agreement was destroved, a action was hrought by Bebt in the nand purporting to be drawn by Peters against the three acceptors, go by default, but Elderton, having never before heard of the bill, and suspecting there was fraud, obtained a jadge's order requiring
Bebb to give up the residence of Peters. Bebb described him as Bebb to give up the
cause proceeded to triai, on wa witness arainst plainaif, and made a statement on cath as to the exnstence of the plaintiff in
the actit $n$, who he swrre hail diseounted the hill nul account of the acti in, who he swire haal discoured the proceeds
the partuer hip, and that they share
A verdict was acenrdingly ohtauned against Elderton since been dincorered that there was no real plaintiff in the
action, and that Peters was only an imaginary person, a rule nis for a new trial had been obtained, and was now pending. The
bill was flled in this court for equitahle relief, before all the cir-
 imaginary person as plaintifif in the action. Bebb had actually orer, made the asual affidavit of increase of costs in the action.
The wway Bebt met the present application was with a statement that the whole matter was managed by his clerk, who was pime to time, but that personally he knew nothing about the transaction or the parties concerned in it. This the learned counsel
submitted was no answer to the application. It was inmaterial Thetherbebb had been acquainted throughout with the real state professional man to be used in perpetrating a fraud of the grossest description, and of whatever court he might be admitted a solicessional misconduct, though moral guilt was not necessarily imputed to him by the present application. - Mr. Wakefield opwas nothing to show that he had been guilty either of moral or professional impropriety. The instructions to commence the who called at Bebb's office, and left the matter in the hands of his bill of exchange. Mr. Bebb, knowing nothing of any of the parties, proceeded to execute the instructions by commencing an action, and only followed them up by entering an appearance to
the bill filed in this court. The learned counsel asked what there wastify him adopting course different from what he had done and proceeded to enter into a lengthened detail of the evidence, and of the connexion between the parties when their trading speculaa law student of the Inner Temple, and a certificated conveyancer of Staple's $\operatorname{lnn}$; Elderton as a solicitor in Lombard Chamings, an attorney in Norfolk-street. A great deal of correspond-
ence had passed betwreen some of these gentlemen and another person named Hearne, which was read to the court, and related abounding in low expressions, and shoung a close int mone be tween them. It was in the course of these transactions the bill of xxchange was given. which Jones swore at the trial Peters had
discounted, and that the proceeds were divided between therasald said that he saw Jones and Elderton dividing the money, Yet Elderton was the person who now put himself forward in the
character of a plaintiff, and impeached Jones, who had been his partrer in the transaction, and who might have been cross-
examined by him on the trial to show Peters was the imaginary examined by him on the trial to show Peters was the imaginary
person alleged. It was immaterial to Mr. Bebb's case, howeyer, persen surtere. was wask a pertoon as Peters or not. The evidence Bebb's conduct was unassainable, and this court could not inver fere on an application which related to his conduct on proceedings in anotuer court of competent jursiction. The vice Chancellor said that the case was a rerv important On the exidence now before him, because the aftidarit mate in opposition to the motion tendered in effect that there really was such a person as Jolian Hugh Peters. The only question to be accertaned was whether this Peters drew the bill of exchange, had been made of the belief of th.e who had given evidence in support of the motion that there was 10 such person as Peters. there should have been no direct contrary statement on the par of defendants: but instead of it, a statement Was put forward
that Jones, at the trial, swore to the fact of Peters taking money that Jones, at the trial, swore to the fact of Peters taking money
out of his pocket to discount the hill, which was in effect swear ing to the existence of such a person.
ment by Pocuck to show there was such a person; but for some
reason not assigned there were no direct athidavits by either o them as to his positive existence. These two individuals might certainly have reasonse mich if they were applied to a but it did not appear whether they were applied to or not. His honour was, ther fore, of opinion, in the present state of the matter it would be too much for the Court to interfere in the manner which would be neccessary if it should be quite certain there was no suck person as Peters, and that the right course who had made affidarits could be examined. The form of the issue that he should therefore direct would be, whether Julian Hugh Peters drew the hill of exchange, in wh
should be the plaintifl, and Ederton the defendant
Excmequer Chanber. - The Manchester Charter.-Rutter Chapman.-Their lordships assembled and gave judgment in this
case, affrming the validity of the charter by five voices againet two. The judges who voted in favour of the charter were Mr.
Justice Coltman, Mr. Justice Coleridge, Mr. Justice Patteson, Mr. Justice Bosanquet, and the Lord Chief Justice of the common Pleas. Lord Denman and Mr. Justice Williams differed from the
rest of the Court upon that point. Mr. Justice Coleridge was o

# THE GARDENERS' CHRONICLE. 

## A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS. <br> THE HORTICUL'URAL PART EDITED BY PROFESSOR LINDLEY

No. 10.

## The garderosperus or

The Gardeners cheronicle ; The Horticultural paut Ediced by Professor Lindey. Gardening is admitted to be better understoo in Great Britain than in any other country, and the number of works on the
subject prove ethe patronage it receives, and the desire there is

 No one will thene ofroerery portson who ana athorid the expense.
 heap means of intercummunication on professional subjects.

 relation to Gardening, together with Notices and Criticisms o every work of importance on the subject which may appear
Connected with this part of the plan will be a WEEKLYCALEN adapted to the varying seasons as to form a constant assist pon Horticultural subjects - Reports of Horticultural Exhibition and Proceedings-Notices of Novelties; in short, everything tha tne workman, or which may conduce to the pleasure of his employer. Thus the Gardensr, the Forsstra, the R'ral Arcit ave the improvements in their respective pursuits recorded. GARDENING is in many respects the art of creating an Arti found: evidence, however tharding the plants are naturally concerns vegetation, is greatiy wanted
PHYSIOLOGICAL INQUIRIES, and all those interesting topics the various parts of the creation each on the other, will also form a sabject of discussion.
Another peculiar feature will be the introduction of informa-
tion relating to FORESTING, or ARBORICU LTURE. This is one of the most important subjects to which the attention of the pubhave occasion to practise it, althongh the amount of property
affected by the mauagement of timber stands second only to that affected by the matuagement of timber stands second only to that
of land. The natur govern the production of tim-
ber and regulate its growth, the ralue of it ber and regulate its growth, the value of it, the extent to which
it is infuenced by soll, and consequently to what circumstances
are to be ascribed the great iuferiority in quality are to be ascribed the great inferiority in quality of the same spe-
cies grown in different places, are all points to which attention
will be given. Wie shall endearour to colltit that very important but much-neglected subject, the diseases of trees, aud the cause of their decay, whether natural or accidennew species, Which promise to increase either the beauty or value
 Although it is not intended to ocepy our columns with the Parming, it would be impossible, even ift were dexirathe, to explants, whether upon a large or a smaliacale. Whatever, therefore, may be found important in that arapect to the Farmer will be constantly reported.
To the FLORIST our Miscellany will have much interest, not only becanse everything relatiog to those rare and beautiful, pro-
ductions which are his peculiar care wil in such a manner as to make him thoroughly acquainted with of cultivation, but also because we shall take care that such
opinions as may be given are the results of an honest examina. tion by competent judges unbussed by personnl interest.
In thb smiminaIN THB SECOND place, we shall introduce that description of paper. We consider it unnecessary to dwell on thishead further banncrs of any party; on the contrary, our best endeavours whl be to make Tue Gardeners' Chronicle a full and comprehen-
sive Recurd of Facts only-a Newspuper in the trus serse of the
uord-leaving the reader to form his own conclusion and opinions; our object being the elucidation and discussion of the addition to the peciliar feature of the Journal, with such a variety of information concerning the everits of the day as will supersede The proprietors are happy to announce that they have alm The proprietors are happy to announce that they have already
received promises of contributions from great numbers of their
friends and supporters: amons whomthe following may friends and supporters: among whom the following may be more particnlarly named:-

1. Hobitinis at the farden of The in, The Exhibitions will take place on the followning days - Finhmetire

All persons, whether Fellows of the s.ciery or nor, will b: at Hiberty to send subjects for exhibition.
Where it shall be required, the Society will defray the fair and easoable expenses actually incurred by private growers in conveying objects to and from the (larden, provided a detailed state-
ment of such expenses be delivered at the Fruit-room in the Gearden, between the hours of 3 and $40^{\circ}$ cloct in the eafernoon of
the day of exhibition; the statement to be signed by the exhibitor as a declaration of its correctness.

DELIVERY OF OBJECTS FOR EXHIBITION,
Exhibitors sre earneatly requested to notify in writing. previously to the day of meetiog, what they intend to supply, in order that due provision may be mate for the proper distribution of
the plants, \&cc, on the exhbition tables. The best places will be secured for those who comply with this request. Asthe (iardesi whit te Alida a th.m. frot the admission of

 morning; and if the owners of any locked-ap boxes, or other morning; and if the owners if any locked-up boizes, or oune the said hour, such cases or boxes must be excluded from competition for medals.
All specimens, whether of fruit or Anwers, will remain unthe hands of the exhibitors, who are most particularly requested not to five away their cut fowers in the tents, as much confu-
not
sion sion has occasionally been profuced by that practice
All MISSION OF EXHIBITORS.
Exhibiturs ci titer prerim) requirs tha assist in bringing in Hald.past 9 in the morning at the Carter's-yard entrance gete.
Every principal extibitor of snbjects for which medals are specifically offered will be fartishleu with one whiss-icket, which is nut transferable, for which he is requested to apply before 11 pot officially detained there.
Exhibitors may re-enter the Gerden after : $0^{\circ}$ clock, when they will be required to produce their pass-tickets at the Carter's-rand gate, every time they pass or repass.
FLOWER. STANDS.

Provision will be made by the Society for placing on the tables such specimens as may be foraished by extibitors: but as some and as many persons prefer their own stands, it laas been determined that any exhibitors may ase their own boxes or oteots, ander the following conditions:-
No box or stand shall exceed
No box or stand shall exceed eight inches in height at the
back, or eifhteen inches in depth from front to back. The lids back, or eirhteen inches in depth from front to back. The lids
of all boxes must either be loose or made to unhinge. No boz the tables. If a box not constructed of the dimensions above given is sent in, it masy be placed on the tables, if there is room

The Society distributes in MEDALS
of Medals; namely, the Largere the in Silver three descriptions the three Mectiogs, may eedals of the same denomination at go, may exchange them in the following pro-

In a former Number (p. 71) we gave a short account of some remarkable discoveries by Dr. Boucherie, by means of which the important problem of preserving timber seems at last to be solved. A pamphlet lately published by this gentleman gives us the means of more fully explaining the nature of his investigations.
It is obvious that to render a power of preserving timber generally useful, it is necessary not only that the substance to be employed and the means of applying it should be extremely cheap, but also that the former should be perfectly free from all unwholesome qualities. Among the many substances that occurred to Dr. Boucherie was the impure pyrolignite of iron, manufactured abundantly from refuse iron for the use of dyers, which the following experiment led him to believe would be perfectly efficacious. The soft fruit of the melon differsfrom hard wood only in the greater quantity of soluble matter which it contains; and as the decay of wood had been ascertained experimentally to be"caused principally by its soluble contents, it appeared highly probable that whatever sulstance would preserve so perishable a vegetable substance as the melon, would i forthoni act with energy unon timber. A melon then was divide:l into two equal parts, one of which was immediately placed upon a plate, pyrolignite, after which it was laid upon a second plate by the side of the first. As usual, the unprepared half speedily became putrid; but the ot'er gradually became dried up, and at last acquired the hardness of wood. Experiments uponsaw-dust, beet-root, carrots, and flour having given the same result, Dr. Bougain this object completely was his next inquiry. Mere immersion will produce only a superficial effect, and to force the pyrolignite into the tissue by means of pressure is too expensive. It occurred to him that the simplest, the most certain, and the most economical method would be to take advantage of the vital the pyrolignite to the lower extremity of the trunk, as if it were food to be taken up into the circulation. Upon trial, this mode of impregnating the trunk was found perfect; the pyrolignite rising rapidly through all the permeable parts of the timber up to the extremities. The method employed is cimple immersion of the lower end cutoff, when small arms of trees are to be operated upon; but when the weight of large timber trees prevents their being so treated, withont expensive tackle, the following contrivance has been adopted :-At the ground line. a hole is bored horizontally through the trunk, so as to open a passage from side to side; a coarse-toothed saw is then introduced into the hole, and worked right and left horizontally, till about an inch in thickness remains undivided on either side; by which means nearly all the sap-vesse's are cut through, and the trunc remains supported by two opposite points. The wound is then carefully closed externally with pitched cloth, except at one point, through which a pipe passes from a reservoir containing the pyrolignite. A few daysin the summer or autumn are sufficiant to saturate a large tree, for whicb purpose pyrolignite to the amount of about sjo the weight of the green-wool is required.
In France the hoops of wine.casks are made from branches of sweet chestnut. Some casks hooped with wond thus prepared. and others in the usual state, were placed sideby side in a damp cellar; at the end of two years the matural hoops were rotten, while those prepared were unchanged. Timber thus impregnated becomes so hard and tough, as to be very difficult to work.
Having thus ascertained the practicability of introducing substances into the interior of trees without
having recourse to any expensive process, Dr. Boucherie turned his attention to the possibility of increasing the elasticity of wood, and of diminishing its com. bustibility. He found that these most important results could only be arrived at by the use of a deliques cent salt. His experiments laught him that the elas ticity of wood is generally in proportion to the quantity of moisture it contains, and that those qualities are universally lost when perfect dryness is produced. Such cases as appear to form an exception to this rule, are either dependent upon some particular structure of wood, or upon the alkaline salts which it naturally contains. Muriate of lime, an exceedingly cheap delicuescent salt, was employed with perfect success*: a weak solution increases the elasticity and flexibility a little; concentrated solutions render those qualities excessive. Ver.eers of pine-woorl prepared with a concentrated solution of muriate of lime became so pliable, that they could be twisted in any direction, or bent into a perfect spiral, without giving way. It appears probable that the same preparation will render wood durable; but in the absence of proof of this, a fifth part of pyrolignite is added to the muriate. The casting, splitting, and shrinking of wood are all prevented by the same means; and, what is of much greater moment, its combustible qualities are almost destroved. Upon this mostinteresting subject we quote the words of Dr.Bou-cherie:-"As soon as I had discovered that a certain amount of moisture could be constantly maintained in wood by the employment of the earthy muriates, it became easy to conceive that by the same means I should not only diminish very considerably its inflammability, but also render the combustion of its charcoal difficult in consequence of the melting of the earthy salts at its surface and in its substance: and so it is. Wood prepared with these salts eatches fire with great diffeulty, and burns to ashes excessively slowly; so that it may be regarded, for practical purposes, as incombustible. Two cottages (cabanes) exactly alike were constructed ; the one with prepared, the other with unprepared woud. To set them on fire, an equal quantity of combustibles was employel. The latter was burnt to ashes, while the inside of the other was hardly charrell. the fire having been unable to maintain itself. These and other facts lead us to comelude that conflagrations might be r adered almost impessible, except in consequence of the inflammable materials that houses may contain.
Garnixers are now aware that to maintain the atmosphere of a greenhouse in a proper state of moisture is quite as important to plants as to regulate the temperature, and for that purpose have been manufactured the zinc pans, slate cisterns, open troughs, steamino apparatus, and other contrivances everywhere to be met with. Among the plans that are used for moistening the air is that of throwing water upon heated flues, where the latter are still employed as a means of communicating heat; and it is for the sake of poinsing cut the inoufficiency of this method that the following obervations are made.
When in severe weather much tire-heat is required to be maintained in flues, the bricks of which they consist become excessively hot and dry, and this compound of absorbent material rapidly destroys the moisture of the air in a house. Epon entering such a house, one experiences an unc:mfortable sensation in breathing, on accement of the unusual dryness of the atmosphere. (in such oceasions it is a common practice to sprinkle water upon the heated flues from a watering-pot. by which means a cloud of vapour is produced, which the gardener imagines restores to the air the moisture that had been lost. This is, however, no: the case. If, an hour after such an operation, the house is risited, no appearance of dew will be found upon the leaves, in consequence of the condensation of stean upon them. In point of fact, the water thown unon the fuis was in part abowbed and in part lecomposel by them, and the house grined little 0: inhiner. But if, insteal of this, a cloud of steam is introduced into the house by means of a pire leading froma boiler, a rery differtat effect isprotucch; all the plants becomie covered with dos, stunting in globlesupon the ol res of the leares: shy wing that, ia this case, the atmesphere has heea thowahly moistene.t. It is therefure cloar that the furn in which meisure is communicate! to a sreenhatuse is not an indiament consideratio.. We know that some cardeners make a secrer of this, and hope to excel their *The mothor has fow in tior citis purpore ze equalty ar wel sea wather ing evaporated diquid drawn off trent che taiks in the process of making sait
meires des marais salants).
brethren by keeping them in the dark upon such points. This marrow-mindedness should have no place in the feelings of any man, and least of all is it crellitable to those whose thoushts ought to be elevated and enlargel by the habitual contemplation of the bounty and goomeses of Provilence in regard to the vegetable world.

## ON THE CUlture of the pansy.

In considering this subject we shall adopt the orter probably follow.
Having fixed upon the situation for your bed (one having a south-eastern aspect, and well sheltered from all be not so overhung with trees as to cause the plants to be drawn, or where they will catch the drippings from the doughs), at any time between October and February mark out your ground in plots three or four feet wide, with onefoot alleys; remove the soil from the beds to the depth of eight inches, and fill them to the height of three inches above the alleys with a compost prepared as follows: Some time during the previous autumn heap together in layers equal parts of one-year-old horse-manare, ditto commanure, maiden earth (the top spit from some meadow is the best), common garden-mould, and leaf-mould: this is to be frequently turned over and mixed during the winter in frosty or dry weather; but never during rain, which causes the soil to turn sour. Where the soil is cold and heavy, the proportion of horse-manure should exceed that of the cow-manure, and with this compost should be mised about oze-sizth part of the whole of silver or sharp sand or road-scrapings; but where, ou the contrary, the soil is sandy, the cow-manure should predominate.
the compost is to be made use of fire coarsest portion of the compost is to be made use of first, letting the finer portion remain for the surface.
The next operation to be considered is planting: for this choose a dry day, towards the latter end of March or the beginning of April, and havin.s its: neal! rahed the bed, proceed to mark ofi the intented rows at one foot apart, and when planting leave a spaue of at least 10 in . between each plant. Atter planting, it would be advisable to turu a garden-pot oser cach piant for the first day or two, to shade it from the sun, wind, or frost. If there has been frost during the night, he rery careful nut to uncover tirem if the sun be at all likely to shme. Pansies love a moist, still atmosinhere, and are very impatient of wind. All sudden charzes are also firy prendicial. Several of your readers will the remarken timat it a hot sun succeel rainy weather, many of tie prouts berm to droop, and wo prom soond when a bed presiousiy sharded is suddenly expsacei to the heat of the mudedy sian. If you find any if thits atifecteal. I lave a hard-ghass orer it, and form it into cutungs. But anter all due care and attention have been bestowed, it mill freppently be found that some of
the phants sap wif. This las been aitributed to the wirewo:m, but I bave never fown that grni) at or in the roots of any Pansy I have taken up, witcia I iavariably do when any of the plants fall prostrate. Streng:h or freshness of the manure, and its being too retentive of muisture, have been assigued as other causes; that this disease is accelerated by them I have no doubt, but it cannot be the only reason, as they very frequently sap off in poor sandy soils. Parhars some of your readers can suggest the true cause.
Any person who may wish to send thowers for exhibition will be quite unable to compete successfully, unless he cover his beds at least a week previously to each show, rain, or fuled by the sum in hot weather ; it will prerent excessive evaporation, and in cold keep the temperature more uniform. The frame for the cover sinould be at least three or four feet above the beds in the centre, and supported at the four corners on posts at about 8 in . from the surface, to allow the free circulation of air. It may be made similar to a tulip-frame.
Oue of the greatest eacmies the Pansy-grower has to contend with is the slury; during one nigit it will make as great ravayes am ney the brasoums as will require a week to replace. The bers thetilual to rid yourself of these animals is to water the ici with cher lime-water during the evening ater a shiover of rain (when tiey come out ia everully srarch if rhat in morniag and evening. They generaty sevate wh the under sufface of the eeaves, or generaty mexcete wh the under surface of er seaves, or ciose to thas ruts of the plats. in orwer to tuard as
 your icuts be edigad with slafe or sione, with atiurds no

 if continued hot weather is espectel. I TMit! atrise that

 0.a :1. ... :. .....:-1 :.. folcution wal he requared atcerwady. Wi.es cultings are sutficientiy routed, in goodsized pots, and let there stand in a dry situation
till the frost commences; the pots should then be plunged in sawdust, in a cold frame, and kept quite dry; but air must be given as often as practicable, particularly in spring. When the frost is severe, cover the frame with a mat, which must not on any account be removed during
the day if the sun shines: more plants are lost, in the spring especially, by not attending to this rule, than by the severest frost. For the production of new varieties: this is of conrse from seed, which may be sown at any time from March till September, either in pans or in the open ground. In about six weeks the seedlings will be ready to plant out; but if sown so late in the year that they cannot be removed, the seedlings will require some protection during the winter, either by frame or otherwise; they can be planted out early in the spring. As a general rule Pansy-seed should be sown as soon as convenient after being collected; for if allowed to remain some time unsown, vegetation is much longer in taking place, and many of the seeds will not come up at all. Seed should be gathered

## HOT-WATER APPARATUS.

The following is an account of a portable hot-water apparatus which I bave contrived for frames and pits. The boiler is that described by Mr. Rogers, slightly altered, and fitted into a sheet-iron case with a cast-iron botorn and ash-pit door; the latter is ground to the frame, turn The boiler is surrounded wh and hathe other joint for the door at the top, the whole is rendered nearly joint for the door at the top, the whole is rendered nearly
air-tight, so that very little air can enter the furnace except what is admitted through the register in the ash-pit door. This arrangement places the consumption of the fuel and the temperature of the pipes completely under the control of those who have the management of the apparatus, and allows a greater or less degree of heat to be given as may be required by the state of the weather The top is moveable, with an iron smoke-funnel and door the projection in the case at the pipes is also moveable but is fixed with iron pins in eyes; this allows the boile to be lifted out when necessary. The pipes are placed as in the section, or side by side if more convenient; but they should have a gradual rise from the boiler to the highest point where the water returns to the boiler; an air-cock and cistern are placed at this point, and the latter is connected with the pipes by a small tube. Several couplings are placed in the pipes at convenient distances, to allow of their being easily removed; but where the length of the apparatus is not more than for a six-light frame, or where it does not go round the frame, a pair only near the boiler are necessary. When the apparatus is likely to be moved from one set of frames and pits to another, the boiler and pipes should be made of copper but if the pipes are more than $2 \frac{1}{2}$ inches in diameter, the moveable joints must be made with flanges and uuts. The boiler is usually placed outside of the frames or pits, and covered with a small wooden case.

Some of my clients have had these moveable hot-water
from those plants which have the best-shaped blooms; and if these be impregnated with the pollen of other flowers which have bright or good eyes, it may have a good effect. The seed-podis when ripe become erect, and open on the first fine day, and if not gathered would shed in the course of a few hours: during fine weather, therefore, the beds should be looked over at least once a day, and such pods as appear ripe should be gathered. It only remains to notice succession-beds, which it will be necessary to hare in order to ensure a continuance of blooms: for this purpose I would recommend that the first cuttings which can be obtained be taken from the spring plants, and when struck be planted out in a berd to bloom in the autumn the treatment of the plants will be the same as before rected, but the situation of the bed must be due south.
I will just add that the whole of the remarks made, and the regulations laid down or proposed, are the result of four years' practical experience in the cultivation of this plant.-An Amateur, Manchester
stoves working in frames this winter, and their gardeners give a very favourable report of them during the late severe snow-storm ; they have been able to keep many greenhouse plants in frames at a very small expense-not more than a pennyworth of fuel for twenty-four hours. After the fire has been properly kindled and filled up to the door with gas-cinders, the fuel lasts from twelve to fifteen hours without any addition; one in my own house I have kept going without any adition; one in my own house - have keptgoing one charge of cinders. This may appear a very long period, but it is entirely owing to the slow combustion of the fuel as no more air is admitted to the furnace than is necessary to keep up the degree of heat required, and also to the position of the furnace in the centre of the boiler, so that the whole of the heat given out by the fuel is brought into use-so much so, that an hour after the fire has been made up for the night, I have found that the smoke from the funnel was not more than $140^{\circ}$, while the water in the pipes was $200^{\circ}$
From the practical experience I have had in forcing, think these stoves may be of considerable use to many gardeners, and especially to amateur cultivators, as it will enable them to preserve many plants in frames or pits which, without some such artificial assistance, they are at present unable to do. This hot-water stove is fitted up here in a very superior way by the Shotts Iron Company and by Messrs. Slight and Co., Leith-walk.
I have applied conical boilers, fitted up much in the ame way, to conservatories and forcing-houses very successfully. Mr. Rogers' boiler appears to me the most economical now in use, and much superior to any descrip tion of hot-air stove that I am acquainted with. The conical boiler was used here more than ten years ago by the Union Canal Company to heat their passage-boats with steam, on the recommendation of Sir John Robison, late Secretary to the Royal Society of Edinburgh. C. H. J. Smith, Landscape Gardener, Edinburgh.

COTTAGE GARDENS.-No. VII.
THE planting and praning of all kinds of fruit-tree and bushes should be finished, if possible, by this time. The Raspberry is zenerality among the lattst in belas pruned, on accumt of the canes being liable to be injured not to be apprehende:i, and fherest. Nothing of the son is tended to tou better, as the longer it is delayed it is attee tire greater dang of of rubbing off the buds. The usual mode of matagage tae Raspoerry is to remove the whol ou the did stens which wre fruit last year, and to thin
fruiting this year, leaving them loose, or tieing severa anes together at the top. The greatest produce is pro bibly derived from this mode of treatment; but where rultyy and size are wanted instead of fitutity, they should be planted, as we suggested in our third article (p. 84), at three or four feet distance, and thinned in summer of all superfluous shoots and suckers, leaving oury six or eight of the finest canes on each plant ; so that at this season there will be little to do besides cutting away the old wood; and instead of leaving the canes erect, take half the nomber on each plant and bend them over to half the nomber on each plant and bend them over to
meet the half on the plant adjoining, weave the shoots into
one another and tie them with matting. They will then form a series of arches, which will have the effect making more of the buds break than when the cane are left erect.
Any Cabbages that were planted last autumn should now have the earth stirred between the rows, and a little of the finest of it drawn round the plants. Sowings mus also be made in the border we recommended to be go ready last week, of the following vegetables, which requir to be raised in seed-beds and afterwards transplanted namely, Early York, Battersea and Vanack Cablage Dwarf-curled Kale, Large late Green Saroy, and Leek The border need not be of any great extent; mhen dug, le it be marked off into beds of about a yard square, an allot one of them to each of the things intended to b sown. Sow the seed equally over the surface, buc not to thick; afterwards beat the ground with the teeth of the rake until all the lumps are broken and the seed covered then rake the whole neatly. Birds are very destructive t seeds newly sown, unless they are protected. The usual method of doing this is by sticking some feathers in string and hanging it over the beds; but the most effectual way is by benuing some rods over the beds and then vering them with a piece of net. The kind which is sold at three-halfpence per square yard is well adapted for this purpose, and will last a long time if properly taken care of Now is a good time for planting Chices and Shulluts. The formerare met with in every cottage garden, the youn leaves being much esteemed for seasoning instead onions, when the latter cannot be obtained. A mois situation suits them very well, and they may be plante either as an edging, or in a small bed in rows nine inches apart and six inches from one another. Shallots are sel dom grown by cottagers, but we see no renson why the should not be cultivated, as they take little room and are quite as useful as the onion. The long-keeping Shatlot is the kind which Mr. Thompson recommends. They ma occups a small bed and be planted in rows nine inche asunder, and a foot between each. The ground should be rich, but not recently manured, as the roots are liable to suffer from maggots. Deep planting is also against them, the depth of the bulb in the ground being quite sufficient. - M. E. H.

## FORCED FLOWERS

Permaps there is no branch of gardening more delightful or more esteemed than a large and constant supply of early forced flowers during the dull winter and sprin months. A detailed account of management would, I am afraid, trespass too much on your pares; a brief outline I hope, will meet the wishes of the readers of the Chro nicle that require such information. Before I enter on the subject of forcing, it will first be requisite to give short list of plants that are proper for forcing, and the preparation that they require. The best kinds are as under:-
Roses, White, Red, and Spong's
Provence,
Moss and Crimson Per-
Indica,
Barcelayana,
Laurenceana,
Rhododendron Catawbiense
Kalmia latifolia,
gangastifolia,
Daphne Cneorum, Deutria scabra Pyrus pracoz Gyrus pracoza Hydrangen hortemsis, Syringa violacea,
Andromeda thymifolia, floribunde, Axaleas, all kinds,
Polyanthus Narcissuc
Yanthus Narcis
Lilium candidum
Pelargoniums-Alba multiflorm,
Gen. Washington
Anvincible,
Dchs.of Roxburgi
and scarlets
Teliotropium tands, Amarylis of kinds, Lachenalias,
Agapanthus umbellatus, Aloysia citriodora, Polygonatum vuigare, Lily of the Valley, Cinerarias,
Tulips-Clarimond,
Duc Van Thol,
Pottebakker,
Ptandaard, Tournesol,
Bijou impériale, The best time for potting the hardy roses is early in October; the plants should be well-rooted and strong, and the young shoots should be pruned to within three or fon buds of the base: I pot them singly in No. 32 pots, i rather strong and rich soil; I then plange them in beds in an open part of the garden, and cover the pots "three or four inches thick with half-rotted horse-dung. They should always have one summer's growth after they are potted, to allow them to get well established before they are forsed all the flower-buds should be picked of the first semen, and watering should be well attended to.
Lilacs are very desirable plants. I select the but shaped, and pot them in No. 24 potes in any commar soil, and half plunge them with the roser Doutsia sosbr soil, and hair pluge taean with tue roseso Dounnot be too requires simil after they arrive in this conntry for arl soon planted after they arrive in this country, for carl planting is most essential. in No. 60 pots, and Hyacinths and Narcioms Tulips singly in No. 60 pots, and Hyacinths and Narcisas
in No. tis; they bloom quite as well as in larger, and pots in No. 43 ; they bloom quite as well as in larger, and pot of that zize are more convenient for placing in face or fous Jonquils and Persian Irises in each pot, and Crocuses, Snow drons, Anemunes, Ranunculus, \&e., as thick as they can bo laid; atter potting. a, ! the hady linds should be placew a iry bortom covere 1 four or tive inches with chl till ur eval-ashes. Ladiecinias should le potedi at the sume
 all the kinds of americin ulants siounld be potted a somn as the bloom-juls are tell set, and pianged in chu tin in any sheliered place.

The cummon star and satae uf the strongest-growing tind of hed links are the best fur forciag. They shumis be propagated by cuttings in the forcing-llower house early
in April, and planted out in beds in a light rich soil in
May; by the end of September they should be potted in No. 32 pots, and plunged in a cold pit or frame.
Cuttings or offsets of the Neapolitan Violet planted out and treated the same as the Pinks. In summer and in autamn some of the strongest plants should be potted into wide-topped 24 pots; the side-branches should should be pegged down all round the inside of the pots. After they are established, they should be plunged in an old
melon or cucumber frame, with a little bottom-heat, which should be kept up by linings and covering with mats at night, and as much air given as the weather will permit during ithe day; such plants will produce a profusion of planted out in cold pits or frames will produce a succession planted out in cold pits or frames will produc.
kept rather dry; as soon as they have produced young shoots half-an-inch long, the old soil is all shaken from the roots, which are well pruned or shortened, and potted in
as small pots as they can be conveniently got into, in light sandy soil; they are placed in a shady and damp situation; the shoots are stopped and the growth encouraged as much much richer and stronger soil, with a good drainage, the first week in October, when they are placed in the greenhouse.
Some of the best kinds of shrubby Cinerarias, Heliotropes, Aloysia, Hydrangea, should be propagated in large quantities early, and grown to be strong and well esta-
blished by the autumn. Mignonette should be sown in blished by the autumn. Mignonette should be sown in
light rich soil, in No. 32 pots, well drained, and plunged in a cold pit near the glass, with plenty of air and little I begin forcing about the side advisable.
fill part of the pit in the flower-house with fresh tan, and the other part with shelves; I then place on the tan the first Roses, Lilacs, Rhododendrons, Kalmias, Hyacinths, Tulips, \&e. Pelargoniums, Heliotropes, Cinerarias, Pinks, Azalea indica, I put on the shelves as the season advances; named are placed in the forcing-house in succession every week or ten days. I water the Roses, Pelargoniums, Cinerarias, \&c., with liquid manure, once a week, and keep the temperature of the house $55^{\circ}$ at night and $60^{\circ}$ in the day,
and increase it in the spring to $65^{\circ}$ at night and $70^{\circ}$ in the day. I give air at every opportunity, and syringe the harding, except in very dark and damp every night and mornadvance in growth, they will, when infested with green-fly, require fumigating with tobacco, and to have other insects
palled out of the buds.-John Green.-( To be continued.)

## HOME CORRESPONDENCE.

Stoves for Greenhouses.-Having had under my charge, for upwards of two years, stoves of various kinds for warm-
ing greenhouses, 1 am induced to submit, for the information of such readers of your journal as may feel interested therein, my opinion regarding them. First: In lighting the fire a vapour arises which is injurious to plants. in considerable quantity, is generated, makes its escape from the stove, kills some, and injures many plants. Third: In cleaning out the stove it is impossible to preleaves of the plants and is not easily removed, even with the use of the syringe; the stove and pipe also become encrusted with rust, caused by the vapour and moisture which arise in the house, and being unsightly, must be removed. Again, the preatice of cleaning the stove with
black-lead is highly detrimental: this, combined with the hlack-lead is highly detrimental : this, combined with the
rust, will settle, whilst the process of cleaning proceeds, on rust, will settle, whilst the process of cleaniog proceeds, on
the leaves and flowers of the plants, injuring their colour and foliage, and in many instances entirely destroying
their vitality. Fourth: From the impossibility of establishing a uniform degree of heat throughout the house by means of stoves, those plants which are placed near them must be exposed to a higher degree of temperature, and those at a distance to a much lower, than is necessary for
their healthy regetation. What with the coals, the scuttle, the shovel, the hook for taking out the clinkers, the dust, and the water on the top of the stove, the place has more the appearance of a blacksmith's shop than a greenhouse. I am therefore of opinion that stoves inside a house will never answer the purpose of producing a healthy vegetafashioned plan of heating; and I would recommend gentlemen who are desirous of having fine, healthy, and clean plants to abolish the use of stoves and cheap gardeners, and adopt the method of heating by means of as rather exaggerated, if good stoves are emploved with grod management. yet we quite agree with our corre syondent that the best stoves, whether Arnott's, Chunk, or Vesta, are merely a bad substitute for hot water. There are, however, many places in which a hot-water apparatus
would be too expensive. Cinder no circumstances, however, should stoves be employed for any other purpose than that of excluding frost.
Waste and Croun Lunds.-I wish to draw the public attention to a subject I think highly deserving consideration, and I take the liberty of making your Gardeners Chronicle the medium of a ferr observations. It is asImperial Kingdom, fiz.: England 9,133, $1: 60$, Wales 1,318,174, Scotland $13,900,550$, Ireland 5,596,135. What that the Crown claims large tracts of land which it derives no revenue from, is undoubted. Wherefore then not dispose
of it? Were it divided, and in the hands of numbers, I
am satisfied large tracts of waste land would be thrown into cultivation ; many of the valleys of Wales would become rich in corn and meadow, the slopes of the
mountains would be planted, and the rocks searched for metals. Enterprise would be at worls, busy activity would follow : many parts of this little-known country now dead occupation. The picture is not imaginary: Liverpool and Princhester are not above a few hours' distance from the might induce a scattering of it in speculation, and in other instances in creating residences, villas, or castles, in the sublime scenery of Wales. It would be the country's gain that the land revenue office gifted all these wastes away, rather than that they should le waste. If in private
hands, the farmer, the planter, the miner, the road-maker would be at work, and their combined exeritions would add to national wealth, giving also work to numbers. Thus far I have only drawn attention to the uncultivated lands belonging to the Crown; but much might be said in favour
of selling most of its other landed propert, of selling most of its other landed property, which would produce so much more were it in private hands. Then the enormoussums expended upon agencies rould be abolished; then the expenses of auditors, \&c. \&cc., would be no more The Crown, be assured, does not farm or rent to profit. Supposing that immense tract of land called the New Forest had all its old stumps uprooted and the deer destroyed, and supposing the scene was changed to corn-fields
and pasture, would the transfer of such property not be an advantageous one, both for Crown and country? should like to see the land of the empire all cultivated an planted where it would pay for the labour. In conclusion, let me point out what one man in his own lifetime has
done for his country. That great farmer, Mr. Coke of Norfolk, now Lord Leicester, has brought thousands and thonsands of acres into a high state of cultivation, which
before he commenced his labours were valueless and before he commenced his labours were valueless and
barren. $-\boldsymbol{H} . \boldsymbol{B} . \boldsymbol{H} ., \boldsymbol{F}_{e}$. 23.
Kyanised Wood.-I have read with some interest the account, by Mr. Tillery, of experiments made at Welbeck of considerable importance, and I think Mr. Tillery would be doing the public a great kindness were he to detail most minutely any further information which he may possess respecting the preservation of timber, $\& \mathrm{ic}$. It is well known that almost any kind of timber will soon rot in a mushroom-house, yet I have known Larch last, in a bed constantly at work for several years, without any pre paration whatever. As it appears that unprepared timber at Welbeck, I think it is possible that there may be some pectliar property in the said house for producing decay and I should like to know Mr. Tillery's opinion as to that
question. In 1838, I had a foot-board or pathway made question. In 1838, I had a foot-board or pathway made made of laths sawn out of larch-boards, and steeped in a solution of corrosive sublimate. The house has been in regnlar crop since that time, consequently kept at a high temperature, and the pathway is at this moment as perfect the least the day tion, I always found an appearance of decay in the footboards of the same vinery during the first year, and in three years they fell to pieces, being completely rotten matters, but the to give an opinion whether in these cases it has or has not been of use.-Roaldus, Richmonil, Yorkshire.

Roscoea purpurea.-In the remarks which accompanied the late publication in the Botanical Register of figure of Roscoea purpurea, it is said to be a half-hardy plant, and suggested that it might be found to bear cultivation in the open air in the south of Ireland. It has for many years been cultivated in the open air in the Botanic shelter, and without any other protection than a little tan thrown over the border in winter. With this treatment it flowers most freely. I doubt whether it would succeed in the same way near London, for the thermometer seldom falls so low in winter here as with you. Our climate is more insular.-R. Graham, Botanic Garden, Edindurgh. Tropcolum tricolorum. The soil in which I plant the tubers is a mixture of loam, peat, and sand, with a smal of the sun from May until such time as I plant the tubers. as soon as the decay of the stem and ripening of the seed show that the circula tion of the sap has ceased, I turn out the tubers from the pots, and having carefuily removed the soil, 1 put the tubers in flower-pans upon a shelf in a dry room. About the beginning of September they produce their new stems. let them remain until they have leng thened from 12 to 15 inches. Haring well drained a No. 12 pot, 1 fill it up
with the compost to within 4 inches of the ton, then with the compost to within 4 inches of the top, then place the tuber in the centre of the pot, and coil tue stem until about tro inches of the stem is left above the soil. After potting, I place the pots on a stage out of doors, where they rol that the midale of Otoher: they are then remored to the front of a cool greenhouse, expused to as much light and air as can be given to them. With
respect to watering. I keep them rather moist than ocherwise; when out of doors, they are freely exposed to rain. Wise; when out of coors, they are freely exposed to rane and no little taste have been displayed in the training of this pretty flowering plant. In whatever way it is trained, the earl flower-buds should be picised off until the space allotted is covered; the object being to
have the greatest quantity of bloom at one time. When necessary, in their early growth, they may be stopped, to
give a supply oflaterals; but mine grow so strong and times they should have plenty of air and limht, more espe cially after they show their flower-buds; for the joints will be shorter, and consequently the flowers more close togegether. When in bloom, care must be taken to $s^{n}$ 're from the mid-day sun, which will prolong their season o!l eauty The simplest mode of propagating the Tropcolum tricolo rum is to take off the weak laterals that are not likely to the ber, when about 2 inches long; if with a heel, so much half full of crocks then with February till May, fill the po till within two inches of the top; fill ap with silver sand and water with inches of the top; fill up with silver sand cuttings all ronind rithin one inch of the rim aibble in the
 half-an-inch of the cutting above the saad. Place the pot on a shelf in the front of the greenhouse; keep the sand constantly moist, taking care that the cuttings are always erect. In the course of two months many of them will
throw up shoots from under the sand. The pot should then be removed to a shady situation out of doors. When the stems decay, do not disturb the sand, but water sparingly. In October let them be placed in the greenhouse, when all that have made small tabers will grow. It is from these plants the best cuttings are obtained in the spring. In the following May I tura the whole ball out of the pot, in a warm situation in the open ground. After they have finished their growth, take them up and sift the bat through a fine sieve, carefully picking out the tubers They are then treated in all respects as the older tubers, and will make fine flowering plants the following spring The seeds before sowing shoull be soaked in milk and water 24 hours, and the outer shell carefully removed they will under this treatment grow much sooner, and with greater certainty. They should remain in the seed-pot until after they have formed a tuber. A small stiels can be placed against each plant, to which it will climb, and it serves to indicate the place of the taber when the stem is dead. Many seeds will remain 12 months before vegetat-ing.-J. Falconer, Gardener to A. Palmer, Esq., Cheam
Halesia letraplera.-By an oversight, a letter signed "Philo-itilis," recommending this plant to be used as an speaks does not bear a berry; he must, therefore, hase mean some other plant. Perhaps he will inform us what he intended to recommend. A correspondent suggests that the writer must have meant the Snowberry, Symphoria racemosa.
Malva Laicritio - Upontaking up some plants of this, I was surprised to find at each of the lower joints of its prostrate stems a fusiform root fully a foot long, and nually both downwards to a point, as well as upwards to the joint to which it was attached. Those roots decreased in size at each joint, until, near the points of the shoots, there were only a few fibrous roots striking into the soil Although they appear at first coming in contact with the soil to send out several fibrous roots, one fusiform root only was sent down from each joint. These roots offer ready and abundint means of increasing the plantDavid Cameron, Botanic Garden, Birminghan,
Acclimatising Plants.-At Whitehouse, in the island of Arran, a Fuchsia has grown for a number of years by the side of a roughly-built wall, and is now of a large size, and would have been much larger had the wall admitted. Even that part which is considerably higher than the wall has never been in the slightest degree injured by frost, and seems perfectly hardy in this climate. The particula variety is unknown to the writer: but it is a very beautiful free-flowerer, with very dark foliage, somewhat like the Riccartonia. Its seed, and indeed the seed of a yariety of other Fuchsias growing in the same place, ripen perfectly, and grow up in the borders and waiks in great numbers-
some even in the holes of the wall. For a time the young plants were destroyed, as it was not observed that the were Fuchsias; but it is now expected that numerous so:th will be thus obtained, as the roung plants are very varions in appearance. The first plant observed, and which had sprung up in the box-edging at the side of a walk, has flowered. It is not remarkable for beauty, but seems, if possible, even hardier than the large plant, for it has grown for two years in an open border, is now large, and even it the frost has been unusually severe this winter of doul five or sis vears in the opea air, without any protection, and are now in flower; and thongh the flowers do not remain long in beauty, the most tender parts of the foliage have ner been hurt by the weather. This plant therefore, seems to be more hardy than is often supposed Indeed there can scarcely be a doubt but it would grow very well as a shrub out of doors; and although it might not flower every season, still, with its broad shining leaves, it would be very ornamental. If Camellias could be discovered that would flower in summer, instead of early spring, they would be a great acquisition to the flowergarden in chimates in other greenhouse plants, stand the winter in this island. Salvia fulgens is grown entirely in the open air, winter and summer, and flowers profusely has remained in the horder forron seems quite hardy, and has been written as to the use of saw-dust as a manure The writer of this may observe that he has for years mixed this article amons the stable manure in making hotbeds for flower-seeds, dc, and found that the heds thus made up kept longer in heat than whes altogether of stable manure. These beus have generally been made in the spring of one year, and remained till the same time the

Year following, when the contents were spread in th
garden like other mannure, and no difference observed.
John Palterson, dgent to the Duke of Hamillon.
Shrubbery Beds and Borders.-Mr. H. Bower, of Lalebam, disapproves of leaving shrubberies to nature, as recommended by our Liverpool correspondent ( $p, 53$ ), and he particularly criticises the unneat apparance prodineed
by leaving trimmincs and leaves to be blown wour the kept ground. He defends the cumpion practice of hoeing and raking borders frequently, drawing the rakings into holes made between the plants, and throwing the mould taken out over the border, which gives it a fresh appearance, and
takes nothing from the fout of the pim:s. He also approves of the method of disung a pat in inn.e remate papt of the shrubbery, and coilecting in it all dead leaves, curtings, and other rubbish, mixing mould with it to hasten decay; the
mass is turned over several times, and when well rotted. mass is turned over several times, and when well rotted. reapect to American beds, he observes, that they should not be dug with a apade; they should be covered during winter with well-fermented leaves; in April or May a decayed leaves should be raked, strewing the mould taken out of the trench over the bed, which is thus annually refreshed.

## resked. is invaluable.

Melon and Cucumber Pits-Mr. Cuthill, florist, Love Walk, Camherwell, aitverts to the ill consequences of buildgust, lest the mortar should not be thoroughly dried. I this is not attended to, the mortar, when heated by dung,
will often emit a noxious rapour that destroys the young plants. He first observed this at Dyrham-park, where it destroyed nearly 100 cucumber and melon plants, although the walls were coated with cement to the thickness of a quarter of an inch. Mr. Cuthill strongly recommends solid sides to brick pits instead of pigeon-holes, because he is able to apply hot dung immediately to the walls in the former case, and in the latter it is necessary to sweeten it. He states that in such pits his early melons, sown on the 1st of February, have been cut in the first week of May. In winter cucumbers he thinks no plan equal to Mr. Green's. See Chronicle, p. 35.
Evergreens.-Mr. Street, gardener at Biel, near Preston Kirk, recommends that when Evergreens become too large the principal branches should always be sawn off, and the young shoots at the lower part of the plants left. The best bruary, both for Evergreens and decidnous trees; for they vill be found to grow stronger than if pruned later. Common and Portugal Laurels. Rerd Cedars, Hollies, and Straweme pheasants are fond of the fruit of the latter. Red Cedars should be attended to while yonng, and trained up with a single central shoot, or if suffered to grow loose the branches are, when large, liable to split and break with mow or wind. At Biel there are many large plants of Red Cedar perfectly symmetrical, covered, with branches from the ground to the height of 26 feet; their powdery blue berries are produced in ainudance in autumn, which give them a pleasing appearance thll the winter, when the eight to ten feet high, with large branchy heads ; and some large overgrown ones, that have been cut off three feet Street prefers, where the bushes are planted on greensward, that it should come close to the stems of the plants, and not leave a dug circle of earth round them, which renders he roots more liable to be injured by frost.
Daphne Lagetto.-This, the Lace-bark Tree, grows plentifully in many parts of Jamaica, though if the local mame, Banoes (not Mahoe, which belongs to a different plant), is not known, it is difficult to find. It is not confined to the mountainous districts, as supposed by st. Mar's have also is foun, dwarf Indian Corn, producing oral seeds as hard as bone, which make beautifui necklaces. Local or native names ought always to be sent by collectors with the plants, and these should even be retained in scientific works as synonymes. Had the native name of Daphne Lagetto been recorded in the Hortus Kewensis, it might by this time have been as common an inhabitant of our stoves as Ficus slastica.-Jurenis.
Self-Manures.-It is more than 20 years since I made experiments on some carnations, by watering them from time to time with a weak solution of nitre (nitrate of poin the most unequivncal manner, the rirtue of the salt in the most une fuineat mamner, the rirtue of the salt interested in observing in the grarden of my friend James Cochburn, Esq., Guprneer, (to whom the Morticulture and Floriculture of that truly interestinar ish ind que leeply,
indebted.) the remariable lisuriance of the aitucholes, chiefly if not entirely of the inind nhtzined rininaly, I
believe, from Britany. He informed me that the mint manure employed was their owa isares, and I fiel jermaded that we would do well to use, as far as possible
when it can be ohtained. the debris, wreck or ruin, of individual plants. 'each after bis kind,' as the most suitable manare: such as the stalks and leaves of the potato for convineed the prineiple is sound and the inference is wanranted by the cultisation of the Vine and Fidbert, their own foliage. Re.. ministering the best pabulum. Al-
together the phenmma connened with this question are very beautiful, and evince beneficent design. The leares will in autumn and mantle the ground, and secure the
filled, they decompose in spring, and supply the plant with proper nourishment.-J. Murray.

## hloride of Lime.-I observe that one of your crime

 spondents has made some inquiries as to the proportions of the vegetation of seeds. I have been recommended to try 60 parts of water to one of chloride of lime; but it anust which the seeds are immersed must depend on the thickness of the skin. Itried the effects of the solation ond not a grain has vegetated. Seeds of Strelitzia regine were immersed for 24 hours, and being sown and placedin a hotbed on the 1st Feb., are now swelling, and will in a hotbed on the 1 st Feb, are now swelling, and will number of seeds committed to the earth on lst Jan. are just appearing.-Ozoniensis.
Horses and Potatoes.-Has not Mr. Carroll mistaken Liebig's argument that horses will not thrive on potatoes? Surely Liebig means to say on potatoes alone, whereas The fact of animals requiring glaten, or some food in which nitrogen is an ingredient, has been proved by analogous experiments with dogs, who soon die if they are fed alone on starch, sugar, gum, or other substances which do not contain this element.-J. S. Henslow.
Management of the Birch.-"A Young Forester" recommends the Birch to be cut down in autumn, immediately after the fall of the leaf, or just before winter, and not in spring ; and he attributes the want of success on the part of our correspondent ( p .85 ) to not observing this rule. By early winter-pruning bleeding will be prevented. [It would be easy to show, upon physiological principles, that A Young Porester" is right, and that the practice he recommends for the birch should be applied to all trees cut down for atools.]
Blue Lechenaultia_-Mr. Drummond having sent to England from the Swan River Colony seeds of two apecies of plants described as Blue Lechenaultias, much anxiety was felt among the lovers of beantiful greenhouse plants to possess them; it had been fancied by a number of individuals that the plants raised from these seods were not the Blue Lechenaultias which were known to exist and form such lovely objects in the indigenous flora of New South Wales, but some species of Burtonia already in the gardens of thic country; and several of those who had purchased them have thought themselves deceived. Notwithstanding all this, it is now perfectly certain that Mr. Drummond's original description was correct, as one of Exeter thes was exbibited in flower by Messa. Society. Any one who may bave purchased them, if he will only take the trouble to examine their leares, may tell at one glance whether they belong to the genug Burtonia or to chenaultia, the leares of the former being channeled on the under side, while thome of the latter are quite solid.-Robert Fortune.
randa possessing 20 . 20 is strongly recommended to all persons possessing a stove; Ibeg to atate that it can be successgreenhouse or conservatory. In an edifice of the latter piant: the house was heated by a small Arnott's stove and though the temperature was not higher than was requisite for Citrus plants, Kennedias, \&cc. \&c., it grew and flowered freely. My own plant, now in bloom, has never been subjected to stove-heat. It is figured in "Paxton's Magazine," No. 65, under the name of G. oblongata; and in the description and account of its culture, the state ment I have made respecting its thriving in a low temperature is fully borne out.-A Devonian.

Clianthus puniceus.-In your reply to a correspondent you say that this will grow in the open air of Cornwall and Devon : this, as applied to our ordinary winters, is correct ; but my experience of the plant proves that it wil not endure a season as rigorous as the present unprotected. My place is situated in one of the warmest-ralleys near the south coast, and against the front of the house, with a south-east aspect, Clianthus punicers has attained the height of 14 or 15 feet, and during the winter and spring of 1839-40 was laden with countless racemes of flowers, so as to render the plant a mass of glowing scar-
let : it is now withered, and apparently dead, though it may possibly shoot from the root-A Devonian. The Turnip-fiy.-A correspondent (H. B., Essexs) asserts that elder branches strewed over the beds in
which turnin-seed is som will, in gardens, in nine in which turnip-seed is sown will, in gardens, in nine instancee out of twelve, be found security enough for a crop, If applied as soon as the seed is up. No doubt the ungrateful odour of the elder repels the insects. The same correspondent promises wis, in the course of the spring, a a crn of turnips is the open field.
rames and tirs mient be fept very simple methon, frames and pirs mignt be kept comparatively free from Woodlice; at any rate the insects might be so far subdued by it as not to be injurious to plants. Put a cold boiled or
roasted potato into a small thower-pot; cover the potato roasted potato into a small flower-pot; cover the potato
with moss, leaving a little hanging out of the pot by way of enticing the insects to enter ; then lay the pot on its
side in a corner of the frame. Wood-lice feed in darknesp,
and at the approach of day they trot off to their hidis Whecs in cracks and crevices, or amongst the loose soil or bark; the moss is therefore nezessary to induce them to remain in the pot, to which they will flock in handreds after having once tasted the potato. Every morning the pots should be taken out of the pits and the insects deproperily attended to, half-a-dozen pots so prepared sill soon clear a frame of this troublesome insect.-J. B Whiting.

