right of burgesses. Measures were immediarely taken to suppress the outbreak; the Argauvian (asernment sent an express to the lorort, ahich dea fatc...d re...furcenents to the seme of action. The treops ut the Government, 2006 strong, marched into the insurgent districts oi Muri and Bremgarten, where the Catholics had taken arms agaitst the news constitution, and came to an engagement wita the rebeis at hamergen, near Wohlen The latter are stated to have bad thirteen killed, and the Government forces, who had only two wounded, took possestios of Wohlen. The prefect and all the officers of poo
lice had either been 1 mprisoned by the insurgents or forced
to tiy. During the night the insurgents received reinforce lowing morning the convent of Muri was tal. .a......... of by the Govermment tous rishow rosothic. Then convent, and left the cauiul of Argau, to take retuge in the territory of Lucerne. The Grand Council of the canton assembled in full number, to take such measures as the
interests of the country required. The Gth battalion and interests of the country required. Come
the Gtla company of the Bernese Carabineers, and a corps
from Basle country immediately entered Argau, and Zorich also called out its first contingent. A letter from Berne disturbances in the canton of Argau has been followed by a Raadical decision which threatens to engender new comb
plications throughout all swizzeriail. The Gre that
 Muri the establishments, and particularly the convent of in the insurrection; but it is not the less true that this decision of the Council is an infraction of article 12 of the the convents. It is already said, that the decree in quesof an extraordinary Diet, and this measure is considered affairs, and without reference to the suppression of the convents. The troops of Berne continue to be directed towards the cantun of Arzau, in onder to prevent thiu
morement from apreading. Fcars are, homeser, entertained that the insurrection may extend to Lucerne, whe the Catholic party is much stronger than in coletre or Argan, for it appears that religious differences have been the ultimate cause of the disturbances. The ('atholies, less numerous in the canton of Argau, demanded, it said, as many representatives in the Great Conasil as the Protestants. This was considered impossiule, and th former appealed to arms for vindicating their tights. Tois rehigous flame has even gained Vaud, where, it is said many pastors have resigned in consequence of the bew
ecclesiastical law, empowering the Grand Council to decide in matters of religion.
Spain. - The speech of the Queen of Portugal he produced considerable dissatisfaction at Madrid, and has given a nerr and disagreeable turn to a question which ras were as nearly settled. enea tanse journats whe gency glain of the that document. The opposition papers convert it into a new weapon of attack, and find in its contents a corroburatión of theis previous arguments, deprecating the unnecessarily offentre language of the Portugnese Ministry, aud holdin, o:it the it would not be the fault of s question of the navigation of the Douro came to ler cthe at the mouth of the Tagus, and under the shadow of the standard of Spain. Doubts are therefore entertai...d re specting the amicable solution of the diileretwors wil tion of Great Britain, has been anxious to protract thei adjustment, and the British Minister has demanded of the Duke of Victory the concession of a new delay to the Portuguese Cabinet to return a reply to his ullimatum, nine regiments of cavalry, and 160 pieces of artillery, would be concentrated along the Portuguese frontier, and that this army, commanded by the Duke, would not wait beyond the 31st of January, the day on which the delay fixer by the Spanis regency woulu exple; athi hrath Por tugal. General Espartero was said to have alca?! pre pared his plan of campaign. He intends to divide his drmy into three corpe, which would march simultaneously upo Oporto, Lisbon, and Santarem.
Portugal.-Advices from Lisbon to the 11 th instant mave reached town. The Douro question is, for the to this subject the C'unt de Almoster, son of heo Marquis of Saldanha, had arrived express from Majrid, miths despatches from the Court of Spain, the purpurt of which had, however, nut transpired, with the exception of the fact that the Cadbinet of Madrid would nat consent to withdraw its ultimatum, althouyh it proposce to Walt until the end of the month for the fulsiment of the provise made by Purtugal respecting the mediation of Eneland In some of the districts of Portugal the populace ha risen in arms in order to oppose the acts fur reartiting ti. ranks of the army. In sereral cases the new-mace cruits had been rescued, and in one instance a wietachment of infantry had been defeated with con-ilerabie loss. Preparatious for war prere going on rigorousaly, alid erery exertion was making to fortity the lines, and put the capital in a respectuble state of deterice; 110 preces arnitery are already planted un the lines of the cup 52001 men for the standing army; and orders have accordng: been iscued to sume of the parish overseers to suspend further impresement. It is patal that a courier Lias been despatched for Madrad with the answer to the express receired from the Spanish Court, stating that the ( $)$ ferm ment wha accept the extension of thirty days, but insist on the mediation of England. The Ministers are sald the have declared that if they cannot carry the question in the Cortes within the period mentioned, they will retire from affice. - The following facts relating to the exportation © wine from the Douro are interesting at this moment to During the last year $33,190 \frac{1}{4}$ pipes have been exported

and Norway, 1513; Russia, 1643, Hamburgh, $645 \frac{3}{4}$; rable old man, residna at Thandurg, in Easi Prussia, and murdered. His housekeeper, an aged woman, the only person with him in the house, was dangerously
wounded. It appears that the murderer got into the palace, with which he was well acquainted, in the evening, appears to have ane direct to the bishop's sitting-ronm,
and to hase cleft his skull with a bill-hook, so that he died instanty: He then bruke cipen the cupboard in
wiich the money was kept. At that moment the househeeper came in, and the murderer, though disguised and wearing a mask, thought it necessary, for his security, to
murder her: he accordingly gave her a severe wound in the face and fled. The servants returning from church found the bodies, and inmediately gave the alarm. The physicians and without hopes of recovery. Public ofinion, it is said, soon pointed out Rudolph Kulnappl as the murderer
$H e$ is 26 or 27 years of age, of the Roman Catholic He is 26 or 27 years of age, of the Roman Catholic re-
ligion. He has several brothers and sisters; and was educated by the bishop, who, intending him for a clergy-
man, placed him in the seminary. Being dismissed for man, placed him in the seminary. Being dismissed for was dismissed for theit, and bound to a tailor, but he Fould not work, and Jed a vagabond life; repeatedly threatened the bishop and the canons, and declared that he would set fire to their residences. For this he was put in prison, which increased bis rancour towards the bishop, from whom he lately demanded 4 CO dollars, and threatened the wurst consequences if refused. He was seen near the
bishop's residence between six and seven o'clock in the evening, and in searching him much of the property belonging to the bishop was found. He has therefore been

Hesse Darmatidy harents and his sisters.
Hesse Darmatadi. - At the close of the assembly of the estates the Grand Duke expressed his conviction that
peace would be preserred in Europe. This oficial deof the alliance between the Grand Duke and the Emperor of Russia: as it is presumed that they are fully acquainted St. Petersburgh.-A letrer from Mentz, 7th inst, states that the Rhine having been frozen over opposite to that city, on the preceding day numbers of persons ventured
to cross from one bank to the other it, when the ice broke up with a tremendous noise, and shore, but about fifty people were caught by the water, and while the current carried them along. Boats were put off to their assistance, and they were all rescued without urther accident
Belgiuns. - In the month of April last a band of forgers,
hose head-quarters were whose head-quarters were at London, spread themselves
all over Europe, travelling in post-chaises, lodging at the all over Europe, travelling in post-chaises, lodging at the
first hotels, with sirvants in forked letters of credit from the house of Glyn, Halifax, Mills, and Co., succeeded in obtaining enormous sums,
from many bankers in almost all the great cities of the Continent; among the rest, in Belgium, from the houses of Nagelmachers and Cerfonlaine, at Liege, and of Paris described as European forgers, ineluded the Marquis de Bombel and Baron d'Argusson, belonging to ancient Mr. Boyle, rich bankers at Flovence. By a decision of thee Court of Appeal at Brussels, dated the 13 th inst., Messrs. Perry, Graham, jun.. and Baron d'Argusson are
to be tried before the Court of Assize of Brabant for to be tried before the Court of Assize of Brabant for Brussels, and attempted to do the same at Antwerp and Ghent, where their schemes were defeated. A female,
Angelina Lamont, who was in company with these persons Angelina Lamont, who was in company with these persons, of hasing knowingly received part of the funds obrained by means of the forgeries. The other persons not not be prosecated. The progress of the affair promises to be extremely curious, on account of the rank of the accused, their plans, and their ramifications.-A letter from Mastricht of the 9 th says that the line of demarcation is irrevocably fixed as to Canne. The Belpian commissioners important to retain for the safety of their country. The of marking out the line. - the continuation of the work damages occasioned bs the recent from Brussels detail the swollen by the melting of the snow and by the rain, which bas fallen without intermption for several days, has again the country; the environs of Brussels hense extent of the country; the environs of Brussels have the appear-
ance of lakes; the water is nearly as high as in February ance of lakes; the water is nearly as high as in February
1839. From Brussels to Vilvord is one vast sheet of Water, the meadows are covered to the depth of several feet, and the iron railway is almost wholly under water; the same is the case from Brussels to Hul. At Brassels there are few cellars in the lower parts of the city which are not full of water. The canseway at some distance from Anderlicht gate is almost under water, and the comand the river has atill much floating ice. We hear that the
environs of Malines and Louvain are also inundated. The
English residents of Brussels have raised a liberal subscription for the relief of the sufferers by the inundations
in France, for which the Prefert of the Rhone hats for mally returned thanks, through the French ambassado Hengary. - The question of mised marriages has been arain brought before the public under a novel form. The ast Diet had passed a resolution, by a great majority, in
sisting upon the right of all Cbristian members of the community to the free exercise of their consciences, and declaring it to be contrary to the law for any clergyman to
demand a written engagement respecting the education of children from parties desiring to be married. The Com tat of Pesth, in its last meeting, reduced this principle to any confession who should art against this resolutiun The Primate of Hungary, M. Kopaczy, has publicly protested, in a long letter, in which he openly assumes that the Legislature has no right to dictate to the clergy mhat functions they have to perfurm, or in what manner they

## Rome.--L'pon Christmas day, Queen Maria Christina

 attended divine service at $S t$. Peter's, and was accommo dated with a seat in the same tribune with Don Miguel The ex-royal pair are said to have been very little embar-rassed at this meeting; and though they were separated by a slight partition, it did not prevent them from exa mining each other curiously from time to time.-A gale of
wind blew with such violence in the city wind blew with such violence in the city on the Jth inst., that it caused the great bell at the Roman College to of about 160 feet from the level of the sea, as during the whole tine there was a complete caln at the summit of the astronomical observatory.-Letters from Ancona state, that a severe storm has occurred in that port, by which the shipping has sustained much damage.
Gireece. - Private letters from Athens announce that the English residents are making great exertions for the completion of the new Protestant church, the expenses of which will be defrayed partly by subscription and partly been made by an Athenian journal to explain the system been made by an Athenian journal to explain the system
of torture alluded to in our last, but none of the facts have been refuted. It is, however, expected that the European Powers will iuterfere, in order that such proceedings may be abolished.
Turket.-Letters have been received from C'onstantinople, from which we learn that the submission of the Pacha of Egypt has been accepted. The Porte requires the Pacha to give up the Turkish fleet-to reduce his army and navy-to proclaim the Hatti Scberif, and to evacuate Syria, before the Sultan will enguge to reinstate him in the pachalic of Egypt, or cede its hereditary despatched to Alexandria with this decision, and with orders relative to the execution of the conditions. Captain Fanshawe will be the bearer of the reply, accompanied by Admiral Walker Bey and by Kanoun Effendi, who has been appointed, it is said, to reveive the fleet in place of
the Capitan Pacha. It appears, therefore, that the submission made by Mehemet Ali has been accepted only as a promise, upon the fulfilment of which depends the course to be adopted by the Saltan. In the mean time hostilities are not discontinued in Syria; and from the fact of General Jochmus having been recently confirmed in the chief command, without instructions to suspend hostilities, intelligence may arrive of a final blow having been struck at the rembant of Ibrahim Pacha's army. Further accounts state that the tenure on which Mehemet Ali will be allowed to retain the pachalic of Egypt will be no better than that of any other Pacha of the Porte. He is to have neither army, fleet, nor revenue; he is to be assigned a yearly salary, while the Porte appoints its own moubassils for the cullection of the public taxes. The Egyptian troops are, to a certain extent, to be quartered every year
in Turkey, and to be replaced by a Turkish force, which in Turkey, and to be replaced by a Turkish force, which
is to be commanded by Paelas of inferior rank, nominated is the commanded by Paelas of inferior rank, nominated
by the by the Porte. Such part also of the Egyptian fleet as it
shall deem expedient, must be delivered, together with the Turkish, into the hands of Admiral Stopford. The effect of these provisions will, if duly executed, be to reduce Mehemet Ali in the government, where he has for the last thirty years enjoyed sovereign and undisputed authority, to a mere cipher. He would, in short, be placed by them so completely in the power of the Sultan that he would have no security for his head, which it is stated there has already been some question in the Council of declaring forfeit. The Sheik Islam, at the instance of Reschid Pacha, and in order to silence the supporters of Mehemet Ali in the Council, openly denounced him as one with whom no terms could be obseryed, and who by his treasons and his crimes had forfeited all claim to mercy. It is considered, therefore, if the four powers still lend their assistance to the Porte, that the Pacha has little to expect from its forbearance. -It is reported that seven British line-of-battle ships, now in Marmorice Bay, will winter at Malta, and the remainder of the fleet, with the Austrian division, at Vourlah. The British fleet at Marmorice consists of thirteen sail-of-the-line, two corvettes, and several steam frigates; the Austrian consists of two frigates, two corvettes, and a brig.
Syrna.-The situation of Ibrahim Pacha becomes more critical every day, and it is expected that in a little time the remainder of the Egyptian army will capitulate. Ibrafrom El Meseng guard are said to have been driven back Egyptian regiment by Schible Arian, the Druse chier, an Emir Beschir had passed the Anti-Lebanon, and occupied Zebdeni, six lengues from Damaseas. Official intelligence dated 9th instant of the entrance of Zecheriah Pacha and

Esaad Pacha into Aleppo bas been received. The forme compiettly evacuated by the Egyptians, who were in full
 drecring int. hin meane oficers who have dora leee dead, and others he shound hiow to fre avandoned him, that the people about him are often completely puzzled hov to act. Suleiman Pacha, on the contrary, is as collectes
and cheerful as if nothing had gone wrong. Five thous sand mure troops have been sent to Syria as a reinforce
ment. The steamer Talivi Bahri has takea a detachment hesides Hussein Pacha, president of the military council Who goes on a special mission to organise the re-con Pacha, and Abdi Pacha, who are to serve on the staff news of his appointment when be prepared to set cout frou Aleppo fur Damaseus. A body of medical men
with Doctor Zohrab at their head, have also gone duma is the Tahiri Balu-i, as weil as selctal hiutib: of the arnsy. Mehemet Ali received despatches from Gaza, ann uncin that the f 0.0 men who had left Cairo to mert Ibrahim Pacha, under the orders of Selim Bey, had sx'cly reached that place. The Bedouin thibes of the netishourhood Who, on being told that the ailies were in pussessiun of
Alexandria, had resolted against the Pacha, hai male thei submission to the Bey. A corps of 80,0 Egyptians, col lected from different garrison turns of Syria, was also
stationed at Gaza. All communication with Syia hy thin desert being cut off, nothing new was known respecting the movements of Ibrahin Pacha. Mehemet Ali had written to Admiral Stopford, praying him to re-open the communications in order that ise night inferm his son of the cessation of hostilities, and the Mydra steamer hat been placed at his dieposal to carry his letter to Marmorio Bay.-A few sporadic cases of plyue have cecarred in
Cairo, and fears are entertained of a rather severe plague this season, that being the usual follower of a great inurl dation.-It is stated that the Pacha still continues his preparations for resistance; that gun-boats hase been
stationed at Rosetta and Damietta, that the fortifications statiuned at Rosetta and Damietta ; that the fortinications consisting of 64,000 men, has been called out ; and that the available cavalry, amounting to 15,500 horse, have been sent to the Syrian frontier.
Indra. - A communication has lately been receivad by Government from the Deputy Superintenlent for the suphressiun of Thaggre, requesting the asistance of the
Calcutta authorities for the apprihension of aiout 20 men belongiug to the militiu. These men, it appears, have been away from their corps since 1834, applying fo received they are believed to be engaged in gaining a living by the Thuggee system. They are supposed to be practising their dark deeds in the vicinity of Calcotta, and prices have been set for their apprehension. The same grounds, of the existence of a systern of buat Thuggee, carvied on in Calcallu! Sereral respectalle people are concerned, and the way in which it is practised is by inveigling the people into the Thugsee boats, which have always convenient accommodations, and by despatehing them in many cases almost immediately after shuving off from the shore, and in open daylight.
Chisa.-Private letters state, that in the communications between Admiral Filiot and the officers of the Emperor no specitic sum in the way of indemnity had been demnity had been fully admitted by the Emperor ; and hat his anxious desire to have the seat of negotiations remored to Canton was caused by the panic which our naval force bad produced in approaching so near his capital. The emperor did not wish to negutiate under our guns, and, to "save his face," (as the Chinese phrase is, ) he would rather do justice at a distance, than undergo the humiliation of appearing to his subjects to y:eld to our vessels of war. The entrance of the Madagascar into the Peiho river is said to have caused the utmost consternation. The shores were descrted at her approach, and the inhabitants sought safety in the highest hills.
United States.-The Calecionia, mail steamer, has arrived from Boston and Halifas, after a soyage of fourteen days and three hours. Alchough her despatches extend over a period of a fortuight from the date of papers previousiy received, their contents aford much news of general interest.- The proceedings in Congress, up to the last accounts from Washington. pessessed an interest purely local. The census of the cinte.l ates mas nearly completed. The population would reach, is it
did nor exceed, $17,000,000$.-An accident of $:$ ? did not exceed, 17,000,000.-An aecident
nature had occurred in the House of Requerentat wes an hour ur two before the hour of meriny; the chan-
delier, with all its fittings and appenders, fill the thoor, and was smashed to pieces. Furtuntriy, owing to the earliness of the hour, no one rids witim riach so as to be injured by it. Had it fulien an huar or two later, it
 hall by this accident, the Hukwe ajournat soon after meeting. This drantelier was of American manufacture, weighed abose wull ius., and coot tu00 or su0 dollars. It mas 13 feet in diameter, contained i8 Argand
burners, and it is said to have been ornamented hy $2 f 50$ lustres, and 3 how spangles.
Mexico.-The city of Tobasco, which had been be-
sieged by the Federalists for some weeks surrendered about the beginning of October. There had beenn hat

Iexico was comparatively tranquil. Its present popalation is estimated in the New Orleans papers at $6,700,000$ souls; that of Texas is set down at 200,000 .

The election for Bridge-M iderable excitement in the City terminted on Than atter a severere contest. The numbers were, for Mr. Gibbs
tock Exchange, Jan. 22.-The funds have assumed rmer aspect, Consols for the Account having opened at 90 buyers, and later is the day improved to $90 \frac{1}{8}$ to $\frac{1}{4}$, at cent. Bank Stock remains at 170 to 1 , and Exchequer Bills 6s. to 8s. prem
ftetropolis and its Vicinitp.
The Weather.-The sudden thaw which commenced on Saturday continued during the whole of Sunday, accom-
panied by rain; the snow rapidly disappeared in the meropolitan districts, and the streets and roads were soo free from obstruction. The effects of the tham, however,
have been severely felt both in the neighbourhood of London, and in the provinces. On Tuesday evening the weather again became cold, and a slight fall of snow occurto prevail, with few exceptions, during the week. Many mails and coaches have arrived affer their time, but the
floods in the country have begun to subside, and the condition of the roads is improving.
Inundation at Brentford.-On Sunday morning an alarming inundation occurred, occasioned by the bursting of the banks and locks on the Grand Junction Canal, which
has been attended with the destruction of considerable property, the carrying away of many houses hy the stream, as well as the loss of life. The water, it appears, was observed to be slowly rising about balf-past twelve on Saturday night; but no fears of an inundation were entertained by the persons residing near. Towards two a.m., however, a po-
lice constable, on duty near the bridge, observing the water till increasing and rushing with great power to the Thames, awakened some of the boatmen belonging to what are called " monkey-boats," large numbers of which were moored off the different wharfs abutting on the canal, and cautioned them to be on the alert for their own security. At that time immediate danger was not apprehended; but a few minutes before four a loud noise was heard towards
the north of the town, which approached nearer and the north of the town, which approached nearer and of the Brent had orerflown its banks, and was pouring itself in the swollen waters of the canal. Numbers of boats, barges, and lighters were instantly torn from their moorings, and driven with great force through the bridge towards the Thames. At the same instant also the accumulated water*, having overflown all the premises north of the high rond, burst through the two avenues by the houses near the bridge, filling the lower roons. The poat that moment it is impossible to describe; and men, were ranning in all directions for places of shelter. In a very short time all the houses at that portion of the town were thoded, and, the water rising rapidly, the oceupier of houses near the market-place commenced damming up their doors, and there is no doubt that the whole, not
onlr of Ness Brentford, but also of Old Brentford, would soon have been under water, had it not forced itself an outlet at the bottom of Church-alley, by razing the wall of the extensive nursery-grounds of Messrs. Ronalds, by which it joined the stream of the canal near its outle to the Thames. About five a.m. the water was at the highest, and the only comrounication between the houses neat tbe bridge was by means of a boat. Towards six, was ascertained that the water was gradually decreasing and when daylight came the extent of the damage was large barges, driven by the force of the water against the wharf of Mr. Fowler, and swamped. They were laden ith $13 \% 0$ quarters of corn and 330 quarters of linseed laar the month of the outlet to the Thames the greates fal barges and lighters have foundered, and many have The b one of the persons on board, named Spruce, about 1 years of age, was picked up, jammed between the rails at the botroni of a neighbouring yard. It has been as-
certained that 21 then, momen. and children escaped from off the pissare boats. as they passed the wall of the Duke of Nortiamberind's grounds. The first that got orer was a boy, nio instantly fastened a rope to a tree, hey felt the wall tottrinar under them. and while the last hoy crossed, it was overtiarown by the water, he providen of sunday a large number of men were employed with waggons and carts in carrying away zacks "i grain and thet asticies, rese fire ashore. The iouse of Mr. Whitburn. near the bridge, has her and water, whin in was suthin a foot of the crown of the bridge.
risen kgter, the briage itself, wiih the adjoining houses. must have been carnied away. Above the bridge, where the junction of rhe Waters of the Brent with those of the canal took place. the towing path bas been washed away. In consequence of this calamity, between 60 and 70 boatand subscriptions have been opened for their relief. The

Infant School Room has been prepared for their accomas their destitute condition calls for. Subsequent accounts the town by the discovery that Mr. Charles Morris, marketgardener at Old Brentford, had been missing since Saturday, and all doubt on the subject has since been a stream communicating with the Brent, and which had been much swollen. The body was removed to his residence, drowned "r returned.-An inquest was held on Wednesday on the body of Spruce, which was found on Sunday mornfurther was adjourned for a week, in order to give time fo crowded with visitors from the metropolis and its neighhourhood, ansions to examine the scene of the inundation, and to obtain a sight of the wrecks. vithin an hour on Saturday night, that the furs or hot-bath of the Humane Society was put out ; the cellars and lower rooms of houses in Kensington were, in consequence, flooded.-At Windsor, the water rose several feet in the
streets, and filled the lower parts of the houses. The cellar of the Adelaide Hotel was overflown, and consider able damage done to the wine-caskg.-At Greenwich, the effects of the rapid thaw were productive of serious losses During Saturday the streets of the town were deloged and many houses had their cellars and kitchens filled with nater. Temporary bridges were placed to enable the midnight on Saturday the flood carried away a consider able portion of the bank of the river Ravensbourne, be tween Deptford and Lewisham, and in two places rushed into the grounds of Mr. Palmer, a market-gardener, forcing along with it the fences in all directions. In less than quarter of an hour the whole of the grounds were under Mr. Palmer has sustained very serious loss, as the flood carried away nearly the whole of the rich soil from the surface along with the growing crops. The inmates of leaving their furniture floating about beneath. The lowe part of the houses in Blackheath-road were completely aundated. Two very strong bridges, to which were atwere carried away by the stream. The carts and waggons passing through Lee to Eltham, dc., were axletree deep or nearly three-quarters of a mile. The greater part of Lewisham has been under water, and the valleys presented Hanwell, an island laid out for a garden has been entirely washed away. The palings on the side of the grounds helonging to the County Lunatic Asylum have been thrown down, and 32 she

Inquests.-An inquest has been held at Hackney on the body of H. Davey, aged 16 months. The servant stated that on Saturday they sat down to dinner, decease sitting in its mother's lap. The mother took a bit roast mutton from the plate and gave it to deceased, put a portion of it into its month, and had hardy done so Then it became black in the face, and appeared choking The mother tried to extract the meat with her fingers, and surgeon was sent for, who said that when he was called the child was black in the face and dead. He endeavoured to pass a probang into the throat, but a resisting substance prevented him. He would have incised the trachea liad he not considered the child irrecoverably dead. Death was caused by the bit of mutton lodging in the epigloctis, prerenting the action of that organ, and of course arresting respiration. Verdict, "Died from suffocation." The precisely similar nature of children haring been suffocated whist in the act of swallowing animal food, that within short period had come under his notice.-On Tuesday evening an inquest was held at Charing-cross Hospital on the body of John Hine, aged 52, whose death occurred under the following circumstances:-W. Harriott stated that on Monday evening he and deceased were unloading denly ran back. Deceased got out of the cart to lay bold of the horse's head, and stop him ; while doing this the violently jammed between the cart and a wall. After the anfortunate man hid received the injury, witness picke him up and assistad in laying him on some straw in the stable. He appeared to be dreadfully injured, and was conveyed to tha Charing-cross Hospital. The house surgeon stated that on deceased being examined, his breast bone was found to be fractured, and six of his ribs broken of which injuries he died on the following morning. Ver dict. "Accidental death."-A lengthened investigation took place at Peckham New Town on the body of Mr. Arthur Emmett, $5: 2$ years of age. From the testimony of several witnesses, it appeared that on Friday moming a neighbour of the deceased was alarmed by hearing groans. On get fing up and going into the road to ascertain the cause, h fund deceased lying on his back in the snow close to hi own house in Park-buildings, and evidently in a dying state. He was conveyed in-doors, and a surgeon sent for but before tis arrival deceased expired. Mr. Ward. sur geon, depo-ed that be was called to see decessed, whom he found quite dead: there were no marks of violence on his person; be had come to his death by cold, caused by long exposare to the inclement weather on Thursda night; he must have lain on the spot where he was found four or five hours; he was very feeble, and most likely
had fallen down, and being unable to rise, had perished with some friends, and left about 12 oclock in good health The jury, after hearing some further evidence impugnin the condact of the police, cue of whom has been reported down the road where the deceased was lying after half-pag , returned a verdict of "Died by exposure to coll."." the poor in the eastern districts of the metropolis arciearry ing on their operations with great advantage. The conhoperations last week, by the distribution of upwards o
2001 gallons. On Saturday the distribution increse 23010 , and on Monday to 5109 gatlons. which wase not horrever, found adequate to the number of application The applicants have much exceeded the orders for deliver, nd whout the aid of the society many families would b Limehouse, and other distant parishes. At the Sailn, Destitute Asylum, near the London Ducks, the Sailor tions for relief have been much less numerous tian for many years past, which is ascribed to the great demand for men for the navy. The distress in the parishes of st
George-in-the-East, Stepney, Shoreditch, Bethnal-green \&cc., has been greatly relieved by the exertions of local societies. At a meeting of the committee for the relief of the distressed poor of Marylebone, on Tuesday, the chair man announced that he had been authorised by a gentl man, who was anzious for the success of the present sub scription, to state that he would add 50\%. to every 450 subscribed, until the subseription reached the sum
5000 . The annount alrealy subscriled exceeds 10001 .
revalence of Smallpox.-The poor-law comm have sent a circular letter to the board of guardians of anions, in which they notice the prevalence of smallpori the metropolis, the greater portion of the patients, how enumerate various precantions which they wish to be taken to prevent the spread of the disease

Mortality of London.- By the table of mortality for the week ending Saturday the 9th, it appears that the week was as follows. east districts, "57: in the porth districto, 210; in central districts, 260 ; and in the south districts, 287 Making a total of 1191; males, $\$ \$ 1$; females, 610 Weekly a verage for 1838 - 9 , 10 males, 15 , females, 45

Police Libraries.-Some officers of the metropolita police have established a library in their respective diri
sions for the use and instruction of their men when of sions for the use and instruction of their men when
duty; the example was set by the superintendent of the E division the example was set by lo just published, it appear that the library consists of 290 rolumes of the conductors have attracted the notice of private individuals, who, in the division referred to, have made gratuities to the amount ofrewards of 201 .
The spitalfiets sitkueavers.-A meeting of silk manufacturers an.t of the most skilful journeymen silkweavers has been held, for the purpose of appointing committee to superintend the school of design which i
about to be established in Spitalfields. The Rev. H about to be estabished in Spitalfields. The Rev. H co-operation of the manafacturers and journermen to promote the object of a school of design. The Goveramen had promised their assistance, provided such umion tool place, or that a committee was formed, consisting of manu-
 of forming the school, in the courree of which the manufacturers acknowledged the great credit due to the journe men for their exertions in the establishment of such an object; and it was stated that the funds for the support the central school at Somerset House. The following re solution was then unanimously carried:-" That in the opinion of this meeting it is highly erpedient to establish a school of desion in this neighbourhood, to co-operate with the central school at Somerset House; and that a com mittee, consisting of manufacturers and journeymen, be formed to carry the object into effect.

## 耳lobintial Ntotos

The late Fioods. - We learn from Essex that the inundation of the Lea has caused considerable damage throughout the western division of the county. During the whole of Monday this district, to the distance of about six miles in length, reaching into Epping Forest, was on sheet or water: the depth in many parts, where the land lay lo.v, being five or six feet. In some places, owing the rapidity of the current, the ground has been furrowed will the or four feet, and it is feared a vast breadeh or seed and a great portion of produce. At Stratford two boys who saw a hore orne an by the houl to ti wssistance, bat they were und current, and were drowned. In the neighbourhood of Wanstead Abber, much damage has been done to the ground, and the farmers have sustained extensire losses At Chelmsford, the rivers Cann and Chelmer, at whos confluence the town stands, overllowed their banks to a extraordinary height, thooding the fields in their vicing. The Cann rose so high that covered the ground-ibor the Friars, and entered the new building for the athe næum ; and on the east side there were eighteen inches water in the Sunday School-ruom. In Springnield. the Chelmer rose higher than it was ever before know The gardens and yards skirting the water on the east and
of the river suffered considerably. Several cellare and
houses were flooded to a considerable depth, and the clergyman was obliged to be taken in a conveyance from his
residence to perform his duties. In the West of England the effects of the thaw have been severely felt. On Sa-
turday evening, many villages on Salisbury Plain were iisited by a sulden flood. At Shrenton, 3 h houses hare been washed away, three lives have been lost, and damage
done to the amount of $10,1100 \mathrm{~L}$. At $\mathbb{}$ rlye, a few houses and one life were lost; at Stuke, abont i0 houses; at Tilshead, seven houses; at Cuitterne, two entirely, two consequences have been still more disastrous. The mass of waters burst up stout bridges in its course, and received every mile large additions to its bulk. Few villages on more considerable : we learn from Sunderland, that within the memory of the oldest inhabitant the shipping interest
of that port had never sustained, by river floods, damage and loss so extensive as that which has been occasioned by
the breaking of the ice in the river Wear. The main body of ice, borne down by the floods, reached the harbour about
half-past four on the 19 th , bearing all before it, driving from their moorings, and in some instances with their moorings, upwards of 100 sail of ships, several steamof timber. The scene which presented itself at daybreak was frightful ; vesseils entangled with broken masts, bowsprits, bulwarks, and rigging, so as in many instances to Many vessels have been sunk, others driven out to sea, and several very seriously damaged. The loss already ascertained is estimated at $150,000 \%$. Many men are missing, but at present the number cannot be accurately
determined.-Letters from Sheffield state that great injury has been sustained on the high roads and embankments;
in Suffolk, the flood was higher than it has been for the in Suffolk, the flood was higher than it has been for the
last ten years. Fears were entertained at Sudbury for the safety of the bridges, and the streets were almost impass-
able. Many gardens, and the first floors of several houses in the lower part of the town and Ballingdon, were flooded several inches deep, the current passing through the passages into the street.

York.-A Chapter hasbeen convened by the Archbishop, assisted by Dr. Phillimore as his commissary, for the pur. pose of ascertaining the resources of the Minster, and how edifice. Another object of the visitation is to investigate the dissensions which prevail, it is said, to such an extent as to impede the progress of business, and prevent the due administration of those functions which it is the province manifested great opposition to these proceedings, and has strongly objected to Dr. Phillimore sitting as judge is a counsel for the Archbishop; the Dean has also refused to conform to his jurisdiction, or to attend the Chapter, and Dr. Phillimore has given notice that he shall compel his attendance. As a similar visitation has not been held for many years, the right of the Archbishop to exercise visitorial fower has been questioned, and the Commissary has felt diction, which has, he says, been handed down by the authority of the primitive church, enforced by the canon
law, and respected by the courts of common law in Englaw, and respected by the courts of common law in Eng-
land. The proceedings excite the greatest interest in the land. The proceedings excite the greatest interest in the
diocese. The Rev. W. V. Harcourt, on Tuesday, announced that the subscriptions for the restoration of the Minster
amounted to upwards of $13,000 l$., of which $1200 l$. have amounted to upwards of $13,000 \%$., of which 1200\%. have funds of the Minster, he stated, could afford no assistance, as the edifice is deeply in debt.
Manchester-Staroation.-An inquest, exciting considerable public interest, has been held at Heywood, respecting the decease of Eliza Frankland, the youngest child
of an operative clogger. Deceased, who was two years and six months old, appeared to have died from the effects of hunger and cold. A policeman of the county constabulary
stated that on Thursday morning, whilst passing through stated that on Thursday morning, whilst passing through
Heywood, his attention was attracted by the cries of children proceeding from a cellar. Having called another policeman to accompany him, they entered and found the only inmates to be three young children huddled together on a bed. On examining them, one was found to be a corpse; and the dwelling was entirely destitute of food or
money. All the children were in a state of starcation, and most miserably clothed. The superintendent of police promptly attended to the wants of the survivors, and Srocked them with food. The father was at work at widower, his family were much neglecied in his absence. He siated he had been out of work for some time ; hut, within a ferr weeks, had obtained employment at stuck-
port at nailing clogs: his earnings yielded only 5 s . bi per Treek, nit of which he paid 4s. for food and lodging, at Stuchport. Hiving only 1 s .6 d . for the sustenance of the
children weehls, he had parchased some flour, of which le made perrieige on Sunday; and, having obtained the services of a wom tin to attend occasionally to the children,
he proceeded to Stocipmort. He formerly receised a nit tance of 1 s . Bil. Weily fivis the orerseer of Middletit ; what was the reason he did nostant-overseer asked him that if be bad seme hlocks he could st on hetter. The overseer, consequently, gave him 12s. to ewal, him to get
work, and from that period had never been to risit the
family, or render them assistance family, or render them assistance; he therefore thought it Mr. Leach, surgeon, who had examined the body, stated
that the child had died of inflammation, produced by cold
and want of food. He observed that there was but a very
small quantity of food in the stomach, and the case was ene of the most painful he had ever mitnessed
Wigan.-Hightoay Robbery.-A highway robbery, ac companied with violence, bas been committed in the neigh bourhood of Wigan. Mr. Coupe, of Haigh, after spend place between 12 and 1 o'clock, $t$ ored to his own residence. Though somewhat under the influence of liquor, he was by no means deprived of his faculties of suddenly rushed upon him, and knocked him down. he then fell upon him, and proceeded to ritle his pockets. ir. Coupe, on recovering from the effect of the blow sisted the robber, and a struggle ensued, rhich lasted fo some time; but at length he was overpowered, and com
pletely deprived of sensibility by his antagonist kicking him in the most savage manner on the bead and face On recovering, Mr. Coupe was discovered by a man who conducted him to the nearest honse. Here it was clothes, saturated with blood. While in this house a man entered and walked forward to the fire, where Mr. Coupe was seated. One glance sufficed to assure Mr. Coupe that he again saw before him the person with whom he had so shortly before been engaged. He then sprang upon him and succeeded in keeping his hold until some of the in mates of the house, roused by the noise, came to his aid and the man was secured. His hat was then examined and proved to be that of Mr. Coupe, the lining having threw a handkerchief into the fire which he had wrapped ound his body, but it was snathed forn the fire before was damaged, and identified by Mr. Coupe as his own The prisoner was recognised as a person of bad character a native of Wigan, named Bolton. On Monday he was
brought up before the sitting magistrates, who, after hearbrought up before the sitting magistrates, who, after hea Liverpool.-A Fair Free-Trader.-At the Audit-house the officers of customs attended to press a charge of hav ing landed a quantity of foreign gloves, against the wife of a gentleman in affuent circumstances in this city. As the lady did not appear, an affidavit, made before a magis trate, was tendered in proof of service of the summons. An officer of the customs deposed, that in July last he was on board the Monarch, arrived from Havre; a lady with her servant was in the act of landing, but having foreign foreign goods on her person. She said she had not. Wit-Castom-house, for in charge of another officer, to the Custom-house, for examination by the female searcher. In the course of the same day, he received from the officer six dozen and five pairs of kid gloves and twelve yards of
silk. The searcher deposed to the finding of the articles concealed about the person of the lady, who tonk out her purse, and told her she would give anything not to lose the goods. She left directly after being searched, saying she was quite ashamed of what she had done.-The fuil penalty of $29 \%$. 13 s ., being three times the value of the goods, or imprisonment until payment, was imposed.
Stafford.-A meeting has been held here to establish a county association for promoting the moral and religious improvernent of bargemen and boatmen. The chair was taken by the Bishop of Lichfield, who advocated the claims of the society, pointing out the demoralised ffort for their inmen, and the necesity of asing every portance of petitions from. His lordship urged the importance of petitions from magistrates, canal proprietors, merchants, manufacturers, and others, as well as parishes
and public bodies, for a legislative enactment to put a stop and public bodies, for a legislative enactment to put a stop to Sunday traffic on rivers and canals throughout the kinghad produced a powerful effect in the House of Lords. Lord Normanby had promised to appoint a committee next session to investigate the subject, and Lord Hatherton to obtain the necessary information from evidence. Ear abot, the Lord-Lieutenant, Lord Sandon, and others, aoved and seconded resolutions. The Duke of Suther tions. Lord Dartmouth, and Lord Bradford, cent The appointment of canal chaplains. 2. The building of schools and small churches on the different navigations. 3. Petitioning parliament for the cessation of Sunday labour on rivers and canals.

W'ales.-The London and Aberystrith mail mas overturned on Monday morning near Strethough, at the foot of Plynlimmon. In consequence of the snow-storm the
coachman had provided an estra pair of horses, and the coachman had provided an estra pair hersess, and the one side is a ravine of considerable depth, into which the coach and two inside passensers were precipitated, the whole turning over twice or thrice, and yet both gentlemen The coachman aped with only a few scratches and bruises not coachman and guard threw themselves off, and were ot hurt, and the postilion received no injury.-On Saturday a distressing and fatal accident occurred at the Hean Caste colliery, Pembrokeshire, by which two person were deprived of life, and another placed in perilous cir-
cumstances. One of the colliers, accompanied by two cumstances. One of the colliers. accomyanied by two boys was preparing t) ascend the pit, and had just got
into the "tram." when mother, full of coals, whieh had reached the mouth of the pit in safety, was suddenly precipitated down the shaft, and before they could eseape they were erushed beneath it. One of the lads was in-
stantly killed, his brains being dasbed out. The man lived for some time, but one of his ribs being driven in caused internal hemorrhage, and he expired in the course of the day. The skull of the other lad was dreadfully fractured, and for some days his life was despaired of, but it is
now hoped that his ultimate recovery may be effected
An inquest was held on Wednesday last when of "Accidental death" was returned. Anen a verdic diarism has been committed on the farm of Mr. Evans near Carmarthen, by which ten stacks of corn and one
 ture which occurred on board the bark Armata, Captain Jackson, which arrived at that port a few days since, while of the berths in and water, and had brought them many hundred miles to sea with him, but a strong gale of wind coming on, they
left the ship. The honeycomb may still be seen on board Wilts.-Yesterday week a left it
Wilts.-Yesterday week a serious accident occurred at about three in the morning the lady of Mr. Henry Hobhouse was awakened by the smell of smoke; she roused Mr. Hobhouse, who said it was caused by the wood fires, Shortly after this, the smoke increasing, an alarm was the dining-room. On making a breach ia the wall the flames burst out in a large hody. but a suphly of water being promptly obtained, the fire was got under before much damage was done. The joists in the room in which Mr. and Mrs. H. Hobhouse slept, over the dining-room were burned at the ends, and the carpet singed.
gab. ing church education for the young chimney-sweepers of this city, and for facilitating the gradual absorption into other
branches of honest industry of such of them as will be thrown out of their employ by the Climbing Boys " Act Bristol._The Pariamen
Mr. Owen, which has been between Mr. Brindley and 4010 persons, has been brought to a close, and resolutions have been adopted declaring Socialism to positive infidelity; that it denied the responsibility of man for his actions; that, by trampling on the sacred sex ; and that it aimed at the overthrow of all institutions. The motion was carried amidst loud plandits, only five or six bands being held up against it.

Plymouth.-A court-martial was held on Saturday on George Hobbs, the gunner of the Pigenn packet, who was on four charges:-1st, being drunk and dis orderly; 2adiy, repeated drunkenness ; 3raly, for insub-
ordination and disobedience of orders ; and 4thly, for triking his superior officer, the master of the Pigeon while in the execution of his duty. The prisoner pleaded guilty to all the clarges. The court deliberated nearly wo hours, and on its re-opening the Judge-Advocate read over the charges, and pronounced the prisoner "Gailty." He ras sentenced to be hung at the yard-arm of one of
Her Majesty's ships in Hamoaze. The prisoner expressed hope that in consideration of his long servitude, and its heing his first offence, the court would recommend hiun to mercy. The President, Rear-Admiral Warren, said the would regretted their duty was in
Leeds.-The great meeting of Refurmers and Chartists, for which preparations have been so long in progress, took place Mr sday. Mae meeting Was addressed by Mr Collins, Mr. Hume, M. P., Mr. Moir of Glasgow, Sir G. Williams, M.P., Col. Thompson. and others farourable to the ballot, household suffrage, triennial Parliaments, aud the no-property qualification. At least 8000 persons were present, of whom 1500 were Chartists. An address to the necessity of co-operation among the working classes, and resolutions to the same effect were carried.
Dover.-A fatal accident has occurred to the cretw of the Beaver steam-packet belonging to this station; the steamer arrived off Boulogne on Friday morving with the enough to enter the harbour, the pilot-boat put off to land the mail and passengers. She left the steamer with eight seamen on board, Mr. Hare in cbarge of the mail, and two passengers (Canadians); but a heavy sea striking her, she upset, and her crew and passengers were seen struggling in the water. The commander of the Beaver immediately got out his jolly-boat, and picked up the mailbag and one seaman, one of the passengers, and the pilot ; but life was already estinct in the two latter. Two of the crew swam ashore, and were saved ; but all the others unfortunately perished. Mr. Hare. the mate, who was charged with the mail-bags, has left a widow and sit children to deplore his loss. His body was washed ashore this morning. The two pissengers who were drownew Mr. Webster, of Virginia.
Wirdsor.-On Wednesday morning an Enquest was held at Spital, on Letitia Friday, a girl unly "xteen years of age, the daughter of a person erppoyed wat drat Park, who died in consequence of canthardas ormuner having been administered to her hy mintan for sulphar drugs at the infantre liomatiol. Deanseal hat anomed under a disease of the skin. and had some to the mintry hospital in order to haze maciline for hoshias. The surgeon. Dr. Fraser, has inammety supplied her with the the sersoint. Who) was uidered to serve her, bad siven biister outment by mistake. After a long inquay the Coreman of the jury cbserved there was no doutt d.out a and that no wilfulness could be attributed to the sergeant.

A verdict was therefore returned of "Accidental death."
A sobbery was committed on Monday in the shop of
Mcssrs. Ievi and Goldsmidt, and jewellery stolen there-
from to the amount of 100l. A piece of glass was cut from to the amount of lool. A piece of glass was cut
from the large pane, and the property abstracted through

Railroads.-Midland Counties.-On Saturday night and obstructed the traffic. The mail train from Derby, arriving soon after the accident, was embedded amonz-t the fallen materials, but none of the passengers received
inyiry. A 'er a detention of fous: hours, the ab-tuction wa- remove- 1 , an the tran continue its jomes, arriving curre ion Sundey a; rot ppon Elis thonpd thaw on simity, the hams i, the Soar, neat rughborough, were overflowed, and a body of water colcause the station-keeper with his family to remove for safety. At the arrival of the mail train on Sunday night,
the guard found that several rails had been carried away, and the train could proceed no further. A chaise and four Was immediately procured, in which the bags were connibus. The delay thus occasioned was of such extent, arrived too late at Rugby to be forwarded by the mail-cart morning. The length of embankment carried away by the

committal of these outrages.
WVr. O'Connell's Progress.-This gentleman arrived on Wednesday at Youghal, and addressed the people from the
windows of the hotel. He said, above all parts of Ire land, he felt particularly indebted to the men of Youghal to Parliament his son, when only a boy. By that effer they had broken the first link of the chain that kept them enslaved by their oppressors, and have since scattered the remainder to the winds. He asked them-Where are the and in such plenty in the laands of the shoneens? What sort are the Quakers here? In England they are honest men, and give me their support-but the Quakers of this country are Orangemen at heart and bad politicians. He
berged of them to avoid all secret societies, and the taking of illegal oaths, and to do their business honestly and conscientiously in broad day. He said, "I believe you re-
collect the tithes well. They have now got another name -rent-charge. We must abolish them altogether-we have partly done away with them. We lave taken off one-fyurth, and the other three-fourths I promise you I whll som mexe follow." The parchment unim he said was gre grievous injustice to Ireland, and a every Irishman. Mr. O'Connell's arrival in Belfast is described as being unattended with the results which bad been anticipated with much anxiety. It excited a good deal of sensation on Saturday evening, and a number of persons collected in front of the hotel, but no manifestation of feeling was muld go to chapel, considerable numbers of nersont he lected at the top of Donegal-street, but the Hon. member did not attend, and thereby disappointed the wishes of many who were anxious to have a sight of him. The day passed oser in pesce, and nothing whatever occurred to disturb the tranquillity of the Sabbath. The Rev. T. Drew. Ineumbent of Carist Charch, published an adlress to the Protestants, poiating out the necessity at the appunching Reral Jieeting. The Prathyterian Mr. O Connell's assertion e issued a declaration that him on the repeal question is untrue, and that they are decidedly and conscientiously opposed to the political creed of that gentleman, believing it to be subrersive of the best sented to Mr. Q'Connell by the Operatives, and by the Christian Doctrize Society. In the evening, a public dinner took place at which 800 persons are calculated to have been y reseat. Mr. O'Connell's speech was received
with great enthusiasm; it contained an ontline of his political principles, and particularly dwelt on the necessity for trieanial Parliaments, no-property qualification for mem-sufirage-O Tuexday the Repeal Meeting was held in froat of the Royal Hotel, and was attended by many thousand persons. Mr. O'Connell appeared in a dress of reneal-frieze with a white velvet collar, and repeal buttons. He read several resolutions passed br the Reformers of Uister in 1Fin, and sand that the principles which they embolied were those wich he profersi the Union as an imposition practised upon Ireland by frand and force, and based apon injustice. He urged the people to violate no law, but to join him in peaceful agita-
lion for repeal. Three cheers were given for the Queen, Mr. O'Connell and Repeal, and the meeting separated.

## SCOTLAND

Preshytery of S:rathongie.-The Elders and Parislioners of Murnoch, in this Presbytery, have formarded to the Secretary of State for the Home Department an energetic them to admit the Rer. Mr. Edwards as Minist parish. High Court of Justiciary.-Alexander M‘Rae was charged with assaulting May, or Marjory, M\&Intoash, daughter of the lock-hecper on the Caledoninn Canal. The
Court was occupied with this case with closed doors till late hoor, and the jury returned a verdict, unanimously finding the prisoner «nilts. Lord Meadowbank pronounced judgmeet after a lang address. in which he held out no cuted merey. The yrisnner was se The Town Conne and inhabitants of Inverness have petitioned the Crown Sherifs' Court.-A Lave Suit for a Penny.-A farmer she and daughter had lately Edinburgh, in one of their own carts. The carter, to pro-
tect the clothes of the ladies, tnok the precaution of strewing the bottom of the vehicle with two small bags of stram for which, on entering the city, the tacksmen insisted upon
charging one penay in the name of custom, which was pald. The farmer, however, being persuaded of the illegality of the charge, brought an action before the Small
Debt Sheriff Court for the recovery of the penny. The case was argued on both sides at great length. On the one hand, the tacksmen contended that straw was at article subject tn custom, however small the quan whot which they handed up the new act of Parliament, which the sheriff carefully examined. The pursuer, on the other hand, maintained that straw was only subject to custom if brought to market for sale. The sheriff was clearly of the same opin
with costs.
The Wealhor. - The state of the roads between Carlisle and Edinburgh has seriously impeded the passage of the mails. On Saturday night the mail which had proceeded for the former town with six horses was upset, but there were no passengers. It is said that for several years the during the not been so much obstructed as they weigh bourhood of Edinbargh; but so rapid was the thaw during Saturday niglat in consequence of the violent gale, that next morning the whole snow had disappeared. The other streams, were striking most of these rivera having overflowed their banks, rolling dowa large blocks of ice with velocity. We have not, however, heard of any damage arising from this change. - Accounts from Glasgow hensions were entertained, that in the eventof an overflowing of the river, the lower parts of the city would be in dange from the flood, and fears were also entertained for the safety of the shipping in the harbour; prudential measures Sund th the the adopted by the part es and gable part hard given way, and there having been several heavy showers ifain on Saturday night, a spate was occasioned, with which the broad fragments of ice floated down at a moderate velocity. The strain on the vessels was severe, and in some cases both chain and hempen cable were cut while the anchor was thruwn overboard, but, despite every effort, three steamers and a schoone: were driven from their moorings. About an hour and a balf sufficed to clear the river of the ice, which is said to have tumbled over the weir at the rate of some thousaud tons an hour. Notwithstanding the great quantity of snuw Which must have been melted by the thaw tor the pretive twenty-fuar hours, the river did not rise to any great heigur Glasturr.-Monament to II! ! bland Mury.-Measures are about to be taken for the etection of some memoral over the ashes of Burns' first and purest tose. Nhis objewn to eacla thare been taken up by duturent purties, fiour IW S. Carruthers, Esil, of Dormont, Dumfriessibire, in whth the writer expresses his iatention to erece the mommo necessary stop for and requests Dif. Weir to takic ciab acessary steps for that purpore. Under hortly done to ararh the 1 at resting-p.ue of Mary Campbell.

## THEATRIC.AIS.

Drury-Line.-On Monday night. M. Jullen made is apperame as the suceessor of M. Murard in the con ductorstip of the Concerts \&Hiver, and was weltomed by as full an mukience as the most prosperous night of the sexion lads yet attrauted to this theatre. We choruses, monto of the evening, and the accessinn of chornes seemed to give satisfaction, and the performances wo aitngether suecesstul. An important addition to the sol players is M. Baumann, who astonished the audience wi his performance on the bassoon. The melo-dramatic fects introduced to aid the descriptive music smm Huguonots were loudly applauded, and proved successfa
ss a coup de théátre. Schiller's "Ode to Joy," by
Beethoven, was more coolly received, but the ensemble of
the concert passed in an enthusiastic spirit, and was the concert passed in an enthusiastic spirit, and was
crowned with the applauses of a very crowded house. Maymarker- An attempt has been made to drama-
tise Mrs. Trollope's novel of $W$ idow Barnaby at this theatre. The widow was assigned to Mrs. Glover; the
sham Major and his Valet, to Messrs. Vining and Wrench. The work was of the most serious description; scenes scarcely anything to disturb the still solennity until toroked a laugh, but the piece was of a nature to repress ath trifliug of that sort.

There wa
time, indeed, when A. lawgh bucame geueral, and that was at the last scene,
ahes the clerk of the magistrate before whom Mrs. Barnaby was brought on account of her connexion with the
swindlers continually called out, "De quiet, Barnaby," an odd tone that he produced shouts, and greatly interrupted the calm propriety of the house. No
expressiou of opinion was uttered during the piece, but
the hisses gained force by retention, and at the descent of the curtain were discharged in one grand volley. It may
be observed, that Mr. Webster's regular season closed last week. The Lord Cbamberlain has given him leave to the additional term.
Adelphi.-A new piece called Agnes St. Aubin, founded upon one of Mrs. S. C. Halrs "Thas Mr. and Mrs. Trials, was produced on Thursday. Mr. and Mrs.
Yates, and Mrs. Keeley, sustain the principal parts; the piece was successful, and was announced for repetition

## ftiscellancous

David's Sow.-The common expression "as drunk as David's Sow, " is said to have originated in the following ludicrous circumstance :-One David Lloyd, a Welshman, with six legs, which was much visited by the curious. He had a wife too, somewhat curious also, in the frequent desire ueurs; which often subjected her to a little due correction. One day, David's wife having indulged her proconsequences, thought it best to seek timely retirement asal tuok possession of the sty, wherein to sleep herself sser. A company of persons coming soon afterwards to
see the rare six-legged sow, David ushered them up to the sty, exclaiming joyously, on approaching the inclosure,
"There's a so for you! did either of you ever see such another?" To which some of the party in advance, see-
ing the state the woman was in, replied, "It is truly the most drunken sow we ever beheld." Whence the woman

The Pretty Pig, and Elderberry. Wine.--Some time since, a person living in Carey-street, Maidstone, with his favourite pig, which was in his sty, in the garden, night be cellar of his house. After some time piggy continued to ascend some stairs which led up to the kitchen, and after he found about two pounds of bacon, which, in a most cannibal-like manner, he devoured. This repast soon making him thirsty, he sought about, it is supposed. for something to ailay his thirst, and in the course of his researches
sinen sumething savoury in the upper regions. Accordingly he scrambled up stairs into a bed-room. There he tonid wherewith to wash down the bacon; for on the floor stood several hottles of Elderberry Wine. Drawing of
corks he did not understand, but in "cracking a bottle" he proved himself to be as dexterous as any bon-vivant in the parish. But his freak now drew to a close; poor piggy got "us drunk as David's sow." He capered about, wash-hand basin, and swallowed the soap. This last performance caused great alarm to the neighbourhood, for, in the his pou'ing litart, he stood erect upon his hindlegs, and with taptiost aceidentally on bis head, looked out of the window, for the benefit of the air, and to find his way out again. Being observed by some one, a great outcry was raised, and a report quickly spread, that there was a mad pig,
foaming at the mouth, looking out of a chamber in Careyfoaming at the mouth, looking out of a chamber in Carey-
street: and the tipsy porker, by all accounts, certainly had a very queer look. It was proposed to shoot him, to prevent fuxther mischief; but after much pro and con, one stairs, to pop poor pigsy into a sack, and brought him harmlessly down stairs. A subsequent examination of the premises, and depredations committed therein, satisfactorily safely deposited in his sty, without any further damage to The Fer-de-Lance Snake of Martinique.-The French papers give an account of a melancholy accident which is stated that whilst amnusing himself in shortinique. It attacked by a snake, and notwithstanding the most obstinate resistance, he was bitten in several places in the legs, and in spite of every assistance died four hours after-
wards. The reptile to which this fatal accident is due, is the 'rigono cephut 's lazecelatus, or fer-de lance of the French, so called from its head terminating almost in a point, and is ant unly one of a very deadly genus of snake, bet probably
the most fearful species on the globe. Its poison is equally powerful with that of the rattlesnake ; but, unlike that and most other of the more deadly sorts of serpents, which are slow and sluggish in their habits, rarely attacking but in
pursuit of prey or when disturbed, this species is endowed every living creature which comes in its way. The been 7 French feet long; and instead of 80 , the usual numbe of young, it contained, on being opened, no less than 162
young ones. At the time of parturition, the young are fully formed, active, and ready to bite. The usulal haunts of the snake are in the sugar-patches, where they live principally on rats and birds ; but the loftiest trees and the summit of the most arid mountains, the rivers, and sea-shore, as in following the instinct of their energetic nature. Mos fortunately the range of this formidable animal is extremel mall. Having hitherto been only found in the islands o and there appears to be no foundation for the tradition and there appears to be ne some writers of their haring been transported from the continent of South America, and constantly a drift-wood is found in the West Indies. It is providential that hitherto it has not been found beyond the narrom
range we have mentioned. It is said to have been formerly found in Guadaloupe, but to hare been exterminated hy pecies of boa. Every means have, as may be supposed, been taken by the inhabitants to rid the island of so dreadful : scourge, to which the lives of many negroes fall a sacrifice in (secretary bird of the Cape of Good Hope, a remarkable species of the captorial family of birds, which live princi pally on the most venomous reptiles) has been transplanted o Martinique, but we have not heard what success has

Baron Von Halberg's Offer of Marriage,-The following account of the success of the Baron's matrimonia interest our readers:-Itappears that the offer it contained has led to the most happy results. He has, without a joke met with a perfect woman. is now preparing, with his mind at rest, a circular letter to those condescending young radies who have offered to surrender to him their hands and hearts, and all their charms, amounting to no fewe than 749. The gallant gentleman, who is repairing his ancient castle to receive the Queen of the Tourney, deeply regrets that the terms of his own letter and his thate sense of delicacy will not allow him to publish the 749 beautifully composed, that if exposed to the light of day they would in one week extinguish by their brilliancy the celebrated correspondence of Madame de Sevigné, and render it stale and unprofitable. The most spirituelles, he says, as might be expected, came from France. There are 27 from actresses, singers, and dancers; 101 from
grisettes, mantua-makers, and dress-makers; 5.3 from duchesses, countesses, and marchionesses; 329 from Parisian literary ladies, whose mames are always men tioned in a whisper. The discreet Baron, howe announced through the press that he has burnt all these perfumed missives. The letter he is preparing will be his adieu to the press and the public. Henceforth he declares he no longer belongs to the world, but is devoted to the treasure of beauty which the wheel of fortune has brought to him.

## Tye Gationers Cfrantele

SATURDAY, JANUARY 30, 1841.

Prblic attention at last seems thoroughly aroused to he importance of apulying scientific principles to every brauch of the arts of cultivation: but that which appears ust now to be the favourite topic of inquiry is the action of Manure. Our successive notices of Liebig's book have already, in part, explained the views of that chemist, and the subject will be further elucidated as we proceed in the examination of it. In the mean while, as we do not find the theory of manures understood so clearly as could be desired by some of those whose experiments are recently recorded, we take the present opportunity of making some observations upon the subject.
Nothing can be more simple than the theory of manures. A plant, like an animal, requires food, and obtains it from the ail and from the earth. Certain kinds of food are required by all plants indiscriminately; such as water, carbonic acid, and nitrogen. Other kinds of food are indispensable to some species, and useless, or even deleterious, to others; such as alkaline substances, salts of iron, copper, and other mineral matters. The art of manuring consists in augmenting, within certain limits, the quantity of that kind of food which is universally necessary, in supplyiag a suficiency of that which is specially demanded by each species, and in withholding that which is useless deleterious.
But although the theory of manures is thus simple, the application of it is, in reality, extremely complicated, and involves a great variety of details which none but chemists can possibly examine. It is, in the first place, necessary to determine what kind of food a plant specially requires; this can only be learned from an analysis both of its organs of vegetation, and of those of fructification : the analysis of a grain of wheat will not show that of its straw and leaves, neither will the latter show the constituent parts of
the seed. It may, indeed, be said that if the straw and leaves are healthy, the grain must be so also, and therefore to know the constitution of the former is enough; and this would be true if we merely wished to secure a seed capable of producing healthy seedlings. But it is the end of all art to render nature subservient to the wants of man and as the substance called gluten is that which forms the most nutritiqus part of corn, so it is necessary for the cultivator to promote the preternatural formation of that principle; and he does this by increasing the quantity of nitrogen in the soil, through the aid of animal manure,
because nitrogen is an essential element of the other hand, if we could conceive it possible that a Wheat-field should be cut off from all access to nitrogen, the formation of gluten would be impossible, because nothing comes of nothing. To know, then, the chemical constituents of a plant is indispensable.
Having ascertained what matters a given plant natorally coatains, the nezt step is to determine chemically the exact nature of the predominant matters found in soil; otherwise all manuring is blind hazard. Suppose a soll to be already rich in phosphate of lime, which is an indispensable manure for wheat, to add more phosphate of lime is $a$ waste of materials. On the other hand, let a soil be rich in ammonia, in alkslies, and in carbonsceous matter, but containing phosphate of lime in insufficient quantity, to give such a soil nitrate of soda would be merely adding matter of which there is already an abundance, and with holding the only principle that the land really required. In such a case, bonsodust would have been nseful, and nitrate of soda wasted. It is, therefore, evident that to depensable.

But the labour of the must also determine the chemical does not stop here. He he makes use of; otherwise he eanature of the manures manure to employ in each panticular case. Simple manures, indeed, such as salt, cubic nitre, saltpetre, gypsum, and even bones, the elementary parts of which are uni form and well ascertained, cause no difficulty; but as regards compound manures it is far otherwise. Nothing is more variable thau the chemical composition of wellrotted dung, of of the various kinds of peat; and few agriculturists have any idea of the ral natare of mach artificial substances as Poittevin's menure, Lance's humans, or Lance' grearbon, or eren of yeast, malt-dust, soot, black sed of the market-gardons mear London, already cbounding in curboamecons matter, were manured with
some substance consisting of little else; it is clear that no
effect could be produced: but if it receives alkalies and ammonia in a proper state, such a manure will supply what is really deficient. We must have very unskilfully explained our meaning if it is not manifest to every one that a knowledge of the exact chemical nature of manure is as indispensable as that of plants or of soil.
He, then, who would apply manure in a manner theoretically correct, must ascertain with accuracy the chemical constituents-1. of the plant to be manured; 2. of the soil in which it grows; and 3.of the manures that can be applied

That this object is of the first importance cannot be doubted; but how is it to be attained? Chemical analyses can only be well performed by very skilfal chemists; and they are expensire. Individuals in this country can hardly be expected to incur the labour and cost of such inquiries, even if convinced of their importance, and possessing the skill to conduct them. The investigation must be a special labour, undertaken for the general welfare, at the expense of public bodies. It is a subject to which the funds of the British Association would be well applied ; and we trust it will soon be taken up in earnest, and systematically, not only by that body, but by our two great Horticultural and Agricultural Sucieties. The united efforts of these three associations would quickly produce an accumulation of positive data, which by converting manuring into a branch of science, and establishing it upon a solid foundation, would be a gift of the greatest value to the rural population of all the world.

THE PANSY.
HAVING in a former number given a list of some firstrate Pansies, we proceed to lay before our readers the rules by which the form of this favourite flower is determined, and the qualifications it should possess to entitle it to rank as a show-flower. The first and most essential quality to examine is its form, which will be found in the greatest perfection in that flower, round which if a circle be drawn, each petal will exactly touch the circle not projecting beyond it, nor stopping short of it. The following diagram will illustrate this point:-

The petals should be large and broad, because in that case the indentations must be shallow, where the outline of one petal meets another. Bearing these rules in mind, and examining a few first-rate flowers, the eye will soon become accustemed to judge of its most perfect form and proportion, and will be quiekly able to detect any deviation from it.
The other qualities which are combined with form in order to render a Pansy perfect, consist in the petals being of airm texture, fiat, even at the edge, and free from notches. The eye must be clean and well-defined; the colours should be rich and vivid, and the markings must have a clear edge. A uniform tint as a ground colour is much eateamed; but the variations and combination of colour are so numerous and beautiful that no precise rules can be formed to govern this point.
The Pansy is so universal a favourite, and excites so much attention and interest, that we are anxious to see flowers possessing all the qualities we have enumerated common, and gracing every garden. It is no doubt susceptible of further improvement, if we consider what has already been done by the gkill, persoverance, and industry of floriats.

## ON CORBETT'S HOT-WATER APPARATUS

In the first Number of the Gardeners' Chronicle I find a reference to Corbett's Patent Apparatus, or open-irough system for supplying artificial heat to hothouses, \&c. Having had an apparatus on the same principle erected at sanguine expectations, I have sent the following remarks on it.
The open trough, or gutter, may be applied to a boiler of any construction, but the one to which it is connected here is what is technically called a D boiler, manufactured by Messrs. Garton and Jarvis of Exeter; the fireplace and ashpit are in the centre of the boiler; the heat and flames escape at the front and back, passing over the top, on each side, and underneath, before they are lost in the chimney so that very little heat is wasted. The water flows from troughs made of cast-iron, of the following dimensions, inside measure:-Șix inches wide at the top, three inches trough if constructed in fuggths three feet long, neatiy trough is constructed in lugths three feet long, neatiy side near the top. The water returns in a cast-iron pipe, three inckes in diameter. There are thin iron lids, or covers, of the same length as each portion of the trough,
to fit upon the whole length of the apparatus, so that the
degree of humidity may be regulated by taling portion of the covers, without disturbing the others. The troughs, or gutters, might be made of various materials,
but I prefer ivon. The the trough, or pipes, neariy from copper or zinc, and retains the heat much longer. The width and depth of the trooghs should be varied according to the plants intended to be grown in the house; than those intended for the gromth of Ericas and greenhouse plants generally
consider Corbetten's opentrongh producing artificial heat, I consider Corbett's open-trongh system the most simple
and eficacious. To all lovers of Orchidacees I would particularly recommend it, for a moint and humid atmosphere may easily be obtained by takiing off any nuwber of the lids from the trough, as may seem adviamble. It dispenses with the perforated pipe, and the inconvenience of throxing water on the floor of the house, mhich vfen makes it disagreeable to walk on. Another adrantage, of more importance, is the nature of the steam arismg ditrect regetation than that which is raised by pouring water on a hot pipe. During the resting season of (I) relidadzeous plants, the atmosphere of the house is easily kept less humid, by not removing the whole or any part of the lids. humid, by not removing the whole or any part uf the lids.
For पineries and Peach-houses it would answer exceedFor Vineries and Peach-houses it would answer exceed-
ingly well, and entirely eradicate the red spider; for the ingly well, and entirely eradieate the red spider; for the
trough can be covered when the trees are in flower, and Then the fruit is approaching towards maturity. On the other hand, during the growing season, you may maintain a regularly humid, atmosphere with less trouble than by
any other means. In a Pine-stove, 40 feet lung with a any other means. In a Pine-stove, 40 feet lung, with a walk between the back wall and bark-bed, the trough being two feet from the level of the walk, I can command any degree of heat with much less attention than is required for some houses with a boiler of the same deacription and equal power as regards pipe. Durny tiee las
week of the country, the thermometer on the 8th instant being as low as six degrees Fabrenheit, at eight o'cluck in the morning. At that time the thermometer in the pinestove was from 65 to 70 degrees; and in a moderate frost it may be raised to 100 degrees. Persons accustomed to horticultural buildinge, on estering a bous: heated on this system, cannot fail to observe the mild ant geninl nature of the atmesphere ; and the appearance of the plants is a sufficient gnarantee that the air, as reguiated by this appa-
ratus, is beneficial to their growth. -J. Grifin, Gardener ratus, is beneficial to their growth.--

## on the cultivation of calceolarias.

As I find in the leading article of the first number of the Gardeners ${ }^{2}$ Chronicle, that you intend to devote a
part of its columns to articles connected with the cultivapart of its columns to articles connected with the cultiva account of my method of cultivating Herbaceous calceolarias, in the hope of interesting those of your readers Who may have witnessed the exhibitions near London of they have done flowering, which is, under ordinary circumstances, about the latter end of Jone.
As soon afterwards as circumstances will permit, I divest them of their flower-stalles and dead leaves, and top-dress them for about an inch deep with silver-sand and yellow ham in equal nortions, taking care that all the that depth; I afterwards place them in a cool and shaded situation until the beginning or middle of September, giving occasional waterings duriag that period. By this time I have emitted a sufficient number of roots to admit of their being removed with safety from the parent plant; this done by gardeners in the removing of layers of carnations. I then plant them in 48 -sized pots, or smaller if necessary, and place them in a frame on a gentle bottom heat of tan, taking care at this period to guard against the duect influence of the sum until they are fairly established in their pots. yellow loam, four of well-decomposed leaf-mould, one of cow-dung which has lain at least twelve months, and two of silver sand. This soil I vary as the plants strengthen and approach their flowering season, until the proportions are
five of loam, two of leaf-mould, two of cow-dang, and one of silver sand. From the time the plants are well estan blished in their pots, I gire them no particular attertion bevond that of slighty fumigating them once a reck, a
discipline to which I subject them daring their whole period of growth, until about the beginning of II Ans When I shifr them into laryer pots and phace the. . In the
rout stage of a geranium house, the teen . which is kept at about 4.50 , with an ex $\therefore$, 14 hamid
 mould being pot over the ripe juints of the yon tir whod, which very soon emit rocts. an oper of the I am also very particular in drainage, never allowing a particle of the old drainage to be removed: and by the time they are placed in their finwering-pots, I bave a complete open drain from rithin a fea incies of the surface dorn to the botiom of the pot, with the exception tween the mould and potsherds.
This temperature, and a carefit attention to fimigation, Consider the most essential points in the cultivation of Calceolarias, for if they once become infested by the green fly no art can prevent the destruction of their foliage, and
few plants are more impatient of an excess of moisture at gating Calceolarias care must be taken to avoid doing so o excess ; if smoke is applied to them in the same quantity as would be proper for penches or other plants of a hardier nature, they will be found to sofier as unuch from
the antidote as from the bame. In watering. I am guided the antidote as from the baw. In watering. I am guided more by the appearance of their foliage than by the mond
in the pots : if they are in a proper state. their foliage will be found every morning to be fringe! with drops of dew,
which is a certain indication of health. When this has which is a certain indication of health. When this has were either too wet or too dry.
By using the above compost, attending to temperature and atmospheric moisture, avoiding an excess of water at
their roots, and slighty fumigating once a week, I have grown many of the beavtiful varieties raised by Mr. Green, Sir Edmund Antrobus's gardener, to the size of three feet in dinmeter in the head of flowers. Thisp however, cannot be accomplished in situations where parsimony application for anything which I considered necessary to application for an ything which I consldered necessary to
bring those plants to perfection. $-J, B . L . J a n .13 t h, 1841$.
ON THE CULTIVATION OF LILIUM LANCIFO. LIUM, OR SPECIOSUM.
Ths taste for the Lilia having considerably revived since the introduction of the new kinds from Japan, particularly the beautiful varieties of Libivom speciosum, or as we
have it lancifolium, I send you some remarks on their cultivation, thinking that any information relating to such elegant plants may be acceptable to your readers.
cultivate Lilias in the greatest perfection, they should be removed as rarely as possible, and only when the bulbs become too cluse; for disturbing them is most injurious to their growth and flowering. It is, however, a common practice to remove them, perhaps because it is not geneplants in having permanent fibres to their butbs, which are thus supplied with nourishment after the stems have decayed, and previously to their recommencing growth. Now these tibres are much injured and not unfrequently
deastroyed when the bulbs are taken ap; and this must of necessity weaken the growth of the plants in the following jear. It is also to be observed that if they are allowed to
remain unplanted any length of time, they shrivel and lose remain unplanted any
mach of their $v i g o u r$.

Besides the fibres of the bulbs, Lilies have others just above the bulb on the stem, which fibres appear more especially intended for the growth of the stem and flowers; it must, however, be anderstood that as any injury to the foliage or stem of a bulbons plant must reduce the health development of the stem and flowers, indirectly increase the buib. To show how mach support the stem derives from these fibres, I tried an experiment with three plants incles high, and I thought the stem-ribres were grown about an inch long, I cleared away the earth down to the fibres just above the bulbs. I then had them potted, treated as cuttings for a short time, and afterwards planted out; they grew well, and all produced small bulbs from some of the axils of the leaves. I do not, howerer, recommend this as a good way to secure increase; I notice it only as a norel crethod of propagation. The bulbs from
which these stems were taken remained dormant until the Which these stems were taken remained dormant until the following season, when they grew much the same as the generally pursued in the culcivation of these lilies has been age, and to use pets of large wize, having plenty of drainsoii. One great point is to keep the buibs, particularly the largest, at a safficient depth to allow room for the stemfibres to grow freely. When they require repotting, which should only be performed whilst the bulbs are dormant, they should be turned out of the old pots, and the crocks should be carefully remored, so as to avoid injuring the fibres, or even shaking off the earth; the bulbs are then to be repotted in a larger-sized pot, in peat and sand, with good drainage. Hitherto they have been sufficiently scarce to make it worth my while to grow them in the greenhouse, Where they thrive, but as they become more plentiful they will. no doubr, be tried in open beds, and I have reason to think they will be found safficiently hardy to stand our winters, if planted in light peat, and at a good depth.
I have found no dificulty in their propagation, by following a simple but certain plan. Knowing the tendency thought it more than probable that this kind might possess the same character; I therefore earthed the stems up about eight or nine inches high, to encourage Nature as much as pousible, tan operation I had previously performed with
success upon other kinds in the opea ground. At first I placed four pieces of board at a stort distance from the stem, so as to form around it a box, which I filled with fine peat, keeping it constantly moist; but I found the evaporation was so great that sufficient moisture was not
retained round the stem to allow it much size. Therefore in the following season I placed some pieces of turty peat round the stem, at a sufficiins fiok the phatry this lad the devired efect, and wht noweh wore nigmptous and of linger, sand the than I had Katieipatefs so that I Iow possess a mae stock of them, Sorathing of the same kuibs wast seasom.
otzey person, but, zs ifunderstand, without secceus. The pleged a zandentpotol nearly the size of the one in which
the plant was growing, and having broken out the bottom they inverted it over the plant, filling up the hollow with monld ; this not only presented the exapneation of any air in the stem, which appears absuintely neco...ary fur the production of bulba. The plan which I have described above is infinitely superior to the old manner of taking off
the scales from the bulb, which besides reducing it nadtethe scales from the bulb, which besides reducing it nate-
rially, only produces oflsets of a small size, which require
to be grown some jears before they will Hower. I have to be grown some jears before they will hower.
tried laving tiee stem on the earth, and covering it mith
moutd, fenving the foliage uncovered as much as possible moutd, fearing the folinge uncovered as much as possible
this, however, was not very succeasful, for the plant heing this, however, was not very successful, for the plant heing
in a horizontal position, the course of the sap was much impeded, and the stem failed to attain its full growth. There is also another plan, which consists in cutting the them into joints, each baving a leaf, and is nearly similar tion, that the solid part of the stem is removed, learing only the bark with the eye attached to the leaf. I can scarcely speak of this mode with certainty, having

The young bulbs of these lilies assume a pecaliar having their leaves opposite, from which I at first thought they might form a division of the genus which would no hybridize with those we already possess; but the following
year, when the plants had gained strength, they lost that regularity, and I am happy to say I have this year obtained seed from them crossed with L. bigrinum. I am therefore in hopes I shall obtain some new varieties.
In hybridizing care shoold be always taken to save seed from those flowers which have the best shape; for I believe the form of the future flower is mach more deupon that which furnishes the pollen; the pollen generally gives the colour. It is also highly desirable that the flower from which the pollen is taken, should be darker than that producing the seed; for I have found in such rases the seedlings have been much more beautiful (being frequently spotted or striped) than where I bave reversed the process. I have seen this occur in so marked a
manner in ranunculus, that I have adopted it as a prin manner in ranumenlus, that I have adopted it as a prin-
ciple never to take pollen from a lighter-coloured flower. I remember many years ago crossing a black ranunculn with one quite white ; the produce from which, instead of Thite having merged into the black without producing any definite character.
Acting on the principle of placing dark colonrs on guineur, and hare obtained some beantifal ratieties mast baving very brilliant colours, and many being finely blotcbed with the deep colour of J. atrosanguineum. have no doubt that the laws which regulate the combination of colours are as much observed in hybrid flowers as if the two colours were mixed on a pallette : therefore regard
should be had in crossing, so to select flowers that the colours when mixed mag be brilliant, or at least novel. Of course I need not say that to be successful the anthers should be remored from the flower intended for seed, previously to the discharge of the pollen. I may be charged
hy the bntanist with making confusion in the renus, but , as a flurist, cannot agree with him, for I believe in obtaining new varieties 1 am only developing the latent beauties of nature, which are thus wisely hidden, to excite us to further industry, and to show that there is an everlasting field of beauty before us if we will but investigate It is the infinite variety of this endless pursuit which wonders of nature in vegetation is so rapidly increasing that I do not believe the love of flowers will ever cease in this country; their cultivation being an amusement a once innocent, instructive, and bealthy; it has also the sanction of the most remote antiquity, and the authority of our great Creator, having been selected by Him as the mployment most conducive to the happiness of man in
Walucorlh, Jan. і, 1841 .
H. Groom.

ON THE CULTURE OF THE OXALIS DEPPEI In 1827 was introduced into England, directly from Ifexico, a new apecies of Oxalis, which Messrs. Loddiges name of Oxalis Deppei. Ten years afterwards M. Lejeune, the Nestor of Belgian Botanists, gave it the name of oxals =onate, in order to express the black bands of the Lejeune made known moreover the use of
the leaves as sorrel, and described the plant as a great aequisition to the kitchen garden. He propagated it much, and in 1837 sent a dish of the roots and bulbs to He exhibition of iruits and vegetables of the Royal Horticultural Society of Liége. Thest exhibitions are became better known, it was sought after and cultivated everywhere with success. Daring my tour through Great Britain in 1838, I only sew the Oralis Deppei cultivated as an ormamental plant, in those pretty fower beds, which the English alone know how to keep in beautiful condition. Everywhere Ifound that the enly friends it pos an affection for plants, as to admire them withont thinking of inquiring whether they are of any use. This Oxalis
has only bees properly appreciated in Belgiam, the country of vegetables, if ever there ans one, which had the
honour of presenting green peas to your great Elizabeth.
Verviers, one of those towno whose affection for good
cheer and hospitality to strangers are so well known to sll Who visit them, has been in this case diatinguished by the
creation of a new enjoyment. That pleasure comer of 1 have thought it not derogatory to my usual marere semone I have thought it not derogatory to my unal mare semone
occupations to relate the hismry of tis. detmone ()
 value their good digestuon, and 1 am sure ei numanz ia this occasion with much sympathy. The ront of this plane. markable instance of structure, when it is examined wiz the microscope. If cut longitudinally the root is found to of Salep : like it, it becomes white in dryiog, is trant parent, and consists of cells enclosing a very mutritions substance, without donbt of the eame natnre "s basorine (a nutritious gummy secretion). The rind forms of of the consist of prismatical cells the microscope it is found to and io of the same measure in breadth, all placed in hoisht, zontal lines, which rus from the wood to the skin of the rind. These cells are reservoirs for the useful parts of the Ozalis. In the centre of the root occars a woody asis in the fornn of a white opake line, often hollow in the
middle. This wood has a singular structure, and callo middle. This wood has a singular structure, and callo to of annular and netted vessels, and is a highly interesting object to study under the microscope, for beautiful vessel. are observed in it, as much as $\frac{1}{80}$ of a millimetre brond,
and having the spiral fibre $\frac{8}{80}$ of a millimetre thick. It appears evident that in this Oxalis the wood is reduced to a simple medullary sheath without pith, and that the woody tissue or sap-vessels have no existence in it. The rejs the water of the soil to the plant which has to elsborate it, and the rascular tissue is the breathing apparatus which maintains life in the cellular mass. In summer. and horizontal. At that time, if anything strikes the leafstalk, the leaffets in a quarter or half a minute are sem to fold themselves along their mid-rib from the base to the snmmit; the lobes next corve: and at length the partial stalk bends from above downwards, so that the leafets hang down from the centre. After resting sume minutes the leaves recover their former condition
Soil has a considerable infuence upon Oxalis Deppei. I have cultivated it in a slaty soil, without success; it does not thrive in losm, still less in calcareous earth: it almays suffers iu heovy land, and often will not produce its lap. roots. But in a sandy soil, light, and mixed with decijed roots become a decimetre + long, and three centimetres: thick. The aspect in which it is grown is immateral, dry. Freunent watering is required, preferred, when nut dry. Frequent watering is required. but not if tise ground
is moist. Dew is sufficient to maintain vegetation during is moist. Dew is sumicient
I plant the bulus on the lith of April, when I 120 longer ear frost, an inch deep, and fire inches apart, in riwa which are seven inches asander. Three or four are put into
the same hole, talking care to arrange them in quincons. The beds are kept clean. and in the month of May are watered with liquid cow-dung. Vegetation continues till September and Uetober, at which time the roote are taken up. Propagation is effected by seeds or by bulbs; the
latter are preferable. They are taken off the sides of the crown, are kepi through wister in a cellar proteoted from frost and damp, and are employed in the Spring. I have seen a single plant produce from 45 to 50 bulos.

The uses of the Oxalis are many. The young leaves tre dressed like sorrel, in soup or as a vegetable; they have flowers are excellent in salad, alone, or mixed with com salad, endive of both kinds, red cabbage, beet-root, and eren with the petals of the Dahlia, which are delicions when thus employed. When served at table, the fowers with their pink corolla, green calyx, yellow stripes, and lithle tamens, produce a very pretty effect. The roots are taked in a cool cellar. They are gently boiled with salt and water, after having been washed and slightly peeled; they are then eaten like asparagus, in the Flemish fashion, with melted butter and the yolks of eggs. They are tiso serred ap like Scorronera and endive, with white sarlee. - Yoy orm, in whatever way they are dressed, a tenue delicate stomach. The analogy of the root with Salep indictes that if ercellent upon all constitutiunsCh. Murrcn, Pros. But.. Liége, Deci. 1n, 18t0.
 ths of an inch.

## COTTAGE GARDENS.-No. I1.

Denarag the winter little can be done by the cottager but the season is now approaching when every apare wel if the ground is tolerably dry and fit for working. small portion should be dug for a sowing of Early Frome $P$ eas, and anuther for Mazajan Bearns. Fur we w? and the same depth, three fees apart, into waich s.i peas are to be laid as regularly as poasible irom ont end of the drill to the other, bat not crowded, and thencoter
neatly. Beans may have similar drills made for them. but, instead of being sown like Peas, they are to be dropt three inches distant from one another in the row. space for Beans should be about half the size of the ome
alloted for Peas. As these are the priserpal crops which requir to ben avail oumetves of this opportunity to give a selection of the fruits which are considered iy Mr. Thampron of the

London Horticultural Society's Garden to be most desers ng on gear for the ponsideration of local horticultural societies whether it would not be worth while to offer then as prizes for cottagers, and to authorize their secretaries in the autumn to procure plants of the several kinds from
those nurseries where they are likely to be obtained true to their names.
Apples. - Where the soil and situation are favourabie for the Apple, and where the space will admit of only four trees, the best are, the Wormsley Migpin, King of the Kippins, Ribston Pippin, and Duch Mhe Alfreston and Old Sunpareil; where eight, the Wormsley Pippin, King of the Pippins, Ribston Pippin, Bedfordshire Foundling, Courtpendu plat, Alfreston, Brabant- Bellefleur, and
Scarlet Nonpareil: where ten, the same sorts, with the addition of the Downton Nonpareil, and Pennington's Seedling.
Pears.-Marje Louise, Beurré de Capiaumont, Beurré
Diel, Glout Morceau, Easter Beurré, and Beurré Rance t would be difweutt to select fewer sorts than these. The are all of first-rate excellence, and hardy enough for
standards. Several sorts may be grafted on the same tree there the space will not admit of one of each being planted. Plums.-The best are the Green-gage, Washington, Coe's Golden Drop, and Early Orleans.
Cherries.-May Duke, Late Duke, and Morello. These may either be trained against a cottage wail, or any out grown as standards. The Plums may also be treated in the same way.

