ticks, the worst of all, are unavoidable whenever you go
among bushes, and stick to you in crowds, filling your fies, and other obnoxious insects spiders, gallineps, horseor sorely hurt you. Hateful snakes are met, and if poisonous are very dangerous; some do not warn you of
like the rattle-snakes. You meet rough or mand to vex you, and bind paths to perplex you, rocks, monntains, and steep ascents. You may often lose your way, and
must always have a compass with you as I had. You may he amed in climbing rocks for plants, or break your limbs creeks, rivers, and swamps. In deep fords or in swift may be overtaken by a storm : the trees fall around yon.
the thuntri roars and strikes before your the winds may antey gou; the fire of he wen or of men sets fire
to the grass or forest, and you may be surrounded by it unless you fly for your life." Now for the
other side of the picture. "The pleasures of a botanical exploration fully compensate for these miseries and dangers, else no one would be a travelling botanist, nor apend his time and money in vain. Many fair days inspires delight and ease, you breathe the pure air of the country, every rill and brook offers a draught of limpid fluid. O hat delight to meet with a spring, after a thirsty sound sleep at night after a lung day" walk: what spoth Every step taken into the fields, groves, and hills, appear to afford new enjoyments. Tandscapes and plants jointly again ; there a novelty, a rare plant, perhaps a new one greets your view; you hasten to pluck it, examine it, ad mire, and put it in your book. Then you walk on thinking feel an exultation, you are a conqueror, yon have made conquest over Nature, you are going to add a new object or a page to science. To these botanical pleasures may be added the anticipation of the future names, places, uses, history, \&ce of the plants yon discover. For the winter or season of rest, are reserved the sedentary pleasures of comparing, studying, naming, describing, and publishing. On Cells of a Particular
Dr. Schleiden.-In the Meletemata Botanica of Schott and Endlicher, they attribute to Monstera of Adanson (Dracontium pertusum, Mill.) raphidophorous ovaries. No being acquainted with any of the Aracere in which the ovaries offered a quantity of vessels of raphides, I was bited anything remarkable on this point that might be mentioned in its generic character. On examining attentively the ovary of the plant, I found that the so-called raphides were not inorganic bodies. The carpellary leaf of the genus Monstera is traversed with cells of the liber of a very singular structure. These cells are in length nearl 0.1 to 0.13 Paris inches, and their thickness from 0.004 to 0.0042 Paris inches. Their sides are formed of a num orifices of which are flattened on the sides. In the inte rior of these cells of the liber, which are filled with a granular substance of gam, …., are cytoblasts developed and on these cytoblasts rery thin cells are formed. Thes here and there break through the pores. Many of thes cells have lateral branches, varying in size; and it appears to me very probable that these branches are forme by the walls of the cells, the cavities of which are placed quence of the absorption of the diaphragm. It has been however, impossible for me to follow completely the history of their development. Similar formations are fount in the bark and pith of Rhizophora Mangle. - Micro scopic Journal. [Cells of this kind occur in other plant:-
They are sbundant in the fruit of Gnetum Gnemon, which is lined with them in the form of tine spicula.]

The Truffe.-There have been many attempts to pro pagate the Truffe, but nearly all have faited. In the Bulletin de la sicciété diAsriculrure du Département à \(l^{\prime}\) Hérault several experiments in planting Truttes are mentioned, which promise a successfinl result. The earth prepared in the fullowing manner: take out the soil to is inches in depth, finely siit it, fill up the trench wis some of the sifted soil to about 6 in ., on it place the smal Truffes, and cover them" with about with water, an worked to the consistence of mortar, and in that state placed on the Truffles. This operation is performed November. The Truffles which furnish the seed or trumets ought to be kept till they begin to rot; they nust then be spread out by pressing them betimeen the fngurs, ame substance, or the seed, mast be taken ont. It is quite certain that there are germis in Truftes, and M. Turpin brs foun some developed in ripe Truffl's: Lie calls then Trufters and thinks them spores which answer to the organs out fecundation in plants which have nis visible flowers. Dhile how comes it that these spores, which are
 near, are always separated from tweh wher, and they do not take the extet place of those which have atcans pect a bluish fly, as sapposed by some, of playing a part racquainted :-or thme that the spring, which repronduces the lly, apreals the seeus of the Truftes in the neighhourioo. If this radicular network, bearing germs, existg in 'Srutles,

 requisite to know whether there are not other causes, be-
sides the takinz down of the walls, for thr reappearance of the Truttles. It is untwos to trabse vurseltio with suit positions, as we know nothing certain of this remarkable fact: wexnow, however, hate the natare of some soils, or
 is unk nown. Wichave collected stae remorkaile frete from the Trathe hunters of Temainin. Thes say that Trumes are emanmony fomm under nut-trees, eserereen
 not a branch mat he cut from the tree, or the Trufties mill not reappear for fine ur ix years atter. When large trees, the Truflos semoke firther off; and if the lopping is repeated, that disappear alt,zether. This coincidenee between the presence of the Trutte when the trees are not cut, and its disappuarance when they are pruned, will lead
one day to wome facts resperting their propagation. I have witnessed an animal trained for truffe-hunting pass through an alley bordered witi pruned white oaks, without manifesting any dessre to scratch up the earth, not-
withatanding that befure the trees were pruned he had withatanding that before the trees were pruned he had
scratcheal up many Truftles. The pigs used for hunting them transinit the faculty through generations, and a trufthc-hunter of Vaucluse refused 140 franes for a sow reputed to be the best in the prosince. This has been previously observed, for Platina, who lived in the 15th centiry, savs "of inat nothing efluals the instinct of the The presence of Truilles is made hnown to the hunter When the mand, driwn in an irrenstible force, digi up

We learn that the Council have directed the reports on experiments monthly presented to the Garden Committee by the under－gardeners to be henceforward published in these Proceedings，if they appear sufficiently interesting Accordingly，at the Garden Committee held Juls 6， 1940 it was reported by Mr．Thompson that Madia sativa，a new oil plant，had been sown in the month of September 1839，as directed in the instructions receised with it from Germany，but that all the plants bad perished during the following winter；those plants，however，which had bee raised from a sowing in the middle of March 1840 with stood slight spring frosts and were in flower in the be－ ginning of June．
July 6．－Read，a report by Mr．Gordon upon acclimatis－ ing plants．From the numerous experiments upon this sub－ ject in the garden，it appears－1．That plants which it is intended to acclimatise should never be subjected to artificia heat during the winter tuat precedes their being planted out ；that if cbtaghed from seeds，as little heat as possible should be emplofed in raising them；and that starved or stunted plants are more likely to succeed than such a have been forecd into a rapid and luxuriant growth． 2．That the plants should not be committed to the ope ground earlier than the end of May ；that the svil shoul be poor，dry，and thorouglity drained；that if against wall，the border should be protected through the entir minter by a roof of hurdles thatched with straw，and pro－ jecting about three feet．A thermoneter placed unde such a covering did not，during the tree montis of Eebru ary，March，and April，stand more than two or thre风egrees bigher than one freely exposed；from which appears that it is the dryness of the situation，and not of thatched hurdles so useful to border protected

Read，the results of experiments by Mr．G．Gordon upon raising plants from seed．He states that all seeds from North America and Califurnia should be sown in the autuma as soon as ripe；to defer the sowing them till the spring may in all cases be disadrantageous，ex cepting the case of annuals；that Mexican and Chilian seeds succeed best if sown in spring；that with regard to Europe，and the north of India，trees and shrubs should be sown in the autumn，and annuals or perennials in the spring；that all seeds，of whacerer kind，should be sown in dry soil and not watered till they begin to vegetate；in the case of old or sickly seeds，to water them at the time of sowing is to ensure their destriction h，rotting ；that shading is to be preferred to watering ；and that one of the best constructions for the purpose，is a pit glazed with double sashes like one in the Society＇s garden：finally： that all sechings should be potted or transglanted as soon as pussible，except bulbs．
Dhodorn the great beauty of the Rhododeadrons this year，notwithstanding the wet and gloomy summer of 1839 ，was，in bis opinton，attributable
to their fruit haring been all destroyed in l 1839 ，imme－ to their fruit haring
Allg．1．－The following commuxnication was reat for the Hon，and Rev．Wim．Herbert．
＂I wish to take this opportunity of communicating to the Society a plan I have adopted for cultivating Orchida
ceous plants, which I think will be found deserving notice. I took a strong post, or atem of a young tree
barked, of a suitable height; and I had pieces of barked barked, of a suitable height; and I had pieces of barked
wood, such as are used for making rustic benches, cut into various lengths and nailed on, crossing each other in dif ferent directions, rith the knees or elbors pointing outwards, so that the wholc had something the appearance of a Roman trophy; moss was then tied on where it was
thought requisute, and bits of peat inserted in some of the thought requinte, and bits of peat inserted in some
supports, and the plants nailed or tied on with wir
simply placed illangles formed by the pieces of trausierse
wood. The plants in front throve exceedingly well, but those with their back to the wall were found to grow weak and perish. I then devised with my gardener, Mr. execution, to fix two iron pegs or pivots into the two ends of the posts, of which the lower one is let into a hole of strong wire fastened either under a rafter or secured etween two. The result is, that the whole of each trophy with its plants turns round at the slightest touch. The ardener moves them a little every time he comes into he house, so that no plant is either constantly exposed to facility is given to examine the plants and to clean them. Each of these machines bears a marvellous number of species with ease, and the greater part of my collec
now spinning upon them much to my satisfaction."

Aug. 18.-A paper on producing Sea-kale during the season without the aid of dang or pots, was read, from Sturges Bourne, F.H.S. The author stated that he employed a subterranean pit, easily accessible in all weathers, and requiring no' attention in regulating its temperature, hecanse the natural arerare warme air is considerably higher than that of our variable climate in winter. A pit? feet long by 8 feet wide and 6 high, would be large enough for a large family. Planting may be commenced in the beginning of November and continued until March. No water is ever given to the plants.

The Madras New Almanac for 1841. 8vo
Ir is not often in the pages of an Almanac that we look for original information. Here, howeve, in a volume as large as a London Directory, containing all sorts of information of an. interest entirely local, there is a great deal of excelient matter relating to Indian Gardening. It is few extracts will show in what manner the subject is treated.
The first article is called "Hints on the Theory and Practice of Gardening; what relates to the effect of heat on plants is more especially interesting.
en.- Mie exter of high temperature, the greatest enemy the horticulturist has to encounter in this country, requires to be more fully considered. The extremes of destruction of ritality, has not been accurately ascertained: but it is known, some seeds may be boiled and still regetate, and some plants are found to endure the most intense cold know one the temperature of the soil of his bulb garden at the Cape, \(159^{\circ}\) Falir. between 1 and 2 p.M. and found a seedling fir, of the year's planting, quite healthy, while a thermometer
buried 4in. deep in contact with it, marked one day ( 31.1 of buried till. deep in contact rith it, marked one day ( 31 of
Dec.) successively, betweert the hours of \(11 \frac{1}{2}\) A.M. and 3 p.M. \(-148.2^{\circ}-149.5^{\circ}-149.8^{\circ}-150.8^{\circ}\) and \(140^{\circ}\). In India, so far as we hase been able to ascertain, no similar set of observations has been made, but there is reason to infer,
from known data, that when the subject is more attended to in India, the heat of the soil, during our hot weather, will be found much liigher than either of these observations indicate. We hnow, for example, that we never can get Cabbages, Canhiftewers, Knoll-kells, de. to Hower in plants, as an article of trale, is constantly practised. Dr. Coulter mentions, that in wuth America, he hat olserved the temperature as ligh as 1401 , but the circumstances in
which the thermometer wis placed is not mentioned, which Which the thermometer wis placed is not mentioned, whith Leaves room to suspect the experiment wis imperfectly
conducted, as Mr . Fuggo, of Edinburgh, succeeded in obtaining in July, at that place, with a large thermometer, having the ball copered with black wool, an indication of \(150{ }^{\circ}\). In India, it is probable a thermometer so prepared, or the ball simply blackened by being ameared over mith a mixture of guin and lamp-black, and suspended
folly exposed to the sun"s rays, would, at some seasons, indicate is a com little short of \(200^{\circ}\). At this neason (December) it rises to \(130^{\circ}\). In repeating such observations it is desirable that instrument freely the air; another laving it simply in contact with the ground, to show to what extent the surface accumalates heat from absorption of the sun's rays; and the third set the depth to whichi ronts usually exteni. In the second set the thermometer thund not be placed in herbage, as Mr. Figest found another thermonseter similarly prepared but reating on hermine inds ate muly \(119 \cdots\). These obsorhortevaltiral dasturs mill be milu. eal to repeat them and poblish the resulte. There is nu want of re isters of the thermometer in India, lme not a single olbeersation, neither on the lemperature of the sal, nor on the intensity
of the sua's rave we reecivel of the san's rays as reseived on the liamemed hath at the
thermometer, do we lifd inywhere remaded. though of such vast importance to the horticulturist. The first effect of heat on a plant, which has for some time had vegeta-
tion checked by exposure to cold, is to expand the air
contained in its cells; its fluids become thinner, the exmences, the effect of which is to bring into play the ab sorbing power of the root and thus set the whole ma different plauts can sustain is very difierent; thise of tropical countries require a temperature that wo thd hit from cold, even in the warnest weather, if expmeed to the open air. When the temperature is pein. m. 1 ty a ohis
same time moist, its tissues grow faster than the vital forces of the plant are capable of solidifying them, its excitabi state of debility is brought
watery, with thin leaves, and with no disposition to produce flowers ; as light lowering of temperature, in this enfeebled state, affects them more than in other circumstances, and the abstraction of light rapidly dest-oys them Butation is greater than can be made good by the roots, the secretions are elaborated faster than the parts to receive them can be formed, the old leaves dry, and the young ones perish as fast as they are formed. From these statements it appears, that high temperature with moisture
leads to the production of leaves and branches only, while leads to the production of leares and branches only, While with dryness, within certain limits, it is favourable to the to increase their excitability; that is, it renders them more susceptible of being acted on by the stimaulus of heat. Heat by its stimulus diminishes excitability, and if long continued would exhaust it altogether. Nature provides and heat of the day and night. During the day evary part of the plant is strongly excited, and its powers of evaporation and assimilation most energetic. As esening advances, and the stimulus of light and heat is withdrawn the excitement subsides and reaches its minimum during urnal seasons of action and repose. During the day their system is exhausted of fluid by exhalation of aqueous fluid, and during the night, when perspiration ceases, the wast is made good through absorption by the roots. The al teration of seasons seems intended to produce the like
effects in a more extended manner. This is very evident effects in a more extended manner. This is very evident vegetation for months together, and renders the plant so excitable that the rise of a few degrees of temperature in spring at once excites active vegetation. It is much less on between the tropics, but here also it is observable, as nearly total arrest of verctation in most, during some part of the hot senson. Thas wonderinl simininty of ctiectis
in living beings, originating in the action of opronit: estremes of the same cause heat), has not receivel the atten. tion which it seems to merit from philwopiters, and no iodeed, any esplanation can be given, it is indispensably at our ourctions on the proportion uiuaily borne to each other, by the temperatures of the earth and great importance of heat in the economy of plants, this knowledse is, for the purposes of gardening, of the great est collsequence. From obsertations mall in Europe, has been attempted to deduce the relative temperatures of the air and earth within the tropics. Thus it is aseertained that in Eugland the mean teraperature of the eart is between two and three degrees higher than that of the India. This inference is cunfirmed be one set of observ tions in New Grenada, the menn temperature of the air of the er the warmest monta is abouse , during summer. According to this ratio, the temperature of the earth at Madras, during the m maths of Novenber December, January, Fi" ruary, and Mareh, shom. hee be Juls, one foot below the surfice, has been found to be onis very injurious influence on plants fittel for the biser temperature, by over-atinulating and exhausting their excitabhity, enfeebling their prowers, and thereby inc apacitatiay them adequately to perform the functions of arsimination by which their food is converted into suitable nourishment. Is it posaible in any way no far to obviate these injurious of colde excessive heat as to enable us to cultvate plans ing quee in the wropical horticultarist, but camnot, ite believe, in the present state of our knowledge receive a satisfactory answer. If, with the view of affording plants of colder countries a lower temperature, we cultivate them ander shade, we deprive them of light, the agent by the and of which the vital forces of vegetation are evabied to decompose the water and carbonic acid, by which they ary tity of cermiorbon in a solid state formed. She quan the quantity of lichit wincio stikes the leaf, and the health : aes in preportion to the guantity devimonown the be citin.
 aived by thy the whelp ratat, therovg deprning it of te hat by tha place of the wil only a riew which sermes fintlos a, en
 which redued the temperature \(30^{\circ}\). For this reason it seems probathe we shaul succed better in raining earl
crops, by shading the soil and keeping it cool, while by liberal watering, we furnish a constant supply of moisture
both for eraporation from the soil and for free perspiraThe correciicus of this inference was in some measure piscl list ecason in the Mad:as Hurticultural Society's Girlen, the filust Eset-rooz of the season being raised in to hare the efat ieches thick with saud, which seemed ous evaporation, and preserving the soil below always cool and moist, though comparatively sparingly watered. On the vigour and luxuriance of Melon plants in the hottest Thilet the coptous erapotation from their large leaves by keeping them cool, counteracts the heat of the solar rays were planted with the Sweet Potatoe, the procumbent stems of which rapidly covered the soil as with a carpet; from that time they continued to grow luxuriantly through the rently from the same cause, as the soil under them was kept moist, and foud sereral degrees cooler than that staded by trees. Ihe effect of high temperature on plant is to stimulate and exhaust its excitability, and enIeeble its powers of assimilation : the primary object in means. At the present season (Decemuer 1340.) obsershine, shat during fine clear weather with brisht sun air and that the thernometer, suspended in the open temperatare of about 700 , and at 2 2.an. from \(120^{\circ}\) to \(13 \ln ^{\circ}\), (ar that hish degree it is very unsteady, or a range face of the earth, it is prubable, exceeds ertn the high Inulication. Tine tenuperature of the air fluctuates rapidy and it is probable that in immediate contact with a healthy plant the terperature never exceeds sil) '. Not so the soil It absertbs lieat and parts with it very slowly, thereby maintaining a constant high temperature about the roots, keeping up night and day the stimulus and excitement by which the plant is enfeebled. The object of our recom mendation is to prevent this accumulation of heat sbont the roots, and allors plants to enjoy a more perfect period of rest during the night.
The effects of moisture on the soil are also considered great judgment. Among other things it is observed
While treating of moisture it may be well to notice, that in seed-owing the soll should be merely noist, just and amonathem by the mere force of attraction. In this country, therefore, pots or boxes in which seeds are sown placed in well-sheltered situations, and covered, to preven as latuih as pos-i, ie ti.e rapid evaporation caused by our warin and 'ryt..ntle. Irregular variations of heat, light and notitare, br whid the process of germination is some times accelerated, sometimes retarded, should be particularly gurried agaust. as such irregularities are apt to de nates in this cuuntry, the temperature is generally higher than what is considered most admantageous in Europe, and probaliy leads to a luss of many, which either do no germinate or the young plants soon after die. An instance of is him was lately cocmmunicated to us. Two parcels of Mifnonette seed, one tirect from Europe, the other buta via Bangalure, were sumn the the same time. They farourablr, but the former all died Uf a fow isys ater they appeared above ground ; the latter shat survise, and are risurnus heaithy plants. We and the fin actimatig either an opysite cuaciasion. Letture, Turnip, and Carrot seed, were fyen hims, wore swa outh . which is much below that of Madras. The failure at Ban-

 bar to our trying. With this view we would recommend,
- the most probable method of attaining success, that S the most probable method of attaining success, that
some of the best Cabbages, Knoll-kolls, \&cc, be transplanted into pots filled with soil compose
 and ior tim. w.eat with liquid manure, prepared the operation of transplanting. These should then he allowed to rest through the hot season, merely giving wates
euough to keep them alive until October. They might then be planted ont and liberally watered for a few time a flower-stalk, when their sepplies ought to be diminishedt, ripened in the conree of the nan! sensen It seems probable that many failures, even in Bangalore, must he sabmitted to, before we obtain good seed; but the object is
well worth the trouble, and it seems even probable that if The bring the subject to the notice of European gardeners,
they conld levd us very important assistance by obtaining eeed from the warmer countries of Europe, and growing a
few plants raised from them in their hothouses, until they few plants raised from them in their hothouses, until they English gardener thene plants can be mude to produce have been the amount of previous discouragement, would probably resume onr experiments with renewed energy, There is also a good 'Gardeners' Calendar for India, and the Strawberry, the Peach, the Mango, the Cotton, and several other plants.

Popular Cyclopadia of Natural Science-Vegetable Physioloyy. Published by the Society for the Pramo-
tion of Popular Instraction. London: Tanner and Co. 8ro.
Tue publishers of this book inform us that it is the first of a series of Essays upon Natural Science; the reasons for prodacing which are thus stated:-
The omission of the stady of Natural Science from the comme of instruction generally followed in this country, intellectunl discipline and the most important means of Almighty has placed within our reach. This study, rightly pursued, has: : is object to enable as to read with unof which are maly and horrly uncoliad lefore us; and which "is written" t. the the :my ressive words of Lord Bacon in the omly longuase rinica \(1.2 s\) wene forth to all To every one do " the thesis. ns ilectare the glory of fiout," Whilst "the earti" "her" inows itwelf " full of lit gondness: hent nost of af to i,m wion has learned to interthe reasun wheresith he the heen endowed, to the discemint contromption of the glorions rowk by whith he is surronnted, to trice II:s pwer, wistom, and luse in every action.
As a mesns of intellectual disuliphe. the study of Natural seremee is pertiops secmat to none. Habits of accureasoninz, ard of somund judtracd bservation, of cautious love of Truth, are cultivated by it. Moreover, it has the advantage of interesting the prupil much more than the will tend to increase his desire for the atteinment of valuable knowledge of any description. Furthen, at the present day, when scemer is e nstant:y furnishing some new so much to our comfort, and in their tum contribute in sarious moodes to the expansion of the intellect, the practical benefit of a general acqumintance with its rrinejp les is sufficiently evident. And whatever portion may be destiof its own, in furnishing subjects for the healthy have uses tion of the thoughts, ami ofjects of pursuit as rational and interesting relaxation.

解 school as formall: as th. Lnamazes, or geography and politeai history. Suouid this ex retation he realised, the at the narrow education of their forefathers, and wonder how they conld dispense with a knowledge of the uses and properties of the natural objecta that surround them The first step, and a great step it is, has been taken by

 growth and reproduction of plants seem to take place with so slight an introduction of solid matter into their
system, that it cannot be compwendel wit? examination how they derive the means of uprearing the
gigantic masses of wood and foliage whicl mans of them gigantic masses of wood and foliage which mans of them any solid matter is ordinarily taken up by the roots, except certain mineral ingredients which most plants require, do they obtain the materials of the firm wood of their stems, roots, and branches,-of the soft but still firm generate in their flowering system, -and of the sarions hasd substances which they produce in their different tissues? This question will now be answered.
doubt, that neither plants nor animals have the crenting or producing matter which did not before exist. Livine beings are entirely dependent upon the supplies they obtain from without, for the nainteuance and en-
largewent of their own structures;--they greatly alter the form and properties of the elements they take in :-b they can create nothing. It is easy to say whence ever particle of which a living body consists is obtained by it
for, by placing it in a variety of circumstances, serving the changes in its mode of life which these pro animal can determine the influence of each. Thus, an ment, as for instance sugar or gum ; and it is found that, article may be it has not the power of supporting life f., any length of time by itself, unless it contain (nhich an single article of food except milk does) all the substances required by the animal for the right maintenance of its structure. So, also, on the food of Plants we may experi-
ment, by placing them in different soils, and in different kinds of air, and supplying them with variable quantities of water; until we have discovered what is absolutely necessary to their growth,-what favours it,-and what is superfluous or injurious.
another place, speaking of Gum, the author says:descending sap to all products, which are carried by the of a similar nature contained in the blood of animals, the principal is Gum. This is found in the bark and wood of all plants; and is present in such abundance in several,
 bark also wor 1 climntes cliunates unly that the formation of this product is so abundant as to make the collection of it desirable. Various mondifications of this principle exist in uifferent
vegetables; but they may all be regarded as combinations of pure sum with uther substances. (rum Arabic is unc of its simplent forms: this is really broumht from A rabia, where it is annually collected in the Acacia forests, at the end of Nivember. A large quantity is imported into this country, on account of its extensire use in calico-printing and other arts. It is a highly nutritious substance to man and animals; and it forms an important article of diet in Arabia and Senegal. Those who are engaged in colleeting it live for a time almost entirely upon it ; and six ounces have proved sufficient to support an adult for 24 hours It is on record that a caravan crossing the Desert, thei provisions being exhausted, preserved themestlves from famine by eating the Gum Arabic which furmed part the merchandise they were transporting. But no animaly could continue long to subsist on this ingredient alone since it contains no nitrogen, which is still more essential to their support than to that of plants.
Of Starch, that curious product, which so extensivel contributes to the nutrition both of man and plants the author speaks at some length. We have not room for any thing more than his introductory observations upon the subject :-
ive is not unfrequentiy necessary that a store of nutritive matter, which may be required at some future time situation that it shall be out of the general current of the circulation, aud at the same time easily brought into it In animals, the fat constitutes a store of this hind. The superfluous nutiment introduced into their system is converted into this substance; Hinch, besites other \(\mathrm{p}^{\text {ur }}\)
poses that when from any cance there is a failare of the sup,iy on Thich the anin.al uswaily depends. In some animats this production of fat takes place at regular periods; thus alke little food daring that season, become very plamp in the autumn, and are observed to be very lean soon after they have emerged from their winter retreat.

Now the Starch, which is found so abundantly in many plants, and in some part of almost every one, serves the same purpose as fat. It is oum, slightly altered, and enclosed, as it were, in a series of minute bags, which fill the cells of cellular tissue and receive their form. Starch, granules ; each of which, when examinned with the micro granules ; each of which, when examined with the microsubstance, the interior ones being nearly fluid like dissolved gum, and those on the outside being almost as firm as memarame. When put into cold water, they retain their stracture, as the outside layer is not acted on by that
ittie sac bursts, and its contents are set free and dissolved
in the water ; and this is why starch, once dissolved water, can never l.a restored to its orivinal form." in hot The lencth to which we have allowed then cutracte
 of this book, who evidently understands his culject, anf We cannot, however, in justice to ourselve
onsideration of this work without a word to dismiss the isherg. These gentlemen assign as their reason for bringing out the series, of which this is the first, that "the better thomentary treatises on Nataral science are little much behind the present state of science, and are, for are most part, but inaccurate copies from onc another executed anechanical spirit," \&c. \&c. Now we should be glad to wohks, and what else any elementary book can be? Ther will also, perhaps, inform us why an abridgment of a work must nefessarily be much betimit the present state of science? 'Jhat, we presmap, will depeml upen the character of the larger work itself. Considering that this ley's Introuluction to Butany, the grenter pait of the解 hare quoted would lave been much better omitted.

Eight were sentenced monthes imprisona, ent, and the two others were acquitted. Ifu-tafi Fey, to whose exertions the Porte is considered to be mainly indebted for the pacification of the island, had :a'led to join Talir Pasha, in Candia.
Eavpt. 一 Our letters from the Levant bring intelligence fom liexandria to the "th ult., and from Beyrout to the Enth May. The fmmer convey the important information paladyprodatmed on the 10th ult.- The question of the tribute, it i- said. has been settled by a separate firman; and some mected to be made in it. The Pacha has resulsed to cuin no more money for Egypt, about to declare current at low fixed rates in Egypt, with the intention, it was supposed, of obtaining them for the payment of his tribute, and profiting by the great difference of exchange, when calculated in the depreciated tratic lial come to nothing, and matters were carried on monr folunwif than ever. The Fellahs were accused of senerii.g the ir harresis from the Pacha's collectors, and great cruelties were practised to bring them to light (ve.j)t tor account of the Pacha, on pain of death. The duce into the Pacha's stores, and their borats applied, withat serant, to roavey the grain required by the Governhent in Aicxandia. The plague had diminished to seven a.us di:1y in the latier city, but had risen again in Cairo, varying from eighty-five to one hundred per day. In
Rise!ta twontr-ive cascs were the daily number, and at Damie: a a regiment of infantry had been nearly exterminated.
Livefo Silici- By the arriral at Livempool, on Tuesdar, of the . le olict steamship, from Halifax, in the paprs t.) the lith ult. inclusive. They are chiefly filled with ilie rrocecings and documents of Congress. The state of the relations between the Tnited States and Great Fritain hid ! en bronsht under the consideration of the henate by Mr. Buchanan, who, in proposing to refer that fart of the Presdent s message that related to foreign himars to the emmittee which had the charge of them mg to the capture and confagration of the Caroline, and wig to the capture and confagration of the Caroline, and
the points arising out of the occurrence. Mr. Buchanan did not, he said, think the condition of the I-nited States wold bes? rery alirming in the event of a war. America wation culd atick her without suffering as much from war as she would. He did not, however, deem that then कृ: any rok of wit: but on the event of its coming, he aisned the law of nations to be so construed as to put
figh: in the eyes of t:e world. The debite ended Affairs. The President had submitted his plan for the parintmest of "a fisen agent," which Congress would India ind Cuna.-The Overland Mail Ponboy Mry 2urd. anired on Monday at Marseilles The intells sen e erought by it, states that Commodure Si ant it E: A.ner Bu, othat Caleuta on the sth of May
 mento to (Al.a; the Quern and Mudagasar steamers were undergoing repairs at Calcutta: the India was preparng and two steam-frigates and two iron steawers wer were to form at Bombay. the 94th and sith regiment consist of 2,500 European troops and a body of natives -In Scinde the regotiations With Nusteer Khan had
completely failed, and a rising throughout the country was expected to be the result; in the Punjanb, affair semained withont much alteration. The arm their sower ppen revolt, and Shere Sing compietely in their power The Persians had evacuated Ghorian Cul Stoduched still a prisoner in the hands of the King of Bokhara. Aden. The Punjaub is represented to be in a very disturbed state but there appears to be no probability of the British entering it. The accounts thence are considered as very nuch exaggerated, in order to influence the public mind
in favour of that invasion. General Ventura had arrired in favour of that invasion. Creneted to proceed to Bom bay. The policy of Lord Auckland is described as being hom decidedly pacific. The alarm created here about the invasion of Affghanistan by the Schah has subsided, both from the known inability of Persia to make any successful aggression, as well as the willingness of its Monarch to satisfy England.-Two small forts have been taken in Bundelkund; the siege of one of them, Chirgong, appears cive lone accounts of the offir, and the Indian papers Accounts receired at Bombar state that the Dutch were xtending their conquests on the west coast of Sumatia, having possession of Pulo Nias, and about to occupy the port of Turmoon. Great financial contusion prevailed in Batavia, the result of the misconduct of the Java Bank. The cholera was raging at Bombay, but the mortality dues not appear to have leen very alarming, and was almost entirely confined to the natives.- There has been much discussion as to the causes of the late mortality among the troops at Chusan, which seems generally attributed to mismanagement. The dates from China are not later than those contained in the previous despatches; but it is stated that the accumulation of goods outside Canton is immense, and that they were expected to be thrown upon the market. The papers contain the proclamation merchants, without distinction, are henceforward foreign mitted to trade with Whampoa, and promising that no hindrance or obstruction shall be made to commerce. The "Canton Register" states that the English ships of war have rexioved below the city of Canton about one mile and a half; that the British flag was hauled down in Canton on the evening of the 26th March, the guard remored, and the flag has never since been hoisted. The further demands of the local government are stated to be that all the English ships of war are to leave the river, the fort and island of North Wangtung to be evacuated and surrendered to the Chinese, before any trade as usual can be recommenced

City:Election.-On Monday and Tuesday the City presenter an appearance sush as, it is said, has 1 been witnessed since the days of Mr. Wilkes. Monday being the Guildhall was crowded, at an early hour, by an im mense number of persons, anzious to witness the procendmense number of persons, anzious to witness the procetu-
ings. The gallery was filled with ladies. So great, howings. The gallery was filled with ladies. So great, howsereral candidates and other persons who addressed the meeting could not be heard, and were not eren audible, it is said, to persons situate within a few yards of them. In conzequence, however, of the regulations made by the sheriffs, less annoyance was experienced than might have been expected in so great an assemblage of persons of all classes. On Tuesday, the day fixed for the election, the excitement that prevailed throughout the Clity was still greater; business appeared to be entirely put a stop to, ad, in the after part of the day more particularly,
 ing the greatest anxiety to hear the resut of ele of the which, however, in consequence of the closeness of the contest, and the discrepant accounts of the several committees, could not be accurately ascertained, to the disap pointment of great numbers, and was not officially an nounced until the following day. The result will be seen in another part of our naper, under Election Movements. Altempt to Destroy the Pichures in the Royah Acatemy Exhetition.-A wanton outrage, whic! has created much excitement, has been discovered at the Royal Academy Exhibition. Upon the porters of the institution ging round the rooms, as it is their custom at dusk, tain that all the visitors had left, their attention was at tracted by the appearance of dust apon the picture, by Mr. Simpson, of "Mary Queen of Scots going hawning. by some cne having scratched out the eyes of every hyure portrayed upor the canrass. This discovery created an and a careful inty of the otier pictures the me attempis and a careful ins ection was made, when the sana atemp: at destruetion rere found apparent upon the Inahan feal sants of Mr. M‘Innes, and apon a "Portrait if a Baro-

Hant the Slipper," in illustration of the liear u Wakefield, was also very weriously injured. The picture by Mr. M'Clise, Mr. Simpson, and Mr. M'Innes, are not however, beyond repair; but that of Mr. Corbett, being upon panel, is more seriously injured, and, it is feared, cannot be restored. A rail, it is said, is at once to be placed around each room, to prevent, in future, the too near sp-
proach of visitors. A subsequent attempt, of a similar nature, was made on Tuesday to damage the works of art
in the Gallery of British Artists, in Suffolk-street. The picture thus damaged is No. 597 in the catalogue, and is marhed as "sold." It is in illustration of "The Witch of Datchworth," from the text of Strutt's Queen Hoo
Hall, and is painted by Mr. T. Clater. The eyes of the younger figures are scraped out as if by the forcible thrusting of the finger-nail into the soft paint. A high reward has been offered for the detection of the offender, who, it
is sapposed, may liave been stimulated to commit this is snpposed, may liave been stimu.
DIntrage vy some thoughtiess wage
Murdh Shatuell.-A murde
Shurder at Shadwell.-A murder has been committed at Shadweil, which has produced great excitement at the east end of the town, as showing that great insecurity ex-
ists both for life and property, in the district where the ists both for life and property, in the district where the
outrage took place. The deceased, Mr. Thomas Briggs, who mas sisty years of age, had resided for many yeais in Norfulk-street, Commercial-road, and rias the owner of many houses in the neighbourhood of St. George's in the
\(\mathrm{E}:\) :st. The persons who committed the outrage mhich caused his death were two women, called Long and C) vington. It appears that the mother of Long had been tenant of deceased, who, a few months ago, distrained upua her for rent after she had removed from his house, The daughter had frequently declared that she would be revenged, and on Friday evening she and Covington asjuries that he died a few minutes afterwards. An inquest has been held on the body, and after a protracted inquiry that lasted two davs, the jury returned a verdict of "Wilfal murder "against the prisoners, who have consequently been committed to Newgate to take their trial.
Riol at Kensington.-During Saturday evening, and throughout the whole of Sunday, the neighbourhood of High-street, Kensington, was a scene of puch excitement and tumult, in consequence of the recurrence of one of those riots which appear to have been formerly frequent amongst the lower orders of Irish, who, in large numbers, inhabit Jennings's-buildings. A very serious affray appears to have taken place, during which many were Barry, was stabbed with a sharp instrument in the chest, and lies in St. George's Hospital without the slightest hopes of surviving. The police have not yet succeeded in apprebending the party who intlicted the wound. His name, it appears, is Smith, and Barry, before being remured to the hospital stated, that seeing him attack another man, whose neck wis also slightly scratched by
the same instrument, he went between them to part them when Smith instantly rushed at him and stabbed him. Artillery Practice at Wooluich.-The Select Com mittee, arpointed for the purpose, met yesterday morn ing, in the Woolwich Marshes, to proceed with the erpe
riments on the new and peculiarly destructive projectile called percussion sheils. The experiments had been dis continued from the inefficient state of the o!d practice hutt. One of larger dimensions and stronger materials had been just completed, and three guns, with platforms were selected. The candidates were-Mr. Napier, Mr. H. Reece, and Mr. Wilkinson. This projectile, it seems, was considered by the F'rench committee so fatal, that they reported, that if it could be brought into use, no ressel could staind two shots. No one was admitted to witness the experiments, except by an order from the
Master-General of the Ordnance. Master-General of the Ordnance.
The President Steam.
The President Steam-Ship. - The New York papers on investigation which had taken place in that citr at a public meeting, convened by the British Consul, for the purpose of inquiring into the condition of the steam-ship President, when she last put to sea from that port-what cargo she had, how her coal was stowed, whether there was any deficiency of spars, yards, \&cc., whether or not she was strained by previous storms, and every particular connected with her. The pilot who took the Presillent to sea on this occasion was not present; but a gentleman attended the meeting in his behalf, to represent and speak for him. A statement was then entered into by the agent of the Steam Navigation Company as to the condition of the P'resulent at the time of her leaving, from which it appeared, that her exact draught of water was 17 feet 9 inches abaft, and 17 feet 6 inches forward; so that she was not out of trim more than an inch. She had between 40 and 50 chaldrons, or about 55 to 60 tons' weight, of coal in her between decks, besides having all her coal boxes
and burkers cloself filled. This coal was nlaced in the and bunkers closely filled. This coal was placed in the
between deks.imnediately over the opinings of the coal between deris, immediately orer the openings of the coan because hac calculated, that as the \(\boldsymbol{P}_{r}\) esidienat consumed about 39 this of coal in 24 hours, a! the coal between decks, weuld be cos,sumed by the timee be had been 30 hours at vea. But it was thoug'it that even if that granaffectul the ressel io any way but very slightly. These Was 1.0 car:) ?twed in any of hat coal boxes; the cara, syace was disthict and separate; she could have takno buard. Ste thai fromion nore cargo than she had on (a),out to tuns weight), and altogether her weizht of casco on hir 1 at trip tas not over 3 (t) tons in weight, and she

 anil her hull pronounced to be as safe and sound as itever bad i,een. The gentleman who apyeared for the pilot stated, that when the pilot left, Capt. Roverts ohserved that he felt satisfied of making a quick passage, that his
vessel was in good order, he had abuadance of fuel, \&c.,
and that, with regard to her trim, she was only about on the ship Orpheus stated, that he left New York in com pany with the President, on the morning of the 11.h down on the erening of the 12th: that when he list sam her she was rising oa the top of a tremennus set. an.l appeared to be pitching heavily and labouring greatly. She Ocean, about midway between the Nantucket Shoal and the St. George's Bank, just where the Gulf Stream strikes the St. George's Bank, Just where the Gulf Stream strikes
soundings, and where the waves rise almost and down, and as bigh as a four or five story house: th she then must have been shipping seas heersily an! \(f:-t\) that probably these large bodies of water wopled thro" into the engine-room or fire-room, and cxtinguisted
fires, in which case the steamer would have been compa ratively helpless; that the storm was terrific all that night ; that next morning the wind shifted suddenly from hat the..., raising a still more tremendows sea, and of the 13 th ; and that it is his biclief that she dim not survise that gale, but foundered with all perished before sundown on the 13th,
bours after he last sar her, and most probably in rific uight of the 12 th of March. In this opinion severa nautical gentlemen present seemed to caincule.
New Chain Pier at Battersea.-The moming popers the inkabitants of this populous neighbourhooul. in ahnut to be effected, and that Earl Syencer. the lond of the manor, is about to erect th. pier neme the chureh, on
plan of the one erected by Lord Cad. ुan at Cuelses.
Suicide.-On Saturdy French, occupying a house in Holland-place, Bristonrond, precipitated himself from the second-floor window of his residence. Mr. French ras upwards of sists jears labouring under serere illness. He had been confined to his bed for some days, and was left alone for a few mo ments in the afternoon of Saturday, when, it appearl,
rose from his bed, and, with the assistance of his walkingstick, succeeded in gaining the window of his bed-roorn, when he raised the sash and threw himself into the garden beneath. Some persons who witnessed the occurrente having hastened to the spot, he was conveyed into the has been held on the body, afd a verdict returned of

seten persons. On examining deceased, it was found that lis right les and left thigh were fracturel, and also the hones uf the loins. He died shortly after. Terdict, "Accom liente., with a request that the coroner should examinicate with the proper authorities, that they might cident was attributable, with a view to prevent a similar catastrophe. - An inquest has been held at the residence of Mr. Fowler, Wilson-street, Gray's Inn-road, on Miss Scot, aged 18. It appeared that deceased was the niece
of M . Fowler, who is an indipendent gentleman, and was a rowar waman of finus labits abd greatly belused. On Yhursday morning, Mr. Fowler, who was accustomed to
take an early walk, went out as asual. He returned home about seven o'clock, when, not finding breakfast prepared, he called deceased. Upon her not answering, he went in search of her, and at length found her in the back
yard lying upon the ground, apparently lifeless. A medical gentleman attended, who pronounced life to be extinct, and who discovered that her skull was fractured. It is the sreon't fluor, as it was open, while there was an indentation on the ground where she had fallen. It is supposed she was looking out of the window and overbalanced herself. No cause could be assigned for any attempt on before the melancholy occurrence. Verdict, "Found dead.
t.cident.- On Friday the 25th, an explosion, similar to decharge of cannon, was heard to proceed from the manafictery of Messrs. Elee and Co., cartridge and per-
cussion cap manufacturers, Old Bond-street. A numiber of persons proceeded to the premises, when they found that great destruction had taken place, and that Mr. Eley, being discovered very much mutilated on the floor of the counting-bouse. An inquest has been held, when Mr. C. Eley, of Cheshunt, deposed that deceased was in the habit of a doubt dece sed was stirring the comprition when it exploded. A sulicitor stated, on behalf of the proprictor of tibl matter being used by deceased; that bad the fact bec: Lnuwn to the neighbours, deceased would have been indicted. Deceased's servant stated, that the whole of tion was made had been more ci hus c.rrited anay and injured, and all the windows destroyed. After other evi-
dence bad been heard, the jury returaed a verdict of "Acci-

Fic:- - in Tresday rioming, a fre was discorcred on

Ionday on the ocraing Monday, on the occasion of the nomination of the Parlanceltary candidates. So serious was it considered at are said to have been dangerously wounded, and the win dows of several houses were broken, but no lives were lost. Knaresborough.- A murder was committed in this own on the morning of Saturday last. Hen Friday three Charles Gill, went, it is supposed from previous arrangeHart, the an intention to rob and murder him the party locked the door, while Burlinson committed the murder with a hammer. The men then decamped aking with them the hammer and some silver. It appears, owever, they had not had time thoroughly to pluader the house. They took the Harrogate-road, and threw the hammer into the Nidd, near to the Highbridge, but finally agreed to return into the town, where they were appre
lended shortly afterwards and admitted their guilt. An incuest was buth on the budy the following afternoon, When the jury returned a verdict of "Wilful murder" against John Burlinson as principal, and
Bedford. -The local papers state that the thunder-storm Friday the 18th was severely felt in this town and neigh burhood. Two cottages at Sandy, occupied by Mr. Balls, a market-gardener and his son, took fire, being struck by the lightning, and were totally consumed. So rapid wer tages could be got out.
Brighton.-A few days since a serions accident hapened to Col. Grey, late of the Scots Greys, now quartered in this town. It appears that he was driving in a gig, ac companied by his groom, from the barracks in the Lewe road, and on arriving opposite St. Peter's Charch the reins got under the horse's tail, which commenced plunging violently, when the groom jumped out to seize it, and rrange the harness. The Colonel also leaped out with the reins in his hands, when they got entangled with his feet, and the horse at the same moment started off, and dragsed him between 30 and 40 yards, dashing him against a lamp-post. Several persons ran to his assistance, and arried him intothe Richmond Hotel, where onexamination was fonend that his right leg was broken in two places, and that he had received serious internal injuries. He was fterwards removed to the Clab-house in this town, where he still remains in a very precarions state. The groom es caped unhurt. The horse parsued his course through the crowded streets, and was eventually stopped, without doing further mischief, at the Queen's Park, nearly two miles from the spot whence he started.
Cue m. f furd. - On Saturday the daughters of Sir J. Tyrrell, of Boreham-house, were on their way home in a phaeton with a pair of horses, when one of the animals having got its leg over the bar, they both began to kick peril ing, and ran away. A young man observing the aiter being drawn a considerable distance, succeeded in soping the amimals near Springfield Lyons, without an other injury, than that sustained by the carrage and horses hich is considerable
Cambridge.-On Wednesday night the Union, stage coach, on its journey to London frous Lynn, was upse near this town, being filled with passengers inside and out The coachman received a compound fracture of one of his legs, and two ladies, passengers, also sustained such serious injuries, that surgical assistance was necessary Another coach being procured, the remaining passengers, after a delay of a few hours, proceeded on their journey "me ferw having sustained slight injuries.
Merihyr.-The strike against the butchers, which we eferred to in a previops number, still continues in the Weish Iron Works. More than 40,060 petsons, it is said are now abstaining from fresh meat, and have pledged themselves to do so till the price is lowered. The Monnouthshire colliers have also joined the labourers at th iron works. Large quantities of bacon, on which they now subsist, are brought every week from Bristol, Bridgewater and Cardiganshire, and meet with a ready sale at 9d. to 10d. per 1 lb .
Brampton.-Last week, as a gentleman in the neighhourhood of this place was examining an old desk which tad stood in an outbuilding for a long time, he found a small bag, which he thought was a shot-bag, but on taking rolled 500 guineas.
Wolverhampton.-The papers of this town give a long Monint of a murder which has been committed at Wetley Moor, on a poor man upwards of sixty years of age, of
the name of Hewitt. The body was discovered some few days since in a stone-pit on the moor, about 200 yards from the road-side. There were seceral severe wound upon different parts of the head, apparently inflicted with
some blunt instrument. On examining the spot, a stone was found concealed amongst a heap of other stones, few yards from the pit, much stained with blood, and which it is concluded was the weapon used. Money ap pears to have been the object of the murderer, it being him, and one of his trowsers' pockets waterigns about away. The last time deceased was seen alive fis saturcay morning. When he was sitting on tiet newor hear
 upun a maak named Simpson eircumstan es suspicion fel apun a maas named Simpsen, and kee was consequently quprehended on sunday morning at Bucknall. An in-
quest on the body has been beld, at which it was proved
that deceased possessed seventeen or eighteen sovereigns that Simpson had made particular inquiries respecting his money.; was seeing going towards the old man shortly before he was found murdered; and had spent several sovereigns soon after the murder. An old purse belong ing to deceased was found in his possession, and on his waistcoat were spots of blood. The jury, before they gave in their verdict, wished to hear what the prisoner had
to say. The prisoner in reply stated that the last time he saw deceased was on Friday night, and, respecting the noney, that he had it of Mr. Hall, timber-merchant, Newastle. The jury then returned a verdict of "Wilfol Murder;" and the prisoner was committed for trial at he ensuing assizes.
Liverpool. The election in this city did not paes of quietly ; both loss of life and serious injury to property having taken place. On Tuesday, during the nomination of the several candidates, the Irish in Tithebarn and sereral other streets in that vicinity manifested a very riotone disposition, and later in the day collected in such great cowds that nearly the whole body of the poli.e had to be kept in the neighbourhoud to preserve order. On the morning of Wednesday they again evinced the same hrowing stones at the police. About six oclock a large party of ship carpenters formed a procession, and were proceeding homewards along the 1 em Bird-street, when they were set upon by about 6110 Irish, and assaulted with brickbats, bludgeons, and other weapons of a dangerous character. The carpenters retaliated, and for some time fight of a serious character between the two parties ontinued. The roofs of the houses in which the Irishmen reside were ascended by that party, from mhence they continued to pelt down bricks and slates upon the heads of the police, stripping the roofs and dilapidating he chimneys to furnish themsel. Much damage appears to have been cione to the houses in the police found thousands of the Conservatives and Inish, armed with very dangerous weapons, fighting with each other. In Fisher-street others of thie Irish got upon the ops of the houses, and were engaged in hurling bricks and missiles upon the heads of the Conservatives by which many were severely wounded. Numbers of Irish then assembled in front of the public-house kept by Mr. Casement at Salthouse Docl: He warned them of the consequences which would result if they proceeded to do any mischief; but, notwithstanding, they smashed every daughter, and burt her severely. Mr. Casement then ired two pistols, loaded with slugs, amongst them, and shot four men and one woman. One of the men was very dangerously wounded, the others not so much. The mob threatened to have vengeance; and hearing that fatal consequences might ensue, Mr. Casement was conveyed to Bridewell under an escort of police; and constables were sent to guard his house. The riotous parties were at custody, and lodged in Bridewell. This appears to short summary of the occurrences which took place, and which at one time were of a Tery alarming character, considerable injtury to persons and property having been inflicted
Blackburn.-A serious riot also took place in this town, on Wednesday evening, on the occasion of the election, after the returning officer had declared the final state of the poll. An attack was made by the moiting and so serious did the affier become, that the Riot Act was read, and the military, who had for some time been ordered to keep themselves in readiness, were called at. The confusion produced by the appearance of the soldiers in the streets was very great Haviag ceeded in dispersing them withont any one having bech seriously injared.
Halifax.-On Saturday night, as Mr. Whittel, juno, aney manufacturer, of Stainland, near this town, wa walking home from the Littleborough railway station, oi dead through the head, about half-past ten o'clocis, nea the Barsslanu toll-gate, oy some parties wio robird har o about 93. Suspicion has fallen oa an individual witn who deceaser was seta in company when passing throug mo toll-gate, who cannot now be found. The pulice, Low
 only recently married.
turn on Thurslay on disturbances took place in The populace pruceedea to soch extremities that militar out, and notmithstanding all their exertions graat conjusion pregailed for a long time. One geate mm , it seems, was p Hed from his herse by the nus. the effects of the wounds he received.
ambridge.-On Thursday evening an accid
curred at Sidney-street, to D. J. Ansted, Esq., of Jesuu College. It appears that he was going down the street, looking after the Rocket coach, which had just passed by when he was rua agaiast by a horse and phacton, and was struck wihh suich force by one of the riatts. teat in broken completely off the body of the carrage.

Ay'étuig.-On Saturday inght Joseph Whate, one of the krepers on the Duke of Buchagham 5 witon woud entate, was ivohidg out, wheis mithin and ra:sed his
 gun to shoot the barrel burst in pieces, by which his left hand was seriously injured, two of the fingers being blown
off，the thumb nearly so，and the whole hand mach cut
and bruised．Anuther keeper went to his assistance，and and bruised，Anuther keeper went to his assistance，and
accumpanied him to Brill，where a surgeon，after stopping the bleeding，accompanied him to this place for the pur－ pose of amputating the injured limb which was safely done the following morning in the Buckinghamshire Infirmary， where he still remains，and is going on well．It appears that this was the first time of his firing off the gun，which was an old－fashioned heavy piece，employed to kill wild
ducks with，and which had been occasionally heavily loaded．

Railuays．－The Great Western line of railway was opened throughout，from London to Bath and Bristol，on long since，but for the tunnel through Box－hill（six miles from Bath），which is nearly three miles in length，princi－ pally cut through st me．The difficulty and danger of forming this extraordinary tunuel were looked upon as so great，that，for some time，no one could be found to under－ the raitway round instead of through the hill．After very great difficulties，however，it has at iength been completed， through the perseverance and skill of its engineers． Between Bristol and Bath alone，a distance of about 12 miles，there are six tunnels，some of them of great length． The summit of the level of the whole line is at Swindon， 76 miles from London，and is 253 feet above the terminus at Paddington，and \(2 \pi\) feet above that at Bristol．In
Feb． 1836 ，the works were commenced，the original esti－ mate of which was two millions and a lialf sterling ；but the actual outlay，it appears，has been＂already more than double that amount，upwards of five millions．The dis－ tance from London to Bridgewater，it is said，will be per－ formed in five hours and a half，and persons will be able to travel from Londinn to Bristol in about four hours．－
The inspectors of the works，and several of the directors The inspectors of the works，and several of the directors， made an experimental excursion on the Brighton line on
Monday，to Hayward＇s－heath，preparatory to an early opening to the public．The result is said to have been all that could be desired，the working and general action of the engines being perfect．The rail is completed to within 15 miles of the Brighton terminus．－The following are the amounts of the rectipts of the principal railways in opera． tion for the past week，up to the date to which the resper－ Hull and Selby． 7501 ．；North Midland， \(4,38 v 2\) ．；Midland Counties，2，04 \(4 l\) ；Birmingham and Gloucester， 1,5396 ．； Counties， \(2,04.2\). ；Birmingham and Gloucester，1，539．；
Birming inam and Derby，1，1888．；London and South－ Western， \(9,89.5 \%\) ；Great Western， \(12,400 \%\) ． ；London and Greenwich， 9351 ．；Northern and Eastern， \(\mathbf{i 8 2 2 l}\) ；London and Birmingham， \(19,753 l\) ；Manchester and Birmingham，
 a passenger by the Givernock rallway was brought before the magistrates of Gorbals，for haring fraudently evaded The guard of a railway down train from Glasgows to
Greenock，by not giving up his ticket，and for having Greenock，by not giving up his tieket，and for having up－train from Greenock to Glas zow，by delivering to bim as a proper ticket，the one which he had withlield on the preceding day．The magistrates considered this to be a clear case of fraud and wilful imposition，and fined him damages against the passenger then raised an action o Lamarkshire；but the shariff considered that the railway company liad full power to seize the passenger and bring him before a magistrate，that the passenger had com mitted a serious offence，and had been rightly punishod， and therefore dismissed the action．

\section*{IRELAND．}

Dublin．－His Excelleney the Lord Lieutenant，now Earl Fortescue，returned from Devonshire，on Saturday after attending the funeral of lis noble father．－In conse－
quence of the meeting held by the junior members of the quence of the meeting held by the junior members of the Majesty on the surjject of the apponntment of Lord Campbell to the Chancellorship，and which we noticed in our last number，the members of the Senior bar have thought proper to enter a protest against the proceediugs of that meeting，in which they any that，in opposing a spritit of perfect good feeling towatds them， the most direct，plain，and manly course they can the it to give their names to the public，and simply to express lations．This ducument，it is said，rectived upwards of ing，and pros．－Lord Campbell arrived on Mor ？ay morn－ his，Lordship would sojourn for a few days on a visit with Earl Fortescue．His Lordship took his seat on the beach and was to assume the cistody of the seals yestrrday． Gablocay．－In conserquene of a warrant fron Dublin hastle，M．At．freorge，of Tyrone House，in this county， has been arrested on a charge of inciting persons in his employment to the outraze wrich ended in the death of the late Mr．Heathers，an officer eaganed in the Mrdn waee survey，wheh twok place is Morsh hist．It is reported forward，and whated was at work in the house，has come a person of a smopicione appurance having got moile the deraesne－wall．tining ouservations，of the place．Mr．St George supplied zowe of asodtantiants whith fire－arms，and ordered thens to eject the struncer from the prentives． Deceased was in eonsect theauce struser from the preaten，and thruwn over the wall，havnig sustained sexeral itatures，fo ma tine ducted of which he died．The investicatima has been con－ ducted provately，and it is not known what ground there may be for implicating Mr．St．George in the transaction；
but the magintrates have seen sufficient reason to send
him to trial．They have，howerer，admitted him to baik，
from which it would appear that they have not entertained the capital charge．The assault on Mr．Heathers pro－ ceeded，it is stated，from a notion of the peasantry that he was endeavouring to obtain access to the honse of their lanulord，in ouder to serve him with some legal process； and in consequence of some further violence being appre－ hended from them on this occasion，it seems that it was deemed necessary to call out a party of dragoons
cute the warrant for the arrest of Mir．St．Gieurge． Limerick．－The Limerick Chronicle states，that on electric power of which surpassed anything of the kiud ever witnessed before in that neighbourhoud．A portion of the electric Huid struek the anjle of one of the main
walls of Ballymacreese House，the resildence of Mr．Shine； Walls of Ballymacreese House，the resilence of Mr．Shine；

 Chancellor cunfirmed the order of the Vice-Chancellor, and dismissed the appeal. His Lordship was of opinion that the plain
tiff failed in his proof that the agreement on which he relied ha been accepted by the defeadant at the time he got possession the farm

Duckett.-This was a singular claim to the property of tift, the representative of a person named West, who died in 1695 , clamed, as administrator de bonis non, to be entitled to a
\(51 m\) of 14,\(0 ; 7\), , bang the produce of 20 shares in the West New Jercer Cempany, witich was intended to promote the cultivation has heen extinct for some time, and their assets vested in the detendant and others as treasures and managers for distribution anong the c'ammants. An inquiry has taken place before the
master, and it is clearly ascertained that the plaintifir has a legal title to all the shares; but a legal and equitable title united to no ing the produce of the whole 20 shares to be paid to the plaintif and the defendant appealed from that order, on the ground the there was a beneficial interest in others with respect to \(t\) ie 15
shares, and that they were not bound under such circumstances shares, and that they were hot title.-The Lord Chancellor said that the Master's a mere legal information with respect to the representatives of the person beneficially interested in the produce of the 15 shares. The Court, under such a state of things, could not part with the money. His Lhordship dircecte one-fourth to he paid to the Vice Chancellor's Court.-Haman v. Jones.-This wasa present Exchange. Mr. K. Bruce mored for an injunction to retrai the defendants, who represent the Commissioners for Sewer Sum Fire Office, in Threadnserss the value of the old site of th the plaintiffs, who are the trustees of the company, in erecting their new baildings thercon. The argument occupied severa days. The question between the parties tas arisen ubdir the approaches to Iondon-hritey. The Sun Fire Offce had with the Bank to make on their own responsibilitr, under Par liamentary powers whi, \(h\) yere siven to the Bank, certain im
provements iu Barcholon they had made considerable progress with their worke, the city apt horities, who were interes' ed in the Exchauge, were desirous
of throwing the insurance offce farther back than its ipter new position. Negotiations for that purpose took place, bnt withoat effect; when the City anthorities at length diseorered an obsolete act of Parliament, made iit 1817, which gave, as they contended with the koyal Exchance Commerter or whom were purchasine thutes in the street ter the purpase of sidenins of improving the street. And under this act it was proposed to pur chase out the sun Fire Omice altogether.-Mr. Richards con tencer that the act in question was not obsolite, and that there and that the Cover would not interfere to preve committee provement in the Citr, which was the main design of the Legis lature in ail the acts.- His Honour having taken a few cays to Roite Count, CHANEERY-LANE.-Woodrock r. Renneck. Lritandale deivered judgment in this cause, lately heard whict invehved an importaut construction of a will, by which bequeathed by William Linton, who died in \(185 \%\), to trustets trust to pay the dividends to Joseph Christie and Sarahat his wife.

Fivilliar ASTRONOMY. By George Dacury, to the Popalar Geometry-a System of Popular Algybra-and a
System of Popular Trigonometry. 12mo, wrth Eagravings, ss.
ciuthi. . "Ther sa a vact ea of das a nical hiformatica conver ed in

Botenicul Ingions of Erasil.-Von Martius distinguishes five principal regions, viz,-1. The extra-tropical mountain land; 4. The dry northern district; 5. The mountain land; 4. The dry northern district ; 5 . The moist eqnatorial district. .en from fouth Brazil, extends from berond the tropic of try, or south Brazih, extends from berond the tropice of either plain or gently undulated, rarely rising into mountains (scarcely ever exceeding \(\mathbf{1 , 6 0 0}\) feet high). It is to-
lerably well watered, althongh many of the lenser streams dry up anautis. entirely or in part. The monntain formation is martly granite, gneies, mil sienite; in the more southern distrats the tedp-tirination prevails. In the more ac,nthern districts you see a vast extent of the Brabecome more rare; and, mingled with the Armericaa, we fad European forms of regetation. On the other side the Plate river this region passes into the Pampas of Buenos Ayres, whish extends from thence to Cordova, and
to the castrat siles of the Andes if Chill. II. The Highlud thehis inciude the great Brazilian maurtainsystem. Winch consticutes the interior of the protince
of Minas :0 the west, and extends through the Serra dos Vetentes to the upper valley of the river of
Madeira, the Rio linêz, or Gupoce, and towards the Madeira, the Rio Iinêz, or Guapoce, and towards the worth in the provines of Batim, terminates with seseral district, situatel betreen if and \(10-\mathrm{F}\) W. Long., and between 27 , ami 11 - Lit., alen includes a part of the Grossu, and Bania. Low vaileys, steep, declivities of mountains. gentle declinations, and elevated plains, altersuve j.unie) feet. The therailing mountains are quartz abure \(j .(\mathrm{um})\) feet. The prevailing mountains are quartz
slate, or thep frequently contain ironstine. (iold oecurs slate, or they frequenty contain ironstine. The occurs part of tinis district is covered by grass-phains, on which are statured a variety of beautiful herbaceous plants and
low shratus or copses. There are alsn wonds pussessing 10 wh shius or copses. There are alsn monds pussessing
two different chiranters, the lofty evergreen wonds, pretty similar to these along the coast, and lower, dense, and not altosectier deciduous ones. The first, especially, affect the banks of rivers, and ascend from the lowest districts, at most, half-way up the mountains. They are destroved in the mountain distriets in the same way as in the United the country, is under cultivation. In the language of the country it is called Matovirgen, virgin forests. The other terisid by low wet grounds, which cut them int isarads, terisid by Luw wet grounds, whichs cut them inh iaduds,
mostly of a roundish form; many have swampy botroms, others contain springs, the sources of brooks and rivers. They are culled, in the language of the country, Capoens, island-woods; they never ascend to the ridge of the higher mountains, which is only covered, in this district, with
bushes or herbaceous plants ; whilst in the northeru part of the extra-tropical hill country, it is wooded eveen to the very summit. The last linds of vegetation in the moun-
tain district mostly lose their foliage daring the dry months, often fiower before they throw out fresh leaves, become dry.-III. The wooded mountaia-land, to which tends from the province of S. Paul to Bahia, and northerly finces of Alagoas and Pernambuco. This particulariy the si. ni.y if the sea aad the dense forests moistened by
 of the \(r\) vinici samuatits only attainng an elevation of about 4000 feet. It maintains a recuiiarly luxuriant, rich, and brilliant Riora, which, although it has been the most bosuist. Tuwards the north, the flera of tirs monutainranse whanges considerably; so that many of the species supply their place. The Flora of Rio is distinguished above all others by greater magnuticence in form and from the principal mass of monntains of the Minas dis trict, and easterly from the line of mountains of the Serra
 dhicirat regotatum trum that natioerto humbed. The mountain-formation is here mostly granite and gneiss,
sandstone or chalk. The heat is much greater thaniu the al mas distrie upou tue coast, or than in the more elevated Minas district; for the present region, with the exception of the small range of Carriri mountains and their ramifiof the sea. Tise rains that conamence in above the level more southern parts, farther to the nortl. prual. frea for several years. The winds that blow ia the districts beyond the tropics, frequently with great violence, particuarly from the south-west, are here of rare occurrence; months without anyy variation. This characteristic of the FW iflatemput. pliphotit. achsions the peculiarities of the Flora of this
 he a current of sucust air nulich
 17A.61616
overrua for an immense extent with shrubs of a man's height. This vegetable feature is called, in the country, Brazils, and is, of all that exist in the tropics athe dent in individuals. It clothes a great mart of the country on the other side of the Rio de San Francisco, the whole interior of Goyaz, Pernambuco, and the northern provinces of Rio Grande and Ceará. The forests here have seldom the lofty growth of those of the coast, anid, account such wods are called, in the language of Brazil, light forests (Can-tinga). What is extraordinary, if no rain falls, the trees remain for many years withoat producing foliage; but when at last the showers descend, in most delicate and tender green. Many plants of this Flora have the flowers produced before the leaves, or during the time of the bursting of the foliage, and many d not ripem their frait till arter they have again dropped are seen ; while the general vegetation is distinguished by the rigid leaves, hairs, stings or prickles, small flowers, thick, and frequently milky juice. The pastares differ from those of the mining district, in exhibiting bright green, more delicate and smoother herbs, and grasses with more
pliant leaves. The Brazilians call them Campos mimosus, in contradistinction to the Campos agrestes of tie Minas Gerais:- - The moistequituril distict. Northerly from the province of Ceara the country declines to wards the great nlain of the Amazons. The mountains, which are exceedingly curious in structure, are deeply covered with vegetable sonl, and consist principally of sandstone. A rast very frece of springs, , cumerous streams, rivers ands from the A tlantic,Ocean, unite in producing the greatest vigour and luxuriance of vegetable growth. Dry situations are scarcely to be met with except on the sides of some low hilis in the interior of tais almost wholly unesplored tract, between the Ocen and Madeira River. By far the greater part of the country is covered by very lofty forests, which in the neighbourhood of the waters are particularly intrirate and wold, but never so grand or beautiful as the forests of the more south-eastern parts of Brazil. Pasturage does not exist here as in the elevated lands of the moining districts, but is found chielly on the light hiliy lowlands, selaom on the low scattered mountans. The group of the Andes bound this extended tract to the north and and forest (the Ceja de le Montana), appears to cat off this egetation from that of Peru on the borders of Popayan and Maynas: and this extends into the district of the of the Iteney or Guaporé and Mamoré. Its extreme boundary in the south may be taken at about the \(13^{\circ}\) of S . lat near the Destacamento das Pedras), where the banls of the river are more elevated, and steeper, so as to chec Cuiabs is and where the branches of the Nerra seral the north med west, and the Abridged from Hooker's Journal of Botany.
New Vieks concerning Starch-In the last number teresting paper by Mr. Moh1, concerning the action iniodine upon the elementary organs of plants. We hardly need inform our readers that starch is a product of the regetable kingdom, found in the shape of oblong bodies of various sizes in the interior cells, and that it has the property of becoming blue if acted upon by iodine: which mmediately detectsits presence. It has also been supposed, up to the present time, that starch is the only known substance whose colour is thus affected when acted upon by codine It appears, however, from the researches now before
that starch exists in other states than that of the granule just spoken of. Schleiden had remarked, that when cells are boiled in a ley of caustic alkali till they are dry, they are stained blue by the action of iodine, but lose the property by a prolougrat ebullition in water. He did no of cells is changed in:o starc's, but he thought it most probably was'so, because when weak sulphuric acid acts upon vegetable tissue, and iodine is added. a small quantity of iodine of starch is obtained. He supposes that by thi operation the primitive membrane of com is also challsu is converted inte gum and sugar by the action of sulphari acid, that action is secondary, a conversion of it into stirch always taking place in the first instance. Schleiden also found that the embryo of Schotia latifolia is completely soluble in water, except the epidermis, and that fore be inferred that he had formd a plant whose cellular fissue is in its natural state all starch. Mr. Mohl's object has teen th pursue this inquiry without calling in the aid of re-agents. - When the cells of the cotyledons of Tro prooluma majus are sliced thin and acted apon by a concentrated tincture of iodine, they become a fine indigois only after some time they become blue, and then it by a transition tarough green, owing to the mixture of yellow and blue particles. In the mean while the primitive fir a fem seconds in strons causti. aik: anl is tan wathe? is wich, iotine then aluars the cell- at ouce of a char mulacinue, =h the trmilish hami, ratue acquiras the same colour, but paler. The cells of Tropwium ar same kind of texture occurs in Lichens, and Professor Mohl, in consequence, directed his observations to those
plants. Although he did not meet with all the anccess he he he found that the shieds of many species presented a a ilar plenomenon; for in many cases jodine produced primitive membrane, and in the inter-cellular substance that unites the cells. In examining the horny albumen of Endogens, several interesting remarks were made. Ti.e cells of which it is composed are generally very thick. sided, perfectiy colourless, and are readlly distendid with mater. When a silice of such albumen, previousiv soffened in water, is exposed to the action of a concentrated tine. ture of iodine, the cellular membranes presently acynire colour; but it is not easy to describe in what way the does not produce the colour which eventually results from its prolonged action. In general it produces at first a yellow colour, which by the intense action of iodine becomes brown; moreover this agent produces, in most cases, if it acts long enough, a blue colour. This blue is however never of the clear indigo tint that is observed, for dish and in the shers redit presents all the tints observable in vapour of iodine of degrees of density. From these and a great many more observations, Professor Mohl draws the following conclusions : -1 . Iodine causes the cellular membrane of plants to assume different colours, according to the grantity of it that is absorbed; a small quantity produces a gellow or brown tint, a larger cquantity torms nolet, and a still larger amount of it causes the production of blue. Iodine mas commanicate to cellular membrane, when dry, a yellow or browa tint, provided it, the iodme, is dissolved in alcolul, or comes in cuntact wilh the memorane in the form of vapour; but the violet or blue colours are only formed when the membrane is saturated with water. Blue changes to violet or red as the membrane dries, and returns when it is again moistened. Similiar variations of dry or moist. 2. The colour that the membrane of cells assumes, under the action of iodine, is n it dependent merely upon the quantity of iodine employed, but is also connected with the organisation of the membrane itself. Membranes which are softest and most tenacious, dittending most in water, assume, even when acted upon by oniy a small quantity of iodine, either a violet or blue tint immediately, or at first a yellow hue, which passes afterwards into violet or blue, even before the evaporation of the liquid. Membranes that are hardier, more brittle, and less distensible in water, on the contrary take on, under the action of iodine. a yellow or brown colour, and do not show a trace of blue, after being dried and again noistened, unless a creat quantity of iodine has them. 3. The development of a blue colour is aused bute of the cellular membrane itself, and may be caused by the absorption of a sufficient quantity of iodine. It is
to chemists, says Protessor Mohl, to say whether iodine
 ketseen the particici of that niembrane, or whether indine and woody fibre form determinate chemical combinations, may, we canmot but regard these observations of the higheas naterest to all engaged in the study of Vegetable Physio-\(\operatorname{logy}\)-Botunical Register
Rapid Vegetation of Norway. -The difference between he vegetation of Norway and of Scotland is, indeed, very remarkable, and cannot help striking the most curbeyond our ken; at the same time, much of the formet's apparent superiority may be explained by considerations derived from its very excess of northern latitude. The Norwegian winter is long and severe; but then many sceds do not require to be sown until the spring ; while many plants and trees are so protected by natured germination, similar to the hybernation of animals in the same climate. Again, the summer is, alas ! very brief, in we reckon the number of days from the last of the prean ous to the first frost of the succeeding winter; for we caut, the talk of springs or autumis in this as double, since then, edch day may be always countedras thedly, with oblique, but still very powerful, rays upon the earth, which thus has scarcely any time to cool. This, added to the fact, that the energies of vegetation had never been weakand periaps aiso to the ferthising effects of thawng shon, causes a tapidity of growid that is quite startims. seetas as if the steds are scarcely pat in tir grouad lonir

\section*{SATURDAY, JULY 10, 1841}

In gardening, as in all other arts, there are certain first principles to which almost everything else may be ultimately reduced, and upon which practice, however raried it may be, will be found in all cases to depend more or less immediately. Armong such principles, that which is most commonly lost sight of by practical gardenen, as well as by amateurs, is thisthat the health of other parts of a plant is in proportion to the health of leares. This axiom ought to be hung up in every gardener's room, and so placed that it may catch his eye continually. There is no real exception to it, and the neglect of it is the fruitful parent of half the failures that occur in cultivation. Our columns might be filled with illustrations of this great fact; but for the present we shall confine ourselves to one or two points only.
Nature has given plants leaves not merely to decorate them or to shade us, but as a part of a wondrous system of life quite as perfect as that of the animal kingdom. It would be of no use for a plant to suck food out of the earth by its roote, unless there was some place provided in which such food, consisting principally of water and mucilage, could be digested, and so converted into the matter which maintains the health of the individual. The stem cannot do this; firstly, because it is a mere channel though which fluids pass; and secondly, because many plants have no visible stem, as in the instance of the Primrose; and yet in all such cases the plant feeds and must digest ite food. It is to the leaves that this important office is assigned, and to enable them to execute it God has formed them with wisdom no less infinite than has been displayed in the creation of man. The leaves have veins through which their fluids pass, and cells in which they are beld while digesting, myriads of little caverns through whose sides respiration is maintained, a skin to guard them from the air, and pores for carrying off perspiration. 'These thinge may escape our observation, but they are to be found by those who seek for them, and they plainly tell us, that although a leaf may look like nothing more than a piece of thin skin, it must be framed for some essential purpose. A leaf is, in fact, both a stomach and lunge ; and to destroy it, is to do the same injury to a plant as would be effected in an animal by the destruction of the parts to which those names are given. If it is useless to cram with food a dyspeptic person, so is it equally useless to stimulate the feeding organs of a plant whose leaves are out of health.

Of this we may be certain, that neicher taste, perfume, colour, size, nor any other property, can be given to a plant except through the assistance of the leaves ; and that the more numerous these are, the larger, and the more luxuriant, so, within certain limits, will be all that a plant is capable of forming. Strip the leaves off a tree, and no more wood will appear until the leaves are restored; if you feed its roots in the rain hope of thus compensating for the loss of its leaves. the stem will be filled indeed with watery matter, but the latter will collect in the interior until it forces its way through the bark, and runs down in putrid streams, as happens to the Mulberry-tree when it is incessantly stripped for silk-worms, and as occurs to trees whese leaves are continullly destroyed by a noxious atmosphere. Strip the ripening Grapes of their greell garments, and no colour or sweetness will be collected in their berries. Rob the Potatoe of its foliage, and you will seek in vain for nourishment in its tubers; and so of all things else. On the other hand, leave the Mulberry, the Vine, and the Potatoe uninjured, to the genial influence of the sun anse the air, and the dews of heaven, and wood is cormed in the one case, sugar and colour in the other-and Hour, the staff of life, in the last: and these products will all be in exact proportion to the health and abundance of the foliage.
How, then, can we mow off the leaves of our Strawberry plants in the autumn as some do?- the only effect of which must be to rob the plants of the materials out of which the fruit of the succeeding year is afforded during wister loy the folitage to the trander and
delicate flowers which are to spring ap on the return of warm weather. How, then, can we mutilate our forest-trees by barbarous summer pruning? Every leaf that is then removed would have added something to the quantity and solidity of the timber, had it been spared; and although the quantity of timber formed by the separate action of each particular leaf may be and doubtless is, extremely small, yet we are to remember, thatin pruning millions of leaves are removed and that it is by myriads of such millions of minute quantities that a forest is constructed

Are we, then, to conclude that all pruning should be avoided? and that it is more judicious to leave Nature to herself than to assist her? Surely not. The object to be attained is not to secure the greatest quantity of leaver, but the greatest quantity of healthy ones; and moreover, there may be purposes of more importance than increasing bulk and substance, or even the quality of produce. Bat to this we shall advert next weell.

Iv the present atate of our Transatlantic Colonies, and connected with Corn-duties and Sugar-duties, which now occupy so much the minds of politicians, it will be interesting to many of our readers to know what sulcess has attended the cultivation of Wheat in our West India Ielands. It is, we believe, only within a very short time that any attempts have been made to introduce ít there, an opinion having been enter. tained that it would not succeed in such elimates. No doubt the common English red and white Wheats would fail if suddenly transferred to the soil of an abandoned Sugar plantation; but we are of opinion that other kinds would probably produce a fair return for the expenses of cultivation in many parts of the West Indies. Wheat is said to be naturaily found in the country of the Baschkirs, where the summer teroperature is extremely high- \(97^{\circ}\) Fahr. not being uncommon. It is grown extensively and advantageously in Egypt and laarbary; and even in the Caraccas, near the town of Vittoria, and in Cuba, in plains little elevated above the sea, according to the testimony of Humboldt. In Egypt, a particular species of Wheat, the Triticum compositum, is cultivated; and elsewhere varieties of the common species, whose natural habits have been changed by long exposure to a hot climate; such, for example, as the hard Vittoria Wheat, whose constitution is more
favourable to a West Indian domicile than the more favourable to a West Indian domicile than the more succulent varieties of northern Lurope. One might therefore expect that such Wheat as the latter would answer the expectations of the cultivator, at least as a winter crop, in many parts of the West Indies.
We are now able to confirm the statement of Humboldt, for experience has proved this to be the fact. There is before us a letter from Mr. Fox, the Agricultural Superintendant in Bermudia, from which the fullowing is an extract:-
"I was the other day at the reaping nome Vittoris Wheat, grown on the estate of H.J. Tucker, Esq. This Wheat I put in with the dibble, Dec. 2!, 1840 ; the quantity of seed was not one pint and a half; it not being threshed out yet, I cannot state the increase, but I took an average ear, the produce of which was 52 kemels. The crop was reaped the 3rd of May. This Wheat has completely altered its character; the seed I put in was small and long-the proluce is a short, plump, full-bosomed Wheat; the number of grains dropped in each hole was from two to three, the stems from three to four.

Our Correspondent, Dr: Hamilton, of Plymouth, has also favoured us with the following communication upon the same subject:-
\({ }^{c}\) The following are the resulte, as far as they have as yet reached me, of the most severe test to which the culture of Wheat has been hitherto subjected in the peculiarly arid climate and soil of the island of Curacao; the cletails are given in a letter from the philanthropic Gorernor, Baron Von Raders, of the date of the cth of January last:- The first trials I made of the \(I\) ittoria Wheat culture, observes the Barom, - have answered in some instances very well. bet net having generally applial the directions for mixing the soil with calcareous manure, they have failed in othe situations, principally owing to the attack of worms or grubs. The ears that were reaped on a spot under my immeitiate care were very healthy; tlicy came to maturity exactly in \(9 n\) days after sowing; and the grains were heavier than those received from you, by about five per cent. I was in hopes of renewing the trial on an extended scale last autumn, which is our only planting teasen in the year; but the most scerere
drought that I ever witnessed on this naturally dry spot has entirely frustrated my intention; and you will conceive the impussibility of proceeding when I tell you that the whole quantity of rain which fell during the last year, \(1 \sim 40\), on these islands did not average ten inches.' The success of Wheat culture, to however limited an extent, under such singularly trying circumstances, is important and satisfactory, since it shows that Wheat is capable of resisting severe drought, if planted at such a depth beneath the surface as to enable the fibres of the seminal roots to collect a sufficiency of liquid foud from places beyond the influence of the sun. With respeet to the failure of the trials in some instances from the depredations of worms or grubs, had his Excellency adopted the judicious plan of spreading hot quicklime of the recently burned ashes of vegetables in their caustic stato upon the surface of the soil destined for the experiment some two months before planting. he trould have cleared the ground most effectually of these pests of the farmer which swarm so peculiarly within the tropics. The advantages of this plan have been explained by Colonel Le Couteur, in his admirable Treatise on Wheat, to which I must beg especially to refer your readers. "

\section*{BLDDING.}

Ir is well known, that at certain periods of the season, the bark of trees is ensily separnted from the alburaun ; and if a piece of bark containing a bud is then raised from the alburnum, and immediately hound eluse on the place from which it was removed, it will reuniter The bad will ikewise continue to vegetate, if not deprived of its base. But although the moat netural union may bo thns mepposed to take place, yet no adrantage would result were a reunion of such identical portion all that could be effected; a bud from a different slioot of either the same tree, or of
any other, within certain limits of affinity, may, lowever, also be inserted; and this budding. or ineculation, as the operation is sometimes termed, becomes各 convenfent mode whereby varieties, apeotes, and evers some genera are propagated on others.
By observation in the spring, it will be seen that buds gradually progress into shoots ; at short intervals on these an embryo bud is formed, which protrudes as the season

sential to the life of the indivia jet it happens rarely that they can form a distinct plant This property, howeve", resines in buds: and, accord ingly, if separated from the parent phant, asd placed under circumstances favourabie \(f\) - their ohtaininf a sumphy of tourishmest, the: farthar developmes wil cisue. Witit a portion of branch or shont atrached, they may be made to strike zuts for thenstlves, or they may derive hein they may be piopaqated or budd:as.

In performiny this oreration, virigus modes are prac. tised ; but that inat ti) be leserihed, and which is illustrated by the danased st wh cut, is generuily preferred. It is enlled shild or T buddun, fr m the chind the f .mm of the portion of bark contamiar the jud to be cherredt, and the resemblatee which the Lorizontal and r-arocio cular cuts, made for its admission into the stock, bear the two principal bars of the letter from the shoot, by entering the knify very shart) to some distan below, the bud. The portin in is ! : included with the bud must be separated by enterio the point of the knife at the top, so as to lay huld of the woo forwards and dumpards. Vearly the sime if tue imne bark wiil thua be expused, exmiviting a ammeth piseous surfice. But on attention being dire sut ta the repre-
 from its origin; the secunt and lower, is oun oblong nortion of woody fibre, wheth was being sent dowa from the leaf-stalk. The leaves being cot off, the portion of fibre in comexion with them becomea unimportant; but suck is
not the case with regard to the base of the bud-for if it of a prominence, the whole may be thrown away as useless, and another bud must be taken. It is essentially necessary to take care that the portion of wondy matter emanating from, and connected with, the base of the petiole, is not mistaken for that proceeding from the base of the bud; for the bud alone has the power of sending fibres downwards, which encompass those proceeding from the petiole, and indeed ultimately strangle them at their ou ward connexion, so that the petiole and leaf drop off.
The bud being prepared and seen to be perfect, an opening is next made for its reception in the stork. its middle, one is drawn upwards perpendicularly from its middle, one is drawn upwards perpendicularly from penetrate no deeper than just through the inner bark. The two edges are then raised without bruising the viscous substance below. The bud is immediately introduced, and the opper part of the shield cut square, so as to coincide with the cross incision at \(b\). The base of the bud should not be pushed far below this incision, becanse scends from the leaves on the upper part of the stock. The whole is then bound closely with astrip of phe bud. This must be loosened when the swelling of the stock requires it, and retied till the union is such as to bear full exposure.
In selecting buds, those that are very young should be avoided : for in that case they are closely connected with the greenish substance composing the pith at the tender age of the shoot producing them; and on this substance they then, doubtless, too much depend for nourishment to be safely deprived of it. It is a sign that they are duly constituted when they begin to emit woody substance; and this will form a criterion of their fithess to shift for themselves. Buds taken from fruit-bearing treeson-bads, which will not produce shoots.

\section*{COTTAGE GARDENS.-No. XXV}

It will generally be conceded that those cottagers who have a garden, and take pains in its management, possess many advantages over such of their neighbours as happen to be without so useful an appendage, or if possessing it, have neither the taste nor inclination to attend to it as they little they may require for the use of themselves and famihies, the former are now surrounded with an aoundant
supply of fruit and vegetables in return for the time and labour they may have devoted to their culture. Some of these, such as Goose'3erries, Currants, and Raspberries, will now be approxching maturity, and means should be taken to protest them from being destroyed by birds. The cheap netting formerly recommended for covering the seedbeds will be found well adapted for this purpose: beine light and open, it is easily supported by the bushen, and admits plenty of sun and air to ripen the fruit. Where there are Vines, attention must be paid to the young shoots inteaded for the bearing-wood of next year, which will be
growing vigorously about this time in every direction, and should now be securely nailed for fear of being blown down by the wind. Stop such as were omitted last time of going over, as well as any fresin shoots which have since made their appearance. If these are not hikeiy to be wanted,
remore them altorether, and pinch off the laterals as before directed. Where the fruit has set, and the bunches are more numerous than it is supposed the \(V\) ine is capable of nourishing properiy, we wonld recommend a thinning to be made, and the smaliest of them cut away. It is much better to do this now than to overcrop and weakell the gue for the following season, which we believe is too fre quently the case, and utien proves hjorious to
Attend to the late Potatoes, and see that they are not neglected for want of hoeine and earthing an. Sow some more Turnips for winter use, and thin out the last-sown to proper distances. Gather Chamomile Flowers in dry now be cut for drying, such as Sage, Balm, Mint, Thymee. and Pennyroyal. The stems should be cut immediately before they come into flower, and removed to an airy situ-
ation, shaded from the sun until they become thoroughly ation, shaded from the sun until they become thoroughly up in bunches, or stowed amay closely pressed in a drawer antil wanted for use. Chamomile-flowers may be dried in a similar manner and preserved in paper bags.
Bees.-The season for \(s\) warming, which may be consi dered the most important periud with Bees, being now the shading of the young hixes from the powerful effects of an stranger Bees or wasps that may occasionally be seen to attack them. Huish
states, that the Drones are rery often lilled in this monh and that most value should be set upon those hives which duce being greater than those which do not hill their drones uncil late in the season.-M.E. \(\boldsymbol{H}\).
XI.-Tme GNTOMOLOGY. A. - The partial, and in some instances total failure the \(\cdots, u n r y\), has been attributed to variouf causes, and as
no edty asisted in dimanishing the crops of this favourite
fruit, its history, connected as it is writh Roses and other The Cetonia aurata is described by Linusears a a Scare
brus, and is one of our largest and most beautiful beetles, being of a bright burnished green, often reflecting a rich golden or copper tint; the horns are short, with a small
clab; the scutel forms an elongated triangle; the wings clab; the scutel forms an elongated triangle; the wings
are very long, brownish, and folded beneath the horny wing-cases, which have a few scattered white lines placed transversely, resembling cracks in the green epidermis; the under side is of a fine copper tint, often inclining to rose colour. From its nestling and reposing in the flowers of the Rose it is generally called the Rose-chafer, but it is also attached to the White-thorn, Candy-tuft, Elder, Mountain-Ash, Prony and Strawberry, the fowers at the earliest period I ever remember, for on the 11th of May the Rose-Chafers were in such prodigious numbers on the flowers and leares, that it became necessary in some gardens to have them collected and killed. The beetles generally destroy the anthers, eating them off with great dexterity, probably to revel upon the honey secreted in the
nectary, so that by their agency immense quantities of Stramberry flowers are rendered abortive; when one crop has flowered they take their flight to another, and this spring after feasting on the Strawberry blossoma, they prn for seed, and they are now making a repast of the Roses thus they migrate from one set of fiowers to another, unti ther sets in they become paralysed and die.
The female Rose-Chafers lay their eggs in the ground and the larve they produce are no doubt often confounded with those of the Cock-Chafer (Melolontha vulgaris), being as large and very similar, and I think it exceedingly probable that under the name of "Le ver blanc they ravages in the Rose-tree nurseries of France. Although these larver are very much alike, it is not difficult to distinguish them, those of the Rose-Chafer being downy and covered with transverse series of short hairs, and the feet are pointed, whereas the grubs of the Cock-Chafer are tips. These maggots are fat; the head, horns and six pec coral feet are rusty ochreous ; the tips of the strong juw colour from the food shining through the transparent skin ; but in the Rose-Chafer there is a large horny bright rust-coloured spot on each side of the first thoracic segment
In Febraary last I received some of these larve nearly as large as the figure 1, which had been dug up in the covering of a vine-border. I put two of them into a turobler with some earth. covering the surface with a turf of grass, the roots of which they soon began to eat, and dragged the detached fibres into their retreats during the frosty weather. I observed that they made tolerable pro with their jars, always moved very readily lying on their backs, by contracting numierons rings of muscles, each of which is furaished with a row of short hairs forming transverse lines In the mould as well as upon the surface were multitudes of pellets of earth more or less oval and dark brown (fig
greatly resembling the dirt of mice, that \(I\) was at first sight deceived by their appearance; with these they likewise
cover the outside of the large oval cocoon which the larva firms in the earth, when it is full grown and retires to its ceil, which is smonth inside, to become a pupa, which many of them did the second week in June; but whether it is evident that these large maggots, living most probabl ander ground for two or three years, must do as much, if not more, mischief than the Rose-Chafer; and I suspect they often live and undergo their transformations in Strawoud beds, for I lave seen very fine young plants di uddenir, and on taking them up, the roots had invariably
oeen eaten through close to the surface, and a large mag oeer eaten through close to the surface, ant
The simplest remedy is to collect the beetles, which are large and conspicuous, into bottles or cans of water in the
morning and evening, or in dull weather during the day, for they fly very well when the sun shines, which render it difficult to capture them unless a net be used; when the search is ended, the contents of the vessels should be emptied into boiling water. We know of no better meano of getting rid of the Rose-Chafer or checking the increase stroying them, especially Blackbirds, which have been actively engaged in searching for them in the vine-borde before allinded to which was full of the larve this spring The Roses and Apricots in France and Maita suffer from he auncks of two uther Cetonixe, for which, as well as fo some qeneral remarks, the dissections, \&c., we must refe to Curtis's Brit. Ent. fol. and pl. 374.-Ruricola.

RURAL CHEMISTRY.-No. XVII.
The principal vegetable substances which constitute plants are very similar in composition; they all consist of
the same three or four elements, and onls difier slightlv in the relative proportions in which these elements are combined together; conserquentlr, although sucar, gum, and starch are certainly very different sinhstances, and not possibly to be mistaken for each o:h-r, yet it will be readily understood that they may easily be changed by very simple chemical operations into one another. Nothag can well be more distinct than wine and vinegar, and yet e know how very easily the one may be changed into the ther by exposure to the air under proper circumstances th prodad by whole difference between spirit and vinegar is, that the latter contains rather more oxygen than the former. In the same manner it is easy, by increasing the quantity of carbon, or what is the same thing, diminishing the quanity of oxygen and hydrogen, in lignin, to convert it into gum, or to convert grom or starch into sugar; and these changes, which we can readily effect artificially by chemical means, are constantly taking place naturally in the organs of plants.
The soil or earth is, as will be supposed, very variable in composition; its nature is always a good deal dependent
on the subsoil and stony matters which are buried beneath the surface, many of which are slowly decomposing of crumbling away, and adding to the soil the substances of which they were composed. The constituents of soil ma be divided into two classes-the inorganic and the organic The inorganic are the earthy bases with their compound and silica, which together form the principal bulk of moet soils ; metallic oxides, of which the only ones of import ance are the oxides of iron, and small quantities of varions saline compounds of the alkalies and earths. The organic matters in the soil are chiefly derived from the decay of animal and vegetable substances, the latter consisting usually of the remains of vegetables which at a former time have grown on the soil, and which, under the influence and moisture, are slowly undergoing the kind by the gradual combination of a portion of the carbon the contain with oxygen. The most abundant constituent of soils is commonly silica, which frequently forms nearly nine-tenths of the whole of its weight ; but this is by no means always the case, for in calcareous or limestone countries we frequently find soils containing a very large quantity of lime ; whilst others again contain a large proportion of alumine. These differences in the proportion of the earthy components of the soil give rise to the varieties of light or free, and stiff or clayey soils, which are also modi fied by the presence of a greater or less quantity of organic substances. Soils differ greatly in their mechanical as well as in their chemical nature, as the same substances con stitute a soil possessing very different properties according as they are in the form of jittle grains like sand, or in very fine powder. This state of mechanical division is of great importance for several reasons, and most particulary alumine is generally known by its stiff tenacious character and is remarkable for its whilst those consisting principally of silica, and more especially those in which it exists in the form of sand, are generally light and porous soils, and far less retentive of water. The best soils are those in which the earthy constituents are so proportioned that the light porous qualities of some are balanced by the close retentive properties of the others, as they are then most uniformly suitable to regetation
The silica and alumine in soils are of course almost wholly free and uncombined with any acid, as the former is not a base, and the latter has hardly any affinity for the silics acid, such as the carbonic, smain quan either soda or potash, forming those curious compounds befor alluded to, in which the silica seems to play the part of an acid; soils never contain more than a very small quantity of these substances, bat it is evident that those plants, like grass, which contain silica, must obtain it from the sols, by gradually absorbing it in combination with alkali dis solved in water. Lime and magnesia, which ha bot powerful affinity for acids, are never present in is except in combination with some acid, and lor not unfrecommonly the carbonic; the former is acid, constitating quently found combined with sulphuric acid, constitan the gypsum, or sulphate of lime. The oxides on sufficient stthe usually uncombined, as they lave the aray present in carboni an measure occasion th
 as the iron is in the state of protomite, or peroxide, it gives to the soil a black, or brownish-red coluur. It thast at be suphosed, however, that the colvur of sons is whin dependeat on the iron which they contain, or that the biach aess of any particular soil is indicative of the presence protoxide of iron, because the decomposing vegetable sub stances which all soils contain in greater or less quantity are asualiy of a brown or black colour, and therefich does not frequenty give a very dark colour to soll who sometimes contain any iron. Sulphate of iron is also somm by present in soils in very swall quantity, belig son the gradual oxidation of sulphoret of iron in the wis sa? previously mentioned; a vers minute quandy
of iron confers upon the soil pecaliar properties waich render it appropriate for particular panta, sut a \(=.\). increase of the quantity of the galt in the soul is alknuch with very bad results, as, except in very minute quantit it is poisonons to plants, and hence such soils are invari The saline matters in the soil are principslly the sulphate muriates, pitratos, and phosphates, of the alkaline and earthy bases. The nature and quantity of these substances
vary considerably, but they never constitate more than
a very small portion of the soil; their influeace upon regetation is, however, considerable, for certain plants seem to require particular saline substances. and do not
grow well in soils not containing them. Thus all kinds of grass and corn contain silica and phosphoric acid; the former requires the presence of an alkali, either potash or
soda. to render it soluble, and enable it to enter the roots dissolved in water; whilst the latter is also always associated with a base, which is usually either lime or magnesia, quantities of similar saline and earthy matters. \(-E\).

\section*{HOME CORRESPONDENCE.}

Cateeolarias Hardy.-In p. 441, you say that Calceolaria arachnoidea is the only one of that tribe which in the neighbourhood of London will live throngh the winter out-of-doors. In this place, about 50 miles the south-east of London, Calceolaria Cistrensis lived through last winter without the slightest protection in the open border. I winter, and have for the last five weeks made a fine appearance, having from 12 to 15 heads of blossom, each containngg from 20 to 30 flowers. A Pelargonium (Wilmot's Adelaide) has made shoots from its root, having also stood
the winter out-of-doors, as have also Salvia involucrata, Grakami, and angustifolia. Salvia fulgens, chamædryoides, and Pentstemon gentianoides were killed, but I have a seedling plant of the latter, self-sown, coming up in the tion is much exposed to the north-east, and the soil is a stiff claf, almost like brick-earth.-A Subscriber, Ken-
Window Gardening. Pelargoniums in a window, I may mention to you that I have a plant two years old of the Speculum Mundi, with up-
wards of 60 blossoms expanded at the present time. The only things I attended to were plenty of air, good drainage, and after repotting in spring, giving it occasionally a
little manure-water. This information I give you for the encouragement of those who have no glass. I had a plant of the Cactus speciosissimus in bloom, with 14 blossoms. The blossonss of the Pelargonium were
Slrawberries.-I beg leave to say a few words on the subject of strawberries, pro bono publico, in consequence the Hautbois. What he asserts about the male and female plants is very true, for, some years ago, by way of an experiment. I puiled out all the male plants of a bed of
Hautbois-and the consequence was that the strawberries, if they could be so called, were only as large as peas, hard
and perfectly dry. But why does your correspondent propose to spoil two good strawberries? The Alpine and
Hautbois to be mixell by impregnating the one with the other! Wby not with the Keen's seedling or Wilmot's superb? two strawberries fine to look st, but of very
little or no flavour. He might as well recommend to mix lavender water with eau de Cologne! for where do you find two strawberries of such high flavour as the Alpine and the Hatbois? The Alpine is little known in England. As for their size, I gathered some out of my gar-
den, two and a half and three-quarters, and even three inches and a half in the round-and if that is not large enongh for Alpines, it is difficult to please Strawberry rate them :--first of all, there must be fresh beds every year, of the Alpine in particular, and of all other sorts; and the Alpine must be planted on a south-west, east, and north border; and then you may have them, if a dry November, till December. I have sown the Alpine in Febraary in a pot, in a greenhouse, planted them out in
May, and by July had a very pretty crop; and it is the only one you can do so with.-Now, Sir, for a hint on the subject of all sorts of Strawberries, little understood by even the best gardeners or fanciers, which is, to make fresh beds every year-and never later than the 12th or l4th of this month (July); if not showery, to water them for a fortnight every day, until they have taken root; and then, if managed, well, and some loose dung scattered over them in November, you will have a crop the rext in the old method-say in September-you mast wait till the year after for your first crop. It is quite a curiosity "Wolseley Strawberry." I gave him one year 4000 plants, and as to their bearing, it is most astonishing, for they bear by bushels-and as for flavour, the moment you as a sweet-briar hedge after a shower of raim. In in strong, there are but three sorts of Strawberries that have much flavour, the Old Scarlet, the Hautbois, and the Alpine. After the secoud year, the beds ought to be destruyed, for the routs become so matted togetner, as that the fruit dwindles. The Alpines ought to be called aloo Everlastings, for the runaers, to the month of November even,
keep bearing. Therefore, in naking a fresi bed, each plant ought to be a foot apart, and the rows eighteen inches asunder, or there is no ro m for the runners, and never more than two ruws in a bed, to aroid treading in
the alleys.-C. W olseley, Hololely, Hull. Stafordshire.

Onions.-The growth of Onions has hitherto been very much impeded, and not unfrequently destroyed, on some lands, by the ravages of a small grub, which eats away thing that will entirely put an end to these vermin; but I if they will water gir bell with s strong decoction of wormwood (every weel in dry weather and every fort-
night in wet), as I have done for the last six years, they
will find that it will give unto the Onions a healthy and vigorous appearance, and I am sure they will be surprised at the rapid growth, of which I have ample proof even at
this moment. I sowed last spring two beds, parallel to each other and side by side; one of them was frequently watered with the decoction and the other not, and the difference is astonishing. I have had the curiosity to
measure the height of the tallest onion on each bed, and measure the height of the tallest onion on each bed, and
it proved to be twenty-three and a half inches where the decoction was used, and only fifteen and a quarter inches where it was not used ; and this difference, great as it certhe period when the waterings short space of five weeks, be said, that the growth is facilitated one half; and it is my opinion that if used in time it would be a preventive, though I cannot say it would be a destrnctive cure, for the maggots. I have lately commenced watering the other bed, and although it has only been watered three days, the effects are clearly visible. I trust this information will be further tested by some of your able correspoudents, Who will give the resalt to the public, for every poor man's
benefit who has got a garden. The manner I make the decoction, is to cut a double handful of the tops of the wormwood and place it in a bucket, and pour boiling water on it till it is full; then let it stand until cold, when it is used.- We presume this is owing to the quantity of able. in the wormwood, which is known to be consider ashes, should produce the same effect.]
Myatt's Pine Strauberry.-Having just read the remarks in the leading article of the 3 . berry, I am induced to hand the result of my own experience in its culture. Which I hope may tend to prevent others being discouraged from the attempt to eultivate
this extraordinary and valuable variety. I purchased 100 plants from Myatt about five years since, and plante them in a double row about nine ioches apart and twelve inches between the rows, as an edging, in a rich light
soil. The result, after two years' trial, was inadequate to my expectation ; I therefore planted three beds, forty fee by four and a half, in the spring of 1839, very thickly with plants which had been pricked into a bed the pre vious autumn ; these I allowed to run together. The following year (1840) I had a fair crop of frait, bat still not a satisfactory one. The plants, however, grew vigorously, chough they had suffered from the frost and wet of the prerious winter, and ran together very thickly. In the auturn my gardener top-dressed them with a thick coatties of which I attribute the complete success which followed, leaving nothing to be desired. The crip has been, and is, a very abundant one, and the fruit fine and high-
flavoured. Last autumn I dug up a considerable quantity of plants grown as edging in double rows, as before
alluded to, divided them, (no variety that I am acquainted with breaks up so well, ) and planted nine beds in an open quarter, ten feet by four and a half, giving them protection above as the others; and from these I have fair crop of very fine fruit, and have little doubt that when they have run together, I shall have as fine a crop next year as I have had this on the other three beds. The plants in these new beds, divided from old roots, are much stronger than any I have had from the previous years' runners. So far from giving up the cultiva'ion of Myatt's Pine, I have no hesitation in saying, that it is easier to obtain a fine crop of fruit from it than from the Old Pine, in our soil, though from a totally different cause. I believe most Strawberries thrive best on a cool and rather tenacious subsoll; but this we cannot offer them, ours being a ferruginous sandy loam, with a brashy subsoil, and rock within three or four feet (the pennant of the coal formation); consequently 1 find it useless to
attempt the growth of any variety in beds in which the plants are kept separate; but the difficulty I experienc in fruiting the Old Pine arises from ita ranning to such or fruit. I hope, however, that time and patience wil effect a cure. I planted a large bed in 1839, sloping considerably to the south, let the plants rua together, and autumn had a lururiant growth of leaves only. In the and asies, and this rear I red \(m\) orate crop of 6 fruit, but with a still too luxuriant foliage. Next year I anticipate an improvement, which I have little doubt will be progressive for many rears. A neighbour of mine, living within a quarter of a mile, has the most prolific bed of Old Pine that I am acquainted with in this neighbourhood, which I believe is at least fifteen years old, and from which he never fails to obtain an abuldant crop of fine fruit, without manure or attention of any kind. Keen's Seedling does very well with us as everywhere else; also the Roseberry. I have a small
bed of the Swainstone Seedling: but the plants whici I obtained last autumn were too weak to expect much from this season, and I am unable to form any correct estimate of it. To return to Myatt's Pine: I mould recommend runners being thickly pricked out in a dry
sheltered situation this autumn, and covered over to wards winter with loo-e short duog. In the spring prepare suitable beds. the richer the better; and put the plants in about eight inches apart each way: let them run together as thickly as possible; in the autumn co little doubt the resuit will be foilowing season I hav I should add, that I wid not a highly satisactory one standing the continued dry weather in May, and the early part of June; though had I been able to do so, I have

Tuckett, Frenchay, near Bristol.
Tuckett, Frenchay, near Bristol.
Hygrometers. -If the misconcention of your corre-Hygrometers.-If the misconception of your correspondent T. . . is likely to be shared by other persons,
it may be worth while to remose it. In observarions of all kinds, it is a common practice to make more than one, and take the mean of the whole. This is supposed to be conducive to accuracy, and doubtless is so, even though But where it can be so arranged that the errors must be on opposite sides, there is a srill better chance of obtaining accuracy from a mean. I can hardiy magine any one serious in asking how the observations are taken equally sible; but inasmuch as the mind has first to be satisfied that the dew has appeared or disappeared, and the eve to be then transferred to the thermometer, some loss of time necessarily occurs, during which the mercory may have fallen or risen perhaps one degree, or more or less. If the observations have not been taken equally late; if in one case the fall of the mercury had been a degree and a quarter, and if in the other the rise had been only three quarters of a degree, which is a greater difference than can be easily made with common care, still the mean would give a desirable approximation to the truth. Suppose, for example, that the true dew-point was \(40^{\circ}\), and that in the first observaion he wernomete was not noted till it had sunk to 38 ; suppose also, that in clearing off, the temperature had not been ascertained till it had reached \(41 \frac{9}{4}\), the mean of these \(\frac{383}{7}+403\) very near the truth; but in fact, as we seldom profess to read to quarters, it is all but certain that these observations would have been called 39 and 41 , of which the mean is precisely correct.-Andrew Ross.
Heating Greenhouses.-In a paper in the Gardeners' Chronicle on Saturday by Mr. Ainger, "On the production, distribation, and preservation of Heat, with reference particularly to the imitation of Climate in Conservatories, he endeavours to prove all projects for treating houses by means of the atmosphere, as certainly nasteful, certainly unlike nature, and therefore unfavourable to the perfect development of the plants exposed to it." Now, in anther I did not send you a large boz of Roses on 30th March, which in the flowers, and even more in the foliage, were as perfectly developed as any that have been exhibited this year at the Shows of the Horticultural Gardens, and grown in the open air many weeks later in the season; and these produced in a conservatory by the means of a heated atmosphere, and at an expense (a regular hounds and horses, or shootiog establishments, or even one banquet in London during the spring, is a mere no
thing-absolutely nothing; and with regard to the ration dity of these pursuits. I will not institute a comparison aity of these pursuits, I will not institute a comparison,
because "de gustibns non est disputandum !" \(-\boldsymbol{X} X X\). [ No doubt the Roses alluded to by our correspondent were the greatest possinle health and beant \(]\)
Budding Roses.-Among the many methods for budding roses, I have found none answer so well as the following, should be more generally known :-The bud for insertion is taken off the shoot sery close to the eve; the tip or part of the bark below the bud is cut off quite close, to allow the bud to be pushed closer into the stock withort being bruised. It then requires only to be tied above the bud, and a composition apulied to exclude the air and keep the bnd cool, consisting of two-thirds cow-dung and ret and gradually grows so closely into the stuck as hardly to be distinguished fromed The composition is applied in a liquid state with a small brash.-Henry Curtis, Glasenwood.
Kinellan.- In answer to your correspondent from this place (which must be Scotch or Irish), I may state that, though the thing is as yet conjectural, still, from many observations, it seems rery probable that there are distinct roots connected with distinet branches or parts of plants, parts there are distinct nerves connected with pared thas when a young tree is moved and some of the roots unavoidably destroyed, certain branches perish, while others remain alive. This observation led me, many jears ago, to refrainfrom pruning transplanted trees and shrubs till 1 saw which branches were alive: and I thus sared many which by indiscriminate pruning might have had the live branches cut awry, and the dend ones left. Now it is very likely that the disease complained of may arise from disease, or injury to sume of the roots from the attack of grubs. The latter 1 consider moner and and rightle, I sam in a scoteh new paper that some agricultural societies in Scotland had resolved in their mistemen to destroy the rooks; and if kinellan he within the ringa of
any such society, the farmer-gardener may prob ioly find on inquiry at any sursiving row the true catise of what he crops in the early part of the season commence at a particular spot in a field, and gradually and regularly advance, often in a tortuous figure, to a large extent, and exactly \(a s\) if grubs were travelling below, and consuming roots in should be found; and driving poultry over the fields when however, the seed is sown, may dy good. Lime niterte of soda, \&cc. should alwaya be applied at this time, and be well mixed in, for the purpose of destroying grubs, which, strongly recommend this practice to your correapoudent,
instend of liming sce. at other seasons. You seem to think the disease not caused by insects; but you probably refer only to the apper part of the plant. Careful examiap should be made. [We examined the roots with care, but could fiad no trace of insects.] Your correspondent say of, in one part of his letter, that the disease often attacks Barley, and then aays it never attacks Barley. He also with that care which in such case is necessary. Many root-fibres may remain quite sound, while seme have been cut off; and the loss of une or two mayy cause all the mis. chief. I may add. that the practice of paring and burning the surface of grass-land betiore ploughing is one likely to be beneficial against zasects. It would also be beneficial, for many reasons, to steep the seed during 24 hours, or more, in some pichle; that is, to wet it thoroughly, and
allow it to remain on the barn-tiour a day or twu. There is no reasun why this practice should be confined to wheat. It would be kind in your correapundent to say mhether or not he has committed any mistaisein stating that his crops of oats in general amount to 8 or 10 quarters per acre, as appears in his letter as printed.

Watering Pots.-Having obserred in a Late number of the Gardener's Chroniele an engraring and description of a new watering-pot, I would mention that upwards of four yars ago, when connected with the Sheffield Gardens, I scribed by H. L. The plan and construction have since been greatly improved by Mr. Willinmson, who was then gardens. I merely notice this circumstance for the purpose of stating that I think the watering-pot as improved by Mr. Williem
[Upon applying to Mr. Williamson upon the subject, he firvorred us with in aletch of his plan, with the fallowing memoranda :-

No. 1 represents the original, which dilifers from a common watering-pat, in having its tube inserted in a borizontal position, with a brass vilve near the point, through which pasesa a brase wire or rod, held in its proper position by centre, as represented at a as, and cennceted with a crant or lever at \(b\), between the lower part of which and piston and shuts the valve. From the top of the letser is fired a brass rod at \(d\), which is kept in its place by a collar brazed to the aide of the pot. In rising, the rod is pressed by the finger. No. represents the improve-
ments, which consist in a double lever, acting like tho key ments, Fhich consist in a double lever, acting like tho key
of a flute. Iastead of the steel spring at the end of the lever, a spiral une of brass mre is tixed withis the point of the tube, immediately before the valve, which it shuts; at
the other emi I fhe thhe is a conves rose of coprer, \(t\) prevent dirs, se, passing iuto the tube, turough the centre of Whick passes the my in cornexion with the lever and the
valre. No differs froun the reveline unly in having ralre. No 3 differs froun the reveding unly in having a
moveable curied tube attached to the pipe at top of which is a very fine rose, about one inch in diameter. From the length of tube (about 20 inches), the pressure of water is considerable when the pot is held in an inclined position, producing a light shower admairably suited to small seeds, \&c.]
Pharbitis Learii.-Lust November I divided off a porstrong rieh turfy soil for this prince of climbers. It conm strong siehtarfy soil for this prince of climbers. Is con-
tinued growing all the winter; by the end of April it began to flower, but still kept on growing, and mow it
rans over two stores, prodecing from 300 to 500 tow runs over two stores, prodacing from 300 to 500 tlowers
dally. Its flowering in sach profusion does not seem to hinder its growth in the least; its habit is peculiar in this respect, and may be taken advantage of by the amateur to formith tin greathuase with formering plants of it the plan I an suins to recommend. Whem a plant of this species comes to a th. rening age, it praiuces tazo ciints of evory jolat; the other neither twines nor flowers, but hangs d wis from the rafters, or runs diung the ground, rooting uaturd tmede of a strawberry rimer. This being itm tike achounge of it for multiplying their plants ; but plants so producod from the barreas shoots, piants; bou will o, sellam or never flower the first season; whereas cuttings or hyers takea frome the flowering plant. I flye screral plants from basten shoots last spriag, cice of is Lacts runs over our Orchidaceons house without any signs of its Auwering this season. I had sean
several such results inst autumn during a tour through the midland counties. Other plants of my early produce I planted out in the borders of the conservatory; a lofty
structure attached to a suite of living-rooms and well adapted for displaying climbers-these soon reached the top of the house, but probably will not flower this season after I recommended and got executed an expensive alteration in the inside of the conservatory for the better display of climbers. Not to be driven from \(m y\) origina intention of having this climber in flower the first season
in the conservatory, I lasered long flowering shoots in 48 rots in the store 'they soon filled the pots with roots were then removed to the borders of the conservatory, and are now going on gruwing and flowering as if on their parent
plant ; only not growing so fast, owiug to the different remperature. We tase off other plants io the same way, from 5 to 20 feet long, flowering from top to bottom, for training over wires in large pots and loxes. Indeed, one day, plant them round the side of a very large box or pot, and train them over wires of any size or shape according to the length of the shoots, and they will be in full blussons to-morrow, and to a common observer would appear as an done in so short a time for Although this could be not the best way to have fine fluwers and healthy foliage After the layers are cut from the parent plant, they ought to be potted progressively, and the shoots trained up the large pots as it would be convenient to move about, when they ought to be brought for the change into the greenhouse or conservatory. I shall plant out some established plants in this way against the open wall about the middle or end of July, and 11 expect to have some flowers on them Middleton, Bat
Potaloes for Horser.-I am willing to give an Essex Gardener, or any one else, all the information in my power with respect to my mode of feeding my horse with roasted Potatoes. The quantity it may be proper to give a horse per diem I am not prepared to state: I give my
horse about two-thirds of a peck for his supper, and I am of opinion, when he has slow work to do, the same quan tity may be given to adrantage at any time of the day but I would not give a horse Potatoes immediately before I was going a journey in haste with him. As a proof that this mode of feeding is good, I may state that my horse as fresh and sound as ever he was, is eleven years old, and Thave had him seven years. If the Potatos are roste they will do very well ; but if roasted till the skins are black, there is no objection to it. The horse eats all; but if not cut into slices of moderate thickness before they are put over the fire, it is well to crush them a little, lest a horne in his eagerness to devour them should choke himself. If a horse should have two feeds of Potatoes in a day, I am of opinion that with regular gentle exercise he will do very well with only one good feed of Oata. No water
with the P, tataes ; but if one-third of Swedish Turnips sliced be mixed with the Potatoes, I think it is an improvement to the feed : the Turnips are not to be cooked. A Bran in a dry state, or scalded, or Grains, does well feeding, I have made no calculation; but should a feed of Oats cost, say \(4 d_{0}\), and a feed of roasted Potatoes \(2 d_{l}\)., then on one feed \(2 d\). would be saved, on two \(4 d\).; and this plan continutd for a year would be a saving of something more Essez Gardener "1 add one more observation for the Essex Gardener, "Quid nocebit tentare?" What harm to
try? Having fried, he can proceed or stay his hand, as he shall find the mode of feeding beneficial or otherwise. It may be observed that where persons grow Potatoes in large quabtuies, there are generally many small Potatoes and many that are not in a very fit state for the table or the market. These, if in a sound state, will do well for a horse, and thus a considerable aaving of expense will be effected.-A Cottage Gardenes.

Salvia patens.-"S." does not specify whether his plant whose buds fall off (Gardeners' Chronicle, p. 413,) rianely, and flowered profusely with me in the open ground in a very sandy soil, both last year and this, and certainly never sheds its buds. As the seeds seldom ripen, the eupty calyx falls off a few days after the flower. It may
be well, however, to mention that the plant is not hardy enough to stand ordinary winters. It bears a good deal of frost in spring, if planted out early; but every single plant, protected or anprotected, was killed with me last and Tigridia Pavoaia escaped unhurt. The oniy plant Fhich escaped was against a hot wall, planted with not now so forward by three weeks as plents preserved in the greenhonse and turaed out.-. \(\boldsymbol{B}\).
Stanhơpea coutâta. - A plant mentioned in the last perfection 1 bin pain parther notice. The plant is compratively a small one, haring been imported in 1836, by Messrs. Low, of CLapton, and its new bulbs formed last year are only sevea. It has now upoo it, expanded at one time, 69 flowers upon 9 spikes, forming a mass of bloom about 2 ft . broad in beaut more than three days, it is probable that we never see the finest specimens at horticuitural exhilitions, it being diffecult so to time their blouming as to bring them out in perfeetion. But the plants generady shown preporaveous flomers, and thencipre fill far hoort of the oxtro-
ordinary beauty of a specimen like this. I am inclined to think that its perfection is the result of the folluming tivatore, which 1 recommend to the experience of cal rally left in a warmo greentiouse, moderately shaded, fo ringed it is much drier than in the stove. The buish which are exceedingly shrumik hy the effurt of fluetering continue for somse ume shriveiied, though they gradualif resume a degree of flumpuess. As soou as the new shool appear, and not till then, the plant is renacved to the being taken that the bulbs once treatment, special care want of water. Two years that this treatment has hoe pursued, vie in 1837-8 and 1840-1, the growth was peen liarly strong, and the bloom appeared all at once, the two other jearr the plant was returned to the stove immediately after flowering, its shoots were neithar so me. merous nor so strong, and the flower-spikes appeared i regularly and in succession, Under the treatraent recom mended, the plant, having flowered about the last weak in June or last of July, begins to grow in September, and the flower-buds appear the first week in May. When well ald bulb, and two flower-spikes from shoots frome every plant is grown on a frame or inserted basket of elder wood and is or course suspended.- Jofn Rogers, Seven Oaks.
Education of Gardeners.-I quite agree with you on the value of education in a gardener, and I think much might be done by a normal school for gardeners-sar a the Horticultural Societr-and some three or four geo elementary works on the practice of gardening and the elements of vegetable physiology. Your own "Theory and by decrees echould stand at the head of this class where there are horticultural societios or botanic gardens, as at Liverpool, Exeter, Edinbargh, \&oc. In the mean time, one suffers from the transition state. The good old-fashioned rule-of-thumb man is fast going out, and has been suceeeded by the Joung smatterer, with very little theory, and no practical knowledge, and an abundant orop of conceit. I have two small gardens; in one I have a young gentleman who has a capital reason for ruining ail my trees by theoretical pruning; he spoils my grapes, and I get no vegetables, and few flowers; but he bas a reason for all he does, and promises that the mex year-the to-morrow of the sluggard-- 10 do med. class ; I cannot afford a first-rate artist. At another garden I have a fine old fellow, of the old school, full of prejudices will not hear of the rationale of anything-spurs and chops my trees about-robs my farm-yard of all the manure, and after all my prophecies as to his ignorance, \&c., I find his garden the olly place from which i can obtaia eicher fruit or flowers in perfection. As this chess will soon have passed away, pray make haste to edecute sian of sutthan the Gardenors' Chronisle. - K.
Daformed Reses.-The deformity complnined of by your correapondents in the Rose-trees arises, no dorbs, from the cause you have mentioned, that of having been too much forced by the warm weather of the past spring From my own observation I am inclined to think that eoni with some descriptions of Roses produces similar eacion to fill up a broad and deep ditch, Which I dud with the soil from a very old bank at the foot of which was a ditch which carried off the soil and filth from the home. The newly-made border on the site of the old ditch was, in consequence, of the richest description: in this severn varieties of Roses were planted, amungst them a Rose of peculiar bearty and fragrance (I do not know the name), the ontside petals light, darkening towards the ceatur, I was surprised at finding a socond bud pushed througb the centre of several of the flowers, and in many instances - thind bud, the others surrounded by leaflets; every ansuing year it was the same. I found also that Browns Superb, planted ia the same soil, was inclined to throw ep buds in a similar mauner. I send you a specimen of the Petronalle, which even exceeds my former Rose-tree; it is a very vigorous strong-growing standard, planted \(2 \pi\) a rich Iom ; hat yenr it showed no symptomes of this diseas. the effect of moil, in the other the warmoth of the spring.Waller Hemry Hius.

PROCEEDINGS OF SOCIETIES.

NOTICES OF NEW PLANTS WHICH ARE EITHER CSEFLL OR ORNAMENTAL.
 from Cawhiere, by the Curt of Directore of the E. . Company.
It was first met with hy pr. Royle's collectors, and afterwards by Mayestuemont in tpland pastures. Certaminl it is one of thie
gayials. In eovnequence ct the striking contrast hetween the white and hiue of to large flowers. This serennial prows about a fout hiph, and flowers in May and Jume. It is
easily increasel bu dividng the whole platit in the antumin or spring, is perfectily hardy, and was raised from Cashmere wedt

 who sent is to Messrs. I.ddiyes. It is quite distmict from all the species previously publuhed, although no dembt allied to \(C\).

\section*{MINCELLANEOUS}

Character of the Priminal Regimns of the Flore of Brazil. -The iegetable kimgdom in Brazit presents in general a fixed character, especially if the tropical resions be considered. This exhibits itseff in the great exuberance of the ramitications of leaves, in a profnsion of thowers and fruits. and in the absence of those orstunted growth or imperiect development. suelt as thorns loaded with dark green foliage, and flower stems adorned loaded with dark green foliage, and flower stems aunrned
with reds, violets, and yellows are more abundant than blues and whites. The bark of trees is thin in proportion to
the size of the trunks, and it does not peel off as in North the size of the trunks, and it does not peel off is in North
Holland, where the ground resembles a tan-yard. from the Holland, where the ground resembles a tan-yard. from the
quantity of bark with which it is strewred. number of plants are naked on their surface : it is chiefly in the estratropical parts, and in some elevated or saline situations, that we find a clothing of hair and down on the leaves, or other soft herbaceus parts. With the exception of some genera, such as Chorisia, Pachira, Eriodendron, Bombas, Wittelsbachia, Lasianira, and many Orchidacere, the flowers are not so large and magnificent as in the Flora of Southern India, though larger than is common in other tropical regions. The extraordinary variations in the same species, caused by situation, climate,
and age, charaterise this tropical vegetation, and make the study of it not a little difficult. The size and shape of leaves, especially at the base and apes, their degree of hairiness, their texture and thickness, infloressence, out-
line, (and in a less degree colour,) vary infinitelv, a ccording as the species grows fully exposed to the light of the sun, or in the shade; on lofty hills, or on low ground; on elerated plains, or on niver-banks; in stony places, on decased dung, or or moving sands. Frequently one and the same tree, if growing half in the light and half in
shade, will exhibit different degrees of hairiness in the different parts, as is observed with the Mango (Mangifera indica): and the fruit differs in the quantity of its saccharine, aromatic, and resinous secretions as it may chance to be produced by one or another branch. Ano-
ther circumstance that distinguishes the Flura of Brazil, ise circumstance that d.stinguishes the Flura of Brazil, flowers, according to their age, to the season of the year,
and to locality. Many species produce thowers when very young, and then the fuliage and blossoms are of small size: others require a great degree of maturity in the wood
in order to bear fruit, and are at first sparingly clothed with blossoms ; sometimes in every part. The leares of fruit-bearing individuals are often 3 or 4 times as large as those of the same plant in a state of flower, and their substance and texture are equally altered. The leaves of those
trees which in the suring, that is, after the rainy seoso usually expand rapidily, are at first thin and delicate, but by degrees they beconse so thick and leathery, that specimens from the same tree, gathered at different periods, will frequently appear, to a botanist accustomed to European forms, as belonging to a different species It is the
same when an individual of the same species grows in the moist primitive furests aling the sea-shore, and in the dry forests in the interior of the country seldom remreshed with reticulation or the leaves are much more copions than upon the coast. It is, therefore not surprising thar many speEes should be introduced into systematic works, whose right to that rauk wiil be doubtrul, untul they are more studied in their original localities. Another circumstance nusessarily escape the traveller wino passen hastily throuch the country-namely, the formatiun of hybrids, and the vidual. There can be no doubt that the numermus incects in Brazil industriously visit the expanded hlocsoans, and produce the same uffects as in Europe. Unoat accuracy and muct time will also be required to prove that rariacasioned by differences of sex in the humerouie polygamous and diocious pants that octur in the Flora of BrazilAlstrattel from Hooker's Julurnul of Botany.
Conculiar Poplary.-The Canada Poplars planted on the banks of the river Stour, near the Dean's Mm, Canter-
bury, have attained an extraordinary size. Joe of the largest is about se feet iifigh. and with a trunk 16 feet in circumference at \(t\) feet from the ground. This magnificeat tree dirides into turee enormous brancirs at y feet is these trees, iz that all the brancines that hang over the fivar lave a descending dumetiva, so great in sume ci-es that the poiats irequentiy grow into the patcr, whate zontal direction. This is an example of the effect of sinal upon the growth of trees: the branches uri ance from the surface of the water that :- cio........ serface of the land, the pressure is s., weal. "...t theso pendent of a tree that extend urertinc pendent in direction.
one very large specimen of thete ti... las atain ed the height of 94 teet, with a trunh 111 feet in circumference at \({ }^{5}\) feet from the ground, and turms a trust beautiful
objcet.-M.