POREIGN CORRESPONDENCE.
Paris, Feb. 4th, 1841.-As information is continualls ing Pines, perhaps mode of culture, may not be unacceptable. The Poteger or Royal Kitchen Garden of Versailles, has the merit of producing this and other fruits in the greatest perfection ; no expense is spared in procuring every necessary for such nequire is acnt, and all that skill and experience cam Massey. The Pinery consists of a vast number of pits, succession and fruiting houses, the whole of which are heated with hot water; it contains about 2000 plants, among which are fine specimens of Queens, Cayenne Lisee and Epineax, Providence, Enville, Smooth and Black Jamaica, Black and Green Antigua, St. Vincent, Havannah, Hontserrat, Welleck, Ripley, Globe, Brown and Mealy Sugarloaf, Lemon Queen, \&cc. : in all about forty vatieties. Ouly four kiads are considered desirable for general cultivation; of these, however, more than 1000 plants are annually fruited, namely, 700 Queens, and 300 Cayenue Enville, and Providence. The Cayenne, both smooth and Erickly. 9 and weighs on an verare fron the 12los.- the Enville and Prusidence from tivation appears to be very similar to that of Eingland, excepting, perhaps, that here the young plants have more open ground culture in summer; the suckers are planted in pots in October, and remain in the houses till April, when they are all set in frames in the open ground, in a very light soil composed of sandy loam, leaf-moutd, and peat. Here they remain till October, when they are repotted and taken into the pits. Some of the fruiting Pinen are also planted in the ground in the houses, but by far the greater number are in pots. The hot-water system is also applied to all the long ranges of forcing-pits for Peaches, Cherries, Grapes, Strawberries. Melons, Peas, icc. sco. In hese the trees are trained against the back wall, which i about five feet high; and upor them may now be seen ruits set, also white Argenteui Figs nealy Hambro', Chasselas, and early White Chasselas Grapes,
showing fruit-Peas in bloom, and Prench Beans fit showing fruit-Peas in bloom, and Prench Beans to gather. andis garden is well worthy the celebrity it has Paris or Vertailles should not fail to inspect it, especially a there is no difficuity of admission upon application to Mons. Massey: it is not five minutes walk from the Palace. There is also a good stock of Pines, comprising must of the best varieties, at the Royal Gardens of Gontier, of Paris. Mrincil Trutfaut of Vor sale are Mons Pelvilain, of Meudou: the two former cultivate oniy the Queen's, Enville, Cayenne, and some other varieties:adeed, the connoisseurs seldom buy any except the Queen; but M. Pelvilain has almust every known variety, and has also obteined many from seed. Thase cultivators have also adopted heating by hot water, and the rigorous state of their plants give abundant proof of the excellence of this system : the compost they use is of more sandy nature than that of England; all their young plants are grown in the open frames during summer, and same way.
Attached to the palace of Versailles are the gardens and nursery of the Trianons: the mursery is upon a large scale, and contains above forty acres; here are propagated all the forest and fruit trees, flowering shrubs, e:ergreens and American plants, required for the Royal Gardens of St. Cloud, Neuilly, Meudon, the Tuileries, \&c. \&cc. Im.
mense numbers of Rhododendrons, Azaleas, Kalmias, \$c. mense numbers of Rhododendrons, Azaleas, Kalmias, are annually raised from seed; but hitherto hereed, hybri dizing wis no I beliere, attempted before last season. In the pleasure garden are several fine trees: among othess the first ('edar of Lebanon introduced into Europe; also Pinus tada and rigida, Larix pendula, Fagus purpurab Cappinus heterophyda, Alnus serralyolia, \& \&c. \&cc.

The Ladies' Companion to the Flouer-Gar-len. By Mrs. Loudon. - Few books have lately appeared m re useful than this Horticultural Dictionary, for the amateur who possesser bat a slight knowledge of botany or cultivation. nder the different genera the natural orders are given, and the best and most showy species are mentioned, It is not far therhaps to erpect such a book to be free from It is not farr perhaps to expect such a book to be free from
errors, ani I Mrs. Lowlun has fallen into some, which she will doubtiess amend hereater. Speaking of cuttings, in the arcicle Propagation, she says, "The depth to which cuttings are inserted depends upon whether they are of buried at least half the distance betwein the foints? Now propagators generally bury a hard-wooded well-
ripened cutting at least the entire depth of the joint, and ften much deeper ; it is the young cuttings that should only be buried half way, or only just deep enough to enable them to maintain an upright position. In the same article, when describing the method of sowing seeds, it is recommended, "that the seed should be sown in a somewhat lighter and finer soil than that in which the parent plant thrives, and that the covering should be two or three times the thickness of the seed." Now it is well known that though dampness and darkness are necessary or the vegetation of most seeds, yet many ought never to be covered deeper than their thickness; and in such cases as Heaths and others, the minute seeds should be mixed with pare white sand and sown on the top of the prepared pon therace of the soil and covered over with mossas for instance Calceoluria pinnalu. These, however, are stight errors, in comparison to the useful matter that is contained in the volume
Calendar or operations for the ensuing Week. In places where tender plants in pots are put out of doors durthough under certain circumstances unaroidable, they should
now be potted, to enable them to form fresh roots in the house now be potted, to enable them to form fresh roots is the house in the pots ought never to become a hard, impenetrable mass, is impossible for water to nilter, or for new root to pentetrate; all the young roots, therefore, of plants in this state wilt se form the pots, the very situation fure, as intense heat and drought, caused by exposure to the sun, and by the soil, when dry, shrink ling from the pot-sides, and by Told, in consequence of the evaporation from the porous pot. plenty of drainage, truryy soil, aling for tender species double pots; stone : for plants of robust growth, as Hydrangeas, sc., a feeder
slled with water will be sumcient, bat the water should be freguently changed.

ITCEARN-GARDEN AND ORCHARD.
PrNERY, - Should the weather prove unfavourable for potting the succession plants, the fruiters will derive much benefit by paoved, without disturbing the roots, and replaced by some fresh mould, which may be raised above the rims of the pots by using
turfy pieces for the outsides. This operation should be performed with care, and without disturbing the plants, unless the beds re. quire renovating, in which case both may be performed, at the pots being placed under then in replunging. Syringe the fruiters Mightly overhead upon fine mornings, and the surface of the tan higher than the others, which should be from $00^{\circ}$ to $65^{\circ}$ fire-heat; do not vary the treatment much by increase of temperature or modsture until the plants have been potted.
let is be done neatly, but not the tyight, or they of the shoots, and oosendeachain as the shoots swrell; do not allow the shoots to uccess in a great measure depends upon this - if a proper temperature be kept in the house, the syringe need not be used after the plants are in hloom: the early house may range from $60^{\circ}$ to a hamid atmosphere in the rineries now adrancing untll they peacelir blossoms.
house, therefore variations in the temperature, in the state of the border, and syringing with cold water, should be carefully guarded against, as likely to cause the fruit to fall off before
stoning ; weakly trees often set abundance of fruit, but it it in udicious to allow them to remain unthl they attain any size, and the thermometer to rise to $70^{\circ}$ without giving air, nor by fire-heat to more than $60^{\circ}$
in the temperature - Whatwre have said above as regards changes in the temperature, \&c. is equally applicable here: give a little gradunily increasing the quantity as the day advances; syringe the trees overhead occasionally, and do not allow them to become dry at the roots; search closely for the caterpillar-curled leaves always indicate its presence, and as it does not leave its ing the infested leaves with the thumb and finger; if aphis or Fic-Hovss. - Water at the root regularly; syringe overhead frequently, and keep the temperature to about $65^{\circ}$ fire-heat. site quantity of eyes are broken. when the youns plats requi. more than one shoot, let a day or two intervene between the stopping of each. Mr. Mills in his treatise recommends peat earth, without any aumixture, for their culture during winter in frames, and for pot or tub culture, mired with one-half well-
rotted dung; and Mr. Mills is no mean authonty. A great advantage would be frames glazed with sheet-glass for winter forcing, When the greatest obtainable light is requisite. Rather ons; and the soil used should be a fine maiden loam : other. Frevch Beise - Contir.
Farnch Beans. - Contunue to sow and pot-off successions: oid mushroom-beds mixed with a little fresh soil will be found with twigs. and placed in the cacumber-bed. Saladeng of all kinds. - Keep up a succession.
Mamure, dig, or trench all vacant ground if not already done. son, in the fine pulverived tate ni the soil, and in the facility wath Which it is levelled for the receptron of crops, for if done early on the earth about crops of all kinds, and weed antumnt-sowni crops Cown if gri-Prick out in bores or on a slight hotede the earliest sown if sumicimtly advanced iprepare slight hotbeds for pricking Cauliplowrins.- Prick out the strongest plants of the spring coive ghaght protection if neceveary, a feve from the fames, those under hand-glasses, may be thimed ont and planted, on a and cauliflowers, at lettres planted in the be sown with onions object; but take care the perita ake mot mevent if mound be an priasra.-80w red for the rooks, atso the leaf tinule in shallow drills.

situation will admit; continue draining and fencing of all linds. -Joseph Pualos. continue draining and fencing of all kinds.

## NOTES FOR SMALL GARDENS

Mony small gardens in the vicinity of London do not contain of a circle or oval with a gravel walk round it; but if the space is by dividing it into small geometrical beds, edged with Box an separated by narrow gravel walks; or in cases where the house
is built of stone, or has a coating of cement over it, the beds nlay is built of stone, or has a coating of cement over it, the bells nla are preferred, a small circle in the centre, with comma-shaped and look infmitely better than the eternal moulds, with half tarved Aucubas or other evergreens on them, Kind of garden; and where there is convenience for keeping a
few Geraniums and Petunias during the winter, they will found desirable additions. Where beds are cut out on a lawn, o are surrnunded by Box edging, sharp angles should be alnost
always avoided, as great dificulty will be experienced in keeping them properly; even rectangular beds may have the corners
slightiy rounded instead of being brought to a sharp point Lawntly rounded instead of being brought to a sharp point
Lave bare places in them should now be renewed small pieces of turf on the naked spots; previously to sowing
seeds, however, the surface of the lawn should be drauged with bushes to render it fit to receive them. All kinds of out-door
operations should now be performed, as mentioned last week: operations should now be performed, as mentioned last week
small patches should be sown with annuals to succeed thos raised in pots; all herbaceous perennials should be divided an should be immediately put in. Continue to repot all plants that require it in rooms and greenhouses; and if it is wished to
propagate them, the tops should be taken off, put round the edge propagate them, the tops should be taken off, put round the edge

## eniomological notices.

Asc elm trees in woods or plantations attacked by the Elmshould be, and removed now the insect is in the lary when the beetle appears it lays its eggs on the neighbouring trees. The trees cut down, or the lopped branches, should be im escape, and litile or when the insect arrives at maturity it will bectie is small, being only about two lines long, and half a line dotted lines. From the researches of Messrs, Audonin and Spence, it seems that both male and female insects attack the trees for the purpose of food, and burrow into the trunk. When the tree has
got into a state of sufficient $l i l$
health, the female burrows deeper and deposits her egrs, and the larye when hatched make cylin parant, and parallel with each other; here they change to pupee and finally attain the perfect state and propagate the species, The fecundity of these insects is so great, that their

MIGRATION OF BIRDS IN MARCH.
Almost all the winter hirds have left, and the earlier of the summer ones arrived. The following generally visit us in March: the Bunting ( Rmbariza Minria); the Reed Sparrow (Emberiza
Schericlus); the Red-legged Seamew (Larus ridionndus); the Willow Wren (Regulus Hippoluit); and the Chifrchati or least arrives in August, usually departs ahout the first week in March the Redwing (I urdus Miacus), the Fieldfare (Turdus pilaris), the
Gannet or Solon Goose (Subs Bnssans), the Jacksmipe (Scoloput Game in September, generally leave in March; a few, Snipes,
comwever, remain all the year, the Teal (Anas Creca) tow Crow (Com all Comite), the Merlin (Anat Crecca), the Roys-
(Felco Avalon), and the Woodicock (Scolopar Rusticola), which arrive in October, depart
in March ; the Widgeon (Anas Penelope), and the Red-hesed in March; the Widgeon (Anas Penelope), and the Red-headed

NEWS OF THE WEEK
Our foreign intelligeace confirms the impression that he events which hare so recently complicated the affairs of Europe are no longer likely to affect the continuance of peace. In France, during the debates on the Secret service Bill, M. Guizut, on behalf of the Government, refused to declare that they would not disarm, and so firnly expressed the intentions of the Executive on this point, that the Chamber passed a vote of contidence in the Mibistry,-a result hailed with satisfaction by the friends of peace. In reference to the same subject, it appears that France has returned so pacific an answer to the protest of Austria against the continuance of the armaments, that the projected levies of the German Confederation are not to exceed the ordinary peace estabishment, and that Prussia has declared to the French ambassador that she entertans the most peaceful views towards France, in common with the other States of Germany. -From Berlin we learn that the fortifications of that capital, though less talked of than those of Paris, are making rapid progress; that a new criminal code is about to be adupted, and that the measures taken for its discussion are regarded as the first approach to the repreentative system in that kingdom. - In Switzerland the protests of various Catholic Powers against the suppression of the Convents have given rise to a declaration from the Vorort disputing the right of any foreign Govern ment to appeal to the federal cumpact. - From the Levant e learn that the firman confirming Mehemet Ali in the hereditary Pachalic of Eyypt has been despatched from Constantinople, and that the Pacha is devoting his attention to the cultivation and improvement of the land, to military colonisation, and to the abolition of negro slavery. The remnant of Ibrahim Pacha's army was approaching Alexandria, and the plague had made its appearance in that city, and in other places on the coast.-Atfatrs in the Cnited States still present an unsettled aspect, especially in relation to this country ; the Bank has suspended specie payments; a b.ll of murder has been returned against Col. I'Leod, who is still in prison; and the border States hare resolved to expel the British troops from the territory in dispute between the two countries.
At home the principal topics of discussion in Parliament during the week hare been the postponement of the Irish Registration Bill of Lord Morpeth thll after Easter, and the Navy Estimates, the debates on which are interesting, on account of the declaration of Miuisters that there now remains no disagreement between France and this country, either with regard to Egypt or Mehemet Ali. A long debate has taken place on the grant to Maynooth Cullege, and leave has been given to bring in a bill to amend the existing act regulating that establishment. The Copyright of Designs Bill has been advanced a stage, and the motion for going iato committee on the Constabulary Bill has been negatived. In the House of Lords the subject of the Catholic seminaries of Canada has been discussed at great length, but in consequence of the great pressure of business in the House of Commons no other matters of particular interest have been brought forward.

## 71) ante Ǩemo.

The Court.-Her Majesty, Priace Aibert, and the Princess Royal are still at Buckingham Palace. During the week Her Majesty and the Pruce have taken eques-
traan exercise in the ridng-school at Pimlico. The Countess of Charlemont has succeeded the Marchioness of Normanby as the lady in wating on the Queen. Lord
Byron and General the Hon. Sir Win. Lumley have sucByron and General the Hon. Sir . Stovin as the lord and ceede
groum improbable that Her Majesty will either reman in tom or proceed to Claremont for the Easter holdays, instead
of spending that season at Windsor, as usual. Caledon, it is said, will supply the vacancy in the representation of the Irish peerage, occasioned oy the death of the Earl of Rosse.

Parliamentary.-It is stated that Sir Peter Laurie will be put in nomination at the next election of Members of Parliament to the City of Londun.- it is reported that the Conservacives of Manchester are making actuve pre-
parations fur contesting the representation of the boreugh in case of a dissolution of Parhament; and that they in tend to bring forward two candidates, and Richard Entwistle, Esq-It is sand that a requistion is ill course of signature, invitiog sir J. Beciactr, Bart. and the Hon. J. s. Wurtley, to become candidates for the representation of Leeds at the next election. - A report is in circulation that Mr. Cavenulai is proceening to canvass for the county of Sussex, and tnat Major Curtei Eurt standing for East Sussex. - it is reported that Mr his seat for tiat borough. Shuldid that event occur, Mr. Cardwell, it is said, will in this case offer himseuf to the electors on the Conservanve, and Mr. M. Wilsun, jun., of Exhton Hali, near Gargrave, on the Whig iaterest. - The Speaker hias informed the House of Cummons that the two sureties to the petitions, respecting the eiections for
the boroughs of St . Albans and Walsall, are unobjectionable. The general committee of eleations have appointid
the 22 d of March to choose select committees to try these
etirions.
Commander-in-Chey of Nere Bronsmick. - MajorGeneral Sir N. Dough.s, K.C.B., has been appornted Commander-tn. (hief of the Forees in Nova Sicotia and New Brunsalick,
The Consulate af Hamburgh.-It is understood that Colorel Hodges, British Consal at Alexandria, is to be
appointer to the hnerative and responsible nffre of ConertGeneral at Hamburgh, in the place of the late Mr. Canning.
Trial of the Earl of Cardigan.- From a report sent in Trial of the Eari of Cardigan. - From a report sent in to the House of Lords, it appears that the total expense
of fitting up and furnishing the House for the tral of the Earl of Cardigan, on the 16th Feb., was 9901. 2..

France--Sectet Sirnice-maney nill.- The debate in the Chamber of Ueputics on tie inotiou for suppuicuseatary
sceret funds has been warm and interesting. The main interest to English readers lies in the disclosure of the opinions of laducs man and yarties with resard the theign Saturday was most important from the position taken up
by 11 . Thiers, and the minie in minich 11 . Cuizat met the opposition. The commiosion and M. Jouffoy stigmatised the toreign prias of the has (abmet as mentens and violent, and thelared it to le a rolicy inexpethent for those of Be'gium, Italy, and Spain, by dypmany, and
which ought to have solved the Eastern question in the which ought to have solved the Eastern question in the
same way. M. Thers in lepir said that it had neerer been a question of peace or war. He arproved of the position
taken br the cabinet -that of tisolation; and he would support the cabmet if it refused to disarm, and to enter into any treaty sametioning , what had been accomplished in the Levant. M. (iuizot, in reply, sald that in the present state of affuirs he neither ought nor would say anything; that Na . Thiers, speaking of ther foreign question, to decide; that the chamber had fommd the question reHe begged the chanher to recollect what it did liscuss, and asked if it was nnt, whether they should have a million or half-a-milh n of soldiers? M. Thiers had said. when the present numistry was installed, that pertce was
then resolved and certain. He, M. (iuizot. had replled then resolved and certain. He, M. (iuizot. hat repheel
by saying, "If you, M1. Thier,, remaiued on these benches, war was certain!", The debate was nothing more than to see whetber M. Thiers or the present Government should
be ministers. "You may endeavonr," he said to M. Thiers, to make yourself little, and ingratiate yourselt with the majority, and say you never meant war. But these are
your words, which declared you were making preparations for war in spring, if the P'oners refused to modify their treaty. You cannut teny your oun words, in order to cannot make it belheved that all $d$, ne by you and by us, doring the last year was but an imsignticant, comedy,"
To this M. Thiers did not reply. M. Mirmot followed, ald said that France showld rewain isolated, and not jum in
any treaty. M. Dutaure insi-itastronaly on the inerease of the arny and nuvy. He did not think that isolation could contmue always. It meght be dignified, but Frame
could nut remam a stanger to ail that mats pasing in Europe. Isulation mijhit cease when the Powers whuld recal France, not perhaps into a treaty, but into the c uncils of
Europe, $1, \mathrm{y}$ mahing the first step towards France and towards reconciliation. Tius the riews ot the partics in the oppostion for isolation, M. Dufaure and the middle party for reconciliation, provided the Fuur Powers made ad. vances ; and M. Guizat. Hisu refused to declare that he to be important. especialiy as it was followed by a vote of confilence in the ministry, of which the number of the majority was

The Fortifications.-It seems that Government entertain some doubts about the passing of this bill in the ested in its success. Th confirmation of this, it is said that the Peers curpluyell on foreign embassies, and those charged with military commands throughout France, have been ordered to Paris to vote in favour of the measure
Libels on the King.-The papers state that an artisan of Montereau, near Fontainebleau, was a few days since
found gnilty by the Court of Assizes of the Seine-et-Marne of having publicly used outrageous language against the King, and sentenced to a year's imprisonment with fine of tuluf.

The Invitutions.-On this sulfject prisate letters from Niames state that the country is ascins cavered with a disbanks, and rushes acruss the bas:in of the 11 ps to the sea. The water have reached the
were the inhabitants awsenible in crowds, endeavouring to repel the danger. The country around wears the same
desolate aspect as it did in November, and the river may be seen carrying away with it laveme trees, timber, furniture, and sometimes even entive cottages. Dwellers in isolated habitations have become a prey to the nopt eruel sufferings. Foictes, atul erying out for suevour. The cattle have generaily gone to the bills, but many have been drow bed in the gtables and farms. Whole familiiss tere arriving in the town, many having escaped only on refts.
Christening of the Cound of Parris-It It remoured that the chiutening of the Count of Paris, ca the lnt of
May, is to be accompanied by a general politieal amnenty,
which will include Prince Louis Napoleon and his companions in captivity.
Niters nes. ${ }^{16}$ the Metroperlis and Procinces.-Private nity to an uninsual extent, ocensioned by the rapid and extreme variatiuns of the temperature. At Beauvais typhus ficuer is mating considerable ravages.
Et en arions elec:ors. The prpquation amounts, it is eatimated, to $33,000,000$, of whom only 200,000 are electors; and it is
stated that of those 200,000 one-fourth know not how to read or write.
Stuery in the
Stavery in the Colonics.- From official returns, it ap-
pears that in the French colonies the governors have emancipated, by ordonnance, the following number of slaves i 1840 :-Martinique 338 ; Guadaloupe 81 ; French Guiana onial Ministar has sent orders to the French West India islands, that henceforth all private prisons are to be primens. and that at least one half of the judges must be ent from France.
The Loos of the Phénix.- In the affair of this steamer, which was run down some time ago by a vessel belonging
to the Gieneral Nivigation Sterm Company, the Tribunal of Commerce at Havre has decided to issue a commission to three nantical men to hear evidence as to the relative
position of the vessels when the collision took place, and o repurt their opinion to the court. This will put parties o a great expense in the transport of witnesses. Whatever may be the decision of the Tribunal of Commerce in Havre, it is thought that one or other party will appeal to the Cour Rovale of Rouen, and from thence to Paris. It idjusted by private arbitration
Spanc.-The Regency is Irawing up the Royal speech for the opening of the Cortes. The Government was more satisfied, it is said, with its
despatches from the provinces, although the republican pirit was still manifesting itself.-The Basque provinces had addressed a formal protest to the Regency against the infraction of their fueros. The Deputies General of the provinces declared that they should fail in their duty to the iovernment, the nation, and above all, their native hills, if they neglected to submit their just complaints and legitimate clams. The Bilbao commercial interests continue to petition against the arbitrary acts of the Madrid Exe-cutive.-Letters from Vittoria detail the serious quarrels which had taken place between the Alavese Ayuntamiento and the Christino authorities. The regency had appointed a judge, but his nomination was refused by the Basque authorities as being a violation of the fueros. The Cummandant had threatened to send the Alcade and the De-puty-Guneral of the province prisoners to Burgos. - The court of Don Carlos at Bourges is stated to be the focus for all the machinations in the Basque provinces. Latterly the relatious of Don Carlus with his agents have been mire active than ever. Capitalists have been applied to culated p:cc!amations in farour of Dou Carlos. The Bastues, hawever, reject such attempts. They defend their fueres, but will not become again instruments of Carlism. The Regency of Madrid is said to possess documents which establisi the existence of a Carlist agent in that capital at the expeuse of the Pretender. The Journals have announced that forged bonds of the pubtic drbt were in daily circulation. should this be the case, it demands, chey say, the serious attention of the Government, for it
might influence in a most deplorable manner the financial might influence in a mo
situation of the country
Portcgal.-The last advices from Lisbon hring no intelligence of general interest; the debates in the Cortes have been of a local nature. The Minister of Finance, in animacurerting upon the embarrassments of the Treasury, stated that he could not accept the authorization for the receising of the taxes, with the proviso of paying regularly a month's pay to the civil and military lists in every 30 days, and that he should look to the future, and not to the past. This declaration produced a species of terror among he agiotas or usurers, who became frightened lest a naional bankruptey should follow. The ©Bank, also, was about to suspend its discounts of the arny and navy pay-
tickets: but Ministers, fearing the consequences of such tickets : but Ministers, fearing the consequences of such a
resulution, came furward and pledged to that establishment resulution, came forward and pledged to that establishment the revenues of the Custom-thouse for Aprit next.-Petiof the capital to be presented to the Legislative Assembly, against the project of law for the reorganization of the
Na 'ional Guard. The weather at having become very fine. -The chitf seat of the recent innundations of the Tagus was about Vallada, three leagues of land an the soith tignt from isbon. The called the Lezirias, has also been entirely under water.-The assassin Dirgo Alres and his accomplice. convicted some time since if a murder in the centre of the city, have been expeuted. The sentence of death upon the third, who led to the discurcry of this alair, has been commuted to transportation or life- It is stated that the guerillas in the Algarve are again on the increase; a gang, lying in ambush, hard ata Lieutenant of the Caçadores; after which they entered Casanel, Cachopo, and Martin Longo, and obliged the repective detachments to retire within their forts.
Eerpr.-Letters from Alexandria inform us that Ibrahim Pacha had arrived at Gaza with the sixth and last divisions of the retreating army on the 29th ult. He was suffering severely from an illness, of which jaundice was
the mont obvious symptom. Nevertheless, hy had ex-

 convoy of the Pacha's roops finan (ima in homietta. and all attempto to interfere wi h the erite nee at Jatio, been relinquisised. Coluat Michel was requitai to be dead of dysentery. Commodore Napier was still at Alezandria, and had given up hi inteat as if paceling to danger of a coilision be ween Juchmas an. 1 ITranim. it seems Mehemet Ali hacl been 25 chys mition nit auy direct
 the Palace with Mebemet Aiv. Tinis is tue iirst dinner given by the Pacha to Englishmen since the treaty of the
i5th of Jaly. The Commodore takes an active interest in the fulsiment of the tremtrof commerce ant navigation and is following up this subject also, day by day. for the Pacha's edification. The latter was preparing to set out distribution and cultivation of the land. Later adsices assure us that positive instractions hat been formarded to Ibrahiua Pacha, by hio father, to retum in lle IIagi Baba pected at Alexandriq, or at Mamicita, to ascend the Nile
 Gazs to superintend the returas of the Syhan triops, and
to prevent the horstilies which it was believed the Tarks mould endeavour to excite. when the Syrinas should be
disbanded and the Egrptian troops disbanded and tae Eysptian troops wemanched by their
defection. The returned tromps of soliman Pachas division were dally mahing their way in small parties from Suez to Cairo, bat their leader had not yet arrived in the capital. Sherif Bacia, who was amongst the nirst arrivals, is kept in arrest under accusation if treason. 'ille firman from Constantinople had not arrived, riotwithatanding the
despatch of the fleet; and private a.ivices stated that neidespatch of the flect; and private ansices sta'cd tinat nel-
ther it nor the return of the Consuls-General might be expected till the settlement of all particulars at issue between the Porte and the Pacha. It appears that Meliemet Ali has commenced his military colonization, and has promised Commodore Napier that he would take an early opportunity of abolishing negro slavery. The plague still continued at Alevandria and Rosetta.
Turkex.- The lorte has announced, in a proclamation, con. Captain Walker by the uther ships of thee Mitomana thet, reached bishisa Bay on the $\%$ th, and anchared at the Dardanelles on the 8th, on which day the Tahiri Bahri, ()toman stramer, arrived from Constantinople, briucing new apparel for the Turkish seamen, in order that, after shifiug their chothes and riding out the established quarantine fom bsypt at
Lapsarus, they may enter the (i,dden Hum tisether. The Lapsarus, they may enter the Golden Hown thenther. The
Tahiri Bahri continued her voyage to Alexudrid, and had an ofticer of state on board. beamir of the titman con-
firming his Himhess Mehempt Al: in the hereditary pachatic of Estypt.-Resinil H acha inso entirely reeavered from his mati-position, and has had an audience of the It was stated that IR :sria hod emelemouri ito erommass his downfall, as a paitism oi Beitisn interests, and as the negotiator of a secret treaty wheeeloy Enyland had obtained the free narigation of the Eulhrates for her steamboats, and the manatenauce of a getrison of $5(\%$ men at Acre- The ceremony of the Kuurban-Beiram took place tomary pump. It repair to Smyrna vith one or two ships of the line, and that the remainder of the English fleet would proceed partly to Malta, and partly to
GbrMM
Gbrmany.-Letters from Frankfort state that the fortifications of Berlin are proceeding in such a way as to rival the projected plans for the fortification of Paris,
The King of Prussia is represented as a great patron of the literary and scientific men of his hingdom, and hes given the Berlin Academy of Sciences permission to elect the members of their orn body, a privilege which formerly resided with the crown, and has established a chair in the His Miey for the celebrated metalbystican satient. pher, and it Galso inducea M. Schalsers, the philos in order to sutt'e in Berim. Mention is alan matir of the royal order tiat the new critana. cuit is to to laid before the Provincial states for dactusiun and approval. But as the suats mett only every three years, tue wonveuing an
extraordinary meeting for the special purpose wouid be attended with great expense. A plan is therefure proposed for calling a certaia number of deputies to Berlin from the Provincial States to examine the important question Were this realisel, it is comidered that it would be the The commercial treaty between Prussia and Holland is stated to have been renewed for six years, without the ex tensive modifications demanded by the German States. The ruvtive for this is said to be that the Prussian Government being deatrons of seeing the Grand Duchy of Luremburg associated witm Holland except on conslition that the not obtain this from Holland ezcept on comlition that the
original treaty should be maintained in vigour. $-\mathbb{I}$ loter
from Berlin states, on the subject of the recent departure
of Count Bresson, the Prench ambassador at that capital, that previously to his leavine he had a loing conference with the Minister of the King's Household, which did not break up till midnight; that his departure was thought to be connected with views entirely pacific; that he would represent to his sovereign that the disposition of the Prussian far from being in proportion to
Germany has no other idea tha Germany has no other idea th
defensive in case it should be go to war go to war. It is hoped that the presence of M. Bresson at
Paris will contribute to the maintenance of peace. The finances of the Govemant $a$, jear to $h$ sin a most flourish-
ing condition, according to the last accounts, which are made up every three years. is considered the best proof of the progress of manufactures in Prussia during the last three years, and of the the Customs Union, which many persons at first doubted, are said to become more and more manifest.-A letter
from Stuttgard states that the Minister of War to the Committec of the States that he liad expended the $9(0)$,(1) florins sranted to him for extraurdinary expenses for the armasents in rrouress, and that he would be
obliged to demand a further supply. An animated debate ensued, and the committee determimit to lay this dewand in stating that the ausmer returned by the French Government to the formal remonstrance on the subject of the "armed peace," addressed by Austria, is of so peaceable a nature that the German levies will be contined to the ment of the confederation. These will, however, be called on earlier than usual in the spring: and in Wirtemberg the Minister of War has caused an inspection of all the
horses in the country to tahe place, with a view of facilitating the purchase of such as might be required on an emergency.
Switzirrland. - From the note addressed by M. de decree for cuppressing the convents of Argau has furnished the pretext for a sweeping claim on the part of Austria to the Grand Council of Berne has been given to the acts of the Executive Council, in aiding the Government of Argau during the late disturbances, by a majority of 107 votes to
16. It is stated that the French Government in compliance with an application from the Cabinet of Vienna, federation to support the remonstrances of the Emperor against the suppression of the convents. The Swiss Vorort is said to have semt the same ans कer to the Cabinet merly given to the protest açainst the sappression of those of Lucerne, disputing the right of any foreign power to Holland.-We learn that Government has under con sideration a 1 rroposal to cede to a company to be estarevenue of which, for a certain number of years, is to be paid in advance.-The papers announce the entire completion, in ten dars conly, of the immense work of cutting a chanitel in the sea frola the Nienwcieep to Amsterdam,
in spite of all the ditticulties of the execution. The first in spite uf alredy
ships hase already arived in the ducks; some vessels have left then to $\mathrm{g}_{\mathrm{y}}$ to sea, and fifty lighters have gone to the
Nieuwdeep to receive the whole or part of the cargoes Nieuwdeep to receive the whole or part of the cargoes
of several East Indiamen now lying there. The completion of this great work is the more erratifying as it is probable the comaunicatioo with the Nieuwderp may not be free from ice for three weeks to come.
Hasover. - The new civil penal code appears to lave beeu spreedlly fuilowed by a military code. Flugging is established in contrast with the German mode of discipline ; the minimum is 50 stripes, the maximum 300 stripes, which can be intlicted for an offence liable to be risited otherwise with anly fifteen months or two years' imprisonquences ensue, the survivor is declared to be freed from responsinility upon proving that he had received a provocation which his honour did not allow him to put up with. The king is said to disapprove of the discussion of the Stade duties, and the propised commission. The reduction in the duty on butter and cheeve imported moto Eng-
land, but especially to, the Went Indies, which has been recently proposed, would. it is ssid, be very acceptable on both sides of the water, and the reluction of the import duties on manufactured wares, frim 25 per cent. to 10 per would probably increase tise revenue consilderably.
Belgicm.-It is stated that MM3. Rottaschlut, of Paris, have just concluded the detarls of the ness Belzian loan,
 securities. The faolity with which the MM1. Rothsehild have nesotiated this inan, notwithstanding the present
scarcity of casis, is concidered a powerful argument in favour of the maintenance if peace. The Bulgian capital-
 was at first coutractel tor by the Beigian bank, and which
failed to exccute it en itments. Ruscia, - Accounte fome it.
 roubles in money.-Recont letters from Cracow announce that the Austrin troups have left tiat city and territory.
At the same cime, the city milicia, which had been com. At the same time. the city militia, which had been comgarrison. The Austrian troops marched amidst a great asemblage of people to Podgorze. The citizens of Cracow
greatiy regretted their departure, which is accounted for
by the fact that the troops caused a large sum of money to circulate; it is also stated that their conduct has been to the esteem and regard of the inhabitants of the republic. -Travellers lately arrived from Warsaw assert that the troops. The official journals, however, are silent on the subject.
English Consal A letter from Copenhagen states that the verament to go to London to give information respecting the Sound duties. The Danish Government have likewise sent a person employed in the custom-house at Elsinore to
assist the minister in the negotiations with which he is entrasted. -The Danish negotiations whe which he master of the Danish language to the Princess of Mecklenburg, who is to marry the Crown Prince of Denmark, Royal Highness.
Sweden.-Papers from Stockholm inform us that the beating given by Count Matuschevitz, the Russian Ambas sador, to a footman in the service of a lady of diatinetion, carriage being brought to the door of the Palace before that of the diplomatist. Striking any person in the king's Palace is punished with death; and as the lady has for-
mally complained to the Court, the reply of the Emperor is anxiously looked for. It remains to be seen whether the Czar will sanction the conduct of his Ambassador.
King, on the Private letters from Athens state, that the King, on the occasion of the anniversary of his landing in Greece, had made a number of promotions in the army Governy, which were held to evince the invw officers were several individuals said to be compromised in the Philorthodox conspiracy, and well known creatures of to the Bount Roma, one of the chiefs of the opprosition appointed a councillor of state by his Grecian Majesty. The Candiots were preparing an expedition to revolutionise Candia, which, it was beliered, was encouraged by King and Robinson, with a capital of projected by Messis. Green and Robinson, with a capital of 3,00
at last obtained the royal sanction.
United States. - By the arrival of the U'nited States, packet, we have intelligence from New York to a recent date. The news thus brought is of considerable importance. The United States Bank has again suspended specie payments. It appears that since the resumption on the and specie funds, and that the amount of instant demands has been greater than they had reason to expect. Many of the other banks are said to have followed the exanple. -In regard to Mr. M•Leod, the papers state that the hearing evidence against this gentleman, came into court with a bill against him for murder. It is further added, and Terminer, to be held on the fourth Monday in Marelh unless a special commission shall issue. Such commissiun may be issued by the Governor, with the advice and conrent of the Senate. A Justice of the Supreme Court or a Circuit Judge must in all cases be appointed to preside in auch special court. Mr. M•Leod was still in gaol, but was kept there, it is said, to protect him from popular violence,
instead of being forcibly placed there by an armed mob. The lead of being forcibly placed there by an armed mob.The legislature of Maine are again actively engaged on passed the following resolutions:-"That the Governor be authorised to take immediate measures to remove the troops of the Queen of Great Britain, now quartered on the territory called disputed by the British government, but by the treaty of 1i83, by the resolutiops of both Houses of Congress, passed in 1838, and by repeated recally a part of the rightful soil of this state. ResolvedThat the resources of this state be, and they hereby are, placed at the disposal of the Governor, and the specific sum of 400,000 doilars be and the same is hereby appropriated out of any money in the treasury, for the purpose priated out of any money in the treasury, for the purpose
of carrying the said resolution into effect." The resolutions were referred to the committee on the north-eastern boundary question.
Beenos Ayres.-Private letters from this place assert that Rosas has been driven out of his capital, and that General Lavalle entered it the preceding day at the head of 6,000 men. The population had received him with great enthusiasm. Rosas had taken the direction of the Entre-Rios country, but was pursued by General Lamadrid with $4,000 \mathrm{men}$; and it wat believed that he would embaric fur England.
re from the bry the papers, which ligence the the digence rernor Gene vernor-General would open the Queen s commission, and
take the caths as Governor of the Province of Canada. The proclamation was issued on the 5th. The day had been appoiuted in honour of her Majesty's nuptials. The Legislative Assembly of New Brunswick was called together on the 20 th ult. by the Lieutenavt-Governor, Sir John Harrey:
Aew Zenlax d . - The New Zealand Gazelte gives an account of an earthquake that has been experienced in the neightiourhood of Purt Nichoison. The Colunists were first aroused by an undulatory motion of the earth and a somewhat severe shaking of their houses. The first movement took place about five oclock on the morning of the 16th of May; the mocond, about as hour later. The fol-
lowing night there was another slight shock, and since
then two more shocks very slight. The first shock was by far the severest and
the longest in chief, though it alarmed was not the cause of any mischief, though it alarmed some of the inhabitants. It
appears to have been nearly equally felt all roand Port Nicholson.

Entertainment to Prince Albert at Trinity Howe.On Saturday evening a Coart of the Master and Elder
Brethrea of the Corporation of the Tristr Brethren of the Corporation of the Trinity House wis
held for the purpose of enroling H.R.H. Prine Albert es one of the elder brethren, in the place of the late Marquii of Camden. It was beld in the Elder Brethren's room, where his. Royal Highness was elected with thee rssal cerewony, and, ater taking the customary oaths, was or th
 presided, Prince Albert sitting on the right hand of his Grace. Among the isistors present were Lord Melbourne, Ear Minto, पisceount Palmerston, the Marquis of Douro, Lord Denman, Sir J.C. Hobhoose, and Sir R. Peel. Oa hiss health being drunk as an Elder Brother, Prince Alber brieff acknowledged the honour conferred upon him
Falling of two Houses in Fleet-street - A serious accident, which might have been attended with calamitons consequences, but thich happuly was not acompanied bid
loss of life, oceurred in Fieet-street on Saturdiy nigit It appears that a fire occurred doont a month since at tim house of Mr . Bundy in that street, when the interior of the house was almost destroyed. The premises were dergoing repair, and complaints existed that belonged to 3 bookseller named Dobson. During the evening a policeman was alarmed by the sonnd of a loud cracking, which proceded from the walls of Mr. Dobson s Iom giving way. He immediately proceeded to the neare station, and apprised the iospector of the Every preaatoon was taten to arouse the immates of they
adjoining house to the perilous situation in which they were placed ; and Mrs. Dobson, with foar or five calidrear Pere conveyed to the residence of a friend. At this timo the cracking of the walla became more loud, and in a ter minutes the houses fell. The police-officer on duty had a narrow escapie, his cluthes being covered אith dust, and a cab standing io the street mas nearly overwherimed aid bourbood the police sent to the buiders in the by the standers-by, proceeeded to remove the ruins, and a number. of carts laden with timber were brought for the purpose of ereeting a "hoard" to enclose the demolished buiturass tie
 fate of the two adjoining ones, and it was found neecs.
to obtain ropes and raze certuin portions of it for the
sesety of the pasengerms. The ocerurrenee crated a yraid
ensation throughout the metropolis; and it is regarded as
remarkable, that in a leading thoroughfare like Fleet remarkable, that in a leading thoroughfare like Fleet-
street, thronged at all times, and more especially on a street, thronged at all times, and more especially on a
Saturday night, a great sacrifice of life was not the result of the casualty. Tbe house of Mr. Bundy appears to
have been very old and crazy, from the fact that that have been very old and crazy, from the fact that that
portion of it in which the fire occurred a month since, and which was shored up, is left standing, while the whole of the front rooms and staircases have fallen in. A tailor, named Wagson, seems to have had a narrow escape ; he
was in the house at the time of its fall, and as the churchwar dens were going over the ruins to ascertain if anybody was in them, in the course of their search they saw Wagson in the act of going down some stairs from the third
floor of Mr. Dobson's premises, which overhung the ruin below. Wagson was made sensible of his danger; he quickly retraced his steps, and was shortly afterwards rescued by Mr. Braidrood, superintendent of the Fire Brigade, who ascended by means of ladders to the win-
dow where he was standing, and, after demolishing the casement, succeeded in safely getting him out. Several gentlemen of the parish of St. Bride have since waited on the Lord Mayor, stating that they had carefully ex-
amined the ruins, and that the back parts of the premises amined the ruins, and that the back parts of the premises
were in imminent danger of falling down, and there was were in imoundent danger of falling down, and there was
every ground to believe that if they fell, they would drag part of the adjoining premises with them, and great loss of life would probably ensue ; that the public safety would not admit of their removal being delayed until the meeting of the next Court of Aldermen, and that they required his Lordship's authority to be immediately exercised in ordering them to be pulled down. - The City Surveyor stated tiat there existed no authority under the Act of Parliament for his Lordship's interference.-The ruins lay in his opinion on the owners, but if he were churchwarden be should at once take the responsibility the public from injury; until, however, the Court of Althe public from injury; until, however, the Court of Al-
dermen assembled, he had no power to interfere. It apdermen assembled, he had no power to interfere. It ap-
pears, however, that the City Surveyor has since been directed to take the necessary steps according to the presentment of the inquest.
Repeal of the Corn Laws.-On Monday evening the annual meeting of the Metropolitan Anti-Corn-law Asso. ciation was held at the Crown and Anchor Tavern; Mr.
Warburton, M.P. in the chair. The report having been read, it was mored and seconded, the it be received and printed for circulation. This was followed by a proposal that there should be an addition made to the resolution, that "it was vain to hope for the repeal of corn-laws, or presented through the enactment of the People's Charter; and, therefore, they advised that a national petition be presented to the Queen, praying her to interfere to pro-
cure the recognition of the principles of the "People's Charter." This proposition was followed by a scene of great confusion, which completely frustrated the real object of the meeting, which was the discussion of the
principles and effects of the corn-laws. Several Chartists addressed the meeting ; and at length, after much uproar, the resolution was carried with the addition which had been moved.
Thames Tunnel.-On Tuesday the annual meeting of report, it appeared that company took place. From the the tunnel having been brought to within twelve yards of Wapping High-street. The footway descents on the Wapping side are expected to be finished by the middle the company will be ind by its termination it is expected The length of the tunnel at present completed is 1140 feet, and the foot passengers shaft is sunk to a depth of of visitors last year was $3 t, 000$, being 3000 more than in the year preceding; and the amount received from them ${ }^{14,0001}$. The balance sheet showed a sum in hand of taking to the present time is about 400,0000 . including the taking to the present time is about 400,0001 . including the
Government grant, and that it is likely to be finished for Government grant, and
less than half a million.
Fleet Prison.-On Saturday a depatation from the Woods and Forests visited the Queen's Bench prison, preparatory to moving over the debtors from the Fleet, which is about to be pulled down. By this arrangement the country will save about $15,000 \%$. per annum, besides obtaining room for other contemplated improvements. It is supposed the judges will find some difficulty in removing the prisoners from the Fleet by habeas, and that pense of the Queen's Bench prison, in its present employment, is about $30,000 \mathrm{k}$. per annum to the country. there is some doubt fespecting subsequent staternents, that On Sunday night Sir W. Boyd made a second attempt to escape from this place of confinement. In both instances, his endeavours were frustrated. On the first occasion, his endeavours were frustrated. On the first occasion,
having dressed himself in femaie attire, with bonnet, veil, curls, te., he managed to pass through the outer gate. lowed tima fir as Caarimj-cruss, winetre, in order, it is presumed, to breche a.purer atmosphere, is raisec bis

Accide remain so long as he continues in the prison. ing some timber under one of the dry arches of thaterlo Bridge, he fell bachwards from the top of the pile, a height of about twenty feet. He was taken to St. Thomas's near the loins it was found that the spine was broken entertained of his recovery.-On Sunday night, the landlady of the Seymour Arms public-house, Euston-square, observed a powerful light in one of the neighbouring
houses. She opened the window, and saw that it was a houses. She opened the window, and saw that it was a
bed on fire, with several children on it. The street-door bech on fire, with several children on it. The street-door
was found open and the house full of smoke, and five children busy in extinguishing the flames. The parents were from home at the time, and the account given by the
children is that they were all in children is that they were all in bed except the boy, who was in the next room, when the candle fell over and set blaze, awoke her brother, who ran down stairs for water whilst she got the other children out of bed. The father, it appeared, had gone out with a friend after supper, and but had, after putting the children to bed, had followed, accident happened. Had the children been asleep, it is supposed their destruction would have been ineritable. was proceeding along the Bethnal-green road, the driver who was sitting on the shaft, fell offt and was the driver, the wheel. He was picked up, and taken to the London Hospital; but he was found to be dead on his arrival. On Monday an alarming explosion took place on the prethat during the absence of Mr. Hooper, his assistant was preparing a quantity of eider ointment in a pipkin over a was that the whole frontage of the shop, with the contents of the shelves, was blown into the street. Other parts of the shop were also injured.-On the night of Saturday, woman residing in Lisson-grove, on entering her house, after an absence of about 15 minutes, was alarmed by the screaming of her infant, which she had left alone and asleep in its cradle. On going forward towards the bed, whe was surprised to find her child covered with blood, which was flowing copiously from lacerations on the face rounds were inflicted by who was called in, said that the wounds were inflicted by a rat. A search was then made,
but without effect, until a dog was procured, when a large rat was discovered in the room was procured, when a large The child continues in great danger from the effects of he bites; and it is feared that serious conserpuences may ensue.-On Thursday afternoon, about three o'elock, as a man was employed in digging a grave in the churchyard of
St. Bride's, Fieet-street, which was intended to be lowered to the depth of 20 feet, he was overwhelmed by the sides of the grave giving way, and the mass of coffins adjoining fell upon him. Assistance was immediately given, but nearly two hours and a half elapsed before the body could be discovered, when it was found that the lower extremities were completely jammed under the mass of coffins. It was not until past nine $0^{\circ}$ clock that the body was extricated; but death must have ensued instantaneously after the neighbourh During the process of exhumation the whole neighbourhood was in a state of great excitement, and a
party of police was necessary to keep off the crowds which pad assembled. - By the returns from the city and liberty
had of Westminster, and the Coroners of the city and the eastera division of Middleser, it appears that during the eastera division of Middiesex, it appears that during the in those districts, chiefly owing to their parents leaving them alone in a room with a fire in it.
Inquests. -An inquest has been held on the bodies of two children of the name of Huddart. It appeared that four of the children in the same family were lately attacked by malignant scarlet fever. Two recovered, but one died. During their illness they were attended by a surgeon, who caught the disease from them, and has mother on Thursdason the inquest was held was that the given an undertaker orders to bury the children on Saturday. The circumstance excited suspicion, but it was proved that the mother had remored to ensure the safety of her remaining children. She also is now labouring under the disease. Verdict, "Died of scarlet fever. An inquest has been held on the body of a foreign gentleSunday. Mr. Kirby, of Surrey-street, deposed that deceased had lodged at his house three weeks, but had never spoken to him. He considered him a traveller for some foreign house. A letter came for him to witness's house, Deceased came payment from Robarts and Co. for 8.88. out between three and four. A gentleman residing in the Haymarket had seen deceased, whom he recoguised as a person he had been in company with at Spa, in Belgium. aut huthing died him as a traveller to a mine-merchant, asked witness for 101 , which he declined, not having been sufficiently acquainted with him. Deceased said a captain owed him 150 mapoleons, and he expected monty froms
Antwerp. He appeared in good spirite, and said he shouid go to Buden, when, 5 , gaom spirite, and syid he of money. He did not think deceased had lost money at ganibling, as he had said that he had 100. or 2006. if
required; nor did he think he deatroyed himself or met
his death from the hands of another; but that he fell in French into the river. A letter was found written bady, requesting her to remit him money, to inform bim how things were going on at home, and to direct to him at drowned," drowned, there being no evidence to show how deceased Benjamin Kuapp, scene-sthister been held on the body Theatre. It Kuapp, scene-shifter at the Marylebone ceased was at the back of the theatre since, whilst dedoor, he observed a horse belonginetre opposite the stagetors, riduen by a servant, apparentiy with a stope in it with its foot to see if such was the fact, when the animal, with its foot, struck him on the knee. The part immeCollege Hosnital swherl, and he was conveyed to Cniversity of the injury. Terdict. "Accidental death."- An in quest has been held at Islington on Miss Sherer, an and lady of independent ortune. It appeared that deceased, Who was asthmatic, and had not been able to obtain sleep veighbouring chemist, which she composing draught from a following morning she was found in a state of insensibility, and shortly after she died Medical that deceased died from the effects of the draught, which was shown to be of a narcotic nature, though the chemist strength. The verdict was, "f was under the ordinary strength. The verdict was, "That deceased, from the mortal effects of a certain dose called Batley's Sedative Solution, administered at ber own desire as a medicine remedially, then and there died.
St. Marylebone chureh, High-street the grave-digger of lying aldebone chureh, High-street, observed something churchyard from the strect. body of a male infant, whose head had been serered drom the trunk. There was a quantity of blood at the spot, and the head could nowhere be found. The body was conveyed to the workhouse. It was wrapped up in a sheet of brown paper, and the outer covering was the Carlisle Journal, dated December 19, 18*1),
Fires.-A fire broke out on Saturday at the chemical manufactory of Mr. Frieny, Tenter-ground, Goodman'sfields. By the exertions of the firemen the flames were soon subdued, but not till considerable damage had been sustaineu.-About the same time a fire occurred in the the East India-road, to Mr. Lloyd, provision merchant, in the East India-road, adjoining Messrs. Marshall s, oil and illow merchants. By the prompt arrival of the engines it was subdued, but not before the stabiing, with a quantity of hay and straw, and a raluable horse, were destroyed.Dresch, Broad-street, Bluomsbury. The flames of Mr. arrested untrl considerable damage had been done.-A great sensation was created on Tuesday amongst the Hhabitants of Deptford by a fire in her Majesty's Victualing lard. It commenced in a large kiln used for preparing oats for oatmeal. The instant the discovery took place the alarm bell was rung, and the military, police, the establishment ordered to the spot. The engines of flames. The gates were closed and great secrecy manifested, but the news of the fire soon spread, and hundreds of persons hastened to the spot. The fire was soon got under, and is supposed to have been caused by the overheating of the furnace under the kiln. - In reference to the subject of fires, Mr. A. Booth has published a letter in a morning paper, stating that it ought to be known that the attempt to arrest the progress of a fire in a chimney by any plan of putting a wet blanket or other covering at remedy. The most obvious mode is to extinguish the fire from the bottom, which may be done by throwing into the fireplace a few handfuls of flower of sulphur, which creates sulphurous acid gas, and which, ascending the chimney, will extinguish the flames, as combustion cannot continue in it; or, what is equally effectual, stopping the current of whole front of the fireplace
Robbery.-A few days since, a robbery was committed in the house of Mr. Besley, Northampton-square. The thieves effected an entrance from the back of the premises, arm, in the shutter of a back kitchen; by this means they were enabled to withdraw the fastenings, and make an entranceinto the the kitchen, they proceeded to the pariours, where they were evident'y disturbed: for although they stole a cluck, silver cruet-stand, conts, reat-coats, and other valuables, yet they left many portable articles of plate untouched. This is the second or third house mhere considerable property has been stoien and remored winour cetertion
Forgery on the Bank of England.-It has been lately discovered that a robbery to the amount of $4,250 \%$. has been committed, by means of a forged po ver atorney, street. The stock taken out was in the New Three-andThe forgery committed some months ago, bit trustee discorered till within the last few days. A ferw days since Picard was in town, but so ill as to be unfit to leave his supposed that he is now on the Coztinent. A reward of

## Frobinctal Xems.

Liverpal. - The interest excited by the melancholy sacrifice of life caused by the loss of the Covernar Fenner
continues unabated in this city. None of the bodies of
the unfortunate sufferers have yet been picked up, and it is conjectured that, unless they are on board the wreck, they
have been washed into the Channel. The captain is still here, and is ansions that an inquiry should be instituted into the cause of the collision prior to his departure for New York. He has raited upon the mayor, requesting
that he would cause an investigation to take place, but the that he woud cause an investigation to take place, but the the inquiry. The wreck of the Fenner was seen floating
off Lambay on the Irist cost, List week. The Notting. of Lambay on the lrinicust, hast week. The Notting and the result of his examination sums to have creared some as onishment that tie ste umer dud not also forunder. An action has been commenced between the owners of the steamer and the orners of the (formur $F$ chner, the one
claiming compenstt: of from the orher for damages sustained. Captain A wrows latain mat his helm anort according t, the rales laidduma by the Trinity Honse, and adopted by the steam stip owners of Livery the blame upon the steamer. - The duties received at the no less than furr millions seven humared thow- nd pounds sterling, and yet, on the accounts being subjected to the usual examination by the proper ofticers in London, the only error found was under 20 shillings.
Birmingham. - On Wednesday the audience of the theatre in this town was much alarmed in consequence of three large bags of flour being thrown from different parts of the gallery into the pit. The confusion created in all parts of the house was very great, as the persons in the pit hastened in a state of terror to the doors, believing the roof was faling in. Fortunately the only person inwho was krocked down at the donr. In consequence of the general alarm in the gallery, tile parties who comthe general alarm in the galery, thie parties who com-
mitted the ontrage were not secured; but from information conveyed to the poliee-offeer on duty, a man named Jaekson was taken into cuatody. He was brought before the
magistrates, and it was proved that he threw one of the magistrates, and it was proved that he threw one of the
bags. He was accordingly committed to taku livis trial at the neat sessions.