Gooseberries.-Of this fruit the variety is almost endless, general cultivation: Red Champagne, and Red Warrington ellow Champagne, and Early Sulphur ; Pitmaston Green gage, Massey's Heart of Oak, and Early Green Hairy
Woodward's Whitesmith, Taylor's bright Venus, and Crystal.
urrants - Red Dutch, Knight's Sweet Red, White Dutch, and Black Naples. The latter is far superior to the common Black, which it is fast superseding everywhere. Raspberries.-
Yellow Antwerp.
Strawberries.-These are as variable as Gooseberries, but the following kinds are most to be depended on: Grove To those benevolent individuals, or Horticultural Societies, who may be desirous of aiding the industrious cottager, the preceding lists will be found very useful. They may have ever been made for the cottager.-M.E.H

## HOME CORRESPONDE NCE

Pears.-I quite agree with Mr. Rivers, that much useful knowledge with regard to fruit might be made general if every cultivator would publish the facts that experience
teaches him as to the peculiarities of different varieties; for it is only by such means that we can obtain a thorough knowledge of the fitness of particular sorts to particular
situations.
Soil and climate exercise greater infuence on the quality of fruit, pears especially, than is generally supposed; and many a good pear has got a bad character
through being placed in an unsuitable locality. I lived in the north of Yorkshire, at a place where there is a capital collection of fruits, including many of the moat With the same sorts in the more favourable climate of London, while others, which are of the highest merit in For Garden of the Horticultural Society, were not eatable. For example, the Passe Colmar and the White Doyenne
from standard trees, two of the most luscious pears we from standard trees, two of the most luscious pears we
possess, when favourably situated, never became melting neither did the Beurré de Capiaumunt. The Glout Mor ceau both from walls and standards was only second-rate the Bezi Vaet and the Duchesse d'Angouleme, from an east wall and in rather dry soil, were flavourless as a turnip the Crassane and the Colmar growing against a south wall, in a stronger soil, attained their usual excellence, and also
ripened about their usual time; the Beurre Diel from south and west, aspects, and in dry soil, I never found good; neither was the Swan's Egg from an east wall at trees on the strong clays of Herefordshire. The Beurré imperfect ; while the Easter Beurré from a wall generally bad, but it would not keep longer than January. This ditions appears to be less deteriorated by ungenial conis invaribity wost others; so far as my experience goes it is invariaity good, generally excellent. Standard trees of high musky flavour ; the Marie Lovise likquired its usual well on standards : but of all the pears we grew; the Jersey Louise Bonne was best suited to the soil and climate, for it never failed to produce handsome well-favoured in fact, to be faroured october and November. . constitution ascribed by Mr. Rivers to Hacon's Incomwhich pear trees grow and bear here is a puor sand, in fruit is not of the best quality. The Colmar from a south wall ripened at Christmas, and was solmeet and insipid; Perhaps sorts is hatever, this inferiority of two known good sof the not so much owing to the suil as to the situation uneven piece of ground is frequently overdrenched with uneven piece of ground, is frequently overdrenched with
water. The Duchesse d'Angoulême from a south brick fruit was quite worthless, but from open dwarf trees the

Duchesse is certainly not first-rate under any circumstance. The practice of thinning pears, mentioned by a corre spondent in your last number, cannot be too strongly re commended; 1 always do it when necessary, and find it
very beneficial both to fruit and trees.-J. B. Whiting Deepdene. Jun. 18

The Club in Brocoli.- In your second number, I per ceive a paragraph treating on this troublesome disease but as thess recommended in which are no doubt good, I beg to may not be within the reach of every gardene years, and which I have never found to fail,-which attainable by every man, in almost every situation, and against which no objections can be started, as the expense none, the troable not worth naming, and, if properiy autumn I never omit to ridge up the ground I intend for spring sowing, that it may have the benefit of the winter's rost to pulverise it ; when the time is arrived for sowing Iovel the ground roughly, then dig it over regularly, and
form it into beds; I then burn any prunings of shrubs and trees that may have been collected during winter and spread the ashea on the beds to the depth of two or three inches. Then with a potato fork I well mir the ashes with the earth to the depth of four or five inches, sow the seed in the usual broad way, rake all in smooth, and the operation is finished. I have only further to add, that the fresher the ashes are used the better, and those from green wood are preferable to those from dry.-Brassica.- [lt i wood ashes are what produce the effect. It is worth trying nitrate of soda, which would probably be equally efficacious.
Smut in Corn, and a Cure for it.-Take as much dung hill water as will make your quantity of corn swim; add ss much salt, with a pound of pulverised saltpetre, or in
lieu thereof two pounds of copperas, as will cause the water to bear an egg: steep your corn twelve hours ; after kimming of the light corn, strain it out and dry it with slaked lime or dry turf ashes. Be careful to sow it the and it be kept four or five days out of the ground, the cor peels and will not grow. As the pickie decreases, it may be augmented by adaing more water and salt, $\& c_{0}$, until all the seed intended to be sown is pickled.-G.S. $\boldsymbol{R}$.
Flowering Stove Plants.-I have often seen fine old stove plants thrown aside because they do not flower with gare, flowered a beautiful species of Lagerstroemia that gare, flowered a beautiful species of Lagerstroemia that
never blossomed at that place before, by shifting it, and shortening its shoots in the spring; keeping the temperaure of the stove low, and the plant dry daring the winter and increasing the water and gradually raising the tem species might be flowered in the same manner.-Richar

Poinsettia Pulcherrima.-As an additional means
improving the size of the flowers, I would recommend that a strong healthy plant, not less than two years old, should be kept to propagate from by eyes, as described by be kept in in thronicle ( $\mathrm{p}, 36$ ). This plant shoul growth by all safe stimuli, and have only two or three of its strongest shoots allowed to remain. When these shoots have nearly done growiag, cat off their tops, that the plant aray throw all the strength of its vital energies into those eyes destined for your next year's plants. When the young wood ripens, allow the plant to go gradually to rest, and when you cease watering it, place it in a dry par prine stove. should it ofier to vegetate too soon in it back. About the beginning or middle of April will be quite time enough to begin to propagate it. At that time take the most prominent eyes from the ripest portion of rill oranches, and treat them as recommendea Wery. Cut the old plant down to the former year' decayed shake off all the soil from its roots; cut away al in as small a pot as you can put its roots into, and place it in bottom heat; treat it with due care, as in the former season, and for the same purpose.-D. Beaton, Gardener o Sir W. Middleton, Bart.
Bones.-I am making a new vine border, to be 30 inches deep. The compost for it is so fresh and so full of vegetable matter, that I shall add no animal manure at present, but I
shall add a cercain portion of rough ground bones. Will any of your readers be kind enough to say the proportion of bones 1 ought to add-say to every ten square feet?

Musa Cavendishii.-Remore the suckers when they are about a foot long; if allowed to become much larger, they are more troublesome, and seldom make such perfect part vegetable soil or well-rotted manure from the hot beds, and a small portion of sand, and plunge them in the ark-bed. Shift as the plants require it; a box of three feet diameter is sufficient for a large fruiting plant. The sides of our boxes are made to be taken apart at shifting. We use plentry of drainage, and keep the roots moist. They
w ill be improved by jottom-heat, but that is not necessary after the suckers have become established in the pots. temperature of $55^{\circ}$ to $60^{\circ}$ will keep the planta crowe receiving any check during the dark winter honths, and from $60^{\circ}$ to $i 5^{\circ}$, or eren $90^{\circ}$, with sun-heat, xill not be too much in summer, although they wilt do very weil in lower temperature. We bave a plant now in ruit which was removed from the parent plant about eighteen months ference round the stera, with a clastas of 136 fraits, which
will all ripen about May. For the last two years our plants have matured their fruit about September, and they eight feet high valued as dessert fruit. In a sture abou Cavendishis hagh kept at the above temperature, Mus cess as the Queen Pine-apple stove here sisty feet long and fifty feet wide, and from A. S., Leigh Park, Hants accommodate Musas, \&ccgive the Chatsworth mode of cultivation next week. berts, 1 should addition to your excellent paper on fil suggested that the grafting the filbert on Miv. Rivers ha Spanish nut, which does not throw up suckere, will be found advantageous. I have received from him a few tree lane kind, which appear likely to answer his end. In plants have fernale flowers, and only a few male catkins are these sufficient to impregnate the whole hedge; or doe impregaation only take place when both are on the same trees? Would it be worth while to tie branches with mal catkins on the trees which have none, or to shate them over the whole hedge? $-\boldsymbol{K}^{\text {. }}$. [Take the catkin-covered branches of the wild hazel and shake them over the filber on a sunny day in spring, when the little pink females are just expanded.]
Chalk.-You tell us that carbonic acid gas is the great source of food to all plants. What, then, is the best sub stance to spread over poor chalky soil, so as to induce to give out the carbonic acid so gradually that it can be absorbed by the plants ?-H.S., Bedhampton.- Carboni acid can only be expelled from chalk by the agency of acids, or other substances, which cannot be introduced int always contains carbonic aciu, and supplies it far more always contains carbonic aciu, and supplies to plants than it would be possible to obtain it
regur from the decomposition of chalk in the snil.
Grapes.- A new rinery has been constructed at Elm"Theory of Horticulture." Grapes fit to send to the were cat in about seventeen months from the time the vines were planted. A few good bunches were remaining cellent plan in the morning to expel any domp that may be hangin heout the honse; then gire air, letting the be hangin night ; the art inside by such trentment becomes cooled down to nearly the same temperature as the open air, so that the chance of any candancation of vapour inside the hous is partly removed, the fruit kept more dry, and mouldiness in part prevented.--J. $H$
Pelargoniums in the opon Ground.-About the 20th of May we plant oat our geraniums (about 7000), which ar kept during the winter in suall pots, to economise room Drarf Scarlet, White and Pink-flowered Ivy-leaf, Cup-len Variegated, Pink Variegated, Red Variegated, Yatmann grandiftora, and the Gold-edged-leaf Geranium, each variety in distinct beds. When the plants are well esta blished in the open ground, we propagate by cuttings from them our supply for the following summer, for we fin young plants succeed better than plants taken up from the beds in the autumn. - [For the foregoing memoranduan we are indebted to Mr. Mangles, of Suaninghill, whose fiower garden, on the skirts of Windsor Forest, is one of the mos
beautiful near London, especially as regards the brimiant effect produced by the Pelargoniums in open beds.]
Propagation by Leaves.- It is well known, that meny plants may be propagated by their leaves. This, however, is
for the most part the result of art, and takes place only for the most part the result of art, and takes place only is one of the few plants which naturally increase in this way. Another instance has just come under my notice question had attracted my attention by the extraordinarg fragility of the leares which clothe its flower-stem. The slightest touch causes them to fall off. This extreme fragility led me to suspect that it was not without design, and laid some of the fallen leaves on the earth in the pot In the course of a few days, a bud made its appearance in mall hollow just above the base of ererg: and in les rous small roots. Every single leaf, some not half an inch in length, whether fallen into other pots or or to the shelf, had begun to grow. The plant is, I beliere, $E$.
lurida, lately described in the "Botanical Register," having pointed leares of a dark purplish-red colod. callus is formed at the base of the leaf, but the bud sprouts just as those on the margin of the leaf of bryopayllam: and it is evident that this
naturally increases.-J. $R$.
Buds formed by Leaves.-A curious instance of accidental formation of buds came under my observation last having been broken off before the sap had iescen ild to the bulb, upwards of forty small bulbs, sarying in size from a pea to a small pin's head, formed on the broken edge, and on the surface of the lower part uf the lear. Schieiden.] recommend this fact to the attention of Dr. Schieiden.] tenacious clay and dilute it with water till it comes to the consistency of paint. To every gallon of the clay pant
add half a pound of sulphur ; miz them well and paint add half a pound of sulphur; mix them well and paint ings, and the second must not be put on till the first is thoroughly dry. The best season is when the buds begin to swell. To prevent rain washing it off, it is adrantajeous to nail mats over the trees, taking them off when kill the scale; when the clay drops off, it will boing all

The scale with it. No mildew will make its appearance
till July, and but little then. compared with what there would have been without the application. If mildew does apply flur of sulphur through the rose of a large water-ing-pot. By dredging it on while the trees are wet, and leaving it on for a reek, you
wnl be conquered. John Kyle.
British Oaks.-In allusion to this subject allow me to give you some homely evidence as to the qualities of the in Hertfordshire, near Stansted. In conversing with some conntry builders as to their estimate of its qualities, ceived the following replies to questions put:- When y the country, do you give the same price for red oak as for the common or white oak? Oh no, we reckun that it
is not worth more than half the price; so that if we are giving 4s. per foot for the lattep, we should not give more than $2 s$. per foot for the former. Do you use the red oal for the same purposes as the white oak? No; we should reckon that we cheated our customers if we used it in any lated to revist the action of the atmosphere, and vellow deal will much outlast it. Another builder mentioned that to think afterwards that it might nef felling prove to be the real oak, and consequene sed oalk found heavy loss. The grain of the wood of the red oak found in the abnve penter, "it is like bad mahognny." I can rouch for the accuracy of the above, as from my earliest experience 1 have always seen the red oak avoided as totally unfit for The roofing of the Abbey Church at St . Alban's is said to be of Spanish chesnut, and I cannot help still suspecting add a few more worda on oaks the same.- Let me grafted on the common oak, grows nuch more rapidly than on its own roots, and soon forms a beautiful pyramidal tree. The Quercus alba, or white American oak, which will not flourish in cold clajey soils on its own roots, its fects its shoots so as soon to malke a handsome tree if grafted on the common oak. I have observed lately that an oak has been sold by some nursery men as Quercuis batlola which is apparently nothing but a variety of Qucreus
ilex, with rather long leaves. Now I have invariabls received from the South of France, and once from Algiers, acorns under this name, which have always produced Quercus gramuntia; but I have sometimes thought that the plants had larger leaves and a more robast habit than those 1 have seen growing under that name. Do you know Whether under the article Quercris hispanica, in the tical with the "New Lacombe Oakk" a strictly evergreen and pyramidal tree or with the "Lucombe Oak" which about this my favourite genus, which you will perhaps allow me to continue in your next number. $-R$.
thas by Jeel:-It would have been more satisfoctory if $R$ had given the result of his own experience. We well knows What the prejudices of both growers and buyers often are
upon such subjects. As to $W$ estminster-hall, I have at at this moment a specimen of its roof, of Hastings subto be conerat with the days of Henry I., all perfectly sound and beyond question belonging to the red oak: which is not at all like the wood of the sweet chesnut. It is, however, probable that Hertfordshire red oak may be of bad quality, just as is the case with the white oak in other parts can doubt that the quality of timber varies extremely according to the soil it grows on. At Petworth, in Susses, both the red and white onks are found wild. The former is almass accompanied by the fern, that is, it prefers the
lighter land; the latter is confined to the clay. The late lighter land; the latter is ennfined to the clay. The late oak was much the better timber of the two. Can jou not matter? - So far Jael. We answer the remainder of $R$.'s letrer our-elves. Q. ballosa and Q. gramumbia are identical : the Aljerine lles is $Q$. baliota: there are, however, varceries of the latter. which is always known from the varieties of Q. iless by the rounded end of ite leaves. Upon turning to Mr. Barker Webb's book, we find that he regards the subdeciduous Lucomberak as being Q. hispanica.] Amnerican Blight,-Five years ago I had under my care rican bug. At firs I attempted to chase them by means of strong sait watter: But althoush they were actually in-
erusted with salt, as if covered with ice, neither trees nor insects were affected. The following winter I ayringed the trees by meaus of an engine with water heated to the temperature of $200^{\circ}$, and with complete success. The insect course this operation the tres are in perfect health. Of course this operatio
my panses 12 the so the last two years I have propagated up he lower end of the catting ronad the soft by turning fore-fi. gar : the didatatage of which is, not only the greater focity of trikiag them, bat a greater power of as is frequertiy the *ase here, the laid joints beneath the surfice of the soil rise up in abundance is the spring; Whita those planted in the usual manner are frequently
destroyed here, unless under the protection of a frame, or some such shelter. Two jeare ago, Whilst plantion in the
apring, I remarked that all those pansies which the men the atumnal digging were not only fresh, hut were grow ing vigorously, though blanched through the abserice of light; and those of the numerous detached and areviousit rootless branches were growing and ruoting freely beneath the surface. This has taught tree that, instead of using flower have not alwars at hand. I can now protect them Howerely by buryiny them. I first trim and clean the and then cover the whole about half-an-inch deen sith good rich compost. In the spring the plants will be found perfectly protected, and every extremity springing up in
all directions ; and they will blossom beautifully soil be congenial to them. If laid in the soil, cuttings of the choicest pansies may be taken off at any season,- - even to procure them at that season. He may lay the whole cutting beneath the surface, either in coil or longitadinally, It will spring up at most of the joints, in due season vigorous and healthy. The soil used by the best, pansygrowers round Manchester is the partially decomposed turt well-decomposed cowdung, about one part of the latter to two of the former. I have only used a similar compost to that generally applied to the growth of early cucumbers season, in thumb-pots, with little else besides sand to grow in. I do not consider the largest blooms the greatest per fection in the pansy, but the beauty of its painting, and its well-proportioned and finely-spread petals.-John Mearns,
F. H.S. Zoological Gardens, Manchester.

Patent Nets for Fruit Trees. - (See Gard. Chron. No II., p. 21.)-As H.K., Cheshunt, is about to follow up some experiments relating to the protective power of the Patent Net against the effects of wind and frost, I shall of his communication which "refers to bis on that part protection from birds" that being his motive ner origin protection from birdss" that being his motive for originally
setting them up at all. Many gardeners in Germany have setting them up at all. Many gardeners in Germany have
nets for this purpose constructed in a peculiar manner, nets for this purpose constructed in a peculiar manner
which they dye blue, a colour of which, as they after long experience find, all small birds, but especially the spar rows, have a great dread; and that this idea is not to be father to son, but is, on the contrary, highly probable there is every reason to believe, inasmuch an it is a wellascertained fact that certain colours strongly affect the passions of divers animals in various ways. That blue should be a repellant is no more incredible than that red should be an attractive colour to birds, and that this latter is so every fowler can bear evidence. Perhaps few persons will be inclined to doubt the authority of Shakspeare on all matters connected with natural history. He alludes to the fascinating power of the doring (or daring) glass used with the day net, when he makes Surrey say, Cardinal's cap and the daring and dare us like larks" - the Cardinal's cap and the daring-glass being both red. The
twine for the blue nets is dyed before they are made, but twine for the bue nets is dyed before they are made, but
the patent net may be dyed ready formed by H.K. in his own copper if he be inclined to try this experiment too. I am not aware of the precise nature of this patent net whether it be a woollen and woven material, or made o twine by machinery with loose knots-expanding lnots, as the inventor terms them. I have found the same sentrine garden accidentally getting behind the common twine garden netting that $\boldsymbol{H . K}$. describes when under the sibly be a difference discovered if tested by the thermometer under similar circumstances. If $\boldsymbol{H}$. $\boldsymbol{K}$. or any of your readers would like to know more of the peculiar structure of the German borticultural nets, I shall have great pleasure in forwarding the models which I have netted of the two different kinds used, according to any address given in the Notice to Correspondents in the G.C. I have only to request that delay in forwarding the same may not be construed into neglect on my part, inasmuch as the models may be oot when application is made for them by your readers, and I must wait till they be returned. As the manufacture of the net might afford useful occupation to the cottager, in whose behalf the G.C. is ready to devote its columns, at seasons when, to say the best of it, he is gaining no money and sitting iale at deemed intrusire or trivial by those who, like myself, consider that there is no branch of industry which has not its place and its use in giving strength to the whole fabric of society; not that I would willingly entertain an orerweening notion of any one particular employment being of such importance ai to generate in the mind a disparaging view of all the rest.-Charles Bathurst, January 1841.
** The models weigh less than one ounce.
Brick Rubbish a Manure.-One of your correspondents (Not.Corr.s p. 25) iaquires how the soil is improved by burning, and if brick rubbish will not be of service. I am nut chemist enough to answer the first question authoritatuvely, -my idea has been that it merely acted mechanically ; but I think I can answer the latter question in a more satisfactory manner. I remarked that the arops very rank and lusuriant in two or three spots where brickkilhis had stood eight or nine years before, and attributing this to the burning, 1 determined to try brick rubbish in
my garden. Mr experiment was upon an old bed of strawberries (Keen's Spedlings), which had been planted five or six years, and were quite worn out. I had the ground between the rows dug up, and the spaces filled four or five inchea thick with brick rubbish (without a particle of min-
the plants were wioter. The luxuriance and ferti ity dition anywhere. The suli is a strong loam but not dece
dint and a strong wet clay srosent. Ifmery ain that the face

## Munuring Pinks.-A friend of mine manured some

 provement in the appearance of the bloom was astonishing In fact, he says it quite altered the charactec of the flower. Medical properlies of the Birch.minds us that the account given at page 37 of the diuretic tion:--A In some flaces these trees - flollowing çunta tion :- In some places these trees (the burli.e) ars
taped wine, which has been recommended for sone mad grave!
as is also the sap unfermented."- Millers Dit Domry. He says with great reason, that it is a pity modern writers surely there is methe food sense and information in his book than in many modern works upon gardening matters;

## FOREIGN CORRESPONDENCE.

Boston, Massachusetts, Sept. 14th, 1840.-Mr. Cad ness, a young man sent out from the Horticultoral Society Garden here. I am surn of ground has been chosen; it lies so close to the sea the half of it is covered with salt water during five months in the year, which destroys all the plants, though as yet there is ant a smal portion of the ground occupied. The bor excepting a few flower-beds scattered about as if by accident; the other part being a wilderness. It will take a long time and a great deal of money to make a good garden of it, as it lies too low. The proprietors cannot
build any houses in the garden, as the build any houses in the garden, as the land belougs to the the conservatory and the two small houses which they have are at some distance from the garden. The conservatory is raised upon the ruins of an old riding-senoon, and all the frost we have here. It has the appearance of a large ciome placed upon a platform about 20 feet from the grouad, and it is capable of holding 7000 or 8000 plants. It is, however, a bad house, and by no means well calculated to grox fereat kinds of camellias, almost all the old plants usualt grown in stoves in England, and the largest collection of bulbs I ever saw. Many of the bulbs, I am told, are rare and valuable ; but, like all the other plants, they are in a
deplorable condition. There appears to be little taste here for plants. and few seem to understand or appreciate, their value. Fruit-trees are generall! cultivated, and these only becarase they produce money more readily than flowers; even in the first-rate gardens of this State, the Fhe Botanic Garden irait is sent to market to be sold. of Mr. Grey, the president, and what is paid by visitors, which does not average 20 dollars per week. It is impossible to effect much with a garden 20 acres in extent, and containing a collection of about 8000 plants, with such imited means: a garden in this country causing more expense and trouble than in England. In winter the severity of the frost will not admit of a collection of her-
baceous plants or evergreens being kept without protection; and a great many cannot bear the heat and drought of our summers. The Dahtia, for example, never flowers here
till the end of August or the beginning of September, and till the end of August or the beginning of September, and it is with dificulty kept in a growing state daring the hou than any others, the heat here in summer being equal to that of the West Indies.
Paris, Jan. 21, 1841.-Among the opinions expressed Wy Professor Henslow in his lecture on the diseases of that I made last summer on the same subject. I speak of the transformation of Rust (Credo rubigo: into Pucinia Graminum. Not having seen the drawinys exhivited by Professor Henslow, it is hazarding a good deal to oppose his opinions; nevertheless my experiments were made on living specimens, and therefore it may be aseful to phace
mine by the side of his. I have followed with care, by the aid of an excellent microscope, the dere.op. these two plants, and I have always remarked tiat althoug they grew together, and were often mixed together oh sufwheat, yet they each had a different mode of growth, sum ficient to make them tiro different species. The rut leaves, the sheaths, and the chaff of wheat. seldoni on the stalk. It appears as little elong, ted puasules, clear orange coluar, and dispused in parallel lines contanand enclusirg a nuesiens equaly apparently withont pedivel. coloured granules. This kind of rust begins to shom self about the beginning of June and lasts till the end of July. About the beginning of July I have observed on the leaves, the steaths, and the stems, ansther kind of rush the scientific name of which I do not know. It is distinguished from the common rust by its pustules blobales when yowg are spherical, a little larger and deeper co-
loured than the common rust; but when they are fully
developed, they become elliptical, transparent, and enclose a spherical nucleus, composed, as in the other, of copedicel three or four times longer than the greater diameter of the globole. This rast lasts till the crop is cut. the two kinds of rust of which 1 have just spoken ; instead of forming just under the epidermis, it originates in the cavitie which separate the bundles of fibres of the tissue. A small shapeless mass is at first observed, only recognisable
by its darker green colour from the rest of the tissue, and this little mass grows till it has filled the cavity. There then appears on the exterual border of the mass some little tumours of a golden colour, which in passing through
the tissue that separates it from the epidermis, raise and ear it till they appear on the outside in the form of puccimia. I have often observed in the early part of dernis, which had not strength to force their way through it, remain there and appear like little black patches, which in consequence of the compression that they lave under prebend why Puccinia appears more frequently where rust has previously existed, or where it stili exists, the degree for the coming out of the Puccinia. We also understand why the rust with elongated glubules, from its later growth, should frequentiy be found mixed with Puccinia and this accounts for I rofessor Henslow's opinion of a
transformation that does not in reality exist. - L. Vilmorin. Leyder, Dec. 3, 1841)-Great exertions are making here by the Government to secure the safe transmission of live plants from the Durch Colonies. Dr. Blame, who is charged with this duty, has obtained specimens of Ward's
cases from your Horticultural Society, and is employed in drawing up instructions for the Dutch governors and officers. The second volame of his splendid Rumpnin is lume are already engraved; among them will be found a considerable part of the Orchidaceous plants of the Mouccas and New Guinea
Newburgh, near New York, Nov. 28th.-The Americans are much improving in matters of taste; and I hope the vignettes sent will give you some idea of our villa re-
sidences. Mr. Downing, of the Newbargh Botanic Garden and Nurseries, near New York, has now in the press a volume on "American Landscape Gardening and Rural Architecture," illustrated with engravings. I think it will but " log cabins" in this country

## MISCELLANEOUS.

Growing Exogenous Plants on Blocks of Wood, in the same manner as many orchidaceous plants are cultirated, has been practised with considerable success by Mr. Halliday, of Elmham-hall. Epiphyllwow trwneutum, in particular, grows as luxuriantly, and blooms as profus
as it does when treated in the usual manner in pots. Epiphyllum truncatum violaceum.-This is a new and superior variety of E. iruncatum. In growth and habit it
resembles that species; its flowers are nearly of the same size and shape, but have that inimitable glow of purple and rose which characterises the inner petals of Cereui the other species of the genus, and will, no doubt, become a great favourite if worked on stocks of Pereskia ceuleato, in the asual manner. It was originally sent to Mr. R Harrison, of Liverpool, by Mr. Moke, of Tejuco, a place in the gardens of George Knott, Bsq., of East Barnet, under the care of Mr. Judd.
Juniperus commwnis var. fastigiata.-This singular variety of the common Juniper is found near the tile-kilns of Roques, in the jurisdiction of Languais. There are eight or ten enormons Junipers, the largest of which are their tro to 14 feet in height, and judging from the size are growing with a be more than a century old. The side of a hill, the greater part being of the fastigiate rariety. In its manner of growth this Juniper exactly rathes the pyramida cepress, escepting that the con is rather more swelled and fusifor. Io not think tha any pruning would force a young common Juniper to become of this form, and I am sure that the youngest of
these fastigiate Junipers have never had anv care bestowed on them during the 15 years that I was in the country. We have tried to transplant them, but without saccess. I have also examined them to see if thes differed from the species excepting in their manner of growth, but they do not; and I have no hesitation in saying that this little family of pyramidal Junipers is one of the botanical cariosities of the department.-Des Moulins, Catalogue des Plantes de la Dordogne.
kinds of ants. most Camphor. - In Arabia there are many kinds of ants; most of them are as harmless as our own,
excepting two species, one of which becomes troublesome by the voracity with which it attacks victuals, unlese driven away by the oduur of camphor. The bite of the other is little less painful than that of the seorpion, or less fatal in its effects. - Niebuhr's Travels.
Nerw Salvia.-A beautiful new species of this genas from Mexico, the S. tubifera, with graceful drooping racemes of rich purple alender flowers, has lately been flowering in a greenhouse in the garden of the Horticultural society. Although not the most britiant, it is 2 t most elegant of the genus yet introduced.
yroposes to render wood more durable pres. Boacheris tieity, prevent it from warping by drgness or humidity diminish its combustibility, augment its tenacity and lasting perfumes. He has done this at little cost, by the aid of cheap and simple materinls; which is enough to cal attention to this important procens. Dr. Boucherie uses
no mechanical, complicated, or costly means to force the but simply or coloaring substances into an entire tree table itself, which is sufficient to earry all the requisite ingredients, provided they are properly concentrated. from the base of the trank to the leaves. If a tree is cut off a the liquid the trunk, and plunged into a ressel contaming will ascend in a fem days to the topmost leaves ; all the will ascend in a fem days to the topmost leaves; all the
tissne will be filled with it, excepting the beast-rood, which from its hardnees and age almaga the heast-mood, branches and leaves; a tuft left at sheuld retam dll its excite absorption. A tree need not be uprigit. which would sometimes render the operation impractucabie; it
maybefelled afterall its aseless branches have beentaken and then its base being put into the liquid destined to be absorbed, alt its parts will be penetrated. It is not neces the foot of thee should be felled; for if a bole is made a is sufficient to put the part that has been cut into con tact with the liquid, for a rapid and complete absorption up in a few days, without difficulty, are eridently verv different from the methods formerly resorted to. When pieces of cut wood have been operated upon by others, the liquid has not penetrated them except by the powerful machines, or by the prolonged action of the hiquid in which they were immersed. The new'and ingenious
process of Dr. Boucherie is to use an immense natural force, which conducts without injury all kinds of soluble substances into the most delicate vegetable tissue. Dr Boucherie was not content with trying pyrolignite of iron and many other cheap materials, bat he used salt water from salt marshes, whick cost him nothing, and had the desired effect. Wood prepared with these saline solutions preserves its fiexibility after being exposed to the air for cracking and if exposed to the air it will is difficalt to burn and will not spread fire
ties render it extremely useful for ships, as well for houses and machines. By similar means wood is coloured in such varions shades, as renders the most common kinds fit for the cabinet-maker; the following substances are used in colouring :-pyrolignite of iron gives a brownish tint which harmonises very well with the parts that the acid does not penetrate : if some matter containing tannin be absorbed after the pyrolignite, the wood aequires a blue black or a grey tint. If pyrolignite of iron is absorbed and then prussiate of potash, a Prussian blue is produced. If acetate of lead and chromate of potash are introduced successively, a chrome yellow is the result. If pyrolignite of iron, prussiate, acetate of lead, and chromation are absorbed, the most varied shades of blue, green, yellow, and brown are produced.- Abridged from the Comptes
Roadmaking. -In some towns in Belgium, Campeachy and Pernambuco woods are used for roads after the dye is extracted and they are reduced to small pieces. They are
admirably adapted to garden walks, giving them the softness, elanticity, and warmeth of a carpet.

## GARDEN MEMORANDA.

Dickson's, Clapham.-In the greenhonse there is a large
quantity of Acucis armata, which will shortly be in flower, with
 remarkably well, and with much le.s trouble and expense than
 built along the centre, over which is laid a quantity of old tumher,
and upon this a layer of coai ashes, ahour 3 or 4 inches thieks and upen this a layer of coal ashes, an

## SUMMARY OF CUNTENTS

Oor Home Correspondence has now herome sn extensive and important, that, after occupying wath it a very large propertion of the space destined for other subjects, we still have a great number of valuable communications which we are compelled to defer till another week. U'nder these circumstances, we have but little npportunity of commenting upon that which we do pubiish. We must, however, point out among the subjects of greatest interes a very short but excellent article upon the true floral character of the Pansy; and anather, by Mr. Mearns, upon the cultivation of this pet flower. There is also a continuation of the discussion concerning British Oak; an account of an ingenious mode of heating garden structures by means of water in open troughs; arr article apon the cul tivation of the beautiful Japan Lilies, and an account of what is seldom beard of, a new culinary vegetable which deserves attention. Reriews we have been compelled to amit. Notices to Correspondents are growing into an important feature, and will be found to involve many valuable practical points.
CALENDAR OF OPE゙RATION゙i for the ensuing Week. IT should be borne in mind that many of the sowings and ment uf the eardener, to tiscrimmate whether it would be expedient for him to perform them at the exact time they are recom-
mended, of even at all. Many of them will be of great impurt. ance to mome and to others matters of indifference; as it does occur that the times of sowing for regetables and towers, and of commencing to ferce, will rary materially in adjoining gardens, periectly cotrect. as resaris at ainugg the desired enst, nomely

NEWS OF THE WEEK.
Her Majesty's Speech at the opening of Parliament, and the debates on the Address in answer to it, have been the paramount object of home interest during the week. The assurances it contains that a general desire prevails among the European Powers for the maintenance of peace,-the expectations expressed that the Eastern question and the disputes with China will be amicably settled, -and the anoouncement of the acceptance by Spain and Portugal of the mediation of this country, are the chief points of the Speech, so far as relates to the Foreign policy of Government; while the principal topics of domestic interest adverted to, are the necessity of increased expenditare cansed by recent affairs in Syris and in China; the revision of the laws; and the further extension of legislative measures respecting the poor. In the debate which followed, the desire for peace manifested in the Speech from the Throne was warmly responded to by the leading Members of both Houses. In the House of Peers the regret expressed by Lord Brougham at the interruption of the French alliance, drew from the Duke of Wellington a speech on the Foreign Policy of this country which is expected to lead to the happiest results in preserving peace : his Grace concurred in the measures of Minister in regard to the Eastern question, and pointed out the necessity for the co-operation of France in all question affecting the general interests of Europe ; at the same time stating his conviction that no insult had been offered or intended to France in the execution of the Treaty of July by the Allied Powers. In the Commons, Sir R. Peel expressed opinions in a great measure coinciding in these views, and stated his belief that no measure of European importance can be considered complete without the sanction of France, to whose alliance he attached very high importance. Lord Palmerston and Lord John Russell, on the part of the Ministry, stated their entire concurrence in this feeling, and said that measures had been taken during the recess, which would, it was hoped, restore the good understanding with that power. The subsequent debates have not been particularly interesting; the principal business transacted has been the introduction of bills for the continuance of the Poor Law Commission, and for a revision of the laws. From abroad, the intelligence received has not been o great importance, and a delay in the arrival of the Levant mails leaves us without advices from Egypt and Syria. In France the attention of the Chambers has been wholly bsorbed by the Fortification Question ; the debates have run to unusual length, and have been characterised by reat energy on the part of the speakers. Marshal Sonit in stating his military opinions on the relative value of the schemes propused for adoption, disapproved of part of the Govermment plan, and illustrated his arguments by the example of the Dake of Wellington, to whose merits he paid honourable testimony. It appears to be generally believed that some kind of fortifications, probably a serie f detached forts only, will be the result of this lengthened discussion.-The news from Switzerland is satisfactory and tranquillity, it is huped, is permanently restored.-It said that Portugal will accede to the demands of Spain and the peace of the Peninsula will thus be undisturbed.

## -forcign.

France.-The fortification question appears entirely apon them have sasumed additional importance debates sequence of the high character and influence of the speakers; but it seems doubrel hon will be sectled, as every political party is still divided upon it. s.lion, as it proved that his own private opision on the plan of the works differed from the riews of his colleagues; the Marshal condemned the enceinte contimute, and ad vocated an entrenched camp and detached forts as a more desirable system ; but stih, he would support the measure before the Chamber rather than bave no defecees at all. He considered that the contipaed wall eould only inconvenience the citizens; that woris consi ructed on certain ganised army in Europe; that the most advisable defence capital itself, and that the danger increased as the defence became closer to it, sincusthe difficulty of procuring provisions would become so great that no order could be pre served in amutiny produced by famine. The Marshal noticed the twe zathorities quoted by M. Thiero-Vauban and Napoleon. In respect to the first, the whole system of military science had changed since his time, and in regard to the latter, the Emperor had repeatedy said sotting he could not cortress se long as he had 50,000 men manceurre with. Napoleon had never put in practice the opinion ascribed to him at Saint Helena of fortifying Paris; and his tactics in the campaigns in Italy as well as in Champagne at a later period, proved that his plan of action was to operate unceasingly against the enemy. The Mar shal referred, as an example, to the Duke of Wellingtun ${ }^{\circ}$ proceedings in Portugal. "I quote this remarkable in sersary, in whose praise I will raise my voice whenever the occasion shall present itself." He then referred to the lines of Torres $\nabla$ edras formed by the Duke of Wellington, instead of resorting to Lisbon itself, as a mode of defence. these lines were invincible." The Marshal referred also to the system of defence he had adopted at Toulon, in 1814, where there were ramparts, but with 21,000 men by the chain of hills half a league from Toulonse, where he tbrew up bastily some works, and obliged the enemy to make a very long movement, and managed to atruggle in despite of the disproportion of forces. The papers state, in reference to this expression of opinion, that Marsha Soult's military convictioas overcmae his mixisterial feelings, and that the fate of the measure was consequently long and eloquent speech, to which all parties assign the merit of great ability; he described the measure as false in tactics, becamse Paris onght not to be isolated from country to its capita, and as injarious to the principle of honest revolution; and he expressed his conviction that the country mould never sanction ite adoptrun. A tinued with great vigour by both parties, but the result was becoming douvetful, when the speech of M. Guizot in favour of the measure, which he described as an act o moral energy and political power, gave encouragement to its adrocates; aud after a long debate it was resolved that been beard as the Reporter of the Bill. and the discussion of the separate articles commenced on Tuesday. Public opinion was still divided on the probable tate of the measure; but that some species of fortification-the detached
forts at least-would be roted was deemed linely, the speech of M. Guizot having, it was said, made many converts to that opinion
Forged Letters of the King.-A series of letters has been pubisisied in the papers. purporting to be written by Louis Philippe to contidentral friends. The opinions therein expressed were at once regarded by the hepublican party as manifesting treason towards France, in and their Joarnals indulged is severe attaeks upon hia Majerty, on acconat of those intentions. It now appenar that the letters have been forged for party purponet, and
prosecutions have been commenced against all the papers which have poblished them, both for the crime of forger and for the offence against the King's person. Domicinary
visits have also been paid to the houses of several leading members of the Rojalist party; and the result of the investigation is looked forward to with great interest
The passages in these letters which have been regarded as charges against his Majesty state, that he pledged him self to the British Government to abandon Algeria; that revolution of Puland in $1831:$ and that he was anzious for the creation of fortifications round Paris, in order to be able to check or put down any attempt at insurrection of the press.
Darmes, the Regicide.-It appears that importan revelations have been made by the prisoner, and that has denounced as conspirators against the King. A long ist of persons implicated with him, and other papers on
importance, have been found: and the investigations, Which were thought to he neariy complet
pected to last for several months longer.
Spars and Portugal.-By the Royal Tar, steamer arrived from Lishon with the mails, it appears the question in dispute has been amicably terminated by the Portuguese Cortesalluwing the Spanish claims on the Douro Navigation. hose mated in, it said, do no original treaty. The pacific policy adopted by the Cortes has restored confidence to the mercantile interests ia both countries, and the result is hailed with satisfaction by the pablic at large.-Letters from Perpignan announce that he Spanish refugees on their return from Prance had bee well received by the authorities, and that 5000 had already entered Catalonia. The Madrid Government Journals state, that the new project of the Minister of Finance,
conformable to the decrees of the 4th Nov and the 9th Dec. last, and to the other measures having for their th ject to restore public credit and ameliorate the fate of the creditors of the state, has not yet been submitted to the deliberation of the Regency, but that it will be laid before it very shortly.-A private letter from Bilboa, of the 20th, announces that the meeting of the General Junta of Biscayan Deputies, held in that city, had passed off quietly The resolations of the Ayuntamiento and Commercial Chamber, in favour of the maintenance of the fueros, were commanicated to the Assembly, and obtained its sanction but it was nerred to leave the adoption of definitive mea ures to the conference about to be held by the delegate of Biscay, Guipuzeoa, and Alava. The political corregido was present at the deliberations, and is said to have reto support their fueros.
Holland.-A commercial treaty has been concluded with France on terms of matual advantage. The paper are filled with details of the recent inundations. The great height of the Rhine bas caused considerable injury, and the danger is augmented by the masses of floating ice which still corered the waters at the date of the last advices
Prussin.-The Chureh Question.-It is stated that the King is about to relieve Catholic bishops in his dominions from the necessity of forwarding and receiving thei correspondence with the Pope, through the government offices at Berlin. In future, the bishops are to communicate in the most unrestrained manner with the head of thei church. This determination is said to have produced considerable sensation in Germany, where even Catholic governments have hitherto withheld from ecclesiastica authorities the concession now spontaneouly mado by a Protestant monarch.- The Murder of the Bishop of Ermeland. - Intelligence has been received that the tailo Kuhnapfel, who was stated in our last to be in custody, as confessed bimself guilty of the murder of the Bisho and his housekeeper. He says that he armed himself with hatehet, and knocked at the door of the palace,- Which the housekeeper opened. He compelled her by violen arriving there, she was about to go out, whereon he gave arriving there, she was about to go out, whereon he gave her several blows on her arm with che hatchet. served him so long; nevertheless he stretched her on the ground by a violent blow on her head. The bishop de clared himself ready to give up whatever he had, bot the prisoner bound him to secreey by an oath, and then compelled him to go into the adjoining room, where he delivered up his anmif-box, watch, purse, and keys. On returning to the first room, the prisoner perceived signs of life about the housekeeper, and inflicted another blow upon her face At this moment the bishop dropped the candlestick, and tooping to lift it up, exclaimed, "Oh my God!"
murderes fancying at first that the old man was crving for help, felled him to the ground by a blow on the back of he head. Before making the above confession, the murderer had made an ineffectual attempt to strangle him self with his chain. The Bishop's funeral took place on Protestans Universilies.- Much satisfaction is rank.the decision of the Emperor of Austria to withdraw the interdict long placed on the U'niversities of Bertin, Erlangen, Leipzig, \&ce., by which the Protestants of Hungary and Transylvania will in foture be allowed to parsue thei of Sclences has been commissioned by the king to prepare new edition of the works of Frederic the Great. The commission appointed for this purpose is composed of Alerander Von Humboldt, and Professors Ranmere, Rouke and Boelh.

Breaners.-The ambassador at Frankfort inteaded to
repurs to thie cits on the 19th, bat waw umable to puls tid

Rhine not be accomplished without great difficulty. The Maine噱 Aowed, as well as part of the quays of the city, and the
Senne has again overflowed its banks. The rimds tren become nearly impassable in consequence of the snum and tham.

Switzerland.-By intelligence received from Zurich, the property of the State, and that the have been declared sale are intended to be applied to the establisbment of churches, schools, and charitable institations, after the
sum of $1,000,000 \mathrm{fr}$. has been appropriated to th C schools and the poor of that persuasion
pal Nuncio and the French and Anantrian Ambassadors have protested ayainst this measure; and
Convocation of an Extraordinary Die: is expected to tak place upon the subject. The tranquiltity of the Canton has not been disturbed since the date of our last advices. construction of the railroad from St. Lovis to Basle should be commenced at once. This completes the Alsacian line
and carries it yuite into Basle, affurding thus the firinstance of a cuatinuous line crossing the froutiers of two distinct nations. The (council has aiso granted a subsidy
of 330,000 fr. towards the undertahing, with the gratuitong supply of water for the machines. Messrs. Stékelin and
Huber, with the head of a banking-husse at proceeded to Paris to negotiate the cession of their privi lege as contractors to the company which possesses the
Hamburgis.-A meeting of the Temperance Societ lately formed here, which was to take place on the 18th moderation. The place chosen for the meeting was the old schoolroom, the way to which passed by a pablic house, whose owner illuminated his windows, and, by openhouse, and in the open space before the schoolhouse. dense crowd was collected, whose turbulent conduct guf ficiently manifested the effects of the invitation of the tavern-keeper. The members of the Society and the friend of the plan had great difficulty in malking their way through the crowd. At the time fixed for the meeting a num ber of persons found their way to it who had no inten scarcely had the secretary begun to read the rules of the society when several persons, by violent clamour and other manifestations, made it impossible to proceed. This gave the signal to the crowd collected outside for acts of greate violence; the doors were forced, and the members of the
society had scarcely time to retreat by the hack door whem the mob penetrated to the apartment in which the meeting took place, broke the windows, tables, and chairs, which damage. They remained mastels of the field tull the civic guard, which was called in, cleared the builing of the rioters, and arrested sever
Twap -A severe tempest visited the kingdom of the Two sicilies on the might of the fth inst. Three ships, this which belonged to the Ryal French this port, but the crews were saved. A French brig was
also lost in attempting to get into the harbour. The sea broke over the Mole, and rendered it impossible to afford assiatance to several vessels which were damaged at thei moorings. From Cosenza, in Calabria, we learn that an
earthquake, lasting 15 seconds, occurred on the 27 th ult, and extended as far south as Reggio, where many building were thrown down. Vesuvius was covered with snow and te winter was generalily severe.- The King is said Christin of Spain, and preparations were making for her reception India.- The Calcutta Papers give some account of Government, it seems, is aboot to establish a steam fotill and monthly packets on that river, which will ascend on the Gurrah or antern hranch $2 s$ far 28 Ferozepore, lyin about sixtr miles south of Lahore, and 7,200 miles from the sea. It is expected that the unfriendly spirit of the people on the lower pait of the Indus will present an considerable trade from being carried ob will be open to us, with its three millions of inhabitants, and the trans portation of goods to Affghanistan will be greatly facili tated. The channel of the Indus will then be the bes route to Bukhara, and ultimately will lay open countrie possessing six or seven millions of inhabitants to our com mercial industry.
South Aumbica.-Letters from Valparaiso describe the arrival of the English steamers Peru and Chiti, the frst which have ever braved the seas of Cape Hor Their appearance created great astonishment amongin by a general holiday. The Governor had made prepasahior Mor the's receptioa with the usual maral honours her Majesty's ship President manned her yards as the steamers passed, and the Chilian flagship gave them in harbour. All the shops were elveded, publuc offices she ap , and business entirely suspended in honour of thi been examined and found suitoble in every respect fo steam-navigation.

Syria and EgYpt.-H. M. packet Hydra arrived o the 2tth at Marseilles, with a despatch for Government but as the purport of it has not transpired, some uscer mairal Walker is supposel to have arrived at Alexandria on the 2ad or 3rd, with the decision of the Parte as the Pucha'" nubmimion.

## 誛arlíament

OPENING OF THE SESSION. House of Lords, and opened Parliament in person, with the following speech from the throne :
 in the Levant had long beena caise of Uian a view to avert the
of danger the generat traqquility. Mith
evils which a continuance of hat state of things was calcalated

 to be able to inform you that the measures which have been
adopted in executinn of these engagements have been attended
隹 Tracting varties hat in vew are on the ever, $f$ heing completely
accom listed. In the course of these transactions my Naval
 deemed it "ecessary to send to the coast of China a Naval and
deentileny
Miltare, to demand reparation and redress for injuries in.
dicted upon some of my subjects by the officers of the Emperor of Aicted upon some of my subjects by the officers of the Emperor of
China, and for indignities offered to an azent of my Cruwn I at
the same time appointed Plenipotentiaries to treat upon these

 arrangement. Serious differences bave arisen between Spain Powers, in 1833 , for regulating the navigation of the Denro. But
both parties have accepted my mediation, and 1 hope to be ahle to
 Trade, which I have directed to be laid before you.
identlemen of the House of Commons,-1 have directed the estimates for the year to be laid before you. He wever sensible of
the importance of adhering to the princtples of economy, 1 feel it the exige encies of the pur lic ser vice. without delay which will have for therr
and effectual adminect the more speedy
and this snoject is sufficient to ensure for it your early and most seri-
ous consideration. The powers of the Comm:ssinners appointed under the act fur the amendment of the laws relating to the poor,
expire at the termination of the !resent year. I feel assured that you w.ll earne tiy disect your alt ntion to enactments which so
deepls cuctr the interests of the community. It is always my Parliament. I place my reliance upon your wisdom, loyalty, all your councils may be so directed as to advance the great inclasses of my subjects." to Buckingham Palace, with the same forms that had marked her progress to Parliament, and both Houses adjourned till five o'clock.
HOUSE OF LOMDS.
Tuesalay. -On the re-assembling of the House, the Lorm CravoEarl of Ducig proposed, and Lnrd LURGAN seconded, the birth of the Privesess Royal congratuiations of the Hoase on the The Earl of Ductre said it appeared to hina to have always been
the custom in that House, in moving the eddress in answer to
the speech from the tirone, to fix upin the most inexperier ced person for that purpse a a laugh). His nobie friend itivecont
Heibourne; had not on the present occasion proved himself a Meibourne, had not on the present occasion proved himself a
very strenuous retrmer, and he hoped that their ordshiys would
not urove sucl unusnal reformers as not to concede to him that not prove such ulusual reformers as not to concede to him that
courteous forbearance whieh had hitherto been connected to per-
sons similarly situated (hear, hear). It was mot gratif ying to
 of their desire to ruaintain relations of peace and amity with
this country; and it was still more gratifying to him to find the first wist, and object of Her Majestry was to maiotain that peace which was so esseutial to the welfare and the happiness of
the country, cependur us this couutry did, from its position an:ong the nations oi Europe, upon ber manufacturts and commerce. But, dear and necessary as peace might be, he was the
lat person to wis. that England should lose that position on the
Continent which enabled her to interfere in cases where interfe. reuce was necessary, and more especially in a case that had
arisen in the East, where our interference had been occasioned arisen in the East, where our interference had been occasioned
ly our desire and hope to maintain peace. That blessing, he believed, would be speedily realised to us; ard he must say that, in his opinion, they would owe that haypy result to the heads
that had plant.ed and the arms th it had effected the capture of
 Chinese, he hiped that the occupation of the i.lland of Chusan pooid act as a spur upon their diplomacy. With retard to those
point of legislation to which their burdships' attention would be
drawn it was nseles tor Aramn, it was nseless for him to take up their lordships' time in making remarks, as in those instances referred to the principles reat and mighty changes, haring, as he thulught, a most bene. ncial bearing upon the future prospects of this country. In
India he. hadd every reason to hope for tranquility and for an ppportuity of cultivating in that country more extensively the
arts of peace. Canad extibited 110 or mptoms of political disturb. seference to the new constimation for the two provinces With regard to domestic politics, the country was in the enjos mient o improvernent. and vur manulactures had recovered from that deresumed that state of limited and uncertain prosperit. bey oud Which they could not go so long as there existed restrictice duties
of such a nature as rendered it impossible for any foresight and caution to present the recurrence of famine prices and retronpective glaine a: tive state of deranzenhent in which our turued since the aummer of 1839 . The first caure eas the contraction of the currency, there was, secondily, the great discredit
into which the United States of America had failen; there was also the stoppape of our trade with China; there was the bockthe uncertain stane of our comeercial retainone with Frunce.

was every reason to hope that the usuall/ great commeree of this
country would produce balances of pay ment so far in her fa-
vour that the bullion would again return to the coffers of the
Bank of England, and the monea marke of Lund Your that the bullion would again return to the coffers of the
Bank of England, and the money market of Lundon be relieved
from the pressure that now weighed it down, and from the high rate of interest that had evisted for some time. This would hea
great relief to the trade of the country, and woult elahle the hauks
to afford that accommodation which had so important a bearing on the national inductry. Having these prospects of the improvement of trade, he had al-o the satisfaction of helie ing that manv of
those cause, that had hitherto pressed upon our commmercial interest, were either removed or were in the course of removal. The
settlement of the Eastern question had again opened the trade of

by the part she had taken, produce an evtended commercial inter-
corre in those parts. He cessation \&f the bleckater itrane
of the Sourh Amrican ports would also preduce an iucreased
commercial intercourse with those parts, and the wise recoonit
tion of the independence of the states of Texas had opined a large field to the surit and enter prise of cur merchants and manutac Furers. From the last account that had been received frnm the
Eastern seas there was erery reason to heliere that oar differences with China would be adjnsted and he dide not and believed that provice indemnity for the past and security for the future and at the same time extend our commercial relations with that large
emire. Among our prospects of ccmmerce no spot was nonre
bright bright, or caused greater congrafolation, than the evi hence that
had lately been recelved of the retordion of credit with the
U extended intercoulse that had taven place between this country
and the Unite.l States, it was impossible but that the deranze ment of internal credit for the last four years shald have been
heavily and grievously felt by our merchants and manufacturers. to hope that the firmer extended intercourse would he graduin re-umed, to the great adrantage of bothl countries. It would be
harrlly doing justice to the people of the (nited States if missed that opportunity of calling their Iordships' notice to the
bonour and good faith of the people of that country, in punctaally fulaling their engagements with their rica, and indeed not a bad one for some of the older states Europe. It was gratify ing to him to find that those prospects of
extended commercial relations were not lik-1y to be nisturbed hy any interruption of the general peace of the world. Havin made these few remarks, be could not brit just draw their brd
shipe policy of her Majestys Ministers. It mast be conceded that they had at this mument domestic quiet; and, as regarded fur foreign
relations, they had erery prospect of pcace and extended cum. relations, they had erery prospect of peace and extended com.
merce. He had heard it said that thewe happy results were the consequences of gnod fortane. He, however. entertained a very diferent opinion. He attributed the one to the firm administra. tended comexisting laws, and the prospects of peace and of exthe straightforward and manly course taken by the noble lord other paint to which he must call their lurdshivs' attentiou It was, indeed, a subject of thanks, but of thanks to a higher power than any earthly power -he alludid to the safe delivery of
her Majesty, and to the birth of an lieiress to the throme hear hear]. There was no reflecting person either in that House, or return thanks to the thi every hope that the inheritance of the throne of these realms would descend in the direct line [hear. hear]. He felt so certain
that their lordships would concur in that opinion, that he was sure that they would cordially adopt that part of the Address
to which le had last alluded, and which Address he moved be

Lord Lergan said, that in rising to second the Addrés, he whe conscious of so many deficiencies in endearouring to disecharge his duty, that he must, at the very outset, express a humble
hope that he might experience all the indalenee which was
usually accorded on such occasions. He fett, he confessed, inadequate to do fustice to the subjects embraced by the speech
but if impartant interests which were brought before them by Her
ind Majesty's gracious, communication, he stm took colurage to pro
ceed with the task, because he felt that there was a atrength in the cac hich had been put by the noble mover of the Adireem Address was an impaired hy the weakness or hut it was also the expression of the warm and natural sentiments of their lordships. There were many paragraphs in it which appealed deeply to the
feeiings of that House: and it would obtain, he feit contident teings lordships unanimous approbation. With reference to a subject which was nearest to their lordships ${ }^{\circ}$ minds and hearts,
and which was therefore most ready to spring to their lips, he must say that it whas not with such fetings as were orvinarily exaph in the Addres pongratolating the country on the bit a Princess Royal. He then alluded to the operations on the coast of Syria, and defended the Ministry from the imputation England throu hor territerial aggrandisement escribed as patient forbearing, and pacific.
Lord Broughas. in reference to that passage of the Speeci factory as that of la-t ear. He feared that a material chauge had taken place in our relatiows with France, and that an alliance danger, danger. He dissented frim tite opinion that England. from
insular situation, could remain completely peutral on all tions ; but there was a great difference between never interfering and perpetaal meddling; and it was this constant interterence that he condemned. The object for which the risk of war was incurred was the independence of the Tarkish eupires, but that
 means employed to hudd it tugether were wholly insufficient. To all these measures Russia hatd been nit only a consenting bat the most prominent party, and he could not but belice that her zea itjurious to her intrents. The alliance berween Eneland and
France gave tre only compent seurity fir designs of Russia : and the cessation of that alliaice would be an evilwhich no success in arms, however oriula
pensitei He truted that neither in France nor in
would it he thoughit that the peope folt indiffere
war. On the connerary, but one felling prev iled among the murtie and the classes upon the subject: and it wav ony the of peace which bad preventet a general demonstration of its France to war, the natural good sense of the Frencti people, their high spirit. and conseiousuess of power, met as in tad beea with

cured, and the sufferer, accompanied by his master and amputation of the arm abe North London Hospital, wher Mr. Liston. During the journey the untinturmed by suffered excrucidting tortlire, and had to travel upwards of ger.-An accident occurred on Wednesiar erable dan bridge to the Planet Gravesend stedm-packet, with 12 passengers on board, which excited great aiarm for thetr atety. It appears that on $g$ ing alungside the wharf, not be made fast; and the tide, which nas running up rer rapidy, carried the Planet towards the bridge. She the let go her anchor; but it dragged, and directly afterwards
the steamer came against the bridge with a tremendows the steamer came against the bridge with a tremendous
crash, and got athwart the pier. The tide swung the vessel round under the arch, her funnel caught swe the top of it, and fell over the starboard side of the veamel into of river, doing considerable damage. At this moment the away. The passengers escaped into the boats alongside, serious injury. The Planet remained fired under the bridge some time, and after landing the remminder of the passengers proceeded to Deptford for repairs
Baker, of which seven were cases of sudden death by Mr. first was on Mr. S. Taylor, surgeon, at Kensinta. The expired suddenly in his bed; the second was on Michet Olive, a gardener at Tottenham, imprisoned in the Honse of Correction for unlawfully pawning a silver spoon; the loset; the fourth on Mrs Mor aren on the foor of his the East India House, found dead in her bed; the fifth on a woman whodied at the washing-tub: the sixth on the in-
fant daughter of Mr. Johnson, surgeon, who was found dead in the nurse's arms; and the seventh on a young woman found dead in her bed about ten weeks after her
delivery, Verdict in each case, "Died from natural causes."-On Monday the same coroner held four inquests at the London Hospital, two being on aged women, one of whom died from the effects of a compound fracture of the arna, and the other from an apoplectic fit. Verdict, "Na-
tural death." The other cases were those of children left unattended by their parents, and burnt to death by the fire. Verdict in both cases, "Accidental death."-Another inquest was held the smme evening at St. Bartholomen's Hospital, on a child burnt to death, by playing with the fire; when a similar verdict was returned.-An inquest wha also building materials, who died from the effects of excitement produced by intelligencenthat his nurse, whom be intended to marry, had come into possession of property A long investigation has taken place at the Brixton House of Correction, touching the death of Elizabeth Banks who died suddenly. From rumours being abroad that de ceased had been put on the wheel in an improper sfate of
health, one of the visiting magistrates attended to watch health, one of the visiting magistrates attended to watch
the proceedings. It appeared from the testimony of prisoner, that deceased was suffering from illness when she came into the prison, and was urged by her companions to make her situation known, in order to be relieved from whe last the did not. however, make any con:plaint, and with a sudden sickness, and died almost instantly. Verdict, "Death from natural causes."-An inquest has been suicide in her Majesty blo or a It appeard suicide in her Majesty s dockyard. It appeared that on
Monday morning deceased was on duty, when the sentry at the guard-house was alarmed by the discharge of fire-
arms. He immediately gave information to the ofticer, and a party proceeded to ascertain the cause. On arriving on the wharf they were surprised in not finding deceased at his post; but, on going to his sentry-box, beheld him groand. It appeared that deceased had shot bimself by placing the muzzle of the musket to his chest, and touching the trigger with the bayonet. Death must have been instantaneous, for the ball entered the pit of the stomach, passed ont at the back of the neck, and through the top
Thejt in Aldersgate Church. - A robbery has been committed in the parish church of St. Botolph, during divine service. It appears that a lady named Mrs. Reddish had received 801 . in notes and gold, on the previous day, was going to church, she found that she had neglented to deposit it in a place of greater security. Being rather late, however, and the church only two or three doors from her house, she was induced to keep the purse in her pocket. During service a respectably-dressed man, a stranger, was admitted into her pen, who contrived to abstract the parse, and decamped bafore the theft was discovered.

The Thames, Steam-vessel.-A subscription has been opened at Lloyd's, for the relief of the widows and orphans of the crew of this illfated vessel. The Lord Mayor and aldermen have come forward in aid of the same benevolent object, and it is expected that the appeal to the prablic will be successful.
Death of Haifiold, the Lumatic.-James Hatfeld, who was tried it the Old Hailey, Sept. 18112, for firing a loaded pistol, in Drury-lane Theatre, at his Majesty King George III., and aequitted on the ground of insanity, died on Saturday last, in the 69th year of his aqe.

The late Inundation at Brentford. - The inquiry respecting the cause of this accident has been continued during the week, and a number of witneases have been
come ander their notice. The only important point, howthat a breach had taken place in the walls of the Kingso bury reservoir belonging to the Regent's Canal Company through which a body of water was poured into the
Brent. The reservoir itself, it was stated, covers upwards of 140 acres of ground, and the walls by which it is enclosed being insufficient to resist so immense a pressure as that thrown down upon them by the thaw and the consequent inflax of water from the country, the flood both overtopped the walis, and forced a passage throagh one pand tended in great measure to produce the calamity, The inquiry was adjourned until the 3d of February, to give time for further in restigation.

New Royal Exchange.-The works for the new building have again been put in active progress, and upwards of 150 hands employed, the principal part of whom had mency of the weather. Upwards of two millions of bricks have been placed on the ground to form a foundation. It is expected that her Majesty will lay the foundation-stone early in June.
Fire--On Thursday morning a fire broke out in Fleetstreet, on the premises of Mr. Bundy, trunk manufacturer.
It was first discovered by one of the City police ; he aroused the inmates, who succeeded in escaping to one of the adjacent houses. The firemen in about an hour extingaished the fire. The loss is supposed to be between 01 . and 8001 ., insured in the Phoenix office.
Robberies.- The shop of Miss Hunter, Upper-street, Islington, was broken ioto a few days since, and a silver
watch, spoon, several articles of dress, and other property, stolen therefrom.-On Monday night, an attempt was made to break into the house of T. Platt, Esq., Brunswicksquare, by climbing over the garden-walls of houses in the rear. Having unsuccessfully attempted to force the shutters of the back-parlour, where the plate and between 300l. and 400l. in gold were deposited, they tried the staircase window, when the barking of a dog in the house alarmed the family, and the thieves escaped, leaving some housebreaking instruments behind them
Supposed Murder and Robbery.-On Saturday moming, the crew of a collier brig lying of the stairs eastward river entangled with their mooring-chain. The crew instantly picked the body up and landed it at the stairs, inquest. When the body was found, one of the pockets of the trowsers was turned inside out, and the only property upon deceased was a few pence, a handkerchief, and an
Almanac. His face bore marks of violence, and there was Almanac. His face bore marks of violence, and there was blood flowed. His boots were marked "Capt. Collins, Leith." These circumstances gave rise to painful rumours and the general belief was that deceased had been first robbed, then murdered, and the body thrown into the river. It appeared, however, at the inquest, that it was an accidental death.

## 非robimial Nebos

Leeds.-Subsequently to the reform meeting, mentioned in our last, a public dinner took place, at which Mr. O'Connell was present. The great feature of the pro-
ceedings was the approximation towards an understanding between the Radicals and the Chartists, particularly on the subject of Universal Suffrage. Mr. O'Connell's speech was of great length; he advocated the establishment collecting information respecting the Representation, and attributed the frequent occurrence of warlike demonstra tions to the fact that the people, being unrepresented, have not democratic control. Mr. Hume, Mr. Roebuck favour of the union of the middle and working classes.

Leicester.-On Saturday, a meeting was held to petitio Parlianent for the abolition of Charch Rates and Eccle siastical Courts, as well as for the release of Mr. Baines now imprisoned for non-payment of rates in the county gaol. The meeting was attended by Mr. Easthope and Mr. O'Connell, and other well-known Reformers. Reso lutions were adopted condemnatory of Church Rates, as an invasion of the rights of conscience and the freedom of reigious opinion; and declaring the constitution of ecclo of justice, and hostile to the liberty of dissenters. Mr tion of Mr. Baines, and recommended agitation to effect that object. Addresses in accordance with these reso Houses of Parliament. forward for presentation to both Bristol.-A murder, under very aggravated circumstances, was committed at Horfield, near this town, on
Monday. Mr. Shedden, a retired druggist, residing in a cottage at that place, had left home in the morning to go
to Bristol, and on his return found the body of his wife bing murdared on the floor, which was deluged with to have heen dead scme hours. The sluyll was beaten in in three places, apparently by some blant instrument. No less than seven distaict souinds had been inficted npon
the skull, temples and face open, and the right beaten in, apparently by a hammer
Fron the marks of blood, the situation of the furniture, and the position in which the body lay, it would appear
that the lady must have been sitting at the fire-place when the first bluw was inflicted, as there was a large quantity of blood immediately before her chair, and the wall was
sprinkled with it. She appears to have risen from her
seat and perhaps struggled with her murderer, as there
are marks of blood on a chair near the fire-place, and also on other articles of furniture. It does not appear that plunder was the object of the murderer, as no article of
ralue was touched. A young man, named Rudge, has been taken on suspicion, but no motire can as yet be as signed for the commission of the crime. He declares his innocence, but the jury have returned a verdict of wilful murder against him.
Brighton.-It appears that the parties concerned in the robbery of Mr. Holland at Boxbill, Sussex, a few weeks ago, have at length been apprehended. Mr. Holland was him with a knife, and threatened murder if hie offered resistance. A friend rushed in to his assistance, but he was thrown on the bed and received a similar threat. They then demanded the key of the bureau, and took out cash Above $50 l_{\text {, was in }} 51$. Hastings bank notes, and the chief officer of Police has apprehended two men, Dunnidge and Ede, on suspicion. The officer said he was in a situation to prove that the parties had purchased clothes with a character, after which they went to Shoreham suspicious the remainder of the money. A man named Smith is also in custody, and the three prisoners are remanded.

Ashton. - The examination of the prisoners charged with the murder of Benjamin Cooper has been in progress during the week. Evidence has been adduced upon which the magistrates have committed Wiliams for trial, and
the other prisoners have been remanded for further the other prisoners have been remanded for further
inquiry. Among the documents seized in connexion with this affair, it is said that proof has been obtained that every outrage connected with trade disputes or turn-outs, which either of late or for a considerable period past has taken place, has been of a systematic character, planned, execated, and paid for by the general confederation.
Whitehaven.-An explosion of carburetted hydrogen has taken place in one of Earl Lonsdale's coal-pits, by which one man was killed and another so seriously injured as to place his life in imminent danger.
Manchester.-A public meeting has taken place to consider the adoption of measures to obtain the privilege of bonding goods in this town. The first resolution was proposed by Mr. Philips, M.P., who detailed the proceediag
before the select committee for granting the privilege of before the select committee for granting the privilege of
bonding in Manchester and other inland towns. He stated bonding in Manchester and other inland towns. He stated and showed that they emanated entirely from parties Liverpool or London, whose interests would be damaged if this were made a bonding port. He then pointed out advantages which would resalt from the alteration, and declared his intention of supporting the measure when it tions as to the advantages which would accrue to Man chester from the privilege were adopted, and petitions both hoases of parliament agreed to.

Lincols.-Intelligence has been received that the ancient mansion of Mr. Bourne, of Dalby Parls, has been totally destroyed by fire. Only a few of the valuable painting and a portion of the library were saved.
Dartmouth. -The Lords of the Treasary have decided that the future West India mail-steamers shall embark and land their mails at this port, instead of Faimonth, in accordance with the recommendation of the Commissioners appointed to examine the channel harbours for that purpose. Great preparations are making for the accommodation of these vessels, and there is no doubt that this resolution of the Treasury will restore the prosperity of the town. It in steam navigation are opposed to Dartmouth as packet harbour.-During the past week two or three whales have been seen in the Channel, one of which described as 60 feet in length, warso near the coast that a trawler was in danger of losing her nets by its becoming entangled in them.
Falmouth.-Letters have remeked this port annoancing the total loss of H. M. Packet Spey, Lieut. James, on a coral reef in the Bahama Channel. It is attributed to the inaccuracy of the charts; it fortanately occurred daring the day, and in fine weather, and no lives were lost. The crew bad succeeded in saving their effeets, and had erected tents on Racoon island, as a temporary shetter
Sidmouth. -Interesting Antique.-A curious bronze, representing Chiron with the young Achilles riding behind him, and a panther leaping up in front of the group, was lately found on the heach under the cliffs, near this place having been washed up by the sea. The group is about eight inches in height, and evidently formed the top of Roman standard or ensign. It is considered by local an tiquaries to have been the standard of the second Iegion
in the reign of the Roman British Emperor and Admiral Carausius, about 294 A. D., axd to have been lost from galley wrecked on the coast, or perhaps in opposing some descent from Gaul, or the aggressions of the Saxon rovers This legion was at that time called Parthica, and the Centaur appears on five of that Emperer's coins as recording these troops.
Rochester. - The Hoo Board of Guardians have come to a determination not to prosecute Mr. Miles, master of the Poor-Law Commistioners. A meeting of the county mutgistrates has been held to consider the subject; but toeir moured that Jiles, thowgh ernaved relieving afficer, and his wife matron; and that no new master will be ap-
pointed.
Shefrield. - A murder was eommitted here on Sunday,
by a man named Raney, ou the pervon of George Bell,
both of whom were edge-tool makers. It appeared from the evidence at the inquest, and from the statement of the prisoner himself, that having gone home on Bunday thorn ing for a moment -give over-1 expect my master home directly ", The man said, " Oh , never mind bim, he'll not come home

I don't care for him." Prisoner said on hearing this conversation, he thought there was an improper intimacy, and rushing in, said to decensed, "You villain, are
 then took place between them, and the prisoner got his hand to deceased s throat, declaring "he should never do stated that he said, "I have not killed him the prisoner him; I have done it more by strangling than by striking him. He then asked the constable who the man was and on being told, exclained tbat there were no person. better friends than deceased and himself. It appeared when the prisoner rushed into the room, he could not see Whom he was striking, as the candle was out. Prisoner declared that he had no intention of murdering the man, thould that if there had been a light in the house, he
 inquest was adjourned for furtber evidence, and prisoder Droituich
Dis an return of a fire-engine from a fre throwg a brook, of the evening, as it was passing stance in the water, and the arm and hand of a female were exposed to riew. One of the engine-men jumped off, and brought out of the water the body of a young woman, which appeared as though it had lain there about two days. There were on it marks of blows from some and instrument. The body was placed on the engine The niece to Mr. Patrick, of Wichbold. About five years ago she was sent to Birmingham to learn the strawbonnet business, where she has since resided, nceasionall paying a visit to her uncle and aunt at Wiclubold. Last week she arrived on a visit to her friends, and nppeared in her usual health and spirits. She left the house on Thurs day morning to take a walk, and never came back. The family became uneasy at her absence, and concluded that she had returned to Birmingham, but intelligence was received that she had not done so, previously to the discovery of the body. Measures have been taken to trace footsteps upon the brink of the brook, but they have hitherto been ineffectual. There are two mounds; one between the left eye and temple, about two inches in length, from which blood had copiously flowed; and the other, a small cut across the money or ornaments have been taken from her person. Bridlinyton.-Collision at Sea.-Inteliigence has been Hetotal loss of the schooner Robert, of Goole, and the Hunler of Sunderland, with a cargo valued at 50.01 ., which oceurred on the night of Sunder last, in the disaster took place vestels coming into collision. The tance from Bridlington Bay, at about half past $100^{\prime}$ clock. From particulars received, it appeara that the wind wa blowing a gale from the weatward, and the night extremel dark. The Hunter, which was a tiae-built vessel, left the Thames for Sunderland in the early part of last week, and was bearing under press of sall at rate. it is supposed, of seven or eight miles an hour. The other vessel was on her voyage from Goole to London, and was proceeding at similar rate. It is stated there was a good look-out kep on both sides, and that they did not perceive each othe until within 200 yards; and although the crews made every effort to avoid a collision, they came in contact with tremendons force. The halls of both were driven in, and it was a considerable time before they could be extricated from each other; and on that being effected, it was dis corered that both were sinking. The constemation that ensued amongst those on board each vessel can be better imagined than described. Some were asleep in thei berths at the time, and were compelled to rush upon dect in their night-clothes. The boats were as quickly as pos sible lowered and the crew threw what little property they could save into them, and then got in themselves. The masters were the last on board. Captain Redman, of the Robert, states, when he got into the long-boat the water had covered the cabin deck; and Captain Smithson of the Hunter says, when he left his vessal, twe water war six feet in her hold, and it was coming in on the starboard bow like a main sea. Within ten minutes, both vessels wen down headforemost in deep water. The crews kept close together, and in the course of the night were picked up by the brig Halifax from Newharen, the master of which treated them with great humanitr, and safely put them on shore at Bridlingtom. The total lass in said to be upward of $10,000 \%$.

Essex.-The lete Floods. -On Saturday an inquest was held on the body of Richard Gibbons, a labourer, who Was drowned in the lood on Stratiord marahes. M Wilson, a cowiceper, started on a horse to rescue some cows that were in a shed on the marshes, when Gibbons got on behind him. wishing to sare a pony that was in the the horse began to swim. Gibbons then slipped off, pullin Wilsons witi bim, and they were immersed in ten feet of water. They struggled together for some siwes exhausted, Wilson disentangled himself from him, and was pieked up in a state of insensibility in a boat that put of to his assistance. Verdict, is Accidental deutn Froma-The andien thaw and heavy rains of last week
caused an inuadation of the lower part of this tomis to a
from extent than for many years past, the water being producine to four feet deep in the lower Market-plare, ants of that neighbourthond. (On sunday morning the Wody of a mason was dhevorered lying dead in the ruad at Welsh Mill, whinh adjuns the town, and where. in is chp-
posed, deceased bad attempted to wade through the flood posed, deceased bad attempted to wade through the flood being carried off by the rapidity of the current he perished. An inquest was held on the bodg, aind a verdiet returned, 'Found drowned.
Bath.-Last week four boys were shooting in the fields near Thornbury, with a poaching gun, sbout fourteen inches long in the barret, when a quarrel ensued, and une of them, Joseph Walker, at about tiree yaris' distance, wilfully shot one of inis conmades, who died in a few
hours. Walker, who is an apprentice to a shoemaker, immediately ab-conded; he is ouly lis years of age.

Northallerton.- I fair poscher, the housekeeper of person in Barnard Castle, named Hodeson, was eanght on of Mr. Mlorrit, of Ruheby, near Greta oridge, casccuing hares. She had been abundantly successful; and, notoff an under garment, and conrerted it into a sack for her plunder! She was subsequently taken befire the magis trates, and ungallantly connuitted to the House of Cor rection, Northallerton, for three months.
Cibiheros.-Attack upon the Police.-A party of the week to a beer-shop at frindleton. about three miles from this place, to apprehend two notorious poachers, Briggs and Dicknson. On arriving, the police found both at the beer-shop, and immedrately seized them. They made a violent resistalice. Briggs drew a knife, but it was capped, and this was also taiken from him, when, after a desperate struggle, the police succeeded in handenffing bok. They omicer therefore went off to Chtheroe for a post-chaise.
During his absence, albout 50 or 60 persins, six of them During his absence, alsout 50 or 60 persins, six of them armed with guns, attaeked the house, and bruke open the
door. They then deananded the release of the prisoners, and threatenert the hyes of the pase if they did not obey their commands. A struggie ensued, when the officers were overcome by the furce of numbers, and the prisoners rescued. On leaving the hunse several shots were fired, and the mub hissed and houted in the most farious manner. At this time the officer arrived with the chaise, and on alighting be was attacked with bludzeons. Thescaped ims lie house, and the duor sas again closed. the room, some of which took effect on the policemen. Siz armed men then tiorced the chor, and demanded 10. or they would take their lives. The money was given to them, and the poice left the house, when they were again morning Brigus and Dickitison went titroligh Chatburn, armed wich guns; and between that place and Duwnham they met Mr. bituledale's gamekeeper, whom they anowhed down and kiched in a savage munner, and he now lies seriously ih of the injuries receised. These desperate chat-
racters are still at tarce, and are the terror of the whole raters are still at targe, and are the terror of the whole
neighbourhood. The police, however, are making efforts to apprehead them, and it is expected that they will soon be bronght to jusice.
Razurays.-An inquest has been held on the body of Mr. Bowies, money-taker o the Blackwall Railway, whose death was recurded in a former Number. It appeared and that, being deaf, he did not near the approach of the train, which knocked hum down. and produced concussion of the brain. Verdict, "Accidental Death." -An accident has occurred on the Gloucester and Biruingham Railway, which proved fatal to one of the stokers. The fallen across the line ent a mass of earth which had driven driven with great violence into the bank. The stoker fell between the engine and tender, and had both legs broken; of the passengers were hurt.-A general meeting of Nele gates from the principal Railway ('umpanies has been beld at Birming ham. for the purpose of adupting measures for the prevention of aceidents. A series of Reshlutions was entered into, expressing their sense of the responsibility Which attacies to Ratiswy Directors pointung out the atrictly of vigilance and caution, and of attending more It was also resclveil, that the propusal to employ a third persoa. as conductor or ciptam, would, by distractiag person. as conductur or ciptan, would, by dastracting diminish the risis víacuituts. A new system of reguladionmshat signals was appr) rel, and recommended for ge-
 London and Birmiogham Ratiwa;, as the train from Bir-
mainghana was on its way from Canden Tumb to the London mingham was on its way from Camden Tuwn to the Londoa terminus. At the proper distace, the iseaksmea endenvoured to stop the traia gradanily, but, in consequence of the slippery state of the rails, the breaks hat not the least effect. The train proceeded at increasing speed until it came in contact with a luggage-var on the line, which saved, by its interposition, the carriages and pasthe concussion ary. The van was driven by the furce of the foremost of the train. Was shattered to pieces carriage understood to be tisally arranged by the Post offee authorities, that the transit of the London, aorthern, and Glouceater Railway, shall commence on the Jth of the enaning month. -The half-yearly meeting of the Liverpoal

Wedneanchester Company was held at Liverpool on Directors are said to fussess unusual intereat to the proprietors of raliway pruperty, as proving that increased expertence srill emahle the managers to decrease conster
ably the experditure in varions departments ably the experditure in varions departuments connected
witio the working. Thie total reccip's fur the hali.yed amount to 139,3236 .; and, after deducting all disthursements a net proft: is left of $91,620 /$, giving a dividend of have been eonseyed on the line, and with only one accident

## The recent Murder in Armag

- meeting of county alopted and transmitted to eorerument by the Earl of Gos. ford. One of the oijects scught was the issuing of a special romniasion to try the persons now in custody for the states that he dues not consider the circumstances of the case of sufficient importance to justify any departure from thank sto the magistrates for the promptitude, zeal, and liberality, with which they have come forward to procure the apprehension and punishment of the murderers Dulitin. - The Master of the Rolls has granted an in junction to stay the sale of the state coach, pictures, and other property of the corporation, seized for a debt al-
leged to be due to two ex-sheriffs of that body. The sale thus prevented was to bave taken place within an hour Belfust.-A meeting injunction.
Registration Bill repeal, has taken place since Mr. O'Connell's sisit. Reso lutions were adopted expressing the necessity of a change the sufficiency the registration of electors, and declaring A long letter from Lord Sitanley, in explanation of his miotives in introducing that bill, was read by $\mathrm{Mr}_{r}$. Emerson Tunnent; and thank were voted to Lord Stanley for his the legislative union were insisted on, and resolutions car ried in which the meeting declared its conviction that reperwould amount to the dismemberment of the empire, that it would affect the settlement of property, and ultimately destroy civil and religions liberty. An address to the Ommic iny an Armel Party.-On Monday night last an armed party, to the number of 14, surrounded the haring entered the house, they first shot a dug tying by the fireside; they then placed spillane and his sinn by on their knees and presented pistols at their heads, and swore them to give upsome disputed land.
arn. .an the thentication has infermation the Court of Queen's Bench for a criminal of the proprietor and editor of the Duljin .Monitor newspaper. The thel complained of arose nut of a series o arteles publishect in d-fentaut's pqper, charging pluintiffs, visit of Mr. (fonnell to the north, with having written misit of Mr. (I) Connell to the north, with having written frolings of the Ulster Orangemen; in fact, that no less chin the assassination of Mr. OConnell was covertly replaintiffs had caused gratuitous copies of the Monitor to be distributed tirronghinut the various localities selected by Mr. O Connell in his tour. All which averments plainswore to be false and groundless. The case was post poned in order to prepare supplementary aflidarits.

Edinburgh - Anti-Patronage Petition. - It is stated that the number of signatures already attached to this petition is upwards of 15,000 , and the signing is still going on with activity. It appears that the total number of sigaatures to the non-intrusion petition of last year was not quite 13,000 .-Mr. Edwards was ordained and inducted on Thursday, amidst symptoms of popular discontent, but without any serious acts of violence.

Another Larly Thief.-A nosel case of imposition occurred a few days ago. A woman, respectably dressed, of a number of articles, inhish city, and requested a sight desired migit be sent to her place of residence. The merchant, suspectung the object of his sisitor, ordered the whole of the goods to be carefully measured. They were then sent and returned, the lady stating that she would call and make a better choice. Ois re-measuring them, anmever, the whole were found to be deficient to the amount of about $5 \%$. This had been accomplished by removing the articies from the room into which the porter wad been ashered into an adjoining one the lady alleging that her sister, who was confined in consequence of indisInform, wishert to see them betore mahing a purchase. after investigation, found that the case could not be sustained; but after a reprimand from the merchant, and the minmation subsequently lodged by her servant, she was Educed to pay the expenses.
Rover when whe thed Rover coach left Glasgow. an old soldier took his seat behind the cuaciman. He was a litule the worse fur
liquor, but by tasting at every stop, he got quite infoviliquor, but by tasting at every stop, he got quite intoxi-
cated, and fell asleep unobserved. When ajout seven miles from Edinourgh, a gentleman beside the driver thought he observed something pass him, and looking about, called to the coachman to stop, saying, " The poor fellow has fallen ofie." The coach was going at a rapid paces, and had proceedod about fifty or sixty yards before
it could be brought up. Whle coming to a bait, a carter paosing along culied out to the duver to atop and take the
man from under tive whecel. It wie ernal the in falling. had gos one of ints fers anod the the sudier
 been thrown ontside of ti.e vemr fiont witel, and lad inside of one of his legs. He mier carefulty reiedocd, and put into the bashet, if heits inturoshide at the time to ascertain the extent of his mivury. (On arriving in th city, it was imagined a corpse would have presented itsoll?; instead of which. the veteran was discovered in a sound
sleep, and perfectly onhurt sleep, and perfectly unhurt.
licspite for Aler inder is
in favour of this man, who was sentenced to death in the
High Court of Justiciary, arrived in day. The rumour that a reppite had been recelved for an
unlimited period is said to be inatcarate. The late Muler on the cilnsqume $R$ Doolan, the man suspected of this mintacay. - Dennis prehended and examined before the sheriff; but been ap. the particulars have transpired. He was found in Livertified. At and the close of the examination was at once iden-
that for further evidence.-It appears that the Scotch authorities hare been for some time in correspondence with those their attention and, in consequence, the latter have had Doolan, who, it was suspected, would malke his appen ance in that town, in the neighbourhood of which hepears formerly resided, when enuployed on the Cheshire Railway. to Wednesday nigh a to a house immediately adjoining that in which Dennis formerly lodyed; and two of their number entered in search of him. He was denied by the inmates ; but, hear found Doolan at the top obove, the police went up, and incur. Doolan at the top of the building. He made tained that his the cause of his apprehension. He main the officers who accompanied him that the repeatedly tol would have to pay his expenses back from (ilasgow to Liver poul when his innoeence was establishced. It appears that be went to Liverpool on Sunday meek, and that he had been secreted in the west of Scotland from the time of the murder. This, however, he denies, and states that he travelled to Liverpool from Scotland by land, and that he has done work since his discharge from the rallony in this neigh bourhool. The Liverpool pelice state that it was his intention to have gone to Amerrea; and to enalle him to effect his purpose the $\leq u m$ of 1 i. was to have been sent Sheriff's Chambens a Whate under examination in the Sherift's Chambeas a large crovid assembled to get a sight some He was removed to Bridewell, and the driver had after dimeulty in avoiding the crowd of people who ran charged with this murder.