Turpon oi the Globutes of Ilici.-Taey vegetate and nourisin themselves in tivis shivetance exactig like the
gisbules of the blood, the lymph or nervons mass, or the Lalbs of the hair : in siturt, mpie all those elementary organisms, of which the organic structure consints, and which They are composed of two veniclea, mad contain smaller
globules, together with oil producing a greasy substance; their size extends to 100 th of a millimeter ; when exposed to some degree of warmth they become four times this size and then burst. They still vegetate in an independent manner, as the cuter skin breaks, and pushes out tire inner branches, which become entangled potatoes germinating in a darkened cellar. They at length become Penicillum glancum, and plant themselves by means of buds and seeds, particularly on the surface of mills, of cream, and of cheese. If thee ghibules are placed between two glasses with a little water, they sson germinate, and change to the Penicillumi glaucum, which radiates on all sides and bears fruit. They may be preserved in this manner for a whole jear. The sleep-apples (Schlaffname of Erincum, were conceived to be fungt, are no more independent plants than the hairs of animals are independent creatures. If, however, in the one case the cellis. and in the other the bulis of the hair, did not come forth till after the death of tiee budr, we should consider them as independent plants. This is the case with the globules of milk. What then can a portion of organic matter be said to be? Nothing but a mass of innumaerable globules opportunity to develop themselves. The leaven of bread, according to Cagnard Latour, is nothing but a similar mass of globules. I, therefore, perceive no difference between the globules of milk and the cells of animals and of plants, which are prolonged into hairs. Additional proofs are thas in \(h\) published in 1805 , under the title of \({ }^{6}\) Procruation," that an organic bode consists of nothing more than a procreation is nothing more than the aygregation of Infusoria, spermatic species, but of simple vesicles or slime.-Microscopic Journal. [M. Turpin is dead. Peace to his ashes! Let us hope that such speculations as this are dead with him.
We have seen many a parador maintained by clever people, but none more absurd than that of M. Turpin, that a man is a mass of infusorial animalcules.]

\section*{NEWS OF THE WEEK.}

Our news from France relates chiefly to the negotia tions with the Allied I'owers in regard to the Eastern Questiun, which is considered to be set at rest by the acceptance of the new firman by Mehemet Ali. In the diplomatic circles it is reported that the Four Powers have invited the French Cabinet to join the European Alliance, and thus become a party to the final treaty of pacification; and all accounts agree that the French Government has consented to do so as soon as the other Powers ren junce the intention of further interference in the Levant.-In Spain, the debate of the Chamber of \(D_{\text {cputies on }}\) on the gaardianship of the young Queen has termmated by a decision against the claims of the Infante Don Prancisco de Panla ; and the Cnamber bas called upon the Gorernment to convoke both Chambers for the appointment of a guardian; to which office it is believed that Señor Arguelles will be elected. The report or the budget shows a large deficiency in the revenue the allowance to Queen Christina as Regent is discontinued; and much dissatisfaction exists in regard to the proposals of Government for the increase of the army in the present exhausted state of the treasury. The financial negotiations for the new loan are still in progress, but their speedy settlement is expected. The movements of the French tleet in the Mediterranean appear to have given rise to apprehensions, and reinforcements have been sent to the Balearic Islands to repel any hostile attempt on the part of France. A bill has been brought before the Chambers for the complete appropriation of the property of the secular clergy to the uses of the State, which s said to have been received with approbation. - In Portugal, the Ministry has officially announced the recognition of Donna Maria by the cunrt of Prussia, and has made known the probability that this example will be speedily followed by the other Northern Powers. The English Government appears to have impressed on the Ministry the claims of the bondholders on their attention, and arrangements are said to be in progress for satisfying the national creditors as to the character of the new bonds, orevionsly to the proposed conversion.- From Hanover, we have received intelligence of the deati of the Queen, whose illness we mentioned in our last Niumber : the Assembly of the Estates has been dissolved, and the King has decided that the high tribunals are incompetent to entertain the suit of the Guttingen professors against the crown.-From Prussia we learn that an Ambassador has been despatched to Rome with conciliatory proposals ; and that the King has expressed his readiness to accede to any arrangements for the settlement of the church question, whicia do not compromise the rights and dignity of the crown.-From Itals, adrices of a recent date inform us, that Don Miguel has declared that he will never resign his. rights to the throue of Portural; and that the Neapolitan Government unites with that of Russia in refusing to be a party to the payment of a pension to Don Carlos. -From the Levant our news confirms the accounts published in our last, in reference to the acceptance of the firman. The Sultan has received the sum transmitted by the Pacha of Egypt in anticipation of the tribate ; and hopes are entertained that a smaller amount than that specified in the firman may be accepted, as so large a sum as 80,000 purses cannot be paid without paraIysing the internal government of Esypt.-The European provinces of Turkey still continue in a disturbed state; the Christian inhabitants of Bulgaria and Servia Lave entered into a union, with the intention, it is said, of throwing themselves under the protection of the five great Powers. In Candia, several engagements have taken place between the insurgents and the Turks, but the most contradictory accounts of the result have been received; it appears certain, howerer, that no material advantage has been gained on cither side, and that the Turkish commander has sent for reinfurcements.- The arival of the Great Western from New York has su! plied us with recent news from the Enited States and Canada. Thequestion of Mr. M'Leod has been discussed in Congress at conswerable length; a warlike tone was assumed by sume of the speaker:, but was deprecated by the majoity, and the lebate terminated in a resolution to refer the question to the Committee on Foreign Affairs. In Canada public attention is much occupied by the speech of the GovernorGeneral, Lord Sydenham, at the opening of the first Parianent of the L'ited Provinces. The geverno: alluded to the affair of Mr. MCLeod, and sta:E! that energetic remonstrances hed been forwarded to New Yoris her Majesty's Government were resolved to adopt every mecessary
sabjects.
At Home, the Elections still concinue to absorb attention; those for the Eng"usi cities and boroughs are now completed, and the county eiections are in a great measare decided. By the close of another week the comascertained.

\section*{3nome Jems.}

Cocrt.-Her Mujesty. Prince Albert. and the Princess Royal, aceompanied by hrr Majest fige (ane and the Doke de Brabant, loft town, on Monday afternoon, for Windwor Cartie, where they still conitinue. His Majonty the King of the Belgians left at the same time for his ment at Claremont, which he again left, or Tuesday, on a visit to her Majesty at Windsor. Her Majesty and Prince Albert, and their Majesties the King and the Queen of the Belgians, honoured the I taliann Opera
with their presence on Saturday evening. Despatches with their presence on Saturday evening. Despatches
were brought to town, on Saturday, conveying the intelligence of the demise of her Majesty the Queen of Hanover. The Earl of Fingal has succeeded Lord Byron as the Lord in Waiting, and Mr. J. Rich has sueceeded ViceAdmiral Sir R. Otway as the Groom in Waiting. The Hon. H. Pitt and the Hon. S. M. Cavendish have aucMaids of Honour in Waiting to the Queen.

The Revenue.-From the Official Report just published, containing an abstract of the net produce of the Revenue of Great Britain in the rears thded Sth July, 1 nin and
 was Cu-tums for the year is yit, a1/, wh the Pust-ottice 545,0100 ., and on the Crown Lands is \(\quad\) nil0, amounting to \(1,416.991 \%\) decrease of tire ordinary lievenue; to which must be adtied the deerease on Imprest and other moneys 67.5302 ., Reparments of Aifances \(1: 8,603\), mahing a tntal decrease of \(1,6,6,, 2 l+4\). The increase for the year on Excise is 431, )... these branchies of the total ordinary Revenue of \(1,138,5316\). By deducting this sum trom the tital anount of decrease. the accounts show a decrease on the year of \(i 24,640\), as the accounts show a decrease on the yed of ended show a centinuance of the decrease on Customs to the amount of 289,3481., on Crown Latuls of 12,500l., and on Stamps of 48,8301 , amounting to \(350,6 \% 8 \%\). on the ordiuary Revenue: to which must be audel the decrease on Impost and other moneys \(99,814, i /\)., Repayments of Advances \(52,455 l\)., making a total of \(503,028 l\). On the other hand, the Post-otfice shows an increase for the quarter of 19,0006 ., the Excise 83.3616, Taxes 362,8881 ., Miscellaneous 14,1181., total increase \(459,367 \%\); by deducting which from the total decrease as above, we find a decrease on the quarter of 3, f.611.

The New Parliamext.-Elections concluded, The Table gisen in nur last Number contaiued the returns of 185 Cities and Boroughs in England and Wales, 1 return from Scotland, and 1 from Ireland. The state of the representation in the list Parliament compared with the recent Elections, gives the following as the result of that Table, counting Thettord as a ciouble riturn:-

107 Places. Number of Members 3201.

The following is the continuation of our Table, gising the returas of the past week so far as they have reached us up to the present time. Cardiy in is given as a duable return.

Places and
Cunstituency.

received at that port to equip two ships of the line, one of
100 aud the other of 90 guns, which were lying up in dry dock.
the French census may interest our readers at for tahing moment. In cunsequence of the circular of the Minister of the Interior, the Prefect of the Seine has published an order prescriuing the mode of taking the census for the
department of the Seine. It is to le made in Paris between the 1 sth ult. and the 15 th of Sept., by special com missaries appointed by the Prefect, on the reconmenda tion of the mayors under whose surveillance they are to be placed. These commissaries are to risit every house with such other information as may enable Gosernment to class them either as married or unmarried, wiciows o to these commissaries all tie information in their power a order that they may Reilroad oad are going on with great rapidity, and in order to be fully prepared, twenty-four locomotive engines were orof the branch of the railway already opened to the public, viz., from Paris to Corbeil, have just been published by the company. It appears that from the 2uth Sept. to 505,391 , and the total amount of the receipts ? 605 being an average of 1 f . Jlc. for each person. This total gives an average of 739,000 per annum ; the receipts for day, or about about \(1,100,000\) f. Estimating the expense of this portion of the road at \(10,000,000 \mathrm{f}\)., and the current expenses at 45 per cent., it would give a net revenue of about \(600,000 f\)., or about 6 per cent. interest.
Crime in France of criminal justice for the year 1839 has just been published. It appears that the number of prosecutions in assize courts was 5,621 , being 260 less than the previous persons, and crimes prosecuted, there were 1 ,Ne been less assassinations, but against property. There vilence offered to femates. Of the 5,621 prosecutions, 1,598 were set aside by the jury ; 2,693 fully admitted, and 1,330 parState of Trade. - The MIoniteur publishes the cons. parative returns of the trade of France with her comand foreign countries during the years 1838, 1839 , and 1840. It appears from this ducument that the importations in 1840 amounted to \(1.790,000,000 \mathrm{f}\), and exceeded by \(205,000,0010\). those of 1838 , and by \(20 \%, 1,00,000 \mathrm{f}\), those \(1,706,000 \mathrm{f}\)., showing an increase of \(93, \overline{\mathrm{~s}} .16,000 \mathrm{f}\). over those of 1838 , and of \(21,000,000\) f. as compared with the exports of 1839 .

\section*{on the 28th ult., the diamber of Deputies brought to a close,} guardianship of the young queen. The claim of the Infante Don Francisco de Paula to that important post was opposed; after which the president announced that the debate was closed, and, on his proposition, the assembly vernment, agreeably to the law of the \(\because 9 \mathrm{th}\) June, \(183 \overline{7}\), for the purpose of appointing a guardian to the young queen : to which office it is generally believed that Señor Arguelles sented its report The committee on the budget has preappears that the expenditure will amount to \(1,200,000,000\) reals, whilst the receipts are not expected to exceed
\(800,000,000\). It is stated \(800,000,000\). It is stated that a reduction is to be made in the queen's civil list to the amount of \(3,000,000\) reals; reals; and the \(12,000,000\) reals which Queen Christina received as regent are to be entirely suppressed. The pecuniary supplies, are said to be proceeding satisfacto rily. The cnly diffeculty rests in the amount of the luan the Minister of Finance demanding \(35,000,010\) reals, and the capitaiists being willing to give only \(30,000,000\). A bill has been presented to the Cortes to authorise the the minister proposes to retain a standing army of \(100,00^{\prime \prime}\) men, and a disposable reserve of 50,200 . In general this amount is considered too great in comparison with the Tould probably be prorogued on the \%th inst., the ministry disapproving of the great reductions made in the hadget by the committee. In the sitting of the Chamber on the 25 th, a depury put some questions to the gavernplained that subject of the Basque provinces. He complained that the law which foliowed the Bergara convendion had not been executed, as nothing bad been done to he said, cared nothing afout the fuerus, and had commenced the civil war from an abstract lure of absolutism and religion. The President of the Council said that goverament was quite ready to carry che law into settle the gutser had veen too shurt a time in ofice to capied. In the mean white he lad appointed a captainwhilat he was radecting on a made to affect no interest, and jet preserve the cunstitution uninjured. -It appears toat the differences on the French and Spanish frontiers are not yet at an end. 'The French custom-house officers and thised circumantance hamiards, in the exted sume angry remarks in the this circumatance las excited sume angry remarks in complaint in the fine that the British Consul at Carthes-
gena has been made a consul-general, and the captain of
the British brig of war who rescued the smuratler pro-
moted.-Aceounts from Andalusia, Castilie, Valencia. Estrenatiura, Murcia, and Saragcsea deseribe various
scenes of anarchy, which would argue the deunoralisation of the people to a great extent. -The manourres of the the attention in the Mediterranean seem to have rousted Barcelona of the 29 i panish government. Letters from arrived from the Ministry of War to embark in all haste infantry, a few squadrons of cavalry, and a battery of artillery. The motive for this concentration of troops stated to be the necessity for efficaciously matehing the morements of the French and English squadirons whicl
are cruising off those islands. The English it is sand demand the cecupation of Port Muhou, because the French have establisted an hospital ia the island Del authorities to visit the fortifications of orer. enjoined the in those islands, and address a report to him on the subject.-A project of law was read on the 29th ult, in the chamber, for the complete and entire appropriation of the property of the secular clergy to) the uses of the state. secular clergy in futurention of government to pay the posal was receired by the Cortes with marked signs of approbation.-Subsequent accounts inform us that of Senate was occupied with the question of the guardianship. A decree orders that all copies of the Pope's address shall be delivered up to the Guvernment. The ceclesiastics are to cause to le put under arrest any memhers of to the orders of the Government. The ccoub from Malaga report the revolt of the garrison of Albucemis, and of the excesses committed upon the persons and lives of man, women, and children. The Guvernor caused soldiers the ringleaders to be shot, but on the l4th the Geners were again masters of the place. The Captain muster.

Portugat.-By the usual meekly packet, which arrived at Falmouth on Saturday, we have news from Lisbon to the 28 th ult. The chief subject of interest is the finanderree in of the special commission appointed by roya decree in March, and that of the government, which, appears, adopts the various schemes of retrenchment proposed by the Comnission, by which the estimates of ex. more prospectively; and also their plans of taxation; but re objects to alter the present method of payment as recommended by the Commaission, who advise that all talised, and cash parments tune this year, should be capi reports and plans had been read in the Chamber of Deputies, and referred to a select committee of that body for revision. money on the next three months' revenue , and raise Lower Chamber by 66 votes against 24 . - The Minister of Foreign Affairs announced to the Chamber, on the 26 th ult, that the Court of Prussia had arknowledged the Queen Donna Maria, the information hawng direct Austria, he said, was al:o on the point of doing the same A Minister was daily expected to follow their example. A Minister was daily expected from the Lnited States, A merican Gew treaty, which has been duly ratified by the Americh Gorenhe.-I was expected that the government would enter into any arrangement for satistying the that be the a the character of the new bonds, shoula Palmerston obstacle the plan of convorsion. Lord and just claims of the bondholders on the attention of the government.
Gerana.-Our news from Germany this week is very Denme and destitute of interest. The concession made by been gratefully rectived throughont Prussia, where the most favourable results were exnected to acerue from it to the towns of Stettin, Dantzic, and Konigsberg.-On the at Potsdam ne Bruhl had his final audience of the King It is generally supposed that out his concili. supposed that he has received the most the proposals of the Roman curia which are compatible with the dignity and inalienable rights of the Crown, and which tend to peace.-The Prussian State Gazette mentions the establisiument of a line of pubiic vehicles from St. Petersburgh to Fanroggea, on the Berlin roac, runbing seven tinder a week, and tranaporting traveliers, arcordias to the lightens of the caringes emplofed, ij of thu urs, 84 hours, or lus inons, at charyes of 35.1 , or if siner rubles respectively (the ruble is 4i, 13c.). The vehintes are made to hold either texo or four persons, and good accommodations for sleeping are to be found on the rcad.The quarantine on the Austrian frontiers, to which passengers and merchaudise from the Turhish provinces have artherto been suhive"ed, is not abolished, as hat beea supnexion ; but the iune is considerably siortened. In coll nexion with this subject, the Angsburgh (ruzelte states ressels leaving the port of Marselles with cleaa bilis of health to ascend the Lower Danube without leing compelled to undergo quarantine, but it was believed that thas request would not be granted.
our last two numbers, haid weene health, as we stated in our last two numbers, had been fur some time in a pre-
carious state, died on the 29 th ult. The Gozette whici announces the event states that, after being connued to her bed for three months, her Majesty expired from a decay

Prince, and the Duchess of Anhalt Dessau. Wednesday her Mujesty. -The Assembly of the Estates was dissulved on the Beric uit.- As the constitution antes dissulved goverument, in case of a cissolution, to cullect the exist goveriment, in case of a cilssolution, to cullect the existnot necessary for that period. Tie tases tier ture it i stated, wia be levi.d aceordmely. The King bas puislished a decree of his Council of state, declanng the hish tributhe Crown in the cast of the fortingen a stit against hating heesh forcibly dispossessed of their uffires, without the sentence of any tribunal again:t them. had adopted a mode of elearing their characters by applying to a court nification, under the common lan of Genmany, fur indemnifcation.
Don Miguel resign his rights to the throne of Portugal. It was expected that he would leave Rome soon fir Modeua or Capies. -The Neapolitan government, it is stated, has
refused to juin in the payment of \(8,0 u 0 /\) a rear pension to Don Carlos, on the ground that it pays a pension to Dun Scbastian. Rus-ia alon, according to the same accounts, has not consented to join in the payment of this pension.-Letters frem Milan announce the death of the asino, on the bank a the (atatani, who expirid ather Gut the report requires confirmation.- It ap pears that the Neapolitan Captain, said to be drowned in the Pollux steamer, whose luss we referred to in our last Number, escaped on a plank, and was next day picked up by an hashir vessel. A Leghorn letter says that a commission ti e spot where that vessel sank. They had ascertained that the hull was hing 41 Italim miles ( \(t, \frac{4}{4}\) Englista) from the shore, havins drfted three Italian miles from the place in 111. Tuscan fathems of water Aut hope of raioing the hull had been the ref.re ahandoned, but a compang had offered to try and get up the specie
by means of dising beils, at a cost of 130 .un0 frames. The \(\dot{P}^{\prime}\) ollu e, it appears, hat 711,000 silver colonati on board. A Russian lady 1 s st 30,000 francs in gold, and numerous artic.es uf value. The Duchess de ia Rocea, a Neapolitan lady, lost \(30,0^{\prime} \omega u\) francs and her corriages: and a Captain and Arikery lust 20,010 france, with a contscoped with ditticuly, bethe all asteen ine their berth when the collision tuoh place. Magege.-Accounts from Athens inform us that \(M\) and Minister of Foreign Affairs, bas resigned Counci was taken ing shends. The motive for this step, which urent is comideral to the the nore surprising, as the King hau acceccul to the Minister's program...e. At the same time, as it is only the post of President of the Counci that M. Marrocordato has given up, it is thought that the
diferences which have arisen between King (Otio and his Prime Minister, whose entry into power has raised the hopes of the people, may be yet inade up. Ry subsequent inteligence, howevtr, we leata that the following Alnistry has been formed:- Mavrocordato, Interior and Foreign Vallettas, Public Instruction and Public Worship; PriviKeglos, Justice; Schmaltz, War; Crivzis, Marine; the two last retan the ciffices they previonsly beld. At the same time it is asserted, that the King wiil not grant the sists upon the disiolution of thia anti-antional caamarilla, and that every Minister shall be made rapurambe for his own propositions; and to extchd the puwers of the Council fate, constituting it de jacto an independent legislative body. Although the King had at first promised every-
tining, it is thought that he las been overruled hy some intriguants, who have diverted him from his original inte
Rcssia.- Private letters froin Petershurg state that on the 9 th June, the chief committee of public credit held its
dnnual sitting, when thie Minister of Finance presented a report relative to the state of the public debt of Russia up the end of 1840. The report states that on the \(1=6\) Jan. last, the foreign debt was i \(74,8: 2,000\) Dutca Hurins,
and \(4: 3.331,419\) silver roubles. The home debe consisted of the sispen silver roubies. The ver roubles, and of the five per cents., amounting to \(103.901,220\) silver roubles. In the course ut the year 2.9:5. 595 silier roubles, and it 051.950 assignats of the six per cent. Rentes, and \(17.20: \overline{7}-10\) siluer roubles of tire ive per eent. debt. The sidver ruluie is 4 f. Iic., the gulid

THE GARDENERS' CHRONICLE.
[ \(\mathrm{N}^{0} 28\).

Which Tarks lend each other against the Rayas. It was considered in power, both the Pachas of Widdin and Nissa wu.al l lave been dismissed.- The state of public health in the capital was more satisfactory. In the neighbourhood of Bolu, however, as well as in Scio, and some other
Asiatic purts, some cases of plague had occurred, which obliged the quarantiae officers to take the strictest measures Subsequent intelligence from Constantinople informs us that the return of the steamer, which conveyed the last the utmost anxiety. The Council continued to hold frequent meetings, but their object was no longer the Easterm question, which was considered to be irrerocably settied, even were Mehemejet under consideration was of a domestic nature, and referred principally to the improvements which the Divan appeared disposed to into the various branches of the Administration. Several Tatars had arrived at Constantinople with despatches for the Government, announcing that the families of most and that suct of the revolters arms had retired into the mountains. When the last Tophia, at the head of a corps of 6,000 irregulars and two regimen's of troup; of the line. Hefzi Pucha was also on Pacha of Wiudu, was adrancing by ferced marches at the head of several thousand men. It was hoped that those and Terik Bey, who had been ordered thither, with in had been tirected by the Porte to use his utmostexertions had been cirevited by he portions to endeavour to bring about a settlement of the dirferences by means (iconcilation. The Peindschevket arriatches from Taint Pacha relanive to the insurrection, which he pronounced to ise nearly at an end. Mevertheless, Tahir had demanded tweive field-pieces, with the necessary accessaries, and a detachment of gunners, to enablall vessels were als, fitting out fir the purnose of reinforeing the circular the the European boards of trade, informing them that a Turkish brig arrived on the 9 th from Alexandria with seventy-five passengers on b sard, amonest whom fourteen were suffering under the plague, but that as soun as the intendance was informed of the fact, the ressel had been ordered uato quarantine at houleli. Four died during the first five days, but the ten others still suritself in the city.
dandia. - Accounts received from this island, through Egypt. comirm the unsatisfactory result of the negotiations
undertaken br the Consuls of the European Powers to induce the native Greeks to lay down their arms, return to their lumes. and send a way the stranyers who had exAdmizal, Tair Pache, haviag in vain offered to pardon them on suban ssion, attacied and routed them at the village of Provarma, feetween the the British naval captains on the station : but were thwarted, it is said, by the arriv?! and interference of the French vessel Acheron. The captain of a merchant vessel states, that when sailing near Sphakia on the 7 th of June, he heard the noise of a battle, which lasted from 2 P. M. till dusk, commencing with musketry and concluding with a heary Turkish cannonsde. The Creeks, it seems, have no cannon. SubAt Athens 15,000 drachmag have been collected; at Syria 10,000 drachmse ; and at Marseilles 80,000 francs. Subsequent accounts, received by way of A thens, state that on ents and the There was an engagement betweem menced by the first, ibut who, after a battle of sereral hours, were defeate!, and compelled to retreat to the mountains. pursued for a consderabie distance by Mustapha Pacha, at the head of tro sattalions of regulars. The Turks, according to then own aceunt, had only a fers men wounded, n their side, aseet that ther sustainel Condians, on their side, assert that ther sustaired no loss at all. anythag but dec: sive. - The Prench and English Cabinets, it is stated, thave sent instruetions to their Consuls in Crete

\section*{Egypt.-Intelligence from Alexandria, dated the 16 th} ilt., confirms the announcement, given in our last Number, that Mebemet Ali had not only publicly proclaimed the hatti-scheriff of investiture, but had also transmitted of the Sulcan a sum of \(1,250,000\) frane, in anticipation shall bave received the humbis remonstrances wheh he intead to make, showing tbat it will be impossiule for him to pay an anaanal tribute of 80,000 purses without paralrsing the internal Government of Egypt. This motributed to the suggestions of the French Consul, who, on deite ere of the solemn audience, in which Muhib Effend a long conferenne with Meicmet Ali, and represented to him, that brias immealiate sobmiesion, France, in concer Oo dinn fur him a diminution of the amount of the tribute \(5+\ldots\).iea a : a the first firmana. It is thenght that the Porte. which fur ang time past had received absolutely by this transmission of \(1,250,000 \mathrm{f}\), and will therefor order Muhib Effendi to make nee of the inotruptions whick
athorise him to grant to Mehemet Ali a diminution o liminishing in the extreme heat and the cases had fallen to hetween fire and fifteen per day. Ibrahim Pacha was still at Cuiro, preparing to meet his father at Esneh, on is the plague, which had falten at Cair had ceased at Rosetta. Mehemet Ali and Boghos Bey is said, a letter of sharp remonstranc from Commodore Napier, on the subjects of freedom trade and the restoration of the Syrian conscripts, in wado with him , and declared that if the promises made to him be not fulfilled, he will become as personally hostile to th probability of his reappearance at Alexandria, if his son the release of all the Syrians from their captivity. H argues at some length on the folly of the Pachas aties, an the determination of the Allied Powers to see them exe cuted; points out to him that linseed is not one of th terfere in its export on account of next year's sapply and that, in short, he must allow his people to buy and sell for themselves, as guaranteed to them by the Sultan.
The Pacha had replied, but the substance had not transpired.
Syria.-Private letters inform us that the letter o the Hatti-scheriff of Gulhane has been brought into ope tion of the council is not such as to enamour the pople with representative principles, or to inspire confideace in Nedjib Pacha's character and intentions. Intolerance and bribery are on the increase. In Jerusalem the dissensions between the Greeks and Latins have heen revived the great The treaties which secured to Franc the catholies of the Lerant had their origin in the das when the emperors of Germany, the kings of Poland and the czars of Muscory were contending with the sultan; while the Louises were generally the allies of the latter. The defeats of Aboukir and Acre cut them off fo fifteen years from the Levant, and the successes which made the temporalities of Rome part and parcel of the French empire placed them at variance with the spifitual power of the Pope. Thus the sanctuaries fell out of re pair, and the Greess were cal not ong keep up their domain, if but an inch at a time. The exertions of Russia of late years to protect the Greeks are well known. France, on her part, takes up the cudgels with equal zeal for the Catholics, and thus the people imagine that the exertions of France and Russia are all for the glory and advancement of the interests of the Clurch.
extement easts in Mount Lebanon on the subject of the 12 per cent. duties on expors. The Gorernment has yielded on the subject of the Kharatch and the Mesad; part of the existing irritation is probably due to foreign
intrigue. The motntains paid 2,601 purses, or 13,0006 .
 pation. 12,000 purses, or 60,0002 ., were paid during the occupation to the Emir Bechir, now in Malta, but the mountaineers have begun to calculate that under the new system they will have to pay an indirect contribution of 30,000 purses, or 150,000 ? The silk which is worked up into manufactures is of three sorts: the Aly, or high silk, such as that of Kesrouan ; the Wussut, or midditing such es thom in the neighour, and surh Rasheia. The average value of the silk in the town of Damascus is 360 piastres per rattolo of tho ores, and as the former charge was \(5 \frac{1}{2}\) piastres on this sum, the duty was as near as possible 1 I per cent. ; add to this 1 per cent. duty in the city of Damascus, then 3 per cent. on export, and the whole export and import duties were \(5 \frac{1}{2}\) per cent Under the new system the duties are 12 per cent. on the raw silk from the mountain on going into Damascus; 12 per cent. on manufactures exported; total 24 per cent. declare that their establishments cannot survive. Much discontent exists among the Droses, owing partly to the intrigues of the houses of Abou Neled and Djoubelat The Druses demand a prince of their own religion, and the ancient fend between the house of Shehab and its great rivals is likely to be revived. They would have muck less repugnance to a Mussulman than to a Christian Prince, and in case they persist in their demands, the house of Shehab could, without having recourse to
strangers, supply them with Mussulman princes, in the persons of the Emirs of Hasbeish and Rasheia. All this mere revolutionary ferment, arising from the ambition of the secondary houses. The roads in Lebanen are on the East IndiaCompany's post in Anti-Lebanon, whe 2 ball passed through the courier's leg and tilled his horse no accident has ueen heard of
India. - The further accounts which hare appeared dur ing the week state, that the Punjaub, as we briefiy men Goned in our last Number, is still a scene of great confusion. Sheer Singh has shat hrmself up in Amritsur, permits the country to be a prey to the iatrigues of the Court and the excesses of the army. At present, however the British convoys for our forces bevoad the Indus have not been interfered with; and there have been no scenes
of actual riolence since the murder of the unfurtunate offiof actual tiolence since the murder of the unfortunate offi cers who perished by the hands of the siks troops.-The ma littiy houn prodused in that eity, in the newnaper
trade. It appears that the preparation of newspapers for
Earopean circulation now occupies more of the time and attention of the publishers than the getting up of papers
for readers in India. The principal establishment in that city, that of the Bombay Times, began to send home monthly summaries for the finst tione in Outober last, and about ten times this number; and finding ordinary printing presses inadequate to supply the demands of the pub-
lic, is about to introduce a printing machine. since a fow hundred newspapers only were sent home from India altogether; now there are from 8,000 to 10,000 des patched
Persia.- The accounts from Persia are of a more fa It is positively stated that Ghorian has been siven yp by the Schah to the Ruler of Herat ; and thus the mostim portant obstacle to the renewal of amicable relations be mreat Britain and Persia has been removed. The mmediate consequences have been a marked improvemen a the tranquillity of Affghanistan and Scinde, and the had been talked of in that quarter. mail state, that the Admiral, Sir G. Bremer, who came to Calcutt for instructions, had received his final orler from Lord Auckland, and returned to China early in May The prevailing opinion there was, that the Emperor wil
not be frightened by what has hitherto occurred, and will not be induced to sanction the opening of the trade on the terms which the British Plenipotentiary is now instructed to demand. More troops, it is thought, will be wanted and her Majesty's 55th Regiment and other corps are directed to be in readiness: and the army in China, it is said, will have to be raised to an effective force of 5,00 men before anything decisive can be done.
Cnited States.-The Great Western steamer arrived at Liverpool on Saturday night, having left the evening of the 19th ult., bringing American news to that date. The chief proceeding of interest to English protracted debate on Mr. M•Leod's affair. It appears to have been long and angry, occupying two sittings, and te minated at length in the adoption of a motion torefer th matter to a committee on foreign affairs, who now have under consideration. Some of the speakers took a rer bers der the mathe majority also muck occupied with discussions on their financial deticito
Cavida. - By the Great Western, we have also received the speech of the Governor-General, Lord Sydenham, to the newly-assembled Parliament of the C'nited Canadas, whic had been received by express at New York on the morning of her sailing. The chief subjects of interest in it are the allusion to the arrest and detention of Mr. M• Lend, whicl is thus referred to:-"A subject of her Majesty, an inhabitant of this province, has been forcibly detained in the neighbouring States, charged with a pretended crime. -
time was lost br the executive of this province in remon trating against this proceeding, and provision was made or insuring \(t^{\prime}\) ) the individual the means of defence, pend ng the further action of her Majesty's Gorernment. The Queen's representative at Washington has since been in structed to demand his release. Of the result of that de mand I am not yet apprised, but I have the Queen' commands to assure her faithful subjects in Canada of her Majesty's fixed determination to protect them with the whole weight of her power." Among the subjects to which the attention of Parliament is especially directed, is the doption of measures for developing the resources of the province, by well-considered and extensive public worts. The Governor recommends the improvement of the navigation from the shores of Lake Erie and Lake Huron the ocean-the establishment of new internal communica tions in the inland districts-works requiring a great on \(1,500,000\) f. sterling for these and other purposes will be negotiated under a puarantee of the Imperial Treasury, should the British Parliament agree to the proposition of Ministers to that effect. The Governor recommends a large appropriation for military defences, and states that resty's command to say, that "her North American possessions shall be maintained at all hazards as part of her empire

Removal of a Midileser Magistrate.-AT a meeting of the Middlesex maylistrates, on Thursday, a long discussion took place on the circumstances connected
the removal of Mr. C. H. Moreton Dyer from the Commission of the Peace. Our readers will recollict that as far back as May lst, our paper of that day announced magistrate had been secused of offering, Med gratuity of 30001 ., to obtain the discharge of 1339 the hurst, who was ennvicted opl, an Hayes, near C'sbriuke by which be oceasioned his death. His sentence wish three years imprisonment, without hard ; term two years expired the 7 th of Aprio. In consequebistof Mr. Medhurst's grandfather having died about christo mas last, it was generally known that he had come posseasion of considerable property. We als not to bet
effected by an escape, but by a remission of his sentence. Since that time the conduct of the magistrate in question has been the subject of frequent inquiries and communi-
cations between the Middlesex magistrates and the Marquis of Normanby, as Secretary of State; from which it that the magistrate who made the offer was Mr. H. More ton Dyer. The object of the investigation on Thursday, as to receive the the Peace, by the Lord Chancellor, who it appeared rested Mr. Dyer's renoval from the commission upon the admitted fact or his haring held such communication with a prisoner under sen-
tence, as Mr . Dyer himself confessed to have taken place. After a long discussion, the statements made by the officers of the House of Correction and Mr. Medharst to the visiting Justices were laid before the court, from rish to get Mr. Medhurst oot of prison; that he frequently had private communications with him, and that he had stated to hina, that if he wished to obtain his
liberty "he must stand somie money." Mr. Medhurst further stated, that on pressing him as to what sum would be wanted, he said, after some hesitation, "about 30001. ;" wom it must be done; that he had five or six conversations with him, during which the name of Lord Melbourne was also mentioned. After the evidence, which was of considerable length, had been received, the chairman said, he ought to mention that when the Marquis of Normanby had heard that Mr. Moreton Dyer had asserted he was related to the archioness, and that Medhurst was to have been obtained, his lordship had given it the most decided contradiction. The matter
New Line of Atlantic Steamers.-It is stated that Government is about to contract for an additional line of weekly communication between the two countries. The new line, it is thought, will run direct to St. John's, while the present line will continue to run to Halifax.
Another Steam-boat Mutiny.-A few weeks since we noticed a singular mutiny that took place among the iron steam-boats running above London Bridge. Another bas this week occurred of a somewhat similar nature. On Sun-
day last, in consequence of the directors of the new Greenwich Steam-packet Company, owners of the red fannel-boats, having come to a resolution not to pay the captains and crews for the extra passages performed by resolved to mutiny, but the revolt did not terminate quite
so successfully as that of the iron steam-boat fleet. The men belonging to the Greenwich fleet struck their colours,
and lowered their funnels early on Sunday morning, to indicate that the steamers would not get under weigh until
payment for the extra passages was guaranteed. The directors refused to give way, but a negotiation was entered into which ended in nothing, and during the whole of passengers and reaping a good harvest, the red fannelboats remained at their moorings. The following morning an arrangement was made, by which payment for the extra passages was secured to the captains and crews, but two three have since continued running. It appears that owing to the great competition which exists among the steam-boat companies, there being no fewer than 20 some of them liave, during the present year, scarcely taken sufficient to pay for fuel and defray the pier-dues. Fall of a House near Fleet-street.-On Thursday Mackintosh, printers, in Goldsmith's-court, Fleet-street. It appears that for some time men have been employed in remoring the old premises in order to make way for a new and much larger printing-office. Some men were engaged the back part of one of the houses which they were then pulling down. They had seareely time to ret out of the way when the walls came down with a loud crash, which alarmed the neig.bourbod and some other honses near the spot are said to be in a dangerous condition.
Royal Artillery Comich.-On Tuesday, a review of the Royal Artillery Company took place at Woolwich, before the Earl of Erroll and several other noblemen and gentlegians and Prince Absert would have been present, and that there would have been an extra field-dar; but the inteliigence received on Stuar lay night, of the demise of the Queen of Hanover, it is supposed, prevented the intended visit. The party, who arrived abont 12 o'clock, were re-
ceived by Lieut. Gen. Lord Bloomfield and his staff, and shortly afterwards pizctice commenced with spherical and case shot. the firing being excellent. The time occupied in the marsbes was about two hours. and the extensive ercises. Shortly after 2 the narty proceeded to the morar and howitzer batteries at the west-end of the paradeground, where the practice was exeeedingly good, sereral of the shells having struck the flag. After partaking of a
repast, the rinimers proceeded to the Royal Repository, repast, the rinsors proceeded to the Royal Repository,
Where they remanned sume time examiaing the collection of models, \&emanned sume whim it contains. At 4 o'clock the Royal Horse trtallery marched to the Common, and went through all the evolutions for which that branch of the service is so much distinguished. The practices continued
until about half-past 5 . until about half-past 5 .

St. Saviour's Church.-A report has prevailed for
some reeks past in the parish of St. Saviour, Southwark, that the lofty Gothic tower, which contains a fine-toned peal of twelve bells, the largest, it is said, with two or three exceptions, in England, has exhibited signs of giving covered in the upper part of the steeple, indicating a set tlement. An architect and a builder have examined it and have given a favourable opinion as to its stability. It is ress or pillar which helped to and some part weakened it; and that the vibration caused by the motion of the bells when ringing has tended to decrease the safety Pur
Further Mortality among the Convicts at Woolvich.has proved fatal to so many of dhe conchitis, and which erminated; inquests are frequently being held. and on Saturday an inquiry into the deaths of two took place, Dr. Hope went to prove that everything was done for the recovery and comfort of deceased, but rithout effect, and the jury returned a verdict of "Died from natural causes" in both cases.
The Chain Pier, Chelsea. - In our last we mentioned the progress of this pier, the want of which for the accommodation of passengers, and the inbabitants of the populous neighbourhood of Chelsea, has been long felt. course of a fer weeks. It is a chain-pier, of handsome
 and 4000 . It is situated in the mall of Cheyné walk, and forms one of the most interesting objects of the place.

Mortality in the Metropolis.-The following is the sult of the table of mortality for the Metronolis, issued by the Registrar-General, showing the number of deaths from all causes registered, in the week ending Saturday, June
184. Notal 755. A verage weekly deaths in 1840,926. nexion with this event, which at the time created so general an excitement, it may be interesting in our readers bered, effected his entrance into the palace on three different occasions. According to his own account, he made four entries, but escaped the last time without detection. It seems that on the 14 th nlt., he was liberated from Tot-hill-street gaol, his period of imprisonment having expired. Whilst in prison he was quiet and exemplary in his on Constitation-hill, and in the immediate neighbourhond of Buckingham-palace, which being communicated to the authorities, orders were given to the police to watch hi movements; but it seems that there was nothing in his
manner or behaviour different from those who daily frequent the parks in hopes of obtaining a sight of royalty. character, and that he was probably meditating another entracce into the Palace. He was consequently appreDianond emigration ship, bound to Aused on board the other of the English colonies, being apprenticed as a seaman for five years. On the day be left the prison, one of the managers of a minor theatre, it is said, called and offered him 17. per week to appear on the stage for a fortnight, and at the end of that time a benefit, but the bov declined exhibiting himself for so short a period

The Nete Percussion Shells.--The experimental firing of these shells took place in the marshes of Woolwich, on Friday, as we briefly noticed in our last wcek's Number Tce following are the particulars of the results:-Th first fired was Mr. Napier's,-which struck the bulk-head,
and passing through both sides exploded. Mr. Wilkinand passing through both sides exploded. Mr. Wilkinson's struck, but did not explode. Mr. H. Reece's was
fired, but the gan was denpessed struck the ground and depressed so low that the shell onwards. At the second round Mr Napis again passe throngh both sides and exploded. Mr. Wilkinson's struck the ground, richoched without exploding, and passed into the rever, The eleration of Mr. Reece's gun having been corrected, his shell struck the bulk-head, and exploding the instant of striking, the flash being distinet:' marked the fragments alone struck the inner sitie. The effect o Bloomfild appeared th give seat sacisaction Here the firing ceased the thal of these important Here the firing ceased, the trial of these important expeance of the notice-posts anchored bis barge in the line of fire while the flag for firing was flying
anleged Mrither at Demima...On Monday an inquest was Leld at Deptford, on Frances Studd, ayed \(2{ }^{3}\) years, who, it ic said, died on Caturday from the ill-usage she husband of deceas her lushand. It appeared fll-usin her, and that o on the head, from the effects of which she dia. Studd absconded on the death of his wife, but retarned on Monday, and was taken into custody. When introdaced to the jury, homever, he was in such a state of intoxication that the Coroner seclined to hear further evidence till he was in a fit stdie to understand its import. The further inquiry was resumed on Welnevday, when Elizabeth knocked forn by a rio hom from hus'anis Kinsed down hy. riolent bor hor hand in that her husband had bnocked her down, because she had reproached him for be:ry ont all uight. Another moman cenfirmed the evidence of the last witness. Other witresses were then examined, but their eridence only proved former acts of ciolence of the prisoner towards deceased
A surgeon stated that he attended deceased, who was suf
fering from inflammation of the brain. of which she died. She informed him that it arose from a blow that the had received from her busband, and from the exam:nation he bad made, he was of the same opision. This beivg the whole cease evidence, the prisoner in defence stated that dealso much often complained of pains in her rid. and was he struck her, he did not intend to do ber any serivus injury. The Coroner then summed up, and stated to the ury that he did not think the circomatances of the case would admit of a vetdict of wilful murder. He would, rowever, leave the case in their bands. The jury then Folberies.-
Ir. Noble was proceeding through West-stree oloch, as Mr. Toble was proceeding through West-street. smithHe was seized, and his arms pinioned, whilit one of the thieres took his watch-chain and seals, and hazile. them to a woman near the spot, who ran off. They then effected their escape. Infornation was immedintely given to a whole of then. He at lenzth sucupeded in auprubunding the woman, who gave her name Smith, and was recrenised as a well-known thief who had been frequently in custody. She was remanded to afford an opportenity tracing the property, and annehending the remmnder of the party. The above spot, Turnmill street, and Cow cross, are infested, it appears, with greit numbers of chieves, which renders it dangerous for any re-patable person to pass through them, especially at nizht.-On Tuesday, information was receiced at the various metropollan folice station-houses of the following extensive rohberies having been committed:-From the person of Mr. Taylor, of Thames Ditton, Surrey, hetreen the borough ami ipner wamertreet, a canvas-bag, containing Bank of England notes to the value of apwards of 4000, and about 301 . in sovereigns. From the house of Mr. Carter, South-street, Grosvenor-square, a pooketnotes, and 12 silver ten-spoons and sugar-tongs. The property whs taken from a bed-ronm on the first floor, the door of which was opened by a false key. From tiac house of Mr. Reid, Blackheath Park, varions articles of jewellery, a large number of rupees, four Neapolitin piastres, and a Neapolitan brace'et. The robbery was elfected hy means of the drawing-room wind 1 w, which hat heen left open. From the house of Mr. Johnson, Ravenainorne siderable quantity of plate from the houses of Mr. Hesel tine, Paddington-green ; and Mrs. Moseley, Forest-hill, Sydenham. From the Club Cbambers, Regent-street, a check for 321 ., supposed to be stolen by a servant, who

Rotherhana.-Oo Munday afternown, a melancholy and exten sive luas of humata life oretered in this town, which has been, in consenpmee, thrown into a state of the greatest excitement. It appears that a sinall ressel, with from Cinmijers', brat-yard, when no sooner bad it touche the waiee tuan at suddeniy rullied over, and every one on board \(n\) is thruwn iu:o the strcam. The graud jury, who were steing at the time in the newhbourhood, ordered to the sport, and render aif pursibie assistance. It was not were recosered. As spuedicy din the cinflusion would permit, chans were atmend to the punwale with a view to ight ber; hat hefore :his could be effected nearly tho hours hal elapacd, when it was found that upwards of sixty of those wuo were on beard had lhe time, supposed to be much greater; but soveral, whose hives were at tirst despaired of, have since, in some degree, recovered, whilst others stiil continut in a very dangervus state. The immediate cuuse of the accident is not yet known with any hich the barge was pushed into the water were too short, and that she struck the water too soon. Others state that it was owing to her being launciued sideways iuto the water, whiie the people on board ran duwn to the lower side; and tbat the heel sut clearing the stocks in sufficient time, she was overbalanced. Tue sunierers appenten years of age.
Liverpool.-The parties who were injured by the shots fired from the house of Mr. Casement, a publican in this city, during the recent election disturi)ances, and wheh we noticed in uur last Number, are doing well, and serious consequences ars: not likely to ensue. It would appear
that the partues nomoded were not at all implicated in the that the parties womaded were not at all implicated in the ontrages, but merely spectators, girl, seventeen years of age, wounded in the breast; an mabrelia-maker, shot through the wrist and the arm; and a seaman, who received sereras wounds, but none of a serious aatare. An a magistrate, when Mr. Casement, who fired the shot, was held to bail in his own recognizances of 200 l s, and two magistrate observed that, whether nuder the circumstance the prisoner whe justified in resorting to fire-arms, he should not take upon himself to determine.
Hereford. -The Hereford Times gives the following account of a case of smambulism which occurred in that city a few days siace. It appears that about five o'clock in the morsing: a resident in Widemarsh-strect was awakened by the violent ringing of his door-bell, and not hearing any servant answer, be rung his bell for the man jumped out orbed, and pulliag aside the winior-bind, saw what he believed to be his own horse heid by a strange man. He threw up the window, and, on inquiring the man had been thrown from his horse in the meadow, amd he feared was mack hurt; and that he had taken him to his house, where he still remained. The master said that asistance should be at once sent; and a surgeow and one of the domestics proceeded to the plact. The surgeon,
oa examining him, found that no bone was broken, and that there wan no injury except some wounds on the face He was then led home, apparently insensible, merely answering to every question "that he dida't know." He fisect, and he p piris muck dilated. At nine o' clock he awoike, ant it anpears that he had not the slightest recollection of a single circumstance that had occurred from the time'when he dropped to sleep on the previons night, to the moment he awoke at nine o'clock in the morning! I Withington, and for this purpose he had put sispence in his pocket to par the gates ; but he had not the least re membrance of any circumstances that occurred in the intervai.
Portmouth.-All the preparations necessary for ti.e fitat great explonion this year on the remaining wreck of

Redruth.-One day last week, as the men belonging to travelling menagerie were driving their caravans into contained the Hoas and tizers unset, and the partition bo tween the lioness and tigress gave way. A fight immediately ensued, and great alarm prevailed among the by the animals; but the leeper mounted the top of the car riage, and, breaking a hole through it, introduced a long pole, with which he managed to beat back the combatants acerey were at leagta secu

Findsor.-A melancholy accident has occurred in the Freeman, Rector of Miltons, Cambridgeshire, met with his death. From the eridence adduced at the inquest Which bas been held, it appeared that deceased, on Mon day, was driving aiong the Slough road in his four-wheele
by a barge-driver, galloping on his horse, and apparently having no control over the animal. The clanking of the chain-traces frightened Mr. Freeman's horse, which started about two hundred yards, he turned suddenly in roud road leading to Upton, and the chaise was immelitelo capsized. Mr. Freeman was thrown out with great rio lence upon his head and never spoke afterwards. The gentleman with him and the servant were also thrown out, but escaped with a few bruises. A surgeon who wa shortly in attendance found deceased suffering from severe wound on the scal. . and a fracture on the base of
the skull. He died at fire oclock on the following morning. Several of the inhzitants of Slough attended, and from the manner in which the barge-hirses were ridden through the village. It was aloo thoneht that blame attached to the orner of the horse nhich was the canse of the accident, for allowing so spirited an animal to be under the charge of a lad, who had no control over it The jury returned a verdict of "Accidental death." The reverend gentleman was in his seventy-fourth year, and much respected in the neighbourhood
Oldham.-A few days since considerable excitement and alarm persaded the neighbourhoud of Waterlon near this place, by the repirt that an explosion of fire-damp
had occurred in the coal-pit of Messrs. Jones and Co.. of that \(p\) lace. The report proved to be true, and four individuals lost their lises lyy it. The following are the particulars of the accident:-It appears that at the time, there were in the works six miners who had all safetyamps except one, and it is supposed that the intlammable gas took fire at the candle which he carried. The explosion was very great, and was heard as well as felt at named Garforth, and a lad, were taken out dead; another died at about seven the same evening. The body of another which had not been found, was supposed to have been blown to a remote prirt of the works: the others, explosion, and taken home. An inquest was he!d on the bodies on Saturday, when a verdict of "Accilental Death' was returned.
Sunninghill.-On Thursday morning the country residence of the Mon. Mrs. Osborne, at this place, was broken open by sonse thieves, who effected an entrance rom, on the ground-floor. They stole severil articles of jemellery, seals, and valuable trinkets, silvar candle sticks, \&cc., with which they decomped undiscovered. It is supposed they were disturbed while they were in the entered. They had unsuccessfully attempted to piek the nck of a small writing-des, 5 , in which were upwards of had goid and uarik notes. It appear> 12 and 1 o'clock and before four the robbery was discovered. The same and wion the last to be entered in a similar manner. The neighbourhood, th stated, abounds with thieves and idle characters of the worst description
inking of tro resse sinking of two vessels off this const during the late boisterCeres, of Ipswich. From a statement made by the Captain of the Rosina, it appears that that vessel sailed from this port ladem mith coals on Sundny morning, bat in passrith conside harbor, sue brought her up in the roads, and after repaiing the surposed damage they proceeded to sea about two o'clock. Ou the following morning they discorered that the Bhip had two fook to water in the hold, and though they immediately took th the pumps, and worked at them vigorously for two ho by o'clock it had increased to a depth of seven feet. The crem finding it impossible to save the vessel, took to the long boat, and shortly after she went down. The weather was exceedingly boisterous at the time, and it was some thergo are said to be worth \(2,500 \%\). The other vessel, the Ceres, \({ }^{33}\) lost on Tuesday afternoon last, about six miles from lupe Light, and the crew were saved oy a finmus-sals belongiug to Aluoorough. Aile also wa taiunen. He sioking was attributed to her spriaging a leak during the heary squalls from the siw. on that day. Tue luss is stated to be at least 3,0 vioi. 21 inst. an accident that mighat hare been attended with serious consequences occurrel the South. Tuestity an inquest was held at Bletchingly, respection the death of Wm. Einiutt. aged 17. Deceased mas em ploged on the line of the South-Eastern Ratiway. It appears that this is the fifth or sixth inquest that has decth
caused on the South-Eastern Railway. A labourer stated
that deceaved, whose duty it was to bring up the senarate waggons, laden with earth, to fill up an embankment, had started his horse, and was running by the side of the waggon. On the near side. In a minute after deceased called for help, and witness then saw him lying across the
rails, and the waggon proceeding without the borse, which rails, and the wagyon proceeding without the horse, which
he must have released. Witness thought that deceased he must have released. Witness thought that deceased
was running on the line, instead of by the side of his horse, and filling down, pulled the string rhich is attached to a spring-hook, to release the horse from the waggon,
which passed over him. He was conveyed to the poorwhich passed over him. He was conveyed to the poor-
bouse, where a surgeon found that deceased had a fracture house, where a surgeon found that deceased had a fracture
of the left leg just above the thigh; the right foot was crushed, and the small joints very much injured. Deceased was told that the only chance of saving his hfe was by an were amputated, but he died in a quarter of an hour instance of the great rapidity with which communication can now be effected through the medium of railroads was afforded on the 30th ult. A special train was despatched from Birmingham to London on election business, at tions, and suffering delay to the amount altogether of 14 minutes), and arrived at Euston Station at 11 minutes past 3 A.M., thus performing the distance of \(112 \frac{1}{4}\) miles, er-
clusive of stoppages, in 2 hours and 57 minutes. The following are the receipts of the principal railways in operation for the past week: - London and Birmingbam,
\(16,880 l . ;\) Croydon, \(67 \%\); Great Westeru, 12,001l.; Northern and Eastern, \(7.2 l\). ; Birmingham and Derby, 1,2296. : South-Western, 6,5631 ; Midland Counties, Midland, 4,0166.-An accident, attended with loss of life, occarred on Satarday at the terminus of the Grand Junction Railway, Birmingham. It appears that a lad named Shaw, in the employ of the Company as an errand-boy, had been in the habit of getting on the engine which brings the halfpast eleven \(0^{\prime}\) clock train from Liverpool, and retuming by of the danger of so doing, and enjoined not to persist in the practice. It is supposed that he must have done so unperceived on Saturday; and the engine having been stopped to take up some wheels, it is conjectured that he was leaning over the side of the tender, when the sudden jerk from the engine being again put in motion, threw
him across the rails, and the whecl of the waggon that him across the rails, and the wheel of the waggon that
was attached passed over him. The engineer on being was attached passed over him. The engineer on being
called to. immediately reversed the engine, when the wheel passed over the lad a second time, and occasioned his

Dublin.-His Excellency, the isued a circular for the guidance of the high-sheriffs throughout Ireland, as to the ase of the civil and military forces at their disposal, during the elections.
Galuay.-It appears that the statement made in our
Number of last week, and copied from the daily papers o the effiect that Mr, Gr. George House, had been beld to bail, for having instigated the authors of the fatal assault on the late Mr. Heathers, was been apprehended on this charge.
Cork--The election in this city has been attended with serious disturbances. Varions buildings were attacked, and much injured by the mob. The police, in their enby them, and were at length obliged, in order to protec themselves, to fire; when loes of life unfortunately was the consequence, \(b\)

SCOTLAND
Edinlurgh.-For some time past great excitement and bad feeling have prevailed among the labourers on the Edinburgh and Glasgow Railway, arisiug, it appears, out of a quarrel between the Highlanders on the one side and he Irish on the other. So serious did it become, that the authorities considered it atcessary to call in the assistance of thomilitary. The facts of the case appear to be these : a short time since some differences arose between the Highhanders and the Irish in the neighbouriootut Falkirk. From that several of the Irish had been hilled in the scuttie their countrymen, in consequence of this, resolved to employed on the east, and the Hightanders on the west part of the line: and it appears that the scene of the intended conflict was near Wiuce burgh. Fhe authorities of Stirlingshire having learned the circumstances of the case, wrote to the authorties of Linlithgow, requesting their co-operation in preventing the parties from meetins. On Sunday evening, howerar, as a party of Highlanders were passing thringl Winciburgh, they were attacked by a lirge body of Irishmen, and some of them severely end to this city for the asaistance of the military, their object being to prevere the parties merting. The Irishmen. bozeres. being reintorced by their comatrymen from the Grasstarket and Cowgate, haid assembled within three miles of Winchharçin, to the number of about \(1,5 \pm(1)\) many of them armed witi heary bludgeons; and it was understood that the Highianders were fast approaching to meet them from the west in still larger numbers: The military Were accordingly at onee parched off to the scene of danquer : and after some civecin time to prevent the nitended contict. masters, sone seriuus remunstrances on the part of their were at length prevailed on to retire peaceably to their were at length prevailed on to retire peaceably to their
victed together with Doolan and Redding, who have since
suffered the extreme penalty of the law for the Green, a ganger on the Edinburgh and Glasgow Railway, and an account of which appeared in this paper at the time, was sent from the Glasgow prison to this city, pre-
viously to being transportel to a penal colony for life, in virtue of his sentence as commuted through the exercise of the royal prerogative of mercy.
specting the apprehension of Gavin Scott, whose case rehave noticed in previous Numbers It appears that we sum found in his possession when apprehended at Marseilles was 4.2086., thus showing a coneiderable deficit as compared to the sum he took amay with him. The missing money is so far accounted for as follows :-A German with whom he got acquainted, and of whom he made a conndant, immediately on his arrival in Marseilles, had taken from him, it is said, a Bank-of-England note for 1,000l., in addition to a box or bundle of sovereigns, and is about 2 scott further admits that he has squandered amay in London and Paris the short period he has beel away. in Londing his capture, It is therefore feared that notwithstanding his captore, there may still be a considerable de-
ficiency in the sum of 8,6000 . with which he absconded ficiency in the sum of 8,600 . With which he absconded. French police did not take him into custody immediately his his arrival in Marseiles, and that they only searched possea. tained that the poptor of the houl in which Scott lodged and who had since been taken into custody on suspicion of having robbed him, had given information that his master The istress had been the thieves to the amount of 1,9653. tion, and, if found to be true, it will account for a large portion of the money which is still missing.

Serious rioting broke out in this town upon the defeat of Mr. Gillon becoming generaily frown to the townspeople. It appears that an express arrived at the police-ofice, Glasgow, about half-past nine o'clock on
Friday night, with a letter addressed to the sheriff, which was signed by two of the magistrates of this town. The consequence was, that the sheriff went immediately to the barracis, put himself at the head of a party of the lith Lancers, and proceeded here without delay. On their arrival, however, the town was comparatively quiet, state popalace had previously been in a very riotous ratire candidate held ich tae cownith abled windows broken by the mob. An attempt was then made to obtain an entrance, but the precaution had been taven to barricade the doors, which enabled the occupiers to keep the mob out, and afforded time for a number of perseveral persons have beerr severely injured.

\section*{fliscellancous.}

The Boston Notion.-The paper published under this title on June the 10th, at Boston, in the United States, is perhaps the largest paper ever yet published, even in these days of sigantic journaimm. It measures in extreme length 18 feet, and in width or height about il wood-cuts representing Irish scenery and curtous with tural landscapes and incidents, monuments, de., besides portraits of Messrs. Danill O'Connell, Daniel Webster, portraits of Messrs. Danictin secretary of State, and W.C. Bryant. The matter consists of notices on all subjects ; indeed it is said to be a perfect Cyclopwedia. The type is of different sizes.
This paper in dimensions exeeds all that has been printed in England, but the quadruple nunbers of The Times have contained more letter-press. The price is very moderate, being only 2.5 cents. It is said to be almost a library and a picture-gallery in itself.
AHack of Weasels. - The Edinburgh Evening Post butas, that as the steward on Wooden Onstead, in Rox belonging to Capt. Scott, he was attacked by no less than seven of these ferocious little animals. They leaped upon him, and attempted to get at his face and throat, but after a conflict which lasted several minutes, he succeeded in killing the whole namber. From the determination of their attack, the steward was led to think that had the person so amsailed been a female or a child, the consequences might have been serious.
Extrandinary Pioduction.-A correspondent has sent us the following extract under this title from the Norwioh Mercury :- We have occasionally heard of a Turnip of tridges, or a pheasant, have conveniently found stoware within its ample substance. We have not yet heard of the carcase of a sheep being similarly accommodated. Such, however, might literally be the case with respect to Falenham in Na possession of allergyman sear extraordinary vegetable productions ever witnessed in this country. The Turnip in gentleman by a relative in Australia, upon whose farm it was grown from seed supplied from Eugland. It affords reniality of climate of the rich fert:lity of the soil and by grown no mieans an unusual production there. It was lard holand, tan Diensen s land, and cared the long vorage in a good sta e of preservation. Its weight is 84bs., girth jft. 2in. When tirst taken up it weighed receipt in this country it was carefally unnarked in the presence of several agricalturists, and immediatrly weighed and measured, giviag the resolts abore state?. Its consistence is solid, altwough there ate now slight symptoms of decay. Incredible ns this statement may appear, the facts detailed have been strested by the signatures of the gentlemen who were present upon onening the packingmight be curions in such watters, at Fakenimm market and in the neighbonthood

Photography.-In addition to the process ni M. Pavard given in our last. it appers that seme impravemests have and at a recent situerestiry vines y il msuerre, Arago communicated the fact, that M. Dajuerre was stil occupied upon an majertar- series of emriments conincreasing tiee sensthenese of th. r . ad plase, he had canera cbsura. wh hat than mirnellately, exposed them
 the plates too semsitive, and so much so that the merm opening of the covering of the plate inside the camera obscura could not be effected rapidly enough to preven
ivid than others. II. Daguerre hai, therefore, made use of a preparation nut so sensitive as that which he com monly employed, and upon again applying the force of electricity had obtained such a degree of sensitivenes
that, according to a communication from Mr. Los Talbot on! the milfinnth part of a seennd was necessary for oh taining an impression; so that anght to be no expecting too much to anticipa
 when further im rovements should be effected as of the bunian ody might all be taken by the Daguerreotype.
Minature Machinary. - A olever little piece of mechanism, a model steam-engine, has been for some time ast exhihiter in fall onernting in a shop-windor opposite he Eintern Institutin!. Conain cicial-ruad East. Sum ated by tine approbation bestowed on hum hy several euli ent practical engineers who examined tisis mon' 1, the aventor, a Fwatchmaker, has since attempted, and suc eented in protncing, an engine of much smaller dimension and in the same window is now to be seen one of the mos xtraordinary productions of modern times, viz., a working model steam-engine, the weight of which, includiag engine boiler, safety-vaives, fir-whee, stop-cocks, feed-pipes, an ll the other details, does not exceed three pennyweights The cylinder is less than the sixteenth of an inch in diancter, and it 1 . ss beed calculated that the

ue Exhibitions at the Garden of the Horticultural Society are concluded for the present year ; and we are able to congratulate the Fellows of the Society upon the unprecedented success that has attended them. Twenty-t wo thousand one hundred and ninetythree tickets have been issued, nearly the same number of persons visited the garden, and 285 gold and silver medals, amounting in value to \(£ 74413 \mathrm{~s}\) have been awarded to successful competitors, who have also had the satisfaction of knowing that their skill has been appreciated by the highest nobility of this land, and by the many foreign visitors who will carry away to the distant countries of the East and of the West the fame of English gardeners. Turks, Persians and Hindoos, Greeks, Itali:ns, Spaniards, French and Germans-men from the wilds of North America, and the more remote shores of the Pacific, have witnessed these really wondrous displays of skill, and have been compelled to recognise the pre-eminence of England in these peaceful arts of domestic life.
The display of fruit on Saturday last was precisely what we anticipated, when the strength of the forcing gardeners was really put forth. Well have they vindicated their skill, and nobly have they shown that they are in no degree inferior to the cultivators of flowers! All that the natives of the Continent obtain by the and of a genial climate was on this occasion presented as the result of skill struggling with unfavourable skies. To the full account to be found in another part of our paper we have little to add. Cultivation can go no further in Grapes, Pines, Peaches, and Nectarines. We were, however, surprised to find Cucumbers and Love-apples included in collections of fruit; this ought, in strictness, to have disqualified the exhibitors from receiving a prize. We presume, however, the Judges thought the other fruits in these cullections so meritorious, as to justify them in overlooking what was, after all, an error of judgment in the exhibitors to whom we allude.
Our country friends will be glad to know how such Peaches as were exhibited on Saturdav, so thoroughly ripe, and consequently so tender, could have travelled from the distant parts of England without a trace of injury. Good packing is a most important part of a gardener's business, and ought to be better understood than it is; we shall therefore state that the mode employed by Mr. Errington, who sent Peaches from Sir Philip Egerton's garden at Uulton Park, near Tarporley, was to pack his fruit in nests among cotton wool, in the usual way, and then to enclose the box in a case about three inches larger all round, filling the space between the two boxes with moss and grass pressed tight. In this way the bad effects of the incessant vibration of railway carriages were completely averted.
We resume the subject of leaves, and their importance to plants. Although the general rule is to allow as many leaves to remain on a tree as can be kept in health, yet there are particular circumstances whick justify their removal, and, indeed, render it necessary.
For example, when a tender tree is trained to a wall, a great object with the gardever is to secure ripe wood; for unless he does this, the frost of the succeeding winter may destroy the branches, or the budis may be so imperfectly formed as to produce feeble shoots the ensuing season. To attain this object, those leates most be removed which prevent the sun from striking upon the branches to be ripened, the effect of this being to stop the rapid growth of the branches and to comsolidate their tissue, in comsequence, partly, of the excessive perspiration, and partly of the rapid diges tion of the sap, which is thus induced; fir the rate of digestion and perspiration in a healthy plant is in proportion to the quantity of light and heat to utiwho it is erposed. Hence the remoral of those shoots which in summer overshadow that wood of the Peach-tree Which in intended to be preserved another year, is use-
ful ; there can be no doubt, however, that as few shoots as possible should be thus removed.
Another case in which the removal of leaves is justifiable occurs in the Vine. In this plant the fruit is berne near the base of lateral shoots, which will, if unchecked, go on lengthening and producing leaves o a considerable distance. Now all the food of such lateral shoot is obtained from the main branch, which, however, is only capable of furnishing a certain quantity. If the lateral shoot is allowed to grow uncheckel, it will consume its portion of food in the production of many leaves and some lirapes ; and the more there is of the former, the less will be the weight of the latter. But if the shoot is stopped after having formed two leaves, all that quantity of food which would have been consumed in the production of other leares is applied to the increase of size in the Grapes and the two leaves that are left ; while, on the other hand, the general crop of leaves on the Vine will be amply sufficient to prepare those secretions which are to give flavour, coluur, and sweetness to the G.apes. This will, perhaps, be better explained by the annexed diagram. Let the line a g represent a lateral Vine-branch bearing fruit at \(B\), and leaves at \(c, d, c, f\). Suppose six ounces of sap are destined to support this lateral \(a, g\), during the summer ; it is evident that, if equally distributed, each leaf and branch will receive one ounce of sap as its proportion. But if \(e . f, g\), are removed, it is obvious that the three which remain will have two ounces each, or double the supply.

Why then, it may be asked, not remove \(c\) and \(d\) also? because, in that case, \(B\), the bunch of fruit, would have the whole six ounces of sap to itself. The reason why this should not be done is this: it all the leaves on the lateral are removed, there will be no force left upon it wherewith to attract from the main branch the food that belongs to it; for the power which the parts of plants possess of attracting fluid is in proportion to the amount of their perspira. tion. Now leaves perspire copiously, but the Grapes themselves scarcely at all: whence their gratual conversion from a substance of the texture of a leaf into a mass of pulp. In the instanceof Vine pruning. the greatobject is to leave on the laterals just as much force as may be required to sccure for the bunches the foid that is intended for them, and at the same time to deprive the laterals of the means of expending that food uselessly in the production of leaves instead of fruit.
These con:iderations will show the inexperienced realler, that alchough gool practical gardening must necessarily depend upon physiological principles, and although such principles may be clearly understood, yet that the application of them is by no means so simple as at first sight appears to be the case.
We have received a file of Jew Zealand Gaxettes up to the 30th of January. The allotment of country sections was proceeding with vigour: and the condition of the colony was in all respects prosperous. A large quantity of fertile land had been cleared in the valley of the Hutt, where the crops of Oats, Barley, and Wheat are represented to be most abundant; the ears of Wheat were six inches long, and the straw four feet high. The natives had been found zealous and efficient labourers in the all important task of clearing land for cultivation, both on their own account and that of the setilers. A bullock weighing upwards of 900 lbs. had been slaugitered for Christmas; prime beef was selling at 9 d . per lb .; and at a recent sale of cattie the following prices were obtained :-14 steers, highest \(50 /\) per pair, lowest \(34 \%\); 19 cows, highest 27l. per head, lowest \(19 t\); 100 ewes at 30 . each; I horse 292.; I mare \(57 \%\). 100\%. was offered for a young Durham Bull, but not accepted. The Surveying Staff had penetrated to a beautiful and extensive valley. The reports to the disadrantage of the colony which bad been circulated in Van Diemen's Land, and thenee conveyed to Eighand, mete severely commented upon, and shown to be totally destitute of trath.
Ameng other events, a meeting of the most respectable settlers had been hell at Port Nicholson, for the purpose of raising a subscription to reward the ingenuity of any persoas who should invent a toel or machine, or discover a process. by which the New Zealand Flax may be readily brought into a marketable condition. The manual labour of the natives being now applied to other purposes, some machinery
for dressing this, the staple produce of the island at present, had become indispensable. If the New Zealand Company will second these attempts of the se'tlers, we are quite sure plenty of machines will be contrived for effecting this important object.
The only point in which the colonists had had reason to complain of ill-success was with grain crops upon "Fern-land." A large part of the country being overrun with Fern, this was a matter of serious inconvenience. We cannot suppose, however, that this can be a subject of permanent difficulty; for such land may no doubt be reclaimed by some means or other. We should try paring and burning.

ON THE STATE IN WHICH CLTTINGS SHOULD BE WHEN PREPARED FOR PROPAGATION-
THE PROPER TIME. AND THE MAIAER IN WHICH THEY SHOULD BE MADE.
At page 411 I explained the state which plants should be in from which we select cuttings for propagation, aud gave the reasons for the success a hich attends such a selection. I should lave added to this, that it very often hap. pens that cuttings taken from the under part of the plant near the root, or from branches which hang along the
The state which the cuttings should be in
The state which the cuttings stronid be in is the next subject for consideration. There is a great number of phe cuttines are taken from them, or in what state they are, if the plants are only healthy. But there are many athers to which these circumstances are of the first inportance ; be.ause, if the wood chosen be too young, the cuttings are very liable to damp off; or if it be too old, they do not emit ronts readily. In piants of this hind, the short-jointed growicg wood should be chosen, and a "beel" formed hy the previous growth and now bait-ripened wood taken off along with it. This "heel," which is inserted in the propagating soil, is not so liable to be injured by moisture as the younger wond is, and at the same time contains the matter which forms the young roots in a more complete state of organisation.
The proper time therefore for propagating plants generally cannot be specified, as one plant is in the state recommended at one time, and another at another time; but by far the - reater number of hard-woeded plants can be propagated in spring and early summer. the in propagating at this timie-the warmth of the sun's rays. which is of great adsantage whe ther artificial heat is used or not, and by this means the cuttings are well rooted and strong before the approach of winter.
The number of leaves which are left upon the cutting has
nuch to do with the success of the propagares. When we take a cutting from its parent tree, we deprise it of the supply of nourishment which it femmerly repeiven ; but notwithstanding "his, its leaves being stril acted upion by the atmosphere, give out the moisture which chey contain, and draw upon the vessels of the plant which siipplied them before the separation took plare. If we conid ny artificial means still supply the leaves with this eorrishment, the best plan would be to leave the whole of them ua the cuttings, to decompose the carbonic acid of the atmosphere, and form the other parts of the substance of the stem, and to send down roots for their more complete support. But we leaves to remain upon the cuttine as we can sup, ly with leaves \(t_{0}\) rem.in upon the cutine as er cans supt, Ay winh of these remarks by the follonirg simple experiment:Take such a lant as letunia violacea for example; make one pot of cuttings from it 9 inches fong, and let all the
leaves remain upon them; make another set 3 inches, and ailow only three or four of the top leaves to remain water both pots well, and place them side by side in a damp trame. The difference will soon be apparent-those cuttings with all the leaves leit on them will soon flag, while the others will scarcely be affected, and will go on performing their functions. This will be particularly apparent if the cuttings, from carelessness or any other cause, are negleeted, and therefore this principle stiond be weli understood by those who have other dutiew to attend to but who at the same time are anxious to succeed in the propagation of plants.
The length of the cuttings is another important subject to be attended to. The experienced propagator can tell at one glance, when he sees a plant, how long its cattings shouid be made in order to succeed: but from the great dificrence of the constitutions of plants some experience is required before this can he understond hy ti.e amateur or young gardener. The prineipies wind requlate the and which have been just cxpliaine i, are the same whicht point out the proper iengts ; and therefore tie strong and robust plant, which is ensily propagated,
stronger pint sooner from a rarge cutiog than from small one, beewuet it is capable of assimilating a greater quantity of the food which is prestnted to
trequeatly see a hase pole cut frous a Willow-tree, when
platited in the groegd, pushing with great rigour, and making a fine tree in a year or two. The same thing ind smaller way is niten done by fady-apandmera mith thoit window Pelargoniums; ; a branch beths pertapus hy aceianother pot, strikes mots readis, and -oen makes a fine plant.
But
But there are plants of a more dinienit nature to ithcrease, such as Cape Heaths, Eparriees, Bartoutas, and propagate if t . eated the the Willow or Pelargonnm just
mentioned. On this accouns, the cuttings of such plants are generally made quite short, not exceeding an inch and a half or two inches in leagth; and then the whole of the
Heaves which are left on can be supplied with food, and have their energies brought into action.

The propagator must fix in his mind the proper length that the cuttings should be before he takes them from the
plant, and then be will be enabled to seitet those which are suitable for his purpose. Having taken off the cuttines and remnveld wuth a sharp knife all the leaves and buts not
required, let them be cut across at the base of a leaf-bud, required, let them be cut across at the bdse of a leaf-bud,
which will facihtate the production of roots. The spaces on the stem butween the buds and leaves are called internodes. In some plants these space- are very dhort, hut in
others they are of considerable lengtn. If instead of cutting the shoots acruss at the top of the interpotes and immeniately balow the buds, we cut them acru-s at their base, it will then be the internode wisich is inserted in the propayating soll ; and unless it lias a power, like the Curture of the suil will ementually rot the cutting. There seems to be a certain decrree of vital energy all around that space where a burd is, which prevents it from rotting or
withering so quickly as the other parts of the stem, prowithering so quickly as the other parts of the stem, pro-
vided it is placed in contact nitha a certain degree of moisture. \(-R\).

\section*{cottage gardens, No. NXVI}

Neatness a around the cottage, and cleanliness within it, are as much to be recommended as order and attention to
the regular cropping of the garden -the latter being no less essential to the well-doing and ultimate success of the rarious crops, as the former is conducive to the health
and comfort of the cottagers themselves. This leads us a remind those who have their garden enclosed by a hedge, and the walls of their cuttage covered with creepers, that in order to have them always look well, it is necesary to attend to them, occasionally, during the growing season, before they get out of bounds, and disfigure, with their loose hanging branches, the very objects they are already done, the hedge should now be clipped, and the young shoots of the creepers properly trained and tied up. ries, which are the hinds most generally grown by cottagers against walls, and produce their fruit on the spars formed on the principal branches, they should now be carefully gone over and have their leading shoots nailed, and the others shortened back to witinn a few eves of the
spur from which they sprung. In doing this, it may be well to observe, that it is better to err on the safe side and not prune them too close, as the shorter the spur, the greater probability there is of the buds being blind or inperiectiy matured. Trees that are laden with frult, in exthis time, in case of hrigh winds arising to damage them. Do not unat attending to the flower beds and borders; stir the soll wherever it requires treshening, and be particular in removing all decayed flower-stems as soon as they and in neeri of support, and let no more be introduced than there is room for. A very common fault in most cottage gardens, is the crowding together of a greater variety of plants than the little space allotted for them is
capable of nourishing properly; hence it is only the stronggrowing kinds thet bave a chance of succeeding. To obriate this, we would recommend a litcle more care to be
taken by those who are desiroun that their flowers shonld taken by those who are desirour that their flowers should
look well, and never to allow any plant to be so near anotier 98 to touch; on the contrary, such a distance should be allowed between them as that every plant may stand distinct and have rom to become clothed with foliage, and furnished regularly on all sides with flowering branches. Carnations and Picotees may now be increased by layers, or pipings prepared in the same manner as formerly recommended for Pinks. Layering, however, is the best way of propagating them, and is nothing more than striking cuttiogs that are ailowed to retain their connecLon with the mother plant by means of a portion of their -Prepare some fine of proceeding may be thus described: intended to be increased, and a number of small pegs of fern, or twigs of trees, for securing the layers. Segelect fern, or twigs of trees, for securing the layers. Select leaves, but do not shorten the others; then, with a lower knife, make an incision hali-way through the stem an knife, make an incision hali-way through the stem an
inch in length, so as to diviue one or two of the juints. Lay this down in such a mantuer as to keep the cut part open, and secure it in that fosition with one of the smail pegs; press the earth gently round it and bring the leaves upright. When ail are completed, give them a good watering, and be careful not to let them become over-dry rooted.M. W. . . afterwards, until they are sufficiently

RURAL CHEMISTRY.-NO. JYII.
Trey nature and quantity of the organic substances in lity soil have great istuence upon its character and fertipresent a constant source of carbinic acid, and if they contain nitrogtan, thexise of carbinic acid, and if they ing the soil open and perous, and at whist, by rendercreasing its absurbent powera, they assist in lleeping Eni.rm. y molst. TuEyatso increase the means which the
 alumina of :zo or treee earths, such as thene, sithea, and aluusith, is twiter tited to absorb coistare and gaseous Arme wifs iul scintion of organic matters to the soil has

The efiect of increasing this power still further; and, there a quantity of each of the three earths, mired with a moderate proportion of decaying organic matters. Some and indeed not unfrequently consist alnost wholly of the remains of vegetables; the different varieties of peat are of toin great a quantity of organic matters in a soil, rendering it towgh, rery porous and spongy, so that it is soon saturated with water, or completely dried, by the changes
of the weather: and be-ides all th1s, very frequently contaming a pecuhar acid substance, produced during the decay of vegetahle matter, which is hurtful to the growth of plants. Incther use of the organic constituents of the saline substances whic' they naturally contain, and which ant being subject to decay, are gradually washed out by the rilus during the decomposition of the organic substances, and are
the growing plants.
The decay of the vegetable remains in the soil never proceeds so far that the whole of the elements which they first ciange which they undergo, when exposed to air and moisture circumstances favourable to decay, is a domi nation of the quantity of oxygen and hydrogen, and, likewise, though in smaller relative proportion, of the carbon colour, somewhat similar to that produced
burning or singing them by heat: they become more or less brown, according to the degree to which this change has proceeded. Whilst in this state, they constitute what is called humas, the name by which chemists distinguish all kinds of vegetable matter when in a state of decay, and tutes a very large proportion of the bulk of plants. This process of decomposition proceeds slowly for a considerdrogen to the carbon gradually decreasing, carbonic aci and water being all the time formed, until, at last, the humus ceases to undergo any further change, and then is In order to chemista.
ery great importance in this process, which is one o plants, it must be remembered that woody fibre and most regetable substances consist of carbon, oxygen, and hydrosen, and that though these three elements are united gater, we must nevertheless nortions to form carbon and that they are composed of those two substances, but that they are distinct compounds of the three elements; and herefore, of course, that the water evolved during their decay is not merely set at liberty by a process of decomposition, but that it is formed by the hyd
When woody fibre and similar vegetable substances are exposed to air and moisture, they decay; the chemical
affity which binds their elenients together seems to be weakenen, and the elements acquire a tendency form new combrnations. The oxygen and a portion of the carportion of her and constirute carbonic acid; whitst a ir, gives rise to the formation of water. This explains the use of air in facilitating the decay of these substances; for it is evident that if free oxygen be required to combine with the bydrogen, this process cannot go on withont a constant supply of fresh air. The rapidity of the decay of vegetable matters in the soit, therefore, depends greatly on the porosity or closeness of the soil, permitting a more
or less perfect action of air. In soils containing a large proportion of clay or alumine, the decay of vegetable matter or bumus proceeds very slowly, because the close, dense nature of the soil greatly retards the free access of air; though, in other respects, such soils are decidedly
favourable to decay, inasmuch as they remain long moist and a certain degree of moisture is essential to decay
The decay of regetable substances may be greatly increased in seseral ways: thus some of the forms of woody pose, whith have comparatively little tendency to decomwith a small quantity of some animal or me mixing them trefiable substance, which rapidly undergoing decomposition itself, greatly accelerates a similar change in the comparatively unchangeable substance with which it is mized. comman a prastical illustration of this in the case of woody fibre or lignin of the straw is very greatly assisted and accelerated by the animal substances which become mired with it

The presence of the free alkalies and the caustic earths, such as lime or magnesia, aliso greatly facilitates the decay of humus and similar organis substances; and, consequentiy, when these alkaline or earthy bases are mixed wita the soil-or, what is the same thing, with the vegetable matters intended \(t\).) be used as manures-they accecate decay, and, therefore, increase the formation of spects, sweh as improving the mechanical texture of the soil. \(-E\).

\section*{HOME CURRESPONDENCE}

Cottagers' Prizes.-There are few noblemen or gentleholding the rural popalation taking greater interest in the cultivation of vegetables, fruits and flowers, than they do at present. Wiri a littie encuuragement on themr part, along with the advice of their gardeners, much migit be done to better the condition of the rural population of
in this place that had for its object the improvement as president, and have had everg formation I have asctel its working. For several years past a prize has boc given for the best bouquet of wild flowers: at first thio may appear a trifling thing, and scarcely worth a we find that what are called insignificant canses Pren do mighty effects. We would look upon the bouquet of wil fowers as a step taken in the advancement of that knowtedge that will one day be yet more generally diffused, he lahouring man. On or increasung the pleasure of
 compete for the bouquet. Parties are sent in varione directions to collect the most showy and rare nature that is likely to afford anything that will suit their pur pose ; the hedge-sides, the woods, the moors, the bog the cultivated fields, and waste places, are ransacked for those flowers that are thought to excel in beauty. In selves to dangers that in ordinary cases they would not think of facing. The Nymphæa alba, or white Water-lits is one of the most beautitul of our indigenous aquatics it commonty grows in deep water, and is not obtailied without some difficulty ; but its flowers are sa. tempting, cheerfully undergone. Returning in the heir collections of flowers, the cottagers conmeng wid is called the "busking of the flower ;" many persons neree think of going to bed the night before the exhibition, for here are sevy hours to decorate the bouquet, although there are sereral persons employed about it. display a good deal of taste in the arrangement of the flowers. After the bouquets are fanished, it requires some they are often protected with awnings ; for it is the object
they and interest of the compecitors to have them in as goo a condition as possible. The first things in general that the attention or visitors are the bouques; a he most conspicuous are compused of wild flowers. Many collected inquiries after the names of the plants that are membered. Among the numerous flowers that are brought into notice on the day of exhibition may be seen the red Campion and Meadow-sweet, the beautitul Hemp Xettle and Pyrola, the orange Avens and the purple Cinquefoil, the rose-coloured Rest-harrow and yellow
Bedstraw. The Forget-me-not is removed from its oozr bed, and the fragrant Asphodel is taken from the bleais noor; and the Thyme that fringes the heaths, the Scabiosa succisa from the upland pasture, and the Buckbean in oblivion, exposed to flowers remide blasts of of genius living ect. With some exertion a race of rustic naturalists might soon be formed in every district of Britain. It has beea said by an ancient writer, that the pleasures of the hus. bandman are next to those of the philosopher. If the stady of zoology, botany, mineralogy, and geology constitu part of the philosopher's enjoyment, the same might so that they may have all the pleasure they ever had, and much of the philosopher's into the bargain. Take for exconsiderable object is gained in favour of that department considerable object is gained in favour of that department in the mind; and there are few persons that look upon flowers with indifference. When once a knowledge of a few terms is acquired, a key is found that will open the vestroule of the temple of Flora; and when once in, he must have a callous heart indeed, that will not be a morshipper. When once persons are accustomel to observe objects in a systematic manner, it is wonderful what cal be laid up in the storehouse of the memory. When we consider that the labouring man is born with the same powers of mind as the philosopher, and that we are all many thousands of ignorant of that which would add to their happiness, and ignorant of that which would add to their thappins.-Peter
raise them higher in the scale of intelligentbeings. Mackenzie. West Plean
Honey-dere.-I was pleased to observe an admission made by your correspondent Dr. Bevan, in his letter, \(p\). 430, that "Honey-dew is not always the concomitant of aphides, its presence depending on the temperature and humidity of the air." Now this is what I contended for my first letter; and I firmly believe, that the nore clusel he investigates this subject, the more he will be convicend that the cause of this phenomenon is rather the atticks in the agency of atmospheric changes than in to deny the truth of Mr. Murray's statement, that "there is ofterstimes honey-dew in abundance where the aphis is not to be discovered;" and in corroboration of this statement I beg to refer hin to a passage in the "Journal of a Nataralist." in which the intelligent author says, that on the Tth of June, 1828 , he observed the foliage of his laurels (Prunus Lauro-cerasus) covered with honey-der, upon which numerons hive-bees were feeding, although there
were no api ides. nor any trees near upon which they coutd were no api idss, nor ang trees near upon which they your as
be fivund. There is somethiug in the seavon of the yed well as the temperasure and humidity of the a:r, which appears requisite for this estiaordinary depusit of heney dew; for I am not aware that it has ever been observelly excepting doring the summer months, more eaptary Selbacme," a well Mr. Krapp in the pasage syor
quoted, always perceived it at the same time of the year, and both these accurate observers of nature were of opinion that it proceeded from some cause independent of aphides. With respect to the appearance of aphides upon the hops in Kent, I would take the liberty of suggesting to Dr. Bevan, and to his friend Mr. Golding, the necessary inquiry, whether the plants are not in a sick!y state, and whether their juices may not have undergone some chemical change, by which their saccharine property has been -Oswald Mosley, Rolleston Hall.
Nitrate of Soda.- The following is the result of my experiment with nitrate of soda on strawberries :- Those parts of the beds which were watered with the solntion,
1 oz . to the gallon, soon showed a difference in the colour of the foliage, becoming of a deeper green; but when the plants grew very rapidly from the quantity of rain which
fell, the effect of the solution was not perceptible, in consequence, I believe, of using the solution too weak That part of the bed which was covered with the salt itself is now of a very dark rich green, and the growth of
the plants has been very great, so that I shall next year nse the salt without any fear. I have tried nitrate of soda in planting my rows of Celery, covering the dung with it ceptible in the colour of the plants, for Ileft a part each row not salted; this latter part looks very pale, and the outer leaves of each plant have become yellow, whirh is not the case in any plant where the nitrate of soda was
used. In a part of one row of Celery I used bone-dust justead of dung, putting about two inches thick of the dust in the trench, and turning it in with the spade; and bitherto I think those plants look most promising where the bone-dust was used. I have this year planted my
Broccoli in trenches like Celery, only not so deep, and I have used the nitrate of soda in all the trenches, and as far as I can at present judge with good success; certainly there is no appearance of any injury done to any of these
crops by the free use I have made of the salt. The chief portion of my dung has been cow-dung-my soil a stiff red clay over the new red sand-stone rock: and I have aned sand most freely to lighten the soil, and my crops this year are more promising than 1 have had them before. From my experience, 1 feel sure that I shall be able to plants as I see that occasion calls for solution for Dablias, and was perfectly astonished at the effect produced. My plants immediately increased most rapidly in thickness of stem and depth of colorr, as well as in size of leares; but they show no appearance of grow--John Wedgwood, Seabridge.
Rules for judging Carnations.-In reply to Mr. Bates, "fancy flowers" for more than 20 years, and I have never known ans difference of opinion respecting the leading
qualifcations of a good Carnation. Not so withen Tulip, for the winners of prizes seven years ago wonid now be discarded, so great has been the improvement in shape, texture, and clear bottoms. When I commenced showing Carnations in Lancashire, the excellence was estinated by the briliancy and distinctness of the colours, and formation of the petala. The ground petals. Self-coloured petals are a disqualification ; the cup must never burst, and if the pod is long it is a great never overcharged with petals, and consequently attended with the least trouble in preserving them from bursting. petals should have a perfectly smooth edge, free from serrature and cracks, or blemishes. Every layer of petals ahould decrease in size from the guard-leaf, and form a kind of crown in the centre. Every petal of a Bizarre must
be distinctly marked with the two colours. For 20 years these have been the objects of attainment in a good Carnation, how can you improve upon them ?-John Thackeray, Mr. Bates and qualizies which constitate a first-rate flower, s, that the L M. Nasackeray age prejudiced in favour of large fowers to the exclusion of some of the finer properties in the marking; and on the other hand, that the and arn growers have so strong a bias in favour of calour and marking, that, to attain these, form is disregarded site number of petals. It is only by showing together that a proper understanding can be established, and the not be allowed to pass without the accomplish neent of this deairable object.]
Bees.-The inquiries of \(A\) Subseribor, which were in would have received a prompt reply had thergent been of beeses, before. First, the alightingt board sion hald be placed at the bottom of the box. The bees soon fill this bux with comb When it is kept dark, and. till filled, they ascend the sides sary, being with the alighting board proportioned to the number of bives which are to be united; say four inches in width for three hives. Thiruly, the holes forming the renience dictates. Fourthrs may ber beneth may fixed or removeable; but 1 prefer the former. I have pleasure in adding, that a friend who has adopted my plan of treating bees has met with tncourauing surcess. My weight oftce this year is at present about for: y pound Mr. Kught's Bird-trap.-Among the usetul little found to be the late Mr. Kuight was a bird-tr ip, which he found to be an effectual means of keeping down the depre
dations of Titmice, who are great enemies to Peas. The
foliowing letter sent us by MIr. Kinight some years sence foliowing letter sent us by Mr. Kinght some years since, to minny of our readers, and show how kind-hearted and amiable a man he was in the most trining matters; he could not take away the life of a bird, however necessary without doing so in the most humane manner.-." I enclose in the Titmouse-trap which I promised to send you, the following directions how to use it :-Tno weights (I use pieces of stone), each of about three pounds, are to be the bird when that touches the bait or tiller. I bait in the summer with an open pod of Peas, fixed as you will find one in the trap you receive, and in the winter I put some Oats into the box, which the Titmice soon find: but I
do not set the traps to catch till many birds have been attracted by the Oats. Tro kinds only of Titmice, Paru major and P. crruleus, ever break the pods of Peas, and I therefore never kill any others. I never suffer the traps to remain set at night, nor when I, or the gardener, can-
not attend to them: because I do not like the poor birds o suffer a lingering death (they will not, however, generally live more than two hours) : but Rohins will often be canghr, and when they are entangled in a net the Titmice will kill and eat them. One cause of the abundant number of his species. or rather these species, for the remark applies only to two, is, that in cold seasons, when the small birds become weak throuch want of food, these attack and destroy them, inflicting, I fear, great torment upon their netims. they hase therefore but little claim to compassion. The trap is usually fixed to stand upua the hind of spike
enclosed in the box, and that spike is usualls fixed in the top of a stake. It is, I think, totally imposible, without efficient traps of some kind, to save a crop of Peas of my large late varieties in any country garden, where other gardens, to diride the attention of the Titmice, do not exist. I killed in the last summer and winter more than four hundred Titmice in and round my garden, and I
think they are ratuer less abundant than they mere; but doubt whether the preservation of my late crops of Peas will not cost a hundred victims. The trap, when properly et, never fills to take."-T. A. Knight, Downton Castle
It
The accompanying cut represento this trap in the act of springing up. It consists of a wooden box open on the upper side, and placed upon a staff about three feet high. A strong wire is carried across it from \(e\), and is so conwire is attached a net which is secared on the other side to the hack of the bor. Connected with the ends of the wire is a piece of line to which meights are attached (brickbats or stones do very well) ; the object of these is to pull the wire forward to the front of the trap the moment it is sprung, and so to encluse the bird in the net. Then set, the wire is drawn back to the space between \(b\) and \(u\); the eatel \(d\) is turned over the edge of the wire communicates with the tililer \(a\), on wisich the bait is placed the pressure upwards of the wire upon the cateh, in consequence of the weight of the stones attached to it, keens sequence of the weight of the stones attached to it, keeps
it firmaly applied to the notei \(\delta\) untll the tiller is disturbed; out the moment a bird tou bes the point \(a\), the apparatus is disarraned. \(\&\) and \(d\) separate, and the wire is mstantly
brought over to \(c\), in the direction of the dotted line, thus brought over to \(c\), in the
taking the bird prisuner.

Tu dotain crapos from Vines in Pots.-I lave obrained Grapes from rines in pots for the last two yeurs by a imple method, which is attended with less than half the inbor and inconvenience of the ordinary way of raising commended by Mr. Mearring. It was the coiling system that first suggested the idea to me: 1 had reveatediy tried it, but neres could succee? sufficiently to repay me fier of goung plants from single eyes or cut-inys zeneraliv to bear summers growth to mate them strong enough heat, and in a favourable situation, would bring fruit after
one summer, yet there was so much uncertainty in it that plants never insure a crop of Grapes, Muscadines, Frnatignan, Sweetwaters, and several other sorts, are sure bearers in pots, and by whatever method the plants may be raised it does not seem to affect their Grapes of ery When the vines that are let into the house have reached the top of the rafters, instend of house have reached shoot, as is commonly done, and often too soon, which causes the eyes to, burst and renders them nseless for the succeeding year, I turn the shoot back, and having read turfy or suitable size, well drained and filled with fresh therfy loam, and rotted dung, of equal parts. I place it upon shoot has pot. I cus attained a sufficient length to be laid into the and हcrape of a littr three eyes, and as many of its leares, part intended for roots, which is bent into the pot, and covered with mould to the depth of six or seven inches. No attention is required, excepting to train the shoot ae it advances in growth, and keep the mould in the pot a rle moist to enerurage the emission of roots, wisch wil pot. When fortaight or three weeks, and soon fill the from four to eight feet long, according to the strength of the parent vine, to which I leave it attached until ie bas dune growing and perfectly ripened irs wood. I de naz liways conime myseif to the leading shoots for a supply of plants, hut I prefer them to any other, as they ahrays bring the largest bunches. Sliould there not be a sufficient quantity of leaders. I place pors uader the rafters Hue: but the shonts that are laid in these pors are nemt uffered to exceed five feet laid in these prots are netw are severed from the parent vines, they are putout under a wail, where they are protected from frosts and taken into the house as required for forcing; at that tiwe they are shifted into pols about a foot over, and \(1 \frac{1}{2}\) inches deep: in these they remain until the fruit is cut. after which they are thrown away, as I am always sure of a iresh supply of plants every year
Stothard, Cianiry House.

The Hautbois Sirauberry.-In page 414, Gardeners' Chronicle, June \(2 t\), an article appears on the ahove "The old Hautovis Strawberry, unlike any other, hears the male and female flowers in different roots." Nom from long experienice, I can add to the above remarks, that others produce botis fluwers separately, but on the same plant ; whilst others produce both male and female
organs in the same flower. Thus it exhibits four variations in its sesual character. The sort which I prefer opropagate from, is that which produces both blossoma separately, but on the same root. I have had frequent opportunities of making remarks on this excelient fruit which almust warrant me to believe "that the arganio defect is occasioned by bad cultivation for a series of years ;" and that if it were grown in rich toam, with the defeets moisture when the flower-sterms begia to rise, neglected at that time, the evil is dome, and future watem Chelsea fitlle sern, She when hermaplirodite; and so are all the varieties of the Hautbois We never yet sam any that had nol the parts of frictification common to the genus, in eitiuer a perfect on imperfect state. The stamens are very short in the large hat Hautbois; yet without anf other variety being near they produce, in general, most aiuandantly. The prolifo or conicul has always long stamens, which are persistent till the fruit is ripe. It, homever, sometimes happens that the receptacle in Hautbois is insperiect, or ssen dead. Again,
under circumstances unf pulpy substance, the recentacle remains dry und action of a bears, notwithstanding, apparently perfect seeds. Sterila much ih plants maybe occasionaly met wiln; bues true there is a male Hautbois described (Hort. Trans) but it was an error; for the name should have been Mule Hautbois.,

\section*{MISCELLANEOUS.}

Trees in the Landes. - The Pinaster, which covers some of the wooded districts, is precisely the same as the one growing, on so very different a soil, on the Maritime gardens in the length of leaf and depth of colour, but is readily distinguished from P. Laricio and other allied species by the cone and general appearance. The Tauzin penially whell prowing with the Quercus nedunculata; the pecially whell growing with the Quercus pedunculata; the green of the latter. This 0 Tozs is senerally pollard green of the latter. This Q. Toza is generally pollarded; but some specimens, left to themselves, formed much larger trees than I had innagined, and the species seems altogether preferable to the Q. pubescens, the most common sessile-fraited oak in the South of Europe. The
Cork-tree is also frequent in the Landes.- Boals. Jour. Bot. vol. II. p. 110.

Source of the Drug called Tragacanth.-The real origin of many of our officinal drugs is involved in obscurity, or the statements made by authors concerning thers are in great need of confirmation, even when true. The common gum, called Tragacanth, brought to us from the Levant, is no exception. Linnems erideaty considened cantha, French ay the plant he call the botanists of that country A. massilieasis; but De Candolle assures us that no gum whatever is furnished by that plant. Another species, the A. creticus, has been named as the source of the drag, and it does appear that a small quantity is obbulk of the samples of commerce. Labillardière relates that his A. gummifer furnishes Tragacanth on Mount Lebanon; but the samples obtained from thence are said to be not the same as those of commerce, being white and
more transparent, and dissolving less readily in water. Finally, Olivier assures us that the principal part of the Fragaeanth used in Europe comes from Astragalus verus, a Persian species. The only certain conclusion that can be drawn from these statements is, that Tragacanth is a secretion from some sort of Astragalus, belonging to that curious division of the genus which consists of spiny bushes. The snbject has been recently investigated by dried specimens of the Tragacanth plants of Koordistan. One of these is labelled "The shrub that yields the white or best variety of Gum Tragacanth, and is the A. gum and much to be desired as an ornamental plant; for it is covered with mgriads of short spikes of yellow fowers embedded in wool, and surrounded br bright green smoot leaves. Dr. Dickson's other Tragacanth is labelled - Shrub from which the red or inferior species of Gem Tragacanth is produced." This is quite a diferent plant, flowers, whose feathery calyres are as long as the corollas It is evidently very near the A . microcephalus of Will denow; but if the character given by that author or by De Candolte is to be refied upon, it must be diferent biliferns. Hence new species and me best Tragacanth is really furnished by A. gummifer, as Labillardière affirmed ; that no additional evidence as to the accurary of Olivier's statement concerning A. verus has been obtained; but that the existence of a third Tragacanth plant has been clearly ascertained.-Abridged from the Botanical Register bolanical Lectures in 1635.-Two thing onely which belong to this Uaiversitie memarable. the Physicki Gar thongh a small plott of ground nott above t atatute though a small plott of ground, nott above \(\frac{2}{3}\) a statute aker. Herein was I this night, June 6th, when Adolfus Voerstius, Doctor of Physicke, made his lecture in this garden, which hee is to performe twice a weeke. His manier is to talce a whole bedd, \(4 y\) - long and 1 broad, and to discourse of the nature and qualitie of every hern and plant growing therein, which hee points outt with his stick we when hee begins to speake thereof. Hee treated of the Mastiche tree which there growes, though it is butt me bask and of no great statare, hercu. he of H sou and of Hamlocke, which hee suid was of a most renemons. somnitine. stupifting, aud intoxicating qustite yea, any man did butt soe juch ar conch itt and rabbitt, that part that touched itt, would loose his naturall heate. Egerton, dated Leyden 1635
Bergamotte de Hollande, which sea some pears of the for table on the Ist of July. They were grown by Edwin Corbett, Esq., of Darnhall, near Winsford, in Cheshire, who found thert more juicy at the end of May than at any other period. This variety, therefore, slthough not first-rate, is valuable on account of its lng keeping

Trifacial Oranges. We understand that, apon the application of M. Salame, his Excellency the Turkish Ambassador has undertaien to procure some plants of the oranges of which so much has been lately said. It eppears that this variety is well known in the East.
Blutia Iyacinthina.-Tbe lorers of Orclidaceous plants aie scarcely aware that this beautiful species is nearly hardy. We have lately seen a proof of the hardiuess of the plant by specimens sent us from Sir Charies Lemod seat at Carclew, from a specimen whica has been growing Booth tells as it appears to be quite es hardy as Tigridia Booth tells as it appear. pavonia, and comes up in the spring about the same time. grown in a hothouse.

GARDEN MEMORANDA.
Cren Wood, the sent of the L"urt of Mansfield. -The space oceupied by the gardens and shrubberies here is between 50 and Hampstead is by a windmg road, the banks rising at times to with trees and shrubs, so planted that the mansion is not seen till we are close to it. On the nght, through a small wicker, is the flower-garden, shut im on three sides by trees and shruhs,
nad on the other by one side of the house. The beds are chicty round or oval in form, but some of them are of difierent shapes, some plant round it which contrasted with the towers in the bed and formed a cood soparatuon from the lawn. It may afford some useful hints if we state the kinds onf plants with which the
beds were planted. A circular bed, filled with the rich glowing parple of verbens Hendersonil. had a border of the did vellow Heartsease; an oval, with a wire-work basket, was filled with purple Petumas, and over the sides, and haudle of the bashet Cor chorus and Fragraria indica were trained; an octagon, with Corchoras hedses, coming to a point in the centre, had the compurple Heartseases round the edge, Clematis florida was trained tmong the Corchorus, which in a short time will be covered with flowers; a round bed of Carnations had an edging of commona next to a bed of the brillia. \(t\) blue Anchusa italica was a clump of
 circle flled with standard Roses, edged with pink China Roses, spaces between the beds large Orange-trees were placed for the summer, and vases filled with fowers. At the upper end of the flower-garden there is a row of Neapolitan vases set on pedestals ; these vases are joined by festoons of creepers, which though they
produce an artifial effect, yet form alind of boundary by no
means unpleasing \(i\) path covered with a trellis orer which creepers are trained, leads round to the south front of the mansion; the griund belng elevated, the eye wanders ver a rich,
though contined landscape. The fore-ground is a shelving bant planted with a few specimen trees and shrubs: among the more not less than 150 ft . in circumterence; a black Spruce Fir, the brancies of which had reached the ground and afterwards grown upright, a hand-ome specmmen of the sophora japonca, and a
very large old Thom: from these we look over some green very large oid Thum: from these we look over some green and having at outh ends brdges balf cunceaied by follaze; and behind the picture is rendered crmplete by the maynuficent trees, form little more than a copse. Among these trees there are some Cedars of Lebanon and Larches thern there is quite a grove of Rhododendrcns, which ; seem to grow with native luxuriance; many thousands are comug up leads from the pouth frome of the house through this wood, and in facts. entirely encircles the pleasuregr ain. A IIstory of British Forest Trees. By P. J. Selby, istory of British Forest Trees. By P. J. Selby,
Esq., F.R.S. E. Part I. 8 vo. Van Voorst.
is Ters is the commencement of a series of iilustrations companion to Yarrell's "x British Birds," and other standand works inmed by the same publisher. Any critical observations we may have to make apon it we reserve till the work is finistand. In thene man whiten woodents, executed with both taste and care, and that the paper and printing are of the best deseription. In preparing the letter-press, with his subject, and has chiely confined himself to matters of popular interest; his manuer of doing which is agreeable and instructive, as the following estracts from the account of the Holly will serve to show

The size which the Holly frequentiy attains in a state mond condary tree or merely as an anderwood shrub, added to to its being of indigenous growth, are circumstances of sufficient importance to justizy our admitting iritish foreattrees of the second rank. There are many, we believe, who are scarealy aware of the size to which a Holly will grow under favourable circumstances, and who only judge of the plant as they have seen it in shrubberies, hedges, or as an ruser ; snch will be surprised to learn that there are many exatoples of Hollies in England and Scotiand, that have attaiped a height of 40, 45 , and even 50 feet, Nith truaks rarying from swo to four feet in diameter. Such instances, ae admit, are not very common, and only met with in Goods where the Holly is indigenous, and has not been enamped in is growth by ocher trees, of where it has been pianted and afterwarde treated as a tree, and not as an unierwood evergreen.

The climite of England and Scotland appears to be particularly favourable to the growth of the Holly, for, albation througtout the middle and southers parts of Europe, in no part does it attain so large a size as it does fto prevalence in the remains of all our natural woods and aboriginal forests: thus, in Exgland it abounds in that of Needwood, in Sta fordshire, the New Forest in Hamapshire and many others. In Seotland, few natural woods are unenli-
rened hr its presence, and though its usual form is that of an rasiderwiod to Oak, Ash, and other trees of a quicker and more exalted growth, it frequently assames the form and reaches the dimensions of a tree of the second rank. Such are many of the trees mentioned by Sir T. D. Lauder as growing in the forest of Tarnawa, upon the baniss of the Which grew in the forest of Black ball, upwn the river Dee, in tue same county. In Northamberland we know several remains of natural woods where the follien to those upon record. At Detchant, near Belford, in a large natural wood, there are still Hollies of a very large size, though most of the finest bave been cut down within the last fes years, and their valuaile timber suld to the herring-curers. At Twisell House these are also several Hollies of ancient
growih and considerablesize in the wooded dells and other remofins of matural wood.

The nsush, and indeed the orly objection to the Holly as a hedge-plant, isthe slomness of its growth; this objection;
liowever, we think aill only be found to hold good where the necessary attention to the due preparation of the soil, and the remural and after -culture of the plants, have been meglected. We have isnownand seen Holly-bedges which, under proper treatment, became fences in as short a time as one of hawthorn, privet, or almost any other sort of great care wat taken in the femoval of the plints, and the previcus preparations of the soil; and when the annual growic of the Holly is considered, (the leading shoots, ander fisourable circumstances seldom falling short of 8 or 10 incies, it may easily be supposed that a few years would suffice to make a good fence, where every care had been takea in the selection and proper insertion of the plants.
"Under the old aystem of gardening, and disposition of pleanure grounds, the Holly was. much more extensively used as a bedge-plant than it is at the present cay. Evehis impregnable Ledye at SiF"'s Court, 400 ft . in itngth, 9 ft . hight, and 5 at feet in diameter, 'the talter standards at orderly distanees bluthing with their natural coral : it mocks," he wids, "therudestessealte of the weather, beastr, or hedge-breakers?

In Scotland, the most celetrated Holly-he
at Tyuyngham, the seat of the Earl of Huddiagton; those burgh. At the place fint named there are 1952 Ear Edin-Holly-hedges, most of them plinted about 127 years ago. In height tiey vary from 10 to 25 ft , and are from 9 to
every Apill, and are protected from cattle and other injury, by a ditch on either side."
honses act chem of urnamenting our churches and dwelling. ont readeraristmas with sprigs of Holly is weil known to Cirandler su.... appears be been derived from the Druids, who are said to Lave derorated their dwellings. during winter, with evergreens, 'that the syivan spirits culd winds, until a milder season had renewed the foliage of their darling abodes ;' but it is more likely to have been first adopted by the early Christians at Rome, where the Holly had long been used, as an emblem of good wishes, in the great festival of the Saturnalia, celebrated about that period of the year.
injurious to the we have found the hares and rabbits very injurious to the Hollies; and in the long-continued storm of January and February 1838, many plants of as
large a diameter as 3 or 4 in. were killed to the surface of large a diameter as ground hy haring their bark stripped off as high as the animals could reach. We are now obliged, when planting Hollies in the woods, to surround each with a wicker acquired strength and size sufficient to resist the nibbling propensities of our four-fonted game; or else, previous to planting, to dip them overhead in a thickish misture of least a couple of measoas, and does not injure the growth of the planta.
CALENDAR OF OPERATIUNS for the ensuing Week. THz remaining species of Cologyne whose culture was not
noticed in our last, we treat as follows :-First, C. Gardneriana is
found in the preatest found in the greatest luxuriance in its native haunts, where the
rebounding ppray from a waterfall keeps the foliage constanty rebounding , pray from a waterfall keeps the foliage constandy
moist, usualiy growng in vegetable mould or mose; we find it
thrive best in a mixture of three parts sandy liaf of turfy loam, using a great deal of drainage, as it requires con-
stant stant supplies of water and a moist atmosphere. The tirst thower-
buds usually protrude themselves a avout January, at which time the plant sthould be caretully potted, allowing the buds to rest Young shoors mahe their appearance from the erse are budd, and
the plant is kept growing, a second flowering will take place August; atter which, having perfected their growth, the supply of water is diminished until they again show indications of growth the next January, The remainmy species differ mateHowering scape from the summit of therr young pseudo-bulbs and do not expand their hlossoms until the spring following. C. interrupta anid Cumingii are instances of this ; whilst barbata,
aristata, and intermedia resemble Gardneriana in habit, but they all thrive under simblar treatment: that practised here. is potting chem in sphagnum in wire-baikets, and suspending thenn in the
coolest tartof the Orccirdacea house. Whena new growth in per.
ceived, they are supplied literally with water and greater heat until it is completed; ifter which, a cool dry treatment until they again show indications of growth; forcing these growths by con-
stant excitement, we have found produces weak shoots without blossoms. I.-KITCHEN-GARDEN AND ORCHARD.

rich maideng. - The best corapost for Balsams is about one hali Some hurwe-droppings and sand may be added, and the whole well mixed together. Alittle sllwer-sanal is certainly beneficial Enth for Balnams and Geraniums.
Eharacensis will furd his question answered in No, 28, p. \(45 \%\).
W. D. If the bearine-showt: of rour Viaes have grown th con-iterable extent heyend the bunches, it will not be aumsable to reduce thens alito ontyone, or even twa jnint above the hunch better leave them at suith lengthe as you fund you have spaee to
train them in. Athnush ail the leaves on a Vine are conducive to train them in. Athnuch ail the leaves on a Dine are conducive to contrioutes chiefly, tio the growth of the fruit. Other fruits vary with regard to their dependence on roliage in their immediate
sicinity; for example the Pear and Apple are often found termunal, bist the peach requife; leaves beyond or above the fruit. All laterals on yung -h. ot, of the Vine shsuld he displaced as
they appear, with the exceptom of one or two of the ixppermost, to take the p'ace of the leader, in case it hould be broken. An Amateur should procure a few Heaths, Camellias, and Aus-
tralian hard-wooded plants; these, wth Pelarmniams, Calceo larias, and Fuchalas, whall ner be found at ail difficult to keep through the winter in a small greenhouse, provided the frost is ing. giving air, and repotine the plants as they require it. If Dianthus makes his lime-water according to the receipt
given in p. 133, we have no doabt bat it will free his Pansy beds given in p. 13.3, we have no doabt bat it will free his Pansy beds
and Pank pipings trom worms.
East Hants. - Cacumbers not fertilisert in any way will not prodace seed whith will grow. The seed may be apparently well that a bed of single Stownd lieht and empty. It is not probable double varietics. The tlung is just pos-ibie, but very improbabie.

\section*{NEWS OF THE WEEK}

The first and moat important event of the week, connected with the Poreigu relations of this country, han been the signature of the Convention on the Eastern question, by the representatives of the Purte, Great Britain, France, Prussias, Austria, and Russia The signature of this Convention had been delayed until the Pacha of Egypt had accepted the firman of the Sultan, and its ratincation will not only set at rest the different points at issue between the Pacha and the Porte, but will put an end to the isolation so long maintained by France from the rest of Europe, and to the sclism which had arisen between that country and the other Powers on this im. portant question. It provides moreover, that in all future consultations on the affairs of the Levant, France has acquired the right, and undertaken the duty, of bearing her proper share of the responsibility, and that nothing which has hitherto been done can be made the ground of future dissention between the Powers who are parties to it.-We learn from France, that serious riots have occurred at Toulouse, arising out of the cha::ge of Prefects, and the recent measure of Government for the assessment of household property. The disturbance spread to the other towns of the Department; the military were called out and succeeded for a time in maintaining public order; but a renewal of the riots has since taken place, and the neighbouring country still appears to be in a state of great ex-citement.-In spain, the discussion on the guardianship of the Young Queen has occupied the attention of the Senate; after a long debate, the office was declared va. cant, and the united Chambers have since elected M. Arguelles by a large majorsty to fill that important trust. The financial affairs of the country are still in an unsettled state ; the discussion on the Budget commenced in the Chamber of Deputies on the 3d instant, and after several adjournments was resumed on the ith. when the dotation of the Regent, amounting to \(2,000,000\) reals, was woted by a large majority, and an allowance was granted to Queen Claristina on account of her marriage settlement. The Minister of Finance has forwarded to this country the sum of 10,000 as part payment of the over-due instal. ment of \(50,000 /\). for the Britisl Legion -In Portugal, the Question of Fihance, respecting which so much anxiety prevails, has not yet come before the Chambers; the Ministry, it is sald, have given satisfactory explanations to the British Ainbassador respecting the claims of the Foreign bond-holders; and the Senate has passed the The Swiss Diet has resumed its sittings; the discussions on the suppressed convents, and on the measures to be adopted in regard to the Canton of Argau are regarded with much anxiety, and the strong feelings already excited by this question are said to be increased by the attempt of the Church prrty in Tessino to recover their influence by force.-The funeral of the Queen of Hanover took place on the \(\overline{7}\) th inst., and the King has issued a proclamation dissolving the assembly of the Estates, on the ground that the majority of the members of the second Chamber are unfit to fulfil the functions demanded of them.- From the Levant we learn that in consequence of the Pacha's acceptance of the firman, the Sultan has granted a dimination of the tribate, and has forwarded to Alexandria a new firman announcing this concession. The measures adopted by the Porte for redressing the grievances of the Christian population in the European provinces have proceeded satisfactorily; the Pacha of Nissa has been deposed and a rigorous investigation of the government has been instituted. The insurrection in Candia still continues ; the insurgents have had several engagements with the Turkish troops, but the results are unimportant; and supplies of men and ammunition continue to be received in spite of the blockade.-From the United States we learn that a protracted discussion bas taken place on the case of Mr. M'Leod, and on the conduct of the Federal Government in reference to it; but it was not brought to a conclusion at the date of our last advices. The proceedings of the new Parliament of Canada have been directed chiefly to the Act of Cnion, and an exciting debate has taken place on two ancendments to the address in reply to the speech of the Governor-General, in which a protest against the Union was embodied; the first of these was rejected by a large majority, and the seeond was under discussion when the despatches were clused. At Home, the Elections continue to enjage public attention to the exclusion of alm st every oher tupic; in
several towns and districts serious riots have occurred. In Ireland the interference of the military has been necessary to repress the excitement created by party feeling; and in many instances loss of life has taken place. The
elections for the Euglish and Welsh counties and boroughe are concluded, and very few of those in Ireland and Scot. land now remain t

\section*{}

Coert.-Her Majesty, Prince Albert, and the Princeas pected, her Majesty will remain untiil ahortly befors the
opening of the new Parliument. His Majesty the King
of the Belgians took his departure froma the Castle on
Tbursiday for Woolsich, on his return to the Coarinent. Her Majesiy the Queea of ti.e Brigrans will prolone her visit in consequence of tue Duke de Brabant nat being sufficiently recovered to frar the fatigues of the j.,urney. Pot Offire-Reyintered Lellers.- It appear- trom a retura in ane number of the present mode of r- gi- ration. up to the 2ath of May, 18+1. Stating the ditte of surin mode of reglst ration, and the fee charent fir it aimpe the postage-and aiso, the date on whicis the Post-othce discunanued the formar practice of gratuitous regsistration of

 above the postace is ous suiting. The entering of letters containsag com was diwortinated on the Iat J2n, I5 'l; because the number of such letters under the fourpenay sustems was foumd to ie \(\sigma\) great, that the service could not be carried un with anv rezalatisy, and it was decided. there:ort, hy the Chanc ! !or of the Exchequer and the Postmaster frenerai, that it would be lunpusable to temnt it when the fenny phestage came into operation

Criminet Offenters.- The following statistical informatian relative t. crimiarl offenders is from a return
noved for in the last Parliament by Mr. Hume:-The total number of persons committed for trial for rarious offences, buth agaiust persom and property, in England and Wales, amounted in 1038 to \(23,49 t\)-of whom 16.785 were convicted: in 1830 to \(\quad \ddot{4}, 443\)-of whom \(17, \times 32\) were coavicted; and in 1810 to 27,187 , of whons 19,927 were Scotland in 18.38 amounted to 3,418 —of whom 2,679 were convicted and uutlawed; and in 1839 to 34149 - of whom 2,651 were convicted and outlawed ; and in 1840 to \(3.8 \% 2\) 2,of whom 2,915 were convicted and outlawed. In Ireland, the number of committals amounted in \(18: 38\) to land, the number of conmittals amounted in 18.38 to 16,723 -of whom 9,649 were convicted; in 1839 to
26,392 - 0 whon 12,019 were convicted; and in 1840 to 23.82?-O - whom 11,194 were convicted
Refugees. It appears,

Refugees. - It appears, from a return of the House of Commons, that the total amount of money issued towards the reliet of Spanish refugees from the year 1827 to 1840 was 131,4956 , and that the total amount issued towards the reliei of Polish refugees from the year 1834 to 1840 , inclusive, was it,it2l.
Corn Statistics. - The following information relative to Corn and Wheat is derived from returns lately published of Foreign and Colonial wheat and wheat-four inported from Jan. 1at t1, to A pril 1841 (both inclusive), an ounted
 entered for home consumption. The total amount of duty received on the \(1,009,02.5 l\). The moathly averıge prive of wheat during the above permd was \(31.5 s .4 d\). per quarter. It further
appears that the total quantity of wheat imported into Great britain from the ports of Prussia, Germany, and Holland, during \(18: 8 ., i 9-40\), altogether amounted to \(1,118,160\) quarters, being an average of \(65 \cdot 2.25 \cdot 5\) quarters per annum. The total quantity of wheat imported from the same conntries trom la 166 to 1813 (both inelusive), was only \(1: 17,14{ }^{3}\) quarters. The total amount of foreign wheat imported into Great Britain from \(1: 93\) to 1814 , from all the purts of Europe and America, was \(9,817,411\)
quarters; and the quantity of wheat-lour, \(+016,421\) quarters; and the quantity of wheat-iour, \(\pm, 010,42\). The quarters. brough into bowe consumption from the passing of the act of \(18: 28\) to \(184^{\circ}\), inclusise, was \(11.21934^{\circ}\) cuarters and the quanty of wher \(3-9,53)\) purters
Tee New Parliament. - Elections cuncluded.-Ou last Table presented the result of the Elections in is Coun and 26 in Is eland. These added to our Table of July 3u, and to that which we inser: below, give the following as the result of the Returns ascertained up to last night, countang The ford and C'ardig in as double returns, which last. In case of a double return, both Members may take their seats, but neither can vote.

France. - The Eastern Question. - The convention on the affars of the East, which has been for some time agreed on ata initialed, but the signature of whech had been delayed unt:I it shouid be known that the Pacha of
Eegypt had accepred the firman of th.e Sultan, was definiEgypt had accepred the firman of the sultant, was detinh-
tively signed on Tuestay, by she plenipotentiaries of the Six Powers, Austris, Fracie. Great Eritain, Prussia, Russia, and Turiey. The slmature of this consention puts an end to that schism jetween france and the other Powers, which had arisen out of tie different views which France and those Powers had taken on this important question. The object of the convention is to render geatral, to all the tive Powers, the engagement, which subsists between Great Britain and Turkey, and by which the Sultan declares his intention of closing the Straights of the
nations, as long as Turkey is at peace. It results from paration from he est of Eurupe and that har state of se paration from the rest of Eurupe, and that her luils-main taned isolation is now at an end. lhe treaty provides, moreover, that nothmy whicis has hitherto been dowe in relation to the affidirs of the Levant can be drawn into controversy, or made the ground of future dissension between any of the Powers who are parties to it; and determints that, in the event of any future conseltations be coming necessary among the gieat Pisters, in reference to the affairs of the Levant, taking the actual stutus gun os the recognised point of departure, France has acquired the right and undertaken the duty of bearing ber proper sinare, as an important European Power in all such future consultations. The ratificalions of the convention, it said, will be exchanged as soon as they can be receired from the respective courts
this city on the evening of the 6 ch in riots took place in change of Prefects, which were agan renewed on the fol lowing evening. The presence of - large militury frece,
however, hid prevented any serious results. On the 8 th, there \(\mathrm{w}_{1}\) s still some rioting : but on the 9 th, order wa again conpp.etely restured. and the operation of the assess ment of house property, suspended by the former Prefect, was resumed and proceeded without opposition. Nolves were lost, but ten of the rioters were wououed oy
charges of the military, and about sixty arrests had taken place. Subsequent accounts inform us that ne \(x\) disorders had broken out on the 12 i in inst. A disturbance, got up by the secret societies, twok place in the evening of that day when the rioters attacked the post of the prefecture but were repulsed. All the towns of the departmen appear to share in the discontent of Toulouse, and it hostility to the Prefect, who, it is stated, has behave very cavalierly to the Municipal Council.
The Butyel for 1842. - The law of the budget of 1812 has been ufficially published, in which the expenditure fixed at \(1,276338,076\) francs, and the receipts are valued at \(1,160,683,143\) francs. Another las is also officially promulgated, appropriating seventy-five millions to the be taken of extracratnary works in 1812, which millions of francs. The question respecting this loan, it is stated, was to be decided in the Cabinet Council on Monday, and will be announced for the middle of September. Some of the journals state that the Finance Minister has applied to the Receiver-General of Departments, to take a large portion of his loan, M. Ruthachid proving reluctant; bu that the Receiver-General had not acceded to the demand
The Fleet.-Accounts from Toulon state, that it was rumoured there that the division under Capt. Leray would soon sail for the Levant, instead of that under Ad miral Lasusse, which would merely put to sea for evolu tions. The division under A.dio toulon. Subsequea intelligence informs us, that this disision had arrived and anchored on the 12 th , off the island of Hyères.

Earthquakes in France.-Three shocks of an earthquake were experienced in Paris on the night of Sunday, or rather Yonday moraing, the Sth inst. The storm of
thunder and lightning, and of wind, by which they were thunder and lightning, and of wind, by which they were preceded, is represented as having been awfut; or its vici-
injury, however, was sustained in the capital injury, however, was sustained ia the capitareived with nity. The same shocks, it seems, were percei, Burges, Pontlevor, Sancerre, Tours, and the surrounding disitiets, he shocks were felt with much force, just at the same time as in Paris, and again, in some lucalities, at a little bisited aur. The same storm the country. A rumbling noise is said to have been heard in most spots, attending the oscillations of the ground. At Orleans, on the same vening, about eight o'clock, a violent whind stormy until miduight, when the horizon began to clear up, with occasional lightning. At this time there was nor he shgning, wind. At a quarter before one, on the inhabitants from their sleep, and occasioned great alarm. They succeeded ach other at intervals of from thity to thid \(h\) ect of The first, which was the most violent, had the effect of a violent motion from east to west; the two others from north to south. 1 The third, in particular, lasteir beds. placed in the direction of east to west. felt them move five or six times. Thuse, on the contrary, whose beds were placed in the direction north to south, Whis last heads that a moise like that a heavily-laden carriage passige over pavement a diopare. at short tume afterpassing over pavement at a disiance. Allow by torrents of
wards a violent wind rose, and was follow wain. At three in the morning the storm was over, but another shork of earthquake was experienced. Towlent. In the direction of north to south, but are Orlems. The shocks were telt in all the communes near (hal artibut, with the exception of the derangenent of sme eridence cles of tarmenre and same signt crackins, no eride that remained of them. It is stated as a remarkate foen, all the insane patients of the asylum at Orieans pan. the night in a state of extreme agitation and irritation.