Kirkby Lonsdale.-On Tuesday as Mr. Donald, of Hayton, Cumberland, was walking over the bridge at this battlement of the bridge into the river and was drowned before any assistance could be procured
Hull.-From aceounts which hore beew published containing some details of the shimp inc of this port, it appears that the whale-fishery has ran my decmep dons rewent years. It is statect that there will this seasun be but one sent uppards of 61 ships to the $n$ rthern whate fishery.
Noultingham.-. 1 fatalaccident ocearred in this town o Saturdar, which wis at tirst supposed to be a murder. Mr. Astie, boistmaker, has at the back of his house an underground cellar, entared by a flicht of steps down a doorway, which a person eiterng has to stoop to get undar
this was pheed and :onn gratines suspersiod by hinges at much morn, fall into the cellar belum, unles cirs was nocl. This ceilar was let to a fruiteres nameed D. . . and his mike, who also fruit there. The w an in 11 irsler. it appeurs, was an habitual drumhar., nad having gom don this cellor, was fallen from its howrev, :rivg upon Las body. The immediate cause of death was emenssime of the brain. Th husband had, it was alleged, bean hand to use rough
language to the woman, and threatened tilat he would do language to the woman, and threatened tiat he would do
for her before the day was out. It appeared, however, that the woman's death was accidental. An inquest was held on Monday, and the husband declared that he was not prenent when his wife fell into the cellar, that they had frequent quarrels on account of her bad habits, but that he The coroner said that he did not suspect him of haviag if he hand userl the langruce at ributed to him. The man denied having used this longraze, and the jary returued a rerdict. "That decease, $\begin{aligned} & \text { wi, found dearl at the botiom of }\end{aligned}$ the stepa of a certaia cell re, and appears to bave died from any intrntional violenee having bzen used to cause her death.

necessity of the present vintation. The Court met again
the following morning, when the Rev. W. Harcourt entered into a defence of the chapter as to the frequent administration of sacraments. Archdeacons Corbett and Wilberfrre having made a few observations, Dr, Phillimore addressed the Court, and intimated that it was his anxious Cish to get through the whole of the business before the Conrt, and that he should issue a special manition demanding the presence of the Dean, who had no cause of of abence whatever, at the next meeting of the Dean and Chaptc:. The learned Commissary then adjourned the Court till Tussiay, the 23 rd of March. It was understiond that all the gentlemen who were absent from the chapter
without assigning any reason were pronnunced cont without assigning any reason were pronnunced contrby auc'ion by her husband for \%s. 6id., in the Pavement in this city.
W'yn:ar'l I'ark.-Further particulars have reached us Marquis of Londonderry, an arcount of which appeared in our last Number. An investication has been instituted for the purpse of ascertaining the cause of the fire, and from the statements of several domestics on the establishment it appears that on the night of the acciden', the housekeeper. prior to retiring to rest, went over the
mansion and saw the different fires in the apartments safely extinguished. She had not been in bed more than an hour before the alarm was raised, and on proceeding to the western wing of the mansion she discovered that part buildinzs adjoined the main building, which quickly ignited, notwithstanding every effort made to prevent it. The stemard states that on reaching the spot the conservatory and chaplel were in a blaze from the ground as an foof, and the western wing of the mansion was also on within four hours the mansion was completely gutted. The conservatory and chapel were new buildings; the latter mas not finished, and was heated by the fllues connected with the conservatory, which were under the superintendence of the head gardener. It seems that he had the firts alight in the conservatory on the day previous, but at the time of leaving the building there were no indications of a fire raging in the flues. The general imof the however, is that the fire originated the droyed is estimated at between $100,000 l$. and 150,0001 ., and his Lordship, it is stated, is wholly uninsured.

Dover.-For some weeks the steam packets at this port have bcen busily engaged in transporting large supplies of horses fint the French cavalry, agreeably to contract; and to-lay the Waterwiteh was azain londed with a cargo of these valuable animals for the prort of Boulurne.

Canterbury.-On Tufsday evening an accident occurred on the high road, beyond Harbledown Two citizens of this place were returning from the country in a chaise cart, the horse in the reticte, which he was unable in see owing to tia fors when presated. The hoy was thrown with violenee from his horse, and a fim ran passing at the momant, he was taken up, and his bas convered to the next statum. He w!s not seriously hurt, and the parties in the chnise were uninjured, although they were thrown ont, and the shafts of the vehicle broken.
Unrcester. - The Rev. Mr. Wehster, his family and domestic-, continue to prouress satisfactorily toward; recorery from the effects of the arsenic taken by them, as related in our last. Number, but tho facts bave yet tran-
spired that in the least dispel the mystery in which the spired that in the

Brighton.-A mackerel boat came into the harbour on Sunday evening with a cargo of 12,000 mackerel. They were immediately purchased for the London market. The 15,0c0. The present cargo fetched upwards of 150l. The vessel, which is a new one, made the passage from Plymouth in about 24 hours. She brought satisfactory news from the little fleet, most of the boats having been successful. One, however, had been taken smuggling, and tha adult nortion of the crew conmitted to prison. This circumstance has induced a sharp look-out here. It is stated that-the mackerel fleet cousists of about 45 from Hastiags, 2 i from Brighton, the same number from Wurthing and about 20 from the Cornish coast.

Chad herton.-A laughable scene took place on Saturday evening at a place called Lane's Pool. A party of LatterDuy saints, with their preacher, went to this place for the purpinse of dipping a woman, who appears to have been of larae shawl round liar waist, $s$ ) as to have a firmer hold ut her. He then gave ber a dip in the water, but shie, beine the heavier of the two, pulled hims in with her; and had it not been for the timely assistance of the crowd, it is supposed both wonld have been drowned, the pool beins supposed bath wonla have

Fenny-Stratforit.-A fex days ago a meeting was hel! in the chapel for the purpose of laying a rate. After a long discussion in reference to the churchwardens' ac-
courts, it mas inquired what proposition was to be subc.
mitted. . The chairmam replied that a 3 d. , rate was wanted. He was asked for what purpose; and the reply was, for past and coming expenses, and to pay of a number of
hills ho hat with him ; and that he shonld propese the rate. This, iowever, sas out siconden! It wis thes proposet as an anendmant, and seconsed. that the meetried without oppositis The chairman then said he roomld have a rate, for he would not be out of pocket, and woutd go out of office, and accompanied this declaration with an go out of ofice, amd accompanied this deciaration with an
that it was cnough to make a parson swear in the middle
of his sermon. The parties opposing the rate offered to of his sermon. The parties opposing the rate offered to
contribute something towards a voluntary subscription. Notice of a meeting to be held on the 26th, for the parpose of laying the rate, was posted on the chapel door last ration of the tareste rame t1...

Railways. - An accident of a fatal nature weutred last
 was incautiounty crossing the line by the min Fron Wroot ton-Bassett to Padatogton. He was struck by a projectivg portion of the engine on the head, and his death is supposed to have been instantaneoas: for apon his receivis from a serere wound on the homd.-Ay one of the thins
on the line of the Midland Counties Railway was coming
along on Saturday afternoon, a horse which was led along along on Saturday atternoon, a horse which was led along line of rails along which the train was coming, when it was killed on the spot. Fortunately no other injury re-
sulted.-Last week as the train of the Brandling Junction Railway, proceeding to Sunderland, rias a hout half-a-mile
from the Gateshead station, a sailor fell from one of the from the Gateshead station, a sailor fell from one of the
carriages, and was killed on the spot. An inquest has been held upon the body, when it appeared that the sufferer
was observed to have left his seat, and was passing along Was observed to have left his seat, and was passing along
the footsteps from one carriage to another, and unfortunately fell off. Verdict-" "Accidental death." Deodand
upon the engine and carriages, $5 s$. - The sisth half-yearly general nitetin of the 1r inietors of the Edinburgh and Cilasgons Raskay hiss Letis held. The directors reported favourbly of the torrese of the undertaking during the last six mencis : tiey Luth furworl to the opening of the
line in Anrust, and ther state that the sum expended on the work since hat June till December amounts to 194,1797. 7s. The report was unanimously approved. The ing, namely; whether the line, after its opening, shall be ing, namely, whether the line, after its opening, shall be
divided into two portions, called the Edinburgh division and the Glasgow division, the management of which is to be entrusted to two committees of the general board of directors, having co-ordinate power, as has been the case
during its formation, or whether the whole is to be managed as one entire and continuous railway by the general board itself. A series of resolutions were moved in favour
of concentration, and a concentrated board of managersent to sit in Glasgow. An amendment was moved that the line should continue to be managed as hitherto. The meeting decided in favour of the concentrated plan.- The attention of the engineer to the Midland Counties Railway Company was last week attracted to one of the arches joining having sunk to a depth of four or five inches, and the result was that the morning trains on Wednesday were drawn over that part of the line by men, the engine being detached, as it was deemed inexpedient to take it over on account of its great weight. A number of men were proto the same level as the other portion, and in the afternoon the trains proceeded as nisual.

## IRELAND

Dublin.- Tt has been stated in this city that Alderman Perrin, who lately absconded, owing a large sum to
many creditors, was on board the Governor Ferner when she struck the Notimgham steamer, and that he was among the pasengers nilo perisined in the wreck.-It appears from the l.te returns of the New Postage Act, that Ireland, $6,664 l_{0}-447,6641$. This is the clear revenue the money paid into the Exchequer. On looking back to
 Britain the Post Oftice under the new law has yielded 29 per cent. of what it yielled under the old. In Ireland it the charges of management absorbed only about 30 per cent. of the gross receipts; in Ireland they absurbed 51 per cent. In Britunn the groat amount of business and
the wealth and mimbers of the midule classes ensured a great inereave of correy ondence, but the opposite circumstmese of Ireland have left small room for such an increase there.
Limerich.-A cerrespo:dence has been published in the yapers be ween Sir D. Roche, member for this county, and Lurd J. Russell, which proves the disturbed state of that distrit. The firmer, it appears, having becn served with a notive to be in his phace cn one of the late divisiofs, replied to the noble Lurd, that he had paired with his neightour, Lord Ad ire; but added, that if his Lord-
ship wished for an attendance, he would at once end his pair with Low Adrre - though as there was in that district of late a di-position among some misguided persons to take up arms, he would rather not leave home for a short time. gentlemen $\mathrm{c}_{\mathrm{i}}$ areat int umace with the people would produce
Belfar
Belfast.-The Ulster Reform Association held a general meeting last week to support the Irish Registration Bill of Lord Morpeth, and to express their disapprobation of and after passing several resolutions expressive of the object of the meeting, a petition to Parliament was adopted, to be signed by the Chairnan on behalf of the meeting.
Dingle - A tishing-boat a few dars since puloted into this harbour a Swedish brig bound for G thenburg, from
Rin, folr iuvt. lis. at sca. She and the cress were in a famished condition. One died befure the ressel reached the port, another immediatel after. Two ...ver are a shore under the care of a phyemaciated. In corissquence of vi.a Captnin appearing in good health, and withert any symptom of starvation, suspicion has arisen thas some of tue crew were bady treated; that he, the Mate, and ne of the sallors, were allowed a sufficiency of fand to sus tin life. The magistrates. theresufficiency of ford to sus tin life. The magistrates. there-
fore, sent for a (urmer to have the matter investigated. A post-mortim examinaton wis made, and no mark of violence was sund; but as none of the rew conld speak Englisk, and no interpreter could be fiwnd who could speak or understand the $S$ wedish, no inquest cound ve held.
Nezery.-A calawitous occurrence took plack in Newry young girls, were assembled in a room of the Court-house

Which was in a dilapidated condition, for the purpose receiving payment of their wages, when the wall

## SCOTLAND.

Edinburgh.-On Sunday last, towards the conclusion the afternoon service, the congregation of Lady Yester' the ornamental plaster on the roof giving way close to the
pulpit, and falling with a loud crash. Fears were enterpulpit, and falling with a loud crash. Fears were enterfrom the wall immediately beneath where the accident occurred ; but no injury was sustained, though the plaster fell among their feet. The plaster had been lonse for some time, and the matter been represented to the proper authoheve it secured.

Elgin.-The following is an account given by one of the parties engaged in the chase of Cameron the murderer, whose appretension was mentioned in our last :-". Never
before did I endure such hardship as during four days, day and night, with a party of sizteen, in the upper districts of Banff and Elgin shires, over hills and snow, through glens and burns, in pursuit of the murderer, and our labours were at length crowned with success. After a run of up-
wards of four hours, two of the party enclosed him in burn, quite exhausted, standing each about thirty yards distant, the murderer refreshing limself by lasing water on his face; and when he looked up, as if about to attempt to run, he looked one way, and that being in the face of a Sheriff's officer threatening to shoot him, turned himself the other way, where one of my constables mas standinc, who, in an instant, presented a pistol and commanded him to surrender, which he did, saying. 'I am undune: I can do no more; I am the guilty men.' They instantly handcuffed him, and had him convered to this town, from which they were full 25 miles."
the erection of the British pint way, and a number of masons and labourers were precinitated nearly forty feet, with a quantity of ashler blocks and other materials which had accumutated upon the scatfold. As the dust cleared away, the bodies of the sufferers were observed lying about in every direction. An Irish labourer was found quite dead; another, with his skull fractured, and one of his legg broken in two places, died on Wednesday morning: another had his left eye knocked out, and his head and body severely bruised; annther, with a leg broken just above the ancle, and one arm broken in two places, is scarcely expectel to recover. Several others when it began to yield, two escaped almost iniraculous!y one who stepped upon the wall, and the other, getting one who stepped upon the wall, and the other, getting as to save himself from receiving any injury. The cause of the accident was the giving way
supporting the platform, and which,
a three-inch plank turned apon its end, a support inade quate to bear the weight which was placed upon it. This
had been noticed by the builder, and the men werc informed of it; but though some of them wan'ed it made more secure, nothing was done, and just b:fore the occur rence of the accident, it is unde stoou that the labourers placed an unnecessary quantity of stomes upon the scaffora. -An explosion of fire-dampt tolk place a few days since in the eoal-nita Keppoch-him, when two roung lals were killed on the spot, and another so dreadisulty burned that after lingering till Sunday last he expired. - Thromgh the persevering exertions of the authorit:es, Fatrich John Green a person deeply implicated in oun (hane Railway, has heen taken into custuly. It is supposed thet the wial the accol will the thil. The A ti-Com-w the plation of this citr hame announced a grand demonstration to take place here in Easter week. Many members of Parliament and the leading friends of the cause of Manchester are expeeted to attend on the occasion.
Delvin.-A melancholy occurrence happened on Saturday at the steading of Sir John Mackenzie, Bart. The person in charge of the cattle having oceasion to be absent, left them under the care of a poor man residing at spitalfield until he should return. Amonyst the rest was a valaable but ferocious bull, which, becoming irritated to fury by the presence and approach of a stranger, tire away the fastenings which held it to the stall, and rusbing uroa him under foot. He on!y sarrived sis hours, and has left a family to lament his lnss.

## THEATRICALS.

Covent-Garden.-A new comsedy, in five aus, en-
titled "Iondon Assurance", was brought nut at this theatre on Thursdar nisht. The plot. कh apyears to have beea construeted with great porer of invention, and
 from a street-quarrel, and acompanied hin to ins own houre, unkuown to his sire. who regards him as a patterm of virtue, meets 'squire Harkaway, who invites hime down to his sent in (iloncestershire, where there is to be a wed ding. His friend Charles, as he can accusunt fine his ah? sence frota home on the plea that he is at college,
aecompanies his friend nnder a feigned name. They muet with a huspitable welonme, luit great is the ainrm of Charles when he finds that the bridegroom is his own father, Sir Hareourt. who is about to marry Harkaway niece, Grace, with whom he has fallen in love at irst sight On sir H.'s arrival, the only course left for him is to deny
his identity, and the old baromet, thrown off his guard, is deceived. He, kowever, seada for his son from home,
when the feigned gentleman retires, and Mr. Charles, in kept up, though the likeness is admitted to be wonderful. To break off the wedding, advantage is taken of a penchant
which Sir Harcourt discovers for Lady Gay Spanker, whom the youthful pair beg to encourage his addresses,
and who, with disinterested regardlessness of her own chaand who, with disinterested regardlessness of her own cha-
racter, patronises the soft things Sir Harcourt has to utter, and consents to elope with him. The lawyer Meddle discovers this plan, and reveals it to the husband Adolphus, who detains his wife, while she laughs at the joke, which she seems to have carried a little too far. The conclusion is, the union of Charles Courtly with Grace. The principal and who was very successfully relresented by Mr of 60 , The nther chareters were. ons the whatw, well sustured. way of drcoration, ad the afpuintments generally were or a superior charater. The performance throughout favourably receivei

## Alistellancoty

Attachment of Birds to Mun.-A traveller in Catalonia has furnished the following relation of the attechmen of the feathered race to a member of a hermitage, formed on the piet rresque monntain of Montserrat. This hermi tage bears the name ut St. Catharine, and is situated in deep and solitary reress, but commanding, nevertheless, a most extencive nat puasing pro-pert at noomay, stretch\& C ., are contin cast and picturesque and secure locality under the foot of one of the ligh pines. Though this hermit's habitation is the most retired and slimy ab ofe of the many which are established on the mountain, and far removed from the din of men, yet the courtly, affable, and sprightly inhabitant seems not to feel the loss of haman society. Although what recompensed by the notes of birds, for it is their sanctuary as well as his ; since no part of the mountain is so well inhabited by tho feathered race as this delightfol spot. Perhaps, indeed, they have sagacity enough know that there is no ather saperfectly secure. Here the nightingale, the blackbird, the linnet, and an infinite variety of littlo songsters dwell in perfect security, and live in the most friendy intimacy with their protector, and obey his call. He hasbat to suak the who and matantly

Rolls' Counp.- Tyler $\nabla$. Fuler. - This case, "which has been several
daye, il gavs before judgment, said that this bill prayed that certain trostees of a fund for tbe benefit of
children should be made liable for then arising from the improper investment of the principal, and general Mismanagement of the func, and that Mesolicitors of the city should be orderd to repay the

 law and her children, plavert in, wewle vayy five per Cents, ,t the for life, and the chidren the esecrims, this art tomplace in the
Between that time and
 same trust, and ficr the same purpore.
fuands to a mort gage, in ordertme to increase the amount of the the come. One of the trustees objected to this change, and ultigrantor, who thok the trust under the same responsibilities as
his suecessors. Mr. Baxter, a bullder, who as well as Mr Fyler. was a client of Mesors. Blunt, Roy, and Bluut, wanted a sum of money on the mortose of arity. In wat this huse was sold for The trustees apylied the the solicitions to find ansther security as an investrment, ard they recommended that the money shoula be
re-lent to Baxter upon the security of two tiones -one in Rezent-

 although the mortmage was unlimited in amount upon either of
the securities, unly 1 ,joul. of it was paid into the hands of the trustees. This was manifestly wrong, and should never have In the course of time Baster became a bankrupt, and on the sale
 deducting the money due for ground-rent and other charges, there
remained hut 2,364 to to tiplidate the mortgare. There was ans erident deare om the part of Mrs. Fyler and her family to save ship ou trustees who act with the kindert impulses, must not be allowed to influence the Chart in its judrment, or it would open
the door to the riolation of all truasts ; and the court must refer the case as far as reysarded all the trustees to the master, to take on account of the transaction, and, report therean. Alos the solicifunds, on tie grounds that their conuexion with Baxter save them a direct miterest in nbtaiumg the moner nyon the insumticient security af the two houses, and that the money came intn their hot inclined to ko this leneth; but this was one of those cases showine the auficuities in which solicitors involved themselves when they injudiciously acted for two contendinz interests at the
same time. The monev was paid by Baxter to E. unt and Co. to the ammeunt of varionsey wassactions with him, and before he (Lord Langdale promounced for or awainst their re-ponsibility,
 - ice-Cbancsus in this cause was made before the Vice-Chancellor hy direction of change the venue trom Exeter to Londen of an issue which the Lord Chancellor hat drected to try the lesitimacy of Henry Gulling Isaac, through whom the defendants chaira the enormous property wish io the able frequently before the publice that it is only recessary now in state than the pruperty in question was settled
on Joseph Isaac for life, with remander to hin children, and that Joseph isaac had one child, at lea-t, by Leah Datell, whom he married in March 15.8.; and that the herentant's cane appeare to he that Heary Gulling Inaas, the chide of Jomeril laac by Leah Oact, on the last trial at Exeter the book o of the medical attemiant of the fammly were for the first time priduced, to lanw that medicome had ben used in the foman and to any young infant. some medical wituesses were exammed on the part of Mr. Gomupertz, who were rence did not take place till December 1784 ; and if that were so, it would have shown that Menry Gulling Isaac munt have ljeen witnesses in the neighbourhood of Exeter, where the parties re sided, were examined as to the recognition of Henry Gulling
Isanc as a legitimate child; but there was great discrepancy in Issac as a legitimate child; but there was great discrepancy in of his birth or baptism. The jwry, however, fownd for his legitimacy; but the Lord Chancellor, upon reviewing the evidence, testimony, and directed another issue. The application was now made to have the venne changed to London, in order that the plantiff might have the testimony of the metropolitan physicinss, altogether to go to Exeter, and others required enormous compensation for their loss of services. Sir James Clark and Dr Arnott declined attending. Dr. Locock require 100 gaineas a day,
and his attendance would be necessary for not less than seven and his attendance wour be necessary for, Dr. Davis, Dr. Merriman, and uthers, made similar de. mands. The plaintifs also asiked for a farth, to assist him in the trial. The Chacellor had adiTanced nim, ona a iurmer oceasion, the same amount, which had been expended. The defendants, it was said had obtained to be false. The defendants, in opposition to the motion, conwith that of the other witnesses who were at Rxeter, and that it

tated that the prosecutors were then unable to produce a matestated that the prosecutors were then unabe to proctuce a mate
nial witness named Fitzpatrick, whose evidence went to prove the actual loss of the Dryad. Fitzpatrick was on boarh the rese
when she was alleged to have been destroved, and he afterward joined Her Majesty's Navy, and was with the tleet in the Me
diterranean when the preliminary examination, took place before the magistrates. The indictment was laid before the true bill- - The prisoners, pleaded sot Guilty.- Patrick Wallace was first proceeded against. Witnesses were brought forward hy large sums in premiums on policies effected on gonts which had never been purchased or shipped; that their get from them the paynuent of the sum of 4000 .; and that they of the witnesses it appeared that the vessel sailed from Liverpmon, bound to Sauta Cruz, in Sentember tha9, and frout the hegriming of the crew. The ship proeeeded, but did not par-ue the proper
track. She met with no stress of weather, and the captain all the time had full command of his course. It would appear he ought
to have steered by the sonth side of the islaud of st. Domingo, to have steered hy the south side of the island of st. Domingo,
and so on to Sainta Cruz-hat such was the direct and usual courre, but he thought fit to go to the north side of Hayti, or St.
Domingo. At Anagada he made an attempt to rmi the ressel on a reef of rocks. That attempt, however, dint not chicceed, and he proceeded. He kept close in-shore until he came to a place called
the silver Keys, the ship upon a reef He was warmed of what he wan ahout, not fired by the captain of another ship, callet the Benconten: a flar was homsted to watr him of ans danker,
divert from his courae to run or the breat
This he did, and the vessel struck.
tow by a pilot-boat, and carried into a pas, toweret, taken paired, aud she again sailed for Santa Cruz. Again he gut out or
his course, for he ought to have made directly for Cape Curz instead of that he continued to creep alourethe coant , lokking for an opportunity to cast away the vessel; and when about 15 miles
from Cape Cruz he awain ran the vessel on the breakers. She mipht have been rot off: but the captain would not allow anything were lost. The captain and his men mert to Jamaiia, whence the men came home to England, but the captain had never returned, to prove that the prisoner was an accesory to the casting away
 them, claiming for stotal loss again and again, giving undertakings, sometimes in his own name and sometimes in the name of
his brother, to account for any goods that might be saved. -The prisoner's defence, as made by his coansel, Mr. Phillips, chieffy in representing what he termed the improbabilities of the
case made out against him: that the whole affair resolved itself into three points, and of each and all of them, it must, as a super-
structure, be assumed that Captain Loose wilfully cast away the vessel; if that was not proved, then there could be no case aapainst sufficient evidence to say that the goods never were on board. Even if these two points were believed, there was no reason th and that the captain intended to cast away the vessel ; that the evidence rested entirely upon the testimony of two. persont on the it wre to have hazarded his own life by casting away the vessel; that every exertion had heen made to bring the case home to the pri,
soner, and though his house had been searched nothing was fonn:
tend tending to criminate him. - Chief Justice Tindal summed up, and
ctocreit that tit juy mut not ennsider that Captain Lonse wa

 was cast away for the purpose ct defraumse the buvern or part orners than wicketiact. With reevecs to the-ting away, tiant waid
 fiod on that head, the wnitat then have to consider whether the
anion

SATURDAY, MARCH 13, 1841

The continual abstraction from a garden of the flowers, branches, bushes, trees, mowings of grass, and dead leaves, is an incessant cause of loss to the fertility of soil; for all these are formed by plants, in a great measure, out of the soil, independently of the atmosphere, and soil has little power of renovating itself When this happens in a farm or a kitchen-garden, the loss to the land is made good by manure; but in kept gardens, especially the little squares in front of houses, in the neighbourhood of London, much is gearly wasted, and nothing is restored to the soll. As this arises partly out of an idea that manure is required only by farmers and kitchen-gardeners, and partly from a practical difficulty in procuring fertilising matefials, it seems desirable to advert to this point.
It is no doubt true that ornamental plants are in general more nearly of the nature of wild plants than those which are cultivated for food. There is no difference, for instance, between an elm or an oak-tree in a garden and in a forest, except that the latter is usually the more healthy; and our favourite flowers, whether tender or hardy, are but little changed by cultivation, except in the case of florists' flowers. On the contrary, the cabbage, the carrot, the turnip, and evengrapes and corn themselves, are so unlike the wild races, that one can hardly fancy them to be the same. Now as the system of manuring is an artificial process, and seems unknown in nature, it does not a first sight appear that wild plants, when cultivated, can require the assistance of manure, notwithstanding the necessity of it to domesticated races. This idea is, however, founded upon error. In reality, plants do receive in the wild state manure in abundance, and, what is more important, that kind which is most suitable to them. It does not appear that animal ma nures are indispensable, except for artificial purposes, and when substances that are nutritious to man are to be procured in greater abundance than is natural the atmosphere no doubt supplies all the nitrogen gas that is really necessary to keep vegetation active and healthy. What is indispensable for plants seems to be decaying vegetable matter, and the various substances it comprehends within its tissues, and an abundant supply of such materials is annually furnished by nature. Look at a hedge-bank, where the primroses and violets bloom the sweetest; the leaves of trees that fall upon them, and the dead stems of annual herbs borne down by the winter's snow, are perpetually restoring to such places the fertilising principles which had been removed. Look at the same plants in a suburban garden-puny, weakly, dying creatures, starved by the neatnest that surrounds them, robbed of all that constitutes their food by the assiduity of the gardener, who may not permit "a litter" in his flowerbeds; and again behold them by the side of the ill kept footpath leading to a cottage-d or, in even more robust health than in their native dells. It is usually alleged that the air is unwholesome or that the soil is bad in gardens where such flowers fail ; but the truth is. that starvation is unwholesome, and that plapts dis like it, after their nature, quite as much as animals.
Nor is it to flowers alone, or to such small matters, that these observations apply. Much higher considerations are involved in the inquiry. Our London squares, valuable as they are for the health of the inhabitants, and beautiful as they might be as charming decorations of a crowded metropolis, they too are more ruined by the neatness of the gardener than by the sooty atmosphere that oppresses them. When a square is newly planted upon fresh soil, brought in to fill up the hollows formed by the builders, the bushes and trees grow freely : their leaves are broad and green, their shoots vigorous, and their whole aspect healthy. But as years pass on, the shoots gradually
become stunted, the leaves smaller and paler; Howers disappear, and health and vigour are exchanged for symptoms of debility and disease. A filthy slime oozes from beneath the bark-destructive insects find it a fitting nest for their eggs-disease is rapilly in-creased-swarms of maggots contend with the stillliving tissue for the mastery ; branch after branch perishes, and at last a stately avenue becomes a broken row of blasted trees! Nor is this an overcharged picture: witness the Birdcage-walk and the promenade on the north side of the park of St. James. In all these cases it is alleged that the soll is worn out, ex. hausted-and that the London air no trees will grow in.
But why should trees in London wear out the soil faster than trees at Windsor? In the natural forest, or the well-kept plantation, we see no decay of this sort. The tree throws its arms abroad for centuriesages pass away without diminution of health and vigour; and it perishes at last by accident. The truth is, that nature provides food, and man steals it away In a forest the leaves fall and decay; limbs torn oft by a storm, themselves crumble by degrees; the fruit drops at the foot of the parent, and all, but that minute portion which grows into another plant, rots and re stores to the earth what had been abstracted infts own formation; and thus life is perpetually maintained by the operations of death. In our squares and prome nades, on the contrary, not a leaf falls nor a bough is broken but is immediately swept away, for the sake of neatness; and the trees give up all that nature bounteously provides for their renovation, without re ceiving anything in return.
Let it not, however, be supposed that we are advocates of unneatness and of slovenly gardening. W only mention these things to call attention to a class of facts but little considered. Neatness must be maintained; and a garden would cease to be a garden if the perishing fragments of vegetation were allowed to strew the ground. What we would insist upon is, that if we rob plants of one kind of food because offends our eyes, we must give them some other to which the same objection does not apply. What that other may be, and how it can be best administered, must be the subject of future consideration.

## THE MANAGEMENT OF FOREST TREES

Tere following code of instructions will be found worth the attention of those who take an interest in the cul tivation of woods, plantations, and hedge-row timber.
Although pruning in ordinary cases does not ultimately increase the bulk of weight of wood, yet trees which are early, annually, and juliciously pruned will be improved in quality, increased in their useful dimensions and ultimate ralue, and a greater number can be grown on a given space. The value of a timber tree is much deteriorated by numeroas ramifications attrecting and retalning a large proportion of the elaborated sap, which if properly directed by judicious pruning, would go to form valuable timber in the main trunk of the tree. Thinning timeously prevents the necessity of excessive pruning. Thick planting and annual pruning come the nearest possible to the unassisted operations of natural canses towarts the formation of straight and well-gtown timber. Now, when we find this, which may be considered natural pruning, to produce the straightest and cleanest timber (when this is the object we have in view), ought we not in artificial pruning to attend to these processes of nature, antu endeatour to imitate them as closely as we are able?

In order to produce the most beneficlal effects, the pro cess of praning should be begun catly, and not carried to any great extent at ohce, but renewed every year as the tree advances, until it is brought to the most perfect form its nature will admit of. At this early period the knife is the most suitable implement, and the top is the principal part which requires attontion. In order that only one shoot may he allowed to remain as a leader, the others next in size, if not very inferior, should be headed down generally to about one half the length, and all the stout branches on the tree lieaded in the same manner. If the tree be strinted, carê muist bé taken to select a leader that is healthy.

We cannot too strongly reprobate the common error of clearing young trees entirely of the sfde branches up to certain height al the first prining, and afterwards to operate only on the under braiches of the tree. Thi side branches more vigorons than the leader. What an side branches more vigorous than the leader. When thi bundred ever becomes a lagge or valuable tree. It is one great and common error to cut off in one year branche to the height perhaps of 14 feet from a tree nut ajove 20 feet high. When this is done the trees remain nearly stationary, and are often stmoted to auch a degree as to
assume the appearamee of old age. Such din excess of amputation destroys the health of the tree, by depriving it of the orgaine by which a sufficiency of sap is secured,
to be iterwards converted
It is well kniown that then the feading shoot is destroyed, the growith of the tree is grealy impaired. It is the danger
of losing it which makes wise planters so careful in fencing their plantations. By increasing the number of leadin shoots the strength of the nutritious principle is rendered in a great measure ineffectual. To counteract the deviaperfect forms vertical tendency from nature's own more perfect forms, and to confine to the production of ome valuable slom the vegetative power which in a forked tree luxuriates in a multiplicity of branches with comparatively trifling effeet, is the maia object of the system here adro cated. Pruning is only of much advantage when performed early in those branches which are apt to bear too great a proportion to the leading branch, therebs modifying the tree, and directing its energies gradually to the top tre serving at the sazae time a sufficient quantity of folinge.
Where hedge-row trees and trees in open situations are intended for profitable timber, pruning should commence at an early period of their growth, encouraging the leading or main stem by displacing or foreshortening all over-luxuriant or aspiring side-shoots, by ripping off buds likely to contend with the leader, gradually clearing the lower part of the stem or side-shoots, and forming the top into the shape of a very open cone, that cone, while the tree are under 10 years of age, occupying nearly half the length of the tree, and generally diminishing from that proportion as the tree adrances, till eventually, when about 30 year of age the tree will have acquired sufficient length of stem the cone or top may occupy from a third to a fourth part of the whole length. All lower branches should be removed befors they exceed an inch in diameter. Tree thus managed will form close and healthy stems reithou ang interior blemish, and be trained to any reasonabl altitude, according to the soil, subsoll, and situation on which they grow ; but if neglected, such is the propensity of most sorts of what are called round-headed trees, open spaces, to run into branches, that without due attention the foliage will become too voluminous for the roote will ensue
The only rule to attend to is to leep the top taper preserving the leading shoot clear and free from clefts and the bole the thes only of the smanter kind that are requiste fin health bottom, of all its branches as it advances in age. But the bottom, of all its branches as it advances in age. But the bole should be cleared tery slowly at first when the trees are young. Only keep the branches that are left thereon amail by aftem pruning, so as not to injure the tree when ing abmes timber. By the heads of trees being kept tapor creased, on accomt of the sap being confined th the mos useful points, and not allowed to spread in bupport of large unnecessary branches. By attending to these rules, and the operation of pruning being executed every year, the brand be estended to a great height, and at the end the grand object attained, viz., the production of sound an to be most consistent with futt-sizet frees is 50 feet trank to 35 feet of head.
It is of the utmost importance that trees should heve ciretmference of stem in suitable propmrtinn to their height If the circumference is one inch for every 15 inches in height, so much the better. Trees should be examined every tear till they are 15 inches in circamference; tho highest will then be fully 18 feet.
All scientific planters agree as to the propriety of re mranches dead or decayed brandhes. Whenever dead branches are forn on any troe, they cabnot be 100 soon removed , and even Fr plantations, which when taicily planted are generaly self-pruaed, will be improved by having all the dead wood pruned off quite elose to the stem. By proper pruning trees cona stand closer togethe without requiting to be thinned, and the whole of the branches are enabled to retain their regetative power and live for any feagth of time in laxuriant beaaty. By a dif ferent management we often see trees thus redured to the appearance of so many tufted poles, presenting no obstruc tion to the winds which sweep through the plantations and render the groand so hard that the trees in consequence become unhealthy. But by this method the green branche preserve moisture in the earth to male them healthy, and to arrive al great maignitude. Provided we use proper caution in pruning, and do not cut very large branches, it is not of very material consequence what season we choome for the operation; and the smaller wounds catused by the pradent and gradaal pruning above reowimended will heal in a reasonable time and without any great damage at any season of the year
There is no doubt much to leirn respeoting the manage thent of wioder Experto crede. - Phifonsivid, Kilyy.

## RURAL CHEMISTRY. -No V

We now come to the consideration of an elementary or simple substance Thich has been aready more than once alluded to, namely, carbon or chis but comrinil charcoa is so nearly pure that we may consider thee two wards as meaning the same thing ; it is an essentinl 1 irt of ill kinds of fuel, or combustible substances, duriur the Larming of
Whath it combines with oxsgen. amt forms artsonic acid

 torms of carbon, for me hios the the brillim: culuurless gem called the diam ind is really pure carbon, there exist
ing hardly any cl. acical difference between that gea common charcoal. There ere many substances in natur which exist in two or more different states presenting very different appearances, but being really chemically the
saine. Thus, chalk and marble are very different-looking
substances, but they are composed of precisely the same
elements; the difference between them is not caused by heat, like the difference between the three states of water, but is wholly of a meebanteal nature ; the particles composing a piece of chalk are much smaller than those composing a piece of marble, and hence a piece of marble appears made of many little grains cemented together, whilst chalk is composed of particles so small that we are unable to distinguish them, and it therefore appears to be a uniform substance. The power which holds together the little particles composing the piece of marble or chalk, or any other substance, is callet eohesion, and this power varies in strength in different substances; thus it is far stronger in marbie than in chalk, and hence a piece of marble requires a much harder blow to break it than a
piece of chalk. In the same way we say that the particles composing the diamond are held together more firmly by cohesion than the particles composing a piece of charcoal Cohesion is, of course, quite independent of chemical attraction, for it holds the different particles of a substance together, constituting its meckanical strength, whilst chemical affinity binds together particles of two different substances, forming a compound substance, but does not in any way affect the strength
Under common circumstances carbon is one of the most unchangeable things we know ; neither air, water, nor any of the substances commonly found in nature, have any action upon it; and hence the practice of charring the lower parts of wooden posts which are intended to be driven into the ground; the coal of charcoal thus formed protects the wood from decay for a much longer period is heated, its chemical affinity for oxygen is greatly increased, and it no longer appears to be the unchangeable substance which it is whilst cold.
Carbon has been already stated to be a necessary element of plants, which though so various in form and colour, are nevertheless composed of very few elements. They consist almost wholly of the four elements, oxygen, hydrogen, nitrogen, and carbon, which, by combining together in different proportions, form all the principal parts of both plants and animals. The greater number of vege table substances consist wholly of oxygen, hydrogen, and carbon; whilst animal matters mostly contain, in addition to these three elements, a quantity of nitrogen. When wood is charred, its elements are separated from each other; the hydrogen and oxygen combine together and form water, whilst the carbon is left behind. It is the combination of the hydrogen and oxygen which causes that which we call flame. The combination of the char coal with oxygen goes on more slowly and steadily, the carbon all the time glowing, and continuing red-hot Whenever a sabstance burus with a flame, we may be sure bright, we are sure that it contains a good deal of carbon, for the flame of pure hydrogen is very pale indeed, and the brightness of a flame, such as that of a candle, is entirely due to the carbon contained in the tallow, which is burned at the same time with the hydrogen, both combining with oxygen of the air. As the products of the combustion of a candle are carbonic acid gas and water, it would be natucandle woild take from the vapour of water thus formed the heat necessary to 1ts existence in the state of yapour, and consequently condense it into the fluid form. This is an experiment which may very easily be made, for we have only to hold a cold glass at a little distance above the flame of the candle, and we shall soon find it lined with a fine dew of water condensed in this manner.
Carbon is unable to combine with oxygen at common temperatures ; it requires to be heated before it can enter into combination wilh a substance; but when a compound substance containing carbon is exposed to the air, It usually happens that if the other elements which it contains combine with oxygen, the carbon also is then able to combine with oxygen, and forms carbonic acid gas. Thus when a plant dies and decays, its elements separate and form new compounds; but the carbon is not set free in the form of black charcoal, but is slowly combined with oxygen. Hence we see that decay is very like burning, similar effects being produced by both, only that the change which is effected by combustion in a short time, and accompanied with a great deal of heat, is very slowly and gradually effected by decay, very little heat being at the same turae evolved. In both cases carbonic acid gas is produced, which is essential to the growth of plants, as they, being able to decompose it, thus obtain carbon. This explains the use of decaying vegetable substances in manures; they. of course, contain carbon, which is slowly combining with oxygen, and therefore always supplying the growing plants with car'honte acid gas, which being rather hearier than common air, remains near the surface of the ground ready to be absorbed by plants.-E.

## No. III.-The Red $\quad$ EnMology.

neus, who was Red SPIDER.-From the days of Lineffects produced by the Red Spider, to the mischievous no inspet has caused the gardener greater annoyanze; indeed, the whate race of mites is troublesome. from th se bites the leza in the autumns, to the harrent mite. that which is a still greater evil. What gardeners call the Red Spider, is, in fzet. act a spider. but a mite, the tearus founded wader that name, it is several species be cunas in appearanae, for it seems that no spot in a earden is sheiter. I suspect that the blistering of the leares, both
of peaches and nectarines, so long attribated to frosts, may often be, with great justice, charged to this insect; if so, ing for the unerring effects of his constantly secured to his trees perfect leaves, after they had been blistered toially or in greater part for twenty-five years, is explained. In warm and dry summers it does great injury to vegetation in the open air, and in the larly the lime, the younger trees being the greatest sufferers; and although scarcely visible to the naked eye, it occusionaty becomes so abundant as to form large orangeof these nests taken from the trunk and branches of a lime-tree at Broom-house, Fulham, were formed of closelyspun webs of very fine testure, varying in form, but generally tapering at both ends, which were open for the
insects to sally out of or retreat into; they were packed close in these nests in countless myriads, for one of the smallest nests (reduced at fig. 1) was 3 inches long, 1 iuch wide, and $\frac{1}{3}$ an inch thick, and must have contained upwards of a million of these little animals.
The property given to this Acarus of spinning a web, has led to its being called a spider, and also to its Whecific name of timelarius; but it in in alr respects a mite. top to bottom, but principally on the north side, with five silken threads, so numerous that the trunk looks glazed and shining ; yet it has never been ascertained from what part of the animal the threads are produced, and although it is natural to suppose that, like the spider, they are
drawn from the abdomen, I am pretty certain they proceed drawn from the abdomen, 1 am pretty certain they proceed
from the mouth. On lifting up the foliage, many Red from the mouth. On lifting up the foliage, many Red
Spiders will be seen actually running about on the under side of the leaves, whilst others are engaged in piercing them and imbibing the sap, thereby producing little yellow spots on the upper surface at first, which soon spread and acquire an autumnal tint, more or less inclining to yellow or brown, until the trees are enfeebled and defoliated, and delicate plants become sickly and die.

The Red Spider, if magnified, looks like a crab, of an oval form, with the legs so arranged that two pair are few long scattered hairs, and is of a somewhat transparent yellowish blood-coloured dot or spot on either side of the thorax; the larger specimens, which appear to be females, have a
bright chestnut-coloured body, the fore part of the thorax bright chestnut-coloured body, the fore part of the thorax
being ochreous (2), whilst the smaller ones have a leadcoloured patch on each side (3); unlike spiders, the thorax and body are so united that they form one mass; the head is narrowed and rounded, and from und $r$ the nose projects a short rostrum, composed I believe of two can be thrust out at the pleasure of the animal. Many Acari have two feelers like an additional pair of short legs, projecting from the head, but in this species they are very short and only two-jointed (2 c), and I cannot discover any eyes: the legs, which are nearly of equal size, are clothed with moveable bristles, and seem to be composed of five joints, besides a ninute vesicle at the tip, from which proceed a pair of bristly chws. The female is oviparous, and in wery young Red Spider has only six legs, the third pair $d$,
being wanting, but this pair is attained when the insect being wanting, but this pair is attained when the insect
changes its ekin; a rariety of sizes is them, independent of differences in the sexes, the females being the largest, with the oviduet slightly projecting, and quantities of their cast-off skins are scattered about the under side of the leaves which they inhabit.
The great increase of Red Spider is attributed to plants being kept too dry in summer, and many remedies have been proposed for its destruction ; but as sulphar proves ing it are recommended:-Wheel-bellows which hare hos to be filled with flower of sulphur, having a rose on the end containing some pieces of birds' feathers or cotton to scatter the sulphur more perfectly over the plants, was an peaches, vines, \&e. A quarter of a punned of fower of sulphar put into a watering-pht of water. and when wall stired, phused through a rose along the flues when they the foliage has expanded, produces the necessary effect, and in the course of a weelk the plants should be weli
syringed. For melons it is better to make six ounceso soft soap into a lather in a gallon of rain-water, and to
apply it to both sides of the leaves, as it will not injure the plants. Ruricola.

## COTTAGE GARDENS.-No. VIII.

Before we proceed to notice the sowings which ought direct the cottager's attention week, it may not be amisa to such for instance as the peas and beans p. 68, which will have made considerable progress by this time, and be the better for having the earth stirred between the rows, and
afterwards closely up to the plants. Chouse a dry day for doing this, and also for staking the peas; otherwise if the ground is wet the treading on it will be injurious another should be made about this time of the Early another should be made about this time of the Early
Frame, or Knight's Dwarf Marrow Peas, and of either Frame, or Knight's Dwarf Marrow Peas, and of either
the Windsor, or Long-pod Beans. For these the ground must be prepared in the same way as we mentioned at p. 68, and a row or two of Spinach thould also be sown as
before. In the border set apart for seed shed sowing of early Cauliflower, Red Cabbage, Brussels Sprouts, and early White Broccoli. A good-sized bed, in some part of the garden which has not been recently manured, should be dug and got ready for early Horn Carrots. They may be sown broad-cast. A very calm day must be chosen for this, in consequence of the seed being light and easily blown away. Some care is also necessary to separate the seeds and to sow them evenly over the bed; when this is done they are to be lightly trodden, and then raked until the seed is properly covered. It is better to defer a week or ten days longer the sowing for a main crop of Carrots and Parsneps, as if made at this time many This is now the proper time for Hollyhocks planting or sowing Peas, Lupines, Larkspurs, Stocks, Mignonette, and most of the beautiful Californian annuals which are so well calculated to ornament the cottage-garden during summer. They are generally put in circular patches of sis or eight inches diameter. Previously to being sown, the groand is to be stirred and made fine. The seed is then to be sown all over the patch; or a row may be made to occupy the circumference of the circle only, and atterwards covered
ligbtly either by raking, or with a little fine earth thrown over it.

Bees.-Those who have bees should still attend to the feeding of weak hives. The best time for doing this is the evening, as it will prevent robbery by stranger bees during the day. The food not consumed should be taken away in
the morning and restored again at nigbt until you find it is not required. The warmer hives are now kept the better, as it is considered to hasten the hatching of the eggs and promotes the prolific nature of the queen. This is the time to purchase stock-hives. It is not advisable, however,
to buy from your immediate neighbour, and for this reason, that although the bees will not fursake the bive, there is danger to be apprehended from being so near their former station. On returning home they will probably be confused, and many of them, perhaps, kiled in attempting to force their way into other hives than their own. When bees are for sale, the cottager should take the opportunity
of a fine day to able to form some idea of the health and strength of the hive, by carefully noticing whether the bees are numerous and active, and whether they fly away quickly from the hive, and return with yellns balls on their legs; these
being the most obvious outweard signs by which the goodbess of a hive may be estimated. Weight is no criterton ness of a hive may be estimated. Weight is no criterion
of value, except in the case of swarnis of the current year. -M. $\boldsymbol{E}$. $\boldsymbol{H}$.

## HOME CORRESPONDETCE

Tarred Canvas for Coverings to Pits would be more convenient than patent asphalte roofing, as it might be aailed on the top edge of the pit, and made to roll up on a roller. By putting aiais on the frame, the canvas would be a good protection for the glass as well as leave a space screens between. If nailed to wooden franies it would The canvas may ber garden purposes, andig to the purpose for which it is required.-W., Brighton.

The Effect of Steam upin Mushrooms.-Your correspondent in $p .85$ will find steam very beneficial to mushrooms. Last summer I converted a shed into a
mushroom-house, heated it with a tlue along the centre of mushroom-house, heated it with a tlue along the centre of
the place, leaving a cavity between it and the beds; this the place, leaving a cavity between it and the beds; this
flue was covered with foot tiles, bollowed out to hold water; the sides of the beds were pared with similar tiles, and form a level walk 2 it .6 in . wide. When the fire is lighted water is poured on the walk; the water evapora-
ing as the flue gets heated, the house is filled with steam. ing as the flue gets heated, the house is filled with steam
The crbp of mushrooms produced during the autumn and winter far exceeded anything I have hitherto seen, and sufficiently proves the beneficial effects of steam. My beds are composed chiefly of horse-droppings and leaves well mized together, and firmony beaten down to about 1 ft thick; the spawn is placed in this to about its own thichness, and the bed is then covered with $2 i n$. of stiff lower Straw in placal ower the bed fill the minat humid atmo
after which thy are filly exposed to the hum after which thyy are prody exposed the the hand and the more the steam the fince and more abundant are the mustruans. Jurng the ate frost, water was pure
salk three or four times during the twen' 5 -fur thors,
 J. Grifin, Cowley, Exeter.-M.Mr. Judh has also had 3 good supply of mushrooms during the whole of this long and nerera winter, by making his beds in November in
two close brick-pits. The mushrooms appeared in December, and fresh dung has constantly been applied to the pits, which has kept up a contin
highly beneficial to the mushrooms.
Neglected Plantations.-Some neglected plantations which came under my care some years ago had neither been thinned nor pruned, and consisted of oak, ash, elm, larch, spruces, and Scotch pine. The larches were much the highest and stoutest, which i considered ho left for timber. Many of the oak, ash, and elms were sickly, little better than fishing-rods. and nearly as bare of little better than fishing-rods. and removed about onehalf of the spruces and Scotch pine, but only a fer of the half of the spruces and Scotch pine, bising oaks; all dead larches, to make head-room for promising oaks; all dead cut close off by the bole, and the wounds were painted over with lead-coloured paint. The next season the spruce and Scotch pines were removed, except in the skirts of the plantation, where they were ornamental and formed a sheiter; a few more larches were cut out, and many of the smallest oak, ash, and elms were cut down to the surface of the ground for stools. With a little care and attention the following summer to clear away all the shoots but the strongest, these, by the end of the season, were in many cases upwards of six feet high, and after five years were finer and more promising trees than many of those that
Erysimum Peroffskyanum is called an annual in the Gardeners' Chronicle, and all catalogues which I have seen. I beg to say that the plants which bloomed and seeded with me last year are stocky vigorous specimens now, and some of them have never ceased to flower up to the present time, though but slightly covered with snow Subscriber.
Gesneria elongata is an excellent drawing-room plant. I brought it into the house from the greenhouse at the beginning of December 1839, and it bloomed well for two months. I have not been so fortunate this year, having been from home during part of the severe weather; but the plants, though I have no doubt on one or two occasions exposed to a temperature of and ready to blow.-A Subscriber.
Scale Insects.-I am afraid the various scale insects affecting oranges, \&cc., are not injured by any exposure to the air during the summer months. They breed faster on my orange-trees in the summer than since their return to the greenhouse. A careful attention to stripping of the
old bark will go far to clear vines from this nuisance.A Subscriber.