## flíscellansous

The Coct of the Bois te Boulogne. - Not far from the Porte Millot, in the midst of a deep claster of chesnut strollers of Paris repair in the summer months to make gipsy parties, and forget the economy of the marehouse
and the frugality of the connter. The U de of this culinary depenanserai, M. Leger, rears throughout his numerous dependencies a multitude of model bens and monster
cocks which supp' $y$ anateurs in white meats with a concocks which supp'y anateurs in white meats with a con-
stant supply of delicioas ner-lai.t e gs bid sour party stant supply of delicions der--laide e gs. Did your party
consist of a thonsand or more. Lerer's hens will regale rou with eges laid that very same dity. The proprietor of furthermore, who shall doubt bis veracity when Leger, the moment you shall have given your order, repairs to the hen-house, dislodges its clucking inmates, and unnestles their precious deposits? To doubt, under such circumtances, were to be a universal sceptic-an absolute Pyrhonist! Accordingly it may well be believed that the proprietor of the Cate de la Rotonde (as he designates his
establishment) is doatingly fond of his hens, but, if possible still more of his cocks. He watches nver them with paternal care, tlatters, caresses them, lavishes on them the enderest endearing nannes, and places on one side for their especial service the crumbs which fall from all his tables, and the choicest morsels of gatteav.c and desserts. Amongst the suitans of his inmer court there is one which soars abore all the rest as far as a Marshal of France above all, brave, he handsome, majestic, gallant, and, "Marengo," which has been given him by his master. For him the tender cares, the pleasing preference, the solicit ous attention-for him the best bits and the most daint glorifying master's despair at perceiving that Marengo was lusing his saperb plumage day by day, and that bis
tail, which whilom undulated like an ostrich plume. was widuwed of its finest ornaments: Who could have thus despoiled hirengo - who thas profmed the person feared him as much as they respected his acknowledged superiority; and one glance of his proud eye was suffictebt meaner preten wway from his favourte hens all other and and bad not long to wait until he betuth his magnificent cock engaged in doing battle with a black dog, which held aim fast by the throat, and, in spite of the heroic mesistance of Marengo, was fast proceeding to the strangulation of the plumed biped. Who shall paint Leger's rage and consternation? Near the fatal spot stood the owner of
the dog, who coolly assisted at the unequal struggle, and
excited the brute both with voice and gesture. Leger happening to be endowed with uncommon strength, began reliuquish its hold of the prey, and then be was well nigh custody as responsible for his cur's misdeeds. Presuming, not irrationally, that the attacks from which Marengo had lodged a complaint with the Procureur du Roi; and Armand, the owner of the dog, appeared before the Correctain penalties are inflicted upon those who shall have ma ciously killed or wounded animals the property of other individuals. Leger.-If you only knew my cock ! Oh! such
a beavitul cock! I saw him perishing beneath my eyes without the power to assisc him. So I planted myself in
ambash, being consumedly sospicious that there something in it more than met the eye, and what should 1 see but this man's dog, which was proceeding to strangle my cock! I had often before given chase to the dog. 1 they were running after my cocks and hens. But on that day my poor Marengo, the master cock of all the world, nervously, his eye turned in his head. I thought he was on the point of yielding up his last sigh. Corbleu! I was no longer master of myself, and I put both dog and haven't said how you gave me a thrashing that lasted ten minutes. Leger.-I ought to have thrashed you, wretch, but I didn'r do it. All I did was to collar you, for fear My dog's a mere bit of a lap-dog, not bigger than my fist, a little drawing-room pet. He's sportive and fond of his fun, that's all. If he bit the cock, the cock began to peck choking Monsieur's cock? Leger.-Parbleu! you wanted to steal him. It doesn't require one to be over malicious to divine that. It was under a charge of robbery that the steur Armand was "puled up in the first instance, but deroanded only the application of the article of the criminal code which has reference to the malicious injury. But the facts adduced in evidence not suficiently estaFruits of Marriage. - An elderly spinster, meeting a newly-married man who bad once been her servant, carry-
ing a cradle home, which he had just purchased, exclaimed, "Ah, John, these are the fruits of marriage. o, ma'am," replied Joha; " this be the Freit Basker. held this week, Mr. Wakley, the coroner, said that the Middlesex magistrates now required all christian names to There was an old saying that "the schoolmaster was abroad," but he thought that he was very much " wanted home, for some persons could not write at all, and at could do so. Mr. Wakley, after these observations, signed his own name, and handed the paper to the jury. Seeing that one old gentleman detained it longer than he thought necessary, he asked him the reason, when the juryman exclaimed, "Dang it, I've done it at last; but I've been
so long used to sign my name, which is Benjamin. 'Ben, so long used to sign my name, which is, Benjamin, "Ben,'
that I forgot how to go through with it." All the jurymen Laving signed, the coroner, on looking over the names, discovered that the person who had been so puzzled had
as he said, "done it " at last by writing "Bengarman." Smoking Manners.-A Kentuckian visited a merchant at New York, with whom, after dinner, he drank wine and smoked cigars, spitting on the carpet, much to the brought for his troublesome visitor: he, however, pushed it away with his foot, and when it was replaced, he kicked it away again, quite unaware of its use. When it had been thrice replaced, the Kentuckian drawled out to the servant who had brought it,-" I tell you what-you've
been pretty considerable troublesome with that 'ere thing, been pretty considerable troublesome with that 'ere thing,
I guess; if you put it there again,
I'm hung if $I$ don't spit in it.

nied that an 10 U shown him
events. if in whe his handwritiog at ail events, if it were so, it had slipped his recollection. He had been about town for some years, and had no recollection that he Rome, and other places, and had been for some time connected
 mooths ago in the Fleet Prison. The account was iul $1-36$, but he
had no account at any banker's when he contracted the deby with Mr. Hall. In 1838 his recelpts were 1766, and in 1839 he received, under his sister's eatate, $627 /$; and the reason he did not pay lis
creditors with a parc of that money was that he expected to receive 2,0001. from Government, but being dosapp iuted he had
no means of doing so. M. Hail was abusive to him in the
siter
 after he made the purchase. He gave sime artic es to a lady in
Eininurgh, also to a lady in Dundee. He also sild a waich for 14l, to a Mr. Johnson. He had given a guinea each to two per-
sons to become his sureties mhen he applied to be arlmitted to

 of insolvent's parchayes at periods when he considered he was
dealing with wrr william Boyd," the friend of mr. Hume.
After some discussion, the case was adfouned to mend the in snlve tort's description, insert and serve several creditors with notice, and account tor d. frerent sums of money.

 Unter the liaf Duk's, will the present Duke was tenant for life,
With remainder to bis infant son, the Marguis of Worcester, in tail male, and subject to a term of 1000 yenrs in Lord Fitzroy
Somerset and Lurd Granville Somerset, which enabled these Somerset and Lurd Granville Somerset, which enabled these
trustees, at their d'scretion, to enter and receive the whole rents. In the month of December, 1838 , Mr. Wedge, the Doke's land
agent, tuld the Duke Mr. Nee.d was desirous of chtaining Dunley Gerse, which lay near his nwn mansion, in exchange. The
Duke rep icd he had no objection to obige Mr. Neeld, it he could get wood for wood, and the Duke named a piece of wood, called
Alderton Grove, pait of Mr. Neeld ${ }^{\text {n }}$ estate, which he should like to take in exchange, as it lay close to hiss own mansion. In the month of January following, Mr. Wedge mate known to the Duke Mr. Neeld's reply, that Alderton Grove was included in his
marriage settlement, and that he had am objection to ask the consent of his wife's trastees to her parting with it. The Duke
now declared he considered the transaction as to was at an end, and paid no more attention to it. \&n the month of June following, while the Duke was in Londn, Mr. Wetge
sent up to the Duke's silicitors a form of consent as in the propnsed exchanges, in which the parctls to be exchanged were numbered, and the Duke, without being at all a ware of the fact
that one of these parcels represented Duniey Gorse, signed the consent, by which the agreed to give up the enumerated tarcels郎exchange for such other lands of an equal value within the him. It appeared the commissioners upon this consent proceeded to declare the exchanges, and a warded Danley Gorse to
Mr. Neeld, who entered into possession of it and was making a never discovered the circumstance till January, 1*40, when he
 deal of correspondence ensued. At length the wake brought an
ejectment to recover possession of the copse of Mr. Neeld, and
filed this bill to restrain the action. On Mr. Neeld's part it wras fired this bill to restrain the action. On Mr. Neeld's part it was
insisted that ererythine had been done openty, and that if any
one was to blame tit was Mr Wedge, who had di-ibeyed or misunderstood the Drike's commands, and that the Duk was hound
by Mr Wedges acts and his own signature. F., the Duke it
Wis was arged uat ie was a pain case op rative, aithough the Act of
signed blimself alone was inoper
partiament authorised a tenant for life to consent, for that the Duke was not in fact tenant for ife, but had only a precarious
estate determinable on the will of the trustees.- His Honour said this was a very plain cass. He woold assume the Duke was
tenant for life, as the trustes had not disturbed him. It was perfectly clear, upon the section of the Inclosure Act that had
been referred to, that the vuie had a powe of giving his
consent only it the nature of a trusteastrip. Beine, then a tris. tee of the power t. consent. he consenten in these terma, - " 1
consent to geve in exchanke for such other lands of an equal
vane within the same parish as pous, the commissinners, nay ralne within the same parish ais pou, the crimmissionners, may
consider desirable for me.". A Count of Equity neser colld coni-
sider sider any such consent to be huding. Besides this objection in
the very outset as to the firm of the contract, it appeared the Duke signed the consent under a mistake. Weelge bad cormmitted
a mistake in allowing Dunley Gorse to remain in the consent. in
ind
 end thant, too, an arreemert such as no Court of Equity woold
execute. He shovid therefore disalve the injuretion.
 amount of a bill for leeches supplied to defendint. - The supply and delivery of the leeches having been proved in the ustalal man-
uer. Mr. Chanwek saud, as he was instructed, a more barefaced attempt at extortion hever camie under his notice. Whe defence
lay in a nuthell The fact was, the moxey bad already been
paid to the plautiof
 weeks, he recered a writ a reccipt. instead of which, in a few
Fortunatel two two persons were in the of the present action. made to plaintiff, who were ready to atthot when pat onent was
 immediately asked for the amount of his of that diny. when he His uncle thourdht how much it was. Plaintifr replied above 108 . His uncle thought it could not be so much Pleintirir said i. was,
and if he would let him have 10. The wound feel much obliged. After a few words, which he did not exactly recollect, his uncle
gave the plaintiff ten sovereigns, the latter saging be would rectify any mistake when he went home, and seind a receipt.-
Cross.examined I never said when the lad came to sere the Writ that I Was Mr. Hlomaind. never said that the house was maker, stated that he went into defendant's shop to purchase a
bottle of medicinc. and while it was heing made up plaintif came In. This witness gave a very precise account of the transaction
described by the last witness, adduing that he remembered the 5. for the medicine, for which defendant gave him a receipt.
(The receipt was then produced.) It was dated 30 th Nov. 1810 . Cross-exanonined: He had been suddenly taken ill in Fenchurchcourt, and that had caused him to go for the medicine. - Mrs.
Arden said, it was not very likely that when takell suddenl. a pain in the bowels in fenchurch street, a mans would run all che way to wapping for medicine; and to show how much re-
liance was to be placed upon the first witness, he would call the lad who served the writ, who would positively contradict a part first witness. Query, clenk to Mr. Arden then swore that the represented himself as Mr Blomiteld, and said that his house sheriif clear that one or other of the witnesses could not escepe froma
something very Damages, 10l

## 

## M.s.aion. Housz. - Richard Moore, who has undergone several

 examinations upon charges of attering forged notes to a largeamount, was brought ap for final examination. - Charles Chapell, waiter to Mr. Thompson, keeper of the ganbling-house in Let-
cester-square, stated that on the night prisoner played with forged nores he asked to see the bark, which amounted to 1300 .
He then He then began to play with witness the game of French hazard,
and lost ill, whicn he paid in country notes. Hee went awny

temple was lacerated, and her skull fractired. He had inquired
at the hospital, and found slue was in a hopeless stare. A drover, who had endearoured to secure the beat, said he got him into
Duck-yard, Westminster, and thought he hat made him secure by placing some carts before him, wheu on a sudden the infurigred beast harst through a door, and made its escape, doing a great deal of damage. The magistrate repeated that the beast nothing for thoke whose persons or property had been injured.
The Luue rulative to Cus, LDi.era-- Mr. Brard, proprletur of atrunst his rizit to impose a fine cipon hid for misconduct hraving complainell, on Tuestay, that a wriver of AIr Beard's had demandeal a larger sum than lis legal fare, and had hehaved in
an msolent and abusise manner, and neither the owner nor an msolent and abusise manner, and neithpr the owner nor
driver having appeared, the case was heard in their absence, and the proprietor atjudged to pay $20 s$.- Mr. Bear.l now said he he had never been required to do an befire, a. pough many com-
plaints had been made against his druer, If the mogistrate plaints had been mate against his drivers, If
would grant a warrant again-t his man, who had
would grant a warrant again-t his man, who had commutted the
offence, lie would use his endearours to find him and give him
into custudy: he had scenty cabs on the streets, amd was at a
cost of about sopol. per annum. If he pald this juena.ty, it would
only be an encouragement to his drivers to defraud and other-
wise ill-use the public.- The Magistrate thought the wery reverse, and reminhed him that the moment after he had paid the He then re if the section of the new Act, which says-1s If a driver shall have committed an offence against thi, act, or that
passed in the lat and $2 d$ William IV., for the commission whereof any penalty is imposed upon any such driver or conductor, and any penalty is imposed upon any such driver or conductor, and
not upon the proprietor of such carriage, and such driver or
conductor shall not appear or be produced by then, but not otherwise, the proprietor of such carriaue shall be liable to esery such penalty as if he had heen the driver or con.
ductor of the carriage at the time when such offence was comductor of the carriage at the time when such offence was con-
mitted."-The Mapistrate inquired if Mrs. Beard wished any time given him to pay the penalty.-Mr. Beard replied Do. It was not ness, but he refused to pay it. -The Magistrate then said he should issue a distress warrant against his effects, and the laster might
resist as he thought fit. Mr. Beard might prosecute him for duing so if he felt any inclination, and he (the Magistrate) would defend it with pleasure.-Mr. Beard, having again repeated that the law could not compel him to pay this penaly, left the office, and directions were given to issue a distress warren

SATURDAY, FEBRUARY 6, 1841.
MEETINGS IN THE EMSUING WEEK.
${ }^{3} \mathrm{~T}$ Tundely
THE heating glazed buildings employed in gardens is a nost important subject, which has occupied the attention of many ingenious persons; and although there is a very considerable difference in the degree of skill evinced in the construction of heating apparatus, yet they are in general similar in the principles upon which they act. There is, howerer, one exception in which the ordinary rules of heating are departed from, and upon which, as it has produced no small loss and veration to those who have been a few observations.
In the Gardenor's Magazine for March 1840, there appeared an account of a mode of warming and ventilating hothouses, by Mr. Penn, of Lewisham; in which account we are informed, that it attains its object much more completely than any other mode, that its arrangements are extremely simple, and itseffects most satisfactory in all respects. It is represented as rendering the atmosphere so grateful to the feelings, that a person may remain an entire day with plessure in a temperature of $80^{\circ}$; as causing flowers to set better, fruit to acquire a higher flavour, and leaves and flowers to gain a more intense colour, than under any other circumstances; finally, as producing fragrance where there is none, effecting a great saving of fuel, and enabling a "lady or gentleman, assisted by a houseservant, to manage in a great measure without a gardener." We might mention other alleged merits, but it strikes us that what we have just extracted is sufficient to show that there has beea no such invention as this since the discovery of the far-famed Macassar oil.
We are told that the principle upou which Mr. Penn arranges his apparatus is what is represented by the accompanying diagtam, which shows the interior of a greenhouse, of which $c a$ is the back wall, and $c d$ the glass front. The
triangle $c, f, b$, indicates a back shed, in the bottom of triangle $c, f, b$, indicates a back shed, in the bottom of is pierced immediately below the summit; $f$ and $e$ are the mouths of a drain which passes under the house from front to back. We are informed that the air being heated by the pipes $f$, rises in the direction of $c$, and, passing through the aper-
tures beneath $c$, takes a direction
downwards from $c$ to $d$; that in the mean while the cold air at e presses
downwards into the downwards into the
drain, in consequence of the abs. traction of air from $f$, and rusbing along in the direction e $f$, produces a general

ation of all the air of the house; in other words, e pipes $f$ so act as to suck the cold air out of the house along the drain ef, and haring heated it, send it upwards again into the house through the apertures $c$, when it gain descends to $e$.
By this ingenious arrangement the chamber or shed where there are no plants is admirably heated, and the external wall is enabled not only to warm itself, but to assist in reducing the cold on its outside. When the walls of the chamber have carried off all they are capable of absorbing, what remains of the heat is permitted to enter the house at exactly that point where it is-of the least serTice: and, forced downwards by the suction at the point $f$, it at last reaches the bottom. How much heat it retains by the time $\mathrm{i}^{-}$has arrived at the end of its struggle downwards, with the temperature of the external air at $20^{\circ}$, we leare to the ingenuity of our readers to imagine.

It would be extremely difficult to conceive anything more anphilosophical than this singular contrivance. In the first place, the whole heating apparatus is placed on the outside of the house it is intended to heat, and this alone must, from the nature of Mr. Penn's other arrangements, cause an excessive waste of heating power; and in the next place, the heated air is furced downwards, in the opposite direction to that which it would naturally take: in order to effect which, a still further heating power is to be provided; for no circulation, such as would be required to produce the necessary temperature of a greenhouse in cold wenther, cas be thus maintrieed, if at all, except by an extraosdinary creation of heat at $f$. It is clear, there-
fore, that one part of the supposed advantages of Mr . Penn's method, namely, that of economising fuel, does not
belong to it. An attempt to heat greenhouses in this manner can only be compared to that of lighting streets by lamps inside the dwelling-houses; and in point of fact, as might be expected, the plan has this winter everywhere failed, notwithstanding the extraordinary heating power which has been employed.
And for what is all this power wasted? we are told that it effects a ventilation and circulation from which great advantage is derived. We shall not now go into a discnssion of the uses, real or imaginary, of ventilation in gardening, but content ourselves with remarking that no ventilation can be effected in cold weather by Mr. Penn's method, without still further destroying the efficiency of his heating apparatus. Ventilation means the continued introduction of fresh air into a building; but in this case all that happens in cold weather is that the same air is kept circulating from the house into the shed, and out of the shed into the house. With regard to the circulation itself, the motion of the atmosphere will no doubt be agreeable to the feelings of human beings, although of no importance to plants; bat we wonder it should never have occurred to Mr. Penn that all the effects he now produces might have boen attained without any loas of heat or departure from known principles.
Suppose in the annexed
diagram, $a, c, d$ represented the section of a greenhouse ; if $f_{.} e$ is the drain, and the pipes are stationed at $e$, no principles would be violated, no heat would be lost, and a circulation would be established all round the house in the direction of the
arrowz.
Experience baving proved,
out, that this mode of commu-
nicating heat by excluding it
will not answer the purpose, it may seem hardly necessary to inquire into the other parts of the description which has been given of its operation. We are not, however, inclined to deny the truch of the statements that the plants in some of the houses thus contrived look well, and even better than in many others ; although we are certainly aware, as indeed was stated in the Chronicle of Jan. 9, that this has been exaggerated.
On the contrary, in our Home Correspondence of to-day, we publish extracts from the letter of a good practical gardener, who speaks in terms of approbation of the state in which he, some time ago, found the plants in Mr. Penn's garden at Lewisham. But can any one really imagine that this result has been obtained by Mr. Penn's invention of compelling his heat to enter the top of the house and thence to travel downwards? Surely it must be obrious to all persons conversant with artificial climate, that the healthy condition of plants in Mr. Penn's houses, when they are healthy, is owing to the moisture of the atmosphere, and to nothing else. The drains through which air is forced are Wet. Now in order to maintain a humid atmosphere there is no necessity for resorting to such an expedient as that under consideration. Pans of water placed over hot-water pipes, open reservoirs through which hot-water pipes are passed, Corbett's open pipes, Green's trough for cncumber pits, ave all good and simple contrivances, which involve no loss of heat, no pulling houses in pieces, no needless waste of fuel, and which will enable the atmosphere to be kept is any required stato of humidity.

We can but regard Mr. Penn's invention as an instructive illustration of the disadvantage of not attending to the principles of physics and physiology. That some modifications of the system have been introduced since the glowing panegyric pronounced upon it in the Gardener's Magazine, we are aware; but as the principle remains the same, we do not think them worthy consideration.

ON THE CULTIVATION of the PELARGONITM.
Tae following is the method adopted by me in growing Pelargoniums for exhibition. It may be arranted under four separate heads, viz. - 1 st, The period of striking potting, and re-potcing. 2 dly , The treatment when in the greenhouse. 3 dif. The maniner of applying heat during the winter season ; and tthly, The way of prenaring the soil, \&c.
lst. My usual custom is to strike the cuttings the beginning of June, or sooner if my plants are sufficiently strong to allow my taking two or three shonts onf winhowe injury. As soon as they are rooted, 1 pot them in acsized in a cool frame, shading them constantly whem the sum is out, until they have taken fresh roots. They are next transferred to an open situation and placed on slates or boards. As soon as the plants will bear the sun without flagging, I stop them. In September I repot them into 48 -sized pots, and at that period 1 commence training
them into the form 1 istend thea to have. In December or January those which are sufilientiy strong are shifted
into 16 -sized pots, allowing plenty of potsherds for drainage ; the others I do not shift till March. In these pots they remain to flower. About the middle of July or the
Deginning of August I cut theus down, and place them iu Deginning of August I cut theur down, and place them in
a shady situation to keep the sun from drying the soil too a shady situation to keep the sun from drying the soil too
fast; water is now applied very sparingly. As soon as fast; water is now applied very sparingly. As soon as
the plants have thrown out shovts an inch long, the soil the plants have thrown out shoots an inch long, the soil
is nearly all shaken off, and they are repotted into the same sized pots; when they have taken fresh roots the superfluous shoots are thinned out-in this state they remain until they are remosed into the greentiouse.
2nd. Treatment wheo in the greenliwse. The plants I intend growing for exhibition are plased an the staze at least four feet apart; air is liberally supplied; where the situation will allow it, the front sashes should be left open all night, while the weather will permit. In November the plants are stopped; a stick is then put to each shoot to make the plants aniform, and the leaves are thinned out to allow the air to pass freely through the plants. In De cember or January the strongest plants are again selected and repotted into No. 8 -sized pots; additional heat shoui then be applied to enable the plants to root quiekly. In February I commence syringing them; this ian done eariy in the afternoon, so that the leaves may dry before night. In March they are again re-potted into No. 2 -sized pots, allowing a larger quantity than before of potsherd for drainage: water is now very liberally supplied. When the flowers begin to expand, they are shaded on the outside of the house with cheesecloth, which I consider better than cauvas, as it admits more light, and the temperature will not be higher. Air should always be admitted before the sun has much power on the glass; this precaution in a great measure prevents the appearance of the green-tily. for . Au applying fire-heat the greatest care is required for on this, success will in a great measure depend. The system I have pursued for four successive years is to light the fires at 3 or $40^{\circ}$ clock in the afternoon, sometimes later, out at 8 or $90^{\prime}$ clock, by which time the temperature ought to be $40^{\circ}$ or $42^{\circ}$ Fahrenbeit, which is umply sufficient. I again relight them at 3 or 4 o'clock in the morning, by which means the plants are never overheate as is frequently the case when the fires are continned until a later period in the evening.
4th. Preparing the soil.-Maving obtained a quantity of loam with the turf, it is chopped up with a spade and placed in a beap. I then procare a large quantity of fresia stable litter, and shake it up liglitly into a heip, in the form of a muahruom-beủ. at the time, it is well watered with stroug men and covered over with slates as closely as possible, to keep the ammonia, \&cc. from disengaging. In this state it remains for 1 or 16 days; 1 th frat in evart barrowful of
loam one of dung, covering the heap d!fhty o:er at last loam one of dung, covering the heap byht! oier at last with loam; in this heap it remains for a momaris or inver that the loam and dung may be well mixed tugether; in 12 months it will be fit for use. To two barrominuls of this compost I add one of leaf-mould and a peck and a half of silver sand. - Wm. Cock, Chiswick, Jan. 25, 1841.

## $\times$ RURAL CHEMISTRY.-NO.I.

Under this bead we propose giviag a sketch of the science of Chemistry in its most simple form ; not pursuing the subject further than is necessary in order perfectly to understaud the relation whisin it bears to Agricultuie, and Rural Economy in general. We shall endeavour as much as possible to divest seience of its technicalities and hard words, so as to, render it inteliginble to those who have neither time nor inchnation to wade through tise bulhy volumes which treat of chemistry. Every day proves more strongly the value of this science in its application to agriculture; but unfortunately there is no cook which, whilst it enters into the relation of organic chemistry to vegetation, is sufficiently simple in its language and terms to be comprehended by those whom it would most uenefit, if they were able to understand it. We hope that the short articles we irtend giving under the head of "Rural Chemistry" will supply this deficiency, by placing in the hands of practical men such an outline of the subject as will enable them perfectly to urderstand a mass of bighly important information which is mow useless, from the
wint of an explanation of the terass and technicalities in which the details of the science are involved.
Perhaps it will be as well, in the ourser. to say a few words respecting the aim or object of the science we are about to enter upon. It was at first intended to give an introductory chapter, which should contain an explanation of scientific terns; but it subsequently appeared more convenient not to do so, but to explain all technical terms made use of as we proceed. The object of chem:stry is ro become arquainted with the propertien of all narual smiostanees, to stady the changes which are going 11320 nowe to find ont the rules which givern them, and the manner in whech these matural operains,s are inbuenced by eircumstances. Nearly all the changes whech are gotsg on im change is that whick takes place when two substances come together which have, as it were, an attraction or affinity for each other. As a familiar example of wha then happens, we razy take the erimal.... of swan boiling. Wheal an aik icre ut caustic fy en wad wan aind in ne loy has un artuation the the fat: the an beome ramenzity mized, and combine or anite togot or fat or the aikail, and which to called soap. Thas Bind of action is quite distinct from simple mixtare. When we waix together two substances-such as, for example, brown
sugar and sand -no change takes place, for they heve no
affinity or attraction for each other: and therefore, if boiling water is poured upon the mixture, it will soon dissolve nor the sand will be at all altered by having been mixed. nor the sand will be at all altered by having been mixed. When we mir two substances which have an attraction for
each other, they are both changed, and the new substance formed by their union is quite different from either; and when two substances are thas united or combined together, they are not so easily separated as when merely mized, and of course require the exertion of some attraction more porerful than that which made them combine, to cause it is different frome the ley in not being catustic, and differs from the fat in heing easily soluble in water. It is a rule which holds good in all cases, that whenerer tro substances combine or unite together, and form a new subtance, the properties of the new substance are quite different from those of either of its components; but when two substances are only mixed, the properties of the mixture are intermediate, or lalf-way between those of its two
componeuts. Another common case of atfinity is observed when we slake quicklime. Quicklime has a strong affinity fer water, and when it is wetted, it becomes very hot; the lime combines with a quantity of water, and when it has cooled, we find that the lime is much altered, having lost It may perhaps seem as if these tro examples of the change produced by attraction or affinity were processes of art, and not of nature. They will, howerer, serve as examples of what is going on in a great many natural operations; and as we proceed with the subject, it will be evi dent that this kind of change by which two different substances unite and form one nerr substance is exceedngly common throughout nature.
The second kind of change wh
The second kind of change which we shall have to consider is that which goes on whenever anything decays. This change is quite opposite in its nature to that which we have just been describing. It takes place whenever any substance is separated or divided into its component parts. Thus, to return again to the quichlia, whe chalk or lime tone is decmposed, when, by burning or heating it in a very hot fire, all the water, or whatever else it contains which can be roasted nut by fire, is driven off, and the ime only remains. The decomposition of a substance is lso effected when it is mised with anything which has a very strong attraction for one of its components. Soap is made by the attraction which the alkali has for fat; but f we add to a solution of soap in water anything which bas a stronger attraction for the alkali than it has for the fat, we shall decompose the soap : there are many substances which have the power of doing this, but it is sufficient now to mention one. If vinegar is poured into a solution of soap, it is decomposed; the fat is separated and floats on the surface, and the winegar combines with the alkali of the soap. This kind of change is always going on when anything decays or putrities, and therefore is of consider

## THE PERSJAN MODE OF MANAGING BEES

In Persia so much care and skill are displayed to obtain the honey, and at the same time preserve the life of the
bee, that the mode practised bv the inhabitants to effect hese objects deserves to be fully noticed. The same system prevails throughout Asia Minor, and I believe in Greece, and honey and wax form a considerable source of profit as well as comfort to the peasantry of those countries. Even the inhabitants of towns derive a considerable income by seeping bees ; some possessing fifty or sisty hives.
The shape of the hive is such that twenty would scarcely occupy the space that three or four do in England. They are made of wicker, plastered inside and outside with com ylinder, as shown in fig. 1 a,
Fig. 1.

the dotted lines represeuting cross sticks in the inside for the bees to alight upon. The front or head of the hive is generally formed of a circular piece of glazed earthenwar plastered in, and the bot:ons of the hive consists of a cir eight inches long by uine inches in diameter. This cylindrical form is adapted alike for transporting the bees to places where fragrant herbs abound, as well as for talking away such portions of the comb, without disturbing the
bees, as the proprietor may wish to dispose of. During bees, as the proprietor
minter the hives are phedin tl.e comt-yards of their houses, with the heads of the hives turned towarils the south. The
uppermost row and the two sides of the tile are plostered uppermost row and the two sides of the pile are phostered
with mad mixed with chaff to prevent any injury from rain, as shown in fig. 2 ; and during a zevere winter the heads of the hives are covered over with a mar. A furtion of the the space witam, and consequently to render tho bives Wander. Titey are trey uentig looked at during the winter, subsiste.ce of the bees, they are supphed with treacie and Water in a pines, on whica are scattered a few straws fur At the commeacement of spring the dours of the hives ate opened, and whes tick berbage of the low country has
vecume parched, about sis weelis after the vernal equinor becume parched, about sux weeks after the vernal equinos,
the fropitietor closes the hives and places sir or seven of
them on an ass, and in this manner he transports his whole frazrant shrubs abound. A shatered siluation is th. sen usually near a village, the hives are arrana. 1 in three rows, Ane above another, facing the south, as shown in figo 2 bees, and saffly ludzed the swarms in new hives, he seals the bottom of them, and leaves them under the care of a The sillager is responsible for the hives, and should there be any stolen he is obliged to make good their value; and or those swarms that have cullected no honey he is not paicinty of Tabreez, I have seen ranges of hives to the number of 580 or 600 .

About the middle of October the proprietors of the hives again proceed to the mountains to remove them to thei winter quarters. These excursions are looked forward to with great pleasure by the citizens, who are frequently ac companied by their wives and children.
To extract the honey, the end of the bive, formed of a aid of a knife, fig. 1 c , more than half the length of the hive, the combs are cut out, and a sufficient quantity is left for the winter consumption of the bees. To drive them to the extreme end of the hive during this operation, dry cow dung is put into an earthes jar, fig. 16 ; and being lighted, the smoke is blown by the mouth through the holes in the sides of the vessel into the bive. This obliges the bees to retire, and this simple mode neither taints the honey, nor affects the health of the bees; and any quantity of honey may at all times be removed with ease and without risk.
In order to prevent the escape of the young swarm, a cage is formed of willow hoops about two feet eight inches long; one foot two inches broad at the widest end, which is corered with gauze; and five inches wide at the narrowest end, which has a moveable top. The cage is then fixed by a thong and hook, so as to cover the aperture of the hive at the moment when the new colony is about to take its departure, and the bees being prevented from flying into the air by the gauze, cluster upon it. The cage may then be removed to some shady situation and placed in a slanting position for some hours. An empty hive is then got ready, with the head uppermost; the cage containing the bees is put over it, and, by a suddea jerk, the cluster of bees is thrown into the bive; after which they may be placed
where they are finaily to remain.-George Willock, K.L.S

## COTTAGE GARDENS.-No. 3.

Is the ensuing week any fruit-trees and bushes which may have been procured should be planted. Gooseberries and currants may be put in the borders on each side of the footpath, at the distance of about four feet from one another, and two feet from the path. Raspberries require the same distance, and will succeed best if planted in a shaded or sheltered corner of the garden by themselves. Sow a row of curled parsley close to the footpath, to which it will serve for an edging. The drill for it should be about an inch deep, and the seed sown tolerably thick. It will probably be a inonth before the young plants make peas and beans recommended to between the rows of ders spinach may be introduced. It is superior to the ders spinach may be introduced. It is superior to the
round-leaved or prickly-seeded varieties, on account of the greater size of its leaves. A shallow drill is to be made, and two or three seeds dropped in it, at nine inches for the family, the cottager will find it are than sumbent for his pig in summer. This work will not occupy more time than the greater number of cottagers are able to afford: and in those districts where our directions will not apply on account of being too early, an allowance of a few days can easily be made, according to circumstances.
Bees.-As regards the keeping of bees, we may remark that in some parts of the country the most ridiculous prejudices exist respecting them and their management are desirous of removing these, and leading the cottages to see his real interest. Many are averse to purchase a
hive of tees, but will readily take one in exchange for something else. Num, to such as are disposed to think that a purchased swarm will nerer prosper, we wrould merely state that there is no more harm in the buying or selling of bees, than ia the buying of seeds or plants for their garden and afterxards disposing of the produce. In his case some are more successtal than their neighbours and the same will happen with bees, which thrive in cer w.al! bowever, strongly recommend their being kept herever it is practwabie, and we trust the varions hortichicural secetas whe ha"e alyeady awarded prizes to enccurage tie ealtre of bees anons costagers will con-
tiaue to lo ma , pot on! by offring a premium for the thaue to io s, ne: th! $y$ y offering a premium fur the

turtium, or Indian Cress, Chamomile. $-R$. Thompson, Chiswick
The Lancashire gooseberry-growers consider the following Goaseberries best suited to cottagers' gardens:-Red: Wonderful, Top-sawyer, Huntsman, Companion, Lion, White: Wellington's Glory, Eagle, Fleur-de-lis.Tounsman

## HOME CORRESPUNDENCE.

Mr. Penn's Mode of Heating.-Having heard a great deal of this system, I lately paid a visit to Mr. Peon' garden at Lewisham, where I cunfess the luxurant ap pearance of the plants exceeded even my expectations, who no material differe them unusually healchy. As lond and those used elsewhere for similar purposes, the evi dent superiority of the plants must be attributed to $\mathrm{Mr}_{r}$ Penn's mode of heating, and most especially to the safe and efficient means be has devised for ventilatiou. Tbe manner in which the latter is effected, is by adwitting the esternal air through apertures which communicate with the drain in which the pipes are laid, and compelling it to general circulation. Moreover, by pouring water into cross drains, moisture is obtained when required, which leaves the atmosphere of the house as much at the control of the gardener as the combustion of the fuel in his furnaces. Sueh a system must prove of incalculable benefi to bion who has the care of early forcing, particularly of stone fruits ; for how often in forcing these, when the external air has been in such a state that, if adnnitted by the ordinary way of sliding the sashes, it would hare proved injurious to the bealth of the trees, does it occur that the gardener is compelled to have recourse to artificial means of impregnation, either by the application o tle anthers to the stigmas, or by causing motion in the at mosphere of the house by means of a fan! Mr. Penn has however, orercome these difficulties, and by the proper application of his method, the gardener will hereafter be enabled to dispense with all such tedious operations and lady-like amusements. 1 do not, however, agree with those who would make it appear that Mr. Penn's method can be applied with less expense than those of many others ; because from the situation in which the pipes are laid, there must necessarily be an additional number of thein to allow for the absorption of heat which takes places by the material which cemposes the drains, and this invoives not only an additional original outlay, but a considerable increase in
Mushrooms.-I called this morning upon a friend, who showed me his Mushroom house iu a dense clond of steam, thrown into it by a one-and-a-half inch pipe, attached to a temporary tin concave top, placed on a small ten-gallon b,iler fitted up in an adjoining shed, and only used occasionally when any liot water was required. Since he has applied the steam, the bed nearest to where it enters the abundance. He intends to carry a pipe the whole length of the Mushroom heuse, and only to admit the stean occasionally; and he is of opinion, as well as myself, that it will be a more congenial method of tempering the house than by the usual fire-flue, and will consume much less fuel, and can be fitted up at far less expense. He proposes to take up his flues and to substitute a pit in its stead, to fill occasionally with well. prepared bet dung, cultural purnoses for many years, but had never used it in the growth of mushrooms, nor have I ever heard of its sems so applied. - If $x$ has been so applied, and its effects proved, we should be giad if some of your readers mound be so kind as to send you an early communication on the subject. If it answers the purpose, my
have no other advantage, the saring of fuel is an important
consideration where a regular winter supply of Mushrooms is desired.-John Mearns.
Culture of Vallota (Amarglis) purpurea.-Although there are few among the amaryllidaceous plants of easier be far less known and cultivated than it deserves. In Mr. Herbert's work on bulbs, it is said " it shoaid be kept always growing, and does not object to the stove in winter:" the bulbs I possess have thriven particularly well under the following treatment for the last three years, flowering
regularly. They are potted in good-sized pots in a mixture of loam, sandy peat, and leaf-moulc; being merely kept in a greenhouse with but little water through the winter, a south wall; where, about June or July, they throw up their splendid scarlet flowers, which last fully a week or more. They would be very ornamental plunged at the
edge of a warm sunny pond, forming a good contrast with Crinum capense, Nympheal allia, \&e. About October they are remored into winter quarters. I find them increase pretty fast by offsets, taken off and fresh potted in
April, and treated as the parent bulbs, which should at that time have their decased outer skin removed.--C.D.
The Bark Monopoly.-The country gentlemen of England who are proprietors of oak are greatly indebted to
your correspondent, Mr. Paxton, for his able and spirited your correspondent, Mr. Paxton, for his able and spirited
letter on the subject of Barl and the Tanner's Monopoly; and I trust it may be the means of leading to some remedy for a grievance we all have felt, and submitted to much
too long. I am a bark-grower, and for many years have amnually sold my year's peel; which, for the most part, is What we here call "rough bark," as distinguished from practice of the neighbourhood in selling it, to the country buyers, per running load, set up in the woods or fields. take their price rather than run the risk of loss by weather; and as sure as the bark season came round we found the same story,-that the trade was worse than the preceding grew tired of this, and determined to try some other plan ; and accordingly, for some jears past, I have regularly housed my bark when dry in sound barns. At my couve-
nience I clean or "hatch" it, and then send a sample to nience I clean or "hatch"' it, and then send a sample to
London or elsewhere; and if the price suits, the buyer provides bags, and I forward it by boat, or as may be. Although this may occasion more trouble, I am persuaded it is well paid for; and, at all events, I am my own master. - F., Berks.

Climate.-As a proof of the effeet of the sea on the temperature of the air, I send you an account of the maximum and minimum of peat of each day of the present
month, as shown by a self-registering thermometer, on the coast near Pembroke.

We have not had anow for more than it was all gone next day. Very little rain has fallen until Whitaker's Anti-vermis Mrinture 1841.
Whitaker's Anti-vermis Mixture.-I paid my halicrown for a bottle of this substance, which I find to be
diluted nitro-muriatic acid, and the quantity contained in the bottle worth, at the wholesale price. $1 \frac{1}{2} d$. It is highly dangerous to use on any plant in sufficient strength to destroy insect life; and injurious to use at all, however diluted, as wherever it collects on the plant, the water, evaporating, leaves the acid concentrated, and burns the part.-Flora.

Composition for Fruil Trees.-I find the following of use in protectiug the buds of gooseberries from the ravages of effectual the winter and spring months, as well as an rally from moss, lichen, and the larvæ of insects:-Take hot lime and soot in equal quantities; add cow's urine antil the mirture has attaned the consistency of thick paint. Paint the trees regularly over with the ingredients thus prepared, and the result will be not only a beautifully clean and clear bark, but an increased vigour will also be
perceptible in the growth of those trees to which the mixture has been so appothed. -I.I. D.

Sawdust as a Manure-We have several letters upon this subject. Mr. Spencer, of Adbolton, says if dry saw-
dust is saturated with dust is saturated with fresh urine from a stable or cowshed, becomes a goud manure for grass or clover, and it then Cheshunt, writes:-"I have used it mixed with rabits., dugg for ten years. My garden, whici was only a barren piece of ground covered with weeds, now produces as fine finer; and it has never had any orher manure. My stock of rabbits consists of on $y$ three does and one buck, with stead of strand ; , use sawdust to put in the hutches ingarden, of ratterer more than a quarter of an sere. If $J$. $D$. had mised a quantity of loans or clay witi the sawdust before be latd the foundation of the dunghils, it would have
been berter. It appears to me, from experiments which I been becter. It appuears to me, from experiments which I
have tried, that clay has the power of feccunpuing sawhave tried, that clay bas the power of decurpusing saw-
ciust."-Another corresponient refers us to the? $\begin{aligned} & \text { Br Brish }\end{aligned}$ Fanner's Magazine, New Serier, vol. viii. p, 147 $\%$ Ou turning to this work we found an extract from Mr. Dixon's,
of Hathaway, Lancashise, Prize Essay, published in thre
first volume of the "Journal of the English Agricultural improve the texture of soil. Mr. Dixon says, "Having brought the sawdust into the yard, I laid out a considerable space for the bottom of a compost heap, and about three
feet in depth. Three-fourths of the bottom was filled with peat and the rest sawdust ; on this was daily conveyed the dung from the cattle-sheds, and the urine was conducted through channels for its reception, one on each side of the compost, carefully excluding all common water. Every second day the urine so collected was thrown over the
whole mass with a scoop, and at the same time the accuWhole mass with a scoop, and at the same time the accu-
mulated dung was regulated. This being accumulared for a week, another layer of peat and sawdust was wheeled on the heap, and these matters were continually added doring winter, with the addition, once in every week, of ., Mr. Dison says that this is the cheapest and best manure for altering the texture of retentive soils. Finally, $T_{0} . G_{\text {., of }}$ Clitheroe, advises J. D. to follow the counsel of those and he relates the following experiment:-Having a large quantity of sawdust, and having observed rines growing with remarkable luxuriance in a border, one half of which was peat-mould, he imagined that sawdust a be a substitute fored with it, turf from an old pasture, road-scrapings, prepared with it, turf from an old pasture, road-scrapmins,
and abundance of bones. However, he considers that the sawdust neatralized all the other ingredients; for instead of his vines growing 18 or 20 feet, as he had hoped, they scarcely grew as many inches. This was on the open wall and three or four years ago; and though they grow better now, he is persuaded they would have been twice as strong we receive the sawdust.-We pro these statements as we receive them ; and we think they clearly show that sawno attemptompen, 5 a good manure. In the case of but it was mised with earth and other matters not calculated to accelerate decay. If T. G. employed oak sawdust, the great quantity of tannin in it would no doubt render it injurious to the young roots of the vine. But if sawdust is once rotten, it is converted into carbonaceous matter or humus, and alkaline bases, both which form an important part of manure. The addition of dunghill water would furnish ammonia, for which the carbonaceous matter of the decaying sawdust has a strong affinity. Of course in employing sawdust, that is the best which is most easily decayed. In our own case, however, we should bura it, and use the ashes, if we could find any means of doing so, or reduce it to charcoal, when it woald certainly be a powerful manare.-Since writing the above, we have received the following letter from Mr. Lymburn:-"There are many sawpits round this town ${ }_{r}$ and it has been inva. cian found that when the dust is from deciduous trees, it it will lie for years, and reduces with difficulty, after a long period, into an earthy-looking substance; it is the it, would be to mis it rith acid and mucilaginous substances which contain nitrogen, an indispensable article in all fermentations; yeast, where it can be got, is the very best. Hot fermenting manare, as before recommenided, is also of great avail; but from our experience of it in swine-dung,
we should think hardly sufficient for sawdust of resinous we should think hardly sufficient for sawdust of resinous trees; for other sawdust, or for peat, it is quite sufficient.
We think, all things talen into consideration, unless acid and mucilaginous substances and yenst are easily procurable, and not expensive, the best way would be $t$ ) burn the mass of sawdust, as it is likely to be from deal, that being most used. We shall then have the potash and other salts - metallic bases of the wood, and some charcual while the resin will be dissipzted by the burning. There is nut so much potash in the fir-wood as in some other woods but what thereris is valuable.-Kilnarnock, 23! Jan. 1811,
Red Spiler.-Being annoyed with the red spider on early grapes in the pine stoves here (particularly the Frontignans, I have tried the plan of the late lamented
President of the Horticultural President of the Horticultural Society with the greatest
success, viz. : dusting sulphur over the leaves after the success, viz.: dusting sulphur over the leaves after the
last thinning. Any fumigating bellows will answer the purpose, with a copper tube, as for burning tobacco: the best four of sulphur is used with tije wing-feathers of fowls cut into short pieces to fit into the tabe to prevent the sulphur from blowing out too fast, and to distrinute it equally over the back of the leaves. If the spider has commenced its ravages, the sulphur will adhere to the infected part. and soon banish it. I find it does not in the least hurt the appearatce or bloon of the grapes. I gene rally have all the tying atad thinning done before it is put on, as it is disagrecable to work amongst it atterwarus. Every practical gardener knows the danger of too much syringing among pine plants, especially in the winter nonths; by using sulphur he will compietely conquer this little pest, without using a drop of water.- W. Tiliery,
Telbeck.
Mhubur
Rhuburt, Furcing.-IIaving seen the laborions provess by which rhuyarb is forced, I was induced to try several different methods. The buds mere covered rirh a handglasis, and were siorched and killed; aiter this, old pots, boxes, broken jurs, and fire burnttin kettles, wore inverted over the crowns, sea-kale fakhon, and tumd to succeed perfectly ; and the staks produced were so tender that assemblage of puts, pans. and ketties is not prictaresque even in a kitchen-garden ; but it is better than strew or other litter, which is hasle to be blowm about by the wind. the air rand, the thinner the material, the maore easily is means to be despisel, the blackness of its exterior abourbing all the suass rayp, min not reffectiog tay. As an
example of the superiosity of tin kettles over garden-pots rhubarb-roots, and they all died; for the sun's rays could never penetrate the sides, 80 as to warm the interior. The roots might as well have been placed in a cavern.W. C. R., Newtoh Abbots.

Caulifourers.-To grow caulifowers I adopt the following method :-I plant peas five feet apart row from row, and between the rows celery, which in dry hot weather is much benefited by the shade afforded it by the peas. hen the celery is earthed up. I dig the ground between up the celery, leave one side of the ridge undisturbed. In up the celery, leave one side of the ridge undisturbed. In
the spring I prepare the ground for canliflowers, stretching the line along the original trenches, and levelling the ground so as to form a trench equal to that in which the celery was planted: 1 aiso make a trench between the The canliflowers when planted in these trenches are shel. tered from cold, and retain moisture ; and if carefully taken up with earth about their roots, and planted with a trowel, they will succeed those planted under hand-glasses, and will equal, if not surpass them, in quality and size. I generally have nine plants under a handlight, which leaves me six to plant out in the spring. The ground is then cleared in time for brocoli, and thus I get three crops in sixteen months with the manure in which the celery is grown. -D. R.
Management of Birch in Woods.-Your insertion of the remarks of a correspondent on the management of Birch, encourages me to hope that I may obtain some further iuformation on this subject. I have some considerable plantations, consissing of different sorts of trees, and among them many Birch. They are from 15 to 20 Jears' growth, and were long entirely neglected in pruning and thinning; this work, however, I began three Being years back, and cut down many of the birch. to find that the birch stems either did not break at alt after cutting, or only threw out a few weak eight a shat cbserred when younger trees of eight or ten years grown were cut, that they survived and threw out vigorous shoots, but not one in 30 of such as werwood in the plantations from the remsining birch, I wish to know if there is any management whicli will save the stools; such as by cutting down at any particular period of the year, or by any application to the head of the stem, scc. The soil is a gravelly sand, with a heathy top, and hard concrete subsoil, but the bircla grows freely; and I have some acres of flourishing birch coppice, which was cut down for the first time at an early growth, and has since been regularly cut and produces good shoots.-A Subscriber and Well-wisher
Rhododendrons.-Observing in the Gavdeners' Chronicle that Rhododendrons are thought to seed themselves in woods but sparingly, I beg to inform those who wish to cultivate such plants that where they are grown in woods they are sure to som themselves by tens of thousands. In the woods here me have, by a little attention, thousands of self-sown seedling Rhododendron pontioum, growing on any kind of soil excepting stiff clay. I find a strong soil answer better for seed than a light soil in woods, because it retains moistore in a diy season, and the small plants survive the hot weather withont artificial watering. We adopt the following system in the culture of Rhododendrons in wioods, which has taken plave on a most extensive scale :-After a trea is cut, the stump is graibed up, and the hote is prepared ur breaning up the botion, and widening it ; leaves are then raked up and mised with the soil until the hole is filled abuve the level; a plant is then inserted, and soon makes a most veautital ohsh, sation injured by either domesticated or wild animals. Rhotodendron caturhizense and its rarieties are fur in, re bequtifal
than ponticum, and therefore should be ylanted near than ponticum, and there:ore should be Hanted near
walks aud the margins of woods; it is also one of the best walks aud the margins of woods; it is also one of the best
to cross the Nepanl kinds upon, to obtain havdy rarieties, which are nostiy very beautitul. When in bivon, nothing can surpass the beauty of Rhododendrons in woods; last
year the woods here were quite enchanting with them. It is rery easy to fill woods with them, by sowing the seed broad-cast, where it is desirable to have them. As soon as the capsules burst, which is alsut the present season, I collect the seed by shaking the boughs, placing a large sueet of paper heneath. A man and boy can collect tiful; a calm das stiould be chosen for the operation, which shouid be done as soon as possib e after the capsules burst, and the seed should lie somn immediately. Rhododendron maximun grows much better in slade than in sunny situations; the foliage is often four times the usual size. and of a much finer green; $\boldsymbol{R}$. muxinum seems to preter luam, mixed with a great portion of leares raked up and used inmediately by mising with the soll. ou this subje

Slicited from the South, a difference of opinion should e and growers, of this pet flower. The northern and and feathered rose and a dixaned roe of Teathered byotomen and a famed byblomen, and a feathered bearre and a lamed bizarre; these constitate the pan. Now 1 will mention that in the roses, we think nothing better than a unique or "primee d' Asturias ;" for the bybbomen, a good
feathered "bienfait," and a flamed Siam ; and for the falque," and a flamed "Captain White." I should feel extremely obliged if some of your correspondents would give a list of a score or two of London flowers, with the properties for our stage, keeping also in mind the olean-bo tom, round shape, and 26 h Jan., 1841.

Pruning Forest Trees.-I observe in your directions by Mr. Paxton, le directs close-pruning as regards forest trees. Now I recollect in Norfolk, some years ago, many
of the genclemen there were much taken with a mode, suggested, I beliere, by Mr. Thuch taken with a mode, he urgiug that in the growth of the timber, the new wood never united with the cut part: and I recollect that a Gunton, the late Lord Suffield had specimens of oak and ash to show the defects in timber which arose from close praning. I think it will be important that you shonld invite discussion on so important a subject.-H. K.
Cheshunt.

Root-proning Forest Trees.-It occars to me that root pruning may in some cases of forest trees and large
shrubs be usefully adopted: almost everybody who plants, plants too close, and having planted close, neglects to thin in time, and the fast-growing trees soon overpower others, and it becomes necessary either to cut then away, or head them down. When it is necessary, there closely round the roots every year would be found useful, Take for instance the fine avenue of horse-chesnuts in the Regent's Park: already they are too close, and are poiling each other; if the alternate ones were cat out, the every other one were root-pruned, the growth would be stopped. The unpruned would soon overtop the pruned, and without spoiling the appearance; besides, the root of the unprumed would gain more space in which to obtain nourishment. $-\boldsymbol{H} . \mathbb{K}$, Cheshwnh.
Birds and Nets.-Mr. Bathurst's account of the dislike of birds to blae colour reminds me of a custom which exists of putting a single thread of "speckled worsted along a row of new-sown seeds, and the notion is that correct, it is the llue-grey colour they fear; and this coincidence between the German and the English experience makes the matter more probable. Indeed, why should not a sparrow be as shy of blue as a turkey-cock is of red? It may be as well to inquire whether the Germans always use blue worssed: if that is so, it may be the eoorsted, which clings to their feet, which frightens the birds? $-\boldsymbol{H} . \boldsymbol{K}$

Mexican Oaks.-Mr. Rivers writes us that the Mexican Quercus spicata, called $Q u$. ruyosa in the nurseries, proves to be hardy. In a perfectly exposed situation, covered only by a broken handtight, it sustrined the late frost uninjured, when the leaves of Quercus Fordii, a variety of evergreen oak, were destroyed. Qu. rugosa Was planted in A pril last, in a stiff loam, without a tree no perfectly when grafted on the common oak
Asparagus.-Having lately adopted a mode of cultivating asparayus somewhat different from that generally practised, and haring found it to answer well on strong retentive soils, I send youa brief account of it. In preparing and planting the beds I do not deviate from the usual practice,
nor indeed until the plants have become sufficientlystrong to produce asparagus fit for cutting; I then, in the spring of the year, put a quantity of sand in ridges between the beds, and as the asparagus begins to make its appearance above the ground. I cover the beds with sand about two inches deep, which operation I again repeat as the asparagus reappears until the sand becomes seven or eight inches in depth. When asparagus again makes its appearance, I commence cutting it for use, making the sand level again after each cutting. In the autumn the sand is raked into ridges in the alleys, which affords shelter to the beds during the winter and early spring months; a covering of rotten dung is then put on, which remains till the ensuing spring, when the roughest portions are raked off, and the same process parsued as before described. The advantages attending this method of cultivation are, that the blanched part of the asparagus is more tender, the colour more delicate, and the flavour improved; besides which, the covering of sand prevents an inexperienced operator injuring the crowns of the plants in the process on the beds nor are they so liablered to a great depth with dung and soil.- $W^{*}$. Buchan, Blithfield, 28 th Jan., 1841

## FOREIGN CORRESPONDENCE.

Paris, Janunry, 1841.-During the last few years numerons experiments have been tried in the Model Parmas of France, as also by private gentlemen and gar-
deners, to deners, to ascertain the most productive and valuable
varieties of Beet. Potato, $\& \mathrm{c}$. \&c. The following table will show the result of an experiment upon fifty-two sorts of Potato, and suggest many useful hints to the cultivators of England, who may at one glance see which possess in the greatest degree the productive qualities, and which are richest in alimentary matter.
The first column gives the annual increase of the fiftytwo varieties, and each is placed according to its productiveness. The eighth shows the gross quantity of solid matter; and the numbers $1,2,-3$, , cc.. in the next column. indicate their relative position as the value. The l0th shows last column, indicate those most valuable in this article. It will be seen that there is a marked difierence between the value of many of the sorts, not only as it regards pro-
duce of tubers, but also fibre and starch; for iustance, the
"Sotteville" is the greatest bearer. a seed of 6oz. pro- greatest profit; namely, "Sotteville, Rohan, Yellow
ducing in one season -8 ks .500 g . ( 57 lbs . English), or 152 Rose, Champion," \&cc. \&cc. : it will also shom the times its own weight : it, however, yields only about one- keeper those which, independent of annual productiveness, fifth solids and one-tenth starch : while the long red "Paris have, weight for weight, the greatest amount of nutritive Market," which increases itself only twenty-one times, matter, namely, red Paris Market, early Shaw, Breadfruit, yilds about one-third solids and one-eighth starch. some great quantity is used instead of arrow-root) to purchase kinds; nevertheless this table will enable the gardener and the Auxnoble, Mailloche, early White Rose, \&cc. \&cc. farmer to plant the rarities which will afford them the

The public exlmbition of the Paris Horticultural Society Palace, from the 8th to the 14th of March, and the following twelve prizes are offered:-1st. For the finest and best cultivated plant in flower. 2d. For the finest forced plant in flower. id. For the best collection of plants in twenty 4 . For the richest collection of not less tha best collection of fifteen varieties of Rhododendron Arboreum, including Hybrids. 6th. For the richest collection of not less than thirty varieties of Indian Azaleas. 7 ch . For the best collection of Roses, containing firty varieties 8 th. For the best collection of bulbs in flower. 9th. For the most useful or pleasing plant in flower or fruit, re-
cently introduced into France. 10th. For the best colleccently introduced into France.
tion of fruits. 11th. For the best vegetables, either recently introduced, best cultivated, or well preserved. 12th. For the best forced vegetables. Two prizes will also be gisen for the best painting of fruit or flowers, or newly-invented instruments for gardening. None but French cultivators will be allowed to show for the foregoin prizes; but as many of ciety, there are also two prize offered to them-one for the most rare plant in flowers and the other for the best-cultivated and most rare collec tion of plants.

PROCEEDINGS OF SOCIETIES.

Cult cation in hiyh Latitudes. - A letter from Mr.
Dease in the Edintugh Nroo Philosaphical Journal gives the following infurmatio: concerning this subiect, in the British provinces in North America:-Lat. $67^{\circ} 2 \varepsilon^{\circ}$ nip has been sifcessfilly tred at $F$, it Gowd Hope, but no other kind of segetable.-Lat. $64^{\circ} 41^{\prime}$ (exrresponding with I celand), barley ripens in three months, and is cultitried to advantage at Fort Norman. Oats have not been tried there ; but tolerably good craps are obtained of potar
toes and cabbages.-Lat. $62^{\circ} 11^{\prime}$ (corresponding with the toes and cabbages.-Lat. $62^{\circ}$ in (corresponding with the
Feroe Islauds), barley ripens in three months, oats come to perfection, at Fort Sinapson.- Lat. $60^{\circ}{ }^{5}$ (corresponding with South Shetland), wheat sometimes ripens, but the
(corresponding with kirkaldv), wheat-a prearious crop
at Dunorgen. on the Peace River.-Lat. $54^{\circ} 3 j^{\prime}$ (corresponding with Stockton-on-Tees), gnod crops of wheat -Lat. 32028 (cor esponding with the Isle of Ely), good erops of wheat are ripened in four months.
Mr. Martuceg. - A. rices have been received by the Horticultural Siciety from Mr. Hartweg, dated Guatemala, Oct. 24, 1840 . He was at that time preparing a
large cullection of Orchidaceous plants. Convolvuli, Oaks. and various fine pereanials, when were to be sent to $B e$ lize by the first opportunity. In the middle of Norember
he was to leave for $S$ in Miguel. 120) leagues south-east, in order to secure a passage to Guayaquil, whither he had reselved orders to proceed. His new expeditho into the
mountains of Guavaquil. Quito, and Popavan, will probably be the most important for horticulture that this enterprising traveller has yet undertakra; and as the rich egetation of that magnincent region is shost unknown harvest of beautiful novelties. As every one must take 1nterest in so arduous and important an undertaking, we have printed in another column, by permission of the II rticultural Society, the instructions under which Mr Hartwer is now acting
Duhlius
Dahlias - A correspondent of the Floricullural Maga zine gives a long list of prize Dablias, from which we ex-
tract the following names of varieties, which, according to his writer, have gained more than fifty prizes at the show for 1840
 with much regret that we annomnce the death of this genthe scientific aorld, Mr. Ellis has been long known as the author of two volumes, illustrative of the changes induced on atmospheric air by the germination of seeds, the regetation of plants, and the respiration of animals ; a work which, in tracing some interesting analogies between the animal and vegetable kingdoms, presents a rare specimen of fidelity in recording the observations and discoveries of otheis, and of ingenuity in supplying the deficiencies of their investigations by original expetimental researehes. He was the author also of the articles on Vegetable Anatomy and Vegetable Physiolory in the Supple ment to the
sirth edition of the "Encrclonedia Britanmea," as well sisth edtion of the "Encyclopmdia Britanmea," as well
 crimination, and scientitic genius. The interest he took in the formation of the Edinburgh Horticultural Garden was manifested by the selection of his place of residence in its immediate vicinity; and his continued zeal for its improvement is well known to the members of the Caledonian Horticultural Society.

Choire Pelan gonium. - One of the greatest amateurs of these favourite fluwers, Mr. Foster of Clewer, by whom so many magnificent varieties have been raised, regards the following as the créme of the fancy; viz.:-Conservative,
Matilda, Erectum, Sylph, Nymph, Beauty, Wildfire, Sultan, Lady Douro, Prince Aibert, Amethyst, King John, Queen of the Fairies.

## Rebíctos.

Journal of the Royal Agricultural Society of England. Vol. I. and Vol. II., Part I. Murray
Nothing can more strongly evince the already altered and improved condation of rural education, than the writings upon agriculrural subjects which the growing spirit of inquiry is now calling into existence. Expleriments have taken the place of dogmatical assertions; attempts are generally made by the authors to explain the canses of their success or failure; the language is which aum. munications are conveyed is that of educated men, and readers are no longer fatigued by dull detalls and empirical directions whech have no general application. All This strikingly contradiets the adage, that " a fi tle knowhape a dangerous thing ; for although it may be, per haps, remalked that many of the modern writers of agricuitural papers have but a small amount of scienyic
knowledge, it is still more obrious that what they do possess is leading them rapidily to the po-session of more. The well-head of knowledge is struck, and though it waters are but bubbling up, they must soon swell into a broad and fertilizing stream.
These reflections have been suggested by the perusal of the proceedings at the head of this article, to which some of the best agricalturists of England have contribured, and which have been enriched by translations of foreign scientific: works which, twenty years ago, if they had great mass of the jour thousand two hundrel and sixty-two members of whom this great associntion now consists. Its motto is " Practice with science." and a more happy one could not have been easily found. We perfectly agree with the Council in the conviction they express, "that however splendin as works genius theoretical disquisitions and deductions may be, the solid
advancement of practical agriculture can only be steadily and effectively promoted by sound induction from careful experiment and repeated obeervations under the most varied circumstances of locality, soil, and aspect ;" and we feel confident that such means as this society possesses are sufficient to solve all the mortimportant problems in agriculture, so far as the existing state of knowledge is capable of effecting their solution. We rejoice to know , what indeed the high character of the Presidentand Council sufficiently guarantees, that such ample menns will be judiciously applied, and that the long, tedious, unostentatious, but all-important labour of the analetical chemist wh neither be placed behind geological investigations, and public meetings of display, zor left to be executed in foreign laboratories.
The number lately published contains many excelient papers. Our space will not allow us to attempt a detalled account of all of them, and a sbort notice wi uld be unjust to many of the contributars. Jourist inerefore
refer our agricultural readers to the Journal itself, and for the present content ourselves with adverting io a very few points only of the most general interest. Lurd Ducie tinds the littie early born carrot to yiend a greater weight per acre than either the large Altringham carrot or the Swelish turnip; near 19 tuns jer acre having been obtined from land that would hot produce more than 14 acre of the Belgian white carrot, but Mr. W. F. Harris has enly from 16 to 20 tons; Colonel Leconteurs, on the other hand, reports the produce to bave been 38 thans per acre in Jersey. Mr. Johnson, in his prize essay on gypsum, regards that substance as a direut food to pants, in Whach he is at variance with Liebig, who daserts that it acts indirectly by forming a sulphate of ammania, o
oda, the resulis of which are epparently conflicting, but Anong experiments apon the productiveness of wheats is one recorded by Mr. Hillyardi, of Thorpelands, near Northampton, which deserves be made generally known. Ou of six kinds of wheat which were dibbled cander equal ciring results were obtained:-Per Acre. Whittington white produced 4 qrs. 4 bus. worth Surrey white
Snowdrop white Brown, called clover Essex brown

 fiowers, fryite, and vegetalle, best snited for such gardens. It
is a mere prejulice to magine that zardens will not thrive near is a mere prejulice to magine that qardens wal not mety, chear. ful garden in one of those sunk courts within the inner area of
Somerset-house. That many trees and shrus will bear the
smoke of Lond n , is shown by the beaut ful Plane tree near the church of St. Danstan'sin ti.e Eastr, the Lime trees in Princes-

 and seeds should be louked over, and prepared for planting as
soon as the weacher breaks. ENTOMOLOGICAL NOTICES.
As the season still continues so inclement. the
armer cannst do better than employ their pent, the in ceardenerin an f $r$ r they are to be found, either in the granary, store-room, ir on
fruit-trees. The eggs of the lackey moth (Clisiocumpa Neusfria) are now easily seen, arranged spirally round the twigs of fruittress, to which the larwa do cons dicrable injury. The caterpiliars
appear in May, and ar firt live undtr a web, in cluters of from one to two hundred together. In June thev are full-grown. and about an incu in lenyth, soft, s riped with blae, red. and ellow,
and having tut few hairs. The caternilar spins between two leaves a thin weh of an oval form, and becomes a longish brown pupa, in which state it remains for three weeks or a month.
Jury the moth appears. whi:h in size and colour is not anlike the silk worm moth. Its colour is light yellow, and s"metimes dark
ocre-coloured. The upper wints are landed, and the lower winvs are generally of a uniorm brown'sh colour. TThe mave is
rea tily kn tin fromithe female hy its strongly pectinated anier me
 and dues not con seen. It often appears in cunsiderable numbers, other trees, such as bee hes, elms, poplars. oak*, and ever pines. The best means of lesseuing the deraitation committed by this
 May, when the caterptlars are living in society, the nests cor taken when collecting the nest. for if the caterpillars are much disturben, they tet themsetves down to t1 e groand by means of a
thin silken threat, and escaue. In July their cocoous shonle be lonked for on the trees between the leaves, in the roofs of sheds, flies, whic', fuc dupon the caterpillars, considerably lessen the number of the insect
few the migration of birds in january
FEw migratory birds arrive during this month, excepting grosbeake and Gilbert White mentions that la ge flocks of hen chafSnche are likewise seen, which are supposed to come from the or December, generally disap ear between the 1 tuh and 20th of
 Glake (Einberiza nionlín)

NEWS OF THE WEEK
An Express reached town this morning, convering in telligence of great interest from China, India, and the Lerant. The proceedings of the British forces in Chin have not yet led to any satisfactury result, and no materia change has taken place in the posture of affairs. Sicle ness has prevailed to such an extent among the troops, that upwards of 1500 men are unfit for service, and great difficulty has been experienced in obtaining supplies of provisions and clothing. Fears are entertained that the Chinese Government may evade the settlement of the question by means of protracted negotiations; and Com missioner Lin, who has been dismissed, has endeavoured to restore himself to favour by recommending the Ens peror to tire out the Admiral by delays, in the belief that our forces will soon be compelled by sickness to evacuat the coast.-The principal event which has occurred in India, is an engagement in Scinde, between a detachmen of the Bombay army, and the troops of Nasseer Khan in which the latter were completely overthrown.-Th.e news from the Leant convess the satisfactory intelli gence that the Eastern question, which has so long compromised the general interests of Europe, has been finally settled by simultancous concessions on buth sides, the Sultan having granted Mehemet Ali the hereditary Sovereignty of Egypt, and the Pacha having uncondi tionally submitted to the authority of the Sultan. The resolution of the Pacha was taken before he had been made aware of the intentions of the Sultan; and the latter had despatched a firman granting the independence of the Pacha, before his submission was known. These mutual concessions are regarded as an earnest of good faith, and as a security for the maintenance of peace, not only in the Levant, but throughout Europe at large. -The advices from Spain and Portugal confirm the previous impression that the disputes on the Douso navigation will be speedily settled by the ratification of the treaty on the part of Portugal, - A British subject has been arrested by the American Government, on a charge connected with the boundary question; and apprehensions are entertained that it may lead to a rupture with this country.
At home, the attention of Parliament has been chiefly occupied by the introduction of new Bills to amend the Registration; the thanks of both Houses have been voted to the forces employed on the coast of Syria; and mea sures have been taken for the trial of Lord Cardigan.

## 

The Couat.-Her Majesty and Prince Albert have returned to town from Claremont. Addresses of congra talation on the birth of the Princess Royal were pre ented during the week by the City authorities, and by the Universities of Oxford and Cambridge. It is understood that the Duke of Saxe Cobourg is prevented by indispo sition from being present at the christening of the Princess the arvival of the King of the Belgians is daily expected Cone name of Prince Albert is ordered by the Privy Council to be inserted in the Litany. -The Dake of in the House of Lords, and convesed to his own resi dence; it is understood that his Grace what batter toward night, and it is hoped that the attack may not prove serious
Parliamentary.-The election for Walsall terminated on Tuesday, in the return of the Conservative candidate; the numbers being, for Mr. Gladstone, 3ina ; for Mr. Smith 327: majority, 38.-Canterbury has also returned the Conservatise candidate; the numbers being, for Mr. Smythe, tion at Reigate took place on Monday. Lord Eastnor bavin, been proposed and seconded, Dr. Bedford, of Brixton, was proposed on the Radical interest; but no one having seconded the motion, Lord Eastnor was declared duly elected. Mr. D'Arcy, the other candidate, did not come forward - It has been announced in the local papers that the Hon. Capt. Howard is likely to create a vacancy for Morpeth, by accepting the command of a ship: this has been contradicted by the Ministerial papers. - The election for Monmouthshire is fixed for Tuesday; a requisi tion, signed by 500 electors, has called upon Mr. Morgan to stand in opposition to the present candrdate, Mr Hanbury Tracy. - Rumours are afloat that Mr. Hawkes is vacancy for Worcester.
New Zealand. -The Crown has just appointed a chiefjustice and attorney-general for this colony. It has been and Lord John Russell has accepted an invitation to dine with the Directors on Satarday next, in celebrution of the event.

Medical Reforms.-The foliowing is an abstract o the report presented by the committee appninted by the Colleger of Physicians and Surgeons, and the Society of be-the want of a general registration of heensed prac titioners : the absence of unitormity of medical education and qualincations to practise ; self-election as regards the councils of the colleges and the cuurt of assistants; the exclusivin of licentiates of the College of Physicians from the library and museum; the non-licensing of cheroists and druggists; the non-establishment of a board of public health; and the absemee of some reatrictions on the sale considered these allegrations, recompend is refernotet to
the College of Physicians, that all graduates of British nniversities, 26 years of age, now in practice, should be the licentiates to nominate annually a certain number of their body, one half of whom to be eligible as Fellows;
the licentiates to have access to the library and musenm; the licentiates to have access to the library and musenm;
miform medical qualifications to be required at all British universities, and \& degree thus obtaioed to qualify for practice in the three kingdoms, the graduate becoming a member of the College of Physicians in the county where he resides. There is to be only one board of examiners, and one uniform system of examination, and the class of extra licentiates to be abolished.

## fortígn

Fravce. - The principal matters referred to in the journals of the week are the continued discussion on the
fortiticatious of Paris, and the letters attribnted to the King, published in the Legitimatist and Republican papers. Much satisfation is expressed at the teluour of the debates especially at the unanimity with which. men of all purties the organ of the Court, says, in a eferenence to thas subject. only one which can repeat with us the :vord of liberty, so frightful stull to the Contiuent-the only nation whech, in the moment of universal uncertainty, extended where we were going-the only nation, finally, from whom we might ever hase to ask pardon ine our revolutions.'
Fortifications. - The Chamber of Deputies on Saturday Schneider adrocating the system of detached forts withoat the continued wall. Marshal Soult did not disguise his aversion to the continued wall, and his preference of the amendment. He stated, that in addition to the works, it would require forty-three millions of francul increase of eight millions in the artillery service. The Marshal was somewhat embarrassed between his convictions and promise to support the project, and his desire not to sacrifice hia conviction to interested motives. He accused the comreality, and of not having come to a clear understanding respectirg the simultaneous progress of the works. He stitl adhered, he said, to his plan of an entrenched camp
but he accepted the continuous wall as something secnndary to it-as useless, indeed, but still, since it Meased the stated that he was decidedly in favour of fortifying the capital, bet in some doibt is to the best mede. Gen Schneider's plan, in his opinion, would not be efficient i the detached forts were few; and it would be cheaper and better to pave a few with a continuous wall, chan of the fortifications was to produce a moral efieet beyond the frontier ; and that would rather be lessened by the amendment. This declaration turned the scale in ran of the bill, the fate of which bad been compromised by Marehal Soult's address. If the Clannber bad acted under the
impression of the Marshal's speech, little doubt exists that General Schneider's amendment would have been carried but M. Guizot appeal made a powerfal diversion in favour of the original measure. On Monday the Chamber resumed the discussion, and proceeded to consider the several depulies, but the articles were mostly adopted without alteration. One of these provided that the forti fications should comprise a continned wal embracing both banks of the Seine, and exterio works in advance of the regnlar lines. In the course of the debate, Marshal Soult declared that Government intended toesecute nimultaneously the work of the double line.-At the close of the sitting, the bill was finally passed by 237 votes against 162. Paris will therefore be surrounded by a wall, bastioned and terraced, and defended by detached forta. 140 millions of francs are allotted to the works, including 13 millions siready expended: 35 millions are to be appropriated in 1841, and 20 millions in 1842 The quesso delay will occur in the progrese of the works

Treaty of Commerce zoith England. - The atates that M- Guizot has been officilly asked to mivers reject this treaty. Should it be wccepted, the Minister will be able to snswer the objections of the war party, by telling it that the treaty allows him to procure Euglish steamengines for the vessels bualding. It is stated that if this were not so allowed. the contraband trade would equally higher cost.

Porgat Letters of the 不ing.-It is stated that when the letters were firat published by the Gasette de France, the Minister of the Interior immediately denanded leave to seize the Gazette, but that his Majesty observed the best sent. The same thing, it is added, took place when the other letters purporting to bave been wniten since 1830 were published by the Fronce of Sumday. The Minister of the Interior observed, that this time it was a case of to be taken against that paper. The letters having been quoted by other papers the next morning, and Ministers having heard that some deputies intionded to question thent on the subject in the Chambter, M. Caisot declared it absolarely necessary to procted againat the journalis, in against his will, gave way. and the seizures took place. the provincial joumals whick republinhed the letten firenc
the Journal de Rouen has been seized. It is stated tha the Cuuncil of Ministers has already assembled several hmes, in order to decide whether Gosernment ough not - Another journuls, and submit it to the court of arisen out of this subject, in consequence of the Messager having charged the Guzett with forgery, in publishing the letters. The intter journa has cited the Editor of the Messager to appear before th Correctional Tribunal on the 12 th March, to answer to the editor o with an offer to deposit the autographs in the hands of a nutary, to be open to public inspection : damages are laid at
$10,000 \mathrm{f}$. The Edior has also uffered to refer them to 20 members of the two Chambers, and to abide by the conse quences of this arbitration. He asserts that the letters pen, without alterstion in the paper, without inierlineation hat handwriting of Louis Philippe d'Orléans is ther in all its beauty, and that, having carefully examined the Faper, the sheets dated in 1806 bear the water-mark of
limb, ant thase dated in $180: 3$ the water-mark of 1808 , with the names of "Bugden and Wilmot," the English manufacturers, who sent the paper to Sieily.
nsisting of 6 sail of the line Rear Admiral, has sailed from Toulon to join Admiral Hugon's squadron at Hy yères. There are also 9 line-ofbattle ships in Toulon; and two squadrons of frigates are expected from the Atlantic forts, so that the French fleet rill consist of 20 ships and 10 frigates.-A severe storn was experienced on the coast of Toulon on the 26 th ult Ill the vessels in the roads were driven from their ancho age, and several sustained'severe damage; the sea rushe against the east coast with so much fary that it formed Madame Roland.-An advocate at Amiens, M. Breuil, has just publish a collection of letters, never befor pristed, from the pen of this lady, addressed to two friend of her yonth. Ther were all writen between 1772 and 1780 , subsequently to her leaving school, but previousi to her marriage. The political history of Madame Roland is generally known, with the melancholy termination to her career, when she become involved in the fate of the Girondistes, of which party she may be said to have been one of the most distinguished members. These letters arg said to afford an intimate acquaintance with her early domestic life, and the gradual formation of that energetic mind which a few years later enabled her to play so prominent a part in the Prench revolutionary drama.
Spain and Portugar.-Letters have been received from Lishon, coaveying renewed assarances that the matter of dispute between Spain and Portugal, respecting the navigation of the Douro, is in a fair way of being immediately and satisfactorily arranged. The Ma:lrid Gazette announcen the receipt of official despatches from the Court of Portugal, stating that the Chamber of Depaties had approved of the treaty relative to the free navigation of the river; and as this matter has since been submitted
to the Senate, there was every probability that the affair would be terminated in the conre of January, and all the differences settled to the mutual advantage of the two conntries without the dignity of either having been offended. The news since received from Portugal states that the Senate, on the treaty being brought up from the Cbamber of Deputies, referred the matter to $\approx$ finance committee to report thereon. The committee approved of the measure without alteration, and reported accordingly. The opposition were expected to endeavour to delay its passing as long as possible, but little or no doubt was entertained that it would pass without alteration, and receive the sanction of the Queen before the end of the month. The ostensible subject of contention between this country and spain would thas be eatirely renoved, and that within the allotted period accorded by the Spanish government, which will thereby be deprived of every valid pretest fur hostile interference. The Finance Minister has presented his estimates for the year extending from June 1841, to June 1842. Compared with the estimates voted for the present year, they sho an excess of expenditure of 500 contos of reis (or $120,000 l$. sterling). There is an excess, more or less, under every head; under that of "general charges," it includes the parment of half the foreign dividends. The minister states that the present revenue, which amounts to $8,630,225,042$ dolrs. is quite inadequate to meet the ordinary expenditure, and that the in ; some means must therefore be found to increase the revenue. He proposes to raise the daties on articles of raw material to what they were at a former period, when foreign manufactures were less loaded with duties than at present. By this increase an addition of 140 contos is expecsed, but a further increase of 600 is required.
From Spain, we learn that a decree has been issued signed by the Dile of Victoria, in the name of Queen Isabella, which orders that the interest due apon the consoidated debt, internal or finreign, up to the lst ult., shall be capitnlised, and in order to procure fund to pay the new interest, the Minister of Finance shall deposit $2,000,000$ reals every month with the treasurer of the staking fond, to be under the personal responsibility of
that officer; and if the sums so deposited should not be sufficient to pay the interest of the debt, that the deficiency shall be made good out of the public treasury. The Regency declares that a bill shall be presented to the
Curtes, to autionise this project. Those persons oniy shall be entitled to the interest on the capital so ereated who shall coseant to sceept those ternas belort the 30ch

Minister of Finance will the Queen, which states that the establish the law relative to the incorporation of the national domains and the church property. - The Journals contain little domestic news of ibterest. The Regent's siastically received, is the chief topic of remark; and be expected in the Basque provinces. of affairs in the cantons as becoming more complicated. ing of an Extraordinary Diet. Fribourg and Sclaffthatuet Nuncio had addressed a note to the Vorort respecting the tained that the Austrian Envoy would eventually $j$ in in this remonstrance. It appears that the nuwber of confrancs, aud containing 116 mothis ant 95 nuus. The Executive Connet. had beld a secret sitting, at which it into consideration. The gr ind coutcill of Argan has published an ammesty for political otfender, except all per and has demanded that such pultical refugeces as have taken shelter in Lucerne shall be given up: Gut it is ronwith. The period fixed for recising the constitution of Lucerne is approaching, and it is feared that the malcontents would stize the occasion. trafic on the railroad between that city and Monza ; trafic on the railroad between that city and Monza,
which states the number of passengers for the last four months and a half to have been 158,218 -receipts to the circumstance, that not a single accident has occm red on the railroad since it was opened, and in conclusion observe, that it is gratifying to reler to so brilliant a re-
sult of the first undertaking of this kind in the Ia Venetian kingdom, as it will donbtless add to the powerful inducements which recommend the execution of other railroads between the principal towns of Italy. The construction of the railroad from Venice to Milan is said to engage the attention of Govermment, as a work of the highest importance to the prosperity of the two capitals cone kingdom and the towns situred its delibero the commission has already commenced its and Brescia, and the pruject for a railroad between Mian and Brescia

Russia.-A few weeks ago the marriage of Count Demidoff with a Princess of the Bonaparte fanily was announced; it now appears from the S.. Petersburgh paper: that the Emperor has di-missed the Count from the office of Assessor of the department of Foreign Affairs, and that this measare is suppused to be in consequence of his havmarriage with the daughter of Jerome Bonaparte.
, the Diet, made its report to the States in the early part sures of parliamentary reform have of late occupied the attention of the Chambers. The principal changes recommended by the report of the commuttee are the folthe assebl hatioual representation is to be denominated every second year, instead of every fifth year, as has hitherto been the practice; the representatives are to bo paid out of the funds of the state, instead of being paid, as Litherto, by their constituents; the speakers to be elected monthy by the assembly, instead or for the whole session; and the assembly is to be composed of two chambers instead of four. Grevce. - The arrival of the Crown Prince of Bazaria duce some change in the present system of Government. Complaints are general against the peculation carried on in public departments, and the rapid promotion of Bavarian officers. The Marquis of Londonderry, during his recent visit, was well received by the King, and reviewed the troops, collected from all parts of the kingdom for that purpose, on the plain of Athens. The Synod has publicly declared that it had no part in the recent proceediog against Kairis, or in the system of torture adverted to io one of our former numbers ; this announcement is regarded King. The Acropolis of Athens is still garrisoned, in appreser arpor
PURTEY AND EOMPT.-Intelligence hat been recwived that the long-pending Eastern question is satisfactorily settled. Despatches from Admiral Stopford, dated Jam. 14, announce the arrival of Commodore Napier at Aler dria on the sth; who so successfully arranged matters with the Pacha, that on the 11th be surrendered the whole Turkish fleet to Admiral Walker, who had arrived on the Previous day, as commissioner from the Porto Nhis achas at the same trime tendered to Cammodote Napter ear Bay He also sent order to librahim Pacha to etacenate Syria immediately and retarn to EgJpt, and made prepura tions for sending transports to bring away the slick and such portions of the army as could be emadriked at Canfia -On the 12th Jan., the Solman sent instructions to bis commissioners in Egypt to inform Mehemet all that on his submiseton helag complete, he would grant him the hereditary tenure of the Pdehalic. The simple mention of these dates is rufficient to show that the uct of the Pachs innorant of the definitive intuntions of the Sultian with no
gard to him．On the other hand，the despatch of the fir－ man by the Sultan preceding by two days the restoration and good faitul．These important events are regarded as highly satisfactory by the European Powers ；and conclu sions are dramn from them that all the difficulties which disturb the peace of the East are definitively settled，and as the peace of the whole of Europe was connected with the solution of these difficulties，the news which has arrived has been receired everywhere with the greatest interest．－ murder $m$ the Desert were on the increase，and that the murder to Suez is extremely dangerous in consequence of the Bedouins taking adrantage of the absence of the army in Syia，to plunder passenhers． it is said that they find plunder more protitable than strict ubediethee to his service．The plague has broken out in
the city，and measures have been taken to prevent its preading．－The arrival of the Ori－ntal steamer since the date of the preceding intelligence，brings our news down
to the 2.3 rd ult．Commodure Napier had so successfully to the 2.3 rd ult．Commodure Napier liad so successfully fleet left the harbour under the orders of Admiral Walker within ten days after．the firman for its restoration was Pacha at Alexandria that Ibrahim and his army bad ar－ Syria；the troups were said to be forced marches from destitution，aod transports with provisions were despatched for their relief．Commodore Napier still remains at Alex－ andria to superintend the settlement of affairs，and is said
to agree so well with the J acba，that it was believed they would shortly visit Cairo togethe
Syria．－The last accounts from Beyrout state that he greatest anarchy prevailed in the mountainous districts． Jean d＇Acre．The inhabitants of Jerusalern，and par ticularly the convents，continue to suffer severely from the excesses of the Arabs，and the whole country is over－ run with robbers．It is whispered，amid the echoes of Lebanon，that the son－in－law of Commodure Napier is列 laughter of the Prince of Lebanon．Prom Smyrns we learn the death of the Armenian Archbishop，and the loss
of the yacht of Lord Canning，wrecked in the gulf in a of the yacht of Lord Canning，wrecked in the gulf in a
storm；the greater part of the effects on board were saved， and no lives lost
bringing news from China down to the town this morning hat the posture of affairs remains 24 th Oct．It appears last advices，and gloomy apprehensions as to the final result of the negotiations were entertained．The Admiral is said to have committed an error in consenting to with－ Pekin．Fears are entertained that he may be duped by the Chinese commissioners，and the negotiations be pro－ tracted indefinitely by every artifice common in Chinese diplomacy，and a fresh expedition be required to effect the original objects of the present．The Admiral was still at of 3,650 men landed there，only 2,036 were fit for daty， chiefly owing to bad diet and want of fresh meat．The Admiral was expected to leave for Canton about the middle of November．The British naval force consisted of 20 sail been deprise exclusive of steamers．Commissioner Lin had Emperor，pleading his good intentions，but admitting his inability．He declares that he is unjustly accused of robbing the English of opium，since he has Captain El－ hott＇s petition entreating him to receive it．He admits thes maperiority of the British in war，but suggests that the Eauperor to make no concession，as the English would thereupon increase their demands；and he expresses an opinion，that our interference and blockade will draw on us the hostility of other nations．At present the external trade of China is quite at a stand．
India．－The intelligence brought by the express of this morning is generally pacific，and no event has occurred since the last dates of much political importance．Aff－ Central Asia is of a satisfactory character；and although the Punjaub is the scene of intrigues，the force stationed upon the frontier is expected to be able to protect British the tbrone An action occurred in Scinde，on the Ist December，at Kotriah，between 4,000 Beloochees，com－ manded by Nusseer Khan， 900 Sepoys， 60 irregular horse，and tro kield－pieces，commanded by Lieut．－Colone Marshall．The Sepoys attacked the position，and a despe－ rate defence was made by the Beloochees till four of their
chiefs and 500 men were slain．Six other chiefs and 132 followers were taken prisoners．Nusseer Khan escaped on foot，hut all the baggage and ammunition were cap－ prisates：© men were wounded．－Advices from Madras atate that Major－General Sir Hugh Gough was to proceed to china in her Majesty s ship Cruiser，to take the com
arces on that coast．