The Fortifications. - It is stated that the quarnies and exeavations found under the site of the detachard ade by Ivir. many of which are believed to have been mude the Rumians, audgo as far as the Seine, are so constuers abre, that the consractor for the works of that fort exice the it will require two millions of irancs, in adde construcfour already allotted, for making the requiste coe recent tions under ground, to support the walls.
rains are said to have caused extensive sliph of earth in
many portions of the fosses, particularly at the Pont de
Fandres The Wur in Af, ica.- Corernment has reecived the
foliov iny seiegraphic despatch from Mostaganem:-"The following teiegraphne despatch from Mostaganem:-"The division of the aimy of Oran, which left Mustaganem for
Mascara en the \(\bar{i}\) ith of June, returnell to the furmer place
 not exceed 400. The division did not got go saida, bedestroyed. It mas judged more usefiul to pursue the great tribe of fie Hachem, trom whom Abdel K der takes his nerer experienced the efficets of war, and bad been the most ardient to l, reak throush the peace. Pursued for several days, ithrem iself into the tiers of the desert, its horsuien. to the numbler of about \(3,0 n 0\), having tried
to cover its retreat, experienced some losses. The army thener iterted teat, experienced some losvests in the plain of Eghrers, in order to supply Maseara with grann and straw. At the same time. "torks for the establishment of Mascara were nut in a short time it was expected that there would be mills enongh to nake fluur for a division of 8,000 men. Affairs were going on well; but there has been no submission of any tribes. The division set off again on the ect harvests for fifteen days, wih which to supply that place.
Spaln.-The discussion on the Guardianship Question proceeded in the Semate on the 2nd inst., without any remarkable iucident. In reply to a question put to Dinisters, as to what were the real sentiments of Queen that he could pusitively declare that no communication of any kind, relative to the gaardianship, had passed between the Government and Maria Christina de Bourbon. If the
House desired that the Government should frankly express its opinion, he would say that Maria Christina had no intention of returning to Spain, for, if such were nut the case, she rould have mide it known through another channel; alludıng, it was supposed, to her correspondence
with the Recrent. The debate on this question was tinally with the Regent. The debate on this question was tinally
brought to a close at a late hour on the 3 rd inst. The as sembly held two meetings on that day for the purpose of settling it without beng obliged to adjourn to another day. The general discussion having been concluded, at four o'clock the house dectuled by a large majority, that it would ayain meet at mne in the erening, when the dehate was re-oprened on the articles. A mution to the effect, the Assemisly. 'I he first article then came under consideration, when it was proposed that, previons to declaring
the guardianship) vaent, Guvernment should be invited to address a message to the Queen's mother, in order to ascertain whether it was her incention or not to return into Spain. The proposition, however, meeting with no support, was withdrawn. Anuther proposition was then
read, to the following effect :- that it rould be necessary to decule first whether the guardianship, hitherto held by the Qneen-Muther, be vacant or not, in order that the legislative borlies may be convoked to proceed jointly with
the election of a Giuardan. The committee having approved the amendment, after some discussion, it was put to the rote, and carried by forty-seven against twentythree. The guardianship was accordingly declared vacant. The second article was then adopted without any opposioa the IOth, when M. Arguelies was elected guarihan by 180 potes. The discussion of the budget commenc \(d\) il the Clamber of Deputies on the 3rdinst. A mution of Me Mendizabal, having for its object to grant the supplies posed by M. Olozaga, and rejected by the House. The expected that Husitry expected that the Muistry would be agaiu defeated. In of the Interior, to antorn the house if there was any truth in the report, that an attack was contemplated ayainst the offices of several Opposition journals, whose editors
were to be murdered. The muister, in reply, declared the rumour to be a mere invention, discredited by the very persons who wrute and published it. He then proceeded against the charge of harbouring murderous designs, and protested tharge filst he and they continued in ofice, law. one forreited his existence, it would be in sirtue of the were rejected by the Deputies on the ancial commonsion of eighty-seven againat fity-tive. Besides other conaderment from ris, the asisority proposed to prevent Guvernrevenue. The propusuls of the majority of the commisthe folloring day We have since received Mad journals of a later date, from which we learn that the Clamber of Depuaties resumed on tiee ith the discuission of the budget, anu roted the \(2,000,060\) reals, c. astituting 13. The allonance demantieu for Queen Christua, in consequence of hir marriage sethement, was aiso granted. In the course of the sithuy, wat of the Depurtes asked it sion of the cibll wan sehelid II. by the uorthern Powers? M. Gunzales rephed, that the Government had opened a nesutiaion Foreign Affid. The supplies of the Departwents of further discussion. On the jth inst, the Minister of Finance sent off 10,0006 , to this country; as part payment
of the overdue instalment of 50,0006 . for the British
Legion. Some riotings, but of no importance, had taken pace at Carthagena. The Captain-General of the Basque
prosinces had. in complauce nith orders frum the Ninion ter of War, organised fiying columns for the purpose of repressing highway rubberries and smuggline.
canons of the cathedral of Saragossa were stll centined i heen citadel of Alsafara. with the Propaganda. Batonne papers of the ith state that the Freneas authorites were removing fiom the fooncountry. Independently of sereral Carlists, civil, milaary. ard ecelesiastical, ordered into the interio: of France, i.e Pope's Vice-Nuncio, expelled from Spain, had also been ordered to leave Bayonne for the interior. On the
23 rd ult., a fire bruhe out in the town of Fuentes, in An dalusia, which, in less than four huurs, destroyed 110 houses. Private letcers from Madrid state, that a serere hurricane, which oceasioned much devantation, was expe-
rienced in the district of Nasalcarnern, the day befure the rienced in the district of Nasalcarneru, \(t\)
stock oi an easthume was telt m Piris.
Poritgal. - Few matters of poltucal importance have occurred since the receipt of onr last intelligence. In the interest, offer little worthy of having been of local question of finance had not yet come on. The repurt of nister, lave betn submitted by the Chamber of Deputies a spectal committee, which now consyst of tinteen Duke of Palmella, it appears, still persists in his plan of apitalisation, which the gorernment equally persint repudiating. It was expected that among other aiditional
duties, an increase equal to from 12 to 18 per cent. ad duties, an increase equal to from 12 to 18 per ceut. ad calorem would be put upon the finar kinds of woollen
goods. The increase of revenue, if all the new taxes proposed are carried into effect, is computed at lhwo contos The Portuguese ministers had, it was believed, given explanations deenued very satisfactory by Lord Howard de Walden respecting the claims of the foreign boxihndiders, on which head it was understood that his lordship had laws for regulating the forces or land imposts, and for making a provision for the clergy in lieu of tithes, were before the Chamber of Deputies. The forces, as well as the tithes, were abolished by Don Pedro, and much injustice has resulted from the private rights of property author of the abolition. At the same time it appears to be a matter of great difficulty to deal with at present The senate had passed the bill of ways and means asked for by the government, empowering it to collect and raise
muney on the revenue till Octuber next. ()ticiat in ormoney on the revenue till Octuber next. Official ir. or-
mation had been received of the result of the inquiries mation had been received of the result of the inquiries
made by the Portuguese ships de-ppatched, as we nutice in a former Number, to look after the President steamer
Their search appears to have been fruitless, and no furTheir search appears to have been iruitess, and no fur-
ther hopes appzar to be left in that quarter. A Duteh squadron, cunsisting of two frigates, two corvettes, and a steam-ship, haring on buard Prince Henry of Holland had appeared off the bar on its way to Batasia.-A vessel
arrived at Lisbon from St. Michatl's had broughit intelarrived at Lisbon from St. Michael's bad brouglit intel of Terceira, by a series of earthquakes; which continued, with intervals, for several days, having commenced oa the 12 th ult., aud lasted till the \(2 t\) th. C"pwards of 500 houses and habitations had been shaken down ; fortunately, however, from the warning which preceded the catastrophe, the inhabitants, without exception, were en neighbouring city of Angra. A subscription, by the ex ample of the corporation of the capital, was raisiog for their immediate relief. A corvette was to leave St. Mi chael's un the 20 th ult., with the suma of \(1,840 l\). sterling loading with maize, to proceed thither for the same charitable purpose.
Germany.-The little news received this week from Germany is destitute of interest. The Minister of the Interior and of Police has forwarded the reply of the King of Prussia to the justificatory address of the curpora gistr to their legal right of petition, in reference to their address to the Provinetal Diet, as this right has not been called in question; that the kiug \(\pm\) right is, bowever, equally indispatable to express tuwards his subjects his approbation or thus constitutionally preferred: that his majesty, however, was fully abie to distinguish between the loyal and levoted sentiments of the inlabitants of Breslau, whicen are well hnown to hinn, and the error of the heacis of the magistracy, should, coatrary to his majesty's intention, have gained a publicity which was paintul to the tuwn ai large.-A serious accident is said to have happened to the
bro iner of the king. the Prince of Prussid, \(\pi\) no is on a visit wicin bis sister at Scin werin. Standing in a summerbuuse, he was struck on the shoulder by a aindur. Wi.twh a gust of wind elused suddenly, and was so severely burt chat bicedng was twice resurted tu, whidh, however, dia ion of the Liogiven of Prussia, at the end of is to. Wds 14.907.091. It he ent of 183 , it was. It, (198, 125 ; the hist. stateshe Prussian S.lesia, in consequence of the Guvernment harng made use of the Freemasons' lodges to repress the
sequence of a speech made by the Counsellor Wendt whose sons are public functiondries, sixty muembers have retired.-Accounts from Viensa of the 4 th inst. state that the definitive ratificiation of the nea loan had taken place. Without comamion to ber delivered to the cuntractors, but

The Consul of France had Pacha should abstaiu from such excesses on their prisoner and Tahir Pacha, it is said, promised the Consul to give
Egypt.-Accounts from Alezandria state that the last Grman, addressed to Mehernet Ali, was accompanied by a confidential letter announcing that the execution of th conditions imposed on him would depend apon ulterior
circumstances. The Porte, moreover, it is said, has declared to Mehemet Ali that in future all differences which may arise between him and the Sultan must be submitte directly to the Divan, in order not to initiate the European of the Empire. In the mean time, the Pacha is continuing the fortifications and preparations for the defence of Alex andria.-Subsequent accounts from Alexandria dated the 9th inst. inform us that Saib Mahib Effendi was to return in a few days on board the N ile steamer to Constantinople, and to take five millions of piastres as second part of the tribute. It is affirmed that the Pacha has offered an annual tribute of two millions of dollars if be is left at liberty with respect to his internal administration, otherwise he will pay only one million. On the 7th inst. about 400 Egyptians returned to Constantinople, who either deserted or were taken prisoners in Syria. They were immediately dismissed, and though the Sultan's order was that they should return to their homes, it is thought that thev will sooner or later be incorporated in the army
United States.-By the packet-ships Englund and Garrick, arrived at Liverpool on Monday, we received not iork papers to the 26 th uit. Their contents are before the House of Representatires on the 24th uit., on a resolution offered by Mr. Floyd, which was to the following effect:-That the President of the United States be requested to inform this house, whether any officer of the army of the United States has, since the 4th of March last, been directed to visit the state of New Yosk for any pur ander M \({ }^{4}\) Leod ; and if so, to communicate to this house ander M Leod; and if so, te communicate to this house copies of the inetructionsto, and reportof, such officer. Mir. the proceeding against Mr. M'Leod had gone forwarc said it was the general impression that a high military to interfere in the trial. The belief had caused much excitement and indignation, which could, however, be removed by a denial of the act. The moving of the resolution led to a debate of some length on the case of Mr. M.Leod and the conduct of the Federal Government in reference to it. The house adjourned before the debate was concluded. Congress was chiefly engaged in considering the financial plans which had been brought before them, but nothing bad been decided as to the 'fiscal azent.' It was generally believed that the Sub-treasury Bill would be requaled, and a National Bank established. -By the subsequent arrival of the steam-ship Columbin, at Liverpool, on Wedne-day, we have intelligence from Few York to the lst inst. The bill for incorporating a Senate with all the strength which the government part conid muster. It had been met by strong opposition, which was principally grounded on the haste with which a matter of such importance had been urged upon the attention of the Legislature. The motion for the third reading was met by a resolution for an adjournment which, notwithstanding the strenuous opposition of Mr . Clay and the supporters of the bill, was carried. On the following day the debate on the bill was furthar postponed but the house undertook several verbal alterations, and there was no doubt it would be carried. I bill had been brought forward by Mr. Fillmoore from the committee of ways and means for authorising a loan of 12 millions of
dollars. It was read twice, and referred to the conmmittee f the whole house on the state of the Enion. The debate on Mr. Floyd's resolution respecting the affair of Mr. M•Leod was not concluded when the packed sailed.
Casida. We have received Canada Journals to the
ath uit. Ther contain the proceedings in the new Parbeen particularly excting. A member had moved an amendment, to the effect that the Act of Reunion wa not, in some of its details, acceptable to stabjects of Freait origin. Up)n this amendment, which, as currd. The motion was rejected by a large majority. The addess reporred wai, as usual, the mere ecino of the speech, aut one of the memhers had moved another, con-
taining a sort of protest ayainst the act of union, as embodying grievances to Lower Canada, and coataining ieatures inconsistent with justice and the common rights British subjects. It was under discussion when the ascounth came away.

\section*{Approaching Royal Iisits.-It is stated by a Ministe.} rial paper that her Majesty is about to pay a series of visits to several nuble families whose residences are within week, her Majesty with H.R.H. Prince Albert, will ho nour the Earl and Countess Cowper with their compan at Pansanger. It is further added, that the Queen ba at Pansanger. It is further ayded, from the Dueen ha Duchess of Bedford to pass a few days at W cburn Abber where, it is said, preparations have already commenced to their reception. It is also stated that the Marquis an Marchioness of Westminster will afterwards be honoured
by the presence of her Majesty and his Royal Highess at Moor Park. The entertainments on these occasions, it said, will be of a private description, in consequence of
the Court being in mourning for the Queen the Court being in mourning for the Queen of Hanover.
Removal of a Middlesex. Magistrate. -In our last Nam. ber we gave a report of the proceedings at a meeting of
Middlesex Magistrates, in consequence of the remoral of Mr. Moreton Dyer from the Cummision of the Peace gether with the principal portion of the published eri gether with the principal portion of ror published exiMr. Dyer has since considered it necessary to publish bil own statement of the case, together with a letter of exple nation forwarded by him to the Marquis of Normanbr. I this leter Mrer admits that he had entertained the idea of effecting the liberation of Mr. Medhurst, and had several conversations with him on the sulyet, but say that he only did so from a feeling of sympathy for his position. Mr. Dyer states that the prisoner had earnest requested him to take some steps to effect this object, a the same time expressing, in sery strong ternis, his grief and wretchedness at his continued imprisonneat, as well as his conviction that its prolongation would affect his feeling put an existence. He adus, the feeling desiruus to procure, if possible, a remission of his sentence, he happose that NIr. Medhurst, by offering a large sum of money to a national charity, might lessen the ad verse feeling of the public towards bim - that it might be deemed a propitiation in his tavour, as well as a circum stance calculated to induce an extension of mercy towar him, if such an ofrering were spontaneously made by the prisoner and his family; and that he had, consequenty, a subsequent interview, detailed to Mr. Medhurst the pla concludes by saying that he is now folly sensible of the error into which he had been led, and he sincerely deplores that even a feeling of commiseration should have induced him to interfere with respect to the punishment of the prisoner. At the game time he declares that be never did o from any interested motives, or from the hope or expeclightest profit, benefit, or advantage from such interfe rece. He also adds, that neither the name of the Marar Normanby, nor any other person, was over ise referred to by him as a means by which the desired erd was hoped to be obtained, beyond the fact of lis peution or a prisoner's pardon could be addressed.-In connexion with this subject it is stated, that an application nas been made to the Secretary of State for the immeutiate release of Mr. Medhurst from prison, in conseçuence of serious thess under which he is at present suffering. It selin is for some time past a great change has brough anxiety his health, which has been mo the himself and Mr. Dyer. The symptoms of his disease, it is added, became so alarming that a pliysicion was called in, and, after a consultation, it was pronounced that his death would certainly be hastened were he to be bopt in prison much longer. A certificate to that efect wis massequently prepared, and communioaked to the visisig suject gistrates of the prison, who held a meeting on the subjen n Tuesday, when it was resolved that state, stating the whule of the circumstances connected with Mr. Medhursis case, together with the medical certificate. It is thought that the result will be an order for the prisoner's release. Mortality in the Metropolis.-It appears from the tabic deatho taly of the metropolis that the total number 3, deaths registered in the week ending Saturdar, Ju ver1841, was-males, 383 ; females, 308 ; the weeks 451 Flouting Pier ut Blackfriurs Brdge.- () Tu Tuesday a gentleman attended at Guidball to complain of the danger-ou- accommodation afforded to passengers inuing to the the steam-boats at Blackfriars-bridge. He referredto the Hloating pier, where, as we noticed in our lapding from fime. a yous. whe puty stall that havin g reacled hall by ralsay on sundor aternoon, he got on board one of the steamers, and desired to be landed at Blacheriars bridge. Wian he stepped on tie pier, it immediately turned over, and preeipitated him to the it was duffeuls to
river. Fortunately he could swim; but do so, as there was a considerable draught from the motion of the vessel. If a lady had met with the stme accident, she would probably have been drowned; and he therefiur considered it his daty to make a public complaint of then
dangetoustate of that pief. Sir P. Laurie, the magitnty
in attendance, thanked him for taking the trouble, and said that the conservancy jury had viewed it a few days since, and were about to present it as a nuisance. The City Soli citor would

Sl. Saviour's Church.-In our last Number we alluded to the allejed dangerous state of the tower of this church measures as might be necessary to ascertain its stability It appears that the proceedings were looked forward to with an unusual degree of interest, not merely by the inhave gone so far as to state, that if the bells were again eight the charch, which is stated to be one of the few specimens of English architecture of the twelfth and thirteenth centuries now remaiuing entire in the metropolis.
It was stated at the meeting, that in order to ascertain the soldity of the tower, the architect had applied to the bellwarden to have the bells rung, for the purpose of enabling him to form a complete sarvey as to the strength and durability of the tower. The latter was, however, out of bell-warden as to his issuing such an order, it was thought that an order of vestry should be made for the ringing of the bells, thus removing all responsibility from the warden, who, perhaps, from the rumours in circulation, would not like to give such an order, although the architect enstability of the tower. It was stated on bethalf of the architect, that the only way to ascertain whether the tower is perlectly safe or not, is to have the bells rung, and while that is being done, he might watch the effect produced by
minutely examining the whole of the buttresses connected with the tower. It also appeared that the warden of the account, in his statement respecting the crack's which bad shown themselves ou each side of the altar of the new whitewash, or whether they were they were only in the It was consequently moved, that the bell-warden do ive the necessary orders to have the bells rang. After some discussion, this motion was rejected ; and it was finally resolved that the bell-warden be requested to allow the bells to be rung in accordance to the wish of the architect, and that the architect, after the examination of the tower, report therenn to the vestry. In accordance with minate examination was made by the architect ; and after four hours' heavy ringing, not the slightest expansion in have been in the stones for centuries, and it iscons that they inferred that the alarm for the safety of the tower was unfounded.
Importation of Cattle and Meat from Scolland.into the port of Lovdon is increasing; during the past
week no fewer than 400 bullocks, \(10 \cdot 10\) sheep, and 3.0 pigs, having been landed at the wharfs in the neighbourness, and Berwick, exclusive of about 100 tons of dead meat. A steam-ship arrived at Wapping on Tuesday, is stated, that after paying the expenses of embarking and Scottish graziers obtain a larger profit than they conld realise by a sale in Scotland without any of these expenses.
Wood Pavement. - The introduction of wood-pavements appears likely to become very general in the metropolis; pated in this nay, or in progress of being so. It appears that the small portion laid down in front of Whitehall, which was been tried more than two years, has succeeded of it was raised, to make an alteration in the gas-pipes,
when the bed of concrete on which the wood rests, and the pins, which unite the blocks, were found as entire as When first laid down; the abrasure which has taken place on the wood for the two years not having exceeded the that portion of the thoroughfare which is within the parish of St. Andrew's, is also paving with this material.
Harror School. - The last of the annual commemorations at this school, which has just taken place, was attended by a numerous company, and the recitations were unusually interesting. Among the visitors were Sir R. Bristol, Mr. Wordsworth the poet, and many other distinguished individuals. Mr. F. Peel's Latin essay gained the prize-medal presented annualy by sir \(R\)
Peel to the school. Mr. H. M. Wilkins's Greek Iambics, from Shakspeare, and his Greek prose for the Hope prize, a translation from Lord Bacon's ." Advancement of Learning," received 'great commendation; Mr. Ripley's recitation of the Ibam forte ria sacrâ of Horace was much applauded; and all the recitations were given with good
taste and iutelligence. At the collation which followed, taste and intelligence. At the collation which followed,
Sir R. Peel, on his health being drunk, expressed with much feeling his gratification at the distinction his son had acquired, not for ability only, but for good conduet. The proposal of Mr. Wordsworth's health, introdured in apptause. Tne venerable poet brietly achnowledged the compliment, atid tas heartily cheered.
The Fury Surveying Fessel. - The subscription for the reliet of the wisuoss, orphans, de., of the warrant and
petty officers, seanven, and marnes. who perished in Vessel bas been closed, and the proceeds, amonating to 2,2626.12s. 4d., appopriated tor the benerit of the parhave been placed io various savipga-banks, undes proper
trustees, for weekly payment to certain of the widows, and a payment of a sum to each of their children generaily, at \(450 \% .4 \mathrm{~s}\). I] d. were paid to several of the most necessitous throughout the winter in weekly payments. About \(50 i\). has been set apart as a reserve fund, and about an equal sum was expended in advertisements, circularg, \&cc., with committee were 63, viz.-widows, 15 ; sons, 16 ; daughcommittee were 6 ?, viz.-widows, 15 ; sons, 16
ters, 19 ; mothers, 7 ; fathers, 1 ; and sisters, 4 .
Improvements at Knightsbridge.-It is stated that the new entrance into Hyde Park will be where the Bull pub-lic-house now stands. This new entrance is to be called Albert's Gate. The houses on the side of the Park lead-
ing to Hyde Park-corner are to be taken down, the Dean and Chapter having agreed to sell them to Government for completing these improvements. It is also said that the Marquis of Abercorn intends to build a mansion on the site of the Cannen Brewery

Thunder Storm.-On Thursday the metropolis and neighbourhood for miles round was risited by a severe parts by heavy falls of rain and hait. The morning had been, from an early hour, remarkably fine, but about ten though the lower current of wind was from the north, and soon after eleven the sky became raite overcast, and the storm burst forth. Over Kingston, Richmond, and the adjacent parts, it appears to have been particularly seve the hailstones being of great size, some exceeding that a large gooseberry, and the lightning was exceedingly
vivid. At East Sheen, the gardener of Dr. Byng was struck by the lightning, depriving him of his sight; and though it is hoped bis sight may be restored, he still remains very ill from the shock. The storm lasted about an hour, but during the afternoon thunder was heard at intervals, and returned, but with diminished violence, the heavy rain continuing till a late hour
The Ship" Trafalyar
tlemen of experience have been sent dod theral gen the Admiralty to inspect and report upon the state of this fine Ship, at Sheerness, who have reported that she is decidedly the most perfect of her class in her Majesty's serequalled. Fromber fally equipped for sea she will not be three-quarters of an inch when launched, which is said to be a very rare occurrence for so large a slip. When the Nelson, a vessel of similar tonnage, was la unched in 1814 at Woolwich, she strained to the extert of 8 inches 6 -8ths -her draught of water being 14 ft .11 in . forward, and aft \(18 \mathrm{ft} .5 \mathrm{in}\). The

Accidents.-On Tuesday evening a fatal accident oc four years of age lost her life, and three other person were seriously injured. It appears that whilst a person, named Atclieler, and lis wite were proceeding in a chaise along St. George's Rood, the horse took fright, and became unmanayeable; when, attemptiog to cross the road
the step of the chaise caught her clothes and dragred the upwards of 100 yards: on being picked up she was found to be quite dead. The horse continued his course, and soon afterwards knocked down another child, who sustained a concussion of the brain, besides other injuries. On arriving at the Elephant and Castle, the animal dashed pieces, and Vr and Mrs by which it was shattered proad with grear violence. Mreler were thronion jured, but the ladylyce. Mro Atce wrises. The hors jured, but he lady escaped will a fen bes. The hors Was ultimately stopped by a policeman, without doing farther damage.-Mr. Bailey, the Astronomer and Secretary to the Royal Societr, who met with a serious accident a short time since by being knocked down by a horse in the time, was removed from the Charing Cross Hospital to hi own house in a sedan on Sunday, that being, it seems, the earliest time his medical attendants would consent to his being moved. It is stated, howerer, that he is in such a to und reduced state as to render it dangerous for him tions, or at excitement of seeing cen his bealutely ne cessary.-On Tuesday afternoon, while a number of con victs were employed in excavating the ground in the Royal Arsenal, Woolwich, betwixt the boring and carriag departments, for the purpose of affordiny room to la in connexion with the boring machines, the sand-bank gave way after the convicts had attarned. Prosiderable ance ras rendered, and four of them were released aitout being materially hurt, the other was also soon taken out, but life was extruct. The others being only partially covered, were but slightly injured. To prevent any chance of futur accideuts, a number of sappers have been employed to shore up the baaks while the digging is proveeding.
Maxwell Baker-street, Portriver. was sittiog in a public-house in and found him in company with several male and female avquantances. She instantly quitted tate house without speakiag a word, but returaing sherty atterwards, went up co ther husband, and struck hrm a nolent biow on the discosered that she iaad sta bued hum aith a knife, which was completely batsed in his side up to the handle. The weapon was iramediatiy extracted by one ut his conspa His wife was apprehended, and has since been examined before a magistrate, when evidence to the above effect was
given, and a medical certificate, which stated, that though in a very dangerous condition, there was some hope of Maxwell's recovery. The prisuner, who declined saring anyching, and was remanded for further exammation, appears to have been influenced by feelings of jeatousy and
. \({ }^{2}\) aserious fire broke out in the workshop of Mr. Knott, builder, High-street, Dep ford. it first commenced in a shop at the rear of Mr. Knott's policeman, who happened to be passing to the house. A policeman, who happened to be passing at the time, en-
tered the house, and, at much risk to inimself, succeeded in rescuing Mr. Knott, who was contined to his bed from illness. The fire did considerable damage, destruying no less than four houses.

\section*{Zrobimcial Nefus.}

Manchester.-A melancioly accident has occurred in this town, by which four lives were lost and a great many others placed in imminent peril, The catastrophe was
caused by the falling of a large mill, in Bradford-road, belonging to extensive cotton spinners and manufacturers The mill, it appears, is a very large one, seven stories high, and that part of it which has fallen was built on the fire-proof principle, with cast-iron beams extending from one side wall to the other. and arched with brick. The made of iron, mpsed or fire-tiles, and the roof was also In April, the proprietors commenced making an extensive addition, in length, to the fire-proof wing, which was not yes completed On the morning of the accident, a noise reelers, on the third story of the ness wing, when an alarm was'at once given, and all of them, thirty-six in number hurried to the entrance of the oid mill. which they had scarcely reached when the whole of the building in which they had been at work fell in with a loud crash. At thi time, a number of labourers were emplored on the build ing, four of whom were buried in the ruins Two of them were on the top of the mill, and findiag the roof giving way under them, they jumped on the parapet, with a yiew and they were precipitated to the bottom and baried amongst the ruins. The two others were inside the building and shared the sanie fate. A tradesman, who was at the time in the fourth floor, standing over the arch, feit the floor giving way under in..., and had a very aarrow the the new building was thirty feet in width inside extendel an the hoors were arched on cast-iron beams, iron pillar only in the centre of each beam. The four men killed by the accident as little delay as possible, but were all dead except one, who died in the conrse of an hour. An inquest has been heid on the bodies, at which several witnesses were ex amined; but it was eventually postponed, in order that some experienced sur

An altercation, it appears, took place between the people
and the military, when the chief-constable received a blow from a stone on ti.e furehead, which knocked him of his horse; and a trooper was at the same time discounted \(\mathrm{by}_{\mathrm{y}}\) the mob. The officer in command then gave orders to
the soldiers to load, and the police fired, when four men were shot, and the mob dispersed. Vone of the men were killed on the spot, but sereral were severely wounded The chief-constable is stated to be in great danger. Dur-
ing another affray a gentleman named \(O^{\prime}\) 'Brien received ing another affray a gentleman named \(O\) Brien received
such severe injury from a blow of a stone on the liead, that his hife was considered. for some time, to be in danger. The carriages of several gentlemen were broken, and in
the conflict one of the mob was stabbed in the chest.the contlict one of the mob was stabbed in the chest.-
On Tuesday a man named Scully was shot dead by the police at Bansha. The police. it appears, were escorting the Conservative voters, and when within three miles of
Tipperary the mob pelted them with stones, and the police fired. Three persons were wounded, but not mor tally. There was a rencontre also at New Birmingham, near Killenaule, where three of the country people were shot dead, and several others wounded.
great excitement, in consequence of the scene of very greate is represented as haring appeared like Belfast-a own besieged, being crowded with artillery, cavalry, in fantry, and police, to keep down any attempt at rioting on the part of the mobs, which had congregated from the neighbouring country to no less a number, it is stated, than
150,000 . Notwithstanding, bowever, the formidable display of military force, some serious rioting took place. Several persons were wounded, and a brickbat was hurled at an officer of the loth Hussars, who cut his assailant to
the ground -On Monday morning, information was sent the ground -On Monday morning, information was sent
to the resident magistrate, to the effect that much danger was anticipated from the arrival of a mob from Kilkenny, Instructions were accordingly given to the sheriff, who despatched a troop of the l"th Hussars, and the artillery with cannon. When they had proceeded about half a mile out of the town on the Kilkenny road, they saw a crowd of persons, numbering at least 300 , approach. bave been reason to suppose that the uthers were armed with pistols. The magistrate read the Riot Act, and oriered them to return to Kilkenny. At first they seemed disinclined to obey, but subsequently rerreated, finding
that the military were determined to do their duty. They then crossed a field, thinking to reach the town by another Act was again read, and they finally returaed to Kilkenny Without the occurrence of any serious consequences. this place, on the charge of having been concerned in the murder of Mr. Butler Bryan, an account of which we gave in a previous Number. They were residents here, did not improve their holdings. One of them bas turned approver, and the others, it is thought, will be convicted. It had been supposed that the murderer had conse from Bryan had received were dated from "Cashel," although not bearing the pust-mark of that town.
Edinburgh.-On Tuesdatand.
dents, who had quarrelleciay morning, two medical stuin a field to the south of Grange House, in the nerghbourhood of this city, accompanied by their seconds, to settle being arranged, the parties exchanged shots, the coneequence of which was, that one of them (a young man named Burns) was severely wounded in the left leg. Medressed, and Burns conveyed to his lodging in Drummondstreet. The other party immediately absconded. The seconds, however, have teen apprehended.
Roaxburghshire.-The electious for this county were attended with disturbances that at one time threatened serious consequences. It seems that information having
reached the sheriff that preparations had been made to waylay a party of the Edin police, emplnyed in keeping the peace, he called in a troop of the 4th Royal Irish Dragoous, to escort them out of the town. The police were
conveyed in two omnibuses, escorted by the troups; but were assailed by a volley of large stones, burled against them and the soldiers by the mob. The Riot Act was read by the Lord-lieutenant, who headed the troops in person, and a skirinish took place; but though several persons were wounded, no lives appear to have been lost. the to fish in uy, as Mr. Stirling of that place was on his way the deer pare pond at Drammond Castle, and when within Three of them flew over the park fence; the old one flattered along the ground, and picked up one smaller than ferent rest uer claws. Mr. Stirling put her op three dif The fourth time the old bird dropped certain of the fiect. to the paling, among some ferns, where it could not be found. This is regarded as a curious fact in natural history, as it has been hitherto held that these birds do not
breed in breed in Seotland.
Inverness. - The accounts from this neighbourhood speak favourably of the prospects of sportsmen on hill and reoor. Grouse are stated to be very strong and plentiful, and so rich a promise of game has not been known for many years.

The Nero Jerusalem. - Cnder this title, a correspondent has sent us the following article:-"A new notive power, of the most simple character and easy con-
struction, has been discovered by Captain Giles, of the Jerusalem Coffee-house, late captain of the Mercury. The drawings illustrative of the plan show an action which appears capable of beng maintained in perpetnity as well as with great regularity. It is arplicable to a variety of purposes which require precision of motion and equality of force, whilst its powers may be inereased to a vast sophy has been going the round of the journals; and emanating, as it appears to do, from the same place which without a chimney where suffocation was not objected to, seems to promise that we are on the eve of a scientific millennium, the first indications of which are heat without Instinet of Animals.-One day lately a weasel and windhover were on the look-out for fresh meat for dinner winhover were on the look-out for fresh meat for dinner.
It happened that the weasel caught a mouse when it was traversing the bottom of a hedge; this circumstance did traversing the bottom of a hedge; this circumstance did
not escape the nutice of the bawk, and to all appearance it intended to seize both the weasel and its prey; hut the weasel saw its winged enemy making towards it with all
speed, and bad just time to take shelier under a few rotte eticks, when tee hawk perched upon the branch of a young tree a few feet above it, and there it watched the wease with as great earnestness as ever any grimaikno did a mouse. The person who observed them approached very and the weasel the mouse between its teeth. \(-\boldsymbol{P} . \boldsymbol{M H}\).
Railvays in the United States.-A list of all the railways in operation and in progress in the Enoted States up to the year \(1840, \mathrm{~g}\) ses some interesting results. In the state of New ork there were \(2 i\) raifways, 23 of which
were in operation. The New York and Erie, which is to extend, when completed, 454 miles, was progressing, but no part was opened. It was chartered in 1032, and was 2,7206. The New York and Albany is also among the number not at present in operation. Its length is 1403 miles, and it was chartered in 18:32. Whea completed, its total cost will be 519,2200 ; ; average enst per mile,
\(4,115 \%\). The New York and Haarlem, which is in operation, only extends \(T^{\prime}\) miles, yet in its con:truction it said to have been the most expensive in the Caion. It was chartered in \(1 \times 31\), and opened in 99 . Its total cost was \(240, i+16\); average cost per mile, \(31,802 \%\). In 19 were in operation. The Norwich and Worcester appears to be the chief: it is 59 mile long, and in full operation. It was chartered in 1832 . and opened in 1810. Total cost, \(303,426 \%\); average cost per minle. 5,144 !. In operation. The Jersey there were \(i\) rall xays, and all in with a branch of 31 miles, and employed is locomotires. Total cost, \(5.50,3.5 l\); ; average cost per mile, \(6,039 \%\). In 29 were in operation. The Philadelphia and Reading 103 miles in leprth, She philadelphia and Reading, 102 Philadelphia and Columbia, 82 miles in length and in full operation, appear to be the two chief. The total cost of mile, 9,2606 , sud the total cont of the lutter, 825,0001 ;
average cost per mile, \(10,037 /\). In the state of Delaware the only railway was the Newcastle and Frenchtown, 16 8.2.3.361.; average cost ner mile The total cost of it was Mayland there cost per mile \(5,140 \%\). In the state of operation. The Ealtinnore aud nuin was \(4,3.5\) miles in length, but 3.3 miles yet remained to he opened. It was cost anas eatimated at \(2.685 .255 l\). average cost per total 6,173l. The Eastern Shore Railmas was laid out as 118 maies in length. but was ouly progressing. It would, it was estimated, cost \(311,5^{2}-20\); average cost per mile, 2,640 . In the state of Virginia there were 10 railwars. of which all were in operation, and two only remained to be entirely burg, and Potomac, the largest in the stand. Fredericks-\(-\overline{1} \frac{1}{1}\) miles. Four miles remained to be completed. It was chartered in 1831, and opened in 1835. Itsestimated cost was of North Carolina there were 3 railwas. In the Wilmington and Raleigh was 161 miles in length, and in cull operation. The total cost was estimated at 370,3001 . average cost per mile, \(2,: 000\). In the state of South
Carolina there were two railways, one (the Charleston and Carolina there were two railways, one (the Charleston and
Hamburghlextending 136 miles. It was in full operation. Total cost, 491,0001 .; average cost per mile, 3.633 . In the state of Georgia there were 4 rail rayss, 3 of which were in full operation. In the state of Florida there were 4 railways, of which 3 were in full operation; the works of the one called the Alabama, Florida, and Georgia, which was to extend \(1.56 \frac{1}{2}\) miles, had been suspended. In the state of Alabama there were 7 railways, of which the 170 miles, hut no portion the greatest work; it extended was estimated to cost \(34 n, 0001\).; average per mile, \(2,0100 \%\). In the state of Laxisiana there were 10 rallways, the principal of whet were in operation, but the New Orleans and Nashville was not yet completed. In the state of
Mississippi there were 5 railways; the Mississippi was 140 miles in leng.b. but not yet completed. It was estimated to cost \(700,100 \mathrm{n}\); average per mile, \(5.000 \%\). In the state of Tennesse there were 3; in the state of Kentucky, 2;
in the state of (Ohio. 0 ; and in the state of Indiana, railways; the princ:pal of which were partly opened, and all appeared to have been but recently chartered. In the state of Michigan there were 10 railways; the central, extending 196 miles, the southern, extending 189 miles, and the northern. \(201_{2}\) mules, were three state worhs commenced in 18.37, extending from east to west through the peninsula, and were estiniated to cost 1 upwards of
\(1,332,0000\). Only 38 miles were at present completed Iilinoisy were upar the central line. In the state of works, and meullt, it was estimated, cost \(3.28 .5,0006\). of these the central was the greatest, extending, as it did, 400 miles. Tue general results of this table sbow that that the have been introluced in \(2 f\) states of the Cnion; pleted or in progress, is 179 ; that of the-e conly 16 were undertaken by state (iovernmients, and ti.at the remainder were ubdertaken iy about 100 difierent corporatome, with or without the assistance of the state Governments ; that railways were first chartered in America in 13.0 ; that the
first railway was opened in \(1 ; 27\), and was the ( uincy in Massachusetis only 4 miles in length; that the total length of railways in operation, etther completed or only all the completed, is 3,430 oules. while the total length of Notuce of \(C\) in operation or in progress is 9,378 miles. of sclences in Paris, the first part of a report was read by the Comuittee appointed, not less than ten years ago, obinquire into the nature of gelatine, the bes of substituting it as an alimentary matter in the place of mear. The portion read was chiefly connined to'a review commissiun. It appears that as long ago as \(16=0\), the celebrated French physician, Papin, had occupied himself had experiments from bones, and later, just at tue commencement of the Revolution, several French chemists, and ameng them M. Darcet, continued experimeats of this nature, and mich eathusiasm was excited by the idea that they would lead to a more econoEreal kind of food for the support of the lower classes. mueh solidified zelatine and sareat many false expectations were raised. M. Darcet at that time repurted that gelatine could be obtained from bones in greater quantities quired much seasoninz before it could be trale sufficrentily palatable for culioary purposes. His sun continued the experiments after his death for thrty years, ani arrived four oxen may be made to yield as murh matrim:nt as thive do on the common phin. M. Darcet's rachants for artracting gelatine (cylhaders into which stem. is tursed after they are partially filled with lones' were put up in Tbey still are at work at the Hospital of Si. Louis: but some objections were raised ts the gelatine they produced at the Hospital of La Charitc, and cliershere, as not being autritious; and a metnod was adopted in wheh acids an the nutritiousness of ati-ktine, and tried to feed dogs on it exclusively; but he found that these animals allowed themselves to die of hunger rather than touch it. It hat
also been found in glue manufictories that rats never tonch pure gelatine, and doge fed on bread sotked is gelating become greatly redued, but that three or four
spoonfuls of soup made from meat, given daily, proves enough to recover them. This was the state of the question ren years ago, when the cornmission was appointed; at the Collegede France with gelatine extracted by stemm on dogs. The further reading of the report containiog on dogs. The further reading of the report containing fature meeting.

\section*{A SELECT LIST OF PLANTS}

\section*{HUGH LOW AND CO., UPPER CLAPTON, LONDON.}

It is nevertheless possible to maintain a garden in a state of the greatest beauty from the first visit of spring to the last fading ray of autumn sunshine, by the simple practice of growing annuals and other plants of a similar nature in pots. And for this purpose, an ample variety may be had for \(3 d\). a seedpaper, without having recourse to any means more costly. Not that the common method of growing plants in pots will answer this end ; on the contrary, managed as they usually are, annuals in pots are the most miserable objects in a garden. for the pots become so dry, from the continual evaporation of water through their porous sides, that the plants are literally starved. The method to pursue in preparing pots for receiving annuals is this:-in the first place lay a crock over the hole in the bottom of the pot, then fill the pot to about one-third or one-half of its depth with wet moss pressed very close, and over that put rich light soil, in which the annual seeds are to be sown, or young plants are to be pricked out. The filled with water in wet weather. The moss absorbs the water freely and parts with it slowly; at the same time it forms a mass of moist materials in which the roots of a plant will freely spread. By these simple
means the annuals are completely guarded from all the means the annuals are completely guarded from all the evils of dryness, and they grow with the same health, though not to the same size, perhaps, as if planted out in the open border. Such pots can be distributed over the garden wherever a vacancy occurs, and will decorate the borders beneath trees and bushes, where no such plants will grow in the open ground itself. Their sides are rapidly covered with their own lower branches, or may be concealed by the foliage of each other; as soon as one is shabby, it is removed, and succeeded by another in full beauty; and by a little management, chiefly consisting in repeated sowings at short intervals, no interruption to the succession of flowers need be experienced. Another advantage of this plan consists in the facility with which the arrangement of colours and grouping of individuals can be effected and varied. Bulbs may be treated in the same manner, and then will never be destroyed by the careless spade of the garden-labourer. The only point to observe is, that each pot should be at least six inches in diameter, and should rarely contain more than a single plant, unless in the case of species of very small size naturally, or of bulbous plants.
By this means, a few hundred pots to begin with, and a few shillings' worth of seeds each year, will keen every little court round London in the state of a rich bouquet for at least nine months in the year.
This is no iden scheme, but a mere statement of the practice observed in one of the prettiest and bestlsept of little gardens near town; and we recommend our readers to follow it in carnest, without delay Many annuals will still flower if sown now, and others will prepare themselves for the first crop of flowers nezt spring.
ON THE PRODUCTION, DISTRIBUTION, AND PRESERVATION OF HEAT, WITH REFERENCE PARTICULARLY TO THE IMITATION If has been supposed that the allusion in one of these papers to the comparative prevalence of pulmonary disease that close stoves were in the latter country generally used for the purpuse of warming. This was not the case. I was aware that in most parts of France the wood fires are made under very open chimneys. On the frontiers of extensively employed, whle the French mode of cookery subjects their kitchens to sometbing much more resembling stove-heat than the English. But putting these considerations aside, remerabering ouly that many parts of Frazce have a climate which, in reference to disorders of the luggs, might be called sanatory, it is somewhat remarkable, if true, that the aggregate quantity of such disorders should be greater relatively to the entire population Well-anthentica and particularly from Russia, would be very valuable. In quoted, it is of M. Von Wrangel's expedition, before quoted, it is stated that some persons found exposure to heat of stove-marmed dwellings. It is reasonable, indeed, that any mode of warming which acts principally upon the nir anust be prejudicial to the lungs of those who on quitting their houses breathe a naturally cold atmosphere. I
have little doubt that part of the difficulty experienced in preserving exotic animals has resulted from exposing them to artificially-warmed air, and that the list of consumptive monkeys would be reduced by giving them, under proper ment of an atmosphere more nearly resembling the cool breezes which play amoang the bryinches of their native The following invocat
ervedly popular poet of America, the country in which atmospheric philosophy appears to have been most sucinflicted on the denizens of the forem by peming themg in air-heated chambers

It is a sultry day; the sun has dronk
The dew that lay npon the morning gra
The dew that lay apon the maorning grass;

There is no rustling in the lofty elm
That canopies my dwelling, and its shade
Scarce cools me. The plants around Scarce cools me. The plants around
Feel the top- poent fervnirs: the tall maize
Rolis up it- ionig kreen leaves; the clover drocps
 Languidly in the shade, where the thick turf, Yet virgin from the kisses of the sun,
Retains some freshness, and I woo the wind
That still delass ite coming. Why so slow, That still delays its coming. Why so slow,
Gentle and voluble spirit of the air
Ocome, and breathe upon the fainting earth O come, and brea.
Cooiness and life.
To return for a moment to dwelling-housea, it may be remarked that the objections to stove-warming do not apply to halls and staircases, the reservoirs from which nor in any serious degree to apartments used only for short periods. No quantity of heat given to the air of the hall or staircase diminishes the rapidity of the change within it merelys substitus a this current has not to warm the apartment, but simply to check as little as may be the radiant heat of the open fire, a judicious arrangement of this sort is perhaps the best that can be adopted. A cold ventilation is, however,
uncuestionably better than none, and when we feel dis unquestionably better than none, and when we feel dis-
posed to regret that the poor alone have not the benefit of those improvements in the construction of grates by which economy in the fuel has been pronoted, we find some consolation in thinking of the salutary coied as the are both day and night, is quite essential. How much of the improved health of the metropolis is due to the abundant supply of sea-coal, the use of which in the reiga of years was comparatively scarce and costly, it is difficult to say. Expensive fuel has an inevitable tendency to produce disease, by compelling the poor to obtain warmeth a the sacrifice of pure air. This is perhaps a more effective cause of the difference between ancient and modern Lon-
don, and between Paris and London, than the different supplies of water and drainage. The more wholesome way of living in London, as compared with Paris, was asply of sea-coal having then become so plentiful as to account for great part of the difference. A healthy city requires, in short, the same provisions as a good conser ratory, - solar light, radiant heat, fresh air, good water and perfect drainage
Taking it now for granted that whatever may be Na ture opinion of a vacuum, she certainly abhors hot air,
we may proceed to inquire into the best modes of producing that heat whose distribution and employment we have been so long discussing.
In regard to the economy of fires and furnaces, two very opposite and equally erroneous notions will be found to praybe According to one, the quantity of heat which indefinite, supposing only that the mode of abstracting it can be indefinitely varied. Thus it has happened that the fire ner of a kitchen range, fancying that the back of his determined to reclaim the wasted coals. He forthwith places a boiler behind the grate, and takea a set of circulating pipes to warm his library,-an operation which suc ceeds very indifferently as regards the library, but which tails not to arouse the indignation of his cook, who finds
the spit and tie kettle robbed of half their dues. The fact is that the quantity of heat producible from a certain quantity of coal is as limited as if heat were the most tangible material in nature, and every fresh demand upon a fire must be supplied at thie expense of those previously existing. In all those cases, therefore, where conservatories have been heated partly by a boiler with circulating no not have been as well or better obtained by water-pipes alone from a well-set boiler.
The other error coasists in supposing heat to be so ransient or evanescent, that unless it be seized and appro priated at the very moment of its evolution, it is lost for ever. Hence the desire frequently manifested to place
the fuel in the closest possible contact with the boiler to the fuel in the closest possible contact with the boiler, to
surround it with boilers, to make even the furnace-bars into little boilers ; all which is, I beliere, not merely useless but injurious, because it confounds two operations which are essentially distinet, and which require different conditions for their success. The production of heat is one thing; its transference is another. If I were to nowned recipe for setting a boiler in the style of the re heat;" then, inasmuch as heat may be for aught I know preserved undiminished till it can be conveniently absorbed to prejadice the act of combustion by which the heat is to be produced, bat to receive the graatest Fossible quantity of the hea before it can escape into the chimney. It may be as-
sumed that there are but two modes in which heat once created can be lost : the first is by its absorption into matter. either solid, liquid, or gaseous; and the
seconl is ty radaticu into space. It may be equally assumed, therefore, that heat generated at the surface of the earth might be applied unimpaired to a boiler at the summit of a lofty tower, providell the walls of the tower were heat-tight. This would be, pertaps, rather an exconsiderations hare been unnecessarily intermired two hence the greater part of the bad combastion and the
smoke which disgrace and disfigure the metropolis, and which arise principally because the owners of stanm engines are not content first to atch their heat and then to use it. Perfect combustion is promoted by intensity of temperature, and the generation of heat is proportioned to the perfection and rapidity of the combustion, white the heating of water and the generation of steam are im peded by excessive temperature, and require only a mode rate heat acting upon a widely-extended surface. Let the the fuel be consumed by a rapid and intense combestion and afterwards dilute the heat in its application to the muter by the size and distance of the boiler, always taking corse to receive as much as convenient in the shape of radia-
tion, and to depend as little as possible upon the and gases which may carry a large portion of their charg into the chimney before it can be abstracted.

This is in my opinion the true solution of the problen recently advertised by the civic authorities with the vie of relieving London from the annoyance of its increasing
steam-engine funnels. If we look into a brassfonade? steam engine funnels. If we look into a brassfouader' any ordinary boiler-ncompassed combustion going on in any ordinary boiler-encompassed fire-place, we shall be struck with the difference, and shall be led to inquire wh a modification of the smelting furnace might not be ap: plied to the boiler. The boilers of railway-engines acting unfaces high pressures and temperatures are not 8 by by no means impossible that so much of their boilers a surounds the fire is the least effective portion. Hom ever this may be, it is certain that for all common por poses the close contact of the boiler and the fuel is mite ally prejudicial, and that the detention of the gases acd smoke in contact with the boiler by means of circuitom flues is also ineffective and injurious.
In the examples of boiler-setting usually published, not posed to the direct radiation from the fire, everything being sacrificed to the close contact of the fire with the water, and to the supposed efficacy of the air-carried heat of Mr. the Rogers is a decided improvement, as it expose fire whole of its inner surface to the direct action of the fuel within cold walls

In the annesed diagram I have endeavoured to explain my idea of efficient boiler-setting. The boiler in the
figure may be considered either as a hemisphere or as a

semi-cylinder with the ends closed, presenting to the fire in either case an inverted chamber, from which no gaseous matter escapes but by descending to the lower edge, which terrupted channel for the flame and smoke to play round the whole upper surface. The fire is contained in a brick
 radiation to so reduced by distance to that degree of intensity which is favourable to its absorption by the water, will exhaust, I believe, a very large portion of the effective power of the fuel, which, under such circumstances; may be of any doscription, and may be burnt subject to the most perfect
control. The dotted arrows show the probable course of the flame which must be sufficiently exhausted by the whole upper surface of the boiler, and of the arched vault in which a is contained : their escape wo
I feel confident, however, that the heat obtained from the smoke-flues is very trifling compared with that obtainable from the radiation of the fuel itself, provided bat radiation have fair play. Bad combustion not meerely produces less heat, but it interposes between the fuel and nuch of the already impaired heating power; and when the fire, after wasting a prodigious quantity of fuel in the shape of soot, becomes cleared, the heating power which results for a short time is too great for the small quanily
of boiler surface exposed to it, and a repellent action ensues between the overheated iron and the water, similar to that in the well-known experiment of the drep of wate in the red-hot capsule. Thus in a boiler-surrounded pace every part of the process is bad. Suere is portion o heat,-rendered effectually still smallier by the screen of smoke between the fuel and the boiter; and there is next quantity of the surface apon which it is to act.

It seems rather paradoxical to assert that the boiler can be too close to the fire; and when I have quoted the
brassfounder's furnace as an example of good combustion, brassfounder's furnace as an example of good combustion, the reply has been, that the founder closely surrounds his melting point of brass is something like \(3800^{\circ}\), being fully four times greater than the red heat, which is sufficient to excite the repellent action between metal and water, and to stop the further transference of heat from the one to the other. A drop of water in the founder's crucible would remain there an indefinite period unvaporized; but that is no reason why we should not obtain the benefit of a somewhat similar combustion, and diminish the intensity of the heat to the proper pitch by the distance of the boiler, and the extent of surface exposed to it.

In ordinary boiler-setting, what is called the bridge, which is intended to direct the rising flame and gases into close contact with the boiler, but which at the same time shats out a large space from the radiation, is, I believe, a radiation to the boiler, we of necessity give a larger portion of heat to the gases, which it is sufficiently difficult to reclaim during their rapid pasage through the thereby over-
heated flues, and which escape with an unnecessarily large share of heat into the chimney.
Mr. Rogers'a conical boiler before mentioned, and Which is in many respects of a good form, would be resembling those I have endeavoured to explain, and which are exemplified in the annexed figure. The simplicity of the circulation in this and the former case will be no recommendation to many persons, but I have little fear in appealing to experience on this poin

If it should be nsked how far these principles have been applied to the boilers of the large house at Chiswick, it may be stated that they were in the first instance set in
the ordinary way, exposing, however, nearly half their lower surfaces to the direct action of the fire, and the flues making two turns before they escaped into the main shaft. In this state they appeared to perform as well as usual, but circumstances connected with the land-springs having rendered it necessary to reset them, I was induced to try the application of the principles here laid down, as far as the case allowed. The fires were lowered six inches, so as to burn principally within brickwork, and the diaft made to take but one turn, going under the whole lower surface, and returning over the whole upper surface; the end of the chambers formed by the builers, which were of the horse-shoe make, being at the same time so closed as prevent the escape of the gaseous matters till they had descended to the lower edge of the boilers; thus, of course, had been abstracted. These alterations included, more or less perfectly, all the points of the proposed plan except one, and that the most important; namely, the exposure The change, under surface to the radiation from the fuel. The change, nevertheless, produced a decided improvement over the former setting, and they worked, I believe, There isactorily through the last severe winter.
There is a prevailing notion that the boiler can scarcely hold too little water in proportion to its surface; and for this reason the distance between the opposite sides bas een excessively reduced. The professed object of this dimisution is having a small quantity of water to heat and Ieep hot; but this is altogether. I believe, a fallacy, which proposition to use small pipes instead of large. For the present I would recommend that the shell of water be not ess than from six to nine inches in depth.
Before concluding the subject of boilers, it may be well to notice the expediency of having in all cases of importance two boilers and furnaces, each of them sufficient When fully urged to preserve the plants from injury under ordinary circumstances. The dangers of exposing a valuobrious, and to the casualties of a siugle apparatus are Fantage and the duuble arrangement gives the further adof temperaturg only one when a very moderate elevation should be arranged so that Wi:h this riew the pipes every part of the house that each
The proper lize of the boiler and fire-grate bave been
made the subject of elaborate calculation, which the imperfections and uncertainties of the practical details render
of little value. Tue following, as a general rule, will be found, perhaps, as good as if it were demonstrated by al gebraic formulat:-Take the cubic contents of the house and for half-hardy plants give to every 100 feet 10 square inches of boiler-surface and one square inch of fire-grate. For tropical plants double these proportions, and for orcing-houses take intermediate propor
P.S. A correspondent of the Chronicle (July loth) has criticised the charge of "wastefulness," applied to air heating; it may therefore be necessary to say, that air heating was called "wasteful" only as being more costly than radiant heat ; and it was presumed to be less favour able to the perfect development of plants, because radiant be perfectly true, nevertheless, that fluwers forced in a skilfully-controlled atmosphere, even of heated air, were as fine as any exposed to out-door cultivation in such a
climate as ours. The real question, is whether they would not have been produced better and cheaper by the use of radiant heat.

\section*{ENTOMOLOGY}

No. XII. Humble-Bees.- Does the gardenerknow why his Broad-beans have not produced a fair crop this summer? if not, we can inform him. When the beans were in full flower towards the end of May, matatention was called to the injuries they had sustained in the horticul. tural gardens from the attacks of bees. More than threefourths of the blossoms at that time had been perforated on the upper side of the calyx, near the centre or a little towards the base (fig. 2), and likewise through the upper lobe of the flower; and this was the ingenious contrivance
of the humble-bees to get at the honey contained in the of the humble-bees to get at the honey contained in the
nectary, and which they effected very readily by nibbling a hole with their strong mandibles \((-1)\), * through which they could insert their strong horny proboscis; and this operation necessarily proves a very great detriment to the crop, as the perforated blossoms, with very few exceptions, are not able to perfect their seed-vessels; so that out of knots containing from fixe to eight flowers, only one or two I obsersed had escaped the attacks of the bees and would form their pods.
In June, I examined some Horse-beans that were suffering in the same way to a great extent, and it was amusing to witness the investigations which a humble-bee made of the sweet-scented flowers, roving from one stem to another, and alighting with the greatest precision, with its head over the calyx, just putting its proboscis to the
aperture, and then departing to survey another. It may be inferred from the instinct of this little animal, that the flowers which were untouched and which it did not perforate were destitute of honey at the time, and that some, fluid after they had been tapped; and this opinion is strengthened by a late inspection of the crop, when found many podswith a rough brown wound near the base, which was distorted and deticient of beans, excepting two or three at some distance from the puncture.
The humble-bees, amounting to thirty-five species, form one of the finest groups of insects in this country, and, from their size and striking colours, are well known by every one; those which I detected sucking the beans, were the Bombus terrestris and B. Iucorum Linnæus he former is densely clothed with fine hairs, of an intense black colour, with a broad band of bright ochre at the fore part of the thorax; a similar band towarus the base of the abdomen, and two or three of the apical segments, are of the same colour, unless bleached by age, when they are often whitish or even pure white; the legs are strong; the
feet brownish; the wings are stained with vellow, brownfeet brownish; the wings are stained with yellow, brown
ish at the apex, the nervures being pitch-brown (fig. 3).
Humble-bees form their nests at the roots of trees and amongst loose rubbish, such as heaps of bricks and stones covered with earth, also in cavities of old walls; they are imered with moss, collected in the summer, and are some times lined with wax. The comb is formed of oval cocoons, irregularly clustered together, and made of a kind ber, sometimes amounting to sixty. In the earliest days of spring, the female humble-bees emerge from their winter quarters where they had hybernated, and collect pollen and honey from the catkins of the willows; later in the season the neuters appear, but the males are not common until the autumn, when the Thistle flowers atford them an abundant supply of honey, in which they delight and partake of so freely, that these juvial bees are often seen reeling about as if intosicated, throwing out their legs in a very grotesque manner, and eventually resting in the soft fowers, fall asleep at the approach of night.
I believe that the bive-bees are accused of participating in the spoliation of the Bean-crops, but there seems to be little doubt that the female humble-bees are the parties who first wound the calys in the manner described; and I f am convinced that, at least. fuur-fiths of the crops 1 fore be a rery desirable olject with the Bean-grower to avoid such a loss, and no better means could be adopted than to destroy the humble-bees' aests at the end of summer, and employ children to catch and kill the females in the Bean-fields as soon as the tirst blossoms have expanded.
It is probable that many other plants suffer from the same cause, for I am informed that the calyz and Hlowers of the Azalea are often punctured by the bees; and I P7. For

\section*{have heard
injuries.}

It may be remarked, that all the leaves of the Broad beans of the crop first alluded to, had the edges indented and they exhibited the same appearance last week, but 1 am ignorant of the animal that has caused this strange appearance; it is possible that it may be the work of woodlice or of earrigs, and I shall be glad if any une will confirm or set me rignt on the subject ; for as it is pre sumed to be a nocturnal operation, I have not the opportunity of settling the question.-Ruricola.

\section*{COTTAGE GARDENS.-No. XXVII.}

There are none of our common fruits so universally esteemed as the Strawberry. It is regarded alike by the peer and the peasant as a delicious luxury, and not the least of its many recommendations is that, if managed with rery little more than an ordinary share of attention, it is capable in some soils of being brought to as great perfection in the cottage garden as in any of our first-rate establishments. It frequently occupie; the elge of a garden walk or border, so as to encroach as little as possible on the space required for vegetahles ; and in such ituations Where the exposure was onen and favourable we have seen some large crops produced. The soil which appears to be the best for Strawberries is a strong rich loam, but they will succeed very well in alpost any soil that has been properly manured and is in good condition. There are so we have some difficulty in making a selection of the kinds most to be depended on. Perhaps the Old Pine, Groveend Scarlet, and the Red and White Alpine, are as good bearers as any we can recommend. All of them are readily increased by runners, and every cottager desirous of possessing a nice Strawberry-bed should now endeavour to procure some runners of the kinds just mentioned, or of any other approved sort, and prick them out in a sheltered part of the garden, where they can be shaded and taken care of until the season arrives for planting them in the situation they are intended to occupy. An excellent plan for growing Strawberries was some years ago described by Mr. Byers of Swansea, and having ourselves witnessed its success in various places where it has beeu tried, we would recommend its adoption wherever it can be con veniently done. It may be termed a Strawberry-wall, and is formed in the following manner :-a steep bank of suitable soil is first prepared, and a layer of stones or brick about six inches high is placed evenly along the bottom of it. This is covered a couple of inches deep with good soil, and the runners planted in it six or eight inches apart. Another layer of stones is then placed over the first one, and made to slope inwards, which is again cuvered and planted with runners as before. The same process is repeated until the wall or bank is raised to a sufficient height. Stramberries grown in this manner are dways earlier and cleaner than from a border, and another advantage is that more plants may be grown in a small space of ground than by any other method in general use. Clear away any crops that are over, and get ready the ground for such as are intended for winter use. Trans plant some more Caulithower for heading in autumn, and put out mure Savoys, Brussels Sprouts, and Cabbages, as
opportunities occur. The Celery that was transplanted will occasionally require to be Celery that was transplanted beinceasionally require to be watered and earthed up, these being essential points is its cultivation that must be parcularly attended to at this eeason by those who are deirous of growing it well. A dry day should be selected for earthing it, and care is 10 be taken to confine the leares close tugether, so as to prevent any of the soil from setting into the bearts of the plants and injuring them, Plant out some more in the same manner as directed at p. 412 -M. \(E . H\).

\section*{HOME CORRESPONDENCE.}

Pucking Frust fur Curriage.-In furtherance of the Editor's observations on this subject, I beg leave to suggest the following plan, which is found better than any phical instruments, and is equalig adapted to ripe fruit Having packed the fruit in the inner case with sott fonton or whatever may be deemed leest fir the purpuse, let that case be suspended mithin the other by lines or cords. Suppose, for instance, that the outer case is two or three iaches Near all round the inner ctse, and that eight cords profristened to the echt inturnal cornors the one. and weie Instened to the e ght internal corner: of the other case. In thas way, whateser sile thas uppermost, the inner case
would be suspended fron the fur upper cords, the four lower ones serring onar to s:eaty it and to prevent its swinging asainst the outer case. If the whole be tarned upside down, the functions of the cords become reversed, so that they must all be strong enough to perform either office, about which, however, there is mo difigulty. I have
bestuwed great attention on all the known modes of check-
ing vibration, and have no hesitation in recummending this as incomparably superior to any stuffing of moss, hay, or shaving: and it may, perhaps, lave the additional merit of preventing the cinance of imparting unpleasant flarour, wiuch might anse froma compact massis of regetable matter beighen corde, nor to fasten them from angle to angle of the cases. Any arrangement by which the inner case is susagainst the outer case, will equally well ansmer the purpose. A sull better plan for these who l. wre frequensly
very choice spetimens of fruit to transm t, wuth be to insalate the inner case by spiral springs, with the adistion of small portions of felt or woollen cloth, to limit the vi-
brations, on the same principle as my suppurts for micra scopes ; the springs nould be very cheaply made. and Would aroid the repeated trouble of pack ing or tying. but the cords will do extremely well.-A. Ross, Regent long list of gold and silver medals, awardea to successful competitors at the Horticultural Gardens. sideat of this town, has, at this time, a most magnificent
plant of Xucca gloriosa in flower, entirely managed by
herself; it stands nine feet high, and has upwards of 800 perfect blossoms on it; the foliage is of a very fine colour, and could it have been placed amongst the splendid spe cimens at the Hosticultural Show, I doubt whether there were any the
Cucumber-gruwing. - In the Chronicle of last week, I am asked to gure niy opinion as to the advantage of shutters to cover dung-liningi in early forcing. I do not use them, but think them necessary, particularly for the front I have a friend who has thena in use, so constructed as to convey the water, falling on the lights, to the east and weat corners of his pit, where it falls into a small drain and is convejed away. The advantage must be so evident as to render it unnecessary to say more respecting them;
still I am aware there is a difference of opinion as to their till I am aware there is a difference of opinion as to their
ase. I bave been told by a good practical gardener, who had them in use, that they prevented the dung's ferment ing freely, and were worse than useless. Should particolars as to the material used and the construction of my sending them.-George Mills, Gunnersbury.
Bad Butter. -Since I came to reside here, I purchased two excellent cows. and pat them on the lawn with some sheep. Tomy great annoyanee, while I found the milk bad, of a taste I cannot describe, and not much harder than thick cream, and of a dirty white colour. On inquiry I found that this had been experienced before I came I found that this had been experienced before I came thus affect the quality of butter, for it must be somethiog in the foud; and I should be thankial if you, or any correapondent, can point out any, and say whether there be any mode of getting rid of them without breaking up the rrass. - Revehwood, N. B.
duced by aphides of every desine matter is profusely proto naturalists; and from abseryios is a fact long knowu sereral of the species, I am inclined to think that Honeyexudation from the of the aphis, and not a spontaneous the enormous quantity. produced by a single aphis, I beg to call your attention to the following statement:-Some palled one up, and found the lower part of the stem and paled one up, and found the lower part of the stem and Lettwee, Endive, sic., and which is of considerable size. A colony of ants were in attendance, and I spent many the ant mounted on the proceedinge with these aphides: dramming with his fore feet on the aphis, and comunenced aphis, which continued feeding on the Lettuce, and in the time a pellucid drop, as large as a pin's head, was ejected from the abdomen of the aphis, and as greedily sucked up by the ant; this was frequently repeated, and always witi some effect, though the discharge was not always the same in quantity; on tasting the ejected matter it was very From the quantity imated with the bitter of the Lettuce. From the quantity produced by one aphis, I am not surprised at the quantity of honey-dew which I have seen entirely covering a large Rose and a Honeysuckle. As many of the aphides tiy. I see no reason why a large flight of them should nit have fitched on an Oak-tree, and have produced the effect deseribed by Sir O. Musley. I have never yet met with honey-dew where I did not find
the aphis, but I am not prepared to say that the exudation of some trees may not produce saceharine matter. What Is the cause of the exudation is a question I leave to others: I say, the perforation of the aphis. - Walter Henry Hill; On Cause and Effert In ono
in the leading article of observe, that I have of No. \(2 x\), I would first beg leare to observe, that I have long since laid it down as a law of quired a surface of stant or tree will fructify, unches, and leaves, proportioned acto the food is is supplied with :" but then caay arise the question. Hisw can the term food be apulicuble t
 for disctasi \(a\) : fors athough it is notorions that plants requite as consiant 4 supply of nutritive matter, and that bere is unly one.erm for as variable, as animals, yet which is, manare; and one term only for ill health, which
is, blight! Now what would be thought of our physicians and surgeons, if they had only one term for nourishment, and one term for disease: And yet gardeners, who are prohare but one term for the required nourishment, and but one term for disease I! The colour and comparative size of the leaves of a plant, afford as strong evidence of the health and condition of a plant, as the tongue and pulse
do tiat of animais. Is it not ohvious then, that before do that of animais. Is it not ohvious then, that before
any great progress can be made in the adrancement of the science of Horticulture, a rocabulary should be csta-
blatied: You mis le gratified by the sight of a fine specimen, and by the knowledge that such can be produced; but although yon thus walue the effect, how much more fect, which alone would enable you to produce the same -Jos. Hayzoard. - In No. 20, you say, "a method at air, was published in the year 1824, by Mr. John Hayhave been-Joseph Hayward.
Retraspective Criticism.-The subject of plants casting lately. It has been generally attributed to want of vigour have noticed, that Lupinus polyphyllus albus, and other plants liable to this accident, are most apt to do so in dry weather, when the supply of food is more limited. We above plant. In the case of the double yellow Rose and others which seem peculiarly apt to do so, there should be plenty of manure-water, and mulching, applied a little fairly formed ; and to prevent the effect of a full stimulus of light, the flowers should be shaded a few days before they burst. Double yellow Roses have been known to trained over to the north side of the wall ; and shading would have a similar effect. We would, from observation, incline to be of Mr. Morray's opinion, abaut the cause of what is called honey-dew. Beech hedges are very subject to its attacks; and we were always of opinion that the aphides were more plentiful, when, from late spring frosts, severe in place of other causes of disease, the sap of the plant, of the newly-developed leares, was ets, by the beathy action of a sweet gummy cansistence on the leaves. Like other insects, the aphides will likely have a power of finding out where their food is in the greatest abundance. This season the Larches have been much hurt in the young shoots here by spring frost; the Beech was not sprung at the time: and the aphides are to be found more than usually
plentiful on the Larch. Some of the young she plentiful on the Larch. Some of the young shoots however are gorged and swelled in the vessels of the young wood, as if punctured; perhaps both causes may sometimes be in operation. Mr. Tillery's opinion about roagnesian limestone being prejudicial, is in accordance with that of Sir Humphry Davy ; who ascribed it to the magnesia, when calcined, and having parted with its carbonic acid, not recovering its carbonic acid so quickly as lime, and remaining longer in a caustic state, being thus more apt to be taken up in that state by the roots, and acting
deleteriously on the regetable tissue. On the making of Gooseberry-cuttings (in winter), it may be remarked, they always succeed best when the articulation ar socket, that joins the young branch to the old, is pulled out along with
the custing, when separated from the bush; and as there the custing, when separated from the bush; and as there
are generally a great many buds at the base, if these are not scraped carefully off, and also all the other buds, except from four to six at the top of the shoot, the suckers complained of in the chronicle are likely to appear.R. Lymburn, Kilmarnock.

Law of Gardens.-As you have, in a former Number of the Chronicle, quoted an Act of Parliament respecting the offence of stealing from gardens, it may not be uninteresting to some of your readers to know, that the law also affords ample remedy for any wilful damage to them ; and that by the \(7 \& 8\) of George 4 th, cap. 30 , sec. 10 , malicious injuries, to the extent of 11 . to any tree, sapling, or shrub, growing in any park, pleasureground, garden, orchard, or avenue, or in any ground belonging to any
dwelling- house, is felony, punishable with transportation for seven years, or two years imprisonment; and by the 21 st section, the maliciously destroying, or damaging, with intent to destroy, any plant, root, fruit, or vegetable production. growing in any orchard, garden, nurserygrcund, hothouse, greenhouse, or conservatory, is punish-labour- inprisonment for six calendar months with hard A Subscriber

Change of Seasons.-I was lately looking over the katmbrium Hortense of John Evelyn, and was someWhat surprised at the early notice there given for grafting. fanuary, in the orchard and olitory garden, we are directed " to gather scions for graffs before the buds sprout, and about the latter end of the month graff them in the stock. Joun Reid, an eariy Seoteh author on gardening. who lived. I thiok, about the same period as Evelyn, in his monthly directions for the kitchen-garden, tells us in srafi:" and in February he says grafting is now in season. These directions were given about 160 years ago. Could the springs be earlier then than ther are now : If they were, I bink 1: would be at variance with the cibaerrations of the ate Mr. Knight ; for I believe I have seen a paper of his changes of the wiich be made some remaris upon the changes of the climate of England, and the conclusion he
came to was, that the springs are earlier now than they were about the time that Evelya lived. In that excellent
work "The Fruit, Flower, and Kitchen-Garden," we are March, but it the best time for grafting is the month of the stock is fairly in motion, and may be continued durng the first half of April. Perbaps you could gire some information whether the climate has changed, or the prac tice of grafting improved, or if there be any rule founded apon pliysiological principles for directing the practitione () ur correspondent must observe, that the dates meationed by Evelyu and Reid, being according to the Old Sisple must be forwarded 11 days; so that the period of com
mencing to graft, instead of the latter end of Jan must be uaderstood as referring to the beginnin of Febry ary. That the month of January is a good time "to the graffs ere they sprout," should still be kept in mind; for the more the buds of the scion are expanded, the lem in the chance of success. Grating may then be proceeded ,ita any time during February, Marci, and even Aprih, the spring is a backward one; but March is, generally formerly earlier than they now are, is a question on which formerly earher than they now are, is a question on which
there are different opinions. That they have of late jeurs been extremely variable, is certain ; but such was also the
case a century back; and on an average there appean little or no difference between those of the present and those of the past century. In Reid's Kalendar, publishei that "praffing is yer in amoug the directions for March that "the weather is commonly unsettled in this monet the nights frequently frosty, and blighting winds frum the the are still to be expected. Switzer wrote in 1724, and fruits of ripening which he ascribes to the with the time of their ripening as observed of late years The specimens for the drawings in Langley's Pomona were grown at T'wickenham, in 1727 , the year and day of the month when ripe being engraved upon the plates. An one unacquainted with the earliness of that locality would however, be led to suppose that the seasons must have
been at that period much earlier; for example, the old Scarlet Strawberry is stated to have been ripe on the 2lst of May (ioth, O. S.) - yet it is certain that, about the same time, ripe Strawberries were brought from the abore place, or from its neighbourhood, from the open air, in the present seatom. On comparing the periods of blossoming 1827, there appears no material deriation. La Place concludes, from astronomical observations, that the mean temperature of the earth has undergone no seaṣible change for the last 2000 jearrs.
To destroy the Brown Scale. - I have speceeded. dipping a painter's brush in the browд or impure pyrolig. may safely be applied when the insect is on the stem branch of a plant. The acid is destructive to all tender leaves, but does not injure thick and smaoth leaves, such as the scale generally adkeres to. I have only had an opportunity of trying it on the leaves of one plant in my vinery, riz., Nerium Oleander splendens, the leares which have not been in the least injured. Perhaps some
of your readers will take the trouble of trying the acid on wo of the leaves of other plants infected by the Sale, nd inform you of the result, whether those leaves ha been injured by the application. The brown pyroligneous
acid is also a most effectual remedy for the Amencan blight, Aphis lanigera. \(-N . T\)
been promised a readers of the Gardeners' Chronicis tables, it may not be amiss to articles on couking rege portant, viz.: Wheat. It was to me for many year perfectly anaccountable that while evergbody was found ory brea without ind the ostensible pretence for using alum was merely render ing the bread whiter, there appeared no adequate motir or its continued employme desire has been mor seneral in the metropolis for many years than that for gread free from the sourness, harshness, and other ba qualities presented by London bread after it is two dass
old. It was perfectic incredible that this state of things should have easted for years on a mere question of colvar and on mentioning the subject to an intelligent countr baker, I was informed that the colour was merely a pre tence ; that the real object of the alum was to cause quantity of flour water, and therefore to make per cen heavier than would otherwise be practicable. How far this is true I am unable to say; and if true, I draw frem it no inference unfavourable to the bakers, wh) are, as any class of tradesmen in the kingdom. In wust o these cases the fault is nut so much with the trade as with the public, who look to no consideration except prive
and who must therefore be imposed upon before they will consent to let a man live by his calling. For ail this consent to let a man live by his calling, For and with
there is no remedy like knowledge of the truth, and the view of eliciting that truth I send these crude obser vations. If it be a fact that a ninepenny loaf may ce
dearer as mell as whiter than a tenpenny one of equal weight and of similar flour, it must be duing grod serwill exercise no greater influence orer the baher's profits wi:h this knowledge than without it. The word pryis is indeed inapproprate to the trade of baking, mblad in
one of those to Which, more perhaps than to any other, one of those to which, more perhaps than to andied Adamo Smith's distinction between profit, properly so called, and those nominal proit

Alonzo, pencilled crimson purple; Francia, bordered purner. Some threa or four years ago this identical coal-tar was mer. Some thres or four tears aquthis in a paper in Loudon's
recomnended as a certain remedy, Gaideners Mucuzine, and without giving the matter the slightest consideration as to what effect it might have on permitted my gardener to paint his trees with coal-tar when be considered necessary, My orchati was in a fair bearing state, having been planted about iwelve years; the consequence was, that some of the trees died, and all of of the Apple-tree wherever it is anointed, and I consider it the most dangerous nostrum ever brought into into the crevices when you discover the insect, is bath safe and efficacious; also tarpentine, pyroligneous acia, urine, vinegar, ac., mayy be used in the same way why scraping off the dead bark and plastering the ravages with a healing compostion. Jincer in his forth the production, distribution, and preserration of bicle on says, The application of boctoun heat-to an exposed an somewhat strange that the utility of such a process should remain until now to be tested. I have no doubt but it will prove advantageous to gardening in a great variety of Some years ago, when they were preparing the ground Where a boiler was to be placed belonging to a coal-work, the men came upon an old drain that happened to be in that part of the field where they were at work. A bouse was built near for the engineer, and part of the ground adjoining the house was enclosed for a garden. Shortly the regetables in the garden were growing much faster the vegetables in the garden were growing much faster
than the others. It caused some surprise at first, but it was soon found out that it was in the line of the old drain that the early vegetables were growing, and that the heat from the boiler ascending the drain was the cause of their earliness. Young Beans fit for use were gathered above the drain, while those planted at the same time in a more sheltered situation were scarcely formed in the pod. I think another mode might be tried for communicating bottom heat to borders or other parts of a garden, although somewhat difterent frum that recommended by Mr. Ainger' : sidge plan of roofing conservatories, the pipes for beating to be filled with small stones, and the whole covered firows tarf, to prevent the earth getting between the stones; the Salvia Patens.- Your correspondent " \(\$\) 。" complains of me bleoms of his Saivia patens dropping off; I should foncy there must have been two varieties introduced a fase came timas. Thad planti from two sources when they blooms; the other, rather stinted in growth, and had qualter blooms, whica it dropped, in the manner comphined of. I grew bath of them in warious ways, in all of which the former did well; but the latter regularly tuiled. 1 , therefare, threw the whole of the had one away, M. Headorson, Coleorton Hall.

Alpine Strawberriea, In order to abtain a latp grap, I think the best mode of cultivation is to keep the plants elear of runnerf. This allows the light and air to get to inte in the autumn. Although the white Alpine is not to the latter the

July 2ath - J. R. Guwen, Esq., in the clair. The Earl Somers, G. C. Tugwell, J. Ames, T. B. L. Baker, and E. J. Delatiosse, Estyrs.
were elected. Mrs. Lawrence wahbated a fine colliection of plants, amo alled tricore some exquistrely-grown Heaths, partaculars puik ; tee other plants worthy of totice, were a verry darik variety variety than usual, a handusome Loddigesiinen of Mantiexilia shaveolens, and a curious New Zealand klant, with small white flowe.s, called Heaths in thas collection. Firom Mr. Jackson were seven handsome Heaths, which gained a banksiau medal; among then were Jacksoniana, a seeding raised between retorta and Irbyana, of
a beautiful purplish crimson colour, a dark red variety of tria beautiful purplish crimson colour, a dark red variety of tri-
color, and a pink and winiee metulaciora. In adilition to these there were four seediling Pelargoniums; the one most worthy of notuce was Marchioness of Exxeter, white with a dark parple spot
on the uper petals. Mr. M . Henchman sent a plant of ppomea
ty rianthilia, which. however, Eave but littie idea of the beauty of

 abid Pince sent singuiar speares, broadeat at the bpper end, and hearing at the
endis ot the branches a number of row end et the branches a number of rosy purple pea-shaped ñower.
which in a will tate are nore conspicuous than the folidge; with this were exhibitod specimens of Pyrola rotuatifolia, a loca awarded to the Mirhelia. Mr. Henderson exhibited a beautiful plant of lpancea Learii, growing and fowering freely in a pot; it
does not require the heat that most of the other species do, but succeeds perfectly in a cold conservatory, and will no doabt be useful plant for exterual decoration during the summer it was Lear, Mr. Knight - collector, had found it in Ceylon with this
were sent a bashet of douide white c"anese Primroses, in fine flower; a block of woad covered with nooss, among which s.re Esehynanthus granditlorus, aud cut flowers of Perguaaria odora-
tissima, trained in fertoons over the wooden bluch, and Allamanda cathartica, a fine old stove plant ; the Chinese Primroses may be made to do fower at all seasons if kept in moderate heat, and shaded from the sun; a Banksian medol was awarded for
them, the Ipomacea and the Kscolymanthus. Mrs. Goldsmid sent some seenling Peharg cultivation. Mr. Hogr, exhinhted is varietties of carmations, and \({ }^{2}\) Picotees of first-rate excellence considering the late unfavour able weather; a Banhsian medal was given for them. \({ }^{31}\)
Lurasden, er. to H. Bevan, Esq., and Mr. Selless, gr. to L.
Watkin. Watkina, Exq., had Banksian medals awarded then for their ex good black Hambro' Graper, and Mr. Daviis exthinted some handsome Museat of Alexanurra (irapes. Mr. Errinzton, Gr . to Sir
P. de Malpas Grey Egerton, sent some Marray Nectarimes, and P. de Malpas Grey Egerton, sent some Marray Nectarines, and
a Royal George Peach. Mr. Mills exhibited a branch of his frame Cucumber, which had four fruit swelled or at the following joints. one of which, however, had been cut off; they had been
raised under a hand this variety is equally good fur hand-glass culture, as it is for frame. Mir. Williamson sent the hew watering-pot described and
igured at \(p\). 45 . Amone the plants from the garden of the Societr,

one-eighth part of a pint of common turpentine and \(11 b\).
of barrel soap mixed together; then add some soot and some pondered lime in equal quantities, so as to make the quor of a proper consistency, about the thickness of the liquor to the trees with a paint-brush, tiking care not to let the brush touch the faces with the back stroke, as hat would break off the buds; but always letting the brnsh ay the stuff on from the stocks to the extremity of the
The Acacia Tree.-Cattle are exceedingly fond of its
eaves, which they find an agreeable nourishment. The leares may be given them either greer dry; alone, or mixed with hay or chopped straw. When thus used, the tree should be pollarded or kept as a stuol. It is, how tries where there is a difficuity in obtaining green food from common agricultural crops.-G.S. \(B\). \(\boldsymbol{R}\).
GARDEN MEMORANDA.
a plant of Yucca gloriosa, with six fluwer. stems, and each stem
bears on it upwards of 450 bloumis. bears on it upwards of 450 bloums. To-day I counted on the six
stems 2,04 flowers. The plant at is inches from the ground mea-
surs
 standing that heavy thunder-storms have lately beaten down
some of the more delicate flowers. There is a most luxuriant
plant of Ip m@a Leani in the Orchidaceous plant of Ip m@a Leanii in the Orchidaceous hou
produced daily trom 30 to 40 blossoms for the
Calandrinia discalor and
are in fine flower in the frames. The plants of these which hatonii, placed in the open beds have been considerably injured by the
heavy rains. The foliage of the trees is peculiarly luxuriant this
year: but the one of the Tortrices. Several of the choice Firs have made leading shoots of six or seveu inches; but the most astonishing
growth is apparent in the circumference of many of the forest trees. Amongst others, a Sycamore near the north-west angle
of the house, which in April 1840 measured at 3 feet from the ground, 5 feet 8 mehes in girth, now measures 6 feet \(3 . \frac{1}{2}\) inches ; period exceed 3 feet 3 inches, is now increased \(t\), 3 feet the former
and a common 10 inches ; 9 in circumference, rather exceeds, at the present time, 5 feet cousidering that comparative dimensions appear extraordinary, 1805 , rather exceeds 4 these, which Sir Oswald Mosley planted in ground, and is at least 35 feet high. - July - of Roses is cultivated here, but as we have already at \(p .381,438\) and 436 described a great number of the better varietres, we shall we saw in tlower. Ampug the chinas were several valuable for darker, and finally dying, of quite of a light possess this singulanty are Belle Isidore, Etna, Rubens, Cameilia
panache, and Virgiuie. An Italian variety called Manettii, of strong growth, has been found to make an excellent stock for Teas and Chinas Among the finest things that we saw, was a
quarter of dwarf Rose du Roi, growing and flowering with the greatest luxuriance; they made the surrounding air "redolent Plums are root-pruned, and have consequentiy, formed compand little onshes, in ssome instances covered with fruit. Mr. Rivers has found that scions taken from Pear trees worked on Quinces
grow very well, hut if worked on Pearstocks they almost stocks and succeeded well : they are excellent, as man Mahaleb better dwari plants than when grafted on the common stnck. A been tried, and the following are the results up to this time:
-Lance's humus is a much better top.dressing for Rose; that ammonia; half-inch bone-dust is an excelient manure for Tea anding machanically as drainage, as soil, in consequence of it
of soda as manure; nitrat of soda as a tup-diressing for seed-beds of Spruce Fir, killed
them all; but Lance's humus put on some heds of young
Elms, has accererated their growth considerably. Elms, has accectrated their growth considerably. We ob-
served a very ingenious method for preerving seeds in pots
from mice and birds, or preventing them being washed nut by rain, as well as equalining the temperature; it consisted of a cir
cular plate of burnt clay, abutut the same thickuess as the pot,
pertorated with holes; it is laid on the top of the pot when th pertorated with holes; it is laid on the top of the pot when the
seeds are sown. One of the houses was heated by means of an nected with an arr-chamber. by this means a gentle bottom-heat
nom ond St ft . long, was also heated with a 20 -inch Armott's stove, this
house was ventilated by means of wooden shutters placed behind and in front, the top-lights being fixed on the top of the \(t\)-inch brick walls, without plates or rafters. A large collection of
hardy plants is grown hire, and there are handsome specimens close to the house, which in. inderd: quite a trees, and the origi
rial plant of Quercu. Turneri, which is, without hial plant of Quercu: Turneri, which is, without thubt, a seed
ling. Salix americana pendula, grafted standard high, forms a
very elegant tree, with gtaucous toliage, and fise purple shoots and elegant tree, with glaucous toliage, and fine purple shoots;
from the hispica majur, also grafted as a standard, suffers littil pinched cif. Animg the new and rare plants we observed Lihardy; the piarpie-leared cummon Berberry; a hy band Py bers
between ipectabuis and apenica, which has larger and hivher come herbaceous thant, with er, and Spiræa venusta, a hand has bnyght pink tluwers. Quercus spicata and Clematis Siebobldii,
 most hearthy and rigerans condition. The collection is very of the new kinds.and a fest that are not yet in general cuitiva-
tion. We particuarly nuticed two crmanu bizarfes -Bucknell'; Ciarlemarne and Chamuers' Kate, buth fluwers of first-rate properties, with the coluur tinely distributed: and a scarlet bizarre ever saw. The Picotees are very beautiful, and in zreat perfectina. We noticed no les than sux Queen Vict) rias, raised by

\section*{NEWS OF THE WEEK．}

We learn from France that the disturbances which have broken out at Toulouse and other prosincial cities in con－ sequence of the recent fiscal measures of the Ministry， still give rise to serious apprehensions．The extraordi－ nary Commissioner sent by Goternment to Toulouse has disbanded the National Guard，and has instituted pro－ ceedings against the leaders of the popular party；ted thousand troops have been concentrated on the city，and vigorons measures adopted to prevent a renewal of the oatbreak ；bat althotigh the city was travquil at the date of the last despatches，great anriety prevails for the mosulk Recent accounts from the German frontier an nounce a distorbance of a simpilar character at Strasburg and public feeling is asid to be mueh excited in the central provinces of France．It is alau stated that the forth conoing anniversary of the three days of the Revolution regarded with anxiety in Paris，and that military precan tions，on an extensive scale，have been adopted to coun－ teract any insurrectionary movement．－In Spain，the at tention of parties is occupied with the recent decision of the Chambers on the guardianship of the young Queen， and with the proposal of Government to cede the islands of Fernando Po，and Annabon，to this country for the sum of \(60,000 \mathrm{f}\) ．The cession appears to be regarded by many flarties at Madrid as a dangerous precedent；and it is considered probable that the sum offered will not be paid into the Spanish Treasury，but will be applied to liquidate the arrears of the British Legion，for the payment of whose claims a further instalment 30，000l．has been transmitted to England．－ Our news from Portugal refers chiefly to the financial under discussion for the redemption of the flozting debt． －From Germany，we learn that a commercial crisis has been produced in Vienna by the stoppage of two banking houses of large connesions；and that the Government was expected to issue Treasury bonds to relieve the merchants compromised by these failures．－In Switzerland，the ques－ tion of the convents of Argau is still unsettled：the Diet has again declared their suppression illegal，and has re solved by a large majority that the Canton of Argau be summoned to execute its decrees without further delay． We learn from Holland that the question of mixed mar riages，and other points at issue between that country and the Papal Court，have been satisfactorily arranged，and that the Dutce Government has granted political and civil equality to all ita subjects．－Recent letters from Naples announce the diseovery of a conspiracy，said to have for its object the independence of ltaly as one state；but the scheme has excited little alarm．partly in consequence of its impracticable purposes，and partly from the small numbers of its partisans．－From the Levant，we learn that the acceptance of the firman by Mehemet Ali has produced so much satisfaction at Constantinople，that a diminution of the tribute is confidently anticipated；the insurrection in Bulgaria appears to be nearly at an end；and the re monstrances of the European Powers have led to the adop－ tion of conciliatory measures towards the Christian population of Syria，From Candia the information still costradictory，but it considered likely that the ingurgents will not hold out mach longer．－From Ravpt we learn that the commercial monopoly of the Pacha still continues in fuil force，and that the prohibi－ tions against the export of flax have been extended to all the productions of the country．The plague is decreasing in Alexandria and the Pacha is making great progress with the fortincations of the city．－Advices from Persia mention the anxiety of the Schah to come to an arrange－ ment with this country，anil the complete evacuation of Herat by the Persian forces．－The intelligence from the United States during the week is not important ；Congress han not yet adopted any decisive measure in reference to Mr．M•Leod，and no other question of general interes has occurred since the receipt of our advices of last week At home，the Elections throughout the United Kingdom are now concluded；and the result shaws a large majority for the Conservative party．In a recent address to the Electors of Loudon，Lord John Rassell has declared that the present Miniatcy will hold office uatil the assembling of the new Parliament，and that therr resignation will fot－ low the disapproval of their policy．In anticipation of this event，much apeculation isattont as to the composition of the now Miniatry ；but nothing of a decisive character

Mail Guards．－A Ministerial paper states that by a recent regulation of the Post－office，guards of mail－coaches are prohibited from receiving fees from passengers，under penaity of dismissal ；and therr salaries have consequently been increased on a scale which is graduated by length of service．The loweat rate of remuneration，it is said，is axed at f11l．per annum，and the highest salary does not exceed 1202．This new arrangement，it is thought，will be beneficial to the passeuger traffic on the mails．

\section*{foreion．}

Prance．－Disturbances at Toulouse．－The Prench do－ mentio news in conefined almont entively to these disturb－ ances，which absoro the attention of all the journals．The following appear to be the particulars of the outbreak which again took place ons the 12 th and 13 th，and which we briefly graplue to in our last Number，as comaunieated by tele－ armed despatch．At noon，on the 12 ta，a larye body of the stmon procteded to the Feteriaary School to invite the Phee St．Btienae，and having erected a number of bar－
ricades，adranced against the Prefecture．The Prefect then ordered the National Guard to be called out ；but before this conld be effectet，a collision took place between th rioters and the military，in which a young man was killed． The tumult was then at its heizht；in less thall an hour 1 ： or 20 barricades were established，and the inhathtauts har－ ing carried the stones to the tops of their houses，were pre－ pared to offer a determined resistance：the troops on the otber side，had intrenched themselves in several hoavm， tional Guards made their appirearance，and b；then the Na ． calmed the popular excitement．In the course of the evening all the posts were evacuated by the tronps and sur－ rendered to the National Giuards．At \(100^{\circ}\) clock，a larze body of the rioters cullected before the house of the At－ torney－Gieneral，and demanded the liberation of the prisen－ ers arrested on the previous day．The magistrate having refused to accede to this demand，they proceeded to the prison with the intention of breaking in and rescuing their the prisoners should be liberated in the mornity；on hear－ ing which，the people desisted from their purpose，and re－ ing which，the people desisted from their purpose，and re－
tired．Early in the following morning the telegrap！．s were destroyed，and the National Guard having notified public trapquillity if he did not resign and withdrate he obeyed their injunction，and shortly afterwards ： proclamation，signed by the Lieutenant－General and fect that all cause of disorder had ceased，inasmuch as the obnozious Prefect had quitted the city．The prisoners were then disclarged，the Senior Councillor of the people celebrated their victory by lighting a layg bonfire in front of the Prefecture．On the receipt of the intelligence of these proceedings in Paris，M．Maurice 1）uval，former Prefect of Nantes，was immaediately ap－ and Provisional Prefect of Toulouse．II．Duval at once quitted Paris，and arrived at Toulouse on Sunday eveming while a large reinforcement of troops，to the number，it is city，from different quarters．Subsequent accounts inform us that the tranquillity of the city had not been disturbed on Sunday night or Monday morning．M．Duval had commenced his administration by disbanding the National Guardm；and proceedings were instituted against the superseded the Prefect，the Attorney－General，and the Lien－ tenant－General，who commanded at Toulouse．－Subne－ quent accounts from Paris，dated Wednesday，inform us， that a telegraphic despatch had been received on that day， announcing that all was quiet at Toulouse，and that order had not been disturbed in any of the adjacent places． appears，however，that notwithstanding the reassen in Paris on this subject，in consequence of a general brief that the orders given by Marshal Soult to the new militery and civil authorities at Toulouse were of a most decida from Strasburg，where the Mayor and Municipal Council henue officers in their fiscal operations．
The approaching Fêtes．－The anniversary of the＂three days＂of the Revolution appears to be looked forward to
with some apprehension by Government，and it is stated that at no period since that event in 1830 ，tave sach extensive precautions been taken to ensure pablic tranquil Lity in Paris，as at the present time．The Government is said to be apprebensive that the secret societies may take advantage of the late occurrences at Toulonse，to excite disturbances in the capital．The troops are confined to their barracks，and visited every two hours by geperal munition，and otherwise ready for service．The effective force of the Municipal Guard has been raised，by Royal force of the Municipal Guard has been raised，by Roym
ordipance，to 3,244 rank and file，and 692 horses．The infentry is to be divided into 16 companies，and the ceveley into five squadrons．Some apprehensions appear also exist respecting the state of public faeling in Champagne
The Flest．The effects of the settlement of the Eustern question appear to be already felt at Toulon．Admiral Lasusse has received counter arders，and is not to go to the Levant；but Capt．Leray，it is stated，will proceed there with three ships，after having touched at Tupis． The squadran，commanded by Admiral Hugon，returmed to Toulon on the 14th linst．
Tasation in France．－The Monileur publisher the returns of the proceeds of the indirect taxes and revennes the 30 th Jan．，Feb，and Marcis ；and \(12 \mathrm{~s}, 525\) ． 000 u ．fur A pril，Mas． and Junc．As compared with the revenue daring the the corresponding period of 1839，there is an increase \(28,241,000 \mathrm{f}\) ．，and of \(8,273,000 \mathrm{f}\) ．over 1840．The items which exbibit the－greatest augrontation are，1，foreign sugara，the duties on which exceed those of 1840 by
 home－made sugar， \(1,400,000 f\) ；4，customs and navigation． 1,205, Anmi；； 5 ，public carriages，intomal navigation，\＆c．， marls，steam－packetis， \(1,100,000\) f，\＆e．The only articles in which tiere is a reduction are the duties on registra－ tions and mortgages，amounting to 1,579 ．nver：：those levied on the consumption of sing ir along the cuast， The laf．，on gunpowder ！b3．900r．，and cuonial sugar． The labe＂Injersal Machine．＂－Long details hase been given，from time to time，in the journals，of an
fernal machine，found on the person of an English artism， whose arrest and examination at Boulogne we noticed in
this paper at the time. It is now officialiy announced that the examinations have established the truth of his story, and that he bad gone openly to
Algeria.-Generals Bugeaud and Negrier have addressed to the Minister of War long reports of the operations in
Africa ; they are, however, of no interest to Englis Africa; they are, however, of no interest to Englisb earches to intercept the Arabs, who appear to succeed in escaping from the French dirisions whinle they hang upon their rear, causing them some loss in killed and sounded, Spain, - The press and the public mind are occupied hip question, the decision respecting which we briefly announced in our last Number, as communicated by the French telegraph. In the sitting of the Chamber on the 11 th inst., M. Arguelles thanked the assembly for the
mark of esteem which it had conferred upon him, by choosing him as Guardian of the Queen; but suggested a doubt as to the propriety of his continuing to discharge, the same time, the functions of Deputy and President of the Chamber. This question howerer, on being put to the vote, was decided in the affirmative, by a majority of
131 votes against 2. M. Arguelles then resumed the chair, and read to the assembly a message from the Senate, ratifying the decision relative to the guardianship, which both Houses had jointly adopted the preceding day. The debate on the budget was concluded, and it was 20th of the present month, and reassembled in October. In the sitting of the Senate on the 9th inst., the President of the Council brought in a bill, to the effect that Government be authorised to cede to Great Britain the Guinea, in consideration of a sum of 60,000 . sterling, offered by this country, conformable to a special convention to be signed by the plenipotentiaries appointed for that purpose by Her Catholic Majesty and Her Britannic Majesty, to be submitted to the Cortes after being ratified. The Presideat then proposed that the bill be referred to a
committee, which was agreed to. This cession was regarded by many at Madrid as establishing a dangerous precedent; for though these islands are admitted to be of but little value, a similar transfer of the Philippine or Balearic Islands, it was thought, might hereafter be demanded. It was surmised that the 60,0002 . consideration over to reimburse the British Legion; for the payment of whose claims a further instalment of \(30,000 \mathrm{l}\) was sent celoua report some disturbances which toounts from Bartown on the \(i\) th inst.; the operatives having dug up conisiscated merchandise. Order was eventually restored by the Captain-General and the municipality giving up the proposed auction.
Portugal.-We have received, by the usual weekly packet, news from Lisbon to the 12 th inst. The special he voluminous reports of the late Royal Commission and of the Government upon the financial state of the country and not yet presented the result of their iabours. The Commission had been presented for distribution; and, among other things, contain a statement of the amount of the Floating or Nion-Cunsolidated Debt, made up to the arrears of payments, old royal bonds, paper-money, Titulos issued on the national property, and passive debt of rarious descriptions, there is the large total of upwards of which the modified sum now proposed by the Commission obe capitalised amounts to 3000 contos. The expenses acurred by the steps taken to repel a Spanish insasion,
are shown to have been under 200 contos ( \(50,000 l\).\() , in-\) are shown to have been under 200 contos ( \(50,000 \%\) ), instead of 3000 , as stated by the opposition. The amount
of uncollected revenues of various hinds due to Govern. ment up to June, abating certain sums estimated as likely to be received during the present year, together with that Sc., is above 15,000 contos, or nearly four millions sterunlikely to be collected, is designed by the Commission to form the basis for the redemption of the floating debt.The accounts receired of the series of earthquakes whichdestroyed the town of Villa da Praia, in the island of Terceira, which we referred to in our last Number, state that 565 douses and several churches have been entirely destroyed, sterling. The Qiseen property was estimated at 300,000 . ample of a sabscription to the sufferers, which was going an at Lisbon, and in th is had It does not appear of reis for their immediate assistance. persons were injured in a rush to escape from charch during persons were injur
one of the shocks.
Grrmany. - Intelligence has been received from Vienna of the failare of two large banking-houses, Steiner and Co . and Gieymuller; the announcement of which had caused much sensation in that city, and produced a comemercial crisis. It was expected that Govermment would bsue Treasary bonds to the amount of \(5,000,000\) Horins, to relieve the merchants involved by these failures, which appear to bave had a serious effect upon the value of all other banking-houses were seriously compromised. The intended meeting between Prince Metternich and the King of Prussia mas not to take place, some obstacles having arisen, which, it was beliered, referred to religious mat-
ters. Subsequent accounts inform us that the Prince is
seriously indisposed, with an attack of intermitted fever -The Prussian Cabinet has announced to the Holy Se that it would not offcially acknowledge the nomipation o the Canon Yvan to the functions of Vicar-General of the diocese of Cologne, but that it would not oppose his ad ministration. It was, in consequence, believed that the
affair would be arranged. The Leipzig Gazette says that more than is apparent depends on the termination of
the quarrel between Rome and the Prussian Government The latter, in 1821 , established two Prussian Government churches and chapters, and siz suffragan bishops, with an pome of 200,000 dollars, Lands were to be bought and appied to this; but this has not yet been done, and a The Suabian Mercury, under date Breslau, the 9th inst., tates, that the spirit which animates the inhabitanits of that city is proved by the result of the late clections, where the sented by the municipality to the King. The predominant ish of the people is for a constitution, which has been manifested on every occasion. - We leara by intelligence received from Munich, that the Provincial Council uf Upper Bavaria has, according to a resolution adopted at the Order of the Jesuits ; and that the poduce again anxious expectation of the King's decision; which, however, it is thought, cannot be doubtful. The same acpermission to the Rev. Mr. Doyle, priest of a Roman Catholic congregation in London, who is at present at Munich, to collect subscriptions till the end of September, towards the erection of a Roman church in London, and has himself headed the list with a subscription of 1000 florins. - The Augsburg Gaxette gives the following acman railroads, and the gross receipts during the month of une. Vienna to Brunn, 22, 128 passenger ; receipts for passengers and goods, \(\$ 1,301\) florins. Munich to Augsburg, 25,037 passengers; receipts 26,565 florins. ManFurth, \(44, \dot{6} \ddagger \bar{i}\) passengers; receipts, \(\overline{5}, 213\) florins Desden, 50,249 gassers; receipts, 0,213 fiorins. Leipsic lars Dusseldorf to Elberfield, 31,724 passengers. Maw deburgh to Leipsic, 57,239 passengers. Berlin to Potsdam, 67,299 passengers.  o Raab: this road was opened as far as Baden in May nd on the 20th June to Neustadt. On the 27th Jun there were \(1 \overline{10}, 000\) passengers conveyed, and on the 24th, 0,010 . Lintz to Budweis (iu the month of May) 1,00 and 46,4344 quintals of goods. Presburg
the first of the railways in Hungary, numbe
from the 28 th September, 1840, to the 30th A pril, 1941, 25,132 ; receipts, 5,467 florias. The florin wo francs and a half.
rgau still remains open. In the interval of the session, Argau remained tranquil, bot the interval of the session, mishes of the Diet to compromise the quarrel witt the Catholics. The Diet finding nothing had been done, has insisted on its veto, declaring the suppression of the convents illegal; and the matter has again been agitated, on On motion for -guaranteeing the Argovian constitution. states, that the canton of Argau should be summoned to execute its decree, relative to the suppressed convents, mithout further delay.-At the sitting of the Diet on the Canton of Tesino upon the re-establishment of tranquillity was laid before the Vorort. The Council called upon the Forort to summon the Goveraments of Northern Italy to deliver over the accomplices of the insurrection, and to send
from the frontiers the individuals compromised, who had from the frontiers the individuals compromised, who had taken refage in their territory. It was decided by a large majority that the documents should be printed, and a com-
mission appointed to present a report and adopt the necessary measures. The nomination of the commission wa then proceeded with.
Holland.-Accounts from Amsterdam state that the late mission, with which the Pope's nuncio has been entruated to this court, and of the importance of which much notice had been taken by the journals, has compolitical and civil Tuality Datch cabinet grants perfect Catholics - and equaliy to the Protestants and Roman been settled to the satisfuction of both parties.
Ressil - The Pris Sto Gite
- the afternoon of the loth ult a violent hentions that in the afternood of the 10th ult., a violent hurricane commenced blowing st Moscow, which, in less thas a quarter of an hour, stripped the roofs oll 252 houses, and threw dhent a great number of climmeys. The roof of the great theatre was blown down into the street; and the Ridingschool, the Naval Hospital, and the Convent o the Epiphany suffered severely. The cross upon the catmedral was The amount of injury done had not yet been ascertained. Iralif.-Accounts from Naples, dated the 30th ult., mention that the British merchants interested in the sulphur question bad arrived in that city from Sicily to rethe cone indemnity awarded theno for losses sustained by ohocks of an earthquake, but without sustaining any damage; at Tarento, however, several houses were chrown down; but the inhabitants had time to escape without injury.-Letters from Leghora of the 8th inst.
disposal of the owners of the Pollux stemer two cut-down rigates and the engines necessary to undertake the salvage lately sunk b, wich, our readers will recollect, was steamer Montgibello. - The Augsbrerg Gazelts con tains advices from Naples, which state that a political con spiracy has been discovered there, the object of which was conspirators, it is said, were few, and of little infivence Bergivm.-Negotiations, it is said, are going on between M Guizot and King Leopold for a commercial
treaty between Fraice and Belgium, which, it appears, is not to be a mere cenvention limited to certain reciprocal concessions, but will estend to an actual treaty of com-
mercial union between the two countries. The Me morial de la Samlre, a Belgian paper, adds that it is proposed to suppress are the of castom-houses between Belgium and France: to transfer the French line Belgium, reserviog to France the administration of that portion of the custom-house service, and the exclusive to Belgium the whole amount of the customs duties received on her frontiers by these French officers, with an additional sum of money equivalent to one quarter of the
Grercb.-Letters from Athens, dated the 29th ult. explain the cause of M. Mevrocordato"s having resigned the task of forming a Ministry. This correspondence cordato was, that the Bavarians occupying office should be
 filled by Greeks. To this arrangement King Otho, after required that the responsibie Ministers shavordato next required that the responsibie Ministers should not be controlled by irresponsible advisers, who claim the merit
of every success, and constitute an intermediate power of every success, and constitute an intermediate power
betwenn the Ministers and the throne. The King consented to this arrangement, which was considered to be a great point gained. It was the appointment of Minister of War that caused M. Mavrocordato to decline office. this office should be filled by a Greet, and to this the King would not consent, upon which Marrocordato withdrem. it is also stated that the new ministry, headed by M. their programme, had resigned immediately.-A very serious accident occurred on the 29th ult in the harbour of he Pirwus, on board a French corvette. A large quantity of gunpowder, spread out to dry on deck, was accidentally
set fire to by a sailor who was playing with the lock of the life-buoy, when the whole esploded, carrying away the ronp, killing three men, and sesereiy wounding ten.
Turiey and Srria. - The last accounts from Constantinople refer to the lively satisfaction manifested by that the hatti-scherifulation on receipt of the intelligence Mehemet Ali. His Highness, to whom Rifaat Pacha hastened to communicate the despatches from Alexandria the day after their arrival, expressed his satisfaction at their contents, and repeatedly declared, that this affair being now settled, he would devote his attention entirely to the improvement of the interior alministration of the empire. The attention of the Council held on the 23rd at the Divan, and at which were present the body of the Ulemas and all the high fanctionaries of the state, was Said Muhib Effendi, relative to the submission of the Pacha; bat nothing was decided on that day relative to the amount of the tribute, upon which Mehemet Ali object of a special deliberation when Said Muhib Effendi, who was charged by the Pacha of Egypt to support his claims, should have returned to Constantinople, where he was shorty expected. A iresh issue of paper money, to the amount of 500,000 , had taken place. The plague attacked in the Lazaretto, and seven had died out carious.-Recent intelligence from Bulparia stated that the disturbances in that province were nearly appeased. The insurgents, who had retired into the mountains, daily presented themselves in small parties, to make their submission to the authorities, and the fer who persisted in their rebellion had left the country. The Government had given its agents in the country the instructions and powers necessary to enfect a prompt and comprete paciacation of thabitants who had suffered by the late events. Ismet Pacha, late Governor of Broussa, arrived at Constantinople on the Zoth, and was to lose no time in repairing It is stated that the Austrian Laternuncio lad a lung conference with Rifaut Bey at Constantinople on the 19th ult., in which the basis of a new hatit- scheriff was agreed Chriotion to the amelioracion of the coadition of the full mepala Were fully approved by that body. From subsequent advices received from Constantinople by way of Vienna, dated the 30th ult,, three days later than the intelligence brought by the Levant mail, we learn that the Ottoman Government expected that the disturbances, in Candia would soon be quelled, notwithstanding the assistance of the Greeks. who, it is said, had gone so far as to construct fire-ships at Syra to burn the Tarkish fleet, monstrance to King Otho. The three Patriarchs of the Greek, Armenian, and Jewish communities received on the 30th, from Rifaat Bey, Minister for Foreign Affairs, copies of the firman addressed to the new Governor of JeAugsturg Gazette and Austrian Oiserver confirm the inAugsiburg Gazette and Anstrian Oiserver confirm the in-
telligence, and official despatches have reached Paris, anouncing that the Porte, gieliding to the wishes of the Powers which signed the 1.th of July treaty, had granted to the Christians of Syria the concessions and guarantees that the order; of Givernment fur the disarmament of the Turkish population was being carried into effect. This measure, it appears, has been rendered necessary from the dispates between the Turke and che Caristians, two of the argument in a public café.
Candia. - The accounts from this island continue to be contradictory. The most recent news is said to be unfavourable for the insurgents, who have been unable to
withstand the numerous troops sent from Constantinople and Albsnia. They had retured to the mountains, and it is said that the Turks, being unable to follow them, had committed great excesses, by putting to the sword men, Tahir Pacha is said to have been wounded in a skirmish. The Greek Government is represented as affording every encouragement to the insurgents.
EGYpt.-Our news from Alexandria comes down to the 27 th ult. An amicetble arrangement was anticipated in respect to the tribute. Since the solem n proclamation, how-
ever, of the Sultan's hatti-scheriff, no change had taken place in the interior administration of the country, and the same aystem of commercial monopoly still continued in full force as before. The prohibition ngainst exporting flax seed had been extended to all the other productions of Egypt, and government spies had been sent into the prosell their crops to the merchants. The markets had been so badly supplied with provisions, that an absolute scarcity existed. The agriculturists were compelied to sell their stocks to the Government, and the latter supplied the merchants according to its caprice; the Pacha being of preedion that the time had not yet arrived Par ablabishing polise all he remerce, and being ded nor monopolise al the resources of the country in order to supply civil officers, which, it is said, amount to \(500,000,000\) piasters. Kianoil Effendi and Sxid Muhib Effendi, the Tuasters. Kiamoil cummasioners, left Alexandria on the erening of the 7 th for Constantmople. With the instalment of the tribate. The plague was rapidly decreasing, and the fleet and arsenal had been declared out of quarantine. The East India and China Association had sent an address to Mehemet Ali, which was presented on the 2uth ult., but Alexaadria were still in progress of being strengthened, and the Pichs himself assisted at the trial made on the \(22 d\) ult. of the guns in the new battery erected near the Lazaria from Malta. The tbject of his mission was to demand che surrender of the Syrian troops who were retained Egypt in the Pachas service, for which purpose he Waited upuu Boghos Ber, who in reply to his appl:cation attend to the matter, but that he would do so when he had attend to the matter, but that he would do so when he had arranged bis affairs with the Sultan. The same evening
Mehemet Ali despatched a courier to Cairo, with instrucMehemet Ali despatched a courier to Cairo, with instructhe 25 th a sulute of 21 guns annoanced his arrival at the palace. The fleet was decorated with colours, and fired a royal salate, and the Consale hoisted their flags in honour of the herr to the Pachalic.
Persia. - The Malla Times states that a letter, dated Trebisond, the 17 th ult., mentions the receipt of deapatches from Persia, to the effect that the Shah showed an anxiety to come to an arrangement with Great Britain. The evacuation of the fortress of Ghorian is also confirmed. There Anglo-Indian troops in Affighanistan. Subsequent accounts denved from letters datell Teheran announce as positive that the ternitory of Herat had been entirely evacuated by the Persian torces. agreeably to the desires of the British Cabinet. It was accordingly hoped that the dif-
ferences whica had arisen lately between Great Britain and Persia would now be satisfactorily adjusted.
United States. - The New York packet-ship \(0 x\) ford arrived at Liverpool on Wednesday, bringing papers
one day later than those by the last arrival. The news they contain, however, is altogether unimportant. A report had reached Philadeipha respecting the President
steam-ship, the particuiars of which will be found under our Metropolitan news. The Secretary of the Navy, to Whom was referred a resolution of the Senate of the I2th ult. requesting the Prestdent to canse to be communicated

The Houses of Parliament.-A number of workmen are at present engaged in making alterations in the Houses vanced upwards of ten feet into the body of the House, which, it is expected, will prove of great convenience, during the examination of witnesses. The chair of
the Sergeant-at-Arms has also been removed, and placed even with the bar, by which there will be several rows of seats for members at the back of the serjeant's chair. In
the passages of the House of Lords, various experiments are making, the object of which is to obtain, if possible, a regular heat and better ventilation.
The President Steam Ship.-By the arrival of the New we learket ship Oxford, at Liverpool, on Wednesday, wel learn that a report had reached Philadelphia to the effect, that the captain of a ship arrived from Trinidad wreck of a steamer, supposed to be burnt to the water's edge, which he considered to be the President; an opinion which appears to be coincided in by the New York and Philadelphia public. The account given by the captain states, that when ninety miles south of Cape Hatteras, at five A.s. of the 24 th proved to be that of a steam-boat; the middle part of the having borne down close to it, he could clearly discover some part of the heavy machinery, such as crank, shaft, \&cc. ; part of the frame of one wheel,and the timber of her guards, was out of water, and appeared as if a boiler had been thrown off; he conld see no white streaks, and she had very much the appearance of having been on fire; he saw no person, and therefore did not think it necessary to board the wreck; the weather at the time was pleasant, with light wind.
The Pier at Blackfriars Bridge.-At a Court of Aldermen, held on Wednesday, Sir P. Laurie said that he conthe dangerons condition call the attention of the Court to the dangerous condition of the temporary pier at Black-
friars-bridge, where a late accident occurred, which proved friars-bridge, where a late accident occurred, whe
fatal. Me said that he understood the inquest jury of the county had presented the subject to the Court of Conservancy, and he wished to know whether anything had been said, that hedy citor, who had instructions to apply to the parties particularly interested, to make the necessary arrangements nnisance He was justly considerei a great public of London to be summoned for the 12 th Aug. to inquire into the state of the pier. The result of this inquiry, it side of the bridge.

The new Percussion Shells.-On Monday, a detachment of the Royal Artillery attended in the marshes of Woolwich, to make further experiments with the percus-
sion shells invented by Mr. Wilkinson, sion shells invented by Mr. Wilkinson, Mr. Napier, and
Mr. Reece. In a former Number we gave the results of the last trial; on the present occasion they were as follows :-No. 1. A 32-pounder shell, invented by Mr. Wil-
kinson, struck the bulwark, and went through the second erection, exploding, and entering the earth of the butt immediately behind the object aimed at. No. 2. A 68pounder shell, invented by Mr. Napier. On the word of command being given and the hammer pulled, it missed fire. Mr. Reece's 32 -pounder shell was then fired, and was entered as No. 2. On this occasion the shell appeared to explode about eighty yards before it reached the bulwark, burst in the air; Mr. Reece and others, however, thought that it had grazed the ground before it exploded. No. 3. Mr . Napier's 68 -pounder shell, on being fired, struck the bulwark and exploded betwixt the two erections, scattering the fragments eastward and westward to an extent of
several hundred yards. No. 4. Mr. Wilkinson's struck the bulwark, went through both erections, and burst on entering the earth of the butt, after it had gone some depth. No. 5. Mr. Napier's struck the bulwark and went through both erections, and entered the earth of the butt, but did not burst. No. 6. Mr. Reece's gun, in compliance with his request. Was elevated considerably in its bulwark, exploding immediately afterwards, and scattering the fragments in the interior betwixt the two, tearing the woud to pieces and lidging deeply in the erection in the fear. No. . Mr. Wikinson's shell went through both shell went through the bulwark and exploded betwixt the erections. No. 9. Mr. Reece's shell exploded in the butt,
after having passed through both erections. No. 10 , Mr. Wilkinson's shell exploded almost immediately on emerging from the moath of the gun, the pieces spreading over an immense range, several fragmeuts having passed within about five or sis vaids of the spot where the officer and gunners, who attended to notice the effect of the shot, were standing. Tae distance was about 180 or 200 yards in front of the bulwark. No. 11. Mr. Napier's shell passed throagh both erections, and entered the earth of shells, did not fire at this round. This concluded the experiments with these remarkable projectiles for the pre-
sent, the resalt having been considered by the judges
present as very satisfactory. It appears that when the France, it was ascertained that under the most favourable circumstances not one in four exploded; but the result of the trials at Woolwich show that, under every eircum stance, the shells invented by Mr. Reece have exploded without failure, although they have been about cight months lying in the Royal Arsenal, the same period as
Mr. Napier's and Mr. Wilkinson's. Out of Mr. Napier's seven, five exploded ; and out of Mr. Wilkinson's seren three or four exploded, one being doubtful on the previou occasion.
Metropolitan Improvements.-A meeting of the ratepayers of the parish of St. Martin's-in-the-Fields, which was very numerously attended, has been held for the par ference to the proposed new street from Coventry-street to Long-acre, and to appoint a committee to "consider the for of the Marquis of Salisbury to the Swanclose estate for a portion of which his lordship has made a claim of
\(60,000 \%\) The details of the business entered into prin \(60,000 \%\). The details of the business entered into prim
cipally bore apon the high value which the noble marqui cipally bore apon the high value which the noble marquir
placed upon his land, contrasted with the small amount of rate which he paid ( \(166.10 s\). a-year). Cpon this ground the meeting determited to resist his lordship's demand; and a committee was appointed for the parpose. It appent pute value of the estate, the titce of which is now dis puted after a lapse of 200 years, is very considerable.
Shipping of the Port of London.-At the half-yearly general meeting of the proprietors of st. Katharine in connexion with British commerce and the shipping of the port of London, were detailed in the report read by the chairman. It appeared that the increase in the arrivals of shipping in these docks, compared with the re turns of the corresponding period of 1840 , amounted to
45 vessels, and 9,562 tons; viz.:- 11 vessels from the East Indies and the Mauritius, \(y\) ships of 4,290 tons from the West Indies, 8 of 989 tons from Siduey and Van Die men's Land, 6 vessels of 1,252 tons; from the outport of the United Kingdom, the increase was 3 vessels of \(4 ; 9\) tons. The great decrease was as regarded Spain, the decline being 7 vessels, but whose united tonnage was only 992 tons. The chief increase in the arrivals during the past six month had been from Sonth America. Th general business of the docks had increased, notwith standing the falling off in the China trade, in consequence The incressa in or our relations with that countr The increase in the quantity of goods in the company' to the end of June 1840. But though there had beea this increase in the amount of shipping as respectel these docks, it was ahown that, taking the returns for the whole port of London, there had been a decrease of 191 ships and 13,048 tons, which fell, however, entirely upon foreign vessels: for the British vessels entered had ill reased in number by 33 of 23,250 tons, during the siz orresponding period of last sear. The tared wink the St. Katharine Docks were, from the lst Jan. to the 30th June, 270 , and the tonnage 66,283 tons; of this number there were 8 vessels of \(1,96{ }^{6}\) tons from Russia 2 from Prussia, Germany, and Holland, of 145 tons; from Sidney and Van Diemen's Land of \(3,42 \cdot\) tons; \({ }^{1} 1\)
from the East Iudies and the Mauritius of 17,433 tons ; 20 from the West Indies of 3,328 tous; 32 from North America of 15,360 tons; 18 from South America 4,210 tons; 29 from Africa and the Cape of Good Hope of \(4,2.2\) tons; 50 from the Mediterranean of 7,633 tens 19 fron Spain of 2,272 tons; 15 from France of 2,59. tons; and 3 from the ports of the United Kingdom of 3,601 tons. Taking the port of London altogether, the Britis in the six months ending the juh July were 1,90 British vessels of 39,000 tons, and, 30 foreign
tons, or altogether 2,610 ships of 508,700 tons.

Wimbledon Common.-On Monday Mr. James Roberts, market-gardener, residing in the vicinity of this common, was charged "before the magistrate at Wandsworth, with
wiffully obstructing Ir. Dann, manorial constable, in the wilfully obstructing Mr. Dann, manorial constabie, in the mpounding of daty, and Mr. Elliot, depaty-keeper of Wimbledon-common and Putney-heath.under E arlSpencer, the lord of the manor of Wimbledon, said, that for a length fime Putney-heath, which is merely a portion bledon-common, had been infested with gipsies. the common, but that restriction had amounted to nothing at last, as the defendant, who went by the title of "King of Wimbledon-common." and was a great supporter of privileges, had allowed the gipsies to encamp upon a fiel turned their horses and donkeys out on the common. At court-leet held recently, it was decided that copyholders resident on the manor should have power to turn a portion of their cattle out upon the common, and that other per-
sons not copyholders might turn a horse, cow, or other nimal copyholders might turn a horse, cow. of the common, the money to be expended in draining snd level, however, in defiance these regulations, turned their cattle upon the common, as did defendant, who was not a copyholder, and refused to pay. On Sunday witness employed Mr. Dann and others to impound the cattle found on the common under he circumstances above mentioned, and they were in the ofi a doing so when the defendant interfered and drove af a horse belonging to him, which was amongst those going to the pound. He also used language calculated's deposition was to the same effect. The defendant ssid, he saw no reason why there shoald be any hindrance to
any person turning cattle upon the common. With respect to the charge, he paid 6d. per week for one of the horses they were driving; the other, an old one, he kept
at home, but on Sunday not being supplied with sufficient mater, he had gone in search of some over the common, the grass of which he could not eat off, as he was stiffnecked. He considered he did no harm in driving them home. The magistrate said that court-leet law would not justify him in convictivg the defendant for the offence mitted any assault, or that he had made use of abusive language, and he should therefore discharge him.