Every one must have observed that frequently two trees of the same species-especially the hawthorn, the sycamore, and the horse-chestnut-in a similar aspect and, apparently, soil, will differ regularly every year by a week or a fortnight in the times of their leafing and shedding. Will any of the readers of the Gardeners' Chronicle suggest a cause for this phenomenon :- Charcoal-dust -

Charcoal-dust. - A covering of half-an-inch of charcoaldust spread over the soil and mized with it just before onion-seed is sown, will be found a remedy for the grub and for mouldiness; it also prevents the roots of cabbages and cauliflowers from clabbing.-A. $\boldsymbol{H}$., Noltingham.
Alstrameria acutifolia, a Hardy Plant.-The Alstroemeria acutifolia has been noticed as having withstood the severity of the winter, both in Guernsey and in Devonshire, but I am not aware of any general notice having yet been given of its cultivation as a hardy plant so far north enduring the sererity of the winter, but also of producing seeds for propagation, is placed beyond a doubt by one having been planted out in the spring of 1832 against the east end of one of the hothouses in the Birmingham Bominjured up to the present time, flowering beautifully uainjured ; in pars matoring many capsules of every season and in most years maturing many capsules of
seeds, which are ripened by cutting them off with about two feet of the stalk in November, and hanging them head two feet of the stalk in November, ands in a dry part of the stove until the capsules begin to open, which is generally in February. The situation where our plant stands is by no means a favourable one, and it receives no heat from the hothouse pipes withinside. The space for training the plant is limited, being only ten feet long and two-and-a-half feet high; the shoots are trained horizontally until they reach the extremity of the space, and they are then turned and trained back in the same manner. The plant generally sends up from six to eight shoots in a season, each of which is terminated by a cluster of flowers. The flowers commence opening in the beginning of August, aud continue in succession until November; and the duration of each flower is about two or three weeks. Whether the horizontal manner of training makes the plant blossom more freely, I am unable to say, but it is mortiny of imitation on a less limited space, as it keeps the Howers so low as to show them to the greatest advantage; whereas when the shoots are trained erect to the height of 15 or 20 feet, very litcle of the beauty of the flowers can be seen. The flowers are murh deeper some emineut cuitivators, who have seen our plant when some emineut cuitivaturs, who have seen our plant when
in flower, have supposed it to be a superiur variety to that which is grown elsewhere, and they have solicited plants. Which is grown elsewhere, and they have solicited plants. is 18 feet long, and with several of ti.e leaves 10 inches fong, by two-and-a-tialf inehes hoad. The shoots are
frequently muci longer, but never hadl leaves so large upon the plant before. The seeds are suwn in heat in February or March. and the young plants make their appearance in about six weeks afterwards. When strong enough, they are potted siogly ia 60 -pots, and shifted progressively into
larger sizes as they require more room, and by autumn many of them are full four feet in height. These should
be kept cool and rather dry during winter, and then be kept cool and rather dry during winter, and then
planted out against a wall, where they are finally to replanted out against a wall, where they are finally to re-
main. The soil for potting them in is light sandy peat main. The soil for potting them in is light sandy peat
and loam; and when planted out, they should be also placed in a light sandy soil, two feet deep, on a per fectly dry bottom. I hope that these few remarks may
bring this beautiful plant into more general cultivation. bring this beautiful plant into more general cultivation. -David Cameron, Botanic Garden, Birmingham. [This in the most perfect health, 9 inches long.]

The Galranic Protector.-I wish to notice a rather important omission in my previous description of the Galvanic Protector. The strip of copper should be placed within half or one-third of an inch of the top of the zinc plate; and the remaining upper portion of zinc should then be turned over, so as to form a horizontal lip projecting over the copper. This is most material ; for whilst last year testing the efficacy of the plates, by causing slugs to creep up them, 1 observed that, in a few instances, the creature elevated its head and horns when it came to the copper-plate, thereby avoiding the galvanic shock. It thus passed upon the copper, but is furt progress war in all cases rudely stopped by its horns (the seat of sensation and touch) now coming of necessity in contact with the overhanging edge or border of zinc. As the plates are frequently soiled and encrusted with dirt as they come from the hands of the workmen, it is requisite that they should be rubbed bright and clean when put into use Knowing the never-failing efficacy, the durability, and may add, cheapness, of this contrivance, I am satistied that it will soon be generally adopted wherever anything of value is cultivated; and hence I am desirous that its application should be clearly explained and understood at the outset. The hoops for protecting dahlias I had made for sixpence each; they being six irches in diameter and four inches in depth. I would beg to observe, that horsehair, cut small, and the beards of barley, (fresh saw-dust is preferable to either.) as recommended by Mr. Veasy, afford a very inefficient protection from slugs. After a shower of rain they are of comparatively little use, and are, moreover, not always easily to be procured, as well as being uncleanly in their appearance,-F. R. Horner, M.D.
Birch Stools. - There is no doubt that "A Young Forester" (p. 150) is right in recommending birch to be cut down in autumn rather than spring. But the object of bush correspondent (p. 8) is if the plantations are at all thick and of the are of 20 years , I fear that no managemen whatever will cause shoots from the stools to grow strong enough to form underwood. Having a number of birchtrees in the plantations here, I have always observed that, except along the edge of a plantation, the shoots from birch-stools come up weakly, and soon die off; in fact they will not grow'without plenty of air and light, and this is the reason why they succeed better in coppice-woods.
Holly, yew, box, or laurel, planted in groups, make good underwood, and may even be planted in plantations which are in the progress of thinning.-J. Henderson, Milton. To secure Mushrooms from Woodlice.-Procure a few
helf-inch boards, about three inches broad, one edge having a groove to contain liquid, and the other being wedgeshaped to insert in the soil. When the mushrooms appear, the beds are surrounded with these boards, and the earth is pressed so tightiy round them as to prevent the iasects from getting underneath them; the grooved upper edge is then filled with tar, which effectually preserves the mushrooms from the attacks of woodlice, which cannot pass over the pitchy barrier.-T. Sellers. Another correspondent recommends the corners of the mushroom-beds to be kept dry; these will become the favourite retreat of the woodmay be killell by hundreds ; with scalding water
To destroy $\dot{W}$ oodlice.-Mr. Sellers destroys woodlice by putting between the hot-water pipes of his pits a quantity of fern cat like chaff, which attracts them in large numbers ; he then takes a kettle of boiling water, and pours it over part of the fern. Those which escape run towards the dry fern, which, after a little, is soaked wita boling water in the same manner as pests will not be near so numerous.

To Shade Dahlia Flowers.-Procure some hazel-rods from two feet to seven feet long, according to the height of the floweroto be shaded, and about an inch in diameter, on the other a thin piece of deal siz or eight inches square.

The board must have a hole in the centre to admit the stem, and by making a cut with a saw from the outside to he bole in the centre, the flower may be slipped through without injury; and to keep it in its position the branch may be tied to the rod. When the flower is fixed, invert a
pot over it suffiently large to cover it without touching
the petals, and the blossom will be protected without imjury, and all the beautiful shades of colour preserved
which otherwise would be destroved by the sun and linht, whe otherwise would be destroyed by the sun and light, The hole in the bottom of the pot admittiug sufficient light. The flowers should be placed under the pots when little more than half blown, and in hot dry weather they will be benefited if the pots are taken off, immersed in water, and replaced drang the heat of the day. In rainy weather the wet should be excluded by putting a little cotton wool in the hole of the pot, which also prevents earwigs from enteritg; if this were done every night, and the board oiled, these Dahlia pests would be almost entirely driven awar. To prevent the pot from being blown off a few nails should be driven round the outside of it, or it may be tied on with matting.
Hothouse Heating. - From the observations that have been made on Mr. Penn's system of heating and ventilating hothouses, I am induced to send you a slight sketeh of a plan that I have adopted for about 12 months, and which is found to answer very well. I do not claim to myself any credit for the invention, as it is only a copy aight alterations) of what has been done by som friends of mine; but, having seen in several houses the original plan of Mr. Penn for obtaining a circulation of air, \&c. by inclosing the pipes in a case, I thought, upon reflection, that the same effect might be obtained by much simpler and cheaper method. Although my mode may not produce such a cmror air, it sho duce, in my opinion, the desired effect. The house to which I applied it had been in operation for a considerable time previousily as a Pinery, and is heated by hotwater pipes passing round three sides of it, with a walk a the back and a pit in the centre, and a row of large slates round the outer edge of it, to prevent the tan coming in contact with the pipes, as shown in the sketch. To carry out the object I had in view, and which I am inclined to think is the gist of Mr. Penn's system, that of obtaining a moist air, instead of a dry or burnt one, it was only necessary to sink some small drains through the walk at the bach the house, below the level of the bottom of the pit and thence to carry horizontal drains across it, bringing the mouths of them up immediately under the water-pipes ect of which, I thought, would be to heat the stratum of air in the drains, which rising thereby would cause the change thus taking place in its volume to be supplied from the drains or air-holes at the back; an farther, thinking that I might promote the draft slightly

A. Ground line. B. Pit. C. Walk in the Honse. DD. Drwins. of slate.
of drains.
thereby, I caused the slates in front of the pipes to be inclined a little to the wall, so as to narrow the space above them. The result is a mode of heating and ventilating with which I am perfectly satisfied; the peculiar burnt smell that is always feit in forcing-houses is completely got rid of. and the sensation, even if very hot, is periectly agreeable. After it had been in operation for come minths, I was desirous of knowing by experiment whether or not any benefit was reany dervicd the test, arrangement, and for the purpnse of fuing it to the test, ordered all the air-holes mo pheing large raving-thles was very effecturily done by plaing large paving-thles
over them; some hours after, on guing in all the usual dry and unpleasant smell of burnt or heted air was telt; on taking off the tile azain, the smell, witer a short time, entirely di-appeated. It is necessiry to throw water frequently down the air-holes or drans, by wheh means the air in pascing through sains its humidity. Not
being thorourty satidflel witil my feelings only, in bought one of the sirall weather houses, or hycrometers, acting by a figure of a mana and woman altermately appearing, as the atinosphere is dry or damp. When the airstantly out ; but when the apertures were closed, the lady
made her appearance to inquire into the state of the case: of course ...me hours were necessary to produce the change. With regard to fuel I have not found any difference that can be noticed; the consumption in general appears much the same as formerly: I am inclined to drain below through which the air in passing obtains moisture more re cularly than by either throwing water on the floor or even by placing evaporating pans on the pipes, as it is difficult to get a slightly moist air constantly water is thrown on the floor, for a time the house is very
moist; as it gets hot the water evaporates, and it then becones dry. Evaporating pans may also produce too much at particular periods; but on this plan the water
being in the buttom of the drain, little or no evaporation can take place, except by the air passing through; and thus a continued moist air, in contradistinction to
one, is obtained. $-R$. $W$. Barchurd, Wardsuorth.
Hints on the Management of Peaches and Nectarines. Maiden plants should always be chosen, as they may be have a clear stem, with but few pleases. The stock should swell out well; ;ad it ought to be budded from 3 feet to $\frac{1}{\frac{1}{2}}$ teet high, according to the height of the wall against branches neartheground become covered in the winter with wet and dirt, which causes the bark to crack and the branches to decay. If the tree is bodded high enough the
branches will radiate in every direction, and those that debranches will radiate in every direction, and those that dependicular; and no part of the wood will saffer excepting the ends of the descending branches, which mayy be shortened during the winter-pruning, and they will again fill the wails following season. Alertes ifoot, according to the strength of the plant. Daring the following summer, the branches should be trained about 6 inches or 8 inches apart, and proned the succeeding winter to make them produce double the number of shoots the next year; and ficient number of branches. When these have acquired their full length, the extremities will be about 10 inches or 12 inches apart. On the upper mide of each principal , anmer, shot six inchee apart, and the following winter cut every other one back to the bud next the principal, to make wood the next summer. In the winter the bearing wood of the preceding summer should be pruned back to the nearest bud to the If aphides appear in the spring, syringe the trees with tobacco water, when the sun is shining upon them, two or three times during the season. If red spider infest the plants, wash them with sulphur and water mixed to the The borders should be 10 feet or 12 feet wide, and 2 feet or 3 feet deep, well drained, and consist of turfy loam maaure and leaf-mould. They ought not to be dug more than 8 inches deep, and should be but little cropped. The that the water way be carried off in spouts; and if these that the water way be carried off in spouts; and if these covering to protect the blossoms from the spring frost. or Galande, Noblesse, Late Chancellor, Late Admirable Barrington. The nectarines best worth cultivating are Elruge, Violette Hâtive, Early Newington, New White,
Hunt's Early Tawny, Pitmaston Orange, and Brunon. John Haythorn, Wullaton Gardens.
$V$ ine-border.-In answer to some inquiries, Mr. Halliday says he followed no author when he made his vineborder, but was guided by physiological considerations The border of the new vinery mentioned in p. 59 was originally inside the house, but that was removed, and a place prepared on the outside where none had previousl existed. The flues in the house were rebuilt in such position as to heat the lower stratum of air before the
upper; to erfect this the trellises were taken down and new oues put up in such a manner that the vines ran up the centre of each light instead of along the rafters.
The border is 32 ft . long by 21 ft . broad, 9 in. beig The border is 32 ft . long by 21 ft . broad, 9 in . being
within the house, and the rest without; in forming it, the ground was excavated about $3 \frac{1}{3} \mathrm{ft}$ deep, a large drain made all round it, several holes for the reception of the depositions from the border, and, to lessen the chances of the large drain being chuised up, a number of smaller ones were placed diagonally about 5 ft , apart, the space between placed a quantity of tile and brick rabbish, and then some whole being about a foot thick, leaving 2 ft 3 in . for the Whole being about a foot thick, leaving 2 ft 3 in . for the manare and brick and lime-rubbish, the whole forming compact mass. but allowing water to pass through it
freely. The rines are planted on that part of the border Within the house, and opposite to each plant is an arch to allow the roots to get out; and as these arches are about
3 in . beneath the sonl. the stems are well proterted. The greater part of the vines planted were from eyes one year
old, and these producd the strongest woud and the best
 Mr. Hallinty never saw any produced so quikely of as the
later, tumgh he is sure he might have had his a month sooner if he hau applied a little fire-heat. The rines left ingrod in int first as long as it ratter, wo that the bearNeither wips nor flies are admitted within the hove.
and thus bagging the bunches is saved; though bags are of little use, as wasps will eat through them. Cegetable agaries.-A White Cameilia juponica was white blossoms. This year it has geveral years to bea some pure white, some a blush, some streaked with pink, and some with exactly one half pink and the other half white. Several trees in the same garden at Oporto have marvel in this case is, why should the variety now occur, the blossums having been pure white befure being trans planted, and for several years after?-M. C. [Such sport
as are adverted to by our correspondent are less uncom non than may be supposed, and have given rise to some fixed varieties. A Peach tree will oceasionally bear a Nec tarine ; the old buff Chrysanthemum often sports to lilac. No one has ever accounted for so singular a dispusition.
If the varieties are handsome, M. C. had better try to fix them by budding or inarching. 1
Susa Coccinea.-I cuitivate this plant successfully in my plane manner :-In the latter part of February I pu and the drainage covered with a little moss, which prevents the soil from settling in such a manner as to interfere with the superabundant water being carried off. I then plunge he pots into a bottom heak, between 1 and for until the plants begin to fill them with roots. I water freely, but goil. If too much water be given the soil will become sour, and will not allow the water to pass freely through it, in consequence of which the leaves turn yellow. As soon as the pot is filled with roots I shift the plant into a pot a size larger. When the plant has got root-hold in this pot it becomes more vigorous and requires more water. After it has filled this pot with rooks, a final shifting into a pot at least 16 inches in diameter may be given, and two or three suckers may then be his last shifting I pres many in bucking. A as may be required for succession plants. When I perceive the plant growing vigorously in this pot, I cover the surface of the soil with moss and place the pot in a shallow pan of water, and water it at least once or twice a day After this treatment the plant begins to send up one large leaf after another, and presently a magnificent flower ap pears. I continue to keep the plant growing till Novem ser, after which I gradually get it into a dormant state by withholding water during winter. It is allowed to remain dry till the soil separates from the edge of the pot, and man thus be kept in a cool greenhonse till spring. The eucker talen off at the last potting, after beiog shifted into pots 10 inches in diameter, and thrown into a dormant state at the same time as the old plant, will not only be much better wintered in the greenhouse, but will flower much earlier. In those parts where suckers are left on the mother plant, the centre will bloom by the beginning of May, and the suckers will tlower in succession during the latter end of July and August, the latest flowers keeping fine till Christ mas. Instead of taking of surkers in the spring, I leav off or three on the mother plant till July, then take them plants of last year. It may be asked, why are the drainag and the surface of the mil oovered with moss? It is this the moss on the surface prevents evaporation from the soil, and that over the drainage acts like a sponge, absorb ing water from the pan, and thus feeding the small fibres of the root without soaking them in moisture. The compost I nse for Musa coccinea is equal parts of black boy earth, well-rotted leaves, and fresh loamy turf from a ric pasture, chopped fine and well mixed. In watering, always use rain-water if possible. The following are thi cumference of the stem $3 \mathrm{in}$. ; at the surface of the pot $6 \frac{1}{2}$ in.; height, including the flower, rather more than 5 ft . The largest leaves were 3 ft . long by 11 in . broad not inclading the footstalk. This plant was grown in inmmon vinery after its second shitting; had it been grown G. G. Wetson Vorton Vicar - We received a spe cimen of this plant from Mr. Watson, and a more beau difal instance of cultivation could not have been produced. Vitality of Ferns excluded from Air.-I have a speci men Hymenophyllum tunbridgense which has bee reserved in a bottle, corked and sealed over, for more tha three years, and which even now, judging from its appear ance, would seem to be living. For the first tro pears looked as fresh as when first introduced ; and although some of the fronds have now become black and shrunk many are still fresh and expanded. On communicatin this circumstance to a correspondent, I received the fol lowing statement, which may be worth recording as an example of tenacity of life belonging to Ferns, in common monget ances the Mosses:-A hay in rela its $C$ rach, whe hal been above two vears in a portfolio in very dry wam room, and after planting it in a pot and covering it clore, she had the satisfaction to see it come again to life. Afterwards a fresh young frond came up, was given, and all the ald ones have now withered amay

## Horticultural Question.- $\overline{1}$ shall be glad of some advice

 plan. The suil of my present orchard is a cold clay, and I am not able to devote any other ground to form a nem orchard; nor am I willing at once to destroy the presen trees in order to make a new soil and replant it. I pro-pose, therefore, between each row of the present trees to dig a border four feet wide and 18 inches deep; the bottom I sthall cover with a thin coating of concrete, and the sides
with slate; and $I$ shan run a tile drain along the middle of the border at the bottom. and then add a layer of brick-rubbisb, and till up with loam, turi, and dung; roots prumed pears, apples, and prums, and seep the take away the old ones, which, from growing in clay, pro duce bad crops of ill-flavoured fruit. The concrete will prevent the roots from getcing into the clay, and keep them near the surface; and the slates at the sides are intended the old trees getting into the new-made borders. If you ffectual mode of H. $K$

Root-pruning Pear-tress.-Having had my attention called to the root-pruning of pear-trees by Mr. Rivem, and the two following months, and finding that some young pear-trees were growing very luxuriantly in the summer, If the end of July 1 cut the roots of three or four, and that the operation had the nowise injured thereby, and exect (as 1 conceive) of formin the trees of the same kind which were not pruned haviny no bloom-buds on them. I observe that root-pruning of pears in June is recommended in the lst volume of the p. 197. I should observe that both the trees mentioned in the above work and those I pruned were growing luxar riantly and in strong soil.-H. Glo. $^{\text {. }}$
Glasing without Pusty--C.E. saya that the mode of ase; for paty, mentioned in p. 121, is already in both used for plate-glass and sheet-glana. The about two feet in length, to make as few joints as possible. When plate-glass is used, it is not polished as high as it is for mirrors.- We doubt very much the expediency of employing this eort of glaring for small squares.]

1. On the Vegetation and Botany of the Island of Madeira Madeira may be termed a Trunsition station berween the Euro-
pean and the Arican vegetation, and intermedrate between the temperate and intertropical regions of botanical gengraphy.
Although the island is off the African coast, between 32 and 33 Although the island is off the African coast, between 32 and 33
degrees of Y. latitute, and only 240 miles N.E. of Teneriffe, the character of its Flora is on the whole most allied to that of the
northenn shures of the Mediterranean. At the sam. tume man of the plants, althoush belonging to European1 same, are species
not found in Europe ; many are common to Madeira only with
te the canaries and the Athantic istes, and somes species are entinuly most ylurious character, buth as repects the beauty of the cul
tirated parts and the sulinitity of the mountain ditrtict of the
island. In the interior, and on the north coast especiall, the
tra traveller meets with combinations of nastural objects such as in every conception one had previously formed of the grand and sublime in scenery. This is greatly the result of the geologicil
ctaracter of the isiand. The mountrins have notbing of the in
tegrity of outline and tame regle tegratty of outhine and tame regularity of folme nothang of thass appeaz
in some of the formatuons of older geological epuchs; but are compused of the must recent basalts and other inchens rocks,
and, on a scale of Alpuite magnificence, present a seene of the
ain wildest contusion, being everywhere deeply riven by rugged
ravines, the preciptous clitits of whieh are cluthed to the ver
 altogether perhaps the finest in the world. The island was stated
to he almust wholly composed of volcanic furmations, basalts
and basaltic cunclomerates aud uther ibneous foch forming the
whole mass of the sland. it mer or two places there appear whole mass of the island. At one or two places there appear
beds of tertiary limestone and other non-volvame formations
but in so very sinall a proportion of the whule surtace as to have but in so very sinall a proportion of the whole surtace as to have tered places of the solith coast the re is quite a tropical tempera where the invalids reside suring the winter the climate remains
more genial than our English summer, at the same time that on more genial than our English surmmer, at the same time that on
the opporite cuast and in the interior of the island, the mountains
are covered with snow, and all the ngour of a lorthern winter i experienced. Between these extremes every degree of climate Dates, Bananas, Limes, Custard Apples, Ginaras, Coffee, and such plants ripen their fruit in the gardens on the coast, the Potato
the Apple, the Strawberry, and many European plants flourist above. From the mountains rising up clove from the sea, it ts close approximation. During winter the residents on the cooss
lonk up from amidst their tropical regetal ture, through avery degree of climate and verdure, to the bleakest montho of the year arain, while on the coast the summur fuliare
is yet amaltered and the inflnence of the sum little diminished the opper parts of the landscape present the varieguted tints and the
fading foliage of autumn. Dr. M. mentioned the following the must marked zones of botaminal climate on the south side o

## MISCELLANEOUS

Climate of Chusan.-We collect the following scraps upon this subject from Lord Jocelyn's recent book on the een, covers a large space of ground at the mouth of a valley, or rather gorge; the neighbouring hills are clothed with wild shrubs, of which the tea-plant is the most predominant." In another place he speaks of the hills being overed with the tea-plant, cotton, dwarf oak, and a species farbutus, rich with its red fruits; whilst their lofty summits towered on high, clad in the bright green pasture. of the different ravines, some lost in the many windines in the hills, whilst others, again, swept down to the gea-shore, laden with their luxuriant crops of rice, bending to the worning breeze. "During the men's breakfast, we were all deserted except one, which appeared to belong to the head man of the district: it was buried in a grove of palm and citron trees, and other shrubs unknown to us: and surrounded by a garden where the Cape Jessamine and other sweet Huwers perfumed the neighbourhood." And again:-"Amongst many of the beautirul groves of selected as the resting-places of mortality ; and spots are these tranquil scenes where the sweet clematis and fragrant lowers help to decorate the last home of man, the most careless eye cannot fail to nark the beauties of the grare." t otherwise appears that the climate is excessively hot in summer, and that the island deserves the name it bears of

Effect of Coloured Light on Plants.-I planted in a box some curled cress-seed, and so arranged bottles of carmine fluid, chromate of potassa, acetate of copper, and earth was exposed to light which had permeated threefourths of an inch of these media. For some days the only apparen: difference was that the earth continued amp under the green and blue flaids, whereas it rapidly ried under the red and yellow. The plumula burst the cuticle in the blue and green lights before any change was vident in the other parts. After ten days, under the lue finid there was a crop of cress, of as bright a green as any which grew in full light, and far more abundant. The crop was stanty under the green fuld, and of a pale unhealthy colour. Under the yelow sitution but two or aree plants appeared, yet they were less pale than those which had grown in green light. Beneath the red bottle the number of plants which grew was also small, although rather more than in the spot the yellow cuvered. They too were of an unhealthy colour. I now reversed the order of the bottles, fixing the red in the place of the blue, and the jellow in that of the green. After a few days' exposure
the healthy cress appeared bighted, while a few more
unheallay plan:s begns to show themselves from the in-
fluenee of the blue rass in the spot origually subjected to thuene of the blue rays in the spot orimathaly subjected to
the re. I. It is endeat from this that the red and yeitow her = not merely retard germination, but pasitisely deateny ace rital prmaciple in the sead. Prolonged expmare uncovered, with genial warmth, free air. and indeed all that In induce growtin, fails to revive the blighted veretation. luids, but the results have been the same. At this time have the above facts strikingly exemplinted where the space covered by the bichromate of potassa is without a
plant. These results merit the attention of those who are ngaged in the study of vegetable economy. Do not they punt at a process by which the productions of climes more redolent of light tham ours may be brought in this island to their native perfectio

Victoria Rhubarb. -This variety is well admpted for forcing, for it sends up very large leaf-stalks which can be gathered in a young and tender state, in much greate

## ziebictos.

On the Vegetation in the March of Brandenburg: a con tribution to the Geography of Plants. By Dr. Barentin Abstracted.

- Relation between Vegetation and Climate.-The most important agents in the growth of plants are heat ight, and moisture; so that there is scarcely any othe element necessary to their prosperity. The relation belevelopment is so great, that the latter may be frequently predicated by a knowledge of the former; and this has bee done with great accuracy where no instruments have been possessed for determining the latter
There are some plants which are diffused over the whole world. Such are: Lemna minor, Lemna trisulea, Marstica uadrifolia, Comvoluvtius sevivm, सestuca Arundo Phragmites, Panicum Crus-galli, Soirpus Le ustris, Cladium Mariscus, Juncus effusus, Solanum ni rum. Nast
Many of the lower forms of plants heve also a wide ex tension. Meven found Permelia perforates on the Sand rich'Tslands, and Ehrenberg discovered Aspergillus glaucus in Africs under the same circumstances as it occurs i Surope. If this miversal extension of some plants doe ot offer any proof of the inffuence of climate on vege ation. it offers a powerful obstacle to the supposition tha piant: were originally diffused from some one spot of the earth that elevated itself above the waters which originall overflowed it. Recent investigations on the generatit equivoca should malse us caroful in ercluding the inflnence of circumatances both in the production of play ani nimals.

The infuence of external circumstances is remarkably seen in the fact first pointed out by Saussure, that the emperature of hills decreases as we ascend from pisins, in he same manner as temperature decresses as we procecd tempertatre in either circpuatances will be found the cha racter of the regetation of the place. Thus Sa.cifrage ppositifotia, Silene acaulis, Dryas octopotala, Erigeron
coasts, are found in the snow-region of the Alps. The nalaya have an cutire'y Europuan phrsiognomy. Prunilia ruluaris. Thymus vpulium, Origarolum vilgare Romuculus areensks, and other plants characterising the regions of both. Humboldt finund in ascending the moun tims of troptcal America, that recetation assumed succes sive phases, similar to those in passing from the equator to the poles.
It is not. however. always the same species that is exended, but the same type is found imprinted with a different form. Orchidacea, Leguminosæ, and Cyperacere are found all orer the earth, but their primitive form assumes as many characters as there are circumstances to give them existence.
The cause of these changes of form existe principally in climate, the great variety of which depends not only on geographical latitude, but on proximity to the sea, extent of continents, height of plains, fe. Some climabea are favourable to the development of one Nof plant, and ome to another. On the west cass of Norway, the Fi the Pine ( Pinus syluestris) extends to $70^{\circ}$. On the other the Pine (Pinus syluestris) extends to $\%$ On the othe hand, in Siberia, the Fir extends much farther north than the Pine. This arises from the former being able to bea warmer summers and colder winters than the latter. The family of Grasses is spread over the whole earth, but it forms vary: in the tropics they are arborescent; in colde regions they form the clothing of meadows anu plains in Asia they are endowed with peculiar thick leaves to esist the influence of the atmospheric currents to which they are subjected. In the distriburion of many other plants we find the same changes of toroz accurding to the circumstances in which they are placed.
2.-Rplation of Plants indigenous to the March with thase of other chmates.-For this purpose three Floras vere compared: Wahlenbery's Flora of Lapland; Koch's Flora of Germany, and Fon Buch's Catalogme of the plants of the Canary Islenda. The mean temperature of Lapland is from $32^{\circ}$ to 380 , that of Germany $45^{\circ}$ to $50^{\circ}$ the Canary islands $70^{\circ}$ to $72^{\circ}$. The tables give the number of species fonad in 22 orders, and the proportion par these tables it was found that the following increase and decrease took place, proceeding from north to south:-

## Dicotyledons <br> No Uniformity of

Liliaceæ
Chenopodiac
Labiatze
Solanacea
Crasisulacere

## Monvcotyledons

## Monvcotyledons

From these tables it appears that the Grasees are almont equally distributed in the cold, temperate, and warn abundant in the temperate zones, as also Crucifere, Umellifera, and Boraginez. The Orchidaceæ are entirely preat extremes of temperature, cold nights and hot days. great extremes of temperature, cold nights and hot dayb. ension of agriculture, the character of the regetation has in many places been much altered during the last century Extensive swampy low-lands, with immense sandy tract aterspersed with Lakes of various sizes, was the characte of a great portion of the country. Under these circumtances, countless marsh and water plants, with willows alders, service trees, and sedges, gave a charucter to the regetation which it does not now posses. Many plant bat are now looked upon as weeds have been introduha ss in suc great numbers in the neighbourbood of Berlia, was intron duced in recent times from Peru.
The number of plants considered at the prement day a belonging to the Flora of the March which have been in roduced at various times is more considerable than generally supposed. The following have been introdicel from various parts of the world, and
wild or cultirated in great numbers :

From Europe.-Beta vulgaris, Lycime barbarasm Peiroselinum salirum, Faniculum vulgare, scanaite cere folium, Anethum graveolens (from Spain and Portagal), Linum usitatissimum, Spirsa salicifolia south-east a Europe and siberia), Brassioa oleracea (England), Ra phanus sativus (Porturali, Errum bens, Suinnum Ma rianum, Scorzonera hispasicta, entureanv). Lrris Dalmatia), Abies pectimat (Sule of Eurpei' populus ulhaz (East of Europe), Popatus dilalata (Italy. (ireece); hose whont the name of the place are from the Soutio Europe. 2. From Asia: East Indies-P
 Sum Siusrmm
tauricum. Polyg. fogopyrum, Alriplex hortensis. From Persin -Poys Hippoastanum, Lopilium sativum Mforms alba, Cannabis sativa. From various regions o the West of Asia-Borago officinalis, Acovss calancs Pisum sativum, Centaurea cyanus, Agrostemma Gizaga,
Papacer Rhwis, Prunus Cerasus, Mfolva crispa (Syria) Vicia F:bus. Platanus aceriforia, Rophanus Rapha
 teenti, Panucum. 3. From America : Nbentana rustica, N. Tujucundo from Nostia ime fica-Uratis atrictan Enothera biennis, Cornus alba, Aeser dasyearpum, Pres neng gerotina (Virrinia), Rokiote, Porud-acacia, Five

Strobus, Populus monilifera. From South AmericaPhaseolus multiforus, Solanum tuberosum (wild in th colder regions of the Cordilleras of Peru and Chili),
Wi inomgia parvifora (Peru), Helianthus tuberosus (Brazil) Tables are given of the number of species of each na tural order founded upon Ruthe's Flora of the March of Brandenburg, and Stange's Enumeratio of the plants growing around Frankfort. From these it appears that there are 1283 species of Phanerogamous plants, of which 308 are Monocotyledons, and 197 Dicotyledons, being in the relation of about one to four; a relation precisely the temperate zones. Monocotyledons are always found in great abundance in low wet countries; thus in Holland they form 25 per cent. of the Flora, but in Rhenish Prussia they form bnt 22 per cent. In smaller districts, Mo nocotyledons are always found to prevail more in swamps Whilst in dry sandy districts, Dicotyledons have a prepon derance greatly above the average.
The difference in the
The difference in the prevailing number of species in natural families can be observed in smaller districts than those laid down in former tables. On comparing the
Floras of Pomerania, Brandenburg, and Baden, the increase and decrease from north to south will be found as follows :-

| Incrax ${ }^{\text {a }}$ | Decrame. | No alderation. |
| :---: | :---: | :---: |
| Dicotyledons | Monocotyledons | Polygonacee:, |
| Itiliacer | Graminete | Chenopodiacer |
| Euphorbiaces | Cyperncese | Laminacese |
| Rosacere | Iuncacer | Boraginacere |
| Cruciferse |  | Umbelliferse |
|  |  | Legamnosse |

- Time of Flowering. -It is well known that the time of flowering of plants differs, but for want of sufficient observations we cannot say precisely what are the influences by which this is regalated. Schabler pointed out fome time ago the fact of a great difference in the time of fornd that plants around Parma, which lies $90016134^{2 m}$ south of Greifswald, "flowered $36 \frac{1}{2}$ days sooner than at Greifswald, and drew from thence the conclusion that Greifswald, and drew from thence the concld be four days' difference in the time of flowering of the same plant situated at a distance of one degree. It was also inferred from the difference of mean temperature is varions districts of Europe, that where the meas was $1^{\circ}$ Reaum. ( $2^{\circ} 25 /$ Fahr.) lower, there the plants would flower 71 days later. Observation since the publication of Schubler's views have confirmed generally the accuracy of his inferences. There are, however, many circumstances that may interfere, in comparing large disof flowers at the given periods.

Researches have been made upon the time of flowering of plants in the March of Brandenburg, and tables are given in the diflerent month of the year. On a comparison in the different months of the year. On a comparison of rived at, that the flowering of plants in the March commences with the northern forms, and passes gradually on to those more south, and with the increasing temperature the plants abounding most in waruer climates are deveSoped. The subject of the time of fowering will bear great develapment, but requires much additional correct information,

Mrs. Koudon's Ladies' Magazine of Gardening has arrived at two Numbers, which include a variety of into lady gardeners. Each Number contains une coloured plate of flowers and several wood-cuts. The former are copied from Siebold's work on the handsome plants of Japan, the latter are in many cases reproduced from the Gardenars' Magazine. The execution of the coloured plates is good; but we fear Mrs. Loudon will only cause disappointment to her readers if she allows them to suppose that such plants have ever flowered in this country, and can be procured in the Nurseries. We happen to know that a good deal of dissatisfaction has already been produced by the figure of the beautiful Paulownia impefialis, given in the firt Number, where, by the way, the colour; there is nothing in the statement that accompanies it to explain that it has never flowered in Europe, sequence has been numberless vain inquiries after it cpon turning over the pages we find some articles for Mossessors of small gardens, particularly one by Captain Mangles "t on the means of improving the view from the windows of a back parlour in a suburban villa," accomNanied by a plan and section. Several pages in each Editor, illustrated with wood-cuts and short descriptions of the proncipal rock gardens in this country: those deacribed in the Num'ers before us are Hogle House, Ches ter, and Redleaf, Keat. Articles on the contecting and management of Foreign Seeds, by Mr. Beaton; on the caltivation of the Chrysanthemum in the open air, by Main,-will be found among the more interesting matter. CALENDAR OR OPRRATIONS for the eneuing Week, which they inabibe and pert with moisture and heat, it occurs to us that serious errors are cownitted in their managen to their nature of properties. To dig or trench, withong clay whilst was stiff sate is cold before so hard, that neittrer sum, air nor what cail intuence it. On the other hand, earth nanturaily of good nise calnot be too strongly recommended; and manare is to be gardens, because more practicable, the most effectral and per-
manent improvement of the soil should be the object of the culti-
rator ; this in clay soils is accomplished by usine mean
the the soil dry and friable, ssch as mixing sand or lime weans the ma-
nure; but hest by buning the surface and efrectual draining
 bastard trenchius in the management of strong land, when the
subsoil is retentive this conist- $m$ throwing the top -pit forward, and digsing the bottom one in the trench, by which means drain-
ase
as assh tedt, the rmots allowed to penetrate depper, and the
 are perfiap the beet vegetable cultivators in the the worlit. Akain,
in the treat which is neetmary to secure averave crops, is very expen-ive,
and the ferthity induced comparatively temporary; but if clay or marl were mixed largely with the manure, althongh the expenve
makht at firet be increased, the result would unquestlonably he permanent improvement. We are ourselve, reaping the benefits of past treatment of this kind, and strenuussly recommend it
the attention of hose who Inay bo untirtunate enough to labo
upon soils whose nature requare, entire renovation or change. I.-KILHES-GARDEN AND URLHARD

Privert-Much will depend upon the treatment the plants have recelved through the winter. In shitting, those kept hot ought
to have heen shitted before this; whilst those kept cool will not have commenced growing so early, and may the shi ted now, see
our two last Numbers.
such as are potted may be kept closer

frequent de wingz overhead, which is much better than watering at the roots until the phants have established theselves in

NOTES FOR SMALL GARDENS
Any alterations in gardens should now

## Any alterations in gardens should now be performed, such as maning beds on lawns and forming new walks. The first thing to he done in maning a new walk is to take the levels of the surface he dome in making a new walk is to take the levels of the surface,

 ing off the water, and the quaztity of coil to he remored frromeach sude of the walk to make it unitorm. When this is done, the width of the walk must be marked wut, and the onil excavated
to the depth of a foot or tifteen inches. The excavation should
be filled up to within six inches of the surface wath coarse gravel be filled up to within six inches of the surface wath corarse sravel
or small stones; on this three inches of finer sandy gravel should
be laid, and then three inches of good binding gravel must be well rolled after it has been raked even. In cases where
the edging is box, it will be found most advisable to plant the
edring beture putting on the second pravel previously to laring down the fine gravel ; but where it is torf,
venient time. Oll walks should be cleaned and hoost con-
hoeing, if they are raked and rolled, they will have all the appear
ance of ance of new walks. Continue to propagate and reput all plants
in rooms and preenhousen, as mentioned lavt week. Lonk elosely
after insects; for as the spring advances, aphdes fest the growing shoots of plants, and should be at once removed by fumigation with tobacco. If any turf is to be laid downs, it
must not be longer delayed.

## ENTOMOLOGICAL NOTICES.

## by the Bud Tortrix (Orthotenin Turionana), and the Tarpentine

 Doth (Orthotenia resinellat). They are both very small, measureing, when their wings are expanded, 7 or 8 lines across. The
upper wings of the former are cinnamon-coloured, prith upper wings of the former are cinnamon-coloured, with several
silver shining streaks upon them. The under wings are, in the
male, whitsh grey, and in the female dark grey. The mo, hs ane to be found in July and August on the lark of Scotch Pines and
Silver Firs, which ther resemble so nuch that they may be easily
overlooke. The female at that time lays her egge, and in lo or the end of October a caterpillar, has reached the largest centrat lowing April. When full-grown it is nearly half an pupa the fol-
a brownish red colour with darker transverse ring of head. When the heart with darker transverse rings, and a browd injury is done to the growth of the trea. The best remed, 年, is to Tortrix in the auturm or early in the spring. TTae Turpen ine
Moth is particularly injurious to Silver Firs, as its casemi wheh is ochre yellow, with a brownish red heads, gnawis the
young shoots till it reaches the alburnum : and the sap which issues from the opening becomes its nourishment; and this fluid enlarges and becomes hard externally, and the growth of the tree is
mpeded. The moth is blackish browts, with tine silvery the upper wings

NEWS OF THE WEEK.
The arrival of the overland Miils has supplied us with news of great interest from India, China, and the Levant; and the packets from New York bave brought recent and important intelligence from the United States. The news of the China expedition is not more favourable than that brought by the last Mail; the negotiations proposed by Admiral Elliot have produced no beneficial result, and the Admiral has retired from the command, leaving the conduct of the expedition to the Commondore, Sir Gordon Bremer, who has threatened immediate hostilities if the negotiations be not henceforth carried on in earnest by the Chinese Commissioner.-A communication from our own Correspondent gives a clear and comprehensive account of the present state of India, ar.d details the events consequent on the death of the two last rulers of the Punjaub. - In the Levant, affairs have again assumed an unsettled aspect, in consequence of the conditions which the Porte has imposed upon the Pacha in the three firmans transmitted to him. It appears that among other stipulations, these firmans impose on Mehemet Ali the adoption of the recent laws and ordinances of Turkey, the abolition of slavery and its consequences, and the payment of the arrears of tribute due for the last three years; they likewise require him to build no more ships, to reduce his army, and to surrender the appointment of his officers to the Saltan ; and they reserve to the Porte the right of nominating the Pacha's successors from among bis desrendants. To the last of these provisions the Pacha strongly objects, and he has appealed, it is said, to this country for a modification of the condition. Apprehensions are entertained in Constantinople and Alexandria that this disagreement may re-open the Eastern question.-Advices from New York show that the relations of this country with the United States are becoming more and more seriously complicated; the Committee on F. reign Affairs bave reported on the demand of the British Minister for the liberation of Mr. M•Leod, justifying the proceedings of the State of New York, and arguing that his capture was justifiable. It was generally believed, even by the members of this committee, that the Report contained the issue of peace or war. In connexion with the same subject, a bill has been introduced into Congress to complete the necessary armaments and put the frontier defences in an effective state The Senate of Maine has taken steps to remove the British troops from the disputed territory; and it was supposed that Mr. M‘Leod would be convicted and executed
At Home, Parliament has been occupied with the introduction of new bills for the amendment of the criminal law, abolishing capital punishment in certain cases, bat retaining it in the code, with transportation and imprison ment. In the dehate on the Jews' Declaration Bill, Lord J. Russell expressed his intention to support British Jews in obtaining for them all the privileges belonging to other subjects of the Crown; and in a long debate on a motion for giving instruction to the working classes it was stated that Government are taking measures to establish schools of art and design in large towns. Sir Robert Peel, in reference to this subject, declared his persuasion that the Government should provide not only food for the mind, but the means of recreation and manly exercise, by setting aside spaces of ground in the outskirts of our provincia of both Houses has been chiefly occupied with details of general business, and with private bills.

Prancl-Forged Letters of the King.-The editors of the joumal ha Franco, charged with having forged and published three letters purporting to have been writ ten by Louis Philippe, have been liberated ing that there were no grounds to justify the accusation.
Trinl of the National.-The Chamber of Peers as of the Nationarl, charyed with having published a libel on that House. M. Delaroche bein 5 still confined to his bed by illness was represented by his solicitor, and M. Marie, his counsel. The Recorder having read the indictment, M. Marie rose to present his defence. He right of acting judge and party in its own case, and ubserved that it was inupossible fur them to pronounce in then defended the article itself, and contended that, though ritten in unbecoming terms, it contained no offence to the Chamber. The defence being concluded, the House verdict; and the editor being found guilty, was sentenced rerdict; and the editor being tound guilty, was se
a month's imprisonment, and a fine of $10,000 \mathrm{f}$.
The Armaments. - The Committee appointed to inves-
igate the supplementary credits for the year 1841 have examined Marshal Soult and M. Guizot relative to the credits of $179,707,435 \mathrm{f}$. granted by ordinance to defray the expenses attending the increase in the land and sea forces, made in consequance of the treaty of the 15th of July; and those Ministers are said to have declared that the situation of afiairs in Europe would not permit the Go-
vernment to reduce the effective of the land and sea forees during the year 1841.
lavery in the Colonies.-During the debate on this question in the Chamber of Deputies on Saturday, M. asy, who had been a member of the Colonial Committee appointed by M. Thiers, stated that while the laterable to emancipation of slaves, professed to be favourable to the emancipation of slaves, objects for which the Committee had been appointed.-
M. Guizot declared that the present Government was M. Guizot declared that the present Government was
sincere in its expressed desire to afford the Committee on sincere in its expressed desire to afford the Committee on of slavery in the colonies, and likewise in effecting reforms in the administration of justice in them.
The Prince de la Moskowa. - The Prince de la Mos-
cowa, son of Marshal Ney, has taken his seat in the Kowa, son of Mars.in Prerivisly to have written two letters, one to M. Dupin, the other to General Excelmans, asking their adrice it he ought to take his seat in a Chamber which had condemned his fati.er,
and which refused to reverse his sentence. Both were of opiniou that he might take his seat. The Prince sought to speak, on the occasion of his first appearing in the
Chamber; but the President, it is stated, refused him permission. At the commencement of the sitting of the Chamber on Monday, Count Molé rose to offer a few observations in reference to this subject. He entered into directed the conduct of the Chamber in the unfortunate trial of 1815, and said that, for his part, if he had the misfortune of sitting as a juror on that occasion, he defied

Private letters motice this incident at some lensth, and tate that it is considered to be a manouure at the ruile instrument to revise batred against the elder branch of the Bourbons, whose unpopularity had of late been rapidly deareasing.

The Madrid journals are principally occupied with the Regency queation; they state that it was generall believed that the Duke de Victoria was positively aiming at becoming sole regent of the kingdom.-It is said that Cortes, but that a speech will be read in her name considered to be the Dulke's influence which has decided the Regency to come to this resolution. The papers state that truops continued to march from the adjacent parts to in raising a sum of 25,000 piastres, required by the Duke say that the General Junta of the Lordship of Biscay was about to be held, to consider the infringements of the fueros by the Government.-It appears from the journals entered into Catalonia by the mountains of Campredon.General Saldanha is roported to have denounced to the Spanish Government the existence, at Zursa Mayor, of guerilla of 200 men, ready to invade Portugal; and having
demanded the removal, into the interior, of the Portuguese refucees residing on the frontier, the Regency hat aceeded to the request, and forwarded orders to that effect to the frontier authorities.-The Spanish ambassador at London, it is stated, has forwarded to the Minister of rejecting the finding of the arrears, with an interest per cent and demanding thet the intereat raised to 5 per cent., and the payment of the dividend suspended in November, 1836, be completed.
-The journals from Lisbon afford us little bews. It appears that the difficulties of the Administration are becoming daily more embarrassing. Neveral mo difications in the Ministry had been talked of, but nothing had been as yet effected. Since the failure of the attemp to get the support of Viscount Sa da Bandeira, it is said Duke Pr Cabinet. The Duke of Terceira has arrived at Lisbo from Oporto, his mission to protect the Northern provioces against Spanish invasion being at an end.