## HOUSE OF COMMUNS．

Monday．－The House aljourned immedinsely after ita meeting
at four oclock，in consequence of there being only twenty－nine

 levied in each during 188s，11399， 1840 ．

 Indies.-In this object Dr. Lewhivarov declared hi- com.urience,
and gave notice of a motion for the abolition of East in:ian
slavely.
Lord STanims then moved for leave to bring in his bill for the
Registration of Iri-h Voters. He comd mot anticipate opponitions Registration of Iri-h Voters. He crmbld mot anticipate opppaitions
after the unoposed introduction of the same mea-ure last ses-ion, and the sanctuon it then received in its prosress. There was a universal conviction, that the abuses of the franchise imperatively
demander orme leonlative remed. His proposal would be
mainls the same as last vear That ineasine had geme to abolish mainls the same as last year That ineasure had gone to abolish
 for the purpee of the registration, insteath of leasimg it, as at
present, a tar of the bunines of quarter sescinn, to withdraw
the questom of the taidity of rotes from election committen of the questrom of the vaidity of rotes from election committees of
 peal to a judge of assize, whu should have the :ower, not only co
allowing a mite improperly rejected, but of disallowing a vote
impro enly ammitted. He had before proposed to leave the costs
of that appeal wholly to the discretion of the judge; but, in order of that appeal wholly to the discretion of the jndge; but, in order
if provede against even a possibility of a hardh.h.p, he ad now
introduced a clau-e alic wine costs to the voter, where the ori ginal deci-ion tau ben his havour. He advertel to the Liberal
 everv part of his bill, he could cute the authority of this anso. leading ounts. He was desirons to adnpt the opinions of the
House as int mated in the divisions of la-t year, but there was
one amendment then carried, to which if it meant that a party one amendment then camied, to which if it meant that a party for life provided there was no chauge in his qualific, tion he could not accede. He contended that the wite ought to he re-
movatie from the register, on lroof qiven , the ciljector that it
ought never to have found its way thither at all. It was not his intention vintroduce any clause definine the Parliamentary franchise. That subject, he thought, could not convenien ly be decided by a majorit, if aimost two to one. The introductinn of such a definition would rai-e discordance in the House, whic
would cut him off fom the chance of passing any bill at all. Lurd Morpert said Lord Stanky had shown hirmelf so ena-
moured of the -ubject, that he had not been able to resist the temptation of introducing it again, notwithstanding the notice given by Gover, ment of their intention to bring in a bill on the
same manter. Howrver, ater the reception which Lord stanley's
bill had last year obtained, he wonld not now : and he tru-ted the same courtesy would he extended to his appeal both wars, but not on matter of fact, and not without a definition of thr iranchise. In the bill whice he intended to pro. Mr. O'CuN veli. wist ed Lord Stanley had told the House how the reisister. C th contaned he was so anxious to sweep from
cons ituency wan but 3, Sone. Wales had but itants, yet its whole cons ituency wan hut 3, sena. Wales had hut 710,000 inhabitants,
yet its voters were upwards of 30,000 The present franchise was a fraud on the Irish, for Lord Stanley was its author. Iord to knuw what the Government bul wald be. That hill ought t. evers fresh ingrance of ill-usage to Iriland was an add, itimat ar.
 the cefert- of whi h were equaliy atmited and nearer home?
He conclud disy morimg that rhis debate be adjourned till aiter Thursder; which was seconded by Mr. Hume, and supported by
Mr. O'Brien. Mr. OBrien.
Lord J. Rc
Lsird J. Resiens: the ught it remarkable, considering the party
wih whim $L$ rat Stanley acted, that he shnuld neglect the nu-
merous abuses in the Entli-h andi Scoteh registration, mernus abuses in the Eneri-h and Scoteh registration, and address
himself s. lely to the Irinh. It was a great ehjeci $i=n$ to this remedy, har it worked solely by way cf restric ion. The Roman the franchse; the present bill went to nam. . it still forther. restrictions, "You may give a vote to every lul. houveholder, nut the first bouk of Homer:" It was by this tendency toward re. the "burgesses." \&r., had been narrowed to some dozen people arit the judges, hower er ouncientiou-ly, manitested this bar again-t the fic i i is woter does nut prevent the entrance of th. gethuine nne. He then enlarged on the difficulty wrincu frequent aupedis misht impose on the voter, to the great discou-
racemment of hinn and his neighours. The question c uld not be th r.dishly or justiy settled withnut a se 11 mant of the franchise
also. T..e, ffect ot ihis bill would be to exclude all but those who

any R
any R uixay Bill, be nosdified by the substitution of five per cen
for ten The motion was on, poed hy Mr Labnuchere, Mr. Wa
burtm, and Mr. Brotherton, and rejected by a majority of 141 to 1
 with the idolatrous ceremonies practined in that country. Th the Pre-itlency of Madras, the inatructions sent out in 1833 ha
been fully carried into effect The attendance of Christian trion at heathen festivals, and of Bindons or Mahometan, at thove of
either faith, which would wound their prejucices, was di-pensed ither faith, which would wound their prejudices, was dispensed
with; and if any instance the orders issued to this effect had
bend dinegarded, steps would be taken to ensure obedience for
The Artorvex Gieveral, in reply to Sir E. Wilmot, stated that in his measure for the improvems int in the administration of justhe law relating to the qualifece to anding registration of parlia-
mentary voters in Ireland He first stated the points on which he was disposed to agree with Lord Stanley. He was ready to abolish
certificutes as a test for the right oi voting, because they afforded facilities for personation, and afforded no check upon the con qualifed He was willing also to allow of a periodical revisio of the registry, and that that revision should take
year instead oi once every eight years, as was now
would also allow an appeal both to nhjectors and
but before he consented to these changec, he mulst firs hare fraichise clearly defined. Nor could he agree to deprive the Irish peasant of the facility he now enjoyed, of a yuarterly recours
to the court of the assistant barrister. When once the voter placed on the registry, he was willing to allow the title to the
franchise to be annally called in question for any matter an nulled or altered in the original qualification; but
inguiry exacted by the Irish Reform Act, tor he conld 1
with the nolle lord's scheme, to allow a right once recog
be yearly called into question He should prese recognised to of a new court of appeal, and he:e he would retain the same pro Attomey-General, and the same that would be found in the bill The new Appeal Court would consist of three barristers, to sit at Dublin, and to be appointed by the speaker of the 1 rouse of Com-
mons. He now eame to the yuestion of the franchise. On this subject the opinions of the judges and assistant barristers wer also divided; nar, from the speeches of the Duke of Richmond, Lord stanler, Lord Melboume, and the Marruis of Lanndowne, it appeare, that the very framers and authors of the Irish Reform noble lord then detailed the results of a carefui inquiry that had been made into the state of the constituency in a variety of poor many indivituals were fouth in posisess on of the franchise with out being fairly entitled to it. He entered into voluminous sta.
tistical detai:s to show, that while the population of Ireland was on the increaie, the const:tuency had heen rapidly declinng: and it was his intention to make the franchise dependent on the valu wished to fix the standard of the franchise at the same amount a
which the Poor-law fixes the liahility of the rate standard would be a 5 l. rate: and he woull propoye that th at five pounts a year, prowided the possemsor hail anl interest in
 sible for the moble lord to pass his recristration bill in the present
session, a tuled as it was by a species of posticript, which comprisel all the characteristics of a new Reform Bill. I'e felt much satisfaction at the confirmation given to his own statentents hy
the statistical details read by the noble Secretary for Ireland. H appealed to the noble Secretary for the Colonies to say whether
Lord (rey's government, wiren framing the Irish Reform Bill, had not based the franchise on property rather than on popula
tion. It had heen thought they hat gone far enough when they gave the franchise to 10l. householvers in connties; but now it was proposed to deluge the
tion of the noble lord's bill, which he wrould teave to tell its I ord Ho
concurrence to so much of the measure as related to his hearty fication of roters. its friendly feeings towards Ireland, by passing a bill whic:
would be received with satisfaction by the pe ple of that comntry He made a powerful appeal to the Conservative party, callin ance of an act of justice. They dint not know in the present state of Europe how snon they m:ght have occasion f. $r$ Ireland, and it "as now for them to make their choice between the curse of Ire-
land, and Lord Stanley's bill on the one ide, and the blessings of
Ireland and Lort Mr. Shaw was not surprised at the satisfaction of the hon. and frage : it was certainly household cuffrage. Iris'. Johen O'Connell, Mr. Hume, Sergeant Irish members addressed the Howve, those on the Conservat sue unamimonsly condemning the adoption of so low a standard the Liherai qi.te, with the same unanimity. expressing their :ati, faction with all the leading principles of the bill.
Leave was then given to bring in the bill without a division.
better regulation of railvays. The soie cijject of his bill for the be to increase the afety of railmact travelling; fut thoush he mivht he for the interest of the public, yet he shonid not tike away the responsibilty which now restes on the railrod $p$

 turned with consideratle change, and winter has again re the wind suddenly shifted 10 N.E., and the thermometer from that time began to fall ; before milnight the roads and paths round the metropolis were completely hardened, and the pools covered with ice. On Tuesuay some ice which the recent thaw had not dissolved in Regent's-park and Kensington-gardens, Lad become sufficiently strong to induce skaters to benture on it. ()n Wednesciay skating was resumed with vigour on the Serpentine the ice havin materially increased in strength through the intensity of the previous night's frost, and during the day the number of skaters amounted to nearly $\overline{5}, 000$; in the Regent's-park there were about the same number. There were a few immersiuns, but no material accident nocurred The Humane Society, who discharged all the isemen about a week since, under the impression that the skating season had concluded, have found it necessary to re-engage then: and every other preparation has been made fur a been extremely dangerous from the snow, which, from the low temperature at which it fell, presented a thick sur cult, and many severe accidents have oceurred. The Hack ney, Lea Bridge, and Walthamstow roads have been very
dingerous; and the coaches from the suburbs have been obliged to have additional horses. The malls have been greatly delayed in their arivals from the country; the
guard of the Deconnort mail reports that the snow haaccumulatell to some deptir in paits of Salisbury Plain and all the western coaches have been too hate for arrival fallen comparatively linht, but in some paris o: Kent there has been a considerath fail; at Wy ye ani at sitiogbourne the snow was above the middle of the horses.
Fics. On Saturday morning a fire broke out in the minises of hear the Ames, For sume tims it threatened minster, near the Almonry. For sume tims it threatened number of engines arriving, the proyres of the flames wa.
sept in check. In spite of erery effort, they e.ntinued to rare with great furs until about 0 o cloch, when the roor of the workshops and watehouses ifll in, all the propert been destroyed. Mr. Ames is partly insured. The fire is supposed to hase been accidental.- 1 fire broke out on the same day on the premises of Mr. Bud1, grocer, Mile the family, but no lives were lost, and no accilent cecurred The premises were entirely destroyed.-On Minday night ocurre in the premises of Mr. Nieer, carpenter, Richmond. The whole of thee premises, with
the stock and dwelling-house, were entirele destroved, and the stock and dwelling-house, were entirety destroyed, and the same evening a stach of hav cause is unknomn.-On bers, butcher, at Ealing, was discorerel to be on fire. portion only was saved. From the freguency of fires of the ae's of an incendiary. - On Tuesuay, at 1,1 oclock, fire broke out on the premases of Messrs. Puinter, cabinet nanufacturers, Finshury-parewient, when cupied by it was almust an acre in extent. The fire, it is supposed, arose from the builing over of some vamist it infammable properties of the varnisin soun rommunicated to other materials in the room, when it became evidea that no effort could arrest the proyres: of the flames, which rushed from floor to floor with amazing rapidity, and, pass ing out at the windows, carried them across the street,
whick is about 200 feet wide. Various engines from the
stations of the Fire Brigade arrived, but water was nut
supplied with promptitude. Long before eleven the whole supplied with promptitude. Long before eleven the whole was their power, that many persons in Chiswell-street were side of the pavement the shopmen were compelled to fling buckets of water upon the shutters. The house adjoining the corner of Frasbury-square subsequently eanght fire, as well as the rear of the houses to the south in Cross-stree, and as the wind was blowing the front wall of the premises fell down. An immense mass of dense and heated smoke instantly arose, and as soon as it passed away the wholenteriong a dreadful scene, the house being leved to the ground. As it was impossible for the engines to produce any effect upon the building, the men exerted themselves to prevent the flames from causing further damage to the
adjoining houses. The premises occupied by Messrs. adjoining houses. The premises occupied by Messrs. Painter were built about 40 years ago, by Mr. Caslon, Lackington, the celebrated bookseller, and upon his death were taken by Messrs. Painter, by whom they have been held about six years. The destruction of property has not less than 20,000 ., but all the parties are amply in sured-Since the occurrence of this fire, the firemen and engines have been in full operation both day and night No fewer than eight fires took place on that day in the metropolis, and property to a serious extent was consumed ceived of one at Ratcliff. It originated in a small house tenanted by a waterman, who is aot insured.- In the even ing of the same day a fire happened in Hoxton Old-town, and was attended with considerable damage. It is supposmates have been occasioned by a good supply of water, the flames were confined to the upper part of the building.-About the same cime another sumed the front room of the second fioor.-Among the fires that occurred on Wednesday, the following were the most extensive:--On the premises of Mr. Hodgson, turner, on the premises of Mr. Reid maker, Leadenhali-street ; at Mr. Ahmpor, Montagneplace ; and at Mr. Howe's, tailor, Berwick-street Acill, bents -On Saturday night, a fireman named Macneiln, belonging to trongate-stairs, hailed a waterman to row him oft to the ship; but as he was intoxicated, and had no money to pay the fare, the only waterman at the stairs refused to and plunged into the river. He floated on his back some distance towards the inside steamer of the tier, when, mistaking the set of the side, he was drawn towards the stern He discovered his mistake, but too late to save himself, and while be was shouting "Huzza!" he was drawn under the tier and disappeared. The crew of a police galley immediately the out the the body was not found afternoon of the same day, a serious accident occurred of afternoon of the same day, arasenous accident by the brig Earah coming into collision and sinking the bark Vesta, from Sunderland. It appears that the Vesta was lying at aucher southward of mid-channel, waiting for the flood tide to proceed up to L ondon. The brig Was bearing down channel, and came in contact with the ald out effect, and she went down in deep water.-On the same day, as a van belonging to Mr. Bates, organ-builder, was proceeding along Moor-street, Seven-dials, containing a valuable organ, it suddenly broke acrozs, behind the fore thrown violently to the ground, and had both legs broken. The organ was dashed to pieces, and one of the horses injured.-On Tuesday morning as a man was throwing up rubbish at the base of the tower of Old Bartholomew s Church, near the Bank, a large stone fell upon his head
and fractured his skull. He was convered to St. Thomas's Hospital, where the case was promounced hopeless. It appeared that the men above, in pulling down the tower, mass accumulated to such a height that one of them rolled out of the window of the belfing, and fell upon the head of the workman
Inquests.-In the early part of the week a rumour preint that the family of a foreigner, named Azoni, residing in Charlotte-street, Fitzroy-square, had been poisoned. officer of the district, he institated inquiries into them. It appears that about a fortnight since, Mr. Azoni, who registered as from consumption. Two days after, the A sistrar was ashen for a certificate for the burial of Mr. Azon's sous, a hoy shot ten years of age, who was stated
to have died of a similar disease. The certificates were granted, and tLe burial took place in the Tabernacle, Tot-tenham-court-road. Subsequently Mrs. Azoni and her two remaining chiduren became so seriously ill that it was deemed advisalle by the lodgers in the house to have them were treated as persons labouriur under the effects of some narcotic poison. Ali that could be ascertained leading to a suspicion that the family Lad been poisuned, was that they had been lately in the habit of drinking water from a copper, which might thereby have become deleterions.
The coroner ordered the water in the copper to be anaissed, and it proved penfectly pure. This rendering the
circumstances of the case more mysterious, the coroner
issued his warrant for the disinterment of the two bodies, and on Saturday, in pursuance of that order, the exhuma
tion took place in order that a post-mortem examination might be made. This process was performed on Sunday and the contents of the stomach were analysed ; but the result of the experiments will not transpire at present. urther inquiry.-An inquest has been held before Mr. Baker, at Kingsland, on the body of Amelia Chalkley, aged 1t, found on Saturday in the Regent's Canal, with several bruises on her person, and her left arm broken near the shoulder. The landlord of the Stag's Head de posed that deceased was his niece, and had been his ser out to deliver two pints of beer in the neighboarhood, and did not return. Witness became alarmed at her absence, and on inquiry at the houses, ascertained that she had been there. Not hearing more of her, witness had the canal dragged, and on Saturday the body was found by the side of the towing-path, in the condition described. Deceased, When she left his house, was in perfect health, and talked about business she had to do when she came back. female who knew deceased, stated that she met her about the time named in a street which leads from the cana into Kingsland-road. She was not then carrying beer but had a small parcel in her hand. The coroner remarked pon the suspicions natare of the case, and advised the jury to come to a decision which might leave the case open
for future inquiry. Verdict-". Found in the Canal, but how she came there, there was no evidence to prove. -An inquest has been held at Bermondsey, respecting deceased was in the emplog of Messrs. Caristy, bat manufacturers. On Wednęday, she was at work at the manufactory, when she laughed at her sister before one of her companions, and suddenly fell from her seat. The coroner inquired if she had been pushed down, but wit nesses declared she had not, and that when they ran to cr assistance she had the appearance of death. A sur geon was called in, and found her insensible; she died oon after. He discovered no mark of violence on the body, and had no doubt she died from natural causes rising from disease of the heart. Verdict, "Natural death." wo in on the bodies of Mrs. Bostell, aged 59, and Mary Ann Kennedy, aged 11, Who were burnt to death from their
clothes igniting. Mrs. Bostell was the wife of a plumber, Iothes Ignington, and had been for some months in a deli cate state of health. Her clothes accidentally became ignited whilst she was sitting at the fire. In the other case, the parents were poor people, living in Cripplegate. On Friday, between school-hours, deceased and two other girls were in the school-room, having been desired by the ome of the sebol regulations, when the fenthes caugh fire and she was frightfully burnt. Verdict in both cases, "Accidental death." - Two inquests have been held at Guy's Hospital, on persons who died of The first was on James Wilkins, a city policeman who died from the effects of a broken leg. It ap peared that, on the 13th ult., deceased and other police men were returning from might duty to the station. In ceased was knockel down, and the wheel passed over hi right leg. A constable stated that he was with deceased at the time, and heard him afterwards say that the snow on the ground prevented him hearing the approach of the cart. The driver of the cart was taken into cus tody at the time; he was perfectly sober, and deeply amented the accident. Witness considering rence an accident, allowed the driver to go at harge, but Lord Mayor, who remanded the case until the result of the inquest sbould be known. Verdict, "Accidental death "-The next case was on the body of Johann Lynch. On the 23d Dec. while pulling a piece of wood rom a hedge, she slipped down on some ice and broke both bones of her right leg, of which injuries she died od Sunday last. Verdict, "Accidental death.
Statistics of the Seamen's Haspital.-At the recen meeting of the governors of this charity, it was stated tha within the past year 2,064 patients have been admitted and that 53,471 persons of every country and creed had been relieved since the foundation in 1821 . Of those who have recovered, it appeared that, referring to classification of nations, there were Englishmen, 22,440; Scotchmen, 38 ; Russians 460 . 261 ; Frenchwen, 151 ; Germans Danes, 539; Swedes and Norwegians, 1,139 ; Italians 09; Portuguese, 318; Spaniards, 156; East Indians 493; West Indians, 687 ; British Americans, 438 ; Cnite Greeks, 19 ; New Zealanders, 21 ; New South Wales, 18 South Sea Islanders, 133 ; Chinese, 23 ; Born at Sea, 99 -Total, 38,281. In what Service Employed-Her Ma jesty's Navy, 2,127; Hon. East India Company's Ser--Total, 38,281.
Altempted Escape of Two Femules.-A few nights ago when the officers of the House of Correction had collected together the female prisoners for the purpose of being Giles, who had been convicted for choplifting and sentenced to six moaths' imprisonment, were missing. It apears that the prisoners conceated themselves in Water-claset until opportunity occurred, when they conimenced operations, and, phacing some pails over exch other against a wath contiguous to the governors garden,
they succeeded in scaling the wall, and descending into
the garden. Here, however, their design was frustrated by high walls, and they were compelled to wander about the grounds until the watchman employed in the prisor detected and delivered them again into custody
Improvements in Lambeth.-A public meeting bas been hold in Lambeth for the purpose of promoting the free use or Waterloo, Southwark, and Vauxhall Bridges, and or taring into consideration the best means of effecting mprorements in that borough. Resolutions having been public public generally, mould derive if the toll upon those made for a reasonable proportion of the sum of 350,000 b, granted by Parliament defray the expenses of making thuroughares at the surrey side of Westminster and Vanxhall Bridges. The Chairman said that the grant had already been expended in improvements, and suggested an amendment, "That in the even of any future grant of money, arising from coal-duties, or otherwise, for metropolitan improvements, a petition be ticipate in its benelit
Sewers Rate.-A special jury was empanelled on Saturday for the purpose of trying an appeal on the part of the Royal Hospital, Chelsea, against the assessment of that building to the sewers-rate. Witnesses were called on each side, and in the evening, the case having occupied upwards of ten the jury returned a rerdict in farour of the com missioners, and confirmatory of the presentuent.

Mortality and Sickness.-It appears by the official table of mortality for the metropolis that the number of death existered for the week ending January 23 was as follows -Males, 570 ; females, 559.540 persons died of small iously had an attack of ning small pox. four had been noculated, eighty raccinated, and $4 \not 43$ had not bee raccinated.-A paper in reference to the prevalence of small-pox in the metropolis at the present time was read few evenings since, at the Medico-chirurgical Society appeared that during January there had been more patients admitted into that institution than in any month since the formation of the establi-hment, a period of nearl one hun usual law of epidemics, the present one, which commenced usual law of epidemics, the prescat one, which commences in October last, might be expected to teack its greares beight in May or June next, and from that periodetwoul gradually dechine. With reference to the forective in that of enatracted small-poz fter yaccination eeven only died; while of those who were unprotected forty-five per cent. fell victims to the disease.-Influenza in a very severe form has made its prearance, particularly at the eastern parts of the metro disorder

Stockport.-A melancholy aceident, attended with the loss of three lives, occurred at Holmes Chapel, on Satur day. At that place, a viaduct is erecting over the rive
Dane and the adjacent valley, somewhat similar to the one Dane and the adjacent valley, some what similar to the one
at this town. On Saturday some workmen were pushing at this town. On Saturday some workmen were pushing a waggon loaded with bricks along a temporary bridge whole fabric fell into the one the beams brore, sorkmeric eninto the river, carrying ang bridge at the time. Three persons were killed by the materials falling pon them, and others seriousiy injured.
Liverpool.-A daring robbery of notes and securities to the value of between $1,500 \mathrm{l}$. and $1,600 \%$, was committed on Saturday last, about 7 p.m., when, as a gentleman was proceeding along Gill-street, in this town, he was accoste by two men, of whom he is unable to give a description who knocked him down, and while on the ground robbe him of a pocket-book, containing Bank of England notes 800l. more, with which they got clear of before he could raise an otco or procure has been offered for the apprehension and conviction of the thieves, and the recovery of the property.-At the police olice on Thursday, there was brought up a red-faced, good looking girl, about 18 years of age, dressed in sailor attire. Her name is Ann Blake, but since she assumed the dress of a male, she has called herself John Blake. She belongs to Ballyask, county of Wexford, and was in service in the same county for two years, from which she was dismissed about four months ago, for being absent longe ther, but having quarrelled with her, proceeded to the town of Wesford, and dressed herself in men's clothes From Wexford she proceeded to Waterfort. whe:e she contrived to support berself for three montas by begging from house to house ; anter which shet enterea as cooz thi boart the Elizase of Portaferry, to gotyhead from stress of weather about three weeks since, the captain sent her on shore at that, port, as he was short of provisions. She
walked to Chester, whence ste ubtai:ad a pasiage by the packet to this town. Hinte walking along one of tee quay: a police-officer thought he observed surnetaing tealing fromo subject. She said the bulk was occasioned by her having loaf of bread in her bosom, but the officer put in his hanct, and discovered that she ware woman she was attire, and in order to guard against subpicions ath

Asylam when brought before the magistrate, who ordered
her to be sent to the parish office.
Droiturich. - In inquest has been held on the body o Mary Ann Patrick, found dead in a brook at Wirhbold, as described in our last number. The evidence did not canfirm the suspicion that deceased had been murdered. On tion, deemed it prubable that she had fallen into the brook in a fit, ard $\pi: 5$ drowned, as the body indicater? the general appearances of apoplext, and the forunds had evidently not been produced by a sharp instrument, but probably by a kick from a borse's foot after death. As horses are in the habut of passing tirrouth the brook. this conjecture usually great, that on removing the clothes, the surface of the chest and anjacent mate rere perfectly hlancherl, while the upper parts it the bexdy still retainad their thorid ap-
pearance. The stomach by this pressure was forced much pearance. Ihe stomach by this presure was forced much proper place. Picasurs of this kind would increase the drowned, but how deceased got into the water there was no evidnce to show.
Sheffield. -The examination of witnesses in the adjourned inquest upon George Belk, whose homicide ras announced in our last. is now concladed; the jury have was comnitted to Yoik for tral. His wife was dismissed Was committed to loik for trial. Mis wife was dis

Northampton.-John Haslock, the clerk who recently absconded from bis employere, Messrs. Whitworth, bankers of this town, with qpwards of 800l., is in custody. He a feigned name, and has since been given up.-The parish church of Brisworth, long known as a fine specimen of the Anglo-Roman style, has recently afforded great interest to antiquaries, by the discovery of the semicircular whole circuit of the original wall, which desceads from the present floor to a depth of four feet, where it.encloses an ancient cement floor, has been laid open; and measures are in progres: for rebuilding the chancel on this original Hentimetion
morning, as a son of Mr. Roberts, of Haddon, was riding towards Stilton, he was met by a young man on the Great North road, who seized the horse by the bridle, pulled ous a pistol, and, presenting it, cried, "Deliver your money." him to alight, and mounting the horse, rode off, saying, "If your facher wants his horse, hevll find it in York toas he could, and his father mounted one of his best horses and started two servants in other directions, while he pursuen the hifhtayman en the York road. When he wile befure hinn, rilus at a brink canter. He son came parent from lois manuer that he had not the least suspicion who Mr. Roberts was: and the latter, judging that two horsors at the -an a time. determined on rading with hima until te reache! -intord, where the folice were gether, where he cullured the thief, and charged him with felony. On semehing lim, a pistol loaded with ball. and sewerdi looze bullets, flints, and powder, were found
on him. He was well dressed, and under twenty years of age. On Monday he was committed for trial.

Burton.- A fatal accident has taken place at Doveholes, about midway between Chapel-en-le-Frith and this town. The day being extremely cold, two youths, with a man, ing themselves, when the stone upon which they stood, Which was niled up amb in the act of heing burned into lime. suddenly sumk, and the two boys were instantly
closed up in the fiery vortex, without the possibility of assistance. The man with great difficulty extricated himself from his perilous situation without sustaining material injury; but the bors rere almost consumed to ashes before any portion of their limbs could be recovered.
Durham.-Bious and Williams, who were found gnilty imprisonment, have been liberated, their sentence having expired. It was announced by placard that they would be escorted from prison to the Sands, where a meeting
would be held, at which the working men of this citywere would be held, at which the working men of this city were the gaol, and haring received the prisoners, escorted them fo the Sands, preceded by a band of music. The number Houghton they were met by a small party, when a few was displayed. mercy, at the recent court-martial on Thomas Hobbs, ghnmer of Har Majesty's packet Pigeon, for striking the
master. the sentence has been commuted to transportation Sor life, by arder of the Lordi of the Admiralty.
Brian - Dn Thursday monning a purse, supposed to be thit of Mra. Shedden, whose marder was mentioned Churci. Kingedewn. on the road from Hortied to the prisoce:" resteace. It has beert eonfrdently stated in
this city, thit we prisor-w had mate a confessiun of the Murus to a macerby a lauy living in the next house, has deposed that she heard footsteps in Mrs. Shedden"3 house about 3 p.3.; but the prisoner's friond have sworn that he was
that he is not guilty. It is also stated, that two suspicious characters, ballad-vendors, were seen aloun grioding a lathing.hammer, the deacription of weapon grisding a lathing-hammer, the description of weapon
with whirh the surgeon thinks the murder was committed, at a grindstone on the roadside, at a blacksmith's shop, within a few hundred yards of Mr. Shedden's residence. This circumstance would not have been remarkable had not the man been turning the grindstone himinf, and apparen produced in this cits, by the intelligence that Houston Wallace. charged with the destruction of the I,ucy, has been secreted in the neighbourhood. Our police report in this day's Chronicle explains that he is charged with voyage fiom this port and Llannelly to Valparaiso, for the purpose of defrauding the General Maritime Insurance Company. The ressel in which Houston Wallace arrived, is the Margaret, Captain England, from whom the officer learned that he had left the vessel in a skiff in
King road. On his arrival, Wallace no doubt heard quite enough to induce bim to act cautionsly; he was, however, traced to Queen-square, where he had applied for Bush lon, in which he procured a bed. The officer then traced him to the train for London, into which he went on Sunday evening, so that in all probability he is now in the metropolis. It was stated on board the Margaret, that Honston Wallace went to see the Captain on Susday retired quickly, but never repeated the visit; he appeared o be much discomposed, and had apparently lost every thing by the shipwreck of the Lucy, except an old watch. Handbills and placards offering a reward of 100l. for his apprehension have been sent to all the seaport towns, and the insurance companies have spared no pains or expense in the search after him.

Gloucester. - It is stated that during the lite frost, a gentleman an arley attocked the blaness of the rooks; and such was the contents was carried off before they could be forced to relinquish the attack.
Bury.-A fatal and distressing accident occurred at Cavenham on Saturday. A party of five gentlemen were
shooting on the estate of H.S. Waddington, Esq., M.P., shooting on the estate of H.S. Waddington, Esq., M.P., went off whilst in the act of uncocking it, and the whole charge was lodged in the knee of the Rev. H. Cholmeley, who had stepped across to look at a bird which another of the party had remarked was a red-legged one. The unfortunate gentleman never recovered from the shock, and expirer on Sunday. An inquest was held on the body on hatever could aitach to Mr. Jeffrey. whatever covid alcach M. Jeirrey. A surgeon deposed to undergo ampolation, which alone could have saved his life: be had no doubt that if he had undertaken the opeIffe: be had no doubt that if he had undertaken the ope-
ration the patient would have died under it. The jury ration the patient would have died under it, The jury was rector of Troston, in this county, and between 50 and 60 years of age.
Ulterstune. - On Sunday morning Mr. Robinson, plumber, and Mr. Ormandy, left this place in a gig, to nformed the sands to Cartmel. On the road they were of the tide. They therefore kept the torapike road throughout until they arrived at Cartmel. In the evening. they left that side of the Sands, on their return to Ulver stone, about six o'clock, intending to cross the Sands on their way home, when, it is supposed from the situation Which they were found, they must bave attempted to cross much below the ford, and got into a place where the channel is deep. They were both drowned, somewhere near the place where the two Kirbys and Mrs. Parker were drowned last jear
Rirkdalo.-An ingenious attempt to escape from this gaol was made by a gang of burghars on Thursday, by cutting ont part of the panel of a door. Through the ppening thus made, the hand could be passed ; so that th prisoners could reach the padlock. They then took th of the windows sufficient lead to make a key. The prioner who was the author of this device let himself out of his cell in this way on Thursday, and with the same key opened the doors for the other prisoners. They succeeded in getting on the roof, and took the blankets of their beds with them to make a rope; but from some reason not explained, probably from some part of their machinery being incomplete, they returned, intending to renew the attempt on the following night. In turning the locks of the cells, the leaden key gave way; the turnkey nest morning of course discovered the proceeding; and separate cell.

The inquiry in the case Tenjamin Cooper is still in progress. Holme has been committed on the capital charge, and the Hardwickes and Shaw as accessaries before the fact. It is expected that
further disclosures relating to the tom-outs will be made the trial.

Wales.-On Sunday morning between three and four clock a smart shock of an eartbquake was felt in Carmarthers, accompanied by a visible tremor of the ear:h. and arabling noise similar to the soand of distant thunder. A like oncurrence was felt at Pontantwn on the same morning; and it seems to have passed onward en Llanstephan and the Ferry Side, as shocks were felt a tremor accompanying them being considerable aad occa-
sioning much alarm. Similar shocks were observed abone the month of November last, in the neighbourhood of Llan stephan, but of so slight a nature that they did not attrect particnlar notice.

## IRELAND.

The Jesuifs.-Government has determined to take measures for ascertaining the number of Jesuits throughout
Ireland ; and Lord Morpeth has issued a circular to the Ireland; and Lord Morpeth has issued a circular to the clerks of the peace, in reference to the subject. It is however stated that although bound by the provisions of the hooks of the rest the peas. instance in which the society thought fit to comply with the intentions of the Legishature.
Repeal.-It is sated in the Cork papers that the Lond Lieutenant has cancelled the appointment of Mr. Roche High Sheriff of the County of Cork, on the ground of his declining to give any pledge with regard to the present
excitement on the subject of Repeal, of which he is a well excitement on the
known advocate.

The Chaplaincy of St., Nicholas.-In consequence of the decision of the Queen's Bench, that Roman Catholies, notwithstanding the existence of a charter, have no right to vote for the election of a Protestant minister, the Rov. Tresham Gregg, who was presented to this preferment by the Protestant parishioners, is now entitled to receive the revenues of the chaplaincy; but the Archbishop of Dublin has refosed to grant him a license to preach within his diocese. It is stated as the reason for this refusal, that Mr. Gregg has made himself conspicuous in discussions on polemical questions at the Rotunca and other places.
Rot in Sheep.-Daring the late cold weather Ireland wa not so severely visited as other parts of the United Kingdom, the snow nowhere having fallen so deep as to offer serions obstruction to the traveller, and in the western countion scarcely in sufficient quantity to cover the surface. But the effects of the frost, which for some days and nights was intense, will be long felt; for it has been followed by a destruction of sheep more extensive and alarming than has beea known since the winter of 1817. Two seasons of constant rain had produced unsoundness, which the excessive cold of the month of January has converted into a rapid mortality. The markets in the province of Connaught are crovided with cart-loads of tainted matton, which is offered for salo, in many instances, at two-pence a pound. A panic is spreading amongst the farmers, and apprehensions are entertained lest it should affect the local banks, whose paper constitutes the priscipal currency of the province.
Mrvolers.-A respectable farmer, named Phelan, of Kilmacow, by four other farmers from the neighbourhood, who are now in custody. It appears that a quarrel arose during the evening, at a public-house, between the prisoners and a man named Longhnan, and that in consequence they were all turned out of the house. Loughma took refuge in the police barracks, while the prisoners found in the road near the public-house, and dying from the injaries received. It is supposed that the men fell upon him, mistaking him in the dark for Loughnan.-A farmer at Glenattucky, holding about 10 acres, was retraning last week in the evening, when he was knocked down, thrown into a ravine, and his head nearly severed from his body. He was a respectable and quiet person, with a detection of the murderers.-Suspicions are entertained that the Rev. W. Downes, whose death, last Christmas, was attributed to a fall from his horse, was asomosinated. It is said that he receired a letter reqnesting him to come to the spot where he was found dead; and measures have been taken to investigate the case.
The Weather in Dublin.- Por several days past the snow has continued to fall with little intermission, accom panied by a harsh and bitter wind from the east and north-east. The country has again assumed its wintry garb, and the state of the roads has retarded the arrival den flut ounatry mails at the Post-ounce. Tuctive of serious consequences in generating disease.

## sCOTLAND.

The Church Question.-The petition to Parliament for the total abolition of patronage, now lying for signaturo in Edinburgh, has received 23.000 names, being only form Bill, which it is expected to surpass in numbers.At an inti-Patrouage and Chartist meeting which has taken place in Dundee, a serious riot occurred, and the police were obliged to be called in to preserve order in the church. The mob assembled outside made several attempts to force their way into the church ; the migistrates and police were pelted with stones; and mure injury would have occurred if the police had not charged the crowd with their batons and compelled them to fiy. Little damage has been done to the church, but the grounds outside are somewhat injured.

Arran. - A distressing accident occurred on Saturday last at Shisken. At the farm of Feorlin, in that locality, a small school was taught by a young man, in an apartment formenly used as a potato store. One of the gables of the house guve way during the thaw on the above killed on tie spot, and seperal others severely injured.
Remarkable Occurrence. - On Monday morning the watchman at Leith had bis attention calied to a dreadful noise proweding from a stable belonging to a carter named Newlands. Beipg nnable to effect an entrance, he hastened
to Newland s howse and larought hin to the place: whets
on entering, they fornd, \& herd of six swine, belonging to
the adjoining tenant, engaged in devouring Newland
horse! The pigsty was separated from the stable by rooden partition, but impelled, it is said, by hunger, the actually tore it down and seized upon the borse. which. being tied to its manger, could make hittle resistance. So favennus were they, that it was only after assistance hal been ob'ained, and the mutilated animal dragged out of
the stable, that they were overpowered and driven from their prey. The horse was by this time in such a state The Murder on the Glasgneo Rnilloay.-Two men have been arrested in Ireland on the charge of stealing bay; the appearance of one of them corresponds so clusely with the
description given of Dennis Doolan, the alleged murderer f Mr. Green, that a person has been sent over to identify him, and it is expected, from other circumstances, that he will pruve the perpetrato

## flliscollancous.

Novel Plan for detecting Theft.-A gardener not far from Canterbary, being much annoyed by frequent offenders, resorted to a novel expedient to satisfy bimself. He had some large hedge-stakes perforated with an auger, the stakes were stolen, and a little time brought intelligence that a certain person's chimney-piece had been of the inmates. Inquiry convinced the owner of the stakes Who had stolen them, nor was the fright produced to the the room without effect.

Definition.-A schoolmaster, who was as fond of the
of his grog as his globe, was asked the difference beuse of his grog as his globe, was asked the difference be-
tween gravity and gravitation? "When I've druak five tween gravity and gravitation? "When I've druak five
glasses of grog," rep lied the pedagogue, "my gravity anishes, and the gravitation begins to operate.
Ducks reared artificially.-A person at Staplehurst. in Kent, many years ago, accomplished the art of hatching ducks, by the following artificial method. In one season he raised near 500 ducklings by means of an inconsidereggs. As they laid the eggs, he put them under a hen, which sat upon them for a week or ten days; he then placed the eggs in a stable-dunghill, and took care to turn was generally the case in a month, sometimes in a few days less than that period. He then put fresh eggs to the hen which he continued to keep constantly sitting for two
or three munths. In rainy or cold weather, he laid the eggs before a fire, which answered the same purpose, taking
care to turn them every twelve hours. B7 these means care to turn them every twelve hours. By these means
he raised every year, throngh the aid of ten or twelve he raised every year, throngh the aid of ten or twelve
ducks only, between five and siz hundred young ones. Antiquities.- A curious discovery has just been made
near Arnaval, in the department of the Meurthe, highly interesting to antiquaries. A ploughman having broken the stock of his plongh against an enormous stone, the proprietor of the field was advised to make an excavation cave, in which were found five stone coffins filled with skeletons; each coffin measured two yards in length and one yard in breadth. Not far from the same place was word "Moussa." An antiquary who has examined this coin states, that an Arab chief named Moussa carried his victorious arms into the south of France in the year 712;
and, according to the Arabian historians, Moussa intended, after having subdued France, tọ return to Damascus, to the Calif Valid his master, by crossing through Germany,
the Dardanelles, and Asia Minor, threatening to convert the Mediterranean into a large lake, which would serve as a mode of communication with the different provinces of his gifantic empire. It is known that it was Eudes, Duke of Aquitania, who in $i 24$ opposed his designs. These hame of Me comans, and this Arabian co the idea that this Arabian chief had begun to realise his plans of conquest.

The Archimedes Screv. - The importance of this invention, by which steam vessels are propelled by the perpetual screw, instead of paddle-wheels, has been so satisfactorily proved by the success of the Archimedes, that
Government is said to bave decided on adopting it in the navy. Measures have already been taken on the Continent for the construction of several steamers on the principle of the Archimedes; and in Bremen a company has been formed for the same purpose. As soon as the vessels are ready, they are intended to run regularly between that city and New York
Marriage Advertisement. - We copy the following from an Americen paper:-" A gentleman of high respectability, good business, and noble pedigree, is in immediate want of standing ; she must be a womana of very superior endowments by nature, gond habits, trilliant intellect, sound judgment, diseriminating understanding, eombined with grace and elegance of person, ease of mankers, beauty of countenance, with a truiy amiable disposition, ever thinking it her greatest bappiness to entance his telicity and add to his pleasures. And, that nothing be wanting to satisfy
the mind of tiis truly aspiring man, it must be suggested that she must be in fortune possessed of at least one hundred thousand dollars, all of which be will expect her to freely relinquish to him at or before marriage, and think it no sacrifice. Any lady in possession of all this, mast office.-N.B. As to her age he will not be particulir.
Effects of Snozo-wator. - The thickness of the ice occaLodge, Cheltenhano, to put lis gold aud silver fish fhto
tobs. The pond having been emptied of ice, was in a
short time filled again by the heavy fall of snow. The
rain which followed dissolved the snow, and the fish were rain which followed dissolved the snow, and the fish were
returned to their former abode; but such was the effect produced by the snow-water, that every fish went blind codfish : several died, and there appears very little chance of any that are living continuing to survive.

Ianteft, a Widow.-A ludicrous scene thok place on Tuesday morning, in Tower-street, at the house of Mr. advertised in the papers of Monday for a widow to superintend his domestic affairs. Before eleven the widows begant to arrive, and the street was soon rendered impass-
able br the number crowdirg towards the house, and in a few minutes Mr. Stroud's shop and parlour were filled with women struggling to gain the attention of the ariver tiser, and clamorously setting forth their qualifications for the situation. A report soon got wind that Mr. Stroud had advertised for a wife, and people flocked from all quarters to see the ladies in search of a hosband. The the dark -young, middle-aged, and old-the thin and stout, attired, continued to arrive, and were greeted and others gaily by the mob, who gave free vent to their jokes as they arrived and departed. At length the confusion became so great, that the police were sent for to preserve order.
About twelve, when the crowd was very dense round the About twelve, when the crowd was very dense round the
house, a cab drove up, from which stepped a handsome widow and her daughter, who had come from Essex to answer the advertisement; they were received by the mob in a similar rude manner, amidst cries of "Do you want hushand, ma'am?" "He's a good-looking man:" The widow and her daughter, seeing the position of affairs, immediately retreated. The widows continued flocking to the spot, and the mob increased till about three 600 females had applied for the situation.

Recipe for Speaking English - A servant girl in Edinburgh, who speke the worth so brodly as thes hardly to be comprehended even by her mistress, on being asked how she contrived to make herself understood when in service in England, where she had previously been, replied, "Oh, it's quite ensy ; ye ve nothing to do but to
leave out a' the $R$ 's and gie the words a bit chow in the middle."

Indiana Eloquence. -The following is an extract from a speech delivered by a member of the Indiana Legislature, on a bill to encoarage the killing of wolves, which in sublimity has seldom been surpassed:-"Mr. Speaker, the wolf is the most ferocious animal that prows in oun He creeps from his larking-place at the hour of midnight, pheus: and ere the portals of the east are unbarred, or bright Phoobus rises in all his golden majesty, vehole lifter of pigs are destroyed
homely in his address, chose for his text a passage in the Psalms-" I said in my haste, all men are liars." "Ay," premised his reverence by way of introduction, "ye said it in your haste, David, did ye?-gin ye had been here, ye might have said it at your leisure, my mon.

## SATURDAY, FEBRUARY 13, 1841 

Tre newspapers inform us that, in consequence of Government having determined to grant a Charter to the New Zealand Company, Lord John Russell has accepted an invitation to dine this day with the Directors, in celebration of the event. We hail with much satisfaction this recognition of the importance of New Zealand ; and we trust it is the forerunner of a series of judicious measures for the government of a colony which bids fair to become, at no distant period, one of the most important of our foreign possessions.
Situated in temperate latitudes, well wooded and watered, and broken up into a varied surface by mountain ranges of considerable elevation, New Zealand is free from the terrible droughts which form the greatest obstacle to the prosperity of the settler in Australia. Inhabited by a fine and hardy race of men, as well adapted for husbandmen as the Scotch, and willing to be so employed-very different from the wretched aborigines of New Holland-these islands contain within themselves a supply of agricul tural labourers, and, to a great extent, secure the setther from the difficulties of obtaining good servants in colonies, whether penal or free, where all labour must be European. The moist and temperate nature of the climate of New Zealand is indicated by the numerous Cruciferous plants of great beauty which it contains, -by its Gaultherias, Brambles. Hex, Veronicas, and Fungi, which would not thrive in countries subject to periodical heat and drought; and even in the northern island the summer temperature is like that of England. We to-day publish a letter from a correspondent who has lately visited the northern island, and who regarded it with unprejudiced eyes; and we must confess that all the information we have been able to collect relating to this colony leads us to the conclusion that no place offers a more flattering prospect of solid and early advantage to an English hus. bandman. It is probable that the southern island will prove even more cultivable than the northern; and We understand a body of settlers, among whom are men of birth and education, have, in fact, proceeded to establish themselves at Port Lookers, on the east of the southern island.
The bay of islands at the northern extremity of New Zealand is the well-known missionary station; but it does not appear to have been selected for colonial purposes, and we have reason to believe that very sufficient reasons have led to its rejection. We mention these things because we know how interesting the subject of emigration is to many of our country readers; and we are anxious to direct their attention thus early to the land where they have most to hope and least to fear.
It is, however, in part for the purpose of calling the attention of Government to a subject of great national consequence, altogether independent of speculations about emigration, that we have to-day adverted to the subject of New Zealand. The finest timber in the world for masts for the Navy, especially for line-of-battle ships, comes from New Zealand, and, in fact, can be obtained nowhere else, except in the United States and in Nurth-west America. How precarious are our means of procuring such timber from the United States must be obvious to all who look abroad into the political world; and it is not improbable that ere long Virginia may be closed to us. Vew Zealand and North-west America will then become our only source of supply. There is much fear that the Kawrie Pine of New Zealand is by no means so abundant as to justify our regarding the supply as incxhaustible. It is understood to be of slow growth, not collected in foreste, but scattered over some parts of the country in
solitary specimens. Such trees will soon fall beneath the axe and fire of the settler, unless protected; and we earnestly recommend to the consideration of the Colonial Government the necessity of devising some means by which they may be secured for the use of plenty, adapted to the wants of the settler, although not to those of the shipwright; and that would be a short-sighted policy which allowed irreparable national loss to be sustained from an unwillingness to incur expense, or from an apprehension of unpopularity.
Of this at least we may be assured, that if the supply of such naval timber from New Zealand and the United States is interrupted, we must fetch our masts from the mouth of the Colombia.

## ON THE ACTUAL STATE OF HORTICULTURE,

The progress made in the science of horticulture within the last seven years is traly astonishing, whether duced, the stimulus given to improved methods of cultiva-
duantity dion by means of horticaltural societies, or the interchange of ideas which has taken place through the various periodicals devoted to the art.
If there be those who think that publications of the
kind above referred to have contained much of light and irrelevant matter, and some repetition, the onght I conceive, on a more full consideration of the matter, to be led to think that although such has been the case, yet even which govern the art in its physiological character are, as it were, few and simple; yet the application of principles and controlled, in a very eminent degree, by the great variety of soil, situation, climate, and I may add, objects, of those engaged in tbis lovely pursuit

Landscape gardening has come in most decidedly for its share of improvement. That vague, indescribable sort of
thing called a slurubbery in former times, and which has rery aptly been compared by Gilpin and others to "a snake with his tail in his mouth," has given place generally in modern gardening to picturesque masses and groups; presenting endless intricacy of outline, and, of and I hope I may say, still increasing taste for arboretums, will, before long, by exhibiting and contrasting the varions forms and coloars of trees in the most perfect state of maturity, much increase the resource of the landscape gardeners of the future. The splendid accessions to the Phe finily will alone produce wonders in our scenery
when once their merits, and more especially their degrees of hardihood, are ascertainel. Ind here I may suggest to my practical brethren, that those who may have an opphr-
tunity of testing the new Mexican and Himalayan kinds in the course of the present winter, should furnish informaAnd nowing them to the public
And now I may, with all deference, offer an opinion of rinced that shallow and somewhat light soils feel conadapted to this end ; presuming, what will bereadils granted that the prime object is to obtain well-ripened wood. I have latterly (from repeated observations of my own, as well as by observing what has been done in this respect by our best cultivators) become so perfectly convinced of this, that I have for two years planted all my Peach-trees and Flemish Pears on mounds of stone or brickbats-the By this mode, however, be it une centre of the mound By this mode, however, be it understood that old and impure soils will not do-nothing but pure maiden loam can be depended on, which in the case of fruit-trees on shallow borders should be of an unctuous character. For my own part, I subscribe without hesitation to the opinion that a comparatively small quantity of soil is sufficient, provided it is pure, and the surface roots are duly preserved. Trees than trees on the old plan; but when onee growing has fairly commenced, they certainly grow more freely, and, of courte, can better bid defiance to insects. Besides this, there is altogether an earlier maturity: the whole volume of roots lying so much within the sphere of the sun's action, is of course earlier warmed by the increasing heat of the early summer; their growth is completed, or nearly so, when deep-rooted trees in rich soils are in their highest
degree of luxuriance, and the drought of August, searchdegree of lusuriance, and the drought of August, search-
ing in a considerable degree the mass of soil, teuds, of course, to lessen, to a great amount, their absorntion of sap. However, as the limits of this paper will not alluw me to say more on this head at present, I shall be happy at some future period to furnish a more complete account of both root and top management, in connexion with the princlple of acclimatising as pursued by me.
The flower-garden has not been forgotten in the progress alrealy ailuded to. Valmable accessions have been made in the various tribes of plants adapted for masses, andect. three parts of which were kept mure for the sake of the label attached to them than for any real merit they possessed. Let me not be understood. however, to under-
rate the labuars of the butanist; 1 I enis sugrest that he is rate the labuars of the hotanist; I enis suggest that he is
not most at home here; for whatever may ke said about elegance of form, peculianty of habit, or rarity, nothing can or ought to compensate for want of rich colone in the modern parterre. S.:. much remains to be dune in this department. and many excellent points of practice in accelerating and retarding, as well as in the general cultigardens, which, if collected together, would furnish a rast
deal of information under this head. Flowers, too, in generality, are, as thak, by far too much crowded in the immense quantity in any given space that produces proper effect, but having the linds well selected, and, above all things, highly cultivated; and I quite concur in garden should every flower, if not shrub, in a flowergarden should stand completely free of its neighbour in evecy respect, with the ground in a high-dressed state
between. Much attention has been paid to application of it in this dias been paid to style and the the mode recom in this department; and amongst others, he terms (I beliere) ch Mr. Loudon, of forming what my hamble opinion, much attention.
The introduction of new exotics has lept pare too with giver improvements, and the stimulus which has been tural societies is truly astonishing. In this departinent, also, a superior degree of cleanliness with regard to insects is observed, and that horrid pest of former days, the red spider, finds little refuge except with a bad cultivator. With the plants to be found in modern collections, it is With the plants to be found in modern collections, it is possible to keep up a perpetual display through the gloomy season of winter. The numerous family of the Camellias may be had in flower from October to May with the greatest case. The Chinese Chrysanthemums have been much improved, and many of our showy flower-garden plants may be had in great beauty in pots up to Christmas, by cultivating them through the summer, and by the Inally pinching off their bloom; by which means productive of the blooming principle The tecretions Valley and the Neapolitan Violet may be had in constant bloom from November to May-two llowers always acceptable to the ladies, whether botaniste or not. The forcing of Roses, of various American or bog plants, together with the Chinese Azaleas and Cactuses, also contribute their aid to con vert the dulness of winter into the gaiety of spring. are now, with a few exceptions, as higlily cultivated; they tribe of plants whatever; and I believe the errors which most cultivators of this eccentric tribe had fallen into at first, in a greater or less degree, were attributable in some measure to the glaring descriptions written about the the there seemed to be at one period only one iaea, which, like couns rod, swallowed all the rest, viz., that those cessively damp, with intense shade; no distinction haring been made between the various countries, or between night and day heat-a most material point, in all hothouse management. Much information is yeb
wanted in these resperets: and it is, I tiink, to be lamented wanted in these respects; and it is. I think, to be lamented
that collectors who resided some time in the respective that collectors who resided some time in the respective
climates, had not taken all the pains in their power to obtain the most accurate information of the relations existing at each season of the year betmeen light, heat, and moisture.
Have now to ofter क few observations and suggestions about the forcing-houses of the forring and fruit as well as plant departments ; and here, although great improvements have also taken place, there is, I presume, jet room of Horticulture " is, in my opinion, just the sort of book which was wanted. The chapter on Atmospheric Temperature is truly admirable. The real necessity of not only annual but durnal rest is clearly pointed out; and although the two kinds of rest are not precisely of the same character, yet both,are necessary, as is amply borne out in practice by a multitude of facts which will readily occur to the minds of unprejudiced practitioners.
My own practice tells me that when heat is present light cannot be absent with impunity; and rearly the same may be said with regard to air and moisture. But as these are all relative. no absolute rules can be laid dorn to guide those who are not accastomed to practical matters. In fact, with those who are, the relation between those elements must ever be ruled by the objects in view. By the term heat, as here used, I mean what gardeners term a night heat of $70^{\circ}$ in the depth of winter, with must plants, especially soft-wooded ones, produces what gardeners term "drawing," or in the language of physiologists, a mere without a correspondent stiffening or strengthening: and if a gathering and concentration of the secretions has a tendency to fructification, we may fairly presume that a dispersion of them over a greater space has a contrary effect. However. I do not pretend to understand the science of vegetable physiology like some persons, hut I and when we find successful practice meet in the p int with thenry, we may fairly be satisfied. My own plam, my fies. where fire-heat is wantel. Early in the thumiac ; to give air immediately, be it ever sol liti.n. am $\rightarrow$ throw
 I sometimed dispense with air; but in that ecent I keep my fires down and withhold water, and the oniy effect is sphere-in fact, something like that of a fine day in October.
What I want to urge is this, that when we perceive in the morning that there will prevail a defficiency of light through the dag, we ought to make arrangemente enrectly or renain in an amost quiescent state dariag the day. By such means we may not sail so fast as our neighbour, who.
it may be, carries all the canvas he can, through all
weathers, but we shall, I am convinced, be found in the
end to have steered our barls more safely. II other words I say, whatever growth we make, let it be honestly done and in fair daylight. It is well known that all good gar-
deners are very fond of putting their plants, their vines, deners are very fond of putting their plants, their vines,
their cucumbers, their pines, $\& \mathrm{cc} . \& \mathrm{cc}$. "to-bed $\pi$ trm," as it is technically called-and a most excellent plan it is, and this is but another illustration of the above principles, and
meets in the same point with the physiological accounts of meets in the same point with the physiological accounts of
the circulation of the sap, under the intluence of solar light, and the secretions consequent thereon. The main point to be observed is to make use of sunshine when it and thus by cleansing the atmosphere of the houses early in the morning, by means of a free circulation of fresh air, we are enabled, if sunshine occurs, to take away air ontirely early in the afternoon; and if at that time the be), we are in possession of a powerful solar heat, in pure atmosphere, with abundance of light. The only thing that remains then for the remainder of the night, is to take care that the flues or pipes never become very hot, unless in cases of particular emergency. We hear a great a given plant will bear, but for my own part I pay little heed to such matters: a night-heat, if such it may be called, of $50^{\circ}$ to $55^{\circ}$ (a few things, such as carly grape foeneral ; however, as spring, and consequently solar light, increases, much greater liberties may be taken with artificial beat.
I am of opinion that if we had some non-conducting medium, such as canvas, on our hothouse roofs at night, we and I think the time not very distant, when a night cover ing will be deemed indispensable. The powerful effects of "radiation, When the sky is unclouded, and perbaps a sharp deal with, are beyond all calculation. 'When I was at Chatsworth in the end of August of last year, Mr. Paxton had a portable roof of thatch as a covering to an orchidaceous house; it moved in a groove, and had, I believe, a nonconducting cavity between it and the house-the idea struck me as excellent. It appears to me, however, that with such coverings a different night management would have to be adopted in many cases; probably a more sparing use of water in the affernoon on the floors, \&c., and the back ventilators. I hope Mr. Paxton will be induced to state the results of this mode, for the benefit of the horticultaral public.-Robert Errington,
Oudton Park, near Middlewich, Cheshire.

A NEW KIND OF PROTECTING MATERIAL.
The usual mode of covering plants, \&c., with Russian mats is subject to many disadrantages, of which the grea annual expense, the loss of time in covering and uncover ing, the breakage of glass, and their not excluding damp, may be reckoned amongst the priacipal. To obviate these inconveniences has been a desideralum wit T have of late used a material which is at the same time conomical, convenient, and effectual, and which may be
employed at much less expense than any other thing I have heard of
This material is Pocock's Patent Asphalte Roofing. sold in pieces 16 in . by 32 in . at $4 \frac{1}{d .}$. each, or about $1 \frac{3}{4}$ d.
the square foot. Its weight is only 60 lbs . to the 100 ft . square. It has been exposed to severe frost and to a heat cooler in summer and warmer in wintef, and therefore alike useful for protecting from cold and for shading from Patent Felt, and appears to be a combination of hivo a Patent Felt, and appears to be a combination of hair and long fibrous substances, intimately united by excessive
pressure, which gives it strength, durability, and an even surface; and being saturated with an asphaltic composition, it is completely waterproof. I have used it here to half-hards reet in length or cold pits, in which are kept wintering letualpine plants in pots; and itis also used for culinary productions as require protection during the winter. I have also a number of shutters made of the same material for covering the lights of forcing pits, and If ind them of much importance in serere frosts and windy weather: for slthough these pits are all heated by hot wate and would resist any degree of cold, still I hold it a principal point in culture to use as little fire-heat as possible. not heated artificially, so as to require sashes 6 ft . by 4 ft .; and to correspond with these, I have had wooden frames
made of the same dimensions. These frames are formed of a top and a bottom rail, and two side rails, $1 \frac{1}{4} \mathrm{in}$. thick by 2 tin. broad; to the top and bottom rails two pieees of size at the middle of the frame across it, and attached to the side rails. To these the aspibaite covering is secured by copper tacks (but iron or tin tacks made warm and 6 ft . by 4 ft ., weighing 24 lbs , and costing 6 . each,

## for timber and haboar.

These waterproof shuattery are vantly preferable to Ru:s12 years, if not longer; for while not in une they can, after being well dried, be stored in a dry niry loft or shed. From the mature of the material they will not take oil-paint with advastage, but may perhaps be improved if thinly coated with tar every taree or four years. I intend to treat mine
thus, and while the tar is still solt to wift ever than some
fine white sand, whic
The best mats will hardly last one season for the ordinary purposes of covering, and cost here about $18.3 \%$. each Asphalte shutters will resist more cold on account of their nonconducting property, and their beiny waterproof; more-
over, not resting on the surface of the glass, but lying abore over, not resting on the surface of the glass, but lying above
it to the thickness of the wouden frame, they leave a volume of air between them -elves and the glass, which, as
has been long ago demonstrated by Dr. Wells in his the has been long ago demonstrated by Dr. Wells in his the cold, the air being also a non-conductor. If, then, each asphalte shutter is in the first place equal to three mats which allows $2 s$. for tarring during that time, the difference of the expense will be thus:-One asphalte shutter, $8 s_{0}$. period.

These shatters have also the important advantage of preserving glass, which, as every one knows, is greatly damaged when covered with mats, and still more when hay or straw is used for additional protection.
But the advantages of asphaite coverings are not confined to pits, \&cc. Portable houses may be constructed from a capacity of two or three cubic feet to as many trees or shrubs. These structures can be made in pieces, similar to hand-glasses, the sides being in four square or parallelogram pieces, and the roof in four angular pieces. ornamental gardens, now that we have so many interesting exotics almost hardy enough to stand in the open ground, and only requiring slight protection during winter and early spring. Why might we not have whole groups of Chinese Camellias, Azaleas, Nepaul Rhododendrons, and
the splendid hybrids originated from them, which are too tender to stand in the open air? Structures formed of asphalte roofing might be removed piece by piece as the spring adrances, until the whole becomes unnecessary by the return of more congenial weather. Certainly such structures would have a much less disorderly appearance than protections of mats and thatchings of straw. I could were directed to this means of protecting the many valuable specimens upon the beautiful lawns of their garden.
Other cases to which such shatters might be applied in private gardens are many, such as covering mushioom-
beds out of doors-protecting the blossoms of fruit-trees in spring-covering flower-beds in autumn, to prolong the flowering of plants. If set on edge and supported nearly perpendicularly, they would make excellent screens for early peas, or such other crops as require shelter in spring and protection in autumn.-C. M'Intosh, Dalkeith Pa-lace-gardens.

## CULTURE OF PELARGONIUMS.

I bisg to offer, through the medium of the Gardeners' Chronicle, a reply to the inquiries of a correspondent relative to the cultivation and management of the Pelar-
gonium. The following is my mode of treatment :- I pregonium. The following is my mode of treatment :-1 pre and plant my cuttings. The sitaation chosen is exposed to the sun during the middle of the day. In about six weeks the cattings will be sufficiently rooted to remove, and I pot them into 60 -sized pots. To prevent the worms stage, and allowed to remain in a shady situation about three weeks, by which time the plants will be well established, and bear removing to a more exposed spot, where under the influence of the sun and air, the wood will attain a necessary degree of hardoess. Here they remain until taken into the house for the winter, which is gene rally done about the end of September; the time varies
according to the season, but they are housed before danger according to the season, but they are housed before danger plants, and make them improve and bushy, I stop them at the third or fourth joint, and shift them into 48 -sized pots, using al little turfy loam and sand with the compost to allow the water to pass freely through the soil; I give but little air during eight or ten days: the plants will be then re-established, and afterwards as much air may be given as the state of the atmosphere will permit, until the beginning of December. The side-lights must be kept closed daring the prevalence of cold winds. The pots by this time will be well filled with roots, and the plants will require shifting into 32 -sized pots. The bone-dust which is now added must be used with caution; being of a dry-
ing nature, it is not used near the surface of the soil, the shoots are again stopped at the third joint, the house is cept at a temperature of $45^{\circ}$ Fahrenheit for about 10 days, and then allowed to fall to $40^{\circ}$ or $42^{\circ}$, at which it is kept. The fines are damped two or three times every night, to prevent the air from becoming too dry, and a little top air About the middle of February those plants which are intended to be large specimen plants are shifted again into 24 -sized pots; those of vigorous growth will require s train them into uniform and well-shaped plants. In the beginning of April, when fires are discontinued, the plants are syringed over the top three times a week; this is done about four oclock, at the time the house is closed, and continued during three or four weeks. The house is well damped every evening at the bottom, and the top sashes air to escape; and during the day all the air is admitted that can be given with safety. The r!n+s when hegiming to bloom are freely watered, and protected form the
scorching rays of the sun during the middle of the day by meang of canvas, and are thas retained in blossom a
much longer time than would be possible it this precaution leaves are remored, and whenever the orsen the decayed appearance the house is well fumigated; to do this effectaand they must be mell watered the plants are in a dry state, and they must be well watered the day following
bnut a fortnight to the sun and air, to harden the for before being cut down. Those plants which are intended as specimen plants the second season, after heading down, are placed in a sheltered situation, when little water in given, and as soon as the new shoots are an inch long, are repotted into pots from one to two sizes smaller, the old The plate from the roots, and good drainage given. the winter, from having less soil about their roots during repotted, they are placed upon a stage in a shady situation, emoved into the house at the proper time, and undergo the same treatment the second winter as described for the first. When those plants which are intended for exhibition begin to show their bloom, they receive additiona attention; a little liquid manure is occasionally given; they
are no longer syringed over the top; bees are sept out of are no longer syringed over the top; bees are sept out of
the house by means of gauze blinds, and every precantion the house by means of gauze blinds, and every precaution to flag from exposure to the sun or want of water. I re commend every grower to begin early to train his plants for exhibition; when the shoots are young and tractable, any direction may be given to the stems; a uniform and handsome appearance will arise from the practice, and the plants will require fewer supports, and less pulling ahout at the time they receive their final dressing. The flowers should be so arranged as to present an equal distribution of bloom over the head of the plant, to. effect which the stems must be secured to small willow twigs. Practice lone can teach the art of preparing flowers for exhibition the less art is employed the better, and the means should always be kept out of sigh
The compost I use for my Pelargoniums is the followone ditto well-rotted cowdung maiden loam with the turf quires to be frequently turned over in winter, to destroy ditto of bone-dust. For the winter repotting a little more sand is added.-W. Calleugh, Hans-place.

RURAL CHEMISTRY-No. II
IT is a very common saying that fhere are four elements, air, earth, fire, and water ; and many people believe that all things are cosprised or made up of these four elements. This is very incorrect, because there are many substances which do not contain any of these so-called ele many, and they are, besides, themsel sense in which it is used by chemists, means a certain set of simple substances, which by combining, or uniting toether, form all the various matters that occur in nature To return once more to the example of soap, we may say that the elements of soap are alkali and the question will arise, what are the elements of tallow an alkali? Which can only be ascertained by chemical experiments. In this way, then, we may analyse, or puan unable to separate or decompose them any further, and the substances which then remain are called elements, or simple substances. There are upwards of fifty of these elements, but it will not be necessary to study the nature and properties of the whole series, because many of the re of very rare occurrence, and found only in small quantities. We will commence with those substances which are of the greatest importance, whether simple or compound, and gradually go through them, before entering apon the chemistry of vegetation. Foremost in import ance of the substance
tudy, stands the air
We are too apt to think of the Airs as being merely empty space; we move about through it without feeling ike anything else we know, we usually forget its existence altogether. The fact is, that every part of the surface of the globe is surrounded by air, which flosts on its sarace almost like water. It is easy to prove that the air is really a substance. When we try to squeeze together the sides of an inflated bladder the month of which is tightly tied up, we feel that the bladder is full of something which resists the pressure ; this is oceasioned by the air which contains, and which, though so easily displaced, or pushed
aside, by anything moving through it, resists strongly any force applied to it when thus confined in a limited space and if whilst we are pressing the bladder we prick a
in it, the air rushes out, and we feel that the resistance is gone, and that the sides of the bladder easily come together. And again, when working a pair of belluws, it is he resistance of the air which we have to overcome by orce of the arms, Which constitutes the labour of worning no we presently find that it is impossible to go on working the bellows any longer, because having forced in as much air as it can hold, the natural resistance of the air prevento any mire from entering.
Nlthough we are, forgetful of the "erz existence of
the air, it is of the greatest importance to alt wur dilly occupations, and even to life itself. Withoort air nothing ndeed, without air neither animals nor plants conld live for it is equally essential to the life of animals as it is to fr a lighted candle is put into a large glass bottle, and tue mouth of the bottle then stopped up, The candle som of this is
that the ait is no longer able to keep it alight. If we no
 iving animal substituted for the lighted candies for forte
 immediately expie. The question now will naturally
arise Is the whole of the air then burnt or or sed up; and if

 remainder, which cannot support flame nor the ife of an
animal, is of of different tind from the air which can ; and we find that the common air wlich we breathe is a mixlure of two kinds or air, or gaster ais they are cated biry che supports, the life of animals and plants, and is essential to
 in which animals and plants der and which immediately
puts ouf fre end lights. Chemists sall the good air oxy. gen, and the bad dir nitrogen; ;but we must not suppose
that because the nitrogen appears
thus useless, it is really sof for it in, in in fact, of very great importance, asw we
shall hereafter see. In the experiment fust mentioned of ald
burrining the canter sadee in in alarge bettie, the o oxygen is all con sumed and the nitrogen left unchanged, which, of course When a candie burns, it traduangly diseo it
orter and shorter, and at last, when all the tallow is burnt, the candle goes out; but we must not therefore sup pose that it is utterly destroyed. A change has taken place the tallow, or rather its elements, have combined with the oxygen of a portion of air, and a new compound, which i a gas or kind of air, is produced. If we put a piece of sal pear altogether, having wholly dissolved; but we know that the salt is not destroyed. Now we may compare the burn ing of a candle to the solution of a piece of salt; for al the solid matter of the candle remains diffused throughou the air, after it is burnt, just as the salt remains dissolve in the water, but with this difference-the salt is dissolved in the water, but not combined with it. The elements o the tallow are dissolved in the air, but they have combined with a quantity of oxygen, because they have a strong
affinity or attraction for it. If the solution of salt is left ome time in a warm place, the water evaporates, and we get the salt again, unchanged; but in the case of the can dle, its elements have combined with oxygen, and they cannot be separated again from it except by the action orygen than it has for the elements of the candle, causes it to relinquish them. There are substances which have ufficient attraction for the oxygen to effect this, but we simple substances of which it is composed. What has been said with regard to the burning of a candle is equally pplicable to the burning of wood, coal, or in fact any combustible matter. In all cases they burn in consequence of their affinity for the oxygen of the air, and they are
never destroyed when burnt, for their elements may always afterwards be found combined with oxygen in the air in which they have been burnt.-E .

## ON MUSA CAVENDISHIT.

In the fourth number of the Gardeners' Chronicle, the culture of the above plant is requested. As this species is so worthily associated with the noble patron of horticul-
tulture whose name it bears, and has been so successfully cultivated at his Grace's palatial residence at Chatsworth the task of framing a reply seems to be fairly saddled upinus. There seems to have existed considerable spe-
cuation and doubt as to the origin and native country of this species, or rather variety, of the Musaceous order. I met with it at the Cape, in the garden of the well-known friend to botanical science, the Baron C. F. von Ludwig,
who informed me that he had received it from the Mauritius, and who obligingly furnished me with his only duplicate plant, in order that so valuable an acquisition might be introduced into the Botanical Garden at Calmonths after I introdnced it, as will be seen from the fol lowing letter addressed to me while on the Khoseea hills, by Dr. Wallich, M.D. : - The plant arrived at Calcutta in the beginning of May; Dr. Wallich's letter is dated Dean extract of Paxton's botanical publication (in Loudon's valuable Gardener's Maga=ine), to which you allude, Baron Ludwig at the Cape, has blossom you brought from home. It is in full flower here at present, and I doubt not that the plantains will prove excellent. It seems to disiaca, both these being, I beliere, one and the paraspecies). The plant is much cultivated, I learn, at the other sorts of the tribe on account of its stem any of the and robust, and therefore less exposed to be damaged by the hurricanes which occasionally risit that island. We sets; the spalix very nodding and stout." The fruit be equal to any of the numerous varieties cultivated in India: and they are very many
Lo bring Musas to a high state of perfection, they should be grown in a house entirely devoted to them. It should be divided into pits about two feet six inches square, in order to grow the plants separately, so that whene, in order to grow the plants separately, so that teplneed without disturbing its neighbour. The produce
of a house of small dimensions, if devoted to Musa Ca-
vendishit, would be immense, and wonld vield fruit year round. The stem of this Musa seldom attains greater height, under the most favourable culture, than foliage, a house ten feet high in front and twelve feet in with sliding lights in the front and ends, would suit it admirably. But it may be easily fruited, and with good success, in a pit of the size above named, formed in
the corner of a pine-pit, where there is sufficient height without crowding the leaves. The soil which suits all kinds of Musa best is a mixture of half-rotten dung and half sandy loam, with about one-fourth sand, well mized together. The pits or tubs, in which latter M. Cavendishis may also be fruited, should be well drained, as the plants require to be supplied liberally with water at the root when growing. They should riever cease growing, and never be allowed to want heat and moisture, from the time attained their full size. This I conceive to be the great secret in growing this excellent fruit. By this mode of culture the fruit will be twice as large, and much better flavoured, and the plants will be doubly productive; for
when they are checked in the full vigour of their growth, when they are checked in the full vigour of their growth, ture, they loose their roots to a certain extent, becom stunted, and never again assume their original state of vigour and luxuriance. A strong moist heat, never below plants frequently syringed orer-head and kept up; the light without any shade. This should be continued until the fruit are set and have attained their full size, taking care however not to wet the flowering plants. Young healthy plants will throw up their fruit in nine or ten months after being planted out, if treated as above; an as soon as all the fertile flowers are set, the end of the spadix an inch or two above the last tier of perfectly set fruit should be cut off. This will enable them to swell
better, and prevent the successive expansion of abortive flowers, which are no ornament to a spike of Bananas When the upper tier of fruit on the spike begins to change colour, totally discontinue water both at the root and over-head. The flavour of the fruit depends apon the aon-application of water after it begins to change colour and it should be left to ripen upon the resources contained in its own tissue beneath a full exposure to the sun
Ripe fruit has beea gathered from plants only eighteen months old, grown in tubs at Chatsworth, in an ordinar tove; although for three months out of the eighteen during the winter season they were dormant. This conme that a Musa Cavendishii ought not to be mor than'twelve or thirteen months in growing from the sucke and ripening its fruit. In India it requires only about Musa Cavendishis is a plant that will accommodate itself plenty of hothouse room, it can be grown and fruited with tolerable success, for we have got a plant at this time with cluster of fruit upon it grown in a box only nineteen inches diameter. I have had larger clusters on larger about a month's time.-W. Buchan, Blithfield.

## COTTAGE GARDENS. - No. 4

THE successful cropping of his garden is of course the bject to which the attention of the cottager should be in the first place directed; but the decoration of it and of also cottage, though points of a secondary nature, should also be kept in view whenever there are means of doing
so. To such as possess this advantage we would now recommend the planting of hardy ornamental plants, such as Pæonies, Polyanthuses, Hepaticas, Phloxes, Pansies \&c. The tall-growing may occupy the intermediate spaces ine borders between-the fruit-bushes; and the choicer orts may be put near the cottage in small beds.
In a warm sheltered border exposed to the sun, sowing should be made of White Cos Lettuce, and either the Early Frame or the Long Salmon Radish. The deep. Afterwards it is to be formed into two beds of abou four feet wide each, with a path one foot wide between them; or should the border be very wide, a four-feet bed divided into two will be enough, and the seed sown tolera bly thick: both are then to be raked fine and even, but not deeper than may be sufficient to bury all the seed The observations which we made last week relative to the purchase and keeping of Bees prevented us from giving, as we intended, the following hints for their ma aagement at this season, when they are just recovering from their torpor and beginning to resume their labour. I will be some time before they are able to procure a suff ciency of food, and therefore assistance shives that appear weat and in need of support. s a mistake to suppose that the feeding of Bees has tendency to make them lazy; on the contrary, a little food at this time, or even before, will make them swarm arlier tuan usual. The best food for Bees is stated by ir. Huish to lue a pint of ale to a pound of sugar, wit skimmed When cold , the whole bolled together and honer, and is to be supplied to them occasionally in a shallow plate with some short clean straw, or very small wigs, laid across it before being put into the hive. MI.E. H.

HOME CORRESPONDENCE
perience during the present seerere ainter of the meitite of perience during the present severe minter of the merits of
Mr. Corbetis sytem of heating by the circultion of
hot water in open troughs or gutters, we think we owe it to the inventor to furnish you with our opinion of the
claims which his method has upon the patronage of the horticultural public. We have now in patronage of the nursery several different plans of communicating heat by hot water. Eariy in the autumn of 1840 , we applied Mr. goniums, and we can without hesitation say that it much superior to any with which we are acquainted. The troughs that we have ased are constructed of cast-iron, 6 inches wide at the top and $t$ inches wide at the bottom by 8 inches deep; these are furnished with wrought covers, neatly fitting in lengths of 3 feet each, wich be easily taken off, and the moisture in the atmosphere of the house regulated to a great nicety by the removal of a erstances require. It has been bre oblect that the moisture arising from the open during in : expposed excess, prove injurious this important apo this important point we can speak decidecly, for we her possess a perfect command of heat, with an atmosphere in every respect congenial to regetation. On the morning meter indicated $10^{\circ}$ Fahr, the temperature of the Pela gonium house alluded to was. $50^{\circ}$ Fahr., and, had it been desirable, a higher degree could easily have been main tained. We took upon ourselves the responsibility of applying Mr. Corbett's system to a Pinery which we las year planned for Mrs. Wells, of Cowley House, near Exeter, and we are glad to see that Mr. Griffin has, in the Chronicle of the 30 th ult., testified to its complete efficacy. We can fully corroborate all that he has written on the subject: indeed nothing can exceed the health the Pine-plants with which that structure is filled. Pince, and Con Eveter
Diseases of Corn.-I do not perceive anything in M. Vilmorin's observations on rust and midew, to shake the conclusion at which I have arrived. I do not suppose, as be inagines, that the one form is transmutable into the other, but that both forms of fructification belong to the same fungus. I suppose that one or other form of sporidium is produced according to the conditions unde which their development takes place. I have not hatily arrived at this conclusion ; and M. Vilmorin will see in my report the reasons which first led me to suspect the possibility of this being the case. It is since that report was mritten that I made the observations which have con firmed me in this opinion. I found the inner surface of the chaff-scales (palee) of some wheat which had been much attacked by the Uredo rubigo, blistered precisely a M. Vilmorindescribes the effects produced by this fungus As the disease advanced darker, and gradually assumed a deep brown tint. In no other respect did they differ from the yellow and orange coloured blisters filed with the Credo rubiyo. A change in the weather prevented the disease from making furthe progress, and these brown blisters did not burst. Upon of forms in the contents found them to contain a veriety ruigo, others the Credo linearis, and lastly there mer many with the form of Puccinia graminis. There appeared to me to be such a variety of intermediate forms connectng one with the other, that I considered the evidence of their identity to be quite conclusive. I sent Mr. Berkeley several of these scales, and in a letter from him, date Nov. 28th, I had this reply :-vour specimens of Ured can be no doubt that the former is only satisfactory. There an no dormer is only an eariver stage of growth." Mr. Berkeley's testimony I consider to be much tion to this class of plants than any other English botanist, and he was, moreover, decidedly opposed to the con clusions at which I had arrived when 1 first mentioned them to him. If I knew how to forward to M. Vilmorin some of the chaff-scales containing these supposed proofs of identity, I should be very happy to do so, and he might hen either satisfy himself of the correctuess of my obser rations, or show we where I am in error. I have promised intte paper to the Journal of the Agricultaral Societ with drawings of these forms, and the remarks of M . Vil morin will set me to work inmediately to prepare is. If I find I cannot support my position upon a re-examination near Bildeston, Suffoll, lst Feb. 1841
Fresh Tan makes a pleasant winter walk. particularly on tenacious soils, as it never adheres to the shoes, eithe during rain or after frost: half an inch, I think, is sufficient It likewise makes a soft and pleasant summer walk, anc from its loose nature is readily cleared from weeds. If not wanted during summer, it may readily be swept clean of after a few dry days. It is invalable for covering walks or footpaths in the kitchen garden when there is much is too often obliged to be suspended after ten or aleven $o^{\circ}$ clock, when there is clear sunshine, from the ground getting soft and clammy. With a covering of tan, the peration may be continued throughout the day, and eve during wet weather. If the tan remain permanently, it wiil equire renewing every two years.-D. Cumeron.
bits, 1 mis Fruit Tree's from the bits, 1 mix nightsoil and soot in water, and daub over the stems with orush in whember, when are asain done over with the mixture in February. The November dressing is, however, generally February. This mixture has stopped their depredation entrely, even when they had cummenced operations. have used train-vil for smearing stakes, which keeps them off for a time from the plants close by the stakes, but appare never used train-oil upom living plants, considering it
must be injurious by closing np the pores of the bark.-
D. Cameron. Gooseberries and Currants. - When these are raised from cuttings, to cnsure their never sending up any suckers,
all the buds, except three or four at the top of the cutting, should be cut clean out of the solid wood, much in the same way as a bud is taken off for inserting in a stork. A sharp knife and a little experience will enable the operator to make cuttings in this way as expeditiously as by the usual method, if only cutting the buds clean of without wounding the stem. At the base of the buds are sometimes left by the usual method the embryos of future buds, which in time become suckers. Some may be afraid of spoiling their future plants by so mutilating their stems,
but I have never seen healthier plants than those treated in the above manner.-D. Cameron.
Manufactures.-Your readers may fancy that ribands, shawls, lace, and embroidery belong to the loom and the tambour-frame, not to the field and the garden; and they border. I trust they will excuse me for being of a different opinion, and for attempting to convert them to my own odd way of thinking. I have no mind to inquire into whould not know how to do so; besides, I would rather leave it to nyy metaphysical friends to ammse themselves in that way ;-but this I feel, and so do all of us, that there is something in the form of living things, whether animal or vegetable, which produces sensations of pleasure in the
mind, and constitutes what we understand by beauty. On the other hand, it is, I think, sufficiently plain that this feeling of pleasure fades away in proportion as the object contemplated recedes from the form of natural objects and posses into the creations of human imagination. Hence household vessels of the classical nations of antiquity are such general objects of admiration, while the elaborate but monly of disgnt Surely $w$ mint an feel that thisions only of disgust. surely we must all feel that this is so, or ornament consider this essential truth! Look at the anmeaning, ill-proportioned devices of the shawl-weavers and lace-workers, for example ; what poverty of invention, what paucity of ideas! And yet how abundant is Nature in her cariety of form and colour, how bountiful in sug gestions! What an inexhaustible source she affords of new and charming forms, contrived as it were on purpose to train us to a true perception of the beantiful!-and how little do many of us profit by them ! I would engage to prove that the common groundsel, rightly looked at, is in many branches of manufactures might largely profit, if we did but know how to observe. I am not, however, just now about to illustrate my opinion by reference to so mean a weed; I shall endeavour to persuade the ladies Who read your Chronicle to borrow their patterns from their own gardens, instead of buying the ugly distortions of the shops. Let us take the White Butterfly plant (Phalænopsis); this flower alone will furnish a store of the prettiest fancy forms. For the present I must content myself with sending you a sketch of one. The lip, as botanists call it ,-though 1 never could make out why it flower, has a very curious form. At its base it turns on each side into two ears, then it contracts into the figure of a lance-head, from the point of which curve back a pair of feelers arranged in the most graceful way imaginable. Along the middle of this part there rises an eleration which relieves the nakedness of the lance-headed part mear the base there is a kind of knob or wart, and from the latter there bends away on either side a triple ray. Would not 2 row of thesse form a beantifiul ruming pattern for the border of a shawl, or for a cuff? Would not five of star for the middle of a screen? Could not the be sogant posed as to become the prettiest pattern for the corners of a lace handkerchief, or of an apron, or a canizon you encourage me, I will show you many a figure still more strange and beautiful.

Puchsia arberescens. - Will you allow me to point out this muck-meglected, though by no mems uaworthy our
servatory plant ? I do not mean to bring its qualities into comparison with those of sume of the other splend d spe-
cies of this eminently beautiful genus; nevertheless, it is cies of this eminently beautiful genus; nevertheless, it is a plant which will not disgrace the most limited collection. will it attain its greatest perfection), in a soll composed of loam and peat. it forms an evergreen bush $j$ or 6 feet high, and of a very pleasing appearance: for though its habit is not to be called graceful, it is of a neat and compact character, well suited for such a situation, and its foliage is dividually are nearly equal in size. Its flowers, thongh individually small, are, from their disposition in upright families, very urnamental when produced in profusion,
which they will not fail to be when the plant is kept in good heath and allowed plenty of room, w indeed indispensable. The panicles very much resemble
in appearance those of the Persian lilac. - W. Elliott, Kiplin, near Catterick, Yorkshic
Bres.- Perhaps some hee-keepro will explain the cause of the following circumstance. In the autumn of 18381 son in my neighbourhood. From February till April, 1839, strong swarm and cast. In June of last year another appearing as engaged and active as usual till the middle of August. Having at that time had occasion to visit the Tontinent, I know nothing further of their movements.
The hives were closed up for the winter. I offered food as early as December; but finding it untouched by the hise in question, it was raised, when to my great surprise it was tenantless! Some dozen or twenty dead bees at most were found about the outskirts of the comb. The hive was full of comb, containing not a particle of honey, beebread, or anything else. Three years, it has been said form the natural life of the bee; mine having attained nearly that age, would seem to authenticate the saying but it appears singular to me that they should forsake the
bive, though to the naturalist, or rather entomologist, it bive, though to the naturalist, or rather entomologist, it
may be well known. Last year proved a very bad honey may be well known. Last year nroved a very bad honey prevailed over the limes, which I believe is generally esteemed an auspicious event.-A Young Bee-keeper

British Oaks.-I observe that a mistake exists in the discussion on British oak, in consequence of the application of the same term to two different things. Your correspondent Jael calls the timber of Quercus sessiliffora red oak, and Mr. R. says that the red oak of Mertfordshire is worthless for all purposes where durability is necessary. Now in this he is perfectly correct, but the sort of red oak to which he refers is in all probability not
Quercus sessilifora, but $Q$. pedunculata. In the extensive Quercus sessiliflora, but Q. pedunculata. In the extensive of Huntingdonshire, red oak is far too common, but in al these woods that have come under my observation there does not exist a single tree of Quorcus sessibitiora. The red colour of the oak here referred to is not caused by any difference of soil or situation, red trees being found scattered over the woods in every direction, and growing side by side with sound white trees of the very best quality. It is a change produced not only in the colour, but appearance it is yet in a healthy and growing state. In the progress of this change there appears to be two o three stages. Pirst, a ferruginous tinge commencing at
the root and proceeding upwards-sometimes on one side only. When the tree has acquired this colour throughout, the timber is called by carpenters Foxey oak. Secondly, the tissue surrounding the pores which separate the concentric rings changes to a darll brown colour, producing in the timber, when cut pp , longitudinal dark streaks; af terwards, when this colour has passed through the harder ligneous portion of the concentric rings, the wood acquires a uniform dark red colour; and this seems to be the last state in which red oak is fit to be used for any purpose Teaves the timber a light rufous red, when it is in a state of rapid decay. With respect to the cause of this extraordinary change in the timber of the oak, I am not aware
that any satisfactory explanation of it has ever been given. that any satisfactory explanation of it has ever been given. the great age of the woods in this part of the country in some measure favours the notion that it may be the natural decay of old age; but it is clear that this cannot account for the peculiar red colour with which the decay here is accompanied; besides, there are plenty of decayed produced by the mycelium of a fungus acting on timber which from age or some other cause has lost some of its natural qualities? The remarkable fact that the red colour never penetrates the sap-wood, seems to indicate that there are resisting qualities in it which the heart-
wood does not possess. But the whole subject requires thorough and minute examination : it is one of great interest to the possessors of these woods, whom I would earnestly recommend to use every practical means to raise a succession of young oaks in the woods to surceed those hitherto grown from old stools. This would at least be a safe proceeding. Whether the red oak here referred to may have bad any share in generating the prejudice know not, but such would doubtless be the effect of confounding the two sorts under one name: I would thereother name for $Q$. sessilifiora. and leave the old and widely-established one of red oak to designate, as heretofore, most worthless ant of timber in a state of in-
cipient decay. $J$. Henderson, Milion. We are to blame in allowing our corsespondent Jaal to exploy the local
terms white oak and red oalk, instead of whalked oak and stulh les nak. In future we shall take the liberty of reducing our correep ndent's language to this.]
Roses from Seed.-In 1838 I attempted to impregnate some blooms of the Lamarque noisette rose with the pol. ripen till about August $1: 39$. I then took out the seeds and put them in wet sand. I sowed the seeds of one pod In November 1839, and of the other in Fubruary $10+10$. They were sown in smadl pots and kept in a warm greenhouse. Six flants rose from the firet suming, and tro from the latter ousinys. in May and June 1840; and two of the seeding plants actually bloomed in August and Septem-
ber 1840 , though the blooms were necessarily small, and only served to indicate the colour-one being red, and the otber pale buff (the colour of the female parent). I would minate thus early, may not perish under the ordinary reatment, viz. -that of burying the seeds in a considerable cuantity for upwarus of a twelvemonth. As an ana teur, I should beglad to offer any encouragement to the production of varieties from seed among brother amateurs of this most beautiful flower, offering, as it now does, such inducements, on account of the beautiful foliage and loxariant habit of many of the new varieties of Noisettes, hybrid, Chinas, and Bourbons. - Alfred Whitlaher Frome, Sumerset.