Apprehension of Cuiners. - Information having been receved by the police, that a party of coiners were in the purpose of manufacturing base coin, on Saturday afterpurpose of manuracturing base coin, on saturday atterseizing them. On their arrival, finding that the doors were fastened, they made a forcible entry, when they discorered a mand standing before a large fire in the wet of facturing coin. A large quantity of new counterfeit sixpences were lying on a table, and a female in the further part of the room was washing them. On seeing the officers, the man threw down the moulds, and jumping apon them, broke them to pieces; but the officers collected the frag ith spoons and other articles of Queen's metal, \&c. When about to take them into custody, they made a determined resistance, but were at length overpowered and conveged to the station house. They were afterwards tsken before the magistrates at Hatton-garden; but the offence and apprehension having taken place in the City, the case was referred to the City authorities, who remanded the prisoners for the parpose of secaring the sttendance f the authorities of the Mint
Robberies,-On Saturday a man named Lee was examined before the magistrate at Kensingtor, on a charge of having stolen a quantity of Strawberries, the property of Mr. T. Wells, market-gardener at Brook-green, Hammer-
smith. Mr. Wells stated, that on the gfternoon of the previous day, going accidentally to a portion of his ground, adjoining a brickfield, in which a large number of men and boys were employed, he was astonished at finding no less
than from 20 to 25 men and boys in his strawherry beds than from 20 to 25 men and boys in his strawberry beds, hard at work gathering them. On seeing complainant they all ran off in different directions, and the only one he could catch was the prisoner, whom he seized just as he jumped over the fence into Mr. Bird's field, with about a pottle of Strawwerries in his handkerchief. His hedges of the green fruit plucked. The number of men was, in his opinion, larger than the boys. The defendant said that into the field until told by one of the other men it was "all right," and he thonght the complainant had given them leave to take the Strawberries. Complainant denied that not likely he shouhd do so, sinee he lived by the produce of the ground. The brickmakers earned large wages in the sumwer, yet he had to pay poor-rates to keep them in the winter, and if not able to pay, his goods were liable to
be seized for their support. The magistrate said it was a wholesale system of robbery, and a most serious offence: and although it was defendant's first offence, it was his duty to inflict the highest penalty, which was, to senteace har to hard labour in the House of Correction for one was fashionably.-On Tuesday a man named Davis, who from a lady at Greenmich Hosnital with stealing a purse she was in the Painted Hall of the Hospital with her husband and children. The prisoner was near her, and she felt his hand at her pocket. Shortly afterwards she missed her purse containing silver, when she seized the prisoner, and accused him of the robbery. He made no reply. Mr. Norris
stated that he secured the prisoner, whom he saw throw a handlerchief and the purse in a corner as he was leaving the hall. The person in attendance at the hall also stated that be saw the prisoner throw away the purse, which he picked up. The prisoner, who declined making any deAccidents. - On Mitted for trial.
Accidents.-On Monday afternoon, a melancholy accicurred at Westminster-bridge the loss of three lives, ocman, of the name of Harbour, residing in the neighbont hood of Croydon, was married on Sunday, and on the following day, in company with five friends, took a boat at Hungerford-market, witin a view of having a row up the nagement of the return, however, through the bad maof the piers and instantly split in her, three, including the young man hiraself, were of Mr. He On Tuesday night, several men in the empioy of Mr. Harland, farmer, of Hendon, after their day's premises, for the an outhouse attached to their master premises, for the purpose of having some beer and smoking their pipes. Some time afterwards, one of the domestics observed smoke issue from the shed, which was vented from extending, By timely exertion it was preVented from extending, and when got under three men
were found on the ground with theirclothing and persons were found on the ground with their clothing and persons them, and it was evident they had fillen saleep lying near thena had his right arm nearly burnt off, the other two Were scorched severely.
Forkshire Stingoturday morning, a fire broke out in the the alarm, and the inmates weread. A policeman gave plentiful, supply of water, wad the trimel. Owing to the engines, it was soon subdued, but not before the inside of
the house was much burnt and the whole of the house-
hold furniture destroyed. In the afternoon of the same day, a fire broke out in some new hayricks, belonging to Mr. Egerton, Southend, Bromley. Erery exertion the adjoining fields, to subdue it; but, in consequence of the want of water, the fire spread considerably, communicating with three other ricks, and destroying a grea deal of property before it was ultimately got under. The quite green.-On Tuesday morning, a serious fire broke out in the residence of Mr. Farebrother, Kingsland-road. It was discovered by a policeman, who gave an alarm, and he family effected their escape from the top of the house Ahough there were several engines soon on the spot and posible supply of water was obtained, it was found im The adjoining houses, bowever, were saved withoat sustaining much damage. The caase of the fire is not known the place appearing perfectly safe when the family retire to rest.-On the same day, Marshall's Kineorama, in
Pall-mall, had nearly fallen a sacrifice to fire. It appears that, for the purpose of exhibiting the views in the most effective manner, a framework covered with canvas forms the outer portion of the exhibition, and the scenes being placed in the background, a strong light is necessary to produce the desired effect. At the apper portion of the framework was some oiled silk drapery, for the purpose of throwing a strong reflection on the paintings. By some accident, whilst lighting the gas, the taper caught the oiled framemork, and in an instant, the front of the was soon got under, without doing any considerable da-mage.-On Wednesday morning, a serious fire took place mage. - On Wednesday morning, a serious fire took place for some hours, threatened the destruction of six exten sive hayricks. The loss sustained is estimated at about 100\%. The fire was occasioned by the heating of new hay. premises in High-street, Chatham, belonging to Mr. Kilvinton, coal-merchant, and in about a quarter of an hour the whole of the warehouse, containing 40 tons of coal, adjoining houses soon fell a prey to the flames, although the military of the garrison were speedily on the spot, and rendered efficient service. The loss of property is stated to be very great. - On Thursday morning a fire was discovered by the police in the lower part of the Greyhound public-house, Brick-street, Piccadilly, which, however, was got under without causing any serious damage. Its origin was subsequently discovered to be from a pipe of lighted tobacco being left on a chair near the wainscoting gines stationed in the City were called out to a large fire gines stationed in the City were called out to a large fire the laboratory of Messsr. Atkinson and Co., chemists and druggists, in that street. The damage done, how-

Barnard Castle. Within the last few days the inhabitants of this place have been thrown into a state of considerable excitement, by the discovery of a murder com mitted in the neighbourhood. The name of the deceased wat Chapelow, a farm-servant, in the employment of Mr . Hunter, of Pecknal. It appears, that he was at the house of Mr. Straker, on Sunday evening, and that he left about
eleven in company with a man named Dent. He proeleven in company with a mon named Dent. He pro-
ceeded along Bridgegate, on his road home, and was afterwards found in a yard about twenty minutes after he had left the house. He had received several kicks on his
body, and was severely bruised, but life was not extinct. He was conveyed home, where he lingered in a state of in sensibility until Monday, when he died without being able to give any clue to the perpetrators of the deed. Dent, and two other men, have been apprehended on suspicion of being concerned in the affair.
Billinghurst.-A few days since, a singular accident occurred in the family of Mr. Aylward, of the King's Head Inn, in this place. It appears that the barn being infested with rats, a rat-catcher was employed to ferre the shrieks of the nome time the family were alarmed by months old. She had left the child sleeping in an upper room, and on her return was alarmed by seeing a ferret which had fixed itself on one of the child'stemp.es. The nurse seized the animal, and with great difficulty forced it
to relinquish its hold; it, however, bit her several times severely before assistance arrived, and struggled to get back to the infant, who would, it is thought, have been killed but for the timety arrival of the nurse.
Boreham.-The late thunder-storm, of the 1 5th inst., which was so severely felt in other parts of the country, has occasioned considerable destruction of property, de., of humounty of Essex, though unattended with any loss At Bull's Lodge Farm sery sererely felt at this place. a stable, were struck by lightning, and killed on the spor: no marks of the electric fluid were visible on them, nor did the buildings or any other stock in the yard sustain the least injury. A thatched barn at Brook's Farm was also outbuiidins orif fre, and a barn, two stables, and othe sumed before the fire could be subjued. The dwelling bouse mas situated in an opposite direction, or it is thought estimated at about jool. At Coggestill, the thumager and lightaing were very severe, and an elm tree, near the Tre electric fivid struck the buildings of Mr . Blyth, at

Thorpe, and though every assistance was rendered by the neighbours, the barn, stabling, and sheds were destroyed. The damage done amounted to between six and seven and shivered to splinters, and portions of it carried a dis tance of forty yards.

Braintree.-A vestry meeting of the parishioners of chu phace has been held, pursuant to a notice given by the Eccleswardens, in accordance with a monition from the ing them and defraying the necessary expenses for the decent celebration of divine service. A rate of two shillings in the pound was proposed, which, it was stated, was absolutely necessary to effeet the repairs of the church, the expense amount to not less than \(713 l\)., together with 20l. auditional for incidental outlays. An amendment was then moved to the effect, cthat all compulsory payments, fo rere unsanctioned by any portion of the New Testament, and opposed to the spirit of religion; and that compul sory church-rates, and more especially such rates upon Dissenters, appearing to be a most unjust tar, and an ec vestry feels bound to refuse such a rate," The chairma then put the amendment, and declared it carried by a large majority. One of the churchwardens then stated that it became the duty of the churchwardens, and those ho were willing to obey the monition of the Bishop of London, themselves to make a rate, the validity of Which would be tried hereatter. He would therefore submit to ing been carried in opposition to the proposed rate, rate has been made by that vestry meeting. The rate of wo shillings in the pound was then made by the cluurehwardens, and signed by them and the vicar and several of the parishioners. A protest was entered on the minutebook by the opposite party, and the meeting separated.
Chellenham.-An extensive robbery has been committed in the rooms occupied by Sir W. Cotton, in one of the hotels of this town. The property stolen consists of several orders and military decorations, including the Grand Cross of the Bath, and four others, all richly set in diamonds and other preciots stones; also a purse, containing upwards of 601 . in gold and notes, a bill of ex-
change, and several other documents and articles of considerable value-all of which were de;:osited in the sittingroom immediately adjoining the bedchamber in wieh sic Willoughby slept. The box containing the orders, \&c., in the Bath road, but had been completely rified of its on suspicion, but sufficient evidence has not been brought against them to warrant their committal. On the same night, and it is supposed by the same parties, the rooms hotel, W. Pole, who occupied apartments in the same broken open : but and a dressing-case of Lady Pole' it contained several articles was removed from it, although it is thought, were disturbed before they could secure any farther booty

Colchester.-A few days since, a boy named Abbott, 13 years of age, effected an entrunce at the roof of St. Marand in stepping betwown, in search of young jackdaws, and in stepping between the joists of the ceiling the lath and plaster gave way, and he fell a depth of upwards of 40 other boys, who were in the churchyard, holding the lat der by which he had ascended, fall. About four hours after, two men were surprised to see the boy come out of one of the charch windows; and of what had happened, that he had fallen asleep in the charch, and had lain in the aisle in a state of insensibility not not nowing what imminent peril he had been placed im. Darfford has were fractured, \({ }^{2}\). other parts of the country, was visited with a heary thunderstorm on Thursday the 15 th inst, which continued for several hours, attended with a great deal of hail. The lightning set fire to a large strubble stack at Darenth Coat lodge, the farm of Mr. Chapman. The fire at one time wut alarming, as the barns and lodges adjoincod the stack, under hill amal on lue for iple got under without doing any further damage. The lightning also set fire to a granary belwning to Mr. Armstrong, of
Southfeet, and destroyed the building and its contents.
Dover. -The journals of this town state that the late heavy rains have been very detrimental to the hay harvest crop neighbourhood; but that the wheat and barley haviug stood up exceedingly weli against the high wind and heavy rains. Dry and warm weather is, however, much manted. Of the Hops no general complaint has been made: and it is therefore inferred that they are in a promising condition.-The same papers state that, in bourer, while driving a cart at Warehoro, in the Weald of Kent, was struck by lightaing, and killed on the spor. occasion scarcely, since the city has become a port, has there been such a general depression of trade as has existed stems suspended, and, though in the midst of summer, there are larger numbers of persone out of employment than o ioland navigation. Tradesmen complain that their shops are unvisited by contomens, and their wares cannot
be disposed of; thilst numbers of children are kept from the Brinsh and other schoos, and left in idleness about the streets, hecaum their paren's cann \(t\) afford
small weekly sum charged for their e ducation.
Hereford.-- Whm thast four days. Forkmen have been emploged in erecting strong barricades at the avemues of preventing any person from promenading on the gravelwalks adjacent; and the dean has issued a circolar,
cautioning the prblic mat to walk rear the bulding. as cautioning the priblic nut to walk near the huading. as coveries made a short time since by Mr. Costingham, and noticed in our paper at the tani. It appenes that the danger is now consedereni so inminent, that the organ has
been taken down, leat it should be crushed beneaith ti.e ruins, in the event of the tower falling. It is stated that the restoration of this fine edifice will cost upwardis of 10,000.
Hertford.-Preparations upon an extensive scalle are making for the reve! tim of her Nyecty and bis Royal Conper, where they are expecel to mrive on the 29th through which the Royal provestion will pass to tesufy their lovalry and attachment to the Sovereign. A meet-
ing of the ininabitants of this town was held in the Stire ing of the ininhatants of this town was held in the Shire
Hall on Wednesday. to adont the necevary means for Hall on Wednesday, to ahthyt the neicerary means urer neighbourhond. Addresses were carried from the corporation and twhabitants generally, expressive of their feel-
ings of lovalis and attachment, and a committee formed to ascertain in what mode it will pleace her Majesty to receive them, and for the purpose of tuhing other measures of testifyng ther joy upos the oceasion.
Liverpnol.- It is stated, that Gorernment has, on the recommendation of ser W. Colehrook, the rece:ttly aptract for the running a steam-packet weekly from this port to Halitax, and bark. duning eight months of the year; a
measure which is thought to be of the lighest importance measure which is thonght to be of the lighest importance to the British provinces of North America. A local paper
states, that thele lias been uninterrupted fine weatber in this neighbourhood since St. Sw: hin's Day. althougli there was a deluge of rain on that ominnus anniversary. Ia consequence. a large quantity of har has been securen, and the weather, it is thought, will (h) mate to secure a fair, if not an abundant, harvest
Manchenter.-The Joint Stwek Bon's of this town, Which for some tine yast lias been the only one of tais solution to withidtan its rintes payahle to hearer on demand, and to cease uny fartere issues. This h.mis was extablished in the year 182s, and commenced its issues shortly after-
wards, and having gusen the prociple a fair trial, and finding that a circulatom of loeal noress is nhieerionable in that county, its direcrors have at luanth devided to discontinue England only. In sinequar cantrats \(t\) ) the weat Ber expe rienced at liverpool and its n-ighourhod, and showing how impossible it is to juldee of the weather in this ewuntry from any mere lucal ixprerience, it appear- that not ? day
has passed in thrs town since st. Snithin's -and indeed, acarcely ose since the lah June, when the weather ferst broke - wituuat liaty rain.
Margate. - On Sianly it blew a gale from the northeast, and a great number of ressels in the Channel were put to constderacie inconstuieace, and compelied to go large snips. for several hours in considerat? dancer from the furs of the wind. The storm was aceompanied with heave stowers of rain. Two steamers, whichleft Lomiten in the morning for this piace, were unable to put ia here; the danger of going alongside the jettr, in consequence of the intrin wiad and heary sea, appearng so great that they sturd out
for Ramsyate, where they succeeded in landing their past sengers. The growing crops in the neighbourhood of this town and Ramarste arpear to have sufferen much from the late beavy showers, and mmy fields of Wheat are laid by the wind and rain. The prospeets or the farneer, it is stated, begin to wear a cloomy aspect, and fair weather is much wanted to ripen the Corm, which in sume places is very backward.
Monmouth.-On the evening of Thursday the 1.5 th instant, this town and n:ighbourhmon were Fisited by a very heavy storn of thunder and hehtning, aceompanied ground for of rain and hat: the later remaining on the
gromer the stormi wie om. A large oak tree, situated on Troy Farm, wiss struck hy the electric fluid, and the baik spht int shrecti' t. fragmenta: and two sheen. which wetr lyang near it, wee lethod oa: the spot.
Portsmoth- - prians hare iar suas that part been proceeding here aith ennsiderajle succases, for the remoral of the wreex of the \(B\) some. wheh shet, it wail be re memberent, Was loat of thrs harbour. by fire, diring the late war. On were lawered into the considerable effeet by Drniet's iafrert. The diver fisith the spot on the following day, and the wortmen were a machue constructed toring what they eould by means of mud was removed, and considerable quantities vi tumber and irca work were brought up. But the most curious tining recoverad on thas ucension was an ornanyented brass feet in extreme in Swedish :-" Wita God's help, by King Cbartes XII taken at the battie of Ciltzow, 9th July, 1702." It is con. idered to be a singular coincidence, that this gan shoudd
thris be recnrered on the anniversary of the das on which Charles NII. took it from the Poles. In addition to the
abouse insmintion, it has also a shield bearing on it two abure insuintion, it has also a shield bearing on it two
smomen cize-2. Tinis cannon is supnosed to have been brought by the Bogue from Guadaloupe, as she had in her n:any trophies from that island when she was burnt. The oferation on the wreck are still procectinc.
Ry:-Market.-A melancholy accident occurr d in this phee on Monitay, whereby three children lost their lives. Abrut ore n'clock the Red Rover coach, from Ludlom, st pped at the Falcon Inn, while a waggon was coming in the opposte direction, heavily loaded. A fers yards before rwehne the conch, the horses started into a galloy,
and the struet bring very narrow, drew the mazgon on to the cussenta. where there were a number of children, some a whom were dragged into the honses, bat three of them, Uue was hill d on the spot, and the other tiro survived only two l. atis.
-On Saturday, a general meeting of the -hiveraers of this town was held at the Ewhange Build-cuil-trade. There was a numerous and respectable attendance, and several gentlemen addressed the meeting, stating that the shipowners now only realised from 5 s. fis. per \(t n n\) fir conveving coals to the London market penses of the vessel, without any reference to insurance or prosit. In order to remedy this state of things, it was proposerl, either that the price of the best conal shonald be at a fixed rate, or the sale restricted until October. A coalowner, who was present, suggested that a committee fhip whers sloull be appored to meet a committee lieries were worked at a certain loss, and mas contident that a larger supply of cuals had not been sent to the London n? 2 rket than it required, or than was conveyed in the same time last year. He was, therefore, unable to suggest remedy fer the evinunder which the coalowners and ship dresselt the meeting strongly urged that the coals were kept at too high a price, and that it was the duty of the conlowners to reduce them. In answer to an observation that any reduction in the north would be accompanied by
a corresnonding reduction in the south, it was represented a corresponding reduction in the south, it was represented that if this were the case, there would be an increased consumpi \(n\). which would, at least, be of some benefit to the shppowners. It was then resolved, without opposition, in tead of making remunerating profits, are suffering a certain loss, which will shortly affiet the shipowners to a very seriows, it not ruinous, extent; and it being the opinion of the meeting, that not less than Fs. 1id. per ton freight to I. ndon, from the present time to the list Oct., will afford shipowners to refrain from loadins unless that amount is otained. It was also resolvel, that a deputation from the meetins fiould wait upon the coalowners for the pur-
pose of confering nith them, with the riem to relieve the depressed state of the trade.
IV atweseld.-On Sunday, a serious fire occurred near preperty wis which several thousand pounds' worth of worsted aills in the viltage of Horburr, about five miles from this place. The eagines attached to the village were quickly on the spot, but all attempts to check the progress of the flames were unavailing, and in the course of an hour and a balf the roof gave way, and the entire premises isere de-troyed. The luss is stated to be considerable. It has been aseertained that the fire originated in spontaneous
combustima amongit a quantity of cotton waste, that had collected on the third story of the mills.

IT ateringhery. - A loeal paper states that on Thursday, the 13th mint. this neighbourhood was visited by one of the most severe thunder-storms that have been experienced for yatio, continuing four or five liours with searcely any cessaion. The lightning was extremely vivid, and a bara in and other farm huildinys completely destroyed 10 barns account s'ates that the Hops have grown rapidly within the last fortnight, and have a very healthy appearance. There are several pieces of slack bine: and the Corn of all descrptims promises a good crop. The Hay harvest is chiefly tinished, and has been most abundant, and generaily well secured. The Rowens have grown luxuriantly since the heary rains, which, it is hoped, will tend to lower the present high prices of ayrienlturat produce.
Hestor. - I few days since, some thieres effected an entrance through a thick stome wall into the house of Mr. Petterson, of this phace. Their parpose appeared to have two large blitideons and a knife \({ }^{\cdot}\). which in their bumy eseape, they were obliged to leare behind them, together wih a luder which they had taken from an atjuining fieh. It seems that a don belonging to a neizhbour of Mr. Petrerson gave the alarm, and the omener of it callins out, the thires supposed that they liad been detected in offered br the tra ran of. A reward of 10. has been olfered by the Weston Gudardian Society for their apprehensin, pat it tas not yet been effectual.

Trymonform, - 1 murder was committed, on Saturday. between :his place and Hethersets. It aypears, that a pnot gint, whase nams is not known, and who was weeding in a fied by Wymondham-common, on that day, was assaulted by a yung man in the neighbourhood, who, with a knife which she carried about her person, cut her throat, and then dragged her through the corn to a pond. Not retimeing thome at night, she was missed, and a search being mata
picion having fallen on the young man. he was appre jury found a rerdict of "Wiltal nurder" against him ; whe he was fully committed to Jorwich ('astle to take his trial der of Mr . Cocker, of K naresborough, an acconnt of mury appeared in this paper at tho time, came on at the sasict in this city, on Monday. The court was greatly crowded pricipaly hy irlasitants from Knareshorough, where the greater than has beell known since the time of E bee am. The prisomers, whose mames are, Burlinsnn, Gill and cuttall, are all voung men, scarce! above 20 rears are. The crunsel for the rrosscuting liaring brieffy de
tailed the nature of the exidence that the jury, sereral witnesse; were ersminad, whore testimnn c.e.rity estoblished the guit of the rrisonors. It afterward appurel, that they had all confessed being concerned in
the murder, but each prisoner denied that he was the son who committed it.. After the evidence had been concluder, Mr. Justice Wightman summed up, and went in detail throngh every portion of the evidence. There wa would redice the offence in proved in the case which slanghter. If the jury saw anythine in the eridence mian they thought would justify them in inferring such circumstances, it was no doubt open to them to give such a ver dict; but if they did not, it was their bounden duty

Tue jary returned a verdict "guilty of morder" ag ainst all the prisoners. His Lordship then addreseed a
few impressive sentences to the prisoners, and left them, witl.nut knpe, for execution
Railuays--On Monday, two trains of empty maggons crme in collision on the Taff Vale Railway, near Maes mawr, by whisth wae of the engine-drivers was killed o the spor. No other person was injured, and the cause of the accident dnes not appear to have had any retation what ever to the safety of the passenger trains.-The half-yearl meeting of the proprietors of the London and Greenwic Railway has recently taken place. The report stated that the nen capital mould be found sufficient for the object contemplated. that instalments to the amount 92,3081 , had fallen due, of which 84,0721 . had been paid leaving 8,236 l. in arrear; and that the directors would \(r\) quire a futher sum of \(50,900 l\), but woutd defer the issuing of further shares for that purpose until the Brichton Rail-
way was thoronghly opened. The erection of are uniform brilling as a juint station for tie Crosdon, \(\bar{B}\) ightom, an Daver Railmass, would cost considerably less than the \(60,010 \mathrm{ml}\). raised for that construction. The gross receipt enual tor that of \(18 \pm 0\), heing \(26,46, \%\). \(1 \%\). 9 d , agains \(\because \frac{1}{5} 121!\). 11s. \(7!\) !, or \(6 \frac{2}{2} ?\). 13s. Ind. less, which was entirely cwing to the comparative emproduetiveness of th \(926 l, 3 \approx, 3 d\). less than in 1510 . The Sunday traftic showed a divinution 2-61 10: 6d. but the weehly traffie shoned incuease of 5 thy is ild. It having bren found nec:ssary to cluse the fontpath during the progress of the quence. The Directors had reduced the c:rrent expense ahout 1,400l. compared nitis the half-year of 18.41 , and the resulr of their proceedings showed a net profit
3,443 . 8 s . Sd., to which was to be added a reserve of fi51. 14s, -dd. The report advised the discontinuance of the secnnd-class carrioges, and a reduction of the shilling fares to ninepence, and the eirhtpenny fares to sixpence and, in cmolusion, recommender a dividend of 4s. A ro in a dividend passed adopting the report, and declating a dividend or tondon and Blackwall Raeting of pro been held for the purnose of considering the proposal of the directors for raising a further sum of muney for the purpose of discharging the liabilities of the company, and completing the railway to the City terminus. After a loog discussion between the proprietors and board of directors apon the necessity of raising the money, and the prospecta of the railmar, a resolution was passed unanimously for raising a forther sum of \(200,00 \mathrm{~m}\). for estending the moris Fenchurch-street, and setthg thabite 8. 6 s . 8 sue of new shares to that amount, at the rese proprietors in proportion to the number they poisessed. It appeared that the extension line would be opened by Wed nesdar the 29 th inst., and that the receips ath
 the receipts were \(32,6 n, \ldots\), and the number of passincipal
\(1.818,(14)(4)\). The following are the receipts of prine railways in operation for the last week:- London and Birmingham, 17.4.3\%. ; Greensich, 926t. 15s. 6d.; Birmingham and Derby, 1,25\%. 17s. 3u. : South Western, B.3n...as. 3. ; Northern and Eastern. Yland Countres, 2,9301 : Noth Midland, 4,4067, 9s. 10d. : Hull and Sel br, \(814!\). 13s. 14.; Manchester and Birminghan, 3237.; and Biack of Enyland, 1,4422. 1/s. fic.; and is made by the Great iVestern Railway.

Dulinn,-The marriage of his Excellency the Lord Lieatenant, which was postponed sowe short Fortescue. sill be ceintarel on \(H\) anday, at the Ticeregal Lodge.
Kerry. - Twa gentlemen named Mr. Mr: imeeny and Mr. Fitzgerald, friends of the opposing candidates for this county, were bound over to keep the peace on Eriday While preparing to take the field near Glin, county the election.

Whexford.-A local paper states, that as a clergyiman of this docese, accompaneorhood of Enniscorthy on Saturhome from the neighe violently assaulted, white passing through Taghmon, by a mob, which had been chairing
Mr. Hawkshaw. The elder lady was struek on the head Mr. Hawkshaw. The elder lady was struck on the head and neck by several stones, and, it is said, is suffering younger lady received a serious blow on the hip, and the driver was struck severcle on the side by a large stone,
which was hurled at the clergyman's head by one of the whob, but fortunately missed him. Two of them haring then in rain endearoured to seize the horse's head, one from the car: the speed, however, at which the horse was diven, combined with her own resistance, defeated this attemp

\section*{injury.
Waterford. - On Saturday the Mayor attended the} Court, in order to give an opportunity of bailing Mr. Morgan, who has been in prison since the 8 th inst., on
which evening he fired out apon a crowd that was rioting Which evening he fired out apon a crowd that was rioting which we gave in a previous Number. A solicitor, who attended on his behalf, said that he thought it would be better that he should remain in pris in until the assizes,
which were now near at hand; as information had reached his famity of such a nature that they considered his life might be endangered if he were now enlarged; and, besides, it might not be an easy matter to procure persons just now to become bail for him. The Mayor said, that if the prisoner did not wish to be bailed out, there was an end the solicitor had conducted the case. His Worship further stated, that he had made it a point that morning to visit the children wounded. They were all doing well, and three or four of them were to be discharged that day. Even with respeet to the girl who was the most seriously injured, the accounts were now favourable here was some hope she might recover her sight.
Leiirim. - The Dublin papers state, that accounts from the West of Ireland represent the state of the Potato crop
to be very unpropitions; in many places they have come up thin in the ground, whilst in other districts the vege tation has been too rapid. On the whole, the appearances
in this and some of the neighbouring counties is very dis. heartening. Among the black cattle the distemper still continues, and in some districts with increased fatality. heighhourhood were visited with a fall of rain on Thursday the 15 th inst., which, for intensity and duration, has nol rents for hours, and was accompanied with several loud peals of thunder. The following day, however, brought fine and
mise well.

\section*{SCOTLAND.}

Edinburgh. - From the prevalence of easterly and westerly winds, the weather in this neighbourkood has for tended with heavy falls of rain. Vegetations, although benefited by the rain after the long and severe drought, is beneefited by the rain after the long and severe drought, is
injured by the cold; and where the Wheat is in flower, some nneasiness is felt from the effects of the cold and rain on it. The Hay-making has been much retarded, and in some cases injarted from the same cause; and its value has been still further deteriorated by unpropitious weather.
Leith. The Edinburgh Observer states, that conniderable excitement at present prevails in this town in conee quence of renorts that her Majesty's Advocate, Mr these burghis, in expectation of being elevated to the bench, as it is thought that Lord Jeffrey will resigh, on account of his recent serions indisposition
Glasgov.-In connexion with the late forgeries com ferred to in several previous Numbers, a local paper says that a letter has been received from Marseilles, in which to the to the authorities of that city, stating that the prisoner would be given up, on security being granted that he would
be removed from France. - The Argus states that a letter was receired on Tuesday from Mr. Dickens, in answer to the invitation to accept of a public dinner from the citizens of this town, in which he expresses his regret that, in consequence of his presence being required immediately in London, be cannot at present receive the tribute of
respect intended for him. He at the same time states, that he will probably be in Glasgow in the months of September or October, when he will be happy to comply with the request, should this arrangement meet the wishes of the gentlemen from whom it proceeded.
Dunbar.-The Caledonian Mercury states, that the herring-fishery at this place is fairly begun, under very although rather stormy for the season, several boats went of both from this place and the Cove, and several delivered froh 1,000 to 1,200 fish. Next week all the boats from these two places will be ready, and it is expected that a considerable accession will then be maule from the
apper ports of the Frith. Fife. The local papers state, that the weuther diring the past week has been both colld and wett. Rain has fallen in great abuadance, and the ground is completely soaked with water. In the intervals between the heavy showers the air was close and warm, and the appearance Without any discharge of the electric fluid. The crops in the naighbourbood are a little laid with the heavy sufin.
this county the weather still continues rainy to excess and in many places wheat and other grains of rank growth are laid to some extent. It adds, that there is still no appearance of more settled weather.
Ayrshire- - A local paper informs us, that during the past three weeks the weather in this county has beth
rather changeable, but, on the whole, favourable to the country. It has been productive of no very bad results, with the exception of the Hay harvest, which has, in some early districts, beem partially retarded. Hay cutting has
only during the last fortnight become general, and the neather has not been thon far unfavourable to its progress. Every species of crop presents the appearamee of grea plenty; and Oats, in particular, are expected to be considerably above an average. Wheat also bears out the the latter end of spring. Potatoes are now conside red secure from all injury, and sanguine hopes are entertained of an abundant supply. Although the Turnip braird in prevailed during the months of May and June, yet the prospects generally apparent give indication of a full crop. Prom the cause above mentioned, those that were sown early are not likely to do so well as the later crop; which,
now that all fears from the ravages of the fly are removed, now that all fears from the ravag
holds out the promise of plenty.
Dunboe.-A distressing accident, accompanied by loss of life, has recently occurred at this place. A fishing-boat, in returning to land, was upset in the breakers, and all on board perished, in sight of their wives and relatives, who were on the shore at the time. By this secídent it appears that fout widows, sixtech orphans, and an aged parent have been deprived of their means of support.
Hawick.-Great rejoicinjs have taken place in this Tuesday of the constquence of the celebration. on Fanny Elliot, second daughter of the Earl of Minto. The ceremo Lord and his bride started for Bowhill, the seat of the Lord and his bride started for Bowhill, the seat of the purpose residing thtil the second week in the ensuing month.

\section*{28 to 1 agat Robert de Gorkem (taken)}

\section*{fllistellaneous.}

Changes in the Solar Spots.-A correspondent of the Dundee Advertiser states, that "it has been lately noticed that two large clusters of spots were traversing the sun's disc, and that a third cluster had appeared on the morning of the 23 d ult. On the morning of the 27 th , one of the two former clasters had entirely disappeared, though it had scarcely arrived at the middle of the disce. It consisted of one pretty large and five smaller spots. This change, it is thought, must have taken place daring the 2.th and 26 th uit. Some of the small spots in the thir cluster, also, have since disappeared. The large spot onnected with the other cluster, which appeared with compact dark nucleus, and which was reckoned to be nearly the size of the earth, has since that time been diided into two parts, with a bright space between them and they are both included within one regular penuwbra. These changes, accomplished in so short a time in manse of matter larger than the whole extent of the terraqueou globe, indicabe that vast changes are constantly going forward, either in the solid body of the sun, or in hil uminous atmosphere, and that powerful agents, far sur passing what we can now conceive, are in incessant ope ation to produce so astonishing effects. Perhaps the overwhelming of America by the Atlantic Ocean, or the violent distuption of Africa from the continent of Asia, woukd not exhibit phenowena more wonderful than the sudten disappearance of some of the larte solar spots.
Conmarce and Navigation of the Criter stales From the annual statement of the commerce and naviga ion of the United States, it appears that the imports durima the jear 1810 amounted to 107 , 141,519 dollars nd the exports to \(132,085,946\) dollare. Of the export 13,895,634 dollars were domestic articles, and 18 , 190,312 dollars foreign articles. Of the domestie artictes 2,030,898 dollars were exported in American vessels and \(21,864,736\) dollars in foreign vesselso The registered
tonnage for the year was 899,764 tons, enrolfed and licensed 1,156,694 tons, fishing vessels 104,304 tons, whaling versels \(1: 6,920\) tons. The total tonnage of shipping built in the 1810 , amounted to 118,309 tons, of which 36,121 were re-

Sugar in the United States.-The Newbury-port FFerald saya, the quantity of sugar made in Loxisiana in 1839 hhlls. ; in Tennessee, 6,989 hhds. ; in New Hampotire, 1.097 hhds. : in Massachasetts, 579 hhds. in Mrine, 238 hhde - in Pennaylvania, 1556 hhds. in Virginia 1,530 bhds - in Vermont, 221 . in IHinofs, 2520
Ancient Coins. - The French papers amnource that her Majesty has sent as a present to King Louis-Philippe portion of the 7,000 ancient piecas of coin which were are of later date than 910 , and of which nearly 3.000 were are of later date than 910 , and of which neariy 3,000 were of the Anglo-saroa era. He pieces sent, which are 19 of Cimber, are of silver coin, and awong them are the Clarlethagne, one of Louis-le-Debonnaire, with the ferent toms with oth ef Lovis II Cartoman, Eudes, Cbarles the Simple, Beranger, and Lambert. Among those of the Anglo-Saxons are seven of Alfred the Great, six of Saint Edmund, and forty various pieces without any ames of kings several of which are curions imitations of the French Carlovingian coins. They are all in fine preervaion, and several were previously unknown.
made by Professor Ehrenberge, that he has made by Professor markabie discoveries in the coarse of his various experiments on chalk. He fornd that a cubic inch possessed npwards of a million of microscopical animatcula, and consequently a pound weight of chalk contains above ten millions. From his researches it appears probabl that all the strata of chalk in Europe are the product of microscopical animateula, most of them invisible to the naked eye.
The Hair-worm.-A correspomdent, Mr. M. Sanl, las furnished us with a copy of a letter which he has recently puthlished on the hair-worm, in the Lancaster Gazette ind from which the following are extracts:--M Mo hai taken from the ail of a young horse, but it requires a very powerful magnifier to obtain its true colour and head. We are informed by naturalists, that they live in water and clayey earth. I had occasion to sink domn in my rarden to obtain water, which I found about uine fee rom the surface of the ground, on a bed of mari, and wanted, and the same has been drawn ofti every day. O Sunday last, on aning dorn to take a little water out. wns astonished to meet with une of these womlerful ani-
mals. At first I supposed ir was a hair thit had been dronpel down both din, Ntiof cont It appeared about 1.2 awhes lowz, and then shot forth ascending throurh a suan suppised it was ase sprim reserroir and had carried the hair forward, as all the water

it was a living animal．I put it into a dish of water，and
carried it into the house and placed it on the table，so that carried it into the house and plaved it on the table，so that out what sert of a head it had．I therefore put it man bottle of water，bat in removing it on the point of my pen， it appeared as if dead and stiff，looking tike a piece of tine began to move rery sharp！y．I toch it to a medical friend， who soon gave me its name，and viewed it through a very trong magnifier．We were then able to make out it head and colour，which is light brown．＂Mr．Saul adds that the worm was deprosited in the Museum of the Natural Sistory Suciety of Lancast
Sh．Swithin＇s Day．－The following is given in Brand＇s Popular Antiquities＂as the origin of the old adage：－ If it rain on St．Swithin＇s Day，there will be rain more or less for forty－five succeeding days．＂In the year 865 ， St．Swithin．Bisiop of Winchester，to wlich rank he was raised by King Ethelwolf，the Iane，dying，was canon－ ised by the Pope．He was singular for his destre to be buried in the open clamsi．yard，and not in the chancel of quest was crmpled with；hut the monks，on his being canunised，taking it intos their heads an was dis gre ful for the saint to lie in the npen churchyard，resolved to remove his bofy into the choor，which was to have been
done with solemn proctesitn on the 1zth of July．It done with solemn pructesiln on the lith of July．It days succeedng，as had hardly ever been known，which made them set aside their design as heretical and lias－ phemous；and．instead，they erected a chapel over bis grave，at which many miracles are said to have been rought．
Andiquisies．－As some mentwere employed in digging gault a short time since in Haddenham Fen，Isle of Ely， and had got about five feet below the surface，their sriades came in contact with a hard substance，which they which have been frequently found in the fens within a fer feet of the surface；but，on semoricg the soil around it，they discovered it to be an ancient canoe，bottom up－ wards，in length twenty－sis feet，and in breadth sumething above four feet，with romlocks for three pairs of oars about five feet in lengtiu was broken off the canoe in getting it out．－It appeared on close inspection to be hollowed out from the trunk of a single tree． \(1 \ldots\), is no means of
determining how long it may have remained embedded in the soil，or whether it was used by our Saxon ancestors， or by the Romans when they conquered this island；but there appears to be little doubt that many centuries hare elapsed since its formation．

\section*{Moday MEETINGS IN THE ENGUING WEEK. \\ }

The squares and public places of London, the old suburban gardens, and the little courts in front of newbuilt rows and villas, have an evil name, so far as plants are concerned. We are assured that soil and air are alike pestiferous there; grave old gardeners shake
their heads and talk of former days, and tell how the smoke and the manufactories have poisoned the air so that no plant can breathe it; and then they look back upon the tempus achum, as on days of purity and bea'th for man, and beast, and plant. but which have long since gone away. Battersea fields and Lambeth, once so gay with gardens, are desolated by gas-works and water-works, and lucifer-works : and Chelsea which, in the days of grod sir Hans, was a Paradise of pleasant flowers, has become a wilderness of dying weeds and plants obscene. As to the squares, one might as well attempt to cultivate a coal-field as those soot-begrimed and poisoned places. At least. so affirm the old, and sage, and practical gardeners, who, strong in the prestige of their experience, despise the new fangled notions of younger men. The latter, however, are a stiff.uecked, obstinate race, and they are
not willing to regard London as one of the adits to Avernus, though peradventure the ancient practical gardeners aforesaid would make it look so. They admit that mudern contamination, both vegetable and human, is very great ; but they assert that it is no
greater than it was a century ago. Which is right, is greater than it was a century ago. Which is right, is question of some interest, alike to the inhabitants the murky regions of Moorflelds. We shall endeavour then, with what skill we may, to settle this important question, which has occupied our thoughts for ome vears past.
The air is poisoned, and the earth is poisoned, in London; plants cannot live in air and earth that are poisoned; therefore plants cannot live in London.
If the earth is poisoned, it must be with something that falls from the sky; for nothing is brought to London which is not also carried elsewhere. Now What falls from the sky is anmonia in rain-water, and soot consisting of carbonaceous matter and ammonia both well suited to the food of plants, and, in fact, employed as the most effectual of manures. The earth, then, is nut poisoned.
If the air is poisoned, it must be by the innumerable fires and manufactories that defile all things with taeir smoke. And here the experiments of men of
science are appealed to triumphantly, in proof of the pestiferous ingredienis in a Hetropolitan atmosphere have not Drs. Christison and Turner, it is said, proved experimentally that half a cubic iuch of muriatic acid gas in 20,000 volumes of air will destroy plant in 24 hours? is it not true that sulphurous acid gas, vomited forth incessantly by our sea-coal fires, has the same fatal qualities? is not the air of Mr. Ward, of Wellclose-square, shown that plants will grow in mid-London in his air-tight boxes, although they would perish in the open air? and does not all this prove irrefragably that the atmosphere of London is deadly, and that there is no hope for the gentle flower-loving citizens? Nothing can be more true than these assertions; but it does not appear' to us London prove anything applicable to the case of When one kind of gas is mixed with another in free air, the diffusibility of these subtle elements is atmusput they are inmediately lost in space, and the atmusphere remains as at first, so far as chemical tests can discover; so that no chemical difference is ascertainable between the air of one place and that of "an-skied-between that of a smoky town and of a clearevidence does not show that such a vitiated atmosphere affects plants. Look at Belgrave-square, or Eustonsquare, or the 1 helsea Botanic Garden: many plants there, in the open air, are as healthy as those at C'laremont; and they manifest no signs of a vitiated atmothe ends of the leaves. In the contrary, the leaves Wreep green and healthy in the majority of cases. tight, nor regand to Mr. Ward's cases, they are not airtight, nor anything like it. Un the contrary, the at-
mosphere, by its pressure, enters freely at every fismosphere, by its pressure, enters freely at every fisthem is the same as that on the outside. This has
already been insisted upon by Mr. Newman, in his ingenious wok on British Ferns. That the plants within are healthy is admitted; this, then, is a pro that the air is not vitiated. But suppose for a momen that Mr. Ward's cases are air-tight, no one will pre tend that a common greenhouse is so. There, at least the air enters without let or hindrance. Now, we wil produce a garden, filled with the most varied kinds of vegetation, which. in one of these suburban stations, shall have all the plants in the open air healthy, where they are fully exposed to the so called noxious atmo sphere, and shall have all those in the houses sickly; so that, in such a case, the air, if noxious, is not so when it surrounds plants beneath the sky, and only becomes so when they are cooped up beneath a glass

We therefore join issue with our septuagenarian friends, and deny that the atmosphere of London is noxious to plants in consequence of the deleterious gases that it contains, and that the soil is poisoned.
Do we, then, also deny that the vegetation of London is often miserable? Surely not. But we must beg those who are anxious to know why it really is so, in many cases, to suspend their curiosity till next week.

In another column, we print a paper by Mr. Forsyth, gardener to the Earl of Shrewsbury at Alton Towers, upon the subject of garden-pots. As the author is a most skilful, practical man, his opinions are entitled to much attention, and we are not dis posed to differ from him in anything, excent his obser vations on drainage. He undervalues the use of crocks, and considers that holes enough, as large as quils, in the very bottom of the pot, will be sufficient drainage. There we think him wrong, because we fear that such holes will be much more likely to choke up than the irregular interstices of the fragments of pottery commonly in use, and which he condemns. We, however, recommend his observations to the serious consideration of our readers.

\section*{ON THE CULTIVATION OF VANILLA.}

It was for many years considered that Vanilla aromatica was the only species that produced the Vanilla pods o commerce; and such continued to be the general opinion
until 1836, when Professor Morren, in fruiting Vanilla planifolia ; an account of which is given in the "Annals of Natural History" for 1839. It appears has exis. Morren's observations, that much misconception confounded under the name of V . aromatica; and that whatever species it may be that produces the Mexican Vanilla, there can be no question that Vanilla planifolia is one of those which produce odoriferous pods, equal in ther, that the plant sain to be introduced in 1793 by Miller, under the name of Vanilla aromatica, does not now exist in England ; the plant commonly found in hothouse being the Vanilla planifolia of Andrews, introduced in 1800. The Vanilla of commerce is a long, narrow, blac pod, which opens into two equal parts, and is filled with profusion of small seeds; it is delightfully fragrant, and
is used chiefly by cooks and confectioners to give a rich lavour to their confections and dishes; the principal sup ply is imported from Mexico, and the pods cost in London about a shilling or one and sixpence eack. This high price no doubt tends to limit the use of Vanilla, even at the tables of the opulent ; and as a cheaper and more abuudant supply would be highly desirable, I shall offer a few observations on the cultivation of the plant on the rafter of the stove, where, with attention, it may be brought to prodice its fruit in tolerable plenty. About five years ago, I planted a plant of Vanilla planifulia in a border at he back of a stove; the portion of the border set apar or the plant was filled with coarse peat, from which the of finely broken potsherds. In this mixture it bas con of finty broken potsherds. In this misture it has con-
tinued to grow vigorously ever since. It soon reached the top of the iron pillar to which it was trained, and was then led along iron rods crossing the rafters at the back of the house: in this situation the plant produces flowers every spring. In 1839, I read in the "Innals of Natural Fanilia in Europe, in which he first communicated the act, that in a culfivated state. fruit is only to be ubtained by means of artificial fecundation. Soun after, when the plant came into flower, I followed the drections of the ofessor, and succeeded getting a few pods to set, but, on the column, my success was ouly partial. The pods hich set, howeser, success was only partial. The pods 1840 ; they were equally fiazrant aitin the impurted fruit: some of them were used to flavour ices which were served at the table of Earl Eitzwiliam, and found to possess the proper flavour. With the crop of Huwers mbicis upened in the spring of 1840 , I had unore sucesss; setting then of towers, two innured and firty pods nad set when the plant ceased flowering. At this time, Dec. Wh, ther are two hundred and thirty-six pods on the plant, all in a bealthy and promising state: and should they all arrive a maturity-of which there is uow every probability-thes will, if valued at the lowest price at which Vanula is sole in the shops, be worth \(11 /\). 10.3 . In a pecuntary view. therefore, the cultisation of Vanilla planifulia is not unhave a better claim to notice; its rich green fleshy leaves,
and highly curious flowers, might entitle it to a place in less firly occups pas be pine fir less fitly occupy a place in the Pine stove. In either place the cultivation of the plant is most simple; a horder composed of turfy-peat mixed with putsherds or rough gravel, or perhaps any other soil, the particles of which are coarse enough to admit the free passage of water, will be equally suitable. It may be tranned, and will attach itself either to wooden or iron pillars, or to wires; but the points of the shoots must be occasonally broken off to make them throw out side branches, and thereby give a greater space for the production of fruit, the plant having naturally little disposition to branch. As it will be erident that success in the cultivation of Vanilla must lising of the shigend on the attention paid to the fertiforming the olin, fhich beare the ather and sisma; the former of these, which bears the sather and stis the foit of the coe, a dilated appendage attached to the summit of the colama lower surface, the pollen masses. This appendage, by means of its curred neck, bends towards the lower sarface of the column, where it rests upon an organ, called the retinaculuim, which interposes between the anther and the stigmatic sarface of the column; this latter, projecting from the column, lies immediately under the retinaculum, and terminates a bearded glandular process which covers the lower surface of the columb. The retinaculum, which is concave towards the stigma, effectually prevents all contact berween that and the anther; it is therefore necessary to remove the retinaculum, in order that the anther and stigma may be brought together, and this will be best effected hy means of a pair of narrow-pointed stout forceps. These are carefilly introduced sideways betmeen the anther and stigma, seizing the retinaculum and tearing it off in the direction of the anther. The anther is then drawn out and pressed down on the stigmatic surface of the column, and the operation is completed. If this ope ration is proneriy perrormed, the settiog is certion, the fowera will not drop, but remain for a considerable time on, or continue fixed to the fruit. In aboat tweaty-four hours, the fruit will be perceptibly elongated, and at the end of twelve months it will be ripe. It is perhaps unnecessary to observe that the plant must be planted and trained in such a situation in the house, that when the fowers come out they may be easily approached; they mostly ope:: during the night or in the moraing, therefore the areat fine focundate all flowers that be ope oday by day as long as the plant is in flower. In Mexico I believe the pods undergo sume preparation, probably to preserve them from dryiug up and partiog with their properies, the athod purvem in a close-corked bottie, whicb appears to pres on the surface of each pod, which are no dunbt crystal of beazoin.-J. Henderson, Millon, near Peterborough.

\section*{IMPROVEMENT OF FLOWER-POTS}

Muct has been said about ornamental flower-pots or rases being injurious to plants grown in them, whethe made of hewn stone or of composition and painted, or of stone ware or cha, or ind brick eart, aad even that, particularly injurious. These ideas, like many others uo supported by practical evideace, are seldom questioned, but are handed down in writing, and otherwise instilled into the minds of young cultivators. Now leaving castiron vases out of the question, bectuse their corrosion is evidently iojurious to vegetable life, let as take the ex treme case of a flower-pot being burut so hard that its substance resembles that of a slug or clinker of the fur nace ; even then its bad effects, if any, are strangely ae. On the contrary, Thase seen Alpint plants growing beautifully in the old crucibles that had been osed for meltin cour. I an bear ritness that the innocent melting copper. failure is either overlooked or unknown ; and I doubt much if the quaiity of the pot kas above one per cent. of uflueuce on the health of the plants, provided it is made of the proper shape. which in my opinion is that of the
frustum of a cone inserted, whose width or diameter over he top is and the sted, whem the top is exactly the same as the depth, and whos all inside neazure. Thus pots 12 in. deep by 1 inn. wide sheuld be sia. at bortom, and not more, hut rather less, that being the safer side to err on, or 9in. by 9.n. 6in.; or 6in. by Gin., tio.; or 3 in . by 3 in . 2 in , and so on. care beng a possible, to preserse the routs rom innary connag \({ }^{0}\) contact with inequalities on the inner surface of the pots in the process of shittiag.
I have often meen told that the poruns nature of a pot
 apply moisture to the ruots atter ti, sad th the pat has
 ari so far from therr berug ail \(m\) a fo Larnt futs, as one might naturally enough have expected to see them, they
vere living and doing well m rowden tubs well pithed were living and doing well in wovden tubs well preched
ind painted, without any pores besides the bules in the Dattom ; and here I caunot help remariking tuat tubs for Oraneetrees and other large plants are generaily builc uch shaped tubs a than the frustum of a come, ade oldes t cannot close tight again, since the whole weight of the ball of earth is on the bottom, instead of being equalised
all over the inner surface, as it must be if the tub taper; towards the bottom in the proportions above described; in such there never can be open cracks to any extent on the sides than it does on the bottom-in the same way that a common brass plug in a sink closes tightly the tapering month of a pipe, without resting on anything but the sides. As all the roots of Orange and other trees naturally run towards the sides of the tub in the outset, it is essentially necessary for the welfare of the plant that that particular point be rendered darls, firm, and moist, which it cannet be in tubs so nearly approaching the shape of the cylinder, In the latter case, too, the ball, resting principally on the bottom, renders the tub as tight as possible in the only place where it is essentially necessary for the drainage that it should be open.-Bat to retarn to the subject of ordinary flower-pots.

The porous fi.wer-pot has. in my opinion, nothing to recommend it but its cheapness, and certainly many faults to condemn it. In the first place the very nature of the pot is objectionable. for there is no lnowing what it really
consists of, since puts must wary in their natures and be as different from one another in their properties as the earths of which they are mate; but allowing that they are quite neutral when they are first used, they cannot long remain so. Supposing a new pot to pass through the
ordinary routine of Strawi)erry-forcing for a season, till its substance becomes quite saturated with dirty water from the dung and soil, till green scum cuvers the outnext used for the stiuhing-ronted Acacia for another season. next used for the stiuniky-ronted it is not likely that such a pot if even steeped in bolling-water would yield a tasteless fluid or remain guite neutral, so as neither to aid nor injure the roots of a delicate plant potted in it, but rather that notwithstanding
its having been washed, it would still remain more or less its having been washed, it would still remain more or less
tinctured with the essence of that with which it had been so long and so cl. sely associated; in the same way that a water-butt made of an old rum-puncheon makes the water taste and smell of the ardent spirit that had soaked into its substance. So far, indeed, as regards nursery and
forcing departments, where pots are little seen by any ex. cept workmen, the common porous flower-pot may answer; but for the finer ornamental plants, whose habits require composts and treatment almost as various as the countries hey colean as a driukin 0 way by admixture of its properties with the compost proper for the plant. This never can be the case whou unglazed pots of brick-earth are used; for however beneficial
burnt clay of some kinds may be as a manure to particular tribes of plants, it is ridfculous to apply it inme distely in contact with the roots of plants of all kinds, whether those roots onginally inhabited the earth, the air or the water. Let me aleo remark that burnt clay is none of nature's componts, and therefore never was a natura source of nourishment ; and 1 am of opinion that to this practice of having a body of burnt clay applied to the soots may be traced the diffeulty and disappointment ex perienced in the culture of many interesting plants which prefer that a pot should be glazed, and thus remain neutral, with a smooth, clean face; for I need not tell your readers that it is not the pot, but the compost in the pot, that materially affects a plant; although a
At the exbibition in the Chiswick gardens in May last a plant was observed trained over a trellis, forming a sort
of spron in front of the pot; I take this as a bint that the grower did not admire the sight of the red brick pot more than I did on such a day, and therefore had taken measures beforehand to make the trellis hide it. Other extibitors had propped up the pots, 80 as to make thei hibiting the crown of the piant and giving the towers the advantage of their own fine folinge for a background, in stead of green baize, and of hiding the great, ugly red pots, Which, though cleaned and scrubbed for the occasion, and incurably ugly. This brick-like appearance of flower-pot has induced those who keep flowers in their windows to have their flower-pots painted or otherwise decorated so as in some degree to harmonise with the rich interior of
the room. But in addition to the objections I have ulready made to common flower-pots, is the enormous waste of tabour to clean them, for they require to be washed once a month to have them fit to be seen by the family, and it is no without much unplensant and unprofitable labour that the ank porous surface of unglazed earthenware can be were glazed inside and out, like household crockery, could scarcely ever wat washing; and when it did, a mer rinse in water, or even with the syringe, as it stands on the stage, would easily carry off all that could adhere to
such a polished surface; and when empty, a man could wash it, not clean-like, but clean, almest as fast as anothe could stack away. In point of economy, too, I have no hesitation in saying, that the swing would be very ones do, ye: the lengta pits cost double what unglazed tems, eheaper after all. The water whilh getz into the hie suefer thit pot the soaner them to moulder away, and rue is thened af the pots, one feels ashamed thea every our poteriou tle subject of glaxing common I potans, he sei thymust adaufacture them more stender for thet purpese, sine the comnon pots, when glazed, would be unan articie of half that body would by glaxing become
double the strength. Here, then, we have an article more elegant and durable, of one half the bulk, and yet double the strength of common pots, and will a mot absorb dirt nor allow it to adhere, and of a pleasing coluur, for it may be manufactured of any hue to larmonise nith surround ing objects, easily cleaned, and as regards compost, neithin as neutral as flint. In common pots, what with the pot itself and the broken crocks in the hottom, soaked in dirt and covered with scum, one fourth part of the compost good or harm consist of miry clay, which must either do are an example of the thoughtless manner in which one man will follow another for years without knowing, why. Instead of having pots porous everywhere, excepting where fewerthan 6 quill-sizad holes in a half-pint pot (a 60 ), and in the same proportion with larger ones, taking care that the oles are male from the inside, with a clean smooth arras. Also on no account would I have flat-bottomed pots, but there should be a rim or foot, like that around the bottom of a common tin watering-pot. The plants will then be
better drained than now, and as all the pots will thus be crocked to the gardener's hands before they leave the pottery, there will be no more pictking the old crocks out of the hall before the plant is repotted, and no labour lost in crocking pots in fine weather, or in breaking up old potpatience to see the space, generally too small, inside a pot filled up an inch or two with stones or rubbish of broken pots, as if one never could have enough of burnt clay in the culture of every tribe of plants.

Pots for ordinary purposes 1 should prefer to be of dark stone culour, as being neither gandy nor gloomyWarren's paste blacking-pots are the sort of thing I mean I would also prefer a flat rim at the top (instead of a
round one) as if the pot had a hoop round it for strength. The accompanying section will show this, and also the place for the bottom and the foot. The holes in the bot tom can scarcely be wrong, so as there are plenty of them quill-sized.

I tear some will say, "glazed pots, with porons bottoms ron't do," "because they won't," "they know they won't. To such persons I can say nothing; but those who liness and economy are so much concerned, I can assure hat cuttings strike freely in glazed pots,' and that the delicately-rooted Tropeolum tricolor is here now growing vigorously in a well-painted vase. not to mention a second time Mr. M'Nab's Heaths that do so well in wood. I have givea a section of a saucer or stand, to clants are exhibited. The saucer or stand here given is made dee and wide to contain enough water without any risk of its overfiowing, and injuring the farniture or soiling the floor of the room where the plants may be placed. I am quite persuaded that properly-shaped glazed pots, when they come to be generally known, will be sought after as much as they are now shunned, whilst those now in general use will not be counted worth carriage from the potteries. Should any such be wanted, your readere need only show this copy of the Cardeners' Chronicle to any intelligent potter, and he will understand the uature of the article ranted; or they may apply at once to our potter, Mr Legg, of the Furnace-lane End, Staffordshire, whom they Alton Towers, \(10 \mathrm{hh} J \mathrm{Jul}_{\mathrm{l}} \mathrm{l}\), 1841.

COTTAGE GARDENS.-Nn. XXVIII.
Thes ensuing month is always one of the busiest with Cot tagers and farm labourers; who cannot, therefore, be expected to devote so much time to the culture of thei gardens and small aliorments as they were enabled to do in the early part of the season; bet we are sanguine enough to hope that such of them as have an eve to the fiture, will be abte to find an bamp or twa, in the cours of each week, for attendng to the to st timingi we are about On tice. Among these, we wond particularly menton tae Broneoli intended as a prinerpal crop for next spring which should now be tinally transplanted without delay whake ruom for this, some of the early summer cros be well manured and dug. A deep drill is then to be made be well manured and dag. A deep drill is then to be made
with the hoe, in the same manner as was formerly recom-
neuded to be done before planting any of the Cabbere reet asunder. Hoe between the liflower that were pat ont some tim Savoys and Cab little earth around them if they seem to require it. Thin out the young Turnips as they advance, and where the last sowing has failed, another may still be made for a winter supply. Towards the latter end of the week prepare a small bed, and make a sowing of Early York prod anack Cabbage to stand the winter, and come into we the ensuing spring and summer. It is of importance not to defer the sowing of this crop later than the loth of August. See to he Shallots that were directed to be planted in the begioning of March. They will now hare arriver at maturity, and should be taken up whenerer gle bulbs, in addition to increasing in size, will be found to have formed a mass of other bulbs around them, which need not be separated for the present, but the whole re. moved entire to some airy place, and allowed tu remain until they are perfectly dry. The earth is then to be shaken from them, and the bunches, after being tied together, are to be strung up and preserved like onions.
Be particular in attending to the Vines. Take an early opportunity to go orer them again, and stop the laterals and any other superfluous shoots. The fruit will now be swelling gradually on the bunches, and some of the latter, perhaps, may require to be thinned. For this purpose, it is necessary to use a small pair of scissors that will cut bunches that are most forward, and reduce the number of berries on each, full one balf, by cutting out all the mallest and such as are too close together. This is an important operation in the culture of the Vine, and the ize and flavour of the fruit will very much depend on ite being seasonably as well as judiciously performed.-M.E.H.

\section*{HOME CORRESPUNDENCE}

Carnations, fec. - Carnations just now engage the Florist's attention. Allow me to state the folloning ciro
cumstance:-In the same pot were planted two layery rom a purple flake, which had entirely run for a year of two past ; however, the flower-stalk of one plant had, by some accident, been cracked nearly through at a joint, and the flowers on this plant are clean, the other plant castinuing to produce run flowers. Is the deficiency of ap ng to state occasioned by too great a supply of sap? We always see run-plants the most luxuriant and hardy, perhaps because they have an extra supply of roots. Has the soil aything to do with this running? Might we not troly say, that the salf or runstate was the nacural and pertere one, and that the perfect Florist's fiower is sickly; teprom deformed, unnatural? Books tell us to be most,carefal of the poorest seeds and weakest seedlings, as these are ditions seem to point at a scanty supply of sap. I do not think the soil has anything to do with the running of Curnations, but my very limited experience hardly warrants will giving an opinion. Any information on these poins stated that he had lost the hybrid China-rose Miralba, which is with me extremely hardy, pretty free-growing, and easily propagated by lavers; it grows in an open situation exposed to all weathers. On the other hand, Indica major, which he called hardy, never keeps alive above the ground with me, unless very well protected; peat-earin Deapped against it I find the best preservative. Jimé Vibert, Cerise, and Fellemberg are gencDesprez, Aimé Vibert, Cerise, and they were all so lim winter, on sonth and east walls. Fulgens, hybrid Chima grows freely but never blooms, and I wish any of your bers would tell me how to bloum againsts, budded in the open border, ar nor a bud uporit. Victor Hugo, hybrid China, is a good rose and blooms without fail every season, and I wish you would give the names of one or two others equally certain ; this a dens. tion is valuable to those who have only small gardas tion first or ghe like leaf tion, first appearing like a drop or hine pand pings, ias and eating out the hearts of the seedla been most abundat tais year, and has dote Scotch large stock of seedlings. Books tell us to spriakle sear sauff or ground black pepper on the plants, but this would hardly reach the iasect once ia a score Can any better remedy be devised, and is there any wi to keep earwigs from the blooms of Carnations grew wiven beds or pots plunged in the ground: is it betcer, the seed is desired from Carnations and Pinks, to thin the in his ©sT or allow them to re " p. 181, that sem-do Anemones and Ranancali will rarely yield dunble varietien Ancmones and all -does aation Leneraly aation generally produces the beot oe the sumber of shor a bursting pod, whici seems owing to a rest objection to round-formed loathery petals in it, is a great [We trus: a Carnation.-G. Bad Butter.-Answer to N. B. respecting bad butter Good cream will certainly produce gool butter under goils
butter to be as described by N. B. Let the charn be weller and boiled ten minutes; let it then be put in an niry place to dry, and before using, let it be rinsed out rith clean cold water. When the cream is breaking inte berter, add a hittle ciean cold water there are trees (particularly Ash) in the pasture, the butter is probably affected by the leares the ows eat (for butter is often affected by leaves, when milk and cream are not perceptibly so). Let the cows be turned into a grass park (Scotici) free from trees, for a week, and try if the batter mends; if it does not, the pasture is in and), but surface-drain the land well, and give it a good dressing of lime compost. Query-Mar not the fault be in the mode of making the butter? -D
British Association.-Retrospective of the meeting of the British Association at Glasgow, I send you the forowing free translation of your German epigram of last nul. But though I subscribe most heartily to your timely warning, do not suppose that I judge very hardly of the rare convivialities of men of science, or of the occasional rebange of the divine afflatus of Hermes for the fumes of the grosser godhead; when they bethink them

What neat repast shall feast us, lisht and choice,
Whear the lute well touch'd, or artful voice
Warble immortal notes and Tuscan air? He who of thosesia delilesthts and Tun juscan aire and spare,
interpose them oft is not unw ise." Neither let us be envious of due praize to men who grace their nobility by sweling the triumphs of art by their most efficient aid.

Public Parks.-In a leading article on this subject, the Gardeners' Chronicle very earnestly advocated the entire opening of the Regent's and other parks to the public; proposal from which I beg leave to dissent, though I r cognise most fully, as paramount to all other considerations, the promotion of the health and ratiunal enjoyments of the humbler classes of society. I differ merely as to the best mode of accomplishing this important object, which man's thoughts; for although the poet may have been quite correct in saying

\section*{Of all the evils that mankind endure,
How small the part that Kings can cause or cure}
it is nevertheless certain, that if a Government can exercise any influence on the happiness of a people, it must be by providing them with refining and salutary amusements, and thus seducing then from the mere gratifications of sense, rather than by prohibitions. Amorg the means for this purpose, public gardens and parks hold a prominent place: but a park near a large town, thrown entirely open,
soon becomes, like Iyde Park, a brownish-looking desert, soon becomes, like Iyde Park, a brownish-looking desert,
neither useful nor picturesque. The Regent's Park, on the contrary, as at present arranged, is, I think, precisely What it ought to be. In walking northward up the main public arenue, we have on the left hand a somewhat exteniive and very beautiful pastoral scene,-a wide expanse of brilliant green pasturage. enlivened by the colours and movements of the cows, whose breath mixing with the scent of the sweet herbage, comes wafted on the breezes innocent of dust. The whole forms a delightful and most enjoyable picture, infinitely superior to anything that could be afforded by a universally trodden space, of whatever dimensions. If, then, it should appear that the prodection of a revenue from portions of land so appropriated ments of those for whom such parks are and ought to be especially intended, it furnishes additional inducements to especrally intended, it furnishes additional inducements to involve quite so large a pecuniary sacrifice.- \(A\)
The American Blight.- It has seldom been my misfortune to read a less just criticism or comment than that
of Mr. Thackeray, Notts, in the last week's Chronicle. I resommended, for the cure of the American blight on Apple-trees, coal-tar to be applied with a small brush, and only to the part affected. Mr. Thackeray, however, directed his gardener to "paint the trees !" and to repest complains that the bark was injured, and denounces the coal-tar as a "dangerous nostrum." Had he ordered his bardener but to "paint the trees" assiduously with fresh保 Thackeray does not use, but abuse, the remedy. Were a person who was directed to apply a little mercurial oirrtwith it, would he be justified in complaining of salivation? or, on being requested to apply a little ointment of Spanish fies to a painful wrist, were he straightway to envelope bia whole frame in one huge blister, would he, of right, Idirected the coal-tar to be applied last sumner, are now free from blight-of vigorons. healthy appearance, and Iesvily laden with froit. So for from its being dangeruus, cions than oil of turpentine and urine, recommended by Mi Thackeray. The terme "nontrum," is equally unfor.
tunate and inapplicable, as the word signifies a secreb remedy. In conclusion, let me entreat your readers, and
especially Mr. Thackeray, to reflect that it is the proper and timar. hackeray, to refeet that really constitutes it a remedy.-F. R. Horner, M.D., Hull.
Gonseberry Caterpillars.-In the spring of this year my Gooseberry-trees were much infected with caterpillirs o throw over the trees fresh slacked lime: but this had no effect whatever, and to know whether quicklime would kill them or not, I put some into the lime and covered and making their escape. I at last had recourse to handpicking, and, by a little persererance, soon destroyed al che caterpillars in my small garden, and thought that
had, for this vear at least, done with them ; but I discovered to my surprise this morning, that the trees were again covered with the destrnctive things, and on examination, found numbers of the leares lined with eggs in the same way as I had observed them in the spring. Varions remedies have been proposed for their destruction, none of which, I think, are effectual except hand-picking, which in large gardens would be a tedious operation, and my object is to induce some of your more experienced correspondents to attend to this subject, and find out, if pos. otherwise preserving the trees from its destructive ravages. -W.W. [We most sincerely desire to hear of some effectral remedy for this pest ]
Rabbils. - A correspondent, J. A., wishes to know the best mode of catching rabbits.
some information upon this head.
Laus of Gardens.-The few following remarks may prove beneficial to sowe of your numerous readers, and ences either as landlords or outgoing and inconor tenant, -Annual roots and flowers planted in a garden may be removed by any tenant, and so may young frait-trees and shrubs in the garden or nursery of a person to whom the
same has been let for the purpose of sale or trade- 2 East's Reports, page 88. But unless a garden, or orchard, or other land, has been so let as nursery ground, no tenant can, as between him and the landlord, remove any flower, root, tree, or shrub, not strictly an annual, or not usually taken up at one season of the year and replanted at an-
other; and if without authority he should remove the same, he would be liable to an action for the waste. And if a tenant, of any description, has made Strawberry-beds, he cannot, either before or at the expiration of his tenancy,
and whilst they are likely to continue productive, remove or destroy the same, without being liable to an action for injury to the landlord or succeeding tenant- 1 Campbell's Reports, p. 227.-A Subscriber.
erlings in Waler-Certain, as old as thed by gardeners which succeeds well with fibrous-rooted plants. Put a quantity of the finest and closest moss into foot of the cutting; then, or previously, saturate the moss with soft water, and let the bottom of the pan be kept constantly wet. A gentle heat will assist in forming roots seldom fail. Another plan not generally known, is to take a large flower-pot, insert one of the most porous about hal! the size into it, plug up the hole in the bottom and fill it (he smaller pot) with water, and fill the vacancy between the two pots with mould, insert your cutting into the mould, and place the pots in the greenhouse: tinis is par-
ticularly adapted to cuttings of Roses and Pelaryoniums, ticularly adapted to cuttings of Roses and Pelaryoniums, Corceoclarias and Salvias. As the water Hill.
IInney Dew.-I am induced to troable you with the following remarks, in addition to my first communication upon the subject of "Honey Dew." As it must be evibe a secretion lirectls from the leaves it anpears that we bave to consider whether the honey dew, in case of aphides, be directly from the injured leaves, or mediately through the abstraction of saccharine matter, and a consequent ejection of it by the aphides. I have no reason to seen have neser been confirion, for the authorities I have fallen under my observation. In some cases, I found it a mode of conveyance not adequate to the supply; in all, altogether inadmissible; for the aphides have been situated on the uader side of the leaf, while the upper side of the
same leaf has been exuding the saccharine matter. To have been the ejection of the aphides, it ought to have pruceeded from the under side of the leaf ; bat in all cases of honey dew, I foand the upper surface of the leaf the part always affected oy it. Every observation I have inade leads me to the conclusion that it proceeded directly from the injured vessels of the leaves, and not mediately by ahstain degree cof hequent ejection of the aphiue order to produce a separation of the saccharine matter and to bring it into such a state of attenuation that it mas be exuded. inleed, 1 m dry hos weather, its presence near the quier dew may ba de:ected by the actual reflection of the rars of the sun. That the aphides and the honey dew should disappear tige:her is but a reasonable expectation; they
must dee when the temperature becomes suela that they can no tonger obtain a supply of nece-sary feol-agan, because the upidides are capable of extracing and transmathng sacelarine matter, it does not therefore follow thit
the honey dess is so produced. It this argument were good, it wuuld follow, for the same reason, that bee produced the houeg dew. When it is asserted "that the aphi-
des :asert their suckers into the teader burt and autorb
the sap without intermission," to me this appears an ejection, unless there be, at the same time, a continual same time, how shall we distinguish this from the case of a puncture or rupture of sonse congested vessel of the lea on which the aphides are situated, and the flow of the liquid directly from the opening? You will perceive that I have touched upon some of the arguments by which the jection of the aphides is urged as the probable and general cause of honey dew. If each individual interested in ny ature, he will be proceeding in a mannor the best adapted or ascertaining the true cause.-C. G. \(\boldsymbol{H}\).
Disease in Oats.-I am nbliged by the notice taken of my inquiry as to the disease in my Oats by \(S\). You hare misprinted a word in my former letter, and thus made me appear to write nonsense. "It attacks oats, after (not
often) pease, turnips, pasture, potatoes, and barle, sce." The misprint maker me say that the disease attacks not only oats, but many other kinds of crops. If the disease aruse from grobs, why should not barley, wheat, or rye, suffer? It never was known to attack wheat, rye, or bar1837. As to want of rooks causing it, I only wish \(S\). had tithe of our Ross-shire rook stock, and I think he would ry, "enough." I suspect S. farms a garden, when he talks of applying lime, nitrate of soda, \&c. and mixing
them well into the soil at seed-time. Doing this every two or three years, and over some hundred acres, would be both injudicious and impracticable. The microscope declares the roots to be perfectly fres from injury, and if
one or two may have been injured, surely 50 to 60 that remain would be sufficient to present the plant withering as it does. Paring and burning are quite impracticable in -course shift. Pickling might of conrse be useful to oats season, if spared till then. I believe 8 to 10 quarters of oats are by no means uncommon crops hereabouts to the Scots acre, which is a larger than the imperial measure. I trust that some friend will kindly hit apon the true cant of the disease, and inform me through your excels deleterious mour npinion as to its depending on sonoe reason, yet it is difficult to imagine any great difference of soil in patches so circumscrijed as mine often are. he able to mariage that myself?- Kinellan. [We believe soil is aralysed at a very reasonable expense by Mr Phillips at the office of Woods, \&ec., London.]

\section*{FOREIGN CORRESPONDFNCE}

Teneriffe, May \(23 t h\). - As we made a short stiy at this island, I took advantage of the opportunity to go on shore, in observations Santa Cruz. In the first place, I visited the vegetable and and Artichnkes were in Pumpins, Cucumbers, small quantity of Green Peas and Freoch Beals, but of had quality. Garlic is offered tor sale all ofer the town, the poorer class eren stink of it. Of Figs, a few were offered ripe Peach, as Be Peaches, Papaws, Baw il Radishes, Lettuce, small sallad, Beet Root, Culitlowers,
Onions, Capsicums, Tomata, Egg-plairt, ©゙c. : flowers, as an object of cultivation, appear to be totally neglected, except a few of the most gaudy, and those grow without any attention being paid to them; the only exception that flower is in great requisition; as presenting nue of these flowers to a lady is an act of politeness. I s? a solitary instance of the Single Dahla in the gartan of the English Consul, and was told there are some fine specimens of the Brugmansia-this also seems to be a favourite, and of Nefrom the town, theye was a plant of Poinciana pulcherrina, which, as a rare thing, had the precantion and painstaken of being planted in a pot. and its fone searlet bracts seemed to delight the cultivatur; it was kumwn by the appellation of Flura de Paseo. Among the informatio that recive hrom the Pre whe sapuly of Potatoes from England about every third year,
as ly that time they degenerate so as to be of little value as ly that time they degenerate so as to be of little vaius
to plant: and that their corn is chiefly from Spain, of which I was shown some frne samples ; the cran on that grown on the island is very small, the harvest of which is over at this time. On the sides of the hills. is cultivated the Cactus for the Cochineal insect, which is produced of verand qualy. Rut introduction iato England, prevents the culcivator being able to compete with Mexico. \(O\) wing to its being the dry season, I met with but few in Euphorblai. I suppise Canariensis, a Lavender, a few Comprosite and Leganiaose
plenty were to be found it time would have permitted: as oppusite side of the island.

NEWS OF THE WEEK.
A telegraphic despatch reached town yesterday from Marseilles, announcing the arrival at that port, of the overland mail from India; the dates from Bombay are to the 19th June; there is no news from China, but Sit Gordon Bremer had quitted Calcutta with reinforcements for Canton. Until the arrival of the mail, no farther particulars can be known.-A Aother despatch reached town last night by express from Liverpool, announcing the arrival of the Brilccnnia steamship from Halifax, bringing the important decision of the Supreme Court, that Mr. M'Leod shall be brought to trial ; it appears, however, to be the general impression at New York, that on pleading his irresponsibility under the Law of Nations, the jury will at once acquit him. The judgment of the Court occupies about ten columns of the American Papers; it declares that the judges did not consider it their provinee to examine the grounds of the defence, because the ques tion whetber the act was committed or not, and the guilt or innocence of a partr indicted for a capital crime, are matters for a jury slone to determine.-Our European Newa also of considerable interest; we learn from France tha the intelligence from Toulouse and the other Provincial owns concerned in the late distarbances is satisfactory no new revolt or collision has taken place, and Government has adopted vigorous measures for repressing the spirit of insurrection, and for bringing to justice the parties im plicated in the riots. The accounts, however, show that resistance to the fiscal measures of the Government is becoming more general and decided; in Metz, Auxerre, Bordeaux, and other places, the authoritie, hwe refused to co-operate in enforcing the minnsernal census; and it is reported that a similar feeling exi-ts in the Municipal Councll of Paris. The ceremomes in honour of the "three days" of July have commenced without any demonstration of popular feeling; and although preparathons on an extensive scate have been made in anticipation of an outbreak, it is believed that the fêtes will pass off quietly.-()ur intelligence fram Spain informs us that Queen Christina has published a strong prostest agaiust the decree of the Cortes deprising her of the guardianship of her children, and of the manageinent of their property ; and that the Chamber bas granted beer an alluwance of large amount, as the jointure stipuiated on her marriage with King Ferdinand. Presin colio: m: have taken place between the Spansh coant-guard and the Britioh cruisern which have given rise to renewed expressions of hostility towards this country both in the journals and in the Chambers; and a sum of twelve millions of reals has been roted for the construction and equipment of vessels of war for the protection of the coasts. The committee appointed to consider the project of raising a loan he approved of the minimterial plan, but the negotiation or obtaining it from the capitalists still cuntinue fruitless. - Our news from Portugal informs as that Rússia is prepared to recognize Donna Maria and it is supposed thet Government will obtain from the Special Committee of the Chambers a vote of confidence to enable thent to carry ont their proposed reforms and financial projerts.-From Austriz we learn that the recent fallures of the banks still continue to occupy attention, and that their effects have been severely felt by all classes throughout the empire, and especially by commercial and agricultural interestsin huagary In Switzerland, the Grand Counch of Arsatu has resoived on offering certain concessions to the Diet, by whinch it agrees to re-establish a few of the convents, but still insists on the absolute suppression of those which took part in the late revolt. It is considered doubtiul whether the Diet will accept these terms, and the result is looked for with much anxiety. - Advices from the Polish frontier state, that the Euperor of Russia contemplates the reorganisation of the Pulish Chambers, and intend's to return to the Pules their natunal arms. - In the Levan a perfect understanding al pears to exist between the Ottoman Government and the Pacha of Egypt ; the
tribute has been permanently reduced; and in antictpatribute has been permanently reduced ; and ill anticipason to in progress for makiug Mehemet All Grand Yizier, and guardian of the goung Priuce. Syria is in a more tranquil state; the Purte has sent firmans to the local Governors, directing them to give full protection to the Jews, and to treat them with the colsideration pai to the Cbristian inhabitants. The meteingence from Can Jia is unfavourable to the insurgents, who have been de feated in two eagagements; the Turkish troops hav committed great excesses, and it is not expected that the Greeks will be able to hold out much longer

At home, political excitement appears in a great mea sure to have subsided; and the public press, during the past week, has iseen more agreeably occupied in recording the pregress of her Myesty ans Pance A.bert during thei visits to Woburn Abbey and Panshanger. The line of their route was marked by every demunstration or nantage and all classes and parties appear to have taken adrantage royal party.

\section*{740me Nrbos}

Couer.-Her Majesty and Prince Albert left Windsnr Castle, on Monday afternoon, for Woburn Abbey. on a visit to the Duke and Duchese of Beतfford; her M.aj-sty's prugress througnont the wh. ie of ther r ute, and ancumn of by every denullatrateon of luyaly and aztachment. Her Mijesty and the Prance remaned at Woourn Aoney until Thursday, when they proceeded to Pan-latyer, Herts, to honour the Earl and (wantess Consper man a bait. On Melbourme with a bivt at his etat. Bromint Hain op take of a déje üné. again reinrimug to Palabatrger in tief eveniug. Her 1 tyesty a: d Prince Amert whid return th to improve, and has taken datily ritees in Whasor Park with his auguet mother, the Queen of the Beighass.

Neze Post-Gfice Order.-Trie Potemater General has issued an order by whach peth suns addresed to barliduer it, and furwaruted by ples w He...bees or ether House, if they do not exceca 32 ounces is wr: hit, are exempt trom postage promided they are sent mithout coners or in covers in such pecition intendeal to be sent fiee of parstige, the practice beng :llezal : and it any enclusure is round in perition, it will be ahbect to the full rates of postage.

Ecclesiastical Commission.-The Eeclesiastical Com. the amited alsuunt of fuads it present at their diaposal may be best dratribated, thave fumad it neecessary to contine thenr augmentatioms, in the first matance, to a particular
class of benetices; and tiney have resulved to recommend to her Majes'y in Conncil the grauting, out of the annual proceeds of suspended canonntes in cathedral and collogiate churches now accruing to them, such augmentations as may be requisite to secure an average annual net income cure of souls (viz., bens ether a parish church, or a church or chapel, with a district legally assigned I. Laving a population amounting to 2000, and being in the pationage of the Crown, of any arcmbishop or bishop, dean and chapler, dean, arctuteacon, prebendary, or orther, of of any rector or vicar ; the Commissioners, nevertheless, reserving to themoslves a rigat to abstain from recommending such augmentation in any case in which, frow special cir-
cumstances. Chey shall be of opition that it is nut at precumstances. they shall De of opituiun that it is nut at pre-
sent expedient to do sn. And the Commissiouers are also ready to receive, for inture consteration, any otfer of
a benefaction. to ineet an augmentation out of the funds a benefaction, to ineet an augmentation out of the furds at their disposal, to any bentfice, whether in public or private patronage. having a like amount of
Official Appointments. - Vice-Admiral Sir C. Adam, K.C.B., who has been appointed tos succeed Sir T. Harvey as Commauder-in. Cinet of the West India and Nortin American stat:on, takes his departure the first week in
Sept. for Berieuda, and will hoist hits fig in the M Malatur
The New Purlument. - In order to present our veaders with a complete account of the recent elections we give belum an alphithetical list of the Members recurned to the Imperial Parliament by the different construenctes of the
United Kingdon, distingui-bing their politieal principhes by doubie columns, as before. It now aupears \(t w a t\) Mr. Harford, one of the Members included in the double return for Cardigan, has expressed his determination not to interfere with the otaer Member, Mr. Pryse, who will accordingly tahe his seat without opposition. This will reduce the majurity by one.
Alpaabetical List of Members of the Hocse of Commons, returaed to serve in the lith Parliament The United Kingdow, and the 2nd of Queen Vict

France.-Disturbances at Toulouse. -The intelligence from this city, brought by the Paris and provincial journals
since the publication of our last week's Number, is satissactory, inasmueh as it informs we that no new revolt or
fact collsion had taken place: at the same time, however, it shows that wh.le the Government was adopting all pussibie means fur enfurcing observance of the laws and for repressing the spirit of insubordination, resistance to the fiscal measures ordered by M. Humann was apparently becoming dressed to the people ty y the new Prefect, M. Duval, which, at the same thme that it was firm, was conciliatory, and This appears to soothe the irritated feelings of the cirizens. in reference to the late proceedings, but preparations were makug for trying some of the instigators of the riot, and the pretimnary judicial measures were proceeding. The had assumed the command of the military, of the had reriewed the 8,000 soldiers cuncer.trated at Tumlouse. All the posts occupted by the National Guard had been given up to the troops of the line. Subsequent accounts inform us that
the proceedings riuts were carried on the parties implicated in the late rests were daily taking place.
has been publecal Measures.-A long Ministerial article atrongly agaiust the attacks and exayuerations of protests positon journals on the subject of the fiscal measures of the Minister of Finance, contending at the same time for bare subinited legality. It remarks that 20,000 communes cause a dozen or fifteen communes have opplosed its execution that Government is to be intim dated, or that it sanationed moreover by strict accordance with the laws, Wiambers. If in some towns, it adds, the census had inet Wita difficulties, and public peace had been disturbed, it Was only because the authornties had not displayed that connexion with this subject the Journal duem. In asserts that the municypal council of Paris intends to resist M. Humatn's plan for surcharging the door and windowany of this important intelligence is not confirmed by caused a notice to be journals: the mayor of Metz had M. Humann's circulariaca sioldtion of the laws. Accuunta from Auntres state that the municipal council of that town Maving been convoked for the purpose of deliberating upon and declared that neal measures, had refused its concurreace, and declared that none of its members should accompany
the fiscal agents in their domiciliary visits; the Mayor
attempted in vain to call a second meeting. The same accounts inform us that the supervisor of taxes having commenced his operations at the small town of Gradignan, near Burdeaux, was permitted to proceed until it was
found that he had increased the taxes on a pastryconk found that he had increased the taxes on a pastryconk
from 17 to 57 francs, when the entire population became fromis to 5 francs, when the entire population became mined to refuse to assist the inspector.
The Sinking Fund.-An official statement has been published of the operations of the sinking fund during the months of Aprit, May, dnd June. 1 is 41 , from which it appears that a capial of \(6.148,981 \mathrm{f}\). Was approprited by
the treasury, in that interval, to redeem 211 . milf . rentes in the 3 per Cents., and 25,233 f. in the 4 per Cents., in of Surveillance of the Caisse des Déports et Consignations March, \(18+1\), amounted to 318.33 ?, 522 2f, fi"c.: the recerip's. in the course of those three months, were \(49.639,1 \geq 3 f\). 51 c. , and the expenditure \(32,992,38\);f. 63 c . leaving a mm
of \(3.35,3 \times 6.258 \mathrm{f}\). 80 c . in the Ca:sse on the 31 ch June, \(1 \times+1\).
The Fleet. - Accounts from Tuulon announce the sading of the fleet, under Admiral Hugon, from that purt, on the
22 nd inst.; its object and destination however are not 22nd inst.; its object and destination however are not stated. Admiral Lasusse was unable to accompany the
fleet in consequence of an accident-the breaking or divlocation of his arm. Some surprise and speculation appear to have been excited by the sailing of this squadron; hasing been considered that one of the consequences of
the signing of the London protocol would be a gradual disarmament. It was, however, stated that the vessels were only victualled for oue month, and it was therefore concluded that they would not leave the coasts of France,
Italy, Spain, and Africa. The same accounts add that Italy, Spain, and Africa. The same accounts add that
two ships of the line and one frigate, under the command of M. Leray, at present before Tunis, would proceed to the Lerant.-Subsequent intelligence has been received, which states that the destination of Admiral Hugon's squadron was no longer doubtful; that three ships of the line would remain before \(T\)
resume the \(\operatorname{Sin}\) Irna station.

The Weather.-The accounts received from various parts of the country announce the most gratifying improvetime past of a character to raise the most gloomy forebodings with respect to the crops. It is added, that should this favourable improvement only continue for eight or ten days longer, the harvests, which are both
good and abundant, will be safe, and the principal purtion of them will have been housed.
The Fétes.-These fêtes, in celebration of the " three
days" of the Revolution oi 1830 , conmenced on Wednesday, but the ceremony of that day consisted merply in Vague rumours of disturbances continued to prevail, and the extraordinary precautions taken by the authorities seem to encourage them, but no riotous indications had as yet been manifested, and it was generally expected that the fetes would pass over, as heretofore, without any dis70,000 , and a well-provided street-artillery prepared for instant emp oyment.
Algerra. - Letters from Algiers of the 13th inst. state. that the Governor-General will resume his operations in the autumn, when the province of Oran will be the theatre of war. In the mean while, his endeavours are directed to insure the tranquillity of the colonies established in the Mitidjah. Gen. Lamoricière was at Mascara, and was to follow up the system of razzias against the Arab population. An expedition which marched from Mostaganem to receive exdimission of a tribe. had met whe thative with fresh courage. The French troops continued to be much harassed in their garrisons.

Spain.- A prutest, which has given rise to much discussion in the journals, has been published by Maria Christina de Bourbon, against the decree of the Cortes which deprives her of the guardianship of ber daughters, of rather of the management of their property. The senate and the deputies, it is stated, are at issue as to the manner of taking the oaths to be imposed on the new guardian of the Queen. In the Chamber of Deputies, during the discussion on the budget of the marine, a deputy moved an amendment, to the effect that 12.000.000 reals should be appropriated to the construcrion, equipment, and armament of vessels of war, at Ferrol, Carth+gen 1, and Cahiz, protect national the kingdom. 31 Was menared alung the who Olozaga, ia the name or col motion, dectaring that he nation artheles a had nothing to fear; but the motion was nerelce at Algesiras oy the ho ise.-An affray had taken place Britih satiors, between the Spanish coast-guard and some britsh satiors Maess of which had exrited consere remarks on tha country from called forth some In reply to some question connected with this affair, put to the Coprernmear fa the Chamber on the 17th, the Ministry said that the Cabrnet had demanded satisfaction of the British Government on the subject. On the same day the Chamber asupted. atter some discussion, the article of the budget granteng Queen Christing an allowance of 3 , \(9: 10\). 0ilf reals, being the amount of the jointure stipulated on her marrage with King Fer-
dinand VII. The article was carried by 95 votes agunst
ment plan of raising a loan of \(60,040,004\) reats had approved of the project; but the aegociations of the minister for the purpose of obtaining the advance of this
loan from the capitalists had hitherto been fruitless,
although the proceeds of the salt monopoly were to be
given as a guarance. The given as a guarantee. The frorngition of the Cartes is
now erpected to take place in the fisat wepk of tugust.
 the Butaric ls ands, with mospathes from the Consernnr,
annomeng that con-ile: able asiation prevalled there in conseguence of the influr at a mimber at Enylaht officers Who were helirved to entat t:A some racers on thase
islands. Tue Engish, it is as and intende 10 begin by establishing a mhiaty huspital at Piml: but this is opposed by the fovernment, who hav semt there 30 in men and a large sum of money to be emplaned in the detence of those inaud-.- Letters fram Mawz of the 12 h inst. Hhucema, but that a force of \(4.0=1\) men was theal con centratell near the to a force of to be menn was thes con centrated near the th:n realy to be eminmken. shath the letters add, that the Englah had of late Lonted muwards af 300 bales of prombited gaods on that part of the mant of Anditusia.-senheerpent menants from Madnd infinm us, that the Regent had ordered that the :4h Mast., whech was
the anniversary of the hirtiod of of Quen Maria Christina, should not he (ibserved, and that \(n\) ) lesee woutd be held at Court. There were some repports of chances in the Mif Fins; and the retirement of the linsters of War and mentioned as particultrly spuken or, Mo. Man being the Cortes, in their sittmy on the 21 st, disided by 83 voices ayainst thi, that the moperty of the secular clergy was national and for sile. - Arcoments from Barcelona state, that the aurhorities have ordered the maren from that town of the reginemt of the Rowal (Guard, axamst which the population had risen. It is also sud that the garrison of Andicema, contstrig of men. had surrendered, on condution that their lives should he spared; but that they had been removed to Malasa, where the greater portion were sentenced to be shot. notwithotatint the promise th us given. - A letter from Algssiras of the 13 th inst. in forms ns, that the Commander of the Sm Roqne. on hearing of the attempt \(c\) momutred by the Fayghan salors on the coast-guard in the night of the 7/h. had crossed the lines and had a warm alterestron with the Governer of Gibraltar. The latter, it appears, retuned to gise him a satisfactory explanation of the conduct of the crew of the English vessel. But atter some discus-ion he at leneth convented to restore the captured boat. which mas brought back to the bay by the English.
Portugal.-By the usial weekiy steamer we have re ceived intelligence fiom Lwhon to ine lowh inst. It had been announced, that Russia was preparent to recognise the
Queen, and it was reyorte! that (Mie; other Libonski was to come as minisfer Tom thet mower, and Monsignor Furnarini as Ninew of on Rome. \(X\) repart had as yet
been presented hy the suecial Commite of the ( hamber been presented thy the special Commitee of the (hamber forward by the government and the rural commistion: it was expected that it would termmate in government getting a vote of confidence to carry out its proposed reforms and financial projects. From an abstract of the budget which has been published, accordng to the prenent estimates for the rear June 30, 1:41, to Jute Sh, 1R42, it ap pears. that the total revenne and expenditure are as foll ws: - Reventle, 11,091,279,210 dollars; expenditure 11.0133666683 dollars The Cumber of Deputies had passed a and were still cinstiderng the quection of the foraes, or land imposts. There were some rumours of changes in
the Mhistry; but if these sh uld take place, it is thought that they will be unimportant
Germavy. - The amounts from Tienmastate, that the recent fallures of the large baliking - house to which we reatrention our lavt Aumber, suth conimue tor orlupy much surs who had lost large sums, amnnyst wham were the names of the Empress-mother, and several princes of the Imperial family. The amount of thar paper discounted 400,0140 to 501,010 florins. This failure had already cuased the ruin of sir ather houses of the secend or third class: but privite levers a ta.e that commercial affars in Vienna were heginning to assume a less uniturnatable appearance. The Augsburg Gazette of the :2d inat., ander date Pest, states that in eonsequence ofthen ai taken place at Viema, a mo-t unfivmerable speston Lud taken place throuzhnur homyary. and that s. me of cer mants. Credir and confitence had dispupeared. wod the price of native proflucs nactiantry or wome had anten conder ably. The late aveounts inform us that Proce Merternit h
 qu earthquate had bern fen on the \(13+1\) ars., at the Obercatory at Vienna, whiek cuupi in damase, hut a

 require, amongst other emeewions. an extension of the liberty of the press. andi 1 reorganisation of the district corpurations. A corvention has been mado between the Frankfort, for the formation of a rauroad between Cassel and Frankfort, by the way of Marbourg and Grison.-A
thunder-storm, accompanied by a hurricane, passed over Berliu, on the afternoon of the 18 th inst., doing consider largest trees were thrown down; the corn which was cut ance of several miles. The rois of several huildins tance of seral miles. The raois of several buildins sons thrown down. The fine roof of the tavern belonging sons thrown down. The fine roof of the tavern Anhalt-gate, weighing about 200 cwt .o was torn off and carried into the city, and it became necessary to cut it t . pheces in
order to remove it. The same storm did considerable damage at Frankfort-nn-1 he-Maine, and other places.The foilowing statisties have been fublished. relative to the city of Berlin. - In the year \(1 \mathrm{~s}: 6\). The number of criminals brought to trial amonted to \(8,-6\). From the year 1817 to 183 , the number of crimma Berin amounted to \(170,0(100\). In the year \(1 \times 36\) they had incretsed to 3 41, (thtil and at present, the population ansed in popo inhabitants; whale crime has increasul in propurtionof boats at that place were carried away by it, but fortunately no one was lost, though many people were on the bridge at the time. One of the divisions with a carriage on it floated down the river several leagnes. The effect
of this storm, which was, as our readers will recollect, very general throughout the ['nited Kingdum, appears to have been felt over many parts of Germany, Switzerland, and Frence, daring the same day. - It is reported that the return of the Arcbbishop of Cologae to his diocese was attention to an antograph lecter of his Holiness.

Switzgrland.-Accounts from Berne, of the 21th inst, state that the Grand Council of Argan has adopted by a majority of 108 votes against 80 , the folloning resoconvents and the nunnery of Hermetschwll, which has taken a special part in the revolt, are to be suppressed; secondly, the other numneries will be re-established, on condition that the necessary reforms be introduced into them ; thirdly, the property belonging to the suppressed convents will be, by modification of the former decree, exclusivelr teft to the churches and to the Catholic schools, to the education and assistance of the poor. If the
majority of the Helvetian Diet does not declare itself satisfied with this concession, which is the only one the canton of Argau can make, the concession will be considered as null, and the Grand Conncil reject all responsibility with respect to the results which a resolution of the Diet might bring on by rejecting such a concession. It is thought that tins ciecision of the Diet will lead to serious consequences.-The Swiss papers state that, on the morning of the 18th inst., a hurricane, such as has hardly been chitel, the prineipal violence of the storm being concentrated round Lusianne. Several vess l: were sunk, trees of great size rooted up, and several tuild ngs, levelled with the ground. The road from Lausanme to Villeneave wa carried away in sereral place's. Heayy falls of hail and rain accompanied the wind, and the damage dune to the crops and fruit trees was rery great. The quay at Vevey was also seriously injured.
Russia.-Aceounts from Warsaw inform us that by an imperial ordinance of the 15th ult., the Government of Cracow is to be called hencefurth the Grovernment of name with the adjoining Reprblic of Cricow. - Private letters from the Pulish that the Emperor coatemplates re-establishing the two
Polish Ciambers, dissolved by an Imperial decree of the Polish Cinambers, dissilved by an imperial decree of the arms.-Aceounts received at Odess? from the seat of war in the Caucasus state, that the lth division of the Russian
army had crossed the ruver Lija, in Apri, in effecting whic9, eight officers and three hundred soldiers were hilled. Thr fort of Williaminow nad been successfully cannmadeat townds the eat of May. The garison of the fort of thagra had lest fifty men, who had been sent in search of a detachment whose absence had been prolonged. fuctance, and lose annually in the Circassian war 30,001 . men, by the enemy or si, hines.
Italy. - Six persons concerned in theconspiracy, alluded to in our last Number, to erect the whole of Italy into an three of them sentenced to deati. It is, however, thought that his Sicllian Mije-ty, who has never had a polttical ermmal executed, whil commute the sentence. - Letters
from Bulogna of tie 16 minst . nnommer th th a poltict
 Anstria.- Accounts trom Turin vi the lich ins:. amponce that the arrangeraen's relative to an amilai pension of
200,000 f. ( 30 vin .) sterling, to be paad hy the abs lute Powers to Don Carios. Were nearly completed. The Prus-
 allowance which is pays already, bit it is tavught that
 to take magures for making a tuntel on an 1 nmmernse
scale though t.ee antioulty if tart ronte ints Iealy. - tceuants frum
Rome of the 14th nosto state, that Count Brahe had arrived in that city from Berlin, for the purpose of arranging the ter of Treves. - We learn from Genon, that the three sarviving brothers of the Emperor Napoieon, Joseph, Louis,
and Jerome, are at present in that city, where the Govern-

Gremee.-The (abinet sas definitively constituted on the 6 ih inst. in the following manner:- - therocorderior:
Presiden of the Council. and Minister of Presiden' of the Council. and Minister of the Minister Christides, Minister of Foreiun 1 ffirs; Metaxa, Meinister of War: Valetas, of Public: Instruction and Religious Antairs ; Melas, of Finance is contided provisionally to M. Tisamens. Prisate letters of the 10 th announce that all Bivarians are to be discharged from office, and that Marrocordato was very popular.

Tcrkey and Syria.-From Constantinople we learn that Said Bey and Sami Bey, the former son of Mehemet Ali, and on the Gth inst. with presents for the Sultan, and capital on the 6 th inst. With presents for the sultan, and
11,000 purses, or nearly \(5^{\prime}, 000 l\). on account of the tri11, pute. The Consuls of the four Powers had received orders to be ready to return tlinexandia. plot is said to be in still seems to be declining, and a plot is saif to be a progres for appointing Mehemet Ali Grand Vizier and
Guardian to the yuung Prince, in case of the Sultan's death. Tise Porte hal aldressed a firman to the Govermor of Jerusalem, respecting the Jews of Syria and Palestine, in which he is directed the in every respect as he had been ordered to treat the Christians. Letters from Beyrout of the 25 th uit. state that the Pachas in thely netghour the old sritem, and disregarded the hattischeriff, that the Porte had recalled them, and that the mountaineers persisted in their determination not to pay taxes. There remained at Beyrout a detachment of English 10,000 men. No new cases of plague had taken place in Syria, and the general state of the country is said to be
satisfactory. The latest accounts inform us that the dis turbances in Bosnia begin to assume a serious character Mahmoud Pacha, of Tusla, on the frontiers of Sclavonia, had raised the standard of revolt and attacked the Vizier, who was obliged to retreat before a superior force. Tusla had become the rendezvous of all discontentishes arm mans and Christians, to whom Mahmoud furnishes arms indiscriminately, in order to reinforce and French offcers in his service. -The Porte, it is stated, has summoned the Retif, or militia force of Anatolia and Roumelia, to Constantinople, so as to collect 50,000 men there, but for what purpose was unknown.
Cavdia.- The intelligence received from this island is unfavourable to the insurgents. Since the 13th several skirmishes had taken place on different points of the island, in all of which the Greeks had been worsted; and or result of each engagement was the subsisste serious encounters, in which 2,000 men on each side were engaged. The insurgents were defeated in both, and the provinces of A pokorona and Kissamos had been reduced province The Greeks, is added, were in som measure surrounded in the mountains of Suhakia by Tahir Pacha, who was waiting the arrival of 2.010 Albanians ( 81.1 ) of whom had just landed) to attack them in their last stronghold. A cutter and two large boats, laden with aras and ammunition for the insurgents, had been ciptured off Sphakia by the blockading squadron. A Turkish steamer, with troops on board, reached La Sula on the 22 d ult., and the flotilla lately sent from Constansinople to reinfurce the division of Tahir Pacha was seen Turkish troops, it is stated, continue to commit the greatest excesses after their victories. We learn by subsequent intelligence from Sinyrna, that a Greek schooner had arrived there on the 8 th, bringing the news of the entire pacification of Cindia and that the Archbishop of the island had addressed a letter to the Ottoman Ministers, in which he betestmony to the prudent and moderate conduct of Tahir Pacha under the most trying circumstances, an Which we states had obtained the universal approbation of
the inhtbitants; but this statement requires coatirmation. the inhabitants; but this statement requires coantmation. by the Levant matl, to the 6 th inst. A perfectly goad understanding c intinued to exist between Mehemet Ali and the Porte. Said Muhb Effendi, the Sultan's envoy, previnusly to his departure from Alexandria, on the 2oth uit.. agreed on the part of the Porte to reduce the amount
 which the Pacha is said to have been well pleased. With respect to freedum oi trade, all prodace is bought and sold by the Goverament alone, and the ni mopoly i- deseribed as having never been inore severely exercised than at the present thene. lurahim Pacha was still at Alexandria the plazue had ceasel, and the Nile was rising favourabl When the steamer, conveying the Levant mail, was on the poiar of \(s^{2}\) arting, a despratch from the Grand Vizier at Constantinople arrived at Alevandria, commanding Mein Arajia, to send troops aul provistons to Ltedjz, and the holy cines, to mantan good order there, and promising that the expense, of the expedition shou'd be atiosed out of the tribute to be prid by Mehemer Alito the Ports.
Patris Henry, as Liverpuli, on Tuadiy night, we have inss in Congress cintefly relate to the Bank Bill in the Senate, and the Dintrionti:n of the Pubhe Linds and Pre-emptina B.Ifs in tha Horse of Repre-entatives. The said to be diviled amung thenselses. on the bill. It was even rumoured that the President would not sign the bill which Mr. Clay and his friends had matured. The President Lad transmitted to Congreas a message in writing, accomp nied by the memorial from New York, praying
declaration of independence bad been celebrated on the to the case of M'Leod, the decizion of the Supreme Cont which had commenced its July term on the 5th inst would, it was supposed, be given in a few days afterward All the members of the Court had, it was rumoured, prepared written opinions to deliver on the case. The de cision of the Court, it is thought, will be brought by the next arrival. The papers contain rarious speculations a to the wreck of due sapposed burnt steamer which hat been seen of Cape Hatteras. A portion of wreck cosjectured to have been part of that vessel, had been wasbed of in Castine-bay, in the state of Maine, on a promontory particulars of a wreck, also supposed to be that of the President, which was fallen in with by the ship Norl/ Bend, on the 2d June, in lat. 30. 30, long. iJ, and which will be found under our Metropolitan news.-The arrival of the Britannia steam-ship, from Halifax, has since pat the possessioa of the decie that he shall be brought to trial, and have given a loni tatement of the grounds on which their decision is founded; but no doubt appears to be eutertained of his nltimate acquittal. The Brifannia performed her voyage in nine days,-the most rapid passage known.

The Niger Expedition. - We have received a letter from one of our correspondents engaged in the Niger Espedition ; it is dated St. Vincent's, Cape de Verds, Juae 3 d , and was forvarded by the Portuguese packet which
left the islands on the saine day. Our correspondent sars, "Our vevage has been very favourable; we hare had fine weather and fair winds since we left Enzland, and all things seem to go on well as yet. We hope shortly to be able to announce the safe arrival of the Expedition.
Infant Orphan Asylum.-On Saturday, H. R.H. Prince Albert laid the foundation stone of the new building belonging to this charity, at Wanstead. The Prince came to town from Windsor by a special train, and was esconted from the terminus by a troop of the Essex yeomanry. On his arrival at the ground, H.R.H. was received by the Bishop of London, the Lord Mayor, the City authorities, and by a numerous assemblage of company. After the usual ceremonies were gone through, the Prince partook of a luncheon at the Eagle Taveru, and in acknowledg ment of the feeling with which his healtn had been pro posed by the Bishop of London, expressed the pieasure Which he felt in assisting in the work of charity on that
ocrasion. The Prince then returned to Windsor Castle.
Release of Mr. Medlurrt. - Tinis person, whose case has lately acquired additional interest, in consequence of the removal of Mr. Moreton Dyer from the coumission of the peace, the particulars connected with which hare appeared at some length in previous numbers of this paper, was on Saturday released from his confinement, ulpon that order sent down from the Home Office. It appears tha his release has been effecter in consequence of apre sentations made by his medicyl attendants to the Marquis of Normanby as to the state of his health, from which the worst result was anticipated, unless he mere at once of the prisoner by the recent proceedings, arising (lut of the alleged proposition of the ex-magistrate, is suppiosed be the cuuse to which the failure of his health may be attributed

The New Percussion Shells.-Some experiments, in accordance with the directions of the Board of Ordnance, have been made in the artillery practice ground, Wouk of Normudie and those made by Mr. Smart. The pectuliar ment of these shells appears to be thatt they are no discharged by means of a fusee-a process which illed mith rally somewhat uncertain, but by means of a eap niled merer deconating puwder, which is intended to exploce where fired fromel strines its a jecry-two pounders at a woode bulwark, pinted so as to resemble the side of a ship, an at about four hunded yards' distance. O.winr, howeren to some defect in the fastening of the cap, the success wast not so c.mplete as had been anticipted, the shells burs ing, in every inotance, as so in as liberated from the muz zie of the gun. A hate experience hawever, it was thoed by \(w^{w}\) )uld easily remedy this defect. The shelis invetined Mr. Smart, in which it appers the end to be woted jet the same, though the means are different, succee ed thas the burst whenever the mark was stenotended th pros the ontaion of the offeers who stpent wood the proceedinzi, tiat, from the splinteriug of the woud, These holes proluced by suci finng culid \(n, t\) oe pasd, when the ateration in the shells neeessary to ensure suose, ba been expente 1

 Oxford.street should be paved with wood. the previju had undergune a lengthened discussun on that occasion, Saturday, when it was adjourned. report was read from the committer appord street, in
they agreed unanimously, that having from time to time carefully examined the state of the paving laid down by
the Metropolitan Wood Paving Company, since October 1839, they could not approve of it. After a long discus sion, a vote was taken on the adoption of this report, when was accordingly received and adopted.-In connexion with this subject, Sir P. Larie appeared at the Mansion-house on. Tuesday, for the purpose of complaining of the wooden pavement in the Poultry. He stated, that although the it was most dangerous for gentlemen either to ride or
drive orer thens ; and that, in fact, the lives and limbs of drive orer thens; and that, in fact, the lives and limbs of wherever the wroden pavement was laid down. The Lord Mayor said, that he was not aware that this description of pavement was generally considered so dangerous as Sir maintained that its mischierous effects were quite palpable, and he hoped that the Suciety for the Prevention of Cruelty to Animals would turn their attention to a subjec of such paramount importance. He should himself men future intention. The streetkeeper of the Poultry being ssked to state the result of his daily observations of the wooden pavement, said, that when the blocks were partly ret, the country horses, whith were not used to such parement, frequently met with accidents.
The Census, - The returns of the p
The Census. -The returns of the population of the the various parishes and unions adjoining the cities of London and Westminster, have been sent in to the Registrar General, and give the following results
\(1841\left\{\begin{array}{l}\text { City of Westminster } \ldots 229,703 \\ \text { Metripolitan parizhes . . } 909,749\end{array}\right\} 1,139,452\) 1831 City of Westminster.
\(764,430\} 974,466\)
Excess of 1841 over 1831, 164,986 for the city of Westminster and the metropolitan parishes. Ditto of females Andrem, Holkorn. It appears that with the exception of Wapping and Saffron-hill liberty, there are more females than males in all the parishes; and the exception with respect to these two appears to be uccasicned by the cir-
cumstance, that Saffron-hill contain cumstance, that Saffron-hill contains many lodging-houses for men onfy, while Wapping is the great resurt for sailors,
The excess of females in Islington is accounted for by the large number of ladies' schools. Including the city of London and the southern metropolitan parishes, thought that the increase of population will exceed 200,000 Mortality in the Metropolis.-During the week ending on the 17 th inst., 761 persons died within the metropothree years having been-926. During the week ending on the 17 th, if children dred of convulsions, and 35 of hydrocephalus. Of consumption, there died 150 persons of disenses in the digestive organs, 47 ; of old age, 42 ; privation, 2 ; and by violent deaths, 21 . The table of deaths, for the week ending on the 24 th inst., gives the
following results: - males, 400 females, 356 . Weekly following results:-nales, 400 ; females, 356.
average, \(1838-9-40-\) males, 475 f females, 451 .
The President Steam-ship. - By the arrival of the packet-ship, Patrick Henry, from New York, we learn wreck having been fallen in with by the ship North Bend, on the 2nd June, in lat 30.30 , long. 75 . : and which, like the wreck reported in this paper last week, as having been seen off Cape Hatteras, is sopposed to be that of the ProAment. The following are the particulars as given in the passed close to the side of a large vessel, her lower deckblown ournt off to midships, the deck appearing to hare ing off, as the spikes were in the beams, all the fastenower deck-way was painted red. The Captain considered that it must have been a large ship from the size of the timbers, and could not have been long a wreck, as every-
thing was qui'e clean. The carpenter of the North Bend xpressed his convict. The carpenter of the North Berid the President, as he had seen the English s:eamers in New York, and, from the formation of everything, particularly the dagger knees, as well as the painting of the Ween destruyed by an explosion of gunpoweared or steame for it was thought that if sthe had been laden with any edge and sumle matter, she would have burned to the water's edge and sunk. If she had taken fire in lat. 38 , it is considered prubable tiat she would have drifted down to There she was seen. Nothing further Lad been ascerFitn by the captaing wreck stated to have been fallen in It is also captain of the Augusta, of Cape Hatteras. cast up on the coast of Dramman, which it is thought may be that of this unfortunate steamer, from the circumstance that the greater number of wreeks occurring near
the shores of up on the coast of Norway. City Improrements
held on Thursday reports were brought up on petitions tion househants and others, for a new street from the Manpracticability of forming to Ivenue from Great Eatochedp to \&:. Mhentel's clurcti. They represenied, that at pre. Sent the state of the funds would not admut of carrying
into effect improvements so desirable; that che extensive itoprovect improvements so destrable; that the extensive office occusioned an expencumare so consicierable, as to prevent any of the City cash from bems made avalaoie for those projects; but tuat it was hoped the furmer would
sent ssid that the City had been greatly relieved by the opening of the new London-bridge, as the iumense traffic over that bridge testified; and he trusted that as the ine to Southwark-bridge would be attended with but slowht diate and the convenience would be vers great, immeimportant an improvement, especially as there was ever. expectation entertained that the bridge toll would soon

The reports were then severally agreed to, upon the understanding that all the improvements alluded to should be undertaken as soon as the corporation funds could be made available to such purposes.-At the same meeting of the Court, a discussion having arisen as to the
propriety of interring hodies within the Citr, a resolution was proposed and carried unanimulsly, that it be referred to the City Lands Committee, to examine into the means of sepniture in the City, and the state and condition of all the churchyards, places, and vaults, for burying the dead therein, and also whether it is expedient that an end should be put to the interment of the dead within the City, and o report thereon to the Court.
Accidents.-A fatal accident occurred on Monday, at the Marble-works, Pimlico, to Mr. C. Reid, son of the builder of that place. It appears that six men, under the
direction of deceased, were engaged in removing some direction of deceased, were engaged marble slabs from the steam machine, by which the large marble slabs from the steam machine, by which they
had been cut. The slabs were supported almost perpendicularly upon a stage, composed of cement surrounded by brickwork, and were considered to be perfectly secure They were pulling off the seventh to place it upon rollers, and to convey it to the adjoining wharf, when the compo though it had been propped up, fell towards the workmen All the labourers escaped whurt, but deceased, tho \(m\) a directly in front, had not time to move before the slab fell upon his ueck and crushed it against the opposite wall. He was extricated as quickly as possible, but from the great weight of the marble he was quite insensible, and died a few hours after. An inquest has been held, and a verdict returued of "Accidental death."
Inquests.-On Saturday, an inquest was held at Sydenham, on the Rev. J. Dyer, who committed suicide by
drowning himself in a tank of water. Deceased was a Baptist minister at Sydenham, and appeared to have been labouring for some time under considerable excitement, in consequence of oret-anxiety arising trom pablic bustiess. He had been for a great number of years the Secretary of the Baptist Missionary Society, and it seems that he bad actually issued printed circulars, calling a meeting o neighbouring ministers, in matters connected with the Religious Tract Society, to meet at the hour at which the jury were sitting on his body. Verdict "Temporary rly down, os Caroline Harbour, aged twenty-one; the roung woman who, with her busband and another person, were drowned by an accident on the river last week, and which we noticed in our last Number. The jury deliberated tor
some time, the majority being of opinion that a hear deodand should be laid upon the boat, to show their disapprobation of the practice of letting out boats to inexpe rienced persons. The boat-builder, of whim the skiff had been hired, stated that it was licensed to carry sis persons besides a waterman, and was of ample dimensions. He was always very cautious to whom he let boats, and in the present instance he was assured that the parties were fuly death."-An inquest luas been held on Mr. Cleak, formerly builder at Huxton. The body, it appears, had been buried, but again drsinterred in consequence of certain rumours affecting the character of the widow, by whom it was said deceased had been poisoned. Tuese reports appear to
have originated from the circumstance of thelr having have originated from the circumstance of ther having
lived unhappily together. Thie inquiry, which occupied two sittings, terminated on Tuesday, when a medical man who bad made an aceurate examination of the contents of the stomach, having tie, osed that it was pertectly heaithy and exnmited no traces whaterer of poisons, the coroner said that the esidence was most declesve. It clearly proved erated his wite trem alis surpieion of hasins in any way hastened it. The Jury then returned a veldict of "Nistural death

Plymouth. - A local paper gives the following account On Sunday morming when Couk, one of the town gergeauts, took their breakfasts into a cell where three men were contined, one of them, named Randell, who is under sentence of transportation for 14 years, snatched the prison keys from his hance a knife, and, using threats stripped of the to:n sergeant's trousers aud put them on himeelt, taking from him three sovereigns and his watch, baving fastened the town sergeant on the bed with his face downwards, made his escape. The other prisoners were afraid to interiere, in consequence of Randells threats,
It appears that in the year 1837 the convict was sent to the hulks for seven years for robbery, but in consequence of good, conduct he was freed after about four years con-
finement. He had, however, only been at liberty 16 days when he stole a check for \(50 \%\). from the master of a ship lying here, and for this robbery was sentenced to 14 years transportation. Subsequent accounts inform us that the at Liskeard.
S'rewsbury.-On Monday, Thomas Simms was tried at this place, charged with the highway robbery committed near Newport, on the 5th June, on Benjamin Nicholls, and with stevthy from him 150 hali-erowns, 500 shallings, and viher moneys, the property of Willia an Brittain, the ireumstances of which were reported in this paper at the tume. After a iengthened trial, which did not elicit any
further facts than bave been already made known, the jury found the prisoner guilty, and sentence of death was accorthingly reeorded against him.
Silverton.-The Devonshire papers give the following account of an extraordinary crop of wheat, self-sown. It appears that Mr. White, of Yolton, in this parish, has a field of wheat, of four acres, which has sown itself by the carn fa:ling from the ears at the last harvest. Mr. White' turnips, but conceiving that the ploughing up such blades of wheat as presented themselves would be a species of destrnection presented themselves would be a species of resuit is a fine crop of wheat, some of the ears being early a quarter of a yard in length. It is thouglst tha chere will be from 25 to 30 bushels per acre, and that it will be sufficiently ripe to cut in less than a fortaight, should the weather prove favourablo.
Southampton- The great inerease whith has recently taken place in the trade of this port appears from the fol onwing account of the exparts for the quarter ended on the Sth inst., compared with the quarter ended on the Jth July, 1840. Quarter ending July 5, 1840 : value of British raanufactured goods exported during the quarter to France and the Channel Islands, 31,0001 .; of foreign goods from bonded warehouses, 30006 . ; total, 34,0001 。 Quarter ended July 5, 1841, value of British mannfectured geode es ported to Fraaee and the Channel Islands, 40,0001 ; foreign goods from bonded warehonses, \(5000 \%\); totul
45,000 . 65,000 . ; foreign goods, \(30,000 \mathrm{~L}\); total, \(95,000 \mathrm{l}\). British goods exported to Malta and Alexandria, 15j,0001. ; foreig goods, 3uinl. ; total, \(158,000 \mathrm{l}\). Total increase on the quarter, viz., on British goods, \(8 y, 0001\); on foreigne goods, 3, 0101 .; making together, 124,0001 . The imports have The duties pary increased, but hore amount to uearly 17,000 . - The works of the Artesian well in this town are now in full progress, and the depth of 344 feet has been attained. The soil at this depth is. hard clay having the appearance of dark-culoured rack but softening on exposare to the sir. Should no unforeseen difficulty atise, an early completion of the work is anticipated; and it is thought that the tom will soon possess an unfailing supply of pure water
Stafiord.-On Saturday, William Simpson was tried Hewitt, near Wehley Moor cumatances connected with which we have already given in this Paper, After a protracted trial, daring which strang circurnstantial eridence was adduced ageinst the prisoner, the jury returned a verdict of Not Guilty, to the rident astonishment, it is stated, of the Jndge and Court. The prisoner, however, has been again taken into ustody, and committed to take his trial at the next assizes, for robbery with violence, upon the deceased It is reported that since his discharge he has made a state nent, which leaves no doubt that he was the murderer-
Stockporh-Great distress at present prevails among the manufacturing population of tuis town, in consequence oi the number of bands out of employ, and the short time whica tus beer worked at a number of mills during several menths. This state of things, it is said, is lukely to be augmented, as the whole of the workpeopie emproged at ne milis in Hisher Hillgate and Newbridge-lane are ex pected to be throwa out of employment at the end of the week, having received notice that the concerns will be clused, and their services no longer required. The above establishoments have for several years been workiug under iuspection, and upwards of 1600 hands will be thrown out 0: eaployment by their stoppage
Windsors. - A few daya since, three men mapt with an
causite them to fall upwards of 20 feet to the ground One was severely injured, ant realered unable to resume his work; the other two, though much bruised, wele not seriously hurt. As sonn as the Queen was made aware of the accident, she sent the Erfuerry in Warting to ascertsin the state of their injuries, and before leaving Windsor for Woburn Abbey, her Majesty sent the sum of 51. to the
Clerk of the Works, to be divided by him amongat the Weat Bromuich.-1 few days since a fatal accident accurred at Hately-heath colliery, near this place. Three men, it seems, were employed in bricking the shaft of a pit, upon a scaffold, ahout nine feet from tie bottom, when a man named Holden, who batl just come out of the unan, manediately ran to the shaft, and found the banksman hanging in it by his shoe, which had fortunately caught soine projection at the mouth of the pit, and having seized him by the legs, dragged him up, without his having sustained any injury. Every exertion was then made to the pit, but fuund them all lying at the bottom down iuto the pin but furst held angir at the botcrict of decidental Death was returned, with a deodand of 10 s , on

York. - At the recent adjourned Visitation of the Archbishop, Dr. Pinllimore, the Commissary, as soon as the Court was opened, said that he understood that the Dean was desirous of making some apology for the contempt he had
off.red. Dr. Cockburn then came forward and uetivered long written address, in which he stated that he wished again to be admitted to the friendship of the Archbishop, and that he was sorry if he had said or done anythng which had given dissatistaction. He admitted the impropriety of allowing any pecuniary considerations whaterer to intluence the disposal of any ecclesiastical livings for the benefit of the Church, whatever local cquestions or rechuical distinctions might be raised to it. He also wisted to state his entire conviction of the right of the Archbishop to inquire into the conduct of his clergy in his visitorlal Court, and his assurance that any resistance which he might have offered to the proceedings of the intemperste intended to mighad that is in connexion with this inquiry he was truly sorry, and he begged leare to apologise to the Archbishop, and also to Dr. F frown whe Dean hal said, thas was wilns te atoue as far as possible, for the cuntempt be had offered to the court, and the resistance he bad interpised to its jurisdiction and authority. If that attempt had been persisted \(i n\), if might have led to the severest censare and punistor
ment, He was content, he ssid, under the apology nolt offered, to remir all the penalties of the Dean's conter unacy, and after admonishing him not to offend in the premises for the future, deelared hitn absolved from his coutempt. The Commisary then proceeded to comment had the laurt of sueen's Beach, which of all authority to pass sentence of deprivation in caset of imony and the sentence of this conrt to that effect whe therefore void. The court, however, he said, had a right to inquire into such cases, with a yiew to ulterior pros ceedings. The prohibition of the Court of Queen's Beach was confined to the sentence only on the question af simony, which had coue suddenly upon this court during the inquiry i but all the other
bindiug authority and obligation.
Railoays-On Tuesday, a young man named Chandler died at the London Hospital, from the effects of a necta accident on the Northern and Eastern Rduway. I6 ap pears. that on: the 7 th insto, he was engaged in throwing in stent a waggon on the line near bromeways on the line just at the time a train was pasing when one of the bullast-recgons ment over his body, by which his leg and arm were broken, and his spine much iojured.-On Saturday, as Mr. Lyford, a farmer, residigg Western R Western Railosy on foot for the purpose or fall dorm in at the Farringdon-road station, he syduenly fell down Hi fit, at the coument one of the trains was appromang. His fall was fortuaately witnessed by a man mear at hand wion bastened to his aid, and, by dragging him from his perion situation, prevented the catastrophe which mast other con have ensued. Mr. Lyford, who was insensible, was cont veyed to the station, where he was so far recovered in his short time as to be enabled to proceed by the crain udent way to Cheltenham.-On Tueaday a serious aco man Which it is thought will prove fatal, happened , Rail way. It appearg from the statement of tro of his feilow way. It appears from the stad as one of the aight gang and was empuyed in the deep cutting at Brentwood-hill about nigeteen mies trom ane o'clectio the morning, they were proceeding aloug the cutting to their work, tolluwed by Wilkes, when a purtion of latter the sides of the curting gave way, and fll upon the with burying han beneath a ton of sand and gravel, ino weles be was dug out as speeduy as possible, apparetitiy linues and conveyed to the London Hospital, waere he contin without any hope of recuvery. - Un the first week of he entire line of the Great Western Railway being opened, receipts were \(12,500 \%\); and for the last week, they \(\downarrow\) amulnted to the sum of \(13,8 \cdot 23\)

IRELAND.
On Mouday, the nuptinti of his Erceileric the Earl Fortescue and Lidy Somerville ware nolemp
at the Uiceregal Lodge, by the Lord Bishop of Cashel. The ceremony was private, only the immediate relatives his bride afterwards left for Maretimo, the seat of Lord
Cloncurry, at Black Rock. -It is stated, that information Cloncurry, at been received at the Castle, of an outhreak being merivated in the county of Kilkenoy and the adjacent parts of the county of Carlow, and that Sir E. Blakeney, the
General Commander in Chief, had taken prompt measures to counteract it ; and a considerable reintorcement of local.ties. The troops detached in various parts of the country, for the preservation of the peace at the late elec-
tions, have received from Sir E. Blakeney a flattering tribute to their good conduct duriog the discharge of this important dury. - A meeting of the Repeal Association seut. After the secretary had read the correspondence of the week, Mr. O'Connell addressed the meeting at consi-
derable length. He spoke with some warmth on the snbject of the recent elections, and the present state of political parties, exposing his own views as to the imminent danger threatened to the country, from the approaching stating it as his firm belief, that the Conservatives could not, for any leugth of tine, retain power from the opposition which their principles, and the course they would be and that repeal was the only remedy for the evils to which Ireland was about to be subjected.
faving fired on the mob, durting tried on the charge of haviag fred on the wiong the election riots, on and with having wounded of which we gave at the time, been opened ont the part of the crown, a number of witnesses were examiued, whose evidence, however, estabished no new facts, and the jury gcquitted the prisoner. Belfast.-Considerable sensation was created in this pout, ont account of the sudden deaths on board, of Lord Dufferin. His Lordship, it appears, complained of indisposition on leaving Liverpool, and directed the steward of the steamer to bring him a dose of morphine, which he heavily in his sleep; and at seven on the following morar ing he was ubserved still asleep, and at nine he was found at which it was proved by the evidence of a medical moman, fem examination, th Lord came by his deach from taking an over-dose of morfew days since, a number of whales, of the species called the "bottle-nosed." made their appearance in Lough boat on the Lough was in a short time manned, and in the course of the day all the whales, to the number of seventy-six, were driven on the lnch shore and captured. One of them measured twenty-seven feet in length, and is supposed to be about five tons weight.