Gegmany.- The papera are much more pacific, and express greater confidence in the preservation of peace. The last intelligence from Berl propenin tains the elements of constitutional government in Prussia. The decree was read by the President, and announced that for the future the States would be convoked every two years, and that the publication of the debates of that body would be permitted; that a draught of a bill for reforming the law of elections would be forthwin submit ted to the Diet. as nell as others, for facilitating and inproving the administration of justice. It concluded by announcing that, notwithstanding the extraordinary expenses incurred in placing the army on a war-footing, a would take place immediately. It is also stated that the Cabinet has accepted the propositions of the Pope to put an end to the differences existing in Prussia between the Executive and the Papist bishops. The Archbishop of logne, the prime promoter, was to be created a cardinal an approaching consistory, and was to name his coadjutor at Cologne on his return.-The journals announce that several other political arrests had lately taken place at Mentz and Frankfort, and that the Federal Diet was now in possession of the plans of the conspirators; that the Austrian General Von Hesse was preparing to quit Berlin
for Vienna ; that the exchange of courier between those for Vienna; that the exchange of couriera between those two capitals and St. Petersburgh continued to be extremely
active; and that the Emperor of Ruspia was expected at Berlin in the month of April.
SWITZERLAND. - Accounts from Switzerland state that affairs there remained in a very unsatisfactory state; that thinu strian note had given rise to suspicions that wow suppression of the Convent of Muri, founded by the ancestors of the imperial house. It is also said that this note had not been received as a direct diplomatic communication, but had been referred by the Swiss Government to the Great Council of the Canton of Argovia as a protestation in support of private legal claims. It would appear support of many of their countrymen who it is thought would otherwise have opposed the sweeping measures of the Reformers. The Austrian minister, it is stated, merely sent in the note in question, and did not deliver it perArgau Council, it is asserted, had replied to it by establishing by historical proofs that any pretensions of the Austrian empire had been long extinguished both by law and fact and that no responsibility was due from Argau to Austria. was hoped that the Diet would be unanimous in preSaitzerlany foreign intervention in the domestic affairs of poper posed to the French Cabinet to join them in proteating against the suppression of convents in Argau, but that it had rejected the proposition, saying that it was pureyy one of form, which could answer no purpose. The journals
also report that a renewal of disturbances was antiepated also report that a renew
in the canton of Valais.
Russua.-Accounti from Wiln atate that the Femperor had haid an extraordinary contribution of a silver ruble per bead on all the inhabitants of the two principal govem-
ments of Lithuania, those of Grodno and Wina. The is calculated that the proceeds of the tax will exceed $4,000,000 \mathrm{f}$., which, according to the imperial ukase. are to be applied to the foundation of a school of cadets at Wilma The emperor had ordertd that a permanent capitation tai of one ruble in paper, or 10 d . per head, be levied on the
people of those two governments for the maintenance of that establishment. From the wording of the ukase; it it thought that a similar visitation is intended to be made
on the other governments of the empire. -Private letter on the other governments of the empire.-Private letters
from the Danube say there is no truth in the reports of the movement of Russian troops towards the western frontiers of Poland; that there is no idea of any such move-
ment; and that the same may be said of the extraurdinary Ries reported to be ordered in Russia.
EeprT and Symia. - The intelligence brought by the From it, it wonld appear that the Eastern important. posed to have been finally settled, has been re-opened in a new form, which, it is possible, may occasion serious consequences. The advices received inform us that Nedjib Saib Eirend, Envoy Extraordinary from the Porte, had Ali, one containing his pardon and restoration to the government of Egypt en herédité; another declaring the hatti scheriff of Gulhane to be the law of Esypt; and
third appointing him Pacha of Semnaar, and prohibitin third appointing him Pacha of Semnaar, and prohibiting
the practice of slave-hunts, or of makiug eunuchs. The Enroy also ammounced certain other conditions which he would be required to attend to,-viz., to build no more ships without the Sultan's permission, and to submit to financial and commercial departnients of his adininistration. It is also said to be the intention of the Divan to limit his army to $20,00^{\prime \prime}$ men, and to prevent his nominating officers to ranks above that of a lieutenant withou years' debt of tribute of $170,000 \%$. The treaty of conmerce with England and the abolition of his monopolies med out immediately. A partial disarming othis \&eet wrin be lo have the right of nominating is said to have strongly ob jected to the last stipulation, as well as to the proposed interference with his army and finances. He was willing to concede the other points, but expressed his belief that to a demand which was intended for the ruin of his fa mily. It is said he had appealed to Commudore Aapier, who was preparing to depart for Marmorice fleet, and only waited to hear the Pacha's fival reply the Envoy, and to send a despatch by the Great Liverpool. The Commodore, it seems, stll reman- in hopes of adjusting the disagreemen. leave alerandria and return to (onstantimoule. It would seem, however, that he had not declared the negotiation entirely at an end. Mehemet Ali was very busy in raising money, and had demanded a lian or 110,000 dollars, principal houses in Alexandria. It was mureover experted that be would obtain it, nutwithstandimy the singularity of the demand, and the precariousness of his position. Ibrahim Pacha, it is said, had proceeded to Damietta. Allthe Egyptian and Syrian troops had left Gaza, and Lieutenant have had returned to Alexanarial Jochmus for impeding the retrent of Ibrahim's army, by which 12,000 men have died, besides great numbers of women and children. The plague is reported to be at Acre and Jaffa, and to be increasing at Alexandria, where the small-pox was also be coming destructive. The Albanian troops at beyrouan, who set the Sultan's authority at defiance. The Russian Consula in surion aut to have received official instruc tions to protect all the Greeks who might demand their assistance against local oppressions. At Damascus a cir cular letter had been addressed to the resident consuls by churches of that country against the persecutions practisod on the Jews.
TURERY.-Intelligence from Constantinople informs us that the Porte had addressed a cireular to the ambamannamouncing to them that the Egyptian affair being cond cluded, the blockade of the coast of Egypt was raised, comment on the firman deapatched by the Porte to Alexandria, respecting the terms upon which the Pacha is to hold the govermment of Egypt, and express fears that the cone ditions are of such a nature that Mehemet Aur may red the them. They also aseert that the Sultan had reserved to saculty of naming Mehemet Ali's successors from his the mily, in order to exclude Ibrahim. It is also stated that the firman had been submitted to Count Pontois, the this had cansed some sensation, because it was supposed that the Porte had the intention to invite France to accede to the treaty of July. These accounts further add, that the Porte bad communicated the firman to the Ambassa dors of Russia, Austria, Prussia, and England, begging them, in case of Mehemet Ali refusal to submit to the administ
India.-( From owi own Correspondent.) - An eveats has lately occurred in India, fraught with most importaut consequences as regards the external relations of orruk Sing, ruler of the Purjab, followed by that of his osily

5th of November. In order to understand the bearing of
these events it will be necessary to revert to the preceding course of things. Oun readers will be aware that the Pun-
jab is that part of India which lies hetween the Sutle Indus rivers, forming a very considerable and independeut kingdom. It is the tract of plains which intervenes between the Company's territories and Afis hamistan, at present the
scene of so many important nilitary operations. It formis the grand lighway by which India has on every oceasion Baber, Xader Shah, and Ahmed Sian: : uud before any of them, Alexander of Macelonia. Luring the last 30 years Sing, whose policy it was, guided by a profound sagacity,
and a discreet terror of our arms, to maintain on all occasions result of mhich was that he consolidated his orm power and raised the Seiks from the grade of predatory hordes, under a rude oligarchy, to the status of a powerful and
formidable military nation. A few occasions occurred in Thich the interests of the two states came into collision,
and then he had to yield, as the weaker power neeessarily and then he had to yield, as the weaker power neeessarily
must. By the terms of our first treaty with Runjeet Sing, we had divested ourselves of the right to interfere in any
transactions occurring on the western side of the Sutlej Takiug a statesmanlike advantage of this agreement, and Sing annexed, by force of arms, to his own dominions all the lower parts of Affyhanistan, such as Peshawar, Moolby, the acquisition of Cashmeer. Every year witnessed some fresh accession to his empire; and after expelling Bahawul Khan, an ally of ours, from his Trans-Suttej dotion of Scinde, and the possession of the entire course of the Indus. The importance of this conquest was enforced upon him by his French and Italian ofiters Ventura
and Allard, who showed him that the uncontrolled sway of the Indus would open to him an independent commanicaion with the sea, enrich him with a lucrative commerce and enable him to enter into European alliances, and
assume an imposing attitude in regard to British India. The nou-interference policy of Lord William Bentinck, which has lately caused us such an enormous outlay in Affghanistan, brought matters to this dangerous pitch,
our forbearance had fostered the power of Runjeet Sing to such an extent and degree of consolidation, that he was
ambitiousty calculating the time when, and preparing the means by which the seiks would contend with the English for the empire of India. He had already assembled an march upon shikarpore, when the danger of the crisis march upor sinkarpore, when the dauger of the
aroused our Indian Governnient. Lord Auckland se the orcasion with lis usual energy, and Runjeet Sing was
informed that an aggression upon scinde would he viewel as an act of hosthlity aggainst Britisll hudia and dealt with accordingly. This declaration was enforced by warlike preparatious in 1837 , and tiue Maharajah was reluctantly
compelled to forego his ambitious designs on the western side of India. Soon after followed the crisis of the Persian question of Herat, the Russian intrigues in Caubul, and
the lustile projects of Dost Mahommed, which led to our grand military operations in Affghanistan; to secure a proper base for which, it became neeessary to have a free passage for our troops and commissariat through the
Punjab. The Mahrajah. Runjeet Sing, with his usual discretion, yielded with the best grace the case admitted of; anul a new treaty of alliance was entered into, l, which our arny on its return from Caubul was allowed to pass cession and our advance on Caubul with deadly dislike, and ansiuusly louked out for some reverse to our arms, Soon after Runjucte Sing, one of the greatest characters the East has ever produced, died, and was succeeded by his son Malarajaih Khurruk Sing, the lately deceased ruler. Runjeet sing had several nominal sons, two of
whom only were acknomledged by Whom only were acknomledged by him ; viz, Khurruk
Sing and shere Sing. But the second, although dignified Sing and shere Sing. But the second, although dignitied
with the title of shah-zadeh, or prince, was regarded as a spurious offspring by the Maharajah, and never looked upon with any favour. Kluurruck Sing, his successor, was
an imbecile: and no sooner had he assumed the reins of state, than he was put under virtual restraint by his only son Now Nehal Sing, a headstrong and ambitious young man of little inore than 20 years of age. Intoxicated with minical pre tictions, which designedly or some wild Brahhis known wisthes, and promised him a speedy extension of his rule to Benares, he began to enter on hostile designs degree of the national dislike borne by the Seiks to the Enghish, he eucuraraged Dost Mahommed, by the aid of large subsidies in mones, to make his late attempt on and denied a pussage to a reinforcement of troons which the late untoward course of events required the British Government to send to Caubul. Our arents at Peshawar
intercepted the remittance, or the advices relating to intercepted the remittanee, or the adviees relating to it;
and I .ord A Inekland, seizing on the occasion with his habitual energy, made instant arrangements for the concentration of a large arniy un the Sutlej for the invasion of
the Punjab. The tocsin of war sounded everywhere over Hidoostan, and all were intent on the turn which matters would take. when the nems arrivel of the death of Khurrulk Sing, and his son Now Nehal sing, on the same day, leaving the Punjab without a head. It had been known ras in bad health and reports mere current that he sing undergoing a course of slom poisoning by his son Now

Nehal. It is impossible to say at present what trath there
may be in this ; but it is at least sertain tious designs of the son, joined to his previous unfilial and tyrannical conduct towards his father, gave a probable colouring to the suspicions. Be this as it may, Khurruk Sing died, a natural death or by poison, on the morning The first act of his reign was to witness anded the throne that day, in regal state, the burning of his mother alive along with the body of his father ! Retarning in triumph from this revolting, but to him agreeable, exhibition, which put the seal to his inauguration, his state elephant got entangled, in the crush of the crowd, under one of the gates of Lahore, when he was in progress to the Ravee
river to perform his ablutions after the suttee. One of the elephants pressed against the supporting beam of the drawbridge ; the timber gave way, and fell upon the ele-
phant of Now Nehal Sing, breaking the spine of Oodu Shant of Now Nehal Sing, breaking the spine of Codam died that night from the injury. Thus perished Now Nehal Sing, on the first day of his reign, in the crisis of a most important series of events. He was the of Runjeet Sing, the other sons being spurious mains to be seen how the succession will go, and what our Government will do. The blood of the Maharajah is whom, although known to be spurious, he apheld in all state transactions with us as his second son. The other cashmeera Sing, named (the Sing, Peshawara Sing, and Cashmeera Sing, named (the three last) respectively in commemoration of territorial acquisitions : they had never Shere Sing is in the prime of life, fond of a military employment and display, but uneducated and of no talent and besotted with the habitual use of opium and arden pirits. He is favourably inclined towards the English, or at least was professedly so, in the hopes that some mil Government will sanction his accession to the throne. present the Punjab is withont a head and entirely at ou percy. It is hard to say whether we have most reason to regret or congratulate ourselves on the events which have is every resson Nehal Sing continued in power, ther control orer its fine resources would have been ours by right of conquest ; and this is what every one who has any egard to, or conception of, the security of our empire in the East must ardently destre. With the aid of Cashmeer it would pay itself and easily support an imposing force in Affyhanistan, besides vielding a surplus; and the British flag would spread unchallenged from the Indus to the
ocean, over the wide plains of India. This chance at present appears to have gone by, but we myy still benefit by the late events, and we hope Lord Auckland will take
advantage of them to the full measure of their capability. The line of policy to adopt would be to guarantee the suc cession to Shere Sing, conditioning that the formidable Seik army of 40 regular disciplined battalions be reduced and a subsidiary force of ours, like the Hyderabad contingent, maintained in its stead ; that a political agent of ours be permitted to reside at Lahore to exert a salutary control over the internal management of the country; that all external relations with other states be discontinued, except through the medium of the British Government that the resources of the Punjab be available for British the Seik service who are not English be no longer entertained; and that the Seiks withdraw their frontier to within the Indus, and give up Peshawar to Shah Shoojah. These terms, or something near them, are required for the security of our Indian possessions, and the temper of the times will no longer admit of playing with the danger the Seiks have at present, besides 40 battalions of discipline infantry under French and Italian officers, a large force of irregular troops, and they could bring 60,000 or 80,000 cavalry into the field ; they have also a park of about 200 the most exposed part of our frontier, at the disposal of dubious allies, who only await a fitting occasion to be open
China. - The news brought by the overland mail is of considerable interest with reference to the state of the British relations with the Chinese government. The neproduced nothing, for the Chinese seemed desirous of shuffling and delay. It appears that Admiral Elliot, with a considerable portion Elion per at Tongkoo, near Canton, On the 21 st Capt Eliot proceeded in the Quecn steamer towards the Bogue sent off with a tlag-of-truce flying, but it was fired at by the Chinese from the forts. The boat then returned, and everal shots were fired at the steamer, one of which struck her. Two shells were thrown into the fort from the steamer which then rejoined the squadron. Capt. Elliot went subsequently to Macao, and contrived to send the letter. An apology was demanded for the insult to the flag-ot-truce, which, atter some delay, was assented to by keshen. On the 26 th preparations were made for an attack on the Bogue forts, as Keshen was suspected of producing unnecessary delay. He, however, made his public entry into Canton, having taken care to give nrevious notice of his arrival to the Admiral. On the 29th the Admiral, on the ground of serious indisposition from palnitation of the heart, resigned he command of the expelition to Commodore Sir $J$ J Gordon Bremer, and sailed for England. Keshen, it is said, had declared on the ground that the people were op-
posed to his going to commanicate in person with the
outside barbarians, that he had no interview with them at
Peiho, and sent tro subordinate mandarins to Capt. Elliot. Efforts had been made to liberate Mr. Stanton, which were successful. Nothing was known of the other prisoners. Threats are stated to have been used by otiations in reality unless Keshen would begin the ne The 14th and reality, recourse would be had to hostilities. days of attack 17 th of December had been named as the Macao, and told the merchants that the negotiations were still open. Our troops remained in possession of Chusan, of 4,000 men who of 4,000 men who were landed on this island, it is said latest intelligence. 800 were effective at the date of the United States. - By the arrival of the West Chester packet, at Liverpool, we are in the receipt of recent important. The relations between England and the United States appear to be becoming more and more complicated. The Committee on Foreign Afairs, to whom had been referred the message of the President, thens ting a correspondence with the British Minister in relation to the burning of the steam-boat Caroline, and the de mand made for the liberation of Mr. M'Leod, had reporte the House of Representatives on the subjects referre to them. The report justifies the State of New York for argues at great length that his capture was perfectly jus dwells an every priaciple of international law. It also dwells at great leagh on what terms the aggressions this countr. It says, 一 We have other points of dif question with Great Britain, which add interest to every question that arises between us at present. Neither ou north-astern wor north-wentern boundaries are yet settled with her, and the subject is not entirely free from difficulty. She has recently seized our vessels and exercised a power involving the right of search, under the pretext of suppressing the foreign slave trade, which, if persevered , win sweep our commerce frnm the coast She is incompatible with our rights as a maritime power demnity and denied our rights to property on a subjectmatter vital to near one-half the states of this confederacy, and which, considering her miliary position at Bermuda and her growing power in the West Indies, is of the last importance to our national independence," In the debate pribt, Mr. Granger, of the not his concurrence and he announced it the "eport had tion of war." He said it made an issue upon which Great Britain micht tahe them up, and go to war at once. He would not abide the issue as presented. There were many
things presented in the repurt as causes of complaint aganst Great Britain, as to which they had no informahon, and in which they had no concern. He was not for taking up all these gratuitous issues.-Mr. Pickens, the Chairman of the Committee, in reply, contended that the report had a tendency to the preservation of peace. It stated facts boldy and plainly; but could they hope to secure peace by deceiving themselves as to facts? He when peace. He ouly looked to a war of defence the object in making the report was, in part, to call the attention of Congress and the American people to the necessity of preparations for the national defence ; but that the report had the concurrence only of a bare majority of the committee, and he was sorry for it.-Mr. Adams said he was sorry that the report was of a strict party character. What would be its effect on the Ameican people?-on the world? Would it not be thought that it was the malice of a defeated eneny, setting fire to
a tenement that he was forced to abandon: He would a tenement that he was forced to abandon He would
not dispute the positions of the report; but he would not dispute the positions of the report; but he would
insist that a bare majority of a committee should not commit the country to eport. if sent exposé of the riews and determinations of the Government. But who had made up this issue? He had noBut in it was the issue of peace or war. That they should put forth nothing upon which they were not willing to take the issue of war. There were some questions, he might be wrong and Great Britain right. He would not therefore, put the question of peace or war on this report. -After further debate, the motion for printing the report was carried by 103 to $t 3$, - By the subsequent arrival of the packet Enylund, we learn that in the House of Representatives, on the 10 th ult., the rules of the Mouse were suspended as son as the House met, to enable Mr Fillemore, of New York, to introduce a resolution. strueting the Committee on Milirary Arairs to bill for making the necusary appopians for furtifications, naval armaments, and other necessary preparations, to place the northern and norta-eastern rontier in a proper state of defence." It aiso appears that the resolu-
cions offered to the House of Representatives of the State of Maine, on the subject of repeling what is termed British aggression, have been taken up by the Senate, dollars instead of tyl . 400 dollars for the defence of the State, were referred to the Boundary Committee.-The following resolutions were also cffered and referred to the same Committee:-" Whereas the state of Maine is now suffering the disgrace of unresisted Briush invasion, begua in 1039. repeated in 1840 , and continued up to this hour, in violation of the most solemn stipulations, and wherens Power which has so repeatedly diaregarded ita delaternte
pledges, and believe that further forbearance on our part
to assert the rights and vindicate the honour of our State to assert the rights and vindicate the honour of our State ating-Therefore resolved, that the Governor be anthorised to tale immediate measures to remove the troops of the called disputed by the British Guverament, but by the treaty of 1783 , by the resolutions of both Honses of Congress passed in 1838, and by repeated resolves of the Legislature of Maine, clearly and unequivocally a part o Me rieod, the latest accounts state that his trial was exMreod, the latest accounts state that his trial was exhe would most probably be convicted and hanged.

## Barliament.

Monday. - The Earl of Mourrcas hrl called the attention of the Honday. - The Eari
House to the inteligenee reecived from America, and inquited
whether Lord Mrisury had had any offial communication relative to the authenticicty of a document purporting to be the
report of the committee on foreign affairs of the House of Representative Miluovang said he was unabie to answer the ques-
Viscount Mbi tron of the Mabie Lorr, as nesentative at Washington. He appre-
from her Masty's repred
hended, however, that considering the form or the docament, and hended, however, that considering the form orthe document, The Marquis of Nom Axis stated that he had been requested by the select committee on the Drainge bul, to propose be no ob-
sion of the bill iut) two, and he presumed there would jection to such a step. The Eari of GLEsvastL complained that
fase returas had been made to the house in reference the ad
and ministrator oppes oi arl correspondence beteteen the porin lawe com. missioners and a Mr. Phelan relatiug to the appointment of the
returnug officer for that union. that he had written to Mr. Nicholls, the poor law commissioner, that he had written to akt.
desining his personal att.
planations on the subject.
Tuexdsu-After the presentation of various petitions, the Eari of ABridges calle the attention of Mimsters th the rumoured
appoinment of the Rev. M. Candiish to the Professorship of Bifirst established in conformits with the report of the Royal Commission on Scottish Universities. The noble Eari eut-red at
leugth in'o the nature of the dissensions existing in the Cururch of Scotiand; he tated that, during the progress of these differences lent party in the General Assembly, and that within the last three
wweeks he had deliberately spprised himself to the law of the land we laid down by the court of fission in scotland acting on a judg. ment delivered by the House of Lords. His Lordship haring then
recurred to the declaration of Viscount Melbourne in
his place in Parliament, that he would see the law duly auministered, and
take care that ots protection be aforded to al who conformed
to the provisions of it, concluded by asking whether the noble Viscount was ware of the circumstance which he hand stated at length to their Lordahips, and caling on him as a gentleman and sistent with his own word.
Yiscount MELBOURYE admitted that he had been fairly quoted in regard to what he had formerty said of his determination to
uphold the established law, and at the same time he had said that pedient to introduce any new law on the lioputes which distract
 not then going into any arsumeutas tu the fact of the appointment,
or whether it was contrary to sound policy that a Government shouid instal in ant otice those whots of political interpest. He
strong opinions on the various subjects of strong opinions on the verions subjects of poitical interest. He
had heard many arguments on this subject with refereme to dit
ferent topics, and equecially with regard to the affair of Ireland: and he had always heth epinions on this point very different fromi
those entertaned hy the Noble Duke. Wellngton and by the noble Lorur an the ourer on the subject. He would only say that no such appointment had taken place as that to which the noble councin of Edinburgh that an appointment of a professor of biblical Earl had spoken of had certainly not taken place.
 Were agreed apon establishing a proressorship of biblical criticisul,
the office had not yet been established. Tha in consequence of
the recommendations in farour of M. Condlish her Majesty's Government had considered, with those of others, his claim to the appointment, and a correspondence had been carried on, but the
moment they heard that be had placed himself in opposition to the law they unmediately put an end to all communications with hin uphn the ubbiect. That so far were her Majesty's Government
from passing over the merits of D . Lee, that they hait determined rupon giving him the racant deanery of the Chapel Royal of Edin-
burgh, in connexion with h his prncipalshp of the C nuevsity : and
the they, intended that this simecure, which they could not well Thursduy. -After the presentation of some petitions by the Marquis of Burk, the Duke of Wrilivarow moved that an ad-
dress be presented to the Queen praving that her Majesty would
be pleased to order to be laid on the table of the House a copy of the record kept by the Poor-anw Commistionersof Ireland of their The Marquis of Norsans s said he had no objection to the
motion, but as Mr. Nicholls, the poor-haw conamiestoner, could not be personally present in London without serious inconveni. vilord such explanations as their Lordships might require. It was Tomatey. The noble Marquis then moved that certain papers given notice, on the sabject of the Romanist seminary of St. Sul-
pice, fo Conali, shounid be laid on the table.-As it was generaly
considered that the and athey could not be in the hands of noble Lords till Friday, Morday nert. The right rev, prelate stated that he hat been
served with a subpeena to altend the asszzes at Exeter, and that

 expresed entire popular election of ministers. In maver to a question by the thought a friend to the rete claimed by the Genernil Assembly, the sabject of Romanist Ecclesiastical Corporations in Caned

The Earl of Ruron complained that the papers he had moved
or, a month ago, 4 reference to our relations with Persia, had not yet been presented Viscount Mrlbocras promised to inquire into the cause of the committee, on an understanding that a particular clause shoul
be remodelled before the third reading. The Court of Exchequer (Ireland) Bil then went throug Mocidrci - After gave notice of motion for a committee to inquire
into the means of preventug dueling. If therr Lordstips did no
 should not know whether or not he mipht fipht a duel. The act
of Victora rendered any one doing so liable to be tried as a felon. It was thereiure necessary that something ,hould be done;
althourh the stbject was surrounded by difficulties, he did not consider that to be a cood reason against inquiring into the sub-
ject, and endeavouring to find out whether or not it was feasible to put an end to the practice of duelling,
Some conversation then ensued between the Marquis of NorMA vBY and the Bishop of ExETBR, respecting the Teport on the
seminary of St. Sulpice in Canada- The Coph hold Bill and Lord
Keane Keane's Annuity siill were advanced a stage, the rish Tithes
Composition Bill and the Irish Court of Exchequer Bill were Composi
passed.

## house or commons

Monday, - In reply to question from Sir R. Peel, Mr. Labou-
chere consented to the re-appointment of the committee on Lailways. into committee on the Poor-law. Bill be read, with a view to post-
pone the committee till Friday. His Lordship explained several amendments which he intended to introduce into the bill : the
most important of which was to fix the duration of the poor-law commission at five years instead of tell
The third reading of Lord Keale's. Annuity Bill having been
Loved moved, Mr. he my repated the country too much exhausted to bear large, and the finances of the country to much exhausted to bear
it. He therefore moved that the third reading should be postponed to that day six months; which, on a division, was nega-
tived. - On the questicn respecting the title of the bill, Sir INGLIs urged the claims of Sir F. Head to some marits of the
royal farour, but the surgestion was not taken ap. royal tarour, but he suyge into committee of supply on the army eitimates, a discussion tuok place on the suppressioll of a portion
of the yeomanry.-Lord Jön Russkil and Mr. Fox Ma fended the conduct of Government on that occasion.
Mr. OCOVNELL availed himself of the opportunity to make Mr. OCONFLL availed himserf of the opportunity the make
some remarks on the conduct of the Horse-Guards in the case of Lord Cardigan. He hoped, before the end of the session, some
member of more influence than himself would move for a court of inquiry on the subject. He then proceeded to express regret at the heaviness of the present estimates, and, as the rebellion in Canaua was now at an ena, he could not be accused of encouragroked hy whiust treatment more particularly by the vote of that House, which applied the public revenue of Canada without the consent of the House of Assembly. Canada was now threatened
with another act of injustice -the spoliation of the seminary of St. sulpice. If such an act of spoliation were committed, they must prepare themselves for yet heavier estimates. The hion.
member coucluded by warning the House to abstain from a course of unfairness and injustice towards Ireland.
Sir Grorge Grey shorty vindicated the court-martial on Capt. Reynolds.- Sir DE LACC ETANS was of opinion that it would not have been improyer nor unusual to place Lord cardigan upone
half-pay.-Mr. Warberrox pressed for further inquiry into the haif-pay.-Mr. WAREURTOY pressed for further inauiry itto che the one hand, that there were faults in Lord Cardigan's manner, and alleged on the other that there was a cabal among the otficers;
and the regiment wha dielared by the Commiander-in. Chief to be and the regiment was delared oy the Commander-in. Chief to be
in a state neither useful for home daty nor at for foreign service. Lord JoHv Russell repeated the opinion expressed by him on aggerated. The Commander.in-(hief had considered that the
best way of harmonising the regiment was to convey his opinion through the adjutant-(ieneral, rather than keep alive irritation respecting the threatened interference of the Bishop of Exeter with the canadian ordinance, he certainly thought that the ordi-
nance was a lawfur one, and that any attack upon it would be nance was a lawful one, and that any attack upon, it would be
considered as arising solely from an unfavourable disposition to the Roman Catholic religion. discipline now prevailing in Lord
 been received, in order to guide the decision of the superior autho-
rities. He blamed Lord Cardigan much less than Lord Hill, who, he consiacred, vught to be removed from his situation. - Mr an onjust but temporary clamour. The admonition given to the regiment related not to the actaal state of it, but to the general Sir B. P
scionsly allowed his dislike of Lord Bill to prejudice him against Lord Cardigan. As to the sugrested court of inquiry, he con-
idered the Comander-in- ( hief to have been the best judge whe ther the circumstances of the cave required such a proceeding Lord Cardigan's rank was no reason for giving him any advan
tage; but ueither was it any reasou for treating him with more Colonel SALWE was displeased with sir H . Hardinge for having plained his phrase to have been, that what had oecurred "p partool of the nature of a cabal amourg a few of the officers." He had in generai, they had conducted themselves in an unesceptionable The Honse having resolved itself into committee of supply, Mr. Macaulay moved the vote for volunteer corps, which had stoed being of opinion that the same amount would have nearly paic much more useral. - The House divided ma favour of the vote.Sir Husser Viviay then opened the Oranance Estimates. The principal fentare of his statement was the provision of a much of one of the items to urge - hat the admission-moner to the Tower shouid he reduced from sixpence to fourpence. The reduc tion to sixpence, he said, had led to an increase of revenue, and a
farther reduction would; no doubt, leadd to $\approx$ farther increase of evenue. On the motion for the commitment, pra forme, of the
 nistration, denied. - The speaiher havag lett the chair, Mr. T
Ducoubs animadverted upon the system of unions in general
and particuariy upon the union between ketaininton aud Chelisea. and upun the hew bill lirought in to diworree them, and propored
that the Chirman chould report proeres., -Mr. F. MAcLe ob jected to this as an uncourtenus and unusinal op. ostion, where the
object was merely a connmitment pro forme. After some aitercaobject was merely a commitment pro firma.-After some aiterca-
tion between him and Mr. Duncombe, the bill was suffered tion between him and. Mr. Duncombe, the bill was suffered
to go througin this stage. for the ameendment of the criminal law. Mr, Kelly's peadioc bill
he observed, went to noolish capital punishment in all cases ex-
cept treason and murder. It lwas necessary, he caid, to consider
how the past changes in the law had worked, and what how the past changes in the law had worked, and what was now
the state of public opinion upon the subject; because, even if the capital punishment of any particular offence were not otherwise
 Hhe public opinion honld he adverse to capital punishmernselv, if

## fitetropolis and its Ericíuty

Repeal Meeting.-On Sunday evening a meeting was held at the Assembly-room, Theobalds road, for the object of promoting the repeal of the union. Mr. O'Connell, Mr. Steele, and several other gentlemen attended by invitation. The chair was filled by an English mechanic. After a few observations from Mr. Steele, proposing a resolution to the effect that the union ought by whom it was framed had no authority to make the compact, Mr. O'Connell rose, and delivered a long speech in favour of Repeal. In addition to other arguments, he contended that England herself would be served by the dissolution of this union. If Ireland were prosperous, she would be the best customer England ever had. The year before the American war she became independent, she took $15,000,00016$. of English she became independent, she took this was also a pruper
manufactures. He thought that this manufactures. He thought that this was also a pruper made, that he had traduced the women of Eagland. With respect to that accusation, nothing, he said, Touldgive him
more pleasure ihan to have himself tried upon the subject more pleasure ihan to have himself tried upon the subject Chartists and Irishmen. The hon. gentleman having touched brietly upon several other topics. concluded amillst great shoutine, and shortly afterwards left the meetiag. After a series of resohtions, embedying the riews adverted to in Mr. OConnell's speech, and which were passed aminst much clamour, the meeting briks up. Thursday, at the Crown and Anchor Tavern, for the purpose of taking into consideration the propriety of sending to Parliament a public remonstrance against the New Puorlaw. Before the doors of the great room were open, they were beset by a band of Chartiots, who, it was saif, had intended to occupy prominent sitaations in the room, and to frustrate by clamour and violence the objects of the meet-
and man this design, it seems, they partially succeeded, render evepenly avowed that it was their intenfion to scene of disorder and confusion, until the five points of the charter were conceded. Though they had nut sub scribed to the expenses of the room, ore on have taken into their own hands the whole management of rule proceedings of the day; but this proposition was over Walter who own party. The charr was taken by Mr Walter, who addressed the meeting, at great length, on
the subject for which they had met. He was followed by several other speakers, among whom sere Mr. Wakley and Mr. Duncombe, the Members for Finsbury, and the presented to the House of Commons against the bill. Mr. Walter then vacated the chair, and, with the other gentlemen on the platform, quitted the room. Mr. Neesom himself asmed the chair, and a Mr. Lee, who announced of censure upon Mr. Walter for his partial conduct in the chair. This was seconded by Mr. Boggin, and the chair main put it to the Chartists, who received it vociferously Mr. Neesom declared the motion to be carried, and that the meeting was dissolved. The meeting throughout appears to have been very tumutuous, mariv of the speecbes were of considerable length, and accompanied with much ioleace of language.
Seizure of Spurtous T+a.-Mr. E. Glorer, of West Ham Essex, has been charged before the Commissioners of for the with manufacturing a spurious resemblance of tea 20001b. of the stuff in his possession, by which he in curred the penalty of 10100\% Mr Bind the surveyin examiner of Excise, stated, that meeting the defendant with a large bag going into various grocers' shops, be topp kity of dried cabbage-leaves mixed with burnt rye and chicory, which he was selling as Frarina de Mocha; there was also a small quantity of spurnous tea. In consequence of this discovery a search-warrant was obtained against him, and officers sent down to the defendant's house, where 2001 lb . of sloe and blackthorn and fern leaves were found in the process of manufacture, and so much resembled the real tea as to deceive any ordinary observer. ealth, as said that the leaves were injurious to the public ne of $100 l$. was inflicted, and a warrant granted for burn ing the leaves.
Condition of the Poor in the City. - At a Cuurt of Al ringdon Within appeared at the bar with a presentment on the subject of the state of the foor in the city of London, of the Court. The presentment, which was of considerable ength, stated that having been led, in order to avoid imposion, personally to visit the poor at their own habitaand suffering of which they had never previously formed any idea, and at the existence of which they felt the most painful regret ; and they were desirous that a more syspainful regret; and they were desirous that a more sysestablished than that which depends on the casual geneosity of the prosperous inhabitants portant nature, and requiring great deliberation, was portant natare, to and Comittee of the whole Court, for the exmination of evidence on the subject

The Tower.-In accordance with instructions given by his Grace the Duke of Wellington, the eastern entrance of the Tower is now kept open daily (Sunday excepter) until seven P. M. This rule is to be observed until the 1st t four P. M.
Burglary.-A burglary has been committed at the residence of Mr. Gompertz, Ebury-street, Eaton-square. The hile the family were even in the next room. From the narrowness of the parapet and coping, and the construction of the roof, so accessible from the other houses, it is considered extraordinary how they could succeed in their attempt; they, howerer, managed to do this, and in a very short time roke open several boses, ransacked the drawers, and absconded with considerable property. In the room they entered they forced open a dressing-case, and stole $30 \%$ gether with a souall gold watch and other articles ; from this room they entered the front attic, wher one of the serrants had just been dressing, stole her gold wain goll bokt, ada sik gown. and the semant's mork box and stole a watch. They then entered anuther room box and stole a watch. They then entered anuther room Which they ransacked, and departed, leaving a carpet bag ready packed to carry off, of wearing apparel, out heing disturbed left it behind them. $1 t$ appears hiater in in an empty house, making their entrance through the attic window.
Flight of a person on Bail. - Considera'le conversation has taken place during the last two or three
days in Farringdon-ntreet aud its uti.L', $n$, lative to Mr. Samut Eis:, a $i=s$ atal ciana deaitr, under the futumas cirman-tames- - N1.at two or three weths simee he was exominsit at Crihulall Policeoffce, in a charge uf invinx commition a capital asoault. the on Which ought to gu before a jury, and commitred the prisoner to tike his trial; but bail being subsequently afered, soner to tike his trial; but bail being subsequently ofered,
he was liberated on entering into his onn recagnizance of

5001 ．，and providing tho sureties in the sum of 2501 ． Central Criminal Conrt，the acmsed did not surrender，and the Court ordered his recognizances to be ectreated ：since which it has become known that he has ahecondel．and placurds have been pisted on his honse intimating the in－ tended sale of his property．The accused was about to treet the ourlay on which is stated to nave been consi derable．It is said thit a reward will be offered for his apprehension
Aldgate Church．－On Thursday a public meeting of rate－payers of St．Botolph－without，Aldgate，was held to the lay impropriator of the tithes to repair the parish church；also to make a rate for defraying the expenses of the repairs neepsary th the edinet．This charch，in seenhs，
has been closed for the last four months，being in such a tate that the congregation were apprehensive that it would fall in upon them．It has since become worse，and is at

The chairman said a rate would be proposed for re－ pairing the church，to which he did not anticipate to see the doots of the sacred edifice elosed any longer． A rate－payer said the opinions of two legal gentlemen had been obiained，and they took opposite views of the ques lay impropriator could be ce mpletled to keep the chancel of the church in repain a layman since the pears，and It was then resolved that a rate of 6 d ．in the pound be made to defray the expenses of the fepairs，which would be about 1,4441 ．

Primrose Hill．－The Commissioners of Woods and Forests have we understand，concluded an arrangement with Eton College，by which Primrose－hill will be preserved from being built upon．This place of healthral resort
will therefore remain to the inhabitants of the metro－ will therefore remain to the inhabitan．
Accidents．－On Wednesday morning a melancholy ac－ cident occurred in the Regent＇s Park．It appears that the Regent＇s－park，went out with three of the children for the purpose of walk？ng round the park．On arriving at the bridge over the canal，one of them placed the youngest child on the parapet of the bridge，and was in the act of over the bridge．The servant succeeded in grasping its leg before it disappeared，and in her endeavours to save the child she overbalanced herself，and both were precipitated into the canal．The screams of the other servant drew a number of persons to the spot，and several hurried Two gentlemen plunged into the 甹atet，and after repeatedly giving，at length succeeded in bringing out the bodies ；the infant was found clasped an than． The bodies were conveyed to an adjoining house，close to
the spot，and every exertion used to restore animation，bat the spot，and
without effect．

Inquesto．－On Saterriay aut inquest wias held on a ftmale infant which had been foumd in Hyde Park wrapped in paft of an old merino dress．A surgeon stated that he that the infant had been born alive and had been dead about five days．The mother had been unattended．From the injuries done to the body，he had every reason to be－ lieve that death had been produced by violence．The jury， after consulting for a short time，returned the following verdict－＂Wilfal murder against some person or persọns unknowh，and the jury reeommend the parish－omeers to fenders．and the tury also of enine orender or of－ fenders ant to
 compel the fathers to support their children．＂－On Satur－ day an inquest was held on Sarah Dixon，aged 79，who was burnt to death under the following circumstances：－ A bookseller， ，the Kingsland－road，said that on Thurs－
day morning he was alarmed by the screams of females， coming from the almashouses of the Company of Frame－ work Knitters，and proceding to the spot he saw a quantity of smoke issuing from onte of the houses．On going in he found deceased lying on the floor，about two yards from the fire－place，in which there were the remains of a small fire．The princip il part of deceased＇s chothes were burnt of her body，and the rest were still smouldering．There maining fire，and a surgeon was called in，who pronounced life extinct．Deceased＇s daughter said she had left her ruother in bed only 20 minutes before，while she went on an errand，telling her on no account to get up until wit－ mese returned．She had kept her bed for some months， but on that occasion she thought that she must have got up and dressed herself，as her clothes were found burning upon her．Verdict，＂Accidentally burnt to death．＂On
Wednesday
ath in
inqueat took place at the Elephant and Wednesday atin inquest took place at the Elephant and
Castle，on Mr．C．J．Tears，whocommittedsuiciduly han ing Castle，on Mr．C．J．Mears，who oummisted suicidely hanging
himself at the above hotel．Deceased，it appeared，fol lowed no occupation，but had formerly been a clerl in the Tictualling．office，and hid retired upon a pension．A
witnes saw him lite Fridar－he was then cheerful ；had heard that he was of excitable temperament．Some time ago deceased took the benefit of the Insolvent Act，and a part of his pensiot whe stopped by the Court for the be－ nefit of his creditors．A relation of deceased gave evidence years ago，which went to show that he wadi in the habit of driaking to excess，and when in thit stute comanitted atrange actions．After further evidence tas to deceased＇s state of inind，the jury returned a verdiet of＂Teuporary
derangement
＂－An inquest has been held on James dead dead on Tuesday，in cirrumstances of great destitution and «ant．A surgeon who had made a post－mortem exami－
nation of the body stated that death was the result of app－ nation of the body stated that denth was the result of apo－ plesy，brought on by excessive drinking of ardent
spirits．There was no food in the stomach nor blood in spirits．There was no food in the stomach nor blood in
the heart，which showed that deceased ha I wanted proper nourishment ；in short，that it was wonderful how he had lived in his miserable room without bed or covering throughout the winter．－Verdict，＂That deceased had
died of apoplexy，brought on by excessive drinking of ardent spirits．＂
Fires．－On Saturday a fire broke out in Canonbury square，Istington．The engines were soon on the spot， and the fire，which at first and altimately got under The whinl－of the furniture，paintings，\＆ce，were consumet． It is nut known hor the fire originated．－（）n the same day，a fire brote－onvare，which was fortunately soon got under，but not before considerable damage was done to the stoch，building，\＆c．－On Monday evening the \＃est－
minster－road was alarmed by a report that Astley＇s Amphithealre was on fire．Some tradesmen of the neigh－ bourhood were called into the theatre by one of the grooms，and on going under the pit discovered some of escaping from a hole in of the They inme－ diately got some wet sacks and applied then to the orifice， by which the flames were，soon extinguished．－On Tues－ day a fire broke out at Eastgate Cottage，Feckham－rye， timely arrival of the enginee，the whole premises，it is sup－ posed，must have been bumed．It appears the servant was lighting a fire in the bed－room，Mrs．Margesson not having risen，and remarked to her mistress thehed moed moch but no danger was apprehended，and she quitted the room．Shortly after the curtains of the bed burst into flames．Mrs．Margesson made a hasty retreat，and narrowly escaped taking fire．The whole of the furniture in the rooms where the fire originated was completely destroyed，and the building mach damaged． On the same day a large fre broke out at Knightsbridge． It commenced on the premises of Mr．Lock，cabinet and bedstead maker，at the corner of Brompton－road．The engines was confined to the lower portion of the premises． －On the same day another fire broke out at Montague－ place，Poplar，and was not arrested until mach property the consumed．－It the conrse of Monday it appears no fewer than seven fires occurred in the metropolis，and the destruction of proverty was considerable，－$-\mathbf{A}$ fire occurred the thesidence of Mr．Lovell，Shouldham－street，Bryan－ stone－square．It was，however，speedily extinguished． On the fire breaking oat，a person residing opposite ran over to it，when he wataised with a shivering fit，fell on
the pavement，and Espired．He was removed to a sur－ geon Pa de mele fire，attended with loss of life，occurred in East Smith－ feld．It bivke out on the premises of Mr．Freeman，ad－ joining the large sugar－house of Messrs．Church and Co．， pears that the fire commenced in the lower portion of the premises，under the staircase，and was first discovered by a policeman，who at once commenced alarming the inha－ bitants residing adjacent，and endeavoured to rouse the inmates living in the houge，but for some time withou success．Just as the engines arrived，a female appeared impossible on account of the flames extending with great rapidity；and consequently the unfortunate creature，who prosed to be the servant，perished．The fire was not
subdued until the premises were destroyed，and great damage done to the adjoining houses．An inquest has since been held on the budy，when the jury returned a verdich．That deceased was burnt to death at a aire which cook place on the morning of the 10th of March，but whether it originated by accident or otherwise there was no evidence to show

## 猲的Bincial Nebs．

Liverpool．－A public meeting has been held in this city for the purpose of petitioning Parriame in favour of revision of our comimercial code．It was vety mumerously and the proceedings were tuarked by great unanimity， The attention of the meeting was solely directed to the mamalies of the English tarifi，and every extraneous topic number of speeches，several resolutions were passed，ex pressing the views and feelings of the assembly on the tubject；the mecting did not break up until half－past three in the morning．－Capt．Andrews，late corsmander of the Govertor Fenner，sailed from Liverpool for New York on Monday，and will be the first to convey the intel－ Andrews，desiring to have the whole affair fully discussed， had applied to the Mayor to institute an investigation，but his application proved fruittess，the 3tyor representing that Mayor of Londou．Had the bodies found in the riggiug o the Fenner been brought to Liverpool by the captain o
the Birmiogham oteamer，an investigation would have taken piace；but as it is，it is thought that there is no other Priounal to take cognizance of it but a court of law．－The been nearly drowned．In stepping from his boat to get on board the Rigland packet，from America，bis loot
slipped，and he fellomto the sea．He was carried down the river by the stream for some distance，and had not a lost．It seems that has was un wards of sis minutes in the water，with a strong tile rmaning．

Manclue ter．－（）a Monday the indahitants of Liverpool． oud were alarmed by an attemp；to commit murder．It appers that a man named thall ina had been married for sume time to a monusn aloo kept a st． 11 in the narket，and that about two years ago she died from prison，but by whom administered had remained a mystery．At the time of her death a young woman named Bostock resided in the house as servant，who afterwards lived with Hampson， but not on agreeable terms． had frequently been heard to say he would murder her． person named Yarwond，and another female，were in the room．About eight Hampson asked her to get him some colfee，which
she refused．She was sitting near the fire－plare．and he in a distant part of the room．He then，nithout saying a word，walked towards her，and，putting his arm round her neck，cut her throat with a razor．She was imme－ diately conveyed to the infirmary，where she still lies in， sensible，but alive．Supposing he had effected his design， Hampson immediately escaped，but was soon captured．
When discovered he was sitting in a corner of an old saw pit，covered with mud，and，it would appear，he had made an attempt to hang himself，for it was found that he had the hir handkerchief and one of his braces together，for had given way．One end of the handkerchief was still round his neck，and drawn rery tight．（）n Tuesday he was brought up at the Borough Cour，wale fate of the woman was known．A certificate was handed in from the infirmary，stating that she was in an extremely dangerous state．It has been since stated that she is going oni well，but not entirely out of danger
he inhahitants of this tomernine on he inhabitans． of ayoiding the introduction of the county police，by applsa ing for a charter of incorporation，or taking other stepmy discussion on the advantages and disadvantages of acorpo－ ration，the proceedings were adjourned for two months， for the purpose of watching the progress of a bill of the Attorney－General for providing quart
Shefrield．－An accident of a serious nature has taken place at the Park Colliery．An explosion of fire－damp pany．Six individuals suffered；one was severely injured about the body，and it was judged best to convey him to the infirmary，where he lies with little hope of recovery three others are mach burnt，two slightly scorched，and Lancaster．We
Lancash．We received from a correspondent in this town an account of the discovery of a live frog found imbedded in a solid piece of coal．It appears that as Mr． breaking a large coal，to his great astonishment，a fine frog jumped out of a small hollow in the centre．It was imme diately secured，and，along with the pieces of coal，has been visited by great numbers of the curious．The frog is and to be a fine specimen of the genils．From whe hp that ance of the recess in the coal，it has been conchermation of the seam．The subject，it seems，was introducel last ral History Society，when Dr．Lane procectell to show and was perfectly possivle that it mige existed respiration the moisture necessary to its evistence would respiration，the moisture necessary to
be continually condensing on the sides of its cell，and be again used，ad infinitum．Mr．T．Howitt said he did no believe that either frogs or trats could exist mithout air had nutriment fur any great lengtio of time；indeed there tirely
never been a case decisively proving that they were entire devold of air during their pion impronnel．Sone rersation ensued as to the length of its existence，so the Deluge．Both the animal and the coal were then introduced and submitted to inspection．It सas men＇inned as m markable that the from appeared likely to live：in similar cases they generally died soon after their liberation
Canterbury．－On Saturday two fishermen，named Rose and Maxted，residing at Beltinge，near Herne Bay，were charged with having robbed and murdered Peter Carr，one of the preventive－serrice men，stationed at Bishopstone， between Herne Bay and the Reculver．The depositions taken against the prisoners were to the following effect：－ by his superior officer，with directions to take them to by his superior officer，with directions to take heme a
Elerne Bay and get them cashed．Not returning home the time expected，an inquiry was set on foot by the afficer amongst the men of the station．（Ine of them stated that he had seen Cart at a beer－shop，late in the afternoon displaying the cash which he head obtainds pot the mons into his prose，and left the house．Upon thai information the officer proceeded to Beltinge，to malke mrther inquiries．On arriving there they found that theit search they entered the cottage of Rose and Marted，who lived together，and haring awuke them，the furmer stated that he and Maxted were passing along the beact at bel tinge Bay，when they saw a man put off to sp in a oad
belouging to a intherman named Brice．They ran down
for the purpose of ascertaining who it was, but before they being boisterous, and the night dark, they could not distinctly see who the person was, but they thought he reinformation furnished by Rose was not true, and insisted upon searching the house. Two shirts were found in the front. A cloth was also found near the shirts, stained with hlood, and the sleeves of one of the fishermen's jackets had marks of blood also. These appearances
strengthened in the officer's mind the bellef that Carr had met with a violent death. A minute search was then made for the money; and though no portion of it was
found the men were conveyed to the preventive station, and confined for the night. On the following morning the search was renewed, and Carr's hat was found in tatements having been unde apon oath, the prisoners althongh they trongly asserted their innocence, were rethey were removed to the county gal, but while there it fullowing account of himself:-On leaving Beltinge he made towards the beach, and heing in a state of liquor, had taken a row in Brice's boat, and afterwards became insens bre, and cond not account for what himself ashore with the boat at Marsh-bay, until he found himself ashore with the boat at Marsi-bay and admitted that he had lost $5 l$., but could give no ex planation of what had become of it. An order was then Maxted, who were thus proved the have been entirely inno cent of the crime with which they were charged For. in minster of this city of some ancient brass and siver gilt candlesticks, salvers, \&c., which had formerly been but no key to open it could be found. It was ordered to hemselves to view.

Wonmouth.-A prisoner lately died in the gaol of this wn whilst undergoing his sentence of solitary confinement. After hearing the evidence adduced, the jury reffect of a superstitious dread of solitary confinement. Chatsworth.-We learn from the Derby papers that the Devonshire, has for a considerable period been undergoing splendid and costly embellishment. The artists in Paris, as their model, of which there is a fine specimen at the Princess's theatre, in Oxford-street. The walls of the drawing-rooms are painted with beautifol colours on the new embossed leather lately introduced into this
country, and reliered with a profusion of gold. The library is said to be one of the finest rooms in the kingdom it is elaborately decurated in the Etruscan style. There paintings on the fronts of the pilasters, it in number with plate glass, each plate 12 ft . high. Connected with this princely residence is the great glass conservatory, waggon-headed ceiling, upon which repose the lofty palms, the munificent present of the Earl of Tankerville.
Newbiggin.-Trom recent statements it would seem that this place may now be ranked among the first during the last four months is said to be upwards of 300 tons. Fish of all kinds are said to be so abundant that
they would spoil for want of consumers, if the curing esablishment recently erected did not afford the means of presersing them for sale.
Shrew sbrry.-At a recent meeting of the county ma gistrates, it was agreed that threshing machines were implements of husbandry, and as such exempt from tolls, whether conveyed from place to place on broad or narrow
wheels, and let out to hire or not; and that their not beWheels, and let out to hire or not; and that their not be-
longing to farmers did not alter the principle upon which their exemption from toll was claimed. It was at the same time agreed that the owner of any crop (at the time of its severance from the ground) is to be considered the occupier, in regard to the exemption from tolls, for the convey thereof, the samue not having been sold or disposed of This applies to the custom of growing potatoes upon land apier is not rate cor the relief of the poor or other purposes, but merely charged with a rent for part
particular crop, as potatoes.
Ruilucays.-A coroner's inquest has been held on the body of a labourer on the South-western Railway, who labourer deposed that he was at work on the railway with deceased on Friday afternoon. The 2 o'clock up-train passed them, and a minute after the down-train passed in the other direction. Deceased was standing between the rails of the down-line. The engine knucked him down, passed, witness went to bim and found him quite dead Witness had cautioned him several times to get out of the way of the down-train. There was no fault on the part of the driver, as he conlu not have seen deceased in being check his speed. Deceased was aware of the tram notning to drink durme tie day. The engine-man deposed that he was driving the train from London on Friposed that he was driving the train frou london on Fri-
day. He first saw deeeased when about 100 yards from the Northam Water. He stopped on the line about 10 the Northam Water. He stopped on the line about 10
yards in front of the engine. Witness whistled and shouted
such a short distold, and reversed the engine, but within and rain at the time were very strong, and might have hindered deceased from hearing. The train was at the
time running about 15 miles per hour. The fireman under the last witness deposed that he saw dsceased stop on the line 10 yards in front of the engine. He was told by the engine-man to put the break on. He did so immediately, dental death."-A numerous and respectable meeting of the landowners and inhabitants of the town and neigh the landowns and imabits taking the sense of the town and neighbourhoold with reference to the proposed Stafford and Rugby Railway. Tb chairman opened the business of the meeting by readin the requisition, and he thought the best course they could adopt would be to petition Parliament at once in favour of
the bill now introduced into the House of Commons. A netition his petion to this elfect was then read: after which it was House of Commons, and to support the prayer of it by Readineans in his power.-An inquiry has taken place at of Joseph Painting, who died in consequence of an acei dent mentioned in our list It appeared that decease resided at Wantage, which place he left on Friday, taking with hims some things to sell in the neighbourhood. He was very deaf, and on his return home he crossed the line of the Great Western Railway, at a spot where there was no road or footpath. At this time a train was passing along, but the engiaeer did not perceive him until it was
too late. He, howerer, as soon as possible stopped the engine, the fore part of which struck deceased, and thre him off the rail. He was conveyed to the Reading station by which time, however, he had expired. Verdict
Cidental death." - It is stated that the Great North of Ralway we opeaed for the coaveyance of th the mails fill Tuesday the half-yearly meeting of proprietors of the it appeared that dnrint the last half-year 214,541 passen gers were conveyed, whose carriage amounted to 14,292l and that the actual balance of the c or the year was $7,9566.95$. 3 d . in favour of the company engineer of one of the passenger trains on the line of the Northern and Eastern Railway, met with an accident on Wednesday of a very serious nature. It appears that the down-train to Brorbourne left Shore ditch on Tuesday afternoon. On its arrival nea its destination, Webb, who was standing by the side of the stoker, fell ofir on the line, and the whole train passed over him. He was taken to the Broxbourne station, where was found that sereral of his ribs were bruken, and his right leg lacerated. He lies in a precarious condition.bourhood of Cumbernauld, by which a number of lahourer on the Edinburgh and Glasgow Railway were dangerausl injured. The premature springing of a mine, before the a sufficient distance, ma the cause of the disaster. Seven men were hurt : two severely burned and their arms broken; two hal a leg broken each; the others, though much hurt, escaped without an bones broken. - Another accident, attended with fatal re sults, has occurred a short distance from Glasgow, on the same line. It was caused by the shooting unexpectedly quantity of earth, by means of which a labourer was si crushed that he did not survive half-an-hour after being dug out of the fallen mass. - f few days since a ma named Howlas, employed by the Birmingham and Gloucester Rail way Company, seeing a train approach, attempted could do so, the train struck him and broke two of his ribs and the bones of his hip. His life, it is reported, is despaired of.-The works on the London and Brighton Railmay are approaching completion. The Merstham and Balcombe tunnels are finished; and a small portion only of eutting remains to be excavated at the approaches. This, it is said, will be done in a fortright, and the same time will be necessary to lay down the rails where it is not done. Mr. Rastrick, the engineer, is said to hare engaged to convey a party of directors on the line from London-bridge to Hayward's Heath in the course of a month. At Clayton the tunnel is nearly finished, and the line will be com pleted from Brighton to the Hassocks station in June The Vale Pool Viaduct will be an ornament to the neighbourhood. This work, with some heary cuttings and embankments, will be the last completed; but these will all he ready, it is said. for the opening of the line throughont the entire distance by August.

## IRELAND.

Dublin - A case of assault has occurred here which has produced much excitement in the higher circles. Tis young gentlemen, named Arthur and Charles Foster, th latter the son of Baron Foster, have been summoned betor the Police-office, to answer the complaint of Lord Mas sereene, tldest son of Earl Ferrard, for an assault committed under the following circumstances:-Is the nobl complainant, in company with his brother, was walking along Aassau-street. Mr. A. Foster came up ti) his Lord ship, and, havine touched bim on the shouters with riding-whip, told him to consider himself horsewhippent Mr. C. Foiter then came formard, and proffered his card Lord Massereene, who, being unwumg to entler o the mondar with such juveniue ar to teen the peace The conasel of the Mesars. Foster attempted to justify the assoult on the plea that hin Lertship had written and
printed for private circulation a poem, in the pages of feelings of some relative of the Messrs. Foster. The counsel was interrupted ty the Bench in thrs line of de fence, and at once held the young gentlemen to hail. All the parties are nearly connected. - An adjourned inquest and heen on the body of an Italian, Dominico Garli this, who was found murdered in the neighbourhood of his city last week. A sailor had been taken into custody The countrymen of targed, no suspicion attaching to him nto custody on suspicion, were released on promising to come forward when called on. It is said there is a person in charge of the police against whom a strong case hat been trade out, and the affair is likely to take a turn different from what it originally assumed. A butcher's boy, ted to gaol, in consequence of the gross prevarications in his testimony, it being the opinion of the Coroner and the jury that he knew more of the transaction than he ma willing to confess.-A gentleman residing in Great Bruns-wich-street, in this city, has received by post, from Kan turk, a living owl. The beak of the bird protruded from the letter. It is thought to he an extraordinary circumstance that it should have survired so many hours in the letter begs it weighed nearly thirteen ounces-the prepaid postage being two shillings and twopence.
Leitrim. - It is stated that the Grand Jury and High Sheriff of Leitrim have agreed to a petition to the Legia forward by Lord Morthe provisions of the bill brought virtual repeal of that portion of the act of $1: 29$ which dis. franchised the 4Us. freeholders. The petition concludes by praying that the bill brought in by Lord Stanley, or an equivalent to it, may be passed into law.
Wountmelick.-On Friday morning, the 26 th nlt,, as proceeding to their work, the boiler of a high-pressure en gine exploded, and so severely sealded and injured two men, that they expired within a few hours. One of them was driven with great violence to a distance of severa rards, and received a fracture of the skull: the other fel into the ash-pit, and was scalded to death. The surgeon to the dispensary found the cases were hopeless. It proridentially happened that these two men only were near the boiler at the moment, as it was customary with the workmen to assemble at the fire, previously to the starting of the engine.

## SCOTLAND

Edinburgh.-A meeting of Dissenters hasbeen convened in this city to take into consideration the propriety of petitioning Parliament to abolish the connexion between rates in England, and of expressing sympathy towards $\mathbf{M r}$ W. Baines, at present a prisoner in Leicester gaol, in consequence of his opposition to that impost.-The Rev. Dr Gordon, it is said, is to be proposed as Moderator of the ensuing General Assembly
College took place of the Hon pha las Home Department. After some preliminary proceeding the voices stood thus :-Majority for Sir James Margrigor Angus Nation, 14 ; Buchan Nation, 15 ; Mar Nation, 29 Majority for the Hon. Fos Maule, Moray Nation, 2 Majority in favour of Sir James Macgrigor, who received his education at the College, 56 .
The Highlands.-The reather for the last fortnight has been highly conducive to prepare the ground for the operaThe or the plough, wbich is now being re-drawn out The strong drought of the full suu and the slight frost of the eveniog have dried up the ground sooner than could have been expected from its satarated state by the fully abundant, though har has been much expended in feed i. C sheep-stocks during the storm. This provident attention has, however, helped to make them now appear in excel lent condition, auguring well for the crop of lands. The price of horses is also on the rise. On the whole, present prospects are rather favourable.

Ayr.-A curions circumstance occurred a few days ago as a party of gentlemen were enjoving them-
selves with a day's coursing in our neighbourhood. The with a day's coursing in our neig last dodge The dogs were slipped at a hare, who, as a last dodge, betook herself to a rabbit-hole of rather large dinem
sions: the run, as well as the refuge of puss, tool place Withi ho ru, as well as the refuge of pus, the spot com sigh of he part, who, oa comide to have anothe This ding out their hare huct howerer, was fated to end in disappeintment; for, on working for some time, instead of a hare they came upon a fox! Reynard was secured in a bag, and is to be kept for the Ayrshire hounds on the next risit.