## FOREIGN CORLESPONDENCE.

Sydney, April 1810.-I have just returned from a visit to the alpine parts of New Zealand, where I have met with many curious plants. The following notes on some of the plants, from the mountain range in the centre of the northern island, a region never before trod by the foot of a European, may not be without interest:-A kind of tree fern, with a stem from twenty feet to thirty feet high, and four inches in diameter, with fronds
about five feet long, is not rare in the Arrohan mountains. Another kind more uncommon has the under side of the leaflets whitish; the frond about twelve feet long, with the midrib half-an-inch in diameter, and bear ing about 120 leaflets or more. The great tree fern is common on the north of the river Thames, but rare to the south of that river. It produces fronds twenty-two feet in length and eight inches in circumference at the base ; its trunk is rarely more than twenty feet high, from six inches to eight inches in diameter, and bearing about twenty fronds. The upper part of the trunk is soft, and that and the young fronds are eatable after they have been baked a long time ; they smell like baked apples, but are sweet and insipid in flavour. The southern part of the
island is poor in ferns in comparison with the country island is poor in ferns in Comparlisorns that grow in the
near of Islands. The only fern open country are he Pteris, eaten by the natives, and Botrychium, which grows in marshes ; all the others are found in woods. Portocarpus? Totara sometimes produce two seeds on a receptacle exactly like that of the conmmon rew, and it is dioccious.-Dacrydium, nov. sp. : I may perhaps be excused for mistaking this plant for a clamp of moss, when I first saw it on the tops of the bleak moun ains. Its colour was reddish bronze, exactly like that of the mosses among which it grew. Its berries are about
half the size of those of the yew, and of a purplishored colour. The plant seems to be moncocious, as I never found one of any size without berries, although some plants were covered, while others hed but one or two ; the were very good to eat. 4 new species of Phyllockadus grows on Ingadido, at an elevation of more than
feet, but is very rare. The plant is not of a mach brighter colour when fresh than the dried specimen re. An epiphyte, that grows on Drmmara australi and other trees, is as complete an air plant as many of either in tlower or frait, or even with a trace of their having borne them. An orchidaceous plant grows sparingly on the trees about Roturoa, that are not densel covered with leaves. The flowers are white with a yellow pot, and have a most delicious perfume. Two varietie Carmichaelia australis are found, one growing inland at an eleration of from 2000 feet to 8000 feet, and the othe by the sea-coast. A gigantic climbing apecies of Rubus with a stem three inches in diameter, is found on the banks of the Waikati. A most exquisite little Acena with scarlet spines growe on the downs at Ingadido at a elevation of 6000 feet. A superb plant that Cunningham does not seem to have noticed, elimbs like European ivy to the tops of the highest trees. The scandent stems are not and porons like a root, and the horizontal stems are hard as box. Its flowers are brilliant scarlet, and it coninues flowering during five months; the leaves are three in a whorl. Three species of Gaultheria are found, one like G. antipoda; a second with berries two inches in cir cumference, varying on different plants in colour, being either white or red, a variation that $G$. contipoda is lable to ; a third with beautiful pink berries, but not so good and the last. The two latter species are procumbent. and foent plentifully growing together, at an elevation of 7000 feet A plant with flowers like Styphelia or Astroluma grown on Ingadido, at an elevation of 7500 feet. Its flowers are White; the berries bladdery, like a capsicum, pear-staped larger than a pear, purplish red, and covered with a bean tiful bloom; the seeds are attached to the shin inside, ank Veroniany central columnt. Several beautifal lilac and leronica with blue, white, blue suid white, and liac from 8000 to 9000 feet. The grasses are all from an elevation 8000 to 9000 feet. The grasses are all froie an eleans of of 2000 feet, and, I suppose, new, but thave no memight be useful in Eogland, - New Zeeland abounds in fungi, among others I found an Agaric of a brillian
cobalt blue colour; bat it is impossible to preserve
fungi in cuch a climate. I had great difficuly in saving the specimens I did, and have whten wap, In y mark ia-
tosh round them in preference to wearing it. I ime a suy handsome species of Dracerna, wifh leases varimated wirh
 edly grow out of doors in En iand. I hase se- $\boldsymbol{H}$ che plant with a trank twenty feet kiga, and two. a.... a h h if feet in
 flowers; the leaves are litic a Lomuthas ir Persomia,though the latter it comnt be, her tas ene leaterne at rine angles with the axis if the stom, and alternate: so it my a $L$ ranthus. A new species of Phormilun gruyins in the Amohan range of I fountains has the seed vessal fendent iastead of upright. at an elevation above follo feet, in places where they would be as much exposel to cold as in England. The
cold in summer iu the interior is astunishing. On the $29 t h$ of Febrany I observed the thermometer at 39 deg. at 9 a.m., insile my tent, on the benks of the Wakati, Waikati I founil Azullic pinnata. I have lost all the alpine plants I hrought here from Inyadido, as might be expected. for hardly any Jew Zealand phant will live at had Erlurardsia gremdiffora in his garden, bet it has alway died. it is now thriving well, and I have supphed several of my friendis with it. I think that Dacrydium excelsum, two or three Phyllocluduses, aud perhaps Fuicititia evcolsa, would live out of doors in England. I shall try to send some home as soon as they are well established in the pots
they are in. Kightia eacelsat thrives the worst; I raised more thar five hundred plants of it, which are all dead; though I think it was not so much the climate as the soil that was detrinental to them, there being in New Zeaelse can be got.

## PROCEEDINGS OF SOCIETIES.

 M'Glure, gardener to el. Nurth. Thnemore, late wardener t.

Among the songs sung during the evening was the following,
composed by Mr. Keman for the occasion:Since all ayrree that you irom me For fear that prose may make you dose, Here's Mother Earth, who, ives all bisth, And Father Rain, that swells the grain, Since Adam first was justly curst Half those who live their lippes on With plough and spale to grappic, ob The staff of life has sent us, ohl Without the spade and gardener's trails
Why dry bread must content as, oh 1 From him who breaks bizarres or flates To him who grows potato-rows To fill a donkey's panniers, oh,I give my heart's best wishes, oh 1 As each shall strain, may each, one gratn
His share of loaves and tishes, ot No more we'll stroll, with cabbage pol A gardener's name respect shail ohl claino, Let ev'ry man do all he can To aid a striving brother, obl We have the geit if we've the will To make our trade a science, oll 1 Then let's unite and do what's right,
And bid the woild defiance, olit

## MISCELLANEOUS

Wr reaths and Bowsuets of Dried Flowere.-Mrs. Bateman, of Leachurch Villa, mear Derhy, has produced a colours, pleasing effect by drying fiowers of their natura wreaths and bouquets, fizing them down with gum or paste. A wreath before us contains flowers of Convolvulowking aimont is tresh as when first gathered. The unig partiealar to be observed is, to keep the flowers as free from damp as possible. The colours are well presorved and the spraimens rendered very flat, mer-ly by drying them hotween the lewes of books, changing them frequentig.
at Whouth n-gardem Planke - Tho folloming vegetables, although not new to many, will he so to some others, und their ments deserve to be generally know. - peas: Auvergne-A very prodnctive vasiety, with long round pods, mexeved at the apex, fllod with peas of the finiest quality. Its setsout follows that of the Early Charlton.-

Groom's Superb Dwarf Blue. Of the nature of the Blue Prussian, bat more dwarf; not requiring stakes. Prulific aie sonims ; peds tuly and broad, coutaming five or siz hage beond beans.-Mar:hulit's Early Dicaif Prolific. Superiar to the Early Mizizm, the pod containing a nérive in. It is the best eathy variery. (See advertiseEarly Durlo Rons forcing.-Prudhomne. Mu lerateiy tali; monds very tender, boing ahmost destitute of the usuai twugh haing.- Luon. Trine: Pormeraniun ; pods long. eylindrical.-Cabbage Trise Pomeranian cabiaye. A frin emmet-shaped Very large aad hady, tor winter use.- Yellone Savoy. Aut exinent emman saioy, very tatuler and sweet; but not addapied for withstandiag the winter.-Kright's Profeeting Broevi. White and elose-braued, with one or murt incurwing leaves, serving as a protection for the flower, which arrives at perfection in March and April.Large Asiatic Cauliflower. A very fine variety, obtained Lulem.-Lettrce; : White Puris Coce Cus. This unquestionably the finest Cos Letuce that cau Le grown for suamer use. Though tali, the outer leaves are hooded o as to close at the top and blanch the heart, without being tied.-Green Paris Cooe Cos is bardier than the receding, and will stand the winter if mocuerate; in othe A Cabbage Lettuce for summer use, very crisp and g.od. Nearwititun Cabbage Leltuce. Nound form and compact growti, also good for sumaer use. Cleker : Violet Solid, with a violet tinge where the stalks are exposed to light, but blanching a very pure whire, ani of delicate favour. The Manchester Cclery appears to be only tronger-growing varitety of this, in quality scarcely so fine - Neme Fut-sy wool white Sulin, hery large and fine; esteemed the best white Celery.-Radishes: Semi-long Scarlet. Of a fine scarlet culour and excellent quality remaining longer crisp than other spring and summer Rautishes. -Rose-coloured Semi-lony. Its qualities re semble those of the preceding, but its coluur is not so short cylindrical form; does not run in hot weather so quickly as the long radishes do.-Red Castelnaudary Beet. When this can be obtained genuine, it is the finest and best-coloured variety of Beet.-Victoria Rhubarb. The largest-stalked variety in cultivation, -Long-kee ping Shallot. This variety will keep nearly two years, and is not with the sort generally cultivated. It was obtained into this country from the Messrs. Booth of the Flotbeck Nursery, Hamburgh.

Protection from Cold.-Oar correspondent $\boldsymbol{F}$. states that he has found his Fuchsias, with the exception of a few of the more tendef varieties, live at Camberwell, in the open ground, with a covering of tan round their roots. But he adds that the anplication of the clippings of rabbit's for ( a waste article with furriers, round the roots, and covered over into the form of a cone with tan, proves a much more efficient protection. We suspect our fair readers have hardly discovered how useful their old muffs, boas, and fur trimmings may be to the pet flowers of their gardens.
Herbaceous Plants. - A list of the best thirty hardy herbaceous plants suited for planting the the rough borders of sbrubberies, and similar places, where little attention in paid to them. They are particularly suited to smatl places here no regular gar dener is kept, and where done by contract. The species will grow in almont any trees, or too much crowded by under shrubs. They are asily procured, not expensive, and such as will last a con siderable time in flower. Many of them, if cut down after flowering, will bloom again in the autumn

## Rebíétos.

Catelogue of Perne after the Arrangentent of C. Sprengel, ${ }^{\text {voith. Additions from } C . B . ~ P r e s h, ~ a n d ~ r e f e r e n c e s ~ t o ~}$ the Authors by whom the Speoies are described: to
which is added as Synoptical Table of C. B. Presl's which is added a Synoptical Table of C. B. Presl's
Arrangement of Genera. By J. Riley. London: Hamilton and Adams. 1841. 8vo.
This work, as its name implies, is a mere catalogue of names, but one that all who have a large dried collection of Ferus will find useful. The authorities for each name are given; and where none is mentioned, they are merely "named in Preal's Tentamen Pteridographise, but not described." In glancing over the names of the genera, we Piluiaria, Psilotam, and Rafflesia, are admitted armon, Ferns. However near allies the six former genera may be, the last can have no pretenaion to be included among then, bearing as it does perfect stamens and pistils. Had the synonyms been given, the book would have been of
more value; but the anthor says this "\% would have made it too large for its intended purposes.
4 Catalogute of Choice Slove, Greenhouse, Hardy Ornamental Trees, Shrubs, and Herbaceous Plants,
offered for sale by T. Jackson, Nurneryman and Seedsman, Kinguton, Surrey. Pamphlet. 8vo. 1841.
This is a priced list of an extensive general collection. The stove plants include many succuients and Orchidaceæ: the yarieties of Camellia exceed a hundred; the Heaths are very numerous, and among them are some of tata major, Clewsiana, elegans, epistomia, erosa, eximia, McNabiana, princeps, retorta major, and Shannoniana. The Pelargoniums consist of the newest varieties; and the list of hardy planti contains many both raluable and rare.
CALENDAR OF OPERATIONS for the ensuing Week. As the season has now arrived when the sowing of seeds com-
mentee, not only of arden vegetables and flowers, but of trees
and exnotic plants, buth home saved and imported, a few ofservaA certain proportion if heat, arx, ond molsture, with absence of

only partialiy noticed, some arrired too late to be considered, others require much more consideration than we can this wee
give the made with great ane a and of form a a correct opinion apon the
multifarious uncounected subjects brought before us is an affuir of considerable difficuity; at the same time it is a labour of love, and we shall never be found avoiding it. It will hereafter be
more necessary than ever to compress correspondence, as it grows upon us at a greater rate than we can by any possifility find room for.

## NEWS OF THE WEEK.

Intrligernce has been received that the difierences between Spain and Portagal have been at length settled by the ratification of the Treaty for the navigation of the Douro, on the part of the latter country. The arrangement of this question will ensure the peace of the Peninsula, and allow the two Governments to adopt such measures of domestic policy as may restore the internal ranquillity of both countries.-The continued armaments of France have again assumed a serious aspect, and given rise to energetic remonstrances from the other Powers. The increase of her fleet to 20 sail of the line with an establishment of 45,000 seamen actually afloat, and the augmentation of her army to above half a million of men, with an additional demand for conscripts, have created the ippression that the "armed peace" of the present Ministry may yet assume a more formidable cha. racter. The answer to the remonstrances of the Allied Governments against these hostile preparations, will, however, soon give a definite colour to the prospect of peace or war in Europe. In the mean time, Germany is completely armed, and troops are concentrated on the frontiers, prepared to meet any aggression on the part of Prance.-We learn from Egypt, that the Turkish fleet had left Alexandria for Marmorice Bay, where it would be refitted by the crews of the English squadron, previously to its retura to Constantinople.
At home public attention has been occupied by the christening of the Princess Royal, and by the debates in Parliament, which have embraced many questions of unasual interest. In regard to the arrest of Mr. M'Leod by the Government of New York, Ministers have declared that they recognise the destruction of the Caroline as a Government measure, and have consequently adopted the necessary means to secure the safety of that gentleman, and uphold the dignity of the British Crown. The Poor Law Amendment Bill has been introduced by a large majority, and Bills have been brought forward for the improvement of Drainage in large towns, for extending the jurisdiction of County Courts, for the abolition of Capital Punishment, and for several measures of financial or commercial interest. Parliament has responded to the Queen's message relative to a grant to Lord Keane for his services in India, by voting an annual pension of 2000 . for the lives of his Lordship and his two next heirs.

## $3{ }_{3}$ ome Nems.

The Court. -The ceremony of christening the Princess Royal took place on Wednesday evening, in Buckingham Palace, with every state and solemnity befitting the oceasion. All the resources of the Royal Houschold were put in requisition, and the same forms and etiquette were observed as when the Queen performs any pablic act as Sovereign. The christening took place in the throneroom, the throne being removed and an altar erected in its stead, covered with crimson velvet, and having the initials I. H. S. embroidered in gold. On it were placed the communion-service of the Chapel Royal, lighted with gold candelabra. In front of the railing enclosing the altar was the font, and round it were assembled the Queen, Prince Albert, the sponsors, and the officiating prelates. The Archbishops of Canterbury and York, the Bishops of London and Norwich, and the Dean of Carlisle assisted at he ceremony. The sponsors were the Queen Dowager, of the Belgians, the Duke of Sussex, and the Duke of Saxe Cobourg, for whom the Duke of Wellington appeared ${ }^{\text {as }}$ proxy. The Queen Dowager named the Princess ictoria Adelaide Mary Louisa. In the evening a dinner was given by her Majesty in celebration of the event, at Foreign Ambassadors were present. The water with which the baptism was performed came from the river Jordan, having been sent to her Majesty as a present for the occasion. gheen sent to her Majesty as a present for the occasion.
Accident to Prince Albert.-On Tuesday morning, as the Prince was skating on the water in the grounds behind Buckingham Palace, his Royal Highness unfortunately passed over some thin ice, which immediately broke under him, and he was immersed to the chin in water. The Queen was a spectator of the accident, aad was for a time greatly alarmed. His Royal Highness, however, has not suffered from the accident. The ice in the centre of the lake being mearly a foot in thickness, some surprise was created that the accident should have occurred; but it appears that the keepers appointed to attend to the aquatic birds preserved in the gardens of the Palace had broken the ice along the sides of the lake, to enable them to take water during the frost. These portions had again become slightly frozen after they were broken at an early

## The Duke of

has huppily so far recovered is attributed to the little care taken by his Grace to guerd against the influence of the weather, and to his exposure to the severe cold of Friday last in an open carriage.-The Lord Clancellor was taken suddenly unwell this week in
the House of Lords. but the attack was not serious. and ill be soon enabled to resume his ufficial duties.-Sir Astley Cooper, who has been alarmingly ill for several days, died yesterday in his 73 d chest, and was latterly attended with great suffering.

Parliamentary. - The election for Monmouthshire has terminated in the return of the Conservative candidate,
Mr. Morgan, without opposition, Mr. Hanbury Tracy having declined to go to the poll with a gentleman with Whom he was on terms of private friendship.-The Earl of Listowell has been returned for St. Alban's on the Libera) interest, by a majority of 47 over the Conservative candi date, Mr. Cabbell, who intends, it is said, to petition Me election for Richmond, in the place of Mr. Spiers, takes place on Monday.-Mr. Hawkes has contradicted the report of his intention to retire from the representation of
Dudley.-A rumour is current at Birmingham that Mr Scholefield is aboat to accept the Chiltern Hindreds, on ac count of his business engagements. Mr. Sturge is menexpressed their determination
nor of Colonel Thompson. - The apmointment of Mr Fitzsimon as heal maystrate of the Dablisa Police has created a vacancy for King's Cunnty, for which, it is said, Lord Oxmantown ant Mr. Cermard Conservative candilates, and Mr. Armstrong on the liberal interest.-The contest for East Surrey has terminated diate, by a majority of 1214 ; the numbers being for Mr. Antrobus 2652 ; for Mr. Alcock 1438.
The Judgeship.-Mr. Wightman has been appointed the successor of Mr. Justice Littledale; the ceremony of cre-
ation has taken placic in Lincoln's Inn, and it is arranged that he will go the circuit with Baron Rolfe.-On Saturday the Bar at Westminster presented an address to Mr. Justice Littledale, publicly expressing the kind feelingand respect unanimously entertained towards him. The Attorney-General, on behalf of the bar, delivered the
address; and Mr. Justice Littledale, in returning thanks, tated that after 53 years ${ }^{7}$ professional study and 16 years ${ }^{3}$ service in his judicial office, he felt the necessity of retiring into the quiet of private life, but he could not do so without paying his testimony to the learning and integrity which had ever, tistinguished the Eaglish bar.
Postaye Stamps.-A new envelop was issued on Wednesday, in the right-hand upper corner of which is represented a highly-embossed medallion of the head of her Majesty, which far exceeds anything of the sort previously
submitted to public approval. The necessity for such a charge was first notified to the Government by the same person at whose recommendation black ink was introduced as the obliterating mark instead of red. The colouring matter of the pink is of such a volatile nature that any attempt to remove the impression put upon it will cause the disappearauce of the original stamp, while the ubliterating marls will, if possible, be more firmly imprinted.

## fforeínn.

France. - The fortification question appears for the moment to hare given way to other matters of more pressber in Peer. The are proceeding vigorously in the immediate neighbourhoui of the Capital. In connexion with this subject, it may be mentioned that the Minister of War proposes to construct four new furtifieal tuwns of the flise class, one new fort, and to repair several uthers aldeady in existence.
The four fortified $t$ wns are to be Towziers, on the mod The four fortified twns are to be Touzzers, on the rond eatimated at nine milliun*. Langres, which is to become a principal fortress for the detence of the kingdron, as much for the frontiers of the Jura as for the interior, to cost seven millions; Thann, which will cost six nillions, and Les Rousses, which will cost five millions, to serve as an entrepot upon the line of operation towards Paris by one million and a half, and is destined to defend the head of the valley of Barcelonetta. The details of the supplies required for the army, nvoy, and public works amount to the enormous sum of $722,535,001 \mathrm{f}$., nearly $29,000,0 \mathrm{p} 0 \mathrm{0}$. sterling. Of the new public morks the principal are the
building of new hosnitais, and stables for the troops, building of new hospitais, and stables for the troops, powder magazines, victualling establishnients, barracks. and the repairs of several naral arsenals. These continued preparations for war have excited considerable alarm; and fears are entertained in many quarters that the preservation of peace is still precarious. Germany, it appears. lias remonstrated against these armaments, and has threatenened to increase her force unless Franee disarms.
The Ministry. - The papers state that rumours have boen current of differences between Marshal Sonlt and M. to favour by the King. it is not improbable that a modification of the Cabinet mav take place in order that he may be induced to join it. Other reports would lead to the belief, that if the retir ment of MI, (fuizot were secure), Count Mole would er.er atire.
 continne to contend indisectiy, that the letters lately published in La France and otter Oppestion raper*, purporting to be written by the Kins. were gemin
Natonal maintains that the arrest of the clit is of the papers in which those letters hat appeared was ith noh, whit described them, and determined in his own case to reinst with arms ary attempt of the kind. - It was rarurted in Paris that a third person, altogether unconne:: en with the press, had been arrested, and would be prosecatel wheh the editors of the journali, It is also stated that the Marhimself the entire responsibility of the affair, that he would reveal all the circumstances attendiag the purchase
of the letters, and candidly confess that he had been the of the letters, and candidly confess that he had been the dupe of an impontor.

Treaty reith Buenos Ayres.-A discussion on the policy of this Treaty arose in the Chamber of Peers on conduct of the Thiers Ministry, for having abandoned the cause of General Lavalle to treat with Rosas, thereby in-
juring France in her honour, dignity and infuena..-M. Guizot replied by remarking that the Cabinet woul i ce.
tainly not ratify the Treaty if it believed for a moment

 Loull be pla el onat sume iont athe thost fivared
 Buenos Ayres. Out of much disorder he considered that

was an immense result for civilization. This declaration was favourably received, and it has since been announced

that the ratification of the Treaty is determined on.
Proposed Treaty of Commerce with England.-It appears that the clause of this Treaty relating to steam
engines is favourable to British interests. The commission proposes to abolish the duty of 30 per cent. on engines distined for navimation betreen the two countries. where the maicrials of a French engine would cost $102,518)$ francs, thuse of an Enylish engine of the same size woull cost but 87,5010 franes. The stwamboats of France in 1838 are stated to be 207 , with 7,493 horse power those of England in the same year as 678, with 75,398 horse power. Hitherto the English engine-makers have French establochments. The English have fitteil 9 steamboats of 1740 horse power for the French royal navy; boats of 960 horse power for the French post-office
4 boats, of 2795 horse power, for Havre.
bable reverses Prance would sustain in a naval war in the actual state of her navy, and the absolate impossibility of manning additional ships of war. The present moment is that at which vessets employed on the Newfoundland city of seamen, that not one half the number that usually leaves Dieppe can procure hands. - The French fleet under Admiral Hugon, cruising before Hyères, has been scattered by a tempest. One line-of-battle ship has returned to Hyères, having lost her sails, and the Admiral was com-
pelled to take refuge in Palma. The rest of the squadron have not been heard of.
The Inundations. - The prefects of the different doand Srone hisited by the late inundations of the Rhoae of damages sustained by the Government official retarns within their respective jurisdictions. It applears that is communes were ravaged by the waters; that the losses suffered in house and lamded property amounted to $0,495,326 f$. ; and in goods, seed-corn, and furniture, to

Durmers the Requicile - The trial of Dazmes is not
sail to be fixel for the lath of March, betore the cour: of Pers. The coomittee of incmivy hns obtained much
information as to the working of the sceret soeieties, but has failed in finding out his accomplices. There seems to he no doubs that he had two confederates with him when he fred the carbme at the King; bat the police have nut been able to trace anything beyond this fact.

Vaporleot's Remains.- On Saturday the coffin of Napoleon was remured from the choir of the chapel of the ing-place. The of seremerome, prepared as its final rest followers of the Emperor, was very imposing; and the chapel has been decorated with suitable ornaments.
The Journals.-It is worthy of remark that the Paris journals, with scarcely an exception, have devoted much
space to the indisposition of the Duke of Welliagton; and even the political circles known for their anti-British feeling have expressed general regret at the intelligence. The Journal des Débats says :- "We shall not lose a fested by in giving our expreasion of regret to that maniDuke of Wellington is one of the men of Europe whose presecration is of the utmost importance fur general which the consciousness of great military renown always inspires, have the right to speak of pace with the most inspires, have the right to speak of peace with the most
confidence and nuthority. The remembrance of the noble and dignifid manarer with which he recently spoke of France adids purticularly to the sincere regret which we reel and $n \rightarrow z$ express.
Fixtchance System of Forgery. Tha Court of Assizes held at Auch, on the 20th ult., was oceupied with the $\mathrm{f}_{\mathrm{tw}, \mathrm{c}}$ of M. Robert, a notary, tha was arraigned upon no of forery and fond eommitted in the exercise of his profession! Simpicion mas first excited against him by his extreme irregularity in registering the decds and docucommanicated tirese circumatances to the lass oficers of the (cown, who entered upen the insestigation, which is hued proufs of the above-mentioned dilanquencies foil conts-ion, exeusing himself on the ground of the sate of porarty in which he was left by his thater, and the bad exanplas he had givea him. In tave, an in-preation of the registers during the period of the fother s professtonat lite many stanar wrong doings ware discovered. The prisoner, on heing bruught into Court, excited pity by his extreme wretciedness of hoth mind and body, and by his abmont total ignorasee of the commoz principles of
his profession. He was further accused of having de-
frauded Government of 25,000 f. during the 30 years he bad carried on his illicit practices. Sufficient testimony was produced to induce imprisonment for eight years, and to be exposed in the
pillory.

 reguiation of the navigation of this river, and the Queen ter in Lishon was preparing to leave for that capital ; and Letters since countries wow bo wima ly at rat. ment of this question has given general satisfaction, and both countries. The Government Gazette says that it will closer and closer their relations and common interests : that the Spanish Government, by encouraging this alli-
ance, will find the means of showing Europe the sincerity with whin they actad in this amestion: and that in consequence of its satitactury settlemest, nol.h. ; cha alter It is satil that the hing of Piu-sis is ahout to reengri-a the Queen of Spain, by sending an ambassador to Madrid. Don Miguel is reported to have arrived on the Spanish frontier from Rome, in expectation of a war with Portugal ; and it was suspected that, in the event of hostililies,
he intended to enact a new part in another civil war in both countries. In consequence of some severe attacks on the Duke de la Victoria in the republican papers, a large
body of the National Guard have presented the Dnke with an address, expressive of their confidence, and offering their support against the injustice he has received. Ruand intri gues are in prozress for the establichment of a republic, and that various means are resorted to, in order to great confusion; the provincial depatation of Badajos been given at Seville in favour of the republic. We hear from Goadix that a battalion has mutinied at Hueron,
trounding seseral of its officers, after which about 100 of the most troublespoae left, with their arms, for the Serrauia de Renda, where they will, no denut, establish themselves as robbers. Near Cadiz the roads are nearly intercepted by the highwaymen who infest them. While these doings are going on in the south, we hear from Teruel and turned foom France tre, revivine the conts if the Carlist residents in those porines. In: (:llims whe of the ultra-Prosresisias hate inanlted the womens whilst at praver in the charehes; and the furmer: had nearly suc-

 its articus in two sittings, and mmediately assented to the neaware. Preprations for the defence of Lisbon
still continu:, but tiere is now no doubt of th. preservation of leace. The Finance Minister, whose projects were noticed in our last nmmbe, fas tenderda his resignasent did has..ceeseor has dealnel hant. under the pre solely from hatriot'c ecusidesations, buang in friend to new imposts, averse to loans, and a staunch advocate for the most rigid economy. The Ministry is said to be ex-
tremely unpopular, and dissatisfaction is expressed by tremely unpopular, and dissatisfaction is expressed to Portogal in the recent treaty
Switarlabland.-A sufficient numjer of cantons in nary Diand have united in the demind of an extraordithe Diet to consider the question of the suppression of the canton of Argau, tranquillity being completely reBusle city line insurgent districts. the convents. time, and the Government is antively engaged in completing the armanemts. teers.

Russia.-It is stated that the Government intends nest spring to remove a considerable number of the people called Odnodworey from the province of Russian P'osettle them there as colonista. These peuple are a hind of middle class bettreen the bours and the nobles, and differ from the former very little in costume, languare, igto the nobles on whance. As eates' they have been, their removal will not be much felt; but they themselves will leave their present abodes very unwillingly, and only by compulaion, - We learn from St. Petersburgh that the plague has made its appearance in Georgia, and, althongh leagues beyond Teflis. The governor-general has received Caucasus, in order a sanatory cordon on the line of the interior froas being attacked. He , however, abstained from doing this, representing that cordons to such a vast extent afford no protection, while discontent of the people, and impediments to military operations. He added, that he considered the measure adopted by him, of surrounding every place where there was the least appearance of the evil, leaving the intercourse between efficacious. This opinion is said to have prevailed at St . Petersbargh. Four regiments of Cossacks have since been placed at the disposal of Count Woronzow, to establish panatory cordons wherever he may think right, in case the ptague should pass from the Caucasus and make an irrupwill render still more complicated the affairs of the Cauwill render still more complicated the affairs of the Can-
casus. In spite of the rigour of the season, another division of troops has been ordered to Ieave Taganrog for Georgia, although in quarters for the winter.
ITady-A letter from Naples, dated the 29th January, states that a frightfuil land-slip occurred in the commune of Gragnano. near Castellamare, about 14 miles from that city, on the night of the 22nd, when the inhabitants, who That part of this populous commune which lies nearest the moyntain which overhangs it, was suddenly overKing immediately sent a large body of pioneers, and went himself to superintend their work. As yet, only 65 bodies have been dug out, and five persons were found alive, The, although in great danger, may still be recovered.especially, were covered with snow up to the summit of tinued to issue. The Volturno had overfiowed its banks, and inundated all the plain of Capua. The statement that the King had sent an invitation to his sister, Queen Chris tina, to come to Naples, is denied. It appears, on the
contrary, that his Majesty had notified to his sister not to appear at his court, and had expressly forbidden the Dowager Queen going to Rome on a visit to her. It is added received Queen Christina with much coolness, notwithstanding the recommendation of King Louis Philippe, and the interference of his representative at the Vatican. It is also said that King Ferdinand, who has of late secretly sold the private property of Francis I., and appropriated the proceeds to constitute majorats for his own sons, had cesses, his brothers and sisters, calling on his Majesty to property among his children a letter from Messina, in giving an account of the recent letter from Messina, in giving an account of the recent to the city, though from the frequency of the shocks great apprehensions had been entertained. The weather was fine, and the sea calm at the time. The direction of the
shocks was from N.E. to S.W., showing that it was the name force which acted at Reggio, in Calabria, and did not come from Nount Etna. The earthquake was not felt farther south than Taormina, nor than Milazzo to the west ; well as all that part of the Sicilian coost commotion, as and Cape Faro. The population of Reggio continued encamped in the open country round the town to secure their safety. - In August last, an attack was made upon two English gentlemen, Mr. Hallett and Mr. Smith, by a party renceands, on the route from Padua to Perrara. Intellibeen taken, and depositions have been sent for, through the Home Office, by the criminal court at Padua. It appears that the attack was well organised by the brigands, and several interesting facts relative to the outrage have been elicited from the police documents of Rovigo. It is said that had the slightest attempt to sound an alarm been matie atter the rotbery, the travellers' lises would have been sacrified, as scouts were placed the whole way
along the roal from the scene of the attack Trepot between Rovigo and Montelaco) to the bridge over the Adige. With the intention of bringing back Messrs Hallett and Smith to R, riga as witnesses, the poliee followed them, through the information of the passport offices, to Bologna, Florence, Leghorm, Genoa, and Milan, where they lost all trace of them, fortunately for those gentlemen, to whom a forced sojourn at Rovigo might have proved anything bat agreeable.
Tureey.- Private letters received by way of Germany announce that the Soltan's resolution to confer Egypt hereditarily on Mehemet Ali is attributable to the influence of the Russian, Austrian, and Prussian Cabinets. The

Divan is said to be much engaged, and the ambassalors energy into the Gurernment. It is repurted, that resolutions have been provisionally taken respecting the future administration of the Pachalics of Aere and Condia, whieh
have an important influence in these tro provinces. Both the fortress of SE. Jean d'Acre and the harbour of Sada are to be separated from the administration of the Pacha, Turk ish troons from Constmatinople, in the same mauner as Delgrade, which, although in the midule of Servia, has a Turkish garrison. This measure cannot fail to have a said which has been acceded to by all the other cabinets. Thus he apprehension is at onee remored, that Englath France, or Russia might, at some time or other, attempt to obtain extensive power at St. Jean d'Acre. Unfapour-
able accounts have been received from Syria, and the population are said to have arailed themselres of the arms distributed anons them to carry on a wasfare of plunder

Egypt.-The Turkish fleet had quitted Alexandria, before the sailing of the Levant steamer which arrived in Cairo, with a division of $\&$, 000 men approaching Gaza, whither the Nile steamer had been sent to meet him.

Cape of Good Hope.-Recent advices state that the proceedings of the Emigrant Boors beyond the boundary that they were engaged in a system of domestic slavery. Accounts had reached Graham's Town from Port Natal and other quarters, tending to confirm the belief that a and other quarters, tencing to confirm the belief that a
traffic in native children was a matter of every-day traffic in
occurrence.
United States.-A letter has appeared in a Minis. terial paper in reference to the case of Col. M'Leod, containing an extract from a Niagara journal, stating that the examination has resulted in remanding Col. M•Leod to gaol "until he enters into recognizance of 5000 dollars for himself, with two sureties of 2.00 dollars each, for his appearance at court, to answer to the charge of being encerned in the murder committed at the time the steamboat Caroline was burnt. The testimony given in is very contradictory, several witnesses tending to implicate the prisoner, while others swore positively to his being elsewhere on the night of the burning of the Cavoline. was held at Bufters york papers, that a public meeting redress for the bo, 2 thetrme flammary resolution were apt Prearation said to bey resolutios of adopt. Prepations said to be in progress on the Canadian side of the Niagar river, to organise a night expedition to Lockport for the
purpose of rescuing Mr. M.Leod ; it is stated that he refused to give bail, and is still in prison.
the 18 th December, an account had reached that place from the Mexican frontier, to the effect that the Mexicans were concentrating a force of 8000 men , in order to attack and on the Rio Grande. All business consequently was at a stand

 proceeded from the Whigss, he would not the less support it, being Mr. BrCR trourht that some of the clanges must be amended;

 would relieve the ind ustrious man from the payment of rates to

 After the great expenss incurred (though expense was certainly a secondary consideration, he should not ilke to see the experi-
ment abundoned, especially as nothing was suggested in its
room. It had been said that there was no agsegate saving; for that if there were less laid out in rates, there was more laid out in wages.
had bener
of this bi
staace. as to the expediency of the ten years' continuance. Fise
years, and then, it necessary, five years more, might be a sater
arrangement. Besides, a good tleal must lepend ont the personal arrangement. Besides, a good thal must lepend om the personal
character of the commisioners for the time beinis. He hoped,
too, that the law would not be executed with strictness; and that, inat matters of feeling, suct peodue deference to the natural sentiments and wishes of the
peple. Moreover, he thought there should be no encourage-
ment to iurther unions. Indeed, he apprehended that the principte of these onions had already been coarried too far.
Mr. T. Dt.Nombe said, that this bill contaned hothinr exeept ageravation, and that it Wint to repeal all the local acts of
parishes: hot the people of England would not submet to he dis-
franchised at the will of three gentlenen in Somerset-house. The bull had been brought toits present stage with indecent haste. Mr. Fox Macle said, that Mr. Wakley had belied the poor:
they were not the persons who had disturbed the public peace by
discontent ; mor had they shown any of that tendency to comdiscontent: hur had they shown any of that tendency to com-
bination waich he had enlarged upou. The present question
was not a pecuniary one; and esen if it bad increased instead of
 central management. So little were the boards of guardians fit any abuse of the old system of which some or other of those
boards had not solicited the restoration.
Sir E. Kratcrisuly would not oppose the second reading, Sir E. Kwatcuselh would not oppose the second reading,
though he objected to many of the clanses, and wished for a
good deal of relazation in its working. He instanced from his own neighbourhood a class of recent cases where the distress Where it would have been right that the guardians should possess
a power to give out-door relief, from the imposibility that during
such a frost the poor, however willing to work, should obtain employment.
neticial measures ever the act of 1834 to be one of the most behad gone so far as to propose the resteration of the uld systeme.
Out-door relief, given under pressure, would be an example discouragng provident habits. It had been objected, that men
woud endure much suffering rather than enter the worls house. Toud endure much suffering rather than enter the workhouse.
That was the very thing cesired. It threw them on their own
efter cfurts of their friends. It was unly on the abandonment of these eftor's under the old system, that the character
and condizon nif the Cish peasantry hadd decined. He ap-
proved the renewal sit the serm for ten years, in order to prevent proved the remewal sis the torm for ten years, in order to prevent
agitation, oy provige tiat there was no intenton of giving way.
Some dificulty woulu arise about the burials, because the poorhouses were generally in the neighbourhood of large towns with inmates wre nevessardy custaut
Mr. DARBy urged tree
feelings un the stoject of burials. it was an error to suppose that the new law restored the principle of the $43 d$ of Elizabeth, if it
had, tiwere would not hare been the present opposition to it. The
wo orkhouse wis not really the fave test an ixudustriun man, mituihed to his home and family, wound re-
fuse it. Wheni an idie nowe would take it. The true test between fuse it. Whenl an idle owe would take it. Thie true test between
these two clases was to offer them hard work. Where a man had more childrem than he could matitain, it wou econsiatent with the Mr. Ricz held it to be indispemaable then the manisenent
should bo with a central boand; and Captain Pechell and Mr. W. Attwood objected both to the system and to the Commissioners.
Sir E. Fulsme sid, he would give no vote; for he corle not
conscientiously support the second reading, and on the other
hand, he did not wish, by voting for the rejection of the bill, to
negative all slteration in the evisfor negative all alteration in the existing law.
Mr. Lavodalg wished for a provision enabling paupers of all
denominations to attend their respective places of worship on Mr. JAmes said, that in his countr the original unpopularity of
Me Poor Law had almost disappeared, and the law most beneficially. He was favpurable to this bill, though he did Mr. FIELDENaration of aged couples.
had been said, to raise wares, but Nather to lower them, not, as would oppase thas bill in elery shaple, and on every oceasion.
Lurd J. Resselc contended that the New Poor Law was founded on the principle of the statute of Elizabeth, which goes at once
to relieve the old and infirm, but requires from the able-bodied a
test to distinguish whether they are willing to perform labour if it be found for them. The noble lord read some extracts irom in 103, on the occasion of a great famme in hidia, laid down
principles of policy precisely simular to the rules acted on hy the
Poor-law Commssioners. It had been said that hard labour was
a better test than the workhouse; but he thought experience was the fother way. Then came the question, whether the workhuase no suggestion offered, which would not, in his opinion, bring for out-door relief in a season of severe frost. If that were given
this year, you must give it next year likewise, to such as might
be destitute of work, though the weather should be less severe. Thus, step by step, the ancient evils would be brought back. evidence to show what had been the miselief of paying wages by
rates, and how much those mischiefs were complained of by men rates, and how much those mischiefs were complained of by men
who would fain have been industrious. He entreated the House
not to admut the recurrence of so injurious a state of things, nor not to admut the recurrence of so injurious a state of things, nor the period reduced from ten years to five. - Upon a division the ayes, 201 ; noes, 54.
Tuesduy. of a motion to amend the laws of the Irish Parliament relative to college of Maynooth.
In reply to a question by Mr. O'Connelle, it was stated by Lord
palmerston that he could not lay on the table the treaty with Mr. O'Converls said thatin that case heshould bring on in due Mr. SaNFokD gave notice that he should move, in committee upon the Poor Law Amendment Bill, additions and alterations in several of the clauses, and among others, one which would limit Lopd STion of the bill to five years.
the conversation which had taken place on the preceding evening taken $m y$, and of Mr. Macleod, wished to ask if Government had Lord Palmerston said, that a case nearly similar to the present had been expected to occur one or two years since. In anti-
cipation of that event, instructions had been sent to Mr. Fox and although circumstances rendered it unnecessary for him to cable to this occasion. The last despatches from Mr. Fox had nnly been received a day or two since, and the final instructions,
the nature of which he could not be expected to disclose, had been only that day sent off.
noble Lord afterwards stated that the Governor-General had , the his sanction and approval to the destruction of the Caroline gand her Majesty's Government did consider it a justifable proceeding, as it was donein defentiag the ternitery from invasion. laws relating to the drainage of land in Irelaad. He believed the prove the country and to increase fts revenue and its resource IIe believed it would cffect much more good than either or both

The honourable gentleman prefaced his motio by detailing the case of hardship which occurred to Mr. Sheriff Sir R. INGLIs intimated his objections to the propased change,
and described the Jews as a race of foreigners not entitled to an rights of citizenship in this country. He offered, however, no opposition to the bill in this early stage. The motion whe sup-
ported by Mr. Warburton, Mr. Hawes, and Mr. A. White, and
opposed by Mr. Gladstone, who would not, hoverer, introduction; it was accordingly agreed
The House did not sit on Wednesday
Thursday.- Lords Eastnor and Listowel took the oaths and Lord Ingestre on the subject consequence of a question put by Russeci explained that the sailing of the expedition had been purposely delased, that it might not arrive on the coast at time when there would not be water enough to allow the ressels expedition would be likely to arrive in the month of Jume, and consequently, at the most mahealthy season; but he thought it better that the vessels should arrive there at a season when the; should ab ammediately to proceed ap the river, than that the depth of water, they would be detaing for a much longer perio Mr. Hume, said that the the country. His lordship, in reply of the expedition could not jet be laid before Parliament; but the general object of the expedition had already been fully detailed. naval and military claims on the Government of Portugal ; he was sorry to ind that no progress had been made in the settle British Government would, if necessary, take the matter into their own hands
Lord Palmer
been already fairly and amicably settled the matter had not spondence commissioners to represent the interests of the two arisen as to the rules which were to guide them in the perform Belgian minister, who had consented to act as refererred to the
Bhis pint fad been arranged, he hoped that there would be ao further delay
the condition of the islands and hiechlands of to inquire into View to afturding the people relief by emigration. He was no
extreme advocate for enigration, but he coustdered the case of those whose interests he came furward to advocate as of a very
peculiar nature. By the total destruction of the manufactare of kelp, in consequence of the reduction of the duty on sait
and barlla, the population of that part of Scutland had, soon
after the ciuse of the war, been deprived of nearly every means of existence, and no wape remained for them of betteang
their condition, except by a removal to some other country. He believed Canada the most suitable country to which they could year for three years, the oliject he had in view would be attained The aumirable patience with which these poor people had e
their distreas entitled them to favourable consideration.
Lord Trionmoutr seconded the motion. from the change produced in the kelp trade by the reduction
duties; and, even if it had, he doubted whether it would be a sat principle to give parliamentary relief wherever distress had been classes of the Queen's subjects who There were other distreand granted, an argumest for similar aids; and he did not apprehen He thiation wutd be a sufficient answer to such other claime and the legisiative experiment about of the made there, furnished
additional reasons aganst the proposal. He woull nut, however additional reasons aganst the proposal. He would nut, however Mr. Warblaton feared that the appointment of commito would excite undue expectations, and the repurt of that com
mittee, if favoumble to the grant, woold increase the dificulty refusing what he certainly thought the Moase ought not to cop
cede. If Inquiry was necessary at an, he wrold rather have made by impartial commissioners.
SirR. PEEL said, that where there had been so much suftering
so patiently borne, it would be hard to refuse a committec.
hoper hoped the report of a committee would at least make hnown to be ill received: 3l. per head might pay the voyage ; buthe wished them to learn that mere cepurtation to Cinaada wuad do but
little for them, Without arrangements which wonid greaty in crease the complication and expense of the remedy. For the Honse as greatly preferable to a mere local investisatio Mr. HL we disifked a motion aimed at what he considered to quisite, he preferred a commission on the spot. Tiaere was
 this was anequal; and he would oppose a
the Houst to an advance of public maray.

The CEANCBLLOE of the ExCHEQUBR suggested an alteratio of Mr. Hume, and to preclude the excitement of hopes which it
would be impossible to realize. Instead of saying, "with a view
to relief by emigration," he would rather say, "with a view to to relief by emigration," he would rather sal culty of grantine indiscriminate aids;
to refusc all inquijy as to sufferings
Mr. Bailurk, in reply, adopted the alteration suggested by the Chancellor of the Exchequer; and the motion was carried. quiring that the parties in election petitions should state the nam Sir Hussery Ivian moved for leave to bring in abill for exc-
cuting the Ordnance Survey of England and Scotland on an en-
larged scale. The ordnance survey of England had been made
on the scale of an fach to the mile. Since then a survey had
been made of Ireland on the scale of six inches to the mile, and the comparison between the two surveys had ong made it matter
of regret that the English had not been on the same scale as
the Irish survey. The more limited scale of the English surthe Irish survey. The more immited scale of the English sur-
vey had often made it impossible for Government to aford that
assistance to public bodies which a national survey ought to have
enabled them to give. Hat the survey been originally on a sixbeen saved by superseding the necessity of frequent local survess. ture was one that would amply repay itself. The utility of the
survey might be materially increaver by the multiplication of the In the course of some further conversation Sir H . Vivian stated
that the survey of the nor, hern counties would be completed in that four years. - The motion was then agreed to.
On the motion of the Chancellor of the Exchequer the committee on banks of issuc was reappointed.-Leave was given to or before the end of the next session.- The Court of Exchequer
(Ireland) Bill and the Tithe Commutation (Ireland) Bull Were
severally read a second time. The latter of these bills led Mr. severally read a second time. The latter of these bills led Mr.
Shaw to make some complants about the position of the Irish
clergy with respect to their arrears of tithe. The right honourable clergy with respect to their arrears of tithe. The right honourable
gentleman endeavoured to show that the clergy were, in equity, gentleman endeavoured to show that the clergy were, in equity,
entiled, under the Million Act, to a balance of 100,0000 . from the
Government. Mr. Pirott looked upon the act of 1838 as a final Gettlernent, and denied the justice of the claim now attempted to made in the name of the Irish clergy.
Friday. - Before the discussion of the
Keane, Mr. Huas desired to know from Government, whether it was true, as stated in the Indian newspapers, that as scldier had an end to any question about rewarding his services.
Sir Join Honimouse protested against the allegation of such
charges on anonymous suggestions in Indian newspapers. So charges on anonymons suggestions in Indian newspapers. So march he did not in a sintle case inflict corporal punishment.-

## §thetropolis and its Yícmúty.

The Weather.-Daring the week the cold has been very intense, and until Wednesday night continued so,
with little intermission. The Parks have been thronged with little intermission. The Parks have been thronged
with skaters ; and, although they assembled in large numwith skaters; and, although they assembled in large numbers, no serious accident occurred. The banks of the river
above-bridge have been much crowded by persons desirous of witnessing the immense icebergs locked up in various parts, and in the narrower portions several persons ven tured to walk across the stream. From Blackwall to Richmond the Thames, during the early part of the week, was no longer a navigable stream; maritime business was completely suspended, and hundreds of poor men consequently thrown out of employment. The river above the pletely frozen over, and hundreds have availed themselves of the opportunity of crossing. In all parts of the river, boats, barges, lighters, and other craft, have been imbedded in the ice, and could not, of course, be mored until a thaw took place. The river between Battersea and Westmin ter bridges was only partially frozen over, there being a namow channel open in the centre, in which masses of ice continually floated up and down with the tide. The bergs, rendering the ingress or egress of any uessel utterly mpossible. The interior of the docks was quite frozen up, amongst the labnurers is rery doubt that the dock companies will subscribe a sum litte money for their relief. The destitution along-shore, in resent. At London-bridge the ice bad greater than a immense fields, remlering it impossible for any steam-boat to land her passengers at the Wharf. The tiers of shippiag nication beween a lorve number of ships and the shore of the crews were in a stise ahsilutely burdering upon starvation. With the exception of a few steamers which
ploughed their way throush the lee, the navigation has oeen entirely stoppod; and at on yerind simee the severe property. The whole surface of the river from Londunborac along with the flowing tide, crushing barges, boats,
and other craft, forcing the ships from their moorings,
bearing down platforms, and breaking the chains and warps by which the lighters and coal-barges were made
fast in all directions. Before the tide began to flow, great number of barges, schooners, and other vessels were raised high on the icebergs, threatening to crush others alongside, when the tide rose and forced them on the top far as was practicabrevent the destruction of property as ployed to clear away the ice under the barges before the flood-tide commenced, to prevent their being uplifted by the rising waters and knocked to pieces. The barges were
also doubly, and, in some places, trebly secured by strong also doubly, and, in some places, trebly secured by strong
warps and chains; but the pressure of the ice was so great that the warps and chains gave way in many places, sometimes carrying away the rings and posts, and the fronts of
the wharfs to which they were made fast, while the ice was the wharfs to which they were made fast, while the ice was
continually crushing boats and skiff, forcing out their sides and swamping them. The waterside premises of the boat-builders at Limehousemand Rotherhithe presented a lamentable scene of wreck and confusion. Many lightermen were missing, and business was at a complete stand in the eastern districts of the metropolis. Upwards of 2,000 coalwhippers were out of employment, and in the docks few labourers were required, so that very severe distress exists in their immediate neighbourhood. As a proof of the seflying and hovering over London-bridge. Large numbers of sipes have, during the week, been seen in the marshes of Tottenham and Hackney, and in the adjoining low lands of Essex, and occasionally some wild ducks. A thaw took
place on Wednesday, and has since been followed by rain. Fires.-Destruetion of Camberwell Oll Church.-On Sunday night, a few minutes before 12 , a light was
observed, by a policeman, in the gallery of this structure; and supposing, from the flickering of the flame, that thieve had broken in, he informed the clerk, who resides near the church, of his suspicions; the clerk lost no time in procuring the keys, and on opening the church-doors it was flames, owing to the sudden fire, near the organ. The with great rapidity, and communicated to the organ, belfry, and the other portions of the fabric. Ther burst forth from the windows of the building, and the whole of the to this time could be procured, and the opinion water up bystanders coas, be procured, and the opinion among the bystanders was, that the fire must burn itself out. The
church was surrounded by a yard, and had a square tower, with a peal of eight bells; the whole of which, together with the organ, and the fittings of the interior, have fallen a prey to the flames. About two o'clock, the bells fell with a loud crash, and were soon after followed by the roof, and nothing is left standing but the bare walls of the edifice, which was capable of holding between 1,000 and 2,000 persons. No water could be procured, and out of six appearanch arrived, two left the place, as there was no ously for some time, and, at half-past two, the building was burning from one end to the "other. The ruins have since been inspected by the surseyor of the Atlas Insurance Company, in Which the church is insured to the amount of terior of the church was situated under the nothed the inand the flue extended to the flooring in the centre of the middle aisle, and from thence through the south side of the middle aisle, and from thence through the south side of the
organ loft to the top of the tower. The end of one of the principal beams that supported the organ loft had projected several inches into the centre of the flue. Soot had from time to time collected on it, and it is supposed that on the lighting of the furnace on Sunday morning the soot must have ignited, and set fire to the heam, which smouldered it burst into flames. There can be no doubt that this was the cause, for the organist and other persons who were in the organ loft on Sunday evening experienced great heat during the service. The church contained many monuments ; but nearly all of them are destroyed. The few was suspected that the bells fell entire; but it appears from the remnants dug out of the ruins, that they melted before they fell. The spacious vaults underneath the church have escaped injury, and the coffins therein are perfectly safe. Notwithstanding this calamity, a novel circumstance occurred on Monday morning; a couple were married on
the ruins, and two funerals took place in the ground adjoin the ruins, and two funerals took place in the ground adjoin-ing.-A fire, attended with loss of life, has occurred at
Rotherkithe, in the St. Helena Tavern. The landlord and his wife were retiring to rest, when a cry of fire was raised. The landlord, imagining that it was in the street, ran out to ascertain where it was, when he discovered it to be raging on his own premises. On returning, he found one of the back bedrooms in flames, in which slept his daughter, between four and five years of aye. Severa to get into the apartment, bat the smoke and heat nearly vercame them. At length, after the fire was somewhat got under, the landlord went in, and, kearing a noise in out corner, perceired his daughter on the floor, burat in a
shocking manner. A surgeon was sent for, but she died shocking manner. A surgeon was sent for, but she died
almost immediately. The child was put to bed shorty after 9 o. cluck, and it appears that in the course of the evening sne of the servants went into the roons to see if
was asleep; she twok with her a lirhted candle. and it supposed that by some accident the bed-curtains caught
fire. The apartment and furniture are destr yyed. fre has occurred on the premises of Mr. Mhiward, lucifer match-maker, in South Hackney. The c mbuastible
nature of the materiais defed a! efiorts to subdue the flames, and the whole of the premises, with the stock, were consumed. -On Monday murning, before six o'clock, the
inbabitants of Millbank, Westminster, were aroused from their beds by a sudden explosion, which shook the housea distillery belonging to Messree Seager the extensive appears that the large still became overcharged, and exploded, forcing off the roof of the still-house, and a quantity of spirits became ignited. By great exertions the progress the rats. Considerable damage has been sustained by -The banking-house of M no person received injury. Wellington-street, Beron Messrs. Weston and Young, Wellington-street, Borough, was also thrown into a state of great consternation by an alarm of fire. Several
engines were promptly on the spot, but by the exertions of the inmates their services were not required. Had the ire occurred after the asual banking hours the conse quences must have been serious, as the fire originated in hree on Tuesday counting-house.-Between two and bourhood of Kent-street, Borough, known as We neigh yard. It originated among some shavings on the first fioo of a house occupied by about 16 families. In a few minutes the engines arrived, and were well supplied with water, and, assisted by a party of police, the fire was arrested, but unfortunately too late to prevent grent damage and loss to the furniture of the inmates, many of whom received severe injuries in escaping from the upper floors.

Aceidents.-On Sunday morning last, a police constable was on duty in a lane leading from Kingston-bottom to Richmond, when he observed a dark substance under the hedge; he approached to ascertain what it was, and discovered it to be a man huddled ap, without either motion or warmth. With some difficulty he convered the body to the workhouse, but life was found extinct, and had evidently been so for some hours. The surgeon who examined the body stated his opinion that deceased, tired with walking, had fallen asleep, and by that means became a victim to the extreme severity of the weather.-On Sunday night a policeman received information that a man was immersed in the mud near the General Steam Navigation Company's works, Deptford. He immediately proceeded to the spot, and, by means of tackle and ropes, succeeded in hauling the person on board the Catherine and Mary, from whence they conreyed him to a public-house Two surgeons were promptly in attendance, and remained win the uafortande gentemaz for several hours, when symptoms of returning life presented themalves. The patient under their care so far recorered as to state that his name was Ware and that he resided at Croom's-hill, Greenwich. He aiso said that another gentleman mas in his company, who is supposed to have perished.-An accident that might have been attended with a fatal result large tin Wenlock-road, City-road, on Monday. A standing, with a powerful to the Imperial Saw-mills, wa the premises, when the animal suddenly took fright, and started off at full speed. After proceeding for some distance, the wheel of the cart came in contact with a gas pillar, and the collision was so violent that both cart and hase were harled over into the rond. A poor woman, who happened to be passing with a basket of fruit on her head was knocked down by the cart, beneath which she fell, and the whole weight of it rested upon her. A police sergeant, with other persons who witnensed the occurrence, ran to the spot, and succeeded in extricating the woman, whom they expected to find crushed to death; but on conveying her to a surgeon's they ascertained that she had escaped with a few bruises, and was able to walk home The horse, which was a injured.-On Tuesday, wombwells exhibition of wild beasts arrived at Woolwich, and in the erening was opened for the admission of the public. A boy named Coraish baving gone one of the animals seized him by the arm and dreadfull acerated it, besides inflicting a severe wound on the scal of the head. So powerful was the hold the lion had of the boy, that it required the strength of two men to extricat him. The sufferer was found to be so severely hurt, that elderiy man, named Peter delay to Guy's Hospital.-An elderiy man, named Peter Buse, expired in the London Hospital, under the following singular circumstances: few weeks since, he accidentally scratcheth his left hand with a pir, and took uo notice of the circumstance. In stead of the puncture healing, it graduakly extended, and his arm became swollea to about twice its usual size. He went to the hospital, and on the wound being examined, it was found to be in a very inflamed state, and it was very evident that it had been poisoned. Mortitication at length took place, and after enduring much pain, death ensued. On Thursday morning, a melancholy vecurrence took place in the family of Colonel Lambert, of Grove-place, fant of two years $f$ appears that the youngest son, antrived to open one of the drawing room sastes, and preing out inter biony clambered up the iron railing, and was in the act of leanins over, when the colonel, who was seated at a table writily, perceiving the child's danger, rushed tyward's it, bat before into the area, and was hilled on the spot. The colonel narrowly escaped being precipitated after his inf. rtunate the balcony and threv hin hiv luser than rate whe int.

nqquest.-()n Saturday erening sa inquest was held in Whitecress-street prison, on the trody of Mr. W. Ram,
aged 39, lately carrying on a millinery business in Regent-
street. It appeared that deceneed was imprisoned for the balance of a doctor's bill, amounting to 201., saddled with with asthma and disenge of the lungr, of long standing. On his admission to the prison, the surgeon found him in a very feeblestate, and labouring under disease of the lungs. He administering to his wants and comforts. In the mean time his friends set a negrotiation on foot with the detaining crediter, with a view to his release, and the torm-de-
manded by the latter and his solicitor bemn e and security manded by the larter and his solicitor bemp g god security diate paymeht of the coste, the negotiation failed because eceased's landlord. on hearing of his arrest, distrained for rent, and left the wife quite destitute of means to fulfil the terms of the proposed arrangement for the release of her husband. After its failure he sank ranidly, and expired on Friday morning. The surgeon had no hesitation in tating that his imprisonmeat and ansiety creditor, tended by the failure of the negotiation with his creditor, tended
to basten lis death. The coron in sumanar up, said that, though the law atfecting debtur and creditor had been much ameliorated batterly, he huped sonn to see the between the bonrst and fraudulent debtor
Naturaldeath, accelerated by mental excitement, produced by imprisonment." - On Thesday, the inquest on the bopoisoned, as mentioned in our last number, was resumed. The surgeons deposed that after a careful analysis of the stomachs of deceased, they had discovered strony marks of inflammation, quite sufficient to account for death, but no race whatever of poison. Evidence was adduced to show the unhappy manner in which Mr. Azoni and his wife
lived together ; and it was stated that the wife often lived together ; and it was stated that the wife often
threatened to poison the whole family. The beadle said that the wife and two surviving children still temain in the Middlesex Hospital withont hopes of nitimate recovery. Mr. Wakley summed up the evidence, with some remarks apon its singular nature, observing that the whole affair was very mysterious; but that as mo poison of any description had been discovered, they could come to no other conclusion than that the deaths of deceased occurred in the due course of nature. The jury, after some consultaion, returned a verdict of "Natural death"
Swindling.-Information bas been forwarded to the police of the following successful act of $s$ windling and rob-
bery :-It appears that on Thursday evening about $60^{\prime}$ clock person, in the garb of a gentleman, called at the shop of Mr. Grant, watchmaker, Fieet-street, and represented that he had been recommended by Mr. Stoddart, army agent, him. He selected a gnid watch and chan, directing it to be sent to the Sussex Hotel at a ruarter before seven, as be was to dine there at that hour, when be would pay for it. He stated thit hio wo to lease London early on the foilowing morning for Darlington. On the watch being delowing morning for larlington. On the watch being delivered at the time appointed, he gave an order on Mr.
Stoddart, who he said was his agent, for the amoant, viz. Stoddart, who he said was his agent, for the ammont, viz. nert day, Mr. Stoddart said he knew nothing of any one of the name, and it appeared on further inquiry at the
Susser Hotel that he had only entered the coffee-room at about half-pasts on Thursday afternoon, and ordered dinner for two, which h - left mmenyched, having decamped iunmediately atter getting tosession of the watch an chain, He gave a card with the name of "Mr. J. Daniels" inwent out of London the same night by the Regulator coach, as he was seen in the Bult-in-Tun Inn yard, Fleet-street, and a person exactly answering bis description applied for an inside place in the Bristol omach, and was referred to the office in Cheapside, where be booked a place in the name
of Hopkins. of Hopkins.

Manchestor.-On Monday morning a fire broke out in the warehouse of Mesmrs. Canfts and Stell, American merchants, which, froma the rapidity with which it spread, and the valne of property dentroyed, il said to be unexheight, thirt yards long, and fifteen yunds wide The back part of the premises was occupled by Mr. Henderson, manutacturer, who also occupied some offices fronting George-street. Mr. Macfarlane had also a counting-

Whose duty it is to open the warehonse, arrived abont six o'clock in the morning, lighted the gas, and then made fires in the furnaces in the basement story; the one heat ine water for warming the warehouse, and the other for the sane sturies, on the feorge-street side of the bunding Havine done tiais, the man cleanma nut the offices on the ground thone, and was proweding to clean an ther rowm When he heard a loud report, resembling that of a cannon Which appeared to proceed from the cellar. He imme-
diately hastened to see what had happened, and found that the end of the hot-water pipes resting in the furnace had burst, and in the explosion had scattered the coals ande quantity of goods. These caught fire, and were burning when the man entered the cellar; he immediatel rapidly that he was obliged to desist; and in less than ten minutes the fire had found its way up the well-holes, and burst ont ar the tho the warehouse. The mind being
way high at tae the, the embers were carried upon the At ipnesm, and other buildings adjoining, which were at one time partially on fire. About eight o'clock the wall warehouse from Mr. Macfarlane's property and fell upon the roof of the offices occupied by Mr odging-house. The fire having communicated to this house, soon destroyed it, leaving nothing standing but the walls; it then communicated to some adjoining premises trouble, the fire was there extinguished without considerable damage. By half-past, eight the two warehouses were completely destroyed, but the fire was so far subdued. that the adjoining property was no longer in danger.
The warehouse was built in the new style of building in Manchester, in which, as regards internal partitions, floors, and ceilings, nothing but wood is used ; and to this circumstance the utesampled rapidity of the fire must be attributed. The circumstances believed to have cause town, deserve the consideration of all parties who have premises warmed by the hot-water apparatus, which is now in such geueral use throughout the country. It welt known that the water which circulates through pipes, powerful action of a furnace, throngh the middle of which uxpses it to a pery high temperature. So long as the pipes remain unobstructed, the water circulates through them so rapidly, thet the portion exposed to the direct action of the fire is quickly removen from its influence and the pla:e supplied by an aninterrupted current o cold water, whereby the generation of highly-explosiv culation of the water is stopped, the portion exposed to heaction of the furnace cannot escape from it, and steam a very high pressare is generated. There seems to o doubt that, in this ease, the water in the pipes ha which prevailed from Saturday to Monday, during which time the apparatus was not used. The ice thns formed in .ue pipes wonld effectually prevent the circulation of the water when the furnace was lighted, and thereby bring on the catastrophe which ensued. It fortunately happened that the stock of goods in Messrs. Crafts and Stell' warehouse was not so large as it was a month ago, as the restige, however, of anything in the warehouse was saved fith the exception of their books and papers, which wer preserved in a wrought-iron safe. Tue value of the stock consumed, it is supposed, will probably be from $8,010 \%$. 9,rono., though no estmate approaching to truth can a et be made. All the premises are satd to have been mply insured, hat very li $\%$ la of the property destroved in the private honses. The total loss is supposed to be fom 16,0ntul to $18,0 \mathrm{mod}$
Oldham.-The colliers of Messrs. Jones and Co., of this place, still continue out, without any prospect at pre sent of a terminati on of the dispate betweea the master and men in regard to wagcs. Thirteen of them have been summoned to appear before the máistrates, for having ieserted their employmen without giving notice to that effect.
Warrington. - Last week a man of the name of Conroy, a sawyer, was drinking in a public-house with several thiker persons. The Ashton murders happened to of - It ras right the ringlender should be found out and punishel," Comroy exintited much veation at the reant Conroy ment nut. He. however, sinstly retarned with a sprig-bit, and inflicted two wounds on Acton, but they were fortunately not mortal, the instrumentnot being loag enough. Couroy was taken into custudy, and ex amined before the nazisurates, by riom he mas committud for trial.
Stamford.-An inquent of an extraordinary nature was Hedres the last week. In a garden occuptal by Mr rise to the suspivion that there was an oid and ill-protected we:t whimeath. Mir. Mederes acuordingty remorid the onl, and cosoarered a coffn rudely conastructed of windons the reas ans of whas aprearears to have bera a youar fe me reazins of was arp earea to have been a youme te by the ruiantary confession of Mr. Cuckson, who atout ten years ago uccupied the premises, and who was guard
of the Express cosch from Hull to London. At that
time great excitement prevailed on acconnt of the frevalence of the crime, and declared that he seldom went ap without dead as well as living passengers; and farther knowing that two notorious resurrectionists were actually
 lamas : misk procewint eharh! He afterwards was stimitied the his: arme in the churchyarl had been at. tempted, fully justifying his unasual procedure. The and no spearanee grave ikeleton charchyard to be opened corroborating the statement. The remains were then do. posited in consecrated ground
Counties Railmay conppiracy to defraud the Midland tempted this week under the following circumstances:A short time since it had been found necessary to affix e guara the office of the railway, stating, that in order to guarantee the safe detivery of money parcels, a per-centag
on the amount, in the shape of an insurance, would be required. A jouth, of the name of Richards, formertr clerk in a coach-offee in the town, called at the parceloffice of the company with a small parcel parportiag to He tendered, and addressed to a farmer in Derbyshire. which the clerk gave a receipt. The porter of the for pany happening to call at the time, it was handed orer theren. He said that the parcel should be opened there or at the company's office. He accordingly opene closing two pieces of waste paper. The letter, which, with youth, purported to be from a person of the name of Biggs, 10 London. It stated that the money alleged to be enclosed was in requital of kindness formerly done the in lor post-office. The youth was taken into custody, and underent an examination before the borough magistrates. He made an unreserved disclosure of the entire transaction, whose implicated two other persons in this conspiracy, sovereign, he had been induced to attempt the frand. From the been apprehended; he is a smith, and a leader of the Chartists in the town. He has undergone an examination, Whitecn held to bair to take his trial for the ofience been guilty of great cruelty to his illegitimate child, ha heen apprehended in the Staffordshire Potteries, whither h hat fled to escape the pursuit of justice. After a long hearing of the cise, he was convicted of a violent and cross out rage on the frerson of his son, and scutenced to tw tion. $t$ ) fisd two sureties for his future good conduct. Much altantion is expressed at the conduct of the me dreal man, through whose evidence the magistrates were enabled to briny the offenders to justice.
(hathan,--1)n Munday the magistrates met to consider How stated tirat the Hoo Union was formed in January 1837, but che inmates had not been put into the proper estabist an order was given to the master that papers upon their admission were to be hair of the females should be cut off. The guardians however, soon after found that they were not justified in adopting such regulations with respect to adult paupers, Biics and from ely cowatermander heind had o curred. If any blame attached to anrbodr, it was to the execuition ane the master, as he ruerely cairied nite thought that, after this explanation, it wouli be unneces ary to pursue the charges further. The Rer. Mr. Pearsin the a couplained of the manner in which he had been treated. and said the letter of the poor law commissioners bore out the ratement he had made, that a female pauper had beea cuntine d for io hours. He held in his hand documentary proof of the fact, and althoush mest anxious disclanm angothing like a desire to uppuse the poor-lan, eagerness to bring forward evidence against Miles, yet he could not help saying that his veracity had been impogned and statements made by the chairman of the guand not appear to leave the court with clean hands unless the cas was fully investigated. The magistrates, after a brief discussion, ordered the summonses to be withdrawn, and the parties present to be released from further attendance. ta the racier of the public prosecutor of Miles, at the forthcom ing assizes, in

Destruction of Plassy Mills.-One of the most calamitous fires that has occurred in the neighbourhood of Limerick for several years has broken out in Plassy
Mills, within a mile and a half of that city. Messengers were despatched for assistance, and exertions were made to check the progress of the fire, but without success, as 1 large quantity of whole meal iving loose in bulk in the lofts, and eight hundred barrels of wheat, ready to be glown, were consumed. A strona $N$. E. brecze having the flames, and before ten o'clock the entire building was completely gutted, nothing having remained but the bare walls, the mere skeleton of what had been the day befor of the kind in the kingdom. The cause of the catastroyhe remains unaccounted for

Abluction. - Inst week, an armed party attacked the house of Daniel Fleming, of Bouman-hill, Abington, brok open the door, and forcibly carried away his daughter. A time, and hearing of the outrage, immediately proceeded to the-spot, pursued the offenders and succeeded in arresting five of the party in the Tipperary mountains, near
Death by Burning-During the ate snow-storm a man named Divver went to the village of Cresslough, Donegal, ana remained in a public-house till he became intoricated o such a degree, that when about to return home, the made a bed for him beside the kitchen fire, on which they placed him when retiring to rest. In the moming an mful spectanle was presentel to their view, the wafortu

## COTLAND

Grlusqou - Irsterday week an uld man, nanci Smith, was killed near Shet lleston. by one of the coaches proceeding to this city having passed over him. It appears that
deceased had been walking new the middl: of the road. deceased had been walking ne ar the middle of the road carts, the driver and passengers immediately on seeing lim shouted lustily; but as he was very deaf and friohtened the poor mau, instead of taking the site sive of the road, the wheel passing over his head, produced aln.ost instant death. The coach was proceeding down hill at the time, the ro was slippery, and all the efforts of the driver to check it were unarailing.

Llexander Macrae.- A communication has been received from the Home-offce, announcing that the royal ransportation f or life.
The Wrenther. - It appears that the severe meather has been generally felt throughout the country; the suow has been very deep, and many ronds have been closed. -Three labouring men have been found near Dumfries who were rozen to death during the severe cold. The ponr fellows were discovered together in asiting position by the roadside

## shiscellaneotis.

The Comparisois of Mun with other Animals.-A Anong sereal differenees or di.tinetions mhich curious and busy those af disputed, ant fex by all allomen. Ti:ese ehiefty insisted on have been something pernhar in their shane; in their weoping, laughter, spach, or reason. But the es introllers of suifer opiaion have mot nuled to fir? out an a simili-
 besides thons of feathre in the fote, and of hatr on their

 was borm, he bal so litale thas frume of a tuan, that it beanake him gatler a monater. It wa for some time under dolibumtion whatier he shenld the hartised or not. However, l.c was wationd. and d-clacal a man prowision had mold shomk shos what he wnild prove. life, the Abbot Mfalatre (ill-shiped). Thas we sez this child was very n.ar beag exchuded from the species of man by his shape. He escaped very narrowly as he was cast him, and he had been executed as a thing not to be
allowed to pass for a man. And there can be no reason given why, if the linearments of his face had been a little
aitered. a rational sonl could not have been lodged in him ; why nisare somerthat longir,or a nose flatter, or a wide ill figure, with sut have consisted, as well as the rest of his ill figure, with such a soul : such parts as made him, diesion to which he was attacted be dignitary in the profession to whish he was attached. He died A.D. 4(1): Some from wot the convulsions of the of the fatal knofe; and that throises upun the approach wortd as well as ; and that they cry at going out of the and , baintive cry of horses when surrounded ane piercing by fire is dreadrul in the extreme, and their fen is ine mountable. In regard to speech, some pretend to doubs Whether the divers sounds made by animals may not have us. and of communications, as words more articulate with us; and whether we can properly judge of their diversity, nations especiaily ahout the Cope of Gool Hopen nations, especially anout the Cape of Good Hope, and lrive thir trodo all in the are to drive their hada of selling furs withnut the use of above $2^{1}$ words, eren with those who do not understand their language. Hor the great number of words seems not natural. but introituced by the variety of passions, actions, possessions, business, entertainments in civilised nations, and by long course of time under civil governments. Besides, other creatures are allowed to express their most natural wants and passions by the sounds they make, as well as men, which is all that is necessary in speech ; and none will dispute anger, desire, love, fear, to be livelier expressed by us than by the lion, the borse, the bul', the buck: or tenderness, more than by the bleating of ewes to their lambs. or the kindness of turtles to their mates. In regard to articulate sownds and words, we meet with them in parrots and severalother birds; and if theirs are taught them, 80 are ours at first, to children: and though .We imitation, yet some instances to the contrary repetition amd marhabe in our age; and it appears, by Greek and Latin authors, to have been believed by the ancients that certait birds in the indies were commoniy known not only to peak as parrols emong us, but to talk and discourse. In regard to reason, that of brutes, as dogs, horseg, owle foxes, but especially elephants, is 80 common a theme that it needs no instances, nor can be well illastrated beyond what Plutarch, Allian, Montaigne, and many others have curiously written upon that subject ; nor can any man's common life pass without occasions of remark and even wonder upon what he may see every day of this kind : so that of all those distiactions mentioned and usually produced, there is none left unquestioned by the know not to have been disputed, being proper or peculiar o man, without any trares or simlitude of it in any other reature ; and it it weme always an expression of good humour, or being pleased, we should hare reason to valu arsel more upon it but is moved by different itth estecm: simeet and affections, that it has gained accidents that we sum at phease us, and at the mahne of apes as well as the inno. cence of cinldren : and the things that please us most are apt to make other sorts of motions both in our faces and in our hearts, and very different from those of laughter.- $\boldsymbol{I} . \boldsymbol{R}$ The Mucking-Bich.- This species of thrush is deseribed in 's Wilson's Amerionu ()rnithology," as being not nncommon many part, both of - Jorth and South Americ est India Islands, where it is well known fo he peruliarity and amazing versatility of its vocal powers. Its vilee is capable of almost every medulation, from the of the bald-eagle. In measure and accent he faithfully follows his originals; in force and sweetness of expres sion he greatly excests them. In his native groves,
mo . th on the top of a tall bush or half-grown tree, in the divn of dewy morning, while the woods are already ocal with a multitude of warblers, his admirable song the preminert orer that of every other competitor he othersuse strain altorether imitative; lis own narrative notes, which are easily distinguishable by such as are well acquainted with those of our various song-birds, are bold and full and waried sceminaly bevond all limits. His expanded wings and tail, clistening with white, and the buoyant gaikty of his action, arresting the eye, as his song most eestasr. He maunts an? descends as his song swells or thes aray. While thus exerting himself, a bystander, destitute of sight, would suppose that the whole feathered tribes had assumbinel together on a trial of skill, each striving to parduce $h=$ uimort effect, -so perfert are his matations. Ife many times dectives the sortan on, hai ten mituz of him, bet whose netes he exntivimitates : even birl- themselves are frequently impous on the the ats their mates, or dive with procifatitis into tha depths of

 barkng of the deg, the mewing of the cat, the creaking
$t_{\text {idity．He repeats the tane t．osne him by his master }}^{\text {though of considerable length，fally and faithrully．He }}$ runs over the quaverings of the Canary－bird and the clear whistlings of the Virginia nightincale，or the red－bird， with such superior execution and \＆ffect that the mortified
songsters feel their own inferiority，and become altogether silent，while he seems to triumph in their defeat by re doubling his exertions．Both in his native and domesti－ cated state，during the solemn stilliness of night，as soon as solo，and serenades us the livelnag night with a fuil dis play of his vocal powers，making the whole neighbourhood ing with his intmitable melody．－I． $\boldsymbol{R}$ ．
Ducks reared arlificially．－In reference to the article on this subject in our last number，we have been favoured
with the following note from a correspondent：－＂In your with the following note from a correspondent：－＂In your ander the head of＇Miscellaneous，＇the siogalar process of hatching aquatic birds．Permit me to offer a suggestion by which the most troublesome part of the system may，I think，be avoided，viz．＂the turning of the eggs every lished，of＇Gould＇s Birds of Australia，＇there are two va rioties of gallinaceous birds，apparently belonging to the turkey tribe，one found at the Swan River，and the othe at the Sydney side of New Holland；both these birds lay their eggs in communities，several hens assisting in form－
ing an accumulated slock，sometimes exceeding a bushel， which are all deposited in a mound of vegetable matter，the Which are all deposited in a mornd of vegetable matter，the warmth of sand hatches those of crocodiles and turtles； but the hint I am about to give proceeds from the circum－
stance of the Australian birds（as their eggs can never be turned during incubation）invariably placing them upright， and with the broad end downvoards ：－Would not this rule apply to the duck＇s eggs also，and to all eggs artificially egss？＂－A Constant Reader．
Head of the Laocoon．－A Lyons journal publishes a letter from M．Valmore，an artist at Brussels，stating that in the gallery of the Duke d＇Aremberg there is the original head of the Laocoon．This fine group，when first dis－ covered in Italy，was without the head of the father，and an arm of one of the sons．The head was supplied by a celebrated artist，who copied it from an antique bas－
relief．Some time afterwards，the original was found by some Venetian connoisseurs，and was ultimately sold to the grandfather of the Prince for about $160,000 \mathrm{f}$ ．，and brought to Brasels．When Napoleon，during the Con－ aulate，had the group trassported into France，he knew offered him its weight in gold for it．This was refused， and as it was known that Napoleon was not scrupulous in gratifying his desires，the Duke d＇Aremberg vent this chef－d coure to Dresden，where it remained concealed for ten yeara，but was brought buck again into Brassels when Belgiam became tranquil．It is said to express in the highest and most admirable degree moral grief mingled with physical pain．The compression of＂．．e teeth and the contraction of the under jaw are almost too horrifying to be long contemplated，and yet in this intense expression
of suffering there is not the slightest grimace．The pupils of suffering there is not che sighest grimace．The pupils of the to flach from the marble．A cast from the head now on the statue is placed by the side of the original，and the difference between the two is at once evident．
Freemasonry－－It appears that a masonic emblem has been found in a stone wall at Ghaznee．It is merely the five points，with an inscription in Persian round it，the translation of which is，＂God grant me what I want．＂ During the campaige in Affighanistan，a strong resem－ blance to the castoms，dress，and manners of the ancient Jews，wat very prevalent among the Afghans；at Cands－ har，they actrnowledge their direct despent，and called themselve＂the children of the Jews．＂It is expected that many more masonic emblems might be traced．

## 显和。

Covint on Exchroqza．－Dunn V．Alesander．－This was ant action brooght by Mr．Dunn，whose name has been repeatedly betore the prible in connexion with that of Miss Burdett Coutts，
against Mr．Alexuder，a gentleman of fortane，residing in the
Regent＇s－parle，for an alleged assault and false imprisonment， under the Metropolitan Folice Act．Defendant pleaded Guilty．＂According to the plaintirrs own statement，he hod
 Mrs．A＇exander，in the Regentis－park，when he would ptedge
himiself to pursue whatever course she might think prover to
point out．On that day，as he was proceeding along Bond－street， point out．On that day，as he was proceeding along Bond－street， Park，whither he foilowed her in a caib．He stond at the door of
defendants hese，and，affer asking a questro or two of the On hisarruvalat abent sum yards from thire house，detentin sare him into the custuity of a poircernan，by whom he that been taken Mefore Mr．Rawlimmn，ore of the magistrates at the Mary lebone be dismissed，mitimatimg．Jowerer，wat he was to give ball to
answer any charge at the Cierkenwed sessions．On the follow－

 menns personally to see her．The letters wot being retunged，he
hadd drewu the inference that Miss Coutts was andious to see
him He migit be wrong in having ertived at that coxclusion， but it was mainly owing to the fact of the letters not having been
returned，and thereby being convinced that Miss Contts＇feelings
towards hima were favourable，that he had been led to the adop－
toon of the cours he had prorsocd toward her．On the sabject
of damages he did not care，but he was disioclined to return t．
his own ctuntry unitil the
 mhd and urt wate stater that the compiaint，when mate at his

 May，entreating her to appoint a private interview through the
medium of one of her servanta．－Miss Burdett Coutts then en－
tered the Court accompanied tered the Court，accompanied by her（ather（Sir F．Bardett）and
was examined by the plaintitr．Miss Coutto，in reply to plaintiff，
said that she had not received the letters addiressed to her at Har． rowgate．She had received many from him，but had read but
fe．．She had seen him at Harrowgate only in the presence of
Sour magitrates，to whom she had intimated that her frst knoy four magistrates，to whom she had intimated that her first know－
ledge of him had been on that very occasion．The two letters
addressed to addressed to her at that place had been either thrown away or
burnt．At all events he had paid no attention to them，because they had been addressed to her by a person who was a total
stranger to her．Mr．Marjoribanks had been requested by her to ake such steps as he might deem expedient and proper，in order
to rid her of the annoyances to which she had been subjected by the person who was at that moment examining
duct he had pursued towards her had only inspi
ings of horror，disgust，and alarm：and she had been compellect to seek the protection of Sir $F$ ．Roe，the late chief macistrate．
She had kept some of his letters for the purpose She had kept some of his letters for the purpose uf prosecutiog
him．Those letters were in the handz of her solicitor，and she would have no objection to their production，provided that gen－ had told her her in of on of phis leetters，that if she would only allow
hat
im to get out of the transaction like him to get out of the transaction like a gentleman，he would ab． stain froma all farther pursuit of her－－Cross－examined by Sir F ．
Polloriv：She had been indisposed for some time，and her medi－
cal adviser had recomender Polorik：She had been indisposed for some dime，and the court
cal anviser had recommended her not to come down to the
on that occasion．She had never，except when before the magis－ on that occasion．She had never，except when before the magis
trates，been in room with the plaintift．She had never met him
in any society，and had never，in the remotest degree，directly in any society，and had never，in the remotest degree，directir or
indirecty，fiven him the ssightest encouragement，although for
the last 2 y years he had followed her abont from place to place On the day referred to more particularly in these proceedings， she was riding up Bond－street towards the Regent＇s－park，when
she observed the plaintiff going in a direction towards Piccadilly and was therefore greatly surprised when，shortly after she had alighted from her cariage in the park，she saw him making hi
way nup to her，apparenty with the intention of speaking．Sh instantly became apararmed，and desired her fontman and her frien stand so as to prevent his near approach
ment they were close to defendant＇s house． her servant said that the person was gone，wherentiv，h wever， to the children．In 2 short time the servant came ap，and said hat the person was following．She again became greatly alarmed，
and went into defendant＇s house．She had been afraid to quit and
defendant＇s until she had heen assured that thaintiff had gone
away．Indeed，for a long time she had not been able to go out withont his passing or coming after her，and has been obliged to have the police in her house as a protection．She had not re turned his letters，becanse had shi
tinin extent，have ben holding
who was an utier stranger to ker．
hem as thout neither the $\mathbf{t o}$ wer．She had，therefore，treated nerally speaking，the letters she their reath from had existed strong language，were very incoherent in their style，
badyly spelt．－Sir $F$ ．Pollock then addressed the jury
fendant，he commenced by stating that it was dufficuit
in what way to ment in what way to menet the case which had been madita to out by the
plaintiff．He knew but one mode of escaping a feeling of the plaintiff．He Knew but one mode of escaping a feeling of the
strongest indignation and the dieepest regret at the line of con－ duct which had been parsned by that individual．Whether there not for him to say，nor was it of any importance what the deci－ sion of the jury on the point might be．It was，at all event
quite elear that there had been a peeuliarity of cunning in methods by which plaintiff had endeavoured to obtain eve
though it had been but a scrap of writmg from Miss Burde Coutts，for the manifest purpose of going to work upon it．That
young lady，howerer，hadd completely frustrated his detigns，b the caution and propriety of oflduct which had marked her de
teanour throughnut the whole tranazacion．The learned coun－
sel then went through the facts of the cave，and proceeder to sel then went through the facts of the cave，and proceedet to
contend，that the cuiduct of the plainitif on the 1sth of May ha clearly brought him within and made him amenable to the pro in respect of the person，and against pulling the door－bell，cee without lawful cause．Now，he should submit to the collrt，that
the plaintiff had committed this offence at the do or of the defen the plaintiff had committed this offence
justuiaed in giving him into custody．If his Lardship should b
of opininn that the conduct of the plaintiff on the occasion in question had not come within the meaning，spirit，and intent the act to which he had referred，the jury would then have vertict at all，with，he would humbly submit，the smallest amoun of damages the coin of the realm would admit of，as the only Lord Abinger，in summoning up，observed that the plainti had introduced into the cause，with the least necessity，the his－
tory of his own conduct towards Miss Burdett Coutts，during the last two y ears and a half．The planntiff appeared $t$

## tion．It was quite plain that he was labouring un with regard to that lady which he could hardly exist in the mind of a maa who was in possessio

 powers，or who had a commion knowtedse of mantind or even of womankind either．It appeared that he ha：isdulged the idea exercise of her own feelings and fncinations，and that those feel－ ings and inclinations，if left free and unshackled，wonld lead heto accept his addresses．Nothing could be more preposteroos or

SATURDAY, FEBRUARY 20, 1841

The business, or more properly the sclence, of foresting is second only to the production of corn, in its utility to mankind. We shall frequently advert to the subject in all its varied aspects; for the present we confine ourselves to the manner in which pruning should be performed.