Edinburgh. The line of railway between this city and Glasyow, is rapidly proceeding towards completion. The bultangs at the entrance of the tunnel are now nearly finished, and a long range of stone sheds hure beew
ereciefi for the carriages and engines. The loug tunnel, commencing at the bead of Queen-street and terminating at Keppoch-hill, will, it is said, be finished in a short to end. The booking-office is compieted, and all the otber operations at the dep,ut are going forward expedibeen erected At Cowliirs large baldurgs are erected for workshops, and an etigine-h use fir the stationary engine. Should line wilh he opened throughout in the course of a few weeks.
Grasgorv.-Un Monday, Gavin Scott, whose case, in \(8,600 \mathrm{l}\). on a home of forgery and fraud to the extent of \(8,600 .-\) on a house in this city, has ezcited much interest among meremathe classes, was pluced at the bar of the Suter, win is teprescutal as beng rather engaging in his perwnal aypmarsace, fald great attention the the charges Gavin :cint, ermety antwowed in the atirmatuse. \section*{}

SATURDAY, AUGUST 7, 1841.
We trust that the ohservations last week offered by notion that the air and earth of London and its environs are poisoned by gaseous matter or the one hand, and by a mysterious something on the other If it really were so, there would be no chance of improving the health of London plants when they are of suffering. In pointing out the true cause of the unhealthy state of London vegetation, we hope to be also able to suggest effectual and practicable remedies.
One cause is doubtless the excessive compactness of the soil in many places, as an example of which we may take St. James's Park. In that situation the trees are constantly dying. and the greater part are in a state of decay. They stand on earth pressed so hard by the trampling of passengers and the rolling of carriages, that only a very small portion of the rain that falls upon it can soak into the ground. Their leaves are, therefore, formed in an unhealthy manner, and their action becomes more and more feeble year by year. The effect of this is annually to render the woody matter of the trunk less completely organised; for its solidification can only take place in consequence of the introduction of secretions formed by the leaves, and the leaves will form secretions of whatever kind with more or less activity according to their state of healds. One of the symptoms attending plants in this feeble condition is the collection of fluid undigested matter in their interior, and is conversion by degrees into a putrid slime; when such trees are eagerly attacked by insects, and become an excellent nest for their larvie. The reason of this seems to be that, small as the quantity of fluid may be which the roots are adie 'o obtain from the soil, it is more, nevertheless, than the leaves can dispose of : and consequently, it collects in the ressels of the trunk and fill: them to distension.
The insportance of sain-water having free access to the roots of plants, is not merely because it dissolves the soluble matters of the soil that are required for their food, but because of the quantity of ammonia which it contains, and without a supply of which no plants can exist in a healthy state. In such places as St. James's Park, no decaying animal or vegetable matter ever finds its way to the soil, nor has elone so for a century past, and the trees can only obtain the armonia they require by the aid of rain; that being cut off by the hardness and impermeability of the soil, they are altogether deprived of this essential principle of vegetable life. The squares of London, surrounded by paved streets and traversed by gravel walks, are to some extent injured in the same way as the trees in t. James's Park, but not to the same amount.

A striking illustration of the evil effects of excessive drainage was presented some sears since in the neighbourhood of Lomton. In the village of amberwell there is a place called the Grove, which may be lescribet as a hard road on an inclined plane, bordered by Elm-trees, and passing through flelds. It mary be represented by the line \(a \hbar\), in the accompaaying iliagram. Along the whole length of this grove the Phomix Gas Company laid down pipes for lighting the neighbourhood. Ifter some time, certain of the trees began to lose their former healthy appearance, espeecially at places which may be called \(e c\) and \(d d\), and after a time they exhibited all the signs of decay: their bark became lonse, and myriuts of iniecrs establishert themselves beneath it. By some the misehief Was ascribed to the insects, but by the majority
to the fias Compans, arainst whon an action to the Gas Company, against whon an action
was forthwith commenced. There was, however, one little difficulty in the cave of the plaintiffs in this mateer: the gas pives ran from is to b, and the mischiet securred only at … and hd
 winich sas not the case. The reai cause of the injury wasereutually ascertancul to be this:at 0 and a depp exeavitions ba ! been mate for the foundarions of houses, whas phating the trees there on the erige of a perpendicn!ar batk; sn that on ore side the roots had heen partially desmuret and the groumb Was laid cry by the excavations, white on the wher the road was so land and so much s!npul, as to caret the rair to run off intead of seaking into it. In this insiance, lais proved to be instice, and the (ias Company were not puaished for the sins of the buiklers It was, howerer, a narrow escaps, so strong is prejidice, and so little real knowledge if the true causes of hings does the ma.s of society possess
Another and more general cause of the bad vege-
tation of London is to be found in the exhausted soil. We have formerly adverted to this subject (No. XI., then said upon it. The food of rlants derived from soil consitts of varions subsiances. particular combinations of which are required in order to main tain a plant in health. These substances are-water,
carbonic acid, ammonia, potash, or soda, and certain others; but more especially those now mentioned. Neither warer, nor carbonic acid, nor ammonia in any form, nor potash or soda, will of themselves sustain vegetation, as has been lately proved experimentally in the garden of the Horticultural Society ; nor wil a part of them without the others. Whatever quanity of these substances the earth contains, plants are perpetually diminishing; and if a garden originally possesses only a limited amount in its soil, it must be at last exhaus'ed, unlece such matter is restored. Now, in London squares and gardens, nothing is restored artificially; for the decaying leaves of trees, and the herbage of annuals, all formed at the expense of the soil, are removed, and no manure is given in their place. A process of exhaustion is therefure always in operation, and no counterbalancing effect is prolaced by replenishment. What, however, ma:i removes, Nature remews, to a certain extent. The at-
mosphere yields carbonic acid and ammonia, aml probably in sufficient quantity ; for, in London, the sont which fall; so copiously is a perpetual source of manure, so far as a supuly of carbon and aumonia is cquire. 1 . What are not renewed by natural processes, we the alkalies, potash and soda, which, although prociuced by the gradual destruction of framents of rocks lying in the soil areso yielded much too slowly for the necessiies of a close and copions yegetation. Nature replaces them. wher left to herself. by the decay of leaves, in which they 4 os: ahound ; but we remove the leaves. I story is related of a certain German, who. wishing to of ain a large quantity of notash planted his evtate
with Wrmwed. in which that alkali is lemped in unusual abomdanes. He obtaised his potash, bat at the expense of all his crops for some vearsafier ; for the W ormarood so completcly deprived the soil of this important substance, that his land was converted from fertility to sterility. Here then lies, as we concelie,
another of the true causes of the bad vegetatim of Lombon ; and we entertain no doubt that it is one of the principal cousts. The remedy is obvounly the application, not of manure, in the sense in which this Fond is usualy umderstom, for sont furmishes that in sufficient quantity, but of alkaline substances, sueh as itrate of soda, saltpetre. or equivalent salts.
We anticipa:e only two oljections to this view, amo these we will, therefore, meet at once. It may be saith that in some of the gardens and squares of London plants do grow well. This is, azo doubt, true; but hose squares are such as have been planted but recently, and in which the suil has noi yet become worn out; as, for example, Relsrave-square and Eustonsquare. Is to the gardens near the sandy banks of the Thames, in such places the sumply of potash seems to be continually renewed by the rapid destruction of the hoose sui! that occurs in such places It may alon be alleged, that cren in the wert places in Lant in scme plan's crov ; as, for instance, Lilaes in Leicestersquare. With re-jeet to these cases, we must obscrve, that if they do grow, it is most miserably; and that even if it were the contrary; it would be no evidence Gains! the views we have been advocating; because it has been ascertained experimentally that different plants require very different quantities of alkaline fook. Fur instance, it appears from the analysis of chemists, that whiedriol a' lewes contain as much as \({ }^{\circ} 5\) per cent. ar abes fir leaves contain only 29 the he bare of Wheat 15. a hater 2. and of ()ats 1:

\section*{Gnoseberry destrovers, a.tho
essentialy in their econnm \(y\).}

The lst. Phaleca Gressulariata 'Linn.*), is one of nur most striking and beantiful " Geometrs," called the Mdr pie-moth : there are for gardens where it may not be seen flying in the evenng, towards the end of July, or restins with its wings chosed under aleaf or aganst the sidenf a wal daring the day. After nairinc, the fernaies lay their eggs upoa a leaf (fis. I), from whel the hitte looping caterplthey begin to feed again in the spring, and are not full grown until the ti.iri weok in May, and sometimes it is the end of June before they become pupe; in about three quently found from the middle of June to the end of July, or later, according to the temperature of the season. When these larvex abound, which they mootly do on bushes, under old walls or hedges, they frequently strip the Red Currant and Gooseberry busles of their leaves, nothing but the foot-stalks being left; they will sometimes attack the
Sloe. and even the Pearh 2nd Almond tree: it is a handSloe. and even the Pearh and Almond tree: it is a hand2s it walks (fig. 2), from which circumstance such insects have been called Geometre , epor with black, having orange spots down which is verr nnusua? spins a weh. so loonely construnted, that sometimes the pupa falls out; it is either attached to the twigs, or conshining black, with a few orange rings round the segments of the body. The moth is of a cream colour, the spots
black (fig. 3); the thorax and abdomen, a space near the base of the upper wings, as well as an oblique stripe beyond the centre, are of a fine orange colour; the horns are a often the case in this family
Towards the end of last May, Isaw some Currant-bushes completely defoliated by the caterpillars of the Magpiemoth. so that it was inpossible the fruit could be worth gathering; this might have been prevented by baud-pickreadily fall down, such leaves as have several upon them may be broken off, or detached with a pair of scissors, and put into a jug mith the rest, to be destroyed with boiling water, or at once crushed under foot; but as the eggs are laid upon the leaves, and the young larve feed upon the
latter, one of the best means of getting rid of this trouble. latter, one of the best means of getting rid of this trouble-
some insect is to burn the leaves as soon as they fall down in the autumn.
The 2nd species, Phalena Vanaria (Linn. \(\dagger\) ), the L . or in June and July: the horns of the abundant in gardens the wings are of an osh colour and feckled, the uper have four browa marks on the superior margin, the sccond crossing the centre of the wing, and forming a \(V\) or L : the larva is a lomper, having only ten lezs; it infests the Red Currant and Gioseberry bushes, feeuing upon the lezves and is found in May ; it is ab,ut an inch long, bluish. green, with two white dorsal and two yellow lateral lines; green, with two white dorsal and two yellow lateral lines; black hairs; it changes late in May to a chestnul-coloured chrysulis, in a slight web, on the surface of the earth.
As the young caterpillars are brought to life almost as soon as the leares uniold, they are often as injurious as those of the Magpie-moth; they may also be collected by
hand-picking; but as they undergo their metamorphoses hand-picking; but as they undergo their metamorphoses upon the earth, lime and hot water may be employed, as
will be explained when we discuss the ravages of the Ten thredo, with which it is suspecicd this larra has otten been confounded, dufferent as they are in economy, and readily to be distingurished by one being furnished with more than twice as many feet as the other. - Ruricola.

Embrace every opportunty now to proceed with the thinnugg of the Grapes, as recommended lase week. and be careful, in banding the bunches, to twist the stems therthy nreventung the for fear of injuring swem, and to cake tivantage of shonery swelling. Ciatinue also portions of ground that are occasiontan, ase ofomiontre the will come into use in winter up with other crops that ptant any of the Cablage and Broccoli tribes, it will be adrisable to manure the ground well, previnusly to its being media ely atterwards onite it is pa: sut,
lery must not be neglected. It is a marshy plant, in ite
wild state; and when cultivated, it is all the better when suppled with plenty of water. To be s.od, it is necessary
that Celery shouid be made to grow fast; and this is only to be accomplished by keeping it moist. and frequently earthinz it up. If there is ronm, another row or two may be
planted arnos the trench as before. In favourable situations, the curcunbers will nom be coming into a bearin state. (i) over them occasionally, and stop the shoots as weakest must be thinned out, and the main branches trained aeatly over the ground, and secured by small pegs. Where any fruit has attained a proper size, it should be cut, and not allowed to remain any longer on the plant prevent other fruit from coming forward. The Vegetable prevent other frait from coming forward. The Vegetable treated, and to have the laterals shortened and thinned, a well as the main branches regulated and secured. Some of the fruit will probably be fit for use about this time; and
as few Cottagers are acquainted with the mode of dressing them, perhaps we cannot do better than subjoin the fol lowing directions, which we find in the Memoirs of the Caledonian Horticultural Society, vol. iv., part ii. : Take the middle ; if large, cut it into cut it lengthrays throug off the outer skin; cut into small dice about half through one side of the slices; then scrape a little of the fat of hacon, and put it into a saucepan with some Parsley and Shallots, chopped very small, and let tem fry a little pepper mixed all together ; then put the slices of Vegetable pan with a cover, and the fried sea soning over them, and let the whole stew a little on a slow
fire until they become tender. Bees.-Dur
able, the bees will resume their former activity, and a great deal of honey will be collected. In order that none of it may be wasted, the Cottager must keep a watchful eye upon his hives, and protect them from the ravages of stranger bees and wasps. The latter now begin to be very troublesome, and wih soon commit great haroc unless means are speedily taken to check them by destroying their nests. It witl also be prudent to contract the entrance as much as possible about this time, so as to leave only bare room for neglected, the wasps will be sure to gain admission into the hive; and when once obtained, they will never cease from annoying the inmates until they have either driven them out of it, or deprived them of its contents. In an ungenial autumn (Dr. Bevan observes), it is not uncommon for bees that are ill managed, and not properly fed, to plander the hoards of their own species; and bees that have thus acquired predatory habits, become great annoyers of industrious and well-fed colonies; they are known against name of the corsair bees, and the best remedy precantion of arres will be found in adopting the same wasps, or a change in the situation of the hives.-M.E.H.

\section*{RURAL CHEMISTRY.-No. XIX}

Animal substances are far more liable to undergo dethe pecaliar than vegetable matters, in consequence of tated, har character of nitrogen, which, as previously ments, and acomparatively weak atinity for other elefrom its combinations, and so cause their decomposition. Under these circumstances, however, the nitrogen is not given off in a free state; but whilst thus escaping from and hydrogen, it alm was combined with carbon, oxygen, of these three elements, and thas gives rise to the formation of ammonia, or nitric acid, according to the circumstances unter which the change takes place. It is always observed that two substances, which hare but a compara-
tively weak affinity for each other under ordinary pandi tions, and which are unable to conbine together when mised, have their power of combination very greatiy increased when they 'are brought together at the moment When one or both are being evolved or expelled from a prerious combination. Substances whilst thus being set at liberty are said to be in a nascent state, and are able to form combinations which under ordinary circumstances nitrogen a be totally unable to do. Thus we know that nitrogen and oxygen are constantly mixed together in the when nitrogen is in a nascent state, or whilst bcing when nitrogen is in a nascent state, or whitst bcing
erolvel during the decay of animal substances, or other compounds containing it, under certain conditions combination is able to take place, and nitric acid is formed. This condition of substances is very important to be. re-
membered, as it shows us that the sulstances ero'red membered, as it shows us that the substances erolred
during decomposition are in a peculiar state, which renders them more capable of entering into new combinations with each other than they are under ordinary circumstances.
When animal substances are expozed to air and moisture, they rapidly undergo a change, and are, for the most part, converted into carbonic acki, ammonia, and water The rapidity with which this change takes place depend. greatly upon the access of air, and also upon the temperature or degree of heat to which the substances are ee posed. When matters undergoing this change are mized with alkaline or earthy bases, which have a strong affinity for acids, they form, daring decomposition, nitric acid. in of oryis-n.
A thral substances, like the vegotable matters in the - oit. are of value in several wars: line them they affect from their sुreat proneness to decay, their effects are more
temporary. Their principal value consists in the nitrogen and earthy matters which they add to the soil, the formes of which being combined either with hydrogen or oxygen, is in a state to be absorbed by plants, and able to enter into new combinations. The eartly substances contained fiarger or smatler quantity by all animal matters, are, for the most part, those which, being derived principaliy from the regetables on which the animals feed, are alsj those requisite for the growth of plants. Some of the animal substances added to the soil, contain a ery large quantity of earthy matters; these are useful principeltr assisting in condensing and absorbing ammonia from the perishinst other animal materials, such as the more perishable parts of dead animals, are chiefly useful for the ammonia or nitric acid which they evolve during decos. Tacilita are nisewise, however, of service to the soil by fackaing the decay of vegetable matters, and thus nnim absorbed by plants.
Whilst organic substances, and more especially animal matters, are decaying, they commonly emit a very offensive nitric acid can cause this, it is evident that some other substance must, at the same time, be formed. The fict is, that the nanseons odour given off under these circum. stances is occasioned by the formation of a small quan. tity of a peculiar gas, called sulphuretted hydrogen, com. posed of sulphur, or brimstone, and hydrogen, which though harcly able to combine with each other under common circumstances, when brought together unite readily when the hydrogen is in that peculiarly nascent state above adverted to. Thus when organic substances, containing small quantities of sulphates, decay, a portion of the hydrogen, whilst set at liberty, combines with some of the sulphur contained in the sulphates, and salphuretted hydrogen gas is formed. This gas not only has an exceedingly offensive smell, but is also very poionous, and would probably occasion many accidents were it not that its strong and very disagreeable odon soon warns us of its presence, and obliges us to adopt This gas is evolved in considerable quantity during decay of eggs, and likewise during the decomposition of nearly all animal substances; though its odour is not unfrequently almost overpowered by the strong pungent smell of the ammonia evolved at the same time. Whilet such decaying substances are exposed to the air, the sulphuretted hydrogen gas thus formed is dissipated, and carried away in the atmosphere; but at the same time a large quan Lity of the ammonia also formed is lost, and this is of cour higlly objectionable; for the value of these kinds of ma nure depends mainly upon the quantity of nitrogen which hey are ahle to supply to the plants, and ererytimeg tending to assist in retaining that substance in the soil and rendering it available to the growth of plants, is ad vantageous; whilst, on the other hand, everything in creasing its loss or dissipation in the air, lessens the ralue
the manure, and renders its application of less service. The quantity of decaying animal matter in the soll is likemise of very great importance, for too great a proportion seriously injures many plants. It must always be remembered, that aithough ammonia and carbonic aci are the principal food of plants, there is a limit to the quantity of these subtances they can absorb; and that too great a supply of them is not only nseless, but even ob jectionable, as it is highly injurious to the plantso-E.

\section*{HOME CORRESPONDENCE}

Cottayers.- 1 is is not to wild flowers alone that th members of the Horticultural Society of this place confine their attention. A great increase has taken place in the number of house-plants; with many their house-room was too small to contain their collection of plants, avd number got small frames with glazed lights, but with a their care many of their best plants died during winter Instead of this circamotance domping their ardour it onil served to increase it. A few have erected small greenhouses to preserve their favourite flowers ; some may smile at the idea of a poor man possessing a greenhoust, but we hope that it will not be the smile of contempt for the poor man may have as much plessure in preservin a few tender plants through the winter in his own rud Way, as those who have larger collections and the best methods of cultivation to aid them. Some of these are small erections at the end of their cottages, with glas roofs: and the heat that comes through the wall from the fire in the house is sufficient to keep out the frost ; citers have a furnace and small flue connected with it. In tures simple structures they preserve their Pelargoniums Fuchsias, Myrtles, Chinese Roses, Verbenss, tender Cal年olarias, Hydrangeas, \&cc. A small frame upon a tarmer durighill is fonnd to be very useful at times for starting Dahias and ather flowers that are required early. Whi we wish all success to attend the exertions made by the rural population in gardening, we would advise young gardeners to unreef their intellects, for it is a pity to see a face corered with the blush of ignorance before those that are looked upon as their inferiors. Some time ayns fent roys receiverl smmelessons in Botany; they were mad acquainted with the characters of the classes of the \(L\). his knowledge into the boys was endeavouring tith the e mmon frige into practice, but was puzzied with 19 , not knowing to what order of the class it bel moned, he anplied to a gardener whom the ma with. and retwestet him to put him right ; but thebor was greatiy disappointed when be found that the person genesia and its orders as and the Zoological gardens.-Peter Mackenaie, West Plens

Coal Tar.-Is there any chemical difference in the coaltar procured from different sorts of coal? A oorrespond "gas-tar" was applied were either killed or seriously injured ; while, on the other hand, some persous strongly recommend it for the purpuse mentioned. I have olten seen the stems of old trees reguarly printen is death to soung wood, apparently by preventing the bark from performing its functions. lately experienced.-J. B. Whitpeeling trees, as I have latery experiencea.- whatever the kind of coal may be from which it is made; the quantity of naphtha it contains will of course vary with the coal, and mode of collecting. The tar is usually mixed
with ammoniacal liquor, the composition of which is various: but the tar when separated is always nearly the same in composition.]

Hardy A fuatic. - One of the finest of our hardy aquatics is the double Sagittaria latifolia, of which I have lately en beautitul specimens 3 feet high, loaded with the panicles of large double white flowers.- \(X\). 1 t is cultivated asiny as the Butomus, or Flowering Rusb, and in the same manner.]
Humble Bees.-In Number 30 of the Gardeners' Chronicle, I find under the head "Entomology," an
account of humble-bees. I trust I have not a brotherfarmer who would think of following the advice of \(R u\) ricola, viz., to destroy the humble-bees' nests at the end of summer, and what is still more absurd, to employ thirty or forty children to run over and tread chown a finl ing a few poor harmless humble-bees. I an of opinion that not a single Bean-pod has ever been injured by humble-bees. The Proridence that gave the Bean for the service of man, also, in infinite wisdom, provided within its blossoms a rich repast fur certain tribes of insects ; and the same All-wise Providence has so securely protected the tender seed-pod, that if examined with a microscope, not a single pod will be found injured in a
large fielu. The "rough brown wounds" Ruricola speaks of, are caused after the blossom has fallen, and the deficiency of beans in some pods by imperfect impregnation.
Vain main would be wise. -An Old Farmer
Honey-dect. -Thedisputants on the oriyin of boney-dew will perhaps be interested by the foilowing fact. A plant of the Canary-bird Tropeolum, trained up a pillar in the conservatory here, was much infested with aphses. of its leaves overhung by the branches of the Tropeolum, and the leaves so overhung, although perfectly free from aphides, were corered wot a trace of that substance on any other part of the Erythrina, in this case, merefore, the honey-dew was evidently produced by the insects on the
Troprolum, whence it fell upon the plant below.-J. \(B\). Tropeolum

Melons.-In the work quoted from at p. 503 , Lieut Burnes states, that seeds of the Bukhara Melons had been brought to this country. Perhaps some of the readers of whether seeds are procurable - \(-\sqrt{2}\). are sent for to Col. Stoddart, by permission of Lord Palmerston.]
Grapes.-If Van Mons' seedling Grape, mentioned at P. 473, is not greatly over-rated, it must he a very desir-
able sort, and well worth the attention of the Horticultural world.-J. B. Whiting.
Garden Pots.-I have read Mr. Forsyth's epistle on the subject of garden-pots. The very pleasant style in sir, the mere speculations of such a man are almost be witching; but I cannot say that there is, ut least to my mpression. anything in them that makes a verv pleasing appearance is concerned. Mr. F.'s plan and ideas respecting flower-pots, particularly at suih a place as Alton Towers, may be important, but the glazed pot to general parnoses, I fancy, whil never become general. Mr. F. s remaras, to my mind, are far, too sweeping, and in
some instances, I presume to think, he is wrons; in others right: so that wrong and right make up all that belong* to human nature. But to the glazed flower-puts. "Mr. E. says, " but fur the finer ormarneutal plants whose bibits require compost and treatment almost quite, I sagl as various as the countries taey cuine from, it is necissary that the pot should be as clean as a diinking-cup, so as in no way to intertere, bs almixture of its properties, with a baked fluxer-por is anal ) pus ust to burnt clap, ithan w'ich nothing can be further from the fact; in the case of a flower-pot the partieles of clay are drawn closer tugether not calcined ir disimeegrated, is is the case of bumine ciay for mauuye, s. that the reasoming on this head wauds for nothing. I here petecive that Mr. F. has leit hinase if a sngg l.ttle creep-hole, by iutrodueng "the finer urna-
meatal tlants," bur we shal 1 see anon. Chotwithotandmy "finer urnmental," by whichi. I fancy Mr. F. might get out of the glazed "flower-pot." Ithink, as doubless asest
of your reiders will, that he means his new put to be the universal pit. If so, I dou't if we shall have anything very select to put into it in a shurt tinue hence. Bnt
we will \({ }^{+}\). were to gather a ritant from the top of a mouatain, of an old wall, "Teuerium Chamedrys," for instanes; and another, the pretty " Sarthectum ossifragum." from a Lancashire bog; would he put each one intu cis glazed pots Tith the same drainage, or rather with no dramaye at all? Mr. F. would call the "finer ornamental plants ;" be it
collection of Auriculas, at the cost of about 20l. Tontd as tho-e mentroned above? Hors, on the same conditions and submit the plants to the usual treatment that is found to suceeed well with Auriculas. and give the publec the benefit of his experience, about this day twelsemonth, because the Auricula is a fine piont, an ormamental plant, and a stage plant ; and the glazed pot of dark st me culour would harmonise beautifully with the lovely folage and flowers of the Auricula - \(S . M . P\). [We have another
letter or two on this subject, to which we shall return letter or two
Mildero in Peach Trees.-If any one will make known the cause and cure of the mildew in the Peach Tree, he examination I have been able to give it, I conclude that it is a parasitical regetation, and not an extulation or ani malculum. Iet if such be the case, in must be rery sing anar Nectative grow side by side, the Peach trets are all in reted and the Nectarines are not at ail affected mith it. \(-~ H\) The cause is well hoown to be the attack of.\(a\) nicemen pical fungus, called Oidium erysphoides, ailias spor. pical fungus, cesled didum ergsphoides, aidas por, information concerning the best modes of cure. if anything
better thinn flour of sulphur is knorn, we should be nuch better thi
obliged.
The Pine Apmle amd Toruool Lorm.-It is well known to the majority of cultisators of Pine-Apples in the immediate nerghbourhood of London, that no sen is so suitable to them as the loam or tained at horwoot, and usually denominated Nurwood loam. In this they grow with great rapidity; the leaves are short,
thick, and broad, giving the plant a robust appearance: the roots are esceedingly strong and abundint, and the fruit always swells well. Living at a cunswerable dis, tance from London, the lo min infurtion is not oltainable by me: but during ti.e t.me I have been a Pla-grower ome six years, my attention has been repeated!'y given to the above-stated fact, with a view to the finding of a loam equally fit in my own neighbourhood, but hitherto withou success. There are three remarks I hise heard from Pine-growers near London. lot, that the luam is ver poor ; 2ndy, that the plants. succeed best in it withou: any admixture of dung ; and 3rdy, that no worns ever are found in the pots. That it is poor, the place where it is ohtained seems to bear sutticient evidence of. I have visited it at several times and seasons, and always observe its barrenness. Gardeners
water passes freely through
the Pine succeeds so well in it? For all
 hat is peculta:ly congenial to the Prine? And why, it dung be tnixed with it, dot the Pines not succeed so well Agan, why do worms object to it? Is not this an evi-
dence of poverty? I have thrown cut these remarks, dence of poverty? I hase thrown cut these remark hoping the subject may be t.ken mp ho fioners and formed certain opiniuns upori the suiject, whis wheh at another time I will treaphss upon your reaters.- Flara.There is no doubt that Norauod lonm is very gond fir the gromth of the Pine-apphe as has been meqpenty nithout chemical analysis, to suy what is pecuinar mits conprosition. From its generl appearance one would be and the to bere in in erme ate benis has some and the London clay: and it stifi-setting property of ti.e lutter.]
Waterng-Pots.-I am at a loss \(t\) ) know in whit re spect Mr. Williamson's watering-pot, described in No.
28 , is superior to mine, and 1 think your readers should have it explained to them. Simplicity of construction in any kind of apparatus is always the first point we dent aim at. Now, in Mr. Williamsom's can there are two
 there is but one crank and a buw-rpriaz; in Mr. II: they are immersed in water and d.ffecis to be a \(t\) at to repair when out of order; in wine they ary ors it the

 que as etfectual if pacen as it in in thath of hio necting rod. I preferthe rose being curved of it is : mine for watering plants, as it enables me tu gei at itew in any direction, especially when in pots; a straight pipe uses for seediner wat be 1 tasal al aman. but in my

 they will almost invariaoly find cut and play upon any
spot of ground that has been fresh dug or stirred up. I had recourse to this plan, (which is common in Lineoinshire, ). and never failed to entrap then
Orences.-I have read a ereat wany obsersations from tume to time in the Clemmide: armong other tinings, about the spucies of the Wance tribe. I metine to thuk that they are merely seedint varieties, hate Apples: and in contirmation of this, I whil tell you what is the case in the that indies, particuatry in Jamaian. Mahy parts of may in districts be said to be covered with them. They spring up spontaneously everywhere, varying in size of every gradation, from the Lime to the Shaddock. In many in flavour; equal the finest Western Island Orange ness which I have known instantaneously to draw blood from the mouth, accompanied by most severe pain. There you may see the Lemon, the Citron, the Forbidden Fruit, weet Orange, all growing miscellaneously together. The are round, flattened, roayh, smooth, obims, and pear shaped, thick and thin-shmmet, jutcy and dry, some with and some without seeds, and some bearing seeds at the ree, outside the finit. In short, there is every variety of shich I can imagine the fruit to be capabic. In passing through the country, !na may noserve some of the tree ren upan thero bosed Ti, former are the samel ireen, and the ne zoos hate care fully gathered the truit. Berare how you touch time latter hey are at sume or batter, or tald la sume way ow other. The way in which the sencral datusion of these plants is ac counted for, is by suppmong that the negroes are in the habit of saring the seeds mhen tixy eat the fru:t ; be i homeser as it may, the isfaud may b. sual to abound in hem to excess. hood of Spani-h Toun, whe:e we may suppese that the spanards originally planted them, and where the produce of the trees may be monowed by age. I Iase often thought that by a little care and attention, and a proper execution of the law for the protection of thas hind of properts, the Orange might becume a very consucrabic artucle of expor from Jamaica to America. But such speculations are out of place here I only mean now to call your a:tention to the iunumerable sarietics produced in Jamaica from the seed of the ( range triot.
Subatitute fir Lidim.-Hung had some difficulty this year in ublamur a good loose, loamy compost in which to a woorlen frame without lights, and protected by night simply with mats), thave had recourse to the simple expedient of making my nobject, and :t has anwerd remarkably weil. The ditaif beme ceneinily sotted to tree it trotu the hav-seeds, and well raked in with a short-torthed rake, not only If pou then the S..., from attacking the young plants. If yua think thi worth noticing for the benetit of Cottage Gwdethers, you
are welcome to make use of it, and will villige A Suiscriber English Merit neglected. - In witnessiuc the prize awand (o) ho podince the firmet fiowers fruits, and rezetables, at tie south London Elorscultural

\section*{MISCELLANEOUS}

The Gurden of a C'ountry Residence.-"We now sailied into the gater, and I onn I was disappointed. I expected a Fretech or I lalian taste, or perhaps both, enfraftud on thee noodern English;-treilises, batustrades, busts, i.itiouser, conservaturles. Except the idat (of no areut dimensions), there were none of these. There was an abunuance of noiuial fluwers, atid sonte beatilulexutics; but these were, I thought, too much mingled with bede of herbs for culinary purposes, of which the flowers formed the sotders. This produced a style nearer the preceding, Wan the then century, in which, indeed, the Weakn the appeainute of the laiter. There was hen to ar proximamo to the ferme ornée. which I knuw many critics would censure. There was a piece of mater, mhich had ul the appearance of a pond (for it was too smani for a lake), and was only divided from the garden by an open fence, letting in the view of whatever cattle mignt cheose
to difiak, or cool themselves in it. This appeared to derogate from the trim garden seclusion thepheared to deromended by the learned in those risthers and I own I
n: yseif thought it a fault. This, hawever. I dad nut sen ture to retnark to hum; intietd, as her was I han who had a reasun fer eservinas. Whether for or against general
customs, I expected. is it turned out, that he would him self explain the apparent s.lecism. ()bserviry what had aready touched had already tourhed upen a hobby of his which he wouid not have censured. 'Why, there it is.' said he ; ' 1 see what is io four miod; and that you are one of the petiss I taste, and think you monophise it. You have matur and simplicity always in four mouths, ret are alwas departing from them. What sight in nature can be mere gratifying than to see that neek, patient. and bountitul ninal (poinzing to a curs, resellag in the fenst which ature has pronit which to see this alone creates in a benevelent pinde, for the animal's sake, what ideas of luecious plet ty does it (ays preasant, not to say leautiful (from the associations of the toaming prats of the dairy, whech it creates) is the sight of these usetul creatures couling themselves in the nater, or drinking it without ple nts. These are what I call the simple, because tien natural, atd theretor, the primitive pleasures of man They were those wifich man enjeyed hefule he was made an artificial character, or built palaces and banging gardens for Eden was before Babylon.' I was struck nith bis to sey ar I hegan to arce wi him) I sat mad mern abstractedly true of a famm hat there were all t.at was aight thiuk the sight not so con.patiole with garden elegance. 'Why, taking you at your word,' saad he,
'what can even lue mure elegaut? What can even toe more elegaut? For you see my com hy their sleekness herlth, and therefore harniness to them ald the posessor of them must necessaril hatnce one of the necessary paris of tave itsel exem is pooluce pleasurable sensation-) is completely mental pleasure as ill motions bo they feelings ar aro spect-are. In this, therefore, this simple si.ht exceeds
 even sellsual-if that is what you tine people requare ; for what can equal the perfume of the atmusphere uccasioned by the miere breathing of these delightrul aminals? A this he snuffed up the air, as if to prove his assertion beyond contradiction, and I confess he compeiled n.e to fullox his example, not merely from inntation, for it equalled the pulest essence of flowers. For the sathe of argument, honever, 1 pinted at the unath,tly truek made said he, 'I allow that is a defect, and a drawtack if you will. of the bouse, or in any of the immediate walks around, it might be an eyesore to you professors of taste. But you the the eye, and you must come expressly to this spot to behold the unsightliness. Could the sightly parts of a the garden; they and the fluwers would mutually set off one anctier. Eien as it is, the flowers of the field, and the pleasure given by the sight of the atmals, womter-
balance the disadisantuges. His strong partiahty to natural tastes not sufficientiy dis to ure he was biendins thees: so 1 obselved that it seemed tugether. 'I agree with yout,' said he, 'that the exthbitiou buens-s sather to lanuins than gardening: but what law ailes cur of cirht aiad ouly preseive the the diagreeandes cut of sint, and ouly prosesve the agreeables:and tuen, What hare pieasins than these condenned ol,jects: As to their proximity to the house, I preter the liwastare arising from the schse of convenience cud hutsenatural pleasuref, to the total want of this interest, cecasioned by the fasidiousdess of banishing them so far uti, that uut of siyht, they are out of mind. It is astomishing what havos this fastidiousness makes in our stock of happhess, when, under a false notiun of elegance, it perSuades us to part with the notion, that as men. we arow fel wauts, and that to supply them is our natural eaplod grass. or kine, and that liitle Aiderney cluse even to my drawing-room windous, nere Qucen Cbarlutte lerself and ber daughters there, than all the tuery of Lawms aud Urange trees, withont \& single reminiscence of our real condition How much,' added he, 'do kings and queens, and overgrown nobles, and minions of weall, lose, in being deprived of this sentiment. by having all thisys di ne for

garden, to strains of music floating in the air, 'coming
and going." "I thank you for recollecting it," said Mr.
and going Manners ; ' 'for, though extraordinary, it is a pretty comparison, and it were amusing to follow it up. It, however, that flowersean be likened,
gentler and more deli ate kind; tioue Viwlets and I.tics getthe- Talley, for example, those Ahen one- Heartsease Polsurhus, and we may admit a few yomes Rosebads. These nay renind us of the softer and mo.e prathetic. as mell as elegint strains in the eqractul minteets of tinde. and gaudy Tulips do in t come undre the head of sumthing? any more than ith races. asertures, or cran \(i\) simforins. any more than rhe races, asertures, or Eran in smomins. close to an alwome, where all I fecl on this sulniect is dereloped in tur Water langurge than mine." At thas, having
found the bools, he read:- "Gardems have charns, that to found the book, he read :- Gardens hate charrus, that to
me exceed all the pleasures of life. It was a garden that was the earthly puadise of our first parents in a state of innuceni.e: it was in a garden that Epicurus taught his philosophy, whu was said to have understood true pleasure grow into pears-when you beyin to cxercise the mind more than the body. as then betore they grow old always do-then you will tind the help of it to contemplation; air, all fellow-ereatanes of l...urs. made tosetlier woth sou for his pleasure-who is the Author of all things-will please you indeed; when especially the innocence, calmness, and seremity of yomr thoulhts, nake you fit for so
divine and ravishing an exerise.' And yet, oisserred Mr. Manners, resuming it, 'as t. gardens, I have a crotchet which you will perhaps be shocked with. Mach as I love, admine, and delight in flowers. if I had but one, 1 should prefer the kitchen-garden.' 'What, lose the elegance of flowers?' 'Yes, rather than the benefit of hefore what is ornamental. a gentleman; and I regard scentless flowers, at least, with all their painted charms, and even those that emit the sweetest perfumes, when I think how ephemeral they are, as I have regarded many of their pretty and perfumed sisters in the world. as beautiful and as ephemeral as they. are only attractive to the eye, and for the moment, and are wholly without power to charm the mind or fix the
heart. Such are by far too many of those beautiful Tulipa of flesh and blood (all show, but no fragrance), who throng our drawing-rooms, radiant in colours, brim-full of accomplishments (made so by what is called female education), bat totally devoid of powers of companionship, or capacity to perform the higher duties of the sex.' 'As I must bow to say; but whatever may be said of the flowers of a drewing-room, I never will believe that these Roses of aature, while they smell so sweet, are useless. Indeed as has been well said, no one can be unhappy in the
atmosphere of flowers.' "Pray observe,' answered Mr. Manners, ' that in what I said to their disparagement only spoke of scentless flowers; and, even in regard to
them, of their epLemeral character. For, spite of these defects, all flowers, I gladly own, because alwavs glad to praise and thank Him who made so much for our happithough their honey may be extracted by other creatures their beauty and perfume can have been made only for man. Man alone can, by sentiment, draw out and appre gratitude it inspires. It is, and feel it enlanced by the the gardea without feeling a sense of thank fulness annount ing to genuine religion.' I honoured him more and more for these sentiments, but could not hielp, cibserving, You do not, then, think a bed of even scentless flowers so useless, still less those that perfume the air, though so lovely and smell so sweet. But how long do they do so? Sweet to-day, the reverse to-morrow, without a sign their utiuty. Whereas, all those tribes of ronts fegethbes, whiesome esculents. and sanative hert)s do lose thasting benefit to onr lives and constitution: ally the poor: to cultivate, seud, and erijos them, therrefore, is a lasting pleasure as a lasting duty. it bed uf painted wun lers is, to be sure, more gaudy and flaunting, , if you will, more gorgeous and proud, than the humble oitory (to use Evelyn's expression). Histoiy, ior the agreeable manner in whith it is written. History ior ihe agreeable manner in winith it is written.
We shall silustrate this by a fert oxtracts. The tollowing the stud author of aecus.

The cultration of Ferns is becoming a fashionable pursuit. It is no longer confined to the botanist and made, more or less successfuily, an attempt to rear this tribe of plants. Ferns constitute so beautiful a portion of the creation, whether they ornament our ruins with their light and graceful foliage, wave their bright tresses from our weather-beaten rocks, or clothe with evergreen verdare our forests and our hedgerows, that it seems next to im possible to behold them without experiencing emotions of pleasure. Years before Ferns had become to me as friends with familiar faces, I conld not pass them without turning to feast my eges on what I thought their excessive loveliness. It cannot then excite much wonder, although I turn to say has incurred some blame, that I should the aside from a more laboriolls, to embrace for a brief period a more delightrul stady: I am not the first since himself with the flowers by the wath
" It was while wandering among the Welsh mountains, in the autumn of 1837, that 1 first felt any desire co know the names of Ferns. I had often observed the variety that half corered some of those bleak and desolate regions Where fern is cut, dried, and housed as the only litter that can be obtained for horses; but now, for the first time, gathered hundreds of froads, and employed the evenings in arranging them into supposed species. I found that three species were abundant in the most drenry and ex posed wilds; but where some rill tumbled over a precipitous hank, or a ledge of rocks, keeping the surface in a state of perpetual moisture, half a score others were sure to be growing: in the chasm at Ponterwydd I think I counted vurteen distinct kinde
Speaking of the method to be followed in making ernery. We find many good practical directions, to which it is indiepensable to pay attention. For instance:-
., Whenever I met with a Fern which I thought would be worth tine trouble of removing, I invariably noticed th situation in which it grew - whether it was naturally ex posed to sun, rann, and wind; whether it grew on a horizuntal, or perpendicular surface; and whether its fronds were erect, horizontal, or pendulous; whether its roots enjoyed depth of earth, or were simply
And having thas minutely ohserved every natural peculiarity. my next object, when the Ferns had reached home, was, to cony Auture as chosely as I could; not. indeed, to imitate roch's and mountuns by a structure of flints. Bath,uicins, or chinkers, but smoply by supylying to each, as ar as posminie the adjuncts wheh it naturally enjoyed: hus, sutwe iou-ioverts, as Gomunda regalis, were placed nater ; ethers, water; others, as Ceterach officinarum, which, almost
deartirg its native station on rocks, has established itself on our mortared walls, I supplied with crumbled mortar, carefully introduced between the stones, and placed the root so that, in all rains, and in the constant waterings in which ferneries rejutee, it shonk remain ds ury an pusiblef for to the ronts of some Ferns wet is as injuri.us as it is heedtul to twe wril-bems of utirers. tre, the oxiy elfectual way of supplying it is by plauting them in a ressel la stape-jar, for hisa ronation betern ; thi-suad be inmerse in the ground. and any dogrce of muisture mait be maintained withuat couble, as the vessel would preven

 morning's sun; at noon, the south wall casts its hadow

\section*{}

When built agaisst a bank to prevent its crumbling into a newly-cat road, covered with a continuous garden of our Phegopteris, and P. Dryopteris, Lastred Oreopteris, and L. dilatata Cystopteris fragilis, and Aliosorus crispus, I hare seen crowded togetwer for hundreds of yards: the water from the land above is continually filteriug through the walls, and thus the roots are supplied with a perpetual moisture. With a riew of imitating this on a small seale, slight angle from the perpendicular, and they face different points of the cumpass. One, situate under a thick
Purtugal Laurel, has nerer yet been visited by a ray of sunshine-
they cannot reach it; a second enjoys half an hour's sun ; a third basks in sunshine till noon; and thus all are varied.
"Sven with this chnice of sitattion, and after having moted the natural habitat, I tind it best to chtain, when possible, a number of roots of the same species, and to Ceterach officinaruin and Scolopendrium vulgare side by side in the darkest thade and the trightest sunlight; but Cet mos and morsture; so where Scolthrises Scolopendrium pines. Thus, hy giving to each an abundant choice, you allow it qo suit itself with a congenial situation, which is even betwhich may have been erroneous.

Having introdaced your Ferns on these principles of adapting the situation to each, the next grand point is to garden-engine, from which, by a presisure of the thumb on the stream, it may be made to descend in an alnost imperceptible shower, which is much more beneticial than a day, the watering should be repeated every evening a bla the the to Erum, when those which are decidusus have disappeared,
end thate which are persistent have sssumed their full gize and subatance. then should nothing more be done to arge them forward; for all require a period of rest, a sea son in which the sap seems to circulate less freely, and a state of sluth or torpidity supervenes; this cannot be disturbed or hastened without injuring the strength and gigour of the plant for the ensuing year.

It will be found s areat improvement to a fernery to sntroduce a number of Mosses and Marchantix; the latter are particulariy useful, they speedily cover the earth and stomes, and seep the surface in that state of moisture which contrary, siould be exterminated, for they are of so rapid a growth, and vigorous a nature, that they quickly overpower, weaken, and finally destroy the more delicate among the
But the prefatory remarhs abound in useful practical matter of this kind.

The following may be taken as a fair specimen of the manner in which the eystematical part of the work is treated
"The gonus Cystopteris was established by Bernhardi, and appears to have been adopted by nearly all subsequent botanstss; it contains but a limited number of species, all in whe feres of rocks, or the interstices of stone walls. They are plants of small size, of erect but elegant growth, They are plate of small size, of erect but elegant growth, excellient specifis name of fragilis. In this country we bave but one of these species, and on this much labour, perseverance, and ingenuity have been expended, in the tean fronds to the dignity of spesies. So absorbing is this spirit of species-making, that I believe nothing less than a nuonth's ramble in the alpine districts of Caernarronshire or Argyleshire could possibly undeceive those who have thoroughly imbibed a belief in the validity of these species; and as those who are strongest in the stady are frequently the will long cherish them with unwavering hainto"

That the anthor is himself no laggard in the parsait of Natural History, the following graphic account of his discovery of the Bristle Fern in Ireland, affords good evidence.

I hunted the waterfalis all round Killurney with great diligence, particularly those of O'Sallivan and Derrycuneby, but without any success, and it was only at the aften-recorded habitat of Turk that I found the slightest trace of Trichomanes. I here found it to the left of the fifteen yands higher up the stream, the rocky baik on the Seft projeets into the river: this projection is unly to be approached by leaping from stune to stone alung the bed of the torrent, which, in times of iluod, as happened to and ticalish operation : you are so close to the fall as to and covered by the spray, and the roar is almost deafeping. be covered by the spray. and the roar is alanst deafeding.
Having reached the projection, the butanist must ascend it by means of the roots and branches, a feat very readily performed; and there io a little platform at the top, where Fill find the rocky bant just on a level with his eyes completely clothed with Trichomanes, the dark green fronds nanging heavily down, dripping with wet, and, if the sum happen to shine, begemmed with spartling draps : it is a beautiful sight, and well worth the wat 3tockiags, which, the expedition. The scenery around is well wothy of the sure fern which it cherishes in its bosom.

In conclusion, we can recommend this little work to
all who care for either the cultivation of hardy Perns, or the study of our native species. It is just such books as this a hich reniler Natural History 50 attractive to everyhuntins, coursing, fishing, and shouting

NEWS OF THE WEEK.
Our inteligerce from France intorms us that the accounts from Toulvise continue satisfac'ory; the vigorous measures adepted by the Extraordinary Commissioner for the suppression of the recent rib: : appear t., bave been successful: several arrests inave tanen plave since the Nationa! Guard was disbanded; and the late Mavor and the Commissary of Police will speedily be brought to trial. The disturbance at Stracbur, has ceased, but passive resistance to the fismal messures of (rovermment is increasing in the central departments. The fetes of July have passed off queety both in Parn and in the grownces, and no attempt was made to disturb the peace; indeed, the popular enthusiasm for tios iestival affens to have greatly subsided. The Minisier of Fumace is sad to have submitted to the Council several proposals for re ducing the expenditure toa level wita the public revenues, in consequence of the present being an inauspicious period for effecting the contemplated loan ; but nearly all his colleagues are stated to be opposed to this arrangement. - Advices from Spain meation that twe protist of Queen Christina against the decree depriving ber of the guardianstip of her daughters, has cieated much excitement in the political circies (f Maurid; and spectal councils hare been held by the Reyent to deliberate on its contents: the new Guardarn thas taken the oaths of ottice, and has been formaily installed in his important post. The Chamber of Deputies Las authorised the Ministry to raise a new loan of three millions of dollars on the mortgage of some branches of the revenue; and the British Ambassador is said to have offered satisfactory explanations of the recent seizures of Spanish ships at Algesiras and other perts.- We learn from Germany that the Prussian Government has made certain concessions in the affair of Cologne which will facilitate the negotintions for arranging the diference with Rome; the second Hanoverian Chamber has addressed a protest to the Germanic Diet against its recent dissoluti n by the King, and states that it refused to grant the subsidies because the restraint imposed upon it by the King had so changed its claaracter that it was no lunger a le-gally-constituted body.-Leiters from Italy ant.ounce the occurrence of a serious riot at Rome during a recint execution; the military were compelled to act with energy against the mob, and several lives were lost; the affair was at first supposed to have a pohtical origin, but there appears 'to be no foundation for the belief.From the Levant we learn that tranguillitr is re-established in Bulgara, and that the new Pach : had conchatal the Christuan populatun by measur: - of justice and humanity. The news from Syria is also satisfictury ; the Haaroun is quiet ; the recent outbreas, winch was nuciu exaygerated, having been directed against the Arabs, not aganst tise Government, why have given the mhabitants tie aid of a milhtary foree to repel any future atachs. In legrnt, a report gans ground tiat the Pacha: . e emplewty restored to favour, that a marriage is contmplated between his sun sand Bey, and tiee sister of the Sultun. The last advices from Candia represent the cause of the insurgents as hopeless ; the Greeks had been defeated in every en
 blockade, and discord was beginning to prevail among the chiefs of the insurrection.-The overland mail from India Las not brought any intelligence of great importance : in Scinde and Affghanistan, affairs have undergone little
 still in a disturbed state, and the nerrs from Nepaul is by no means favourable. In Herat, tranquillity prevailed, and no further difficulties from Yar Mohammed were apprehended. Sir Gordon Bremer left Calcutta on the 26 th May for Canton, with strong reinforcements and some armed small craft for river service. Opinions appear to have been divadul in Caluata, whetiar the manemate object of the expredition was the recapture of Chasan or
 presed whether the season was not too late to allow the expedition to proceed up the Peiho river this year. The emperor appears to be resolved on offering a vigorous resistance, and on bringing the question to a final issue.
At Home, Lord John Russell bas addressed a circular the ministerial members of the Honse of Commons annonncing that Parliament will meet on Thursdy the fistelt prnceed to the choice of a Speakar. and th tha - nsideration of busiums of than,........... is is understoood that Sir Robert Peel will not oppose the re-election
Parliament.
790me Netos.

Waiting; and Lady C. So Cocks has succeeded the Hon. Miss Pitt as the Maid of Honour in Waiting. Major Keppel has sncceeded sir F. Stovin as the Groom in WaitEquerry in Waiting on her Majesty ; Colonel Wylde has succeeded Col. Bouverie as Equerry in Waiting on the Prince.

Oficial Appointments. - Major-Gen. Hill has been ppod he Forces at Madras, the latter having replaced the late Sir S. F. Whittingham at that Presidency.-Sir Chas. Augustus Fitzroy has been appointed Governor and Cont-mander-in-Cusef of the Islands of Antigua, Montserrat, Virgin Islands, and Denimina
dforcian.
France-Disturbances at Toulouse.-This affair continues to be we altabomring tophe of discassion in the journals. and duabts appear sull to bee entertamed of it peacefol termination. The measure, howeier, atingseil
 ult., two ordinances of the King, one dissotving the Na-
tional (rumed, and the city. The hess Munci, atry lad ineen inetalled. and hat tion on wee fet of the former municipality which the Extraurdinary (.unaissioner had been obliged to sum mon to obedience by means of the pulice. 11 . Arzac, the late Mayor, has also been arrested by be tried by the Correctional Police. M. Lenormant, who was Commissary of Police dering the disturbances, resigned his oftice, and proceeded oparis, where however he was ducted to the Prefecture. and afterwards committed to the Conciergerle, whete te remans in the closest continement not being suffered to see any one; and his papers have
been placed under seal. The reason of this measure, been placed under seal. The reasoln of this measure, to the late riots, are proceeding with great acti-itr
but as yet it appears difficult to anticipate the results they will produce. It is said that all persons, arms were distributed, or who procured them during the recent disturbances, are to be disarmed. The military authorities still keep themselves ready to suppress at once, by the most energetic measures, the slightest attempt to create disorder. On the 2rith, in consequance of some
apprehensions that the removal of the National Guard apprehensions that the removal of the ational cruard Michel., w. uld cause some agitation. orders were immediately issued to the Horse Chasseurs. quartered at Mont auban. to cake up a position at the gates of the (ity, whilst those stationed at Blagnac were enjuined to have their horses saiduled aud be readr to mount at a moment's nocartridges were distributed among the troops, and the artillery had been ordered to hold themselves in readines squares. But the peaceful state of the city has rendered it unnecessary to call these resources into action

The Fêes of July. - These fêtes terminated, on Thursday night, with illuminations and fireworks, and withont the slightest attempt been but little spirit manifested in the rejoicings on this occasion; so much so, that some of the journal take occasion to complain that the enthusiasm of the French character has died away. The National Guards were not reviewed, Whilst last year they attended the had also beeu receive 1 in Paris from biarceaux, Perpigume Toulon, Harselles, sirasburg, and from a anmber of other towns, announcing that these anniversaries had been everymbere celeorased amidsia considerable affuence of people, and in tise most perfect order

The fiscol Meanters.-It appears that in one of the departanents of the centre of France a p?ssive resist ance is thade to M. Hiamann's tiscal measures by the population refusume to provide cither food or lodgnesf for the supervisurs of ases at any prive, and therevy renderexecute the duties imposed on them. This system com menced in the dypurment of the Cher, and is extending
to others. At Nismes. Cann, and other towns. the inhabitants refuse ty ofmen their deors to the offiears. The disturbuness at Stratinuty lasecemed. It is still asserted. as mentioned in out last Number, that the Municipal Counch of Paris is destedy uppered to the new systera of taxation: the cosam, hawerer. in very guarded in its culated by the jouraats, form the returns of the now census airedy known, that upharis of thave nerer been ratel for tares, will am Lo made to contribute their portions

The Briget.-It is stted, that the Minister of Financ has submitted to the Councal several propositions havm 1843 tou a lecel to reduce the expenditures of the budget of 1843 to a evel with the public revenues. Consiuering the rentiou of the Siraits of the Dardmeles, ana di.nir, us to accontenth ti, promises made to tie Chambers curiuy the last sessiog, ie is said to have called upon his colleazues as mill haninith the reight of the pubhic ourdens. He is murevier sid to tare represented. that for gn ioans and the presur: eniuarrdsentents felt by seremal Austran bank-
ers, render the present time a mont finanpicious one fur effecting the contemplated loan. To these proposal hameres, though warmily supported by the Minister of

Public Works, most of the ministers are stated to be
strunals ornosd. The discussion of this important quesstronely off osed. The discussion of this important ques-
tion was ady urned at one of the last Cabinet Councils, but it is thougit that it sill soon be resumed, and probably leal to rew ministerial compleations.
- The Floet-Acconnts from Toulon state, that the French squadron, under Admiral Hugon, has returned to the island of Hyeres, and would put to sea on the 3 d Balearic Islands, and would remain some days off Palma. The divisiop under Capt. Leray, composed of two ships of the line, and a frigate, were to join in the inauguration
of the monument to the memory of St. Louis near Tunis. The Frritications. - The works in all prarts of the line are proceeling sith cusiuerable activity, and the King daily visits some portion of them. On Monday his Mawhere a detachment of 150 engineers, 400 civil operatives, and a batialion of the 3 lith Regt. of Intantry, were engaged Ather examin no the pition and effect of the bastions, his. Majesty went through the cannp of the 3!ith at Ruel, and from thence repaired to At. Denis, where he laid the Consumption of Ment in Paris.-The decrease in the supplies of meat, attributed to the heary customs levied the following return just published:-The consumption of meat during the month of July amounted to 5,686 compared with that of the corresponding month of 1840 , shows a falling off of 89 oxen, 130 cows, 372 calves; and 3,268 sheep.
Mulume Lafiarge.-The trial for the robbery of the diamonds was fixed to take place on Thursday, but, acher appearance in Court, or if she does it will only be to move for a postponement, to allo bes tit more witnesses. If there are any new grounds of defence they do not seem to be known, but the general belief is that she will suffer judyment by default, and then there nust necessariy be another hearing. M. Paillet, her counsel, it is said, will not be at Tulle on this occasion. Public curiosity on the subject is stated to be much abated, and almost reduced to ahsolute indifference.

Algeriu. - A telegraphic despatch, received from Toulun, aunounces, that Mascara, abandoned some time siuce, has been re-occupied by the French, who have placed in it \(=000\) men, with provisions to last them till October. General Lamouriciere had quitted that place and returned to Mostagatem. The opposition papers make complaints ayainst the Government, for not colonising the Alserine territory, and for not having clised with the offer of Barun stuck mar, who proposed to locate some Swiss there. Gen. Bugeaud seems, however, to limit his present endeavours towards guarding the small spot of fertile hillgrond immediately around Algiers, and which is to be enclosed by a ditch, and guarded by 150 blockhouses, 500
Switzerland.-Accounts from Tessino of the 28 th ult. state, that the rebellious communes had been sen. tenced by the Conncil of State to pay fines and war contributions varying from 500 to 20,000 franes, according to the different degrees of criminality attribated to them, and that the property of the insurgents had been confiscated. Spain.--The Regent was presented on the 25 th al *ith the ex-queen Maria Christina's protestation against the decree of the Cortes depriving her of the guardianship of ber daughters. It was rumoured that Lonis Philippe Lad appended to it a declaration of his disapprobation of the mavaure, as being derogatory to the common inght of tradicted. The protest of the Ex-queen appears to have created a great sensation in the palace. Ministers immediately assembled, and the British ambassador was called in, and was present at the deliberations of the Council. guardian took place on the following day ; the two legisLative bodies having assemblend for the purpose in the hall oi the Scmate. All the public tribinats were filled with spectaturs: but the British ambassador was prevented by in isposition from attending. There were not more than 110 deputies and senators present, and the ceremony did not oicupy more than a quarter of an hour. M. Arguelles was ushered in oy the four secretaries of the Cortes, and when the had tahen the oath drawn ug by the Legislature the Presileut twin him that he mas authorised to discharge the functions of guardian. M. Arguelles then withdrew. and the 1ssemby broke up. The Chamber of Deputies wis still engaged in diseuseing the clergy bill, and others relative to the alvance of fill millions of reals, the principle articies of which had been adopted. The British amForelgh Aft irs on the 23d ult. Gorernment, it appears, had strongly protested against the seizure of the Spanist bsat at A geiras, on the lith ult., which we mentioned in our last Number, and it was stated, that the Englist ambassadur had offered M. Gonzales some sausfactory explanat.ons on the sibject. It is also said, that M. Guizot bas ciffered to mane amends fur the aggressions of the Frean in tha Adudes, provided the facts of the riolation of ti: territ पy be satiotartonly prosed. Nine Spaush dergymea amsed ai the Aldules from Estella on the ?Jta uit. They had retused to comply with the Regent's injunccion respecting tise Popt's buil, and e esigrated to France Subsequent accounts inform us that the Chamber, by a vote of 5 against \(3 ;\), has authorised the raising of three millions of dollars at six per cent at par, on the mortgage of thme hranche of the rerreane.
PomTVGAin-We hare intelligence foym Fibion ta the

26th ult. It appears that Government had obtained from mittee upon the different subjects submitted to it , to be presented separately at its convenience, withnut waitirg
 the passing of the most essental returne witiont unac cessary delay. The discussion on the Foraes was not concluded. The bill for authorising the collection of the Senhor Avila is said to be acting upon his avowed system of retrenchment. The political relations with Spain aptained of the amicable dispositions both of the is enterprime minister of that country. An envoy from Moroceo wad arrived at Lisbon to make some pecuniary demand, and from the advances made to its consul at Tangiers.
 that on -he previous day the Bourse there was mention informed of the conclusinn of the loan, which has been for some time contemplated; and the communication was companied by a declaration, nor Government would not
reduce the interest thereon, nor the interest on the Metallique, during fifteen years. The same letters give the fol
lowing estimate of the extent of the failures in that city since the commencenuent of the late crisis: "Steiner, florins; Geymuller \& Co., \(8,000,000\) fiorins; Aleanade Poss, 60,000 florins ; L. C. Smekal, 60,000 florins; Adolphe Leon, 80,000 florius; Pierre Belloni, 2,000,000 florins
Moses Abraham, 100,000 florins: Osgi Askerogin florins: Widow J. W. de Tromanus \& Co., \(1,000,000\) florins; F. Falkenberg. banker, 2000,001 florius; Voll ruber \& Koechel, 100,010 florins ; samuel de Mayo
 house of Sabatey Seme suspended its payments, bat re sumed them again. It appears, however, that the liabities of the firms are so widely spread thro ighout Eurnpe,
that Tienna will have to sustain but a small portion of the aioove-mentioned losses. Accounts from Gratz, dated the \({ }^{2}\) th uit., state. that as soon as the present commercia o Trieste will commence: and that the proprietors i Styria have declared their willingness to contribute toward竍s completion. The expenses are estimated at \(32 .(010,11\) forins, and it is calculatel that the tramsport of travelien and merchandise will produce an florins. The Hanau papers of the 27th ult. state that
the shares of the Vienna National Bank had declined? the shares of the Vienna National Bank had declined?
tforins, in consequence of the failure of five commercia thorins, in consequence of the faliure of five commerela
houses at Trieste.-It is reported at Berlin that the European Powers fropose to recosnise the tro Govern ments of Spain and Portugal, atter having made a regula tion relative to Don Carlos and Don Miguel. It appears it be still uncertain how far Count Bruhl will succeed i:1 ar ranging the Prussian difference with Rome. The Prussin government has made a concession in not insisting on the election of the vicar chosen by the chapter for the manage ment of the diocese of Cologne. The Pope, it seems, government has declared that it does not acknumledge thi vicar, at the same time, however, promising that it will no oppose his administering the religious duties of the dio pute with Nassau. Dr. Mohr was selected as the fit cai didate for the bishopric of Limberg, but the Pope has do clared the choice uncanonical. The Hamburg papen jan \(U\) a treaty between the United States and imilar to the treaty witls Eugland. The B aden Chambe has been discussing the best means of keeping a good military furce on foot, to avoid the sudden expense of raising troops, as was the case last year. The Germd Diet however propose taline this question into tss cons deration, and will prubably recommend an extension of the Prussian system of laudwehr, or mulitia, to the south German States. Baden has re-establiohed the permissin to send horses to France, and the other states, it is thought. will imitate the example.
Hanover. - The Second Chamber of the States have dissolution by the to the Germanic Diet against th rce th constitution of 1538 is null, as it was nut roted by Chamber legally constituted, and that it has niot been al proved of by the coustry, from many parts of wha onstrances have been sent, things hats nut been opealy attacked. turt the bridge will be completed in about 18 months.
The lesign is by Mr. Branel, jun., the engineer of the susperion-bridge now constructing at Clifton.

The fenitentiary-At the Mansion-house, on Tuesday, Sir P. Latie, the sitting magistrate, stated that he had
authority for tem was abouru to be completely altered; that after the long trial which iad been given to the solitary process in this pluce of punishment, it was at length discovered that the rigorons plan adopted was not productive of the good anticipated; that insten of causing an improvement of morals, it deprived several of the prisoners coufined mithin Government was at length awaleyed to the necessity of prison reform as regarded this place of punishment. It
was however suggested, by some one present, that the model prison, which Government is at present building, would be the means of establishirs a more rigorous serics of punishments than even the penitentiary was capable of
inflicting; and that the plan upon which this new prison is constructing, is such as to encourage every fear that great powers will be given to those who superintend the of the kind; at all events one Serious evil was about to disappear, and he really did not think it possible that could be substituted by anything so objectionable.

Mortality among the Wooluich Conviets.-It appears that scarcely a week passes without the attendance of the coroner being required to investigate the deaths of some of the convicts at Woolwich. On Wednesday, an inquest restigation, retarned a verdict, in accordance with the medical attendant"s evidence, "That deceased died from matural canses.'

Billingsgate Market.-Wednesday being the first legal. ised day for the sale of oysters, this market was, at an eariy hour, crowded by a great number of persons, anxious to obtain the first supply. There were fifty smacks, with There were, howerer, no native ossters ; this description, it seems, not making its appearance in
ket till the second week in September.

Assault on a Cormmanding Offcer.-On Saturday, as Major Smith, the commander of a detachment of the 15 th regiment, was passing down the Lower-road, Deptford, he met a private, named Duckwood, in a state of intosication, and desired him to go to his barracks. The man walked for a fers moments, when he suddenly turned round and struck Major Suith a riolent blow; atter which, he who attempted to seize him, and seriously injured one of them. After consideraile resistance, howerer, he was at length secured and taken to the barracks. On the following morning lie was brought in custody betiore Major rageous behariour, severely admoaisibed hims. and ordered him to be contined \(t\), barracks for two wontis.
Vere Perchssion Shell's. - It aypears that several otber parties, in addition to the gentlemen who recently made expermanents weh percussion shitl!s in the marshes at
Woulwoch, awounts of which have appeared Numbers of our paper, having applied to the Buard of Ordnance to be permited to make furcher experiments with shells constructed by them, their request has been complied with, and the experiments will take phee imneediately after the way-er p is git in, which it is expected Shipzoeck:-On Tuesday, intelligence was received, by the underwriters at Lloyd's, of the loss of the ship St. George, on the coast of A merica, whereby seventeen lives
were lost. Stue belonged to Messrs. Fletcher and Sons, Lower Shadwell, to which place most of her crew belonged; and the information has ocersiend a deep senpolis. The ubforturate cainnity happene: on the night of the lith Jane, on the F. madi stores, and all un board, excepting two seamen and the eabin bor, perished. stre
 Inquests.-An inquest has been held at the Catiedral Kinz, aged fity-six, Primeipal Examimer at Apothecaries' Hul. wav died saddenly in that hotel, during tae night. The prystetor of the Lotel stated that deceased arrived at his house thout four o'clock on Thursday, and, after takn wne refreshments, went out, saying that he wonld
take h: wuas supper when he retarned. He came back aisout eleven and wen: to bed. The chaubermand deposed hat at night decersed appeared to oe in good health and spirits; but that at ten o'clock on the foliowing mornjing, as he had not risen, she went into his room, and saw
ter was found in the ronm, and the contents of his carpet
bag consisted only of the usual articles. Verdict, "Fo:nd bag consisted only of the usual articles.
dead." An examination of the body has since been made, when it was ancertained that deceased had died of an affection of the leari.- On Tueslay, an inquest was held at Homerton on Mrs. Tudor, aged twenty-nine, who met with her death from being thrown out of a chaise. Several witnesses were examined, from whose testimony it ap-four-wheeled chaise in company with her husband, the Rev. Mr. Tudor. and tro of her daughters, was passing acruss Chadwell-heath, when a dray, the property of Messr3. Barclay, Perkins, and collision with their velicle, and turned it over, precipitating the whole of them into the turned it over, precipitatikg up insensible, and on being removed home it was discovered that she had received a concussion of the brain, from the effects of which she died. The jury returned a verdict of "Accidental death
Accidents. - Sir F. Burdett met with an accident a few whilst riding in the neighbourlood of Ember Court, near Hampton, his horse came in contact with a gate, from which the hon. Baronet received some bruises, but they were of a nature only to produce temporary inconvenience. -Mr . Baily, the astronomer, has at length recovered from the injuries be received by being run over in the Strand on the 21st June. Our readers will recollect that this gentleman was conveyed, immediately after the accident, many weeks in a state of considerable danger. On leaving the institution, a few days since, Mr. Baily presented the Treasurer with a donation of 1001 , in acknowledgment of the benefit and attention he had experienced while a patient within its walls.

Fires.- On Wednesday, a fire broke out on the pre-
ises of Mr. Few, carpenter, Red Lion-street. The inmates escaped from the roof; but while rescuing the inhabitants from one of the adjoining houses, one of the fire-escape men fell from a height of forty feet, by which he was very seriously injured. - On Tueslay night a fire, which was fortunately subdued before it did much damage, broke out on board the steam-ship Duchess of Sutherland, which had just arrived from Aberdeen, with one hundred passengers and a large cargo. It originated in the engine-room, and was caused by the ignition of the coals in the bunker, by the heat of the furnaces during the voyage. By cutting away a portion of the deck and throwing quantities of water into the hold, the flames were got under before they had made much progress.- At an early hour this morning a serious fire broke out in one of the extensive granaries in Thames-street, which is said to have destroyed the entire range of buildings between that particulars are yet known

\section*{Flrobincial Nebos.}

Beaumaris.-On Monday, in virtue of a precept issued to the High-sheriff of Anglesea, a court was held at the the Skerries Light and Rock and the Trinity Board, pursuant to the act of parliament empowering the Brethren to purchase and govern all lighthouses in the Cnited Kingdom. After a long trial, the jury gave a verdict for the owners of the lighthouse of 440,0001 ., which the Liverpool Albion says was considered to be its value.
Birmingham.-Mr. Muntz, M.P. for this town, met with a serious accident on Monday. He was proceeding towards his home on horseback, at a slow canter,
and was near the top of the hill beyond Hockley-brook, and was near the top of the hill beyond Hockley-brook,
when his horse suddenly sprang into a gallop, and rushed towards a lamp-post on its left. Mr. Muntz contrived, at the moment of coming into contact with the post, to sway to one side, and thus received the shock on his shoulder. He was, horever, thrown with violence to the ground, and on recovering himself, found that his cullar-bone was broken. He succeeded in walking home, and it appears that he is 110 doing well. The head of the horse was fraccured by the violence of the blow. - The foliowing is an abstract of the census returns for this borough: Inbabited ing, 352 ; inhabitants (males), 88,305 ; inhabitants (females), 94,393 ; total number of inhabitants, 182,698.

Brentwood.-A fire, involving loss of life, has occurred in the village of Horndon-on-the-hill, near this place, which consumed the whole of the premises attached to the Bell
Imn, and seriously damaged several houses that adjoined Mrn, and seriously damaged several houses that adjoined. The person who perished was a female, the wife of a lathere appears to be no doubt that the fire originated trom accident.

Bristol.-The Mammoth steamer at present building in this part will, it is thought, combine a greater number united in of untried principles than were ever before united in one enterprise of the same magnituice. These
are, first, the large size of the vessel herself, made entirely are, first, tae large size of the vessel herself, made entirely

ing throngh a stuffing-bor in the top of the piston ing through a stuffing-boz in the top of the piston, to give play to the connecting rod, an unlimited application of wheels and padile the propelling power padatethe principle of the Archimedaen screw and revolving nander ber quarters. - The local journals mention, as an instance of "sharp practice," that during a recent sitting found his way into the Judge's private room, and stole the Lamed Commietione's hat arivate room, and stole the

Rose, with his wife, was returning to this city a few dars since, from Stapleton MIM, when near the Black Swan he was fired at by some one from an adjacent field, and the mediately lastened into the town and cave information of medrately lastened into the town and qave information of
the circumstance to the police, but no clue to the detection the circumstance to the police, but no
of the offender has yet been obtained.
Cambridge.-A few nights since a cash-box, containing money and securities to the anount of \(2,500 \%\), the property of the cook of St. John's College, was abstracted obtained by the window-panes, and unclosing the catch of the windo A man named Day, who had the care of ten sets of rooms, being suspected, was apprehended; and his shoes corresponding with some footmarks in the larder, the rooms in his charge were searched, and in one of them the cash-box was found, unopened. The prisoner was accordingly committed for further examination

\section*{Cantertury. - The following has been published as} correct statement of the population of this city, as made borough, 17,320 ; inhabitants of the barrack department

Chelmsford.-On Sunday morning a labouring man named May, who has brought up two grandsons as Laindon-hills, their mother being dead, desired one of hem to go to church, when the lad refusing, a quarrel nottle in his old man turning roud hastily, with caused a concussion of the brain, of which he died. An inquest has been held, and a verdict of Manslaughter returned against the grandfather, who has been committed to take his trial. The prisoner is between sixty'and serenty ears of age, and has always borne a good character.
Dartford.-A short time since the banks of the river opposite the canal broke away, and the water rushius stroyed a quantity of hay, and considerably damaged the corn. This, it is thought, will add to the expense of the intended canal, and impede the works for a short period, Exeter.-The parties apprehended on suspicion of bein concerned in the murder of Mr. Bennett, as reported tions before the magistrates; but in consequence of the reporters of the press not being allowed to be present, the particulars of the investigation are not known. It apwhich he states, that the youn man Pitts, already alluded to as the party most strongly suspected, actually committed the murder; that he mas with him at the time, but did not interfere ; and that no one else was present or concerned in it. - At the late assizes in this city, William Major was tried before Mr Baron Rolfe, on the charge of administering poison to his son-in-law, Thomas Combs, of Thoracombe, an
count of which appeared in a previous Number. After a lengthened trial, and the examination of a great many witnesses, whose evidence satisfactorily proved the guil of the prisoner, the jury brought in a verdict of "Guilty" "
and the learned judge in passing sentence, informed the prisoner that there was no hope of his being pardoned. Gloucester.-Some sensation was excited in this city few days since, by the report that a man had thrown him self into the basin and was drowned, and that his com panion, instead of rendering assistance, stood by, cooily smoking his pipe. The man who destroyed himsel was named Brown. It seemas they had walhed together tomards the basin, Hill having to rective some money from the captain of a ship there; but as soon as they reach edge of the basin, the latter suddenly cried out "Guod-bre" to his companion, and threw himseld into the water. ap his hat, puttine it under his arm, and sat down quietly smoking his pipe with great indifference. An inquert wis held, when, after Brown and several witnesses had been examined, the jury returned a verdict to the effect tast deceased had drowned himself, being at the time in a stale of temporary insanity, with a strong expression of censur as regarded the conduct of Brown.
Huddersfield. -The Leeds papers state that on Thursday norning, the 29th alt., a quantity of snow fell on the high ground between Delph and this place, which at this seaso the year is regarded as an extraordinary phenomenor Hin.-An attempt was made to set fire to for the din er shat while preparations were making for che dural Society on the meeting of the Yorkshire Ag the spot were attracted by a smell of barning, and discorered an oyster-shell, tilled with tow ard other combustibles. near the north-east angle of the building, carefully corert over with boards, so as to communicate with the on made wood wall of the Circus: had not the discovery been man thus early, the whole builaing, and from the nature of short time have been in flames, and, from little chance of saving it. An investigation has been commenced, and 3 large reward offered for the apprehension of the offenders Kendal.-On Sunday afternoon, the Engineer cow Carlisle, when on its return from the latiter place, was overtarned at Cold Harboar, about four miles from this town. It appears that strong opposition exists bet inst in the stage and mail coaches, as to which can arrive wre the the varions towns on the road, in order to secure greaitet number of passengen, and anseed. This seems to have been the case on the present occasion: the Engineer having the lead of the mails, was pruceeding at a grest
rite, when the traces of the leading horse were forced
from their fastenings, causing a temporary check; and the coacb, which was heavily laten, began to swerve fiom on side to the other. This being perceived by one of the he immediately leaped from the coach, and his head coming in contact with the ground, he was iilled on the spot. upset, flroming all the pa-sengers with great violence to the grounl. The horses, however, till continued to drag
the coach some distance, hy which two geatlemen w ho had fallen uader it were seriously hurt
Lucr, wol.- On IInadyy an inquest was held on An tonio Tuscano, an Italian, who was murdered by a countryman or in Thurlow-street. It appeared from the evidence that on the night in question deceased went up stairs to bed aboat 12 o'clock; the prisoner having gone up prerio:e excluiming in Italian that he was burn! ; and the pristairs. Decersed was then found with his face and body covered over with a kind of thin proridge. exclaiming that he was scalded to death, an:l that the prisoner had done produced, and the jury returned a verdict of "Wilful Murder" against the prisoner, who is named Cappello. He has been committed to take his trial at the appreaching
nesizes.- Tae following are giren as the returns of the recent censuls for this borough. It should be prenised, however, that besides the parish of Liverpool, the townships of Ererton, Mirkdale, West Derby, and Toxteth
Park a:e inchuled in the Parliamentary boroush. The aggregate population is 293,963, giving an increase of 33.220 , or it per cent. ; the population of the Parliamentary borough, in 1831, having been 195,961; but at that period the borough was not so extensive as it now is, the limits comparison can therefore be made between them.
Manchester. The commercial condition and prospects of this town are ropresented as being of a very discourasing character. Several large failures have lately taken place, and a great number of workmen are thrown out of employ. It is thought that the mischief will continae to increase, hands whery day will barely exist. As a promed consequence of this criticalstate of things. the Monchester Times states that Lord Francis Egerton is about to raise in order to be prepared against any disturbances that may possibly take place; and that the example is hikely to be bourhood; but this is explained in another local journal Commandant of the Lancashire Yeomary, and that the raising of a new corps is a customary acknowledsment of the honour conferred by that appointment.
Neromarket.-On Tuesday, as
was proceeding from London, to this tomn whan of Exeter Wadesmill and Barkway, some persons driving two waggons, and riding inside, began to flog the horses, whereby One of the waggons was driven against the carriage of the Lis Lordhin: an arriving at Barkway medical assistance was procured, and, although seriously hurt, the Marquis was enabled to proceed upon his journey.
Plow - Pro scene of much excitement and gaiety during the last week, in consequence of the meeting of the British Association
for the adrancement of Science. The proceedings commenced on Thnrsday morning, but broke up at an eariy hour, as is usulliy the cise on the first day. On Fruday, the sectional business commenced by the readne of a
number of prpers on diffrent subjects; on Saturday number of phers on diffrent subjects; on Saturday
none of the sections met, all the members having joined in escursions to thie different interesting localities in the neighbourbood. The largest party, cinsisting of the geologits, \(t)\) the mumber of ' 20 . Went on an excursi. \(n\) to
tiem the Eivan dukes of Cornwal on the edse of Dir"noor, and the towa of Tavistuvk With the mines at Mary Associati no by the tumir:t were employed no excursinens

 onomind, he tu.k the ambuanity to par a fleter :as cull!y on Commeriore Nipier. The admiral, in reference
to these charges, stated that wherever concentrated ope-
rations were necessary, as at Beyrout and Acre, he was imple fact of the operations extending near a line of three degrees of lattitude, if not mure, would he a sufficient answer to the charge ; untess, he said, whe possessed, as Commander-into the birds an! the fishes, of being in twoplaces at once." The meeting was afterwards addressed by the Marquis of Anglesea, Sir Edward Codrington, General Sir Hercules Pakenham, the Chancellor of the Exchequer, and Commodore Napier, who said that "he could assure the meet ing as an officer holding a high command in the Syrian expedition, that there was not an officer or a man engaged in that serrice tho did not on all occasions look up to the Gallant Admiral with the most perfect and entire satisfaction and reliance. -Aa explosion of 650 lbs . of powder applied to the wreck of the Royal George took place last week, and being fired about the lime of low water, produced a similar effect in miniature to those of the great explosions of last year. Notwithstanding a violent gale at the time, several yachts and smal! ressels came out to witness the operation, which disengaged a piece of mast from the mud, about four or fire feet lons, that floated to the surface and drifted to the eastward. A boat ordered to secure it, by Col. Pasley, failed in the attempt, in consequence of the bisterous state of the weather. Next day, though it still blew a gaie, and the lumps pitched violently, tive disers were employed as usual, and a quantity of wreck was secured.
Pucklechurch.-A few days since a lad named Fry was found dead at the bottom of a coulpit, near this place, under the following circumstances. Between four and five in the morning, the boy's father was heard inquiring of presin men if they had seen him, at the same time exarter descended int.) the pit, and at the hotton tound the remains of the lad, who had been dead apparently some hours. An inquest was held on Monday, when, after a lengthened examination of the mitnesses, the jury returned a verdict, "Eound dead in a pit, though by what means
he came there was unknown to them." It is stated that the magistrates have sinee taken up the subject, and cansed the father to be held in custody on the char murder
Rrmasfutp.-A few diys eince, as the Trinity steamracht was surveving round the (rogdin Sands, the Captain esplet some men clinging to oars, about four miles from ti.e land, between the South Foreland and the South Sandheal Light; he instantly made towards them, and though blowing very hard at the time, lowered two boats, and succeeded in saving three out of four, the other havappeared that they were a boat's cren belonging to Dual.
ls have been runaing between this place and Havre, vens have made seventy-nine sogages, carring about 3000 pessengers, the greater proportion of whom were taken across for less than 5s. each, owing to the opposition between the owners of the French and English boats, which appears likely to continue.
Stockport.-The trial of the four Sandys for poisoning Mary Ann Sandys, the daughter of two of the prisoners, took place at the recent assizes. and caused great interest lown. The examination of witases occupied sereral days. The fact of arsenic being fuund in the cel1 ir oceuphed by the prisoners was established; and che to prove that subequently occupied the cellar were called into cccupation. The evidence taken before the coroner was then adduced; after which the counsel for the prisoners addressed the jury contending that the eridence was insufficient to waraant the conclusion that the prisoners were guilty. The atornev-Leneral repiied, and the learned judge summed up the evidence at great length. The jury, after retiring for about a quarter of an hour, returned into esurt mith a verhict of "nnt guity. The
leamed juls? then directed that the pris mers should t, arraigned on the coromer's ingui-nion, to nor similar veritic: mi it be recoried; bat ti.e officor of tue court said that that document was not in existence, the residence of the coroner having been on fire, where, amongst the property destroyed, was the inquisition in question. On the following day, Robert and Ann Sandys

doubt in which it was involved. The learned judge ba ing summed up, the jary retired; and after an Lour's con-
sultation found Robert Sandys guilty, and acquitted the mother. The judge ordered the prisoner to be retained in custody until the nert assizes, in consequence of a motion

Sunderizal.-A publie meeting has ween held at the Exchange-bmildinge to receive th.e regort of the deputation appointed to meet the coal-owners on the deprensed state of the coal-trade, which we noticed in a previous Number. The substance of the report was as follows:when the inadsquate remumeration receised by tie slipTrner was mentioned to was found that the rie ciun derland coals had risen to 21 . fid., 2.. hiclar \(r\) than when the previous meeting was held. The coal-owners objected going up to London and suggeste faat sonth, and obtaining their clearances at the beginnins, tended to depress the market, and that sufficient pains mere not taken of the factors in the sale of the coals. In answer to a question whether they would watch the price of coals in the London market, and when they fell belus the price at which the ship-owners couid afford to sell them restrict the sales? the coal-owners replied that they had a strong wish to do so, and begged that the ship-owners would keep up a communicarion with them on the sulject. A long dis cussion then arose as to the proprie:y of further urging on the coal-owners the adoption of the freightage system, sales when the price of coals was below a certain amount; but objections were urged to each of these plans. A con versation followed as to whether a retora to the rotation system would be advisable, but no resolution was come to on the subject. The shipping interest here is in a very depressed state, many vesoels are laid up, and a greater number of samen ont of employment than has been the case for many years.
-A few days since some workmen emproyer in raising stone from one of the lias quarries on Brockbridge-common, made a discosery, 1 ff. from the surface, of what they thought the bones of a fish, and of
which they gave information to Mr . Dudfield, of this which they gave information to Mr. Dudfield, of this place, who proceeded to the spot, and found it to be, on
examinztion, the foss:1 rmain of in inhtrisumens. Mr. Dudfeld sucpede in di-interrany is and upos nainute es amination found that he tad obtained a beautifut and percimen me sures fite llin. in lensih, idaviug timp head, the whole of the spine, consisting of upwards of 100 vertebrex with many of the spinal processes, and tail perfect, eyen to the smallest point, two of the paddles or fins quite perfeet, and a con-iderste por

Thursk.-In attempt has been made, within the last few days, to set fire to the chureh in this town. It seems that the clerk on entering it to ring the evenina bell, perceived a strong smell of burnt woen, and on making a sinct search, liscovered that two fres had bea kink nier the steps of one of the seats, by placing a large pan from one of the stoves upon some flags: che coas, howern, not being sufficiently powerful to set fire to the bearas
under whein they were phaced, had onis partidly burnt them, and then pospired. The incendicy, in order to kinule the fire. had broken up the bealle so wasd and rase, and hall brovizht a benon from the altar tabe and placed it upon the stais. Dublin. - The census for Ireland, takea in June, is not vet completed; hust sufficient prugress, it is stated, has variety of districts to afford grounds for juiging of the rariety of districts to aford grounds for judging of the
general results. The returns show that im considerable
check has been given, within the last 10 years, to the pro eris-ive increse of the population. According to the thans of 1.21 it was \(6, \$ 01,421\); and in 1431 it hat in hearly one million, or shout 16 per cent Presionsiy to 1821 the increase had been in a much greater ratio, the opulation having nearly doubled itself within tae perio of half a century. The rate of increase, however, be tween 1831 and 1841 will not, it is said, be more than five per cent. ; and in the County of Carlow there appears to have heen an actual decrease.-On Saturday Mr. Cockson
wh., it wi.l be reniembered, fired during the late election upon a body of rioters who were trying to break into his house, thereby wounding a man in the hand, applied to the head office for liberty to carry arms for his protection in consequence of having received some very threatening otices, from which he considered his life in danger. The magistrates, however, did not think the application regu ar, and declined to give permission. Notwithstanding this refusal, Mr. Cockson stated his determination at once ieneral ordera have been issued by Government to the stipendiary magistrates and police to arrest all persons noticed as having been concerned in the recent out rages, wherever the voters were obstructed in their acceso the poll, whether by personal violence or absolute con inc, and other places.- The usual weekly meeting of the Repeal Association was held, at the Corn Exchange, on Monday. Mr. O'Connell was present, and announced is intention of holding meetings frequently until the meeting of Parliament, which he understood would take lare on the 19 th inst., the day when the writs were made the Philadelphia Repeal Association, enclosing the sum of 2001., as its contribution to the repeal canse. A letter was also read from the President of the Transatlantic Society, in which, amongst other statements, was one to the effect that if necessary, the sum of 30,000 . could be raised mmediately in America, for the promotion of the demand im R-peal. A letter was next read from a manufacture at Mamehester, fromising to send over some handloom marti, of this letter on Mr. Ocomell, in moving th pres at time, those who thought with hini had sedulously coine the introduction Irioh manafuctures : but the time was nos come when a line should be drawn, on one side of which those with bad poltites sh uid stand, and on the other the friends of their country, the Repealers. He intended to introduce the sthbject at the Board of Trate on Wednesday, and he would then bring to the test who were Rapeaters and who rere not. There could be no geaufine encouragement of Irish masufnctures until they had repell. The learnet gentleman then proceeded to address the ineeting on the usual topics; accusing England of being animated by deep-rooted hatred towards the people of Ireland, and commenting on the dangerons consequences which he thought would unavoidably result to beth countries from the establishment of a-Conservative Government ; and h conclusion, alleding to the progress of steam improvements, he requested the Conservatives to recollect that steam-boats could come from America to Ireland in ten days.
Weterford.-A Repeal Meeting has been held by Mr \(\mathrm{O}^{\prime}\) Conaell on the hill of Ballybricken, in this county greassembly, which is described as having been very length was addressed by Mr. O'Connell at considerable ascial topics connected with the question of Repeal. The meeting, after having been addressed by several other gen tlemen, quietly dispersed.

\section*{SCOTLAND.}

Edinburgh. - Instructions have been received by the Post-office authorities in this General, to despatch a morning mail, as formerly, to the ent on enast. These orders will be earried into effect in a few days.
Leith.-The returns of the census for this town have not yet been fully completed, but from what is known on the subject, it is thought that the population of the district does not much exceed 26,000 , being an increase of only abont 1,000 since last census.
Glasgov.-It is said that Gavin Scott, whose recedt embezzlement has brought him so prominently before the public, has made an unreserved edmission of all the charges brought against him, stating, however, that the act of forgery was not premseditated, but the sudden result of momentary temptation. He has also stated that on leaving this town he sailed from Greenock to Liverpool, and thence to London, where be assumed the name of Graham ; that he cashed the checks under the name of Heniry Gordon, and then started for the Continent under that of Douglas. During the few days he remained in L-adon he lost or squandered 20001 . He then went, by way of Southampton, to Havre, from whence he proceeded to Paris, and then on to Marseilles, at which place, after remaining two days, he was captured, as our readers are aware, in consequence of a telegraphic desintro received from Paris to that effect. On the awnsai of Mr. wirieggr. one of the principais of the deande harae witin a policeman, Scott at once told them where the money ne had was deposited: but on exnmantion it was
found that considerably mure tha.. 1000 . had been taken awar, of which he states that he knows nothing. He
 terior object, although when there he entertained a notion of proceeding to Egypt, but that he had not time to carry
his inteation into effect before he was apprehended. He
is about 25 years of age, and well edacated. The mone brought home amounts only to about \(4,390 \%\)., but it that more win yet be recovered. The census fi,
 tion has risen since 1831 , from 202,426 to 280,676 , bein eri increase in the ten Jears of 78,250 . The ponulation of all the other places in the county have, it is stated, in creased in the same f..fertion. The number of honse, however, does not appear to have kept pace with this in-
crease. In 1831, the number of inhabited houses in the royalte was \(10,2 \mathrm{nn}\). and while the enme boundert has ha an inerave of \(33, u, 1\) to the population, the namber of a. aitions d welmen lonses to accommodate timm is on? 18.31, the imhentel hamors month be no less than 2, , 6.3 .
Prasley.-The rec.nt fuilnes in thes tran, noticad in nur las: Nomber, coutinue to be the subject of general conversation. There has, however, been no addition to these unfortunate occurrences, and several houses, sap posed to be in commercial difficulties, have gone on freely
up to the present time. The amount of the late failnrem p 450,000 . The total nunber of houses that have stopue payment, or failed altogether in this town, within the last Durdee , is stated to be from twenty-five to thirty.
town are very discouraging. A failure of a mill-spinning concern took place about a fortnight ago, with obligations, it is said, to the extent of nearly 10,000 ., and which has involved others to a serious amount. Several foreig houses in the flax trade, it is also understood, will be con general depression in business, has greatly affected the general depression in business, has greatly affected the
Baltic trade, of which this time of the year is usually the
Fife.-The road trustees in this county have resolved that, after Whitsunday 1842, the rate of toll on onePeterhead - All the British shins have now sarived at this port from the freemland whale-fi-hery. Five of then came in on sturity, and one on Sunday, all having left the fishing abont the 1.5 th ult. The tonal quatity of of is fos tuns, being the prodace of 07 whales and 18,96 seals, all caught by vessels from this port, there having been no other Butivh ships at th:t fis, ing this season All the masters, it seems, cuncur in suting that an abundance or whates, mostly roung ones, were seell during the season, and that the weather continued most forvourable
but they were prevented from making a more succestiul but they were prevented from making a more s.
fishing in conserguence of the comdition of the ice.

\section*{SPORTING}

GOODWOOD RACES.- (Coneluded from last week)
 has won this cup. First Class of Mareh Stakes.-Sherbet took the lead, fol-
 Sherbet. Capote went on with the running. Lte Busk ind
attending hima till close to the post, where he made a rush
won by half a length. Sherbel was an indifierent third, and the won by half a length
others were beaten off.
The Orleans Cutp. - This race was one of the slowest ever ran, and, as far as Hylius was concerned, appedrs to have been run
under very suspicious circumstances. Aspatria went of in front followed by Mus - Hyllus third, and Mustapha last. At the turn sus pasous thi eny, but with so little improvement in the speed
that on reaching the Craven starting-post nearly four minates
had elapsed. It continued in the same way round the clamp, had elapsed. It continued in the same way round the chm the positions remaining as before. Aspatria was beatea st, the
tance, and Buckle. who was on Hyllus, became second; imme-
diately after he endeavoured to obtain the lead, but had no
chance against Mus, whose superior speed enabled him to maintain his position to the end, and win cleverny by and thisty-two seconds, being ab

 history of this game after its arrival in Europe. It was thus announced in the Scottish newspapers of June last:the parish of Uig Isle of 1 , which mur was made in interesting of Lewis, which must prove highly interesting to antiquaries. A peasant of the place, whilst A!, ine in a mank, found upwards of \(\% 0\) pieces of knights, dismounted and on horseback. The figures ar of excellent workmanship, and, judging from the costame, certainly of very remote antiquity. That they were originally carved for the ancient purpose of chess-play seem. the most probable conjecture, and had been destined to relieve the sadness of cloistered seclusion; for they wer discovered near the ruin known to have been a nunner Honse named Taignir collechin dugh an Uig-t the House of Black Women in Uig. With the other article beautifully evecatel, and in perlect presurnation, as are
 (1)...t.on of antiquities in the British Museum. Th ru:mxe of the chessmen, exclasive of the 14 tablemen, or draughtmen, and the fibula found with them, amount to 67 ; of which number 19 are pawns, the rest superio pieces. Of these 6 are kings, 5 queens, 13 bishops, 14 place of the rook or castle, forming altogether the ma terials of six or more sets. For the sake of distinction, part of them were originally stained of a dark red or beetront coloter; hut havingboen on long enhicet th the action salt water, the colouring matter in most cases has been discharged. The pieces vary also in size, according to the ets of which they formed a part; and although so many emain, it is difficult at present to select even two seti !ifh correspond exactly
Antiquilies.-The researches of Sir Richard Hoare among the Wiltshire barrows have again been rewarded by success. Several of those in the neighbourhood of Stonehenge were recently opened by that gentleman, and an unusual number and variety of Celtic ornaments were discovered; among these remains are beads, buckles, and Prooches, in amber, \(\quad \therefore\), n. 1 -1.

SATURDAY, AUGUST 14, 1841
Tur last subject of examination, with reference to London, is the effect produced upon veretation by the prarticles of soot with which its attuosphere is loaded. This is the most real of all the evils that beset a
London vegetation, and that which there is no guarding against, so far as plants in the open air are concerned.
The leaves of plants are pierced with innumerable pores, techmically called stomates, so minute that the most acute vision fails to detect them unassisted by the microscope. These pores pass through the skin
of the leaf into its interior, and thus keep open the communication between the curious air-caverns which it contains and the external air. Such pores abound on both sides of a leaf, but especially on the lower side, and enable a plant to breathe. To breathe is as necessary to a plant as to an animal, and whatever interferes with this function injures the health of a plant to an equivalent amount. It is conceived that soot, collecting over the surface of a leaf, chokes up these pores and so destroys their health.

No doubt this may be true. No doubt if soot is allowed to deposit upon plants to such an extent as to form a cuntinuous layer on them, or anything like a continuous layer, it will injure them. But does it ever so collect: Perhaps in Evergreens it their cultivation in London. But in deciduous plants it can scarcely form a serious disadvantage: firstly, when the coal-fires are burning in greatest numbers, and at that time deciduous trees have no leaves; and recondly, because whatever may happen to the upper
suriace of leaves, soot can scarcely fall to anv great extent upon their under surface, on which the breathingpores primcipally reside. It is als, to be borme in mind, that rains are continually removing the soot as it falls on leaves, independently of which the breath-
ing peres are much smaller than the interstices in particles of soot; so that even if the latter lie upon leaves, they will not seriously choke up their pores, unless they lie in greater quantity than we usually remark
That syot is no very serious enemy to the health of London vegetation is sufficiently proved, independently of all argument, by the fact that newly-planted squares thrive, and that it is only in the older squares that plants become unhealthy. Yet soot does not collect upon plants in greater proportional quantity when they are old than when they are young.
We shall next week endeavour to gather together into a comnected argument all the points now treated of, and to show by what means it is probable that the vegetation of the metropolis, and of all such places, may be improved

We have received from one of our correspondents a letter urging us to point out to masters the advantase of allowing their gardeners to risit one another for the purpose of mutual instruction. The writer strongly urges the utility of this practice to both the employer and employed, and complains that, in most cases, when it is allowerl, the gardener is
required to pay his own travelling expenses. That required to pay his own travelling expenses. That
the privilege of visiting as many gardens and garden establishments as are within a reasonable clistance is useful. no man can doubt; for in the absence of such opportumiries, a gardener has 110 chance of improving year in a stationary position, as to skill: or at the most, Year in a stationary position, as to skill: or at the most, cess of individ.al experimenting. That the employer will aiso derive advantage from the augmented skill of lus servant is two obvious to require any argument; but we cannot conceive it possible that gardeners are ever debarred from the privilege of visiting their
brethren to arcasonable extent: at least weknow of no buch instance; neither do we imagine that any employer would object to allow the reasonable expenses incurred in such visits. It must, however, be obvious to all reflecting gardeners that this is a point upon
which a journulist can unly offer a general opinion, and that all arrangements relating to the payment of expenses are, like other money transactions between indiviciuals, subjects of private agreement, with which it is imnossible for strangers to interfure. If there are any gardeners really lebarred from visiting their brethren uniess at their own expence, we recommend respectful manner, and we have no doubt that they respectful manner, and we have no doubt that they econcmical, either from principle or necessity, but
they are rarely niggards. Let it not be supposed,
however, that we approve of a gardener's being often absent from his duties; on the contrary, there is no business that requires such continual personal superintendence as that of gardening, and which will less bear to be delegated to others. In our opinion, there-
fore, although it is most desirable that a gardener should be occasionally absent on visits to his neighbours, it is absolutely necessary that he should be generally among his plants.

We have lately witnessed a most singular fact, having the greatest interest in Vegetable Physiology. Hill, near London, there stands a Bay tree, which appeared to be killed by the frost of last winter, and the whole of whose leaves became brown and apparently dead. Of the latter, many fell off as Spring advanced, and the branches gradually acquired new leaves. In
this there was nothing at all remarkable; but the singular fact is, that the leaves-hard, brown, dry, and, to all appearance, dead-have gradually recovered their green colour, and are in some cases completely restored tolife! The green colour makes its appearance upwards along, and right and left of, the midrib. There can be no mistake about this circumstance, for so very strange a phenomenon naturally attracted attention and we learn from Mr. Radford, that he has distinguished the dead-looking leaves with notches and other marks, in order to be quite sure that it is they which are restored to life. A leaf now before us, marked as dead a week ago, has now the green colour spreading along it, in the manner we have described, to the length of rather more than an inch. If any of our readers have ever seen a similar case, we shall be greatly obliged for an account of it. That the Sweet Bay tree should frost. is well known; but that its perfectly dead leaves should be capable of reviving in this extraordinary manner, is to us an event without a parallel in either the animal or vegetable kingdom.
Some time since an advertisement appeared in this Paper for a Gardener, who was wanted for India. We are now permitted to state, that the inquiry was made on account of the East India Company ; and we have the satisfaction to add, that on Thurslay last, Mr. John Minner was appointed by the Court of Directors to the important situation of Crardener in the Botanic (iarden at Saharunpur. As may be readily imagiued, the number of candidates was considerable among them were several whose qualifications would have rendered them eligible; but the testimenials of Mr. Milner were so much beyond all the others as to leave no doubt about the propriety of appointing him. Several years spent in the Botanic Garden, Edin-
burgh, at Chatsworth. and eisewhere, in situations where gardening of all kinds is practised under the best instructors, and with the most ample opportunities for improvement, are advantages which few men can expect to possess, and of which no one could have made a better use than Mr. Milner. Those young men who have been unsuccessful on the present occasion, will do well to improve themselves against a future opportunity; for they may rest assured that
others will occur before long; and so far as we have any voice in such events, the best men, be they who they may, will always be recommended. The influence of persons of rank will never have the smallest weight with us, unless supported by the most satisfactory evidence as to qualitication.
ON THE CIRCUMSTANCES IN WHICH CET.
TINGS SHOLLD BE PLACED AFTER THEY ARE MIDE
Havisg selected cuttings i:r pr pacation and made them accordin- to the principles alr sady explained, the next thang to be understood reizes to the cisumastances in which they should be placed. This is of as great consequernce as a knomledse of the was to make them ; for andess they are Properly attended 10 when n.ates, t.ee pruphawi cannot expect to be successfol. in this part af the operation
there are two things to be eqnadered-plinting them in there are two things to be egnsudert-plinting them in sphere containing a certain degree of moisure. The puts Phere containing a certain degree of moiare. broken pots and a layer of turfy loam or peat, because this places the degree of moisture always at the commant of the propagator, which is of the greatest advantage. A ove
this layer of turfy substance it is in many cases found usethis layer of turfy substance it is in many cases thend use is ful to put a thin stratum of the soil in which che pras is
found to grow best, and the remainder of the space is then flled up with sand. Thio arrangement is contrived to ailom the ontings to root in the sand, and siterwards to fud their way down to the soil out of which they can A though nsefil ia certain cases, in of far the greater number it is unnetessary, the sand alone above goold drainnumber it is unactessary, that is required.

Alinost all cattings will strike readily in the silver mand common in the neighbourhood of Londen; but wa this is not iudispensabte to suctess, those who cananot procure it may easily find a mabstitate. There are many nurseries and gardens in racions parts of the country where this
kind of sand cannot be procured, bat where other kinds
abound in which cattings root very freely. Nurserymen and gardeners generally prefer sand which is as free from iron an possible, as this substance is supposed to be extremely injurions. In the present state of our phyin theal knowledge, experience is the only sure guide lags behind and does not come to the assistance of the gardener. On this account we are in a great measure ignorant of the reason why sand should be more fit for striking cuttings generally than the soll in which these bably owing to the mutilated cutting havinz the power of sucking up cortain surean assimilate, and which, instead of forming true sap and woody matter, only gorges and finally rots the tissue ;
while on the other hand the damp sand is able to furnish little else than water, this being nearly all which is required at this time.
There are a great number of plants of robust growth, which striks, Laurels. Pelargonium s, and Curysanthenumbs, others which form roots in water, and there are many more which require to be suspended in hot damp stoves, in order to form healthy and permanent roots. The latter are chiefly Orchidacese, or plants which grow upon trees in hot tropical jungles, and which are now so much cutivated and admired in our stoves.
Pounded charcoal has also been mach talked of lately as a powerful means to induce cuttings to send ont roots
for their support. Its effects in this respect are said to be very wonderful, causing plants to strike root which are extremely difficult to increase, and this in a rery short space of time. The experiments connerted with this subject which have been most before the public lately are those of Mr. Edward Lukas, published in Liebig's Organic when that They have been fuily noticed in this paper wish to prove the correctness of the statements concerning the effects of charcoal may easily do so
The proper depth that cuttings should be inserted in The sand, soil, or charcoal, varies with the different kinds. The strong cuttings, which are not liable to be affected by too much moisture, may be put deeper than the weaker
kinds, which are very liable to damp off. There is an account in the Horticultural Transactions of a mode of striking Orange and lemon cuttings by intouch the bottom of the pot. These are just the sort of things which are not liable to suffer from deep insertion, particul rly if the bark and wood are fully matured; on the same effect as the matting and graiting-clay has in the querations of budding and arafting. But in by far the greater number of cases. the cuttines showld only be inserted so deep as to support thenseives in an upright position. Gardeners are weil aware of the advantage of having the base of the cuttings of many sorts of plants in contact with, or near the sides of, the propagating pot. the roots in the act of formation spreading themselves over this part and down amonget the brohen pats which form the drainage, evidently deriving the required nutriment from such substances. A surface of this hind to a greater extent may be obtained by putting a smailer pot within a larger one, draining them in the usual way, and then tilling them both up with sanu. Anuther plan having the same object in view has been suggested by Mr. Forsyth in the (intleners Magazine, which is, to put a small pot stopped with clay at the bottom into a larger the usual filled with water, which filters sluwly through the pot into the sand where the cuttings are. The prian is rery ingenious, but it is liable to two objections, particularly if beillglasses are used, and these appear to prevent its being generally adonted : a deal of room is lost in the midule of the pot, and the condensation of water which is continually evaporating rots the cuttings.
Atter the cuttings have been put in, they must then be well watered; and this will carry down the particles of sand
and make them ruweh firmer than if the sand had been and make them ruwh firmer than if the sand had been
watered previously, as is comptimes frue. Ha in I poinced watered previously, as is son, etimes inue. Hain I pointed
out bow that part of a cutting with is destined to forn out how that part of a cutting Tulch is destinad pormen to the upper When the operation is at th.s staze it wet be particularly necessary to call to mind the prinaphes atreaily expanmen, ought pointing out the proper sumber of leaves whe of rery soft nature and perspire frecty, it will 'e it we greatest utility to corer them with a bell-glase waic wail until they form rooter and can supply themselves through their proper sestem. Various kinds of bell-glasses are simple in its construetion, is generally preferred. Some are made double, filled with
have a groave reund the
water, which is continually evaporating and supply moistare to the leaves; and others, again, are made of
violet-coloured gises, which is m. 1 to :....es. scme
 to afford that dezree of thate thic: 13 equisire, and that it matters not whether til.s \(1 s\) producesi by it or by any glass, which is so useful to cover cuitiagy which are planted to romt in the open border; and lastiy, the The or pit for those kinds which require boterate and retain a warm and moist atmosphere, but also afford a certain
degree of shade which is indispensable when the rays of he sun are powerful: and even this will be found insuffi cient in rery ciear weather, unless where coloured glass is used-and then the most simple way is to throw a mat over the frame. it must ever be kept in mind, however, that both these things-the surrounding the cuttinge with molature, and sharling them from the sun-may be overlone; in the one case the cuttings will damp off, in the ther the leaves will not decompose carbonic acid, and of cousse the production of roots will be retarded. The ind ridual who would be a successful propagator, therefore must fully understand these principles, and hold the baance most carefully in his hands; for on this depends much of his surcu-s. In practice, he will find it neves ary to dry the bell-glasses frequently, owing to the condensation which is continually taking place upon them; to give all the light he possibly can if he propagates during the winter months; to shade well in the middle of the sunny days of summer, and to remove the shade early in the afternoon, so that the cutting may enjoy the morning and evening rays.

Many yitnts wili not-trike roct withont a high tempe rature and bottom heat, and hence the use of the hotbed and frame. These are principally plants which are indigenous to the tronfen and warmer parts of the mornd, but by fir the grater nuinber, wheiher of those of this class or of thest which grow wild in cooler regions, strike easicr and more cuichly olen this is applied. There are many, huwever. arh is some of the hard-wooded plants of the Cape and New Holland, which do not require it, and to which it is injurious. But these things will come in detail before the readers of the Chronicle, in its quotations from books on practical botany, and in the letters of cor-respondents.- \(\boldsymbol{R} . \boldsymbol{F}\)

OBSERVATIONS RELATIVE TO THE GROWING OF CERTAIN PLANTS IN WAYS DIFFERENT FROM THE ORDINARY METHODSOF TREATMENT
(Read bejore the Bolanical Society of Edinburgh, by Mr. J. Macrab, Jun., April 8, 1841.)

As the rage for norelties in the Horticultural world is annually un tive increase, I beg leave to submit the result of a few experinients relative to the growth of certain plants whicis have existed for the last three, years under circumstances very different from what are seen in Nature, or even in cuitiration
Since the taste fur the cultivation of Orchidacea has come int., fashion, many singultr and fantastic methods hase been resorted to for perfectiog them. Some are grown inpyramus 'f peat and cork, and in baskets ; others in rustic onoden! fuxes of variuls shapes; also in wire bas kets and pits uf Giffereat forms and Gevices. Besides these, Cocua nut husis, tlocks of wood, and artificial branches are also turned to aceount, witin numerous design of pots or baskats ut inpper, zine, and poreelain. Man of these are suspended from tise ratters by means of cop per wres. Astive atusosphere of stonts and hoases fo the growth of Urehidaciollo flants is rem rally kent moist the various forms of puts, id. alluded io aic extensivel employed througlout the country for giviur character to such houses.
 We first enamenced te cuitivde Oivaidaceæ at the Horti cultural Garden. I Lad but fer speciniens, aind being anx Epiphyte houres whicin that aprearance of those England, I suspendet such Orchidaceous plants as could then spare from the shewes ; still the house looke bare above. In order, therufore, tu remeds this eril. looked round to ascertain how many nlants I had that Fig. were likels to submir to treatment simular to that to Orchidacecus plants. Ifirst fired upyon three specimens of Ficus clustica, all of the same ize and aœe, having pre hously seen a large one suspenced in the stove of tue Royal Botanic Garden here, where it has existed ar many pears in a mois and shaty part of the house, witis its ro ts wholly de prived of sisi!. The three mennens whih I exneri menton upon during the wint
 the finluming wass, and now fes-nt the apearance whic shall en? iviur tu leserib add to represtat by the ac barmaing frgupes : - The ares funt - Were fury heaithy seh stanling one fout above the it ci. iltai rasiling the Un congively frum their cots, onfe fithe piante (in - 1) was stimentel ar tie tare part of the indise, where :t re cires shat: Ly tie crulaty cuve fhiats, awd oaly recelve roisture fitic sumyuing the ause of a meramg. Thi flant is itik alize and healhy and continues expandine its oliage, altiough slowly wher compared winh tide otuer specithens. the leares are alse Lis co merons, and acarcely in
the same state of perfection. The second sperimen was treated as in fig. 2 , and hangs in the front part of the house, where it is freely exposed to the sun, both leaves
 and roots. It is now and has been all along in a freegrowing state. Above it is suspendedan inverted bell-glass of water. from which a few plies of worsted thread are employed on the principle of a syphon, to supply of suppory water worsted thread is rolled gently round the stem to allow themoisture to run from it over the roots. Notwithstanding that the roots are freely ex posed to the sum, the spongioles at the extremity of each are quite per fect and healthy This plant produces its leaves freely, is now two feet in height, and does not appear to want its natural support, or show any signs of flag ging even during The third speci men was more ron trated than either of the foregoing, and the result, though very remarkable, is precisely what I had expected to see. Instead of being suspended, as in fig. 2, it was turned upside down, and suppliedwith moisture in the same way. When suspended, it liad no side shoots, nor had it the least ap pearance of producing any, being merely a straight stem terminated with a tuft of leaves. During the first winte it did not seem to relish much its new position: it was how ever quite evident that the top would have turned up had the stem been soft and fiexible; but as it was com paratively hard and woody, the leaves only did so. During the spring of 1838 , the shoot in the centre of the plan rotted ont, and finally all the leaves decayed and dropped off The plant had now a wretched appearance, and was seem ingly dead. As the roots and a portion of the stem ap peared fresh, I stil kept it suspended and in the course of four months after two buds began to break, one on each side of the stem, which afterwards became deve loped into branches. The plant now goes on growing as it nothing hat happened, and has the appearance of the drawing,fiz.3. Notwithstanding that the plant is inverted the new saoots fro duced all grow up wards. The ghant has now a peculiar appearance. owing to the roots coming cown anjongst the branches. This ex. periment shoms that it is impossible to resurse matury: the top will ascend and the root descend, in spite of all that can be done, and whether grown in soil or in air.

During rhe winter of \(1833^{-1}-8\), I had a fine tuft in a pot of the Hare's-foot Fern (Dolypodium aureum), a native of the West Indies. This plant was rather an incumbrance
for a small stove, owing to its large and handsome fronds drooping over the pot, as in fig. 4. It was therefore Fig. 4.

necessary that it should stand close to a path, to allow the leaves room to hang down. In consequence of the dependent habit, the beauty of the fructification is quite bid, being placed on the under surface of the fronds No Fern in cultivation has its sori, or frutification, so large and conspicuous as Polypodium aureum. The stems, or and conspicuous as Polypodium aureum. The stems, or rather the upper exposed portion of the roots, lie on the surface of the pot, and are, above all things, like hare' feet. At the time mentioned I took the plant out of its pot, and rolled uy the root portion with Hypnam Mos without divesting it of its soil. This being done, I passed through it a copper wire, and suspended it upside down to the roof of the house. In the course of a month after being thus treated, the leaves dropped off at their articu lated joints at the surface of the plant. Early in the spring of 1838 four strong shoots began to unrol themselves: I watched them carefully to see which direction they were likely to take; I certainly expected that the leaves would twist, and then hang down in a similar man ner as when grown in a pot. Instead of this, the fronds uncoiled themselves completely upwards with straight, hard, clean stems, and turned all the backs of the leave outwards; the upper extremity of each drooping in such a way as to prevent the san or rain, probably the letter, from injaring the sori below. (Fig. 5 represente the Po lypodium in its inverted state.)

I am of opinion that this is decidedly the beat metiod of growing the Hare's-foot Fern. The plant is rendered not only more ornamental, But it is in every respect toe best mode of making it display its beautiful fructification. The root portion, or ball, can also be usefully adapted or growing some of the minor Orchidacez, such as Oncidium triquetram, Plenrothallis prolifera, Dendrobium poleh lum, and snch like. The Orchidacese flower uncommons freely in this situation.
Another Fern which \(I\) have found to assume a very pie tures que appearance when suspended from the roof of the huuse, is the Elk*s-horn Vern (der-stichum awicorne. a native of New South Wales. This singular Fern is prorided not oniy with its ordinary leaver, winich are urane but like the hurts of the EIK, and whence its nam, alsu with large, flat, reniform bodies, resembling ica which spreat themselves out on the surfaee of the pu or whatever substance the plant mar be gruwing un. Fis represents a plant of Acrostichum alcicorve taken out of pot during the summer of 1838 . The ball or root portion was rolled round with Hrpnum Moss, and then suspendew

It had not been long hung up before bodies resembling roots protruded to the outside of the Moss, when swellings became perceptible at their extremities; by-and-by these wellings enlarged into flat reniform bodies many inches in diameter. The root portion remains attached at one and on the outer surface of the attached is formed which finally becomes developed into true leaves. At this time (Feb. 1841) the whole surface of the ball is covered with them, and true leaves are now beginning to
form themselves right under the plant. I had a very fine plant of Acrostichum growing in a pot, and standing in rather a shady part of the house. This plant had several of the large reniform leaves standing upright amongst the true ones. I suspended the plant with its pot in the most exposed part of the house. After being so treated, all the reniform leaves produced were turned downwards on the outside of the pot, as if to prevent the sun drying up the roots within. Fo sooner was the front exterior of the pot and its artificial covering, and produced young plants Rorbia splendens out of its pot, all rolled the ball Euphorbia splendens out-of its pot, and roked the ball of roots up with Moss, and then suspended it, inverted, to
the roof of the house. The branches very soon assumed the roof of the house. The branches very soon assumed
an upright position, and it still continues to grow and if nothing had been done to it
The latt example which I shall mention, is in reference to the Bilbergia nudicaulis, a native of Trinidad. A piant of this species was taken out of its pot during the winter of 1837-38, and suspended with copper wire, as all the others were, to the roof of the house. During the spring of 1838 it thr?w out a beautiful spike of tlowers; after floweriug, a shoot was produced on the lower side of the plant, which also flowered during the spring of 1839. duced which fonmered freely last spring. This curious plant is entirely supported by the water which it holds pithin the folds of its leaves: When first hung up, it was within the folds of its leaves: When first hung up, it was
not more than a foot long: it is now 2 feet 6 inches in not more than a foot long: it is now 2 feet 6 inches in cing shoots freely at both extremities, as represented in fig. \(\%\). Other plants of diferent descriptions are now in

progress of experiment, but a year or two must elapse beGeh Horb. Sac. Gardon, Edinburgh, Feb. 1841.

COTTAGE GARDENS, No. NXX. Protect by every possible means aly fruit that is now approaching maturity, before it becomes a prey to the numerous swarms of flies and wasps, which in warm seasons begin to be very annoying and destructive about this time. Among Plums it may not be amiss to suspend some bottles half filled with sour beer, honey, and water, or any clammy liquid that will anstrer the purpose of entrapping insects; and in farourable situations where a Peach or Nectarine tree is cultivated we should recommend the covering of the fruit very thinly with walding as soon as there is the least appearance of any of them being injured This seldom happens until the fruit has attained its usual size and begun to colour, when the above cheap and simple expedient for effectually preserving them sound on the trees may then be resorted to. Gather up any of the early kinds of Apples and Pears that are blown down by the high winds, which not unfriquently occur at this season, and do consideraule damace in places that are ex posed. Lay the fruit carefuily aside on a dry floor or shelf, and let those which are bruised the most be placed by themselves, and be the first selected for use. Continue to remove the summer crops and prepare the ground as formerly recommended for other vegetables. Plant out those that were omitted last week, and be particular in ceping every part of the garden well stocked, and clea fom weeds. Towards the latter end of the week a smal sowing of Cauliflower may be made in an open sheltered spot; and should the winter not prove too severe, the
plants now raised will be very serviceable in coming into ase the following season about the beginning of June. We think they deserve a trial, although a few of the plants may only succeed. Where Parsley is in demand, and the spring-sown crop has either falled or is c nsidered insufficient fur a winter supply, an edging may now be formed of the best curled surt, which will probably come up than that which was sown in spring. Parsley will grow in any common garden-soil, whe:her the sicuation be shaded or exposed; but when ton dry it is more liable to run to seed than rhen it is rartially shaded and mois:. Although not an annual, and spring or autumn sowing is always preferable to continuing the old plants, still the latter may be made to last fir more than a year by cutting off the flower-stems as soon as they make tieir appearance. Look to the Onion cropr, which is sometimes greatly injured at this season if it happens to be wet, the rain causing a second growth to take place, and thereby preventing the swelling and ripening of the bulbs. When this is the case, it will be adrisable to go over them arefully, and bend down, without brenkine them, at thos that are large and thick-necked; the rifect of which will be to check the growth of the stem and leaves, and enlarge that of the root.-M.E. \(I\) I

Pubise Parks.-Your correspondent \(A\), in the Chro nicle of the 31st, takes a iust view of this subject. Surely it is better for the enjoyment of every class, not to throw open the whole ground to ise trou w!un and destroy the verdure. In St. James's Park, the verlure is only preserved by altemately keeping harts of it shut ap for feed ing sheep. By the by, light movease irou burdtes, of even sheep-nets, would look better than the unsightity clumsy wattled hurdles made use of. The ittea of tirow ing open the whole of every pubite paris was manch en couraged by some members of the late prriament, who overlooked the inconsistency of their exclaiming at other times against the profigate expenditure of puithe money hen was obvious that the rents arisins from thos parts of public parks that were not thrown oren, went into the publie purse and pro that, weli, red the said public from tiration to meet the expelase of heepang the park in good order. While I quite agree with \(A\). on this sub ject, I must protest against the accuracs of his quotation Goldsmith's lines are
human hearts endure
That part which laws or kings can cause or cure."
IIf the entire opening of the Parks were to destroy wher verdure, we should oe the last to advocate the expe diency of the measure. But as the veruure is not destroyed admission ather parts of the same ground under the sime लircum tances. It is of course to pedeatrians only that they should be accessinte, l.irsemen beian hent th the ?at ways. The free admiszion of pedistrians heed int m cr fere with the pasturage; and it it cun, Fe cinaut cima good policy tu grasp at some trifung amome art of the the expense of the comfort of the respectable pars that the whole park is to be ouenel? to the public to-morrot.

\section*{NEWS OF THE WEEK}

The news from Prance is almost exclusively confined to details of the proceedings in regard to the recent census, and to the resistance made to that unpopular measure. Toulouse continges quiet, and the re-establishment of public order is proceeding without opposition. The ex ample, however, has been followed by other places, and the muricipal councils of numerons important towns have resolved on opposing to the official inquiry every impe diment short of actual insurrection. A large division of the fleet has been despatched to the Levant, for the avowed purpose of watching the course of events, in the present unsettled state of the Turkish provinces : anothe squadron has recently sailed from Toulon, and much spe culation is afloat as to the real motive for concentrating so powerful a force. It is rumoured in Paris that on the approaching inauguration of the Napoleon colamn at Boulogne, the King intends to grant an amnesty to Prince Louis Napoleon and his companions, who are now prisoners in the castle of Ham.-From Spain we leara that the publication of the protest of the Queen-Dowager in the Madrid papers, has caused great sensation in the capital, and has given rise to an aumated debate in the Chambers. The Government has since published the manifesto of the Regent in answer to that document, in which it is contended, that although Queen Christina was appointed guardian to her daughters by the will of the late king, the authority of that will has been superseded by the decision of the Cortes, which are declared to be the ouly constitutional guardians of the public rights. A decree for the partial disbandment of the rogal guard, and a manifesto against the late allocution of the Pope, have likewise been published : the latter is regarded as a declaration of war against the Holy see, and is expected to add materiaily to the embarrassments of the Peninsula. The investigation into the cause of the recent collistons between the British and Spanish cruisers at Algesiras, and elsewhere, has proved that the company which had contracted for the coxst-guard service were the first aggressors; and that much emuggling has for some time prevailed in the ressels of the company, under the assumed sanction of the Government service.-In Por tugal the debates on the Foraes have been postponed, in order to enter upon the question of Finance, the Special Committee having rejectel the recent proposals of the Royal Commissioners in regard to the future management of the financial interests. - Our German news informs us that the King of Prussia has resolved on establishing commissions of the provincial states during the interval of the sessions; and that the plan is forthwith to be adopted in the Rhenish provinces. A disturbance lately broke ont among the workmen in the armoury at Potedam, which made it necessary to call in the assistance of an armed force; but the leaders were arrested, and tranquillity was soon restored. The German Diet has rejected the memorial addressed to it by the Second Chanser of the States of Hanover, protesting against the proceediugs of the King and the Constitution of 1833.-The report gains ground that the Emperor of Russia intends to re-establish the Kingdom of Poland as constitnted in 1815, if the peace of the country continues undisturbed. From siwitzerland ne learn that the middle course adopted by Argau, in its consessims to the Diet, has been rejected: a majority of that body having declare itseil dissatisfied witin the conduet of that canton, and demanded the appointment of a new commission. The intelligence from Tessino is also unfavourable, and the intervention of the federal government is now considered inevitable. - The advices from Turkey state that the measuies of the newly-appointed Pucla have c mpletely restored the tranquility of Buigaria, and that the Christian inkabitants hare been encourazed to return to their homes. The spirit of revolt is not, however, extinguished in the provinces on the Danube ; a fresi disturbance has secarred in Wallachia, and there is reason to belisere that the out break has extensive ranuficativas. In Syria ia insurrection has broken nut among the Maroutes of Mount Lebanon, who have taken arms against the government and it is reported in Constantimople that the Sultan intends to transfer the province to the Emir Beschir, on paymen of a tribute. Mach speculation is afloat as to the objeet of Said Bey's mission to the Porte, some blievinct tritt it has reference to the redurtion of taue trabnte. white others consider it to be the accomplishment of a Mahometai univn againat the efforts of the Eastem Chistidns, whith are considered likely to produce a crisis in Turkey at no rery distant perioul.