## fatiscellantous.

Destruetion of the Falls of Niagara.-The last arrival from New York brings intelligence that these celebrated Falls, so familiar to all classes of readers as one of the most stupendous phenomena of the New World, have ceased to exist, and the mimty rut enters has assumed th character of simple rapids. The Burfalo papers contain an account of this event, from wh...as the following are ex traets :manifested the first somptoms of the great catastrophe that shortly ensurd. Mr. Arnoh, a catizen of the village, while waving at the thot of the spiral staircase for the opposite side, perceived the jutting rocks which formed o the Canada side the famous sub-marine cavern to breal
away and fall into the cauldrun underneath．The incident itself，and its effect on the aspect of the fall，were so re－ markable，that he returned to the riliage and commun group had collectell to watch for further developments， In the course of an hour considerable masses were dislo－ cated and thrown down．The sheet of water that befor fell abruptly，almost perpendicularly，with an unbrukeu breast over the protruding cave，of course now shot down an obtuse angle，lusing ita gracefill and majestic curve，but gaining is tumult and effervencence．By three o＇cluck， gaining in tumult and effrrencence．By three o＇cluck， from Buffalo．Nothung farther transpired that night Early next morning parties were ansiously gazing towards Early next morning parties were ansiously gazing cowaris
the Falls，despite the severity of the weather，expecting to see the work of disorganisition procced．At haif．past Island，within the borsestive，fe．l down ；and then folluwed Island，within the horseshoe，fell down；and then followe effects with greatly accelerated rapidity．Whaty ally taking place could only be surata stage of operations from sight But it was plain to all that the supportn： fabric of the cataract was fast wearing away before the tremenduus enginery．Its immemorial durability misht have been owing to the strongly－intrenched rampart that bad always presented its shoulder to the assailing flood； or the whole，equaliy conspact and secure，might have been preparing for this demolition through ages of sapping， olving percolation．The angle of descent every minute diminished．At hall－past elght the Biddle Tower and al the adjoining gronndwork had disappeared．The towe sunk into the gulf like a subsiding wave．Shertly after the water hawing made a subterraneous passage，burst
through the wall of Gout Island，cumbered with masses of rock and rolled with earth，and as instantly the crust above collapsed and mixed in the wild chaos below．In rapid succession，on the Canada side of the island，mass followed mass，and the island，throughout its entire length， was chafed and narrowed down to a lean stripe，which re sisted further encroachments，as if of more substantial constituents．On the British border，the wall of loose friable rock was gored and ploughed away，until the Table Rock，so much resorted to by visitors，fell down in frag ments，the spiral staircase toppled，and the hotel soon followed．On the American side the great shelf is unmo－ lested ；but the water falling over is greatly diminished，it being diverted to the largely increased channel on the British side．Here the waters have a prolonged fall of zearly a mile，the plane，of course，very gentle，commen cing above Goat luland，and ending below the old fording place，the intermediate space being filled up and graduated
by deposits from above．It is believed no lives have by deposit

The Intexicating Quality of Hemp－The people of Aleppo，amare of this fact，take adrautage of it，and port－ der the leaves of the female plant；they then put them
into wet pepper and cover them with hut ashes till a paste into wet pepper and cover then with hut ashes thll a paste
is formed，wheh tuer press into a cakt and form iuto lo zenges，and $\mathrm{d} .$. ． 114 a drachm of these lozenges（which they call sheera，and in India Bing）put into a pipe and smooked with tobacco is said to produce intoxication；and a few grains mixed with anything sweet，particularly figs，

## THE GARDENERS’ CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
the horticulitural part edited by professor lindley.
No. 12.
SATURDAY, MARCH 20, 1841

Gardening is admitted to be better understund in Gircat Britain subject prove the country, and the number of works on the
to extend the knowledze of its receives, and the desire there is
thanches. Many thousand persons are engaged in the business of Horticulture as a means of existence. and a vast number more are intcrested in the
subject, for garden are now an indispensable part of the domes-
tic establishment of cuery person who can tic establishment of every person who can afford the expense.
No ome will, theref re, duubt the adrartage which may be de-
rived from the evtal liwhent of a Journal conducted in an honest and liberal spirit of good wilto all, who are engaged or intercsted
in Horticulure and frarden Botany, and who will thus have a The plan proposed to be followed in the management of Thy
GARRENER CHRONICRE, is in TME FIRCT PLACE to make it a Garden Botany, and to introduce such Natural History as has a relation to Gardening, tngether with Notices and Criticisms of
every work of importance on the subject which may appear. Connecter with this pant of the man will be a WEEKLLCALEN.
D.AR OFGIRDENING OPER. TION, giren in great detail. and so adapted to the varsing seasons as to firm a constant assist-
ance to the memory-Foreign and Domestic Correspondence
upon Horticultural sibjects-Reports of Horticulurat upon forticultural sibjects - Reports of Horticultural Fxhibitions
and Proceedings- Notices of . the workman, or which may conduce to the pleasure of his emtect, the Draingr, the Ruab-3aferr, and the Cotrager, will all
have the improvements in their rcspective pursuits recorded GARDENING is in many respects the art of creating an Arts-
IICIAL Climate, similar to that in wirich plants are baturally onud: evidence, howerer, regarding the real nature of climate,
PHYSIOLOGICAL INQUIRIES, and all those interesting topics Which elucidate the harmony of nature, and the dependence of subject of discussion.
Another peculiar feature will be the introduction of informa tion relating to FORESTING, or ARBORICULTURE. This is one of the most important sighlects to which the attention of the pub
lic can be directed; for it is oltcn little unterstond by those who
have occasinn to practioe it, although the amount of propert have occasinn to practise it, althongh the amnount of property
affected by the management of timber stants seond cinly to that
of land. The natural laws which sovern the production of of land. The natural laws which govern the production of tim-
ber and regulate its growth, the ralue of it, the extent to which it is intluenced by soll, and consequently to what circumstances cies grown in different places, are all points to which attention
will be given. We shall cndearour to collect information upora
that very important but much-neglected subject, ti.e di-cases of rees, and the cause of their decay, whether natural rr accidenof woodland property. When to plant, to prune, and to fell, WHL
RE STATED WE:KKY IN TBE CALENDAR, TOGETHER WITH THE Although it is net intended to occupy our colnmns with the Farming, it would be impossible, even if it were desirable, to exclude the general principles which relate to the cultivation of fore, may be found important in that respect to the Farmer will
be constantly reported. To the FLORIST our Miscellany will have much interest, not uctions which are his pecnliar care wi.l be constantly treated of in such a manner as to make him throughly acquanted wath
she merits or demerits of new varieties, and with their best modes opinions as may be given are the resulis of an core that such
 domestic and political News which in usually found in a weekly
paper. We consider it unnecessary to dwell on this head further paper. We consider it unnecessary to dwell on this head further
than to say, that we do not intend to range ourselves under the banners ot any party; D the contrary, our best endeavours will
be to make TH: GARIENERS Crionicli a full and comprehen
sive Recorl sive Record if Fucts only- th Sewcpaper th the true sense of the
word-leaving the reader to form his own conclusion and opinions; our object heing the elncidation and discussion of the
laws of nature, not of man. The reader will thus be provided, in
addition to the peculiar featnre of the Journal with suchavaren addition to the peciliar featnre of the Journal, with such a variety the necessity of providing himself with any other Journal. The propretors are happy to announce that they have a'ready friends and supporters : among whom the following may be more particularly named
J. HENCHMA HEakTsERASA He thention of Coltiprize esven times out of eight compentions at the pricicipal Ne.

## SATURDAY, MARCH 20, 1841.

Some weeks since (p. 83) we examined the principles of a mode of heating promulgated by Mr. Penn through the Gardener's Magazine ; and we did so in consequence of certain circumstances that had come to our knowledge. This notice has produced us three classes of correspondents: the first simply abusive, the second remonstrating against an alleged unfairness in our criticism,-and the third thanking us for the exposure of the system, and only regretting that it was not given sooner. To the first we have no answer to return; the third requires none; to the second class we now proceed to address ourselves.
Notwithstanding the objection that has been taken to our alleged unfairness in explaining Mr. Penn's system by reference to his origiual plan, instead of his most recent modifications of it, and our great respect for some of those who have urged this upon us, we must take the liberty of persisting in our course-for this simple reason, that it will enable us the most readily to determine what Mr. Penn's principle really is. If we examine this gentleman's plan attentively, we shall find that it is intended to attain the following ends: 1st, to convey warmth to a greenhouse by means of hot air, and not by radiation ; $\vartheta d$, to heat the fresh air before it is introduced into the house ; Sd, to obtain a circulation by placing the hot-water pipes at the back of the house in a chamber communicating by means of drains with the front of the house, and by means of tubes with the upper part ; the apparatus thus arranged being assumed to throw all the heated air into the house through the apertures of the hotwater chamber at the back, to suck all the cold air out by the apertures in front, and thus to agitate the whole atmosphere and to bring the heated air downwards to the level of the floor.
To originality in the first point Mr. Penn makes no claim; on the contrary, it is expressly disclaimed. For effecting the second purpose, a method at least as efficient was published in the year $18: 4$ by Mr. John Hayward, a well-known writer upon horticulture; a contrivance called "Forman's pit," of which some account is to be found in the Gardener's Magazine, Vol. iii., p. 385, was invented with 3 view to the same end, and is in many respects very like Mr. Penn's arrangements; and finally, Mr. Williams of Pitmaston, many years ago, by means of a vaulted drain, conveyed a current of fresh damp air into his greenhouse from the surface of a small stream of water. To obtain a motion in the atmosphere by heating at the back and forcing warm air downwards, is, then, in Mr. Penn's contrivance, the real point which we have to consider.
It is to our minds quite clear, from all that we have seen or heard of this invention, that everything is subordinate to that end. For this purpose the hotwater pipes were, in the first instance, placed in a back shed ; and for the same reason they are now buried in the floor, beneath tubes rising up the back wall. It is no doubt true that the length of the tubes varies; but in a plan of a house of this kind given by Mr. Loudon in a number of the Suburban Horticulturist, published only six weeks ago, the hot-air tubes reach within one-fourth of the whole height of the back wall.
This method, we have asserted, cannot answer, even if the excessive heating power required by Mr. Penn were granted. Of course we do not mean to say that by no moditication of it heat enough could be procured; but that no modification consistent with the principle above explained will render it efficient, we firmly beliere. If modifications are introduced inconsistent with that principle, the method is no ${ }^{3}$ longer Mr. Penn's, and the argument is shifted to other ground.

At the Marquis of Ailsa's, at St. Margaret's, the houses have been thus fitted up by Mr. Penn himself. In the early vinery there were four 4 -inch hot-water
pipes along the back; these not furnishing heat enough, holes 18 inches long and 10 inches wide were cut over them alternately with the hot air tubes, which were also shortened 14 inches; and then, when it was found that the new arrangement neutralised the effect of the old apparatus, two other hot-water pipes were carried along the front of the vinery: thus six 4 -inch pipes were employed to heat the house, and they failed to do so. In a greenhouse, the plants in front were frozen, although the sashes were covered with mats, the difference in the temperature of the front and back being as much as 10 deg., although the whole width of the house is only 14 feet. Finally, in a small plant-stove with eight (!) pipes at work, the temperature could not be raised above $59^{\circ}$, the external air being $24^{\circ}$. This was on the 22d Dec. 1840, when the intense cold of last winter had not get in.

A small range of houses was fitted up at Roehampton for Sir Charles Ogle. For this purpose four 4 -inch hot-water pipes were sunk about 9 inches below the back path, and were made to communicate with tubes 12 in . by 5 in . in aperture, and 5 ft . high. After several trials it was found that the highest temperature ever obtained was $50^{\circ}$, the temperature of the external air being $34^{\circ}$; in the central part of the range, which is 15 feet wide, it was not possible to exclude frost, there being a difference of $15^{\circ}$ between the back and front; and it was found necessary to introduce a common stove, which was still standing with its chimney through the roof when our informant visited this place on the 15 th of last February. The reason of this may, we think, be explained without much difficulty.
Let the triangle A, B, C, represent a section of one of Mr. Penn's houses; let D be the point of ingress of hot air, and E that of egress of cold air. It is assumed by Mr. Penn that the hot air will rise to $B$ and then descend to E in consequence of the sucking force this evidently did not happen in the houses of Lord Ailsa and Sir Charles Ogle, and, we believe. never does happen in the way that is supposed. What we conceive really to take place is this: the heated air accumulates near the point $B$, or in the upper part of the house $B, D, F$, where it loses its heat with a rapidity proportionate to the cold of the external ait, and it only settles downwards as it cools, forming in the lower part of the house, G H, a cold bed, which feeds the aperture $\mathbf{E}$. If this be so, it is obvious that the difficulty of heating such a house by Mr. Penn's method will be in proportion to the height of the aperture $D$, and in very cold weather will be impossible.

It may be alleged that, notwithstanding this, the apparatus does its work well in some cases; and that of Mr. Barchard's house, of which an account was given in our last Number, and Mr. Crowley's letter, published to-day in our Home Correspondence, may be thought to prove it. But in Mr. Barchard's case, the objectionable part of Mr. Penn's plan is got rid of; and moreover the accumulation of cold air in the lower part of the house is prevented by the heat of the tanpit. And in Mr. Crowley's, as we learn from sections obligingly furnished to us by that gentleman, there is also a tan-pit in two-thirds of the range of houses, to say nothing of four 4 -inch hot-water pipes to heat small houses from 9 to 15 feet wide. In like manner, in the houses of Mr. Wilnot, of Isleworth, the apparatus is in action in connexion with other sources of heat. These houses are 16 feet broad; one, an early vinery, has a tlue, four 4 -inch pipes in front, and the fermenting litter of a mushroom bed besides; another, which has only four 4 -inch pipes along the back, was, when our informant saw it, what is called a cold-house, being filled with Primulas, Stocks, and plants of that description ; the third, employed as a pinery, has four pipes and a flue at the back, twoo other pipes in front, and is arsisted by the tan of the pit; the front pipes were added, as we are informed, because the back pipes would not heat the house. Now it would be justas extraordinary if such a heating power as this, applied to a house 16 feet wide, should not be sufficient to keep up the temperature as it would be if Mr. Wilmot, who is one of the moat skilful gardesers in Europe, did not maintain his plants in high health.

But is it worth any man's while to incur such an expense for such a purpose? That is the question.

We shall greatly regret to find that these or any other observations of ours have given pain to Mr. Penn, who, we have no doubt, is himself convinced that his mode of heating is a good one; but one of the first objects within our view when we established this journal was, to guard the public against being misled by extravagant encomiums upon inventions of doubtful value. The encomiums passed upon the system in question have been perfectly ridiculous; and we cannot consent to sacrifice our pledges for the sake of being good-natured. We hear it asserted, but we know not whether on good authority, that some gardeners have lost their places in cousequence of not being able to manage Mr. Penn's apparatus. Can this possibly be true?

Ir is with great satisfaction that we are at length enabled to announce upon authority that Sir W. J. Hooker has been appointed to the charge of the Royal Botanical Garden at Kew. We trust this wise step will be accompanied by such other changes and improvements in this important establishment as will ensure its efficiency, and prove that the ill-advised plan of destroying it, last year entertained by certain gendemen connected with Government, was never approved of by her Majesty's responsible advisers. This event causes a vacancy in the Chair of Botany in the University of Glasgow.

## ON ROOT-GRAFTING.

Me. Kniget was the first who ascertained the poseibility of grafting seions on pieces of the roots of the same or some allied species with success. When he made his experiments on this subject known to the Horticultural Society some thirty years since, it was looked on merely quently, however, the practice began to be extensively employed in the nurseries to multiply rare plants or such as are difficult to propagate by the more ordinary means, such as Combretum purpureum and so forth.
The practice of increasing rare plants by root-grafting is now so well understood among gardeners, that whenever any difficulty occurs in propagating a new or scarce plant by the ordinary modes, the gardener first ascertains the natural order to which the " new-comer" belongs, and then takes the roots of the nearest allied plants he can find, on which he grafts the shoots of his new plant with as much confidence as he would the apple on the crab, and generally with as much success: hence one good reason out of many why gardeners and all horticulturists should study the affinities of the vegetable kingdom; and hence, too, one practical illustration of the advantages of the natural over the Liunean or any other artificial system.
Mere propagation of rare species is, however, by no means the only object to which this moode of graftiog can be advantageously applied : a nother and a still more important one is, that by its means we gain one grand
step in preventing canker in fruit-trees-perhaps the surest step in preventing canker in fruit-trees--
step of any that has yet been thought of.
We all know that certain plants prefer particular soils and dislike others, but do one can tell the reason. When a young fruit-tree shows symptoms of premature decay or canker, the fault, or rather the misfo trane, is ascribed in nine cases out of ten to the subsoil, wut this is a hasty conclusion. The worst garden or orchard soil in the kingdom produces some healthy tree; and if only one, why not more of the same species or variety ?-simply because there is only one of the stocks used in this instance which prefers that particular soil. Now, if we take pieces of the roots of this particular stock and graft on them, we may reasonably expect that, other circumstances being favourable, they will produce trees as vigorous and healthy as their parent stock on that particular soil, though they propitious for them. This disposition in trees cannot be scientifically explained; practically we can easily account for its effects. Apples and pears are grafted on seedling stocks from the seeds of the wild crab-or, what is oftener the case, from seeds of the common apples and pears, which can be more readily procured. Now seedlings of the apple and pear-indeed seedlings of all sorts, however truly they may perpetuate species in the eyes of the botanist, are well known to differ from their parents and among themselres in constitutional peculiaritias, and it is not too much to say that there are as many different kinds of stocks-that is, different constitutionally-for apples and pears in one nursery, as there are different sonls in the kingdom to plant them in : this at once explaius why a few trees in an orchard are growing vigorously, while all the others are cankered or showing signs of premature debility. We may plant, hoe, and drain our soil as we may, meat eith even but one tree which flourishes in a particular aoil, we need not be afterwards at a luss for stocks to suit that soil. I have oceasiontily acted on thie prineiple for the last dozen years sith fruit-trees in general, and with other plants. The subject occurred to me forcibly last weein : I went to procure a grape - vine for a gentleman last week: I went to procure a grape-vine for a gentleman
close by; his garden was only a few feet above the level of a river whicin ran close by the side of the garden-the soll a light black bandy texture of no great depth, with a stingly loose gravel for gubeoil. All hil appla-treess ezeept one
were re-grafted Intely with no siga of sueces; ; the excon-
years old, and the stock outgrew the graft considerably. I advised the gentleman to cut off pieces from the extremities of such of the roots of this tree as he could find 10 to 15 inches lone ; to graft these by his fireside if he chose, and then to plant them in a shady situation, placing I ama satisfied a great variety of apples will be healthy on I amo satisfied a great variety of apples will be healthy on rally. I am satisfied that one half of all the incidental causes of disease in grafted and budded trees my be traced to the constitutional peculiarity of the stocks on which aleton, Bart., Shrubland Park.

COTTAGE GARDENS.-NO IX
The principal sowings for this month having been made, there will now be a little spare time to attend the winter and spring crops, such as Brussels Sprouts, the winter and spring crops, such as Brussels sprouts, be taken up when the heads are with the outside leaves carried to the pig-sty; but the Sprouts and other kinds of Broccoli may beprolonged after they begin to run to seed, by taking up the stumps and stowing the best of them closely together ner, where they will produce greens for the family until the first crop of Cabhures in fit to cut. The space which ready by the time it is manted for other crons. In determining on the fitness of certain parts of the garden for particular crops, it ought to be borne in mind never to plant or sow the same kind of regetable twire following in one situation. A charge is necessary, and the cottager
who adopts this plan, and studies to have his around rezularly cropped in rotation, will find it to his advantage, gularly cropped in rotation, will find a look to the early Potatoes, as there is still danger of their being injured by frost ; a little earth should be cover and protect the stems that may be making their appearance. In the course of the week a few more Lettuces and Radishes should be put
in to succeed the former sowing: and in a warm spot it in to succeed the former sowing: and in a warm spot it
might not be amiss to sow a little (elery. Ground should likewise be prepared fur a sowing of early Dutch Turnips, which delight in a moderately rich soil, and are always better flavoured when the manure has been dug in the previous autumn. Where this was the case, the only thing now to be done is to freshen the ground by digging it very ahallow, then sow the weds broed-cast and cover them with the rake. or tread them in lightly and level the ground afterwards with the rake. In some parts of the country we have seen various herbs carefuily cultivated by cottagers and used by them as substitutes for tea. Among these may be mentioned Sage, Balm, Mint, and Pennyroyal for which a small space may be prepared in a corner of the garden to contain a bed en other equally usetul, such as (inamomble. Theme. and Marjoram有 raised from seed sown about this time, the whole may be easily procured and readily propagated-the Sage and Balm y cutrings, and the others by division of the roots. These are to be planted in rows six or eight inches asunder, and M. E. II.

## KITCHEN-GARDENING.

Is kitchen-gardening there are many things to consider besides the quanticy oi seeds required for a given piece of ground, and the portion that one kind of eaculent may soils, the taste hese, indeed, will vary with seasons was stated at page 132. We no olaer circumstances, as observations by another correspondent on this branch of gardening, with a riew to show the rutation of cropping, and some other points connected with it.
Kitchen-garden crops may be divided into three sections: 1. Perennials, which last more than one year chen ; and. 3. Secon: nost essential for the use of the kit chen ; and. 3. Seconiarly crops, of short duration, such as salads, which have ne requiar stations, except in borders and other racancies between creps. In all these there are two useful rules to observe : namely, that it is better to
thin a crop, than to find a crop too thin for want of seed, and neser to put off for the morrow what can be done to day: on this point more fail than from any other cause.
Perennial crop's consist of Asparagus, Rhubarb, Arti chokes, Horse-raits!. Sea-kale and Perennial Herbs, suet as Mint, Sage, and Thyme. All these should have a permanent place for at least some years, and those that require covering with dung for forcing should be placed as near 28 possible together. With these crops nothing more is necessary than to make the ground rich and to plant them trame proper season where tiey are to remain. Where kitchen-gardea, Parsley, Thyme, and other pot and annual berbs may be used for that purpose, which in such casem vill bea seving of ground.
Rotation crops consist of those most required for culinary purposes, such as Peas, Beans, French Beans, Broccoli, Cabhayes, Turnips, Carrota, Parsnepa, Beet, Onions,

 Spring Caubaze : this crop should have a sijgat coat of sorts by winter, and should be ridged up all winter for a
crop of Carrots, which should be sown an early as possible;
the later Lircucol. (olewort, Smouts, Ac. will ti: lin way
 clear in the beginning of November, when the grount muat the again rudged mp for winter. and have a good coat of dung, ready for (aulifhower-, Onions, (iarlick, and Shallut-; the tisel liter teing planted in November, and alon the piphe some in the end of March and April. Cauliflowers, Onions, and Turnips will
be clear from July to September ; the Cauliflowers and be clear from July to September; in July, - for autumn Spinach and Endive the Onions for winter Spinach, and the Turnips for spring Onions, Winter Lettuce, and other secondary crops.
spmach. Endive, and Spring (Onions will be clear by the end of May for Savovs, $1 \%$ inter (ireens, Re-1 Cabbage Cauliflowers, and Leeks, all of which require a moderate coat of manure. Savoys, Winter (ireens, Red Cabbage
ic. will be ready for early Potatoes in Apral and May Potatoes will male way in July and August for Turnips, Curnips, Cabbage, late Broccoli, and such crops, if wanted Celery and Cardoon-trenches-if all the ground is wanted; at if not, the Cabbage may be allowed to remain fo prouts during all the summer. The intermediate spaces other secondary crops ; dung must be given for Celery of ourse. Celery and similar crops will in part make wa in autumn, when the ground should be ridged up for winter, and the remainder as soon as the entire crop is
clear; the ground will then be ready for French Beans, clear; the ground ©ill then be ready for French Beans, in the end of April or beginning of May. French Bean will be clear by November, when the ground should be again ridgel up all minter to be ready for Peas and Beans, as at first begun. This will make elght or ten years beand by judicious management of the secondary division among the rotation crops every space of ground between one crop and the other may be occupied to advantage during the intervals of cropping.
and Beans: 2. Broccoli, Savoys Wi and Beans: 2. Broccoli, Savoys, Winter Greens, Collards, and Salsafy ; 4. Onions, Caulitlowers, Turnips; 5. Spinach, Spring Onions, and other secondary crops; 6. S voys, Broccoli, Winter Greens, Red Cabbage, Leeks; 7 Potatoes ; 8. Turnips,
10 . Frencl Beans, dc.
Secondary crops are those of the shortest duration, such as Lettuce, Radishes, small Salads, annual Herbs, and very early Peas and Beans (sown in November), very early Caulifiowers, very eatly Turnips, and ear

## RURAL CIEMISTRY.-No. VI.

Carbonic acid gas is produced in large quantity by the requisite for the support of life, and we know that if an animal is prevented from breathing or inhaling fresh air, it will very soon be suffucated. The chemical action which goes on in the lungs of an animal is just the reverse of hat which takes place in the organs of plants : in this case which it contained is approvriated by the plant; whilst in the lungs of an animal carbonic acid is formed, as the oxygen of the air is found. on being expelled from the lungs, to have combined with carbon and become conrerted into carbonic acid gas. In fact, the process of breathing is very similar to that of combustion, the same results being produced in either case.
Carbonicsacid gas is called an acid, although it certainly is not acid or sour to the taste, like vinegar, and the other common acils we are acquainted with : it will, therefore, be proper, before proceeding any further, to explain why There exists in nature a numerous class of substances which are called bases, amongst which are potash, soda, lime, and other caustic substances. Now an acid is a substance that has a strong affinity for these bases, and which in combining with one of them forms a neutral compound. Some acids are exceedingly sour, and rery corrosire substances, like uil of vitriol and aqua fortis ; but when poured upon a base, such as potash or soda, they combine with it directly, and both the acid and the base lose their caustic and corrosive qualities. These compounds of acius and bases are usuaily called salts, or saline compounds ; and are very numerous, as there are many acids and many bases. Aithough carbonic acid, being a gas, is not perceptibly sour to the taste like the strong acids just mendestroy has a far less powerful attraction for bases than most other acids have, it is rery easily expelled from compounds containing it by the action of another acid, which seizes upon the base and sets the carbonic acid gas at liberty

解 certain leff cuustivers being expefted or driven off, and the lime a.n chustic ine, tuginer witia a quantity of wate:, and is with the lime by so weak an attractiva, that hut aluat is sufficient to expel the acid, together with the wai.u wiich vinegar, or indeed into any sour chiquid, is put into swme vinegar, or indeed into any sour liquid, it will be decum-
posed. and the carbonic acid will buisine thourgin tiue tiuid undil the sintery or wher wid is fully combined wita lime,
and its acid powers entirely neutralized. In consequence of this gas being rather heavier thar compmon air, it fre-
quently collects in cuwerns, cellars, and other similar situations. and eften occasions serinus accidents, suffocatin thase who unfortunately enter the plares thus filled with any down a lighterl candle into the well or cellar: if the candle continues to burn, we hnow that there is enorah oxygen present to support the life of an animal ; and if the candl is extinguished we are certain that the place is full of car bonic acid gas, and therefore that it must not be enterel lation. Carbonic acid is also evolsed in large quantities during the process of fermentation, and occasions during the process effermentation, and occasions the other liquors. Common ale is allowed to ferment in open vessels, on that the carbonic acid formed during that pro-
cess is all dispersed ; but bottled ale being contined in close vessels before its fermentation is completed thed in close acid evolved subsequently is pent up in the liguor and escapes from it in innumerable smail babbles when the

Carbonic acid then is constantly being formed in several different ways : it is evolved during the combustion of all substances containing carbon, during the respiration of mal substances, during the process of fermentation, and is bikewise in many situations naturally given out by the eart in large quantities. To counterbalance all these sources of increase there is only the power of plants already men tioned of decomposing it, by abstracting its carbon and setting free the oxygen again.
Although when carbon
Although when carbon burns in the air it only combines bine with nitrogen and hydrogen. Thus when vegetable matters decay under water, we find that a gas is given on in bubbles thich consist of hydrogen and carbon, and is therefore called carburetted ydrogen. This gas is, as may lerably pese, intainmable; burning in the air nith a its two elements, nater a.nd carbonic acid. This gas is found in very large fuantity in coal-mines, where it is called fie-damp, and occasions violent ewplosions when light is incautiously brought into a mixture of this gas with carbon and hydrogen, in which different quantities of the two elements give rise to a great variety of different sub stances : one of the most important of these is the common
coal gas used for lighting the streets, which differs from the fire-damp of mines in containing rather mon carbon.-E.

HOME CORRESPONIENCE.
Mr. Penn's Heating.-I have been waiting in expectation that some ahler pea would have undertaken the task of refuting the arguments you have advanced in your leade of the 6th ult., against the exiellent aud economical mod of heating forcing-houses invented by Mr. Penn. In the some moditications have been introduced stuce the glowing panequie pronced unon it hy the Gurdentr: Mage zine," and yet you give a section and description of a honse erected upon a plan which Mr. Penn has essential endearour to write duwn a system of rarming and ventildting hot and green houses, which 1 beliere to be better than any other-combining as it does great economy of fuel, facility of admitting fresh air, which becomes warmed in the hot chamber before it enters the general circulation and the great ease with which any required degree of moisture may be created. 1 will not trespass upon you valuable space at any length, but as a few facts are worm results of Penn's sfem. I have had in pork about 12 months fruiting-house for pines, 60 feet long by 12 feet widegreenhouse, 40 feet by 15 feet wide; and a succession pit 40 feet by 9 feet wide; all of proportionate height, and containing an area altogether of between 13 and 14 tho sand cubic feet. They are supplied by one boiler containing about 400 gallons, haring connected with it nearly 50 feet of 4-inch pipe. The houses have been kept during the whole of the late severe weather at about the folliom temperatures respectively: $70^{\circ}, 60^{\circ}$, and $45^{\circ}$, with ba shght variatiou; and the diference of temperature in fruing-honse has varied from $2^{\circ}$ to $4^{\circ}$ betweva the and front. The gardener has had no occasion to alleth nighe premises at the coldest period during f houn the night, and has generally been absent 9 and 10 hours, momio $6 \mathrm{CH}^{\circ}$ to 650 , the in propertion. T time has been about 12 cwt . of Welsh coal (the Graigole) per week, at a cost of 32 s . per ton delivered, or about 25. 9d. 2 -day for the whole. Thave only forther to adt that I trust you will publish the above statement of and I now leave this viluable iuvention $I$ doubt not wil he gaeral estimiten, a resur whion 1 and then C. S. Crowley, Broad Green Lodge, Croytor.
am for Bushrooms-In an arwere pushished in th Gardeners' Chronicle of the l3th of Fesruary last, Mr. Join Mearns requests all who have hat any experien in growing ruustrooms by aid of steana, to cortespon which have come under my observation, with a fevr remain thereon:-My mushroom-house is a small hack sted. the heating and steam apparatus, which evnsists or a
place, with a fiue 4 feet in length to conduct the smoke to
an adjoining chimney; over the fire is placed a 10 -gallon
boiler, open at the tup, with a moveable lid, and a tap to supply it with water from a cistern in an adjoining shed ; in the morning, the boiler being filled with water, I put a little fire under it, which soon ceuses it to boil. The house keep up for two successive hours. In the evening a similar process is observed: a mild and uniform temperature is thus
produced, generally ranging from $55^{\circ}$ to 6 - of Fahrenheit's produced, generally ranging from $55^{\circ}$ to 6 ,- of Fahrenheit's ture, in which the mush rooms thrive vigorously. I have thus produced weekly, from the luth of November up to the present time, ) upon a surfice of s suuare yards, at an average, four large dishes of fine mushrooms, some of fleshy in proportion. I was led to adept the use of steam from ny beds requining to be watered very often; and in watering is now quite dispensed with; the steam coming in contact with the cold surface of the beds is rapidly condensed, and a copious supply of moisture is thus obtained. But let it not be supposed that I mean to infer that mushaid of steam, or at least steam applied upon the same principle. That mine have far exceeded my most sanguine e pectations, or anything like what 1 have been able to produce
without the aid of steam, is certainly true; yet, circumstances, of which I am ignorant, may have favoured my experiments. That a humid atmosphere is an essential point
in the artificial cultivation of mushrooms, no one who has watched them in their natural haunts will deny; but as io the best mode of producing that atmosphere artificially, is a question not so easily solved. The old system of heating by smoke-flues appears a most improper one, from its tendency to rob the air of the moisture suspended in it. The pipes is an improvement, but is also exceptionable for the same reason or some other acting very like it. Corbett's me to be the best yet adopted from its throwing prears to me to be the best yet adopted, from its throwing off moistem I boast of mine being a miniature representation. I consider that a moist, stagnant atmosphere is more injurious than a dry one; but steam with a free circulation of
air has produced the best and most aniform temperature for the growth of mushrooms.-S. H., Crumpsall, near Manchest
Mastich insteal of Putty.-Mr. Falconer states that he has used this substance at (heam for several years, for
various purpe(sts, such as repairing the decayed parts of window-sills, and puttying squares of glas: : so satisfactory has been the result of clazing three lights of a cucumber frame, that in future ali are to be glazed with it. It is not quite so cheap as putty, but far superiur to it in durability, and in adhesiveness to the wood and glass. When used, it is merely moistened with boiled linseed oil, and painted over after glazing.
Kyanised Timber.-Mr. Aitchison, gardener at Crump on Kyanised timber being injurious to the growth of mushrooms; he says his house was fitted up two years ago with properiy-prepared timber, and that the mushrooms in con. coming through the bottom between the spars. [This is coming through the bottom between the spars. [This is
not much in favour of the preservative properties of not much in favour of the preservative properties of considered to consist chiefly in keeping off the attacks of fungi.

Nelumbium speciosum.-When Nelumbium specio$s \mathrm{sm}$ is well grown, some of its majestic leaves will attain a
circumference of 5 feet, and be of a beautiful rich dark green colour; these, together with its magnificent pink flowers, form a contrast not easy to be paralleled. No plant is of easier culture, the only difficulty being to malke it flower. Some plants may be seen growing luxuriantly year after year, without ever producing one single bloom. found to answer well, for it has been practised with success for many years. The Nelumbium nay be casily increased by seeds or by division of the root; the latter plan I much rather prefer, as less trouble attends it, and the plants get sooner into a flowering state. The best time for performing this operation is in Februarr, and the first year it should be grown in a much smaller vessel than the one it is finally to he planted in; the tub or cistern, as it may be, in which it is to be tlowerd, ought not to be less than " feet long,
2 feet wide, and 2 feet deep. The soil should be iwo2 feet wide, and 2 feet deep. The soil should be twoof old rotten dung, which should be well mixed, and the tub filled with it to within 9 inches of its surface. The routs may then be placed in the soll to the depth of 3
inches, and immediately aftermards inches, and immediately afterwards till the tub to its and neser sutfered to sink care that it is nos suriace. The heat by mght, during the spring months, should not be lowerthan $6 \%, \%$ to 51$)^{\circ}$ and from that to 800 during the day. In the summer the temperature should be about $7 \mathrm{I}^{\circ}$ by night, and from that to $30^{\circ}$ during the day. When the fohage decars, 10 autum., water should be withheld ; bus the roots are mire apt to rot when the nould is dry and parehed than when it is hept in a moist state. In thas manner the root should be kept until February, when it ed; for it allowed to rem into fresh soil, as before directit is formast illowed to remain two seasons in the same soil, it is almost certain not to dower the second year.-C.E.,
$\boldsymbol{F e b} .26 .18+1$.

Dahlia Protector-Among the numerous contrivances for protecting Dahlia.blooms from injury which I have notived, that which appears to answer the parpose most
completely is the basket-shade, of which the accompany-
ing sketch is a representation; it effects all that is neces-sary-it shelters the flowers in stormy weather, and it protects them from the scorching mid-day sun; these objects
are attained without depriving the flower of light and air, which are essential in bringing to perfection the beaatiful and intense colours of the Dahlia. This protector is made of wicker-mork, and consists of an inverted shallow basket, to which is attached a tube made of the same material,
through whieh the Danlia stick is passed, and a per being in. through whieh the Danlia stick is passed, and a per being in-
serted between the stick and the tube, it is firmly secured at any height required. It measures 12 inches diameter in the widest part, and is $3 \frac{1}{3}$ in depth. From its
being made of so light a material, and from its simplicity of construction, it is not easily displaced or put out of order, and the flower not beng confined within anywith any substance that would imjure the petals. It requires to be painted to preserve it from decay, and if the ance of them would not be disagreeable, and the insects lurking inside would be easily perceived.-C. $F$.

Hot Water as a Bottom-heat for Pines.-Mr. Sellers agrees with Mr. Saul respecting the utility of hot water as a bottom-heat for pines, p. 133. He adopted it about nine months aqo, and has cat from the fruiting-house since Christmas Queen Pines from 21b. to 11 b , weif,ht, and now has a good prospect of cutting fine fruit this season. December, and might hase cut them tor a longer time, but he required the boyes for another supply, whichs is now showing fruit. Mr. Sellers is not of opinion that tan may
be dispensed with, though he thinks old will do as well as fresh to plunge the pots in. If tan is not to be used, he says a sabstitute will be required; and sifted coal-ashes
might answer the purpose, and wonld not want renewing. might answer the purpose, and wond not want renewing,
like tan or decayed leaves. He thinks the system would answer for orchidaceous houses, as in the morning he observes a ine dew on the cucumbers in the pinery.
Pelurgoniums.- We have already given the mode of cultivation adopted by Mr. Cock and Mr. Catleugh. The following remarks apply to the cultivation of Pelargoniums for the greenhouse of a private gentleman, and may prove acceptable to some of the readers of the Chronicle, as the mode of treatment has invariably been followed by the plants having an abundant head of bloom with heathy are removed into the open air, placed upon cinder-ashies to protect then against the worms, and are cut down the pushed to about an inch, when I proceed to repot them. My practice is to shake off all the old soil, and to prune the roots to within three inches of the stem. This process I consider fasours the prodnction of a fine head of bloom, The plants soon recover, vind the destruction new wood The plants soon recover, and the destruction of the old roots is succeeded by new and active fibres from the points where the knife had been employed. The following compost I use for the winter potting ; viz, two barrowfuls of loam, two of leaf-mould, hulf a barrowful of peat, with one peck of silver-sand. The plants are placed where they are partially shaded, receiving a little of the morning sun onis in three weeks they will have made new ro ts, sufficient to bear removing to a more open situation, where they will receive plenty of lisht and air: here they remain till the weather becomes wet and coid, when I remove them into the greenhouse. I pace them as near the ghass as drawn. and water sparingiy quring the winter months. In Octuver I stop ine shonts to wibin fiver or five eyes of the stem. In the lexinning of December I prewire to repot for blooming. usisig the fllowing soit. wach is richer and tronger than t:e c mpost presmusiy employe i. Io twi) barrnwtuls of ham 1 adi two of cowdung une year old I prefer it of this age, as it affords nourishment a greater length of time ', halt a barrowtul of lexi-manda, and one pecik of silver-sand. If the loam be hears and strung, I add peat; but this is mot, necessary if the iusm is of a sandy nature. I give good d:ainase uy unuls plenty of were previously ginto pots a size larger wan the pans rub off neariy all the old soil, and fill up with the compost above described. The honse is kept closed for a fortnigit. or chree weeks; and wien I see the plants begin to rowt freely, I give air as the weather permits. The temperdture of the house ranges from $40^{\circ}$ to $45^{\circ}$ Fahrenkeit,
when the plants are growing freely. I keep them well
tied out, forming them into broad and uniform heads. I (choosing annge the plants about the middle of February (chosing the afternoon of a fine day for the purpose),
and continue this operation twice a week till the plants begin to show their bloom. Daring the months of February. Mareh, and April, I water twice a week, and norease the quantity as the weather becomes warmer. I midday sun ', miday sun. - Charles Werks, Bhechheath.
timber tree pruning Loping Fure.t-trees.-As forest or ciardeners' ("hromele, I offier a few rent place in the the way in whith it has been discussed remarks on it, and that it seems taben for oranted that pruning, or lopping, and the cuestions hitherto browisher, whe operation molle. as for instance the comparative merits of cha cutting and snagging, than to the thing itself. But passing these by for the present, I should, in the serond place inquire, - Is pruning or lopping timber-trees necessary at Is it in the object sulught to be attained by it? sit increase of sond timber? Thien I should feel dislikely to defeat than to promote that end,-for the follore ing reasons:-lst, Increase of stem can only be attained by reciprocity between roots and branches ; 2udly, No man siderable period of its existence a large head; and 3rdly, In whatever proportion that head is lessened by lopping, dic., in like proportion you lessen the power of increasing the bulk of the stem by destroying the balance of reciprocity. So much for general principles. Is it not someunder the notion that the roots will continue equally active and that all the nourishment taken up by them, and not required for what your loppers will call superfinowe branches, will be laid on the stem and form an extra quantity of timber? Yet many act as if that would really cut the heads off altogether; then the tree, they should stem. My opinion is that pronits is ne warl be al would seldon carry it beyoud what can be done with the knife when the trees are young. Close-cutting is infinitely preferable to snagging; but if at all necessary, Mr. Billington's mode of fore-shortening is best of all, if kept so far off from the stem as not to kill the brauch; yet this is an infringement of my first principle of increase. Some 25 or 28 years ago a well gotup work made itt appear-
ance, called "o The Forest Pruner." by Mr. IV. Pontey, of Huddersfieid. It attracted much by Mr. W. Pontey, hands, and at the time charge of some youg plantations which was required to maid de according to the principles and directions there worl not being approved, Mr. Pontey was called in as citic and judge. I pointed out to him a yourg tree, and gave him my knife; he operated, we agreed: I had his approbation, and my employer afterwards expressed his satisfaction. This book, however, had as a frontiapiece the figure of a beautiful tree-

That few could peer it,
Sae straight, sae taper, tight and clean,
Nane else cam near it.
A rage arose to get all other trees jast like it; and I remember, on the domain of a worthy baronet, the trees were by hundreds "pruned" into the shape of gigantic surdity, and I adduce it to show how forest-pruning ab much that is written about it, is perverted and becomes injurious. On the whole, I am disposed to question whether any proof can be adduced cut tred to satisfy a fair and unprejudiced inquirer that any real benefit has accrued from a system of lepping, whatever the mode adopted. Should any of your correspondents conversant in the matter bring out such pronf, I promise them to beconvert soon as my judgment is convinced. Judicious thinning is another matter.-

Birds and Nels, (ride G. C., No. 6; page 86.)-If H. K. Will do me the favour of once again pernsing my P. 70) I think he will agree with me that our inquiry should be-"Do the Germans coer, not always, use blue of string, as I intended to be understood when I said thet the twing for the blue nets is dyed before they are made. I nsed the word tevine as especially opposed to worsted. However, I fully concur with H. K. that the birds would soon find the worsted very cumbersome to their claws, described by me. As ancient philosopher lamented that he could not move the world because he had not nou इTp̂, and I imagine that the aparrows would likewise be much impeded in their measures from a similar want of a convenot, therefore, and with a view of having two agents at work at once, the one acting on the physique, the other on the morale of these marauders, use worsted dyed blue, as H. K. supposed was the case? We should thus have the German theory and H. K.'s thegry combined, and a bet Vogetables.-The Egg-plant and Purslane are little culivated in this country; but those gardenens who require rariety of vegetables would do well to grow them. Both however, require a skilful cook. $-K$.
Artificial Light for Horticullural Purposes.-The few remarts which I have to make on the employment of artificial light for horticultaral parposes, may perhaps gardening. The intensty of the light of the oxy-hydrogen hmp has led me, for some time past, to suppose that it might be rendered available for forcing plants during the light is one of the principal agents concerned in promoting the growth of plants, which it effects by decomposing the earbonic anid contrined im their sap; and the rapid proenrbonic wide contained im their sap; and the rapid progreas of vegetation in northern latitudes has been attriyeason of those regions. There are two experiments mentioned by De Candolle, which show that even the light of common lamps has the power of turning etiolated plants green, and of causing flowers to unfold their corollæ when ituated in places inaccessible to the rays of the sun. If such were the effects produced by the light of common lampas, how very much greater may we expect the results hyd when the brilliant light produced by and mydersitand has the power of decomposing the nitrate of vilver, precisely in the same manner as the light of the swn! And I am also informed by Mr. Prideaux, the talented chemist of Plymouth, that the flame of the oxy-hydrogen lamp is quite equal to any chemical effect where light is required. I am happy to state that an eminent physiologist, with whom I have corresponded on the subject. has expressed himself favourable to my views; he says, "That the oxy-hydrogen light will affect piants much in the same manneras that of the sun, seems probable. We also atates ould ber, It might daylight during the dark days of winter when tropical plants suffer."-J. M. Winn, M.D. Truro.-P. S. -I made these remarks at Falmouth, on the 17th July, 1840 .
Luminous Worms. - When the glow-worm is accidentally crashed, a luminous line somewhat permanent temains. The luminous metter is componed of spherules, or minute globules encased in a delicate membrane, which being raptured, the light vanishes. The ova of the glowMorma are luminous, and are grouped together in a botryoial form. I find that when the luminous matter in a thin glas capsule is cooled by a freezing mixture, the light is my $98^{\circ} \mathrm{F}$. I am disposed to consider it a thermo electric phenomenon, dependent on the punctum saliens-the vital principle. I am informed that glow-worms have been preserved Iuminous at Christmas, being kept in a glass Murray.

Honey-dew.-I regard this phenomenon as an excretion of the plant in a morbid condition, and the facts and circumstances are numerous that comfirm this view of the case. It is one indeed analogons to the transudations of manna from the Ornus rotundifolia and Tamarix mannifest peculiar secretions from their leaves: in the former it is sweet, and is the latter acid. Let it be remembered that there is honey-dew where there are no aphides, and apphides where there is no honey-dew. The question of the apper or lower surface of the leaf is one connected which will materially modify the phenomenon. The plant saickly, and a morbid condition of the atmosphere is not unfrequently the precursor. It is not duubted or denied that aphides may sometimes wound the surface of the leaf, end thus generate a cuticular disease; but honey-dew certainiy transpires from the plant, and is a phenomenon iedependent of the sphis. Where there is honey-dew. there will aphides be frequently found, on the same principle firat "wetre the carcase is,
gathered together."-J. Murray.
Stoves jor Greenhouses.-Arnott's stove, in its best so heated that paper put on the top is not only charred, Guatignted. The Chunk stove is every way superior. Guntireas at-a high temperature deteriorates the atmo-
on the hend of the stove. Mr. Shepherd of Newport
Pagnel has constructed a stove encased in brickwork. Pagnel has constructed a stove encased in brictwork, well. The following simple expedient will "steam" the consersatory at such times and seasons as a humid atmo uphere may be required, and is free from the objectio decompones it, and evolves an unhealthy atmosphere of hydrogen ; but stuves or bricks thrown into water moll develop drogen; but stoves or bricks decomposition.-J. Murray.

Winter Potatoes.-In the spring of last year, 1840, salected some of the largest potatoer to kee the eariy growing vut, and so continued robbing them off till the month of August, when I prepared a bed of light soil in a
dry warm shed, about six inches thick, with a level surface ; then I put on my potatoes whole, and nearly close to each other. Ater having covered my bed alt over with pota-
toes, I covered them with light soil four inches deep, and gave the whole bed a moderate watering, and so let it remain till it was time to cover the bed over in order to pro-
tect it from frost. When I examined the bed in December, If found an abundant crop of young potatoes without any appearance of haulm or outward shoot from the paren
Pruning and Lopping Forest-trees.-I find by a letter from Lord_Braybrooke, that I was correct in stating that he had abandoned the practice of fore-shortening; and as
he permits me to make use of his communication on the subject, I will give you the substance of it. He considers that the pruning of living branches should never be at-
tempted unless they are of a size sufficiently small to be removed by a stout knife. The blemish introduced by pruning larger branches is too great to compensate for any to his woo, in Berkshire, by the damage branches larger than a man's wrist. This was done contrary to his own orders, and can now be remedied only by fellog for timber. If any buds should appear round the wounds or trunk, they may easily and advantageously be rubbed off in the following summer:-All fore-shortening can of a decayed stump, and it is far better, if it be necessary, to prune close at once. Lord Braybrooke is of opinion that "Pontey's Forest Pruner," which set many landed proprietors to work with saws and bills, when amputations were unscrupulously made to a ruinous extent.-J. S . Henslow.