It will have been observed that, in our Calendar of Operations Mr. Paxton directs pruning to be what is technically called " close;" upon which one of our correspondents remarks, that in Norfolk a practice is advocated of leaving long "snags," and that the late Lord Suffield had specimens of oak and ash to prove the injury done to timber by close pruning. Upon this, Mr. Paxton, in a letter before us, writes as follows:-

- 1 find, by a letter which appeared in the Arboricultural Transactions of Ireland, that snagging was not the practice of one of the most experienced foresters in Norold, which I should suspect, and invensed before forest pruning was so well understood as now, allhough still lamentably neglected. The letter 1 aliude to was written by Mr. Sandys, who for more of woodland for the present Earl of Leicester; these plantations now rank among the Earl of Leicester; these plantations now rank among the
best in the country ; and as Mr. Sandys' opinion exactly best in the country'; and as Mr. Sandys' opinion exactly
coincides with my own experience, I shall give his own woincids.

There is a method of pruning atill practised by some persons, of leaving a foot or more of the branch on the
tree to die and rot off, which if only an inch in diameter tree to die and rot off, which if only an inch in diameter
may take several years to accomplish, during which time the stem increases, and when the stump falls down, a hole is left as deep as the tree has grown since the snagging, which hole must have time to fill up after the rotten branch is gone. The healing of the wound is consequently delayed, and the defect in the timber greater. Instead of taking off a larte branch by the stem, a great part of it may be cut off at a distance from it, leaving a small side branch leaving a snas ; but this method should seldom be practised, being only the result of furmer bad management.

The method of fore-shortening the branches was, 1 believe, first practised in England by Mr. Billington, who, many years ago, had charge of a portion of the Royal forests; and, from this plan, the gracual denudation of ment, founded upon physiolocical knomledge, and so perfect that I do not thinle a reasonable objection can be made to it. If practised at an early period, the ruinous effects of lopping large branches, observed in specimens
yossessed by Lord Suffield at Gunton, will nerer occur."
Similar opinions are advanced by Mr. John Hayward of Buxton, who advises that the pruning should be as close to the tree as possible, and with a single cut ; but that the small spray should on no account be removed.
On the other hand, in addition to the evidence of Mr. Thurtell, above referred to, we have the following letter from a Kentish gentleman, whose name, if we were permitted to give it, would carry great authority with it. He says-

I perfectlo accord with $H$. $K$., that this important question should be generally understood, for on the management of forest trees depends a very considerable property in this country. I must bear testimony to the
utility of the Norfolk plan of learing long snags; for I know, from considerable experience, tiat uothing can be more detrimental to timber than the practice of cutting the branch of a troe close to the stem. Althnugh the bark may soon grow over and look fair on the outside, still the
original wound never unites with the new-formed wood, but decays, and extends that decay, both above and below, to a considerable distance, cerenting what is well known to ship-builders and carpenters as druxey rottenness. On
the other hand, if the branch is not severed close, but left about two feet long, it prevents the bark clcsing over decays, it onfy leaves what is terned by the atove persons a black hoqt, which is little more detrimentai to timber than a hole of tice same extent lared by art. This is very than a hole of the same extent luman frame. where the very is suffered to grow over a part that is not sound at bottom.
In corroboration ui this statement, I hive to muntion, that In corroboration ui hus siatement, have to muation, that trees of considerable size, which bad been lopped close to
the stem; but when they were down, and men commenced the stem; but when they were down, and men commenced
hewing them, the whole were diecovered to be perfectly
unfit for market, and therefore a considerable sacrifice of
property took place; the best parts only serving for posts, gates, rails, and other inferior purposes.

It would hence appear that persons of equal experience recommend opposite modes of proceeding. In point of fact, however, these opinions are by no means irreconcilable, as we proceed to show:-Under the name of pruning are comprehended two operations essentially different, namely-puing, properly so called, and lopping. It is, however, important to distinguish them. Pruning is the removal of small shoots; lopping is the destruction of large limbs. The latter would be unnecessary if the former were properly performed; but the forester is driven to lopping in consequence of the mismanagement of his predecessors.
It is an axiom in physiology, which must be borne in mind in considering this subject, that live tissue cannot form an organic union with that which is dead. If in pruning, in the sense in which we use that term, shoots are not removed close to the stem, the remaining part, or snag, dies; and the lips of the wound will not heal until the snag has fallen off; and when the wound is healed externally, either a cavity or a piece of dead wood remains behind. On the other hand, if the shoot is cut off close to the stem, the very first season will close the wound, and the only permanent injury sustained by the tree is a disunion of the tissue for a space equal to the diameter of the original wound, which, as it ought not to exceed an inch, will have no appreciable effect upon the quality of the future timber, even if no arthesion between itself and the new tissue took place. But in point of fact, in forest trees, in all which the powers of life are strong, the new descending wool will unite with the surface of the wound, to some extent at least, before the latter has time to die. Close pruning is therefore advisable.
But with regard to lopping it is otherwise. What is said by our correspondent respecting the faultiness of timber so treated is perfectly true. The large wounds produced by the amputation of the limbs of a tree can never be healed, although they may be concealed ; so that if the scar left by lopping is a foot in diameter, an interruption of the tissue to that extent must always remain, to the destruction of the strength of the timber. When lopping must be practised-and it is too often indispensable, the plan of Mr. Billington should certainly be followed. The creat object is to keep alive what remains of the amputated limb, so as to prevent that decay, the effects of which no art can emedy. By leaving small live shoots upon the snag, the original object of lopping would not be interfered with, and they will preserve its vitality.

ON SECURING SEED-CROPS, \&CC., PROM SNAILS AND SLUGS.
Trere exists not a gardener or flörist who does not annually suffer loss and disappointment from the depredations of snails and slugs, and this in despite of his best efforts of prevention. It was the circumstance of having had two seedling cropls of a favourite flower, the ranun-
culus, destroyed by these wholesale devourers that first culus, destroyed by these wholesale devourers that first
stimulated me to seek for some effectual means of defence; and I may now exclaim," Eureka,"-I've hit it-in the discovery which I am about to promulgate. It is at once elegant, scientific, cheap, effectual, and applicable to all cases, and will, I doubt not, be considered a valuable boon to gardeners and fiorists. It is the application of galvanism ! That power, so mighty in the hands of the chemist solid mits agency he can convert soda aad potasin into as a shred of paper in the flame of a candle. This vast chemical power is generated by the simple process of placing in contact with each other numerous phates of zine and copper, with a picce of moistened cloth between the several pairs. By multiplying and increasing their efficacy. (as in the galvanic trough.) a power so great may be produced as to destroy the me of an animal with the rapidity
of lightning, and that by the merest touch. Ii is by exciting this chemical power. in its simplest and feeblest form indeed, on which depends the efficacy of the gatwonic prolector about to be described.
If a snail or slug be placed on a plate of zine, to which a narrow plate or strip of copper is fired, it creeps unmoit receives a galvanic shock (its as it touches soft body acting as the moistened cloth above mentioned, and thus forming the galvanic circle complete), and immediately recolls: to touch the copper, to receive another shock. This (10 us) amusing experiment, I have tried again and sgain, and of course always with the same resulta. To protect a seedling crop, then, in a border, or in frames, \&cc., I hive zine plates of one, two, or three feet in length, and four or zive plates of one, two, or three feet in length, and fora or finch broad, placed on the upper part, and stecurell clome with two or three rivets of appect pas in the figure.
These plates are fixed in the ground to the depth of a couple of inches, around the plants to be protected. A
just explained, the snail creeps up the ginc, but reeeives a galvanic shock as soon as its horns or hear touch the copper, causing it to recoil and turn back; an insurmountable fence can thas, in a moment, be formed around whatover we wish to save from these marauders; and if made in a circular form, or in short lengths, the plates may be used this protector in all cases with complete succens, and scientific gentleman of this with complete success, and ledge myself indebted for the suggestion of the principle, ledge nyself indebted for the suggestion of the principle,
last year saved his dablias (which on other occasion had always been nearly all devoured by enails as soon as planted out), by cylindrical hoops of the sinc and copper plate placed around each plant. If the tip of the tongue be placed midway on the zinc and copper at the same time, an unpleasant metallic or saitish taste is perceived : this is the sensation which proves so unpalatable and detrimental to the slag, and in which the protective power consists.

## Hull. $\begin{aligned} & \text { F. R. Horner, M.D. }\end{aligned}$

## NOTES UPON THE LATE FLOWERING

So many new varicties of these gay decorations of winter have of late years been raised, that it seems time to consider them with a more critical eye than was necessary when the sorts were few, and all had the charm of novelty. It appears clear that the tendency of the Chinese Chrysanthemum to sport into endless variations of form, size, and colour, gives it a decided claim to be regarded as a Florists' Flower, and therefore it must be judged by the special rules of floral criticism.
Beauty in a double flower depends upon colour and form, and scarcely any other quality can be allowed a claim to consideration. Comparative merit, in point of colour, is determined by the degree of its brilliancy, or of its parity, or by perfectly well-defined separation of two different colours. The last character does not at present apply to the Chrysanthemum, but the two former do ; all dull colours, mixed colours, or run colours, should be condemned. With respect to form, the nearer a given flower approaches that of a circle, when looked at in front, or the segment of a circle, if seen sidemays, the more beantiful it will be found; for in order to possess this quality, the flower must be perfectly double, with the eye or centre generally called, regularly and symmetrically arranged. Perfection will consiat in the most exact combination of the best form and colour, as here defined, Supposing this tantard to be admitted. almost all the quilled and tasselied sorts will be set anide; the quech atid a very few only would be retained in a collectiou oniy tilit a nure perfect form, with the same bright collour, shall have been obtrined. Keening these principles in view. I have made notes upon the best of the late varieties, and the following list will be found to contain those most worthy of cultivation :-

their size and beauty.

## RERAL CHEMISTRY.-NO. III.

THE changes occasioned by chemical action frequently proceed slowly and quietly but in many cases, and esperilly have a strong allit. or erol evolved. sometimis together they combine directly, and become Fery lrot; this is the case in the slaking of ime; but of two substances, happens that the mere bringing together of two shastances, even though they have an amnity fre eqch other, is comsufficient to cause them to combine. In these cases comed binarion cannot take plare until the subetances are heated up to a certain point. Thus eharcoal has a strong awity for the orygen of the air, yet it cannot com the charcnal is heated red-hot ecmbination commences. and this very act evolves so anoch heat that the surroumetinc parts of the charcoal soon begin to burn, and thus the combustion, or combination of the chareoal with oxysen, continues and increases matil either the charenal is null burnt or the oxyen in the surrounding air exhausted. The common uperation of lighting a fre in a daily illastration of this. The foul til contains earbot, or charcoal, ready to combinse with the oxygen of the air, but, unable to do so uatil by applying a light to it, we heat a portion up to the point required to pommence combination: after which, the heat given out iy the ciscoed atrion gentry un keeps it ulight, and causes it to spread to the surrounding fael.
Now the afmosphere is composed of twa drtarent gamet culled oxyget and nitrogen; bat beiluathiv, it alie eat
tains a small quantity of a thind gas or kind of air, which is not simple like orygen and nitrogen, but a compound of charcoal or carbon with oxygen, which is called carbonic must produce a quantity of this gas whilst burning and hence we can have no difficulty in accounting for its presence in the air. Indeed we might at first suppose that it must be always increasing in quantity; this, however, is in any portion of air that we analyse. The cause of this is that all plants contain substances which have a very strong affinity for carbon, but which cannot combine with it in its solid forms because they are unable to come in
contact with it; bat which, when the carbon has combined contact with it; bat which, when the carbon has combined
ith orygen and become a part of the air, are able, in with orygen and become a part of the air, are able, in for it, to seize upon the carbon of the carbonic acid gas thus diffused throughout the air, and cause it to relinquish the oxygen with which it was previously combined. These facts show us a new use of plants, for we learn that the objects which we have only admoired for their beanty or valued for their utility as producing. articles of food, and even weeds themselves, and things we usually consider as Tholly useless, are all constantly, by the agency of attrac tion or chemical affinity, decomposing carbonic acid gas, Hence the air always contains a regular proportion Hence the air always contains a regular proportion of burning of combustibles, and in many other ways, and as constaatly decomposed by the action of plants. As we are now only considering the properties and nature of the
air, we will, for the present. pass over further consideration of this carbonic acid gas, to which we shall shortly return when studying the nature of carbon, and merely mention now, that it is of the greatest importance to the life of plants, being the principal source from whence they derive the carbon necessary for their growth.
The air always contains dissolved in it some water, or ather steam, which varies in quantity according as the air hotter or colder. When it is hot, a larger quantity of water is evaporated or converted into vapour, and dissolved in the air, which in consequence becomaes more cold the rapour in the air is colsed, becomes cold, the rapour in the air is condensed, returning to the state of water, and the air becomes drier. This of course is modified according to circumstances: thus, in dry barren countries where the ground contains but little moisture, the air, when it becomes hot, remains of course comparatively dry; whist in moist or swampy countries, under similar circumstances, the air becomes very damp from the abundance of vapour given off; and thus some of the principal differences of climate depend mainly upon the quantity of water suspended or dissolved in the air. the solution of water or vapour in the air may easily a tea-kettle. When the water boils strongls, and there is a large volume of steam coming out of the spout, we ob serve that just where it comes out the steam is transparent white and cloudye; that at a little distance in becomes whir cong, aad when at cets freiner out iato the reason of this is, that hot steam is quite colourless and reason of this is, that hot steam is quite colourless and
invisible like air; and it only hecomes apparent to When it is partly cooled by rushing out into the cold air, and therefore is beginning to eturn to the state of water, and it would fall to the ground in a shower of little drops like rain if it were not dissolved and carried away by the the air is also is formed. The quantity of moisture in substance is exposed to apparent to us whenever cold air so much that it is condensed and appears arin the fluid state as water, in little drops on the cold surface thus a bottle of cold water from a deep well brought into a warm damp air speedily becomes covered on the outside with dew, or water thus condensed from the air. $-E$.

## COTTAGE GARDENS.-No. V.

Tae selection of vegetables best suited for a cottager's garden. published in this Journal of the 6th inst., deserves the notice of every one interested in cottage economy, and societies to the of the committees of local horticultura procuring seeds of such as appear most useful in their respective districts, and of distributing them among desuggestion this season, and we are of opinion that the funds of such institations could not be applied to a better purpose, or to one more likely to adrance the objects which they profess to have in view. We trust the list will find its way into the hands of many cottagers, to whom it will be of great assistance in enabling them to know the
names of the best kinds of regetables, and to substitute names of the best. kinds of regetables, and to substitute
them for others of less valuc which they are now in the habit of cultivating.

It was an opinion rers generally entertained until lately of large whole potatoes. but the recent from the planting in the garden of the Horticultural Society hare clearly in the garden of the Horticultural Society hare clearly
proved the fact to be otherwise, and that the greatest prosult is obtained from sots. rith single eyes, the difference in favour of the latter being upwards of 7 cwt . per acre
more than from whole tubers. Another point has also been satisfactorily determined by repeated experiments which is, that the width between the rows should be in proportion to the height of the stems, and that, unless in the case of dwarf-growing kinds, the most uniform-sized These are facts which cannot be too strongly impressed on the mind of every cottager, for whose benefit it may almost M.E.H

ANONG the many curions discoveries made in Guatemala by Mr. Hartweg, is that of a new species of oak, whose fruit is of most unusual size, and has the external appearance of an acorn, with the internal structure of a walnat. It is described as a noble tree, from 50 to 70 feet high, occurrin on the slopes towards the Pacific, among the monntains of Bentham, by whom this species has been examined, proposes to call it Quercus Skinneri, Mr. Skinner having first discovered and sent it home, and has favoured us with the following memorandum concerning it :-

The foliage and male flowers are precisely as described and figured in Q. acutifolia, Nees. The woody texture of the acorn, its large size and internal structure, are very remarkable; but I cannot give them any generic importance. In many species of oak we find the woolly inner coating of the acorn marked with a number of longitudinal filiform ribs. In some, especially in my Q. undulata Hartweg's No. 56:3) and Q. Alamo, there are two, three, or four of these ribs very prominent, sometimes projecting a tenth of an inch into the acorn, and corresponding to tenth of an inch into the acorn, and corresponding to
furrows in the cotyledons. In $Q$. Skinneri it is the same thing, only that the degree of projection is much greater, but always exceedingly irregular in the number, degree of projection, and distance of the plates one from another. The woody texture is more marked in Q. Skinneri than in any other; but there is an approach to it in several others, especially in Q. Alamn, w in proportion to the size."
All the acorns received by the Horticultural Society have unfortunately arrived dead, but some living plants of this remarkable species are, we hope, on their way to England. The accompanying figure represents the acorn of its natural size, tugether with the appearance it presents when cut across.

## HOME CORRESPONDE NCE.

Corhett's Patent - So wong as Mr. Corbett confined himself to urging the voluntary a doption of his pretended his originality : but when he threatens and talks of " being under the necessity of stating that, as he is protected b her Majesty's Roval Letters Patent, he will rigidly enforce
the frivleges the law diluws him, wherever those privilemes the frivleges the law diluws him, wherever those privileges have bers infrin red." he must espect his "privileges" to
be inquired into. In mercy, therefore, both to the uawhy wight he may select to try his enforcing upon, and to his own pocket, after a verdict for a defendant. be may Patents, it is notorious, ante granted to any one and for any thing, if the fees are paid. Mr. Attorney-General and his mas never trouble themselves about their validity, wnless a cepeat has been lodged, and then the only queation
settled is, that the several claimants do not interfere with each other. Corbett's Patent was sealed 15th Aug., 1838 ,
and the specification enrolled 15 th Feb ., 1839 , being the last day allowed him. Were there no other gronnd for considering this patent invalid, the soocalled specificatior affords sufficient. It is, in short, nothing but specifcation based apon false reasoning, and not such a document the proviso in his patent recquires; for it does not ". partion cularly describe and ascertain the nature of the said inven tion, and in what manner the same is to be performed From all that Mr. Corbett and others have published, it would seem that he claims to have inrented the mode of in ong horhouser, dc., by means of hot water circulating in opea ressels, or partiy so. Mr. Corbett, it is to be pre west", Magazine," and perhaps with "Dr. Neill's Fruit, Flower, and Kitchen Garden." Indeed, it would be difficult to fonvince a jury that he had not, at all events, seen the at page 374, he will find a description and ame for 1830 vings of a heating apparatus, put up by Mr. Geo. Jones, of Birmingham, for Mr. Knight, of the King's-road, on hi principle. At page 160 of Dr. Neill's little work (pub-
lished in May 1838, and being a reprint of an article in the Encyclopedia Britannica of 1834 ) he will see that fo two jears previousily, apparatus on the same principle had been in operation in the gardens of the Earl of Hopetoun Similar modes of heating have been used priorto, or at al events from, the first introduction of the hot-water system vali general use; but the above facts are sufficient to in W. Corbett's patent, and to show that in realit he is benind rather than in advance of others. I hope he is, ere this, reimbursed the fees he paid to procur
it, and vould strongly advise him not to throw awar hi money in useless lawsuits, in rainly attempting to sustain its validity or make it "hold water," in the face of such conclusive eridence. This case ought to teach persons i his station of life not to depend too much on the fancie originality of their own inventions, but to consult with those best informed on the subject they are engaged upon rather than with the committees of provincial horticultural Frocies, or the gentlemen of the Patent-ofice.- $S$.
Frozen Potatoes.-Mr. A. Kendall, florist, Islington has found that although frozen potatues, if gradaally thawed by immersion in cold water will become perfectl eatable if cooked immediately aftermards, yet in a few das the a very disagreeable taste. This is no doubt omin the potatoes $n$ of the bitter and poisnnous secter consequence of the destruction of vitality by frost, is dis persed through the mass. Possibly this might be preBirds paring frozen potatoes as soon as they are thawed.
min bmall birds an scared by anything blue, which I think admits of doubt ;
for birdeatchers dye their clap-nets of different shades of that colour. Sparrows will rarely settle net of an colour ; other birds often do. A net placed over seed wil keep sparrows from it, no matter what colour : other birds
will often go under it, With sown seed 1 under it. With regard to worsted over newly twine will answer the purpose as well Cing off birds; but be that from being stretched tight birds are unable to keep their feet on endeavouring to alight, and are thereby scared?-E., Herts.
Anysy Plan of raising a late Crop of Strawberries. Any one who has been in Paris in the autumn may hav seen the hae strawberries that are then offered for sale As the plan of raising them is perfectly simple and easy
for any garden, large or small, although not much practised, it is here given:-The seed of the Alpine Stram berries is sown in pans, and placed in a hotbed ajou February, or not later than the first week in March. Whe the plants are hardien off, they are planted out in good time in May, and will bear a plentiful crop in August and Septamber following, and continue to bear until stopped by the frost. The same plants will also bear earlier that the larger sorts, and continue on until the crop raised away. La plants will keep the roots moist through the summe months, and rine firs be saved from the finest fruit, to get them large, and plentifal waterings (with now and then manure-water) will improve the size of the fruit.- W
Iines wanted.-I wish to ascertain if I could nbtain few rines of the Black Hambro, of not less than tare years old. If any of your numerous friends could furnist the same I would gladir be a purchaser.-Thomas Ashtom the inquirer.
Gami.-I have successfully directed many of my friends possessing game-preserves to plant the Inalesia ¿Enow-drop the berry, and thrive upon it ; and the plant during the winter will afford ahundance of food, so as th prevent them straying abroad, to the profit of the pracier. Ther is noth America abound with it, and it affords frod to birds procured with has hitherto onfy been considerel an oramental shrab will, if my sug gestions ars atrended to, become an object well warth de devorred by atl kinl's of poultry. My shabs are very soon elared of thetr.- Puina-stitio, Bath.
Neglected P!antations.-Mr. Kerr, of Cressirvoin, caili attention to the hopeless tasle of recurering plantation long neglected. He mentions a case where common fores trees, with a large proportion of larches as nurses,
been planted about 24 years ago ; but the thinning was not
atrended to. In consequence, the larches overtopped the more valuable trees, particularly the oaks; and from want
of light the whole were much injured, and some killed. He of light the whote were much injured, and some killed. He he trees are now a good deal exposed to light, many of them are very slender, and years must elapse before they
can be recovered. Owners of land are desirous of seeing fine trees on their property; but if thinning is not attended to in the early stages of the plantations, this most desirable object is defeated. Two years ago he thinned some young plantations, where the trees had not in the rery much; and if attended to in future, the trees will, in few years, be
Blue Dye for Garden Nets.-(See G. C. No. 5, p. 70.) Tom 1 oz., indigo half an ounce (avoirdupois). First boil the twine in pure water for half an hour; during the boiling throw in the alum; then, after five minutes' time, dd the logwood, then the indigo. Leave the mass to down; when cold, remove the twine, and rinse it clean in down; When cold, remove the twine, and rinse it clean in pure water. If the twine be previousiy bleached, not with Bathurst
Notes on Hathouse Cucumbers. - Let the house be constructed as fullows: -the back wall nine feet high, and the front four, above the ground level. A door as near The back wall as possible, and at one end of the house. hot-water pipes, cast with dishes on their upper surface for holding water. Let boxes be made three feet long, 14 inches deep, and 16 . in placing them where they are finally to remain be carefol to place them at a sufficient distance from the glass to admit of watering the root and adding fresh soil. Seeds sown on the lst of Angust will produce plants, to bear during November, December, lst of September; these plants should not be allowed to bear till the beginning of February. The soil to be light fibrous loam; add to this one fourth of leaf-mould and rotten dung, of equal parts; place large postherds over the holes in the bottom of the box; above the potsherds a
layer of turf. Make a small hill in the centre of each box; place one plant in the centre, and continue to add fill the box with soil till the plants are in full bearing. pionally with a little soot mized with it. A temperature of $65^{\circ}$ to $30^{\circ}$ by night and $70^{\circ}$ to $85^{\circ}$ by day (with assistance of sun) during winter. If the plants should flag about noon, as they frequently will during sunshine, sprinkle them with water immediately over the leaves, and as the apring advances shade them lightly during the middte part of the day. Be careful to maintain a moist atmosphere by vapour from the pipes over-watering the roots. For winter and spring crops I recommend Kenyon's; if this cannot be obtained, grow Sion-house-never attempt to grow long kinds for winter. To banish green-fly use tobacco-water applied with the syringe; let it remain on the plants twenty minutes; afterwards syringe the plants with clean water; give air
every opportunity, but do not admit any in front of the house in cold weather. Plants under the above treatment have been kept in a bearing state for twelve moinths from seed sown on the lst of September.-C. E.
Decomposilion of Chalk.-A correspondent inquires Whether any mode can be praetised of disengaging from calcareous soils the carbonic acid in which they abound, 50 is to afford nutriment to the plants growing on them; and acid that would decompose the carbonate of lime, would destroy or injure plants. But if the inquirer resides on a poor chalky soil, it may be worth his while to try this experment. Plough it deep enough to have the surface sprinkle it (by means of a water-cart, such as is used for additions, or otherwise, with water rendered acid by the spring sow it with clover, lucerne, or (best of all) saintportion of sulphate of lime (into which a part of the carbonate of lime will have been converted), and which is accordingly the best manure for them. He should try
different patches of ground with different proportions of the acid, noting accurately the cost, and also the results in not a dear article; ard though on the whole it might posing it to be often repeated, it might, if found to bably for a great many years. $F$ effects would last pro-
Horses and Pohalues. - In No. 4 of your paper, in the culture and Physiologr," Liebig says, "pplication to Agrikept alive by feeding it with potatoes, which contain a very smadl quantity of nitrogen: but life thus sapported is a gradual starvaion. The animal neither increases in this "fact" yuu expressed your doubts, and your wish to subject." It is to be feared the writer of that paragraph has had but little experience in fecding horses on potatoes at least. Horses fel for the greater part on potatoes, boiled or steamed, will "increase in size and sirength," up against heavy agricultural work. But as theory, how-
ever peciontly propounded, is of little value if it cannot
withstand the test of practice, so are assertions of little
value if unattested by proofs. Potatoes, in the absence green or other succulent food, have been found in Ireland
highly advantageous food for brood-mares having early uals, say from December to May; they have been found equally so for weanling colts from October to May. They have been also given with success to draft horses, two feeds each day of 21 lbs . each feed, with one feed of 7 lbs . of igh the usual quantity of hay (14ilos to 18 los.) a ased them advantareonsly on all the above ocoasions but their use is now becoming superseded, as food for horses, by the introduction of turnip culture. They are used as cod for horges by a class of who live by the hard work the hurses perform, namely the carmen, or "gingle boys," as they are called, who ar Those "gingle horses" perform the journeys of from 30 forles daily on two feeds of oats of 7 lb . each, one of potatoes, and bran at night ( 21 lbs . of the former and
7 lbs of the latter), with 14 lbs . of hay. The practice formerly was four feeds of oats daily and hay at night but since they began to use potatoes they find their horse do more work, and are in better condition withal.-Edward

Ines,-About 12 years ago 1 had to soperintend the formation of a vine border. Being young and inexperienced in such matters, I consulted several authors, following their directions as neariy as possible. For severa years after being planted, the vines grew remarkably well but afterwards they began to show symptoms of weakness, and other concomitant evils arising from bad-conditioned roots, such as shanking, shrivelling, want of colour, and bad flavour. Several top-dressings of dung and leaves vere applied, but without manifest advantage. I then exmined the border, found it .wet and sour, the roots too far from the surface, and their fibres dead. Altogether propriety of their entire removal; a proceeding to which I conld scarcely have objected, conviaced as I was of the error I had committed in the original formation of the border. I however resolved on trying this experiment :the border is sixteen feet wide. At one end I opened a the front wall. I then, by means of a pointed ash stick, emoved the soil without doing much injury to the roots. Such of the latter as extended beyond the 8 ft . were allowed to remain undisturbed, in order to supply nourishment until those nearer the stem should recover, great care being taken to preserve such fibres as the latter did possess. The soil being removed, a quantity of broken bricks and coarse lime rubbish was put in the bottom, then covered with sods, grass side downwards; and over this was fllied in fresh soil that had been taken a few months previously from the surface of an old sheep-pasture, and roken a little with the prongs of a dung-fork. The roots were kept as near the surface as a proper distribution them would allow and the mas closely introduced about full crop of fruit, and appeared in nowise different until heir last swelling, when, to my great satisfaction, tne ber ries became one-half larger than usual, were finely coloured, and keprt exceedingly well. C pon examination of ones had been emitted from the base of the stems, which before the operation appeared more like dead sticks; in short, the roots situated in the new-formed vorder made healthy progress. In the autumn following I removed the soil of the other half of the border with much less ines are now in excellent condition, and such as I am not ashamed to own. I consider the errors 1 committed in making the border to have been the following:-It was too deep; the roots in search of moisture will go to the bottom, where neither heat nor air can penetrate, but where in wet plants thd will be . perfection. It was also far too rich; manure is very retentive of moisture, causes the border to go sour, which prevents the young roots from living in it; it is also a nest for many kinds of insects, which feed upon the small roots. When the soil is fresh sod taken from a good pasture, it is much better without dung; it can be added roots to bask themselyes in sunghine, and the effeats will be visible in the large healthy foliage, well-swelled buds, and in the superior size, colour, and flavour of the berries. Radix.
Pruning Roses.-The large showy roses that flower in June and July should be pruned in February. As many of the strongest young shoots as the tree is capable of supporting should be left, and the rest cut out; the branches for howering should be shortened back about onethird, and those intended for next rear's wood to about three buds. By this method of pruning I have many roses with shoots from 3 ft . to Cft . long covered with blossombuds. Those standards which have long shoots are hooped over each other, and protuce a beautiful efect
dwarfs that admit of it have their shoots pegzed down, or planted close tagether they are intertwined, and thos the ground is covered with roses: if, little attention is paid
to colour, a very pleasing effect may be roduced. The young shoots intended for the next season are allowed to Iy reason for this kind of pruning is, that as rese-trees 3 ft . long are produved when the soil is moist sad the sun has but little power; the second 12 inches are added when ence, in June, July, and August, and on this part of the
shoot the best flower-buds are formed; the last growth takes place in the autumn, when the days decrease in cagth, and consequently this part of the shoot is not well matured. Roses should always be thinned in sammer to increase the strength of those shoots intended to produce fowers next season. In Norember I cat back the arched branches, and cover the ground with a coat of well-rotted bove, and in the spring peg down the young shoots, as ton Kings, Cheltenham.

Heating Apparatus.--The great objection I take to the their pipes are presumed to be made of ison: and thit I consider to be objectionable, first, because there is not case the enough in an stove or fine to retain heat in case the fre iotsumcieatly kept up, secondiy, because the heat may be emitted too freely in case the are is accidentally too strong; and lastly, if the ugliness of the irom pipes can be tolerated, I think, with the moisture of atmosphere on the outside and the vapours from the coal Within, they will be expensive from requiring frequent re newal. The plan which I have adopted is to build a brick stove or fae, on the principle of Count Rumford's plans, given to the warld in his treatises at the latter end of the ast century, with the addition, as suggested by Dr Arnott's plan, of greater depth for the reception of fuel 12 hours Connt Re of fre witrodeed cloee or donble doors, and an ash-pit door, with a register to govern the admission of air to the fire ; Dr. Arnott has carried thi rinciple to greater perfection of execution, and added an ncreased depth of fuel to be ignited progressively by ell-adjusted government of the air admitted to the frel in combastion. The Chunk stove varies the application of this principle, but not conveniently for hot or green-houses, because it is not calculated for a perpetual fire. The Vesta tove offers greater advantages for the purpose, and where the fire-place is required large enough to become necessary o place it outside the house, I think it may, with some variation, be adapted for the parpose. Under these considerations, and having a fire-door and ash-pit register hat had belon mall greenhouse that I erected a few months back on the lan I have suggested, and that you may form some idea of its effect, I will give you an outline of my observations upon it. The cubic dimensions of the inside of the greenouse are about 1260 feet, the area of the glass 220 feet, aspect of the front south east inclining to south. The fre-place with the doors inside the house is eight inches by ine inches within; the tlues passing backward and forward orer ench other are nearly 30 feet long before entering the himney. As to its effect, we have kept the fire in for taree weeks or more without relighting, and have had ather more than sufficient heat at times, from the want of experionce, in the cavly part of my man's aferiod of this season, when the thermometers of this neighbourhood were litule, if any, above zero, when we ound the cost of the anthracite or Welsh coals was within 3 d . for the 24 hours, and when the weather was ess severe the consumption was not haif that amount. The fire-place from the bars to the bottom of the door is hine inches deep, and the fire is generally from 12 to 16 hours without requiring attention.-Aquila, Bucks.
Winler Gardens.- On the leaf of a wrapper of the Florists Journal for this month, I have seen remaris on Rusan Winter Gardens, as if in answer to some inquiries on ae subject, and should think the writer must have mistaen the questions put to him, or that the querist mot be號 merely says at rapped in mats would do quite wh if not bethe trees rapped in man thing about Russian winter gardens to talk in this way What greater pleasure would there be in walling about in room with orange-trees and laurela covered up in mats, more than in walking up and down a cabinet-maker's shop riage? By the name one wrould be led to suppose that pleasure and recreation were the objects; and that when he whole country around was covered deep in snow for so many months together, the rich were able to enjoy the sight of green trees and flowers living and growing in the anguage.-H. l-2 IOnr correspondent vill find an am ple account of the Russian wiatergardens in Loudon's Encyclopedia of Horticulture, eartion of 1835: Prince Potemkin's was built like an Einglish consarvatary, with employed to soreen the houses from the intonsity of the weather.]

Kyanised Timber-TI a serien of atperiments carried a her for the lant fonk ycurs, marding the efficacy of janked timber for gardening purposes, we have not furnd it hast longer when expused to great heat and moisPortand first published the results of a trial in a Cateutta sone, the bottom heat being =upphicd by stem, and the pected to a heat of $20^{\prime \prime}$ to a llan Fahtenheit ; good Memel deal mprepared lasted longer than the best oak Kjanised. The then managing director of the Anti-Dry-Rot Compamy and Mr. Kyan came down to see and test the timber:
and on their return sent domn frum the Cumpany's yard at Limehouse eight picees, I repared and unprepared, to be planged in the same stove. The resaits hare bean the sama have decayed quite as fast as the unprepored Good Bat
tic deal unprepared lasted longer than the best oak of
Kyan's prepared-owing, no doubt, to the resinous quality of the pood. We have tried Kyanised timber in the mushroom siclves, and I am decidedly of opinion that it is prejudicid to their grow the inch Scotch fir deals, saturated in copperas and lime-water; it had the effect of preserving the timber for two years; in the same place, when not sa-
turated, it never lasted longer than une. Having seen the turated, it neverlasted longer than une. Having seen the Thoresby, the particulars of which were communicated to the conductor of the Gardener's Magazine by Earl Man-
vers, I am fully convinced it must be used in all horticultural erections with great caution. Another preparation Which is, I believe, of zinc, has been patented by Sir Wm. Barnett and tried here, the particulars of which I will Received from Sir Wm. Burnett, from the Admiralty, pieces of timber, four prepared and four unprepared, plunged in the bark bed of New Calcutta store; likewise pieces of canvas, cloth, and cordage, prepared and unprepared, placed in a damp store-hole, amongst decaying vepieces of canvas, ciotm, and cordage quite decayed; the prepared sound. 1 an. 20,1841 :-A piece of scarlet presound. The timber prepared and unprepared is nows beginning to decay alike, aud I lave no doubt it will not last longer than Kyan's ander the same circumstances. Gar den nets, rick-cloths, and so on, dipped in Sir W. Burnett's preparation, according to the trial made, would last for a great many years, if taken care of and kept dry, sonous qualities of Kyan's solution-Witliam Tillery,

dives,

 $5-5=$ $-2$ ACACIA Briplora. (Greenhouse Shrub.)-A pretty little greenhouse shrub, with small axillary heads of yellow flowers smelling
like Hawthornt.t. It was raised by Messrs. Lowe and Co. from
swan River seecl. The false leaves have a very unusual forn: they may be deseribed an wedtecr, with une of the auglcs muero-
nate a.d more taper-psinted than the other, and with the mudrib
 hunchbacied. Alrai. (Store Orchidaceous Plent.) - Imagine a plant whose fowers have the size of $S$. insignis, the form of
$S$. venusta, the smell of $S$. oculata, the colour of Maxillaria aro-
matica, and are arranged in a spike two feet long, and the
reader will have a tolerably distinct conception of this beautiful
thing, which Messrs. Loddipes thing, which Messrs. Loddiges received from Mr. Bateman, who oculata, but they are in some manner lost in the flood of yellow
that surrounds them. - Botamical Register.
(ENUTHERA FRTTICUSA, var. INDHA. (Hurdy Herbaceons plunt. -On several occasions, and from different parts of Indis,
has been received an OFnothera, with perennial roots, dwarf
stems, rather dull and hairy leaves, and very handsome bright yellow flowers, which approaches very near to the E. fruticosa rieties of that plant, now cultivated. lits leaves are less shining pact little bush about a foot and a half high. Sumetimes its leaves are quite entire, occasionally they are toothed in a repand
 thuse glaueous species called OE. glauca and Frazeri. On the
contrary, it would seem to be a peculiar variety, whose distinctive marks have feen stamped upon it in consequence of long cultiva-
tion in the climate of India. It is very pretty, and well worth a and grows about eighteen inches high, requiring the same treatfreely in any good common garden soil, and is easily increased by dividing the old plonts either in the antumn or spring; it
flowers from June to August. - Botanical Register.
Solanum Maceantwine with large clusters of deep purple flowers, whose centre is occu-
pied by a knot of large bright yellow anthers. It is nearly allied
to the bitter-sweet of our hedgerows, but its fowers are very mnch larger, and hoadsomeg. Mr. Page, nurseryman, Sonty.
ampton, received the seeds in July 1838 , from Mexico; they
were sown late in the autumn, and many of the, nlants damped off. That which fowered is now about three fee high, with se-
vernl branches, and fine large leaves. It is very beautiful, and
will produce an abundance of flowers from its vigourously grow-
 July in the garden of the Hoŕticultural Society, having been received smong other bulbe from Cusco, where it was foumd hy
Mr. Pentiand. It appears to be very nearly allied to Mr. Herbert's
I. pednncolata, but the tube is longer, there are no upon the coronet, and the leaves do not appear less sheathing at
the base than in I. Amancaes. The flowers, although greenish whebase, have an agreable lemou-like fragrance, - Butcuicich
Rigester.

## MISCELEANEOUS.

White Carrots.-Sir C. Burrell describes his crop of about 1300 bushels per acre after tailing and topping. 3 Some of the roots penetrated the earth to the depth of very scourging crop, especially considering tie vast increase of nutritious winter fodder, with consequent economy of hay for both fatting and lean stock, and especially milch cons, their cream and butter being as good, and as free
from any ill flavour. as when feeding on the pastures; and likewise, looking to the great increase of farm-yard manure resulting from its consumption, to. which may be justly added the clean, friable, and finely-puiverised state in ticularly well adapted for ridging up daring the winter, and sowing with barley and seeds in the ensuing spring." Sir Cuaries sowed his seed broadcast at abo said to be free-working deep soils, well and deeply drained said to be free-working deep soils, we
and subsoiled.-Maidstone Gasette.
Helieonia speciosa-This superb plant has frequently lowered in the Botanic Garden at Liége, where it has been observed that the weakest stems have produced the most brilliant flowers. The involucrum preserves its red
colour for three months, and when the flower is gone, the colour for three months, and when the fower is gone, the Artificial fecundation has prodnced no result, as the ovaries which ought to originate seed, and the stigmata, are abortive. The soil in which the plant is grown should not contain mach humus, but should be composed of argillaceous sand and peat, well mixed together.-C. M. soni, with all the habit of that species, has latels towered in the garden of Lord Wharncliffe, at Wortley Hall, near Sbefieid. The tlowers are not more than two-thirds the length, the petals are oblong, and rounded at the point. deap crimson of C. Jenkinsoni, they are of a clear orange buff. The ovary also is much shorter. It is a decided acquisition to our gardens.
Aunuals.- The most showy hardy annuals are, phlow plants from light pink to dark purple; as it fowers from June to September, it is an excellent plant to occupy a bed in a parterre. Clintonia pulchalla, from North-west Ame-
collection. Erysimum Perofskianum has deeper coloared orange flowers than any other plant ; and an entire bed of it in a garden forms a striking object, when contrasted with a bed of the deep purple Cannpanula Loveyi. Bartonia aurea, with large deep yellow flowern, is one of the wandsomest annuals in our gardens. Lappinus Harfsom, is a desirable accession to this ornamental genus. Noluna atriplicifolia, a Perravian annual wīh lirge blue tlowers, is a fine trailer, and adapted for the edzing of a bed or flower-garden. Sphenoryne speciosa is a beautiful plant with bright buff flowers, having a buck mark in the
centre. Calandeinia discolor and speciosa have handsome purple flowers Centaurea pulchra, a late introduction from the North of India, has puryle fluwers. Calliupsis
Drummondi, a fine species from Tezas, bears rich vellow Drummondi, a fine species from Texas, bears rich yellow
fowers in abundance. Madia elegans, a tall strong-grow. ing plant from California, produces yellow flowers with a dark mark in the centre from July to October. Pqparm anmanum, from the North of India, has red and white aowers. Seeds of the above-mentioned kinds should always be sown in the spring, but the following will flower better pinkish blussoms, and androsacrus, with flowers the with from purple to white, grow from 6 iuches to 1 fot height. Giliia tricolor, with light purple or white blossoms, is one of the greatest ornaments, of the flower-gardenLupinus nanus, with bright blue flowers, is in perfection from May to October. Nemopntia asomaria has white fowers spotted with black; phacelioides, with purple
blossoms, and insignis, with large bright blue flowers, should be in every garden. Eutoca viscida, with aperk: ling blue flowers, contrasts well with the yellow of Oxymure chrysanthemoides. Godetia rubicunda producés large pink blossoms from June to September. Collinsia bicolor bears a profusion of lively purple and white flowers during purple flowers, and though not so ornamental as some in the list, yet will be found valuable in a large garden. Calliokroa platyglossa, and Limnanthes Douglassith, with yellow flowers-Platystemon californicum, with delicate primrone-coloured blossoms, and Eucharidium concinnum with its neat pink flowers, should be in every collection.
Vines.- Grapes suitable for early forcing:-Btack Hamburgh, Black Proatignan, White Frontignan, White Muscadine, White Sweetwater. 2. Suromer forcing:-
Black Hamburgh, Black Frontiguau, Grizziy Frontignan, White Frontignau, White Muscat of Alexandria. Cannonhall Muscat, Alicant, Black Constantia, Money's Muscat Eschollata, Dutch Sweetwater, White Muscadine. Late West's Black St. Peter's, White Mugcat of Alezandrig Money's Eschollata superba, Syrian, Horsforth. hall Grape.-Clement Huare.

Manure for Lineyards.-It is said that nothing more is necessary for the manure of a vineyard than the branches which are cut frons the viaes themselves.
We find that our vines manure themselves, like the trees in a forest, and even better than they! The foliage falis from trees in a forest only when they are withered, and they lie for years befure they decay; but the branches are pruned from the vine in the end of July or beginnang of Augast, whilst still fresh and moist. If they are then cut into small pieces and mixed with the earth, they undergo putrefaction so completely, that at the end of four week not the smallest trace of them can be found. A poor man for thirty Muller had a vineyard whict he thus to to hoe them into the soil, after hasing cut them into snuall pieces. He said to himself, if vine branches can make grass large, strong, and green, they must also be able to malle my vines grow better, and become strong and green. In a year he beaatiful; his vines grew splendidy, and remained the whole summer green, even in the greatest heat.

Roses.-A selection of 24 roses for staulards, which are not expensive, and which contains some of the best and most distinct out of each of the following divisions, ${ }^{\text {Is.s. }}$ :-
Perpenvals, Damasks, Mosses, Gallicas (or Fsindi), Hybrid Chinas, Celestials.
Metuals, pale Altshia Palnuypa, dark crimion: Queen of Per petuals, pale ilesh. Palnyra, pale rose. Ma Favorite, pale flesh; La Délicatesse, blush white.

Denmark, pale blush, Campan, bribht rose, spottal; Cone
 White stripes, Griandpapa, derep cmimson; Fonny yellow stripes; Hybirad China-Thiomphe de Lempy, white, Thiomphede Guerin,
pole rose; Mordamit de Leuny, light rose; Farny, slate or dorepele rose; Mordaxmt de Leuny, light rose; Pamy, slate or dore Crimson. Gooseberries.-Among the prize sorts of 1840 two are red, sir yellow, five green, and five white. The following is a list of the four heaviest in each class shom latt jear, from the "Gooseberry Grower's Recorder.

ful as feedliugs，though the latter take 10 or 12 yeari before they
fower．The Benthamia is not of any ralue for a small green－ house，but is well adapte

## 7Rebictios．

Organic Chemistry，and its Application to Agriculture and Physiology．By Iustas Liotig M．D．（Fourth Notice：see G．C．p．54）．

## E proceed with our examination of this book．

But it is not so much the quantity of ammonia that is important to plants，i6，the furm in urtich it is presented measure ust before it can bo imbibed．When fixped，in the state of salts，its colatitity is avercome，and not the smalle＇st dissolveil by u＂ater and imbibed by the peot．

This propusition is one of those which contain the mols novelty in the author＇s work，and which geems to have the most direct application to practical purposes．Many sup－ posed proots of the importanie of ammonia are bronght orward；but tane only ean show how far they are to be adopted．It is，for example，asserted that the action of gypsum is puing to its forming a splphato of smmonia， which is a soluhle salt，which plants are capable of imbibing； and we must infer that the well mown fertilising action of the Bedfondahire peat of which gnlphate of imp foyms
quitting the iron and combining with ammonia．In like and of charcoal，is ascribed to the power possessed by such substances of condensing ammonia within their pores；and the auther refers the varging action of all
nanures in a great dugree to the relative fuamitry of ammonia which they cantain．It is，thercture，tia wlijest much as possible of the ammonia that exists in his manure． Liquid manures，or rather liquid animal excrements，the they contain mout manis the ruost powerfal，because ject．We find the fulluwing just criticism of some of our agricultural writers
salts，has been compaence of gypsum，and of many other crease the activity of the human stomachatics，which in－ and give a tone to the whole system．But plants contain no nerves；we know of no substance capable of exciting them to intoxication and madness，or of lulling them to leaves to appropriate a greater quantity of carbon from the atmosphere，when the other constituents which the ing．We farourables require for their growth are want－ apon man，when mixed with his food，is andeniable；but aromatics are given to plants without food to be digested， nd still they Lourish with greater laxuriance．
Dusing the chemical transformations that result in plants from the separation and recombination of their dements，troo componsd＇s are necessarily formed，one of separated by the rooks，in the form of excrementitious natter．No process of nutrition can te conceited to sub－ sist without a separation of effele matler．
It will here be seen that Professor Liebig takes the truth of the modern speculations about root secretions for granted．It is，however，to be observed，that great doubts Macaire－Prinsep in relation to this snbject，Braconnot Walser，and others，deny their truth，and assert that they can obtain＇no such remille as those of Macaire：or if they do，they ascribe them to accidental lesion of the roots of the plants operated apon．For ourselves，we confess we have no fixed opinion upon the sabject，which is a quos－ tion of facts and not of induction．As to the supposed necessily for exurneatitious rejectamenta（root secre－ （ions），－it is no doubt true that there is no secretion withoat an esertion，and this has long since been pointed out by Senebier，and more recently by Walser．But it is not necessary to look to the roots for these excretions， When we have so many proofs of their constant occurrence parting pirts of a plant．Are hot thence of lisht？Do we not find them throwing off oily，resinous，waxy，acid and acrid watter by various parts of their surlace，especially by he glandular hairs expresoly furmed for that particula purpose ：And have we not pecuhar substances hodged in
the hollows of their stems or elsewhere，such as Tabasheer in the Banboo？Surely all these are instances enough to satisty the necessity of excretions occurring，and render it superfluuus to look to the routs for further aid in this particular．Nevertheless，Professur Liebig reasons upon the supposed excrementitious properties of roots with all the coandenee of a man certain of the truth of that which at the most can only be regarded as doubt ful．
The naxt propontion upon which we propone to offer年 remarks is，that all plants contain alkalies in combina i．h．organic acids，that the proportion of these baes be，but that any one may however，the quantity of alkali contmined in different species is variable，one species of plant will require a more alkaline soil than another．

The perfect development of a plant is therefore de－ pendent on the presence of cllsaties or alkaline matter； or when these substances are totally wanting，growth will be arrested；and when they are deficiont，it must be im－

With regard to the indifference of plants as to the ma－ ture of the alkalies on which they feed，we think this may be Professor Moretti，seems to following case，mentioned Let two pots of the same earth，under circumstances the same in all respects，be planted，the one with common Pellitory（Parittarial officinalis），the other with comman Saltwort（Salsola Kali）．Let them be both watered equally with two diferent solutions，the one of salt（mu－ riate of soda），the other of saltpetre（nitrate of potask）． Although each will have its roots equally exposed to the salt and saltpetre，get the Pellitory will be found to con－ tain saltpetre without salt，and the saltmart，salt without saltpetre．It therefore seems clear that the roots of Salt－ Fort refuse to imbibe sairpetre，and those of Pellitory to feed on salt．It is true that the worye fact may be appa－ rently explained by supposing chat Saltwort rejeets put－ but if this really happens，we nevirtheless scem forced to conelude that sode is the alkali necessary to saitwort，and potash that essential to Petititory
Abutt the general imporrance of alkalies to plants thoue cover 1 i．th ba no roca for doabt，and this dis－ plicable before．When we say that o plat becomes tired i a soil，and find that maruring fuits to invigurate it，the dentrection of allealies in the Boil，and the want of a mfffe－ cient supply of those bascs in the manure，seem to ourar al solution of the enigma．And in like manner the gradual deany of trees in pablic squares and promenades，where the soil is igcossantly robliod of utheline matior，form the
sale of neatness, may probably be ascribed to the same cause. So also the injurious action of weeds is explained by their robbing the soil of that particular kind of food
which is necessary to the crops amoing which they growt Each will partake of the component parts of the soil, and in proportion to the vigour of their growth, that of the crop must decreass; for what one recoives the others are deprived of. "Plants will, on the contrary, thrive beside each other, either when the substances necessary different kinds, or when they themselves are not both in the same stages of development at the same time. On a soil, for example, which contains potash, both wheat and
tobacco may be reared in succession, because the latter plant does not require phosphates, salts which are in variably present in wheat, but requires only allinalies and food containing nitrogen." This seems to be the true explanation of the rotation of crops.
"In order to apply the se remarks," says Dr. Liebig, lain us compare two kinds of tree the woods of which confind that one of these grows luxuriantly in several soils upon which the others are scarcely able to vegetate. For example, 10,000 parts of oak wood yield 250 parts of ashes; the same quant ty of fir-wood only 83 , of lime-wood parts. Firs and pines find a sufficient quantity of allalies parts. Firs and pines find a sufficient quantity of alkalies grow; and wheat thrives in soils favourable for the lime-
tree, becaase the bases which are necessary to bring it to tree, becanse the bases which are necessary to bring it to complete maturity exist there in sufficient quantity. A
lharvest of grain is obtsined every 30 or 40 years from the soil of the Luneburg heath, by strewing it with the ashes of the heath-plants (Erica vulgaris) which grow on it. These plants, during the long period just mentioned, colleet the potash and soda, which are conveyed to them by rainwater; and it is by means of these alkalies that oats, baro grow on this sandy heath."
It is impossible for any one aoquainted with gardening not to perceive the immense importance of these considerations, which show that by adopting the modert notion horticulture has been carried backwards, instead of being horticulture has been carried backwards, instead of being chemical nature both of the soill in which a given plant grows, and of the plant itself, must be the foundation of all exact and economical methods of cultivation.
CALENDAR OF OPERATIONS for the enswing Week. (OABrrations unpon Seeds condinued.)
 tion does not proceed, except in some plants having geeds which

NEWS OF THE WEEK.
Oor foreign intelligence is still of great importance, and events threatening the continuance of a general peace are multiplying rather than diminishing in both hemispheres. In France, a determination not only to maintain but to angment the eristing armaments is manifested by the Ministry, although the Great Powers are still exerting their influence to induce her to discontinue this warlike attitude, and thus allay the anxiety inseparable from the present uncertainty of her intentions. In Spain, the Republican party appears to gain ground, and apprehensions are entertained lest an outbreak may occur; in anticipation of this event, troops have been concentrated in the Capital, and other rigorous measures adopted by the Regency to repel any attempt to change the constitutional government of the country. In consequence of the late excitement in the Peninsula, Don Miguel has proceeded, it is said, to the Spanish frontier, with ultimate views on the throne of Portugal, in the event of a rupture with Spain; but the Regency has resolved to co-operate with Portugal in resisting such an attempt, and it is, therefore, supposed that he will not venture to invade the kingdom. - The intelligence brought by recent packets from the United States is of a discouraging and hostile character. Mr. M•Leod, after being admitted to bail, was seizell "hy aty armed party and reconducted to prison, on the pretence of affording the owner of the steamer, Carolins, ait opportunity of arresting him for the destruction of that vessel, and of thus detaining him in custody within the territory of the States. Much excitement prevailed throughout the Union against Great Britain, and public meetings have been held in different States to consider the measures necessary to be adopted in reference to this subject, the North Eastern boundary, and other matters of alleged dispute between the two countries. -From Egypt we learn that the Turkish army, in pursuit of Ibrahim Pacha during his recent retreat, was attacked by Bedonin Arabs, who were charged and dispersed by an English officer, though not without some loss on both sides. Egypt was tranquil, and the Pacha had adopted measures for its internal improvement, and for the better administration of its resources.
At home the trial of the Earl of Cardigan by the House of Peers has excited considerable attention, upwards of 60 years having elspsed since the occurrence of a similar event. A legal objection was taken to the proceedings on a point of form, and being held valid by the House, his Lordship was acquitted.

## 3) ${ }^{2}$ me Netos.

The Court.-Her Majesty, Prince Albert, and the Princess Royal are still at Buekingham Palace, and are in good health. The ministarial papers have announced that Her Majesty is again is as "interesting state," adding Lord Chancellor's proceeds from high authority. -The Lord Chancellor's indisposition has been more serious than was anticipated, but he is now convalescent.
Trial of the Earl of Cardigan.- On Tuesday, the House of Peers assembled for the trial of Lord Cardigan, for Tuckett, in a duel on Wandsworth Common, on the 12th Sept. last. The novelty of this trial naturally excited a great deal of interest, a period of more than 60 years having elapsed since the occurrence of any similar proceeding. The business of the day commenced about 11 $0^{\prime}$ 'clock, when Lord Denman took his seat on the woolwas very great; their lordships were attired in their robes, with the collars of their respective orders; and the galleries were filled with ladies, the foreigu ambassadors, and strangers of distinction. The roll of the Lords having the commission for the trial was read, and Lord Cardigan placed at the bar in custody. The indictment having been placed at the bar in custody. The indictment having been
read, Lord Cardigan pleaded Not Guilty. Mr. Waddington opened the case, and was followed by the Attor-ney-General in a speech of considerable length. He stated that the indictment had been found by a grand jury of the country against the prisoner, charging him with a falony, the punishment of which was transportacioa or imprisom-
ment; and that it had been removed before their lordships, because by the law of the land no inferior court had jarisdiction to try it. It was possible that in a case of this importance questions of great interest and nicety as to the interpretation of the statutes and the privileges of the peerage might arise; and it was of che itwost has should be deliberately discussed. It was now 64 years since any proceeding of this port had taken place; and he was rejoiced to think that the charge against the froble prisoaer did not imply any degree of moral turpitude; and that, if he should be found guilty, the conviction he belonged. But it certainly did appear to hims that the noble prisoner had been guilty of a breach of the statatelaw, which he and all their lordships were bound to obey. Their lordships were not now sitting as a branclo of the legislature, but as the highest court of judicature, bomed to administer the law, though not acting under the solemnity of an oath. The indtetment ayainst the noble earl
was framed on an act of Parlinm was framed on an act of Parliament passed ia the first year of the reign of her present Majesty; bat before be thiched applied to this particular offence. Fo tham eatervil
whe the
into a brief history of the lav on the subject, and stated not ensue, personal violence did not amount to more than die within a year and 2 day, no felony was committed. After several acts had been repealed, the act to which he give a wound dangerous to life is a capital offence; but to shoot at any person, whereby no woand is inflicted, is no
longer a capital offence, but is only a felony punishable by transportation or imprisonment, whether the intent be murder or any other grievous bodily harm. He was happy to inform their lordships that the present indictment contained no counts on the cappital charge. A wound was
inflicted: but the prosecutor, in the discharge of his duty, did not think it right to arer that any wound dangerous to life had been inflicted. The lst count charged the noble lord with having shot at Capt. Tuckett, with intent to
commit murder. The 2nd charged him with the same act with intent to ranim, distigure, or disable Capt. Tuckett; and the 3 rd, with intent to do him some other grierous bodily harm. Now it was for their lordshijs to say, counts must not be considered fully supported and established. The substance of the evidence to be adduced was duel with pistols on Wimbledon-common with Capt. Har shots. It would appear from the witnesses whom he should call, that in the afternoon of that day two carriages were seen to come from opponite directions apon Wimbledoncommon, and that a party alighted foum was in contemplation. The seconds went upon the ground, and made the usual preparations. The principals. Tere placed ang a
distance of 12 yards from each other. They exchanged shote without effect. They then received from their seconds each another pistol. They again fired; and this time Capt. Tuckets was wounded by Earl Cardigan. There came up to the spot, almost immediately afterwards, Mr. Dann and his son, with Sir James Anderson, a surgeon,
who had been standing close by and observing the whole transaction. The wound of Capt. Tuckett was examined; it bled copionsly; but fortunately it was not of a dangerous nature. The parties wass removed from the ground by Mr. Dann, who, being a constable, told thent that they muston requested permission to remove Capt. Tuckett to derson requested permission to remove Capt. Tuckett to to on his giving a pledge that he would appear, whenever then took Capt. Douglas and the other parties into custody, and Earl Cardigm and Capt. Doughas were carried before the magistrates at Wandsworth. When he was before them the earl said, "I have fought a duel. I have pointing to Capt. Danglas, "is also a prisoner, and is my
second." The carl was then asked by one of the magistrates, whether his man was Capt. Reynolds? He replied, ${ }^{64}$ Do you think that I would condescend to fight with one of my own officers:'" He was then called upon to enter into recognizances to appear from time to time when called upon, which he did, until this indictment was prefented. The witnesses whom he should call to prove these James Anderson. It was painful to use the language which the first count made it necesang for him to employ; but it was for their lordships to say whether the eari had not shot at Capt. Tuckett with an intent of crime. Someharrelled, whilst Capt. Tuckett's were not so. However that may have been, he entertained the firm conviction that nothing was intended by the noble earl that was not fair and honourable; and he had no doubt he thought that one of his own pistols might be directed against his own person:- He did not suppose that there was any grudge, personal animosity, rancour, or malignity against Capt. that his only object was to maintain his reputation as an officer and a gentleman. Their lordships were aware that the earl is Lieut.. Colonel of the lith Hussars, and he had no doubt that upon this occasion he only complied with what he thought necessary to the usages of society. But considered, if death had ensued, a great calamity and not a great crime, though moralista of the hifhent anthority have defended duelling, it remained for their lardships to concider what duelling is by the law of England. By the haw there can be no question that parties who meet deliberately to fight a duel, are guilty of murder if death ensues. The learned Counsel then quoted the leading law anthorities on the subject, which were unanimous in regerding it as a crminal offence, and he concluded with expressing his conviction that their lordships' judgment in thinasease, whatever it might be, would be according to law and the justice of the case, and that their lordships would preserve that high reputation in the exercise of their judicini functions, which had been so long enjoyed by their ancestors - Thomas Hunt Dann was then esamined at great length; he detailed the circumstances of the duel, and the proceedings adopted subsequentiy to the apprekension of the parties. The son and wife of this witness Were supjected to a rigid cross-examination by Sir Wm. stated in the speech of the Attorney-General. Sir James Anderson was called, bat dectived answering any question Which might criminate himself. Witneraen were then erramined touching the Cluristian name of Capt. Tuckett, poared with the party mentionsed in the indictment.

Sir William Follett then addressed the House for the defence. He apprehended that it was not necessary to
state anything to their lordships, in order to show that the prosecutor is bound to prove the Christian and surname of the person against whom the alleged offence is committed, and if he falls in that he fails in the proof of his case. Their lordships would see that there was no evidence whatever to show that the person against whom the shot was
discharged was Mr. Harvey Garnett Phipps Tuckett. The evidence before their lurd-hips would rather lead to a contrary puesumption, if presunption could be allowed in such a case. Two witnesses had stated that they knew a person of that name, but they could not adduce suad to at Wimbledon-common on the 12 th Sept. There was not a tittle of evidence to connect the two parties in either case; and therefore he submitted that the Attorneyproof required to support a prosecution of this kind. He added that this point is expressly decided in a case in tially necessary to proverthe Christian and surname of the party against whom the offence is alleged to have been committed, and of that there was no proof in the present that there was no human being who, having heard the the inference of the inference of the identity of Capt. Tuckett; and he besufficient to convince a reasonable man out of court ought to convince a judge or judges, provided it be sddaced would have been drawn out of a court of justice, shall it be said that in a court of justice there is not a scintill of evidence from which it could be drawn? This would be a most ansatisfactory conclusion to this trial. Their lordships would weigh the eridence fairly and deliberately. If they thought that this was not the same individual, of course they would acquit the prisoner, saying, "Not Guilty, upon my honour ; but they would not, in his opinion, stop
the prosecution upon this objection, which nust be considered trivial. Strangers were then ordered to withdraw while their lordships considered the objection raised by Sir W. Follett. After an absence of about 20 minutes the doors were opened, their lordships having decided in favour of the to go to their, in other words, that there was Lord High Steward then put the question to each peer severally, beginning with the junior baron, and proceeding, according , through the list; whereupon each peer rose, and putting his right hand upon his breast, said, "Not Cleveland's turn, his Grace said, with come emphasis, "No Guilty, legally, upon my honour." The last peer called upon was the Duke of Cambridge. The Lord High Steward, then, last of all, said, "Not guilty, upon my honour." Lard Cardigan was then plaved outside the
bar, when the Lord High Steward said, "James Thomas Earl of Cardigan, you have been indicted for a felony, for which you have been tried by your peers, and I have the sati-faction of iuforming you that you have been found Sot frulty' be a unataimous sentence. The number of their lordships who gave this verdict I have not pre-
cisely at this moment before me, or I would have been glad to have stated it to your lordship; , but their lordships ave unanimously said, 'Not Guilty.".-The Earl of Cardigan then bowed and retired.-The proclamation dissolving the commission was then resd, and the proceedings terminated with the breaking of the staff by the Lord Steward, after which the House adjourned.

Partiamentary. - A petition has been presented against the return of the Earl of Listuwel for St. Alban's, on the ground of general bribery and treating.-Mr. Currie has addressed the electors of Guildford on the Conservative interest. Mr. R. D. Mangles, whose father represented the borough on Liberal principles, is also mentioned as a candidate.-A report is in circulation that Mr. Cresswell, the barrister, intends to offer himself as a candidate on the Conservative interest for the representation of Tya is about to come forward as the Conservative candiatate King's County, in opposition to Mr. Armstrong ; and Mr. Daniel O'Comell, jun. is also spoken of as a candidate on Repeal principles.
Governorship of New Brunswick.-It is stated by Ministerial papers that Sir John Harvey, governor of New Brunswick, has been recalled, and will be succeeded by Sir William Colebrooke.

## fforrígn.

Thancr.-The Fortification Question still excites public attention, although doubts are entertained by its advocates whether the Chamber of Peers will pass the Bill without considerable modifications; while the opponents
of the project
declare their heliei that the Chamber will reject project dectare their helle that Count Muié, as the leader of the Conservative party, will oppose it; and that the Duc de Broglie and the Duc d'Orleans will spieak in its favour. Three-fourthz of the Peers are said to disapprove of the measure ; the military Peers being opposed to Russia and Alastria regarding it as a defiance to the Continental Powers.
Forged Letters of the King. The journals state that a the appreiension of the person charged with having fabricated the letters attributed to his Majesty, and add, that the French Ministry was much indebted to the British Government for their assistance on the occasion. In connerion with the subject of libels on the King, it ap
pears, by a alencienties paper, that of Halluin (Nord) for copies of a pemphlet against Louis Philippe, believed 5010 was said to be concealed in the prisecsaion of the landlord, but nothing was furnd. The subject, loweser, still nccupies the attention of the authoritics.
Lithel on the Chamber of Perrs.-Ttre elit. . of the repablican newspaper, the Nationai, has been summoned on that assenabls renently publili.el in hi: juminal. It appears, that in diseussing the question of the treaty with Buenus Ayres, the editor introduced into his paper the wich some hope; we left it as if we quitted an hoyptal of incurables. No, life can never penetr ite into that ionehouse. Energy is as muoh denied to it as independence. monarch, moves in an atmosphere without light or heat There is an odour of decrepitude in the hall of the Chamber, which chills and saddens you.
stitutional comedy played by the dead, a mechanical pantomime, which one is anzious to see terminate, on acconof the continual fear which haunts one of seeing the springs crack." The determination of the Chamber to prosecute the National, is the principal topic discussed in the journals, Which comment upon the measure with very
different feelings. The: organs of M . Thiers affirm thit the honour and dignity of that assembly cannot be affected by newspaper articles; and other opposition prints treat
the affair as unworthy of serious notice. In consequence of the illness of the responsible publisher, the trial was postponed on Tuesday till the 24 th. Since the commencearticle, the appliention of which is obviollsiy directed against the King. It contends that France has always declined and suffered under aged monarchs, citing as eramples Louis XIV, Lovis XV, and Charles X
Poments.-The ambassadors of the Allied Powers have been instructed to protest against the conMinister, Count d'A ppony, it is said, had been charged by his Government to make serious remonstrances to M . Guizot on the subjcet of the new levy of 80,000 men, the
bill for which was recently presented to the Chamber of Deputies. It appears, that this increase of the military force has much surprised the Court of Vienna, which, in consequence of the previous pacific protestations of the Cabinet, had expected a commencement of disarming. one of the Chamberlains of the King of Prussia, was supposed to be connected with that subject. The order of the Minister of War to purchase 500 mules furth. with for use of the army had given rise to various conjectures recent ietters frum 1 culon, that orders har feceivel to commission fur ship or the hne, as an ade the jurnals comment eev rely an the squadron. Many of the journas comment surving the fleet to have bee cansed it such damage, as mentioned in Gur hast. Nany tains an official account of the wre harbour of Stora, the port nearest to Cons'antive, in Algeria, in which 57 of her crew had perished. Out of 32 many lives lost. Several packets were also unaccounted many It is stated, that there is not timber enough in the atores of Toulon to build five first-rates, ner even to repair them after an action. The thirty sterm-frigates ordered would require tho, are not more than to the aholition of the custom which required agents of the Marine to visit the forests and mark such trees as snited the royal navy, which were resarved, and purchased for it. Another cause assigned is the liberty of exporting timber, which has existed since 1897, and which the Englioh are said to have made nse of, in purchasing and carrying of the best saip-timber from rance. in our last week's taker relative to the dificulty of manning ships in the outports, would seem to ahow that the pare resources of Prance are not so powerful as were anticipated.

The Custonss' Bill.-The discussion on this measure in the Chamber of Deputies still continues, and is interaetions to English readers on account of the numerous question relating to our manutactures which it involves. It af
pears that the Chamber has rejected the propusal of the Commission to increase the duty on linen thread, and thi result is stated by the Ministerial papers to be a prod and
the desire to act with conciliation towards England, possibility of a compercial treaty wiln tins an founded on mutual concessions. Io tho 8000 a debate, it was mentioned that there are only 80,000 spinim ning machines in nil Pranoe, and that the weavers raqu the produce of 300,000 , wo that the supplyy at presens eat tended, therefore, that an increased protecting duty would of land disad or land devoted to the proidection

were founded. His Imperial Majestr is stated to have made an express reservation against all acts alienating the bequests of his ancestors from their original purpose.radical faction.

## radical faction. Grrmany.

Gernany.-The preparations for war observable for some time have not in the slightest degree relaxed. A matists to induce the French Government to abandon its
isolated position had not been attended with success, and isolated position had not been attended with success, and
that the Military Committee of the Germanic Diet continued to display extraordinary activity. It appears that the object of the mission of the Anstrian General de Hess to Berlin was to arrange the mode of bringing forward the
federal army in case of any difference with France, and likewise to take into consideration the necessity of extending the fortifications of Germersheim, and particularly to It apptruct a stone fortress on the right bank of the Rhine. tion of Weber's Freischutz, at Berlin, the King of Prussia sent a sum of 100 gold Fredericks to the widow of that celebrated composer.-A letter from Vienna atates, that an English company has obtained frem the Austrian Government a privilege for the navigation of the Danube during be performed in 80 hours.-The attempt to carry the new order for recruiting in Upper Hungary is said to have given rise to sanguinary scenes, which still excite apprehension. that the Hospodar, Prince Ghila, has opened the Assembly of the States in a speech of considerable interest, in which he adverts to the fact that there remains above a million in the resarve of the public treasury, and that the agriculture
of the country is in a most flomishing state. Measures were recommended for extending public instruction and Rusing the criminal law.
Russia.- Recent advicea state that Count Oginsky, wableman who possesses immense estates in Samogitia, table, accused of being at the head of a conspiracy which threatened serious consequences. He was to be transII is estates had been occupied by the military, and a quantity of arms and ammunition seized there had been which have taken place in Poland, a letter from Paris states that "there was more colour for them than at first appeared, and that they were more or less connected with A letter from Cracow contradicts the report that the three Powers which had troops in that town had an intention of Buraitu tham.
Brionum.-A rapid thaw set in at Brassels on the of Justice, in which the tribunal of the First Instance was sitting, was suddenly inundated; the judges, the counsel, and the public, had much difficulty in escaping the deluge Which burst in upon them. The thaw, however, confeared ; but some time will elapse before the navigation of the canals, which has been interrupted for nearly two manths, can be reaumed.-The Chamber of Representacentral section of 20 millions, to meet the expenses of the War Department, and active measures are in progress to complete the armaments necessary to maintain the nearality of the country.
Holland.-It is stated that in the course of the present session of the States-General, which will meet again in the begianing of Mares, some projects of law
will be brought forward on the subject of public instruction. It aiso appears that his Majesty has been pleased to determine that the high posts in the Army filled by
his sons are to be held by them without any charge to the his sons are to prablic treasury.
Mraly-L-Leters from Leghorn of the jth inst. state ported chat a marriage was contemplated between Prince Charles Ferdinand, onn of the Archduke of Modens, and the eldest daughter of the Grand Dulke of Tuacmy. 1 letter Queen Dowager of Naptes haid nearif the French and the iling tive King to his brother, the P succeeded in reconmarriage with Miss Penelope Smythe, the Irish heiress, had led to his banishment from the kingdum.
Spain.- We learn by the Madrid journals that the
lections were over in the capitat, and hat favourable to the Liberal party. We have also accounts of the elections in the provinces. As in the capital, the greatest indifference existed on the part of the electors to form the polling committees. Public tranquillity had not been disturbed, alchough it was said that the Duke de Victoria, ieariag a reputhican mevement, had ordered with forces, to the amount of $25,000 \mathrm{men}$. The result of although there were still rumours of an to the Regenency,
of strength between the repablicans and the govermment. Apprehensions of republican movements in Madrid and
Barcelona were entertained. It had been discovered in Madrid that attempts were made to corrupt the garrison by secret societies called "Without Shoes," something
like the sans-culottes of France. It appears that the mal conteuts meditated a seditious movenient in the capital. They had seduced a portion of the regiment of the Reina Gobernadora, and the authorities, on being apprised of the fact, suddenly ordered it out of Madrid. - For some received in the port of Ferrol for the immediate armanment of the vessels lying there. The last order which arrived announces the appointment of Admiral Capaz, who is to assume the command of the squadron. Various co for it cannot be presumed that it is for the purpose of waging war ageinst Purtugal. It is said that the muni cipality viewed with distrust the concentration of troops in the capital and the other warlike preparations, and that
some angry words had passed on the subject between that some angry words had passed on the subject between that
body and the Duke de Victorin. The Inttor was eaid to have replied to his Aides-de-Camp, who urged him to strike a blow, "The moment is not yet come to have recourse
Portugal-The question of the Douro had scarcely been set at rest, when another occurrence rapidly succeeded to keep this country in a state of excitement. An extraordinary courier arrived from Madrid with the news that letters had been received at Paris from Toulouse of Don Miguel having passed there on the 23 d Jan. on his way to Portugal, which the French Government had transmittect by telegraph to Bayonne, and which was thence conveyed to Madric. The Spanish Regency upon receiving this intelligence expressed itseif explicitly by the mos satisfactory declaration, that on its part the misunder-
standing which has Intely existed between the two Governments had ceased, and that these Governments would always unite when the liberty of either might be threat ened. The Duke de Victoria added, that he would be ready to offer to the Queen of Portugal the same services
which he had rendered to his own Queen. It was feared that the publicity given to this influence the political situation of affairs in Lisbon, might notwithstandin The news of Don Miguel's approach, however, does not appear to have created much sensation in Lisbon, and it is expected that he will not venture to invade the kingdom. Greece.-The exposure of the cases of torture praclised former Numb indignation they created has been increased by the publication of some extraordinary particulars relating to the cation of some extraordinary particulars relating to the
fact of King Otho having signed Royal ordinances autho rising the administration of poison in certain cases, in rising the administration of poison in certain cases, in
order to compass the ends of Government. The Athenian Journal, the Ami du Pemple, contains an account of thi affair in the details of a court martial at Tripolizza, on
certain officers charged with harbouring brigands. The Governor of the province was called as a witness for the acconsed, and in the course of his examination edmitted that a suggestion had been made to enter into correspond ence with the brigands, and endeavonr to entice them somowhere, in order that they might destroy them by plan was communicated by the Governor to the Minister of the Interior, who approved of it. The Governor then informed the accused that they might proseed to put it in execation ; at the same time he gave ordere to the apothe cary of Calamata to deliver the poison, which delivery himself, who was cited before the court-martial. It appeared after the measures for carrying this scheme into effect had been arranged, the brigands were alarmed and fled The facts were proved by the erhibition of the Royal ordinance, marked "confidential," and dated in January of last year, and by the circular of the Minister of the Interior, also marked "confidential." These facts had
caused great excitement, and the proceedings of the Government were considered likely to bring about the interference of the Earopean powera.
Turkey.-Accounts have been received from Constantinople, mentioning a report in the diplomatic circles, that an insurrection had taken place, at the head of which was the Sultana Valide, in opposition to the reforms commenced in the Ottoman empire, and to overthrow the influence of not wit Pasha. Recent ietters state that this minister bas authority has been much shaken.-Some cases of plague had occurred at Varna, and a strict quarantine was in consequenee maintained.
Egypt and Syria. - Intelligence has been received from Alesandria to the 28 thult. Commodore Napier had gone up the Nile to Cairo, and his son, now Lieut.-Col. Napier, had arrived with despatches for him from Gaza Where a great part of Ibrahim Pasha's army had already appeared, and where Ibrahim himself was expected with the rear-guard on the 26 th . General Jochmus and Colonel
Mitchell, with between 6,000 and 7,000 Turks, had marched from Jaffa to attack Gaza before the news of the ratification of the Napier convention reached them, but were themselves encountered by a force of about 1,500 Bedoains on the lath nit., at Mejdil, between Asealon and Gaza. Colonel Rose charged them at the head of 30 party were killed ; two field-pieces fired at the Bedouins disperged them. From 30 to 4 were killed and wounded. several more were taken prisoners in pursait. Heary
to Jaria, where Lieutenant Loring met them with the news of the pacifice settlement of affairs, and the order for demanded of Mehemet Ali that the conscripts enrulled Syria should be allowed to return to their bomes. The Pasha replied, they are alredly in Esypt with Soliman Pasha s division, how arrived at Suez; that he will arrange of his convention ; and that he would receive official comPantations through the Commodore alone.-Ibrahin Pasha had received his father's order to retire, and peace
was established in Syria; but a part of Jericho was burut in a conflict which took place as his troops passed through it. General Jochmus was at Jerusalem, and his forces occupied the country in a line to the coast at Jaffi. Some the Egyptian troops, but the entrance of the Turks restored order. The persecuted Jews had returned and but they were not accepted. A third Government, occurred at Acre, and the authorities had turned the aqueduct on the rains to extinguish the fire. Four by the accident. Mehemet Ali was making great changes in his administration, preparing to carry out the treaty of commerce and narigation, transferring his naral and military Beys and Pashas to civil employments, and reorganis ing his agricultural managers and inspectors through the and arranging for their settlement sin at Alexandria, be follomed op by seltecment in min returning from Syris - Prisate letters from Smy iment that idea ides of rendering Jerusalem, Bethlehem, and the othe minion cities of Palestine independent of the Turkish do minion. A proposal for the appointment of a Christian governor at Jerusaiem has also been well received at Lon
don, and it is also stated that the European Powers are about to open a negotiation with the Porte on this subject in concurrence with Prance. This measure, it is added may be considered as the last step towards a final settlement of the Eastera question.
arivited Statss.-Three packets from Now Yorl have arived at Liverpool, and the Acadia steamer from Boston, of Mr. M. Leod continned to excite much. The affair New York. He has been admitted to bail, but had sooner been discharged than he was seized by an armed party of 200 or 300 men, and forcibly carried back to prison. The object of this extraordinary proceeding is stated to be to give the owner of the Caroline an opportunity to arrest Mr. M6Leod for the lons of that reasel and detain him in custody. A meeting had been held as Buf falo, to take intu consid the British and the American Governments, arising out of the destruction of the Caroline, at which strong language
was used against this country. Preparations were alro making for a great meeting in the Park at New York, for the purpose of considering the conduct of the British Government, in relation to the burning of the steamer, to the north-eastern bouudary question, the nurth-western territory, and the recent seizures of American merchantmen by British crnizers in the African seas. We lears further that the conduct of England in her alleged aggressions aidergrandisement throughout the world were to be conview. This presented to the nation in several points of movements throughout the States of a more important os ture than any that have taken place for the last quarter of a century. It appears to have been urged upon the Government to remove the trial of Mr. M'Leod to some county out of the immediate neighbourhood of the frontier, and beyond the influence of the excitement which prevails there. In connexion with this suggestion it was reported on the authority of passengers from Lockport that Mr. M.Leod was about to be removed to Rochester for safe keeping. It was also stated that two companies of artillery have been ordered from that station to Lockport, on account of an anticipated attempt of the Canadians to rescue him. - The subject of the north-east boundary has been brought before the House of Representatives, and a resolution proposed in reference to the debates in the the laims of the United States. The report of Messrs. Mudge and Featherstonhangh wes stated be easily exposed It was, tions were now pending, and nearly brongtt to a happy conclusion, for referring the final decision of the subject to commissioners mutually chosen by the two Governments, with such an ultimate pro the question. Accounts from Canada state, in reference to this subject, that Mr. BouCanada state, in reference to this subject, hat Mr. Bou-
chette, Surveyor-Gemeral of Lower Canada, has laid before the Gorernment observations relative to the report of Messrs. Mudge and Featherstonhaugh, uphulding the title of Great Britain to the range of hishlands ciaimed by her. -The papers contain an account of an attack, alleged to have been conumitted oy a party ut anmed british sol-
diers on three gentlemen, who were on their way from Bangor to Canada, and were stopped near Madawaska by he soldiers. One of them was knocked down with a blow from a musket ; another receired a bayoget wound in his shoulder; and the third, trying to escape, received a bullet in his thigh. An offieer theu came up and checked further hoathlities. Should this statement prove correct, it is feared that the occurrence will not tend to allay the excitement on the subject of the north-enst boundary,-
ted States appear to be still forther fmereased by the
eizure of the American vessel the Tigris, on the African coast, by her Majesty's ship Waterwitch. On the capture midshipman, to the United States for trial, on a charge of slaving. This was deemed by the Court at Salem, Masachusetts, an unlawful seizure, and so pronounced. No sooner was the decision known, than the officers and crew of the Tigris brought an action of trespass against Mr. Jackson, the English prize-master, for their coercion, laying their damages at 4000 dollars. Mr. Grattan, the British Consul at Boston, became provisional bail for Mr. Jackson; and on the preliminary hearing of the matter it was contended, in defence, that it was the act of the Briish Government, and that therefore Mr. Jackson was not personally lishle. The court, however, ruled that this was another branch of the question, to be referred to the two Governments ; but that there was clearly within the meaning of the law and the powers of the coarts Massachnsetts a cause of action for trespass. A more moston became bound for Mr. Jackson's due appearance t court when the cause is to be tried.-The embarrassments arising from the complicated affairs of the banks in different States of the Inion occupy a large share of public attention. The Philadelphia Banks have resumed cash payments, but those of Baltimore have deferred that meaare for the present. A new bank for the whole of the States is much talled of.一The population returns of the United States are mearly completed, all the census being received at Washingtoin, ercept Kentucky and Arkansas. Estimatiog these two in the absence of the actual returns, the population of the Union in 1840 was 16,900,843. Incladed in the above are $2,350,000$ slaves, and 385,000 $12,866,920$; in $1820,9,633,131$; in $1810,7,239,814$.

## HOUSE OF LORDS

Momday. - The House did not sit this diay, in consequence of Trieuday. - The trial of Lord Cardigan occupied the attention of the House duriag the whole day; an account of the proceedings
will be found under our "Home News." Wednesduy. - The alterations made for the trial, and the re-
moval of the fittings, prevented the regular busimess of the Eouse from beins proceeded with.
Friday. On the motion that the trial of Farl Cardigan be printed, Lord Eldon drew the attention of their Lordships to an at the absence of "moral delinquency" in the casey-Ge was as the House had expressed no opinion on the subject, and as the trial had gume off on a question wholly irrelerant, he wished the subject to be uoticed, lest it sund to be the he referred.-The Bishop of Lowdon thwught that there had not been anything whuch called for the expresion oi such an upinion on the part of the . Ittorney-
General. He trusted that the recent occurrence wosuld induce the Legisiature to auopt some course for the abolition of a pracGinating in tae time of Larbarism, was utterly inconsiotent with Govermment intended to introdace gary mensure tor the more effectual prevention of duellivg? - Lord Melbourne replied in the negatire, aud thought that the law, as it already stood, was not
deficient in farce. Lrish Unions.- Lord Sursuir papens respectint the valuations of Irish of thens.- corrempondence, and their Lordships adjourned.