It Home, preparations are maning fir the meeting of Parliament on Thursday neest, and it is expected that Her Majusty will quan in in person on the 2 tha. In telligerice has reached thwn darius the week of the succespinl progress of tie Eay hrases expedition, and of the arrival of the iron steamonats at Beles on taat niver omthe 31st of May. Letters have also beea received, am
nouncing the safe retura of Capt. Ross to \#obart Towa from his exploring voyage :o the South Pole, daring which without the occarrence of a single cassalty.

\section*{foucign.}

Prances.Disturbances at Toulouse.-The last telegraphic despathes inform us that this city continues perfectly quiet, and that considerable progreas has been made of the disbanded National Guard was proseeding without any impediment, and the officers of the Municipality were scarcely sufficient to receive the arms surrendered by that body. The leal inve-tigntinuo were zoing on aetively, and the ressumste pmotishers of three opp sition \(p\) piers
had been arrested. Thie announcement of the arrest of M. Arzac, the ex-Mayor, given in our last Number, was premature: he has, how, ser. beet examined as a witness
by the magistrates. Thrests of death are said to have been addressed to the new Mayor and his colleagues; in consequence of which M. Larigandiere, one of the Mumicipal Council, has thought rit to send in his resignation. Subsequent accounts inform us that all continues quiet in this cily. Furiherarrests touk place on the sth inst... and
several of those previously arrested had been liberated. The number of muskets given up by the National (iuards amounted to mare thas two thousand, and on Sunday Gen. Rulheres reviewed tiee troups of the line amidst a very arge assemblaye ef speetutors
The late Fsed Moltsirtes. - The example of Toulouse, in opposing the measures of the Minister of Finance, has beenf followed by other torns in the south of Prance. On recond city of the department of the Gironde, in consequence of an attempt made by the Inspector of Taxes to Local authorities. The majority of the inhabitants closed their doors, and crowds having assembled, a serious disturbance was feared, which however was preverted by the Mayor temporising with the mob, and issuing a proclama-
tion to the eflect that the I cal exicutive had sanction the census. untess meompanied by certain guar intees. Expristuath, ns etoued, and prounises were made, wich it was hoper might lead to some new arrangement was coastquelty postponed for sume Jays. Another Marseilies, at its sitting of the 2 ith uit., when a long proposition protesting against the measures of the Minis-
ter of Finance was ad apted by four out if six. The documans conctudes by calling on the Central Government to abandon the new requiations, which the Council deciares are opposed to iaw and custom, and to propose at much of the law in respect to the syotem to abrogate so in the canation as infringes upon the old plan of repartiton Touse , hise hlames the illegal opposition displayed discussion of the Municipalities. The Municena! Council of Bordeaux have also protested against the census: and Prefect to inform him of their determiantion not to afford any aid to the revenue officers in the ex measures. The Municinal Councils of Orleans and Searre have alow dechired that the attachment of revenue officers ought anne to be charged with the operationof the censps. The Municipal Council of Dijon have appointed a com mittee tn inquire into the subject, and from its compositio ment. At Tours, alo, the Mayor ints refured his cor carrence, and the Muaie:pa. Cubualls of dix dud Urieabs have in like manner protested against them.
niral Iasuse - Accoutlo from that inform us that two ships of the line, having received orders ships of war in thoseseander his command all the French ship5 of war in those seas. This measure is supposed to with the unsettled state of the Asintic provinces.-O, and \(2 d\) in-*. A tm:al Huron's squadron, conomestiog of in the of the line, one frigate, and a corrette, anchored in the Trial of Madame Laffarge.- The trial of Madame the Craminal (uri of Tulle, on the 5 th inst. The counsel for tise defence diemanded a delay of three months, to

Whom Malame Laffiarge wished t, bring forward as evidonee azalast the frusecuriun. The Prucureur du Roi dhe com-a for ti.e prizoner stated that his client intended to allaw juh men to go by default, and leave was given O. by the Procureur-t ieneral to withdraw. Several wit
 ordered to be re-tored, and the Leotaud family, having their ulterior remedy against the prisoner, were adjudged to pay the costs.
क. meiferton olaves in ti.e French Colunies, published on the lot Jume, the fulluying additiond numbers have
 Toill, 45:
Imports and Exports of Grain.-According to returns the quantity of wheat imported into France doring the first six months of 1841 , amounted to 88,695 metriea quintals; other grain, 6,289; and flour, 485. The ex 11,914 metrical quintals; other grain, 42,853 ; and tlour buly. The quantity stored in the entrepôts on the lst \(\mathrm{grain}_{2} 24,260\); and flour, 28,050 . Algeria.-Letters from Algiers of the 27th ult. have General Bureand had no sonner terminated his expedition than Abd-el-Kader appears to have begun his. The Emir having collected bis forces, harassed and attacked the corps returning from Mascara to the sea-coast at Mostaonsiderable danger, and lost, it is stated, 70 men. Othe accounts say, that General Lamoriciere with difficulty eached Mostagatem, with the loss of one-third of his force. Throughout this portion of the Regency the Erench re shut up in their fortresses, and have been obliged to ill and salt the cattle and horses for their support, while in the mean time the Arabs have succeeded in getting in Spir harvest.
Spalis.-The protest and letter addressed to the regent by the ex-queen Christina have been copied by the Madrid papers from the Paris prints, and appear to have Chamber consiterable sensation. In the salled of the ministry to communicate them to the Cortes, observing that the prutest was an offence against the national representation, and that Government evinced a want of tirmness and dignity by keeping 'it secret, and by not publishing it befure it appeared in the journals; that it Was, moreover, armal attack upon the movement of September; and the cabinet should not forget that it was
indebted for its existence to that movement. It was also arged that if, ministers mere sshamed of their origin, the ought to resign their functions. The President of the with the reserve and prudence imposed upon it by its mission. It could not wish that the protest of Quee
 cis mind, and for bringiag aboat fresh commotions. For that the manifesto in reply to the protest was already pre pared; and that not only would the document be com municated to the Cortes, but the cabinet was ready to make known its opinios on the affair, if necessary. M Arguelles, the new guardian to her Majestr, received on the 3 st all the officers of the royal household, to whom he announced that he would make no changes in the household department, except such as were absolutel indispensable. Nevertheless, it was reported that the widow of General Mina would replace the Marchioness of Sante Cruz in the office of governess of the Quean; and it was also believed that the patriarch of the Indies, who fills the functions of prelate of the palace, would be superseded in that post : but the mention of Madame Mina' game had not given satisfaction. It is stated tha the Minister of Finance intends shortly to remit 80,0001 tomards the payment of dividends on the canitalised divi dend warrants to those bondholders who would aceept the three per cent. offered; and that he purposes to send an agent to London to explain matters clearly, and if his affir of the cic,pon,0f0 of reals has passed. the salt and stamap tares having been mortgaged (1) it. On the ist inst. the deputies commenced the discussion of the Recruiting Bill to raise 50,000 additional men; and the senate is expected to close its sitting after the passing of afew laws nuw pending. On the subject of the recent disputes between the Spaniards and English at Algesiras the former we, it appears to have been clearly proved that smngg!er of the neighbourhood had been admitted with his bet the Gharun cuosta Cumpany: and that he had been in the inatet of runang into the Bar of Gibralta to spy out the state of affairs. He had been chased out
of it, and on the 7 th the boat was again discovered, when was followed, and ultimately fired ansered, when aunch. Further intelligence has since been received of the proceedings of the Company. It appears that one of their cruisers bas seized far out at sea, and where no right tobacco ; and. having put the crew ashore at Malaca, riagh tue hize hitu Carthazena. Acconats Mom thi place of tue - ita lit. state that an Enylish war-steamer capture, which demand was not acceded to by the Govern ment, on the piea that the ressel seized was laden with contraband goods, upoa which the steamer put out to \(2 e\)
the captain notifying his intertion of seizi, \(g\) the guardaasid the Brition quarter to the it is forthe said that the British legation has formally demanded that the crew of the guarda-costa be surrendered to the Eng their crime at Gibraltar. None of the Spanish authorities have denied the fact, nor has any justification of the me been attempted. Subsequent aceounts iuform us that the Ex-rueen Christina was publizind onta ed on the juth inst. This document coumances by statimg that the protes paper, if it had not been accompanied by a letter ad dressed to the Duke de Victoria, ordering him to publish only was qualified Gazette. It then asserts that the nation and that any authority derived from any other source is in itself null and contrary to the spirit of the constitution The Regency does not deny that the Queen Moiker ma amed guardian by the will of Ferdinand, but says that the sill and everything else concerning the Royal Family and the nation must be submitted to the Cortes as far as pablic rights are concerned, and that it is equally useless to inwhich have taken place in the constitution the changes overrule those laws, and no power can exist in the state bodies. The manifesto concludes by calling on the peope to disregard anything which does not come recomended by the Cortes and the Regency, assuring them that the con stituted Government, supported as it is by the laws, by the army, and by the National Guard and public opinion will triumph over the enemies of the country. - The Official Gazette also contains a decree of partial disbandment of the Royal Guard. The Body Guards, two regimente of Infantry, two regiments of Cavalry, the Artillery, and the militia of the Guard are suppressed. A violent manifesto has also been published on the part of the Cabinet against the llocution of previous Number. This document is regarded as a declaration of war between Spain and the Papal See, and as
addiog materially to the seriuus aspect of atfairs in this country. It is also stated that Government has received reports of an alarming nature from the Captains General to to placed on the troops stationed there.- \(t\) is now rid Marchioness de Santa Cruz ns the Queen's goveruess, and that she has, in fact, commenced her duties.

Portugal.-We have news from Lisbon to the 2 d inst. The Chamber of Deputies had postponed the long protracted debates on the question of the Foraes, in orde to enter upon that of finance, the special committee hav ing gion in rop the lat previously to the 1st July last, and capitalisation of the arrears. The committee agree with Government in repu diating this project, and the debate upon their report out on the lat, had destroyed a sarie longing to the Braganza family, called the Thesoaro Velho pailt of which was occupied by a cabinet-maker, part by lies It an numerous fami hes ind several lives are said sailors took an active part in helping to extinguish it
Germany. - Accounts from Vienna inform us the great preparations are making for the military manoeurre the of Monstria. These troops are garrisoned in Bis to b established nar Are Austria, a cors concentrated a Bottau in Styria. The railroad for Stockeran will be con tinued to Lintz, in order to bring the fortress nearer the capital. - The "Aussburg Gazette," as the semt-otifia me interesting statisicas information on the subject of Austrian manufactures, being a reply to an article on this peared in the British and Foreign Reviel. Fhis the endeavoured to show that the number of factories in that amount of capital employed in manufacturing in country, notwithstanding it had declared issar to stand alone without foreign co-operation, by no met suffites to meet the wants of a poplation of as mitiona and this reasoning was founded upon the official returas the Government, drawn up for the purpore of letying the industry tax, according to the reports of maunatures controllenl by the Provincial Governments. Curius in dustery in the prosperity of mantaris us the dustry in Austrid, the "Aughory razar 1839 ; and from this statement it appears that the empire, exclusive of Hungary, Transylvania, and the military frontier in whic industry is not taxed, but in which also there are prear perry speaking no manufactures, contained in aret 13,361; and in \(1837,13,389\). The term manurnine hower, appears to be widely extended, and embrune the title. Metropolitan Improvernents.- We noticed in a former Number a dispute that had arisen between the Marquis of Salisbury and the paris.a of St. Martin-in-the-Fields, relative to a large estate for which the parish only receives a rate of 21 . 1us. a vear. The citate in question occupies a large portion of one side of St. Martin'slane, part of
 street has been proposed through part of this property. and for a small portion of it the Marquis has sent in smount of 60,000 . The parish, in order to ascertain whether tuey have not a right to more lian -l. 10s. a-year out of this great rental, recently appointed a committee to
draw up a report on the subject; and on saturday a meeting of rate-payers was teld, for the parpose of receiving their report. The restry-clerk, being requested to read it, stated that the inquiries were of a very difficult nature, that their labour had not been brougut to a close, and that it would be prejudicial to the interests of the parish if they laid before the paristrioners what they had yet done. After a long discussion the inquiry was ordered to be had completed their report. This claim of the parish appears to have excited an unusual degree of interest.
nother meeting on Saturday Maryiebone restry held another meeting on Saturday, when the propriety of the discussed. Atter a lonr debate it was resolved, by a majority of two to one, that the experience of its advantage was so great as to justiiy the vestry in exiending the Wooden pavement from Weils-street to Vere-street
Charch-rates. -The attompt to carry a church-rate for by a consuderable majosity, the numuers at tiee cluse being for the ra'e 2mb-asurat it 332 .

Pier at Grays. - Imong the projected 673,316 n different parts of the River may be mentioned the erec. tion of a convenient pier at the town of Grays, by which
means the hazardous practice of using small boats in conveging people on board the steamers will be entirely re moved. The pier is to extend 450 feet into the river, and
will have sufficient water, at the luwest state of the tide, to allow boats drawing eight feet to come alongside. It is to be commenced in the cours
in about two or three months.
Population of Hackney. - The account of the population of st. John's, Hackney, as taken by the late census, has been just published. It appears that the total number of houses in this district is 6,964 , and that the popuation is 38.881 , whom 16.31 are males, and 21 , females. According to the census taken in 1831 the number of houses was 6,344 , and the population 31,132 ,
of whom 13,561 were nales and 17,571 females. Thus the total increase since 1831 amounts to 6,149 .

Navigation of the River.-On Thursday a Court of Conservancy was held at the Guildhall for the purpose of Thames within the exivic limits, in consequence of some serious complaints having been made by the gentlemen of the last Middleses and Surrey conservancy juries that several encroachments and nuisances had been made in er ber river and exanined the various parts in which obstructions and nuisances were said to exist ; and on their return to the court, handed in a presentment specifying the principal encroachments which had come under their observa-
tion; and which coasisted chiefly of the erection of piers or landing-places projecting at different parts into the river, more especially the one at Blackfriars-bridge, which has been already referred to in this Paper. The recorder then stated to them that his lordslip and the corporation would take immediate measures to remove effectually such nuisances as they had pointed out, and were calculated to cause danger and prejudice to the public.
hames Tunnel-On Thursday Sir isambard Brune descended the Wapping shaft, and passed from one end o the tenzel to the other under the river, and made his exit a boat. He was warmly congratulated by the worlmen and others assembled, as the first person who had ever passed under the Thanus by means of that undertaking.
The chairma.l of the company, accompanied by another gentleman, afterwards descended iato the tunnel on the Rotherhithe side, and soon wade their appearance in the shaft at Wapping, having also passed under the eutire breadth of the river. It does not appear, however, that the tunnel is completed, though the shielet extends to within ten feet of the Wapping shaft, and a dritt-way o water-course has been formed from the shaft into the tunnel, through which these gentlemen passed. It is ex pected that une of the archnays will be open for foot passengers in the course of a fel.
ires.-The destructive fire which broke out in Thames street on Satudlay, and which we noticed in our Paper of that day, occurred on the premises of Messrs. Smith, corn
merchants. The whole of :he extensive buildin sfacmg the river have beenentirely destroyed, together with the raluable stock, consisting of 1310 quarter's of heans, several thousand quarters of barley and oats, besides large quant.ties of other grain and seeds of different descriptions. The estimated loss of premises and atuck is 10,0002 . Great fears wer ing houses, and more particuiarly of some exiensive tallow and viriol warehouses, situdied in the inmediate neiga duruoal. By mears of an abuadant supily of water this was, in a great measure, prevented; and, tivough se
veral warelouses and baidings were mum danaged, the lous has been princ.pally coafineti to tike ilestruction o Messrs. Smithis prenises.-A nre, attenkerd with loss of hife, ias also oceurred at chatina. Wie bundir destroy was situate on the ganins of the Medxay, and \(x\) as formert used as a herring-hang, but had been recently enlared for carrying on du 0.1 -manufdetory. Oa the premises from ingrediens knuwn oniy to the necupiero, Messiss Chesson aad Holuage. Tise former, wiose life bay bee tending to one of the refining-stills, there being no one else on the premises; and it is thought that the still which the partner admits to have heen badly made and in pials contained in it immediately set the place on fire Decensed is supposed to have been sulfocated in his at the rains. An iqquest has been held, when tie jury
returned a verdict that he was found burnt to death. The foreman and some of the jury considered it highly necessary that the coroner should severely reprimand the eur riving partner for working a still of so bad a construction. New Reform Club-house, Pall Mall. For nearly hali-anhour previously to its discovery, a strong smell of fire was perceptible in the building, and on some of the domestirs proceeding up stairs, and opening one of the doors on the third floor, they fuund the tlooring in flames. On the ar-
rival of the firemen, they commenced cuting up the flooring, when four large beams and joists were found to beon fire. It was, however, soon subdued. The cause is sup. posed to be the overheating of the flues.-On Tuestay a fire broke out in the house of Mr. Ficetwood, Claphamcommon, whereby a targe quantity of valuable books and damaged. It is supposed to have originated by Mr. Fieetwood having dropped a cigar in the library.- On Wed heath, by which property to a large amount was de heath, by which property to a large amount was de-
stroyed. It occurred at the residence of Capt. Waller. Some time elapsed before it could be subdued, and it is not known how it originated. - On Tuestay a fire broke out in the Britannia Inn, near her Majesty's Victualling-office,
Deptford. Active measures were immer Deptford. Active measures were immediately adopted to arrest its progress, but notwithstanding the exertions of the firemen, and the aid of numerous engines, the flames spread and communicated to the outhouses of Mr. Masson, the Market-gardener. The fire was not got under until the above premises were in a great measure destroyed ; the loss is estimated at 200 l .

Inquests.-A few days since a melancholy instance of the danger of leaving ahout fire-arms in a loaded state,
occurred to Mr. Samuel Brown, a respectable marketgardener, residing at Lower Edmonton. It appears that deceased had a louger of the name of Davies, a policeman, who on the day of the accident came into a room whise Mr. Brown was sitting, and, after some friendly conversation, began to examine a gun lying on the hloor, when it went off, and the contents entered the body of Mr. Brown He was immediately removed to the London Hospital, Where the wounds were examined, anil the bullet detected died about five hours after his admission. It appeared that deceased had no recollection of baving left the gun loaded. He was about 40 years of age, and much respecte. in the neighbourhood. At the inquest held on Saturday the jury returned a verdict of "Aceidental Death, from misadventure." -In the course of an inquest held on
Monday, before Mr. Wakley, a juror asked if the witness, female, might not be allowed to sit down. ..I:. Wakiey replied that it might seem ungallant to refuse such a re quest on behalf of a female, but, excepting under certaia circumstances, he deemed it a very bad plan for witnesses to be sitting while giving their evidence, for they might chance to fall asleep, while standing kept them awake. He did not know whether the jurymen themselves, for the very ame cause, should not be required to stand, for he often met with jurymen who seemed much inclined to takes sap. He recollected on one occasion a very stout gende being sworn and seated, desired the person next him to take a pin, and when he on hin going sleop, whid was sure he shond do, to prick hiun with it. He presenis after dosed off, but the person who beld the pia, hiok slumber till he was aroused by the beadle, when he became quite angry at not having been pricked by the gentleman he had appointed to watch him, and was with diticuity, the beadle was obliged, during the iuquiry, to be continually honding snuff to the jury to enliven them; and at a more recent inquest which he held in Marylebone, after vierring the body, and betore any witnesses had been examined, the foreman went home, and on the beadte belleep. To prevent, therefore, the witnesses falluy thargic state, he adopted the plain pursucd tin ary standCourts, namely, to make thera give their testimony ohtields, ing.-A lengtiened inquiry has taken placo it stated on a person named Aume Braduod, who, itved trons her husband. The principal ciarge aydinst the husband was, that he had violently pushed her down oun the to to pre public-house in Whiteciapuel, when sine wilence was contra ditctory, and did not substantiate that charge. Mangu the witnesses deposed that he had mot. that he was a sober and industrions man: that bectised many biows and wach provacion tiom har: and and by thim : whale other witnesses maint und hat be was and atemperate character, that he ofien in-u-athis what on the been heara to threaten \(t\) de pubhc-hoshee. deceased. while in the room wita ham, had been heand "Murder!" sa diel a few days uter of ajuries th the head, which the surgeon stated might iadu beell product by bla that, by the suggestion of the cornensing the husband from the charge

Harvist Prospzcts. - The interest connected with the approaching harvest induces us to throw together ander this head, all the intelligence on the subject

The accounts from different parts of the country complain very generally of the long-continued unseasonable weather presenting the com-crops as tikely presenting the comacrops as likely to prove productive, farourable turn, and afford only a short continuance of sunsline to ripen them and admit of cutting. The repurts,
however, from different cournties sumenhat vary. From however, from different courities somenhat vary. From
Sussex we learn that the harvest has partially commenced, Sussex we learn that the harvest has partially commenced,
the reaping being most forward in the western part. Keaping has also commenced in Esser; but tise crops are spoken of as much injured by the long contiauance of
wet. The wheat is said to be ldid in many places, and fears are entertained of the mildew ; whilst weeds are ex ceedingly numerous, and in sume places stand ahmost as oats are in better conWhich looks well. In Jorth the harvest is partially be guir ; but many fields, though covered with abundance, are described as being under the influence of mildew some extent. Oats, wheat, and barley, in small quanti where two growths, which it is feared will retard and in jure the crop, otherwise very large and fine: while the wheat has scarcely, in any part, become fully ripe, and in most places retains its transition colour in the ear and the green in the stalk. The Derbyshire papers state that the wheat-crops are suffering from mildew, and the red rust has damaged the ear to a considerable extent; and even where the crop is strong it has been thrown down by the late heary rains. The barley is said to be doing tolerably well, although the whole of the crops stand in need of hot think that the late chilly and chanceable season will make the harvest late, and prove injurions, although the wheat at present looks healthy, and promas.s goon crops. The oats and other grain are expected to yield well if the farmers will cut next week. In Northamptonshire the prospects are represented to be unpromising; and but little progress towards ripening has been made during the
last week or two. The ear looks well set, but the straw be the frequent forerunner of mildew. A fortnight's fine weather it is thought, would realise even yet the anticipation of a fair average crop. On fine loamy lands the wire-worm are repurted genemally good. Harrest commenced in Bedfordshire nearly a fortnight ago, and on the whole is spoken of favourably. It has also hecun in Buckinghom being full and large. The IIamp.hire papers inform us The rheat The wheat cut or cutting apluars, however, to be far from been such as weather has not, for some weeks back Seen such as to hasten its fitness for the sickle. In eren the harvest is not yet fiuished. With respect to the corn-crops, they have not as yet sustained much positive damage, alfhough in some instances they are partially laid. In Cumberlund the papers speak unfawourd.ly of considerable damage from the late stormy weather. In Hereforlshire, also, the wheats have, in many places, been much beaten down by rain ; but reaping is expected county

Burnsley. -On Wednesday a daring burglary and out rage were committed at the bouse of Mr. Bramham, farmer and publican, at Burton, near this town. It seems that about two o'clock in the morning Mr. Bramham was
aroused by the barking of the dog, and on going down stairs was met by two thieves, who immediately fell on him, and struck him several severe blows, one with poker, the other with a plough-coulter, until they left him on the ground, as they supposed dead, and then made off. Every assistance was immediately procured, and although Mr. Bramham's head was severely cut, hopes are entertained of his speedy recovery. The entrance into the house had been effected through the cellar windon, by wrenching off fire strong iron stanchions, which it is thought must have refuired the force of more than two men. They had succeeded in gretting array a quantity of meat and other articles. On the following morning three men were apprehended on suspicion, two of whom have
aince been identified by Mr. Brambam as the men by Whom he was attacked. They have accordingly been cummitted to take their trial.
Cirrliff. - I few weeks ago we noticed the refasal of for meat. The Welsh papers inform us that this determinati:n sti!! continues, and that the number of sheep required fur the works between Abergavenny and ago. Thena is also a very great decrease in the sale of real and !eef, which entails considerable loss on the Curculturists.
Curloste Jitne, the diy of the nomination of candidates for the
 patnck masin feted for the murder, and Jarge Jacken for
 a crowd cchocta in tront of the hustins and thll wed then betame estremely riutoas, and stones and ather missiles were mate use of, uatil it became necessary to take
in front of the coffee-house, and on receiving the order, they drew their staves and advanced on the crowd. Their deceased receired a blom from one on the hear from whose hand did not appear. The police had reached the centre of the square, when the superintendent perceived Jardine fall, and while on his hands and knees, endeavouring to himself, Jackson struck him on the head with a stick, which he held with both his hands. Jardine was much hurt, and died the following morning. It appeared from further evidence, that shortly before Jardine fell, the prisoner Kirkpatnck was seen near the Marketplace, where he pulled a hie-preserver from his breast, fastened it to his wrist, and then proceeded towards the coftee-house. By other testimony he was traced to the spot where Jardine fell, and wan seen to strike him, from behint, a severcblorr on the head, endeavouring to recover himself, that Jackson struck hin with the stick. The Jury found hirkpatrick guilty of manslaughter, and aciguitted Jackson. expressed the necessity of supporting the authority of the law, and of the duty of all people to submit to it, withont taking the remedy into their own hand He then addressed Kirkpatrick, and said that had the Jury found him guilty of murder, he would certainly hav been left for exceution, and as it was. the enormity of offence would be markell by the severity of which was, that he be transported beyond the seas for the term of 15 years

Cheltenham.-The trial of Moses Harwood and James Andrews, the parties who were apprehended on suspicion of having stolen, from one of the hotels in this town, the property belonging to Sir Willoughby Cotton, noticed in terminated in their conviction. The case occapsed the at tention of the court for nearly 6 hours, and excited much from the value of the property stolen, and the daring nature of the robbery the prisoners with its commission was altogether circum
stantial, but was made yuite conclusive against Andrews, by his own confession atter his apprehension. The jur found them both guilty of the theft, but not of the burglary; and they rere senterca, The property stolen has been recovered, with the excention of a valuable miniature and about 50 sovereigns.
Eveter.-A further examination of the parties now in custody on suspicion of having been concerned in the murder of Mr. Bennet, noticed in our last and previous Aum bers, took place on Monday. The investigation was again strictly private, but it appears that no fats were ehented yond what has already been cummumeated to the pub-

Brinsmead persists in the statement which we gave honest one as far as he himself is enncerned. A reward of 1501 . has been otfered for such information as may lead to a conviction, and a promise of pardon to any accom plice, not the actual murderer, engaged in the coinmission of the crime. 1006. of the reward is offered by gorem ment, and 50l. by the relatises of the deceased.-The Royal clemency has been extended to William Major, who was convicted, as we mentioned in our last number, of having poisoned his son-in-lar, and condemaed to deat Her Majesty. in consequence of the report made to the
 tion for nercy, has been pleased to spare the aged man life, who is represented as being in a state of second child hood. The reprieve is said to hare been granted in con serpence of the suspicious character of the evidence give by the wife of the deceased, upon which alone he was con victed.

Gloucester. - The celebrated cause arising ont of the will of the late Mr. Wood came on for trial in this city on Monday, bat, as will be seen under our Law intell gence, the proceedings were brought to a premature close. in consequence of there not being a sufficien number of special jurors. The trial, consequently, has been postpoued for the present. \(A 3\), however, the cas has excited so mucir interest rith the public generally and the question involved in the proceedings is one of such great magnitude, it may be interesting to our readers to be furnished with an anthentic detail of the amount of , this singular character died possessed of, and hich is stated to be as follows:-New Ananities, 66,221 11 s : East India Stock, 3,000.; Three per Cent.  ireehold estates valued at \(200,000 l\).; so that, with five years' interest, the time already consumed in this disputed
 at the age of 80, was a native of this city, and carried on business here for a speat manr years as a draper and banker. The Judges of the Priry Council intend as mentioned in our last Number, to give their decision on this important case on Monday next, when the parties interested will know the destinatiou of this ample fortune. etermined atempt at murder and suicide was committed at Llangarron, in this county, by a shoemaker named Sirong. The person he aptempted to murder was his wite, from whose account it a stairs to breakpoorly," he produces a razor, and, sering that that would make her better, threw let acrozs the table, and attempted to cuther thrat with it. In the scutfe she pushed her but had two of her fingers cut to the bone. On her escaping from him lee intlictel a deep wound across his own throzt. Surgiral aid was immediately procured, and their wounds were dressed; but as the man appeared still bent on self-destruction, he was put under restraint. They both continue alive, but there appears to be little hope of thei

Huddersfield.-On Monday a serious explosion took place at Dowse's factory, at Mold-green, near this town, seems had been bat recently erected on the premises, and by which two young women huve been killed, and four others very severely scalded. It is not known by what accident the bursting was occasioned. During the past week the different mannfactaring districts of Lancashire and Yorkshire have been rinited by Lord Ashley, whose object has been to accure full inform tion rusnerting the wonts and interests of the maubactume popilation, and to advocate the neeessity of a ten hours' tacery bill. On Wed nesday his lordship visiied this tomn with the same riew and was met by a great number of manufactorers and mill-owners of all political oniainns, from whom he re
 the necessity of an act l.onting the period of work to tel hours, but the masters, while they promised that they would not oppose, at the came time candully told him that they conld not aid os assist him. In the erening, his lordship attended a numerong meethay at, the court-house at which were present a large number of operatives Ater again aduressing them at con same subject, resolntions to the following effect were pro tary Bial would be adrantagecus both to employers and employed: That ao chal nisht to be admitted to wor until i2 vears of aze: That no women ought to be em pluye: in any fictortes after marriage: And that all dan gerous mawhinery ought to be boxed off, to prevent the misfortunes mhich so frequently occur in consequence of its being lelt ung arib

Liverpool.-A deliberate act of suicide was committed a few dxys since by one of the passengers on board steam-boat running between this town and Seacombe Deceased was a mildle-aged mian, and was described by some as a gentleman in appearance, by others as oae of the better class of workmen. When the boat had reachec the middle of the river, he ran towards the side of the ressel, and jumped into the stream. He soon rose to the surfuce, and was carried oft by the tide, but seemed to swim welt. Ine steamer was immediately fut about, and the boat sent after him; but when it had nearly reached the spot he seemed to let lumself siak on purpose, and was seen nu more. Vuthag is known of ins name or connexion, but it seems to be the impresion of those who pard that he was insane.-From a recentiy published state..ent of the deliveries of raw sugar in thi the West India Jan. to the 24th July, 16 appears that tces tces., carreat price 36a. 3, p. 7 , 2 hhds. aad tcas., carent price 57a. 240. per ont Ma ritius, in \(1841,224,177\) bags; in \(1840,356,992\) bags. In said, from its being extensively used to reduce the quality of West India. From this statement, therefore, it appears that the comsumption of sugar is mearly one-third loas. not withstanding a fall in price of one-third; and this is ac counted for dy the diminished mems of the people to consume it, from want of employment. Trade in this been known; and another failure was annonnced on Monday, though it was not to any great extent.
Manchester.-In our last Number we inserted a report, pablished in the local papers, in reference to Lord Francis Hgerton's connexion with the Lancasaire Yeomanry. His lordship bas since written a letter to the Londsa vincial journals on this subject, and from which it appears that his lordship has nenther raised a troop of leomanry this description of public force. The accounts of the state of trade in this town, and the neighbouring manufacturing districts, still continue of a very gloomy and depresming character.-At the Wesleyan Conference beld here
few days since. a letter from the Rev. Mr. Hodgson,
 hefrre the conforemce, and gave rise to a chy agil intereat ing discussion. Among the speakera was Dro Banking who took occasion to observe, in refienence to one portion of the letter, stating that those of the Wesleyna mansters bishops, that no power whateres shoud eyer muduce o
compel him to be manle a hishop. He had received, he
nid, a great number of communications on the sobject o the union of the Methodists with the church; and he was influence which he did not possess. Why those communientions wers addresesel to him he could not conceive; but the fact was, that he had received two letters from mershers of Parliament, thanking him for their elective, thex: h, bre Heation witi them, and was totally ignorant, before the then elves nformel him. that ther had been elected at all.  Wher-He. itses an the Welsh Cirenit appear to
 looked upon as a circumstance highly creditable to the
princinality. At Anglesey there was only one prisoner for trial, a female. charged with enmmon larceny, whe pleated guilty. At the flintshire \(A\) ssizes there were only other for robbery. At the Denbighshire Assizes there were no prisoners in the gaol for trial, and only three out on bail, on a charge which the grand jary ignored.
IV ur rinut m. -I arpears that this
the ceri=intretrants, of which on the ith are males, and \(9,-\alpha^{1} 1\) female Wiultar:- Extensive alterations ar.d in provements are about to be carried ato effect at Frogmore Longe, in conwequence of arrancements having been made by the Crown able property. A portion of the grounds (which include upwards of 300 acres) extending towards Old Windsor, priate. 1 to kltochen-rarcens for and frait to the royal palaces; and as soon as these are the and the ground they no oempy thrown into the Park. The royal kitchen-gardens at Cumberland and Cranbourne Lodges, in the Great Park. whll be also dispensed with. At the former lodge the only plentid and enormous Grape-vine, supposed to be the most prolific and extensive in the kingdom, if not in the mortd. A short time since it was thinned of upwards of 7.000 bunches, in order to leave roum for the remainder front, sol feet lons, will be constructed within the gardens, for the promenade of the royal family, extending nearly to the lensth of nne side, with several tlights of stone steps
leading t) it from the gardens. A gravelled road will be inte from Frogmore-house, for the accommodation of her Majests to proce d to the terrace and gardens. each side of which will be planted with flowers, slirubs, and \(1, \operatorname{lin}\) yards in length, and the old boundary wall, to the extent of 900 feet in lerigth, abutting on the high road lending from Frogmnre to Old Windsor, is to be considerably hrig! tened. The bequtiful couservatory in the Great Park, erected by Gporge IV., at the cottage, is to be taken down and placed in the new gardens. The contracts at present entered into will, it is stated, amount to about
\(11.000 l\). or 12.0001 ; and the final completion of tie rarious atrwations and improvements will cost alont 20.014.01. Extersive repairs and embellishments are also to be priceeded with immediately in the interior of the amsion, to render it fit for the occupation of the Duchess of Kent, and for the occasional visits of her Majesty. During the lifetime of Queen Clarlotte, Finsmore L.dge was used by her Majesty as a nursery for the founger branches of the roval family ; and it is thought that a portion of the house is intended to be appropriated by her present H njesty to a similor purpose.
arried iv, o csecution upon Johra Burlinson and Chates (rill, the three youns men who, cur readers n:ll remember. were recently convicted at the Assizes in this city, for the murder of Mr. Cocker of Finareshorough; the cireumstances connected with which produced at the ime so great a sensation in that town.
Rulways.-The half- yearly meeting of the Grand Junc. tion Company lias been held at Liverpool, and a dividend of \(j l .10 s\). per cent. on the half-year dechered. The cost of this railway (including land and all expenses). is miles of road, was stited to be \(1,641,435 \mathrm{f}\), or \(21,582 l\) per mile. The parchase of the 11 drrington and Newton line ( \(4 \frac{3}{4}\) miles, was 6., 4 ini.. or 13,7317 . per mile. The purchnse \(12, r\) as per mile. The total cost of 103 ? miles of road was 1.940. \(011 \%\). The stock of engines, carriages, dc., was 254.21461.. making a total cost of line and works of \(2.238,2202\)., equal to \(21,525 l\). per mile for the whole \(103{ }^{3}\) mules. The capital, in shares of \(1001 ., 50 l\)., and \(25 l\)., was \(2,203,301 /\), and the land unsold, \&cc., 30,601 : making altogether 2,233,30\% (- On Monday the balf-yearly meeting of proprietors of the London and Brighton railway took place at the London Tavern. The secretary read a lonz report, of which the folluwing are the most in eresting points:-During the first week of the line being opened (on the 12tin ult.), to Hayward's Heath 1.5 miles this site of Brighton). 2, 183 persons travelled by it, an. paid fares amounting to \(-5 \% .5 .9 \%\), and since that day the numbers have grawualy increased, being for the Tue whet line from London to Brightun was expectel to Tue what have from London to Brightun was expectel to se opened by the then Sept., when two hours, it is thought,
will sumtice for the jumey. The number of registeced

 with the additional suman raised, will, it is 10s. 8d., which, ficient to complete the line, at a cost of \(2,289,081 \mathrm{l}\). On the Shoreham branch thie nimber of passengers was 3in, whl, and the fares \(6,2 / 11.0 \mathrm{~s}\). Id. ; the carrying ascomut. ans the wharfaye of goots, stowed an income of 4.072! 10.. learing a bal ince for the half-year of 1., it. \(7 \%\). 6d. in favour of the company. - It is proposed Rochester, in the direction of the Thames and Medway Canal; by means of which the journey from London t . a half; the survey from will be reduced to one hour and retaly commenced, and is now proceeding through the valley of the Melway, ornssing at Custon.-On Tuesday an inquest was held on John Hopkins, who died on Saturday, from the effects of injuries received on the Eastern Countien Rulway, on the Solh vilt, when, as stated itio our

Number of that week. he was crushed by the aceidental giving way of an embarikment near Brentmond. After a ong inquiry a veraict of Acentental dath . Croyden R vilroul nar the worl ar Pent occured on the oung man named Priday. It appears that he mes ea ployed in edking some wargous lopied with cis down an Uy the impotns. and seserely travsarel lisis leg. Ho mas onvered to Ginys: Ho-tital, where he lies in a prema state.-On Saturday, as a wentlemani noter 1 Comper, of Far ringdon, was driviny with his wife tumarls simiodon, when near the line of the freat Western Ratway his horse tont frig!t, at a tran, wheh lappentel to be phasing, and be commar wamaze the, rat amay at great spol, and both relic'es were urnet. Mr. (imper ws killod on the spor, but his wife and the gentleman in the other aiz es caped with only a few bruises. An inque-t has been held
and a verdict of "Aceilental death" returned; but the ant a serdict of "Acelilental teath" returned; but the top of the embankneat of the railway, \(t\) ) bide the trion from the view of peroms travelling along the road from Hacrownidge to South Maston, as it seems that several accidents from the same cause hare lately occuren nea that place. -The following are the receipts of the principal rallways in operation for the past week :- Briphten, \(1 . \pi\) ind North Midhind, 1, ©65l.; Xorth Midland, 1,f:581. ; Mid-
 2.245l.; South Western, 7.61911 ; Birmingham and Derby 1,327l. ; Great Western, 14,934l. ; Northern and Easteri,
8j) ; Birmiugham, 18,5916l. ; Eastern Counties, \(4+2!\), and Great North of Eugland, 1,4.5)- The Lalf-yearl meeting of shareholders of the Eastern Counties Railway which it anpeared that contracts were entered intu for the formation of the line from Brentwood to Colchester, an the whole line was experted to be completely oppened to the latter place by Sept. 1842. A clear balance of profit remained from the traffic of \(14,441 /\), equal to \(\%\). per share. The total eash received to the th Juls, intl
 ing in hand was 4,462l. 18s. 7d. The expense of the line (1) an ( The namber of drectors was relucel from The namber of directors was reduced from 12 to 18 balance of \(11,4 i+l\). anplicable to a disiliend, mas reserve till next February.-On Thursday, the general meetung n the Northern and Eastern Railway Comprany took place at the Looden Tarern. From the report for the last halfyear it appeared that the railway had been completed from t.e Harlow road, \(22 \frac{1}{2}\) miles from Lonten, I mhite and it was the futention of the directors to keep in viem the carrying out the tine to Cimbridge, and the norther and earing conntie. since the opening of the line 330,0 pastarers had travelled by the raiway, an the Harlow roan there had been an increased return of 1147. over the corresponding threê days of the presious pany to he \(1+3,35,91\). 35 . The receipts for 'rafficamounted to i \(1.15 \% / 17 \mathrm{~s}\). id., and, after deducting all expenses The reparte in favour of the company of t.flols. 9 . charmer a dividend of 15 s . per share, a long discussion Hllown in aph ieation mate oy Mr. J. W:atiams, to be a llowed to thie end of the year to pay up his calls on 5 nid
one-hundred pound siares, which had beendeclared for feited, paying upon them five per cent. The charman stated that Mr. Willians had received the indulgence twice, and he, as an individual proprietor, shouid oppose its further extension. Mr. Williams said he heid in bi hand a reveipt for 1.333 scrip shares which ine had taker in the coacern on condition that no more new shares were to be raised, but the promise had not been kept. Athe some further discussion, a motion and amendmendulgenc applied for being granted.

Dublin.-His Excelleney the Lord Lieutenant, accompanued by the Countess Fortescre, is expected shorti to take his departure for England. - onee (aptan Cradock.
 the time, las been arrested. The tase is returnell for tral at commistion, to untain time to ascert the the resto. Capt. Cradow is sta! in daager. Thl sto bld the case ter mamate fatally the indicterent win he for aukuer, - (.till to derable increase has lately been made, and appears suring the past week, the 4th Dragoon Guards embarked at Gla gow for Belfast, and the 29 th Regiment of Foot has beem passed over here from the same place.- The account the
ceiped from d:ferent parts of the ennntry respecting the crops are not very favourable, and comp.ints are senersl
 already been done to wheat, especially in the Munard and Southern counties, although previously to the last werk the whear and oat crops hore a very promising ame ctat the mischef inay soon be remediced by a shurt contiuluance of inse sunny weather; dud there appear to be serious apprehensions of the harrest proving less abur dant than it did lent year. With respeer to \(0^{\prime}{ }^{t}\) : and bar ley, they are both meted to be average-looking crupls, par-
ticularly the former．Potatoes are not generally so goo \({ }^{3}\) as it wis thought thiey mould be，the late crop being very abundant，and at present are a great relief to the peor． abundant，and at prestent are a great relief to the poor， far＇thentry as al teseciation mas held on Monday OComell opened the proceedings hy puting his son，Mr J OConnell，MP．for Kulkenny，in the chair，and mor－ mg that J．J．OConnell，sused forr days．his muagest
grandson，he enrulted a meniber of the Asootation．S． real letter－enclosing sum－of mones，were then rend． after which M：O＇Comnell andlassed the meetrin at great length and on the usual topics combected with the ques－ ment 0 a Conservative（invermment，he saud that the con－ quent of Ireland had been si nken of：－＂Let the Conser ratises，he said，try it at they dare．and he rould he found them down．Let them not think，if they attempted it， that they would succeed in ruling over Irish serfs；no， only over dead bodies to the last man．In the presence of civilised Europe－in the hearing of America，where there were 22，000 Irishmen within two days＇march of
New York－in the presence of the universe they dared to talk of conquest；and the language too had been addressed， not to a miserable gang of Chartists，but to the cultivated gentry of the country．He wished that they would at－ tion of the scenes which might ensue，but if the day did him to stand forth for Ireland

Portpatrick．－On Saturday this to was visited by water－spout，which did serious damage，causing the almost entire destruction of upwards of twenty houses ；no lives，
Rathfarnham．－It will be remembered by our readers murdered at this place under mysterious circumstances which，though several persons were apprehended at the time and examined，have ni ver been cleared up．It ane－ pears that within the last few days，three or four persons have again been taken up，charged with the murder；and them．Nothing however is yet positively known，but an examination before the magistrates is to take place in a day or two，when it is expected that something will be
elicited to throw light on this mysterious affair．

Carlow．－The magistrates have held a
the disturbed state of the county occupied their attention． The reante of their deliherations，was a resolution to apply to the Lord Lieutenant for an additional body of police ；
at the same time requesting that the count may have the services of men already drilled．
Dungannon．－Mr．Bewley，Queen＇s Counsel，has been directed by the Lord Lieutenant，to hold an inquiry at this town into the conduct of Major Snow，stipendiary magis－ paeace，with reference to certain proceedings during the recent election，and also into the conduct of the police on that occasion．

\section*{SCOTLAND．}

Edinturgh．－On Friday，the 6th inst．，the election of the ixtreen representative peers of Scotland took place in
the Picture Grillery of the Palace of Holyrood．The fol－ the Picture（rillery of the Palace of Holyrood．The fol－
lowing nere electet ：－Marquess of Tweeddale；Earls Mor－ ton，Elgin，Airlie．Leven and Melrille，Selkirk，Orkner， and Seafield；Viscounts Arbuthnot and Strathallan；Loris Forses，Siltoun．Sinchair，Colville（of Culross），Reay，and Rolis；and the Marque－s of Queensbury．The only alter－
ations were the sulstitution of Earl Seafield and Lord Rollo far Eirl Hotre and Lord Gray，who retire by their the shock If an earthquake was felt in different parts of Scotland，which，in several places，shook the honses per－ ceptribly，and was accompanied by a noise resembling the
rolling of a number of heavily－laden carriazes．It was feit distinetiy through the western parts of Stirlingshire and Perthshire ；in some places more than others．At Comrie it in said that no less than thirty shocks had been expe－ nenced during the past week，but the one on Friday was
by far the heaviest，and is described as having brought all the inhabitants of the village to the street．and put a stop to，all work for some tims．A few stones frill froms the gable of a touse，and part of a stone dike in the neigh－ hard at the trmee，and the day was dark，glumens，and coll． The other plac－s where it ay pe－2rs of have feeri mon：felt and Doune．In nome．boreser，didans antious a cident necur．－The arcount－of the wether and the sta：e of the crops in this country are something more favourable than
thow of Estint and Felait．The raiaje clarater of thene of Eughind and Ireluit．Tue rainber charater of and thorizt the crops are statel to be still looking well，a
few days uf dry and wirm weqtier arpar to he murh de srei．At the sama time．all the ariagnts ay ee that
 The bay－erop apt rars to be generally serurel，and，at． though racher uriter an areraye．the custenc price，of 34．to \(3 i .10 \mathrm{~s}\) ． \(1=5 \mathrm{~min}\) stars，which is consikered to be rather low．－Auroning to the returnis of the recent eme－ sus，the porulac．ou of this citer \(151 \ldots 5,114\) ：in 1831 ，it was years of \(2,1+n\) ．Eut in \(183 i\) the population of the Castle the real increase in the ten years is only 1,118 ．

Inverness．－The river Ness has lately heen rere pro ductive，and has afforded beter arglimy and nes－athing then has been experienced for seseral years．All the northern streans have hately been highty smeresful，and the I resent sesion will form a hrieht one in the themen＇s week for the Thames，and about 700 from Perth and
I） morket is ahout 1，（hin）brings per week．ant fine oalo． may now be purchased in the Metropol！s fir fit．and ind a pound．
Glasgnur．－Annther serions faiture has necurred in this city，which has lad the effect of auzmenting the embibr－
rassment and distress in Pasler， last Number，and where the mminer of recent bankruyteces now amoints to not less than thitey
Dunbar．－The herring－fishery is not proceeding favour－ ably at this place，the weather having been unsettled with a heavy sea．Some boats have taken a fair quantity，but others have scarcely paid their expenses，and no berrings bave yet been cured for keep．At Eyemouth the fishery
steacily improves．At Stromness the boats have been averaging six crans；but the average has come down to four；the most successful boat of the season has delivered twenty－four crans．At Wicls，and on the coant of Caith－ ness，the fishery has fairly commenced ；and though the gut triming，still it is greater than thody pot to sea in that distriet，and a great many are expected from the west country，which have been detained by easterly winds．

\section*{THEATRICALS．}

Haymarkbt．－A piece，entitled Forgign Affuirs，or the Court of Queen Anne，has been brought out at this theatre with complete success．It is one of several pieces lately got up for Madlle．Celeste，and a dramatic effort of this kept in excellent humour to its close ；and the honomace－ ment of its nighty repetition was reveised with euthuri－ astic applause．The phece bears marhe of foretg origm． although it has probably been considerably atrened by the English dramatist，and it is in its movide of a hroader cast of humour than has been latterly prevalent uron the
Haymarket stnge．The scene is laid in the time and af Haymarket stage．The scene is laid in the time and at the Court of Queen Anne，just after the conclusion of a memorable peace with France．An allaché of the em－ bassy in London，under the title of Count Louis，is in－ veigled（though only a boy of 16）into a marriage contract with Lady Bell，the daughter of the Scotch Marchioness of Dumbarton，who seeks to gain a point of ambition in the union，but who has yet the characteristic national French jouth a preur the inse－tian of 1 mase in French yo bion af marriage articles，imposing the necessity of separation
until his majority shatl be attained．The result is，that Count Louis，treated as a boy，and desirous of seeming and acting as a man，goos through all sorts of intrigues and adventures，peculiarly characteristic of both English
and French vanity．A Sir James Courtall，a fop of the and French vanity．A Sir James Court orce his way into the renown of manhood，and thits he proceeds to do in a Way that recoils ridiculumsly enough upon his tutor，and is fraught with comic adventure to himself．Moreover， his own wife，finding that he is courting every one in the world but herself，begins to wish to be included（excla sively）in the category of his attentions；and the comedy properly recognised as husband by Lady Bell and the world．The incidents which link together and run through the adrentures of the Count are too many to record；bat they have great drollery about them，and follow each other with much spirit and briskness of effect．The part of young Frenchman was sustained by Celeste，who set off the character with the utmost viracity，and nothing could exceed the enthusiastic clamour with which the audience called for her at the fail of the curtain．Mr．Wenster Fop and libertine was a lively and efficent fertumance． and Mr．Strivkland qained much applause as a self．h oft Baron．who hal laid himselt out to pateh the widna el a rich citizen，and succeeded．There is a remarkable ar it almost startling freedom about thin comic drama；and the smartness of its dialogue and the bremour of its situations and inmidents are likely to make it popular，although it is without pretension to ingh iterary meris．It ias ioen got
 up with great pann

\section*{finscrllancous}

 the boiler and apparatus are behind the seats；the con－ ductor sits on the front seat and guides it by a handle， which rises from the foot－board．The distance run wee hetween eight and nine miles，and wne traversed in rather less than half－an－bour，notwithstanding that the road un－ dulates considerably，and there are some steep ascunts． The speed up hill was at the rate of 12 miles an hour；on There \(15 \mathrm{~m} . \mathrm{m}\) vilibe escryp nf stram，nor is there any annoy－號 factory，as it showed that a carriage of this sort can be used on any roads，that it is capshle of escending the steepest hills with ease and safety，ind enn pass through
crowded streets witio as muith crowded streets witio as mush tumhty as a stage－owich．
Coal Mines－－To prove the almat ineshameible nature
 States that the Wh－1．mol－fintio thene extend over Whe wal．Lavme an arorage the thous of is feet．Each aree will yield about 100,000 tons，being at the rate of \(6 i 5,000,000\) tons per mile．If from this we deduct one－ half for waste，and the minor extent of the upper beds， a supply of coal equal to \(32,000,000\) tons per square mile will be afforded．If it be conceded that \(5,000,000\) are equal to one－third of the consumption in England，then eatis square ilile of the Wellh cand－fient whi meet a pro－ portionate consumption of a hundred years；and as there would supply England with coal for 2,000 years after all the English mines were exhausted

Geological Discoreries．－The Lincoln papers state，that Saturday a genterman of Stamford，while examining some gravel excavated in the parisio of Stibbington，near
Wansford，discovered a vertebral bune in a fossil state， Which is thought to be a fragment of the skeleton of a plasuspurus．ogether with several curi－s spermens of af the Stamford Institution．－The Liverpool papers in－ form us that a few days since some workmen，enfazed in a stame quarry in the neighbourhood of St．Heten＇s，un－ beiow the surfice of the eavth．The hark of the rrees was carbonised，and covered with pertect impressiuns of the leaves and branches of plants．
Floating Ysland．－We learn from Cumberland that the floating island in Derwent－water was on Monday the 19th ult．discovered above the surface of the lake．The las appearance of this phenomenon is said to have been in July and August 183

SATURDAY, AUGUST 21, 1841.
MEGTINGS IN THE ENSUING WEEEK,
THE remarks which have now been made upon the atmosphere of London, with reference to vegetation, will have shown our readers what the canses really are to which the unhealthy condition of plants there is attributable. An exhausted and impermeable soil has been seen to be the worst evil to contend with, and a sooty air the next. The question now to consider is, how far these disadvantages can be guarded
against.
If London, with other great towns, suffers from local evils, almost inseparable from the gathering together of houses in vast numbers, it, on the other hand, possesses, in a most abundant supply of water, means peculiarly well adapted for palliating the inconvenience, if not for removing it entirely. The water companies are able to lay on an ample supply wherever it is required, and it is to water, in a great measure, that we must look for assistance. Perhaps our views of the remedial measures to be adopted will be most intelligible if we suppose a London square to be placed under our direction for the purpose of being brought into a state of health.
The first step to take would be to renovate the soil, by moving as much as possible of that which exists there now, replacing it with fresh earth from a fertile meighbourhood; of what particular quality the soil
should be would be of little importance, provided it is should be would be of little importance, provided it is
neither chalky, nor too sandy, nor composed of London clay, the most unmanageable of all the kinds of earth. Supposing this were an impossible measure on account of its expense, or for other reasons, we
should give the land a good dressing of well decayed manure, bone-dust, and wood-ashes, nitrate of soda, or some equivalent material. This would restore its nutritive qualities to the soil.

In performing this operation, we should cause the soil to be loosened to at least the depth of three feet, and we should take measures to preserve it in that condition afterwards; so that rain might soak into it, and reach the roots without obstruction. If this were not attended to, all other care would be in vain.
The next object with us would be, to have water laid on in so many places that, without much labour, the ground might be copiously moistened whenever it is necessary; a system of irrigation might be contrived
fur very hot summers, and a powerful water-engine might be used for ordinary purposes. By these means the dryness of the atmosphere in confined places surrounded by houses might be efficiently constrolled.

The last point would be to obtain some mechanical means of dashing water violently over the branches of trees and among bushes, so as to knock off the particles of soot that adhere to them. Although such a method would not wash trees clean, it certainly Would disturb the soot sufficiently to preserve the health of the plants thus operated upon. It would be chiefly necessary in the first and last parts of the growing season, when alone the soot of a large part of London is inconvenient.
Finally, we would place the execution of the plan under some really good, intelligent gardener, and not no further than mowine notion of gardening extends Io further than mowing grass, sweeping gravel-walks, and perhaps scratching a few annual seeds into the ground. The former would probably strike out other methods of improvement, which can scarcely occur to any one not actually and personally engaged in misuching operations of this nature, the latter would misuluderstand and mismanage the business prescribed mere obstinacy.
Let it not, however, be supposed from these remarks that we expect a London garden ever to be the eye and ry garden is. It may be made fair to it nay abound iner all general purposes of decoration ; it nay abound in flowers and sharly crees, and may be green with the suftest turf; of that we entertain no
duabt; but ro art can mate it clean: "c che trail of duabt, but no art can make it clean; "the trail of
the serpent will be over it all;" the impurities of the aur wrll stick to the flowers and the bushes, and the turf, however, verdant and elastic ; and a garden in mid Lendon, however beautiful, will be a thing to gaze upon and not to touch.
That there is an unreasonable amount of prejudice about town gardens is evident from one well-known fact, of which an intelligent correspondent has reminded us. It is not many years since complaints Were heard every where of the impossibility of growing
Cape Heaths in the nurseries near London, on account
of the smoke from the new buildings erected near them. Nevertheless, while the buildings have sur-
rounded the nurseries more and more closely, Cape Heaths are grown better than they ever, were before.
\(W_{\mathrm{E}}\) last week received from a country nurseryman a paragraph which he particularly requested us to in sert as a communication to our readers. In this report our modest correspondent, under a feigned name, spoke of his "very extensive and well-selected collections" -" of the vast number of his pots being really sur prising" - " of the elegant correctness of the biooms, surpassing anything else we had seen this season" "of the unremitting care and attention of the owner," \&c ; and he further assured our readers that "his col lection, as to extent, variety, and quantity of flowers, is one of the first in this kingdom." Nor was our labour to end here; we were further instructed to make mention of a certain seelling "totally distinct and superior in form and coluur from any yet introduced and considered by the best juiges to be a first-class flower."
t will. we trust, excite no surprise in our readers that we should have refused to identify ourselves with this report, which, however our worthy correspondent may regard it, to us appears neither more nor less than a puff, calculated to deceive the unwary if put forth under our authority, and only fit for appearance as an advertisement. We therefore, although overflowing with kindness, civilly declined giving it insertion, informing the writer that we do not introduce reports upon nurseries unless they are the result of personal inspection by either ourselves or our agents. At this the good man has waxed wroth, and has written us a letter, which for his own ake we with hold, as we omit the mention of his name; our only object in noticing the matter at all being to let people see that we will not, either for fear or favour, lend ourselves to misstatements ; and all puffis are such The moment a newspaper panders to the vanity or personal interest of individuals, its utility and character are gone. We will only add that our angry correspondent has after all but little room for com plaint, since his letter has been quietly inserted in the Gardeners' Gazette in the manner he desired; where it will remain for reference and quotation hereafter to the great advantage of the public.

\section*{cactaceous Plants.}

Tris being the best season for engrafting the different kinds of Epiphyllum and other Cacti, I beg to give an outline of my practice, for any such readers of the Garmirers Chronicle as are, like myself, growers and adscquainted with the simple treaiment that they require I grow for stocks, Peresikid aculeata, Cereus hexngonus, and Cereus speciosissimus; I prefer the letter, on sceoun of its hardy, lasting, and robust habit. I grow the stock freely till they attain the height that I want them. Sonse I grow with. 5 or 6 stems, from I to 3 feet higu; others I grow
with 1 stem, from 1 to 4 feat; the short stems I engrift at the top with the Epiphyllum speciosum and Ackermannii, the tall single stems with \(\mathbb{E}\). truncatum, and some from the sarface of the pot to the top, all of which is of course be engrafted hdividual fancy; , trencatuma shopiag habit the greater part of the beauty of the bloom is lost. The shoots, aboat it or 2 icceed the best, are young-srowng skin or bark for about \(t\) an inch at the base of the graft, and cut what is intended to be inserted into the stock in the shape of a wedge; I then make an incision in the angles or top of the stock, with a pointed stick made the same shape as the scion. When the grafts are first put in, to prevent their slipping out, I pass through each a smal wooden peg or the spine of a thorn; I then cover each with a small piece of moss, and place them in a shady damp house, and syringe them over the tops occasionally in the evening ; they will all adhere to tho winter. By engeafting the shating kinde of Cweti on the stocks that 1 recom mend above, noble specimens can be grown in a few years from 1 to 10 feet high if required, and the size and colour of the blooms are mach superior to what they ever the above treatment becomes quite a hardy greenhouse the above fill beom the it does Fhen plant, and will bloom three months later the usual way.
Beantiful as many of the above family are, they are no Botnical epllethin is the obient of the cultivator: that beime
 and varieties, which are, I believe, the most desirable kinds, viz.:
Epiphyihum specionum

Should you commider a gmeral neconnt of my practice in
the London Horticultural Show this last season, and at Regent-street, werth a place in the Chronicle. I shall have much pleasure in semdin it you in a few weeks,-John Grean Gardener to Sir Bduaird Antrobus, Lneer Cheam [We wish for this most particalarly.]
ON THE CALSES OF FOLLAESS OF COLOLR in the carnation.
These are few circumatances which cause so much disappoiatment to the practical florist as the running into colour, or sporting, as it is technically called, of his flowers. of such vast moment to him would have been, from the first. carefully investigated, and its ca.se esplained and made manifeet, in order to iss being remedued. No thing, however, has been attempted respretang is ; s) indisposed are nien to think for themselves, and so apt are they to follow the beaten track: hence, Ignotance is allowed to prevail, and error to be perpretuated.
It is the opinion commonly prevalent amone florists that the cause of sporting, or foumess of cut ur, ia the Carnation, is to be attributed to an over-nutr:tious soil and hence the remedy as universaily preseribed is the rowing of them in a poorer or reduced huil, to make then return to, or preserve them in, a clean state. It is my fixed belief, however, that the converse of thas is the case,
iz. That the cause of sporting or rumning of the culour riz. - That the cause of sporting or ruming of the culour
in this flower is really dependent on a deficienry of uourashment, either in qualuy or yuantitr. On consadering the history and economy of the Carnation, we find that it is naturally single, consisting of five petais, and is also self, or a flomer of one colour. Now it is by cultivation in our gardens that it becomes double, the stamens being converted into petals, and is also made to break into hose beautiful stripes which constitute the he and its character and raised it to this condition, so are neglect in its caltore, and deficiency of proper nutriment. the ause of its degenerating and rmunime back asain to its pristine state; reducing it frost to a wif, fand venambly, indeed, to a single flowa which deprive the pient of a due and fall sulyly of aitable food, whether it be a poor soll, or it be a eld and angenial season, which cramps the energies of the lant, will prone the due elaboration of its colours to lensifer an ontnxard season tantamount to a poor soil in its ultimate effects on the plant. The flake or bizarre state I repeat, is mamifestly the eficut of high cuttivation, and the running into a foul or self state must be considered a degeneration, induced by a inw degree of culture, of the core nuthing al mars to be more unphilosophical, and more inconsistent with reason, observation, and fact of the Carntion to the variegated and brillant colours ness of the vital energies of the plant. The Pink affords equal illustration of the position I wish to establish: it also, is naturally single. but by oulture it becomes doubte, and acquires the benatiful laced colour on the edgea of the petal; in unprapitioms sessons, thowever, or when
crown in poor soil, this characteristic marking, like the tripes of the Carntion, becomes indistinct, or is altogether wantiog. In the case of the Tuip absu, tie ctrcumstances are the same: if the belb of the finest flower be left in the ground, it becomes tushed and fout in colour, and eventually turas to \(s\) self orbreeder state; for the bulb year after year sending down ite roots into the same portion of soil, at length exhausts it, and hence, unable to meet with a dus supply of food, it degenerabes into its former state of a self-coloure? flower.

I have bat one experiment to adduce on this subject, interesting as it is, as well to the regetalle phyeinlogist as to the practical florist. I planted in pots ten layers of run purple fake Caraation,-Ely's Lady Hewiey,-five of them in poor garden soil, the other tive in mar mane grev in the por soil still continued selfo: whthe of the latter three bloomed beautituly ciear-flibed flars, the renaining two still continuing in the self ur eds state. This,
theory.
A correspondent of tha Chronicle mentions the case of a Camation which had been foul in colour for two years,

 uf my usa wiation ; mital
a Carnation is thus cracked
above will have a greater abundance of nourishment, and hence will, in all probability, antrinious juices absorbed by the roo
 course dox-mard- \(t\) t!e | ian: and roots is checked, ob. truate 1 . a a d ren iere i almes impossible. at the crate

 induced in tiam. Eurtizer, it is expeciaify Furthy of remari, as greatiy estatristriog ane frose or une avore ext
a joint (a circumstance not unfrequent in wet seasons), the
flowers are for the most part large, fine, and boldly deflowers are for the most part large, fine, and boldly de-
veloped. Inded, this is precisely what happens, and adants uf expmation on tiec same pruciple as tue ringing of Apple-trees ; that is, making incisions through the bark to canse them to bear more plentifully; in other words, arresting the flow of sap downwards from the branches to parts, rendering it subservient to the greater production of fruit,

The compost most suitable for the Carnation is, simply two parts old pasture sods, two years old, and one part
old frame manare, three years old, with a sufficient ad old frame manure, three years old, with a sufficient ad-
dition of coarse river-sand, to prevent tenacity of the soil Pasture sods reduced to mould are preferable to soil calen from a greater depth, inqsmuch as they contrin the fibrous
roots of the G.ais, which, duriug their gradual decay afford a coms'ant suphly of mist ace ptible no rristiment. I must here clone my ebsurvations on thusd licate, and, to the florist, most im portant subject ; with the assurance, however, tha: though more important engagements have comvation of florist's flowers, I shall always be ready to communicate the reminiserences of a thorist, when informa:ion is soucllt for, as in the present instance, on an importan niggard of knowledge.-F. R. Horner, M.D., Hull, lUsh Aug., 1841

\section*{ENTOMOLOGY.-No. XIV}

The Goosrberry and Currant Saw-Fly.-Most of the Gymenoptera, or Flies with four transparent wings, the minute being all parasitical animals, which, by depositing their eggs in the bodies or upon the skins of the larvee of noxit is duubtful whether any crop would reward our toils. Such, however, is not the character of the Saw-flies, or Teathredos, as they are termed by Linnexas; for there are few insects that prove more fatal, when favoured by
congenial seasons. It is only a few years since whole districts of Tarnips were completely consumed by Athalia spinaruan*. Our beautiful Rose-trees are subject to the attacks of five different species; and, a mongst them, HyPlum, Cherry, and Pear trees parenchyma so completely rubbeul off by the shiny, siugof Pears a bushes aliso are subject to the invasious of another species ; and the exrenoive devastations of the Gooseberry Saw-tly are fresh in the memory of crery cultivator: indeed I believe there are broods of the larvee still at work.
This insect was described in 1423 by a French author, trinacula'us; and it is also called N. Ribesii, Tenthredo Grossulane, and T. ventricosa; but the first name bas. I belteve, the right of prisritg. The fly is of an ochreous colour: the antennæ are almost as long as the body, setaceous, brown above, and nine-jointed, the two basal joint spots on the centre of the trunk, as well as a large patch on the breast or sternum, are black ; the body is orange, sometines bright: the winas, which expand two-thirds of and inci, are iridesvent; the reticulated nervures, the
thickened costal edge of the superior wings, terminated by a callous spot. called the stigma, are brown, as are also the tips of the hinder shanks, and their tarsi, or feet (fig. i).
The files emerge unheeded from their tombs the beginning of April, and the femaie soon deposits her eggs close to the sides of the principal nervures on the under side of the leaves (fis. 2), which is very remarkabte, for all the strument called the saw, for the purpose of cutting into the leaves and stalks, and introdueng the eggs between the cuticles, or under the bark. In about a week the larve

hatch, and commence feeding in the leaf on which they are stationed, and soon sidde them full of small holes: thus they go on feeding and thanging their successive
sins as they facrease in eize, until they are three-fourths
if an inch iony, if an inch hong, when they are seew seatered reund the
olyes of a paty demolisherd Leaf, holdag by tieir fore ara, wihn theit tails taryed ap. nr lying non one side. At nove is le-n gellow, whe the penultimate fo the same co-
 spotnrand in more armar. und the near the base of each foot is

large; every one of these black tubercles produces a hair:
they have sis pectoral snarp, horny feet, with which they always hold fast ; the fourth, segauent seemed to be destitute of feet, but the six following were each furnished with there is a similar parr at the extremity of the last segment (fig. 3).

There seems to be a succession of broods, from the earl spring until October occasionally; but the greatest num bers are congregated in May and the heginning of June, mage in a market-garden, near London, in one season but in the neighbourhood of Blandford, last year, the
second attack upon the Gooseberry-bushes in July and August was, if possible, more devastating than the first. Having defoliated a bush, leaving nothing of the foliage excepting the footstalk, and sometimes a portion of the main rib, and being arrived at maturity, they cast their skins again, aud then lose all their black spots, becoming of a uniform pale green, with two little black dots on the head, the spaces behind it and towards the tail retaining the yellow tiat. After resting awhile, they descend int and gluten of so thick a texture, that it is impervious (fig. ); from these the summer broods of files come up in less than three weeks, but the autumnal ones remain in them, curled up in the larva state, until the following apring, when they change to pupr in time to produce
flies, as the Currant and Gooseberry-trees are coming into leaf.
There are two modes of proceeding to rid our gardens of this terrible scourge: to catch the flies, or search for the eggs and ont off the infested leaves, is scarcely practicable our plan is, therefore, to look for the caterpillars ; for perforated leaves; and when half-grown they are visible enough, and after that period they commit the greatest havoc, having iuordinate appetites, and scarcely ceasing from their gluttony, except when their jackets become so tight that they are obliged to change. Hand-picking is, therefore, attended with great success in small gardens, but in plantations it is easier to sprinkle strong lime-water, as it is terned, over the leaves, which will destroy the cawith quichlime, having previously laid a good quantit is said also that water heated to \(140^{\circ}\) Fahr., and thrown forcibly upon the bushes, through the rose of an engine or forctoly upon the bushes, tarough the rose of an engine or
watering-pot, will kill the larve, without injuring the tenderest leaves on the bushes. The othor method alluded to is, to destroy the pupæ; and this seems to be best effected by scraping away the earth from the roots early in the spring, and drawing it into a deep treach between the bushes, covering it over and trampling it well down. boillag hot water be used, either in autumn or spring, to kill the pupa, it should be put on the earth when it is quite dry ; the soil must be lifted two inches, and returned as soon as the water is poured in, that as the heat passes off it may destroy the amimals eacased in their shells.Erratu.
Errath.-In Entomology, No. Xill., Vauaria is misprinted V'anaria.

\section*{COTTAGE-GARDENS.-Nio. XXXI}

It is at this season that the Cottage-garien, when properly managed, becomes an object of pectliar interest and beauty, many ot its gayest ornaments, such as Hollyhocks flowers, Lobelias, and a great variety of other autumna growing kinds have probably been attended to before this time, as it is necessary in the early stage of their growth to furnish the: with stakes of sufficient strength for their support in stormy weather. In general, however, the operation of staking and tieing up plants is not considered o quently too long delayed, or so indifferently performed that much of the beauty of the plants is lost, and the borders or beds in which they are grown present an untidy appearance, although perfectly free from weeds and neatly kept in every other respect. Those who undertake th ing to this matter, as nothing is mure unsightly in a garden than to sre plants entirely neglected and injuring one an other, or carelessly tied up to rough clumsy stakes, which,
from being quite unsuited fur the purpose, alwars disfigure them. The greatest art in stahing plants of any description is to conceal, as much as possible, the materials
which support them, and to keep the stems and branches in their natural position. Each stake, therefure, should be neariy straigtt, but no larger than may appear necessary for supporting the plant to which it is intended to be placed, nor so high by several inches as the plant itself. small straggling shoots should be removed, and no more left on each plant than there is room for getting neatly fassened to the stake, wimb bunding together so close as is usually done. Dahias and Hollyhocks, but
especially the former, which are great favourites \(\pi\) ith cottagers, should oniy be permitted to have a single stem, which will invariably produce much larger and fine anwers than where two or more stems are suffered t.o reto. these ard stailir tall-zrowing phants will only now re fare to liase some of therr sice itozis tied up and reguhoing that were hor sufutiently advanced the hast time of going over. Dwarf-growing plants, on the other hand. will space to be peyged down and trained neatly over the benas, and such other showy plants as are easily propagated. If put in the ground now, thes will have time to acquire good roots before winter. \(-M_{0}, E_{.} H_{\text {. }}\)

THE following is a statement of the mean atmospheric pressure, temperature in the shade, and amount of nim sent year, compared with the arerage mean of 15 pre ceding years, from 1826 to 1840 inclusive. The difierene is marked ( \(\dagger\) ) when above, and ( - ) when below the

From the above it appears that the mean height of the barometer has been lower than the average in every month. somewhat less than the average in the three sucuetry, somewhat less than the average in the three succeeding
months; but considerably in excess during the month months; but considerably in excess during the months o
May, June, July, and first half of August. rature was below the mean in January and February exceeded it by more than \(4^{\circ}\) in March; was very liwt deficient in April; and in May it again esceeded the average by nearly \(3^{\circ}\). In June the temperature was nearly 2 below the mean; in July it was more thun \(4^{\circ}\); and litul short of \(3^{\circ}\) below during the first fortnight of August. state of the weather since the 15 th inst, and if any inference is to be drawn from the foregoing statement, it must be in favour of fine weather; for before the mean heigh age, taking into account its hitherto lowest annual average, taking into account its hitherto low condition, it the season. That it will not 000 during the remainder of stance on record to prove; and when it stands so ligh, the fall of rain is comparatively limited. A fine autumn, so much wanted, is therefore likely to ensue.- \(\boldsymbol{R}\). Thompson, Garden of the Horticultural Society.

\section*{HOME CORRESPONDEVCE}

Roses.- One of your correspondents inquires how the Hy brid China Rose "Fulgens" is made to flower? Simply by using the knife very sparingly in the pruning season If you cut back the Hybrid Chinas, as you ougbt to do ordinary Roses, many, and especially Fulgens, will no flower the next season. I did nut discover this for sonie any, flowers; since I hare shortened the shoots of the preceding summer about one fourth part only of their length I have found this rose blonm as freely as any. The best mode of training this rose and its brethren, Beauty o Billiard, Brennus, Legouvé, Triomphe d'Augers, \&c., all splendid free-growing roses, is to get them standard high, and place against them an iron stake made thus, the feet made square and flat and 18 inches long, the stake branching off to support an iron ring three feet in diameter lower than the head of the stock winter pruaing, a sufficient number of the shoots must be brought down all round the circle, and tied with tar twine. These roses, thus treated, will present magnificent head

Humble Rees.-A correspondent informs ns that he has observed these insects two or three times this year lying dead in numbers under lime-trees in flower, and that in one instance he found a honey-bee among the carcases. He inquires whether this arises from any deleterious quality in the Lime-tree blossom, or whether they are killed by the honey-bee, or from what else did their death arise? [The first question we can answer positively ia the negative; the latter we commend to our correspondents for an explanation.]
Laws of Gurdens.-Gardens are particularly named and protected in the modern Acts against larceny, \&c. and the power to enter either them or orchards is also excepted in the Highway and other Acts; and therefore, it is not an unusual expedient to plant fruit-trees in a field to preveut the turning a road over the same. Garden-grounds used for trade are as much protected by the exception as private pleasure-gardens, and an injunction aganst entering them for the purpose of a highway may be equally obtainem in the one case as the other; and where a close fard planted with shrubs within the last six years, anuithin the with potatoes, it was held to be
Rablits.-In your paper of July 31, you desire informs. ation concerning the best mode of catching rabbits. I hare been in the hatit of catching from 2001 to \(\left.2 J^{\prime \prime \prime}\right)\) (or ex. ploring orhers \(t\). do si; for the last eight years, and the ollowing is my method:-ist, Purchase some guod ket rets, price frem is. fill. to 10 . each: be particuar to kase, er

line of it towards the holes and the sticks propping it up line of it towards the holes and the sticks propping it up when they come into the net. Catch as many as you can that way while daylight lasts; then go home to supper, and turn out again with the long nets only, and two stillmouthed dogs, keen-nosed and swift of foot. Proceed silently under the wind to the warren, and set your nets
contrariwise to the morning, viz. With the bottom line contrariwise to the morning, viz. With the bottom line
tomards the fields where the rabbits are feeding, and the towards the felds where the raboits are feeding, and the propend of each long net with his hand on the top line, take a long circuit with your dogs, and when you conceive that you hive gone far enongh to entrap the rabbits between you and the nets, loose the dogs and quarter your
ground, making but little noise till you arrive at the net again. Those at the nets will tell when a rabbit comes in by the sudden jerk the line gives their hand; they must then run down the line, kill the rabbit, and quickly return to their position.- A Subscriber.
anproved Watering-Pot.-As improved watering pots are described and figured at pages 298 and 454 , I beg to submit the following one as well adapted for cottagers, those in general use. In the annexed sketch, fig. 1 repre-
gents a section of the can; 11 , are moveable tubes, havsents a section of the can; 11 , are moveable tubes, hav-
ing roses on their upper ends, while the lower ends slide ing roses on their upper ends, while the lower ends slide
over the tube 2 , fixed into the can; 3 is a valve placed over this tube, made of strong leather, and having a small tlock of wood on the top like those in common pumps; the bottom of the can being wond, the valve is screwed on off when it requires to be repaired. The rod, \(\bar{j}\), is connected with the valve 3 , and the spring 6 ; when used, the can may be held by the handle, either in the right hand or the left ; by drawing up the spring 6, with the forefinger, the valve 3 is raised by means of the connecting and 2 : as soos as the finger is removed from the spring, the valve falls, and the water is stopped. The spring is fixed on the under side of the handle, and nearly all enclosed in that part, made to fit the hand. Fig. 2 represents the bottom of the can; the dotted lines showing the size of the ralve: 1 , shows the point at which the water
flows into the tubes. \(-M\). Saub, Lancaster.

Honey-dew.-I was glad to perceive, in the Chronicle up his pen to resme the subject of Honey-dew. As respects my admission the subject of Honey-dew. As aphides, it is not, as some of your readers might suppose, any new admission, for I distinctly stated as long ago as 1827, in the 5th chapter of the "Honey Bee," that I honey-dew, -the one a secretion from the surface of the leaf, the other a deposition from the body of the aphis." I made this statement purely on the authority of persons on whom I was disposed to rely, not from actual observation, never having seen a single instance of the absence of sphides during the presence of honey-dew. In this failare of a disti.ct observation of honey-dew apart from aphiides, I can adduce simular statements on the part of
former naturalists, as weil as by timse of the present day former naturalists, as well as by those of the present day.
In the Chvonicle of the 2 tch wit. Mr. Waiter Hill, who appears \(t\) (s) be a ciose utserver of natural phenomena, assures us that he never witnessed an instance of honeydew unaccompanied by aphides. I certainly cannot deny Mr. Murray's statement, " that there is oftentimes honer-, cewt in abundance where the aplisis is not \(i_{n} h_{i}\) discorered:" and it can very easily believe it :o liave existed where the aphis eras not discovered. This I coneeire \(t\) hare hapfor iis ceeag none on the inferine branches of the tree certainly abli) rds no eridance of their non-existence oin the superior ones. Had such an instance fallem under my own observation, I should at once have concladed that the honey-dew had trickled down from those branches, and sullest confidence of finding them there. I do not possess, Ior have I access to, "The Journal of a Naturatist", bet I think Mr. White has taken a very unphilosophical view
of the matter, and affords no sort of evidence in favour of either apinion-certainly he makes no reference to the agency or mon-agency of aphides, and his editor, in a note, agrees tntirely with the advocates of the aphid theory. Where the leaves of particular trees exade a sacchavine jalue, I thinls it may purticticular of a dresuls exade a mether it is of the
same quality as that which is ejectedi by aphsies; wiether the former may not be a morbid secretion from an un-
healthy plant, while the latter is extracted from a plant in healthy plant, while the latter is extracted from a plant in out upon the subject by the late Sir James E. Smith, as well as by Mr. Golding's reply to Sir Oswald Mosley's questions. So far," says the latter, " from the Hop-plant greatest injury is inflicted upon those in vigorous health ; for if any of the plants get through an aphid season, it is sufficienc a weakly, sapless condition, which do not supply a sufficiency of nutriment for the rapid development of
numerous brood. Such (as is usual) was the case last numerous brood. Such (as is usual) was the case last
year: what few Hops were gathered in the infected dis tricts, being produced in such weakly, sapless plantations while, on the contrary, plants in rigorous health were so pertinaciously authered to as to have no chance of recover sent, but as a cuncomitant of aphides: and in our land of Oaks, whenever those giants of the forest are dripping sweets, it is uniformly the produce of aphides." I stated in my last letter, that I considered a moist and warm atmosphere esseatial to the production of honey-dew, not merely from its action on the jaices of the trees, but from its effect on the vigour of the insects, which become paralysed by a very moderate degree of cold, and if it he
considerable, as I said in my last, they are wholly deprived of existence. If the hypothesis of secretion were well founded, why should the ants so dingently wait for it to pass through the bodies of the aphates, instead of inthbing it in a direct way from the leaves. as the aphides them Hiil, and I thank him for this confirmation of the statement of Peter Huber-it shows so clearly that the aphides are not only capable, but in the habit iff extracting saccharine juices from the sap-evessels of plants. This admitted, all appears simple and easy of explanation. Edward Bevan
Gooseberry Caterpillars.-No. 4. If they are the larve of Nematus Ribesii, which I hope your correspondent Ruricola will soon illustrate, they may be readily killed by spriukling the trees with salt on a damp evening; if dry
weather, water the bushes first with a syringe or waterweather, water the bushes first with a syringe or waterpot, but let it be late in the evening, or after the sum is gone down. If find this a most effectual remedy. -C. M. -No. 5. Last jear the caterpillars destroyed nearly a Whole break of gooseberries in this garden; they made same thing. On their first being observed I tried to stop them by having them picked off, but they soon got ahead of the pickers. Recourse was then had to shaking the bushes, tramping and beating them into the soil with the back of the spade, but before the men could reach the far end of the fow they were to be seen momnting up the bushes quite brisk at the other. Ine next thing was
pretty strong dose of tebaceo-rater earefolly apy hed sith the syringe, so that both sides of the leaves were thorougidy wetted ; this was repeated several times, but all to no purpose, as they still kept on eating the leaves in spite of all that could be done. The has thing tried was flour of sulphur dusted regularly over the busi.es, so mat every stopped their ravages and \(=00 \mathrm{after}\) disappeared, whether to come back aysin I do not hnow. Ifter this application. he Champaigne variety shed a great quantity of its leaves, Whe other sorts upon the same break of the sulphur, but their leaves, and all being served alike, the defoliation of the former must have been attributable to something else. the former must have been attall.
Fuchsia Corymbifora. - In January last I parchased a small plant of this, \(4 \frac{1}{2}\) inches in height ; I gave it a little heat in the early part of the season; in a short time it grew rapidly, filling the pot with roots; the soil I use is peat, loam, and sand, with a good drainage of half-burnt potsherds; I repeatedly shifted it, till at last I got it into a No. I pot, in which I expected to see it flower, but it kept growing, with no hopes of its flowering. As 1 found it to be a strong feeder, l , occaid manure, which produced a beautiful large dark green foliage within six inches of the surface of the pot. I eventually shifted it into a larye square tuib, in when it now stands in the conservatory, 9 teet high. 3 inches in the single stem with 14 large bratiches. and is eovering with Howers beabifuly.-D. M, M, Herts
 Profesoor Martius I was ainwed te ins ecit the proplyiting apparatus is the Botinica! Garder: at Manian. Le. Zent
 added. excepting tuatate the resuts. The strungest prasf that the plan is yood. is, that it continues tu art \(\overline{0}\).th the most complete success, although the author of that man lans are indebted for their success to the unwearied at tention of the pareat eye, and that, from passing into other hands, they are frequently allowed to angetist and decay. Nothing can be more simple than the whote ap paratus. It along the middle, on which is a reservoir of water,
 Which is placed above it. frames of the commonest hiad are phaced, It may be sugair from the cnttings in their early age. .t. may be suso gented, and indeed would iusnediately strane may be owing to the moist heat in which the cattings are constantly kep No question it is so in part, but I an quite satisyed the
extraordinary renulta I witnessed are quite as much owing
tage menstruam of propagation as to the decided advan under abe stated; and I doubt whether peat and sand, roots to be produced whic would cause the quantity weeks' insertion in the bed. It is necessary that the charcoal should be fine, but not in dust, which will consolidate and prevent the fibres penetrating in every direc tion, as they do when it is of the proper size. In some part of the process, fine peat is mixed with the charcoal that the first process of striking, in most species, succeeds best in the pure material. From what has been suated is clear the necessary apparatus is simple of application and of little cost; a part of any flued pit, or one heated nursery or even gentleman's establishment theugh in any one on purpose would be of trifing expense. compared to the results, as, owing to the ryidity of the peratom virtues of the charcoal itself prodacing the respect to the considering, I have little doubt that they consist principally in the porous and perfectly permeable nature of it The heat and moisture are constantly present and passing through, without any saturation or stagnation, or indura tion, taking place. There may be something in the vege
tative powers of it, but I imagine this to be the true caus cative powers of it, but I imagine this to be the true cause for propagation. Many of the plants on which it anc ceeded are known to be the most difficult to strike. There
 from Mr. Lukas, on the ransug seect in snoss. I have no duabt that thes is a grand seemet or miarel gained on natire, by the decovery of one of her asan mad's of operation. It is exactly analngons th the metionds finlored by nature in the High Alps; and there is no dorbt the Gertians and other seeds of difficult growth might easily be made to germinate by it. Mr. Lukas recommends sand to cover the young plants, on their first appearance; but it is doubtful whether fine tan mould not answer a better purpose.-S. E. W., Cerlion
Old Specimens of Ioy,-I think I must be under a delusion, for I have seen this day, growing by the memorable ruins of Fountaine's Abbey, an aged Ash tree which is encircled by beautiful Iry in rich luxuriance, the stem of which Ivy has attained the immense size of 3 ft .2 in . ingirth! Can it indeed be correct that lvy ever attains this size? it certainly appears that the leaf-berrine brames proceed from this stem; but baving never read or heard of Ivy reaching this size, I mm inclined to think myself under a delusion.-Ignorama. [It is true, madam, that the Ivy does acquire as large size as you describe; you may therefore dismises your apprehension of haviag been in waking dream. Mr. Loudon mentions an instance at Brochics Hail. int somersestace, of an Iny tem? \(11 \frac{1}{3} \mathrm{in}\). in twaikable one at Morpech, wheh дrows out of a cresice in a rough stune wall by a cottage, whelh at the height of 9 ft . from the ground is \(19 \frac{1}{\mathrm{i}} \mathrm{in}\). in diameter. De Candolle speaks of another at Gigean, near Montpelier, which was six feet in circumference at the hase, and divined into two great truaks, from tro to five fett in ircumference ; these trunks gren at nist erect, and atiersends re-ted upon a wall. The branches of this plant covered 72 yards square, and the whole height was eighteen feet when De Candoile examined it, but it had been larger ; bse cotamatud its age at 433 years.]

Flower-pots.-Seeing in p. 449 an article on the im provement of Flower-gnte, in which there are some crrors sugg to ofer a few remarks which my experience ha
 strong growth, and those that have large fibres, such as specimens in the summer when the atmosphere is warm and dry; glazed pots may also answer for aquatic plants, but that they will do for plants generally does not agree with my experience. I have had six large hotses of plants to water every day, summer and winter; I have therefore seen the difference between hard-burnt pots and porou pots, both well drained. The water passes freely through well-drained porous pots, and the plant receives benefit from the water, because it is in accordance with nature lodge round, rain passes throngh the earth, and doen no up mure than is fools of plants, and carm. In hased-avens pors, if thee are nut well dramel. the water mail hike, and sean render the eaith sour ; and nowuil tae [.atit be delucate
 Wind am! water, that is. just under the satine of the su:l

 not agree with Mr. Forsyth as to the trouble of moring crocks at every potting, for it is not requisite to remore
them in all cases. For instance, if \(\%\) plant comes off mountain where it has free air and drainage, would that plant do 25 wellin a damp talley where the roots will deprived of a free current of air? I have seen plantit age-hole; but I would not recom........ \(1 .:\) ins a general practice, because winter is the time that the atmaghiera is
culd and daml?, jet plants require water; and it
ougrat to drain quickiy, triun thein, or else the mould sial hecome have favourite plants to give then preniy of daanage
their pots. As far as regards drainage, it argues thus: if dies thm diare to ell or drink than be dan pater tha it can evaporate and divecharge, it must become injured. -

Wash laguinst Miblew on Peath Trees,-In p. nlo, Peacl-trees. I am happy to be able to send you a recipe which I tave mate use of for upwards of 20 years, and have never tued in maninig a perfect cure. Take a quart of alcolicl aint sits. of salphur; mis them tongether, and With a smail paint-brush, in the spring, when the bads are swelliag, paitut the trees all , ,ver, on buth young and old wwod. The trees ougnt to be unnalied, so that every part may be got at with ense. I have mate use of strong I had strersi Peach-trees sery much mild pwed; so much oo, that the fruit was rendered useless. In the f.llowing spring 1 appied the mizture effectually, as not a leaf was

\section*{Devastation among Trees.-As I presume you are the}
protectur uf all that is memerestury in horicieultural matters, may I solicit your appeal in favour of a Chesmut-tree Sir W. de Crespigny, at Denmark-hill Road, Camberwell nearly opposite the Chapel : Though not a particularly picturesque tree, it is rendered a favourite among the ing forth its flowers and leaves foll three weeks in every meason before any other Chesnut that is known. This morning I heard ang all the improvements (?) and sacrilege nobody's way among all the improvements (?) and sacrilege
among sume centenarian Cedars going on there, and I can ony bope your giving fublicity to the wishes of the neigh-
bourthoud may sive it.-* [We wish we could succeed. Surely no one would be so ill-advised as to destroy such is so harbarous as the indiscriminate destruction of fine trees. \(]\)
Cameations and Pieotes.- We have received several inquirtes regarding the hest Carnations and Picotees Which have receatly made their appearance, and which perties. The perties. The following hist contains what we have noticed
as being the best:-Bucknell's Charlemagne, crimson hizarre, the petal is of a tine form, even on the edge. stripes narrow and clearly marked, white pure, with goou crown and plenty of petals: Chambers' Kate, pink and
purple biz, large and well-formed petals, fine crown, good pot, and he coisur well distributed; Bucknell's Talma, Don Johu, sc. biz., a flower of extraordinary brilhaney of colour ; Martin's Spleudid; this is one of the tinest sc. bia. we have seen; the petals are firm and stight ly cupped Among the Elates, Headley's Empress of the Purples, Wiark purphe thake; Headey's ineognita, ligut pur. Al a rival to Breoks' Flora's Garland ; Wropertes, forming Willmer's Endynion, a delicate rose-fl. Picutees-Barnard's. Mrs. Barnard: the properties of this flower we noticed, \(p\). 187 . We are no: certain if it will be let out
this seasmi if not, we recummend our readers to procure Barraud's Bride as a substitute, a delicate rose, lightedged Picotue, somewhiat in the same style, composed of moson : Garrat's Lady Duere, hight-d. delwate rose: this flower closely resembies Waines' Queen Vietoria, it bas the advantage of opening better, and will, we think, prove a greater favourite. Cornelius, very heavy wail. light-ed. del. 10 ose. Barraud's ed. rose; Huiton's Nehemiah, very heary-ed. purple ; light-ed. red; Giddings' Sir R. Peel, heavy-ed. red; Col. Foroman, light ed. pur., colour very distinct, and regular in its penciling. There are, no doubt, many flowers pos seasing first-rate properties which have appeared this ver, we have mentioned me can recommend.
Humblie-Bees.- Permaps some of your readers may iike to hear a few wore particulars about the humbie-bees which bore holes in flowers, and thus extract the nectar. This operation bas heen performed on a large scale in the fine bed of stachys coccinea. etery flower in which has one, and sometmes \(t w e\), small irregular slits, or orifices, on the upper side of the corolls riear its hase. I observed sorme plants of Marvel of Peru, and of Salvia coecmea,
with boles in smmilar postions; but in Salvia frahami Witit boles in sumilar postions; but in Salvia Grahami is in tins spectes elongated. The tubular corolla of Pentstemou argutus is rather broader than in the abore flowers, and two holes are always bored in it by the stde of each other, and just above the calys. All chese oritices are so tmall that they maght ensily be overiooked; I first noticed them a week strce, when, from the brown colour of their The brds it vtachys and Deacstemon are frequented by numersts hamble-bees of many very difereat kinds; at of the of the ftes tiver: they fly very quiekly from flower to hitie orifices. ato which they most dexteromsly iasert their proonscas and ita the case of the Pentatemon, first into the orisicaun ous side and then into the other, so that they
thus estract che nectar on both sides of the germent

Bendes the humbiehres, I saw sume hive-bees on the Pentstermon; they were. however, unuch less desterous, and
generaily alighted across the fluwer, or on the calry, and thus lost time. The orifices in all the above-mentioned finwers are made on the upper side of the corolla: I was, therefore, surprised to find. close by, a large bed of the common Antirrhnum in which all the flowers had one or two irregular slits, or holes, on the under side of the
curviia at its base, close to the small protuberance which corvina at its base, close to the small protuberance which
represents the spur in Linaria, and therefure directly in front of tue nectary at the foot of the germen. From the position of these orifices they cannut be seen without
turning up the flower ; but the humble-bees seemed to understand this method of picking pockets full as well a the other, and nover hesitated where to go, but quickly flew from the under side of one flower to that of another. Now I can speak positively, as far as the experience of part of two summers goes, that country hamble-bees a forcing open the elastic lower lip; and a very pretty spec watch them. All the flowers of Salvia Grabami and the Antirrhinum, which I looked at in different parts of the garden, were bored; and out of the many Pentstemon, I could not find one without its little orifice, aor did I see one bee crawl in at the mouth. Nevertheless sepsrate plants of the Stachys coccinea, and one large on their howers nubored from the scratches on the lower lip of the flowers of two former plants I have no doubt that many bees had entered in the usual way, and I actually saw one bee crawling int jecture that in these plants each humble-bee as it came ot finding a hole ready cut, thought it less trouble to extract the nectar by the mouth than to make one; but
that on the beds of the same flowers, where very many bees we foll set to work boring holes, and others copied the example. From the comparative fewness of the hive-bees on the Pentotemon, their evident awkwareness in finding the orifices, and the smallness of their mandibles, I can hardly doubt they were profiting by the workmanship and the example of the humble-bees: should this be verified, will, I think, be a very instructive c.es ledge in insects. We should be astonished did one genus of nonkeys adopt from another a particular manuer of opening bard-shelled fruit; how mach more so ought we to be i a trive of insects so pre-eminent for their instinctive facul ties, which are generally supposed to be in inverse ratio the intellectual. Horeover, from what I have above stated regarding the Antirrhinum, I much suspect that che practice of boring holes in its flowers is likewise a piece of acquired knowleuge, whether the Humble-bees do it instinctively or not in other cases. Although I have said that country humble-bees appear to be less cunning this June, in Staf ford-hire, some in the act of cutting holes at the base of the corull of the Rhododendron azaleoides; the greater evident entered the mouth of the cololla, as indeed wa vident from the quantity of pollen on the stigma, brought aving a single grain of polleng Azaleas-this hybrid not having a single grain of pollen of its own. One bee was
seen which entered the mouth of some of the flowers and cut holes in others; this shows that the orifices are made simply to save trouble, and not because the bee cannot extract the nectar from the long tube. In the Stachrs and Pentstenson it is also evident that the bees cut the surface of one forer th of quat on the fringed edge of the lower lip. I have no doubt by flowers in the same time. Your correspondent ( \(\mu .485\) ) says that the Honeysuckle is. sometimes bored ; I never happened to notice this, but I have seen pollen-gathering humble-bees show much skill in forcing open the yetclosed mouth of the young flowers and extracting the
pollen; flowers which had been open, apparently even for pollen; flowers which had been open, apparently even for
a day, they at once passed over, whereas the nectar-seek ing humble bees stopped at them. If the mouth of the dower was absolutely close, without any one segment hav ing started, the bees from the dificulty of the attempt immediately gave it up. Your correspondent attributes the but when we remember how the petals of many flowers oas be manipulated in hybridising them, without prevent ing their fructification, we may well doubt this view. But I conceive they may be indirectly the cause of the crop failng, not by their making the orifice, but by their not extracting the nectar in the manner nature intended them;
for I lave observed that when papilionaceous flowers are mature, and actually in the case of the Bean, bees alight ing on the wing-petal, as ther always do to reach the nee tar at the base of the sandard-petal, depress the wingpetals together with the keel, by which movement the grains of pollen together with the stigma are fotced out and both rubbed against one side of the bee's bodr, already generally well dusted with the pollen of other flowers of the same species. If all those flowers, even bermanhrodite ones, which are attractive to insects, almust necessd mily require tizeir intervention, as is supposed with much probability by Christran Sprengel (Entd. Geheim.), to remore the pollen from the anthers to the stigma, what anrorthy members of society are these humble-bees, thus to cheat, by boring a hole into the flower insteau of brushing over the stamens and pistils, the, so imagined, final cause of their existence! Although I can believe that such wicked bees may be injurious to the seedsman, one would lament to see these industrions, happy-looking creatween punished with the mwrits propued by your come-
spondent. Moreorer, the fiorist, I believe. nuyht rathe
to praise them for this ingenious methiod of of ainini nectar, instead of by the old-fashioned naturalone: forle him look how torn and seratched the Inwer petals of som howers are-for instance, those of the Mimulus rosens, ant the wing-petals of some Everlasting-peas. The litele ori fice whith the bees make, in order to avoid clambering i at the mouth, is hardly visible; whereas all the flowers some beds of the Mimulus, at the Zonlugical fiarcens are sadly defaceu. Let any nae who doubts the use of bees admire the manner in which the flat surface of the divide stigma of this Mimulus lieks the back of the enterin bees, which is generally well-dusted already with pollen and then how admirably the two divisions of the s" gma endowed with a sensitive faculty, close like a foreeps of the included granules of pollen! I will only farther re C. K. Sprengel's view, that the streaks and spots of dnub (saft-maal) on the corolla of mest neeterfens of colnt serve as guides to insec's, that they may readily find on where the nectar-vessel lies. I think the bees which out so quickly from flower to flower on the under sides of the Antirrhinum, or those which bored the pair of holes on . he might want such aids, they did not. I know hard any Hower which bees open and insert their probosais inton more rapidy, than the common tail Linaria, which has little purplish well-closed flower; I have watched on humble-bee suck twenty-four flowers in one minute ; re on this flower there are no streaks of colour to guide tiese quick and clever workmen.-C. Daruin.
Elton Pine, called the Elton, of sembles the Downton in the foliage, but is much larger and a profuse bearer, fine for preserves. Mratt's Pine apple we have seen to grow profusely on light, rich, sandy alluvial soils, near the sea. In such situations, othe Strawberries are apt to throw out too many runners, and
uricula Frame- t 296 Dr. Horner account of an Auricula frame, which we have no doubt is one of the best contrivances yet invented for many othe plants besides Auriculas, and especially for Alpines. Ome of our currespondents having expressed his doubts as to the exact manner in which it is constracted, Dr. Horne has beell so ebliging as to favour us with the fotiomng plan and additional explanation:-"If you send the aunexed to Mr. W., any workman will at once understand ment, is 1 ft . Sin. at the back, 3ft. 8in. in frout, 3ft. 8in. i depth, from front to back, and loin. from the shelves to the glass tup-light; the rise between the shelves is twis inches, and the whole length of the frame (two lighits) is about on. The shtres are made sin. in breadth, with simply that the pots may not stand in wet or damp; the air thus also permeates the crocks inside the pot; this is I am consinced important, for I alwavs found large, succulent, healthy roots, lying among and protruding into the crocks, as if in the enjoyment of air, very different from the
discoloured, matted, half-rotting mass, when my plan of potting, sec., is not folshirting board of s!rong deal, partly for ornament part for strength, and from blowing, may-be too roughly, in eddles,
among the pots; the toplights slide, or may be pulled down in front, as
the lights of a greenhouse, \&c. I may just add that as the shelves
 could not carry so larg

out, they are supported midway by a rest, as at the end. an inch sawn out of the middle 一 frame; \(b\) is a
Strawberries.-The method of preparing Strawberry plants for forcing, described in p. 536 , is a good one where time and trouble are of no consequence; but I hare for the last is years adopted a plan which answers well, and by which good stroug plants are procured in one monti from the present rear's runners. The compost I use is good strong loam well mixed with rotten duag from the notbed linings: 21 -sized pats are the best for heen seedlings, and 32 's for Grove-end Scarlets. The latter variety answers for early foreing better than an亏 nor March. when Strawberries are wanted by the ent of Marcb Having filled the pots with the cumpost, they are ron each at once to the Strawberry quarters, and an July, when the plants are emitting roots, is the pro time to begin the operation of laying; hacing prev prepared a quantity of peas, the runed and their roobs into the ground are caretily remured, and the plants aserted in the puts and pegged down. I put three plater
 will only require occasional watering in dry weather When the plants are well ronted. whicin is ia about are month. I detach them from the old plants, and the emoved to their winter-quarters. Beds are preparem in old tha a bottom of coal-ashed, ith a stratum of
ashes s.x indters nide, and as high as the top of the prots. mhich prevents woums from nurking amongot them. I
hare prepared above allousand pots his setson in this way,
 mhich are now (the , th ugust) strong platts the folinge
covering the tops of the puts, and they laie till two covering the tops of the puts, athil mey I leve always obtaned a good erop, and the teedlings sill attain a size equal to any I have seen produced on the natural beds.
 in a small greenhonse at Camberwell, which were superine to any other sort : the beautiful colour of the fruit, its large size, and ito good flavour, will make to Lord Southamp. tom, Whilllebury Lodge, Towcester.

\section*{FOREIGN CORRESPONDENCE}

Hoburton, Van Diemen's Land, April 8, 1841.- For the following most interesting extracts from the private letter of an officer with Captain James Ross \({ }^{8}\) expedition
of discovery, we are indebted to the kindness of a friend :of discovery, we are indebted to the kindn
"The sesson here has been dreadfully ho
is burnt ap. Lady Pranklin is gone to New Zealand, in the Favourile, but is expected back very soon. For ourselves, we have indeed had a most glorious and successful ervize to the southward, and seen many quite unexpected
Fonders, though it has been very unproificio of plants. We reached \(78^{\circ} 3^{\prime}\) south lat., and approached the south magsetic pole, as near as was possible, within 150 miles, having laid duma its posituon with perfect accuracy from observa-
tions made to the N.W. and S.W. of its position. We have rua along, and roughly surveyed an enormous tract of land, extending from \(72^{\circ}\) to \(79^{\circ}\) S. lat.; every part of
it farther south than any hitherto discovered ; and our progress was finally arrested by a stupendous barrier of ice running 300 miles \(\mathrm{E}_{\mathrm{E}}\) and W. Our intention was to make observations on the actual site of the Magnetic
Pole, and also to institute a series of experiments with such instruments as must be used on land. From the first object we were debarred by the pole IVing inland, among a stopendous chain of mountains, covered from their tops to the sea-beach with everlasting snow and ice. Nor can the mainland be anrywhere approached. as the the entire coast flling up all the bays, and sometimes extending in an unbroken line for many miles. In approaching such a coast, danger arises from the chance of a shift of wind, agale, which would prevent our working off, when all the
ice would set down on the coast and give us what is called 'a jamn;' or (quite as bad), we might find ourselves becalmed, and frozen in, for the sun has here no power to melt the ice-cven in the height of summer : wintering in such a latitude, Capt. Ross pronounced to be quite out when a carrent should take 'the pack,' which should imbed us to the north, and melt it in warmer water. All stupendous masses of ice, and their singularly regular aboure; they were all square or oblong squares, generally about 60 or 100 feet out of water, and of course 7 times that beluw it, for \(7.8 t^{\prime}\) is are always under water. Thes are all formed along the cuast and drifted north from it; 84 hare been counted at one time from the masthead, of all sizes, from \(1-4\) ch of a mile to 6 miles lung:
this was in about \(\% .\). ' Nouth latituue. The whole of the land surreyed, trom \(7^{\prime} 0\) ' to 79 , presented the appearance of range upon range of peaked mountains, clad everywhere with snow, except, indeed, where the precipices erposed to constant to allow of its lying : and these are suow rolling down from above along their faces, and sweeppransported from them these erratic boulders. a gale, remove along with them these erratic boulders. All the coast of one island
on which we landed is surrounded with masses of ice more or less covered with sand-stone and rocks. In such situations it is impossible for plants to grow, and when I add, that the whole time we were within the Antarctic Circle the thermometer never rose above \(32^{\circ}\), and very rarely was even so high, you will not be surprised; on
board ship the average range was \(18^{\circ} 24^{\prime}\) (never below \(12^{\circ}\) ); of course it was much colder on shore. The sun is Very powerless here: in \(75^{\circ} \mathrm{N}\)., the sun in summer raises the mercury in a black bulb taermometer to \(100^{\circ}\) and upductive with the land: its temperature averaged \(22^{\circ}\), and 280 is the freexing point of sea-water. When near the tation in the sea, but I am now convinced that in this longitude vegetation does not enter the circle. Emerald fand, of which we passed some sea-weed, is probably the phuthern limit. The success of this expedition in geographical discovery is really wonderfal, and shows what perseverance can do. At one time we thonght we were going land, turning fro. Pole when we were brought up by the cano spouting fire and smoke in \(79^{\circ}\), and about 9000 feet ligh covered all over with eternal snow, except just round you no : tea whe the heat had melted it off. stupeme u- indimpusing, especially when there was any fine weather; with the sun never setting among hnge bergs. the than I have ever seen them in the Tropics, and all the coast one mass of beautiful peaks of snow; when the sun getalow, hese reffect the most brilliant hints of goidem Fellow and semetet. And then to see the darlit cloud of fect columen; one side jet-blact, the other rofecting the
colours of the sun; tuming off at a right anyle hy some
currentoswind andstretchumeny mileo to leeward. This was a sight surp tsinge everytimg l could inagine. and nas stremedy letiahened br the idea that we had penetrated far beyond what was once thwight practecble It really our uann tutal insignificance and fetplesaness. Everything beyond what we ted is enstin in a nytery reserrod
for future voyagers to fathom. During our stay at Lord Auckland's Groupe, (from the 20th of Nus. to the 1?th of Dec., ) me found twn Tree Perns and many new species. batural order, among them. Thiere are three nadecceribed species of Andrea among the Mosses, a fine new Cono. stomum, Bartramia, and Polytricham, together with some others; two pretty Hookeriæe, \&c. At Capbe grow there our stay was very short. The two Tree Ferns grow the

Fispers communicated to the Rogch Inditution of South Wales. By Lo. W. Dillwya, Esq., FR.
In this little pampllet there are some observations on the effect of the wiater of \(1840-41\) on the Shrabberies at Sketty Hall, near Swansea, frow which we make a few
extracts.
"This frost. was of longer continuance, and nearly, if not quite as intense, as that of \(1837-8\) : for," says Mr
Dillrya, " thruyh I have nut nuteil th. thermometer \(t\) be mucia beinw \(20^{\circ}\) at sikety, yet it descended to \(10^{\circ}\) some pleas in tha' ne ighmarhond ' \(T\), aceonat for the
less injury whicis our shmbueries susthmen, it must be recollected not only that the winter of \(1837-8\) was precess of ligatication, unt that the reather in December was so unusnally mild, as to have given a premature stimulus to vegetation; and from these circumstances tree and shrubs had become particularly susceptible of injury When the severe frost set in at the commencement of of the damage was occasioned by the repeated aiternations which, towards the end of January, took place from inthe Laurestinuses, and other hardy evergreens, first exhi bited any mark of distress in this arifhourhond. In our last winter: there has been no such abrunt alreroations the wood had become well ripened in the preceding sum mer; the weather in December had been seasonably cold odoratisamam; and no others than the following had aegna to droop:-7iz., Acacia dealbata, 14 feet high, so far as it extended beyond the protection of some adjoining Daurels ; Brugmansim coccinea, and Melianthus major During the irst week in february, the frost was accomof Acacia armata, and several other tender evergreens, which, at an equally low temperature in the two preceding
montbs, had retained a rich foliage, then first assmed a acorehed appearance and ultimately died, or at least lost heir leaves.'
The following are the more remarkable plants which Mr. Dillwyn staten to have been uninjured:-Arbutus Andracune, hybridu, and procera, uninjured or nearly 10: but A. Unedo, particulary when under 12 or 15 Jears A anara dentacs, upper s. juts sorntiy injured; Benthamis

 W. Wall uninjured, amd C. .thyrsimorus at simgletunhas the top ewotz kiled; formus maernptyila, ralsed from Hi

 anfulin b-aly uafuat syainst \& Wall, protected onlr by a ezping. Destcia subia anul corgmjusa quite uniajured aensis, ruru, glatiousi, ant palreralenta, have mly the top stuotsingured. bat E. flortucnda at Singleton is killed
nearly to the ground; Hippophae salicifolia, uninjured; J. pubigerum uninjured; J. humile, at Singleton, is consideraby hurt ; Leptospermam scoparium and pubescens, on an E. wall, and oboratum on a S. Wall, uninjured, or
very nearly ao; Ligustrum Incidum, uninjured; Pæonia mouton, and papaveracea, here and in a mure esposed situ ation at Penllergare are uninjured; Paliurus aculeatus, much injured; Photinea arbutifolia and \(P\). serrulata, unin jored; Pistachia terebiathus and.vera, uninjured ; Pit tosporum tobira, uninjured; Raphiolepis rubra, in front of a S. wall, lost only a few leaves, and is now in full blossom; Rhododendron arboreum, and many hybrids and other common species, in exposed situations, uninjured Rosa bracteata, microphylla, and multiflora, had the top branches more or less hurt, but the Banksian, Mus Cluster, and other less tender Roses were uninjured; lanum crispum, not materially hurt against the front of a conservatory ; Spartium junceum, nearly killed almost leton, I have not observed any other species besides S scorpius to be-mare than-slightly injured. Stranveesia glaucescens, only the last year's shoots injured.
CALENDAR OF OPERATIONS for the ensuing Week. We stated in a former Number that many Orchidacese require removing to a cooler temperature than they are nsually grown lead to serion- mistaine, if not done juticiously and with proper subjecte, we will sugyest one or two examples of plants refuiring
different treatment to produce the same effects. It is well known
that in their native habitats, difierent species are fund in fower that in their native habitats, diferent species are fund in flower
at all seasons: and that the seaono vary so much as not to be
aliti favourable to the production of flow ers in them all, althouch all the seasons are adorned with some. This will explain why some specie, are recommented or warm and dry temperature, as well as to the hot and moist
growing season, for the production of flowers : for without this change many plants would continue to grow until their powers
were exhanited, but without flowerinu, as has een the case with were exhanted, but without flowerine, as has teen the case with
many fine Orchidacea, before then culture was understood as now Thoue requiring a cool and dry treatment at present, are such
as thower when the plant is at rest, as Dendrobium cærulescens, nobile, Cambridgeanum, \&cc. They should. therefore, be placed in a temperate house, allowed plenty of air, and no water for six weeks, or twe months, by which time their tlower-buds will be
formed; those requiring a warm and dry treatment are such as Dendrobium tensiflorum, acgregatum and others, which flower the stove, but with very little water until their flower-buds are seen: and thone requiring the recular treatment of growing
plants are such as Cuelugyne, Cirmoea, \&c., which flower most plants are such as Cuelugyne, Cirrhea, \&c., which fower most profusely whilst in a growing state, and which a lengthened pe
riod of dryness woult ensure the loss of their leaves and health riod of dryness wouh ensure the los aND ORCHARD.
in the height of thei growth, great care must be taken to give air at every opportunity, let the favourable period be ever so short induration; for curs, the want of air is certain to prodace long, pale-coloured, be prapdect aminst in succession iruiters, or the usual secretion stored \(n ;\) by them at this period will be so diminished as to prevent their showing truit when they ought, or at least cause the
fruit to be proportionably weak and small with the leaves, and fruit to be proportionably weak and small with the leaves, and
probably deformed. As the plants are now growing fast, ently, especially large ones, if plunged upon smaller pots, as we have recom-
mended, their drainage being thereby rendered more perfect, and no accumulated moisture remaining abcut the bottoms of their puts; never use cold spring water, rain-water is best for watering this purpose; manure-water may be occasionally given, according to the state of the plants - the stronger and healthie
is ripers. - The main thing still to be attended to where the fruit the sun bat any drying intluence; and when the contrary is the damp, as abtanine frm the use of water in the houses, and hig the lights a little, to create a current of diy air; immediately
remore any cracked or bad berries as they appear. Where the system of successional bearing-rods is practised, that is, pruning out the oldest of three every year and supplying its place by the be performed as snon as the frut is cut, and the wond throroughly ripened; this method being chiefly followed by those who desire large bunches. The effects of early pruning, even before the laves have fallen, will be that the secretion, which would have
lieen expended in the removed branch, is deposited in the remain ins oucs, rendering them additionally vigerous, hut this system if praning is not so well adapted as the spur for early crops.
PRacin-zouss. - Give the late houses air to the fullest extent during the day, but reduce at night, or close entirely, if cold o ret; destroy mildew and red spider with sulphur, in the manner out any unnecessary or crowded branches; see that the lights
and fittings of the earliest house be put in the best condition for the fortheoming season.
Mesons. - Do not allow too many fruit to set upon the late kinds, and place those wimich are set an,upist and somewhat larly, to remove superfluons growths, and decaying or crowded leaves; trakecare that a sufficient heat is kept up in the beds to aliow you occasumally to dry the plants, by giving air doring two conitocsly, bat freguently dew the plants from a fime-rosed watermg-pot on fine days.
CL: MaERT. - The above
hers in frames or pits : especially aroid allowine thero hear themselves: throe plants in the ridres should have the hand-giasses continued over them, and if they are corered with nats dhrmg end wet niglits, it will be of advantage to them. Candoons. - May now be earthed-up for blanching, first en-
reloping the length of stem to be earthed with strav or hay-bands. Letruck.-Sow the kinds for wintering out-of-doors, if not al-Oslows.-Strong-necked ones should be carefully laid dow ripening, and, consequently their after-keeping; some white Spanish or brown Portugal may now be sown in a sheltered situation for spring planting.
Spinach. - Sow the main winter crop, as recommended in our
last, in a sheltered situation, but not in a shaded one, as min Salading.-Keep up a succession of all hinds
known means to prevent their increase. Keep all the wall treen neatly nailed in, and continue to thin out superfinous branchen
from Vines, \&c.; remove rumners from Strawberries; attend to early buds and destroy weeds.

Srovs.-Attend to Orchidacese and other stole-plants with
water as their different stages of growth require; hut generally Water as their different stages of growth require; hut generally
much less is necessary now. Keep, climbers reyularly tied in, but not so close as to cause an appearance of formality; check any
dispocition to make second weak grow ths in flowerinc plant, reducing the water given them: continue to give air ireely. (ireenholise-Geranium, which have been pruned down,
and whose buds are again started, may be reduced to smaller pots for winter; hard-wooded plarts out-duors which attempt to make late adum-grow from the most season should have them pinched off, and be rather more spar,ng of water
and Mignonette in pots for flowering in spring; pot Auriculas and Polyanthus, if號 a, few may be reserved in pots for forcing in winter. Continge to off the earle pot off rooted plants for the flower-garden; pot as rooted; put in cuttings of Heartsease for the spring bloom;

The weather latterly has been against high keeping ; but persevere to maintain cleanliness by keeping all plants neatly tied
up, the lawns mown, the beds and borders neatly raked, and the walks and edgings neat and clean; see that the early buds of foses, \&cc, are not pinched by the ties; remove decaying flowers
from Dahlias, and all other plants, unless seed be desirable NURSERY.-Cuttings of Laurel. Yew, and similar evergreens may now be put in. Seedling evergreens may be carefully trans. may now be commenced, and continue the pruning of youns trees in rows; examine ali newly-budded ones and dertroy weeds.
FOREST AND Coppice Woons-Continue commended last week, and the cleaning and dressing of hedgea

> NOTES FOR SMALL GARDENS.
ew dry days to gather such seeds as are ripe; they should carefully be lept separate, and if in the sun; but seeds of curious perennials had better be solm in pots directly they are ripe. Dahlias will require constant attention; we mentioned last week a simple means of securins ties are looked to, for sometimes the stem is found haif cut this happens matting, after having grown a shot time. When another secure one made near it. Pelargoniums that have begun to make a fresh growth after being cut down, may
potted; in duing this, the old earth shourd be entirely shaken from applied in the spring. When repotted they should be placed in a frame, where they may remain till they have rooted, after which
they should be removed to the greenhouse. Any rooted cuttings or seedlings that it is desirable to grow on fast ehould be repotted, Winter. Any specimens of tender plants put out in the opem
border for the summer, if out of pot, should be frequently watered and afterwards have their roots cut, before being taken up.
Without this precaution such plants are almost sure to die. Attend as before to walks, lawns, and insects.

\section*{ENTOMOLOGICAL NOTICES}

Therer are few of us but have been disappointed on cracking a maggot, instead of the kernel ; this is caused by the Nut ween
(Balaninus nucum). and sometimes its ravages are carried to such an extent as to destroy the entire crop. The inseet is brown,
with darker bands, is about a quarter of an inch long, and has a long horny bealt, about the middle of which are placed the anpiences it with her beak or rostroung state, the female whil she deposits a single egg. The maggot is hatched in about : fortnipht, and continues feeding in the interior of the nut till it is full-grown. The nut falls when the maggot is full-grown, and thes
eats its way out, and goes into the earth, where it becomes a pupa. The maggot has no legs, nor, indeed, has it any use for remains on hatched in the midst of its food: and when the nut remed and falls amost immediately to the ground. The only frequently shake the trees, which will cause all the eaten nuts

 cumbers for three years, are some species of Ixodes, supposed to
have been introduced with the Fern which is used for litere. It
might easily be mistaken for the Red Spider, but evidently does not belong to the same genus. As Ixodes ricinus attacks dogs, and yet abundant nmongst Fern, it would be rather singular to
find an animal so nearly alled, if not the same, abstracting its X. Y. Z.-Common rolled Tobacco will answer quite as well,
and even better, than shag, for making tobacco-water. The proportions in which it shoulu be used may be rather less than the latter, as it is stronger. We consider fumigation the most effec.
tual means of destrying the aphides in houses, providing it is properly done.
J. D. Parks - The principal recommendation in your Pelargo-
nium is its size; it is the largest we have seen, measuring more than 2 inches each way; the fower is of a uniform ground coIour, with a pencilied spot in the upper petals. It
old class of flowerc, held now in slight entimation.
An (Ins;inal Subseriber.-The Senteh Rose may be increased by layering, but the layers are seldow fit to remove before the
second season. The layering must be done about the end of June, iu the orrinary way, and only the smaller or slenderer shonts used for that purpose. Seotch Roses are very difficult to
strike from cuttings ; when this is attempted, only the youag strike from cuttings; when this is attempted, ony the youg
wood must be used and struck on heat. The quickest way to increase them when the plants are young, is either to bud or graft them at the proper seasoln for such operationss), choosing either
the Sweet or Austrian Briar for the stock on which to work them. the \(S\) weet or Austrian Briar for the stock on which to work them.
The grafting must be performed by rind-grafting, and if carefully The grafting must be performed by rind-grafting, and if carefully
done succeeds very well. We are not acquainted with more than one perpetual kind of Scotch Rose
A Hellthmum's plants are, 1, Phalaris arundinacea, and 2, the
variegated variety of the same plant The inseats are, No, variegated variety of the same plant The insects are, No. 1 ,
Tortrix oxyacanthana ; 2 . Tortrix tripunctana; 3 , Phryganea varia; : Bombyx Caia; \(\bar{\delta}\), Geometra einguaria- - \(R\).
Mr. Barnes. - The nofice we gave in a former Number of your Pansy is confirmed by the specimens you have now sent us; its
beaoties and defects were then fairly stated. Your seedling 24, is not so good in form, and the notch in the under petal is a great objee
very pretty
T. A. M.'s Caterpillars are those of the Currant Saw-dy, figured and described in this day's Chroniele: and the orange-bodied in-
sect sent with them is the parent fy, called Nematus trimaculatus. As there is great fear of the caterpillars immediately reascending the trees, when they have been forcibly detwched by
syringing, the stems should be previously brushed over with train syringing. the stems should be previously brushed
or fish oil. The two larve are Wire-worms. \(-R\).

俍 get the plants up and strong enough to stand the winter. They should not be potted in pure loam, but this should be well mixed with peat, leaf-mould, pad sand to make a free and open compost. In winter they shont be kept in a warmed pir, when spring
perature of from \(50^{\circ}\) to \(55^{\circ}\), and not overwatered. comes round, repot them, top the young shoots, and water more
liberally. You will find it the best way to keep the plants always in a temperature higher than a greenhouse, unless in the summer and autumn months, when they begin to fower. If once allowed cause, it is almost impossible to recover them. The name of the flower sent is Vallota purpurea
Clerieus will be able to reduce our Chronicle. at the end of a year to the dimensions of an ordinary volume, by cutturg orf the three last leaves of each Number; , that part the Index, which we intend to make as complete as possible. We are much obliged by our Correspondent's suggentions, which, with many others, will be ta
menced.

NEWS \(\theta\) F THE WEEK.
Tere chief event of the week has been the meeting of the second Parliament of Her Majesty, which was opened on Thursday by commission. The proceedings in the House of Lords were confined to the preliminary forms on the opening of a new Parliament ; after the Queen's commission had been read to the Members of both Houses, the Peers took the oaths in the usual manner, and the House of Commons retired for the purpose of choosing a Spoaker, when Mr. Shaw Leferre was unanimously re-elected. In the brief debate which ensued, Lord John Russell and Sir R. Peel, as the leaders of their respective parties, took occasion to express their entire apprebation of the ability, judgment, and impartiality with which the Speaker had discharged the duties of his high office in the last Parliament.
Our foreiga news is of considerable interest:-We learn from France that the Minister of Finance has addressed a circular to the Prefects of Departments on the subject of the late census, explaining the law, and calling upon the authorities to suppurt it. It appears, however, that the municipal bodies continue to resist the measure, and hostile movenents have again taken place in several provincial cities. The fetes, in honour of the inauguration of the statue of Napolenn at Boulogne, have passed of quietly and without any manifestation of political feeling, although an attempt was made to create a disturbance for the presumed parposes of plunder.In Spain public attention is completely absorbed by the manifesto of the Regent in reply to the allocution of the Pope, and by the order for the partial disbandment of the Royal Guard. Some fears of an insurrectionary movement appear to have existed, but the precautionary measures adopted by the Crovernment have hitherto been successful in maintaining order. The manifestu addressed to the Pope is very energetic in its tone; it declares that the time is gone by when the policy of nations is to be guided by the mandates of the Vatican, and that the Government will hold no communication with the Holy See until it has acknowledged Queen Isabella as the legitimate Sovereign of Spain.-From Germany we learn that great anxiety still exists in Austria on account of additional failures in the commercial world, and in some parts of the empire trade is said to be completely suspended. In and Perland a report is carrent that France, Austria and Prussia have demanded a conference on the subject of the Argau Consents ; and accounts from Berne inform us that the Diet, having in rain demarided explanations of the recent sale of the conventual property, has resolved on calling upon the canton to snspend such operations and withhold the ratification of the sales. - From the Levant we learn that Suib Bey, the son of the Pacha of Egypt, has had an audience of the Sultan and the great officers of atate, by whom he has been received with much distinction: the affair of the tribute is not yet settled, bat no doubt of a speedy arrangement is entertained. The accounts from Syria are unsatisfactory ; anarchy still prevails throughout the province, and the inhabitants of Lebanon openly refuse to acknowledge the authority of the Sultan. The rebellion in Candia is virtually suppressed, a large number of the insurgents having surrendered themselves to the commanders of the British ships, in which they have since been conveyed to Greece. In Eeypt the Nile is rising farourably, and a plentiful harrest is anticipated. The Pacia is actively employed in the arrangenent of his forces. preparatory, it is said, to a campaign in Arabia, at the request of the Porte.-Accounts from China have been published in the Ministerial Papers during the week, which are said to have been delayed until the present time, in consequence of their arrival at Bombay too late to be included in the last overland mail; if authentic, which appcars to be doubted rthe Chinese Government has tiolated every engagement with Captain Elliot, and the Emperor has issued a decree commanding the authorities to destroy the Teas and other articles of British commerce. The arrival of the Great Western has, bowever, brought news from China which appears to confirm these statements ; this news is not of so recent a date as the preceding, but it states that an at:nck on Pekin was expected on the return of sir \(G\). Bremer from Caieuta. The intelligence from ti.e United states mncuaces that the new hili for constructing additional shifsof war aid steamers if the defence of the coast has beem passed. The that of Mr. MI Latici 13 not expected to take place before September, and the venue bas beea changed, by order of the Supreme Court, to the
county of Oneida. The report that an appeal would be mavie Ly Mr. M-Leod against the recent decision of the Court is said to be unfommetet.