## FOREIGN CORRESPONDENCE.

Saharunpore, Jan. 11, 1841.-I have lately met with a curious fact, which you may perhaps think worth noticing in your Garden newspaper: it occurs in a species of bicolor. "In this, as in the species I previously eramined, the ovarium, up to a period immediately antecedent to that at which we may infer the pollen to be acted upon by the stigmatic surface, presents no traces of an ovalum. But about that period the ovarium will be found to contain several membranous tubes, free downwards, upwards traceable for a considerable distance along the stigmatic canal. I have traced them half up the style, which is of considerable length. The next step consists of the growth of cells from the points of these tubes; and by the apparent confluence of these growths, a cellular mass is formed, which may be described as an ovulum pendulous from the apex of the cavity of the ovarium. In the centre of this mass the cells forming the base of the funicle of the the apperce of the itself, and is accompanied the appearance of the embryo itsel, and is accompanied by an enlargement of the mass, originating from che point of the tabes, and whick mass subsequ. albumen. I have not as yet ascertained the continuation of the troes with the inner membrane of the pollengrains; indeed, I marcely expect so successful a resuit, as there are many unfavourable circomstances connected with the subject in this particular plant. But I can speak with tolerable confidence of the appearance of the tubes after the dehircence of the anthers; of their being traceable a long way up the stigmatic canal ; of the growth of celluat tissue from their points, from which tissue the albumen, as well as the embryo is derived. The inferences from this fact, provided the assumption that the tubes are the ends of the pollen-tabes or boyaux, or, in other words, are
derived from the inner membrane of the pollen-grains, prove correct, are I think sufficiently obvious; but in the present state of my knowledge, I do not consider myself warranted in stating anything but the mere facts; neither shall I here explain the discrepancies between these observatioas and my previous ones on other species of the same genus. It is my intention to follow up the development of the embryo in as many other species of Loranthus as possible, and to connect this inquiry with the evolution of the same body in certain other plants in which singular modifications occur." The circumstances are remarkable, and if the absolute continuity of the tubes with the inner membrane of the pollen-grains be ascertained, will throw a food of light on our knowledge of vegetable embryology. I need not point ont to you the extreme importance of the growth of the new tissues constituting the ovulum, from the outside of the ends of the tubes-a direction of growth
irreconcliable with the assumption of their being embryonary sacs, and one which bas the strongest analogy with the germination of the sporules of certann so-called eryptotrates into the embryonary sace anomaties of this Loranthus with the ordinary type.W. Griath.

ate manner, green withrut and red brown withun, furming, after
a few have expanded, a larse, elegant, cernuous, circular basing,

derstand that the collections made by Mr. Griffith in se veral parts of the north-east frontier of India are about to
be distributed from the India House. As we believe that no Mis. remariks accompanied them, some misunder-
standing may occur as to Mr. Griffith's wishes reyarding standing may occur as to Mr. Grimith's wishes reyarding which Mr. Griffith did write connected rith that point to not appear to have ever left Calcutta. Such being the
case, in order to prevent Mr. Griffith from suffering by the indiscriminate publication by others of materials Mr. Griffith's intentions of elaborating the to announce large collections, and of publishing from them "Contribu tions to the Botany of India," the prospectus of which will arrive in England in the course of two or three months We have no doubt that all botanists will recognise the tion of his own materials ; particularly as Mr. Griffith, in full reliance on their studied abstinence from interference, bas not in these collections availed himself of an easy check on such proceedings; viz., the attachment of MSS.
names to everv described species. We hear however that this is waired in favour of a few of this enterprising botanist's scientific friends

Newe Hybrid Aloe.-This beautiful hybrid, raised by Mr. Ricketts, gardener to W. H. Baldock, Esq., Petham, may be popularly described as exactly intermediate between the Partridge-breast Aloe (Aloe variegata, Willd.), Haw.) It partakes largelv of the character of the male parent, A. variegata, baving three-cornerell channelled fowers are more inflated and about half as long ; but the those of the Partridge-breast Aloe. The hybrid has the warts of the female parent; but these, instead of heing scattered indiscriminately over the whole surface of the leaves, are arranged in fascia, somewhat in the manner of the markings on the leaves of A. variegata. The edges of the leaves are
callous and rather more serrated than those of the male parent, which it resembles in its mode of growth. I have very little doubt that this plant will as soon as it is sufficiently known, become a general farourite, not only on
account of its distinct and handsome appearance, but from account of its distinct and handsome appearance, but from
its possessing the valuable property of flowering when quite its possessing the valuable property of lowering when quite years old. The gardening world are much indebted to Mr. Ricketts for his various experiments on Aloes, and before long he will, without doubt, exhibit many beautiful and curious hybrids from the same source. European grapes have been lately received in this country Mr. Longworth, the grower, tays that they will be founc them to Johannisberger, or some wine ot high character of that class, light and dry. He intends making this season from 3 to 5.000 gallons of different hinds of wines,
some red, some white. some sweet, and some dry. The kinds of vines hitherto cultivated have been almost exclusively native, though many foreign varieties have been
tried. 1850 plants and cuttings were last year obtained from Artois, and some from Burgundy are expected. Mr. Longworth cultivates some native grapes, free from the hard pulp common to most American varieties, fit for the
table. They stand the coldest weather, and would, he table. They stand the coldest weather, and would, he
thinks, do well for open culture in England. The wine sent to England was of the vintage of 1837 , and was bot tled in May 1838.- [As often happens when a person gives an account of his own success. Mr. Longwarth seems We understand that the about the quality of his wine a quality, that no sale could be expected in this country. Shakspeare, a Gardener.-In common with many other readers of the Gardeners' Chronicle, I am mach pleased with the observations of your correspondent $A$. in relation Avon." As much as he has said of the incomparable Shakspeare as a gardener and a forist, or rather, as a faith ful observer of nature in all its ruralitiem, might be predicated of him and of the universality of his genius, in all the relations of life, in all the walks of art and of externa things, as well as in all the various workings, the heights and the depths, of the human soul. So that to Shakspeare the "gardener," we mizht add-the ecelesiastic, the lowyer, the physician, the ploughman, the "woolcomber," o what not. But my present business is with the passage from Romeo and Juliet; twice descanted on by your correspondent. His correction of the reading is ingenious, and perhaps well founded. But I consider it unnecessary says-that the hollowness of the ground of the churchyard would give assistance to the boy's detection of the approach of strangers. A. argues the case on the principle that so lids are better conductors of sound than matters of looser texture. Of his knowledge of this fact. I dare say an ex ample might be found in our author, expressed or implie aithough I have not got one at this moment at my fingers
ends to quote. But in this case, Shakspeare had no vien eads to quote. But in this case, Shakspeare had no view
to the hollowness of the ground as a conductor of seund, but as to its greater power of resonance. What heeps up the eternal din of the streets of Londrin but the reverberation of the elastic fluids of its sewers. cellars, alleys, courts, and housen? Let $\mathcal{A}$. test the matter by computiog the rattle of a coach or the tread of human feet over the courts of Somerset House, or any other vaulted place about town, with the same operations practised on the roads or in the pasture-grounds of the neigbbouring country; or let him drive his gig along the clay roads of Oxford or Sussex, and contrast the sound that triten his car (whe-
ther on the ground or above it) with that given out by the

A little farther consideration chalky Kent or Hertfordshire apondent that these are not the onlr instances in which the earth being struck, " gives back a hollow snumit." $\quad$. $P$. $P$. Herbaceous Plants.--The following herbaceous plants from the North of India are desirable either from their beauty or rarity :-Aquilegia fragrans and glauca. produce their sweet-scented lemon-coloured Howers, stained with purple, in June. Iris fragrans, with blue flowers, is valewith clusters of deep bine flowers, in the ming longinorum, adapted for rockwork. Salvia hians, bears rretty blue and white blossoms in July and August. Phlomis cashmeriana, a handsome species, has large heads of bright rose-coloured flowers. Potentilla lencochron, not unlike August and Soars large golden yellow blossome, in twining Campanulaceous plant. produces dull purplish flowers all the autumn. Aconitum ovatum, a singular species, with entire leaves, bears dull brownish helmet-shaped blossoms in August. Geranium rabifohium, a handsome plant, resembles nodosum, but produces much larger flowers, of a bright purple colour, in div. Polgonum amplexicaule, bears pretty spires of mall ruby-coloured or white flowers, in the autumn. Heterotropa asaroides, produces large dull brown blossoms resembling a pouch or inflated bag, in April or May. Sedum Sieboldi, a pretty rock plant, has large heads of pink flowers. Hoteia japonica, bears close panicles of white flowers in June. Funka Sieboldi, a handsome plant, produces lead-coloured flowers in July and August and Epimedium violaceum, with purple, and macranthum and Muschianum with white blossoms, in way and June These are all natives of Japan. Convolvulus stans with large crimson flowers, and Potentilla hrematochrus with dark blood-coloured blossoms, from Mexico, should be in every coilection. Pentstemon crassifolius and Murrayanus, the former lilac and the latter scarlet,-Helleborns orientalis, with large solitary white flowers, and Clematis lathyrifolia, producing bunches of large white blossoms in Augnst, are well deserving of notice.

 Rural Ecomomy in the University of Oxford. 8vo. 1841, Tae Sibthorpian Professorship of Rural Economy was eitablished nearly half a century ago by the late Dr. Johs

ment, but directed that the whole proceeds of the endonlection of drawings made by Mr. Ferdinand Bauer from the plants collected in the Levant by Dr. Sibthorp. The publication of the "FloraGrexa"" has proceeded slowly; but those who can appreciate the elaborate fidelity of the engravings that illustrate that magnificent work, and who know how small a portion of its cost has been defrayed by the poblic, cannot be sarprised that more than furty years have elapsed before the fands derived from the estate left by Dr. Sibthorp $^{\text {D }}$ conld be devoted to the endowment of
the chair of Rural Ecoaomy. The three lectures nuw published are the first delivered by the new professor, and are intended as an introduction to the stody of scientific agriculture. They are written in the clear and forcible manner which distinguishes all the writings of the author, but
they are better adapted to teach the student how to bring they are better adapted to teach the student how to bring his scientific bnowledge to bear on practical points the information to be derived from scientific experiments.
In the first lecture the author points out the value of science in connexion with agriculture, the importance of stodying vegctable physiology, in order fully to understand ge functions of the difierent organs of plants, their growth, and modes of propagation, together with the in-
tluence of climate and cultivation upon their developement; and the use of chemistry in explaining the nature and properties of the soil, the action of manures, and the deteriorating action which plants have on the soils in which they grow. Thus, in the commencement, he says -
 rials hitherto thrown aside as refuse, nor does the most experi-
enced manuacturer undervalue an appeal to principles of science on the part of those who propose to tim any modification in the
existine pocesses. Aud yet how tmail is the ranke within which
the the preilhe ervices of the experimentaiint are circumschioch,
where he -uceeeds in improving or facilitating the production of any untuactired article of consumption, compared to that of
the tility which would attend the slightest aneliaration which he
might effect in the general productiveness of the soil, or even in might effect in the general productiveness of the soil, or even in
the mechamict or other meitools for abridging the labours of the the mechamic
As to the inntruction, inded. which tlie agrieulturist may de-
rive from a scientific acquaintance with botany and vegetable physiolusy, when coujoined with practical experience, it will not
be necessary for me to dilate. It inust be obvious, that althouph
He to proceed in one unvarying rontine of practice might require
anly a knowledge of the plants actually cultivated, and of the wheeds shmowli aecompany them, yet that to improve upon existing nuethoass, int adapt receivel mes to an alterel convition of cir-
cumstances, demands some insight into the general structure and furctions of vegretables, and into the relations of their members one to the other. Thus, for example, the principles on which derivect trat thic tnowtedre possessed with respect to the circuit. Proceeuing upon these data, the gardeners at Nice and Grenoa, whenerer a severe frost sets in. pluck off the leaves of their
oranse-rrees, ty which mean the sap ceases to rine, and the in jury with would he dome to the thunk by the freezing of it
aquen
 any fitesh memser miththe thele, its piace in the seriess shomld be In the second lecture incluiry is made as to the sources whence plants dcrive those matters necessary to their growth; and in the last lecture practical results are ex plained on scisntifc principles; and theories raised as to the primary saurce of carbon and nitrogen. We shall give
one other extract, takee from the last lecture, on the chemical principles of the rotation of crops, which will sufficiently illustrate the object of these lectures, and the manner in which the subject is treated by their talented author.
Those plants ought to succeed each other which contain differ. ent ehemical ingredients, so that the quantities of each which the
soil at any given time contains may be absorbed in an equal ratio. soll at any given time contains may be absorbed in an equal ratio.
Thus a productive crop of corn could not be obtained without

 that requireal much of any of the above ingredients, immediately
after having diminished the amount of them present in the soil, after having diminished the amount of them present in the soil, other hand, leguminons plants, such as Beans, are wert calculated and less tnam ohe per cent. of the phosphates. They thrive, therefore, even where theee ingredients have been withdrawn, and
curims their growthantiord tume fiyr the ground to obtan a frewh for tire same reasou Whe't and Tohaien may sometimes be rear dit int stecession in a suil rich in potass, because the latter in Whe it, orter, however, to proceed upon certain data, it would se rectuaste that ans analysis of the plants most usefal to
man smand he accomplialied in the different stages of their grow th a labour which ha- intherto been only partially undertaken, and a sreat bedy like that ot the English Agncuitnral Arocioation. grown in different climates. Thus, in the Bect-poot, nitre takes the place of sugar when this plant is cultivated in the warmer
parts of France. The explanation of this difference is probably
as follows:-Beet-root contains, as an essential ingnediemt, not
 that the cae cammet ixlas without the uther The norrogen, being portion as this angredient is wanting
likewrise fall off. Now, it has been s
apd it is conceivei by hins that the decomposition of ammonia, monia in pold, min in that of nitric seid in warm climates. Hence,

The yirst Buok of Botany, by Mrsm Loblon, is a stnali duodecimo of 66 pages, intended for schools and young persuns. We wisil we could say it is Fikely to answer that parpose; but in zuch books, tritting though theg be, sccuracy is indispensable; and when we fud the little wood
terms they profess to exphin, we are obliged to withhold our approbation.
CALENDAR OF OPERATIONS for the ensuing Week. few word- may not be inazppresiate, whilst Pine.growers have

 summer. $\ln$ phottust the plants, great care in nint on neceetary a
when they are in more active growth, for it principally consist in reducing the balk of good roots, or removing dead oure, to
enable their being planted with fresh soin in pots of conventrit
size, and to admit of their being fuccessively poted throuyh the summer. When the plants are in full virour, their ruats ar
most delicate and liable to injury, sad excechinly tuccepthbe
any change; then therefore they require the utmust care anul ex pedition in shifting, to prevent the atmosphere acting for an
learth of time upon the pots whthen standing out of the tan in
thact lack sheds, or even in the open air, ater being taken from a bot
om-beat of 90 . This is seloun considered watic reference to Piner, themulli comnow plants, such as Cuchmbers or Baisams,
whieh reatily show by their foliage any sull nualtreatment, are poutted with yerupplous care and returned to their frames hefore
they have time to sutter. Although che Pine does not timmedediately
show the ffects of ill-usage, the consequences are sure to follow, show the effects of il-usage, the consequences are sure to follow,
in weakl| growth, curled leave, premature or deformed fruit, \&c
To obviate this, care should be taken in the summer potting air The shifting from one pot to another should be done withont disturbing the roots, even by removing the draining tiles at
the bottomi it it annot readily be done, at they will oo on harm
in remaining. In fact, the whole success of Pine-growing depends that growth from injury during winter, which is accomplished by
simimar means, viz.- avoiding sudden changes in the treatment of
every kind every kind.
-KITCHEN-GARDEN AND ORCHARD.
Pryegr.-In clear weather the plants should be lightly shaded during the midde of the day, untir they gre estabished in the
new soil and this will emable the house to be eept closer with-
ont an unusual increase of sun-heat. Keep the paths wet, and ont an unusual increase
moisten the surface of the tan-beds with the syringe night and morning; sprinkle the plants overhead once a day, either about
$90^{\circ}$ elock in the morning or immedlately after the house is shut up ; water the soil in the pots verr sparingly; pay strict attention
to the heating of the renewed beds, and take precutions vent the plants being injured if they heat violentaty, which fre-
quently happens when tan fresh from the pits has' been used where there is shed-room, a stock of tan should be got in for au-
tumn use ; if two fires have been in use through the winter one may be dispensed with now ; use the furnace that heats the front
Vinkry.-The vine-buds in the later houses will now be about breaking. If the cane-bearing system is pursued, they should be owed, to check the terminal buds from gaining the ascendancy
too much. When late Grapes are still hanging on the Vines, as the St. Peter's at Chatsworth are, the buds shoold be rubbed off, in May, and the fruit hung up in a dry spoom prith the wood at
in tached to it: it the Vines are pruned now, they must be untied
from the ratters, and shaded with mats from tie sun, to preven from the ratters, and shaded with mats from tie yun, to prevent
them bleeddrg much; continue to pay attention to tying, stopping, and thinniug the fruit $;$ preserve a moist atmosphere, but do not syringe or wet the fruit, very slight fires are now neces-
sary Propagate vines by eyes.
PEACH TIocse. -Continue to tie in the young wood neatly for PEACH Hocse. - Continue to tie in the young wood neatly for
next season, whilst it may be readily bent into its proper place,
withuut dauker of breaking. The early house, if the fruit is stonied, may be gradually increased in temperature $a$ few degrees, and those branches which have fruit at their base may be pruned
down to three or four eyes. Use the syringe freely to the trees down to three or four eyes. Use
and preserve a moist atmosphere.

watering ald watering is also requisite.

## NEWS OF THE WEEK

OUn foreign news does not embrace many points of public interest which were not fuliy illustrated in our last Number. We learn from France that the probability of a war between this country and the U'nited States is hailed by the opposition party in Paris as likely to benefit France, and restore her to the position she oceupied befure the Treaty of July. The Committee of the C'bamber of Peers have sent in their Report on the Fortitieation Bill, to which they suggest certain modifications: and it appears that the Report has characterised the measure as injurious to the commercial prosperity of France, and contrary to her constitutional institutions. The recent aspect assumed by the Eastern question has given rise to much anxiety in Paris, and many conferences on the subject have taken place. The Ambassadors of the Allied Powers are said to have declared that the principle of absolute hereditary right, in conceding Egypt to Mehemet Ali, was the basis of the Treaty of July; and that they will obtain that con cession for the Pacha, provided that France abandons her present isolation. and unites with the other Powers in settling the questions still at issue; an arrangement to which France is said to hare consenterl. In Spain the republican movement still embarrasses the Government, and great opposition is expressed against the election of the Duke de Vietoria as sole Regent of the kingdom. A tri unvirate has even been mentioned, but a general impres sion prevairs that the actual position of affairs will not be disturbed.-In Germany some excitement has been created in consequence of the closing of the right arm of the Rhine by means of a stone dike, by the orders of the Grand Duchy of Hesse, owing, it is said, to some dispute with the Government of Nassau ; but the matter has been taken up by the Diet, and it is hoped that it may be satisfactorily settled by negotiations.- The question of the suppression of Convents, and the intervention of the foreign Catholic Powers, still occapies the public mind in Switzerland ; and in Italy it appears that some discontent has been caused by the interference of Austria with the arrangements of the Tuscan Post-office. -Our Levant news expresses doubt whether the Sultan will yield to the remonstrances of the Allies in reference to the Pacha of Egypt, and fears that the definitive solution of the Eastern question is likely to be adjourned.
At home, the proceedings in Parliament have not been of remarkable interest, with the exception of the debates on the loan to the Commissioners of South Australia, the question of Church Rates, and the grant to the Catholic
Seminary of St. Sulpice, in Canada. The latter termiSemiuary of St. Sulpice, in Canada. The latter termi-
nated in the rithdrawal of the Bishop of Eseter's motion for an address to the Queen against the ordinance by which its revenues are secured; and the guarantee of a was granted.

## 3) ome 7 xems.

Court. - Her Majesty, Prince Albert, and the Princess Royal still remain in town, and are in good health. Considerable excitement was created in the Palace on Monday
last by the detection of the boy last by the detection of the boy Jones, who had on former occasion effected an entrance into the Palace : par-
ticulars of this attempt will be found under our Metropoticulars of thin
litan News.
Parliamentary. - The writ for the election of a representative Peer of Ireland, in the place of the late Earl of Rosse, was issued on Tuesday last.-Mr. Parker, Member for South Devon, has declared his intention to resion at the close of the present session. It is said tuat Lord Courtenay mill immediately offer himself.-The Hon. G Fitzwilliam, in conjunction with sir Genrge Heron, will come forward as the Liberal candidates for Peterboroug at the next election : and Mr. Gladstone will also contes the borough on the Conservative interest. - At the annua meeting of the Maryleoone Loyal and Cohstitutional As-
sociation, held on Tuesday, statements were made, from which it appears doubtful whether Lord Teignmouth will again contest the representation of that borough. In the course of a speech made by Lord Teignmouth. his Lord ship said that his eiection committee had held a meeting, which was numerously attended; and they unanumously determined to issue a circular to the electors of the borough, stating that unless the electurs came furward at required, they could not advise bim to offer himself again as a representative for the borough. The meeting were penses, but that the remainder was to be subseribed by the electors. He could assure then that he should carefully avoid precipitation : but he thought the elector should look out for a good second Conservative candidate in the event of his retiring, which was by no means improbable.

Auditorship of the Duchy of Cornwall.-Whe auditorship of the dachy having become vacant by the death of
Sir G. Harrison, that office has been conferred on Mr. James Gardiner, a barrister. We learn, however, that the emoluments of the office, which were 1,2002 a-year whilst in the hands of Sir G. Harrison, have Ueen reduced by Viscount Dancannon to 400 . s-year
Command of the East India Station.-Rear-Admiral Sir W. Parker, K.C.B., succeeds to the command of the overtand, in order to China seas as soom to ponible.

Survey of the North Soc.-Commander John Washington, late Secretary of the Royal Geographical Society,
avceeeds the late Capt. Hewett in prosecution of the survey of the North Sea.
Deputy-Governarship of Canada. - The GovernorGeneral of the British Provinces has appointed Sir George Arthur, late Lieut.-Governor of Upper Canada, to Deputy-Governor of that part of the province of Canada which heretofore constituted the province of 1 pper Canada, whe Lieut.-Governor, with the exception of that of keeping and using the great seal, reserving also his own power and authority as Governor of the province of Canada.
Detention of Neus spapers.- In consequence of frequent
complaints having been made of the detention of newspapers by persons connected with the Post-office, the Postmaster-General has issued a circular to the postmasters of the different towns throughout. England, giving notice
that not only will dismissal follow the offence of abstracting newspapers, but that offenders will be prosecuted with the utmost rigour.
New Poor Law. - By the return just laid before Parliment, it appears that the gross total number of paupers relieved in England and Wales during the quarter ended Lady-day 1841 (including the places not yet brought under the Puor Law Amendment Act) amounts to
$1,201,344$. The proportion of in-door and out-door papers relieved, to the population for the same period, was 8 6-10ths per cent.
The Approaching Census. - Active preparations are mow making for the decennial census, and instructions to this effect have been sent to the registrars in we different
parishes of the Cnited Kingdom. Each parish will be parishes of the Lnited Kingdom. Each parish will be
divided into different districts, extending from 50 to 80 houses, and the inçuiries will be made by persons residing in the neighbourhood, to be appointed by the local registrars. Each of the agents so appointed will have to deliver the notices at the houses, and on the 1st July fill up
all details respecting the age, sex, emplopment, \&c., of the different occupants. On Monday, a circular was imaned from the Home-office to the different district registrars, assigning as a rate of remuneration the sum of ten shillings for every fifty houses, with one additional shilling for every ten houses above this number.

## fforeign.

France.-The Paris journals received this week have brought us little news of interest. The papers seem generally occupied in discussing the probability of a war fow exceptions, appear to exult in the prospect as one Firely to prove most injurious to the interests of England, and to afford to France an opportunity to resume that positiou among nations

Libets on the King. -The prosecation of the National before the Court of Assizes, for an attack on the King and for bringing the Government into contempt, has been sgain adjourned until next term, in consequence of the continued illness of M. Delaroche, the publisher. The indulgence of this Court is contrasted by the papers with
the severity of the Charaber of Peers, which condemned the severity of the Charaber of Peers, which condemned fime. A curious circumstance is also noticed as connected with this sentence. The responsible publisher of a Paris paper is always specially indemnified to undergo the Government prosecutions. M. Delaroche's agreement with the National, it is sta month during any imprisonment he might have to endure.
This covenant, duribg the secret sitting of the Peers in This covenant, duriog the secret sitting of the Peers in the late process, it is said, became a matter of conversa-
tion, and it was strongly urged to sentence $M$. Delaroche to the maximum of the imprisonment as well as that of the fine, because the National would have had to pay for three years $36,000 f$. to its incarcerated publisher, and the Republican print would probably be unable to stand the outiay, and a formidable enemy in the press would thus have been disposed of. It was with great difficulty, the papers add, that the more merciful judges ap

The Fortifications.-Baron Mounier commanicated to the Chamber of Peers, on Tuesday, the report of the comHe began by stating that, in his opinion, the plan of surrounding Paris with ramparts was perfectly useless, and that the best way of defending it was by an army and strong garrisons on the frontier. For his part, he said. he perceived the greater danger in converting Paris into
an immense bastille. He then investigated the question in a financial and political point of view. The idea of Puris standing a regular siege he regarded as totally impracticable; and he thought that the fortifications would be injurious to the commercial prosperity of France, and contrary to her constitutional institutions, and to the spirit of distrust on ber part, which would give umbrage to foreign powers, who were as interested as she was herself in awniding a general war. M. Mounier, after dis-
enssing the differeut systems proposed for the defence of enssing the different systems proposed for the detence of
Paris, said that the majority of the committee had been Paris, said that the majority of the committee had been
of opinion to amend the 2 d article of the bill as follows: -"The fortitications will comprise, first, casemated Works, closed at the gorge, and construeted at St. Denis,
Charentua, and on the heights of Ivry and Mont Valerien: and secondly, a wail of safety, embracing both banks of the Seine." The repurter then proceeded to show that adopted by the Chamber, and that it wonld the system verage of being less costly to the couentry. When he bad
concluded, the Chamber decided that the report should be
printed, and the discussion fixed for the 23d inst. The printed, and the discussion fixed for the 23 d inst. The
papers state that the works were proceeding with activity, although the bill had not yet been adopted by the Peers.
The Eastern Question.-The Paris journals generally express creat anger at the conduct pursued by the English Cabinet in pushing matters to extremes with Mehemet Ali, and state that the final protocol drawn ap in London ally submitted to the French C'abinet for its signature, uut that it hadd been refused. In reference to the same subject, we are informed that Count Von Hartig, nttrache to the Austrian Embassy, has left Paris with despatches
from Count d'Appony to the Cabinet of Vienna; and from Count d'Appony to the Cabinet of hienna; and
that these despatches relate to confereuces which have taken place between M. Guizut and the ambassadors of
the Powers which took part in the conference of London concerning protestations of Mehemet Ali against the obmoxious stipulations of the Sultan's firman. It is stated
hat the representatives of these Powers bave informed M. Guizot, that as to the right claimed by the Sultan of hey consider it an affair of internal administration, in which, according to the spirit of the treaty of July 15, siple cannot iolerfe hereditary right to the pachalic, tustrian ambassador, after consulting with his colleagues, has declared to M. Guizot, that, this condition having formed the base of the conferences and treaty of July 15 , there is no doubt that the Courts of Austria, Berlin, and St. Petersburg will employ all their influence with the
Porte to obtain for Mehemet Ali the concession which France desires on his behalf. It is further said, that the promise of Count d'Appony on this head was a formal one, but that it was accompanied with the condition, that abandon her state of isolation, and should aid in settling the other points of the Eastern question, such as the ultimate position of the inhabitants of Syria, \&cc. It appears ment to this effect. It has also been agreed that the French Cabinet shall not send a reply to a note received few days since from Lord Palmerston, until it shall have had the answer of Prince Metternich to the despatches of
which Count Von Hartig is the bearer. It would therefore appear, that it is at Vienna that the Eastern question will be discussed, and probably settled.

Darmes the Regicide.-The trial of Darmes is not exliminary proceedings were nearly terminated, and M. Girod (de l'Aine) was preparing his report of the affair for the committee of the Peers. No less than 50 or 60 individuals, it is said, had been arrested, but none of them could as yet be identified as the accomplices of Darmes,
and it was believed that the litter would be tried alone by the Court of Peers.

Toulon state that a Naval division, composed of six frigates and a line of battle-ship Was to sail for the Indian seas, under the command o Rear-Admiral Laine: that the Prince of Joinville was to accompany the division in the Belle Poule; and that he
will remain on that station until the fibal ad ustment o the difference between England and China. These papers also inform us that a contract has been entered into befor the supply of 250,000 cubic feet of timber which are to be cut down in the forests of Italy, and furnished within the six months following the conclusion of the contract. Paris and Rouen Railroad.-The principal inhabitants of Havre have authorised a notary of that town to nego-
tiate with companies who may be willing to continue this railroad as far as Havre. The municipality of Havre some time ago voted $20,000 f$. towards the preliminary
surveys, and agreed to devote $50,000 f$, towards the execution of the line.
Spaln. - The Madrid journals inform us, that the regwation of M. Gamboa, Minister of Finance, continued ascribed by some to his inability of conversation, and was cies of the Duke de Victoria for the army. The Duke had demanded, it is said, a sum of $30,000,000$ reals for the army, and M. Gamboa entertained hopes, by means of two negotiations he had opened, to arrive at some important result. He had promised the salt monopoly to
M. Safont, and that of tobacco to two other capitalists; but the resistance which he encountered in the Ministry prevented his being able to carry his plan into effect. -The journals are stil much occupied with the Regency question. A triumvirate was talked of, composed of the Duke de ictorna, and Senores Arguelles and Gomez Becerra. The Duke was stated to be indisposed, but not seriousiy. He is said still to flatter himself with the hope of being appointed sole Regent of the kingdom, notwithstanding that his chances of success were diminishing every day He had addressed pressing invitations to all his friends, and to the public functionaries, members of buth ChamCortes. -The Pope, it is stated, has protested strongly against the revolutionary acts of the Spanish government in attacking the Church and confiscating its property,
thus violating the rights of the Holy See as aleo against thus violating the rights of the Holy See. as also against
the expulsion of Senor Ramirez, the Apostolical Delegate in Maurid, and against the conduct of the Executive in sanctionirg the heresy of the Bishop of Malaga.
Portcigal.-By despatches from Lisbon we learn that the Senate had been principally engaged in discussing the projects of law which had been recently sent ap from the Lower House relating to aiterations in the customs' tarifis, The deputies have been occupied with the treaty of com-
merce between Portugal and the United States, which was carried by a majority of 65 votes. Numerous petitions,
couched in strong but constitutional linguage. from all parts of the kingdom, hare been laid befure the Cortes, against the re-establishment of the abolished arnuml-rents,
and the nerly-raised batralions of militia.- Tine journals state that the guerillas in the Algarve and Alemtejo were increasing their numbers to an alarming degree, and roving about in all parts, killing and robibin' with the most even short distances. The county magistrate of Gourea had been assassinated on his own premises near Aampayo, in open dar, by eight armed men, who entered uader the pretence of bringivy him a denpatch from the Adminising it. completely riddled him with their hullets; they left hand, and decaupetl. The Administrator-General of Coimbra announced on the 5 th inst., by telegraph, that of his gang, uere surrounded in a place whence they could not escape, and that after a sharp firing, curine which two
peasants and a grenadier were killed, they were all put to the sword.
Germact:- The political position of this country is at this moment one of very great interest. The Journals Sovereign of Prussia appears, it is, in reality, but the outbreak pamphlet, under the title of "The Four Questions," was circulated a few davs before the States met, and seems to
have created considerable sensation. It was, howerer, confiscated when a great many copies had already been sold. It refers chiefly to the transactions in the kingdom,
or the Province of Old Prussia and its capital, Konigsberg. The language is bold but respectful; and all that is saigns of Prnssia The author insists upon doing justice to the rights of the people, and to what has been promised them. It is said that one of the first statesmen resident in Konigsberg is the author of the pamphlet. The trangactions of the meetings of the states are now regularly pubs ine made on the subject of the disarmament continue to be very vague and unsatisfactory.- The Germanic Diet is said to have voted a recompense of 100,000 florins ( 230,000 f. to the inventor of the electro-magnetic machibe, to super that the closing of the right arm of the Rhine above Biberich, by order of the Government of the Grand Duchy of Highness the Duke of Nassau had arrived in chat city, and had a conterence with the President of the C pper Diet. The wall which has been so suddenly furmed in the khine to cut off the communication with the port of Biberich is the water. About 300 workmen were employed in building this wall, assisted by a detachment of Hessian gendarmerie In order that stemers and other ressels may communicate with Biberich, the Nassau Gorernment has just ordered the erection of a landing place in an island
opposite that port. The communication between the town and the island will be by means of a flying bridge. Papers of a subsequent date announce that the German Diet had dored the Government of Hesse to remove the stone dyie constructed in the Rbine, and that the pioneers of the Mayence garrison have been engaged in removing the explanation relative to the port of Biberich. Its allegation is that the navigation of the river was impeded by the Nassau works. This was the reason of the eleration of the Hesse dyke, in order to protect its rights, but no violence was employed, and if some gendarmes were pres by expressing its conviction that the misunderstanding would be amicably arranged by negotiations.-The Bavarian Government. it is stated. has resolved upon the construction of a central line of railroad, connecting the Aussurg and Munich railway with that of Saxony. This line will pass through Stof, Bamberg, and Nuremberg, and is to be commenced in the spring. The government has purchased the preliminary rights acquired by a company, which failed
 of the state.
BeLertem. - Intelligence has been received from Brussels that the discussion in the Senate in opposition to miaisters has assumed a new and grave character. senators formed themselves into a secret committee, which was read the draft of an address to the King, pray ing him to modify or change the present cabined, desire of he Minine conficence of the Cbambers. pon the address was postponed till the 15 the when it is constdered probable that an ordinance will be read for the dissolution of the f the Belgian At a general meeting of the sharebid to of the Beigian bank, it has been manimo $20,0=0,000$ to 31, 1000,000 .
Switzerland.-The Swiss Journals mention that the Canton of Apperizell had joined the others in protesting against the suppression of the Argovian convents. hat
cantons of Berne and Baste city, which are radical, have instructed their depaties to the Diet to hear che justifica tion of Argau before pronouncing, and to protest argau held an extraordinary sitting on the 8 th instant, to receive
from the Apostolic Nuncio and the Austrian Charge $/$ papers received. It appears that in consequence of a
$d^{\prime}$ Affaires, together with the answer sent by the Lesser despatch received from the Governor of Upper Canada, a Council to the Torort. Next day the Grand Council Council to the lorort. Next day the Grand Council puties of the Canton at the Diet, to maintain the decrees suppressing the convents, inasmuch as Argau had done nothing beyond the exercise of its inalienable right of sove reignty, and for the benefit of the State, and directing the depaties to make a solemn protest against any interrention at rariance mith this sovereignty. The Canton of
Vaud has instructed its deputies of the Diet to try and effect a reconciliation between the Canton of Argau and those that are opposed to the dissolution of the convents, at the same time that it considers the dissolution of these Grand Con ter its deputies in the Swiss Diet to pronounce themselves against the abolition of the Argovian convents, but to protest at the same Geneva has recommended that deputies should first hear the justification of Argau, and then protest against the bolitions, if the explanations are not satisfactory.-The same journals add that the Canton of Argan, in its reply to the Pope, declares that it had devoted the greater part
of the property of the suppressed convents to the use of the church and of education
Italy.-Letters from Italy contain particulars of the earthquake by which the city of Reggio, in Calabria, was nearly destroyed on the 22 d ult. The shocks were 15 in
number; the street of the Marine was converted into one heap of ruins; wost of the houses were thrown down, and the rest were so damaged as to be altogether uninhabit son, the Barrack of St Aggustine, the Cathedral, five other churches, and various other public buildings, were entirely destroyed. The inhabitants had sought refage, partly at Messina, and partly at Naples.-Accounts from Florence announce that the Austrian Government had established Florence has been a long time the peaceable abode where foreigners from all countries assemble. In establishing the cabinet noir, it is stated, the Court of Vienna calculated on being well informed of everything that occurs in Europe; and as the Grand Duke is a mere rassal of Austria, it was easy for her to carry her plan into effect. opened and read by the Austrian police, but they are also irrevocably kept back if they contain any equivocal sentences, no matter how important may be the contents of
the letters for the private interests of the persons to whom they are addressed.-It is reported at Naples that severath British ships of war will shortly make their appearance in the bay for the purpose of giving support to the Sulphur Company.
Turkey.-By intelligence received through Germany, we learn that the envoy of the Porte, who was charged Alezandria, in case Mehemet Ali should raise difficulties as to the purport of the firman of investiture, but to refer the matter to Constantinople. The Porte, it is said, does not seem opposed to grant the Pacha certain points which, without essentially prejudicing the Sultan's arrangements, would modify the accessory measures of the firman. As to the free choice which the Sultan has reserved to himself
in the selection of a successor for the vacant post of the in the selection of a successor for the vacant post of the ropresentatives are aware of it, and they have resolved to
countermand the departure of the Consuls-General for Alexandria; for it was thought that if Mehemet Ali re fused to accept the firmm as it is, the definitive solution of the Egyptian question, which was looked upon as at an end, would be again adjoumed. The Austrian aquadron Letters from the frontiers affirm that Halil Pach, brother-in-liw of the Sultan, had been restored to favour through the influence of the Sultana-Mother Validé. It was rumoured also that the influence of Russia had procured the improbable, as the ex-Vizier has been condemned for malversation.
United Spares.-By the arrival at Liverpool, on Tuesday, of the royal mail steamer Columbia, we are in Tuesday, of the royal mail steamer Columbia, we are in tents are not so important as those brought by the previons arrivals. It appears that there have been lengthened debates in Congress upon the necessity of putting the fence. The discussions upon this subject are interesting as a commentary upon the warlike clamour which bas recently prevailed. All parties seemed to agree that, at present, the country was quite unprepared either for aggressive or defensive war-In the House of Representatives, on the 25 th ult., the Navy Appropriation Bill was the bill had been read, Mr. Saltonstall, of Massachusets moved that the appropriation of $1,225,000$ dollars proposed by the committee for buirding and repairing vessels of wad shonld be increased to $2,000,000$ dollars. This gave rise
to a debate, in which the condition of the navy was disevased in reference to the foreigu relations of the country the commiteported in the House of Representatives by the committee on military affairs, makres appropriations for the fortification of the United States generally for the year 1841, and for armament of fortifications; also, for raising a company of sappers, miners, and pontoniers, and appropriating 500,000 dollars for steana-ships of war. The amonnt proposed by the bill to be appropriated for fortifications is $1,678,000$ dollarn - Upon the subject of Mr. M'Leod and the dentruction of the Caroline there is
correspondence, said to be of an unpromising character, had been renewed between Mr. Fox and the American
Government, purporting that the protection of Mr. M• Leod Government, purporting that the protection of Mr. M. Leod be provided for without delay. Throughout the whole re pablic, especially in New York and the Southern States, the atmost excitement appears to prevail on this irritating subject; and it is alleged that their indignation at the affair of the Caroline arises from a general jealousy, occa-
sioned by the right of search and seizure practised upon American slave-ships by British craisers, that there exists in this country a deliberate intention to overthrow the whole system of slavery in the Southern states.-Mr.
Angus M'Leod (brother to Mr. M.Leod) has written letter to an American paper, denving that his brother wa present at the destruction of the Caroline; and from his statement, if correct, there would appear little difficulty in proving an alibi. From a Lockport paper we learn that a meeting had been held there respecting the alleged insecurity of the county gaol for the safe keeping of Mr taken to insure his safety. The sheriff, one of his deputies, the gaoler, and two other persons hired for the purpose, keep watch by turns every night, to give the alarm in case of attack from without, or attempt to escape within. Still the meeting appointed a committee to wait on the judges, and request them to give the necensary order for his rel
moval to the gaol of some adjacent county less favourable for his escape. It is further stated that it is expected special commission will be issued to try him in some othe county than Niagara, where it is considered he stands no chance of receiving an impartial trial.-The papers announce that Mr. Clay and Mr. Sergennt are to be sent to England on a special mission, with a view to the arrange ment of the pending differences between the two countries. -The commissioners for surveying the boundary line be British provinces in the report of their perations British provinces, f the thpor operations th enough to eatablish the fact that the line running north from the monument at the source of the St. Croix will pass about one mile east of the eastern extremity of the bnse of the north-easternmont peak of Mars-hill. A per manent station was aloo erected at the position established it due west to the experimental or exploring line of 1817 by which the party found itself 2,410 feet to the that line. The commission, also, in their report, thank sir J. Harvey, Lord Sydenham, and the Canadian authorities, for the facilities afforded to them in the progress of their investigation.-The steamer President, which took out the last despatches of Lord Palmerston to Mr. Fox, relative to Mr. M'Leod, had not reached New York on
the afternoon of the lst inst.; her arrival, it is stated was looked for with very great anxiety, parties being in a prevailed in England in reference to the affair of M'Leod. prevarliament.
Nonday.-After the presentation of petitions, Lord Keane's An-

satd that the discussions with Denmark had
stinate character supposed by sir R. Peel; in
nenced but in the last year. The matter was fact, they had commenced but in the last year. The matter was Mr. A. White recommended it to Mr. Hutt to withdraw his
motion for the present.-Mr. PEASE and Mr. Villiers, though not unwiling to consent that the subject should be disposed of sight of the subject. Mr . HurT, in reply, expressed his conviction that some friendly arrangement ought to be made for abolishing the Sound dues alposed of by the previous question, which was done accordingly.
Mr. EA $\rightarrow$ Thope moved that the petition of Mr. Baines, now prisoner in the gaol of Leicester, presented on the 2(1 Fel), be expediency of a strict adherence to the order venting the discre-
tion of printing or not printing petitions in the committee whic had been appointed for that purpose, and which hati for several ears hecn found to work advantageously. He said that unles would multiply to an incouvenientextent.-Mr. Eastrope plead. reasonably objected to.-Mr. Warb yrtonhoped the House would allow the petition to be printed. The general reference to the
committee still reserved the right of the House itself to printing in amy particular case. Here, too, the petitioner was in prison. And the House had already done but too much in nar. rowing the means by which the contents of petitions might be made Enown. - Lord STANLEY wished that the distribation of any alone.-Mr. LABoUCHERE represented the necessity of acting on turn on the petitioner's imprisonment, the printing might he proper cholghe but not, if the motion was to be a teneral one, member presenting it desired that it should be printed.-Mr. Baines observed that though the subject might be general, the printing. The public, he said, were already much dissatisfied writh the obstruction to the right of petitioning--Sir G. Grey
took the sameview with Mr. Labouchere, which was controverted tried, under pretence of a petition, to print a pamphlet on some general subject at the public expense.
Sir $R$. Pren referred to the recommendation of last year's com. mittee on the printing of papers, that the House should not orde a petiont the deci-ion, of the commatter on petitions. Here the peti-
wion tion had heen presented for six weeks, and was now for the fir
time taken up. Dill the hon. member propose a motion to this petition? Or did he take up this petition to meet his mo tition ti) abtain from the general sulbject of church stror himecif to the object of the petitioner's liberation.- The
ATrose would he trusted that, after this explanation, the House would be nearly, if nut quite, unanimous in giving per-
mission for the printing. - Lord Howick acceded; and on the suggention of Lord Stavies, it was ordered that the circulation
should be confined to members ouly. Leave was given to Mr. Bainiss to bring in a bill for the better
enrolment of burgesses in such bind as are divided into wards, and for altering the time of municipal elections in those boroughs.
tate the administration of criminal justice in certain bill to facili. England. India Rum Bill, the Mutiny Bill, and the Marine Matiny Bill were respectively read a third time and passed. On motion of Col. Sibtiorp, copies were ordered of the Home Department and the Treasury relative to the appointment of Mr. Vizard as solicitor to the Home Department, with a salary of 1, jool. a.year. $W$. F . Egesdrenton having moved the second reading of the stafford and Rugby Railway Bill,
Mr. Glssorne moved that the secon
the 24th inst., to allow the report of Lieutenant-Colomel Sir $\bar{F}$ Smith to be in the hands of memhers.
Sir R. Psis spuke in favour of the hill. He said that it would effect a saving of nine miles and a half, with better gradients, in the distance from London to liverpool. The proposed termin
were most important, being the metropolis at the one end, and
the preat manufacruring districts of Whe great manufacturing districts of Lancashire and North
Walhe other end. He contended that the House was bound to encourage compitition, anh not to allow the great monopolist-
of the fondon and IBirminatham Railway Company to interpose
thr the purpune on anked was, ingriry intiore the eommattee inte the merits of the plan. He admitted that there was one ohjection to at which de-
served consideration, iz. - that two juactions with existing lines were propmed in the distance, and - was mnst fit that competent
wimesses -houid he examined to ascertain how far the daneer to

 own convemiance send the bill to a committee, and thus inflict
great inconvenience on the parties. His right hon. friend (Sir R.
Peel) had himself recommended that the ppinion of Sir Peel) had himself recommended that the opinion of Sir F. Smith
should be taken, and as it had been procured, it ought to be de-
cided upon by the Fouse. Thequestion as to tunnels and pradients might be fairly considered in comamittee; but when it could be
proved that there wonld be only a slight saving of time, not more
he believed than ten minutes, at an expense of he believed than ten minutes, at an expense of $1,900,000$, then he
toought that the House might be fairly asked to oppose the bill ou the second rcading. Inis right hom. friend said that they
ought to look to the important termini of Londonon the one side
end Liverpool on the other; but with all respect for his right mom fiverpol, be mastswy that this was a complete mistatement of
the fact, for unless they could conceive a terminus beyond a ter.
minus, the termini were all respectable, but the comparatively unimportant towns of Rugby and Stafford: and as for the sap
posed benefit of competition, it would be only the competition an inferior and dependent line. He would, however, recommend low the House to divide on the opposition of the hon. member for
Cheshire (Mr. Wilbraham) that the bill be read a second time that
day six months.- Mr. Gisporne then withdrew his amend day six months.- Mr. Gissorne then withdrew his amendment
and Lord Granville Sombrset moved that the Members for MomBill. Ater a short discussion, the motion was negatived by 117
to 84. - A motion by Sir G. CLERE to refer the Pollock and Govan Railway Bill, together with a petition on it, to the select com
mittee on private bills, was negatived without a division A great number of petitions having been presented against the gested its postponement, in which suggestior, membere oeg.
Hawes, its author, declined to acquiesce. On the question of budy with whom the medical protessont in peneral comald com and surgeons and the society of Apothecamen, did hot enioy to
 therefore was to constatute one general body of examination and
regulation, and to establish one grade instead of three in the mol dical profession; all practitioners being hereafter to stand on the all three. He real the evidence of some porsesional witnesse
in antirmance of the main phnciple, of thio bill. -- Mr. Ewation arainst this bill which might not properly be reserved for the
committee.-Mr. DARBY opposed the second reading gretted that, on a measure professing to regulate the whole mediance. The hon. gentleman was proceeding, when a motion whs Thursday-Mr. Rics, seconded by Mr. Pianta, moved for a select committee ont. A commission had been appointed last the to examine this subject, and had made a report, which it was now
sought to refer to the proposed committee.-Mr. Barino resisted because a commission was a mure competent authurity in such a matter than a committee of Members of Parliament.-Mr. Mac urged, that when millions of money were vuted fur churches theremight well be a gTant for harbours. It was as important Members concurred in the object of the muver.-Mr. Casbes
Wonn, the late Secretary of the Admiralty, was of opinion that no userul addation cotad be already existing
Sir Robert $P$
port not disposed to promote the formation of a variety of harbours of
refuye, except to the extent of providing mere shelter for smal
craft: as to the larger class of vescols, he was sure it would be marlure uscinl polic! to construct one or two large and serviceable ports, which at last would probably be found of little avail. He thought the matter should be left to the Government ject without an assurance from Ministers that they wonld take negatived. Mr. At.stox moved thet a petition of a maval officer, Sim
La Roche, should be referred to a select commitee- Sir Cochrave thought it undesirahle that such subjects should be
referred to the cognizance of the House of commons. If the
mover thought the Admiralty did hot do justice to the Queen's ofticers, he had better ptopuse a vote expressing thas want of conposing the court-martial, and observed upon the unituess of re opening their inquiry, when 34 years had since elapsed.- Capthin Mr. Jorn O'Conveli. moved for returns of the judicial
pointments made in the colonies from the Union to the present time, with a view to show that the Irish bar had not had its share tinguishmg to whielt har the reapective in were no means of disals employed had belonged. The motion was therefore hegatived.
Mr. Es-Thope brought on the care of Muliam Baine, confined
 likely to serve the interests of the church. An intente interest
prevailed on this subject in Lemeester: atal a ution had been
cigned in Baines feeling could wot be indantaresus to the E-tabli-hment. The
complaint would not long be restricted to Baine. Twenty-six
other persons were daily expectins to he pucceded atainst for the same cause. A prouf of the public feeling was to he found in by moving a resolation, to the effect that Mr. liaines's impnisomment being inflicted for his refusal to pay a demand which w3s
contrary to hi, cunscience, was a violation of the pruciples of Lord J. Rcss.
on auythine puculiar io thed that the motion beine grounded not on auything peculiar in the case of Baines, but on a general ob
jection to the existing law, ought to have been announced by

 ments to the state on the grounll that he hat a con-cientious
 that there wre a different law fimm the present fir the main

 church bel nigin tos the eotalishmemt ? Lurt! J. Huseell had concurred in a former vote for abrolishing church-rnte, and had
intimated his intention of proposiog that the ncessary funds for intimated his intention of proposiog that the nccessan the con-
the maintenance of the church should be take from
solidated fund. But, notwithstandfing this and ther pledges, the sovernment had done nithing for the abolition of church rates. Sate had bean introdnced into this diseussion, in breach of the
 the funds to-day. Consols for the Account were $88 . \operatorname{lig}$
occasionally buyers and sellers thronghout the day, the closing price being $88 \frac{5}{8}$ sellers. Exchequer Bills were 68 to 8 s. premium.

## ftetropolis and its Ericmitu.

Intrusion at Buckingham Palace-On Monday last the inmates of the palace were again much alarmed by detecting in the royal apartments the boy Jones, who, it
will be remembered, effected about three months since, for the second time, a similar entrance, and, after an examinstion at the Home-office, was sentenced to be imprisoned in Tothill-street prison for 3 months. The following ap-
pear to be the particulars of the present affair, as far as pear to be the particulars of the present affair, as far as Jones's imprisonment expired, when he was liberated from prison, and delivered over to the protection of his father. Before leaving the gaol he was asked to give a promise could be obtained, as he said his curiosity was sogreat. His father was then sent for, and Jones was given into his charge, with strict directions that he should take every timie an offer was made to send the boy to sea. His father and mu, ther. although they did not object to the offer, asked fur a "reck or two to get him ready. "p to Monday he attended a Methodist chapelitnice or three times, and had frequently stated his determination to join a tee-total society. On Monday he was at home during the day, but
about 8 was missed, and nothing more heard of him until Tuesday morning, when his father and mother were summoned to appear at Bow-street, when they received
the first intimation he had effected a third entranca into the palace. It appears that shortly after entranca into Tuesday morning, the sergeant of police on duty in the palace imagined as he was going along the grand hall that turned out to be the vase; for un his approzching, Jones ran againz: lima and was immediutcly secured and sent of in custody to the station-house. It was afterwards disco.
vered that the boy had visited her Majesty's larder, as, at the trome he wis disturbed, he was feasting on cold meat
and potatoes, which he had conveyed up stairs in a hand. kerchief. When asked how he obtained an entrance, his
reply was. the same way as before, and that he could at any reply was. the same way as betore, and that he could at any
time he pleased obtain an entrance into the palace. It is generally supposed that he got oser the wall on ConstituTuesday afternoon he was conveyed to the Home-office, and shortiy afterwards underwent a long examination, the particulars of which have not been made public, but the result of which was, that he mas committed to the House of Correction, as a rogue and vagabond, for three months. The strange circumstance of his having obtained a third entrance into Buckingham Palace has formed the subject of much conversation, and a rigid inrestigation as to the manner in which he effected thrs is said to he in progress. He still persists in his first assertion, that his only motive was to hear

British Museum.-By the return just laid before Parliament, it appears that the receipts for the year 1840 wer $34,330.138 . j d_{0}$, and the payments $31,42 \overline{5} . \dot{s}$. id., leaving a balance in hand of $2,911 l$. 16 s. The estimated charge from Lady-day, 1841 , to Lady-day, 1842 , is $33,6751.19 s .2 d$, and the amount of grant required for the service of the from this document, that the total number of persons who have visited the Muscum during the past year was 247,929, the lowest number in any year since 1834. The annual maximum of visitors has never exceeded 383,147 during the last six years.
Mortality in the Metropolis.-From a table of mortality for the metropolis, lately issued from the office of the causes registered, showing the number of deaths from all 1841, it appears that the sum total was 1079. The average weekly deaths in 1839 were 926 . It is stated that under the term metropolis are comprised 32 districts, which in. clude the city of London within and without the walls, the city and liberties of Westminster, the out-parishes within the bills of mortality-and the parishes of St. Marylebone St. Pancras; Kensington; Fulam ; Hammersmith; St Luke, Chelsea ; Paddington; St. Mary, Stoke Newington
St. Leonard, Bromley; St. Mary-le-Bow; Camberwell Greenwich; st. Nicholas and St. Paul, Deptford; and Woolwich. The population in 1831 was $1,594,890$.
Rcorganization of the Chartists.-It is stated that another convention is about to be held in Londun; that the election of delegates is to take place on the 22 d inst, and the convention to be opened on the 12 th A pril. The convention, it is further said, will consist of 15 members, five from the metropolitan districts, and ten from the provinces; and that their object is to devise plans for the restoration of Frost, Williams, and Joing the chiarter the law of the land.
The Cily Improtements... Workmen are nors removing the large mound of earth upon which the merchants used to assemble in the Roval Exchange, and which, according to the original estimate of the committee, was intended to whole of the building, which will be secured with iron doors, with every provision against fire. Several of these iron vaults, it is stated, have been taken by merchants a depositories for their securities, books, \&e. By the arrangement for vaulting the standing-place for the mer chants, the dampness which was always an objection to the old arena it is expected will be prevented. The contractor for the building has commenced the erection of it is said, amounce Bartholomew-lane. 19,000\%. Ther appears to be some check about pulling down the housea called Bank-buildings. If these houses remain, the view of the western front of the new Royal Exchange will be greatly impeded. The price of the removal, it is said, will be about $40,000 \mathrm{l}$, and there is a report that Government are reluctant to allow the additional sum to be raised by the continuance of the duty on coals. The Argus Assurance office, and the two adjoining houses, are to be put back, so as to form a direct line with the London and Westminster Bauk in Lothbury, and thus the thoronghfare leading to Cateaton-street will be considerably widened A number of houses in the narrowest part of Cateaton street have been levelled, and workmen are pulling down the premises at the corner of Guildhall-yard, where it ap pears desirable that the front of the Guildhall-office should be put back several feet, in order to improve that arena, and exhibit to greater adrantage the church of St . Lawrence Jewry.
Gas
Gas lighting.-From statements recently published, it appears that for lighting London and its suburbs with gis, there are eighteen public gas-works; twelve lublic gas work companies ; $2,800,01 \mathrm{JUl}$. capital employed in works pipes, tanks, gas-holders, apparatus; 45u.foul. yearly revenue derived ; 180,000 tons of coals used in the yeat the year ; 134.300 private burners supplied to about thotiou consumers ; 34 tot public or street consumbers about $\because, 050$ of these in the (ity of Loudon; $2,80 \mathrm{~lm}$. lighters employed; 156 gas-holders, several of them double ones, capable of storing $5,500,000$ cubic feet; 890 tons of coals used in the retorts, in the shortest day, in 24 lours; $7,120,000$ cubic feet of gas used in the Iongest night (24th of December; ; about 2,500 persons emplaye Between 1822 and 1827 the consumption was nearly doubled; and between 1827 and 1837 it was again nearly doubled.

Frpeat of the Com-Laies,-On Monday a large meet ing assembled at Deptford to hear Mr. Sidney Smith lec
ture on the Corn Laws. The chair was taken by Mr. $G$.