## HOUSE OF COMMONS

Monday.-Pethions were presented by Sir Hussey Vivian, from
Tanceaton; Mr. Ormshy Gore, from the county of Carmarvon,
Mr. Clay, from the guardians, of the Whitechapel umiom, Mr.
O'Brien from the rate-payers of Limerick, and Mr. Hodges from
some place, in Kent, against the Poor
Mr. EATTHAPE preserited a sinsilar petition from the guardians employed against the bill by recounted mmy of the arguments that th
upon it ; but they ubject to the commistioners being kept in affice being kept in perpetual pupi pawers. They object to the guardians the absolute control of the commissioners. They claim to have more discretion, and esperially in times of manulacturng dimin having the puwer to divile parishes into wards, without the con sent of the puardiars, whose local knowledge would best fit them plure that the pre-ent bill may be altered and amended according to their suggestions. towel for St. Alman"s. - Mr againt the return of the Earl of Lis Manchester, praying for the pardon and restoration of Front, Communication with Mrelamid, Wh. Ormshy Gore, jun., replied that it was not at present his intorion to implugn the report of the conwissioneris appunten to survey the different lines of railroad right to object to the repart hereatter if he should think rit to do so. the Judicial committee of the Pravy Councul had sat durning each year for the setien years anding in is to, the nen in arrear aquealy On the motion of Mr. W. Miles, a retarn was ardered of the in Ran, and the cost per luead of each of the population in in each had boentaid on the table of the House respecting siavery in the Fast Indies from the 3 ist July, issis.
Mr. Lownersises, in awiseer to a questum from Mr. Grote, clastom of the arrangements hetween the Govermments of France spirits consequent thereupon, ttated that under urdiary circum-
stances the would have felt it his duty to urge upar the French Government the speed setilement of the question, and he certhemoselves to the Hlense. IWe tuatrot tomet
 brought ip. Mr Orcorvert: sadd the measure was calculated, in their iands, which was whtuaded with the move distressing comse-

These periodical famines were increasing in extent. During that exceed the horror of the scene. The land was covered with carbuted many of those famines to the state of the landed tennre
there. He was sure the company had not acted wisely even with rexard to its uwl ruvenues. In the last 30 years there had ber
17 or 18 years of famine, during which Enctish sentinele nr sepoys were placed adong the banks of the nvers to prevent mothers
from drownin ther infants. He hail thousht it hecessary not to allow the question before the House to pass over without saying
so much on behalf of the people of India. But as regarded the meavure itself, he qave it his most cordial support,
Mr. Hocio ohserved that the discussion opened by Mr. O'Com-
nell would vecupy more time than could be afforded on that nell would vecupy more time than could be afforded
casion. The permanent settlement of the Marquis Cornwallis
had not been productive of all the good expected from for, but the statements of famines were exaggerated.
had talem place in India, and considered that the sublect of tomes mures was one of great difficuly. Mr. Goulburn, Mr. Laboucherer sain the ubject contemplated by the present bill was to place the
rum of the East Indies on the footing on which the rum of the
West Indies stoont, and not to touch the duties intu Ireland and Scotland as distingui-hed from the duties on
rumimported into England. -The report was received, and a bill
founded on it was brought in and read a first time, in the course of the evenilig. The report of the committee on her Majesty's message respecting Lord Keane was brought up and agreed to. the pension be granted to Lord Keane for life only. tee; and referring to a correspondence between the Government
and the Court of Directors, in which the latter had expressed an opinion that Lord Keane was already amply rewarded, thought
they should either have a copy of the correspondence or a denial

Lord J. Russrict, with regard to the communication with the different from what the hon. gentleman seemed to suppose. The Directors did not give an opinion that Lord Keane had already
been amply rewarded, but declared that they thought it most just Mr. Hums said his question had been misunderstood. He
wished to know whether an application had been made to the Court of Directors, and whether they did not refuse to accede to it
Mr. Hogs said the Directors had expressed in the strongest terms their opinion of the merits by the British Parliament, th as his services had been recognised by the British Pariament, the pension should be conferred bas then received.
The Administration of Justice Bill, introduced by the Attorneywener Sugden, were severally read a secpond time, the discussion till a futare stage
The Cuurt of Exchequer Ireland, Bill was passed. Lord Eliot ontained leave to bring in a bill to provide for rebuilding and re pairing county bridges, which was read a first time.
Tuesday.-After various petitions had been pr
Tuesday. - After various petitions hard been presented, Mr.
Cresswele nured an Address to Her Majesty in reference to the claims on Government for compensation in respect of certain ships and goods seized by Deumark in reprisal for the capture o
the Copenhagen fleet in 1807 . The motion was seconded by Mr Hutt, and sapported by Sir W. Jemes, Mr. Hawes, Ald, Thomp circumstances of this case as distingyishing it from seizures by an enemy in an ondinary contest.
 thooe who had preceded him in offiee in the opimion that howeve they had no right to call upon the public to indemnify them for it class of claimants, distinctly stated that the claims of that party be called upon to liquidate. Since that time, however, the claims so0,0001. had been paid. Now the claims of a third class wer The right of these parties to come to Parliament to indemify
them for their losses he utterly denied. An argument had been raised for that the fosevernment had in its possession a large sum fiscation of Danish property, out of which the clainants in this case ought to be paid. That argument would fall to the ground
when he mentioned the fact that the sums already paud for the liquidation of Danish claims had very nearly, if not entirely,
swailowed up the whole sum of 1,300, vont. He felt it necessary wailowed up the whole sum of $1,300,0001$. He felt it necessar
o warn the Hulse that in voting $2,20,000 /$ for the liquidation
he claims now brought forward, they would, in fact, be votin no less a sum than $1,000,000 l$. sterling, for there were five simila cases not yet adjusted in which he believed similar ciaims might Spanish parties, amounting to not less than $60,000 l$. What other claims might remain hehind it was impossible to tell. It was acceding to propositions of this kind, and involring the countr in the expense of meeting old claims, they would shortly amount
to a considerable item in the y early expenditure of the nation. surance offices. What right had insurance companies, who invariably indemunied themselves for contungencies of this nature by
imposing war premiums upon insurances: what right had they to imposing war premiums upon insurances: what right had they to
come to Partiament and clam to be indemnitied for their losses out of the pockets of those who paid the taxes of the country
There was no pretence for such an application. He should consider it his duty to resist the motion.
Lord Joms Russzu also opposed the motion, and said that if the House consented to pay the sum claimed, a quarter of a mi dion, they would be establishing a precedent for the parment of a
much larger sum in future cases. It had been said that Denmarl was qreatly irntated. No doubt she was. Her capital was bom-
barded ani her tleet captured, and consequently she declared war agrainst this cruntry. It was also stated that such a case coul not occur again, but he thought differently; he hoped, however,
when they were driven to war with other countries, that they or losses sustaned by the - hbjects of this country not justified by the laws of war. When the country went to war it wan upposed
to be for the benefit of the whole community, and he did not see what right the shipowner- of particutar poits, who were equally
benetited woth the rest of the nation, han to come forwari and as Partiament for mdividual compensation for lusse - arstained churing the prosecutivin of such a war. If they sanctioned such a mea-
sure as the fresent, they would not oniy be consenting to the
payment of the compensution clatued, bat they would be esta payment of the compensation clamed, bat they would be esta,
Hininis a precedent fur future payments, whicu, notwithstanding
the assertions of the supporters of the measure, he feared would be numerous indeed.
Moresswll replied; after which the Hoase divided. Por the
motion, 12: : against it, ofo, mafority, $\mathbf{3 1}$. motion, 12": against it, 06. majority, 31.
Mr. Rrca mused to introduce a bill for probibiting the public
execubun of crimuriais. The publicity of ans erecotion did not in

Monse, HUME disapprowed the bin ; but thanked the mover fo
having fumished an argument against capital punishment. Mr. Mich then withdresw his motion. Mr . Mari Prive moved for a com the laws affect ing the exportation of machiner parliament from 1824, and cited th tions on these exports. Artisans were now free to go to the best might be exported, but not the elementary parts. An invento law drove him to do this, and to employ foreigners in working the articles patented, insteau of empluying his ownt counrrmen, an
exporting their work : unless he mugled the machinery to fo
reign countries, which indeed was now done to a great extent
wherever the Government refused to grant licenses of exporta tion. He had been genent refused to grant licenses of exporth
he felt that the representations of the machine-makerction; bere enMr. E. Tennsme seconded the motion. The result of a committee would be, that the legisiature must either abandon the
prohibitory system, or alter the laws for its protection alto-
gether. There was great inconsistency in refusing the permisso many articles which were called tools, but which in themnow possessed our tools, coals, and artisans, and, with then chines. That rivalry had been spurred by our prohibitions. H reigners were sparing no expense to get English machinery fo consideration of some dificulty; it was giving ap the start which
we now had. But as it was clearly impossible to work out the Mr. SHIIL, on behalf of the Boand of 'rrade, nignined the acces. Mr. Heme thought no new committee necessary, and that the evience before the motion. As an instance of the absurdity of the presen
pose
laws, he would tell the House, that thoagh it was illegal to ex

In the controllable cases heat apmlied were from spontaneous combustion $3:$; fire ectire fective or stopped-up flues 330 ; incautious fumigation $17 \%$ ucifer-mateh maces 31 ; escape and lighting of gas 153 ; lucifer-match making 8 ; overheated and defective ovens and drying-stoves 9 . Those which are accidental 105 ; partly controllable are 382 of which there were 368 from candles setting fire to bed and window curtains, and 14 rom apparel ignited on the person. The causes accidental and partiy uncoatrollable were 756 . Amongst those he classes, as in the official report, for the most part unaroid able 165 ; from fires $1 \%$; fires kindled on hearths and other improper places 26 ; portable charcoal fire 2 ; firevorks .8; gunpowder 10 ; intoxication 7 ; sparks from havings drying or airing linen before the fire 101 ; loose carelessness 2 . 30 ; suspicious 7 ; palpable instances of dren playing with fire 29 ; wilful 31-A fire has Charing-cross, whish Chose, tensive ras on accopying a bedacm, on the third gallery, who was lying in bod readiag to the bly set the eutains on fire, which communcated fire was fire was extinguished without other damage.
Accidents - Last week as an elderly gentleman, named knock conveyed to his residence and cart. He was immediately of his ribs were broken, and that was discovered that two parts of the body seriously injured: notwithstandin every effort to save him, he gradually sank under his suf ferings, and expired on Saturday.-As a young man named Legg, was proceeding towards Lewisham with a cart laden with timber, the horse became restive at the foot of Dartmouth-terrace. The driver seized the horse, and endeavoured to restrain him, when he was knocked down and one of the wheels passed over his head and crushed it causiog immediate death. The horse proceeded at a fear stopped withont doing further mischief. It is stated that the horse took fright in consequence of the timber hangin over his head.-On Sunday evening a lady, apparently about 17 vears of age, apary evening a lady, apparenti was seen standing upon one of the seats within a recess on London Bridge, her face being towards the water. Her strange siteation attracted the notice of the persons pass ing, but before any measures were taken towards removing her, she climbed over the wall, and then planged into the stream. The shouts of the persons who witnessed the sistance; but as she the watemen to pull out to her asand, consequeotly some distance from the shore, they were unable to reach ber, and after struggling for a few seconds she sunk, and was carried away by the tide. man about 26 years of age, who was passing over the wes aide of Blackfriars-bridge, suddenly tapped a gentleman on he shoulder, and exclaiming "Follow me," ran aeroce who were and, notwithstanding the number of persons parapet into the water, and sunk. He soon reappeared, and the tide, which was running up exceedingly strong, arried him through the centre arch of the bridge. He as at length rescued by a waterman, and conveyed in a tate of insensibility to a receiving-house, where he was pomptly attended by a surgeon, through whose exerions he was brought to a sense of consciousness. He said his name was Henman, that he was by trade a printer, and had a wife and family. The surgeon having ascerained that he had sustained a compound fracture of the eft arm, besides some severe contusions of the head, directed his removal to St. Bartholomew's Hospital, where he has since died.
Robberies.-Saturday moming a lad, about 14 years of age, and possessing a genteel exterior, walked into the shop of Mr. Garratt, tailor, Corahill, and politely requested permission to remain in the shop untif the arrival of his uncle, who was gone to the Post-office, and who, as soon as he came, intended purchasing a coat. The shopmau assented, and he was requested to take a seat. After a few minates, however, the lad manifested semon impatience, and rising from his chair, said he wondered of him but wid morn in few minutes. He had net howerer, left the shop man seconds when a new gret own the slop heconds when a new is waciosh Pursut mas rain, and although lithedol can be entertained of his having soon discovered his uncle, it is needless to add that he did not retura.
The New Poor-Law Act-Meetings have been held in Clerkenwell, Newington, and Marylebone, to adopt measures in opposition to the bill of Lord Juhn Russell, now before Partament. for prolonging the power or the Poorfaw Commissioners. In all the pariskes the feeling againgt the conchauance of this law was unanimous, and committee were anpointed to draw up petitions to Parliament against the bil.
Hanuell I.unatic Asy?um.- I meeting of Middesex nagytrates has taken place in reference to the management of this institution. A long and somewhat angry ward to refer the question to a committer of the Honse of

Lords, or to a medical commission; but the general
opinion of the bench seemed to be that of perfect satisfacopinion of the bench seemed to be that of perfect satisfaction with the present i.
inmates of the asylum.
Kensingtm Police. -The Prisy Council has issued an order for forming the extensive parishes of Kenington,
Hammersmith, Fulham, Chiswick, and Acton, and portions Hammersmith, F.t's. Westminster, Brompton, and Chelsea, up to Keasali-green, on the Ifarror-road, into a policecourt district. A magistrate has been appointed for the day, from which day the local magistrates were relieved from their duties.

Cambervell Church.-On Saturitay as one of the morkmen engaged in clearing away the ruins of the church was sorting the contents of a batiet containing old lead, iron,
\&ec., he found the vame of the steeplc. It was formed of sec., he found the wane of the steeple. It was formed of
sheet copper, and was intended to represent a rull of paper, having a peln of some length running through the proceeded to break it oppen, when he found that it was really what the artist had intended to represente-a pen and paper case. The interior was found to contain three is, "This Phane was gitt by John Augustile Foulder, November 27 th, $1.9 \%$ Itat. Ii years. - P. S. Wrote this Foulder, sen., wrote this with the pen in November 1797 ;" Foulder, sen., wrote this with the peen 179.." On the back of the card is the following announcement :-- "This Phane was made thy with the pen, Norember $2:$ th, $1: 97$, aged is years." It would hence appear that the use of copper pens was anteceden to those of
steel. The implement thus handed down to us, with specimens of its capabilities, is a foot and a half long.

## Frobíacial Netos.

Liverpool.-A case of extensive embezzlement has occurred in this town. In December last a confidential clerk from hin employers, having previonsly received on their tocount nearly 1500 . On the embezzlement becoming known information was given to the police, and a large reward offered for his apprehension; notwithstanaing When he surrendered himself to the police. On being brought up for examination evidence was adduced to pror that the prisoner had. on the 3 d December, receised 1200 . from two separate firms, on Hacchand Co.. said that the prisoner was formerly their brok-keeper, but at the time he absconded he was employed as cash-keeper, and was empowered to receite money on their account. He had neve arcounted $t$ them for the two several sums of money re ceived on their account fivin the two firms reierred to Since be had receivel these sums he had not been at their ofrce. On the way to bridewell, the proceunt of his em players he had bid in certain places. He subsequently made a full confession, in consequence of whin the places Where he hid the propucty have heen searched, and in found ; and buried in Mitcham common, uear Londun, 1440. 28. 6 d . in bank nots, These and other facts baving been detailed in evidence
Brighton.-A public meeting of the imhabitants has been held for the parpose of considering the course to be
taken relative to the bill of Lord John Russell, now pending in Parliament, for the continuasce of the Poor-law Commission, and the extension of their anthority to parishes at present governed by local acts. The meeting, which consisted of upwards of 1,000 persons, lasted six hours, and a unanimous feeling was displaved against the New Poor Law, aad howerar, to carry a petition agai the bill was defeated by the determination of a number of Chertists, who were present at the meeting, to include in a clause praying for universal suffrage. The chairman divided the room on the question, and the majority were collect the actual numbers, and after much delay the chairman left the chair; when the Chartiets placed one of their body in the vacant seat, and adopted their petition after which they quietly dispersed.
Eton.-At the last maeeting of the guardians, the rote of Hoar. and Rer. Mr. Osborne in bringing to magisterial inventigation the case of cruelty practised by the late master of the workhouse on a female puuper, again became aftended, and some gentlemen present remarked, that they riohed, in consequence of the bad feeling against the board, to inquire into the grozads upou which they had Osborge instituted at the time fur the protection of the poor and the better government of the estadishment. Those guardians who were favourside to the original resoas the vote of censure had not been passed at a full meiting, it was ruled that the sense of all the guardians shiuh be taken before they finaily decided on retaining the resumally proposed to rescind the original resulution, and express their approbation of Mr. Osborne's condact. Upon a division, there appeared a majority of four in then made in the minate-book of the board
Chester. - Much excitement has prevailed in the village
of High Leigh by the sudden disappearance of Ann Simp had been for some time in his service, but it having been made known to him that she ras enceinte, another female had come to the farm-hiouse to supply her place. It is snid that on quitting home on Saturday week Mr. Hewet left positire instructions that tire house should
her before his return. He started upon hog journey about eight in the morning, and before nine the girl was missing, A lad named Jeffs, who works on the farm, stated that she came down stairs without shoes, and left the house without a hounet, shawl, or any other corcrivg. covered, which gave rise to suspicions that she had been murdered. Attempts were made to discorer footstep. shich might afford some clue to the detection of the par lies, and the ponds were dragged, bestigation and Willian Hewitt, one of the sons of the farmer, was apprehended n su ricion, but no eridence being adduced to warran is detention, he was discluarged, and the affair is still inexplained - The vicinity of Chester has recently been the scene of a succession of burglaries and robberies.
maiden ladies named $C o x$, who have been among the suferers by these depredations, displayed great courage in repelling the burglars. They were awoke by the robber prcibly onened it, and levelled a pistol at the sister who was in bed. The other sister, alarmed at the noise, rushe out of bed, attacker the rutians at the door, and struck the man who had the pistol, which she knocked out of his band. A struggle ensued, and the lady succeeded in hrusting him out of the room. She, however, ultimately became erhausted, and was forced back, being so beate with the pistol on the arms, shoulders, and face as to be ncaple f further resistance. The noise of the strugzle minap ho the beged that the the other laid hill woulding parley with her assailants to save her life by giving p her property. The servant who had left the houso as ceeded in reaching a cottage adjacent. Miss Cox was o the point of giving ap her purse, containing a considerabl mount in gold, as the condition on which their lis should be spared ; but at this crisis roices were heard out side, which fortunately proved to be those of the servan and the cottager. The burglars then made off.
Derby.-An assistant gamekeeper on the estate of the Earl of Chesterfield, near Bretby Park, has been shot while in pursuit of four poachers in company with a night-watcher. It appears that the men, who are working colliers, went out to shoot some hares, but on seeing the gamekeepe nd then went br different directions towards his lordship preserves; the watcher chased one man, who had a gun others, and seized one, with game struggled, and during the senfict the other man un and shot him dead on the snot. The watcher heard the gun and went to seek for the heper, whom he found shot through the heart, and with his coothes on fire from the warding. An mucet has leen hen the bory, and the megistr. IIdes.-In a late Nuniber staterd that a man numed Evans, a gamekeeper in the service of Mr. Lloyd of Rhaggate, had disappeared, and was supposed In searching the house clothes were found with blood upon them, which corresponded with the description given of those he wore at the time of his disappearance ; but there being no evidence on which to charge him with the murde, committed on a charge of sheep-stealing, a quantity of skins having been found in his house. peared from the statement of the wife of the prisoner tiat, told ber that his "settled Evans " th he had called him out on the Saturday night, and had led him about two miles from his house, pretending to strow him tome snares that had been set ; that during the walk times but that each time his pistol missed fire, and that the gamekeeper, being deaf, did not hear the noise, and mistook the flashing in the pan for a gleam of lightning; that having failed in these attempts he led him to the bank of a shte-quart, and having told him to look about for the wires struck him with the pistol from behind, and thrust him over into the water; there was a fall of 25 yards, and the pool was six yande deap. In consequence
of this statement the pool referred to was submitted to a rigorous search, and several men were employed for four Lours in breaking np the ice, which had accumulater over
it. A small boat was then let down, by which means the body was discovered, Aninquest has since been held, but beyond the statement of the wife of the prisoner regarding what he had said to her, there was nothing elicited except the witnesses circumstantial character. of the prisoner, was quite sufficient in the minds of the jurors to justify their verdict of "W Wilful Marder" againet Edward Chubb, which they returned aecordingly

Chelmaford, -At the petty sessions John Thiorogood was again summoned, amongst a number of other defaulters, for refusing to pay two church rates amounting to
$\mathbf{1 s s} .6 \mathrm{~d}$. After some objections to the rate, Thorogood said he meant to dispute its validity, and, exhibiting a 5002. Exchequer bill, said, "Y Yat see I have something to do with the Government-I have this to assist me in disputing the validity." The magistrates could itot, thereproceed against him in the Ecclesiastical Court.

Wallingford.-An inquest has been held at East Has bourne, on the body of a labouring man, who died under quarrels had taken place between decers: 1 ard his wife
 in a medical man, win, prestuming bo was himurng uader dysentery, prescrinent fie man diell a jury was summened to in quire into the cause of his death, anspici ms haring been entertained that the deceased hat! bern umordwred in consequence of his wife having refused to alffer any of her
neightionars to s:c him during his ilness, anl is having heen ascertained that, shartly bore, she had purchase some prison. The surzeon who hat atterded him dep sem
that he had opened the bods of deceased, and tint, analysing the contents of the stomach larre cuantitues of poison were discovered, whirh had clearly carsed death The jurs returned a verdiet of ". Wilful murder," against ing in the parish, as an accessory lefore the faet:
Manchester.- In our last paper an account was given of a fire, sugposed to have arisen from the orerheating of the hot-water pipes used for warming a warehouse in this Museus Museum, though it is doubtful whether it is attributable to the pipes. It seems that on aturday a party of stranon the ground flonr, when they perceived smoke for which they conld not account. The pipes were felt, but were not very hot, and the smoke was traced t) a small room adjoining the entrance, used as a store for speci mens, previously to their arrangement in the museun which was found to be on fire. An engine was brought up, and after some time the flames were extinguished. The grate in this room was never used, and the place mas constantly locked up, but the fire appeared to have originated behind the hot-water pipes. When the room had been cleared, it was found that where the flames burst ont, the skirting-board was held to the wall by pieces of wood, and it is supposed that one of these had entered the flue from the furnace below where the pipes are heated and had become ignited. It was fortunate that the fire broke our stitution, as it might have spread considerably before its presence had been known. The injury done mas inconsi derable, though some fine birds have been totally destroyed. The flames also damaged a hurtus sircu*. Au inquiry into the cause of this accident has been made by the sur Teyor of the Insurance Company, and by a committee of governors and curators; Gut it is not yet at an end
It is supposed that it either arose from the orerlheat the pipes, or froma quantity of soot within the flue having ignited. - The miners engaged in sinking a slaitt on the land of T. J. Trafford, Esq., near Patricroft, have at length, atter a labour of nearly three rears, found a vein face. The land is leased to a company, who tond it from a conviction that there was coal beneath, and their enterprize has at lengt'l, heen remarded by the di-menery of a vein of coals said to bo alout six feet thick, of a brime des cioce of coml attempted to lee raised was about 30 cmt ., but it Fenton Path (c)lliery in 1818, to the depth of 1,1130 feet, but a shaft e.fral in wepth to this is saia to he wiknowent Ely.-Two cases of attempted arson have recently the promp on the premises of Mr. Bulman, of Stuntaey, was missing. Little notice ras taken of the circamuna at the time; bat it has since appeared that two attempts stable. The servant-girl, seeing a light in the yard, gave an alarm; on the first occasion it was supposed that the was mistaken but the master afterwards discovered that the hey was smouldering. Two persons were taken up ot sospicioa, but no evieace has beon adduced to wrin their committal for the present.

Tyne.-Some time ago, a man and his wife, numod Newcastle and Carlisle Ral way, who were charged with robbing their ludgings of a box and a considerable sum of moner, were detected aod captured in the following singular manner :- Some or he money found upor them was ilentified, but no tracublic hound of the boz. Recently a dance was helu a po much that the boz fell down the chimney. The prisoners are identified as having been in the house on the day of the identifed as having been in the house on the day of hing
robbery, and had no doubt got clear of the bor by hing Helston -
Helston.-Last week a report was raised here that the Duke of Saxe Coburg, father of Prince Albert, had been driven by streas of weather into St. Michael's Mount, and would pass through this town about ten o clock, way to London. This intelligence was apparently cona irmed by the fact of eight horses having beene appointed time a cruwd of persons touk their ctation at the inn door, where, in spise of the infense cold, they repuined awn titas in was lighted with was tapers : the waiting maids sporn seif was busily engaged in superintending all the necessury arrangements. Many of tae town eame the its ealivenpresent, and the band animerred che scene ains. At lenth there arrivel a certain man of law and letters, delegated to present a congratulat ay adares to the illustrions stranger, which address he proceeded to rend to the byotandert This diaplay, howner, was cue-
short by cries of "He"s coniag, he's comang!" and pre-
sently after a coach and four appeared. The band struck
up "See the conquering hero comes," followed by "God up See the conquaring hero ocmes," followed by "God
save the Rueen ", the crowd uncovered stood in breathless
ansiety the teanned deiegate app ansiety; the learned delegate approached, but was dumb-
founded, when, instead of the father of her Majest $y^{\prime}$ 's founded, when, instead of the father of her Majesty's
Roval consort, he encountered ouly the Guard of the Malta mail!
Lancaster. - The papers contain an account of a cause
heard before the magistrates which is important as a can heard before the magistrates which is important as a cau-
tion to farmers and others. An information hadl been laid
. against R . Nelson, a labourer of Skertan, for reriving his
cour on the footpath, by ulich he had rendered himelf cour on the footpath, by shich he had rendered himself
liable to a penalty not exceeding 40 A . Mr. Suul stated that he met defendant drixing his cow on the footpath; he did not speak to him on the subject, as he had previously ant did not attempt to drive it off, nor ofidence. Die the cown accipathis must be protected, and that driving cows upon them was as bad as riding over them on horseback. The dechis being a labourer, earning only but a a consideration of
lis a month was granted for payment. The magistrates added, that notices agginst trespasssing upon footpaths, and as such transgressions were a great public nuisance, they minst be stopped.
Railuvays.- At the half-yearly meeting of the London and Birmingham Rail hay -yearly meeting of the London last weel, it was reported by the Directors that the traffic
for the last six months has considerably exceeded that of any preceding half-year: that out of $1,483,123$ passengers conresed on an arerage 65 miles each, not one fatal aceident had occurred. - An accident, attended with loss
of life, took place last week at the Whitmore station on the Grand Junction Railway. It arose from the Manches. ter and Liverpool goods-trains coming into collision, by Which both engines were slightly damaged, two pioway. line in all directions. One of the pigigs drivers wasso much injured that he died almost immediately. The other driver was severely bruised, and 25 pigs killed. It appears that the waggons carrying the luggage were placed before the
engines; and it is supposed that the engineers could not engines $;$ and it is supposed that the engineers could not
see the line in adrance of the train. An inquest has been see the line in adrance of the train. An inquest has been held on the body of the deceased, and a verdict of ". Acci-
dental death"
returned, with a deodand of 1 s .-On Tuesday the railway from Stockton to Hartlepool was oppene
by the Directors and a numerous partl of shareholdere.A general meeting of the proprietors of the Northern and Eastern railway took place on Thurstay. This ine joins
the Eastern Counties Railway at Stratford, and is intended to terminate for the present at Bishop, Stortford. It was opened as far as Brozbourne in July, and the report
laid before the meeting gave a favourable description the results. The works between Broxbourne and Bishop Stortford are to be pushed on with vigour; and it was
stated that, in consequence of the level character of the country through which it runs, the cost of the whole railway will not exceed 22,0001 . per mile. The cost of other 25,0000 , to 60,0000 . per mile metropolis has varied from fore Parliament for power to conatruct a branch-line to line will aloo be extended to Cambridge.-A railway through Lincolnshire is proposed, if arrangements can be effected to bring about an alteration in the line of the North
ern and Eastern Railroad, 80 as to have a terminus at ern and Eastern Rairrond, so as to have a terminus at
Grimshy ; its direction would then be through the populous towns of Lyan, Wisbeach, Spatding, and Boston.-Box-tumile, by far the greatest work of its kind in this or
any other country, is fast approaching completion. Less than 40 yards in length now remain to be excearated, and thiere is every probability that the entire work will be fi-
nished withia a month or six weeks. nished withiu a month or six weeks. The length of the
tunnel is 3128 yarde, or 48 rards more than 13 miles. width is 30 feet, and the height varies, according to thr The total of the ground excarated, from 25 to nearly 40 feet. The total amount excavated cannot amonnt to leess than 450,000 cubic yards. It is stated to be the boldest and greatest specimen of tornelling yet produced.

Dublin,-At IRELAND
Mr . John O' Connell brought before Repeal Association subject of Trish railways, and the relative merits of the Coverament would introduce a bill for the promotion of Trilways in Ireland, not tinding themselves strong enough
to warrit the measure, and that-steps should therefore be
tell
 the crent of Lord stanley's bill being passed into al law, Parliment tiord his opinion's bill being passed into a law, mande the Irish people go farther than that measure was intended. He, did not wish to be understod as as bolining
out any tureat, liut it should be remembered that France

Let England now, he said, do justice will jet refuse her assistance in the hour of need. He then adverted to Lord Morpeth's bill, and said it was not likely the ministry would have a majority of more tham four on the first reading, and from the apathy of Englimh.
members in all matters relating to Irish araits, he appre
hended the ministry stagea of the bill.-The rent for the last week wet nounced to be 37. 123.-A great sensation has bee created in the mercantile circles of Dublin by the sudden him defalcations to the Board of Aldermen, leaving behind been as yet assigned as the cause of failure.
Belfast. - At a recent meeting of the Ulster Association, approbation at the Recise entered into, expressive of dis recommending the adoption of that introduced by Lord Morpeth. A petition to Parliament was adopted, stating that the Association cannot too strongly deprecate the passing of Lord Stanley's Bill; being convinced that mos of its provisions are calculated to increase the difficulties and rexation which characterise the proceedings necessary franchise, while it leaves untouched law for procuring the rancchise, while it leaves untouched the uncertainty which
affects the law of qualifeation, and which is the fertile source of many of the principal erils which the fertue xist ; and that, on the other hand, they hail with satisaction the introduction of Lord Morpeth's Bill, feeling that the existing evils cannot be effectually remedied unless the franchise be fixed upon a basis independent of
conflicting testimony and bein satis conflicting testimony, and being satisfied that the principles of this bill would introduce great and beneficial changes in the law on the points which it embraces.

## SCOTLAND

Edinburgh.-Typhus ferer is spreading among the poor of this city. The wards of the Royal Infirmary The number opten, and almost every bed is occupied. whom 139 are fever patients.
Blgin.-The doubts connected with the supposed murder of Mr. Tulloch, farmer, Ballintomb, in Morayshire, on the 17 th October, are at length removed by the capture of the suspected person, Peter Cameron, son-in-law of deceased, who lived in the same house, but succeeded in escaping from the hands of the officers. He had lurked about the parish of Knockando ever since the murder, and intelligence having been received of his place of concealment, a party of officers went to the place. Cameron of from 10 to 15 a back window in the house, but a body of from 10 to 15 maen followed him, and after a desperate race of about 12 niles, he was taken last week on the Moor near the New Im , on the banks of the Findhor He was conveyed to this town and committed for trial. Dlasgove. - Consequent upon the apprehension of Demnis Doolan, a second investigation has taken place into the circumstances attending the murder of Green at Bishop'sbridge, and Doolan has been fully committed on the charge of murder; and four men have alsu been committed on the alternative charge of murder or being accessories to the fact.-It appears, by an account just pubilshed of the hipping trade of Glasgow and Greenock, that considerable Greenosk have been made in recent years. 241 ships left harbour whose aggregate tonnaye was 100,039 tons. The number of vessels arrived at Glasgow from abroad was 228 and the tomnage 42,782. The trade of the Clyde is con sequently in a flourishing state. - There is at present alive has, therefore, Harris han who was born .1730, and upwards, he has cherished all the feelings that constitute the true Celtic character, and enough to become one of the attendants of Mr. M'Leod tacksman of Bernera, during his sojourn in a hiding-place that blood-hounds could not reach, subsequently to the batwhile thus seereted heot chosen was Camba Cliadal; and dine, by clansmen and friends, who supplied him with venison, mutton, fish, and other necessaries, obtained by hnnting, dexterity or otherwise, and served according to the rude fashion of the times. The name of the individual who has seen generation after generation committed to the grave, is John Martin; his facaltion of apeech, sight, and hearing are unimpaired, and he is still so hale in bodily health, that in good weather he thinks nothing of travelling to the top of the highest hill in Harris.

## fftiscellaneous.

Dreck of the Royal Gearge.- $\mathbf{A}$ large portion of timber recovered from this vessel at Spithead has recently found its way into Wales, in the shape of sleepers for the Taaf Vale Railway. Thus the oal, originally appropriated and next doomed to shmmer the ribs of British man-of-war, for half a century, has been again applied to usetul pur poses in the apper world ; and now many of its fragments are lying across the mountains of C wm Taaff, anII sustaining the iron road, along which a large portion of the manuiactures and commerce of Glamorel to and from the element they so long occupied.
Abyssinia bear frvits, of bear fowera, and subsequently seeds, berries or ticular species of birds. Every tree or bush carries these likewise in all stages of ripeness, in all searons of the year. Tixis is, however, not to be understood as meaning that any tree produces, in any part, fruit, or flowers, more than once a year: but the time when each pert base is the first that blossoms: its fruit then proceeds in all its stages of ripeness. till it falls to the ground. It is succeested by the suuth side, which undergoes the saue pronext in frait; last of all comses the tree, , whick produces flowers and fruit till the begfaning of the rainy seamon. In
the end of April new leaves pugh off the old ones, without Abyssinia appears to be an evergrees. $-\boldsymbol{I}$. $\boldsymbol{R}$.
The Indian Blow-pipe and Arrme. - I
Wanderings in South America, there are sol tails of the south America, there are some curious de tails of this instrument. When a native of Maconshia goes in quest of feathered game or other birds, he seldom carries his bow and arrows. It is the blow-pipe he then uses : this extranordinary tube of death is perhaps one o in the country of thriosities of Guiana; it is not found in the country of the Maconshi. Those Indians say that The reed the south-west of them, near the Rio Negro. Indians and the Indians use is from 10 to 11 feet long, and no tapering can be perceired in it, one end being as thick as the other It is of a bright yellow colour, perfectly smooth inside and joint throughe shot the least appearance of a lnot or Ourah. This the whole extent. The natives call it a blow-pipe; but there is a species of palm larger and stronger, which the Indians make use of as a case, in which they put the Ourah. It is of a brown colour and susceptible of a fine polish, and appears as if it had joints five or six inches from each other. It is called Samourah and the pulp inside is easily extracted by steeping it a few days in water. Thus the Ourah and Samourab. one within he other, form the blow-pipe of Guiana. The end which applied to the mouth, is tied round with a small silk rass cord, to prevent its splitting; and the otber evd, seed of the acuero fruit cut horizontally through the middle, with a hole fruit, cut horizontally through the the extremity hoie made in the end, through which is put string on the outside, and the inside is filled up with wild string on the outside, and the inside is filled up with wild made of the seaf of from nine to ten inches long, courite, hard and brittle, and pointed as sharp as a moedlo. About an inch of the pointed end is poisoned. Thi poison is prepared by the fuwian principally from a vine which grows in their wild, called the Wourali ; when he hat produced enough of this, he dige up a root of ser prow taste, ties them together, and then employs two kinds of bulbous roots; which contain e green and slatinous juice. He fills a litle quiver, which he carries on his back, with the stalks of these; and lastly, searches for two species of ants, one of which is large and black, and so venemous that it sting produces a fover; the other being a little red ant which stings like a nettle, and generalls bas its rest under the leaf of a shrub. After obtaining these, he use stroug Indian pepper, the pounded fangs of the Le uses snake, and those of the Counded fangs of the Labarri together over a slow fire, till reduced; to bois the whole The other wad of the arrow is reduced to a thick syrap. The other ond of the arrow is burnt to make it still harder, half. It requires considerable for about an inch and a cotton well ; it must be just large enough to fill the hollow of the tube, and tapered ot downwards; the other ead is tied on with a thread of sili grass to prevent its slipping of the arrow. The flesh of the game is not in the least mured by the poisoa, nor coca it appear to corrupt sooner than that killed by the gun or knife. The Indian on his return home carcfally suspends his blow-pipe from the top of his roof, that it may not get a cast or warp.-I. $\boldsymbol{A}$ Olve Trees raised from Seed.-Trials have been fre by by sowing the seeds. It has always been found necessary the woods imy custings, or to procure wid plaw irom astonished to find that he could not obthin by alt being That natore proince apontancoull. poon the manner He found that ther proced from the were produced. the woods by birds which had the kemes, dropped in he woods by birds which had swallowed the oives; by the act of digestion, the olives had been deprived of their natural oil, and the ceraels thereby become permeable to havieg served for the earth; the excrement of the birds contains, by combining with a portion of the oil which had escaped digestion, having also favoured germination. From these considerations the following experments have bect made :-a number of tarkeys were caused to swallow ripe olives; after they had passed through them, the iernels were collected and placed in a stratum of earth, and watered. They afterwards vegetated, and a number of plants proceeded from them. In order to produce a similar effect upon the olives by artificial means, a quantity were macerated in an alkaline lixivinm, they were then sown, and plants were produced as in the former experiment. This ingenious process mar be regarded as a very important discovery, and may be applied to other seeds, besides those of the olive, which are in like manner so oily that except under rave circumstances water cannot penetrate them and cause their development. Of this description is the nomeg, which will meldom vegetate in subuitted either to the aetion of the stomach or of the alkaline solution

May-dow, -Mey is oas of the months in which the greatest quantity of dew falls, because it is one in which the fintho and darence exints between the temperature of is eresorna days. During the day a great deal of water tomerand hato the atmosphere, where it remains in a low of vapoar until night, when the temperatare being wated by 20 or 30 degrees, this vapour is condensed into ther, and deponits 3 fself on the surface of the earth in far anm of dew. The progress of vegetation is mow mo nourishment to planta and trees by wnet of curiosits to all persone. It is lut in the tom tree il a liquil, which it imbiose thiough it roots, wad that
this fluid ascends from the soit and circulates to the very top of the tree. This ascent is chtrary to the laws of
gravitation, and how it was immesiately produced was never satisfact ri!y explained untit the experiments of Dutrochet. Thist great naturulist established the fact that the sap ascended from the cells of plants through tubes. By an experiment on a clnciken be determined that an organic memprane plac... Nifween twin fuids of different densities will cause the t.inner one to pass through this surt of membraae. and therefore when water surrounds them they imbibe it readily, because their contents are thicker than the water; the liquid comserevently acenmulates in the cells, which bocoure every moment more swollen, and at last are relleved by the fluid passing up the trbes, which open into them. -I. $\boldsymbol{R}$.
$T$ radesmon's Billo.-A gentleman, whose bouse was repairing, went one day to see how the job was progressing, and observing a quantity of nails lying about, onid to the They'll certainly be lost." "No," replliod the carpenter "you'll find them all in the bill."
Musical Inatruments.-The zatives of Amboyna have an instrument which produces sounds by no means dis is a deception, for the person hearing them may not be more than fifty feet from the instrument. It is formed of a bamboo at least sixty feet in length, fixed in a vertical position, close to the sea. Between every joint is a bole near an inch and two-tenths long; these holes form so many mouths, by which the action of the wind emits agree-
able and varied sounds. As the joints of this long bamboo are very numerous. care is taken to pierce it in different directions, so that from whatever point the wind blows it always enters some holes. The sound of the instrument resembles that of the harmonicon more than any other to which it can be compared. There is another instru ment on which the women of Amboyna play, and accomabout six inches in length, covered at one end with a piece of parchosent, like a drum. Three strings of bark, each of them stretche. binder, which is placed upon the knees. the tis of the dint and sotind an octare and the intermediate one a fifth with the farthest chord. A circle intermediate one a fifth with the farthest chord. A circle at each extremity, about four-tenths of ander the instrument
gupports other strings. intended to render more sonorous. These strings are more or less stretched by a slider, which connects two and two together, and Which can be moved at pleasure through almost the whole length, as in our drums. A little slip of bamboo-bark puts Lusus Nature.-There is at present at Dalton Hall, the seat of E. Hornby, Esq., a tame hare, which the other diy exhibited, in a wonderful degree, the absence of the animal. It was missed from its usual place, and was found lying before the servants' hall fire licking and being licked by a dog which it never before sam, and which is used by the dog and the hare have frequently been found together.

Hunting in the Pyrences, -1 letter from Arglees, in the Hautes Pyrenées, relates that as M. Castest, an intre-
pid sportsman of Bareges, was returning from hunting the pid sportsman of Bareges, was returning from hunting the
booquetin, a species of mountain goat, he saw on the point of a steep rock, between Tourles and Bouchereau, near the Cirque of Gavarai, a large bear, which had been already wounded by some Spanish hunters, and fired at the animal again when within -1 yards of him. The beast rolled towands him. succeeded in seizing him, and dragged bim down the descent to the depth of 40 yards. Here the bear became exhansted from loss of blood, and, letting go his hold, fell to the bottom of the precipice. M. Castest, thoagh :everely torn, saved himself by clinging to a jutting point of the rock, and was supported back bareges by three trackers, who also recovered the fallen be which, and three bouquetins he had previossly shot, he returned in triumph.

## SATURDAY, FEBRUARY 27, 1841 <br> 

Our leading article last week was upon the very important subject of pruning forest trees, It will be remembered that we recommended, close pruning for young branches, and the leaving of snags with spray upon them when lopping is practised. Upon this subject Professor Henslow has faroursd us with the following letter;

Notwithstanding the opposite conclasions at which you arrive in your article on pruning and lopping-recommending close-pruning in one case and fore-shortening in another-I shall ventare to consider the question open
to further discussion. My own conviction is, that there should be no difference in practice, but that close-lopping is as much to be recommended as close-praning.
state my reasons for having arrived at this conclusion; but happy to receive correction whenever I shall find that facts are against me. A few years ago my attention was called to this subject by Lord Bragbrooke, who had recently pruning-or, as you would termortening instead of close-lopping-his timMer. This he was induced to do at the recommendation of ter. As theory appeared to me opposed to such a prac-
tice, I took some pains at the time, and have frequently recurred to the subject since to ascertain the precise effects prodaced by each system. Mr. Blaikie was so kind as to send me a number of specimens illustratire of these effects. It was wery clear to me from these specimens, and from all I have ever seen since, that a blemish is necessarily introduced by close-pruning always proportionable to the size of the wound inflicted, that is to say, to the size of partially rotten before the new wood closes over the wound; but I think this more frequently happens when the cut slopes a little outwards from the trunk, and is not quite perpendicular. Inthis case, the new wood and barb, Which for a time form a sort of collar round the wound,
allow the wet tollodge, which thus facilitates decay. But allow the wet to lodge, which thus facilitates decay. But think little or no decay takes place: and I possess a specimen of beech, from which a very large limb has been re-
moved, and in which the blemish is of course proportion. moved, and in which the blemish is of course proportion.
ably great, though the old wood is perfectly sound. Admitting all that can be urged against close-pruning, as regards the introduction of a decided blemish in the timber, it seems to me that the evils of fore-shortening, cateris paribus, are still greater. If I nndorstand the whole argument in favour of fore-shortening, it is intended that the ore-shortened branch should sooner or latar disappear for my inspection, the fore-shortened branches were all in a state of decay, and where the experiment was pronounced complete, the stumps had become embedded in new wood which had closed over them, exactly as it does over the surface of the cut produced by close-pruning. Now the ouly difference between the two results appears to we o be this: that in the close-pruaing we hare two clean surfaces, the one of the old and the other of the new Wood, brought into close contact; whilst in the case of the
fore-shortened branch, we have the decayed remains of a rotten stump surrounded by an irregular surface of the new I think that some confusion has arisen from com paring the effects produced by a large close-pruned branch with those resulting from much smaller fore-shortened I do not quite underearly no just comparison. I fear that do not quite understand what you say about keeping the fore-shortened branch alive. If you mean that such a branch may be kept alive until the gradual growth of the truak shall have embedded it, I rather doubt the possibiiity of this beinr always wriected; but if it were so, there wouli still be the Wuand at the extremity of the fore-shortened stump to be healed over. When this was at length em bedded, we should hare the usual blemish of the close pruned branch, somewhat sualler indeed than if it had eeu cluse-proned at first, but probably producing a wors fluences of the weather. If ron mean that the the influences of the weather. If you mean that the base of a very hage branch should aever le embedded by the growth of the trunk, lut should mercly be checked oy lopping it may be commendable, but I hare no facts to refer to. As I understand the ordinary practice of fore-shortening, it is intended as a substitute for the equaliy or more common practice of close-pruning; and here I must say, that, ca. eris paribus, I have never yet met with an example where the blemish introduced by the latter method was not comaiderably lens then that which in introdnced by the
former. The conclusion at which I have arrived from $m$ own observations on the very numerous specimens which 1 have from time to time had an opportunity of examining,
is decidedly in favour of early pruning, and decidedly is decidedly in favour of early pruning, and decidedly cuurse of timber only,) where it can possibly be avoided It might be more troublesome and more expensive to adopt the practice of anneally removing buds or very young branches, till trees were sufficiently pruned; but it would be the sure means of producing timber entirely free
from all kinds of blemishes, like those which are now introdnced by the natural decay of branches, by fore shortening or by close-pruaing. I may add that I believe Lord Braybrooke, and I think Lord Fitzwilliam, who had abandoned this practice. In a question of such vital importance to the growers of timber, a little further discussion will probably remove all doubt as to which method is most advisable. I should like to see apecimens, rather than hear opinions; and if the advisers of the fore-shortening system will only send you such, we may one day hold a council of inquiry orer them, and judge for ourselves of the validity of the arguments urged in favour of this practice."
Our limited space prevents our going into this question for the moment; we shall shortly return to it in a formal manner. In the mean while we would only observe, that the object of lopping should be to avoid making any wound where it is of importance, and that the limb on which the operation is performed should never be allowed to die, but should be kept alive by the spray upon it. We quite agree with Professor Henslow that if a stump or suag is left to die, that kind of fore-shortening is worse than close-lopping.

## ENTOMOLOGY.

No. II. - Ter Scala I very remarkable tribe, not far removed in relationship from the plant-lice (Aphides). Like them they have an astonisthing power of fecundity, and there is no period of the year when they are not to be found even in conservatories,
where it is warm enough for them. The variety of these vermin is very considerable, for the seale of the vine, olive, fig, myrtle, and 20 others, are well known; we also have the orange-scale, which infests the citron, the mealy scale or mealy bug, the pine-apple, and the oleander scales, and other species of cocous: for such is their scientifie name. Whilst these are so. destructive to our choicest productions, there are other members of the same fanily which confer great benefits on mau: C. ficus of the Indies is supposed to produce the shell-lac; C. polonicus lives upon the roots was celebrated in Poland for its colouring matter until Menico proluced the (')chineal instit (C) acti), which far exceeds everything in the splendid scarlet it supplies.

The females of these singular parasites, some of which rather resemble galls or excrescences on the branches,
whilst others are like muscle and oyster shells in miniature upon the leaves, when once fixed to a spot never seem desirous of leaving it, for there they live and there they die, having thrust in their fine and horay rostrum with such energy, that when forcibly removed they either hang suspended by their beak, or it breaks off. By imbibing the juices of the plant, they become so bloated that neither feet, eyes, nor horns, can be detected. The male, however, is a very different being ; be is infinitely smaller than the female, powdered with white, having a pair of wings, and generally two fine thread-like tails, often longer than his body, bat so fragite that they oreak of with the sightest touch; having legs and wings, he soon finds his mate, and in a very short time after, on lifting up the female scale, a number of egga and young larve are dis coverable, which she is from time to time producing, being I suspect, both oviparous and viviparous; her whole body is sometimes filled with young, until their form may be seen through her distended skin. At the proper season each young one crawls off to commence a similar operation, and whilst in their infancy no difference, I believe, can be discerned in the sexes, but the fermales subsequently cover themselves with a scale, which is supposed to be excrementitious : for when they live un the uader site of any downy leaf, as the magnolia, the minute hairs are found united with the scales. Numerons bundles of little cocoons are also formed by some species, which contains the chrysalides of the mules, and when they hatch, the insect emerges backward, contrary to the law which regulates all other insects that I am acquainted with, except aphides.
species unfortunately naturalised in our hothouses, where it some times exiots in such multitules that the under sides of the leaves appear to be eovered with scurf and meal. The coffee-tree. Justicias and Ruellias, are its great favourites, and if such plants are neslected they soon becuare unsightly
and out of heaith. and out of heaith
The pine-apple scale (Coceus Bromelia) is often a great pest, and rentmuch resembles the met'y bug. On pulling off a radical leaf this winter I funad considerable numoers on the inside of the white pari, whith was tender and afforded them shelter !ris. 1 : intermixes With tiem were numerous elliptical minute objects, something like a glow-worm when magnitied (2): these I taki to be the chrysalides of the males; one which I examined the orbicuiar an orange pupa i 3 ; Un lifting up one (4), a tleshy eqg-shaped a.tinal was dizatosed, of an oranize colour, which proved to be a female (5), for she was nestling her brood of young ones $(6)_{\text {, }}$ amounting to 21 or more legs same colour; the latter stretching out their six little legs and two fine homs, inmodiately dispersed over the
leaf, but the inanimate mother was so bloated that nothing was visible but her siphon or rostrum; I could neither
detect eyen, horns, nor legs. The perfect males, which detect eyen, homs, nor legs, The perfect males, which met with.

As all these insects are from warmer climates, I should recommend Orange-trees and other infested plants to be set out of the houser in the summer months, whe: the ool air of our mghts would check, if not deretroy, the broods altogether. Some species may be eradicated by brushing off the scales with a sufticiently stiff brush, and if this be done late in the autumn. they cannot crawl up again ; but the Pme-apple scale and some others, on being removed, set at liberty a number of yount, which I have seen scamper off in every direction. ekeas as late as November; it is therefore necessary to perform the ahlution not only outside of the hothouse, but at some distance
from at. When this is impracticable, washing the plants with lime, bleck sulphur, and water, is practised in Holland with great success. $\frac{7}{4}$ pint of lime and +0 oz of sulphur are well mixed together, and pat into two gallons of water; bit them well, and when the ingredients have settled, the water will be fit for use. - Ruricola.

pupa; 4 , the scale; 5 , the female; 6 , a young coccus, which is

RURAL CHEMISTRY.-No. IV.
Tar substance next in importance to air is WATER, which exists naturally in three different states: namely, in the solid form as ice; in the fuid state in its ordinary condiof water are famitiar to every one, but These three states causes the great difference between thew. When ice is placed before the fire, or exposed to the sunshine, or in any other way warmed, it absorbs heat, it melts and becomes water; and when water is heated, it assumes the form of steam or vapour. The difference between these three forms of water is entirely mased by the quantity of heat they contain ; and we may truly say that water is a compound of ice and heat, and that steam is a compound of water and heat. Although this beems very ince chemifounded with it. Chemieal action ean only take place between material mbotances, or those that have weight; now heat is not a substance-it is not a thing we are able to weigh, like all the chemical elements, and consequentiy when it combines with any substance it only alters the appearance and ontward characters of that substance, brt does not at all chance its chemical pronerties or nature. When heat is thus combined with a substance it is said to be latent, which means that it is no lunser sonsible to the feel. This will be easily understood from a very simple experiment. If we put some water in a kettle on the fire, we find that it will soon begin to feel warm to the hand if immersed in it; the warmth which we then feel is called free or sensible heat : but if we put some ice into the kettle in place of water, it will not bacome wimm s) soon, but will remain ice-cold tutil all the ice is melted, because all the heat supplied to it by the fire is absorbed or combined with the iee in melting, and therefore as the heat so absorbed does not make the meltius ice any warmer. it is called latent. When all the ice is melted, the water will begin to get warm.
It has already been stated that water is nut an elementary or simple su')stance; it is a compuend. and consiste of two crases. This at first seems yery incompretaensihle, for wo can bardly believe it possible that a hard and shid substance like ice or a weighty flud like water is mmpose $\frac{1}{t}$ of colourless and invisible gas. The diminity. buwever grextly diminishes, when we remember $t_{11}$ as is abone without adding anrthing to the weight of ive. c:naers it into water. and that a little more he $+w / .$. evert that water into an invisible coluuriess rit.an ; + r , as has already been saik, pure bot :\%... is inute invisible, and
 contact of the colder air, wh.ch at....ins it of the beat necessary to keen it in th. -tye if - atole. The con-
 appear far less wond riul; lui $\because=$ bave kule difticuity in belicring thit steam is emi, ( at ten onses, and we
 the same. The ree urnment of int : is oxpgea cras-that pat of the ate which is son ematit. to hie cial evabustion: it constitutes eirinininths of the wei is of lee water, and steam. The other element, or the remaining one-minth, is called hydroyen gas, or ininmmanle air,
because it is very combustible, being the bais of the
common coal-gas used for lighting the streets, and entering into the composition of the inflammable air or firedamp of mines, and many other combustible substances Water is not like common air, a mere mixture of two gases it is a compound, and therefore is quite different in its properties from either of its two elements. The very inflammable gas hydrogen having combined with a certain quantity of oxygen, which is the great promoter of combustion, forms water, a compound which we always regard as the greatest enemy to fire or combustion.

The purest kind of water which occurs naturally is rainwater, for all others, such as spring, river, or sea-water, are more or less contaminated or rendered impure by substances dissolved in them. Thus sea-water contains a large quantity of common salt, which in some places is procured from it by exposing it in shallow pits to the heat of the sun, which causes the water to evaporate, and leaves the salt behind. This fact explains why rain-water is purer than other sorts of water, because when the heat of the sun eraporates water from the surface of the earth, all the impurities which it contains are left behind; and of form of rain, it must be very nearly pure. Springs which rise in the ground always contain earthy matters dissolved in them, which vary in nature and quantity with the soil through which they rise. The presence of these impuri-
ties in water in any quantity gives to it that peculiar chaties in water in any quantity gives to it that peculiar cha-
racter which is termed hardness. Sometimes springs conracter which is termed hardness. Sometimes springs con-
tain a sall quantity of iron or sulphur, and other substances, which constitute the many varieties of mineral waters. These matters, like the more common earthy impurities, are all derived from the beds of stone or sand through which the springs rise. Besides these saline and earthy substavces, rater always contains atmospheric air dissolved in it. This is essential to the life of fishes, and to the growth of all water-plants, which could not exist if they were not thus supplied with common air.
Water is essential to the existence of all plants and animals: it constitutes a large portion of all animal and vegetable substances, it is the principal component of the blood of animals and the sap of plants, and is of the
greatest importance, as being the means of introducing greatest importance, as being the means of introducing their healthy growth.

COTTAGE GARDENS.-No. VI.
There are two or three things relating to cottage gardening to which our remarks ought to have been sooner
directed, especially the treatment of the Vine, and the proper mode of managing the Gooseberry and Currant With regard to the vine, although not suited for exposed situations, there are many warm sheltered spots in which it may be successfully cultivated against the walis of a cottage. The sorts best adapted for this purpose are, the dine, and the Sieect Water. They will succeed in any loose rich soil, such as the Bramble delights to grow in but of course the mure it is manured the better. They are easily managed, requiring only to be carefully pruned and trained, with an occasional trimming in the course of the summer. Autumn-pruning, shortly after the leave have dropped, is perhaps preferable to cutting at this leason. In pruning it is to be observed that the two lowest buls on each shoot are generally what are termed blind, that is, they are never sufficiently matured to break
and produce fruit. The best buds are found on the wood formed between the beginning of May and the middle of July, and of these no more should be left on each shoo than it is supposed the rine is capable of nourishing properly, reckoning each bud equal to the production of half after the whole has been thinned and pruned, the branches are to be trained like a fan, at equal distances against the wall.
Tue pruning of gooseberry and currant bushes is sel dom performed in cottage gardens; the consequence of which c, that everity worthess fruit, without wood produciug a quatity of worthess attention to pruning the bushes in winter, atitle allowing the pruning the bushes th witer, and never allowing the branches to be too cromded or to interfere with ane another. The shoots which spring up in the
centre are to be cut away rery close, as well as the small shouts on the main branches, leaving only the external one, wish must be shortened for about a third of its length. If this is done, the bush will have the form of a cup, wita the branches ranged regulariy round the stem. ther produce their frait on wiurs in the way of berry. The Black Currant moust be managed differently as it bears chiefly on the shoots of the preceding year Instend, therefore, of spurring and otherwise shortening the branches, all that is necessary is to thin them and theep the buashes compact.

This is now the best time for sowing Onions, of which the Early Silrer -lhinned and James's Keeping are the fittest for the cottager. If the ground was well manured Wefore it was dug in autumn, a Loos ctuantity of dung will now he required. It should ce well mused with the
digging, and atter this has been done the sp tre alotted for
 is to monilun hims, ani then levelled with a rane. The send - tust to je sown brond-cast-that is, equaliy over the sarfuce molerate.y thick, and covered with some of vier the jeis with a spacle. The beds are then to be well raked leagth ways unch the seed is effectually buried, care being taken not to cover them too deep. In situations
where the ground is liable to become weedy, wo would re-
commend the seed to be sown in small, shallow drills, seven or eight inches apart, drawn lensthways after the
beds have been trodden and levelled with a rake. This beds have been trodden and levelled with a rake. This
will allow the spaces between the drills to be hoed and kept clean during summer. There is another variety of Onion, which we think weli adapted for a cottage garden namely, the Potato Onion, which is much cultivated in Devonshire, and other parts of England. Besides ripening earlier than those raised from seed, it is more to be depended on for a crop, and is quite as good for all the calinary purposes for which onions are in request. The mode of treating it is as follows:-Dig the piece of

HOW TO CROP A KITCHEN GARDEN.
The accompanying sketch has been prepared at the instance of some correspondents. It is intended to re present one acre of kitchen garden, divided, for the sak of reference, into 32 equal parallelogram8, each contain-
ing exactly five rods, being 52 feet in length by 26 in breadth, omitting a fraction. It is not supposed that kitchen garden would be laid out according to these divi sions; they are merely adopted to show the relative proportions which may be chosen in allotting spaces for various crops. The first and second crops on each are distinguished, the first by Roman, and the one which follows by Italic letters. The whole, however, is but an approximation to truth; for where circumstances vary continually nothing perfectly definite can be laid down. On looking, however, at such a sketch, any one by striking out or reducing what he does not like, and inserting what he more especially prefers, may soon make it suit his own peculiar plan.
who have small gardens. Those who possess large ones
ground allotted for it, and lerel it with a rake: then mark it off in rows a foot apart, and place the small bulbs sir inches distant from one another in the row; press the ground pretty firmly round each, but do not cover them any deeper than the length of the bulb, leaving the point of it exposed. It is a custom with some cottagers to plant
their Potato Onions at Christmas, so as to be ready their Potato Onions at Christmas, so as to be ready by Midsummer ; but they will answer quite as well if planted any time in February, or the beginning of March.

A border should now be got ready for making sowing of vegetables that require transplanting, such as Cabbage Savoys, \&c., which we shall notice next week.-M.E.H.
generally employ persons competent to judge of what is prover with regard to cropping.
We have added a statement
rally necessary for this really necessary for this space of ground, if cropped as in the plan. It must, however, be observed, that seeds may turn out bad, or weather may prove unfavourable for their coming up, or insects may attack the seedlings, so as to
render another sowing indispensable; of course in such render another sowing indispensable; of course in such
cases an additional quantity of seed would be required We would also observe, that as varions kind be required. are apt to degenerate, it is always desirable when in a par ticular season such sorts are found good and true to their kinds, to have a surplus that may be depended on in the following season.

With respect to the best varieties of each kind of seed he who reads our columns attentively will, by degrees, find ample information upon all such points; but as we them for everything at once, we must, for the present, refer the public to the ordinary sources of information.

Quantity of seed required :-Peas 24 qts., Beans 8 qts., Kidney Beans $\quad$ ¿tts., Scarlet Runners 1 qt., White Cabbage 8 oz., Red do. 1 oz., Savoys 2 oz., Brussels Sprouts 1 oz., Borecole or Scotch Kale 2 oz., Cauliflowers 3 oz., Broccoli 6 oz., Carrots 6 oz., Parsneps 4 oz., Turnips 4 oz., Red

## HOME CORRESPONDE NCE

Pears.-Mr. Errington believes that soils and seasons have considerable influence on the maturation of pears, and he mentions a few facts that have occurred at Oulton. Marie Louise, grown on espaliers, on standards, and on walls, with eastern and western aspects, were all so good that he could not determine which was best. Those on the western wall were the largest and the earliest ripe; the espaliers were next, those on the eastern wall followed, and the standards, ripened last of all, were the smailest, but higher flavoured and not quite so melting. Beurré Diel, in an eastern aspect and on espaliers, grow large but never become melting; and they, as well as some other kinds, require a pecuilar mode of management after they are gathered; as he picked out two that were beginning to turn black on the skin, and put them in a drawer near the fire, perfe they lay for a week or swo; when cut they were perfectly melting and delicious. From this and similar circuastances Mr. Errington thinks the management o fruit after gathering is capable of much improsement; and if all the experience on this head could be collected and published it would render essential service. He suggests a return on the subject, in the following form, to be fur nished us by all those who talse an imterest in the inquiry.

Kined. table manure?
3. Subowid. Whother natural or artificial, and depth from the fispect - If wall, what aspect' If espalier, whether a warm

## Stock. - Pear or quince.

Time of keeping. - The earliest period at which each Kind had Frut-room.-If above or below the ground level, whether

Erblice Fungs.-I hare been informed that the number of fuggi which grow in this island, and furnish wholesome and palatable food (and some of them of greater excellence than the mushroom) is larger than is generally supposed. Thirteen have been mentioned to me (With how strict cor-

Beet 3 oz., Scornozera 2 oz., Salsafy 2 oz., Radishes 3 qts., Flanders Spinach 1 qt., Round-leaved do. 1 qt., Onions $6 \mathrm{oz} .$, Leeks 1 oz. , Cardoons $2 \mathrm{oz} .$, Celery $2 \mathrm{oz}$. Lettuce 4 oz., Endive 2 oz., Parsley (to be sown along the edges of compartments) 2 oz .
rectness I cannot tell) as the number of them. I am acquainted with only four. There is no reason why all these delicacies should be denied to our tables. The only argument is that of danger. But why is the use of the mushroom, champignon, or morel exempt from danger ' Simply, because we have been taught to know them. Their salu-
brity is not written upon their faces, but only learnt by brity is not written upon their faces, but only learnt by
experience. A work, therefore, seems wanted, in which the form, locality, \&c., of our numerous esculent fungi shou'd be minutely described and delineated, together with an equally minute description of such unwholesome ones (and such only) as by their near resemolance become objects of danger. I wish to solicit attention to the subject. You will, perhaps, say that the art of finding and distinguishing wild plants is no branch of horticulture. It is at all events very germane to it, and would interest the same minds. Not to add, that the further question may arise out of it-What kinds are cap
mushroom, of an artificial culture ? - A. $H$.
A Method of destroying the Caterpillar on Gooseberries. -Mr. King, gardener at Bushey Park, recommends gooseberries infested with caterpillars to be well syringed with a misture of the following ingredients:-Three gallons of hot soapsuds, half-a-pound of soda, half-a-pound of salt, and a handful of snot. The bashes should be syringed in a still day after the sun is off them, and when the misture has been on about half-an-hour the plants must have some clean water dashed over them. Neither the young leaves nor the fruit are at all injured by the mixture.

Lagerstromia Indica. - This very beautiful shrub, although common in our stoves, is rarely seen to flower well; and when it does flower it is more often br acident than good management. Yet there is nothing more easy than to make it flower regularly and profusely. It is decidedly an autuma-flowering plant, and will not bloom well at any other time of the year; it is generally kept in the stove all the year round in a continual state of excitement ; and this is the reason why we so seldou see it in fower. It should be kept all winter in the greenhouse, should be given to it About the middle or latter end of April it will begin to grow, when the young shooks may
lant should then be placed in the stove or vinery, where there is a brisk heat. It will grow vigorously till June, and will then appear as if it had done growing for the season out in a few weeks, when the young shoots are well very young shoot. These are the flowering shoots; and by the month of August it will be loaded with its beauiful tresses of purple flowers, which for beauty are United States of America
nept with orange an pone the trained aith and pomegrane pots and head from six to ten feet high. It is placed out of doors in May, along with the oranges, \&c., and flowers most beautifully during the whole months of August and Sep-
tember.-R. Reid. [In the Botanic Garden of Montpelier this noble plant forms a small tree about 15 feet high, and is a magnificent object in the autumn.]
Poinsettia pulcherrima is also grown and flowered much better in America than I have ever seen it in this country As soon as it has done fluwering, it is cut down exactly in he same way as we treat Erythrinas, and is kept dry til partially divested of its old ball of earth, and then planted in the open ground all summer, where it grows with has ceased gro it flowers beautifully all winter long. In this country, are it can be planted out in the corner of a pine-pit, and its roots can be allowed to run in the tan, with a full exposure to the sun, I imagine it would fle
and larger than in any other way. $-\boldsymbol{R}$. Reid.

Gloxinia speciosa.-In the spring of 1839 I purchased sispence-worth of seed of this plant. It was sown in a wide pot, and came up very thick; when the plants were an inch high a dozen were pricked out in small pots, the different shades of colour in the stems being selected. Those having green stems proved the white variety; the colours of the others were intense in proportion to the colour of their stems; the remaining plants I gave away. What I kept bloomed in August and September of that menced blossoming in June, and remained in flower till the end of September, and were acknowledged by all who saw them to be superior to any they had seen in size of plant and abundance of flowers. They were grown in very sandy loam with a little peat, and were abundantly supplied with inches in diameter; they were the cheapest sixpennyworth I ever had.-Flork.

A Method of obtaining large and well-flavoured Grapes. -Instead of having but one vine to a rafter, plant two: make a shotear each, and cut the other back, to most of the sap of the bearing one will flow into and swell the fruit, instead of a large portion of it, by the old method, being required to nourish young wood for bearing for one vine, with a proper succession of wood; the only additional trouble will be in enriching the border, and having to tie up the shoulders of some of the bunches from their increased size. Many practical men approve
Bromeliacea-Travellers speak in glowing terms of the beauty of the barren pines in tropical forests, and yet our botanic gardens they may be met with in some ont-of-the-way corner, and known by their bright green foliage and want of flowers. No doubt some of your able correspondents can point out a mode of culture calculated to undeserved.-S.
snails on Orchidaceous Plants (p. 22).-The smails alluded to by $\mathcal{J} . \boldsymbol{R}$. are doubtless common British species. one Z. pura or nitidula. Both inhabit damp moss, and have most probably been introduced into the house with e. - S.

Lamps would not do, as they Moss on be extinguished with the dead moths.-S. low let us kravel Walks (p. 36).-Will Professor Henslow let us know the strength of his solution of sulphate of copper?-S.
aslies when a Manure. -I am aware of the value of woodbut, like Mr. Dison, the turnip crop and on grass lands, the land, which mon, my object is to improve the texture of I have sown wood-ashace-dressing of wood-ashes will do. face of an old meadow with advantage; very rotten tan in the same situation has improved the weight of the crop; effects form and fermented manure have produced good produced no perceptible effect. Last spring some of the turf manure given. afrer coat of crop was at least three times as heavy as on the and the the field that had been surface-dressed with ashes or rotten dung. The dunghills, whose foundations are of sawdust contain six parts of the best farm-yard manure, one part
of sawdust, containing about one-eighth deal, and three parts of road-scrapings, leaf-mould, and ditch-scourings There are other ingredients which might have been used Fith more adrantage, as for instance peat and nightsoil. For the purpose of seeing the effect of fermentation on the and on meparatiag in boiling thaten the molnhla from the ins

I find thatters, and portion of the larger particles rema firm but discoloured, and are evidently in a state of decay which as the heat is still strong will be accelerated by frequent turnings. I am anxious to improve the quality of compost, and would be glad to know whethe some chemical preparation mightnot be employed with bene advantage in the cultivation of the Pine ample, more especially in houses where the steam of dung is not admitted Ihave also seen the leaves of ITusa assume a deep gree colour on having water applied to their roots, in which
that substance was held in solution.that substance was held in solution.-
the ammonial liquor of the gas works ?

A new mode of striking Cuttings. - Take a 48-sized pot, place a potsherd over the hole in the bottom, cover of broken glass, which prevents the admission of worms and on this another layer and on this another layer o coal-ashe surchen thick sized pot placed on it a little sized pot placed on it a little
above the 48. The vacant space between the pots is then filled to within an inch of the top, which is covered with
silver sand to receive the bell glass and more effectuall exclude the external air. The 60 -sized pot is then filled in the same manner as the 48 , and a thumb pot inverted in it, the bottom ranging with
the top of the 60 . The space between the thumb and the 60 -pot, the portion allotted to cuttings, is filled with the compost suitable to the plant to be propagated. The hole of the inverted thumb pot being corked, it forms a heated charaber, and maintains a regular heat in the soil about the uttings.- J. Davidson, Kingsbury.
Melons.-The following mode of growing Melons has been attended with so much success, that in a pit 12 feet
by 9 feet, 40 good fruit have been ripened. The soil that ppears most suitable for the melon is the first spit from a rich loamy pasture, spread about a foot thick and fre quently turned during the winter that it may have the full benefit of the frost. Over every load of soil, 10 or 12 gallons of liquid manure, composed of the drainings of horse and cow-dung and their urine, is thrown during the winter. The pit is filled with leaves to within a foot of the rafters in May, and in three days they are sufficiently settled to receive the soil. The hills of soil are placed in the centre of the pit about three feet apart; under each is laid a piece of turf about two feet in circumference, with
the grass side downwards. After a few days the hills become settled, to about two feet in depth, gently warm and fit to receive the plants; two plan having the seed the ronts of the Melons begin to appear through the sides of the hills, they are covered with fresh soil, sloping it to the north and soath. The whole surface of the soil is then covered with pan tiles, which are better than slates, as they keep the fruit drier from their power of absorbing water, as well as retaining the soil under them at an equable degree of moisture, which is very conducire to the health rincipal nourishment, for on lifting one up they will be found close under.it. Four branches are allowed on each plant, and are stopped when about 15 inches long. These produce fruit-bearing laterals, which are also stopped within two or three eyes of the bad intended to bear fruit, and a flower is impreguated at the same time. These break again, in the manner of pruning vines. The soil is pit till the fruit are all set and swelling, when the lights are taken off and 14 or 16 ordinary-sized garden pots of rain water are poured over the tiles on a sunshiny day; but plenty of
air must be given to prevent damp. when the lights are air must be given to prevent damp, when the lights are
again put on. After another ratering the soil will become so dry as to crack from the sides of the pit; during very hot weather the leaves of the plants are sometimes damped with a syringe. Air is given plentifulty, but water is entirely withheld when the fruit is ripeniug. The temperature is never allowed at any time to exceed 0 by night, and between $80^{\circ}$ and $90^{\circ}$ during the day with an abundant does not exceed $60^{\circ}$. No artificial heat is us:d excepting that from the leaves; but if early fruit is required a pit with a flue or bot-water pipe must be ased, or a pit on McPhail's plan lined with hot-dung, though the linings are apt to destroy the young tibres near the sides, and check the progress of the plants.-G.G. Watson, fre
British Shert Glass is much thicker and as clear as common crown glass, and though it ensts mure per fuot, it will ultimately prove cheaper, as it is not so easily
broken by frost. or the jarriug of the lights when moving broken by frost. or the jarriug of the lights when moving
them. In a house bult four years since and glazed with this glass, there bave been but three panes of glass broken, and those by accident.-W. Broven, Merctele, Feb. 13, Hot-reater as a bottom heat for Pines.-Many opinions respecting the value of hot-water as a means of conveying bottom heat to pines have been expressed, and its utility questioned by some, but I am convinced that where a hotaftewards, tan may be dispensed with. I fill my pit with fresh leaves early in the spring, though I bave kept the old leaves for eighteen months in order to test the hot water. One part of my fruiting pit is entirely filled with decayed leaves, and the plants for some time mainly depend
on the heat passed into the bed from the bot-water pipes rery beneficial being dry and burning as some assert, is ance of the plants indicates. I depend upon the hea given out from the pipes for at least seven months in the year, and could the bed be heated independently of the house, I have no doubt all other kinds of bottom heat might be dispensed with; the siphon system being used heated. - A Saul.
Siphon System of Heating. - One objection to the the house within 18 inches of pe being carried round the comes so nearly in contact with the vines, that red spider is apt to be generated, and the vines injured by the rapid transmission of heat. Another objection is, that the pipe being six inches in diameter; a pipe larger than four inches ought never to be used. In this large pipe the upper side is quite hot, while the under side is cold, and it never which the same temperature that the upper surface does, ripe acting against each other.-A Saub, Castle Hill,
Helianthus tuberosus.-The Jerusalem artichoke is de serving of some attention. Swine are fond of it in a raw state, and do well upon it. The plant grows well on the most barren sandy soils, and when once it gets a hold in the soil a succession is secured for years, without any fur ther trouble. It might probably be grown on the downs near the sea-coast. As an article of food for the poor it is not of much value, from its small farinaceous properties. Philo. Utilis.
Brachycome iberidifolia is one of the finest annuals in cultivation, and the greatest acquisition to the flower garden Brache introduction of Verbena Melindres. A bed of Brachycome presents a splendid appearance, every indivi-
dual varying in colour. At Oakfield-gardens, Cheltenham they last summer acquired a height of two feet, and 2 feet in diamneter, and more than 2,000 flowers were ex-
panded at one time. It is well adapted for pots for early dowering, and lives for nearly six months, whether growing in the open border or in pots. A light rich soil suits it best, though it has but few tender roots. Seeds are not produced very freely, but young cuttings, placed under a gardens, Chellenham
Bees.-We have several answers for the Young Beeieeper (G. C. p. 102), from which we select the followil
ing:-Dr. Bevan, the celebrated apiarian, says "if he will refer to the work called ${ }^{\text {‘ }}$ The Honey Bee,' page 341, I think e will be satisfied that he is under a mistake as to the opinion that it is bounded by six or seven months. It is he queen alone whose existence is extended to three years nd upwards: a circumstance which iuduces some apiarians, Who consider her majesty to be superannuated after the families in which such sovereigus are found, or to substitute young ones in their stead. The death of the Young Bee-keeper's queen was, in alit probability, the cause of the hive's being depopulated, but not in consequence of her superannuation ; for the original sovereign of the hive appears to have had four, if not five successors, two at least during the season in which it became tenantless; for it is well known that a swarm is always accompanied by the old queen or the senior princess, and uniformly leaves a young successor behind, either mature or in embryo. If the family bad become extinct merely from lack of food, the dead bodies of the bees would have been found among the combs; there seems therefore, I think, no other may of accounting for the depopulated state of the hise than that of supposing the bees had emigrated anil joined some other family, probably one of the smarms that had issued
from them. The last season for honey-gathering, taking from them. The last season for honey-gathering, taiking though the honey-dew which occurred in this neighbourhood afforded my bees a full average supply."-An Apiarian of Staines thinks "there is little doubt that the parent hive, which was weakened by the swarm and cast hrown off in June, was attacked by some of its pilfering neighbours, as together, that ty bippers weveral these visits, in which case they are soon plundered of their harddel sears ago. On it has rence took place in those impadent maraners, and hees' dendly foes, the wesps, have vanyuished the sentinels of a weak hive, and in an incredible bort time have committed such ravages, that the sagncious, I had almost said intellectual, tenants, seeing nothin but starvation hefore them, have been obligen, no d aut pair relizctantiy, to rondent woild do weil rate, hase his entrance to his hives or boses too larco, which will enable the bees to maintain 2 vigoro:ss detence with a smatler force in case of a siege; bat he woull d, stid better to spring to remain at home, which they will do it he will
 stock was attackerf and destroyed by robbers, mbich is no uncomaion cast atter being weakmed by swarming. Bees have a great nunitio. pf eliemes to contend with ; but what
is yery extraorduars. the bees themselves are the worst enemies to their own species-tiveir first endeavour is to destroy the queen, and atter this catastrophe, the rightial
owners seem to lose all interest in their property, and associating at last with the robjers, join in the plunder of their
own stores; hence the necessity of keeping but a small entrance in the antump, that the quards may be better able
to recognise the robbers and drive them off. All the to recognise the robbers and drive them off. All the hive, however weak they may be--Finally, Mr. S. Sharp, gardener to C. Mainwaring, Esq., of Coleby Hall, near he had a stock that threw off a swarm and cast and a ppeared strong and heavy in the antumn ; but it was attacked by some bees from a neighbouring garden, which, after a severe contest for two days, proved victorious, and he believes killed his queen; for after that time all began to
carry off the contents of the hive, and in four days from carry off the comtents of the hive, and in four days from had disappeared, leaving only a dry coub and a few deau bees. He would recommend every one when so situated to secure the inuney an! transter the inees to another hive. Rhubarb-forming.-A subseriber at siaines recommends
for forcing rimbari sloght wiosden buxes about 14 inches square, open at the bottom, and having a moveable lid at the top. These are placed over the roots, and stable hitter is placed round in more or less abandance, according to of this genti. heat the boxes are sown filled with fine boxes a few dare restore the plants the lids of the boxes a tew dars restore the plants taker natural
colour. The stalks renuired for ase are taken out at top, and the box is not disturbelt at all. Theie boxes make a much better тppearance than the array of old pots, broken jars, and rin kettles described in p. 8J, and the rhubarb
may be obtained as early in the season as may be desired. If the litter is sufficiently damp, it will not be distributed by the wind.-A member of the Trentham Gardeners' Association sees nothing laborious in the common method of forcing rhabarb, as mentioned by our correspondent, p . 8.5 , or any necessity for the unpicturesque sunk pits heated by linings, which may be covered with planks. A little attention to giving air to the plants wader ghasses will prevent the buds being scorched. He would like to know at what time W. R. C. begins to force by his supersedes the necessity for fermerting materials? The loss of his plants must be from some other cause than that of the covering, as rbubarb will grow in a cellar or mush-
ronm-house, where the sun's ravs never penetrate.-MT. romm-kouse, where the sun's rays never penetrate.-Mr.
$W$. King of Bushy Park, mentions the following method: -get a sugar hogshead, place it on a low stage, leaving a cavity of sis inches under it; within it lay some small faggots about one foot thick, then a thin layer of rotten plant the rhubarb roots in it. and by the aid of a few barrowfuls of hot dung, stalls will be produced in about six weeks when wanted. - [We have a few more communications relating to this simple subject, but it in hardy worth inserting them at present.]

PROCEEDINGS OF SOCLETIES.

MISCELLANEOUS
Nere Greenhouse Annuals. - Portulacca Thellusonii has most brilliant red tlowers from May to October. Several noble species of balsams such as Impatiens rosen, glun-
duligera, mucrochila, and tricornis, have lately been introduced from the North of India, quite different in character from any previously grown in this country ; the colours of their flowers are purple, rose, pink, and white. Martynia frag a mative of Mexico, produces its fragrant tlower from May to October. One of the most beautitul of the recent introductions is Lobelia ramosa, a native of Swan River, and producing a profusion of bright blae flowers from April to July. Isotoma Brownii, a plant like a Lobelia, from Swan River, is very handsome, with purple, white, and rose-coloured flowers; but the true mode of white,
cultivat
rare.

Belgian Collectors. - The Belgian Government has taken from the funds of the universities 9900 francs, and added to that sum from other sources, to send out five young naturalists to Brazil and Mesico. Two months ince Messrs. Ghisbrecht and Linden returned from their travels, and, besides a zoological collection, they brought a rich set of living plants, particularly of Orchidaceæ and Cac taeere, and a few palms. The plants are for the present placed in the botanicgardens, at Brassels and Ghent, but the whole will be divided between these gardens, and those of Liege and Lacken. M. Galeotti, who travelled for M. Vander Maelen's establishment, is now on his way home from Mexico; his plants are remarkable. M. Jacob Makoy has obtained frow another traveller a number of Brazilian plants, some of which are supposed to be undescribed; amorig them were some tree-ferns, which are, we believe, the only specimens in that country. All thia shows that Belgium maintains its reputation for horticulture.
hid wur to mien botanic gard being conpleted ; the houses are commenced, and the flowerbeds are formed. Professor Morren has chosen the natural arrangement of plants, as modified by Dr. Lindley so that without doubt this garden will show the alliances of the families better than any other. There are, besides,
a forest department, a medical garden, a quarter for indifenous plants, agricultural and horden, a quarter for indi ments. and an experimental garden. It is hoped that the statue of Fuchs, the father of Belgian botany, will ornament the garden.
The best of the oll anmuals are the different varieties of Sweet Pea, Lathurus odoratus, which flower from June to August. Pose pine, Lupinus luters, in blossom from June to September; Prince's Feather, Amaranthus hypochondriacus, and Love-lies-Bleeding, Amaranthus caudaths, which produce their long crimson spikes from June to September ; French Mangold, Tayetes patula, a most beautiful and rariabie plant, sometimes with single and sometioes with Marigold, Tagetes erectu, with large orange or lemoncoloured double flowers. Double dwarf Larkspur Delphirium . Ajucis, and branching Larkspur, D. consolida, vary exceedingly in colour ; the former is the most beautiful, and merits particular attention. Convolvulus minor, a handsome species, with large blue and white flowers. Lavatera trimestris, a beautiful mallow-like plant, with delicate pink or white flowers. IVatiomia maritima, the wellEnown Virginian Stock, with pink or shite blossoms, admirably adapted for edgings to heds. Campanula speruium, Venus's Looking-glass, with blue or white blossoms : Catenduha pluvianks, a pretty piant with the interior of the petals white, and the exterior blackish. Kaulfitsiu amelhigh, a neat little plant, growing about six inche Corn-flower, varies exceedingly in colour, some being blue, thers eream, red, or white. (ioreopisis tinctorin, one of the must beautiful plants in our gavaens; fts flowers are orange and browa, and they vary extremely in the intenred piant tints. Clarkiz patchella, a delicate pank-fiowof the great profasion of white or purple tiowers that it produees. Chrysnnthemum coronarium has bright yeilow and white blussems, and is very showy. Crepis batbuta purple cen profusion of straw-coloured fowers, with a dark Is one of the handsomest annuals grown; its flowers are large crimeon, and it produces a succession from July to

October. Hibiscus africanus, a fine species, with lerge
pale jellow flowers, having a velvety black spot in the tre. Enothera letraptera and Romansovii, the former with white, and the latter with violet flowers, should be in every collection. The varieties of Papaver Rheas aft many of them beautiful and showy. Elichrysum bractes. sum should always be grown, as the cut flowers keep their and yellow varieties. The time of flowering of many of these kinds may be varied by soming the seeds at different times of the year. Some few will stand the winter, if sown thinly, and late in the autumi
from $\mathbb{S}_{\text {wan }}$ River, producing a profusion of fine dieearis flowers from May to November; Bignonia Tweediana and解 abundance of white flowers with a brilliant carmine spot china, with large parple flowers fromber; Passiffora onya mative of Brazil, and will cover a large space with great rapidity; Clianthus carneus, a fine plant from Norfolk Island, is valuable, as it flowers daring the winter season, from December to March ; Comesperma gracilis is a delicate New Holland twiner, with purple flowers, which are produced from February to July; Gompholobium versicolor ane plant, bearing large orange pea-shaped flowers River, digitata, Zichya pannosa and tricolor, also from S an River, should be in every collection; Iponnoea tyrianthine and Purga, from Mexico, are beantiful creepers ; Mandevilld suaveolens, a native of Buenos Ayres, produces its large bunches of white blossoms, which erhale a delicious odour, from April to October; and Cobace stipularis, a species with greenish-yellow flowers, much more slender than C. scundens, bat equally serriceable for covering a large space in a short time.
Vegetation of Marocco.-Whilst at Swearah I saw tho Iruit of the Cactus opuntia, Ficus Carica (green), a species of arbutus, water-melons, grapes, walnuts, and pomegranates in abundance. These were daily eaten, along orances, citrons, lime betel-jom(.) a long narrow acorn, with the flavour of a Spanish chesnut, dates, \&c., are now plentiful. Radishes grow to an enormous size, and these, with the kershuff (?) are more eaten than any vegetable, I have seen the imperial gardens at Marocco. Palms (the date chiefly), olives, oranges, sweet lemons, citrons, limes, pomegranates, roses, violets, and narcissi, together with plenty of saffron and southernwood, are the chief inhabitants of these pleasant places in the hot capital of Barbary. In travelling from Swearah to Maramme, the Chamarops humilis covers all the hills like brushwood, but very dwart.-Athencum.
Mierescopical Glass.-Mr. Drake, of No. 8, Jermynstreet, has for sale very excellent thin glass for placing over objents on the stage of a micruscope. It is of beautiful quality, and rery cheap ; bevond comparison better than the Chinese glass which microscopical obververs have been obliged to emplo
and and most remarkable deciduous trees and shrubs embraces anf the more desiable, bur . $f$ present extremely rare: Leycesteria furmnsa, a handisome shrub from the North of India, produces its white flowers in August, and makes a pretty appearance with its red bracts, which surround the flowers, and large leaves ; it is particularly valuable in exposed situations near the sea, where the bracts and leaves assumee a deep colour. Putulounia imperialis, a low tree from Japli, Cornpa syringafotia, has beaunulis, handsome shrubs, growing from 11 to 12 feet high, the former from the orth of Indra, and the latter from Mexico. Caragana rerardiena, a handsome low shrub .with yellow flowers, from the North of India. Cytisus Wellenit, a shrub
from Dalmatia, producing spikes of yellow blossoms, like from Dalmatia, producing spikes of yellow blossoms, like
a Laburnum, but the spukes have an ascending direction instead of being pendent. Spircea Lindleytha, a tine species from the North of India, riearly related to the well -nown S. sorbifolia ; S. cuncifolia, baziflora, vacionfolu, and rotunaifolia, are also from the Nortio of maia, and form pretty low shrubs; $S$. fissa from Mexico, is 8 handsome shrub, growing from 15 to 20 feet high. Lonicera Ledebourii, a curious plant from California, rewark able for its bright blue berres.-The genus Phitadelphus has had several accessions from the North of India anl Mexico: $P$. Gordonianus, from North-west America, is one of the finest species, bearing its white flumers in great profusion in July, and formug a bush from o to 10 feet high. P. Mexicianus frum Mexico, and trifturns and tomentosus from the North of India, are also desirable plants, well adapted for the shrubbery. Deutzia corymBuact, from the Himalayas produces white flowers in Juue. Berberis coriuria is a hadsome spectes from the hora of India, with fine everyreen leaves and yellow flowerso aiesii, with scarler tlumer, forn urth-west Anerica, and glaciale with whel fowers, from the Nurch of India, deserve a place in every cullection of piants. A rullia jup. 20 nica, a curruus shrab fiom Japan, growing from 12 to arge
 Bree from the Hinnalayds, nearly related to phecies, is EXBirch. Amygdalue incana, a Caucasian spectes, is exh
tremely ornauental in April. When cuvered with its bright tremely ornaunental in April. When coverag theen leaves, pinis flowers: and in the summer, its light green ia good covered with white down on the under slde, mate Pallusil, contrast when planted among evergreens.
from Russia, is also a pretty low shrub. Clematis Hemest
of the genus, producing a profusion of large purple flowers from June to September; it is admirablr adanted for covering a bower or trellis-work, and if trained unnbrella fashion on a lawn, would form a must beautifini object. Atragone macropetaht, a shberian creeper, is by no means unworthy of a place on a wall. - Toer ('ushicum and Lobelii, the former a lative of Cilciis, and the latter of Italy, form handsome low trees; $A$. Lobeiti is remark-
able for the fine purple bloom which covers its young shoots.
A Gardener"s Windication of Shakspeare.-Further re-
flection on the passage from "Romeo and Juliet" noticeld flection on the passage from "Romeo, and Juliet" noticed other instances, Shakspeare has suffered for the sins of his transcribers. In this case there can be listle doubt that the passage was oriminally written thus :-
riter yon yew tre lay thee all alomg.