\section*{7anome Netos.}

Court.-Her Majesty, Prince Albert, and ise Princess Wednesday. Her Majos'y pal a rasit to H.R.U. U. the Fingal has suicceded the Marquess of Headfors as the lord in waiting on the Queen; and the Htou. Mr. Howard
has been sueceeded by Col. Buckley as the equerry in
waiting on Her Majesty. Creation of Peers. - It was announced in the Gaselte of Tuesday, that Her Majesty has been graciously pleased called to the Upper House by the title of Baron Maltravers. A peerage of the United Kingdom has been comOxenford of Cousland. Peerages of the United Kingdom sit as Baron Ennishowen and Carrickfergus ; and on the Earl of Keamure, win) aill take fis setis as Burom Kenmure. Sir Hussey peerage by the na:ne, style, and tutle of Baron Virian of Glya and of Trues, and sir Herary Parnell. Bart,, has jesty has also been pieaved io raise Lurd Segrase to the digrity of as eat, uy the hane, atyic, sed utie of E.ml Lord Barham, who has been created a baron, viscount, and title of Baron Noel of Ridlington, Viscount Campden of Campden, and Earl of Gainsborough.

Official - Appoinlments.-The Hon, and Rev. Baptist Noel has veen appoistud one of the Chaplains in Ordinary to Her Majesty, in the room of the late Rev. Dr. Scotto
The following appointments also appeared in the Cazctte of Tuesday :- MI. ... P. Aulass, now secretary to Her to the Mexican Repmblr. Sir Henry Potinger, Bart, to
be Chief superinentent of Brikish Trade in China: Mr. Charles A. Lander, to be Consul at the Dardanelles; Mr. Robert Steuart, to be Chargé d'Affaires and Consul.General to the Republic of New Granada; Mr. Alfred Septimus Waine, to be Consul at Cairo ; Mr. Robert taylor, Consul at Ostend; Mr. Richard Ryan, to be Consul at Para.

Parliamentary Movements. - It is reported that Mr. Hume will replace Mr. Chalmers as member for the Mont-
rose burghs; Mr. Chalnuers, it is said, being willing to resign in fivour of that gentlemen - A ministerial paper atates that Lord Rancliffic has announced himself as a candidate on the Liberal interest, in South Nottinghamshire, whenever a nem election shall take place.-A vacancy has occurred in the representation of Bradford, in consequence of the death of Mr. Lister.

Post Ofice-A ministerial paper states that measures are now in prigress for effecting a considerable and benetricts. The principle when has heen adopted is said to be the establishment of a post-office in every registrar's district which is at present without one: an arrangement of which are now tent and wome even twenty miles from of which are now teln and onme even tweuty milles from
any post-office, will. for the first time, enjoy all the conveniences of communtcation by post.

\section*{FForcian.}

France. - The hate Fisor al Measures. - The Minister of Finance has addressed a eircular to the Prefects of the departments on the sutject of the census, expliaining the ments wheh have iseen made respecting its iutent and operation. In many places, however, the municipal
authorities still continue to resist the measure, and conauthorities still continue to resist the measure, and con-
cur with the people in contemning ir. It was asserted, some time since, that the Municipal Council of Paris had adopted resolutions in oppositinn to these measures.
This; however, was then contradicted by the ministerial or gans; but the matter is now att at reat, by the publication of the minutes of the municipality at its sitting of July 16 . This document, though uinportant as indicative of the teresting to our readers, is it is merely a dry legal discussion of the rights and privileges of municipalities as laid down by the law, It instructs the Prefect to apply to
the Ninister of Finance, and, if necessary. to resort to all legu means, in order that the tax might be colleeted in conformity with the law an established in the time of the the central gnvernment, and concluden by characterising the whole fiscal system of M. Hucann, "as unprece dented, intolerabie, and anti-municipai." Some further
disorders have taken place in the departments, arising from the same cause: the must serious of which appear to have odurred at St. Lirrade, near Villenenve d'Asen popalation, and the peasintry of the neivhbourhood has ing flocked into the town, the revense odicers were com pelled to hide themselves and effect their escape to Agen fect having no was stopped and robbed, and his disposal took refuge in the central prison of Eysses. A barricade Was raisedupon the bridge situate at the entrance of Villewas for a short time interrupted. Orders were immediately given to dreet a sufficient body of troops to the town, but before their arrival the inhabitants seemed to hare become awre of the favlt they had committed; and mencr. The barriende what then removed, and ti.e commanic tions re-established. Serious disturbances aist Groups assembled before the houses of the town-councillors who bad exrressed an opinion favourable to M. Hupersed. huve,tr, at the appearance of the military the 13 th, fresn bodies of the people more numerous than those of the preceding day were formed. They broke
thre tening crits against the municipal authorities. All these demonstrations were suffered to be made for some the people again dispersed. The principal towns where the census has alrendy been successfully opposed, are Lille, Caen, Arles, Aix, Beaucaire, Strasburgh, Beauvais, and Dijon.
Disturbancts at Toulouse.-Tranquillity continues to prevail in this city, and all fear of further disturbance ordered to be surrendered, were heaped up in a cart, hang they were delivered peaceably, but amid a great concourse of people. The municipal councils of Villenouvelle and Montesquien, which protested against the late fiscal mea sures on the loth inst,, have voted a congratulatory ad-
dress to the members of the late municipality of Toulouse and the national guards have prepared an address to thei comrades of that city. It is further stated, that sym foms of dine at Tonlouse and thed the of he battations dissatistied, as they cannot understand the necessity fo the severe duty 10 which they are subjected, white th population continue so peaceable and inoffensive. The but in consequence, it is stated, of the alarming intelligence reveived in the morning of the 14 thy from the neigh bouring districts, its resumption has been postponed to
the close of next week. A supply of ball cartridges was orwarded on the 13th from the arsenal here to Agen, to be distributed to the troops on their march for that town rom the 10th and 11 th military divisions.
teet of Admiral Hngon did not make inform us that the giers; that it had been met at sea, on the 8 th inst, br steamer hastily sent off from Toulon, a few days before with despatches for the admiral; who, it was said, had been ordered back immediately to that port, where he was hourly expected on the 12th. The same accounts add Hat an English vessel of war had constantly followed the movements of the squadron. Subsequent intelligence has been received of the arrival of the admiral with his squa-
dron on the 14th; when he was ordered to proceed to the dron on the 14th; When he was ordered to proceed to the
island of Hyères. Information has been received from the same place, that the Prench were already withdrawing the hnspitals which they had established in the island of Minorca, in consequence of the cession demanded by Great Britain of a footing in one of the Balearic islands, shoul the French be allowed to remain in that island; and that so many invalids had come from thence, that it would found necessary to form an addition to the militar bospital at Toulon. It is supposed that the hospita for the sick returning from Africa will now be stationed at Lassusse's division for the Levant was believed in Toulon Lassusse's division for the Levant was belie ved in Tisoulon and Foy to Greece, the real ohject of ich, does not appear to be known. The French navy is about to enhse this year a great number of recruits; which cirthe line are immediately to be paid off, leads the journals to conclude that the disarmament of any part of the fleet is not contemplated.
Fites at Bonlogne. - The long-anticipated fetes on the inauguration of the statue of the Emperor Napoleon have been celebratel in this town with great pomp and cere mony. Although, however, the rejoicings were very gene ral, there does not appear to have been that degree of e thasiam manifested which was expected from the character of the Prench. As far as all political feeling was con cerned, scarcely any appears to have been manifested, and the event would have passed off with merely peaceful amusements, and amid the greatest tranquillity, but for an attack on the Theatre on Tuesday night, which rendered military interference necessary. It is however stated that the disturbance was got up either for the sake of plander or for the gratification of vindictive feelings, and had no connesion whatever with party politics
Spais.-The new Regent does not seem to shrink from energetic measures, as the difficalties of his position in crease. His uncompromising replies to the ex-Queen's protest, and the Pope's allocution, were accompanied by an act which, it was thought, would give rise to an insur-
rectionary movement - the partial disbandment of the Rectionary movement- Gue partial disbandment of the now publishes a Captain-Generat Don Jose de Palafox, Duke of Saragossa of the functions of Commander-in-Chief of the Royal Guard, which is confided temporarily to Major-General Don Pedro Chacon, Captain General of New Castile. The decree for he re-organization of the Guard bad hitherto ment, it seems, was rell prepared to repress any seditious attempt, and had ordered the arrest of the two sons of General Balbos, who were believed to have repaired to Madrid for the purpose of profiting by the diseontent of The Royal Guard to get up an insurrectinnary movement. The siz suppressed regiments of Infantry mustered 7,200 men, the two provincial regts. 2,400, the two regts. of and the Brigade as 40,000 soldiers of the line. The Government manifesto, in reply to the Pope's allocation, briefly referred to in our hast Number, appears to be of a rather hostile character and the Pope is told in no courteous terms, that the time is gone by when Cabinets are to be affected by the thunden have any communication, or permit any intercourse, with have Holy communication, or permit any intercourse, withe young Lsabel II. as the legitimate Queen of Spains and
that no attention will be paid to any of its mandates. Thi important document, which is of considerable length, con clades with the following words:-" Everything ennsiderec the violent allocution of the Holy Pather must be regarded as a declaration of war against Queen I sabella II., against manifesto in farour of the vanquished and expelled Pra tender; it is a scandalous provocation to schism, di-order and revolt. The Government of her Majesty, withou being wanting in good faith and honour, cannot silenti countenance so enormous an attempt, and it is its dot to prosecute the repression of that act by every means
placed within its hands-by reason, propriety, the discipline placed within its hands-by reason, prupilety, the discipline so indignantly insulted." Since the publication of this manifesto, the priests had been openly insulted in th streets of Madrid, and it was even rumoured that the
Regent would declare war against the Popre, dence was given to the report. The new Guardian con tinues to change all the members of the Queen's house hold ; the Duke d'Osuna had sent in his resignation as Chamberlain of the Queen, and 11 Ladies of Honour had pied in passing several bills voted by the Second Chamber The committee appointed to report on the letter of General Don Francisco Narvaez, who had written to the Senate duties, being in France, adding some severe reflectiont the same time on the vote of the Cortes depriving the ex-Queen of the guardianship of her daughters, had declared that the obnoxious letter was drawn up in too offensive terms for the Senate to take any notice of it of Deputies have made their report to the following effect that the decree of the Provisional Regency of 21 st Jan. for the capitalisation of the consolidated debs, foreign and domestic, up to the end of 1840 , is extended to the over due interest, past and to come, of the same debt of the count to the Cortes of the result of the capitalisation by virtue of the same decree of the present law ; and that the laws of 17 th April, 1838, and 21 st June, 1840, are re . The Government has renewed its orders to the aral deputations of the Basque proviaces relative to the thiration, on the 10th, of the period for the regolation of assuring them of its determination to do its duts an casting the responsibility of any resistance upon the commissaries of those provinces. Very little hope appears to be entertained in Madrid that Señor surra Y. Rull, Minis ter of Finance, will be able to overcome the difficulties of his post, and from the opposition on the part of the capitalists his speedy resignation is anticipated. It appear that satisfactory explanations have been exchangen between iras, which we have referred to bers, the latter, it is stated, admitting that they have bee in the wrone. -Letters fromstre, Cadiz, Puerto de Santa Maria, Jerez de la Frontera, Ciudad Real, and Ma laga, anuounce that shocks of an earthquake had been fel in those towns, lasting some seconds, but no damage had occurred. In the sitting of Chamber on the lot inst one of the denuties accused Government of bein the sole cause of the incereasing diseredit of the finances of Spain, and attributed to their weanness the reaction aime Intertor both replied with some energy to this assertion acknowledging, indeed, the existence of plots on the pa of the fallen party, but at the same time showing that Government had taken every measure to defeat them They said that the army of Catalonia was certainly destitute, but not more so than the other corps of the army which was owing to the circumatance of Government no having funds sufficiently considerable to dispuse of. The revenues from Cuba were mortgaged for two years mile, those from Puerto Rico for three, and from the Philip pines for four, and the produce of the mines of Almade would not be reversible to the Treasury before 1843. Suct they stated, was the financial situation of the country the accession to power of the Gonzales Ministry; sinc which time the present Cabinet had done all in its power to equalise the receipto and the expenditure. Fen thonsand troops have been concentrated by the Regent in neighbourhood
Portugar-Our intelligence from Liabon is to the 9th inst. The capitalisation project of the late Roy Commission, ggainst which the Deputies Committee had delivered their report in conformity with the views Government, has been brought under discussion, and re jected by the Chamber after three days' debate by 65 sote against 16. An estimate of receipts and expenditure founded upon the riews of the royal commission, was sub mitted to the Chamaber, and referred to the apeci 1036 , committee. It appears that since the revolution of 180 twenty months arrears have accumulated, showng the estimates calenlated on as arisin year. The new tares are to favourahe, and that there whibe a definit of anno onto this year. It appears to have been the constant practic for years to put down the decima at a sum which cod the 2.000 and 2500 contos calculated on, has not averaged mone than 1.000 contos, whicu is neariy the exact sum a
 past, which the incereased duties, it is theught. will haruly remedy. The Spanish Governoment are tanng stind into measurea to prevent the smugghng of

Orders from the north of Portugal to be countermanded. A Carlist guerilia had also appeared on the frontiers, and A great excitement appears to prevail in Spain against the
Lisbon Government, it was feared that the Spaniards would take advantage of the event to commit some act of sgression. Several severe shocks of an earthquake had so terrified the inhabitants that many of them went out at night to sleep in the fields, but no serious damage has been nigbt to sleep in the felds, but no serions damage bas been 10 p.M. on the 2 d inst.-Accounts from Lisbon, dated the 31st ult., state that the secret society called the "Society
of the Faith" has organised new clubs at Cintra, which accompanied the Court to that place. The Comte de
Paiha has denounced as members of the society the Dukes Paiha has denounced as members of the society the Dukes
of Palmella and Terceira, Count de Villareal, the Marquis of Prontera, and others exercising great influence over
pablic affairs. The diplomatists of the Holy Alliance, it is said, are daily expected to foment the dispute with Spain; and the Court of Rome has by secret instructions ordered serve as clubs for the reception of the religious and the secular orders, whu are to be then further initiated into
the policy of the Holy see in its bostilities against Spain. the policy of the Holy see in its hostilities against
All letters from Spain are opened at the Post-office.
Germasy.-The intelligence brought by the Journals this week is not of much importance. Great anxiety still appears to exist in the financial world, and two first-rate
houses, which however are not named, are said to be housen, which however are not named, are said to be and, others, whose farlures we have before reported One of the principal causes of these commercial disasters is supposed to be the speculation the bankers nation of the Egyptian question ; but the news of the Oriental insurrections having thrown out their policy, serious deficit awaits them. Every effort for the pacifiserious deficit awaits them. Every effort for the pacifi-
cation of the public mind appears to have failed, and new bankruptcies, more or less considerable, have taken place at Prague, Pesth, Trieste, \&c. It is added that in Bobemia also the financial crisis of 1811 was nothing compared to the stagnation of trade this year, aggravated by the recent failure of the Vienna houses. As there is not been compelled to practise the credit system; and this source having now failed, a suspension of payments has removed the restrictions on the export of horses. Alter from Kirchberg, of the 4th inst amnounces that the Duke of Bordeaux was considerably better, and no ill Prankfort Papers give the result of the sitting of the Prankfort Papers give the result of the sitting of the
Assenbly of the States on the 11 th. The object of the Ameeting was to propose a general amnesty to all political prisoners. The commission rejected the proposition, but the Assembly resolsed to invite Government to a consi-
deration of a project of law for the speedy regulation of the subject. The senate of Frankfort has forbidden the papers of that city from publishing the prices of the
funds on Sundavs.-Letters frum Berlin of the ith inst. assert that the late sittrig of the Diet to receive Baron Bulow, the new Prussian Minister, was for the purpose of hearing a communication from the Prussian Government on the subject of fresin regulations for the press, as also for Gazette of the 11 th inst. says that a recent decree places under the immediate inspection of the Winister of Public Instruetion all preceptors to whom private individual educaThe Governme, as well as masters of the public schwols. ther shonid continue, to restrict the exportation of corn and the diatillery cone, to restrict the exportation of corn be no want of those qecessary articlies. The real object of the missiun of the Count de Bruhl to the Court of Rome . ssid to be the appointment of a condjutor to the Archbishop of Cologne ; and Professor Killermann, of Munster, is expected to be promoted to that office. Potsdam letters of the 2 d inst. announce the failure of the first banking firm in that town.
France, Austria, and Basle Gazette intimates that rident of the Diet a conference on the subject of the President of the Diet a conference on the subject of the Argau
convents. Accounts from Berne of the 1 th inst. inform is that the commission on this question communicaied to the Diet on the 12 th , that Argau bad recently sold sume of the property of the convent of Muri, contrary to the resolution of the Diet of the \(2 d\) April, and demanded that the depaty for that canton should give explanations. The
deputy wished for delay in order that he might write to his Government for instructions, but the Diet decided that he should esplain at once, and he thereupon stated that the me arre was merely an administrative one, and could not then voted by a majority of \(12 \frac{1}{2}\) Statess to 8 that the canton and nou should be desired to suspen all such operations -It is stated that Prince Metternich has addressed a freeh note to the Austrian Mimister relative to the convents of Argau, insiating on the re-establishment of the convent of Muri, and announcing that the Ewperor will resort to
every means to entorce respect of bis rights. The note, it is said, is cuached in very energetic terms.
Bex gir m.-Aceounts from Brussels inform us that the general interest. The accounts state that the rye has been well got in, with few exreptions, in all the sandy districts, which constitute half of the great provinces in the
kingdom. In those districts where the soil is stiff and clayey the harvest is not so far adranced. It is furthar
added that all the barns of the great farmers are full of corn of last year's crop, which has been swarely toucheci.
In order to show that trade is in a flourishing condition in this country, the journals state that the internal consumption of coal has doubled in ten years; and that the number of furnaces has doubled, and steam-engines tripled, since 1830. The exportation of coal, checled at first by the lowering of the Prench duties on the coast, has since redoubled its activity, and cannot be estimated at less have lately purchased of the British and American siteam Company the British Queen, steam-ship. It is not yet known for what employment she is intended, but it munication between Belgium and the United States
Russia.-An imperial manifesto thas been pablished commanding a levy of five men out of every thousand in all the departments of the East. Those districts, however, which have suffered from bad crops are to be exempt from its operation. The Government of Orel, hitherto among the Eastera. Accounts from the frontiers of Poland state that the Russian Government is desirous of conciliating the inhabitants of that country, who are said to believe that Poland will bé restored to the ranl of a nation under the auspices of the Duke of Leuctenberg as Vieeroy Denmark.-A Copenhagen Journal informs us that
the Railroad Company from Kiel to Gluckstadt in Holstein has made an arrangement with the English steamboat companies for conveying travellers from England to
the Baltic across their line, br which means a traveller the Batic across their line, by which means a traveller 30 hours. -The Budget for 1841 has been published, being the first document of the kind ever exposed tio the people at large. From it, it appears that the excess of the revenue over the expenditure for the year is 602,120 rixwhich the king proposes to make in the different branches of the administration this surplus will annually increase. The army is from 15,000 to 20,000 strong, and the navy is composed of six ships of the line, six frigates, and a proportionate number of corvettes, brigs, schooners, and cutters. The expense of the army and navy is put down IT a letter from Rome, of the 29th ult., gire additional details of the serious occurrences which arose out of the execution of the three assassins, on the 20 th . reported in this Paper at the time. It seems that a woman and two children were found dead on the ground; eight not proved mortal, 10 had limbs broken, and 587 received braises and other injuries. When the people were cleared away from the spot, there were found upon it 479 men's hats, 99 of which belongen to abbés and orher ecclesiasties;
89 short cluaks belonging to abbés, and two munks frocks: 180 women's caps and bonnets, and 11 reticules and purses, were also picked up.--It is stated that there is every reason to conclude that the good understanding
between the courts of Rome and Prussia is daily becoming more and more confirmet
Grebce.- Private letters from Athens, of the 31 st utt. inform us that on the preceding day a British frigate and sloop arrived at the Pireus from Candia, having on board all the members of the Cretan provisional Gorernment, who, having, it is stated, been betrayed, had no otice alternative left but to surreader to the Turks or escape on board the English squadron. Valentzas had again matie surgents, and intended, it was believed, to march on Volo A serious difference has taken place between King Otho and his Ministers, arising out of the recall of the late Minister M. Tzinos, and other acts on the part of his Majesty in opposition to the stipulations of M. Mavro cordato, and it was deemed hishiy probable that M. Ma vrocordato would, ere long. resign his office.

Turery and Syra.- By the arrival of the Levan mail we are in receipt of intelligence from Constantinople to the 27 th ult. On the 21 st , immediately after terminat ing his quarantine, Said Ber, sull of Mehemet Ali, accompanied by Sami Bey and his suite, repaired to the palace of the Minister of Finance which had been prepared for his reception. On era he wited on the Grand Vizier and the orer Ministers, by whom was received with the great distions an or mas admitted the greatest dishaction, and Sultan who treated him wih to a private audience of the The of the tribe much atfibility and hindness. The anair civult appears
has not yet been definitively setted, but no diver has not yet been uefinitisely settled, bar no au't appear to be entertained of a speedy and satisfactory arrangement. andria, having been appointed Mustachir of the frand Vizier, was installed in that post on the 23th. Another squadron and expedition is fitting out at Constantiacpite, the destination of which is said to be Tunis, for the pur pose of compelling the Bey to pay the arnual tribute to Which te is bown. An Engtah arcalico the pito of th British embassy, which was destroved by fire a fey years ago. - The Smyrna papers announce the occurrence of a calamitous fire in that city, which broke out on the nigat of the 28 th, in a coffe-liouse attached to the jewellery in the , and continued 1s hours, cestruyas mcines, symain the Tarkioh and Jexs quarters, sereral mciques, symi gogues, and sazans, and mepi and chaldren are said to bare perished. The Austrian Admiral was among the first to render every possible aid, and to the five seamen and marimes of his squadron much credit is said to be due to saving the remainder of the city. - The accounts from Syria state that anarehy still prevails in that country. The in-
habitant of Lebancon openly persist in refusing to acknow-
ledge the authority of the Sultan, and declare that they the Pacha of Beprout sent to collect the duties has been wounded, and 50 , 000 piastres taken from him. The advice-bearers are tuat mulested.
CANDIA.-The accounts from this island, which are to close, and state that the insurrection as drawing to a close, and state that, with the exception of 3,000 or 3,000
men, who sought refuge iu the mountains of Sphakia, all men, who sought refuge iu the mountians of Sphakia, all
the insurgents have laid down their arms, after having been worsted in repeated engagements. The European able conditions, and had offered a passage to Greece in the British and French ships of war to all who were willing this offer, and among the number were most of the foreigners who had repaired to Candie to join in the insurrection. Some of these latter, as they fled, were fired upon by the few remaining insurgents, a body of whom, to the number of one hundred, under a daring chief, have, is said, committed acts of violence in the villages.
EGYPT.-Our intelligence from Alezandria, brought by the Levant mail, is to the 26 th ult. It is not of great importance, but it contirms presious addices that the sultan is fully disposed to resort to the aid of Mehemet Ali, for
the arrangement of the affairs of the Porte in Arabia, and perhaps in Syria. The Nite was rising farourably, and a plentiful harreat was anticipated. Iorahim Pacha was still at Mexandris, and the plague hat entirely ceased. Mehemet Ali, it appears, is net diminishing his armament impressment for forcmg the fellahs to lahour in his shiffive The national guard and the seamen of the fleet were constantly drilled and exerisised in the use of firc-arms and cammon. At the same time. 1.010 seamen, under the comnand of four captains in the nave, were about to be seut to the Delra, to cultivate the Pacha's lands. The firde, or capitation tar, was still lesied throughout the country with the atn.ost rigour. It is said that free trade will be permitted next year. The following is an oficia return of the quasty of cora, ac., of the crop of 1840 exported from Egypt to the 26th July, 1841 - Wheat 314,791 ardebs ; barley, 317,694 do. ; maize, 16,173 do. beans, 426,912 do. ; peas, \(12,240 \mathrm{do}\). ; leatils, \(20,000 \mathrm{do} 0\); total \(1,107,810\) ardebs.
Crina.- By a letter from Macso, dated April 27th, and which arrived at Bombey, lost accounts from Crina, from Madras. too late to be enclnsed in the orectland mail we learn that the Chinese local Government has violated the agreement made with Capt. Elliot, for the renewal of
trade with British subjects. Since the lst there had been scarcely any supply of tea by smuggling, which appears to have been calculated on ; the unexpeeted vigilane of the mand wims having disarpointed these expectations. About the 1ith. a diaree arrived from the Emperor conched in very violent temns, ordering all authorities eivil and military, in the province of Canton, to destroy
all the teas, rhabarh, and uther articles necessary for the English barbariang This order had been rigidly obeyed and it was thonght that one-half of the crop of teas is already destroyed, and that the work is still going on Indeninity was promised by che same decree to those whose property might be destroyed, and rewards for thuse who been sent dusn the river among the shipping. The American papers recrived in town this morning by the Gremern contain intelimence from China, apparently \(\mathrm{c}^{\prime}\) ntirming the preceding account, and stating that Canton wis eracuated after the destruction of the Bogae Forts, and that wat the return of Sir G. Bremer a demonstration wouid be nade on Pekin. Mr. Bligh and Mr Toole, mates of the Blenhein, and Mr. Fied.l. late chief officer of the \(S\) zipe, had been murdered by the Chinese The bodies of the two former have not been recovered.
United \(\mathrm{S}_{\text {rates.--By the arrival at Bristol yesterday }}\) morning of the Great iFestern, in 121 days, we have received New York papers to the \(\overline{\text { ith }}\) inst. ; their contents however are unimportant. The Bank Bill had passed the senate after proionged debates; the tinal rote being 26 to 23. The Bill was immediately sent to the House of depesentatives, where it was read a mirst tiae. The Loan Bill, empowering the E ,or a secon rise 12 .0nin) dollars for the servece of the Chron, hard diso passed the Senate. Tise Home Squadron Bill, appropriating :-9.314 dollars or two frigates, two sloops, two small ressets, and two armed steamers, to be employed ia the defeace of the colar-, had passed the Howse of Representatives, (ine

Excess over the year 1831

Mortality of the Metropolis.-The total number of deaths registered during the week ending Saturday the 7th Aug., 1841, was 759, of which 377 were males ant 382 females; while the weekly average during the three preceding years (obtained by dividing the deaths in the to 926.
Regent's Park.-The new entrance-gates of this park, six in number, were thrown open to the public on Sunday morning by order of the Commissioners of Woods and mental waters adjoining the plantations of the Marquis of Hertford's house appeared to be much admired: they are parea with large 1 orkshire stones, and are level with the
gravel-walk. Another bridge of this description, and 56 gards in length, is abont to be erected over the broad part of the ornamental waters fronting Sussex-place. The Commissioners of Woods and Forests have granted the Marquis of Herfford four acres of extra land, to be added to Mr. Holerd, fronting North Lodge-gate. A number of workmen are engaged erecting light iron fences around the grounds, and also between the walks on the banks of
Thames Tunnel
Wames Tunnel.-The shaft on the Wapping side o for foot-passengers has now almost entirely disappeared and not more than five feet of it appears above the ground. A month ago it was on a level with the tops of the aidjoin ing houses, and its gradual sinking as the earth below is excavated appears to have excited much sarprise. In depth it is Gil feet. Since Sir Isambard Branel, and three other gentlemen, passed under the dritway connecting ber, many other tunnel, as noticed in our hore to the other by the same means; and the entire completion o the work is considered to be near at hand.

Wuod Pavement.- On Saturday, the Marylebone vestry again devoted much of their time to the question of ex tending the wood pavemeat in Oxford-street. It will be
in the recollection of our seaders, that at the neeting of the vestry on Saturday weel, the board passed a resolution to the effect that they were ready to receive tenders from any parties to pave that part of Oxfurd-stieet which rums between Wells-street and Vere-street, with mood. Such at least was the effeet of the resolution agreed to on that occasion; but on the minutes beung read over on Saturday last, the motion appeared to be set furth as for the the hoard were prepared to enter into a contract, Paving Company; and it was therefore mored, that the Paring cumpany; and it was therefore mored. that the
minute he not confirmed. After a long diseussion, the vestry divided, when the numbers were-for the non-
antrmation, 30 ; against the motion, 22 ; majority, 8 .
Metropoiitan Improvements.-A new street has been
recently formed opposite Mill-pond-street, Bermondsey,
crossing the mill-pond by means of a bridge, and leadine crossing the mill-pond by means of a bridge, and leading
into Rotherhithe facing the new church in Paradina-atreat into Rotherhithe facing the new church in Paradise-atreet, Which is now seen to much advantage from the entrance Depr street. The new thurol.ghare leads uirect to the Deptford Lower-road. and the entrance of the Thames Tunnel, aroiding a more circuitous soute to those places, health of the inhabitants, by the remiosal of some old and riligus tenements
St. Savionr's, Sunthucark.- On Wednesday, a vestry
as held at this church, to take into consideration a Was held at this church, to take into consideration a let
ter received from? the Bishop of Winchester, and to adopt such measures as might be deemed necessary thereon Tise fullowing brief outline of the circuasstancts which led to the present meeting may be necessary to afford some explanation of its proceedings :- It appears that for some years past excited feelings have existed in the parish against annually required for its repairs. Rates were made and contested, and ultimately refused; and the result was, that legal proceedings were adopted, and a rate enforced but to get rid of the cause, in the year 1938 it was agreed
at a public vestry, that as it was found to be impossible to restore the north nave of the old church, a new place of worship should be built, capable of containing 2, 001 persons, at a
cost not to exceed 8,000 . This was to be finished and opened within two years, under a penalty of 500 l ., and 5 . per week afterwards. According to the contract, the charch apparently nearly finished, the opening is still delayed. This has induced the bishop of the diocese (Winchester) 3 d inst., a vestry was held for the purpose of ascertaining when the church was to be opened, when a resolution, ile sisting that the wardens should at once take possession of the church, and proceed to open it for divine service, was negatived, and an amendment adopted to the effect that the
church should not be taken possession of until finished, according to the terms of the contract. These proceedings were subsequently made known to the bishop, wio wrote to the restry on the subject, and the present meeting was held in consequence. After some conversation, the bishop's letter was read; it expressed great dissatisfaction to name a day for the re-opening of the church. A discussion of some length then ensued, and a deputation was cussion of some length thenishop. The result of this conferappointed to wait on the buchop. Thest for with nuth interest by whole parish.
Shecrness.-A report is in circulation in this place that it is the intention of the Lords of the Admiralty to re-
quire all the mechanics superannuated from the dockyard, to attend muster in order to pass the examination of the surgeon: and all who may be pronounced abie to work will be required to returu to the fard and resume their work, or in defauit of so doing, to relinqu to the then in
sions. The report adds, that this step is to be tal consequence of complaints having been made that of late years many uble-bodied men have been superannuated fom the dockyards, who have immediately gone to private yards and obtained work Accident. - On Monday an accident, attended with pears that a steamer, while on her return to London from Twickenham, and when opposite the seat of the Duke of Buccleugh, ran down a punt in which three gentlemen wram the steamer . but the number were saved by a 20 son of a surgeon at Kew, was drowned, and the body was not found until an Lour after. The captain and mate of the steamer were taken into custody on their arrival at Richmond. An inquest has been held on the body, and in verdict of "Accidental death" returned, with a deodand of 20l. on the steamer. Notwithstanding this verdict, however, the captain and mate of the vessel have been
committed by the magistrates of Richmond to take their trial for manslaughter.
Attempted surder-On Saturday night a soldier, in the uniform of the 15 th regiment, went into the shop of Mr. Larom, clothes salesman, in Goswell-street, and bar gained for the purchase of a pair of trowsers and a cost, which he put on over his uniform; and having agreed upon the price, he pretended that the trowsen a on were so light that he could not get at his money. At his request Mr. Larom proceeded to assist him: While so occupied, the soldier suddeuly stabbed him in
the throat with a knife, and then ran off. Mr. Largm was knocked down by the blow, the knife having street against the collar-bone, and inflicted a deep wound whith bled copionsly. His life, however, is not considered to be in danger. The soldier has not yet been apprehended
Fires.-On Sunday a fre broke out in High-street, 8 . Giless, in aztensive chisal warehof by the pre assistance, however, the filames were confined to the pre mated at 5002 . On Monden, the varnish manufactor mated at 500.-On Monday, the varnish mandfectare, Battlebridge, with the whole of the stock and premise was destrojed by fire, which originated in the overboir ing of a quantity of varnish.-On Tuesday a serioas fire broke out on the premises of Messrs. Beat and Townsend undertakers, Greenwich. By the prompt arrival of the ngines, the flamer were confined to the lower purt on origis of the fire is not knomm.
Robberies.-On Sunday, the house of Mr. Card, Les-denhail-market. was entered by means of skeletou beys, and gold and Bank of Eugland notes to the amouat or the apprithension of the thieres, and the recovery of the
atolen property.-On Saturday information was given to had been entered the previous night, and several articles of vilue stolen from them. A suspected character, named Col tyer, was in consequence apprehended at Cobham, and duplicates of some of the property being found on his per\(\mathrm{EOM}_{2}\) he was committed to Newgate for trial. While await Newgate, he was allowed to remain in the bench-room when, watching a tavourable opportunity, he jumped ou Several monted police immerliately galloped off in pur Several mounted police inmertiately galloped off in pur-
suit, and after a long run. the prisoner \(\mathbf{c o o k}\) refuge in Hansuit, and after a long run. the prisoner iook refuge in Han-
worth Park, the seat of Mr. Perkins, which for some time afforded him a shelter from his pursuers. The police, however, divided themselves into small parties and scoured the wood, and ultimately the prisoner was discovered in a
bigh tree, when he was seized and conveyed to Newgate.

\section*{月robintial Netos}

Hartest Prospects. - The favourable cbange in the Fcather has had the effect of raising the hopes of tarmers,
and considerably advancing the operations of harvest, which at the close of last week appeared to be endangered by the long continuance of rain. The accounts from the
provinces state that if the present warm and seasonable weather continues, the injury done to the crops will nowhere be to any great or serious extent; and that though the harrest in fair condition, and of average quantity. The
secure news from all parts of the country coincides in represent. ing the present change in the weather as occurring most opportunety, and as having given rise to a general display
of industry in all the furming districts. In \(K\) ent and the Isle of Thinet the farmers have been basy cutting during the week, in all directions; and in the latter place, which
abounds in corn-fields, it is said that the crops are likely to turn out much better than was expected. In Gloucis-
tershire reıping has already become general, aad the crops are expected even to exceed an average crop. The barley is abundant, and of excellent quality, and the late rains have proved beneficial in producing a bountiful crop more abundant. In Lincolnshire, where a great extent of as good, strong in the straw, and even above average; though in some places slightly damaged by the rain, Which it is thought will have the effect of retarding the from Lancashire vary: in the neighbourhood of Lancaster a correspondent informs us that the crops have not been
injured in the least by the bad weather, and that there is erery appearance of an abundant harvest, a quantity of
barley having been already cut. The hay-harvest also, which is only just over has proved farourable on the Whole; and new hay may be had for 3d, the stone, on account of there beings still in hand a large stock of last are much the same, though they vary slightly as to the extent nowhere so great as crops, which however appears to te the quantity of rain that has fallen within the last few weeks The general conclusion arrived at seems to be that with a be every prospect, the harvest will, after all, prove a favourable one, and realise at least an average both in amount and quality.
ably connected, -A man named Charles Webb, respectbefore the sitting magistrates years of age, was brought having, as far back as the 5 th of Dec. i828, stolen in this town, or received, knowing it to have been stolen, a letter containing bank-notes and bills to a large amount, said to be between 600\%, and 700\%. It was some time before the miscarriage of the letter was ascertained, when the strictest investigation was set on foot by the Post-office authorities, had heen duly and been duly posted, but had never come to hand. The particulars of the bills and notes having been made public, it was ascertained that the property bad been negotiated by the prisoner at a banking-house at Calais, five days after
the robbery had been committed, and immediately after tue robbery had been committed, and immediately after this place. Further inquiries were instituted as to the mode in which the prisoner possessed himself of the letter, when it was discovered that his brother was employed as a sorter and deliverer in the post-office here, thruugh whom the robbery had beell effected. The brother was in consequence apprehended, and underwent a series of examinaeridence was eventually liberated for want of suffic:ent person of Webb effort was then directed to secure the penson of Webb, buth in this country and on the Contiment, and in this fruitless pursuit, which continued upwards of 12 months, nearly \(10 v 0 l\). were said to have been expended. The warrant taken out for his arp:ehension Enas indorsed by the magistrates of almost every county in England, and no exertion or expense appears to have been spared to bring him to justice, the sum of low guineas aving heen offered for his anprehension by the Post-otice athorittes. During the present weth, however, the keeper of the Birmmgham prison recsived incelliceace that We tibl had arrived in this neighoourhood, and succeeded in securing him on Tuesday in Edgbaston. ?fter the He was nearly 13 years trom the period of the robbery. the day, and was remarnded until Thursday; but it is nut expected that the case can be gone into for a week or tem days, in order to adford time for procuring the necessary days, in order to afford time for procuring
eridence from France and other quarters.
Bognor.-A fatal accident has occurred here within the
last few days. As the butler and.footman of Mr. Fitzstrong, they were both carried suddenly ont of their depth, and although assistance was at once rendered, ther could not he rescued until both were insensible. Every effort was tried to restore them, which in the case of the butler was successful, but proved ineffectual with the footman. An inquest was held on Saturday, and a verdict of "Accidentally drowned " returned.
Bristol.-A party of about 12 young people from South Petherton, who had been ou a tour of pleasure to this city Clifton, and when at the summit two of them ventured in the suspended basket, which swings beneath a bar of iron about 700 feet in length, at the altitude of about 252 feet above the surface of the water. They had not, however,
proceeded above two-thirds across the river, when the liferope, the only means by which they could regaio the starting point, suddenly snapped asunder, and coiled itself around the rigging of a steamer that was passing beneath. For some moments the vessel drew the basket downward many feet out of its vertical position, when it loosened its hold from the ship and was hurled to and fro over the centre of the river, occasioning great alarm to their companions who witnessed their perilous situation. Their threatened destruction was, however, happily prevented by means of the opposite rope, which, by great desterity, Was cuaght before falling from the cliff, and they were eventually drawn back safe to land.
Dudlcy.-A disposition to rioting has been manifested by the colliers in this neiphbourhood, It seems that a and a deccer of furnaces liave recently been hown out. consequence many of the miners have been put uponsthort time, and are now only employed three or four days a week. In addition to a decrease of labour, the masters signified their intention of reducing the wages of one class the men resolved upon resisting, and therefore proceeded to several pits where some others continued workins, and endeavoured to dissuade them from doing so at the reduced price. At some of the works the men turned out, but at others the masters resisted, and the mob proceeded to cut the ropes at the pits; fights ensued between the parties,
and the police were called out. They, however, were found insufficient, and fears being entertained that more serious disturbances might follow, the magistrates sent an express to Birmingham for a troop of soldiers. On their arrival, however, they found that the main body of the mob- had dispersed, and after staying in the outskirts of the town a short time the soldiers returned, and were billeted in various parts of the town. One young man, said to be the ringleader, has been appreheaded, and commit who are known to have taken part in the affray. It does not appear that any one has been seriously injured. Thic military still continue in the town, but no further out. break has taken place. The accounts given of the consmercial prospects here are of a very glomy character, without any prospect of amendment.
Exeler.-On Saturday, the final examination took place before the county magistrates, of the persons who have been for some days in custody, on suspicion of having murdered Mr. Bennett, referred to in previous Numbers of this Paper, when the young men, Pitts and Brinsmead, were committed to take their trial on the charge of wilful murder. The examination was, as on the previous occasions, private; but it is stated, that the scene in the room was one of mutual accusation - each of the men attributing to the other the particular act by which death was caused and so great is said to have been their animosiey toward each other, that the turnkeys had some difficulty in pre renting them from fighting in the presecce of the justices
cloucester.- Eome curiosity has been excited in thi city during the last few days by the departure 1, f great num bers of country people of the denomination called Mormontes, for what they term the "New Jerusalem in America Some of them, who it seems have with this riew broten up comfortable establishments at bome, are greatly a vanced in age, bot they believe, it is said, that on then arrival a the American paradise they shall be made young agai and live for a thousand years! A of these people went down the Glougestoad of the same description destription of persions twok tineir embarking fine Anerive
 Canadi in paper, that a naan named swith, tire ontinater is now in gaol.
Heatan Norris.-It is stated, that nearly ison persons have been thrown out of employment ia this ne.ghourbooll in conce facturing house at Manciester.
Hull.-The accounts from this port of the present: state trade and commercial prospects are very disenarazing, and it is stated, tiat although it is the middle of sumaer, and a considerable partion of the arrivas wom onten ports has already taken fincor at the worth wee are as numeron during the sererest in math of the last winter Jeray - 1 ne uncertainty of life has ocecurred in this island within the last few days It seems thas a young geatieman, son of sir G. Clers, whie starkne on thenk on smept of by wave which dashed in from the sea, when he mmediately sank, and ras drowned in the stght of his companions.
Lancaster.-At the recent Assizes in this city the grand
jury found a true bill against Mr. Acland, who has gained so much notoriety as an anti-corn lecturer, for a libel on during the lectures delivered by Mr. Acland previously to the recent election.

Manchester. - The Conference of dissenting ministers of various religious denominations appointed to meet in laws, held their first meeting on Tuesday. About 650 ministers were present, and the convocation determined to continue their sittings, morning mol evening, for several days. The first day's proceedings consisted chiefly of prelimisary arrangements, alter which the meeting was
addressed at some length by the Earl of Ducie. On Wednesday, after the preliminary business had been gone through. the Rev. Dr. Vanghan delivered a long speech, esparts of the United Kingdom, by a general conviction of the existence of lonz-continued aud still-iucreasiay distress affecting the community at large, and bearing with peculiar severity on the industrious classes, finds this conviction deeply confrmed by various statements and documentary evidence bers are incapable of obtaining by their labour sufficiency of the copmen mecesaries of life for the suppert of themselves and their families." This resolution being carried, the meeting was next addressed ly the Rev. Mr. Parsons, who proposed the second resolution, which was also car ried unanimously, and was to the effect." That, in the judyment of the Conference. the presailine detress tends to arrest the prourress of edhcation, it prasent the exercise On Thursday, alter the preliminary buinnus subjects. had been gen theothe dinirman onnounced that depuration of working en zineers was present: one of whom came forward, and, on behalf of the dequtation, read a Ior statement of the distress nf the worbini claseses, an the necessity of repealing the Cirn-liws, in order to a fiord them adeguate ren hand weavers several ministers spoke, but not at any length, the number of persons desirous of addressing the meeting, to limit each speaker to five minutes. All the speeche alluded to the state of the labouring classes, and to the phare which they considered the Cora-laws bave had in conference with the operatives, the meeting adjourned. In connexinsa mith this subiect. it appars that the Anti-Corn-law League sent an invitation to the Wesleyan Con the ground, that as meeting ; but this was declined, on consider themselves called upon to enter into the discussion of a suhicet on which surch different oninions are conscientiousty entertained by lar \(\sum \mathrm{e}\) cireses of the people, and which they considered to be primarily a question of political economy.

Railways. - The sisteenth half yearly meeting of shar holders of the London and Birmingham Railway has been held this week. From the report it appeared that
traffic account for the half-year ending the 30th June, amounted to 382.4526 . 16s. Id.. which was made up TV full mes: - I'asee.gers,

this was ab-tracted, for management and maintenance was, \(112,931 i /\), which is \(6,4911 \%\). less than in the preceding halfyear, or 4.18 s .6 d . per cent. decrease, white the
hathic lad bulance of the traffic account 192,1 t \(\%\). was applicable to Waris a dividend, at the rate of \(4 l\).

\section*{The total receipts for the half-year w}
\(833,0176.15 \mathrm{~s}\). 10 d ., and the disbursements \(526,7581.5 \mathrm{~s}\). 8 d passengers in the last half-year was 354,322 , or daily 1,957 , and the miles trastled 23,399.936. The bill for the line
fam sitford to Rugby hasing been lust, the directors were arrausing fur one to Giloucester. The verdict of 2. 0.4 . . found \(b v\) the coroner's jury against the Company, had been annuiled by a superior court. After the reading
of the report, an amendment was moved that the dividend be made \(4 l\). 111 . per cent.; which led to a long discus sion, but was eventually withdramn, and the report adopted. It appeared from a statement made, that a free school for the education of 100 ) boys and 100 girls has been estabished under the auspices of the directors, for the children
of the servants of the Company, and that \(\bar{i} .5\) boys are now in the schoo! ; ant lalso a benefit society, our of which 420 persons had heen relieved, and upwards of \(\% 00 \%\). di-tributed. - At the ninth annual general meeting of the Grand Junction Ranway Company just heti at Livel, the directurs' report was read, from which it appeared that the
rece.pts on this iine for thie half-year ending 3uth June, 1841, have been for coaching, conveyance of carriages horses, mails, and parcels, \(161,7711.28 . ;\) and for convey-
ance of merchandise and lize stock, \(46,7381.28 . ;\) total, 203.5 .6 . 45 . The expenses amountel altogether only to 101. is. per cent. on tie receipts. The total expenditure, including the tull to the Liyrrpool and Manchester Company, b:s been \(03 ; 9202\). 1s. 1d. The net receipts of the hin-year, with the balance of \(68.9 \%\). 14.s. th. carried over
 a dividend of \(5 l\). 10 s . per cent. unon the total expenditure of the Company. The report was then recelved, and a dividend of 56.10 s . per cent. deelared on all the shares.On saturdy a laboturer, named Berryman, was walking alons the hae of the South-Western Rallway, near Chert sey, when he was knocked down by the mail-train, and left in a state of insensibility, the whole of the carriages having passed oser his hand. He was discorered about milf-an-hour afterwards, and brought to the terminus at Nine Elms, and alternardstakell to st. (rearge ollospital, where ampmation at the wrist was performed. On the ofme day ffrat arcident wecurred at Ashton, on the line bad been drinking at Chelvey, and afterwards proceeded along the line towards Ashton, where one of them fell across the railway, and the train, arriving shorlly aterFards, passed over him and killed him on the spot. The
others, who lav alunsiuie the railway, On Saturdav, the mail from London to Hull was delaved for a cunsiderable : inie, in consequence of the engine and carriages havine been thrown off the road, by two horses getting on the line near Birmingham. The horses were killed, but no further accident occurred.-A serious accident has yecarred on the works of the London and Brighton Railway, near Hayward's-heath. It appears that whilst one of the waggon-trains laden with earth was ranning down an inclined plane, one of the workmen slipped and fell on the rail, and the waggons passed over one of his legs. Inmediately afterwards the train was met by a line of empty waggons, and, it is supposed from the alarm caused by the first accident, a boy emploged on the line got between the trains, and was crushed in a serious un zuner. They were both conveved to the Sussex Conuty Ifopital, where they lie with littie hope of reSundiay to on- of the cierks of the Great Western Rail way Compony, nanued Walker, at the Southat station. It appears that upon one of the up-trains learing Suuthall, me made on ti.e steps of one of the emrnages a short distanes and junspang ofif at the time the train irad 3ttane i considerable reiveity, he wds thrown down, and has rignt foot fulnity upon the rant, the whole of the ar hages uassed over It, dividing haif the lineb. The hitivino of the íngerons practive by witich it was cecid\(\rightarrow\) If the Brankw+h Katwiy twok place on Tumesthy. On this reasion an "pportunity was atforded to Alder-
man Humphery, M.P., dyanst whom on previous oucasions some serious charges had been made, to explain the eircumptances under which he had soid certain shares in the compary, and in conserquence of which he end refrom alluding to this case before, urtul Aldermat Hamphery had an opportunity of giving his explanation After the report had been read by the secretary, frowe -hich it appeared that the number of passengers carried \(1,864,756\), the chairman said that in consequence of its having conse to the knowledge of the directors that Alderman Humphery had sold shares in the company of which he was not possessed, a discussion had talen
nation of that gentleman. Thi the last meeting, and Alderman Humphery had since that time published a paper, in which he reffected on the chathe company had published a letter, stating that the df rectors repudiated ail the charges which Aldanay Hamphery bad hrowght aznimat twems Io hat. therefire, the an opportunity to enter into an explination, not o:ly of his own contuct, but of the reasmis which had induced
him to make the charges he had done against others Alderman Humphery, in maki g his explaalarion, stated that it had been said that he had sold some hundrets of suares to injure the company. But the fact \(w: s\), har he
had sold no more than one hundred; and these he cer. tainly would not have sold, if he had understrod at the only reason for doing so was, that he saw he should not have an opportunity again of getting so much money for his
shares. It had been, said in the papers, that he had sold
shares again and again, until he brought down the shor shares again and again, until he brought down the shares
to 11 discount. But he affirmed solemaly, that the transaction which had been explained was the only one he
had ever been concerned in, either in baying or seling shares; and he lad never had any shares in any j"int-
stuck or railway company before this in his life. He then read a letter from the secretary, proving tha he had had been signed ly all the directors; in order to show that he could nut want to depreciate the property when he had incurred so large a liability. The charges which he had made against some of the directors of having calls in arrear, he beyced again to repeat. He then came to their own body for expenses incurred by him in obtaining the Act of Parliament. He said he had opmoned that rote; paid out of the fees of the directors, which latter, hom ever, he had always contended ouglit never to be paid until the line was opened. In conclusion, he assured the mest ing that ho always fell, and still dhd feel, the strong had unwittingly donie anything which eond tend to injure it, he wonld make amends by doing it great good. After present, a resolution was passed, unamimonaly, to the Mr that the meeting hasmes lieard tue stateme tors were completely exculpated from the charges he had made against them.-The receipts of the princapal rallways

Clonmel. - It will be in the recoll
Clonmel. - It will be in the recollection of our readers tiat, during the late elections for this county, some serions disturbances took place, and that amogg other out-
rages, a party of voters, on their way to the hustings, were rages, a party of voters, on their way to the hustings, were a severe conthict cumpelled to return home. On dontay night a buir of mitary proceened to - ew birmingham, ing several parties, deainst whom informations hal beem smorn for having been concerned night's search, they at length succeeded in arrestung ifteen, many, of whem were taken in their beds
Fith their clothes on, realy, it appears, at the first alarm nith their clothes on, realy, it appears, at the first alarm
to make their escape. The magistrates remained in the \(t\) misereral hours, for the purpuse of giving the prisoners an opportunity of finding bril, which they all refused to
do. As the crowd hal commenced assembling is great do. As the crowd hal commenced assembling in great
numbers, and from the excitement which prevailed there appeared great danger of a riot, the magistrates, under a strong escort of military and police. determined on proceding with their prisoners to this town, where they ar-
rived in safety on Tuesday evening, when ail the prisoners Fere lodged in qaol.
Were loliged in We noticed in a previous Number the charge brought against Mr. Arthur St. George. of having been concerned in the murder of Mr. Heathers, which, it will be remembered, occurred here some monts since. It now
appears that the informations sworn against that gentleman have appeared to the prosecuting counsel for the crown so trivial and inconclusive, that they do not feel
therselves justifed in seading up a bill to the Grand Jury.

Dungannon. - The inquiry, noticed by us last week, as instituted by the Lord Lieutenant with respect to the con-
dactof Major Snow, Lord Northland, M. P. and Mr. Pole, his lordship's agent, in connexion with the recent elections, commenced here on Monday. The memorial set forth that various riots aud outrages had been committed by the friends of Lord Northland, but was signed by per-
sons who neither resided in the town nor county, and by some who had indictments preferred against theni at the last assizes. A protest was handed to the barrister appointed to hold the investigation on the part of Lord
Northland, on the grounds of his lordship's absence, and that he had not received any notice, nor could be in time for the inquiry ; adding that a committre of the Honse of
Commons was the ouly proper tribunal to investigate such chamens was the on!y pruper tribunal to investigate such
chate preficred. On Tuesday the investigation mas resumed, but the commissioner not laving the power to compel the attendance of witnesses, it is thought that the obstacles in the way of the investigation will seriously impede the proccedings

\section*{SCOTLAND.}

Rdinburgh. - The validity of the decree of the Court of Session, suspending the sentence of the assembly of 1840 , the strathbogie mimisters were suspended from their functhons, is now likely to be determined upon argument. charch not choosinr to was pronounced in absence, the charch anot choosing to appear before the civil courts to
plead a matter purely spiritual. The seven ministers, plead a matter purely spiritual. The seven ministers,
howerer. not content wich get ting their interdict, craved further, and have obtained a decree for expenses. These, though for a decree in absence, which usually costs a few pounds, amount to 1200 ., and for this a charge has been
given. To resist this, a suspension has been brought, on the ground, mainly, that the court having no jurisdiction in the subject matter of the process. could not award expenses; and thus in deciding a purely civil question remay and ouyht to piead before the court, the question the court's jurisdiction will be fully argued.
Lancefield.- t few days ago a number of the workmen of Lanceneld and Finhieston cotton factories struck, in consequence of their wages brinz lowered to the extent, they
state, of fifity per emt. This reduction they complain of state, of fiftry per emt. This reduetion they complain of Pe nothag more than bartly suticient to support them. Placard, containing statements to this effect, have bees posted on the walls in the neighhomrhnod of the works, and a good dea! of excitement has been crested wong the tradespeople of the districts. A few new hands have come into Lancefield works at the reduced wages; and, in connecesser of some annoyance given them, it has been found the meal hours and at works with an extra police force at may proceed unmolested to and from their work. On one occasion, while the police were conducting several of pelted with atones by a number of persons collected about the place. It is, howerer, now stated that an arrangeremt their employers, and that the Finnieston workers and have agaim fis their employers, and
Greenock.- Emigration is still going on to at very great extent from this place to South Australia. The majority of emigrants, it appears, are of the agricultural class, among wiom are a ci nsiderabie nunber of females. Two
ships, one with 269 , snd tiac other wati 230 passengers, have ieft fo: Port Philip during the past week.
Paisimy. At a meeting of the unemployed operatives
of this town, held on the 10 th inst., a series of resolutions were adopted, among which was one stating that they de-
termined to emigrate to Port Philip or Sidney, instead of
remaining at home with little or no chance of employment dependent for subsistence on the subscriptions of the charitable, and a burthen on their richer brethren. This resolution, they expressed a hope, would be looked on as
laudable on their part, and be countenanced by all who wish to see their countrymen living independently by means of their own honest industry, instead of being degraded into the condition of paupers. As, however, it
seems free passages cannot be obtained without the emigrants being properly clothed, and as they were unable to do this, they further rewolvel to appeal to her Majesty and the Government, and to their wealthier countrymeu, in the hope that they will be induced to extend their aid to them on this occasion.
Rothsay. - A case of alleged murder, said to be perpetrated by a hnsband on his wife, occurred on Saturday at this place. The accused is a fisherman named Bruce, and his wife, it seems, had been addicted to hatits of intemperance. On Saturday afternwon words e:asiled he-
tween the parties, which led the neighbours to suspect that tween the parties, which led the neighburs to suspect that
Bruce had been using violence toward his wife. SubseBruce had been using violence toward- his wife. Subse-
quently the house was entered, when the moman was found dead in her bed, with her head severely fractured, and other marks of violence on her per*on. The husband was examined on Monday, and cominitted for trial. He denies, however, that he inflicted the wounds, and declares they were occasioned by a fall.
Kirhhill.-On Tuesday a farm-serrant of Mr. Callum, Druimchardine, in this parish, having been sent on some errand to the farm of Easter Craggag, took up a fowling piece, which had been imprudently exposed on the pre
mises, and, not being aware that the gun was loaded mises, and, not being aware that the gun was loaded, was on terms of courtship, jocularly saying he would shoot her, when the gun went off, and the contents were lodged in the girl's head. She only survived about an hour an a half. The case has been investigated by the proper authorities, when the man was discharged on accoun
his entire ignorance of there being shot in the gun.

Antiyuities.-As the workmen at Notting-hill Park Bayswater, were recendiy excavating the ground for the foundations of some nouses sneat co be ereted there they diseovered abeat seven feer beling the the direction of
the apes of the hill, a stone coffin lying in the south to north, formed out of one piece of sasdatose, and measuring six feet in length in the interior. The head, which was to the north, lay in a semicircular cavity, and
the bones were in a good state of preservation. A flat About ten feet to the west, and within fifty yards of the Hippodrome fence, was another skeleton, imbedded in lime; and at five feet distance a third, lying parallel with the stone coffin, and with their skulls in a similar direction. The hill has the character of a tumulue, and is a commanding object from the adjacent country; but there are no remains of any walls or foundations which can denote to relighans or sepulctiral arposes. tha: a uew process of tilration. on a large sate, has been discovere! by a gen eman of st. Pet roburgh, who has recently arrived in than whitry for the perpmer of submitand other large establishments ropolitan water companies, ply of pacte witer. The principle of the apperatios lias not jot been mate themn th the pahhic, but a patent is being serared for it: and it is stated to be sin perfect in
its nature a:d operulins, that the largest quantuies of water \(o\) in be filtered in an eltraordnarily fhart time by onee pissur thenti he apparitus, and that a stream from the mest impure sonrce may be readeral perfectly tram-lucent, and fit fir all purposes. The peafection of the machuery appe irs to consist chiefly in this fact, that white in the ordinary filtering apyratus inpure water must pass thinugh severil times to become fit for use, by this process bace is - .lficient for a peatect. Purification, whatever ming be the stare of the wat. r : and water already River Company, may be rendered as bright and clear as crystal. and equd in apperranee to water taken from the best spenges. In oider to gise some idea of the capabili-
thes of the Aifuratus, it is atate thes of the apyratus, it is statel that a worning model, 5 fert equare, will, under ordmary circumstances, filter 2. 16.3., in il gallons in 24 hours, supplied by a pipe of three inches bore. This model has been visited, it seems, by several parties connected with the different Water Compsnies, and by many scientific personages, who, it is said, hare all expressed their entire satisfaction with its resnlts, and with the complete success of the experiment.
Longevity.-The veracity of the following remarkable by any per-0. a n m may, intasit said, be readily observed by any perwan ath will consuit the paridi resister of St
 of 12 Kings and Queens, nameiy, Richard II., Henry IV. V., and Vi., Edward IV. and V., Richard III., Henry
VII. and VIII., Edward VI., Mary, and Elizabeth.

\section*{SATURDAY, AUGUST 28, 1841.}

Tum: British Association for the Adrancement of sismee is one of thoere comblinations which are satil more misclief, to the progress of knowlellye aveorliny to the manner in which they are conducted. We lave always regarted it as a mighlty lever by which the mind of the mothinking part of the commumity may be raised to a perception of the great advantages derivable from science applied to practical urnoses; ant we think the . Issociation has, in general applien its power with judgment and effect. It was, therefore, with any feeling rather than of ill-will that we, a few weeks ago, offered some observations upon certain parts of its management, which in the opinion of many of its best friends were likely, if unarrested, lower the Association in the eyes of the world. On the contrary. for the sake of calling attention strongly 0 the suhject, we spohe out freely and without reserve, even at the risk of offending many of our personal
friends. The points to which we more particularly adrerten were, firstly, the public dinmers, with the hail taste of giving complimentary toasts, and the wretehed speeches which they too often elicited; and secondly, the inconvenience of mixing up Botany and Zoology in the same section. Those who witnessed the public dinners at Liverpool and Glasgow, especially at the latter place, will feel that we said nothing more strong of them than they deserved; and the justice of our objections has been tacitly admitted by the Council, who have agreed to the motion of which notice was given, as stated at p. 4,83. We have now to lay before our readers the following letter from a correspondent well acquainted with the working of the Association, and one whose high scientific station entitles his opinion to the greatest attention.
When the British Association is assailed on what some are
the Timasel newspaper* be takench as an authority on such matters); primciples, according to which it would seem that the mere assembling together of men of science. Who may chance to entertain different urimons on religious subjecta, is to be treated as a grave offence, which no adbe sumiciout io expiate : one feels more joint exertions, can at the carasigance than to expose the unsoundness of -n. In a specis of objection, and may content oneself the intercourse of men of science, which ho. wae in the trent c.adi ion of stsicty would dream ni in posing in Tatase wet the otpects in view. But the case is differ ct:, when exception is taken, not against the existence of
suisi a boly as the British Association, but acainst its uttual management, and it then behores its woll-wishers carefully to weigh every suggestion that may be offered with reference to its proceedings, from whatever quarter adoption of any changes which the acting contmittee the reasonable prospect of improvement.
I \(\mathrm{am}_{\text {, }}\) therefore, net indisposed to recall to the recollec-- mber yon luly the A.s,ciation is likely to derive mote adrantage from hating the attention of its members drawn to the hints it colouring than prejudice from the somewhat exaggerated polouring in which its failings have been expesed to the public eye
connecting as mace, then, I admit the desirableness of disas the medical section of late bas been but badly attendel momblewt of the the difficuly of inducing the leading

\section*{even though it be at the risk of inducing an exaggerated
idea of the extent of the evil complained of, in the minds in those who, standing aloof from our proceedings, learn} No duubt it is essential for the respectability of the body in question, and for the high ends which it aims a main object-that of adrancing the boundaries of scientific knowledge - and that on occasions of mere popular dis of language and a less lavish interchange of compliments lhould be atheied to, than has been the case at some for mer meetings. But when the Association is taunted, on the gromd of the gnol atten lhace on the ordiaries, or on tar inal weches that sumetimes follow in their train, it mily expedient by which a stranger can avoid becoming a hurden upon the hospitality of the local members, and that the practice of tonat-giving, by which this sorry exhibution Enclishmen on wheh wound that it is mure enay cham agrinst then wholly to prevent it.
That the inempers of the British Association in general are, vith one or two splendid exceptions, but indiferent than of regret: it shows, at least, that they have for the most part made science bond fide their pursuit, and are not obnoxious to the charge of resorting to such meeting:
Upon the whole, whatever may have been the case on some former occasions, I flatter mysel there was not much in the proceedings at Plymouth to fix upon us the accusation preferred in the (ierman lines which you fuoted; nor do I thinn that persons who have assisted at such bables d hôte as thote which usurped the three hours of the day during the meetinz of the German Assoany supprionty tha the part of our Continental brethren in
 part of the occupations of the scientific week.
In one respect, however, matters at Plymouth might have been managed better;-I mean in the provisions for
the evenings, two of which, from a wish to cater for the entertainent of the ladiss, and others who were not supposed to interest themselves in matters of deep research, cientific inght fit to
In this I realy think they formed a mistaken estimate patience wiose tastes they consulted; for the exemplary some of the profoundest disquisitions at the Plymouth some of the profoundest disquisitions at the Pirmouth
lecture ought to have rescued them, at least, from the imputation of being such babes in ecience as ty require without denying that the evening meetings may affiord a convenient opportunity for bringing before the public the time an unusual share of interest, or intending to deprecate the very luminous and appropriate explanation affurded us on one of those occasions of the method by which the launch of a man-of-war is conducted, I should be disposed to object to the setting apart of any portion of the week to such a purpose, for the sake of providjng for the contingency of such materials being presented; for an arrangement of this kind may often force the committee, in default of something butter, to put ap rith some second-rate lecturer, or with some young aspirant, who may on such lecturer, or with some young aspirant, who may on sceb out fear of haring his credentials scrutinised.
It would be better, in my humble judgment, to revert to the old practice of reserving the evening meetings for a resumé of what had been done at the sections in the morning preceding, and for discussions on some of the questions of the greatest interest that had been mooted. Thus one of the objects upon which much streas was laid in the original scheme of the Association, but which of late has been too much lost sight of, would be futfilied, by rendering the whole body, to a certain extent, participators in the busimess of uach of tia sections, instead of being parcelled out atu dietinet s.ein its of Geologists, Chemists, Botanists, at:l the line: wnils the leading members of each depart tan wit wuld i, bru hith into umre frequent communi ation, and be iuduced to un tho rincollo directed without the form ef heing announced beforehand as coming forward in the capacity of lecturers.- 1 beg to sun.

We shaill ouly presume to add one suggestion of our own to those contained in the preceding letter. which seems to tonch all the other pont- that require considetation. Pur eorrespondent sass that if a sepa rate section is formeal for Bo'any, the rerration win not operate to the alkamase of the meticars of that branch of science wales ithey attent it. ©.....r sum bers than heretotore, and semd up more alars for discussion. This :s no doubr trite : kut it will not be fair to throw blane upen Botanists if the fonner par of this hint should prove hereater to be well appien Whether they attend or mot depends more upon the Association itself than upon Botamsts. tie greater part of whom are engavel professionalily in the towns thl the beginning of August, and cannot be expectec to quis them for a wetk at an earlier periorines of the
so much the case, that to fix the meetigs so much the case, that to trix the meetion to prohibit the attendance of such men. It operated thus even this year, although the meeting did not commence till
further next year, if the meeting in Manchester shouhd really be held in June, as is at present settled. With regard to papers for discussion, if the section is ex pressly stated to comprehend pure IBotany, Vegetable Phymology, and the application of th an itets to Agriculture and Horticultare, we sec ho catho to apprehend any deficiency in that respect.
A proposition by Mr. Forsyth, the Earl of Shrews bury's gardener at Alton Towers, to use glazed in stead of unglazed earthenware for Hww-mes. to
 good deal of attention. We hase aireatl! :rimal !n. or three letters upon the sulgeet, and wi hate waty others before us, all omdeming the plan an atoed! aiy bad one. We have not imbeed a single letter in tawnor of the propesition. In this case, theory doe- not cant with theory, but practice upposes practece . . M1. Forsyth, an excellent gardener, adricatins the we of glazed pots for practical reasons, and nhers empesing him upon the same field. The greater part of the writers on this subject avoid giving any reasons fo their opinion; others explain upon definite ground their preference for soft-burnt, unglazed pots. The atter we proceed to examine
The well-known fact that the roots of plants invariably direct themselves to the sides of pots, and then follow them, is referred to as one proof that the roots have a predilection for the material with which they are in contact. But it is not stated that the same thing would not happen in a glazed pot ; and we have nu doubt that it would, for this simple reason, that roots have always a tendency to spread away from the stom, -a most wise provision of Nature, in order to enable them to be continually reaching new soil out of which to extract their food. When roots are in a pot, their course outwards is soon stopped, and then they nece sarily follow the sides of a pat junt as they do those of brick or a stone in the open ground.
Then it is alleged that the porous sides of an unglazed pot allow air to communicate freely with the roots. But no plants are ever so placed as to have their ronts cut off from communication with the atmosphere; the loose crocks used for drainage, and the interstices in the soil itself, enable the air to reach the roots :": ithout any assistance from the sit? of the pots Moreover, \(n 0\) such contrivance exists in Nature
Others consider that the porous sides of soft-burnt pots act as a continual drain, carrying off the superthere is as much inconterbience as altumbdin atte ating , because, in dry weather, the earth in pots is disarlvantateously dried by the escape of vapour through their sides. Besides, such a mode of drainage cannot be necessary if the bottom of the pots is preserved in a proper state.

We are not aware that our correspondents have assigned any other reasons for their preferente for sot unglazed pots. In the absence, therefore, of hetter ar guments, we must keep our opinion, that the only way of settling this question is to try orked pot- agains unglazed one not in halt adezen care, for it is always difficult to draw conclusions from so aluad a liumber of instances - but in such quatatity as to ac cure the observer atainst accidental errets isher ow way or the other. There is one piat of eommon practice connected with Mr. For-s thi pham, wind in itself affords some evidence that he is rimhos named! that slate boxes are mach emplovel ta fors Manta in and we never heard any gardener complain of them yet they are much harder than the hardest pit, whether glazed or unglazed.

We have thought it right to place the subject thus before our readers, in order that they maysee what the real state of the question is. Nevertheless, we are very far from undurvaluing the opinions of e? ose gardeners who, without being abie
simply oppose their experietice to that of the adverates of glazel pots. in the contrasy, we ate perhaps inelined to think they are ngmt, athough not for any of the reasing that have hem as signed. It is rery well knowla that the root- of plants love to apuly themscives in the guent out m
 porous substances. I: has been usually ary.... ! Il! the moisture contained in such materialt \(\mathrm{A}=\mathrm{slat}\) !
 of chemists, that ail such sum an ontor enumerated have the power of chmenas: Within
 and carbonic acid. and ateonsards ot putiar ainh them slowly. Now thenc gasuman batec ane among the roost general and monortant of all the subtanees on which plants feed; no womter then that the rooss should attach themselves to them with sor much tenacity. But if the sides of soft garden-pots bave the same property, as is probable, they will in redicient be reservoirs of vegetabie food, and be a mosind conmeans of stealing it from the atmosphere and
veying it to plauts. Hard-barnt pots, on the contrary,
whll prowse this qualny less, because of their smaller Prowits: ant slazed pots will not possens it at all. stited for plants to grow in than such as are merely suft-burnt.

\section*{CONIFERGUS PLANTS.-No. II \\ Orate Ill - Furpan apocies.} This rettos ematains few new or rare species, as commost disme trenn lase lately b en discovered, and, beinu furnmon, it is nowlar hiw they siould have remained so long unnoticed by botanists.

26. Pinus Brutia, or couglomerata. Leaves stifier than
hose of the following kind ; cones numerons, ovate, nearly those of the following kind ; cones numerons, ovate, nearly
sessu! , med cowtel! theether ; they tee albut the suze of those of the Alepro Pine, but more ovate. This species, according to Lime. atthas, on the monntans of (alabria,

 were hated The timber :s hard and full of resin.
Probath this in oly a miety of P. Intepensis, or mari toma if larlwert, wit', the cones lonser, larger, and more ovate. It is cail to the \(f\), und plentitully in (ireece, is as hardy an the Alepum Pine, and the timber is about the and only to be found in good collections.

Division.-The robust two-leaved species, or
those strong-growing kinds resembling the Cluster
l'mastur, and Corsican (Larício) Pines
2-. P. nincmes, or antrita. This is probably only a rous and -reatins branches, wery dark, slender, green leaves, in long white sheaths; the leaves are thichly set is a natre of Auctria-in the lareema forest ; is very ornamental, grows st hisher altitules than the silver Fir, and quantity of aurpemme than any other kind.
m.th much the hasit of the Corsican, but the young shoots are of a higit yell wi-h-broma colorer, and the leaves are denser, uac.in miewe, and of a lighter green th \(n\) that

P. Pineapo the leoves are not much above half the size of thuee of cephatoncea. and of a much lighter green, slightly glaucous in the under side, with the green band along The midrib not very distinct ; they are also more dense bu 2 , a coat of white resin, which gises them (when dry) a very conspicuous appearance, whle these of cephalonica are lirger, light-brown, and nearly deatitute of resin Phaapo alou differs in the buds nut begimning to burst for favourable to its growth in this country, as it will not be liable to be destroyed by the late frosts in Spring). It was first made hown in Fingland by Professor De Candolle, Whu seat seeds, marked as P. Pinsapo, or Mount Atlas by Dr. Boissier, who found it at St. Bermeja, and on the mountans of Malaga in Spoin. The cones are the same size as those of cephalonica; but the aings of the seeds not the case with that species and will, no doubt, make a valuable timber tree, better suited to the variable climate of England than either the or Cephalonian Firs, being less excitable than them it is now to
from Paris.

\section*{COTTAGE-GARDENS.-No. XXXI}

Efrry to come forward for a winter supply. Where circumstances hare prevented any of the latter from being earlier put out, they may still be planted as vacancies occur by the removal of the summer crops, but the sooner they are attended to the better. Those that were first planted, will now refuire to have the soll well stirred between the rows mopid boe, not only to destroy the weeds which grow so rapidly at this season, but to prepare and loosen it for they advance in growth. A little powdered hot lime should also be thiuly sprimhled along the rows early in the morn ing or late at night, to destroy the numerous small slugs which are oo destructive to the stems and leaves of the young plants after they are earthed up. By this time the Last-sown Turaips will be sufficiently advanced for hoeing and thinning ; and the succory, uales it has been already gone over, should be weeded and thinned without delay, so as to leave the plants from the inches to a foot apart. The thinnings may be replanted in another place, if thouglit their ty, care leing taketios them into the pround be sides attending to the wain crops, there are others which asay be cousidered of secondary iaportance that ought no to he neglected by those who have time to spare and room fir their culture, such as Spinach and Lettuces, of both to stand the winter. For this purpose, an open sheltered snot should be selected and sown with Hlanders Spinach, which will be found quite as hardy as the prickly-seeded variety, and far superior to it in other respects. Sow the
seeds broad-cast regulariy over the surface, rather thin than seeds hroad-cast regulariy over the surface, rather thin than otherwise, amil rake them well into the ground. A rew when it can be done, we should prefer making a separate owing, in a warm situation, of the Hardy Hammersmith, Hardy Green Cos, or any other gond sort that is capable of enduring a little frost. They will be fit for transplant ing in the course of a month or six weeks, if they are limed and protected from slugs on making their appear ance above ground-a precaution which must always be adopted with sowings that are made either early in the spring or late in autumn. Finish gathering aromatic herbs, such as Mint, Pennyroyal, Thyme, and Sweet Marjoram. They should be cut in a fine day, when they are quite free from wet or dew on their leaves, and removed to an airy shaded situation until they are perfectly dry.M. E. H.

\section*{HOME CORRESPONDENCE}

Gnosplierry Caterpillars.-I agree with W. W., p. 501, in thinking that the most effectual way to destroy Goose berry-caterpillars after the fruit has attained maturity, or nearly so, is hand-picking; but in the early part of the season, or as soon as the caterpillars make their aypearance on the trees, I would recommend bim to use white hellebore in a powdered state. My method is to add one pound of hellebore to about eight galluns of water, and apply the misture to the buskes with a garden engine: it should be applied only in dry weather: if washed of by rain before it has time to dry on the leaves, it will be ineffectual. I concur with Mr. Froom in thinking that the eaterpillars are destroyed by eating the hellebore, which chey in ist do by derouring the leaves. I beliese that the exomed apteation of helebore powder to caterpilar: win dis: The most chicient mode, therefoe, of deercing the caterpinur, is by apheing the dinse to the uper saffec of the leaves, which also saves the expense
of caployng an aditional man to lood up the branches as seems zecessary when the powder is applied to their ander side- - Br \(^{2}\). B., St. Ives
Plant-Baskets.-1 have muck pleasure in complying with the desire of your correspondent \(S_{\text {., and enclose a }}\)

hat man be thought worthy
Cotlage Gardens.grow where only one grew before, surely the cottager who pass unnoticed This is one of the immediate benefils sulting from Horticultural societies among cottagers. By means of draining, and trenching, and duuging, and selecting geod varieties of vegetables, mach good may be effected; but dune, and labour, and seed may all he lost upoll a wet piece of ground: it is, therefore, of the utmost importance or the cottager to ascertain the nature of his gromend if it is stiff and wet, a little trouble on his part may soon render it dry and pliable-it will soon repay him for his
tiouble. Shallow digging is another thing to he avoided; he ground should undergo trenching alter it is drained; ff the subsoil be unfit to come to the surface, it should, at any rate, be loosened; this will tend greatly to better its condition. Some soils, again, may be too dry and light: hut hy using stiffening materials, we have known a tolerabic good garden formed out of the rubsiah of a sandstone quarry. One member says, that before the Suclety was regetables sufficient for his broth for his dimer on Sablbull. but hy the attention he has paid to it from the same spot of ground he can have vegetables for his family for every day of the rreek, and a cunsiderahle quantity oser populat:or, these sucieties have a tendency to make mure intelligent members of society; they are sit a thinkmg by means of them; they inquire, where the best sorts of resuits them best, and the best method of treating them ; they are not satisfied that they are cultisatisg Cabhages, and Onions, and Carrots, and Turnips-they must know the kinds they cultivate, in order to prove them. Their knowledge sometimes prevents them from being impred upon. One mar was in search of some flowers that he required: he was offered some of an inferior quality; he toid the person who offered them, that he could not accept of them, that he knew the properties of a good flower, and he could not afford room in his small garden to grow a bad one. If this simple rule were more generally acted upon, many collection would be purged of inferior articles, and muc vexation prevented.-Peter Mackenzie, West Plean.
Viriparous Cucumber.-The following extraordinary circumstance took place at Goddington, near Ashford, the seat of the Rev. A. Toke. The gardener (Mr. Phe planis nhich opening a Cucumber, discovered several young perfected their seed-leaves. ately nliced in a frame, and in the course of a few weeks he will be cutting fruit from them, and at the same time from the parent plant, which is still in good health and igour.- -1 . II
Birch Felling and Pruning.-The "Young Forester says, at p. 365 , that, respecting the Vine, \(I\) am right, but as respecting the Birch, 1 am in error. In the nest sem gards he admits I am right, from his own practice, whe the sap is in pruning of young Birch at the season it as applicable to other trees or shrubs, and thinks there must bave been sonse cause unnoticed to mabe the difference specting cutting the Hawthorn hedge I mentroned. But facts are facts. I can, however, say nothing more of that now as it is so long ado : but mive emviction of its con micss was complete at the time. Lhere had fers ip nither of tryigg experius nts un riese subjerts itbe a drom that of other experienced persens, that in cuttrng for whdersood, the ricst rigor, ns and numerous siluvita are pro he age of ?n reare, orolder is agt to be hille:l or much Teakened if cat in the autumn or early winter montis. Not being able, however, to refer to any experiwelit or ts "If Birch of 20 years" growth is cut off soon after it
breaks intoleaf, I am, quite convinced from obsersation it wruld bileed to death," I would not he so rude as to con-
tratict him on that particular point till I had had further information from others. Howeser, it is indisputable that spring is tie proper seasun tor cutting young Bitch, Ha-
zel Oak. Harterry, or Jiodeherry (Prunus paius) and numereus other kinds I could specify if necessary. I have lately been infurmed of some strong Azaleas, cut down this hast spring in a nursery, for stools, after the sap was in full mution, that are making the most promising and vigor-
nus shoots. This very spring I had cut duwn an old nus shoots. 'This very spring I had cut duwn an old
Wiaw tree (a copious bleeder), partly decayed in the trunk after it nas in full leaf, and it has made most
rigorous shoots near four feet in length already; some rigorous shoots near four feet in length already; some
Hancloorns alss have broken well, and are making strong shouts. Being, then, as 1 have stated, convinced of the
truti of what I said about cntting voung trees and underwood in the spring, cxecpt in the case of Birches of 20 years growth and upwards; and yet being always open to connction, and cantions not to ativance anything but what havejuatreceived from a very expersenced friend of mine, who has been most of a longlife a valueroltimberandunderwood, to nhom thad written on the subject: "I received your sooner. I have now seen Mr. Browell, of the Hays, and many other intellisent persons concerned in the managebeent of woods and plantations, all of whom are of opinion
that the carly part of the spriag, when the bud has appeared and swelled considerably, is the best season for cutting duwn Birches (say the latter part of March or beginning of April, according to the forwardness of the season), for a profitable succeedng growth. They are also of opi
nion, that when the leaves are fully expauded there is miore vigorvus growh from the stools of the Birches then cut down, than from such as are cut in the latter part of
autumn or in midwinter. I beg to state that the thony Surtees. Esq., of Hamsterley, for upwards efo Anpresiously to his death, caused the whole of his Birches, Ash, \&c., which were intermixed with such Oaks as were to lee thmned, to be cut down at the same time with the Oaks (in the month of May and June), whicia oave rise to
a good deal of discussion among our knowing foresters as to the effect of cutting Birches, \&c., at that season, and upon a careful examination, the stouls were found to have
made as numerous and vigorous shoots as could be sired. Mr. Ralph Fenwiek, of Marlow hill, agent to the lite Lord Strathmore, and the present Mr. Buwes of Giib. side, William Ellison, Esq., Lintzgreen, and R. W fully consis.e, Hagg, and myself, were several years ago nny defu't in the succeeding growth from the stools. whe taken particular notice for several years of Hazels Which have heen cut off when peeling the Oaks, and obshoots. Rubert Smith Surtees, Esq., of hamsterley, had upwards of four hundred Birches cut down at Milkwell Burn in May and June \(184^{\prime}\), and a similar number cut at the sume 1 ldae (no differ nce of soil or situation) in Sept.
hast ; the succecding growth from which I have carefully esamined, and found the growth fromich I have carefully cut in the sap to be much preferable to those from the stools that were cut in September. The abovenamed Birches were of more than 20 years' growt th ave-named examined the stools of several Birches of very old growth hinch were cut in Jume last year upon Byerside estate, being. About six years ago, a great number of Birches, of funt years' growth, were cut down at Pedomsoak, about whe mincs from this place, the succeeding growth from Which is now most flourishing. Thuse trees were cut in
the first week of \(\mathrm{MI}_{1}\). I hase also consulted many old havealued corf-rud cutters, all of whom say that they have aluws found the best erop of rods from such stools as lad betn cut in the latter end of March or beginning of April. Mr. Joseph Nicholson, of this village, whu las muddie of March, a some woods here, cut down, in the miter, and at about the same fime about nine inches diainches dimmeter aeross the stools; and in the Sept. followestrau dinary from the stwols of the former a shoot of the shoot \(5 \mathrm{ft} .3 \mathrm{~B}_{2}^{1} \mathrm{in}\). I saw and measured the shoots myself. een convini my onn experience for several years past of Birches, Hogberree results attending the cutting dowa to be as above represen, \&ce, at the before-stated seasons, is cotrof,rated by so many experienced, intelligent persons. selves, I shail leave the abure facts to speak for themstines, observing only that there appears in all these instanees no bleeding to death of Birches of twenty years; Howth and upwards, that are cut down in the sap or leaf. Sith respect to the Corf-rods ahove alluded to, I may ob. ferve that there is a great profit derived every three of fies of Durbam those used in the coal-mines in the counties of Durham and Northumberland: and every seven or micht gears, or a litt'e longer, to make crates for the glassabout Neweastle upon for pit-props used in the coal-mines wood is chiefty connposed of Birch, Alder, Hagberry, of Hazel. H, se. The Corf-rods are the long young shoots sequently Hugberry, Birch, and young Ouk chietty; cunand the owsers of such moods grear value in that district, They method of inereasing the produce for such purpuses. Birch aive a common saying there, that a plastation of the seddle, fider will buy the hurse, betore ()ak would bay fit. - Whe Drom the forner cotcing so much sooner to proTho Eay.-Nington, Enderhill, near Oswestry, Aug. 16.

Aug. 14) from the effects of the latt whter's frost , 331 and that gentleman lave surely over-estimated the powe of recival of the dead, or apparently dead, parts. Such an exception to the general rule in the phenomena deserves further investigation. I have two Bars which I have this year treated differently. One stands isolated on the grass. the other is backed by a wall and flanked by I found it so nearly like what it was after the unparalleled frost of 1:35-.8, that I cut it down to the ground, and it has grown again this year as vigorously as it dut then when treated in the same way. The latter being more sheltered, appeared to be less derply injured, and 1 left it to itself. This also, I ought to mention, was killed to the ground, and cut down three years ago. like the other; it deeay. The lower and more shittercd parts are of a lively green and fre growth; the middle are partially the beginning; and the upper and extreme bramenes have withered and stand out with their dead leaves adhering to them; and the whole has a very shably appearance Anongst the middle and injured, but not perfectly dead parts, we may observe the process of recosery goins on injury or degree of disurganisation chtiected ty the frome Of this middle portion, the lowest, greenest. and the least "ithered branches throw off strong lateral shoots; higher ap, the leaves have sloughed, and the axillary buts are exfolitenlarging; nearer the extremities, the process of adhere, but are in a blighted stanguid, and the leaves still perish, along with the twigs to wirich they are attached, next winter, even if it he a muld one. The extreme next winter, even if it he a muld one. The extieme
branches are everywhere destroyed, dried up, and can certainly never recover. \(f\) is in the middle parts that observe the appearance you speak of, of leaves with green petioles, and greeuish centres, but brown edges. The
green is of a dusky hue, differing very nudn for aspect of the healthier parts of the plant; and the twigs to which they are atache are of the same dark colour and though still alive, seem not likely to we in a condition to resist the cold of an ordinary winter. I marked some do nose after the receipt of your last week's paper, and do not now see any signs of improvement, notwithstanding the favourable state of the weather for the last ten days The withered edges of the lower for in the and the branches to which they are attarhed remain shruuk and dark, whilst the parts belaw are plump and green, and throwing out frenh shouts. I suspect that, on
stricter examination, it will be found that the Bay is nut an excention to the gent degree of succulence and constitatichal dedicary. The Fig, for instance, exhibits in its branches the same graciations of injury and power of revival, with the exception of the leaves, which are atways discharged by the cold of our winters; and tie Laurestinus may be ouserred to be partially recoverable in the same way when not killed outright. In such cases, I presume, the frost deranges and bursting the ressels and disorganising them, and that they : my own extent of the injury. With regird to treatment : my own experience is in lavour of cutting dardy evergreens. It is not by any means untenacious of life, and I have nerer been disappointed in seting it shoot and grow agan much more handsomety than if left to recover itself through its dead boughis. I once moved a large stump aiter it had been so cut down; it did not shoot the first year. but it traordinary green again, and court inquiry. I presume the fact may be well known to gardeners, that Thuja and Juniperus, and perhaps other allied genera of Conifera, recover from a dead-like state ; at least I bave witnessed thas, and concan assure our readers that the revival of the Bay-tree was exactly as stated, p. 531.]
Nitrate of Soda.an auxiliary to gardening. I am induced to send the results of some experimeuts I have made with mitr,ter of soda,
whicha, though partaking more of an agricnitural than a horticultural nature, may yet be interesting to some of your readers. In March last I suked a piece of ground with Barley which had prestously been .atse Turnits and eaten of is sheep, and the ground, by being manured with them, would unduabtedig have produced a dar erop without the nitrate of soda, wheh, ater pioughing, I suwed in the proportion of one cwt. per acre, and harrowed in logether with the seed, and aboul ralled. As I naturally expected a good erup, I mis nut disappointed, as I tionk it would be impos-ible for a heavier crup to stand on any ground; and it the late untoward weather lad not beaten down, ind consequenily witoted a great porion of it, acre. At present it presents rather a disuoder y appearance, it being ripe, and the Cluver nearly is niga as the Corn. The singular luxuriance of me Clorer I the nitrate. I also find by some expersuis on Grass lands, that a decided impruvenent wis inauifest wherever it had been applied, and as I sowed it in detached places in a meadis fitid, such spots were eas:ly recognised when the Grass was cut. A friend of mae had somn hal! a fich in Grass in a similar way, onif asit was in riuges he suwed each alternate one : the appearauce in une was percepphut

Natural History of Chusan.
dus.-A brief printed account Assiter the collections made by Dr. Cantor Majesty's -The s Regiment, on expedition to China, 1ant lected at Chung were the animals observed and col Felis \(\longrightarrow\) ? (wild cot) Mans the Indian species), Sus, Equas caballus, E. asinus, Bos taurus (allied t the Brahmuny bull), Capra. None of the larger wild beasts occur, most likely in consequence of a thick popaition. Of domesticated animals, the pig, afording th most favourite animal food, is prodigiously numerous Few horses and ozen, the latter used exclusively for the plough. Goats mumerous. Few wild birds (in conse quence of the absence of forests), chiefly grailatures, crows
sparrows, swallows. Of domesticated fowl-geese, ducks, sparrows, swallows. Of domesticated towl-geese, ducks
fowl, plentiful, of large size and excellent ghality. Thir teen genera of reptiles are in the collection. Southern and Central China are crowded with these creatures beyond description. In Chusan the Nida a appears the only venomous terrestrial serpent. None of the larger 'aurians. Al The forms of repties are tropical, excrept Rana csculenta eption perlaps of A guill which reewhes the Furopea species. Little can be said of the Pelagic fishes, as unfortunately the fishermen had followed the example of most of the other imhabitants, who deserted the vicinity of the English. Among molluses, considering the limited exten of the locality, the number of genera is remarkable
erby, but appears to be the only European form. Uf an nulate animals were found Hirude otticimalis, and Hirudo? (head in the shape of a hammer, also found by Mr. Griffith in the Naga hills in 1836.) Of Crustaceans Pagurus and Crangon were found. Six geners of Arach numerical observed, remarlable for ther of Insects are not identified. Tropical forms prevalent (sirung resemblance to the insects of 1 and sellet collected by
 few butterfies, apparently Earopeas. The following plants were flowering in Chusan in July, Angust, and Sel tember, viz.- Ranunculacea, Ranuncolus aquathis

A few Plain Remarks upon the Neut Poor Laur consists of some well-intentioned nogumants to show that thts law, Which is stigmatised by some persons as "unjust, arbivnchistian, because its main principle is that is ervectis industry of all pessins aini. plo wiple The writer \(\frac{15}{}\) of opinion, that the ral vause of the bardships of the ablebodied poor is "nus thwir being deprived of onk-dioor relief, but their being suifered, or \(I\) might say ourgibly
to remain out of employment." He foribly and juetly
urges upon farmers and lumeownens the benetht that would would give enpinyment \(:\), all the indu-tious labourers in the country. The subst nce of his own views is thus
gtated by himself at the con luaion of his litte pamphlet, Which we recommend to the attentive ferusal of ous rural friends:-
"lst, The farmers lose by not employing the poor, because the land which they farm, and by which they earn their subsistence, yields less than it would do if they employed more labourers upon it, and so is less profitable to them. 2dty, They luse. becaure they have to contribute whom they refues lame if they emplsid theme to their farms, they would get a retarn for the money expended upon them, whereas what they have to pay to the poor's-rates is so much muney omb, and the more persons ineme ane ol:t vit empluyment, the higher are the puor's
rates, and the more money are they falied upon to siak. 3dy, The farmers lose by the depredations and thefts committed upon them by the unemployed-fon though it is frequently mowle a ground of attark upon the
Yew Rour Law tiat it drites men to commet crime, it is New Pour Law that it drives men to commit crime, it is old law it was the unemplayed, who received parish rehef that commatied the greater part of the depredations on agricultural property; under the new law it is the ucemmay be seen that ithe neen, whether recering parish relief or tust, are likely to become dishonent, and that it is meither ease in procuring parisa retifef whing heens then from drives then to it, but it is want of employment which makes them have recourse to such eril ways; it is idleness that produces vice-employ them and you take away the chief mutives to. and opportunity of thieving; employ them and you use one great means of keeping them honest and presersing your own property : the man in regular work receiving resular wages has enongh for the supply of the necessaries of life, and being in stroug exercise all day, is glad of quiet rest in wisiter about at night, pilfering and plundering the property of others. thly, There is yet another way in which the farmers lose by not employing the poor-they have to cootribute towards the payment of foreign labourers for feeding us, and doing the work which ought to be done at home-the less labour they employ on the land, the less is the quantis of prodice Wrown in ilis countrry, the more do we require from other countries to supply our wants, and the purchase of foreign corn is a considerable and serious urain upon the resources of this country. In one of the papers lately put forth by that very useful Soviety called the Labourer's Friend Society, it is stated, " that in only seven months, from June to December 1839, there were \(1,440,755\) qrs. of wheat imported at the average price of 68 s .3 J .; and so, accordout of this country about five millions sterling to rewar foreign labourers, whilst our own were kept against thei wills, unemployed, and so uscless at home; -and it is indeed pitenus, as the same writer olserves, to behold the many able bodied men in vain solucitng work in the parishes to which they belong; it is grievous to behold country's prosperity and safety; as their labour would first earich tenants, then landlords, and through then circulate amongst all trades and professions who cannot partake of what is not first raised from the soil The late increase in the price of corn was expected to have oceasioned the empluyment of more labourers on the land, but agricultural tenants finding that fewer qrs. of wheat would pay their rent at tizs. than at 401. , bave onitted to tuke proper pains to raise should remember that the payment of their own rents is not the only point they lave to consider, but that it is a duty they owe to their country to raise as much produce from their land as possible, and a duty chey owe duty of ail to ue inploy as many as possible,--for it is th not merel, to think how ene entich arselvas place we may benetic the community at large ; and farmer should remember that the diminution in the rates under the New Pour law places more in therr hands to be ex pended in the employment of the poor, and which, if so ex pended, will phoduce a return, and not lie sunk as before.

REPORT ON COVENT GARDEN MARKET
For the Week ending August \(27 /\) th, 1841 .
Tag continued fine weather has improved the quality as well as
increased the supply of most articles. Fruits of all kinds have been very plentiful, hut the demand has been rather dull. Fruit The remarks mate on Pmes last week apply equally to this. Th
supply of Grapes is large: we observed some excellcut Miscat Alexandria, which are worth from 5 s . to ss . per 1 lh . During the week, Syrian Grapes have made their appearance at from 1s. to
\(1 s\). Ud. per b. Amonr Plums, Museles are rather lessin price than 1s. ©id. per lb. Among Plums, Muscles are rather less in price than
they were last week, and Orleans are almost gone. Peaches and Nectarines are abundant: a large quantity have also been in ported. The supply of hples is large: the hinds are the same as
those mentioned last week. The better kinds of Pears are realis ing about \(9 s\). per half-sieve, while the common sorts are oul
worth 58 . or 6 . per bushel. Crabs of various kinds, for tarts and preserving, are plentiful. Filberts are abondant; but though
they luok pretty well, they are a gous deal attacked by the maf got. Vegetahbs. Caulinowers are rather are hoth pretty good Gherkins are plentiful at alinut 9 s . jer thom-and. Some of tit samples of Red celery are of larye size, and tif excelient ing more plentiful. Some fond Enuisencally good. Mushroom are indiferent and scaree. as much as 3 s . and 4 s . per pottle har been given this week for them.

NEWS OF THE WEEK
Tres proceedings in Parliament on the opening of the session, and the atirring tnpice introduced into the Queen's Speech in explanation of the general poliey of Ministers have completely occupied public attention during the week Her Majesty's Speech was delivered by commission on Tuesday, and the Address in reply to it was mored in the asual manner in the House of Peers, when an amendment expressive of want of confidence in Ministeren was move and carried by a majority of 72 . In the Commons similar course was adyyted; un amendment to the Address was mored by the Conservative party, and a debate en stred which was prolonged through four succesaive nights and did not terminate until this morning, when a division took place, giving a majority of 91 against Ministers. -Ou provincial news conveys favourable intelligence in regard to the progress and prospects of the harvest; although in some districts a partial decrease is anticipated, the crop
In France, the enforcement of the census is still source of discontent among the people and of embarass ment to the government; the papers are necupied with details of the resistance ofiered to the measure, and Tou louse, and other important tomns, are stll in an unsettled state, although popular feeling is controlled by the presence of a large military force. The accounts of the larrest are farourable in the neighbourhood of Paris, bat discouraging in many of the provinces.-Our news from Spain is no important; the excitement in regard to the recent measures of the Regency having somewhat subsided. The dispute between the Basque provinces and the Central Government on the subject of the fueros is not yet arranged; and Government has postponed to next year the discussion relative to the cession of Fernando Po and Aunubon to Creat Britain, from the apprehension that it might be rejected if pressed it the present time. - From Germany we learn that the finances of the Austrian Government are greatly embarrasted, and that all commercial enterprise is sugpended ; additional failures have occurred in Vienne and Trieste, and the difficulties of Government have been increased by a revolt among the Polish officers of the army in Gallicia. of the German Custome' Union has beeu promulgaiel in Berlin, and the King of Prussia has published a decree addressed to the Diet of Posen, announcing his determin ation to resist any attempt to separate the Grand Dachy from the Monarchy.-In Switzerland much interest has been excited throughout all the States of the Confederation by the inteffernce of Austria, Prasuia, and France in regard to the convents of Argarr; and it is stateal that the Allied Puwers have called upon the Diet to entonce the Federal compact and compel the conton to respect its decrees. From the Levant we leara that pence has been completely re-established in Bulgaria. A conspiracy has taken place among the troops encamped at Constantinople: but it does not appear to have had any political object, and was suppressed without difficulty.-The Candian rebellion has terminated in the capitulation of the insur gents, who bave sarrendered on condition of a full am nesty.--) ur news from China contains farther particulan from the American papers received by the Greaf Western and briefly noticed in our last. It appears that the Emperor has adopted severe measures against the local commissioners for makidg concessions to the English, and has declared his resolation to conquer or perish in the struggle. A truce, however, is said to base bee signed, permitting a temporary trade; but it was believed that this arrangement could not contimer, and that the English woutd be again obliged to return to Macao. - Prom the United States we have little news of importance much doubt is entertained whether the President wil pass the Bank Bill, even in a modified form. In regard to Mr. M•Leod. a eorrespondence is said to have taken place hetween the Sevetary of State and the Governor of the province, the object of which wes the Nown of the case into the federal court ; but the negotiation was ussuccessfol, and the trial will consequently come on in Oneida county on the 19th of next month.

tain little news of inters and letters of this week conwith Rome, and the mode or importance. The dispute with Rome, and the mode of raising the loan of 60 mil
lions of reals, appear to be the subjects which chiefly oc-
culy public attention. The Senate has voted the Budget Reform Bill, by 62 against 15 ; it was engaged in the least opposition, the budgets of the Queen's household, of the two Chambers, of the Sinking Fund, and of the dethat the session would be closed on the 23 rd . An official return has been published of the public revenues, during be month of July, from which it appears that the receipt \(84,534,701\) reals, leaving a balance in the Treasury 4,032,756 reals. That part of the new tariff, which rerperts tonnage duty, is decdarnd to the in furce. All
foreign vesselb, from tow tons to 20 quintal., are to pay 120 reals per ton, and - -3as per cent. over and above for tonnage duty. The disputes with the French Government, on the subject of the frontier question at the Aldudes, was expected to be amicably arranged. The the Syndic of the Republic of Anderra, separating France from Spain at the Eastern Pyrenees, as to the smugglers Anderra. Letters from St. Sebastian state, that the Basque provinces had declined appointing commissioners
to regulate, with the central Government, the question of he local fueros
Portur - We hare received intelligence from Lisbon to the 16 th inst. The special finance committee of the
Chamber of Deputies had presented a general report upon the questions submitted to it, agreeing, generally, with the system of reductions and new taxations proposed by the late royal commission, and adopted by the Government; but disapproving of two of the proposed imposts, and the tas to substirute by some other tax less onerotts. The committee proposes twelve projects of law fur present adopinn, some of which are to carry out the views of Govers ment respecting rradual retrenchment: others are measure for on produce of all biuds consumed in Lisbou is to be extended from the city to contiguou district- the custom-lubuse tarifli is to be augenented, and the promium or drawback of 15 per cent., wew gisen to goods imported in Portuguese shipping, is to be ace. Te per in also put on Portugura salaries, and the same amount on the dividends of the internal funded debt. The proceeds of the new taxes are to be paid over to the Board of Public Credit, which is to be charged with the to leave the payment of pronsions, half-pay, Ac. (1) the charge of the Treasury, as at mesent, and not to transfer them to the Board of Public Credit, as proposed. It ap pears that the 'pamaris ate taking very strong measures ti) prevent the passage of fureign goods orer How the frontier, and have a large mmary fore employed for that purpose. f perition bas been prestutal from the me cantale body in Liston agranst the abolition of the differen tial duties. (ireat quantities of English cutton goods have been despatched at the lisbon custom-house in escape the operation of the new taritf, whan came ion would chiefly affect womlens. A decree has been published admitting ressels coming in ballast to enjoy the privileres accorded to such ressels, although having on buard packages containing bouk \(=\), mathinery, abd instru ments of varions kinds. prosided the amount was no more than \(1-30\) ) the part of the tomage of the vessel. The guerillas have become very daring 11 the somtio

The Parks.-We announced in a prefmas Namber,
 of its distosable area a vailajle as eariy ts poosibie in the season : the formation of proper foctraris. and the execurion of rarious chiter sertikes yet requisiee is make it complete, procteding as rapidiy as circumstances will admit. The greatest,
ments connected with this measure, it is said, is yet to ments connected with this measure, it inces already made,
come. In addition to the five entrance
a sixth will be formed, to alford admission into the park
from what is termed the inner circle. The ornament water will be crossed by a suspension-briuge, of nearly 150 feet spaa ; and the line of the path of which it is to form the monnexion will extend, with searectr ant deviation, rosedue entrance at hork gate to the summit of Primacquired Plans for comneetung the property recenti part divided by a public road 's-part, from which it is in sideration, which it is hoped will successfully dispose of the difficulties hitherto interposed in the way of preserving houndary in that direction. The enfanco it
 Park aloo, at the entrame mor Myde-parh-comer, wheh weather, has just been repaired, and the lowt-complained-nt inconvenience removed. It is not intended, it is sand to graze horned cattle there axa: \(n\), or to sutfer angthing else to interfere with the receration of the publre. Seats are now erected, and the new gravel-walks are agreeable promenades.
Mesropolitan Improvements.-The inhabitants of the Metropolis will be aratified t learn that on Thursday. on the motion of Sir M . Wood, the House of Commons appointed a Committee, composed of Inglis, Lord Lowther, and Other Members, for the pur prorement of the metropolis which they may deem worth of their consideration: and also the petitions which hul purclase of the interests of the proprietors of Waterloo Southwark, and Vauxhall bridges, in order to their being immediately opened to the use of the public free from toll, and to report their opinion as to the expediency of adopting any of the said improvements ; and also as to the best means of carrying the same into effect.
Bavtholimear Fair.-()n lh denceday, a depatation from the inhabitums of smathnent wareal on the I ord Mayor
 place last jear, had in no way lessened the inconsenience arising to the trade of the neighbourhood, and concluded by praying that the fair should be regulated by the plan f 1939 or discontinued altogether. The Lord Mayor said that he did not think he could interfere in the matter. acted upon the saggestions of the City solicitor, to whom the question of the abolition of the fair had been referred, and who had considered it with great care, and repurfed the to proclaim the fair that he had to do in the matter ants wonld memorialize for its alowlition altog ther, it Noud be extmaninhad this year on tioc apot. It was the

 which fars sudacuy spruag up, England alone appeare to nare been zow in her operations. It is, however, tated -il tr Mr. Massam, who is now her Majesty's vicemparal at triendiy whanse, estath is mind hy she porssion. of which be was at ivemher. The netr interpesting fact cancems more general cirilization, and is to the effect that a geatienasn, also connected with the Eaphrates expedition, and holding
place many of the latest improvements in agricultural implements，and amongst them a lerse number of plonghs， a press for cotton，are．These he intends the assistance of matives only he will improve the means of irrigation；besides which he intends introducing the cultivation of cotton and sugar， for botin of which the country is said to be well adapted．
The Galcano－plastic Process．－A letter froma Munich informs us，that the celebrated Bavarian sculptor Stigel－ mayér has brought to such perfection his galvano－plastic process，that its effects would be deemed fabulous mere they not publicly exhibited in the Museum of the Sweiety of Arts．In the space of two or three hours，colossal statues in plaster are covered with a coat of copper，which
takes with the zreatest arrarwy the most minute and de－ licate touches，giving the whole all the appearance and so－ lidity of the finest casts in bronze．M．Stigelmayer has also applied his prncess to the smallest objects，as flowers， plants，and even insects，bringing them out with such ac－ suracy，that they seem to have been executed by the hands of the roost skifful artists．

The Sun＇s Rotalion．－The Munich Gaxette publishes mote from Professor Gruithuisen，announcing that he has ascertaioed the exact time He finds that the sideral rotation is made in 25 days， 14 bours， 54 minutes，and 5 seconds；and its synodic rotation in 27 days， 13 hours， 7 minutes，and 19 seconds．
Shower of Slones．－On the evening of the 25 th ult．， during a violent storm at Navarres，Balbaita，and other parts of the country，a heavy cloud burst，and shed，as the covered the ground for the space of a league and a half． Some of them are said to have weighed hatf a pound，
Chinese Guns．－A piece of Cbinese artillery taken from the Admiral＇s junk at the Island of Chusan has been sent to this country by Capt．Trail，who was present with the expedition．The gun is six feet in length，with a bore of
about two inches in diameter，admitting a ball of about two pounds in weight，and is said to have much the ap－ pearance of a street lamp－post．It is composed of separate which the celebrated gua＂Mons Meg，＂in Edinburgh Castle，is a specireen．It appears to be of considerable antiquity，the touch－hole being greatly enlarged，and the gun otherwise worn by rust it has been presented to the Musenm of the Dandee Institution，and a simila one
hais also been forwarded to Cupar－Fife．
The Wibliffes．－It appears，from an article in the renera

 the heads of houses，the one of Canterbury，the other of Baliol－both prebendaries，the one of Worcester，the other of Chichester－and both dying within a year of ench other．
This is the more remarkable，as the name of Wickliffe is a local one，and the onl！locality in Fugland bearing the name is the village about sis muses frous the town of Rich mond in Yorkshare，where the Retormer is said to have been born in or about the year 1324．This fact may not ouly clear him from several apparent inconsistencies of conduct，but from the graver charge preferred by several the ers，that the zeal which he displayed in withstanding the loss of the Wardenshin of Canternery Hoil Osfor of which they gay be mas first deprived by Archbishop
 －what ine aferwards dilt wis saerely gut of revenge，and not all of conscience，and that beiny a man of good parts， he exercised them to an evil end．＂Ligit is，however， thrown upon these matters by the discovery of the fact that the Warden of Canterbury Hall and the Reformer
were two distinct individnais． were two distinet individals．

普构。
HOME CIRCUIT．－CROYDON

Glyn and CO，of London；that the parties，as far as could then
be ascertained，were 14 in number，whose names were given amonest them were cumningham Graham，an anonymous partne law of Cumningham（rratiam，and chiet partner in the hoose of
Butie anut（\％）．there wa alon the nane of the Marquis de Bour－ Buste and Cos there wain alwo thane of the Marquis de bour
Then followed the

 ney easily，as he would not have much thether，under those cir cumstances，the defendant was justified in inserting sut errime
 protection，and hoping that by hien verstet they womaterestor rehalf of the plaintiff；after which Sis W．Foltet a．tiresen in th
ary for the defendant，and said that he quite concurred
and abservations that had fallen from his learned friend that the reat importance，not only to the plaintif，but to the public arrer，and also to the commercial interests of the
elt it was due to the character of the paper and for the benefit of he problic that they should do bo．They had made a statement onvaining matter of great importance to the puble－they be
icved it to he true．anut they were bound to prodnce evidence in upport of it．The learned Compel caid he would now provee in a matter of such vital mportance in a commercial communty he might le excused for gome into some luttle detail upon thi Mr．Graham，and it would not be necessary to enter hito anypar icalars of his previous history，but to slate that with two other pentlemen in busiuess as banhers．Messra cilyn and Co．，of cular letters of credit to the bankers in the different towns of the
Continent．which letters were signel by one of the partuers；and Continent．which letters were signell by one of the partners；and
any person holdine one of those letters was enableal to get money t any hanker＇s with whom Messrs．（ilyn kept an account all over the Continent of Eurnip；and the only bobeher for the genuine and no Ietter of a tvice was sent．The learned Comusel then sai that by means of a tracing machine alz exact fac－simil satisfy the jury that the forged letters of credit made use of in machine so that the furged were signed by means of sueh hould alon he ahle to show that the forgery was completed a Florence，he feared hy the elder Graham，and thatio was arranged of the Contunent．nbtainme money in all directions，and they wowld apmar that in 103，the Marguis Bourhel，one spirators，with the elder（iraham，his son Nexander，and th haintiff，were at Corence ：and the first－mantioned perom，who did not hear a very reputable character．resithed hear tlat cit and hat a bauking acal by the statements of the parties themselves；but from the cir cumstances he should lay before them he did not think there could be any doubt that at this time the scheme was irst con been refarred to were not left in the care of the bankers；and Nicholson resided at plorence，and the hat a gentleman named \(\mathbf{i}, 500 \mathrm{~V}\) ．，and the bank of the plaintiff was applied to to advanc Money upon that letter in the ordinary course of business；and credit in the custody of Mr．Kerrick，one of the partners．This then，would give an opportunity of obtaining the signature，and
he nonnht shon that in \(1+, 3\) the plaintiff，liy a fal－ce pritence，that Mr．Nicholson wanted to draw money upon the letter of credit the jury that Mr．Nicholson made no application of the sort，and turnell it to Mr．Sisriv．Mr．Graham was ordered to leave Flo－ bank for him，the object of whicu machine was to enable any on trontain aa clact fac－simite of any wrining mbmitted to its cype to）obtain the momuine signature from the letter of credit he had referred to，and which was afterwards transferred to the forge documents；and this must naturally lead to the conclusion the Bourbel，Graham，and Bogle，were the original promoters of the
cmpispac：－What cronk 130 gle want to gain possericn of the letter of credtit for，and what object coold he have，when they tain a copy from the genuine signature？He should show the jury that aiter this，Buurbel and the Baron Ageneau，another of the party，procoeded ts London，where they ohtaned from Mesors．
Gilyn and Co．a letter of credt for \(150 l\) ．，and having draw：back all the money except isl．at Paris，they retumed to London，and they there induced Perry，another party concerned in the con chaselia guntity of the same description of paper as that uned by Me－srs Giyn and ton，firt the genmme letters，a great number were struch oif ：and as nothayr was now wanted but the signa－ ture，they set off to Florenee with the torged letter
ispature adiled to them．It wond loe prove？

\section*{Cije Gatornats Cbromide.}

SATLRDAF, SEPTEMIEER 4, 1841

Nothivg more plainly indicates the anxiety of the public to carry the improvement of their gardens to its furthest possibelled seedlings are sought after by cu.tiators of every degree. Kinwing that it is by seedlingsalone that much progress in amelioration can
be made, the mere name of such a thing has irresistible attractions for the great mass of garden-lovers There are some who even suppose that, to be a seedling, a plant must necessarily be better than its parent; and there are others who regard the raising a seedling as a prodigious effort of horticultural skill. The former forget how often in the moral world the child is inferior to its parents, and that races may be degraded as weil as elevated. The latter seem uticonscious that myrials of seedlings are constantly springing up around them withont the assistance of art, and to which they attach no importance. The child raises a crop of mustard and cress in a warm flani el near the fire, and mistaking the wonderful creative power of Nature, thus for the first time brought within the range of bis perception, for something that proceeds from his own art, may be well excused for hischildish triumph over nothing. But the grown-up person, who equally claims credit for the same operation, must skilfully applied, or by long and unwearying inilustry, he has succeeded in improving the beanty or increasinf the utility of savage nature. The man who first obanned a fle hy-ronted Carrot from the tough and woody root which grows unnoticed upon our downs, should be due; but we cannot concede the same praise to his desceudant, who merely raises a crop of young When the question is put in this way, no one can avoid perceiving how baseless are the claims of those who demand attention for a plant merely because it is a One person points sou out an Orange tree, and tells you how he raised it from a pip, and offers you a cutting as a grear favour. If by chance you inquire what the merits of this new Orange may be, you are told that. upon that point, the possessor has no information, but that it is a seedling. Another man brings you an Apple-tells you he raised it from seed -calls scions of it for distribution among your friends. It is fruit, and say that you can perceive no novelry in the fruit, and little merit; that it is inferior in beauty to ore thing, and in flavour to another, and that your garden is filled with Apples already; no refusal can be accepted. - for is not the Pride of Pippington a turale xhibition-offers it to the judges fur approval, in full conftidence that it will gain a prize. Let us suppose this plant to be the Silverwood of the Cape; the judges pass it by ; the exhibitor is angry, and demands their reasons. It is in vain to say --" Why, Sir, this plant is a common tree from the Cape of Guot Hope, which has been in the gardens of England for two centuries; it is to be found in all collections where such plants are cared for. has flowered repeatedly, and the specimen exhibited by you is by no means in a good state of health." This is far from satisfying to be rewarded? Did I not raise the pant myself? and Finally, seedling?
Finally, there are those who hold the opinion that every seedling is different from all other seedlings, and, from seed is ay plint, if proved to have been raised This may be literally true; it is prohable that no two individuals amony men were ever the same in all practical indercumstances ; but what then? To what practical inserence does such an assumption lead? Are me to distinzuish every blade of grass and every bush and every hean of corn by some separate name, beits leaf is a hatirs-breadth shorter or iis stem a trifte more crooked. or is corlour darker to the amount of What our neighbours call a smipem? No argument Would he required to show the absurdity of this; and yet the plan is practically acter upon.
No plant ought to be, either butanically or horticul-
curally, distinguishel from othere, unle it has
some plain and undoubted features remarkable and peculiar to itself. A difference is not a distinc-
tion. When, therefore, persons advertise a seedling this, or a seedling that, the true question to examine is, not whether it is really a seedling, but whether it is distinct from others of its kind. The first question cannot possibly interest any one except its owner.

We have been led to these remarks by the numerous inquiries of our correspondents concerning the
new Grapes of the present season. Concerning these the accounts are as contlicting as any disputan could desire. On the one hand they are asserted to be seedlings, on the other it is positively declared that they are no such thing. The Black Hamburgh amt the 13lack Prince are, according to one class of our corres iondents, the same as some of these varieties. while others assure us they are wholly different am? really raised from seed. It e have alrealy shown that the latter is no recommendation in our eyes; and if so in other races of plants, still less is it a merit in the case of grapes.
Eight or ten years ago the late Mr. Money gave a flourishing account of two seelling grapes ; and everybody bought plants of the "Muscat Eshcolata" and the "Eshiculata superba" at a guinea each. After a time the plan's fruited, when the first was found to be the same as the White Muscat of Alexandria, and the last as a worthless old sort known by various names, of which Black Raisin is perhaps the most proper. Mr. Money also sent out another professedly new Grape, to which the singular name of "Money's W'est's St. Peter's" Was given; it was said to have been raised from seed by a person named West, but no one can distinyuish it from the Raisin des Carmes. So again a Grape called Wilmot's new Museat is not distinct from the French Chasselas musqué: an excellent variety, by the way. Now we do not at all
question the veracity of those who say they raised the question the veracity of those who say they raised the
above-mentioned sorts from seed ; on the contrary, we may safely admit, at least for argument's sake, that they did; but what then? Are they on that account worth a guinea each, while those from which they cannot be distinguished are only worth three and-sixpence? We leave our readers to answer this question for themselves.

In Grapes then, as in other things, the question to be answered is not whether a plant is a seenlling, but whether it is really distinct from all other Grapes in cultivation. In the opinion of some of our corre-
snondents, that moble variety called Wilmot's New Hamburfh is oaly the Black Hamburgh well cultivated; one, who -ays that he saw it growing on the tree, declares that he can see no difference between it and the Black Hamburgh. Now in general one may take the word of an honest man for what he sees; but not always, and especially not in such a case as this. Mr. Wilmot's Grape has small, round, loose bunches, with very large uneven berries; that is not the usual character of the Black Hamburgh ; but the latter may certainly be made to assume such an appearance by thinning and high cuitivation. Indeed we must admit that we have seen single berries of the Black Hamburgh Grape even Iarger than any of Mr. Wi-
mots. It is, however, to be observed, that in such instances the berries were the exception to the usual rule, while the large size and rugged appearance of Mr. Wilmot's are evidently the habitual marks of the variety. What. however, are of far more importance than size and the surface of the fruit, are its taste and
texture. If the former can be influenced by cultivatexture. If the former can be influenced by cultivation, the latter cannot. A gardener may thin a Whice those of a Muscat of Alexandris, but he will never make it have either the musky flavour or the firm solid flesh of the Muscat. Now this is very nearly the case with Mr. Wilmot's ; it has a flesh almost as tirm and soiid as a Portural (irape, and is not at all ike the Black Hamburgh in those inportant particulars. There can, therefore, be no drubt that it is quite distinct from that sort. If we are asked whether it is equally dis istet from other Black brapes. we answet without hesitation, yes, so fur as we cmascertain We have consulted some of the most skilful Grapegrowers of this country and the Continent. it
With reurd to Chapman's Seedling and the Royal Victoria Time. we have not at present had opportunities of examining them.

We to-day insert the regulations which will be ohserved next year at the great Exhibitions in the Garden of the Horticultural Suciety at Chiswick. There will also be found in another conumn some chservatious by d correspundent upne other matters relating to the same subject, we shall return next week. Tre shall for the piesent only ubserve, that most of the suggestums of our correspondent are met by the new regulations, which have been framed with gardening.

ON THE PRODUCTION, DISTRIBUTION, AND PRESERVATION OF HEAT, WITH REFER ENCE PARTICULARLY TO THE IMITATION
OF CLIMATE, IN CONSERVATORIES.-No. VI. OF CLIMATE, IN CONSERVATORIES.-No. VI. Tredgold's Treatise on Warming, I find that I have mwech understated the defects of the ordinary plans. In the examples there given not more tban one-tenth of the working suriace nerposed to the direct action of the fire. The whole energy of the burning fuel is, therefore, directed to what tended sprace on which it might act, but for the perverse ingenuity with which it is shat out. It is m ) answer to this obyection that the boiler is of large capaenty. and wontains a great bulk of water; the nill consequaties of urgug an intense heat against a small portion of arom are latle,
if at all, obvidted by increasing the quantity of water conained in the boiler. In fact. the greater inequaluy of emperature which is thus aimed at betwren the maner and outer sur:aces of the metal would (if produceatit) teresen more prejudicial and destructive than the excerope hear at
 mass of water. There is a certain maximum rate nt nthim contact; and the only effect of increasing the supply of heat is to excite that repellent action between the two which has been already described, and which Mr. Perkins ingeniously attempted to overcome by inducing in the water an artifiecally rapnd circulation, which constantly
brought fresh portions of water near the averheated brought fresh portions of water near the merheated clos, but whick did metween the whior mod the irom. This plan, therefore, ingenious at it was, is inadequate to making a large quantity of heat pase sefely and econonaicaliy througha a suall quantity of metul; stall hess efliective is the recommendation to make, with this objees, the boiler of large capacity.
The plan which I have ventured to soggent, of producing intense combustion, and placing the boiler at such a distance that the radiant beat may spread over a large surface, furnishes, I believe, the key to efficient and oco nomical boiler-setting
Having heated our boiler, the next consideration is to diffuse tint heat rapidly through the pipes. - a problem of ertreme simpticity, but which has cometimes not been
solved, by failing to attend to the most obvious eonsiderations. Tue basio of the whele system is turts, - tuat whenever a vessed, of any form, containing an elastic or ately take pla.er in the fluid; and so fir trown is be:ag dilticult to pindure this mution, the ony witticilty, as is to prevent the the cese of air in steam cywler jachers est differences of temperature, and the result is, that in nature ing fluid matter is quet. Warm water in an exposed vessel is in constani mothon down the combenz walls, and up the protected centre, winle lapad, cmoning and evaporating ander the microscope, are seen to describe the most extraordinary evolutions. In short, the whole
tuid world, whether heating or cooling, maintains a perpetual motion, which requires only a few simple considerations to direct to our own purpuses
In illastration of the einpiest form of circulation. let the annexed figure represent a section of any enclosed space contsining air, the opposite any sensible degree ; there wiht then infallibly orcur 10 the arr a continuens moverment shown by the dotted arrows; witle in the centre of the space the contlict of the ascending and descending currents will create numberlese litte winriwinds, when wilh, to a
certain extent, interfere with and ciueck the maiu currents. For this reason it is found that a diaphragm to separate the twu cur
rents promotes the freedom and increase rents promotes the freedom and two strmams within their proper limits. By ciais diaphragm the vessel has beeome

Water in pipes, for it is in some respects a severe case as compared with the pipes. The ascent or descent of between the particles of the fluid, inasmuch as there is a constant displacement of the water, and a rush of the water so displaced to fill the space vacated by the moving balloon. The number and confusion of the intestinal curreats so crented must prodnce friction incomparably greater than any arising from continuous motion in a p:pe of uni-
form bore. If it be replied that these curreats are thuse form bore. It it be replied that these curreats are thuse of fluid against fluid, it has been already shown that this m disposed, however, to believe that fuids conform to the example of all other things, and that friction amongst themselves is more severe than that against foreign bodies. In looking at water flowing by the side of a ship or the piers of a bridge in a stream, no perccptible retardation is discoverable in those parts whica come in contact with the not very smooth surface of the planss in one case, or
with the granite in the other. There is never any indicawith the granite in the other. There is never any indica-
tion of sensible friction between the flaid and the solid; tion of sensible friction between the find and the solid. so as to take place in the fiuid rather than against the walls of the containing vessel, it may beshown to be considerable. Few persons probably are aware that an ordis nary hand-basin, with a plug, will discharge its contents when the water is soaped, in one-fourth of the time that is required with pure water. Here the nature of the course taken by the escaping mater (of which are or upper portion goes first) is evidently over the lower porable with the pure fluid, is diminished to one-fourth by the misture of a little soap: I do not, therefore, advise the ase of soaped water for hot-water circulations where the power is feeble, but the fact is stated for the benefit of any who choose to make the application.

The fact that the friction of water against water is greater than against foreign bodies is further proved by the force required to prop-1 a square-ended as compared with a cut-water solid, or by the resistance offered by piers of bridges differently formed. When the cut-water of a bridge is so formed that the water rums against the whole surface, the friction is least; a square, or nearly square end, which maintains in front of it a portion impinges and rubs, instead of against the stone, incresses the resistance very greatly.