Shakspeare's perception was much too quick to have made the mistake involved in the other reading; and particuarly in a play worked up with such studious care as that explanatory words, loose, unfirm, are made properly to follow the description hollow gropunt; and the certainty oraring is made a consequence of the boy's positio instead of resulting from the condition of the earth. Thus the whole passage is made consistent, its harmony pre-
served, and the connexion of the premises and the in ference made mueh more close and precise; for as hefore stood, the arrangement of the words was bad, even
had the philosophy been good. The difficultv now, I think, cleared up has escaped all the commentators, who have been perhaps too exclusively literary men. It would be doing good service it those who combine with a cultirated taste for poetry a fair quantity of science, would ssist in elucidating some of the numerous obscurities wich still exist in Shakspeare. His frequent allusions to plants and natural scenery seem specially to invite the解 aly same

And from her womb- childrech it it her whurab hind,
None but for some and yet all difierent.
The word baleful must have been healthful, or of some such import. There is nothing in the Friar's character isted; but his entire speech is a sermun denving the existence of baleful things, asserting that all, though it different degrees, have speeial good, and that all are equally liable to abuse. He adds,
> mickle is the powerful grace that lies
> For nought so rile that on the earth do qualities
> But to the earth some special carod doth give,
Nor aught so good, but strained from that fair use,

$$

& \text { Revolts from tue breth, sumbling oon abuse. }
\end{aligned}
$$

The former part of solioquy contains, it will have and when such passages are combined with the numberless beartiful descriptions of external nature which his works present, one is compelled to think that their wits have been wool-gathering, who assume that Shakspeare spent his youth and early manhood in his father's trade of woolcombing, or something of the kind. It is ntterly impossible that Shakspeare, for the few years he passed in the country, could have led other than ann out-ufdour hife; indeed I would undertake to prove, from his writings alone, that up to the time of his joining the players in His occupation during this period is nowhere recorded; but, wonderial as was his genius, he could not have obtained his facts from intuition, and not many of then frons reading. His plays abound with passages which prove his mind to have been absolutely teeming with images drawn from the garden, the forest, the air, and the
birds; and insects which commonly haunt rural scenes. None of these could he heve derived from troul. nor from such occasional visits to their ubjects as might be afforded in the intervals of an occupation adopled for the main-
tenance of himself and his wife. His business, no less than his pleasnre, must have led him to the fields and the woods; in short, be raust have been a gardener. Wio else could have likened the recluse Romeo to

## Ere he cun -read his weenvieus worm, wirs, to the air, Or dedicate hisa bentry to

Who but a gardener is up and abroaid early enough to see, Shakspeare must have done habitually,

 very place where this tree ine growing. It gives a name to the
house, which is now known by the cognomen "Pear-tree House."

## 

and strubs, the soil being in meneral a light sandy loam, on a dry

Hevietos.
 8vo. Smith
This work is written for the purpose of enlightening the postemores of little Londow gardens, in alit that relates to the management of their soit and its protucts. If such parsons desire to study the minutie of systematical and physioh,gical butaay, and to work by the strict rules of science, this hook will assist them in doing 30 ; for it treats of the difference jetween animals and regetables of thalamitorx, caly citlarse, corotilitione, and monochiamy
dex: : of ferns, mosses, seaweeds, funguses, and lichens It points out the difference between evergreens and dec duous plants; it shows how trees are to be known from herbs, and in no superticial and slovenly manner, but in thins precise and exact. Their nomenctatare, the way in Gooseburry came by their names - how the Top-sawyer nosebury and Cos. Deriance Dahlia were calied by those wames intad of some othera, and many such interesting their elementary organs and their the structure of plants, their elemeatary ofgans and their compound organa, amd What relates to the inside of them, and their outside ; their male orgaas and their femaie organs, the orariam and pericarpiam, the caryopsis, the pepo, the epicarp, endo carp, and sarcocarp. These matters being explained, the reader is introduced to the functions of plants, their way of growing and their way of dying ; their geographical explaintion; and much besid bpokin. When we say that all this belongs to a cheap upon the prospect that is opened to them of becoming at once philosophers and gardeners.

A Series of Botanical Labels for the Herbarium. - "Few words," says the Editor of this little work, "will suffice to explain the motives which have led to the appearance of the present publication. The compiter was in want of printed labels for his Herbarium, and, being unable to discover the existence of auything of the knd required by him, was induced to turn his atrention to the subject ; the result has been the production of the series now offered to the pub ic. The depositories of the materials for study and in vestigation should be patterns of systematic neatness and order ; and although some Herbaria merit anything rather than such a character, many botanists, to ohtain this desirable end, have incurred great expense in printing labei for their private use. The reasonable rate at which the present series is offered will, it is hoped, prevent this necessity for the future, and enable all students to arrange their collections in a manner equally usetul and creditable. The compiler promises himself the especial patronage of the ladies, by whom the science is now so generally cultivated, since everything likely to contribute to neatness and accuracy may with certain success claim their favou and approbation. The arrangement adopted embrace the systems of the four most popular authors of the pre sent day by whom Manuals of British Botany have been written, viz., Smith, Hooker, Lindley, and Macreight. As each plant has one or more labels assigned to it whenever the writers above mentioned differ in their nomenclature, all will be able to select that of their favourite text-book, while the synonyms attached will show the ar rangement adopted by the other three authorities, and shus, to the less advanced student. tend in some degree to increase the facilities of botanical intercourse.'
We have only to add, that the plan is extremely well executed, to join with the Editor in advocating the cause of neatness of arrangement, and to give the following as a pattern of the labels :-

## ranunculaces Jugs. Polyan. Polyeyr. <br> - aConitum vulanes De Can. Acentrum mapelius Linn. <br> Common Wolf"s-bane.-River banks. <br> Loe.

Nothing is E- moted han an ill-regulated collection of papers, or 8 pecimens, or any other thing; and we thanis the author of this little work for having at least given everybody the opportunity of neatly arranging their collections of dried plants if they choose to do so.

## Proceedings of the Horticultural Society of London

 1840. No. IX.This part of the Proceedings is chiefly occupied by an account of the great exhibitions at the Garden in May and June of last year, concerning which we shall only observe that on the 13th of June the number of visitors who passed through the gates with tickets amounted to the extraordimry mumber of cleven thowsand five hentrad might be added.
On the 19 th of May a paper was read from Mr. D. Beaton, on the cultivation of plants of the Cactus tribe, from which we make the following extracts:-
"S The grand emporium for Cacti is Mexieo, but wast numbers are found in all latitudes of South America. A few inhabit the sea-coast, and some fine Cereuses and Opuntias have been forand erowing down to the water's dive in the bottest part of the globe, to Ia Grayra and the Guif of Maracaybo. Suck species oceur abumdantly n open arid places, and seem to enjoy the refiection of the sun's rays from a naled soll, in addition to the scorching heat of the atmospherc. From this region up to tht with at every degree of elevation. In the lacitudes of the with at every degree of ele deinged for thret. four, or five monthis at a time, while ther are combletely dry for the rest of the year. They enfoy a perpethat spring in some localities; while, on the uther hand, a fewt cereuses are said to be fomm 1 m thist pore of the Peruvian coast where lerati,n of meaiy 15,16 ) teet, where the mean tempera t. 600 fect. and atill farther south in lat. 190 , where there reigns a mean temperature of $45^{\circ}$
The author stated that the Alyme species should tweeive
the treatment of the heath-honse; and the Melocacti, which inhabit the intratropical shores, a higher temperature than the rest of the family ; for the latter the mean they are kept perfectly dry from October to March they will live in a much lower degree. The great mass of the species do perfectly well in a temperature from $45^{\circ}$ to $50^{\circ}$ if they are kept near the glass. The only attention they require in winter is to receive plenty of air.
Nember, should not be excited into growth until March Many are slow in making roots after their first arrival, and therefore should be assisted with a gentle bottom heat. Indeed all Cacti are much benefited by this on their first arrival : even the species from the limits of perpetual snow like in although the heat of a close heir or fram gies. That hottom heat is highly ang their vital ener plants, even in the midst of summer, the author considered proved by an experiment instituted in the garden of Mr Harris. A glass-case, in which Auriculas are wintered was placed over a bed of hot dung; on the dung was pat a layer of rough stonen and gravel; and three or four In this were planted upwards of 100 Cactio The case had movable sashes at the sides and both ends, with a span roof of glass; and by removing the side and end lights, the plants were as much exposed to currents of air as in selected foer experiment were for the most part newly im ported; for the first month the case was kept close ; afterwards the side and end lights were opened, and a constan draught of air was admitted day and night, the plants being syringed every evening in hot weather. After four montha' treatment the resalt was completely successful. Some Mexican Mammillarixe had made roots 10 inche long; and, contrary to their natural habits in some cas
their roots crept along close to the surface of the soil.

Mr. Beaton thinks that by a proper system of bottom heat, Cacti might be grown in frames in this country to great advantage, so as to equal, is not excel, our contisental neighbourn. To those fond of green, healthy, and symmetrichi Cacti, soedlings and of aete are far preferable to imported plants, as we seldom receive the latter without some of their bottom spines being dead or otherwise discoloured by time or circumstances. This is more particu larly the case with Mammillarix and Melocacti.
With regard to the soil, some grow in stiff yellow clay mised with rough gravel, and some in fine strong loam of different textures and colours : others are found in all the kinds of light soil, in peat, and among chalk and limetone, and even on the sterile lava of volcanic districts. Equal quantities of pounded oyster-shells and coal clinkers form by far the best drainage that can be used, keeping the finer parts towards the top. A layer of moss placed on the drainage would soon kill the finer sorts of Cacti, and must never be used for them. When fresh potted, water is withheld for several days, in order to let any roots which may have been broken have time to dry; otherwise if moisture is applied to the wounds when fresh, death will soon be the consequence.
In growing Cacti from seeds, Mr. Beaton fills the pots with cinders to within two inches of the top; and makes them up with very sandy peat, and a little clean sand on the top. The pots are then watered and the seeds sown after which as much dry sand is sprinkled over them as will just fill up the spaces between them. The whole is then pressed down gently, and the pots are put by in any
warm place, where they are kept moist. The seeds will vegetate in 10 or 12 days, and must then be very gently watered for fear of displacing them till they make their little roots, and get firm hold of the soil, after which they may be freely and regularly watered. Although he has transplanted such seedling Cacti at all ages, yet he lost so many by transplanting while very young, that he recommends the seeds to be sown quite thin in the first instance, and not to transplant the seedlings till they begin to get crowded in the pots, in a year or two.

In conclueion, the suthor adverted to the sdrantages that may be expected from hybridizing Cacti. U'pon this gubject he remarked that the Cerei, of which the Epiphylla are a subsection, are the great laboratory for improving the fine flowering Cacti. To say nothing of mixing new species with the older ones, for the sake of brilliant colours, we might easily get a new race of free flowering kinds in the way of Cereus grandifiorus, by a judicious mixture of such species as Cereus nycticallis, C. trianularis, and its near relative C. Napoteonis, with that splendid new Cereus which is sold in the London nurseries under the erroneous name of setaceus. This noble Cereus is the finest of the genus, and by it a ner moe of splendid Cacti may be obtained; its fluwers are as large as those of $C$. grandiftorus, and of a brilliant yellow colour, of the African marigold tint.

## Mills's Treatise on an Improved Mode of Cultivating

 the Cucumber and Melon contains an account of the author's experience with respect to these plants, of which he is a well-known successful grower. The details are given with accuracy, and the language used is clear and intelligible to ail. Four different methods of growing Cucumcommon duag-beds with ordinary fames; third, in the pine-house in winter ; and fourth, by a new pit system, whereby fruit may be produced every month in the gear with ease and certainty. A person ignorant of gardening may grow either Melons or Cucumbers with the assistance of Mr. Mills's book.CALENDAR OF OPERATIONS for the ensuing Week.

| Aances, numberless insects will be brought forth into active life ; all those that are known to be injurious should be destroyed asquickly as possible, to prevent the propagation of the species. At this time, Sedums, and other succulents in greenhouses, will frequently be observed to get sickly, and perhaps die, without any examined, and the grubs of the succulent weevil (Otiorhynchus sulcatus) will be found to have eaten off the plant close to thesarface of the soil. These grubs are about half an inch long, of a dirty white colour, thick, and fleshy, slightly curved, and having numerous short ri,id hairs on the body. About the middle of May these grubs change into white pupæ, which have no cocoons,but are placed in oval cells in the earth, perfectly smooth on the inside. They remain in the pupa state about fourteen days, and the elytra or wing-cases are rather deeply furrowed. In the Berlin Botanic Garden they have been found to infest the roots of Saxifrages and Trollius growing in the open border, and cause their death. The only methods of destroying them are, at thistime of the year to evamine the routs of Sedums and other succulent plant; and crush all that may be found; and in June, when the perfect insects appear, to look among the pots, where theyare asually larking, and kill them as soon as they come out, before they have time to deposit their egss. |  |  |  |  |  |  |  |

## NEWS OF THE WEEK

The proceedings of Parliament during the past week have been of such unusual interest, and the rival bills for he registration of Irish voters introduced into the House of Commons by Lord Stanley and Lord Morpeth have been so warmly advocated by their respective parties, that they have absorbed public attention to the exclusion of almost every other question. The debates on the bill brought forward by Lord Morpeth on bebalf of the Goernment have been protracted through sereral successive nights, and the strength of opposed parties has been more exerted in its discussion than on any measure which has occupied the public mind for a considerable period. The chief point of opposition to the bill has been the clause reducing the qualification for the franchise to 51 which has been resisted on the ground that its operation nay fall little short of universal suffrage, and may lead to the admission of a class of roters not contemplated by the Reform Act. Many persons favourable to the introducon of the bill coincided in this riew, so far as regards the eduction of the franchise, and expressed their intention to suggest a modification of the clause when it comes under discussion in committee ; but its supporters generally re arded the bill as a measure of justice to the Sister Kingom, as a means of allaying the irritation of her people on the subject of repeal, and of uniting them more closely in alliance with the other subjects of the Crown. The debate has terminated in favour of the bill, and consequently in favour of Ministers, by a majority of 5 .
Oar foreign news does not embrace so many topics of stirring interest as usual ; the most important intelligence received during the week states that measures have been adopted by the French Government which are generally regarded as indicative of an approaching disarmament; and that expectations are entertained in Paris that the army will shortly be reduced to such a footing as to allay the apprehensions recently expressed by the European Powers. With this exception the news from France is chiefly of domestic interest.-From Spain we learn that the elections have terminated satisfactorily to the Government, and that a strong feeling prevails among the troops in favour of the appointment of the Duke de Victoria as sole Regent of the kingdom.-The results of the settlement of the Douro question begin to be beneficially de reloped by the reduction of the military forces of Purtugal , and the suspension of her armaments -We learn from Constantinople that a firman is in preparation for the Pacha of Egypt, which may be considered as the final settlement of the Eastern question ; it regulates the laws, religious observances, and other points of national interest, on the basis of those of Turkey, and under the guarantee of the Allied Powers.

Court.-Her Majesty, Prince Albert, and the Princess Royal are in good health and still continue in town. The silluation of Superintendent of the Royal Nursery has been解 tala poet, and widow of Captain Lehzy of $300 \%$. per annum. The rumour that Barones Lehzen was to receive this appointment was consequentl town on Monday to return to Brussels, where he has since arrived after a very favourable passage.
The Queen Dowager.-A paragraph has appeared in the daily papers, stating that her Majesty Queen Adelaide has been suffering from severe indisposition arising from a cold. It appears, however, that these accounts have been exaggerated, and that nothing has occurred to present ber Majesty from taking her usual exercise.
Parliamentary.-It is stated that Mr. Maule, to whom Elgin risition had been sent to come forward again for the Elgin Burghs, has no intention of contesting that seat in the event of a vacancy. -The petition ayainst the return of Mr. Smythe, the successful candidate for the late Canterbury election, has been withdrawn.- The contest for King's County has been attended with much party excitement, and the troops have been called out to maintain order. Several outrages have nevertheless been committed and strong personal feeling has been manifested by the mencement promised to mencement promised to be in favour of Mr. Armstrong, a large majority over Mr. Bernard, who contested the seat on the Conservative interest.
Healh of the Lard Chancellor. - The attacks of iuflam mation from which the Noble Lord suffered were of so
serious and alarming a character that it was found necessary to blend him ory freely; the consequence of which has been that, in arresting the progress of the symptoms the noble patient has been considerabiy reduced. It is gratifying, however, to state that, notwithstanding the recurrence of these attacks, his Lordship is now out of all danger, and, it is hoped, speeciily advancing towards a state convalescence.

## fforeign.

France. - The Armaments.-A communication has been made to the Budget Committee of the Chamber of Deputies by Marshal Soult, which has been received with great satisfaction by the moderate party. It appears that
ment of 1842 , and that the budget will he diminished by $23,000,000 \mathrm{f}$, and the effective force of the army reduced to 60,000 mea. This is generaily regarded as a com-
mencement of the disarmament, and as a security for the maintenance of peace. The fill, 000 men, by which Marshal Soult proposes to reduce the army in 1842, will form the nueleus of the reserve, which he intends to organise immediately after the adoption by both Chambers of tive new project of las of reerar ment. The Marshad assureh he would be ahle to bring bick the active army to a furtChamber of Deputies assembled on Monds: to disinss Chamber of Deputies assembled on Mondas the chathss the bill requiring a lery of sh, 0 供i recruits af the class of
1840 . The committee to which it was reterred had pro1840. The committee to which it was reterred had pro-
posed to lunit the number to 40,1010 men. The first
 been put to the vote, was cimed by a large majorty. The
fourth article alone gave rise to dischsion. The committee had amendert it, and proposed that only 10, nitit recruits should be at present called out, leaving the (iovernment at hberty to levy the rest at a later period, in virtue of a mpal ordinance. Marshal Soult opposed the amendment, which was ulumately rejected hy the Chamber. The article was

Secret Sereve Money. - The papers are taken up with the report of M. Juuffroi on the bill for granting
$1,(010,0(0)$ ). for secret service, which is regarded by the opposition prints as a new attack on the administration of M. Thiers in regard to the Eastern question, and as a defence of the present Miniatry. In consequence of the alleged dirposition to reduce the armaments, it is ex-
pected that fioverument will secure the support of the pected that Cuverument will secure the support of the thus obtain a large najority; by which means it is supBill. An ultimate combination with the Conservative party is also mentioned, by the adrocates of peace, as the probable result of this measure.

Treaty of Commerces with Great Arilain.-It has been reparted in Paris that this treaty, so long in abeyance, is on the point of being definitively signed by the commene ers of both Powers. It appears, however, that some aew ansettled for the present.

The Customs Duties Bill, referred to in our last, which had been ten days under diseassion, and which involved many British interests, was passed by the Chamber of Deputies last week, almost unanimously; the numbers being 231 against 11 . It is expected that its results will be particularly beneficial to this cauntry.
The Navy. - The whole of the misoint ships of Admiral of the line which had separated from the main budy in the late tempest, had taken refuge in the Island of Sardinia; two of them have retafned to Toulon, and the third remains at Cagliari to repair the heavy damagea she sustanned during the storm. Letters from Toulon announce the arrival of General Buseand, the new fovernorGeneral of Algeria, on his way to assume the command of that colony

Treaty with Buenos Ayres.-M. Mermilliod, deputy for Havre, presented to the Chamber of Deputies on Sa-
turday a petition signed by 1,300 French citizens settled on the banks of the Plata, against the treaty concluded
between France and Buenos Ayres. He entered into statement of the differences which had arisen between the two countries, and ultimately led to hostilities. He complained of the abandonment of the allies of France, and contended that the negotiator had not acted up to his instructions, by which he was boand to obtain for rrenchand to stipulate indemnity fur all those who had been injured in their persons or pruperty by the Argentine government. 3 . Guizot, in reply. maintained that Admiral Mackau had strictly adhered to his instructions and repeated the arguments he had already adduced in the Chamber of Peers

Prosecution af the Nutiunal.-The proceedings in the prosecution of this paper for a libel on the House of
Peers, as mentioned in our last number, came before the Cbamber on Wednesday, and excited unusual attention before the proceedings commenced, all the tribunes were full. After the presicent had read a letter from M. Marie, the counsel for the ehitor, M. Delaroche, which stated that the intellectual faculties of the editor were impaired, owing to the effects of illness, and that he was unable to hom any commanication with him, on which account a fresh delay Was asked for, the President proposed to the Chanber to adjoura the affir for ten dats, which being supported
by several leading peers, the chataber granted a delay of ten days, and the stitins brvise up.

Paris and Rorlen Ruilroul. - It appears that the company has entered into a contract, under jemalits, for the which is to ron from Poissy to Asmierec, where it will juon the St. Germain road. This contract includes two large bridges over the Seine, one at Besons ard the other at tion of the two most important and difficuit ondertakings along the whole line, a tunnel of 3.090 metres hetwern Ruluanse and bonnieres, ard a cutting at lenabizs. shortly be cuneluded for the line between Poisst and Mantes. In fine. all measures have been taken for ensur ing the completion of she whoie road between Paris and Mantes in firteen months, so that it may be brought into
se in the summer of $18 t 2$.
Madame Laffurge.-A letter from Glandier, of

19 th inst., says that the seals have been broken by the udicial authorities, after having been thirteen months on have been spoiled by damp or rats. A great numbere have been spoiled by damp or rats. A great aus articles, persons have flocked is said that there will be a sharp bidding for the planoforte, as memento of the unfortunate Madame Luffarge. Several Eniflish risiturs have been to Glandier, atractril by in tires uf curiosity to examine a lace which hia sbrained so mach moturiety.
Inendations - A. Counts from Tarascon of the 17th in.t. state that the Rome had again risen to an enormous height, and that the viuknce of its carrent was so great as oo endanger the existence of the tempory vas falling in oo herp its waters whthin bunds. Rain Bnger, the country $\Pi T \mathrm{~s}$ menaced with an inuthation more terrine and dor simon and the iower cuartero of that city, mere under water. The accounts from Lyons, howcity, were under water.
Mortality of french Troops. - At the recent discussion on the wihtary establistument in the Chamber of Deputies, (ien. Paixhans brought before the House the improved condition of the army, and stated that the moriality of troops was not now much above the average among the general population. From the statistical detalls submitted, t appears that out of every 1,000 men, the mortality of French troups in the colonies of Americe was formerly of Freneh troos in Alrica in , iresent miortaily of French troops in the French colonies in America 68 ; at the Hotel des Invalides 63; mortality in prisons 62; general officers in active service 40 ; in the garrison of $P$
mortality of the population of France 26 .
Germiny.-It is stated that the German Confederation has received aspurances that the French Government have resolved to suspend their armaments, and that consequently the Confederation would reduce its foree to a pence establishment.-Letters from Berlin bring tatelligence that the long-pending disputes in reference to the Church question and the Archbishop of Cologne have been settled on the following terms: the Archbishop to return quite fres to the diocese, to appoint a coadjutor, awaits him, to support which the King of Prussia has offered him a pension of 20,000 dollars. The friends of the Archbishop believe that he will decline the pension, and content himself with the revenues of the diocese of Cologne, of which he is to continue in enjoynent for the remamder of his lite. - We learn from tenna that a French Consulate at Bucharest, was implicated in the conspiracy against the Hospodar of Wallachia. The plan of the conspirators was to get rid of the Prince and several dignitaries of the state, to approint a directory, and proRoma Warkchian Repubuc uad the plat, the Boyard Philippesco, is said to have disclatiment the ecrapetency of the committee of inquiry, and refused to answer the ques tions addressed to him by the instructing magistrate.
Holland.-It appears by the Leipzig and Cologne journals that the marriage of the late King of the Nether lands, now Count of Nassau, with the Countess of Oultre mont, took place, in the strictest incognite, in the palace of Prince Albert, according to the Protestant and Catholic rites, on the 17 th inst. These journals also state that the Count of Nassau will not return to Helland, but will settle in Prussia.
Switerrland.-The convocation of the Diet for the 15th March appears to excite great interest, and consider able curiosity is manifested to learn the part which France intends to take in this affair. after the Austrian and Roman notes. The former has been commumicated by the oror to the Argau Crovernment. It is stated that the Federal Council of War is actively engaged, but it is not precisely hown for what purpose. The great Council of St. Gall has met to discuss the question of the Convents, and decided that the application for an extraordinary Dies should be rejected. It is said that the Neufehatel Delegates intend to send a depatation to Berlin to protest against the viclation of the Constitution by removing Burel from Switzerland at the request of the French
Government, under pretext of being an accomplice of Government, under

Rtsili.-A decree has been issued allowing the importation of foreign grain ducy free, in consequence of the failure of the crops in the governments of the interior. Private letters froma か. Petersburgh state that a second expedition to Khiva was in contemplation, but was frustrated by the energy of the British Government, which did not, it is said, contest the right of Ruseia to wage war whould be ent thither it would ancounter a British arme on the banks of the Oxus. The idea of the second expedition was then, it appears, abanioned
spanin- Private letters state that a meeting of commane into consideration the expediency of calling together a meeting of the whole corps of officers for the purpose of drawing up a perition to the Cortes, to the effect that the Drke de Vieturia be named "sole Regent" during the Queen's minarny. It was determined that the colunet of each regument, ur battalion, be authorised to hoid such a muring among his own officers. It was reported that during the graind revtew, which was fixed for the commencement of March, the troops woald demand that the Duke be proclaimed sole Regent of the kingdom; and
that 40,000 men, independently of the National Guard, would be concentrated for that review in the aeighbourhood
of the capital. These military morements continued to be
the exclusive topic of conversation, and much anxiety was exprensel? as to the consequences.- The Regency appeara to have determined un the suppression of secret repablican societies, and orders have been issued calling upon pablie parties opposing the dissolution of such societies. - The parties opposing the dissolution of sucth societtes.-The there hase been ciries comtainting 2,000 soters, where only prosent occasion in oriler to vote. The return* received from the prosinces, however, continued to bee fas wable to the exi-ting order of things.- A letter from .Taners states
that a difference bad aisen between the Frem ha Conosul and the authonities of that city. The latter beine informed that a large sum of money in Spuish pratere: had been in viulation of the luws, invited the Consui of France to accompany theur to the vessel, in order to the present at the search they intemded to make. The Consul refised, and the anthorities prweeded to execute thenr mission. The Consul follomed them. furbade the (aptann to open quit the harbour immediateiy, which be dad only giving the Spaniards sufficient time t.) leap into their brat to avoid being carried to Mars-ithes he celebrom Murcia bring intelligence of the desth for celebrated bandit had been offered for hin dead or alive. On the 4 th, two shepherds in the mountains, while he was askng then, for supper, attacked him suddenly, one striking him on the
head with a heary stone while the other fired at him at arm’s length.-Serious disturbances were reported to i:ave taken place at Palma, in the island of Majores. The malcontents insisted upon the suppression of cortain ailed for some time: but ultimately the law was maintained and order restored. -The Government, in reply to a representation of the Intendant at Cadiz of the commim of he want of the soldiery, has acknowledged that the national coffers are so bate that it cannot provide for the wantg of he army the first misunderstondiag with Spain are now disbanding the enlistment for the National Guard has been suspended and the ships-of-war laid up in ordinary. It is stated in private letters that the slave-trade and commercial treaties be brigland have been rethewed; but neither win o is said that the Portuguese Government intents to propose to Great Britain a plan
Irath. -The reconciliation of the King of Naples with his brother the Prince de Capua is on the point of being effected through the good offices of the Queen of the
French and the Queen Dowager of Naples, as mentioned in our last Number. The great obstacle has been the clan of Miss Penelope Smyth to hold the rank at court
which she conceived the name of her husband entitled her and consequently to take precedence of an archluchess Austria and a princess of Savoy. Miss Smyth has at title of countess, and to walk only immediately after the royal family. This affair, which would appear to be ons entirely of etiquette, had assumed, is is said, a politica character from the part which England wished the Prisce de Capua to play in case of a war in which the Neapolitan Turksy. - Intelligence has been received that the Diva was engaged in prepariog the firman of inve,titure for Mehemet Ali's possession of Egypt, or rather the termi upon which he is to hold the reins of government. it regulates carinus questions relative to the riphts of the Pacha of Egypt ; determines the coinage, uniturm, navy the flag, atad ocher matters of national interest. laws and customs of Turkey were adoptel as the basi of all these arrangements.-Letters frum Cir assia stale The he plague had malue forte of several villages between these places and Tefl:s have been attacked by the disease. Two battalions of Georgian Grenadiers hare also been attacked. The plague has not visited Teflis since 1813 , when it carried off one-hals of The
w) pulation of the town in less than three months. The pr)pulation of the tomn in less than three moths. Winter aunpaign is over, and the troops have g ane inain in the same relative positions in which they were last spring.
Busmos Aykrs.-Letters have been received frum Monte Video of the 19th Novenaber, which assert that the provinces of the interior have declared against Rosas, and that Gen. Lavalle is obtaining fresh successes. Io French residents continue to manifest great opposition had been saumitived to party views.

West Indies.-The arrival of the monthly packet has bronght intelligence from Jamaica to the elth Jamary. Advices had been received there from Carthazena, which stated that affairs were in a rery disturbed condition ing that quarter. Imprisonments were represen ${ }^{-2}$ das tak place daily. The Britisi Consul at Carthagent had considerea it requisite that a esset or war and at santa Martha, for the protection of British property. Ia regard to local news. the certents of the Janaica papers are harren of intellize me, but .. The differing more phe Gorernment and Colonial LegisTature at Demerara hare been arranged, and the civi! list satisfontorily settied.

## 骎arliament.

Monday.- Lord WHARNCLIPFE asked if any record of the speech
the Lord High Steward would appear in the proceedinss, which their lordships had ordered the marl Cordigan.
The Earl of SHATBSBURY said he would make the necessary inguiries on the subjct.
Iord WavanNcuprg notice that after the holidays he
would bring in a bill to clear up all doubts as to a peer pleading his privilege in case of conviction for felony. He thought that

Government to bring in a good one. He dwelt for some time on
the hardships connected with an anmal renewal of a struggle for
the the hardships connected wid out the patience of the bona fide voter,
theuld induce, which, to tiring ound his right rather than subject himwould induce him to abandon hist bills, he the effect of determiining the existing doubt; but while the Go-
vernment bill dids so in a strainhtrorward manner, Lord Stanley's berlm wrould do so by as discreditable a trick as he ever saw introduced into the business of legislation. The real ohject of the
struggle was the distribution of political power in Ireland. But struggle was the distribution of political power in Ireland. But
that was a matter nut to be decided hy the gain of an election, or that was a matter nurtuene decided by the gain of an election, or
by tbe balance of unfuence ou a paty division. It was by the
bearing of their foreing relations that the question rust be de-
cided and surely this wai no time to alienate fiom themselves cided, and surely this was no time to alienate fiom themselves the felings of the Irish perple. The Irish had been greatly
changed of late years by the success that had attended their ctruggedes, and a Tory covernment would find them very different antagonists from what they had formerly been. The temperance
movement showed that great alteration had taken place in the character of the people, and argued astonishing infuence on the part of the leaders. No one could deny that a foreign war had
become more probable than it had been for many years. He had no fear of any alliance agrainst England so long as the empire was content a matter of exultation to our enemies and of terror to our friends.
Sir J. Graman censured the topics of which the learned gen-
tleman had made use, than which none more exciting, he said, had ever been addressed to the Irish people at the Corn Exchange.
The hon. and leanued gentleman, howerer, like the secretary of
War yesterdar, had spoken as if the bill of Lord Stanley, and not the bill or Covernment, had been the question before them. He He
himself was determined to stand by the Reforn土 Act, and to im. prove its provisions; but he was determined to resist changes
that must terninate in universal sulfrage, and subject this great Mr. Suyil referred to severacac. personal questions arising out of the speech of Sir J., Grahom, and described the bill as ssentially
in the spirit of the Reform Act. That bill had been brought into Parliament by Lord Stanley, the hereditary representative of ueral opine solvent tenant clanse, arguing that ite was quite
against the the
enough if a tenant had a beneficial interest in his land. It was not till the noble lord had changed his party that he changed his mind and offered to destroy the Irish constituency, as a proof of the noble lord, after hearing the terns in which he had spoken of now carried the banner of the Tories, must make the people of
England feel the necessity of resisting domination-the necessity of securing protection against oppression? Mr. Shecil went on to urge the necessity of conciliating the people of Ireland, whom he
described as fully aware of what their rights. were, and determined to have them. "And do not imagine,", he said, "t hat 1
mean to use menace; do not mistake entreaty for intimidation but remember this-while France is arming, you are disfranchis ing; while France is raising ramparts, you are lovelling the great The debate was then again adjourned.
by which 100 lives had been, lost on the high seas, asked whether Government intended to bring in any measure to prevent similar
misfortunes in fature? Mr. Lusoccrism replied that it would not be advisable to in
trodice any bill for the regulation of the rule of the road with
 Mr. W. M. Geskell, who complained of the hanguage ased by present mensure. Colonel Conolly and Mr. Lascelles opposed

 What new concession would he call for next year, wher an new that the proposed mensure was intended to subvert the existing
constituency, and to substitute another in it place 2 They were
called on to establilsha a leasechold franchiseof fourteen years, with-
out even an oblipation to out even an obligation to pay the rate which rave the wote. In
towns the franchise was at oye stroke to be reduced from 102 .
$5 \%$. He wished there was a more satisfactory mode of definin 55. He wished there was a more satisfactory mode of defining
the franchise; and the evil of a doubtuul franchise was greatly
aggravated by the unfortunate differentce among the judges. But were they to be told that they were not to correct the acknow-
ledged abuses of the registration until Parliament had passed an ledged abuses of the registration until Parliament had passed an
aet to defire the franchise : He Sir R. Peel had incurred obligation by the Catholic Relief Bill. It was notorinus that in car-
Tring that lill they had to contend with the scruples of the
Sovereign. Those scruples were overcome ponly by undertalin Sovereign. Those scruades were orvercome one scruples of the undertaking
to abolish the forty-shilling freeholds. and without that aholition the Relief Bill would not have been carried. The abolition of the Catholics themselves, who were examined at the time. Thos Catholic witnesses described the forty-shilling freeholds as the
greatest of curses to Ireland, and the hon. member for Dublin himself said they were part of the live- stock of an estate, It was
the catholic witnesses who abolished the forty-shilling freeholds, and were they to be told now that they the Conservatives in
sulted Ireland when they refused to re-establish such a franchise What security, however, had they against the re-establishment
of a similar state of things by means of the franchise now proposed ? what security that the subdivision of land would not
again be stimulated by dhe desire of acquiring political influence?
Woult would not be extended to England? There had been demands for extended suffrages in England, backed by a display of physical
force. In what situation would ministers have been placed if the Conservord J. Russell would make a pulliice declaration on this
tobed Lor
subject. He then read a series of extracts from rarious speche of Lord J. Russell against further concessions to popular encroach nent, and intimated a belief that pernaps the nobe Lord had repolicy had not given pleasure to a section of his supporters, and hat might have led him to enter into a new compac
and accompanied Catholic Emancipation, and added that grounding that concession on the fear of a civil war, a great en. couragement was given to fature combination and agitation, and hus the first example of conciliating the party of the hon. Men
ber for Dublin was set by a Tory Government. He was accuse faith was co mamithed adrocating this measure, but the breach of franchise given by the reform Bill-by those who had yielded to were tranquil. When they came to consider the question of re gistration, it became necessary to take the franchise likewise
into consideration; and he had felt the urgency of adopting some test that might not depend wholly on the asseveration of the claimant. They had adopted the test of the poor-rate, and by
hat many would be disfranchised who at present possessed the vote. As to the amount of the rate, however, that was a question
for the Committee. The noble Lord dwelt for some time on the evil of leaving the question of the franchise in its present state, judges, thus making then the a instruments of party. The noble At so reat statements of the diminishing constituency of Ireland. should forbear from touching there were many points which he which he had been so strongly appealed to, that he could not pass
them over in silence. With respect to the said his Lordship, I have nothing to add to or retract from the opinions read last nipht by the right hon. Member for Pembroke:
but the more I consider that the repeal of the Cuion would be calamity, the more I wish the just complaints of the people of Ire land to be redressed. With respect to his opinions on the neces-
sity of adhering to the Reform Bill, his Lordship said he rete the sentiments put forward in his letter to the evectors of tetroud.
1 bave no apprehension, he said, that the allegiance of the lrish people will be transforred to a fureign power; nevertheiess t subject is matter tor grave consideration. 1s it nothing whether,
when our ambassadors have to treat with forcign powers, they can say this proposal comes from the (Queen of a united people, or Whether they are oibliged to admit that discontent exists in a part
of the empire. Furthier than this I do not go, but so far all nust
fecel the value of having a united people. The noble Lorit then concluded by expressing a hope that the people of Ireland would entertained feelings hostile to them. On his sitting down the -For the second reading 299, for Lord Stanley's amendment 294 - majority for Ministers 5.
bill for the Registration of Irist Voned the second reading of hill honday.
The House having tone in The House having gone into committee on Lord Keane's An-
nuity, Mr. Ewart moved to limit the pension to life. Sir J. HosHocss defended the grant, and made a rapid sketch of Lord
Kenens military career. He had served in Egyt, in the West
Indies, in Indies, in America, and at all the great battles during the Penin-
sular war, from PERL did not feel certain that this pension ought not to have been at the charge of the East India Company; but he considered the Mrilint services of Lord Keane fully entitled him to this reward
not in the habit of being Inenerous Diretors, who, he said, were It was not merely for the talking of Ghuznee, but for a long series sides the capture of Ghumnee and the whole campaign of Aff.
chanistan had been undertaken in the general interest of the ghanistan had been undertaken in the general interest of the
empire, and for the attainmeut of Enropean rather than Indian views. After a brief conversation, in which several members
joined, the amendment was negatived by 117 against 74 , and the The House then went into committee on the East India Rum Bilu, and a long conversation ensued on the best means of pre-
ventiong other pspits being introduced into the country as rum, after which the House adjourned.

The Ministers present were Lords Melbourne Normanby, Jolun Russell, Clarendon, and Morpeth. The entertainment passed off without any demonstration of political feeling

Reduction of Watorloo Rridge Foob-tolld.-A meeting of this Compsny has taken place to consider the reduction of the foot-tolls of the bridge, when a resolntion was carried, that after the list of March one halfpenny should the the amount of toll, instead of a penny as heretofore.
place on Saturday, a few miles from town, in the presence
of Sir R. Peel, Sir G. Murrar, Sir H. Hardinge, Sir F Burdett, Lord Ingestre, and other gentlemen. A boa 23 feet long and 7 broad, filled in with solid timber and clamped together with spike nails, was placed in a large sheet of water; on a signal being given, it was set in motion and struck abaft the starboard bow, and instantaneousl collision the water parted, and presented the moment of of a hage borl, while a coruscation appeared on its sur face resembling lightning. A large column of water war lifted into the air, from which were projected many hundred disthe fragments of the ressel, which fell a considerable dus the adjacent fields. How this effect was pro Sir H. Hardinge, the inventor stated that question from tering train he could transport on a mule's back the means of destroying the strongest fortress in Europe. The in strument that $w$ rought so terrible an effect was only $181 b$ weight, and could with safety be handled and kicked round
a room when charged with its deadly contents.

Unicersity College.-On Wednesday the an
meeting of the proprietors of the London Lian College was held, for the purpose of receiving the report of the council for the past year, and to elect officers for the year ensuing. Mr. J. Taylor, F.R.S. was put in Mr. Tol ceedings. Lord Brougham was re-elected President, and the Duke of Somerset Vice-President, unanimously: and the numbers were, for the office of Treasurer-Mr. Tooke Fires. Taylor 89 ; majority for Mr. Touke 2 . premises of Messrs. Myers, Budge-row, Cheapside. It appeared to have commenced in the back room on the first tloor, in which was an immense quantity of paper; but before the flames were extinguished pletely gutted. The loss is considerable. The property
is insured to the extent of $5,000 \%$. The firemen had scarcely got this fire under before another broke out, in Love-lane, Cheapside. It commenced in the upper por-
tion of the warehouse, and fortunately in the course of half an hour the flames were subdued. It appears to have originated on the second floor, whici was tenanted by a Wholesale hosier ; the premises were insured.-On Sanda night a fire occured at the residence of Mrs. Maskell, 37, Gray's Inn-lane, which destroyed the entire furniture of the drawing-rooms, and considerably damaged the house It was with difficulty Mrs. Maskell was saved. The fire originated by the old lady falling with a candle against the drawing-room curtai shed on the premises of Mr. Moss, Hammersmith, which was not subdued before considerable damage had been done to the furniture and premises.- Another fire has taken place, The infases commenced in a cellar beneath the of laduers. The fire with ship-timber and slavings. The upper part of the house was saved.

Suicides.-A few days ago the body of a young man It appears that he was a clerk of Mr. Castles, of Alders-gate-street, and his name Alfred Croley. He did not attend at his employer's house on Friday, but in the morn ing of that day he left his wife and children in a dejected state of mind, bidding them "adien." He wrote a letter
to Mr. Castles, stating that defalcations would be traced in his accounts, and he could never face him again, and that he intended to put an end to his existence, and they wonld corpse in Hornsey Wood. On examining his left his family in indigent circumstances. - An inquest has been held at Camberwell on à female of prepossessing appearance, about twenty years of age. J. Elliot, a youth a female who observed "that it was a very muddy road." She went in the direction of the canal; a fer minutes afterwards he heard a splash in the water, accompanied by screams; he ran towards the canal and saw the female struggling in the water, but she soon disappeared. Drags
were obtained, when the body was got out and convered were obtained, when the body was got out and conveyed
to the King's Arms. A surgeon attended, and endeavoured to restore animation, but without success The body of the deceased was examined, but no marks of riolence were discovered. Verdict "Found drowned."
Inquests.-An inquest has taken place on Mr. W. last five or six months it seemed he had been labouring last five or six months it seemed he had been labouring
under an aberration of intellect, and had been under the charge of a keeper. On Saturday evening he was observed forcing himself through the squares of the winduw on the third floor of his house, the glass of which he had broken stantly turned over and fell, coming in contact with the balconies of the second and first floor, and then fell with great force on to the pavement in the street. Medical aid was procured, when it was found that his left ara and leg were broken and his head injured. He remained sense less until half-past nine on Sunday morning, when he ex died from the effects of injuries received by falling from a window, but whether accidentally or wilfully there was not evidence to show."-A nother inquest has been held at St . Pancras Workhouse to investigate the circumstances con nected with the death of Mr. Smith, who was found
drowned in the Regent's Canal. W. Grifiths said that he was going over the bridge which crosses the Regent's Canal, in the attercoon of Friday, an observed a man's hat floating on the water. He called
two man who were paning ithey cume and got decanged
out He appeared quite dead, and was carried to the
Yorl and Albany, but the landlord shat the doors. A york and Albany, but the landlord shat the doors. A that he was labouring under internal disease, which preyed upon his mind. In other matters he was perfectly rational. He saw deceased last alive about a quarter past two
on Friday at his residence, and advised him to take a walk. He believed he had never threatened to destroy himself He had no doubt he committed the act himself. His distress was great on the subject of his complaint, and that only. The jury returned a verdict of "Found dead." Norman, a gentleman of independent property. It ap. peared that on Sunday morning he got up in excellent plained of illness, and retired to his bed-room. A surgeon pas called in, but deceased died in an hour and a half. Verdict, "Natural death."

Attempted Mruder.-A tragical occurrence has taken place within the last few days at Mitcham. It appears mata young man named Potts, only married about 18 project of destroying his wife, and afterwards committing suicide. It was observed in the early part of last week,
that he appeared to be low-spirited and much exasperated that he appeared to be low-spirited and much exasperated
against his wife, and on Tuesday he left home, and did not return until 9 o'clock at night, when he went to the room Where his wife was sitting with her mother, and without saying a word fired a pistol at her, and the greater portion man who was passing, hearing her shrieks, seized Potts, and held him until the beadle secured him. it-I have murdered my wife, and I hope I shall be hung." The constable asked what he had done with the pistol, and he produced the one just discharged. the muzzle, and a razor. He asked Potts what he was going to do with the razor, and he replied that he intended to have destroyed himself with it, after he had killed his wife. A medical gentleman ascertained that the woman had received severe injury. On Thursday the prisoner vas committed to take histrial at the assizes.
Outrages. -Tuesday
Outrages.-Tuesday morning between 12 and 1 the folowing alarming occurrence took place at the residence of
C. Hammersley, Esq., Park-crescent. Mr. Hammersley, who was in bed, was awakened by a noise resembling the firing of a large piece of ordnance; he hastened below,
when he met the butler. Both of them proceeded to the rea, on entering which they found that five panes of glas in the pantry and one in the housekeeper's room were hattered to pieces; there was a strong sulphuric smell, of police discovered during the morning some portions of resin on the steps, which led to the conclusion that the explosion was from a maroon thrown down the area, and that, a fusee being attached toit, the perpetrator had plentz of time to get away previously to the explosion taking place.-A similar outrage was committed a few nights ago
at Hammersmith. A party in a cab drove throingh the place about two o'clock, crying "Fire." The police were running to the spot, when a loud explosion took place a
short distance from the Broadway. It was soon discovered short distance from the Broadway. It was soon discovere,
that some destructive instrument, or "infernal machine," had been attached to the house-door of Mr. Rayner, bookseller, which, having been ignited, had burst and rames as well as glass, and the windows of the first floor The alarm under which the inmates and neighbours were saffering was very great. Had the instrument not exploded antil the inmates or other persons had been drawn to the door by the cries of "Fire" the effects might have diately despatched in pursuit of the party in the cab, who ere considered the perpetrators of the outrage, but they ccoeded in effecting their escape.
Mysterious Disappearance--A fewdayssince, Mr.Tungate, a tailor, of St. George's in the East, applied to the Thames police for their assistance in tracing Mr. Morris, Katharine Docks, who has lately disappeared under exKatharine Docks, who has lately disappeared under ex-
traordinary circumstances. It appears that he had lodged with Mr. Tungate for several weeks, and had not long joined the Lucy Sharpe. He was formerly of cheerful disposition and steady habits. A few days since he received ntelligence that his sister had been carried off by a person Tho had taken her to London, where he had deserted her. This information affected Mr. Morris very much, and he became despondent and irregular in his habits, in conse quence of which he was dismissed from his situation. On the following effect:"Dear atter in his handwriting receive this I shall cease to exist. I hope the few clothes you have of mine will satisfy you as far as regards my of any erplanation of this rash act of mine. My last prayer is, God bless you and all of your family is the last wish of uuhappy Morris. If there is any inquiry made o me, you can make it known." A Thames police officer has
ascertained that Mr. Morris left the ship on Saturday afascertained that Mr. Morris left the ship on Saturd
ternoon, since which time he has not been heard of.
ourt of Common Council.- At the meeting of the Common Councii on Thursday, the Court entertained in a farourable manner a petition from several gentlemen in behalf
of the widows and children of Capt. Hewett and the crew of H.M.S. Fairy, which was recently lost, as our readers will recollect, in a survey of the North Sea. Different members of the Court spoke in favour of the high qualifications of Capt. Hewett, and of the loss sustained by the public service in consequence of his death. The petition baving
been referred to the finance committee, the thanks of the
Court were proposed to Admiral Sir R. Stopford, Com court were proposed to Admiral Sir R. Stopford, Com-
modore Napier, Sir Charles Smith, and the officers and men employed in the late war on the coast of Syria. It
was also proposed that the vote of thanks be accompanied by the present of a sword to each of the three commanders. It was then moved, that it was more in accordance with the spirit of the times, and more congenial to the to a presen, to give a peaceful testimonial, in preference Wellington to a renewal of war was adduced the Duke of this view. It was therefore moved as an amendment, that the thanks of the Corporation be presented to the Commanders in boxes of heart of oak, which was carried by a large majority

Metropolitan Improvements.-On Monday a Bill was presented to the House of Commons to enable Her Majesty's Commissioners of Woods and Forests to make a new street from Coventry-street, Piccadilly, to Long Acre; and also a new street from the east end of East Smithfield to Rosemary-lane; and for authorising advances to be made towards other improvements in the metropolis. The Bill was ordered to be referred to the standing orders conimittee, and to be printed. It may, therefore, be erpected that these desirable improvements, which involve so much of the convenience and comfort of two great districts, will be speedily carried into effect.
Mortality in the Metropolis.-It appears by the official table of mortality for the metropolis, showing the number of deaths, from all causes, registered in the week ending Saturday, the 13th February, 1841, that the total num-1838-9-40-males, $475 ;$; females, 451 .

Liverpool.-The loss of the emigrant ship, Governor Fenner, attended, as it has been, with a deplorable sacriin this The, completely engrosses pulic- On Fri day last that ill-fated ship, hound to New York, sailed from this port. having on board a crew of 18 and 107 passengers. About two o'clock on the morning of Saturday, being then about 20 miles north of Holybead, she came in contact with the Nottingham steamer, from Dublin, and so sudden and violent was the collision, that in less than a minute after she disappeared, carrying down with her every soul on board except the captain and chief mate. The night appears to have been very dark, so that although the captain of the Governor Fenner was enabled latter was not able to distinguish those of the Fenner. On this subject, however, there appears to be some discrepancy in the accounts given. The captain of the Governor Fenner asserts that lights were exhibited from his ship, and that he sent a boy to the mizen rigging to
display them. The mate, however, says that there were no lights on board the ship excepting that in the binnacle. It is also asserted by the captain and people on board the steamer that she bad no lights at her mast. At the time of the accident the captain seems to have been on deck, and, seeing the steamer on his weather bow, put his helm a-port, but almost at the same instant the ship struck the nel and wheel-house, knocked her bulwarks to pieces, and so completely shattered her machinery that she was immeFenuer crippled and rendered useless. The captain of the catching at a rope from the steamer, and the mate jumped into her from the fore-vard. The watel on deck, consisting of seven men, unfortunately ran aft, and, together with all the passengers, who were below in their berths, stantaneously. The steamer lowered a boat, but she was mmediately swamped alongside. The vessel is stated to have been old and crazy, though, it seems, a considerable ing was expended last summer for the purpose of repairing and strengthening her. The Nottingham, from the only by constantly plying the pamp that she was kept from sinking, until a steamer from Drogheda hove in sight and took her in tow. Had the weather been at all boisterous, it is supposed that the steamer would have shared the fate of the Governor Fenner.
Stockton.-The noble mansion of the Marquis of Londonderry, Wynyard-park, near this town, has been almost entirely consumed by fire. We have received the following account of the melancholy occurrence from a correspondent who writes from the spot:- The breke out in the staircase of the first discovered, abolal and staircase of the chapel, adjoining the Bimard-room and conservatory; an express was sent to Stockton gentlemen from the neighbouring villages. Every effor was tried to sabdue the fire, but withont effect, until it had destroyed the best parts of the house. In the conservatory nothing stands but the outside walls, and parts of plants, shimps of plants. There were many fue, orange an were much vala late Emperor apoleon, and had been brought to W ynyard at very great expense ; many of the stems, after the bark was burrst off, measured $24 \frac{1}{2}$ iful in circumference. Among others, was a very beausaid to be one of the finest in the north of England. The length of the conservatory was nearly is feet, the breadth more than 60 feet; the west end being semicircular. The yards, including the conservatory, as it was attached to the billiard-room. The wind was fortunately from the south or the whole building must bave been desurayed, as the
the fuginated at the north-west end. A great portion of certained how the fire originated.

Cheshire.-The body of Ann Simpson, the young wo man who so suddenly disappeared from Mr. Hewitt's week, has been discovered imbin marl pit close to the ferm imbedded in the mud of born infant was also found floating on the surface of the water. After a lengthened investigation into the of the stances attending the deaths of a verdict, - "Found drowned, but from what cause there

Worcester. mily of the Rev. J. Wpt has been made to poison the Hill, near this city. It seems that, on Friday, after the family had partaken of some soup, they were all seized with great pain and sickness. No suspicion of poison wad ntertained, but a medical man was sent for. In the in .rin. Webster had administered to each perso opions doses of salt and water; and the surgeon said been sacrifis the happiest results as to the children ; but apprehensions were entertained for Mrs. Webster and the servants, who had partaken more plentifully of the soup. The remain der was analysed, and the presence of arsenic detected to a great extent. It would seem that withia the last few monthe Mr. Webster has lost two valuable dogs, both of which are supposed to have been poisoned. It is there fore inferred that the last occurrence is a part of a deeply laid plot. A reward of 100\%, has been oflered for the discovery of the actual perpetrator; and an application will It is reported also that the water of a well on the pre mises has been found to be impregnated with arsenic Subsequent accounts state that all the parties who par-

## took of the soup are quite recovered.

Brightin.-On Sunday afternoon a fire broke out in the parish church at Preston; it was first discovered by a man phe ; immediately after flames appeared. He entere the charch, where the clergyman was officiating, but, fear of the consequences of alarming the congregation, te made his way to the clerk and communicated the fact when the cry of "The church is on fire" was mised on the outside, and the alarm became general. A number of persons had by this time assembled on the spot; some vorkmen got on the roof, under which it was ascertained the fire was raging, and having procured water from the wells and ponds adjacent, succeeded in keeping the flame It appears probable that the fire in the bursting of the flue of the stove, which goes ap throagh of roof of arched timber.- Last week we gave a report petitioning against the Poor-law Amendment Burl, which woul aw Commissioners into Brighton. It will be remem bered that the meeting failed of its object owing to the conduct of the Chartists, who persisted in introducing, an amendment to the petition, a prayer for universal sufo frage. In consequence of that interruption another vestry meeting, numerously attended, has taken place. Several resolutions were passed unanimously, expressing their determination to use every legal means to resist the introduction of the New Poor-law into this place, and agreeing to a petition to the House of Commons against the measure.-An occurrence has taken place in the Sussex County Hospital, whereby the life of a patient has been endangered. It appears that two men, named Craig and Clark, slept in the same room, and, from some unaccount ble cause, Clark suddenly attacked his compan with razor, attempting to cut his throat. Craig was enabled to prevent his doing so, and called for assistance, but before any arrived he received several wounds. him theeding
tendants running into the room, they found him tendants running into tachauted. Clark was kneeling on profusely and much exhausted. Clark was kneeling on that he was labouring under mental derangement, he was secured until the magistrates could be made acquainted with the transaction. Craig was so much injured that it was deemed necessary to have his depositions taken, in the event of a fatal result. It has been since ascertained that be is going
Plymouth.-During the late severe weather the crew of a mackerel-boat, while making for this harbour, came up rith a revenue-cutter galley, having on board seven mea, and who seemed resting on their oars. On examination maining ound that hive fey they were, however, attended , and recorered, when they were towed into harbour. It is said that they had been rowing along-shore, when a strong breeze sprang up and drove them out to sea
High Wycombe.-On Friday evening as Mr. W. Paine, of this place, was riding over to West 1 ycombe , two men
suddenly sprang from a hedge, anil attempted to seize the pony's head. The poay plancd forward and threw Mr Paine to the ground. The robbers then flung themselves on him, and rifled his puckets of a $5 l$. bauk-note and watch, ortunately overlouking hi- pucket-bowk, whels contained his pony commenced a pursuit, and with some friends traced the robbers some distance, but coaid not sacceed taking them.
Wordstock.-A few dars since an attempt was made to rob the post-office at this place. A man came to the office at half-past 11, and knocked at the door, which was opened by his head, formed into a loop, far the purpose of throwing
it over his neck, but it did not sueceed. The clerk immediately closed the door; the man and his accomplices ran
away, using thre at, that they had not done it then, but would another time. In 20 minutes they returned, an made another attempt, but in consequence of the family being aroused they escaped a second time. Suspicions
are entertained against certain individuals, who are in custodr.

Oakhamplon.-Last week a carrier between Barnstaple and this place put a fenale passenger down at a spot near Hathertcirh, together with a bunde and bandbox, which she had winher. She got over a stile to proceed home, gone far before he heard cries of murder, and returning, met a man coming orer the stile with a box and bundle such as he had dielivered to the woman. He ashed the man where he ;ot them, and rectived for a reply, "What odds is that to you :" "pon this he seized him, charging him with robbery, when he received a cut across his fingers from a knife. A scuffle ensued, when the carrier threw bim and broke his leg. He subsequently found the woman The murderer was handed aver to the proper authorities
Workson. - As the driver of the gis mail between Ches terfield and this town was returning to Chesterfield a few days ago, he was attacked by two men as he was ascending the hill on the south side of Troughbrook. One of them aimed a hlow at him, but it missed him and fell on the lamp, which was broken, and the light put out. The driver pulled out his pistols and threatened to fire, but they escaped through the hedge. On arriving at Brimington he sent for the constable, and informed him of what had taken place. While waiting there two men came up from the direction where the assault was commithed. The driver
directed the constable to apprehend them; but one of them, pulling out a pistol, swore he would shoot any man that dared to tonch him. They were not apprehended, but as they are known is is hoped that they will soon be brought to justice.
on his retarn on horseback from this on his retarn on horseback from this town was stopped by the bridle of his horse, and told him to stop. Capt. Paimer the bride of his horse, and told hima to stop. Capt. Paimer, which made him quit his hold; and this, with the sound of an approaching gig, induced them to make off, and they escaped, withont leaving any clue for their detection.
Sinelport. -An explosion of gas of a sericns nature has that a leak had taken place in the pipe which supplies the mill with gas; and a light having heen taken dowu to the lower story, where a quantity of gas had escapel, a violent explosion took place. The report was heand ant over the town, and nearly a mile beynd, and mach alarm was excited. The batling was nucla shaken ; nearly every window was hoken, and agreat deal of machinery disarranged.
No lives huve been host, nor any serious injury su-tained. Blackituve bern (1) Sunday a party of persons were assembled at the Bull's Head Inn, near Oldham, when two of the company. Nicholls and Buchley, wreed to wrestle. They commenced a contest, and aiter sturazling for a tew
minutes Buckley aileged that ticre was a fault, aul both gave up. He, however, desired another romd, to which Nicholl- agreed. and thes contested again; but shonly af-
terwerts, Buchley was orctoone, and left in the floor. In a few moments he was carrted to a sofa, wiien it was found that he hal beens serivusiy injured in the bavia part of his a part of the spine was bruken. The man declared that the transaction was accidental, and no blame was attached to Nicholls. He died on Sunday night. Nicholls in consequence has been apprehended. An inquest has been held, and a verdict returned of " Misadventure
reached Boughton-bill, on its way to London, the conchman stopped as usual to allow the guard to skid the wheel, when to his surprise he was nowhere to be found. The coachman on reaching Boughton returned on horseback
as far as Harbledown turnpike, to ascertain if any accideat had befallen him. He could, howerter, obtain no tidings of him, and he accordingly proceeded to Londoa. On Tuesday morning the guand was discovered lying in the road, two miles from Canterbury. He appeared to be suffering acutely, and was almost senseless. The party who medical assistance was procured, when it was found that he was mach injured, and he still lies in a precarious ntate. It is supposed that he fell backwards, and dropped

mumdiately lets the chruent, and the statement of the mon
senger was found to be correct, but the attempt at self-de-
struetion had not been effectual. struction had not been effectual. All that could be learned
from him on the subject was that he would tell his troubles to his brother when he saw him, but he gave no reason for committing the act. He has since gone on favourably, and is now pronounced out of danger
Wrexham-A few dayssiuce a couple went to the church that part where the minister calls upon the brideceroon to say after him, "I, A. B., take thee, C. D., to be my wedded wife," when the man, instead of repeating the words, said, "I wull, 1 lin have her." The minister re-
monstrated and told him to repeat the exact words after him. The man, however, persisted and said, "I wull, I'll have her." The clerk thinking he had some impediment in his speech, whispered to him to repeat the words after the
curate, but without effect. The man continued to reply as before, and the curate refused to proceed with the cere mony. The parties therefore left the church unmarried.
Raizvays. Railzoays.-The half-yearly meeting of proprietors of turday. The report of the directors gave a favourable view of the state and prospects of the company, and a diridend of 16. 10s. per share for the last half-year was declared, being at the rate of about six per cent. per annum. It was stated that the branch line to Gospor the directors to issue certain new shares was carried, and several directors were appointed in place of those who had retired. -The balf-yearly meeting of the Glasgow, Paisley and Ayr Railsay Company was held in Glasgow last week and a dividend of 12s. per share was declared. The report states, that siace the opening on the 12th August, no accident has happeased to any passenger, though sinc that period no less than 510,332 persons have been Saturday on the line of the Great Western Railway, but fortunately it was unattended with serions results. Jus as the train arrived at the centre of the Hanwell viaduct it came to a sudden stop, in consequence of a large piece of iron attached to the ergine getting entangled in one of the large centre wheels. After a stoppage of nearly an of irou from the wheel, but in consequence of some damage to the machinary, the engine would not move, the stan escaping, apparently foom the bettom of the boiler. Long before this time the down-train arrived on the viaduct and reconrse was had to the engine of the last train to push both the trams, and, after a delay of two hours, they arrived safely at Maideahead.-One of the labourers at fell don-tumel, on the London and Brightously injured He was immediately taken to the Eussex County Hospital Thursday the haif-yearly general meeting of the proprie tors of the Great Western Railway was held, fur the pur phise of receiving the report, and to elect cirectors. chairuan, in his alhe res, alluden to the Goverament mes in t.e extreine, and would fail in the ubject they intended to remety. From the report, it appearel that the reccipts during ti.e last half-year had been $1.33 .412 /$. 195 . sul.
the number of passengers conveved, 64,481 ; and, taking the aggregate mileage travelled ( 13,$8 ; 1,971$ ), a daily ave rage of lotit persons travelling the whole distance. The balance at the disposal of the proprietors was on the amounts reapectively called up was dechned. The expenditure during the half-sear has been $73,448 \%$. 11s. 11 d . leaving a balance of $80,504 l$. 7 s. 9 d . A resolution was then passed to the effect that the directors should apply to Parliament for power to decrease their present number. Brunel, the engineer in answer to questions, said that he expected the line would be opened on the lst of June the whole distance to Bristol, - On Monday, four labourars were filling some waggons with sand taken from abalk adjoining the mouth of the tampel at the Canterbury and Whitstable Railway, when the gand beneath them gave way. Three of tuem sueceeded in extricating themselves from their perilous situation, but the fourth in endeavouring to escape, fell forward, and the bank gave way and buried him alive. His companions immediately comasenced digging for the body, and, after an hour and a half, found the corpse, much muilated. No doubt can diantertained that the deceased expired almost imme diately after being buried in the sand.

## IRELAND.

Dublin.-It is atated that the liabilities of Aldorman Perrin, the particulars of whose flight have been alluded 100,000 prious Number, are variousiy estimated at from nearest the mark. - A meeting for the establiohwent of sceiety for the promotion and improsement of agriculturin Ireland has taken place. Owing to the seversty of the weather there was but a scanty attendance. His Grace The Duke of Leinster presided, and hanued to the Hon. quis of Kildore, Lord Career, H. Grattan, M.P, and the Provost of Trinity College, were amongst those present. Acomand to report to an adjourned meeting.-The Roman Cativite prests are said to bave issued orders from their altars, that every man must torthwith become a Repealer, that they fere to expect nothing further from the Parlisment, which is now tarned against them; and that they must look to be "galley-slaves" if they would not da iomatining for themselves.
Royal Dublim Sloaiety.-It appgers that thim sociots
has recently received a letter from the Lord Lieutename announcing that the Irish estimates had gone over, and
that the usual grant of 5,6001 . per annum to the society had been withdrawn
National Education.-Arch bishop MrHale has recontly tritten a letter to the clergy and faithful of the archdiocese of Tham, stating that they are to continue to maintain authority, without any connexion with the National Board or any other hody, as hitherto; and that the schools must not being one Protestant to fifty Catholics in the entire din cese; adding that it would be strange to subject them to a machinery devised fur the regulation of schools consisting of supposed proportions of the sectaries of various
creeds In reference to the introduction of agricultural creeds In reference to the introduction of agricultural
schools, the letter expresses disapprobation of the proposal, and calls upon the clergy to "6 beware of them as designing stratagem." It concludes by saying that 'schools for agriculture, painting, sculptare, music, and all the arts that improve or adorn life, should have every screens for concealing more necessary wants, not be made engines for religious seduction; and as for the agricultural projects now so much talked of, we must deplore, for the sake of the poor, that among many benerolent persons some others have appended their names to such requisitions who are said to have cast ont numbers of thei tenantry this last year on uninhabitable morasses, there to Qnly pledge for a flourishing state of agriculture is, to give to the tenantry such terms and such a tenure as will a once stimulate and reward their industry and toil."
Belfast. -The late frost was the severest that
arred since 1814. The river Bann was entirely frozen from the Cutts down to Coleraine, and several pestoms ook the ice for a footpath instead of the bridge.
Limerick.-As Mr. Taylor, jun., of Woodelife, in this county, was returning home from Kildimo, on Sunday nately without effect, from inside the wall of the mail-road, about two miles west of Askeaton; his horse shied at the flash, and went off in a gallop. On arriving at the Robertstown palice-station, the officer de Mr. Taylor to his residence. On the following morning search was made, and the ball was found in the cushion of the jaunting-car. Fortunately Mr. Taylor was sitting on
the opposite side whence the shot cane, and the footthe opposite side whence the shot canle, and the foot which the ball first entered, and then lodged in the hair of the cushion. So premeditated was the aim, that but for these circumstances he would most certainly have been attempt is, that Mr. Taylor stopped for a short time tha day at the house of Mr. Sheehy who was lately attacked and he was probably mistaken for some of the function aries expecterl to attend an investigation into that outrage.

## COTLAND.

Falinburgh.-Tie anti-patronage petition has been sen numbier of si inntures to the non-intrusion petition of last ycar, and oise of the most numerously-signed petitions ever sent frum thas town.
Cilusyon:- - $\mathrm{s} \cdot \mathrm{mewhat} \mathrm{extraordinary} \mathrm{case} \mathrm{of} \mathrm{theft} \mathrm{oc-}$
curred in this cits last week. The mail-bag was transmitted as usulal from Glasgow to the post-office at Spring-bank The hig. con'sining the letters, was placed on a table during the absence of the pest-mistress, hut on her return it was missing, nor could it be found anywhere that day, and the whole village was placed in cousternation, for each inhabitant immediately adopted the notion that the bas might contain a commanication for himself, perbaps accompanied by a remittance, although he had no such afpectations previously. Next morning, however, shredsp the sty of a sow adjoining, and it was plain that the animal had gorged almost everything but the brass plate affixed to the letter-bag. Some spoke of immediate slaughter, and others recommended a powerful emetic; but as the som oy the oustr borne a peaceable character, it was rosich hesd-quarters ; and accordingly by request of the postoffice, the matter has been taken up by the sherifif. Whether or not the sow has heen apyrehended is not stated, but it is believed the mode in which it came into posses sion of the post-bag is a mystery, and the investigation in Glasgow some time since. A man was going along the Trongate in charge of a couple of where he was taking them, replied, "That's just what Wrould like to ken; they cam' by the Dumfrith coach, btt the brutes hae eaten
Thare to take them

Eigin.-It is said that Canseron has acknowledged bimself guilty of the murder of Mr. Tulioch; he is reported but merely to it was ant ins intention to masable him frim visiting the female to whom he was about to be married. Finding, however, that Tulloch was likely to get him better of him, he struck the fatal blow, and then dragged would be carried into the spey

The Weather. - Letters from the Highiands state that thie xeather there is as mild as could be desired for the season. The coaches are running reguidrly, though the roads wer a few days since heavy, trom masses of melted saow. Nad fears of agriculturists, with respect to their potatoes apers that a single field or pit has been damaged

Inverary. - A distressing necident occurred here last
week. Dr. Anderson, a highly-esteemed practitioner in this town, had occasion to be on the quay, and had been or some time conversing it mpeared of wind had blown him off the queared and his cloak had got round him so firmly as to prevent his making any attempt save bimself.
Leith.-A narow escape from drowning took place hereun Saturday afternoon. Six young gentlemen, students unaccustomed to rowing, allowed it to drift considerably below the Tower. When trying to make the harbour against a strong wind and tide, the boat struck against the buoy, and dau aged her bottons so much that she would
bave filled and sunk, had not one of them thrust his coat into the broken plank, and the oth dish, thrown out the greater part of the water, by which means, after great exertion, they reached the harbour, completely exhausted.

## THEATRICALS.

Covent Garden.-On Thursday a new farce was produced called The Captain of the Guard. Though it displays no great superiority of writing, the incidents are The scene is laid in Brussels, and tarns on the love ad entures of the Captain, who was personated by Mr. C Mathews. It $\pi$.
unanimous applause
Haymarket.-A new drama in two acts, adapted from the French, was bronght out on Thursday, under the title o The King's Barber. It is founded on an incident in the
reign of Alphonso, King of Arragon; but in spite of being well got up and well played, it was not much appreciated and was received by a crowded house with an equal mixture of disapprobation and applause

## fliscellancou*.

Colowel Alesander MrLood-It may interest some of our readers to be inforned that the British officer arrested by the American authorities, on a charge of having been concerned in the burning of Panbride, in the county of Forfarshire, having been born in the "Gallow Law" there forty years ago.
Alexander M"Leod, the gentleman in question, is the eldest of a family of eight, all of whom, together with thei, parents, emigrated, at different periods, to Upper Canada, focus of the outbreak which took place there three years join his brother, who had gone out some time previously, about 18 miles from Kingston. Not very many years after his arrival he was appointed under-sheriff of the dis trict of Niagara, and, in the breaking out of the insurrec-
tion, was actively engaged in quelling the disturbances. From his official station, and having been for some years a soldier in the Guards, where he attained the rank of ser geant, he was selected to head the Royalists, at a time ingly appointed colonel of volunteors. Aecording to all accomnts, Forfarshire owns the parentage of a more than ordinary quota of those who took part in the Canadian belonged to this county
of the most lovely spots on the southern bank of the Seine, a recent traveller in Brittany observed frequently, brown cakes, ranged in rows against the cottage walls to dry in the sun, and was for a long time unable to conjecture what they might be, and what their destination, till his curiosity was at length satisfied by the information that they were the refuse of the apple from which cider calkes and dried for fuel.-I $\boldsymbol{I} . \boldsymbol{R}$.
The Anxiety of Animals for their Kind in Danger.The inhabitants of Ireland say that the cows of Korry are the prettiest, the sweetest, and the kindest little creatares in all the world. They pay very well, and thongh rather mild at first, a little skittish-and coquettish, too, like the hacies of a diferent them," says the relator of this anecdote, "I always choose them by the head and the horn. I pick out those I consider to have good countenances, as most people do ladies whick I bought; they became in a short time very great pets. I generally go out in the morning, before breakfast, anil they always minet me at the gate of their pasture, use in particuiar, a quaint, crumply-horned little lass, used to puther nose into my pooket, like a dog, to feel for Her breath was so sweet, and her eyes so placid, that was almost ever teropted to be of the humour of the man Who loved to kiss his cow. Nuw, there happened to be in this field a swing, and my dear kind Kerry lass, who family often swin curious, seeing the jounger part of my a swing too herself. Be this as it may, one day, about the gate neareat the loud lowing of the cows was heard at within, hearing the unusmal and continued noise, went ont to see, what wis the matter. As soon as he came to the gate, he saw two of the dear Kerry cows very uneacy, but grounds. As he went, the cows seemed anxiously following,
when he saw my pet, the third pretty Kerry, entangled in the rope of the swing, and caught by her head and horns, There she must have been soon strangled, if not relieved. The monent my brother extricated ber, the lowing of the erer after attempted the humours of the swing."

## Indantotor

suinming.-The natives of the Frieudly Islands swim constantly upon the fore part of the body, with the neck entirely out of the water, and make very short strokes with the left hand, which is hept in front, while great speed is given by the right hand, which is carried to the
thigh, on the same side, at every stroke. The boty is inclined at the same time to the left, which increases the rapidity with which it cuts the water.- $I . R$.
The Leech and Lord Erskine.-The late Lord Erskine had an extraordinary penchant to have about him several favourite animals, to whom he had been much attached, and concerning whom all his acquaintance related a number of anecdotes. Ho had a favourite dog which he used to bring, when he was at the bar, to all his consultations ; another favourite dog, which at the time he was Lord boys who were about to kill him, under pretence of his being mad; a favourite goose which followed him whenever he walked about his grounds o favourite mekaw ; and other dumb favourites without number. But above all, he had two favourite leeches; he had been blooded by them in the autamn, when dangerously ill at Portsmouth they had saved his life, as he supposed, and he brought
them with him to town, and had ever since kept them in a glass; he gave them every day fresh water, and formed an apparent friendship with them. He said he was sure they botiknew him, and were even gratefal to him. He had given them different names, Hame and Cine, of the two leeehes, Lord Erskine asserted, were like those of the surgeons, quite different. After a good deal of conversation one day with a friend goout them, he went himself and brought them out of his library, and placed them in a glass upon the table, and descanted at large upon them he impossible, however, without the vivacity, the tones, the details, and the gestures of Lord Erskine, to give an Birds which imitate the Human - I. R.
Benl) Porest in the Sal (or of birds which ave tamed by the natives, ane various kinds singing or imituating the buman voice, and the nests they singing or imitating the human voice, and the nests they
form are considered the properiy of the Raja. These irds are the Maynen, Gracula religiose of Latham. Amriles chela; Madna Kajla, two Parakeets nearly allied to the Psittacus gingianus of Latham; Tetiya, Psitlaca by Latham ; Sugi, Psiltaeus gingianus of Latham: Latkern, a small short-tailed Parakeet, nearly allied to the Psithucus galgulus. The right of taking the young birds from the the trees, when the birds are first fledged. These people eep the biras for two months, and then deliver one bal dealers and disperse them through Bengal.
The Fire-вaler.-The Chakor, or Chiukoar, (according to Colonel Kirkpatrick,) is a bird well known to Europeans Partridge, (Perdir ruft) and derives ite $\mathbb{E}$ ab Partridge, (Perdix rufa, and cerives its English name
from its reputed power of swallowing fire. The fast, acconding to the people of Nepal, is, that in the season of condug to the people of Nepal, is, that in the season of pepper, aftar eating two or three cappoles of which, it wil eat a red coal if offered to it. Whether this be true or not
is a matter of doubt; but it is certain that some birds will peck at sparks of fire, where no capsicum or C'ayenne pepper has been given to them.-1. .n.
The Altachment of Birds to Mr:n.-The Gander at the Mill.-A curate in the county of Kildare, in Ireland, some time ago, related the following anecdote of his neighbour, a worthy, good sort of man, who carried on the cottonprinting business, and who although onee in very prosperous circumstances, became after, in consequence of a change in the times, very poor:-" In his mill-yard was a gander, Whieh had been there 40 years: he was the finest and the argest bird of his kind I ever saw," said the curate, "his watchfulness was excessive; no dog could equal him in viginace, or pe more fierce in attaeking strangers and at his command would fir at any man or beast, and with his bill, wings, and feet, he could hart severely. Whenever my neighbour paid me a visit, the gander aivays accompanied him, and I ;was liberal of oats, having one or two geese in my yard; he would besides come up and give me a gratuitons call before his mastar rose in the morning, but neither the outs nor the blandishments of the feathered fair ones could keep him long away, and he soon solemnly stalked back to his proper station at the mill. Year after year I perfected my friendship with Taby the gander, and certainly had a share in his esteem, when one winter, after being confined to the house by a severe cold, 1 inquired is passing through the mill-yard for my friend, mill, who had been about the place as 1 ir as Toby kim-- self, 'Toby's gone.'- 'Gone where ? '- Oh, he's dead.' mas dinner.'- 'Eat him?', I thini I have been seldom in my life more astonished and shoeked; positirely I would have given a fat cow to be eaten, conld 1 have saved puon Toby; but so it was. Upon inquiry I found that the poor gentleman had not the means to buy his Christmas dinner,
he was to give his people a meat-dinner, poor Toby fell The Goose, the Hen, and the Ducklings.-At the flour-mills of Tuberakeena, near Clonmel, in possession of the late Mr. Nex bolt, there was a gonse, which, by some accident, was left solitary, without mite or offipring,
gander or geslings. Now it happened, as is common, gander or goslings. Now it happened, as is common,
that the muller's wife had set a number of duck's egga he ducklings, which in due time were hatched, and of course the duckings, as they come forth, ran with natural in-
stinct to the water, and the hen was fright; her maternity on the one hand urging her a sad low brood, and her fear of her own safety, on the other disposing her to keep on dry land. In the midst of he anxiety, her fears, and alarms, up sailed the roose and with a noisy gabble, which being interpreted meant she swam up and down stream with the ducklings; just as a good-natured friend will sometimes promenade with a country cousin, and acting as chaperan, of kind cicerome, will take her under her wing to the church or the concert, and show her off to the beaur, so did the goose, and when the ducklings were tired with their aquatic excursion, she consigned them again to the care of the hen. The next morning down came again the ducklings to the pond, and there was th goose waiting for them, and there stood the hen too, in he greatest flustratioa. On the present oecasion, wo are bot at inte that he goose invited the hen, olserving her mathna troable, but this is the fact, that she beipg near the shore, on jumped the hen to her back, and there sat the duckings, swimining before her in the water, and the goose and the hen fowne hide the pond. And this was not a solitary event, for day after day the hen was seen enthroned on the bapk of the goese, contentackings sailing close by their side, in perfer good humour tore excursion in perfect to vitness visitors, until the ducklings eoming to jeare of diseretion, they required neither the aid of the goose nor the guardian ship of the proxy-mother, the hen, to warn them from dangers of all tinds. Indagator.

Altachment of a Goose to her Master.-The fol owing has been related with full assurance of fact:-A goose in the farm-yard of a gentleman was observed to take a very partieular liking to her owner. This attach ment was so uncommon and so marked, that all person abont the house and neighbourhood took notice of it, and ive nicknanes, at axpressing their sense of the weak understanding of th men, called him "Goosry," Alas! for his admirer, the goose s true love did not yet run smooth; for her maste hearing of the ridicule cast upon him, in order to abate he ondness, insisted upon her being locked up in the poultryard. Shortly after he went to the adjoining town to tend the Petty Sessions, and in the middle of his busians, what does be feel but something wonderfully warm and soft rubbing against his leg, and looking down, to his great astonishment and annoyance, he sees his beloped goose with her neck protruded, quivering her half-expanded wimg with unutterable fondness and delight loing up to
 much for him and his patience, and the goud manners of laughter, it urgod him to a deed he should have been sshamed of, for, twisting the thong of his whin about the neck of his dear friend, he swung her pound and round and again, till he supposed her dead, and then cast her on an adjoining dunghill. Not very long after this, Mr. Goosey, the owner, was seized with a very severe iliness, which brought him to the verge of the grave, and one day hen slowly recovering, being allowed to recline in the window fir air, the first object he saw was his old friead the Goose sitting on the grass opposite, and looking with intense anxiety at him. The effect on him was appaliag; "What," says he, "is this bird come back to life, way?" "On fin sin of destroying it, to be haunted in this so hersho the por, said has daughter, don't speak must know that ever since your illness, it has sat there opposite your chamber window, and it scarcely ever has aken a morsel of food." Passion, prejudice, the fear of idioule, all gave way before a sense of gratitude for this analteroble attachment. The poor bird was immediately taken into favour again, treated benceforth with great kindness, and thenceforth Goose and Goosey were bound The Allachment fhe seal to Mo - In regard to the Seal, there ar tent to which this cocile creature may be rendered obedient to the commands of its master. An exaaple of great attachment is related by Mrederick Cavier, of a seal, which readily obeged a number of orders given to it by its master, of whom it appeaplder a down on the right or left side; and perform numerous other trieks. Pliny geys, "Accipiunt disciplinam," or, in other words, they learn whatever is taught them. When spokea to, they turn their countenances to the speaker with a favourable aspect, and with a tremulous voice flead from their body and preservel, ever atter retains the property of exhibiting the period of the ebbing of the sea; on whime tit henumes rugged, and the hairs or bristles on it trect. (Nat. Hist. lib. ix.) Low says, "Seals have natural curiosity : if peopie be passing is boats, they ad follow them for a tong time together. if they happen to be speaking laved, they seem to monder what may be
the matter. The church of Hoy, in Orkney, is situated near a small sandy bay, much frequented by these crea-
tures a and it has been observed that when the bell has tures; and it has been observed that when the bell has
rung for divine service, all the seals within hearing swam directly for the shore, and Kept looking about them, as if surprised rather than frightened, and in like manner continued to wonder as long as the bell was rung."

Rouls' Count.-Stocker
u. Aurbin.-Lord Langdale gave judgment in this cause, which has an important hearng on the
subject of wills. The te-tator, Jamus stricker, devised his real and personal estatesto tru-teees upon trust, to convert into mopar
and arter payment of his debts, to appropriate 1,0000 for the
fit of plaintiff, his son. By a codicil, the testator, after stating
 gacy given to him by his will should be nuil and
was uotatitestd and was therefor operatir ooly in repard
personal property; an anattested will or codicil, by the theu ex isting law, beint huil auth roid, su far as concerns real estates.
His lordship, held that the real and personal estates constituted one fund, and were by the will to be applied in proportion to their respective amounts in paymeat of the legacy, and that by the co.
dicil that purtion of the levacy was reviked which was to come out of tie pproman estate, alud he directed a reference to the
 and he directed the costs of all parties to be paid out of the estate.
 suit without consent. Mr. Rindersley moted to strike out the tiffs in the suit. Lord langtale said the motion was, that a
married woman, who was with other plaintiff joined as a plaintiaf by her nexat triend, should have her name struck ont of the an sher nest tremid had a rifht to nake her a plaintiff without her
consent, aul if that were so, did she now diseent? A great rariconsent, aud if that were so, did she now dis.sent? A great rariteetermine any question in the cause, out whether it appeared suit. The ruic was clear t the next friend of an infant might
proseute a cause azainst the infant's consent, subject to the diprosecute a cause arainst the infant's consent, subject to the di-
rection of the Court, and to a liability for costs; but no person assuming to be the next frieud of a married woman could treat however, perfectly clear that the lady had given instructions for
the present application. The notion must stand over wnili he the present application. The motion must stand over metil he
was better satisfied that she desined her name to be struck out of the record. she was but just come of age, and he must see her,
and lnow from her whether she gave her consent to the appli-
Vice-Canverllog's Covit.-Conaghiv. Smith mend the Fith-
 him partnar with a full-length portrait of her Majesty, which
plaiuliff allegret had been painted by their order, and which Mr.
 port of the application stated that the Fishmongers' Company ypRoss's miniature, the couyright of wwhich Messrs. Colnaghi
claimed to nave purchaved from that artist ; they stated that the company (flereit theni nene humidred guineas for the picture, and
that Mr. Smuth undertcok to paint it for oio guineas, and that khey supplied him with Ross's original sketeh. guineas, and that 2g reenient was smade, the defendant declared he had no umoterto the Fishmongers' Comptny. This case had been before the finjumction alrendy obtained; bat ne the plainting had not had time to meet tire affidavits of defendants, it was permitted to he again mentioned. The afididavits in opposition to the mation totally
denied any agreement either hetween Mr. Smith and Messrs. Colmaghi, or hetween the Fishmongers' Company and the plain-
 jesty to hane up in fielr hall, and when it was sugrested that a company wi-hed to , btain hier Majesty's gracious couseut to sit to
the artist. Mr. Boddington and other members of the company the artist. Mr. Boddingtoon and other mermbers of the company their wishes, ana obtained, through the kindness of his Ruyal
Highness, the favour they anurht. Mr. Ross's portrait of the Queen, which was painted for the Baruness Lehzen, was lent to
Mr. Strith, together with her Majesty's jewels, robes, ant dress, and days were appointed for Mr. Smith to wait on her Majesty at Windsor, where the sititivgs took place. When Colnaghi and be the most taithful resemblance of her extant, they, at an inter. copy which they said womld be quite goorl enough for the company. Mr. Betwingten asserted that the intuence of the company
would never have been used to obtain the high favour of the Cliancellor tare fudement refurin and Mr. Jacob, who appeared fur the lefendants, to answer the
application. His honour said this application must be discharged Whit but at least they had decivived themselves, Atter going over bargain had been established by the plaintiffs, either between the company or Mr . Smith. For some reason, which did not appear, acreerment, but which was totally anssubstmantinted by the letters
 him aud the Fishmongers ; and although there had been a meeting,
wetweenthe a aintifts and the parties previously to the 15 th of Joly, yet, after that (ixh, anl unc,pent traticking hetween them ceased, parties in the matter, as fally appeared by the amdavits of differ-

 ion saw no reason to alter his decision. In heing left to their
clection the plaintifs were only in the same condition as all other