The influence deducible from these facts in relation to our present purpose is this, that in every hot-water circulation there should be the least possible liability to produce intestinal carrents or eddies; that the water should, as much as may be, muse in a mass. With this view sharp and numerous bends in the pipes should be avolded; and abore all, we should guard against strictures, which aciredraze the water, and create a quantity of inter-friction, infinitely more prejudicial than that against the walls of the pipes.
With well-arranged pipes, then, the friction is doubtless Tery small ; but the inertia of the water is an obstacle of considerable amount, which, like the friction, will increase with every change of direction, with bends, and with strictures.
The value of the resistance offered by friction and iner tia will increase rapidly also with increased velocity, and lil be afecter by mold be are obliged, therefore, to estimate the quantity of resist. ance by knowing that it is certainly below that of the force which overcomes it, and which is more easily estimated. In any system of pipes, howeser complicated or numerous, if the sum of the products of the specitic gravities of the ascending columns multiplied by their several lengths, measured vertically, be less than the corresponding sam of the descending columns, motion will result
which will be more rapid as this difference is greater.
It would be useless, however, to give a minute example of this calcalation, because no design for hot-water pipes place, safely made from such elements. In the first place, the temperatures of the several portions of the pipe purpose. Where the circulation is simple and does nor descend bel w the terel of the builer, every alternation of ascent and descent creates a force which, however small its mount, is ia farour of the n!uvement. When me descend blow the level of the boler, we create a power against the movement of the wdter; but as we seldom maire a decent except for the saiee of passing an obstacle, the temperatures of the asendiny and deacending colums are In oll such cises, hyweiferent to offer much resistance. In all such cises, howeier, it is prodent to have an obvious preponierance of proxer in favour of the circulation, of which an example wat he given presentls. the mutive force may be thus roughis Illustrated:-If the water in the annexel srphon had. when cold, stove in each lez as kigh as the top of the
sborter leg, and if that in the loager sborter leg, and if that in the longer
lag had been heated so as to expand it is showa in the figure, the macer mould A13: out at twe shorter leg with the same furce as if it fowel! rom a coiunan equal to the duference in haight
 almely i-ry much less than here mpposed ; it is so small inute.? aitio anyatainale rarieties of temperature, that the ra tive firet wouid appear to be quite inadequate to seen that the froction of tuids in regular pipes is by wo means so serious an obstacle as is sometimes sepposed.

The facility with which water may be made to circulate a fact which, like the facility with which carria:es may be propelled on iron rails, has grown up by experience in opposition to predictions against its success. It is, never theless, \& phenomenon, when properly considered, per consistent with theory, which, howeser, is frequently fectly consistent with theory, which, however, is frequently
not produced, owing to ignorance of its elementary prinnot produced, owing to ignorance of its elementary prin-
ciples; and which nerer can be produced in opposition o those principles.
The annexed figures, A, B, C, representing three vessels
昭
containing water, will simply illustrate the principles of the movement. In all of them the left-hand side, or that cause, to be the warmest. In A the ascending and descending currents would interfere with each other, as before mentioned, in regard to air, creating whirls and eddies which would check each other's movement. In is
the diaphragm, by preventing this intermixture, and by preventing also the exchange of temperature otherwise than by circulation, would greatly increase its velocity and in c the velocity would be still further increased by
the horizontal distance between the ascending and descending columns, which would cause them to exhibit greater differences of specific gravity.

Here, then, we see gradually produced the three clements of power: 1 . Freed \(m\) from intestinal movements. Substituting the friction of water against some other substance, fur that of water against water. . Difference
of specific gravity, by causing the water to become much cooler in the descending than in the ascending chamber.

We have now only to imagine this last chamber to be closed and unequally divided, forming what may be called a boiler at \(b\), with a cistern at \(c\), and we have a hot-water apparatus in the simplest form.

P. S. I Wdi much gratified to find my proposal for by the results of the accidental experiment related by Mr Mackenzie in the Chronicle of July 24.
I doubt, however, whether the mode of laying the pipes which he suggesued, would be so good as having them ac cessible in a vaulted cavity, where we might make a cer tain number of them into trough-pipes, the vapour from
which ascending into the soil would be a most effective which ascending into the soil would bo a most effective
means of distrbuting the heat, and might perhaps supermeans of distributing the heat, and might perhaps super
sede the necessity of watering: if so, it would tend very sede the necessity of watering: if so, it would tend rery
much to preserve the earth in that loose condition which is farourable \(t\) ) the roots of the plants. I think, indeed that this circumstance might form an important distincthin; for artificial watering is in many respects an indif specinbstituie for rain-though rain. perhaps, an spil which heary rain, produces a hardeniug effect upon the therefore, be a good experiment to grow plants in a vapourwarmed sorl, sheltered by a glass reof from the rains and From night radiation, but free!y exposed to the air and wind.
The mode of vaulting over the cavity by hollow earthen voussoirs, which I furmerly described, though perhaps the best for transmitting the heat, is not essential. An arch tarned with bricks laid open-wise, as in the walls of hot beds, and covered with leaves or moss to prevent the earth rumning into the apertures, might possibly answer the purpose.
White on the subject of earth-warming, it may be wort whie to notice the fact mentioned in Redding's History morninge in aril some vineyards on the Rtine, when th the practice, about an hour before sunrise, to barn litter mong the vines, or to heat the ground with torches of mong, continuing the process till the sun begias to shine on the plants. The same writer states that in Poland, Prussia, and parts of Germang, the frost is kept from the stems of fruit-trives by surtunding them with corus of
traw or hemp, whose ends dip into vessels of spring water, the temperature of which is (I presume) communicated to the trees by the capillary action through the cess be corroct curious, ingenious process. it will he remarked how completely all these practical results point to the efficacy of warming the earth and the plants, in stead of warming the air: indeed, the delusion that has cristed on this subject, the palpable absurdity of attempt-
are the allusions to wh it considered how constant how seldon (except in treatises on warming) warmed sit is mentioned, otherwise than as the instrument of the pear tilence. Turning, a few days since, for another purpores to Roscoe's Lorenao de Medici, I stumbled on the folowing passage, in a letter from Politiano to Ficino:heat of the season in your retreat at Careggi, you will perhaps think the shelter of Fiesole not undeserving your notice. Seated between the sloping sides of the mounstantly refreshed wifh moderate winds, find little inconvenience from the glare of the sun.

\section*{ENTOMOLOGY.-No.}

Earwigs.-The structure of these animals in very curious and beautiful; but, common as they are, few pery song have a correct knowledge of their economy, for, being them; and this, unfortunately, arises more from early peir geting info the human ed than frogar notion of motives. It is certainly remarkahle that in sereny rational these insects have received appellations indicative, tis in England, of this disagreeable propensity; in Prance they are called Perce-oreille, in Germany Ohrwurm, in Sweden
Oremask or Earworm; but these trivisl names Ormask or Earworm; but these trivial names were lies of mankind would naturally expose them to and annoyances, and when prejudice lost nothing from the superstition and ignorance which then existed.
Until very lately I had never seen the eggs of the Earrig; De Geer, however, had long since stated that the emale broods over them like a hen, and apparently prowith some mould and the leaf of a scarlet-bean, which these insects are particularly fond of, and she soon laid 14 oral eggs on the earth; they were opake and yellowish (fig. 1); in a short time she removed them to the surface of the
leaf, and I found her nestling amongst them; unforta. astely they were either destroyed by the parent or entea by some young woodlice, which were concealed in the cup. The young Earwigs are similar in form to their parents, and are equally active, but much smaller, of course, different in colour, destitute of wings, and the forceps are straiguter and not horny; when they have arrived at the pupa state they bear a still greater resemblance to the mature insects, time to time, and immediately after this operation they are of a yellowish-white, excepting the black eyes. Having arrived at their fial state, both sexes are provided with winge, which are most curiousily folded upon the back, and nearly concealed beneath the wing-cases ; that these organs are sufficiently ample to sustain them in flight is not to be doubted; and F. borealis having been taken on the wing in the heat of the day last month is a confirmation of the general opinion; it is, however, not the less remarkable that baving this power, they should so seldom a aill wisor, which seems attached to muck-heaps, and sometimes tiea in such immense swarms in the sunshine, that I was once cosered with them in an instant, when sketching from nature; and I very much doubt if our large common Earwigs fiy in the night, for their wings are too delicate to withstand the slightest bumidity.
There are two species of true Earwigs, one of which is named Forticula borealis,* Dr. Leach having met with it in Scotland; but it is equally abondant in the South of Eugland, under loose bark. stones, \&c.; the males are distinguished by much longer forceps than nur couma riculd ine has, which was named thorax and wing-cases ( 4 ) ochrsous, as well as the horay covering of the wings extending beyond the eiytra, whicm have a sinuated brown line, more or less, surrounding wheo the dise of the thorax being dark-brown; the wings, whed (5): The fesemble a shell called Haliotis or (5): The female (fig. 2) has seven distinct segmenty and on each side of the 5th and 6th from the apex there are two little ridges; bat these are on the \(i\) th and Sth from the apex in the males, in which sex theresre nine vissble segments: the forceps in the female are very slightly curved and form a beak when closed; Jut internal teeth at the base, and both curved (J), whort process at the aper of the abdomen; the horns are 14 -jointed; the les is are furnished with a three-jointed foot, the midad
bilobed, and the \(3 d\) has two claws at the aper.
A vast portion of insects feed only during one portion of their lives, and are therefore comparatively harmless, excepting when they are in the larva state; but Earwigd commence eating as soon as they leave the egt-bill they continue their devastations, chanty and even then they do now, uatil they arrive at maturith, class of animals, after having deposited their eggs. Thns, we find on shaking \({ }^{2}\) flower, small ashy-brown Earwigs, not more than a long, and very soft, with every intermediate gradatioh are protected the full stature of their adul parery, one who bas a garden by a beantiful coat of mail. Blina, is well aware of the evirchall, or whats of the Earwizs. as ind: cated by the bowle of tobacco-pines and l, hoters catm which are suspended over the flowers to catch the enewis In parly spriag they eat off the tender leares and shead appear abore ground, and when me foligge vanced they nibble their edges and perforate the atacied, \(\frac{\text { As snramer approaches our choicest fiowers are }}{\text { Fide Curtis's Brit. Ent., pl. and foll } 560 \text {. }}\)
and in the antumn the most valuable fruits fall a prey their appethes, check their incursions, when they retreat oder baik and stones to hybernate. Their warfare is carried on by nipht, and as they bide themselses on th. approach of day the anibilate them. The plan of pous it is inpossible an inverted garden-pot at the top of a stuck is, f timk the best for howe I I I couid catch none when I put moss into the pots, whic ought to be small for this purpose, and if painted green are less conspicuous, and consequently less offensive to the eye in a garden; the stakes also should be tall to be into lengths of four or five inches should be stuck between the branches, and taken down every morning and shakent over a pall of water, of fall out: reeds, the stalks of Broad Beans, Sun-flowers, and Hollyhocks are excellent for thi parpose; but it is necessary to force the pith out of the Intter two before they are fit for use, or folded paper may be successfully employed in their absence. Any a been flower can be protected by winding tow, which has been
dipped in sweet oil, round the stem as high up as possible. -Ruricola.

\section*{COTTAGE GARDENS.-No. XXXIII.}

Preseay tinue to clear away the haulm and decased stems of such vegetables as are no longer useful, so as the ground which thery occupied may be manured and got ready for the reception of other crops. See to the onions, which if sown as we recommended, in the latter end of February or the beginning of March, will most probably have attained therr full size by this time, and be now in a fit state for taking up. The proper periud for doing so is always inand leaves. When this is ubserved, advantore should be taken of fine weather to draw the bulbs out of the ground, and after gently twisting the top of each, the whole are to be thiuly spread over the bed with their roots upwards, in order that by exposure to the sun and air for a few days they may become sufficiently dry and matured for preserving sound and good during the winter. However simple the operation of preparing the crop for hou-ing may ap-
pear, it is really of more importance than is generalls considered, and to its being performed in a careless man ner, may be frequentiy traced the cause of the failure of some particular hinds of Onion, which are known to keep well, and are valued on that account. It should, therefore, be borne in mind br those who are foud of this vegetable, that its quality for long keeping will very much depend on the degree uf care which is taken not to buise the bulbs in pulling them out of the ground, or in handing showery to turn them over several times until they are perfectiy dry and fit for remoral. When thoroughly ripened, they are to be deprived of their fibrous roots, and dry airy place, where they can be attended to and turned orer occasionally, if anywise thick, until an opportunity offers of getting them plaited, or tied up in bunches, which is the eastest and perhaps the best method that can be alopted for leeping then. Tbe manner of stringing Onions is familiar to almost every cottager, and our deseribing it inay to many appear supherfluous. It is performed in this way:-Take three or four in your hand by the decayed part of the stem, and tie them together with bound ronad the end of a piece of har-band or straw rope. When these are secured, take two or three more and wrap the thread romed them in the same manner, and continue adding and fastening them to the rope in the centre, uatil the bunch becomes of a proper size, which is usually about eighteen or twenty inches long. The flat round bulbs are therally the beat for keeping, and are to be preferred to Which should be sing eiong out by themseives for unsing before
 Which oftes render them inieivor fur culnary purposes at In early period of the season, we would rec mmind a heateu iron to be applied for a few seconds t.) the nozzle, foand an sear it. Tuswe have reason to believe will be HGME CORAESPONDETCL
Sterile Apricuts.-Fur some years past, I have been trying sereral expertments with an Aprtcot tree, in order quite heduce fruit, bat they have all faited. The tree ap paars the roots pruned and placed nearer the sarface. Atter that treatment, it produced blossoms is abund:nce; the any cormia, and stamens ajpeared to be as heaitiyy as any gardener could wish for. but in tire great majurity of in those few not a rudiment of a pistil was to be seen, aud the atyle and stigma were in a shrivelled state; the tree
was also protected at nigh
any cure for such a disease,
in a bunfire as quickly as possible? Is it known whetlien wh stamens will endure a greater degree of c 1.1 than the
pistils?- l'eter Mackenzie. [We sulic.tintormation wion these points.]

Charevil as a Soil for Piants.-1 obserse tat ic, under tiee heal of "Syitices to Correspondents,- Ah, that tou say, it is questionible whether its effeets are more than of a mechancal nature is keepatg tise suil toose. As now in the course of pubication, on vegetable physiology,
published by Tanner and Co., London, speaks very conclusively on this subject, I take the liberty of calling your atiention tuit. "It is essential to the rapid growth of What that this part of its n anishment" (carbunic acid) The carbomic acid may be funibled in two ways: eithe the soil may absorb it from the atmosphere, or the de cay of some of the matter contamed in it may disen gaye this product. It is a remarkabie property possessed by several porous substauces, of abourbing gaser, and e:pecially carbonic ac.d gas, to the amount of many times their own bulk. Of all these, charcoal is one of the most ponerful in this respect, and it has beea found that many plants may be gromn in powdered charcoal, if suff ciently supplied with water, more lusuriantly than in any other soil. The charcoal itself undergoes no change, but by fom car bonc acid qas frum the air; this is dissolved is introduced into the system. In such cases the plant derives its solid matter as completely from the atmosphere alone, as if its roots were entirely exposed to it; for not particde of the charcoal is dissolved, and it, therefore,
affords no nutriment to the plants."--Page 117, section Country Rector
The Lily of the Valley.- The advice which you gare some time since to an inquirer, to grow Lilies of the Valley in the shade, is y ite opposed to the hunble experience of myself and others. The best bed I lave ever seen of it is at the foot of a south wall. where for the lat 30 years I have never knowa it fail to blossom profusely. The double-flowering sort seems, I think, more disposed to bloom in the shade; but best of all when its roots are coninned in a large pot. The pimk, or rather dull lilac one, flowered with me this jear for the first time-it seems very shy.-A Salopias-[Thas doctors differ: wo niy say, that the most healthy and finest Lilies of the Valley toe have ever seen, have been at the foot of old malls in \(a\) shaded sitaation.

 many would find in bri geg thetr thats-duticultes tha: *ould completely deter then from showing at ail-out
and sinyle hlowms (mind, single blooms) with blooms. I ams sure I can answer from erperience that the cost to the compared with the co-t to the exhibitors, unless the latter claim the liberthty of the Society in repaying expenses
incurred in getting their productions to Chiswick. Purchasers alon require protection. Before me is a nursery man's list with prices attached to Geraniums, from three guinas domnward. Numerous are the orders given at Chiswick bor plants when they slall be first sent out, the fowers ony of which are there shown, and many of which hibited in the planto themselies. Now it is a very great disappeintment of find that a plant whose only merit consists in a truss of, sar three fine Howers, has \(c\) st a guinea or two, rhat its habit is radically bad, and that you bave no prospect of a the triss upor it. Indeed you cannot
peraude : morefit it is the same, for the flomer, although similar in collure, is not beauttilly cupput as the bloom you saw at Chrown k. ewept for a stmrt time after it oppens.
and it is tuit tit: you have cut a freshblomm, fixed it nicely in a c mpice if grame leaves, and et it up in moss, de., that you are e nvimed of having bouglt ruur "pig in a recp matent converant a ith the subyect stating what are the preperties of a real fine Pelargonium? Im I rught in inchen on thampter. romud, the liwer as well as upper petals formury mim myles, quwe smoveth, a truss of 6 plps at least, brilnang and distinetness of colour, fleshy in sabstance to the very edge, nicely cupped, and not falling
back ater beang upen a short time, no feathering up back aiter betng "ipen a short time, no feathering up the
petals or propensiry to burn, throwing its truss well out of the finhere, and supporting it without a crutch, and these combined with a close habit and large delicate
foliage. If I am risht in this estimate, has it not yet to be obtained? I believe so, spite of the surpassing beauty of the thwers exhibited by Mr. Foster at the June Catlengh. Gannes, \&c., which were indeed deserving the admiration they obtamed.-Edward Beck, of Isleworth, Amateur.
ines.-I shall feel much obliged to any of your practical sub-ciners if they will give an account of the best mode of pruning Vines on the spurring system. I wish
to know how short the spurs should be cut, 一whether they do not lensthen every year; and if so, whether it is ne cessary to bring in fresh wood, and how often? Whether the bunches are as beavy and the berries as large and well. fidvoured as when grown upon new wood every year ? In shourt, I shall feel grateful for any further information. in addition to the answers to the above queries, they may be pleased to give. - W. \(\boldsymbol{D}\).
Mnie l.wasat-This plant was raised at Spofforth hy impregnating the Peruvian L. Pentlandica, which is a low traing plant, with pollen of the Oaxacan L. lateritia, flichis at winer. L. P'entlandica has Larger and brighter show the fand the interguents at the base of the fite ments. In iateritia the seqments touch: in the mule they also touch, but are sloped off at the base so as to suow the gland the substance. The small scarlet processes from it wheh are connmenous in laterria, are aimost obsolete in Pentlandte, but strong in the mule. The seed pod of the Permun, pant is short and turbinate, of the Oaxacan long
and cytmdrical. The mule is a twiner ; has intermediate foliage, atd sred-pods of intermediate shape. It is perfectiy fertule, and the seedlings ransed from its seed, which Was obtained while it was standing at a very short distance from the two parent plants, are nevertheless as true as if the mule had seen a naturally distinct species. Buth are hardier and handsomer than lateritia. Plants of the mule having been given away, it appears to have been named in ome nurserymen's catalogues L. Herberti. No person for ornament, its general aspect being similar, but very .- \(\boldsymbol{W}\). Herbert.
The Rubin. - Whlte directing my man about weediog the grave, niy ese was attracted by sumething fluttering amonyst the shrubs on one side of the carriage-road; a
second giance discovered a poor Robin labouring under some very seriods embarrassment,-apparently its head held down to its side by something. As the poor thing tumbled about in its endeavours to escape observation, my curionty was excited to know the cause of its extraordinary mutions, and stepping into the shrubs, I caught hold of it. when th my great surprise I found that its head was actually honked to its wing hy its own bill. The upper part of the bill was passed harough the sinews, or wing, witura the tirst juint, and formed into a perfect wing, withta the first joint, and formed into a perfect hook, benly at least the third of an weh longer than the lower part, and tius holding the thead firmly to the wing,
without thie lest chance of escape. I showed it to my Without the least chance of escape. I showed it to my
man. who scared with astonistabient, -next I took it to man, who stared with astonishaient,-next I took it to may wife, and her aucher, who is on a short visit with us.
I then intught it into my study, and with a penknife cut off the tip end of the bifi, or rather hook, in order that
Herremper is might hare the means of feedung itself, though still the uppsr paft remained longer than the lower, and forme quiter \(\mathrm{m}^{2}\) engss-vill. It was then carried to tue place Whise is was sound that it might the more readily be met sorwtias ut de erddaer a second time, was permatted to whith if id aswely is could be expected. It was a this year a \(4 . \mathrm{H}_{3}\)-cisad fot its red breast, but was putting on

NEWSOF THE WEEK
The resignation of Miaisters, consequent on the recent divisions on the Address, was effienally ammuned on Monday in both Huses of Prtisment. Hor Majesty haring been pleasel to acequt their rasization, Sir Rohert Peel was commanded by the Qurea to firm a new Administration ; and Parli unent adywirned for a week to give ume for the necessary arringements. Thie fist of the new Ministers proposed by sir Rubert Peel, in accordance with these commands, havns met with Leer Majesty's approcal, a Privy Council was he!d at (larem:ont yes eriary, when the members of the new Cannet were tormally mesented to the Queen, and kissed hamis on recriving che seals of office. A list of these appointmeits completed, with the exception of a few minor otitive winich are not yet finally setth t, will be found under o ir Ho .e News. It is understona that the new wrats rendered necessary by the acceosion of those Ministers to ulfice who have seats in the House of Cominons, sill be muved on Monday next, and that both Huses, at thewr rising on that erening, will adjourn until Mondy fortnght, the 20th inst. It is also anderstood that the first Cabinet Council of the new administration nill be held at the Foreizn Office this day.
The arrival of the overland mail at Marscilles has brought intelligence from Chme to the 20th May, and from Bumbay to the loth July. We learn, from this, that China remained in the same state : the Emperor was sthil resolved on offering a vigorous resistance, and had ordered a nu merous muster of troopss. whech were to be comminded by bis brother in person. Durris the truce allowed to C'apt. Elliot a large export of tea had been effected, and II,ngKong was agatin occupied by the British. Admural Parker and sir H. Potinger had arrved at Bombey, and left for China on the ith July.. - The news from the Lecant, brought by the same mail, is not of great maportance; in Eg!pt the lacha appears to be corganizug a consmerathle Heet, and making lirge addtions to his mithiry force; the disturbances in Arabua are lihely to the antanged without hotile interference, the Grand shentf of Meeca haring offered his subm stion on condithan that the Porte will

The Neac Muzatry. - ©n sunday evering a special me:senger arrived dt the residence of sir Robert Peet, in jesty, requiring the attendance of the bight hon. barmut at Windsor Casthe un the following day. Sur R. P'en had an audience of her Majesty on Monday, when he re ceived the Queen s commands to form a tion. The right hon. baronet agnin waited on her Majesty,
at Windsor, on Tuesday, and submited the following list at Windsor, on Tuesday, and snbmitted the following list
of the new Cabinet, which met with her Majenty's ap-proval:-

THE Cabinet.

It is understow that the Earl of Morton, Viscount Powerscourt, and Lord Sidney will be the Lords in Wainng;
Capt. Mernefl and Mr. Giore, Grome ia Waitnar; and that an ofer of a seat at the Boand of Admiralty has been made to Vire Admiral Sir W. H. Gage. The Queen held a Privy Cormed yesterdiy atarmon, at Claremont, for the purpose of receiving the seals of office of office to the members of the new Administration. The late ministers. on their arrival at Claremont, had an andience of Her Majesty and resigned their seals, after which hey immediately tonk their departure for town. Sir Robert Peel. the Duke of Wellington, Lori G. Somerset, Bruce, were then adtuitted and tonk the waths on their Bruce, were then adenitted and tonk the caths on their
apponment. The Piivs? Cuancil hien to lowed, at which appoumment. The Piivy Council then to lowrd, at
the other Minsters were connrmed in therr utices.
Official Chanyes - In consequente of a communication received a short time since at the Cuhmial ()ffice, from Lord Sydenham, Governur-General if Canada, representing the necessis, of his return to England, on aecount of
ill brath, her Majesty was piessed to srant his Lord leave of absence. A despatch, however, has been received
this week tendering his Lordstip's resignation, which her Majesty has been pleased to accept.
Post-affice arrangements. - The Gazette of Tuesday conthins as Treasury warrant, durecting that after the 11 th an oun \(e\) in weight, posted in any part of the United Kingutan, for Bremen, and conveyed either by a private ship or packet direct to Bremen, or by the way of flaun-
burgh or Ciahaven, shall be reduced to sizpence. Also that on every leit. \(\tau\), not cxceeding half an ounce in weight, posted th of adnessed to Remiet, transmitted by the post between bremes and any other country or place reen the Uinited Kingdom and Brenuen. or Hamburgh, Cuxhaven, or Hanorer, and conveyed trum or to the United Kingdom to or from any such other country or phace heyonat the seas by private ship, there shan oe cinarget! dmu taneal a unturin rate of Brituh potage of one sh thag and twopence.

\section*{forctgn.}

France.-There is no dumestic news of any interest; the phickal crisis ius this country, and the revent denates and ru'es of :he Enghist Houses of Parliament, are the primitas tones that occupy the attention of the journals. birshat, eat of a'..Ic, ble relations between the two Goveraments, d! fears to have utiorded very general satisfaction. and is hatled as an erivence of the restoration of good harmony between che Powers of Europe. The speech of
to France and to M1. Cenizot, haw also
toon in the pentical sureles of Pans.
 Thow procecting cultetly through ut the conutrs, and the spirit of restanire to its enforcement is fast subsidi, ef. Ont of 20 Councio- (iteneral of the departments wh? hat mer to mane hnown that ofmon on the question, of the North, bad divided in equal pontions un the question. The Comel of the department of Upper (iaromer, of which Toul use is the eapital. with onh me a ssemthy rolice. declared tecision relative to the legality of the mode of carrying it into effect was taken by only 14 against 12. The Counthe mensure, which has been put in force throughout three-fourths of the capiral. To combut these statentents
the opposition journals remark that there are as yet only the opposition journals remark that there are as yet only
20 out of 86 Cooncils-Gtneral who have delivered their opinions, but that those of Aisne, Vienne, Vendée, Mauche,
and Côtes du Nord, would give unfavourble decisions. Independently of which it adds, that the majorities in favou question of law there ought not to be one dissenting opinion.
subsiequent accounts inform the that the Councils-General continue to declare in favour of the census. Some slight worthy of notice. Mr. Lenormand, the Tonlouse missary of Ponice, who has been in close confinement in
Paris for neglect of duty during the riots, has been sent off, under an escort, to Toulouse, to taike his trial at the The
he Army.- It appears that that portion of the Army which would have finished its term of service on 31st Dec. lias rereived its diseharge. This measure was carrued into
effect in Paris and its enviruns on Monday. It was also reported that the soldiers whose term of service would expire on the 3lst Dec. next year, will be provisionally year shall have passed through their first drills. Each of those contingents is estimated at 60,000 men. - It is stated that it is M . Humatn's intentiou to reduce the army and that he is supported by MM. Teste and Guizut, but oppused hy Marshal Soult. Other accomnts affirm that the Marshal is not opposed to the disarmaments. The reduction of the navy will be effected by laying up the large ships, and by increasing the number of frigates and steame's.
Raslroads.-The Departmental Councils appear to bave taken ap the Railroad question with vigour. The Council of the department of Loire and Cher proposes to guarantee the interest on \(50,000 \mathrm{l}\)-, to construct a railroad between Orleans and Tours, and the interest on 32,(100l. for the railroad from Orleans to Vierzon. The town of Blois had already voted a guapantec of the interest on a capital of a million in favour of the Orleans and Nantes Railway The same movement is going on in the different town which departanent, and the department of nure-et-Lnire, thought, contribute towards it. The Fleet.-Accounts from Toulon inform us that the Mediterranean squadron, commanded by Vice-Admiral
Hugon, again sailed from that port on the 26 th ult., to continue its manceuvres. From intelligence brought by the Orerland Mul, arrived at Marseilles, we learn that Rear-Admiral Lasusse anchored on the 20th ult, before Athens with two ships of the line. Information has also been received from Toulon, confirming the report that the French had abandoned their Military hospital at Port Mahon. Orders had been received to evacuate the establishment with all possible speed, and several vessels had arrived for the purpose of conveying the sick and convaescent to France.

Oisturbance at Caen.-A riot toak place at Caen on city. The National, occasion of M. Guizot visiting that wards of \(300 . \mathrm{ctitizens}\) of all classes assembled to express their feelings of hostility to that Minister, and that the tumult at length became so great and the mob so violent
that it was necessary to call in the Military. The populace then dispersed, but continu:d to parade the streets during the night, singing the Marseillaise hymn. It is added that M. Guizot had come to the city to preside at the Council-General, but quitted it without doing so on the

The Harrest. - The cuutinued fine weather in the north of Prance has enabled the farmers to gather in their crops, counts from those departments all concur in describing the wheat crop as very abundant. The prices bad risen a at Beaumont (Oise), Chatellerault, Chateaugoutier, Piondan, Mirebeau, Neubourg, Orbec, Rouen, and Sablé. The price of flour at Paris remained stationary; but it was stal of one centime per kilogramme at the close of the month. Algeria.-Accounts lrom Algiers, of the loth ulr.
atate that the preparations for the nest campaign were niready commenced; that the expedition would take the field in Sept., and proceed to Mascara, and that it would mough and sow the fields in the neighoourbood of tha Was beieve 1 at Uran that Abd-el-Kader had marchen against Trujin, the Bey of Ain Madhy, who had raised the tandard aganse the Enum. The same accounts ada, that the Ardis, who carried off a great number of oxen. Sume of thens were recovered by the troups, who mumedrately went in pursuit, but ai were lost. A blockhouse bad since been erected at this spot, which was the weakest point of
the phlun and near the model farmers were daily seen in ne'cly on the low-out, and caused but they seemed tu be in stared that Govern, eni has olocontmued in iking the ,read necessary for the suppty of the troops in Algeria, and that this change has been caused by reports which commissuriat service. The furniching of brend for A!stria has been contracted or ten years from the 1st Oet. after thaving adof ted, on the 23 d , a number of bills wrthout any discussion, namely, the Miluary Pension bill, by 65 by 48 to 28 ; that of the Guadarama Cinal, by \(6+\) to 12 . and that for tiue construction of a palare to the (hamber Minister fors, 50 dgatut 20. An the same day the posed cession to England of the islandz of Annabon and Fernando Po, which we have before referred to. M. ment, baving been able by other means to fulfil certain project of atienating those islands had been abandoned It appears that all the recent difficulties in regard to the
loan of 60 millions of reals have been removed, and that Government will shortly be in possession of that som,
The B , ard of Directors of the Bank of San Pernando, at its meemer of the 231 , aulhorsed the giving of a credit
of fol), 10012 .on London to pay the overdte divdends and simhing fund on the debentures issued to Engli-h subjerts by virtue of the Oralia convention, and which were in be there Government have thought proper to march a considerable horly of troops to tise Banque prosinces, to pritect the enforcement if the new haw relative th the fueros. Five men, were already stationed on the banks of the Ebro, and were at the disposal of the Captain-General of those pro-
vinces. Commisuries from Alara, Biseav, and fuipuscoa, had arrived at Madrid to arrange the fueros lefure the ensuing session. Great fears appear to be entertyined at Madrid of a seri mas misumferstaning with Portural; an amicable adjustu, ent of which, shonld it once break out, it is thought would be expeedingls, aifficnlt. The Govern-保 upprestion of smu_gling in vari us parts of the kingdom: and seeing, it is said, that they camnot immediately set allocated bodies of trouph of the regular service to co-opeate in the most exposed districts, or, as it is believed, to be a check on the contractors and their subordiates, who with the contrabandistas in many places. The Valencians are addressing energetio petitions to Government, praying hall be arain ordered to be exported declaring that their mandatures will be ruined if the sales be permitted to continue of Euglish cotton prints at \(3 \frac{1}{2}\) reals per vara of a quadity equal to the national tabrics, which cannot be proo favourably spoken of throughout the country; and it is added that Spuin will be enabled, in consequence of the bundant harvest, to export this year from half a milion quent accounts inform us that Gosernment was becoming In Cow hat alarmed respecting the dispositions of the army the discontent the Basque provinces, and at ranajerat into revolt. In this last city it is said the soldiers were with difficulty prevailed upon to allow the initials of the ex-queen Christina to be removed from their sharor. that Gen. Ramon Narvaes lad arrived in Madrid, on his way to Gibraltar, with the purpose, it was suspected, ment on behalf of the ex-Queen Christina. Government \({ }_{p}\) however, way on the alert to oppose this plan.
Portugat. -We have intelligence from Lisbon to the 2:3rd ult. The Cortes do not appear to be making much proyress with the financial projects, and from the length to when the session had exrended, it was thousht hot of probabie that the questions would hase to be disposed of by givug a sate of confiuence to Guvernment, and thus h:ll tor the (h.mber of Depuries. The Spanish Govern ment had, it appears, firmilly deman ?ed the withdrawal of all ded by its lans instae enrry of whien inta spathe portugaese :rontier owns. The Pontigue-e Guvernmat, howr ser, cosid tint comnly will this demand, when nould Horiugal, and would be contrary to the tre:tes existivg between Porrugal ind Eromland. It was expected that the Marquas soldinha woutid be sent agene on a speenal frisolon to the spants. (iovernnetro. and wolla the
 ments arises fro between knowledge possessed by the Spaniards of the real state of things in Portuga, frore the conduct of the Spanish Nimelf with the re lutionary party. The harvest both of corn and oil would, it was expected, prove less than an average oue; and order orice none of them, it was thought, would be executed unlezt thy it zores, where prices were much lower, conhd sead a supp ply. The corn ta the Spanish provinces adjoining Por-
it mas thought that the opening of the Douro would ca
a goold deal of Spanish corn to be sent to England. GERMAN:-Our intelligence this week is of a more farourable nature and commercinl affairs are bepinning
to ass.me, at Vienu7, a less alarming astect. The funds hase shomn a tenidency to rise, but hitte business was dorng. as the capitalists, it is stated, were still ansious about the
East, and were unvilling to enter into any extensive East, and were unwiling to enter into any extensive
speculations natil all the serious questions which agitate
that quarter of the globe should be arranged. The Pacha that quarter of the globe should be arranged. The Pacha
of Egpt' continued armaments had occasioned much
apprebension. Ancounts from Berlin inform us that the apprehension.-Accounts from Berlin inform us that the
irreaty for the continuation of the German Commercia League has at length appeared in the official collection of
laws, published in that city. It states that the treaty is concluded between Prussia, Bavaria, Saxony, Wirtemberg,
Baden, the Grand Duchy and Electorate of Hesse, the States of Thuringia, Nassau, and Frankfort-on- the-Maine.
for twelve years froun the lat Jan. 1142, to the 31 st Dec le 53 ; subject how ever to certain modrtications and additions, specitied at great lensth, but which would be of
Jittle iuterent to an Engli,h realer.--The Diet has decided that the renemed demand for the payment of forced loans made by the former governnent of Westphalia, in the
gears \(180 \times, 11010\) and \(1 \approx 12\) and which has long heene subject of negotiation betwern the governments interested thercin, cannot be detinitively answered, as nothing can be done until there be a perfect unity of opinion between the
governnents. A letter from Baden states that the railway governments. A letter from Baden states that the railway
on the elet buauk of the Rhinue is proceeding with activity.
At Carlsuhe the works have been commenced on the At Carlsulue the works have been commenced on the
place where the station is to be fixed, outside the Etlingen place where the station is to be fixed, outside the Etclingen
gate. (In the fitio lit a contract was aceepted for fur-
nishing nishing 80.000 quintals of rails. The section from Keil
to Appen wighe is advancing rapidly and that from Heldel to Appenwighe is advancing rapidly, and that from Herdelberg to Carlsruhe, it is thought, will be opened abont the
end of 1843 . The rail Chapelle is now completed, and a trial was made on the 22nd ult., which was in every respect satisfactory. The ceremony of openidg was fixed for the 1 st inst., and the
line will be opened for the use of the public on the 6 th. For the present the trins are to go onily trice a day back-
Fards and wards and forwards, and no goods are to be conveyed.
The works on the railmay between Aix-la-Chayelle and The works on the railway between Aix-l-l-Chayelle and
the Belgian fronter are also proceeding rayidily, and it is the Belgian froatier are also proceeding rapidily, and it is
expected that they will be conipleted in eighteen montlhs. The third portion of thee railroad from Berintan to Erankfort On the Udrr, by Dessau and Kerrig, has also been opened
to the puthic, and the to the public, and the King of Prussia has authorsised
the coustruction of a railyay frontions of dasuyy, passing throw Breslay to the
Goertlezz.- The Frangh Leignitz and the conmercial treaty, concluded on the \(222 d\) ()ct. 1810 , between Prussta and the States of the German Customs' This treaty, which is the same in effect as that between Greit Eritain and the Porte, allowance being made for
certain certain necessaiy moditications, is based on a footing of
reciprocity, and relieves German merchants from the old reciprocity, and relieves G
eharges exacted in Turkey
HANovkR-Accounts received through Hamburg, of
the 19 th ult., mention a rumour that the 19th ult,, mention a rumour that Lord Palmerston ment agninst the deldy in the negotiations respecting the
ducties levied duties levied at Stade, and declaring that the English
government would government would onily consent to pay a duty of \(1-16\) th per cent. These accounts add that it was believed that of war to the Elbe to protect the rights of British \({ }^{\text {and }}\) Subjects.
SWITzERLAND. Argau, and other deputies, have I ubbhished an address, setting forth that after theies, reform of tuie constitution ail partics were satistied, except those conuected with the
convents; that these convents, for the third time within
twent convents; that these convents, for the third time within
twenty years, had excited civil war, and accordingly they
Fere super were suppressed. At the invitation of the Diet, however, the executive offered to restore the three least guilty con-
vents, and devol-d almost vents, and devotrd almost the whole of their revenues to
the education of the Catholic chidren, the education of the Catholic children, but more than this, the Dill not cede, even to violeace. In the meeting of language. The on ind, the deputy for Argau held the same Argatu. were also brousht of Thirgau, the Canton adjoining The Thurgauian convenis had, it seems, gone beyoad their means and got into debt, and the state took the administhat enough was not allowed minks, howestr, complaned Were preseated from joraing them. The deputy of Argal momernus alreaty for their funds. It was suggested in the Liet to urder the resturation to the cunvent of the manarement of their property; but this was negatived. and the affair dropped. It was proposed to adjourn the Diet instractions to their time for the Cautons to give fresh the zrth ust., inturms deputies. Subsequent intelligence to that there will bens us that some fears are enteltained ment which will breatuen the Dirt leaves Berne, a movement which will preclude the pussibality of a pacific solution Holcand. - Privanvents.
a serere storm of thunder from Ostend infurm us that rain, passed over that city on the 23 rdult. in the hail and the lightang struck the birracks of Hazesras, and did some damenge to the rout; it set fire to the mannsall of a shtp entenng the harbour, and to a nilli in the neighbourIraly. - Accounts trows Rome of the 20 th
that the differences troan Rume of the 20 th ult. state, Were on the point of berneen Prussia and the Holy See the Prusaian Entof had already apprized his court, by
curier, of the success of his mission. A table of mosaic
nork, which the Pupe intended to send to Mehemet ali as a return for some alabaster columns with which the Pacha had presented his honhness, is stated to exceed in cording to the census of the population of the hind. - Acfor last year, the inhahitants of the capital amounted. on the lit Jan., to 337,845 . The births had been 13,916 ,
and deaths \(13,+65\). Anong the later and deathes 10.3 , and those of 129 persons between 90 and 100 . It is stated that the Jipolitan Gorernis ent have resolved apon undertaking some new excavations at Herculaneum,
and it is added that they will be on an extensive scale. Negotiations have commenced already with this view for as these purchases have been comyleted the worhs will be commenced. A commission of antiquaries and architects Ro be appointed by the Minister of the Interior and the Roya Academy of Sciences to preside over the uperations doubt be made. - Letters from Turing state that the Kinvo Gardinia still entertains the project of cutting a tunnel through the \(\mathrm{Al}_{1}\), in order to facilitate the conmunications between France and Italy. The necessity for abandoning he present road over Mont Cenis is allomed; the new projectedroad will pass by Oulx folluwing the course of
the Duire, and ascending a narrow valley in a northwesterly direction, leading directly to the font of an elerated peak, through which a tunnel can be readily cut, as its lenjth will not be nore than 25,000 feet. This tunnel will come out in a valley which joins the pass of Maurienne and the present road below st. Michel
Russia. - Intelligence received from Bessarabia, dated to subdue the population of the (hating the incessantefforts the theatre of war in that country was nut satisfactury for the Russian arms.

SWEDES.-The government, according to a letter from Stockholm, has, in couformity with a work lately published mediate erection of two vast cellular prisons, for the imnorthern extremity of that city, and the other al Oerebo, the chief town of the province of Nerike. It is also declared to be the intention of the King to recommend to the Storthing, at its next meeting at Christiana, to durect the establishment of several similar houses in Norway.
Greece.-Advices received from Athens of the \(12 t\) ult. Were not satisfactory, and a coup de main was frared from the Imperialists. The Leipsic Lniversal Gazette of the 2 th ult. publishes a despatch of the French Cabinet on the internal situation of this cuuntry, addremed to the European Powers, on the 11th of August, 1811, which ting the sacrifices made by Great Britan, France, and Russia. in order to consutute this kingdom, the document proceeds to describe the increase in the population in Greece, the progress of agriculture, and the auginentation expenditure, and in which it sees the indication of a vee the power, which might be paralysed or compromised by the weakness or neglect of the administration. Although admitting that King Otho and his people have alone the right to rensedy abuses and avert dauyers, exaggerated perhaps. but nevertheless real to a certain extent, the Ponch Gorernment deems it expedient that not only the those who subsequently established more or less intimate relati giving it advice, calculated to ward off an impending catastrophe. This advice should not appear to emanate from rival influences, whose opposition might be the cause of
domestic discord in the country; it should be matured, and presented in such a manner as not to wound the sus ceptibility of the Guvernment or people of Greece, in order thereby to secure to the friendly Powers that m ral authority, without which the evils attempted to be remosed would only becnme worse. The greatest of those evils, in the pioion of France, hes in the weakness and inertness of the overnment, which, assailed by all parties, finds support in sible to find, in the governaient suggests thated migutions of Greece, the means of imparting to the Greek Government the activity, regularity, and countenance wheis it needs. in otriating abuses and preparing the way for more auspicithe attr butes of the Courcil of State by adang to that insitution provinctal and municipal couni lis, the basis of Which already existed ia the conntry under the dowioation of the Turks. These are the reforms which France recommends; and the Jrench Cabinetinvites the other Cabineis to communicate to it the resuit of their delibera tions on the subject. and reminds them that it is a question of honour with the European Cabtuets to remedy, in this kingdom, which they founded, evils satulated to compromise the country and sll the uteresto connected there rith.- I letter reirited from Ancona, dated tia I Bth nits. states that an event has lately occurred, wisch threatens to renew the angry feetusa which wately gabsoted between the Porte and freece, and wheh there semmed great reason to hipe had been removed. It appears that, towards the end of July, about "30 or 300 Greeks, wner the com mand fa Cont Valenza, sailed up the bay of Volv, and landed at Armiran, in the bope of inducing the Thessalian Greens to juin them in deinenng themseives from the Turkish roke. In these expetations, however, they were disappointed, nut meeting with the least encouragement on the part of the Christian inhabitants of the district
Not pleased with his reception here, Valensa moved forwhard with his small force to veleun, and took up his posi
miran to Larissa. Whinher he inagined all the discontented spirts of the surrounding districts would fork to jorn him
 to the arack of Larissation ot leading hos handfut of men Natnile Pacha had, however. in the nut an time cr l.ected several hundreds of Albanans. who mirehed fotward to short resistangents, whom they lotaly ronted after a appears to bave been cot up without any connerion with the interior of the cuuatry, but which, it is thought, may widen the breach proviously existing between the two Governments.
Turzer
mention the arrival ina-Aecounts from Constanimople Sheriff of Mecca, Muhamused Lion Aun. This prince has offered his submission on the condifion that the Porte will entirm him in hac formenacent. The Elows ot the Porte Selim Effenif, had been well received in Arabia, !at the
Divan sthll appeared d:sirous of leaving the arramement whth Aatommed Ebn Ann t.) ihe Pata of Einut. In the mean time the sherlff was soing on wi h ths armsmenta, and had alrealy got togesher bill, \&(at) Bedonin orm us that Divan has resulu the birn ult.o in Pacha, on his return from (andia with an expedition against Tunis.- The supreme Council has resolved to accept a tribute from the populatoms of the Lebanon, instead of exacting the taxes as lewed in other frarts of the Ottoman enpire. It is hoped that this arrangernent may tend to pacify Syria.
12 th ult, gives newence received through Athens, of the the late insurrection in this island. From thas statement it would appear that the rebels were betrajed by a certuin Rousset Bourdoumbani, who had assumed the command Turks, and opened a passage to then was bribed by the Turks, and opened a passage to them into the interior Upon this, a portion of the insurgents took refuge on board the Englisi ships, and the rest divided therselves into small bands, in the lope of stiil being-able to reaiat the Turks. The chief of the late provinional Government has declared that his intention and that of his colleagues had not to abandon the Candiotes, and that the English touching at several place- to spread the news uf their defeat and injure their canse.
Egypt - We leari by acco tinople, that Meheme Ali in rddrion to from Constan tary preparitions, is organizing a con-iderable ther mit many shems a lage ressel of the line, ox frigatea, and as many stonss of war, when mith French cannon. - The Overland Mail brings intelligence
 for a redmetion to hall that amount. The Cunsuls of Austria, England, and Russia, had arrived
Indra and Chana. - The Overland Mail reached Mar seilles on Tuesday ; and the following summary of the in telligence brought by it was immediately communicated by felegraph to Paris: the date of the mall's leaving in the samestate: the Emperor was stil decuta was sisting, and he had ordered a numernas muster of troops, which were to be commanded hy his brother in person. Admiral Parker and sir H. Puttinger left Rombay for China on the 7th July in the stegmer Sescotris.-The arivel of the express this moming has put us in possession of the details of this intelligence. The accounts from Canton deseribe the Chinese mandarins as decindenly hostile to
the British, and state that the truce alinwed in Captain the British, and state that the truce alinwed in Captain

Teslimenial to Sir David Wilkic．－On Saturday， public meeting was held at the Thatched Huuse Tavern， thod of doing honour to the memory of this distingulshed artist．Sir Kubert Pael presided，and aming many otimes noblemen and gentlemen present，were Lord John Russell， hersh，and Lord Tosunshend．Sir R．Peel addressed the meeting at some length，highly euiogising the great talente and private worth of Sir David Wilkie；anti cod dially coperate ind him the promotion of the for which they had assembled．It was then moved by the Dure of Suthernand＂that it was the opinion of the meeting that the genmis of Sir David Wilkie is of that hig order Which entitles him not only to the adanration and gratitude of his country，but to be publicly regarding beeng the whom she it was noved by Lurd Jeho Russell，that this memorial should be a permatent and characieristic testimonial of his worth as a mati，and bo great excellence as a Britugh artist．＂Lord Maison pro pored the third resolution：＂That a statue which pro－ press the many and welloremembered exterior，of the presses win shir and taste the locks ant approprlate testi－ monial．＂After some discussion on the subject of this motion，it was uiltimately carried，amdit was hen resulsed That this statue，the more effectuall toexouing genius， touldation，and to fatht the object and that appli－ cation be erected in the National Gallery，ad lery for the＂herane to the pointed to carry these resulutions intu effect．ise sub upwards of 1000 ．
Repeal Meeting On Monday the fitusis of Mr． OConnell insi：ed him to a rublic dinnes，at Hishbury Barn Tavern，for the purpere of showitg their sellse ded， his scruces in the caise of repeal．Tie roum was cronde end upwarda of 700 persons sat durin th dutuer．A pro the curtomary heaiths hat tonn drunk．His．Ho，in whith be said it was impossible that Ire！and could have her meanc or her industly detetoped unless they tive hod with Parliament，and unless the chtefs if Ireland joned afer the prople．Mr．O＇Cuntuelio healti mas ele atr at Whach that genteman we amit atdressed that the great batele the country bas berin．They had come to period when there coud be no submis－ion to tratuis the one par of compromize nith entures an the other．Tuey had got ritl of the trammels of pariy，and a new era Lad arisen．England had nuthing lor didncal to look forward to but Reform－substamial and and
Reform，even to the extent of general suffrage；

Irish required for themselves the R peal of the Union.
He then proceeded ton comment, at considerable length, no He then proceeded tha comment, at considerable len yth, nit
the recent events that have terminated in a change of nithe recent events that have terminated in a change of mi-
nistry. Revert ng to the question of repeal, he said. it
miglit be asked why he shonill dare to willite a solemn miglit be asked why he shonl. dare ti) winhte a solemn
compart between titu nations? He would ansxer that compart betreen tro nations? He rould ansxer that
question by a ahong another. Was it a c mpact? If it should be answered " les." then his reply must be that the party
so answering was either a very iudncious denier of the Bo answering was either a rery aud wious denier of the
truth, or one who was exceedingly ignorant of history. It was, he conten led, nn compact, unless thet is to be called a compact for which a civil war was prevented, in orde: that when Irishmen were elgaged in a battle with one faction to run away mith their liberties. It was passed at 8 period when there was not a particle of liberty left in Treland, not even the restige of it, and was carried by the
vilest bribery that ever yet was thought of. There were
three milluus pxpended in direct bribery alone and theve were \(2,1175,0006\). for the purchase of boroughs alone. That was, he said, a fact proved by parliamentary papers. With atrocity unparalleled, with power used tyrannically, with
force, fraud, and bribery, by the suffocation of the public poice, by the destruction of countless innocent people, wa the union consummated. Respect it as a compact? He anion which he was not to remedy. Should he be told that this was language which he ought to conceal from the people of England? Win or lose, he should have truth on that they would have a set of judges in Ireland such as nerer were assembled together before; and they would
have juries who, before the indictment was read, would write their verdict of guilty. His cuurse, however, wat
fixed: he asked any man of common sense and humanity if there was the least chance of Ireland getring justice if there was the least chance of Ireland getting justice
from a Tory Parliament? Mr. O'Connell then concladed by saying, that he pledged himself that while he lived he
would not cease to struggle for national independence would not cease to struggle for national independence.
There should be no riolence, no riot, un tumult, no sacrifice of property, and no drop of blood should be shed. Ireland had hearts and hands enough-she had judgment and conscience enough-and she was eminently entitled to be raised to the station of an independent nation, chained by a golden link to the crown of Great Britain, but equally free--more virtuous he believed, and he trusted in God to the occasion had been proposed, the meeting quietly
Spitalfields School of Design.- The first annual distri-
bution of prizes to the pupils of this is on Tuead prizes. The chair was taken by Lord R. Grosvenor. The treasurer having read the report of the committee, Which stated that the school, which had be-n open unly
for six months, had alrealy met with a sucess which gave an earnest of its permanent utility, the clairman, in a short and appropriate address, expatiated on the merits of the school and the exertions of its founders, the steadimess and industry of the pupils, and the beriefits to be prizes to the successful stadents.
Population of Marylebone.-It a vestry meeting, held the superin'endent Registrar, showing the conion from the abstract of eaumerators' schedules for each registrar's distnct of the parish; from which document it appeared 14,316 , unithabated 374 , building 187 , total \(15,0 \div 7\). The amount of population was, males 61,979 , females \(78,33^{-5}\), total 139,4j4. It showed that there had been an increase years, or 2000 souls in the parish within the last ten years, or 2,000 annual!y.
Colonial
Colonial Society.-On Monday a meeting of the Colonial Suciety was held, the Earl of Mountcashel in the
chair, for the puryose of which had been come to by the Nering certain resolutions tee on the case of Mr. M'Leod. The resolutions, which mere of a strong character, stated that the committee had Mr. M'Leod's release, but since the decision any hope of Yort Courts to send him to trial had become known, they thich that pentetest against the unparalleled outrage to erent of any further atrocity being committed aryanst him of her emped that her Majesty would direct all the energies they cunsidered it wias only by of the national honour, as the inhablitants it was only by so doing that the safety of the inhabitants of our vast colonial possessions could be
ensured. These reoolutions were cnfirmed by the meeting: duat it was fuatier resolved that they should be transPoreign Aftairs.
\({ }^{N}\) New Royal Exehange.-The first contract for the foundreshon this building was completed on Tuesday, and the Gresham Com mittee met on Wednesday to receive tenders Whole edtrice. Forrteen of the principal bulders of Lontender should applied to, and it was determined that each ting the masin mork mith the beat Portland stone; the ong the masin work with the best Portlan istone; the
sime alditional price for using magnesion limestone, similar to thatitional price for using magnesion limestone, of Messre amount of the highest tender, which was that 13.5 , nessrs. II. Ward \& Cn., was. for Porthand stone,
 lowest tender, which was that of Mr. Thomas Jackson, \(12,70 \%\). The former stone, \(11.5,9\) inl.; and for the fatter, accepted. The tender of Mr. Jactson was consequently Midsummer 1844.

Barthol mew \(F_{\text {use }}\) - This lung.esta'lished farr, if which terday by the proclamation of the Lord Mrape. On the Pie-poudre Coart, calling on all who take part in the fair "to pay their stall age, pickare customs, tolls, and duties to such court." and to all freemen who trade to produce
their licenses. With this fair the very ancieat, and most expeditious, as well as cherpest, churt of law and jnstice in the country, will probsbly expire, as Bar holomew fair is nearly the only phace in the kingdon where any vestige remains of its former powers. It now merely collects the steward presides, and who was. until the last few years, a judge of all the civil cases, and of many important criminal ones relating to the said fair. Tnis court was esta-
blished in the reign of Edward III., for the summary redress of all grievances at faifs, its original name. pied poulire, beng derived, according to antiquaries, from the dusty feet of the saitors, or because justice was there ad-
ministered as speedily as it was possible to wipe the dust ministered as speedily as it was possible to wipe the dust
from the shoes of the feet of the applicants. When this fair was at its zenith, many of the cases brought before the court were hizhly ludicrous as well as interesting, as numerous breaches of contract amoarst the dramatic formed the subject of its of stallage and standing-room, years all cases of criminal delinquenct have been sent at once to the Compter. The procession called "Lady Holland s Mob" on the midnight before the proclamation tended that ceremonial; and from the general character of the fair this year little doubt seems to be entertained that it will be the last of its celebration.
Mortality of the Metropolis.-From the table of mortality, showiag the number of deaths registered in the weeh
ending Saturday, 2 st Aagust, it appears that the total number were, males, 388 ; females, 388 . Weekly average 1838-9-40, males, 475 ; females, 451.
Lords of the Admiralty Thames.-By permission of the steam-vessel. recently encared in the Gorernment surres of the North Seas, commenced on Tuesday an inspection of the Thames, from Staines-bridge to Yantlett-creek, within the jurisdiction of the city. Both shores from Lon-don-bridge to Chelsea have already been surveyed; and it is said that some important suggestions will be made in the river as to give facilities to its navigation
Importadion of Meat, \&c. - We have before noticed the increasing sapply of prorisions sent from Scotland to the metropolitan markets. Daring the last week an unusually
large quantity of cattle, fish, and grouse, were brought into large quantity of cattle, fish, and grouse, were brought into London by several Scotch steamers; one of which, in addition to uprards of 100 cattle and sheep, and 200 boxes of moors. The supply of provisions of sli kinds from Scotland by the steamers has now become regular, and the demand is said to be good.

Accidents.-On Sunday erening, as the Hardy Green. wich steamer, with a number of passengers, was proceedios down the river, she struck against the anchor of a collier, lying of shadwell, and so rapily fled wior jumped that the coal-barges alungside, where they remained nutil the Yuch of a steamer, which took them on to Greenvich. Much alarm prevanled for their safety. but they were all rescued without recewing any personal iajury, The vessed mit'out much difficulty.-On Saturday a fatal accident occurred at the distillery of Mr. Vickers, Stoney-street, dweling house workmen employedoving the flouring over the hall, when suddenly the joists of the floor gave way, and they were all precipitated a depth of 40 feet. One of them expired in a few minutes, another expe but the third escaped without sustaining any materia! injury.
Fires.-() \(n\). Monday night a fire bruke out in the Broadway. Blackfriars. The premises were in the occupation of a wardrobe-lealer, the whole of whose stock has been destrover. Fears were at one time entertaned for the afety of the aljoining premises, but the exertions of the firemen prevented thie flames from reaching them.-On Thuraday a fire broke vut in Whitechapel at the back of the Pavilion Tneatre. It originated in a assistar carelessu.ess of one of prevented from extendiug to the adj fining houses, and the dan? \({ }^{2} \mathrm{~d}\) ne was nat gre it. - On Welnesday a serious fire occurrel on the premises of Messrs. Conts and sons, plamberc, nenme the. Mile-ead Foad. by wach the pramises wore entraly cestrosed. The origin of the fire is not inown, - n n Ihursday a quantity of lacifer matehes in boses, exposed fur sale in the window of a shop in Lpp-r Thames-ctreet. were ignited \(b y\) the heat of the sun and exploded, secting fire to rarious articles in the window. The flumes mere at one time rather alarming, but they were ext:nauishe i beefore much damize was done.-On Wednashay a fire broke nut on the premses of Mr. Archbut, plamarjker, Las a dann-
Road. I- commeuced in the cellrs, in whid! wate a Aly of be la, carpets, se., and is sumpan its have ortynated from spontaneuus combenstiw, from the cireamstance of there daving been no light admitted into the ce.arrs for seme dave befors. It :s thought tiatore of dasm, and being ing rass maxed with fock, must have berndam?, and bemy clusety pied, became heatect. and uitimamed, but little flames. The strock in the cellars was consumed, but little
other damage wos done.
Hampion Court,-It is atated that two more rooms at
spection. Pri ir to the accession of Willam IV.. in 1830, nineteen state-reoms were exhinted to the punlic. and the number of peciares iontamed is them was about two hundred. It appleqrs thas there will noiv be twentr-four rooms shomn to natiors, and the pixtures m them will exceed eizat hundred. Among the paintings ain at to be made pubice for the first time. are may of much inter: st, including a Buar Hunt, by ins.ters: a fine otd Frameia, one or two Guintb ruaghs, one or tw.a piotures by Hoppmer, a cirious fuli-lenyth portrait of Gondumar the Spanish arbassador here in the reign of James I., and many

\section*{肠robimial Nems.}

State and Progress of Harvest.-Since our last, the harrest, for every kind of crop, has made rapid and satis-
factory progress; and the accounts received from all parts of the conntry continue to be on the whole highly favourgreat measure to have subsided; and it is only in a few places that there appears to be a partial failure of some particular description of grain. It is stated that there is a considerably greater breaulth of wheat sown this year, than has ever hefore been caltivated. The greater portion of it has alreedy been hoased, and farmers, it is said, are for the most part satisfied with their crops, which, both in quantity and quality, are found much to exceed their recent expectations. A soond deal of barley has a'sen been cut ; and even beans have, ta some flaces. heea staiked of the firese gruns the iraps are repmonentel is bemg
 in many places by the late heavy rains, they i...... vered, and now present a healthy appearance. Potat, es are, in general, abmantand and good. The pastures are rc-
presented as luxuriant, and the second crop of grass abundant : in consequence of which hay is selling heavily, and the price is rather on the decline. The hops, about which conviterabe apprehension was felt, are regaining a fromurable apwaranc. The vines are described as free from disease, and, though rather backward, are not nnpromising; While the fy, it is said, are more abundank than they have ever been known. On the whole, it is thonght that the season will be ome which will afford but little occasion for compluint.

\section*{Aylesbury.-On Manday, Robert Stephenson, son of a} respectibl murder, under che following circumstances. It appeared that a few evenings before, as a youth named Franklin was returning home from Colnbrook across the fielda, he fell in with the prisoner, and while crossing a stile, hi foot caught the prisoner's beel, in consequence of which soon eaded; and Franklin went home, unconscious that he had received any injury. Daring the night, however, he experienced some pain in his back, and the next morning it was discovered that he bad been stalbed by some sharp instrument. A surgeon, who was called in, ascertained that the instrument had ertered so far as to slightily penetra'e the lung. The lad is, however, doing well at present, and the wound is nut considered likely to terminate fatally.
Birminghan.-On Monday. Charles Webb. Who, as we have n ticed in a previnu; number, was aprehended on the l, th uly, on staption of bemy wnarned in stealing a leter irum the postone he here in the year latas was A solicitor appeared on behalf of the P. st-offic. purthorities. Fourteen witnesce were esmaned, whess enthnes all tended to implicate the privater in the robhers: after which the solicitor for the Past-1/ti.e salified to hive the prisoner again remanded, as it was probable. he stated, that much more important esidence might yet be obtained. would admit him to bail. it w 1 s , however, decided that it was not a brilable offence: a:d the pristmer was remanded for a fortnight. The case exited much interest, and the investigation lasted serer!! hours.

Matiock.-The "Derty Reporter" states that a few lays azo a great quantity of hay was observed flatiog in the dir shose this place, a portion of which contunued ior
fise minates folling to the ground: and that the eleration atty ars of some part of it could not have been less than Harte. as. aird fom a close in the oceupation of Mr peren thil wind at the time, but that all at once about thria lart if the lay whicla was spread abroad assumed rapid rotatory motion, and at the same time it wm pro-
pelled violently upwards, and that this continued for the space of haif a minute, leaving the ground bare at the spot. a dincoun aper Ml lason, ploing over this place the dicectron of Alfieton. A simfar phenomenom, it is at Tansiey. Here tuere was no wind at the surface o the earth, but the hay on attaining a considerable altitude
was carried. by a brisk upper current. in the direction of Crumford, being nearly opposite to that taken in the case first mentioned.
Nerark. - On the night of the 2 Sfth uit. a fire was dis. sington, near this town, which is supposed to have been the work of an incendiry. in conseghence of its havin tose the engrses from this town could arrive, six stack stacks burnt. the fire beiog confined to straw, hay, peas, and boan-atach: The damage done is estimated at be-
twenn jow and boul. A reward has been offered for the discontery of the supposed mendiary

Onfille.-t forgery, involving the loss of about \(400 l\). the branch of the Stamford, Spalding, and Boston Joint stock Bank. A pers on who, it is ascertained, arrived that day from lioston, presented a cheque for \(40 i)\)., purporting some scruples of the castior being removed, he pand the that the cieque had been altered from \(4 l\) to \(400 / l\). The agent here momediately proceeded to London; but the early in tle forenwon. At present nothing further is known of the party by whom the traud was committed.
Petersfield. - The Salistbury papers state that on Satur being susfected of having stolen some property belonging to her mistres, her box was searched. When the missing
articles were found; and on being further questioned, she wished she mingt be struck dead" if she knew any out she had secreted flem. Her unistress, after a serious admonition, dismissed her from her service. She returned and in a few hours was a corpse, having died, it is said, in a shate of great sufferng early the next moraing.
tiner glowny description of the trade and population of this town:-The amulunt of steam and water power in the borough is nearly \(4,0^{\prime} 00\) horses, and the number of hand eniplosed, per horse power, is chealated at from five to
six. The amount of piwer unemployed at this time i stro horses; and the short time worked by the mils par tally going. simee March, has entanled, it is stated, a luss upon the \(i o w n\) equal to the enture stoppage of one fult fourth of the poner now in motion. Since the year 1830 the reductions of wages in the corton unamifacture hat een equal to \(1200 \%\) per week upon the whole productive present lmated pruabition. There are in the borough abont 12.000 houses, moluding shops, taverns, \&c.; of and several pablic homses. Of the nearly 10,000 houses \&or, orcupred, the liss to the proprietors from the non payment and reductions of rent is eaid to be equal to the with the gear 1803 J ; and which, together with the loss by the 2000 unoccupied, is equal to the entire loss, is comi pared with the ahove year, of the rental of 5000 housus and other artificers not prod necessity, hase not had, upon the average, half work durng the past five years ; and the ruin of tradesmen, owing o the diminished means and the diminished consumption amount people, is fer common provisions by the inhabitants is now above 2.0001 . per week wore than in 1835 , and the amount paid le'ss to the revenme, in eonsequence of the falliag off in the consumption of groceries, spirits, beer dec., is cateulated at \(2,000 \mathrm{per}\) week, or \(101,000 l\), per
anam. In 18,5 there were 125 public and 260 beerhouses, wisereas now several of these houses are closed, and the beer-houses have decreased in number to 120. In conseguence of tias state of things, a disposition to emigrate appeary to prevail among the inhabitants to a preparine to take the same step.
Thirak.-In a previous number we gave an account of an attempt to set fire to the church in this place on the algit of the 20th July. A few days ago a man waited on hee elergyman and eonfessent that he had committed th rentered himae't up to justine. He has undergone an examination before the mugistrates. and bren committed to Fork Castle to take his trial for the offence. He re-
fuses to give his name or the place to which he belongs. He was seen in the church the day before the fire by a person employed in puthay up a new clock, and did not sonth of Sentand, but will not say any more, being afraid, is supposed, to disgrace his family.
Rublits - On Monday. as the train which teaves \(\mathrm{R}_{\text {awlerso: }}\) Bridye, the tempurary station of the Bulton arsion Ratway. at haif-past three, p.M., was near its destinatin a by ohserving the engineer and fireman jump off the engine, being train proceeding at its usual speed, and no means contaet with the buildings of the station-house. Fortu-
nately, by the help of the break applied by the guard, and, with the aid of the p.rters and others, whor ran alog tras so fir arresitd as to enalle an enuse nene carridge was so far arresitu as to enable an etreme binn to miount station in Jew Balley-o(reet, it was fisuma liat a luaded waggon had been carelesoly left upon the raiis oin which he train was approtchanc. bu: owing \(t\), the carved nature of the line at that phace the ensineer wis unable to per-
ceive the danger unul close upon it. He immeuiately warned the nuen about the waggon by sounding his whistle, but fearing that their eff \(r\) rts to move thie wasfon in time
would be ineflectual, he shut off the stean, and together with the fireman jusped off the engine. Happlly the men were enab'cil to move the wagg on just in time, otherwith serious cons-quences.- On Mund hy morning sereral Birmingham Rainay beine neandor teromus of the Birmal arm fore fore the attention, and, on inquiry, it was a-certained that they had arrived by a special trann, which had left Birmingham at Inatitute of that town tos conser to London \(\bar{j}\) I) mechanics and their fantilies on an excursion of pleasure. The parties arain returved on whinesuay esening, arrange-
ments havar been made for their visiting, free of expense, the Colosseum, the Zoological Gardens in the Regent's park, the Royal Gallery, Low ther-areade, United Service
Institution, and some other exhibitions.-()n Monday a public meeting was held at Brighton for the purpose of aking into consideration the propricty of manitesting ame pribnc tuken of respect to the directors of the London and Brighron Railway Company, by invitug them to a puitic dmner or otherwise, on the occasion of opening this month. Nearly 200 persons were present, and reso lutions in furtherance of the object were unamimously adopted.- fath nestay, an acchent, which it is feared may Railway. It appears that a labourer in the employ of the trains came by, and an iron frame, projecting from the carriages, into which, when dark, it is usual to place a amp, struck him on the head, and rendered him insensib:e was conteyed to the London Hospital. On exam ination, and the brain, and dombts are entertaincd of his recovery. A few days since a labourer at work in the cutting on the in the following manner. He was engaged with several others in undermining a portion of earth, preparatory to fall, and notwe of i:s descent plas girm oy the uan stationed for that purposis, when all his companions got The eanth in consequence fell unon him, and killed hin on the spot. Nearly a hundred of his compani ns stood by at the time, unable to render any assistance. - A fotal eter rablway, hear Wraxall, to a laburing man named Chorley. It seens he was one of a body of men euplayen during the night in what is termed ballasting, and that for ti:e purpuse of resting. They all fell asteep, and decease, Who was very near the line, it supposed, mus have filen across the rall; and the mail-train coming
down at its usual hour, passed orer him and billed bim on the spot. The train, passed orer him and billed Bride water without stopuing, no one in it being conscious of any accident having occurred, fron its not having in the leat vearly meeting of the Great Western Rallway took phice un Thursday, at Bristol. Some interest appears to hare Directors in on this undertaking, which has already cost nearly sis millions of money; and also from the circumstance of the dividend about to be declered being the first since the openiag of the line throughout. The report, which wat read by the secretary, was of considerable length; bue total amount of receipts for the half-year, ending 3 th June last, was \(18,1,80 \%\). \(16 \mathrm{~s} .2 \lambda .\). and the expenses were for the same periud, \(84,3=1) l .03 \mathrm{~T}(l\). , being \(44,935 \mathrm{l}\). per reyed on the receipts. The number of passengers cou miles. The result showed a net incume on the half-yea
 coaching department arising out of the agreement wid the coach proprietors: and this, added to the undivid
 applied to the prayment of interest, and the remainder to ue applied as a dividend. The directors hat theref declared a diridend of 37. per cent per anson the recelprs sloce the opeuing of the ane throughoat, on the lst July, showed an average on four successive quired is ti: 140 l . two lines (fireat Western L nion and Bristol and Exeten whreh was estimated at \(1.51,0(4) \ell\). more. After expressiog thetr regret that their expenditure should have exieede their estimates, the directors recommended an issue loan-rotes to the amount of \(351 \%\), nt,0!. It was then the nounced tiat, in compiance with the provision to reduce Aet of Pariament, the board had determined to reluded by stating that the usual accounts were furnishel. After by stating that the asual accounts were faraiohel conver
stion took place; but the principal point appeared to be hopes are entertained that she may be got off, and be prepiedge from the directors that no further sums, or at all the nueting was eventrat! sati-ficd on this hemi. formation reapeceing the or pertem centurnted by the two brach !.ass of Circhateder and Caide water was a

Sept. 11.]
THE GARDENERS, CHRONICLE
 neremt rin

\section*{cibe eratomets ebtomile}

\author{
※.HTRDAY, SKPTEMHER 11, 1世4.
}

\section*{\(4=\)}

Now that the rules which it is intended to observe at the I xhibitions to be held next year in the garden of the fated. We must berg the permicsion of our readers to point out in what respects we consider them most essentially improvel.
In the first place, the manner of exchanging the medals one for another, or for articles of plate, has been simplified; and the introduction of two new forms of reward--one giver than any of those formery
given, and the other higher than the Large silver, and lower than the Gold Banksian-will be found to be attended with advantage to the exhibitors. Ihis arrangement will often enable the Judges to confer marks of distinction upon small exhibitors, to whom a medal could not with propriety be assigned. It will also secure to some exhibitors a higher prize than the Large Silver, by furnishing the judges with a medal lower than the Gold lianksian; and what is of more importance still, it will render it possible for the judyes to apportion the medals with more precision, according to the comparative merits of the exhibitors. This, and the securing the jultres an additional hour for considering their award, wili, it is to be presumed, render the distribution of prizes as satisfactory as it is in the nature of things that it should be.
It will, in the next place, be seen that exhibitors are called upon to furnish a correct list of the names of all the ohjeets exhibited by them. This is now required in ordor itat tie officers of the Society may have the
means of dtahhing nanes to everything put unon the means of dtahhing nanes to everything put upon the
tables, fiom Clorins flowers up to large general coltables, from Clorinis" th wers up to large general col-
lections. Compmints that this is not done have always been mumerous; bat them are great practical diffieulties about it when so little time is to be found, more especially considering the importance of such names beng accurate in aill respects. On former occasions, when it has been attemptent, the plan has failed; now, however, that an additional hour is obtained for the clerks, it appears more practicable. It is so very important a measure, that we trust gardeners will do everythiny in their power to assist in its execution; and we kyared on the nart of the expense nor diligence will iue spared on the part of the Society.
ber of plants to be exinbited under each in the numwill be reandy discovered under each hedd. These suljects of exhibition. The most material change is among Oechidaceous piants, which are to be shown under two letters only instead of four, and for which the number of meddals has been retuced. This has become necessary in part from the absence of sufficient compet.tion among the growers of How ors of this sort, and in part from the difficulties that formerly at th.it less sbill is cution having been so far overcome merly. When we add that the salue of the prizes awarded at the Garden to Orchidaceous plants alone, during the last season, amounted to between one humdrel and thirty and forty pounds, we have stated enuugh to satisfy our readers that it has become necessary to introduce some change as respects that class R Howers.
Ruses have been reduced within narrower limits, and sumjected to a simple classification. Under the of regulatious there was nothing to prevent any one of the great Rose-growers filling a tent with his own that the exhimintors strove to proluce. is it is now arranyed, quality will be the first consideration; and placed has only a small private collectivas will be plaved on equal tems with him who has acres of Roes. Each grower has thir:y feet of boxes assigned arizes, 30 fect of twables will be occupiad by hoses al ne, which is, we think as much as the Suchery can mendertake is provide. Even to to this new arrd"gebe nronere requicai, and a new larne rent wiil nave to exhibited ed, in which atone the Peargoniums wit be tluced by A I blaze of gorgeous coluring will be probeen seen minong furement, such as has never before Another mong fluwers.
hare only small of great consequence to those who to prevent the exaribiros is the introluction of a rule ducing small exibitors of larse collections also prohever contemplaterl by the they should do so was prejudicial to the interests of a large class of growers;
beeanse Mr. Thomas. who exhibited sixty stove and greenhouse plants, could have no difficulty. with such means, in picking out six more. with which smaller penple could not possibly contend. By the presen arranoments, the same person will not be al we.l to
show hoth a large and a small collection of either stove and qreenhous: plants or t'ape Heaths, but must con is so fair that we can anticipate no ohjections to it on the part of any reasonable and unseltis exhibitor.
Everything relating to seading Florists flowers has heen re-arranged. They are io form a class by themselves, and are subject to special rules The judges are restrained from considering any flower among them that is not named. This is a very important preczution, and the absence of it was justly a suhbert of observation on the part of one of our correspondents
last week (p. 591). It is attended with great public inconvenieace to award a medal to a batch of seedlings without specifying to which; because those seedlings must nevessarily possess unequal derrees of merit, and to give the same medal to them all is to assign to each the same merit. (unsidering that to have gained a medal as a seedling at one of these shows of the Horticultural society is regarded by the public as a warvanty of the excellence of the articie, and ensures a large sale to the possessor of it , such a rule becomes indispensable. We believe, however, that practically the consequence of showing several seedling in one lot has been more frequently injurious to the exhibitor than to the public; for the judyes, not being able to separate the first-rate from the second-rate sorts, have passed the whole of them by.

The last subject to which we have to advert is that of I'ruit. The exhibition in July satisfactorily established the fact that there were plenty of fruit-growers able and willing to compete on these occasions, if opportunity is affiorled them, and sufficient encouragement given. That the country growers are at least equal to those near London is also proved : partly by the fruit seat up on the occasion just alluded to, and party by such collections as that if cirapes, from Mr. Matthew Wilson's rardens, last Tresclay placed on the tables of the Horticularal, Society in Regentstruct. The only thing tequired is a hetter mode of packing than is usudliy aiupted, and this is amply provided by Mr. Ruas sexcellemt cantrivalice. mentioned by us at p. An.j. But market gadeners, and thase who, withent being s) callet. remilaly grow fruit for makhet, have the sa me advantage oiver the
gardeners of production of flowers : and therefore it is now arranged that market gardeners, \c.. shall show aghinst one ancher in one class, and gentlemen's rardeness in a separate diss. Thus each competitor
will be placed on fdir cround, "tye and tye, and no fivour," ds the sailurs used to say when pigtailis were worn in the Navy

 take ince. ani the secus deeay: a posicut of the mater io

 The chemical charges attendant on the prucoss of germination are very different from those which go on during
the growth of a complete plant: tef yes the form itiva if
ieares. and in the very earlkest stages of its growth, a plant
requires only warmth, moi-ture and the requires only warmth, moi-ture, and the presence of air ;
but subsequently, it requires, in addition to these, carbonic acilans! 1yrit it it requires, in addition to these, carbonic essential to the germination of seeds. an the nutren being un ble to combine mith carbon, is quite useless in diminishing the quantity of that substance contained in the seeds its presence in the air is, homerer, verr uvetul, serving to dilute the oxygeu and prevent its acting too rapully. seeds are found to germinate very quiekly in pure onyben gas, next stage of the srawth of plants. or when tiney have leaves, they begin to ahsorb cart on from the nis intitead of parting with it, and this tiey do by decompusing tue carbonic acid aiways presentin the air, which they hre able to are sinm in the earth, they are plapect in a siruation where they are protecte.l from the action of lifht, and exposed to the in thuence of air and moisture: and provided they are sufficiently warm, that is, above the freezing poins: of Water, they will germinate and produce plants. Below been already said the action fermis in the first instance to soften the seed, and this of course it canuot effect when 3.) cold as to assume the solid form itself. If buried too deep in the soil, the free access of air to the seeds will be retarded, or even perhaps wholly prevented, and under ture of the soil too is of convderable importance: very claver soils allow a less perfect action of air than those Which are of a more porous and open structure, and in the nome slonts. Whe pricess of germination proceeds more slomls. When the young plants appear above the sarface of the ground, their mode of growth is changed : they then require air and light, and being nol longer presprven by the soil from the action of light, are immediately able to tfeet the decomposition of carbonic acid.
The ronts of a plant reguire little more than moisture and the water which they obtain frum the sand contains whyit salme and gaseous matters which the plants want ans the leaves require cirbonce acid, ammonas. and the intornce of light, and these they obtain oy growing up covered up, either artificially, or by the leaves of surrunding plants, the action of licht is impreded, and thry are u7able to effect the prover decomp,antonn if carionic aed.  ordarry eonhtoms is ette? ind in sea is by tor myen of the an, is, water the-e cirsumstances. carned be the ory or held in solution by water. Iu mi) case cua a seed germinate unless free oxygen is preseat, or some other means exist by which a portion of the carbon in the seed can he removed, \(5^{n}\) ) as to cause the change in the constituents of the seed before described.
In the process of malting or converting raw grain into malt, the object to be attained is to change a large portion gum and sugur. This is finated by ctees the grain in gum and sulyr. This is efiectein by steepung the grain in of the mal-h.use: it is thus pace in the most firaurable conditions for germunain, and in consequence the chemical chares attendant on that process immediately com-
inence. The seeds lose carbon, and at the same time convert the exyen of the air into caromme acid; the embryo or young plant begins to increase 10 size, and the grain becomes warna from the heat evolved by the cheand gum formed would be consumed by the ar, wing young plant, and te mait would then become ueeless : when, therefore, the process has proceeded to a certain extent, \(t\) is stopped by the gradual application of heat, which, b conditions requisite for the further growth of the young plant, and preserves tire graia in the state most proper for the uses of the hrever and miath:ler. - E.

Cotony substance, in which some of them are enveloped,
orm rery satisfaciory marks by which the species may be orm rery satisfaciory marks by which the species may be
separated from each other, and these again further arranged into genera. Sabsequent to the period at which the first female founds her colony, the Aphides live in society, and attach themselves the the plant op the insertion of the proboscis into the tender parts of the young shoots, the recently-formed alburaum, or the parenchyma of the lower side of the leaves. Whilst thus emploged they are almost motionless, and, at all
times, their progresision is sluw, bing stupified as it were with the swees juices they imbibe
to see them congregated together in layers, one above anotier, and thuse which are uppermost, being the most fll-grown, waking slowiy over the rest, or engaged in the act of parturition. For a discorery of the wonderful mode in which these insects are propagated, ebted to II. Bonnet, and his researches have been sui, sequently consirmed by many other seientific observers It is unnecessary to allude to it further in this place, bot the curious reader will find ample detants upon the subect in the works of Bonnet, Réaumur, De Geer, Duval Curtis, and Dutrochet. The specific names of these insects have asnally been given th theme from loceted; but upon further investigation, it is more than probable that different plants may be found liable to the depretations of the same specles, in which case their momenclature whin
reguire some modification. In the coarse of our observaions, it proped to enumerate the different genera in \({ }^{\star} 0\) which this family can be must conveniuntly divided, with the leading characters of each, so as to enable the practical gardener easily to distinguish them, and to learn in what particular situation he may look for them with the greatest success ; some suggestions will also be given with espect to the most effectual means of preventing thei depredations, or, at least, of confining them to as limited n extent as possible. Such an inquiry will not, we trust be uninteresting to the readers of the Gardeners' Chroni cle; and in some of the future Numbers, the promise
herein contained we shall endeavour to fultil to the best of our ability.-Osucald Mosley, Relleston Hall.

\section*{COTTAGE GARDENS.-No. XXXIV}

Tue wet and unseasonable weather which has so gene rally prevailed during the summer has been very much gainst the culture and fruiting of Vines in the opeas air indeed, it is only in some of the warmest situations where hey possibly can ha"e prospered, anderen the crop is an indifferent one, and has been so retarded fo the want of sunshine that the fruit will be late in ripening and devoid of flavour. In ordinary seasons, however, the prospect at this time is very different, as the Grapes, after having been properly thinned and attended to, are now nearly swelled to their full size, and beginning to show some appearances of approachin! ripeness. This is firs indicated by the berries of the write Grapes becoming sof and transparent, whist those of the black varieties assume purplish tinge, which increases more and more until the fruit is fully matared. nuture takes place, all handling and thinning of the bunches must be avoided, as no reduction in the number of the of those than be or mach service in increasiog the siz after they have undergone the last thinning, whicls it is desirable to give them either previous to their or during the perioci when that process is guing fursard The only usually \(m\) Angus very early in September The only thing, plerbaps, they may now require will be, train the fruiting branches as close to the wali as possible, taking care at the same time in donng son not to expose the bunches to the scorching rays of the sun, or ailow them to be shaded by more than the thickness of a singie leaf. (In any leaves from the branches. sumerin they appear to be too cruwhed, under the mistaken notion that, by exposing the buaches to ti.e full athon of the sun, it will cause theni to ripeneearlier nad be higher havoured. On the contrary, it is wortiy of remark, and ought to be or never attan the size and flarour of those thed selduan close contact with the wall and are partially shaded. The shouts intended for the bearing wood of next year should now be shortened anil ciosely naled, so as to receise the full benefit of the will and be perfectiy matured berore
winter. It will also be advisa, winter. It will also be advisthle to gin over the Vines again and pinch off the laterals. \(\mathrm{D}_{0}\) not umit attending to the growing crops of Cabbazes. Cuntiflower, and Broccoli. Keep the whule cienr of weeds, and take the oppor tunity of ury weather \(t\) driw a little earth to them ocer sionally as they advance. The Celery stould be particularly attendeck to in this resprect, and earthed up with care as formerly directe.1.-M. E. \(H\).

HOME CURRESPONDENCE.
Bifacial Oak. -The enclosed seaves are from an old Oniktree standing in one of me gar tens here, the bole measuring about in feet in circumsereace, in height 14 feet, and containing nearly yly feet solid measure, the branches reaching 210 feot io circumfere cee. The bii of the

the long-stalked or white Oale. The prale ones are the
colour of Oak-leaves just unfolding in the spring; th dark ones are of the deepest green of summer; ; both a pear equally healthy. We

\section*{To mathe spee men Fuchsias.-In order to have speci-} of Angust : pharting them round the rims of 5in. pot=, filed with lifht -andy soil. and well drained: they are then Wheet in a Cumbubr-frame till sulfiemently rooted, and dterwards removed to a cool and airy part of the green house, where they remain till February. In that month they are potted-off into small sixties, and when mell rooted in these pots ctoice is made of two or more healthy larger pots, according to their size. While young, care must be taken that the earth in which they are growing soun become sickly. When they have filled these pots with roots, the plants must be removed into larger pots, and carefully tied up to sticks, in order to keep the lead ing shoots upright, as several of the rarieties have a tend that these varieties are kept vigorous. About the second week in June they are shifted for the last time jato pots sufficiently large to bloom them in ; in potting particula attention must be paid to the drainare, so that the super
abundant water may easily pass off. Plants treated abundant water may easily pass off. Plants treated in this manner will begin to bloom profusely at the latter tember; during this period the pots should be placed in pans, so that the plant may be well supplied with water, hare grown aricilis Rly soaked is. on this manner bosi major, microphylla, inflata, and reflexa; and no doubt the same system might be applied with equal sucCess to the more recently-raised varieties. Gräcilis, in flata, and Ricartonia, are now (August 2d) more than 4 ft igh. reflera, globosa major, and virgata, above 3 ft . : and grandiflora and microphylla nearly 3 it . The soil used for these plants was equal parts of loam, leaf-mould, and wellrotted dung, with as much sand added as rendered the compost porous. Plants thas treated, with their shoots pruned into three or four buds, form beautiful objects for curning out into the flower-yarden the following summer, must he increased, and they should be their pot-roo ir.-G. G. W \({ }^{\top}\) atson, Norton Ficarage, s'tokton-on-Tees;
Radiation. -The gardener, as well as the agriculturist, would be much benefited by attending diligently to the phenomena connected with radiation. Dark and rough surfaces, cæteris paribus, radiate best, and a flat superficies prallel \(\begin{aligned} & \text { tith the line of the horizon, better than an inclined }\end{aligned}\) plane. The grass-plat is bedewed when the rolled gravel walk or the flag-stone is dry. A mossy surface might maintain a perennial spring in an arid soil. Daring the prevalence of dry weather the surface of the ground should be frequently stirred to maintain a rough surface, and the at night with a woollen net, the prevalence of a clear and cloudless sky; for such a condition, conjoined with a tranquil atmosphere, are circumstances essential to the formation and deposition of dew, in contact with a radiating surface. An agitated atmosphere and a beclouded sky are antagonists to radiation and the formation of dew. The conditions referred to being stipulated, place a Laurel or Magnolia leaf in juxta-position with one of the Great Mullein on a flat or exposed surface, and it will be found that the former is dry while the
latter is bedewed. These principles serve to illnstrate the protection of the early blossom on fruit-trees attached to walls, by intercepting the aspect of the heavens by means of screens, homever thin and filmy thetr texture, provided they are opaque. The mat which covers the hotbed accomplishes this, and so far prevents the loss of temperature by radiation; but as the surface of that mat is also radiator, the dews will condense upon it, and as evaporation is a powerful source of cold, when the dew exhales the the oue case is undone in the other. A screen not in contact, or insulated by non-conductors of caloric, will subserve the purpose more eficiently.-J. Murray.

Campanula pyramidalis.-I think T. T. H., in p. 537, must be mistakea with regard to the treatment of Campanula pyramidalis, which is by no means a tender plant at least, I have several in blossom in the garden, both blue and white, where they have been for the last two years without the slightest protection. One of the finwerspikes is six feet high, with hundreds of blooms and buds on it. The plants all grow in a strong loam-in fact, pinating tham in the open grouad where they are intended to flower; some of them will blossom the following year, and the others the year after. I had one plant in a po in a window all the winter, where it began to throw un thar or five flower-stems; this was tarned out of the pot
into the border. but it is nut nearly so fine as the others, ail the leaves haring fallen off and the flower-stems not being mare than two feet high.一II. C. F., Perth.
commended, in p. 536 , to take up and keep Fuchsias in protect them with a light covering of litter, \&c. In one west and mre part, them ars rural U-ls of Fuctias are, at present, ithe lirge bo aupets, a conchiete mase of fowers. They are not cut down till tie teds are dressed in spring, as I consider the dead wood forms a proteetion to the living during the wiater. The sorts in the beds,
conica, and disco, rirgata, gracilis, coccinea, globosa comes a shrub, remaining uninjured almost to the extre mities of the shoots; but it does not form near so good shrub as it does a bush, after being killed to the ground ham Hall, Norfolk.- [We are -Johan Halliday, Elm will survive the winter, in Norfolk and elsewhere to the north of Innion; but it is only in very dry soil, as far as ne ever seen.
uctures, and the different mon-Among the varions present resorted to, for the successful growth of Cucum(Ch in winter, that described by Mr. Mills in his Treatise (Chap. 4, P. 47) seems to be the most approved. By the he it he asserts fruit may be prodaced erery month in probable, ease and certainty. This is not at all im. can be produced in the depth of winter, on the comm dung beds, though these are not without many disadvan tages, from which indeed Mills's pit is not altogether free. It is evident his pit can-never be generally adopted, as it ensures success only to those who can always be provided with quantity, and have, like Mr. Mills, plenty prepared, asd will it be with the gardener who has not this command of dung! and there are many under the necessity of begg from the bailiff a few loads to renew their linings with, and probably do not get them for a week after they are re-
 ricks heaped on each other, on an improved principle, dreary does not resist the cold and chilly blast of useless, his plants perish, the crop is lost, and perhaps his character and place also. Another point in Mills's pit that is to be doubted is, whether the heat emitted from the sides of the chamber is regularly diffused, and whether the is enoughow immediately adjacent. If this is not the case, how can there be uniformity of temperature, the most essential ob ject the gardener in the early forcing of Cucumbers? able and the uncivil bailiff, and by which he could keep the temperature of his pit to any degree he pleases, is eridently wanting ; and it surely ought to be the constant eadeavour of every person connected with gardening to tr of and at yot as great a failure as many at present in use. Thave not
had an opportunity of testing it myself, yet the publieation or its value. The cavity for linings ( 6 in the figure), the pigeon-hole wans (g), and the outward chambers (d), ato o correspond with Mr. Mills's system ; but from the out ward chamber, to a centre one \((f)\), which runs along the middle of the pit, to be built of bricks on edge, in the form of fues red with tiles. These are to be placed at reguar distances apart (eay 6 feet), on which are to rest hardles, o support the soil in which the plants are to grow ver which the hurdles are placed. The centre chamber is to contain a flow and returin pipe, leading from a sma pparatus (the kind I would recommend is Rogers's), or boiler placed hene enu, as seen in the sketel at ( ), , can be worked at pleasure, if the severity of tue weathe renders it nccessary, or during the intervals between the decline and renewal of heat in the linings. By means the cross passages ( \(e, e\), in the figure), the heated astribute throughout the it There is no doubt that by means 0 the boiler the disadvantages previously adverted to are one away with ; and it seems reasonable that the smal pace (c) is more regularly heated, surrounded as it is b eated air, than the whole body of the pit \(1+\) times it area) could possibl

 destroyed by them : and if your correspondent will watch hrough the season a crop of Runners, he will see that the
bees bore with their proboscis through the lower part of
the petals, and on examination he will find the germ either entirely or nearly cut off, thereby rendering it abortive. I am no enemy to bees, believing they do more gond by impregnating flowers than harm by spoiling a fer c impregnating howers - Chorlfon, Manchester

Glazed Flower-pots.-Whilst the subject of glazei flower-pots, broached by Mr. Forsech (apparently an ingenious person', is fresh in the mind of the horticultural
public, I ber to offer a few remark, the result of expepublic, I ber to offer a few remark, the result of expe-
rience. I have no doubt that could it be proved that plants succeeded as well in ghazed pots as in unglazad ones, a great advantage monld accrue from their adoption, inas-
much as in the case of shiting plants, it is evident that the fonder they are of the matertal the faster they adhere Wit it so fur so good, but what a destruction of the ping-
cipal fibres tahes place in shitting, in many cases, as every plant-grower can abundantly testify. Now I prebut I am much afraid they mould be liable to a far greater. Every good gardener knows full well, by a round of experience, that when puts become mossed orer on the outside
(in consequence of bail drainage within, or inclement sea(in consequence of babidrainge within, or incle:ment sea-
sons without, or probably both counbined) that the plant will no longer thrive. How is this : why simply because a plant in a pot has only one-half the chances for the
escape of water which a plant in the open s sil posisesses. Thus, then, in a pot, the moisture a plant receives, unless permitted to pass rapidly downwards, through excellent
drainage, is forced to wait, if I may so term it, until it be transmitted (by, I suppose, capillary attraction, throurli organic matter in the soib to the sides of the pot; and here, if the pot be hard baked, or glazed, or encrusted with destruction of the fine fibres, by (as I imagine) the exclusion of air, which would appear to act, if I may play with an analogy for once, in are the exclusion of air, when waters are frozen, does on fishes
howerer, this is, perhaps, assuming rather too much, for I am aware that it will not do to make sport with analogies, , however, give Mr. Forsyth credit for drawing attention the evils I have, rather than tly too suddenly to those I know not of." Much, or most of the moss which is en gendered on the sides of pots, might be prevented; 1st
by increased attention to drainage; ©d, by having trel lissed stages, or boards of some kind above the ground lovel, to prevent the ascent of worms: 3d, by washing the pots clean before inserting plants in them; 4th, by taking care in all in-dour cases where much moisture is preserved lastly, by selecung to have free circulation of air; and, from the potters. However, as to the mierits or demerits of glazed pots, it is a matter soon to be set at rest by ex periment; and when once determined by practical tests to be advantageous or not, we may leave the rest of the affair that Mr F's er philosophy. I could have wished much that Mr. F.'s experiments in the way of glazed pots had rum ; if they have done so, it would, Tropxolum tricoloas well tor him to have given a list of those kinds be has proved. As to tubs, they are a better non-conductur of eat than pots in the first place ; and in the second, they are at the best but a mass of vegetable manure in some stage or other of decay. With regard to Mr. Fis antipay to buint clay, as he terms it, at which the seems to cultirators all it is strange that nurserymen and plantbody of men in point either of education or experience, should persist in the use of abundance of crockils be best a good cultivator where indeed that we generallyreckon on than usual. still I have a pots are crocked rather more may and will be hare an idea that much improvement have tried several experiments on this heatl, and if useful to the Chronicle, will feel pleasure in describing then at some future time. In conclusion, I hope my remarks may not offend, as I rould rather be found to stimulaie than check inquiry iu such matters.-Robert Erringion, Oulton
The Buy Tree.-Feeling anxious to discover the true Lutely of the phenomenon whiciu has engased attention th of and you anuther portion of the Bay. On the snome were eritirely brown, nthers were just commencing their recovery: up to the 2ith they appeared to withe Yery rapid paogriss, some having become entirnly grean; but these last fer days have prosed untivemable to the comSiderably advanced previonsly to my madkins, them. Oate dead leaves, Ithich being well covered with apparenty wad leaves, I thought would prove the point satisfactorily, dhes not losk so hoaltiny as the sicale leaves which were situated in more remote parts of the tree. I thinis that the cessation of the process may in some theisure the attribated to the rapid growth of the yoany ats which tree can furnish forn lately, requiring all the sap that the taken from various part own zuwh. The single leaves are State of con valescence.-J.han IRultherd, Winciomor, Hiz. IWe examined the evideneas supplied by our corres; ndent, dead, have revived, and regained their arren colonar. givise Wricing the foregoins we hare received from Mr. Collier, of Leicester, sume Portugal Laurel leaves, with an assurance that in the garden of Mr. J. Balewell, of Castie appeared quite dead, but new life seemed to emanate from the atem aud spread gradually through them.]

Rhododen liou fimugineunin.- IVe find from our cordendrons are couning into flower very cenerally. This is injured. It arises, as we have before siated, from be injuredi. It arises, as we hare before ssated, from the
incessan rain, and will be found comnected with a very general change of flower: into branches. Those who are interested about Cegetable Morpholugy should avail
themselves of the abundant enidence afforded upon that thenselves of the abundant
suliject by this reet season.
Blue inydranycas.--The Hydrangeas at this place are very heautiful; you may see one plant covered with blue,
and the very next with red flowers. I semd you inclosed two little bits of two brmehes, one blue and one red, which grest on one plant on adjoining shoots, al:ke in exposure to sun and air. There ara several others of Mathern-wells. [By no means.]
Bees.-Yoar correspondent who meations the Humble bres dead under the Lime-trees would have seen if te had been fortunate in his olservation, the bees alise under the lime-trees, but much stupefied, and apparently drum. In a few minutes after they die they become a
hollow carcase; I have not been abie to detect by what means. The isecs, however, were not all, nor were th majority, humble-bees, but the earti-bee. I have noticen a feiv working-bees among the dead. It seems to me that their stupefied state may not be attribused \(\left(\begin{array}{l}\text { on any prembas }\end{array}\right.\) that for any other bee. Aar I wron is made in sompr to have heard or reation astrong hine - Vigil. [As the Lime-tree cont.ins much surar, it leaves would perhaps ferment, and then a spirit might be sort, and we have not heard of the pratices alluded to by our correspondent.]
Hot water.-The success of every cultivator either of forcad fruits or exotic plants depends, in a great measure,
upon the proper construction of the buidungs applitid to these purposes, and particularly to the commant o heat and moisture. The superiority of hot water for heating, over any other plan, when properiy applied, is undoubted by all that have ever had the hast experience in gardening. We are indebted for the many improvements that have been made in the culti:ant of of early fraits. tropical and other plants, to those talenteri men who have made so much progress in the construction of boilers and the arrangement of pipes. After the number of years that hot water has been used for borticultural parposes and the beneficial results that have brought it so ver, generally into use, one whuld suppose that every per son about to improve his ganten was ac pusinted wat the different plans that had been fowal an-wer. But
the contrary is the fact; for I hase lateiy virted many the contrary is the fact ; for 1 have lately vinted many heated in the mosit complientel and unsatisictury manner: in others they are put up at an enormus eipense, with a great saerifice of fuel and labour. At one of the latter places, the gardener, arter the greatest care and unwcarived exertion last wiutur, lost most of his valuable plants, and quence, accused by lis ebuploser of want of ability and of neglect, and discharged. In another gentieman's garden Ifound a new rauge of heautiful vincries heated by the person who had fut up the appratus at the hat-mengandener was accuserl of being prej idhond and of hestiect
 and discharged. This ssstem of heatiog hen beta torent upon many gardeners, to their ruin, by a persen whose great pructice as a forcmy sudener gisco and a caims to
attention which he certainly do s nut deserve. I mothe attention which the certainly dous not deserve. I mothe

 Mi. Rodweil strongly reeummendis the Italian Rye Grass, and shows the rapid growitr and lusuriance of tinis grane
as an early spring food, as well as its great proluctiveness during the summer; and iu every case where it lias been tested, the preferense given to it by every kind of cattle.
Mr. Milburn's paper on Early Spring-feed is cliefly occupied with arguments to show the superiority of Rye for this purpose. He says-6. 1. Provision of excellent green food is made at a season of the year duced without sacrificing any portion of the usual rotations pursued on a farm, and with little extra labour, nor does it interfere with the management of any preceding or succeeding crops. 3. It will grow on any suil, but is especially calculated for poor louse sand, when every
other green esculent is more or less uncertain. i. It will bear any degree of frost to which our climate is subject, and is sufficiently hardy to defy the effects of the coldest situations in the country, being there cultivated instead of wheat for a corn crop from necessity. 5. It is as inespensive or more so than any grass or leguminous plant.
6 . It is readily consumed by stock, especially young animals. 7. It improves rather than deteriorates the soil upon which it is grown.
In the paper on Rust and Mildew, Professor Henslow demonstrates the truth of the opinion mentioned by us at page 5, that these two fungi, although regarded dify bo-
tanists as distinct, are really the same phant in different states, and he answers the objections made by Mr. Louis Vilmorin, at page 70. (To be contin

\section*{NEWS OF THE WEEK}

Our Foreigu news, which includes the detailed intelligence from India and China, brought by the last overland mail, whose arrival we trere merels abte to ammonce in our last Number, will be found more than usually interesting From India, we learn that the principal event which has occurred in the provinces north of the Indus, is the defeat of the Ghilzies by the British forces. The country has been thrown into a state of great excitement by this unexpected collision with our troops, and it is said that Major Lynch, the political agent, has in consequence resigned. The news from Scinde is unsatisfactory; severe sickness has broken out among the troops, and little change bas yet been effected in political matters. The Punjaub appears more settled ; the latest athes from Lahore mention that the British Government have called upon Shere Singh, for a force of 10,000 men, which are supposed to be destined for a new campicn ardinst Iterat. The Shah of Persia has surrendered Ghorian, so long the object of diplomatic negotiations, but has assumed the Sovereignty of Herat itself, which has been surrendered to him by our late gilly Kamran Shah, who has thereby defeated the great object of British policy in erecting it into an independent kingdom. From China, the despatches inform us of the fate of Keshen the late Imperial Commissioner, and the military preparations of the Emperor for a new campaign. Hong Kong has been re-occupied as a permanent possession of the British Crown. Trade has been partially resumed, and Commissioner Lin, so well known for his determined opposition to the English, has been appointed successor to Keshen.-In France, the enforcement of the census still canses some partial troubles, but opposition to the measure is greatly allayed, and no recent outbreak has occurred. The evacuation of Purt Mahon is said to haveg given rise to a temporary misunderstandmy with ti.e spanish autherities and the fleet has been recatiled to Tomton for the purpose, it is said, of tranguilising the public mind respecting the disarmament. The Finance Minister lias postymeal the raising of a loan, on the ground that the present prospect of a European peace must lead to a reduction in the neval and militery estimates of the Great Powers.-We ha little news from Spain beyond the celebration of the Anni-
versary of the September Revolution which passed off quietly, and the ammesty spaated by the Regen: to all Carlist soldiers and officers under the rank of Colonel. Public attention throughout the Peninsula has been much oc cupied with the state of the relations between Spain and Portugal, with respect to the question of frontier privileges; but it was believed in Lisbon that it would be settled by the mediation of Great Britain.-From Germany, we learn that, in anticipation of continued peace, the Austrian frovernment intends todiebsnd the army alter the autumnal reviews ; and from Switzerland, that the Church question, in spite of the interference of Austria and the other Catholic Powers, is stili the cause of great excitement, and fittle douht is entertainerd that the Diet will nomin adjourn the question for future negotiation. - From the Levant we learn that the Divan has resolved on reducing the tribute paid by the 'Syrian monntaineers, and that a proposal which had been made for appointing Mehemet Ali Grand Vizier had been d.clined. A disturbance had hroken ont on the banks of the Lower Danube, in consequence of an attempt to raise recruits in Wallachia for the Bulgarian insurrection ; several persons were killed. bnt the outbreak was effectually suppressec.
At home, the arrangements of the Conservative Ministry are searly completed; writs have been issued fur the new elections in those places where racancies have been caused by the acceptance of effice, and Parliment, after assembling for routine business in the beginning of the week, has adjourned to the 16 th inst. The accounts from the provinces represent the farrest 38 in a great measure coneluded, and consry the iratifyint anarase tion the result, with very few exceptions, will be a fair average crop

 Clerke of Ordanace. Storeveeeper of ord
Serjeant-at-Arms \(\sqrt{25}\)

The first Cabinet Council of the New Administration took place on Saturday; and on Monday the Earl of Aberden,
as Foreign Secretary, held the usual State Levee in Down-ing-street, which was attended by all the Foreign Ambassadors and Chargés d'Affaires at present in London.
Parliamentary Movoments. - Twenty-seven seats are now vacant by the recent Ministerial appuintments, and the new writs having been issued on Wednesday, the elections will immediately take place. Few of thena appear likely to be contested. At Newarls, Mr. Gisborne, for pose Mr. Gladstone; and at Lichfield Capt. Dyott is mentioned as the Conservative candidate, in opposition to Lord Leveson on the Liberal interest. The wacancy occasioned by the flevation of Lord Lowther, the new PostmasterGeneral, to the Peerage, will be contested by Alderman Thompson, who has retired from the representation of Sundrlaud. for which Mr. Wolverley Atwond, the late candidate for London, has cume forward Mr. Perceval
is mentionell as the candidate for the County of Sligo, is mentioned as the candidate for the County of Sligo,
vacated by his father's appointment as Serjeant-at-Armis. In addition to these racancies. Mr. Warburton has retired from Bridport, for whech Mr. Baillie Cochrane is mamed as the Convervative cemeidate. The elevation ot the Hon. W. Duncomie t, the Peerage has aloo created a vacancy for the Nurth Risimg of Yorhhire. The Epeaker has numated the following Meniners (harmeth of Election Committees:-Lord Sam.ion. Hon. S. Herbert, Mr.W.
Patten, Mr. More \(^{\text {O'Ferrall. Mr. S. Loch, and Sir G. Grey. }}\)

\section*{fforfign.}

France. - The Census.- The enforcement of this measure still causes some partial tronbles. At Grenoble there have beea some attenipts to produce a disturbance, as also at Villegrande, but troups were immediately marched from Lyons to repress any open outnreak. In other lueatities. citizeus shat their huases; but the registry is silli sfifectul in one way or other. In Paris, the registry goes on, jet no apartment has been eutered, ti.e tiscal offieers conters. fresh tumult, and allayed op position. The Departmental Councils ind the Muncipal Councils have come to directly contary wituiens on the polut: but the Chamber of Duputier will tinaing decile. and settle all dispated points.
Evaenthons of Port Maton.-The opposition parers
luring the past week have been filledl witi angry discusduring the past week have been fillell witin angry discus-
sions on a diemand said to have been wade by the Sparish sions on a demand stid to have been wade by the spanish
authorities of Minorca, for a sum of \(10,001 \mathrm{f}\).. quarantine fees and expenses, incurred by a French corvette (La Victorieuse). previously to the evacuation of the mbitary hospital. It was also attirme! tiazt tire captain of the corvette had been wamed that ins ressel would be fired upon shuuld she attenpt to sail before this ciam, had been settled. and ministerial papers, however, contradict the report, and add that the proceedings passed off without auy dishcolty, and that the invalids received every attention from opposition journals continue to comment on the transactiom in ternos of great indiguation; and state, in confirmation of the fact, that an angry correspondence had taken place between the Madrid Cabinet and the French Goverament, of the subject of the sudden rattire given by the authorities of the B ilerric Islands, for the French to
evacuate thie bospital. This is, however, evacnate the hospital. This is however, explained by a subsequent statement, wheis appears ta be ufficial, diat
the lucal authorities of Ma: on tunk ap no themolves, mithout sutlowity. to give the French naval officess warn:ng
 that the Pame.i furerument had complained of the prominutin no to rater the lease, as measures had been taken fur the rema wal of the sick to the coast of France. Toalon by the sudden secicuation has been excited
the islands of Hyeres; while another division of the squad:on has been ordered to return to Brest. The ships
stationil if Farct.i.a have al:) received orders to put tos sia witis aiel diephethes. Some accounts represent this measure as adopted by Government, for the purpose of tranquillising the public mind respecting the disarmamerit and rexur: inn of the fleet; while others state that
 tion being sent against that Regency. The fleet under Ast. Marseilles papers of the : wi ain....ace the arvisal a Tunisian steamer, with the (Che nher IRatin, the isey Prime Minister, who has come on a missiou to France.
The Loan.-The ministerial papers contain a semiofficial article, which has made some sensation in Paris.
It states that the Minister of Finance fund his position -o It states that the Minister of Finance finds his position - 0 ,
muci improved, that the will not be furced to make a luan, Which was originally intended to meet the deficts left by
the preceding Cubinet. It says that the elections in England, and the advent of a Conservative Cabinet, ren-
der ? good understandting with France more than probable, and that ome of the fires conne guesuces of that understanding must be a reduction in the naval and minitary estmater ably reduce her navy on the lst Jan. next, and that France
will immediately follow the example, that all apprebension same spirit and policy prevail over the entire continent. Government is represented as devising means calculated
to diminish the amount of the deficiencies; and the Mito diminish the amount oid the defciencies; find and
rister of information he las obtained, that be will be able to
balance the expenditures and receipta in the budget, which will be presented nest session to the Chambers.
The Metropolis.-A cummission has been appointed by the Prefect of the Sciae, to thle into considerniont a project for improving the navigation of the river within
and below the capital. Part of the plan consists in establishing this uarigatiou on the left branch, running along one side of the Cite. Another plan attached to it is the
construction on the centre of the Pont Neuf of a vast building, from which eight turbines, of the force of 4,000 horse power, would throw immense quantities of water Royal, which contains the series of historical pietutes representing the various scenes of which that edifice has been the theatre, is about to have added to it two more paintings-one representing the reception by the Roval Family of France of (tueen Maria Cnrstina; shit the other
the sirning, br her Sniunh Ilajests, of her protest against the signing, by her Spanih Majesty, of her protest against
the Decree of the Cortes, which deprived her of her rights as guardian of Queen Isabella,
spans.-There is little news of interest in the adrices from lladrid. The Chambers have clused, and political exectement seems to have subsided for the moment. The
mode in which the lhan of sisty millions, authorised by the Coites, is to be rallaeri, has ant get heen thentutively fixed ufon. On the ¿2sun a cabme: cauncil was held, said to have heen for the purpose of adontisg energetic measurcs against the pres, or, as others alitge tor quielling reported during the day that troubles had broken out at Segovia, and that one company of a reglment of the line had participated in the movement. It was also stated that an attempt at insurrection has been made, hut promptily
repressed, in the garrison of Algesiras. This circumstance repressed, in the garrison of Algesiras. This circumstanec is attribated to the intrigues of General Narvaez, at Gibralkar, where he is suspected of endeavouring to excite in
Andalusia, of which province he was once Captain-General, an insurrection in favour of Queen (hristina as Regent and Guardian.- The change in the Administration of the palace of Madrid, and of the rosal patrimony, is procecding satisflactoriy. In all that respects personal attention to her Majesty aul sister, the conduct and appearance of the sercants of the household, the state of the pulace, gardens, pleasure-grosuds, \&c., the chance, it is sand. has aready etficted much improrement. The nuighbourhood of the palse of Dalkid, iutaliy nighected or coveral witis ruins, is to be ornmented awd put in order. The comatry palaces of La Granja and ti, Casa del Campo, allosed to
go to ruin in the tume of Maria Christina, are in progress of repair. L-parats of a hundred wen are enpuged at the first of these palaces. The grounds of the roy al park additions made to the plantiurs, for which the seeds of various ornamental trees ame plants are already ordered from C'sba and the Ented Stites.- The Antiversary of the Revolution of September was celebrated on the ist, without any party denoonstrations; and the Regent has issued a decree extending the ammesty to all Carlist soldiers and officers under the rank of Colonel.
Portcgal.-The arrival of the packet has put us in
pospession of news from Lision to the 30 th ult. The law for the new system of taxation had been the mabject of debate in the House of Deputies during the preceding week. The 10 per cent. on the civil list passed after a warm discussion from the opposition, who insist to every such a tax were mecessary, it ought bowsehold, whence such an example would be well rereived. The ministerial majon \(y\), homener, whecered, amd erguad up a the antinainity of the Cran and the exenption of the reat hasciod fown reticuating in the occapied with the stake of relations with Spain and Portugal, and the demands made by the former on the latter prohibited by Spanish lañ frem Portuguese towns near the frontier. This demand if now avowed to be based op the

Treaty of Badajos
with France, obliged Portugal to close her ports againat
us, and to remore all deposits of British goods from the frontiers of Spain. The treaty was, however, renderei null and void by Spain herself, who, instead of fulfilling of the Portuguese possessions to the house of Braganza,
on Ehortly aftewards entered into the secret treaty of Fon-
tainebleau with Napoleon, by which Portuga! was to be tainebleau with Napoleon, by which Portugal was to be
divided into three parts, and the house of Braganza was also to be despoiled of its foreign possessions. The Porject, and acting under the advice of Lord Howard de Walden, had firmly refused corgpliance
Prince Metternich to the French Cabi Prince Metternich to the French Cabinet having procured

 for travellers in southern Germany during the autamn. the emperor cily the festivities attendant on the visit of received by the whole garrison and civic guard under arms and with every display of attachment by the inhabitants Who are as much distinguished in the empire for gaiety of
temperament, as their city is for its picturesque site. The imperitll pary will, atier a short stay, 1roeed to Ischel but Graitz will continue attractive throughout the autumn
by arealis of the ts. ifition of worhs of industry and the fine arts, which has been estullinhed by the Archurke John. The festivities of Stuttgart begin on the 28 th Sept., the birthday of the King of Würtemberg, and are intended to commemorate the 25th anniversary of his accession to the throne. The Prussian Government has distance of 45 ay from Cologne to Aix-a-Chapelle, jonrrey from Ostend or Antwery to the Rhine. It is stated in the Prussian rapers, that the kiug has offered to contribute 10.000 thalicrs to the restoration of the cathedral at Cologne: that a similar sum will be furnisthed by the cathedral itself, and by private collections. An occur rence similar to that which recently excited so much in dicnation in Loudon, viz., the wanton destruction of
worhs of art in public exhibitions. las recently taken place at Cologne. One of the timest pictures in the pre seat eslibition of that city has been wantonly cut. It Augurtus son Embe of (assel, who had sold it for a considerable pice. A large landscape from Düsseldorf, not yet sold, has also been sernonsly injured; and a suath covered, and there is no clue to the asetive which could b.ve prompted these acts of mischief.

Switzerland.-Letters from Switzerland represent the Canton of Argau as in a state of the greatest exciteenrolled itself into numerous volunteer corps, and the canton declares itself determincal to. defend its right to reiorm its clerical affairs, without being exposed to foreign interference. Dieanwhit the combittee charged with the examination of the questions at issme hase sent in then report ; and the Preailent of the Diet has recommended that this body should declare iteelf satistied with the concessions of Argau. Iittle doubt was emtertained that the Diet would again adjourn the final settlement of the question.
Traly.-The Marscilles papers announce, on the authority of detters recrived by the last Italian courier, the dsath of Silvio Pellice, the celebrated puet and an hor of A.e mie Prigioni, whuse misturtunes and yemius bave attracted such umisersal sympathy, and wiose liberal principles caused his long imprisoniment by the Austrian government.-Letters from Ronse anacunce tie intention of the Pope to undertake a pilyrimage to the shrines of Assisi and Lortto. Mis holiness whll ant extend bis excarsion to Bologna, thongh a dequation from that city requested him to honour tiat city with his presence. Fie ail Then risir the frot phase \(t\), the sauta Casi at Libreth, and the tomb of St Praticesco, at Assisi, which three sanctuaries are to receive cosily presents on this occasion. His holiness will lodge only in consents, or in the palaces of bistops or uf legates, and has declined all invitátions from private individuals.-The death of the Prince and ex-Cardinal Odescalchi, at Modena, whither he was conveyed from Verona, though not wholly unexpected, has excited ane regret of all classes who knew him while p 'car of A mission from Abyssinia had arrived in Rome with a letter from thin Pince of Tigre, and costly presents, on the 1 the

lives. The consequences, might have that but for the exertions of one of the audience, who has since
 palare. which had just heco reluait, gase Was, and all the spleniad Italian framtings and vases which it cortained were iestreyed. The less is entinmated at sevenal milions of frames. Xis life was lost, and the remeinder of the chapter of the Order of in. Creorge was heid in the hall. Trupter of -The Divan has been occuped with the consideraton of the comphints made by the Syrim mountaineers respectiug the amount of their tribute, and has
resolved on rulucing it to a sum in proportion to the present resources of the country. The Augsburg papers state that the Divan liad also debated for several days upon a propusal to appoint Mehemet Ali Cirand Vizier, and that the proposition was declined. In the Divan the votes are said to have been equal, but the decision above stated was formed after a conterence with the department of foreign affairs, at which the representatives of the five powers were present. Lord Ponsonby was to embark on
the 26ith ult. for England, and M. de Pontois, the French ambassador, was in daily expectation of leare to return to France.-A serious disturbance had oceurred at Ibraila, on the Danube, in conserfuence of an attempt to raise recruits for the avowed purpose of lading assstance to the
Bulgarian insurgents. It appears that about 2100 Servians had landed at Itraila for this purpose, and after inducing aeveral persons to join their party, retused to submit to the troops, and about 100 were killed, after an obstinate resistance of eight hours-Advices from Smyrna state, that according to the returns made up at the British conSuad bien ascertained to amount to 7284 by the late fire loss \(125,850,000\) piastres.-A report has reached Marseilles, that the insurreetion in Candia has been revived, bot the account appears to retpuire confirmation.

Egypt.-The return of the consuls to Alexandria has produced much satisfaction to the Europpean residents. Oiders had been received from Constantmople for the immediate liberation of the Syrian troops, and Col. Napier
and Mustapha Bey were present to superintend their embarkation The facla was preparing a fiifate to receive them; but as they are spread cyer the country, some time
will be necessary to chluet present residing on his estates, deroting his attention to the cultivation of the lind. He has also assumed the drection of the woollen and cotton factory at Fouah. The rise of the Nile is not yet to be calculated upon. A subsequently the rise has so far moderated that these apprehensions are for the goid reason nove to hupe the inundation will reach its severely fint of utility without causing ti.e ravaçes so
selar. An Egyptian frigate is said to be preparing to conrey a cargo of wheat for the pacha's account to liverpool, where the profits are to be expender in docking and fitting the ressel out in proper English
man-of-war style, that she may serve as a model- vesoel oua man-of-war
Mindi, Scinde, and Affghintafan- The intelligence of thich we gave a brief summary in our last Number has since reached us in detail. The only event worthy of special not:e which has occurred in the pr winces uorth of 3,4100 strong, by a small foce under the command of Col. Wymer, of the Bengal aruy. From some vircmastances tuat hase lately conse tio light. it would seem that a recent attack on the small fort in the neighbourmas of Kelat-i-Ghilzie, by the force under Major Lynch, Bras an act of injudicious aggression on the part of the
Brish agent. The accounts state that the Ghilzies had for some time past been much excited, and exhibited considerable dissatisfaction at the erection of the new fort of

Chisa--The arrival of the Canton and Indram merspapers since tire pribicathon ef our last, has mat us in pusstssima of some form reaci-rs, If appears that the Emperor was so indignant at the capture of the forts of the Bocca Tigris, that he had issued an edict, accusing Keshen,
the late Imperial Commissioner, of having received bribee from the English; in consequence of which his Celestial Majesty degraded him from his rank, ordered him to be pud death, cut asundet it the maist, and alt his relative to have been his implicited. Keshen's sole crime seem superiors, but as the result had been unsurcesssful, the misfortune of coarse was visited upan his head. Commis sioner Lin , of whon we hare not lately heard much, is said to have been the chief instrument in the fall of Keshen, army. Keshen had also told the Emperor some plain, but Bogue forts, on which account he was accused of having received bribes. A nother mandarin of high rank was also sentenced smail pieces from bis bones ; and the country for 27 mile

 for the parpmse of exterminithig the Fnglah, and it apthey did not sucesed, than the Empurer nomid take the field in person, at the head ot a lery at masoe, from Elliut had appointed Lapt. (aine, of the 2 bi'h Rog., chief magionate of Hone-Kons, wheh hes tom r-ounped, and dimw up a code of remal tions for the deministration of justice. Several public buildings had been erected on the istand, and everything indicated an intention of it being retained as a permanent possession of the British Crown. Capt. Elliot had issued a notice intimating that land would be granted to Her Majesty's subipeets on terms sumething sumblar tho thoe adopted in Austruia The general inprusson. latarser, was that there whit be very Kong Gaserts. An official newapaper, called the HongKory Gawifich been hiol, when the gated. It appears that the Chinese were putting Chusan ix a state of defence. A remel which had lately from that island to Macao brought information of several new forts having been erected. The walls of Tinghat were likewise undergoing repair; which was regarded as a sy mptom of a long and severe struggie. No doniot was entertained that the authorities at Canton were merely endeavouring to gain time, with the riew of collecting a large force, before they resumed offensive operations. A sailed north direct to Chusan, knowing nothing of recent alterations, when her commander (Capt. Stead, R.N.) being suddenly seized upun, was murdered by the man

 from us an motern By the medi'e of trelil many of the merchants had returnat to Canton, where they found thei former premises exactiy as they had been left. At the

This discorery has created some interest in commereial circles nd it is stated by a Morning Paper that thase persons in the tea trade who have bees made the rictims of it have come to the determinathon of sifting the aftion
thoronglyy, so as to discover and expose, and if possible to punish, the authors and all other persons implicated in the fraud
Cape of Gonn Hopr.-Cape Papers have heen received this week, bringing news to the 29 th June, by which we find that the wine trale has rapidly diminished since the talk of a treaty besween France and England for the actmission of French wines at a modified duty. Shearehen that their chicf market will be cut ufl The decrease in the expor of wine in 1840 was onalf, as compared with 1839, the value of the cuntums returns in that year beins 33,074l, winite in the meeting hal beea hed to the these faits into considera tion, and the resolations adopted were to be forwarded to
Government by the Colonial Governor. There was to be Government by the Colonial Governor. South African Bank at which wis to be discussed the propriety of issuing notes. The colonists were also, among their local improvements, advocating their right to a Representative Assembly. It arious districts, which seem to be improving, not only in agricultural prosperity, but likewise in moral excellence. The (iraham's-town Papers state that the aggressions of the Caffres on the eastern frontier were extending, and on orerveer on from at Dritit, by some of these -ares bat colth a public appeal in favour of marauders, had called forth a pubite appeal in are stringent measures to rurb the excesses of these tribes. The Ciffre chnefs were to be summoned to Fort Beaufort on the subjuct which was being investigated in the most searching manner. The locusts had done much damage at Winterberg : and a heary tall of snow at Graaf Reinet had destroyed upwards of \(\because 00\) head of sheep.
West Indies Aㄱd Mevico. - By the last packet which arrived at Falmonth, we received intelligence from the different West India Islands to a late date. The Jamaica papers have no very interesting news as regards that island, but they contain accounts from Carthagena to the :3d July, from which we learn that Carmona, the federal chief of Santa Martha, had marched upon that city with a levied force of \(7(0)\) men, calling upon the villages in his way to disown the Constitutional Govern ment and declare in favour of Federalism. In Carthagena there was every disposition to support the government to the last, but it was feared the to hold ont till asistance from the want of provisions, to hold out till assistance arrived at Bogota. In the macan time, government had issued a decree allowing an provisions to enter duty free The crops at Jamaica had as yet a favourable appearance, but the soil was not sufficiently irrigated to form a positive opinion; there was in some districts a great want of rain A serivus epidewic had broken out among the 60th Riffes, stationed at Fort Augusta, several deaths had ensued, and upwards of 150 individuals were then in the hospital; out Newcastle, 20 were laid up with dysentery. The late cold and rainy weather is suggested as the cause of sick ness in the latter place. The Kingston Papers say that sbout 50 of the emigrants lately arrived from Belfast and Scotland wre learing for New York in the schonner Emma In Demerara and Barbadoes business matters were pro been been seasonable showers. The planters in the various increase their crops of prodnee, and the peasamsory evinced a diopusition to ey-oper ite uiti thio employers. In some of the divtriets the 1 freman rmigrants were still discon tented, and would not work on the same terms as the native free labourer. From the Trinidad papers it appears that a committee has been formed for the parpose of inquiring into the agricuitural resources and general capabi bould tae isfand. soil, the greater portion of which is represented as peculiarty adapted th the cutisation of sugar, while the remainder would be found ftted to produce cotton, cocoa, colfee, icc., in abuadance. It would offer also, by the uature of the country, and the quantity of tiunber in which it which advantages, and a proper supply and judicions gystem of labour, the island, it is thought, might be raised to the hoghest im artaner and prperity. - libines from Mexico are to the Jin juhy, Yuetan had honsted a tlag