Wade, president of the Anti-Corn-law Association. A number of Chartists were present, and placed themselves lecture proceeded theus parts of the meeting. As the but finding this method interruptions beca hamed Neesom, callel our toline, one thectrer meant to answer questions. Mr. Smith replied that he did not intend to answer any questions put by men who, by theit extreme line of conduct, had placed themeires ont of the pale of political societs. He considered them public nuisance, and such as ought to be excluded from ill or derly assemblies. Their interrnptions only tended to hinder the efforts being made to obthin cheap bread for the poor. They had put down nthers in the same way, who were endeasouring to procure a mitigation of the rigours of the new Poor-law. After this they renruached the middle classes with the creation of those evils which they, the Chartists, prevented others from putting an end to. He would warn the people to be cautious how they suffered such enemies of ortier to place in abeyance the right of petition, and would exhort all sects and parties to make common cause against those social shmaelites. For hia , fher inter be would feel himself bound to eniploy the strong arm of the obstructed. and himself retire. The Chartists still continuing to annoy the lecturer, the whole andience rose and cried, Out ejected from, when they were, after some strucg his discourse on the evils of the Corn-laws, and the meeting quietly dispersed.
cidents.-On Treaday an accident occurred in Re-gent-street to Captain Pigott, belonging to a Yeomanry Cavalry regiment. Itappears that the Coptaitu was ridins in Regent-street, when his horse became unmanageable and ran away, knocking down one man, who was serioutly injured, and dasling on, came violently against a cart at billed corner of New Burrington-street. fill be we killed on the spot, and Capt. Pigott fell beneath him He was extricated, bleeding from a wound on the head, and lacerations of the face and shoulder, and carried to a urgeon's in Regent-street, and subsequentiy to the Colonaade Hotel. The injuries sustained by Capt. Pigott are consilered severe.-A serious accident happened a few days since to Col. Comsins, Portman-square. It seems that while examining a dealer's horse which be proposed to purchase, he received a kick on the chest, which torew him tea considerable distance. He was carried into the house and surgical assistance promped ; the wojuries were found to be of a serious description, the breast-bone being ractured, and interual mischief, which caused ejection of blood,-On Saturday, as Mr. Fossett, an officer attached o Frer Majesty's Customs, was crossing a plank leading to his footing, and fell with violence into a barye benesth, his footing, his fall with violence into a barge beneath, London Hospital in a precarious state. - A few days since Lsan Mide reciding Peckham, were returning from Bath, where the father had been confined nine weeks in the hospital from an accident received on the Great Western Rauiroad, the son got on the steps of a coach near Bagshot, which he suppused was on its way to London ; but on the arrival or mis father in tomn be could learn no tidings of him, though his friends have thade inquiries at all the police-stations and union houses in the metropolis. The boy is supposed to have fallen of the coach.-On Tuesday female residing in Shire-lane, Temple-bar, cut her throat, and threw herself from the second floor of her house into the lane. Her fall was witnessed by several of the neigabours, who ran to Hos assistance, and she was conveyed paid her, but from the ininries inflicted no bope is entertained of her recovery. The cause of the woman's attempt on her hife is not known. Fires.-On Tuesday evening a fire broke out at the large huildinic, used as a storehouse and for workstiops for the different artiticers employed by the Company. An alarm was immediately given and messengers despatched to the different stations for the engines. In the mean time the fire had obtained a great height, and the whole building was in a short time on fire. The engines soos arrived, but it was evident that all efforts to save the building were the safety of the surrounding buildings. A plentiful supply of water enabled the firemen to teep the pames oris and the fire was confined to the buildiag wig nated, which, howerer, was totally destraytu. It was a in depth, and 30 in height, situate on the west side of the terminus, at the extreatity of the sution where that trains start from. During the shate of Tuesday nigh: anl great portion of wednesday, the engimes of ruins left by the contlagration, and till the evening of Wednesday there stili remaineti a large body of fire in the interior of the warehouses, out in farther derastation of property was feared. honse in which the tire mamenced, it seems, was not for the use of the locomotive department; and on the
 Whale on tio buacuntat we werma Lundred tons of
 all the woramen and labourers emplayed ia tuat part of the estabiismment left at six o'clock, as did also
the engine-makers, and the only parties left were a few

Itbourers and policemen who were to remain at the terminus until after the arrival of the ten o'clock train from
Southampton. About half-past 7 the store-keeper had Southampton. A bout half-past 7 the store-keeper had
occasion to enter the premises in company with two other parties, and while there they discovered that a carboy of turpentine was leaky, and in endeavouring to stop it, the
turpentine, by some accident or other, caught fire, and blazed up with such violence that they were compelled to run out of the place. The doors were immediately closed, in the hope of smothering the fiames; but in a few minutes after the carboys were heard to explode, and in an instant By ten minutes before 8 , the fire had extended to the stores above alluded to. At eight the entire warehouse was in a blaze from the roof to the ground. While the interior presented an appearance of a huge furnace, and the oil and ground in a state of liquid fire, presenting a most singular
efect. Subsequently the engines arrived, but the fire effect. Subsequently the engines arrived, but the fire
could not be stopped until it had burned down the most raluable portion of the rail way property. The value of 8,000l. The whole of it is destroyed, together with three locomotire engines, which were under repair. The iusurance on the pruperty destroyed is $9,000 \%$. It is said the
loss amounts to $20,014 \%$. - 0 n Tuesday morniug a fire broke out in the workshops of Messrs. Jarrard and Co., Soathwark. The workuen, it seems, had just left the factory, when all was apparently safe, but a short time af-
terwards a volume of smoke was observed to issue from the workshop. The whole of the premises and stock were consumed. The adjoining premises were much injured, and were only saved by the exertions of the firemen. It in considered fortunate that the fire broke out at an ararly Messrs. Jarrard's premises, are composed of old wooden houses densely populated. The fire is supposed to have
originated from the over-heating of the flues under the coppers.-On Saturday morning a fire broke out in the house of Mr. Giles, fruit-merchant, High-street, Chatham. The Philosophical Institution opposite and the adjoining houses were with difficulty saved from destruction by the aid of the towns-people, the fire-engines, and a strong military guard from the garrison. This is said to be the 8th fire lately occurring within a space of 300 yards in this town.
nquests.-On Saturday an inquest was held on a newborn child, which it was supposed had been murdered, into the country. Prom the evidence it appeared that on Thursday the basket was recen the Gloncester Coffe-house, Oxford-tred, to be trans It reached the place of destination, whigh, un being opened they were alarmed at beholding the dead body of a child and blood on different parts of it. The hody was re-packed and sent back to London, and taken to the booking-office, When an application was made to the magistrate at Marl-borough-street. A surgeon said he had examined the body; he was umable to state positively that it was born alive,
but should think it had been, and had died in consequence of great neglect. The Coroner inquired of the jury if they would like to adjourn the inquiry for the purpose of the strgeon making a post-mortem examination; but, after a was no occasion for it, and returned the following special verdict:-"That deceased died through the neglect of some person unknown, and that great blame is attached to to show."-An inquest was held on Truesday in the Chelsea workhouse, on a new-horn infant, found under the following circumstances :-a labourer deposed that on Saturday morning, he was going through the gate of a nursery-
ground, beionging to Lady Denison, when he observed ground, belonging to Lady Denison, when he observed policeman, who conveyed it to the workhouse. This pocharge of the body. On one side of the head there was a slight scratch, and the other side was indented from being imbedded in the earth. There was no marly of footsteps where the body was found, and witness had no doubt ness's knowledge no bills had been printed by the parish offering a reward for the discovery of the mother. The surgeon to the union said he found so marks of violence which could account for death, and that he was of opinion "Wilful murder asainst some person or persons uniknown." -On Wednesday an inquest was held at Westrniaster, on a female child, sis months old. The Rev. R. Young
said, that on Tuesday, during his absence from home a female knocked at the door and inquired for him. Being told he was from bome, she placed in the servant's hands a deal box, and demanded carriage, which was paid. The bor was directed, "Rev. Mr. Toung. Wes!eyan Minister, rage paid," Witness's wife havinit began to opea it, and on the lid being lifted, a paper was Pray do this, in the name intion, and bury this poor baby. suffering very much in mind, and by the time this reaches geon and two other gentlemen were sent fory. who opened geon said that in his opinion it, hacked been dead some surand bora ahout sis manths, but he could discover no cumstance was transmitted to the parochial authorities and the body was removed to St. Margaret's werthovase.

Witness had no saspicion as to the party who sent the parce. The woman who brought it was ecilt, and for supplying baby-linen to poor women, and he thought it probable that
the party whe sent the child had in that way become acthe party who sent the child had in that way become ac-
guainted with his name and address, and not having the quainted with his name and address, and not having tho think the box was sent from Brighton. The jury considere the latter opinion probable, and that the direction from Brighton was adopted to prevent discovery in a bost that the decased was but how the child came by its death was not known to the

## frobincial Netos.

Manchester.-A public meeting, convened by requisi tion, was held on Monday, at the Town-hall, for the pur-
pose of taking into consideration the parliamentary repor upon the import duties of the United Kingdom, with their
prejudicial effect upon the industry of the country, and prejudicial effect upon the industry of the country, and
to petition the Legislature for their revision and repeal The meeting was numerously attended, embracing a coniderable portion of workmen. G. H. Hall, Esq., the boroughreeve, was called on to preside. Many speeches
were delivered at great length, and several resolutions, expressing the views of the meeting on the subject, passed. A petition, founded on the resolutions, was ultimately adopted, and the meeting separated.-Another meeting has been held to petition against the Poor-law Continuin numbers and spirit; not more than 400 people being present, and the speeches being altogether of a very ordinary description.-The Mayor has convened a purth propriety of petitioning the House of Commons for the immediate abolition of the corn and provision laws. The
requisition addressed to him for that purpose bears, it is requisition addressed leadid for that purpose bears,
Wigan.-It has already been mentioned in the papers that the colliers of Lancashire have struck for an advance of wages, and that the coal-proprietors have resisted their demand. In consequence of the general vant which is begun to manifest be felt, a spirit of insubordination ha works of the masters are obliged to be guarded, especially during night, against the colliers, who assemble in parties of about 20 , and patrol about the conntry. Several out rages have been committed. The most recent occurred in the neighbourhood of Wigan. About 20 colliers attacked
the house of a fellow-workman who continued to work at the house of a fellow-workman who continued to work a the old rate of wages. They fired a gun loaded with slugs through the window, happily without effect, and then
broke all the windows with stones. The father of the col lier then took his gun, opened his door, and fired amongst them. One was observed to fall, and was borne away by his companions. On the spot where he fell blood was seen, so that no doubt remains of his having been wounded ; and this circumstance, it is hoped, may lead to his apprehension. The collier attack
H. Blundell, of Pemberton.
Hull, -As the Hirondelle stemm-boat from this port to passengers and 93 sheep, she came into collision with a vessel moored in the channel : and so great was the shock went down in less than five minutes. Fortunately, all the passengers were saved by getting on board the vessel upo gether with the 93 sheep. There was a dense fog at the time of the collision, and it is considered a providentia circumstance that the lives of the passengers were preserved
Vottingham.-The Poor-law guardians of this town resolved at a late meeting to appoint two surgeons for the anion, both to be resident in the town, and to give up their whole time to the duties of their office, the salaries of the andertas to be 200 guineas a year each, and they sre to undertake to keep the appointment
Bury.-A singular case has just come under the cog nisance of the magistrates of this place. A Frenchman, short time ago, waited upon Mr. Maden, a grocer, an stated that be resiced at Manchester, and had racilities for obtaining various articles of grocery, spices, \&c., which he could sell much below ordinary prices. Haring conveyed and that buyers had no reason to apprehend risk, he suc ceeded in getting an order from Mr. Maden to the value of more than $33 l$., for which the latter paid him $6 l .5 \mathrm{~s}$. in other hanaccepted a bill at sir months for $25 \%$. On the required some security, and the Freachman deposited with him a gold watch, worth about il. As the goods did not come, Mr. Maden began to think he was duped; and a few days ago he saw, as he supposed, the same individual, the caused him to be apprehended, when it appeared that for years past a teacher of the French Language at the grammar-school, Bury, and in many respectable families knowledters and neighbourhood. M. Caillié denies all Mnowledge of the transaction, and it is thought that Mr. Maden is deceived by some personal resemblance. A long evidence was gone into for the per im of showing tha M. Caillie coull not be the indiri?ual who had detrauded Mr. Maden, as on the day which the latter spoke to as that on which the Frenchmaa was several hours with him, M. Caillie was engaged in giving lessons at the grammarschool, and subsequently spent several hours at the house of a geatlewan in the fown. The matter of the grammar-
school, and several of the scholars, were called, but they a long inquiry, the magistrates decided upon holding M. Caillie to bail for his appearance to answer the charge at the next sessions. Bail being given, he was liberated. The case has excited great interest.
Clkington.-A burglary has been committed on the
premists of Mr. Ardern, residing at this place. The cir cumstances are as follows:-The only inmates of the house are Mr. Ardern. Miss Ardern, and two female ser vants. About one o'clock in the morning one of the servants was alarmed by the dogs barking, and she left her bedroom to see if the doors were secured. She doubleand kitchen with small bolts and an iron bar. Before she had time to get up stairs she heard a crash at the oute door, and immediately after a crash at an inner door, whic proved to be that leading into the pantry. She then went up stairs to give the alarm to the family, and immediately beard a third crash, by which the inner door she had fo tened with the iron bar had been sent in. She went to ons of the windows to give the alarm, but was prevented doin so by a man stationed outside. The other servant had gone to Mr. Ardern's room to alarm him, and attempted to spring a rattle at the window, but was prevented by verely hurt her. The other servant about this time we met at the top of the stairs by three men, one of whom seized her, and told her not to be alarmed, as they would not hurt her, all that they wanted being money. They was went into Mr. Arderns room, where that gentema nined from indisposition, and put the other servant under the bedclothes, and guarded her and her master with pistols. They then made a demand on Mr. Ardern for 3002 , which they stated they knew he had in the house. Miss Ardern overheard this demand, and came into the room, and told them that all they had was in a caid which she pointed to. They immediately broke that open and took out 13 sovereigns. They also broke open a ches' from which they took Mr. Ardern's watch. They went into an adjoining roona, and broke open several dravert, and took away Miss Ardern's gold watch. They broke
open several other boxes in the house, in order to search for property, and, after doing much damage, left the pro miser, irst fitenig the ourer door to prerent perrewit. There were six persons in all concerned in this outrage and it occupied a short space of time, as they were quic and determined in their operations. They appeared th have been well furnighed in all the implements of thei profession. The doors were barst in by the aid of a large piece of timber, eight or nine feet long, and about seven agt inchee peand which was used as a batterint-ran. They committed no personal outrage beyond stoning the servants from the wiadows, to prevent them giving an alarm. A reward has been offered for their detection.
Peterborough. - An accident occurred last week to Earl Fitzwilliam and his two sons, Lord Milton and the Hon G. Fitzwilliam. The noble Lord and his sons were re toruing to Milton House, near this place, in a four-in-hnnd, out of a house on the roadside and seized one of th leaders. The horses were greatly frightened, and bechme so unmanageable that the coach was upset, but no injury was received by the noble Lord or his sons.
Fountrford.-At the recent Quarter Sessions for this fore the Marquis of Salisbary, and sentenced to be trente ported for life for felony. Although so young in years, the career of crime of this individual has been of an almon unprecedented character. The first offence alleged against was tried vith tery and murder of an old penowh therr appeared to be very little moral doubt that he had been the concocter of the scheme, and had assisted in the per petration of the crime, owing to a failure of the crilamon as to his identity he was acquitted, and his two com mitteonvicted and executed. soon after this he mitted another robbery, and was tried, convicted, an young man named Taylor, who had also been charged wio being concerned in the murder of the old man, was taken into custody, and on his trial Sams mes admitted a witness for the Crown, and he then detailed all the circumstance of the murder, stating that it was committed by the $t$ me who were executed, Taylor and himself, and that they d vided the money between them after. Upon this eviden Taylor was conricted and executed. It would have bet thought that these circumstances would have induced Sam to change his courses, more especially as some of thi gentry of the neighbourhood interested the to his old course of life and his emplayers could keep him no longer. He then left that part of the country, and has been ascertained that he was afterwards tried and convicted on two charges of felony. He then returned to thi and in a short time broke into farm-house near Ware, and for this offence took his trial at the Quarter Sessions, and the case being clearly brought home to him the jury found him guilty. The Marquis of Salisbury, passing sentence upon him, obsersed that he never kne an instance of so bardened a criminal. He had had
 add an if be that he should be the severest sentence of the lam, which war that he be transported for the term of his tural life. The convict heard the sentence with great coolness and at its conclasion nodded to one or two companions the court, and then walked away laughing from the bar.
of this place, went with his wife and child, an infant two in the evening. On their way back they called at the Chequers, in the parish of Houghton Conquest, and while there the child turned suddenly pale and instants expired tion of God" returned.
Oxford.-On Sunday last, Mr. H. Viacent, the Chartist, was introduced at the Oxford workhouse, during divine over the whole establishment. He expressed admiration of the cleanliness and comfort of the house, and declared guardians, and all connected with it. He examined the ietary table, and attended the serving of the dinner in the halls, and admitted that the excellence of the meat and
the quantity supplied to each person far exceeded his belief, and that he could not have supposed that any workhouse in the hingdom dealt so liberally by its inmates. He
affirmed that the inmates of the Oxford house were better off than 19 out of 20 of the working population. Before leaving, the chaptain took the opportunity of reminding the guardians who introduced Mr. Vincent that dirine service had been greatly interrupted by their noise in alking through the house during its performance, and he fitting time for their purpose.-At a convocation holden on Friday, it was agreed to affix the Cniversity seal to a petition to the Honourable the House of Commnons, prayttention to the spiritual destitution of England and Wales in order to take the most prompt and effectual measures for its relief, to secure the country, under Divine Provi-
dence, from the fatal effects of vice, anarchy, and irdence, fro

Maidstone. - Pears have been entertained lest the wheat crops might have suffered from the severity of the winter.
In this district, however, the crops never looked better. Some of the backward-sown looked yellow when it emerged from the snow, but the fine genial weather of the last week has completely restored it. In the Weald we are informed ance, which promises the most the last few days the weather has been most seasonable, and the industrions caltivators have been bos inge breadt has been got in well. Hop-catting is proceeding rapidly, ginuing to shoot. The fine weather has had a wonderful bursting out luyurintly. The only danger is that they may get too forward and be cut off by the frost. ? ing amongst the triends of the students at the college here,
from the circumstance of six cases of scarlet fever having occurred among the students during the last 6 weeks, 3 of which have terminated fatally. The heads of the college have consulted several eminent physicians on the matter, Who, it is stated, unanimously agree in the opinion that
there is no immediate cause for alarm to the extent to justify their recommending the closing of the school befure the usual period, which will be in about a fortniglat.Extensive alterations and improvements are in progress in the playing-fields and contiguous grounds connected known as the old lodge, and the collegc-wharf, have been levelled. and the ground upon which they stood added to the playing-filds. The deep ditch las been filled up, and being levelled throughout at a great expense. The courses men carriage-drives have been cbanged, new ones made, and serpentine gravelled waiks are in progress, leading from various parts of the fields to the college. A Gothic lodge, at the entrance to the shooting-fields, from the
Slough-road,.near the fifteen-arch bridge, will be, it is said, inumediately commenced, the st 5 le of architecture to be in keeping with that of the college. Another lodge has
been decided upon by the Provost and Fellows, to be erected at the southern and extreme end of the playingfields, by the river. The whole of those improvements, it is thought, will be completed by the end of June. The ment with the Conmissioners of Woods and Eoreste for the exchange of some land helonging to the college at Primrose-hill, for a large plot of ground, now covered with buildings, at Eton, opposite the college. It is said to be the intention of the college authorities to pull down the old tenements, and erect on their site some first-rate others connected with the college.

Sherousury.-An exciseman calling at the house of a good-humoured landlady in this town, she consulted him about some liquor that had been deposited in her cellar without a permit. At the words "without a permit" the
exciseman rusi.ed below, and soon found himself up to the exciseman rusiter below, and soon found himself up to the
middle in water, which the flooding of the Severn had forced into the cellar.
by carrying away neariy an acre of fine meader channel, joining tire wht Alliey tormeriy fit. James's Priwry) partly beiunging to the Larl of Devon. The mills at water, and, in adduion to the lose of the liod mare than lovoll, it is said, musi be espended to resture the river to

## itts ancient course.

Middleton-On Sunday a melancholy case of muicide occurred at Alkrington Colliery, mear this place. ft seems plojed by Mr. Liveaey as book-kpeper at the above works, ployed by Mr. Liveayy as boak-keepar at the above works,
himaself headlong down a shaft about 150 yards in depth. He had latterly become low in Mr. Livesey, who is about giving up the works. He was a man of steady habits and good character, and had succeeded in obtaining another situation; but, after trial, he was not satisfied with it, and
came home to Alkrington. On Sunday he was unusually came home to Alkrington. On Sunday he was unusually
distressed, and told his wife he was ill. She missed him from the and told was the window toward the coal-pit, and she followed, calling upon him to stop. disappeared down the pit. A man who heard her cry came up, and learning what had taken place, went round was undertaken, when the body was found greatly mutilated. An inquest has since been held, and a verdict of Temporary Insanity" returned.
Railuays.-On Monday evening an accident, which mueh inconvenience, fortunately unaccompaaied by any personal injury, occurred on the Greenwich Railway, near the point of divergence to the Croydon line.
By some casuaity, of which no explanation has been given, By some casuaity, of which no explanation has been given
the up-train was thrown off the line of rails, and some of the up-train was thrown off the line of rails, and some of down conveyance. The engineer and stoker blew out the and excitement, handed out of the vehicles, and shown to a lateral staircase, from the foot of which they might thread a remonstrance by a passenger, one of the attendants consented to light the passengers on their way by the line of foul the 1 and were preparing to start a train downwards. Had this accurred a few minutes earlier, or had a train arrived by the line from Croydon, the collision with the carriages bably have been lost. It appears there was no superintendent at hand to give directions in clearing the line, and no spare engine ready at the terminus in the event of any accident.-The Shefield papers state that and
the down-trains was passing between Clay-cross and Ches terfield, a hare sprung into the ashes-pan of the engine, and was completely roasted.-On Monday, as a poiice-officer was taking prisoners from Halifax to Waketield House of Correction, in the Manchester and Leeds Railway carriages, one of them asked to hare his sassure on his wrists The res in great palied with; and the man no soone felt himself liberated, than he leaped out of the carriage, though the train was going at full speed. An alarm was given, the engiae was stopped and put back, and he was was taken up into the train again, and conveyed from the railway station on a b.ard to the House of Correction.

## The meeti

Kildare, to petition for Repeal, and against Lord Stanlev's Bill, took place on Saturdar. 20,010 persons are said to have been present. Mr. O'Connell started from Moorefield (where he stopped the preceding night) at a quarter past two, and arrived at the Stand-house an-an-hou afterwards, and was received by the asse with enthusiastic greetings. At hali-past two the chair speakers addressed the assembly from the windows of the speakers house. Mr. O'Connell addressed the meeting at great length upon the usual topics. "I insist," he said "that the uccupier of land shall have a tenant's right, and that he should not be removed from possession writhout full compensation for every penny he laid out-nay, more, that he should not be so removed without a jury of his neighbours being summoned to ascertain what rent he ought to pay, or, in other words, what was the fair, rea sonable value of his holding-that should his removal lake place compensation be given for any money laid out on the farm-in fine, to say on their oaths what the man's land was worth. That, my friends, is my plan connected with the repeal of the union. Speaking of the prospects whether she will want the assistance of the Irish people or not, and if she did want them she should have them, but on their own terms though. There were two ways of using a man's hands. It was no harm for a man to put his hands in his pocket, and look on at the struggle. England, he said, had changed her religion four times in as many reigns; Scotland had changed hers, and dyed her
hands in blood; but Ireland had remained faithful. Irehands in blood; but Ireland had remained faithful. fre-
land had never persecuted any man ou account of his land had never persecuted any man ou account of his
religion. After several other gentlemen had spoken, the religion. After several other gentlemen had spoken, th the union -the second for the rejection of Lord Stanley's, and in favour of Lord Morpeth's Irish Registration Bill. Mr. Pim was then called to the chair, and the meeting adjourned.

## SCOTLAND

Grlasgow:- A melancholy case of suinide has occurred in a lodging-house in Bell-strect. The following appear to be the circumstanees of the case:-A man and woman
applied at the house ailuded to for lodgings, and having been admitted, they remained tugether all nikit. After breakfast the man left the huuse, and duriag the day the woman went out aud came back several times, but nothing suspicious was obsarved in her conduct. In the eveniag, White puwder in it; but the persons in the house paid no attention to the circunsstance and though the woman apWas taken of this till she was foumd dead in the morning
in bed. At first the affiair whs Wrapt in mystery, but a note was found addressed to W. Barton, supposed to be the person who came to the house with her. In the letter she complains of her fate. and hints that his desertion of her had driven her to commit the desperate act, and concludes, after a few directions, by praying for his welfare and happiness. It is stated that she was respectably connected; had been married to a showman, who has been dead some years, and had since then been connected with exhibitions of one description or another.-A few days since a flesher who had purchased a pet cow at the west end of the town, took it to the slaughter- house to be killed. Having an assistant, he left him to cut up the animal, who, during the operation, found a lady's gold ring, with the the discovery a long dispute took place between the pon of the animal and his servant each insisting upon their right The matter was at length compromised by small sum being given by the master, who remains in possession, -A giantess, named Moir, who has been exhibiting for ti. in Saltmarket, has been taken up on the charge of being guilty of the murder of her husband It appears that one evening, after the close of the exhibi tion, Moir and his wife quarrelled, and the latter struck the former on the forebeau a blow with a bedpost. The effects of the assault were not immediately fatal; but, afte complaining a good deal, the man expired the following
day about five occlock. The body has since been examined by order of the anthorities; bat it is stated that the medical gentlemen are of opinion that the state of the brain may have been the cause of death, independently altogether of external injury
Elgin.-Peter Cameron, accused of the murder of his father-in-law, has been attempting to escape from the gaol in this place. It seems that he pretended great pe famil worship and wished to be permitted to pertorn lowing is an account of the attempted escape: -The plan wam and aner man named Da vidson. They had been, it seems, together with a boy, in consequence of want of room, contined in the same cell, and had, therefore, time apportanity to bare their plans; they resolved on effecting their escape by cutting the iron bars of the window of the cell. To procure the necessary instruments, Cameron wrote a
usual, he gave to the gaoler for his perusal. On its being returned to him to seal, he contrived to secrete inside it small note, in which he instructed the person to whom it was addressed, to furnish Davidson's wife with 5s. as he knew she was in destitute circumstances. Davidson's wife was instructed to call for the money, with which she was to purchase a set of files, and bring them when she came confined in the same cell that communicated his suspicions to the Sheriff, and a strict nnquiry having been set on foot, the plan of escape wa
detected. It was then ascertained that Davidson's wife had purchased five files, and had called at the gaol but was refused admittance. The prisoners are now put in irons no one is allowed to see them without an order from the Sheriff and a close watch is kept on the gaol during night so that there seems to be now no chance of their effecting their escape
Inverness.-A woman well known in the north, commonly called "Miss Hay, the fortune-teller," died lately in the prison of this town, to which she had been com mitted for reset of rexnatural powers, and had been sent for even as far as Sutherlandshire, to be consulted on dark and doubtfol matters. When goods were lost or stolen, Miss Hay wa resorted to, in some cases she was too well qualified to give information, for she encouraged theft, and someo the owner, on receiving a gratuity for her powers of divination. In telling fortunes, curing cattle, \&cc., it seems she was also amply employed.

## fitistellaneous.

Antarctic Expedition of Discovery.-It may be recollected that the Erebus and Terror discovery ships sailed from England about 13 months ago, under the command of Captain James Clark Ross, R.N., and Commander Crozier, their main and ostensible object being to ascertain the true position of the South Magnetic Pole, and the exploration of the Antarctic regions, of which a very im perfect knowledge has hitherto been obtained; but a seriea of magnetic observations were also directed to be made at different stations on their route, and the first of these being Madeira, they put in there and stopped several days. Thence they proceeded to St. Helena and the Cape of Good Hupe, at which places they fitted up observato ries, and left officers of sufficient scientific acquirements to superintend them. Kerguelen Land $\pi a s$ the next spo they visited, where, and at Sabrina Land, further obserHobart Town, Van Diemen's Land, about the middle of Hobart Town, lan Diemen s Land, about the middie of John Franilia, the Governor, from whom he received every possible attention and assistance, and there also having erected and fitted up an observatory, they prom
ceeded on their yoyage about the $26: \mathrm{b}$ of October, that eeeded on their yoyage ahout the 26 a of october, that were on the eve of their deparcure. Captaia Russ, the nephew of Sir Joun Ross, is the same officer who, in June pritish flag on the North magnetic Pole, ancle and $\mathrm{Sir}_{\mathrm{F}} \mathrm{F}$ 期 voyages to the Aretic seas with ais ancle and Sir Euward parry, passed eight minters and arduons and important duty coald not hare been confided to a more experienced or intelligent officer. It appears
that on their arrival at Hobark-town they learnt that since they left England two expeditions had been fitted out, one by the French and the other by the A mericans, for the apparent purpose of ancupating the cerjects of discovery in tor the icebergs, and their commanders never, it is believed, having seen any betore. they gave up the pursuit, to be accomplished, it is to be hoped, by our own inirepid coun trymen. It is known to be Captain Ross sintention to go direct to the South Pole, Which he expects, from calcula-
tions made before he left England, to find about South tions made before he left England, to find about South
latitude 68 , East longitude 144; and it is believed that latitude 68, East longitude 144 ; and it is believed that observations since made
The Niger Expedition. - There is now constrneting in the boat-house of Woolwich Dockyard a boat of a singular appearance, being formed similar to some of the shallow creels used for currying fish in seaport towns. The boat is about 20 ft . long and 10 ft . broad, and about 21 ft deep, and yet it is so light, that it is capable of being carried any distance on the sboulders of four men. It is formed of thin stripes of wood, about two inches broad, and woven together exactly in the same way as Indian matting, and it is intended to cover the outside with water proof canvass. The purpose for which it will be used is to cross shallow creeks and rivers, and from its size it ap pears capable of carrying 30 men: It will be placed above and will answer as an excellent protection to it from the meridian rays of the sun in the trepical climate to which the expedition is bound.
The Falls of Niagara. -The New York Commercial Advertiser contains the following article on this subject, in refereuce to the account of the destraction mentioned in our last.- "Some of the papers this morning contain What is called an extra from the 'office of the Advertiser, Buffalo, Feb. 1t, four O'clock,' giving an account of the destruction of the Falls of Niagara. A slight glance at it will convince any one that it is a hoax, and by no means a good one, got up by some witling who probably never leading to this conclusion.-1. The article was not written, although purporting to have been, by the editor of the Buffalo Commercial Advertiser. We know his style too Buffil. He never deals in such inflated language as the account presents.-2. The extra purposes to be dated at Buffalo on Sunday evening, at four o'clock, and it was re ceived in this city last evening. This could not be done. -3. 'Biddle-tower and all the adjoining ground-work had disappeared.' Mr. Biddle never built a tower at the
Falls. Some years ago he cansed to be built a staircase n Goat Island, leading down to the Falls, which goes hy bis name.-4. The water made a snhrerr zacuets passage, and burst through the wall of Geat Island. Absurd.-. The last clanse is corvect; there can have been no lives lost, because there was no hotel to he carried away The nearest hotel is the Clifton-house, far below the fallis. -P.S. Since the above was in type, the northern manil, only due this afternoon, has arrived, and brought us the Buffulo Commercial Advertiser of Saturday evening, the latest which could be expectod. The Albany papers of jesterday are silent on the subject. The hoax was probably got up in this city."

Gardener's Privileges.-The question was once askod by a very beautiful wornan,- "Why is a gardener the most extraordinary man in the world ?" The reply
given was as follows :- "Because no man has more business on Earth, and he always chooses good Grounds for What he does. He commands his Thyme; he is naster of the Mint; and he fingers Penny-royal. He raises his
Celery every year, and it is a bad year indeed that does not bring him in a Plum. He meets with more Boughs than a minister of state; he makes more Beds than the King of France, and has in them more genuine Roses and Lilies than are to be found at a country wake. He makes Raking his business more thans his diverston, but it is an advantage to his health and fortume which wishes for Weeds. Disorders fatal to others never hurt him; he walks, and hastles, and thrives most in a Consumption; he can boast of more Bleeding-learts than you can, and has more Laurels than the Duke of Wellington. But his greatest pride and the greatest envy of his companions is, that he can have Yew when he pleases."
Hemp made from Beam-wathe-Every hean-stalk has 20 or 30 fibres ranning up on the outer side under a thin membrane from the bottom to the top of the plant. There is a particular fibre at each of the four corners of the plant, racher thicker and stronger than the rest; it is som for fixing their hoo of ly anglers, instead of sca-grass, for fixing plint has been soaked 10 or 12 days in water. Washing and pulling it through hackles or iron combs is mecessary in dressing bean-fiemp. It is not requisite that the stalks shouid be kept exattly 12 dayo uncer water, they may rewader water, or perfectiy dry. - Indagabor
Ancient 0 nit.-The American Papers contain the fol lowing account of am interesting relic recently discovered in the councy of Wayse. It appears that a white oak-tree Tas cat down, in the town of Lyons, Wayne county, New York, measaring four feet and a half in diameter. In the body of the tree, about four feet and a half from the ground,
was found a large and deep cneting br an axe severing its heart of the tree, and exllibiting with perfect distinctuess, the marks of the ame at the present time. The whole cavity thas created by the origimal cutting was found to be

grown over it subsequently to the cutting. Consequently 118 years before thing mast have heen in the year 1374, or The cutting was at least sir inches deep.
Hemp made from Hop-bine.-The bine of hops boiled in lye till the rind separates freely, way be stripped, and when cool, worked like hemp. This is best done by cording, which makes it the cotton.-Indagut

 Read shouk be removed from the fhice of assiumees. ant that Batten, Turner, and Brown should be the assignee umber the
new connmsiou. In 1 ssi the Manter reponed to tire Court that at the time of the relimemushment the mintes were a losint con. cern, and that there was a prospect of their beine stopwe., to
avert which calamity it was determined to form a atw atlvent Ine and that Grylls being a considerable landowner in the pariol
where the mines, were sitnate, was prevailed on to take 11 :uth - hares in tine new adventu
three for the Duke of Leeds, and relawney, the lord of the mines, Borlase and Plomer, the former of whom had since returned his
share to Grylls. The matter coming on subsequently in the Court of Review on some of the proceedings in the bankruptcy perfectly honest and fair yet that the Master's reportion to b perfecty honest and fair, yet that the Master's report was ne-
verthesserroneous in finding the shares were resold, and di-
rected that the three soth shares he had reported to have been rected that the three 50th shares he had reported to have been repurcha -ut by Grylls and resold by the Duke to Grylis were not
the absolute property of Grylls, but were shares for which he was Gundrys. The present suit was instituted by the surviving as tignee, under the renewed commission, against Mr. C. Trelawney, claratinn of the court upess the prin
that he misht he decreed to transfer theme general creditors, and of the profits since 1820 . The ground on which mainly resisted on behalf of the defendant, and sought to show and the other, posal of becoming a shareholder until after the sale, and that he Trelawney. It was aldo endearourch to be shown from the evi
dence, that the mines were in a losing condition at the time the relinquishment, a large portion of them being actually mort of all the creditors, and with a view to relieve them from the
responsitinities to which they were liable at that period.-The
iice-Chancellor waid it wa- one of the simplest cases ever brought beture a court of equity. It appeared that Grylls, for general
purposes, twok active meanures in respect of the mines, bein purpioses, thok active measures in respect of
prosperity. Noon after the Gundrys became bankrupt Grylls
was chosen assignee, and it was thought proper that a relinquish-
ment shoud be made of their share in the mines. Had the
matter stopped there, there would have been nothing t.) complain ment should be made of thair share in the mines. Had the
matter stopped there, there would have been nothing t. complan
of; but it did not, nor was it intended that it shonld. The par of; but it did not, nor was it intended that it shonld. The liar-
ties wemt on to construct a new company, into the mans of whin
wa to be thrown the property which the (iumdry
 any friends were willing to so shares with him, they were at
 Trelawnev, and then a cormernontence ensued, from all which it for Trelawney those which were marked down to Grylls, "fo self and triends." The rest was mere machinery. The real na-

 see that the uilimate payment by Trelawney was nothing mor
than what he described it his answer, viz," "an adoption o
the general transaction entered into by Grylls." This hi che general transactions entered into by Gryils." This his
Honnur dwelt upon more because it put an end to the question into this-that there was a severance from the mass of four came, subject to this loose arrangement, that when Trelawne: tion. Grylls was merely an agent, and his knowledge would

\author{
SATV RDAY, MARCH \(27,1841\).
}

We have received a few letters, which we cannot but regard as extremely ill-adviseil, upon the subject of gardeners' wages. We believe we have also read all the printed correspondence that has appeared of late years in connexion with this topic ; and the only conclusion at which we can arrive is, that the whole question requires to be considered in quite a different manner from that in which the majority of the writegs in question have regarded it. We think it of very great moment, and we shall take it up in our own good time ; but in the mean while we must decine to
occupy our eolumns with one-sided arguments, which cannot possibly be of service either to gardeners or their masters. For the present we are more anxious for facts than for opinions. Such letters as may reach us upon this subject will be preserved if they are written fairly and temperately, and we shall use them hereafter.

Is another column will be found a full account of the regulations of the Gardeners' Benevolent Institution, for the Relief of Aged Gardeners and their Widows. We insert these particulars at the request of some of our readers, and in the hope that when the objects of this charitable Association shall be better known, contributions will come in from all quarters. The manner in which it is pruposed to ap ply the funds is, by granting small pensions for life to gardeners above 60, or to their widows; and we think this part of the plan unexceptiouahie. Iudeed, with one exception, to be hereafter noticed, we do not know that better regulations could, upon the whole,
have been framed than those which have been drawn up for the governance of the managing committee.

But the regulations are, in truth, a subject of less importance than the selection of the Committee, Vice-Presidents, and Trustees, who, if they are men of respectability, may be conficlently relied upon by the general body of such an institution as certain to be among the first to propose improvements in the rules when alterations are shown to be desirable. Upon this point there is not at present the slightest ground for dissatisfaction. There is no danger of the funds being misapplied, and there is every prospect of an honourable distribution of the pensions. The only thing that we could wish otherwise is, the Committee being so much in the hands of the trade. It would be more satisfactory to gardeners if a larger number of their own body had a share in the management: and, in our opinion, the elections into the Committee should in future consist exclusively of gentlemen's gardeners and amateurs, until the number of nurserymen in it is reduced to one-half. This operation could not be effected in less than 3 years; and when accomplished, the general body should be allowed to elect new members of the Committee from any of the subscribers without distinction.
These, however, and other points, will probably come under the consideration of the Committee themselves, and we willingly leave them in their hands. We trust that the gardeners of Great Britain will now have the wisdom and generosity to join seriously in the creation of a fund for the alleviation of the distress of their aged brethren who may be liss fortunate in the world than themselves. There are charitable individuals enough in this country who are at all times ready to contribute to purposes of such a kind ; but before an appeal is made to their sympathies, it behoves gardeners to exert themselves to work out their own end with their own means. For ourselves, we shall always be anxious to forwand the vievs of so laudable an institution, and we can scarcely render it a better service than by keeping a vigilant eye upon the proceedings of the managers. We shall also be ready to transmit the subscriptions of our correspondents to the Secretary.

We are happy to add that an election of two new pensioners is declared for the 3d of June next.

\section*{ORCHIDACEOUS EPIPHYTES.}

THB following Table has been compiled from a notebook in which I have been in the labit of entering the names and characters of what appeared to be first-rate Orchidacees (I use the phrase in its popular sense) as they successively showed themselves in the collections of this country. Embracing, as these entries do, a period of ten years, they may, pertaps, possess a sort of historical
terest in the eyes of the veteran cultivator, while to mere novice they will serve as landmarks in the formation of a collection
It will be perceived that the number of species characterised below amounts to 147, of which 99 came from the new world, and only 48 from the old! Of the orientals, China and the East India islands contributed 13; Central India and Ceylon, 31 ; and Africa and Madagascar, 5. Of the oecidentals, Brazil sent us 23; Central America (including Panama, Honduras, Guatemala, and Mexico),
44 ; the West India isles, 15 ; ( (uiana (including Surinam and Demerara), 14; and Peru, 3. Turning to the collections in which the species respectively appeared, Messrs. Loddiges will be foued to have furnished by far the greatest number, viz, 31 ; from my own collection came
from Mr. Barker's, 10; from the Duke of Devonshire 's, ciety, 5 ; from Giasgow Botanical Garden, 3; from Mr. ciety, \({ }^{\text {J }}\); from Glasgow Botanien Garden, 3 ; from Mr. Brocklelurst, 2: from Messrs. Rollisson, \({ }^{2}\); from the
Duke of Northumberland, 1 ; from the Duhe of Bedford, Duke of Northumberland, 1 ; from the Duhe of Bedford,
1 ; from Lady Amherst, 1 ; from sir C. Lemon, 1 ; from Mr. Lrom Lady Amherst, if from ir ir from Mr. Rucker, 1 ; from Mr. Allcard, 1 ; from Mr. Miers, 1 ; from Mr. Tayleure, 1 ; from Messrs. Young, 1 ; from Mr. Low, 1 ; from Messrs. ville, 1; and from the Royal Botanic Garden, Kew, 1. It may be well to observe that the preceding account refers only to the period subsequent to 1831 (the year in which I began my collection), all the good species established prior to that date having been, with scarcely an exception, introdaced by the Royal Batanic Garden at
 Liverpool Botanic Garden. The number of collectors would seem to bave increased as rapidly as the number of specits in cultivation: in 1830 there were not more than five or six cullections of the slightest note, and in these were barely 100 species; the collections cannot now be counted, nor the species in their possession; but the latter must be estimated at 1000 at the least. It might be mentioned as a curious fact that the genern aow cutivation are more numerous than were the species of ten years
back; nay, the genus tepidendrum alone now musters a greater array of species than were contained at the period to which I refer by all the other genera combined. As such a multitude of spectes or course comprehends many that are worthless, so it must necessarily lead to a selec
tion of the best, -for in a majority of instances the space devoted to Orchidacere would be quite inadequate to the accommodation of so large a family as the order has lat terly beconie. The fullowing table, as I have before observed, may be useful as a guide to those who desire rathe a select than a numerous collection.
Peristeria elata, Panumu, 1831, Mr. R. Harrison. -a stately plant: the flowers mure singular than ornamental ; easily cultivated, if allowed plenty of pot-room. diges.-A most singular plant; one of the few Orchidaceous genera which, although undoubtedly distinct, has remained for ten years without the accession of a second species. Theve is a darl variety of this plant which is far saperior to the one in ordinary cultare
Stanhorfa oculata, Lalapor, 1831, Mebsra. Lod-diges.-One of the most striking plants in the order ; the foliage fine, and the flowers produced in profusion Nothing can be easier than its cultivation.
Zygopetalum maxillire, Brazil, 1831, Messrs. Loddiges.- Yretty and distinet; easily grown.
Clttleya Harrisunif, Brazil, 1831, Mrs. A. Har-riṣon.-One of the prettiest and most easily cultivated of the Cattleyas; lony confounded with, but unquestionabiy distinct from, Cattleya Loddigesii, to which it is much superior.

Corianthes macelata. Demerara, 1831, Liverpool Hotanic Garden.-A most extraordinary plant, and of a very capricious habit. Some of the varieties, when well grown, are magniticent.

Catteeya gettata, Brazib, 1831, Horticultural So-ciety.-Truly distinet, and although easily grown, requiring shlful treatuent to bring it to pertection. No one has succeeded so well with it as Mif. R. Harrison, in Whore collection it has produced a 40 -flowered scape
Aner ecum beurneum, Madagasoar, 1831, Horticultural society.-A noble plant, but exceedngly searee. The finest apecimen is in the
Devonsinie, at Chatsworth.
Devonshine, at Crasworth. - Tbe finest-culurated specimens of this plaut, however beautiful, full far short of the native ones. It seems to thrive in a covier and drier temperature than most of its congeners. Oncidium Furbestanua
a richly-hued variety or this species.

dull.
Mall.
Atmopdzpurya, Brasih, 1832, Messis. Cycroches LopdrgisiI, Surinam, 1933, Messrs. Lod-diges.-A truly wonderful plant; of easy growth, but the Hower-spihes apt to damp ofi. One of these spikes pro18 flowers
Oscidium ampliatum, Ceniral America and Trinidad, 1833, Kew Botanic Garden.-A fine species, but in colitivation does not attain its native stature. Pseudo-bulbs and flower-spikes that have been sent me from the coast of the Pacific were gigantic.
Oncidija cillatum, Ranema, 1833, Mr. Joe Knight. -A pretty species when well grown.
Catasetcm cerneum, Trinidad, 1833, Glagow Botanical Garden.-A rery fine and extraordinary plant; the Catasetum tritidum of Hooker. I have seen spikes with 40 or 50 tlowers upon them. The only Catasetum with which I am acquainted in which the Huwer-spike is developed before the appearance of the leaves.
Cybtopodiey plactatem, West Indies, 1833, Cilasgow Butanic Garden.-A magnificent sjecies. There are many varieties, all of which grow freely, but seldom flower. habenaria gigantea, least Indies, lej33, Glasgow Botanic Ciarden.-I ans not aware of this prant having Hlowered elsewhere than in the Glasgow Botani. R. Har GoNGORa Mscclata, Demerara, \(\begin{aligned} & \text { rison.-A must singular plant. Many varieties, some of }\end{aligned}\) them very tive.
Cirtochllem flayescens, Mexico ( \({ }^{2}\) ), 183.3, Mr. R. Harrison.-A very free-grower, but a shy-llowerer. Is native country said to be Mexico, but I incline to think it is more probably Brazil. Resembles, but is inferior to, Cyrtochilum stellatum.
Lehia Perrisio, Brazil, 1833, Mrs. A. Harrison.A beautiful species; incorrectly ranked with Cattleya, having eight pollen-masses. Easily cultivated, but its tiowers are rather fleeting.
Epidendeum oncldioides, Brazil (?), 1833, Mr. R. Harrison.-Has a noble habit, but its flowers, individually, far from beautiful; difficult to manage, and rery scarce. Dendrobicam aggregatuy, India, l833, Mr. R. Har-rison.-A most charming species, and of the easiest cue it
tivation. Though registered in this place, I believe it tivation. Though registered in this place, It
towered years ago in the cullection of Mr. Cattley.

Grobya Amberstie, Brazil, 1o3s, Lady Amherst.A fine species, but does not often Hower.
Epidendrum bicurnitus, Trinidud, 1834, Lord Fitzwilliam.-Very beautiful when well grown. Apt to die off unaceountably.
Ovcidiem Lanceanun, Surinum and Demerara, of known Oncidia. Nut a rery free-flowering kind. Many inferior varieties.
Lelia anceps, Xulupar, 1834. Messrs. Loddiges.Singularly elegant and beautiful. More readily cultivated than the majority of its fanilly.
Brasela Lanceana, Suri
Society.- Very beautiful; easily managed
Acasthopphipprem bicolor, Ceylon, 1934, Horticultural Society. - A showy plant, and of the easiest growth. Burlingronia candida, Denzerara, 183̈5, Mr. Bate-man.-An exquisitely beauurfil plant. It nowered win me in the highest perfection fur three years, and then ua accountably pined and died. All the Burlingtonias appear to be of a peculiarly delicate temperament, except

ON PROMOTINGTHE GERMINATION OR SEEDS. Mariy plans have been recommended and adopted for assisting and ensuring the growth of those seeds which are of difficult germination,-such as steeping them consider able success. The fact is, indeed, established, that by certain chemical stimuli, the tardy and latent rital principle of seeds may be excited into action. We must not for a moment, haverer, confound and degrade the operation of the rital principle itself into mere chemical action; the chemieat pon are develoned as soun as the moter ful operations of this principle are vivervable.
Of ali chemical afents pernaps nowe exert a wider and more powertul intuence than lighit. In the vegetable world its eriects are manifest and important, the very colvur of plants and flowers being dependeth on. When it is withheld, culour is host, as in the famisar exions reof blancining celery. I make these genern obsion, in order specting the great influence of light on resetation, in or comspend for promoting the gerwinativa of seeds-mithe application of the chemical atimulas of light. If is staply ti.e pating a square of viole-col-ured glam (weer the top of the thaster-put in which the se matuche on thins rowed coloured light will regetate more quielly tien when co vered with common unstained glass, or with glasss of any other colour. The explanation is this: when a ray of light is transmitted through a prism, it is separated into its sivea component colours, vis.--red, orange, yellow, green that, the fiolet-coloured ray possesses by far the greatest power of producing chemical action; next to it the indigo, then blue, green, and so on, up to the red ray, wheh pos-
sesses no chemically acting power whatever. On the contrary, the red ray bas the greatest heat-giving pown, whil the violet, the opposite end of the spectram, exhibits searcely any. As cinemical stimuli are kno wn to promoto the germinimion of seeds, this of the wiolet-coloured res of
light, as transmitted through a square of stained glass,
will be found of the greatest possible efficacy. Mr. Robert the effects of different-co loured light (viz.-red, yellow, green, and blue) on the vegetation of seeds has manifestly stopped short of the truth. Had he proceeded to the indigo, the quickening effects would have been much greater ; and if the violetcoloured ray, they would have been tenfold. For practical purposes it will of course be much more convenient to case squares of violet-coloured glass, placed on the top of the flower-pot, than transmitting the light through a bottle containing a violet-coloured flidid, as in Mr. Hunt's experiments ; moreover, the mere mechanical effects of a growth of seeds, by preventing the evaporation of water from the soil, and thus preserving a uniform state of moisture, -F. R. Horner, M.D., Hull.

\section*{ENTOMOLOGY.}

No. IV.-The Sanake Millipedes conutitute a tribe of insects with whose history few persons are acquainted, notwithstanding the multitudes that are sometimes turned ap with the spade; and as they are often confounded with with the gardener and farmer for every sort of grub that is with the gardener and farmer for every sort of grub that is
tough and found at the roots of his crops, it will not be tough and found at the roots of his crops, it will not be
mispent time to invite their attention to these animals; for the careless practice of calling totally different things by one favourite appellation has led to numerous errors. Linnzeus applied the generic name of Julus to these animals, which resemble little snakes, or rather Sloe-worms; and they might, with propriety, have been called wireworms, had not that epithet been given to the larva of the Skipping Elaters, with which they have no connexion whatever.

All the snake-millipedes walk slowly, or rather glide along in a peculiar way, from the immense number of legs they possess, amounting sometimes to 240 : these legs, animal is in motion, they look like a fringe of hairs, one pair moving after another in quick succession, and with the most exact regularity, causing a wavy appearance. When disturbed they coil themselves up more or less spirally, the head being nearest the centre, and all the legs concealed.
The snake-millipedes are related to the wood-lice (Oniscus), and form a connecting link with the centipedes, (Scolopendra); but whether they are as mischierous to the gardener as the former is doubtful : I think not, and there is some reason to believe that they are partially beneficial. Several species inhabit England, secreting themselves under stores in damp places, beneath the loose bark of dead trees, and especially in the mossy holes of old stumps. They subsiat on decomposed vegetable and animal substances ; some of them live apon other insects, particularly mites (Acari), and have been detected eating the larva of a fly ; others are acensed of feeding on fruits, roots, and even the leaves of culinary vegetabl
Last September I received some onions from Guildford, which were infested with the maggots of a fly, and in the earth with them were multitudes of two different sorts of Julus (pulchellus, fig. 2 and 3 , and complanatus, fig. 4 and 5 ),
of various sizes, running out and into the purid of various sizes, running out and into the putrid parts of
the bulbs, and between the skins. The same species have been recently sent from Hampshire, and were found chiefly at the Pansy-roots ; and on pulling up some decayed cabbage-stalks the other day, which had beepn planted in the early part of winter, on account of some maggots heing restris? fig. 1) amongst the roots; and I think it probable that they feed upon the maggots and mites that infest our kitchen-garden plants, in which case they ought not to be destroyed. Before admitting this as a fact, however, it will be necessary to ascertain their economy with greater care than has hitherto been bestowed upon the subject; if their habits be mischievons, they have
ample means of exercising their bad propensities, being ample means of exercising their bad propensities, being mach longer-lived than most insects, for they do not attain females then deposit a great number of eggs in the earth the breeding-season beginning after Christmas and con, tinuing until May. Some of these animals when first hatched from the egss have no more than three pair of legs, and 7 or 8 segments only in the body; but in a few days they acquire 4 pair more, with additional rings: thus the number of segments keeps increasing with their age Which renders a perfect knowledge of the species very difficult to acquire, and this is increased by the casting off heir horny and somewhat calcareous skin several times. Every segment is furnished with 2 pairs of legs, with the exception of a few of the rings next the head and the 7th ew at the tail, which are often destitute of any limbs; the horms are short, club-shaped, and - -jointed, and the eves form granulated masses: there is a line of pores on each aide of the body, from which an acid liquor flows of a disagreeable odour, which is employed to defend the Julus 1.-J. terrestris, Linn., which is about an inch long, an of a dark lead colour; my specimens have 156 legs, but they are stated by some authors to amoun
dull yellowish-white ; the tail is mucronated.
2.-J. pulehellus, Leach, is pale ochreous, with a row of bright crimson-coloured spots down each aide, excepting the 4 first and 5 last segme
fig 3 . 3 shows the natural size.
3.-J. complanatus, Linn., is fatten on the back. the segments being a little dilated on the sides, the hinder angles acate, with only 60 legs; these and other characters haveled to its being made a genus, called by Latraille

Polydesmus. It is of a lilac-colour, and generally about年 an inch long (fig. 5), but I believe it grows to the size of the larger figure. Some of the American species of Julus largest swan's-quill ; but even that is nothing to the magnitude of some found near Carthagena, if we may credit the reports of travellers.
To destroy the Julus-water repreatedly with lime-water ; and even soot will drive them away. If nitrate of soda be sprinkled round the plants and afterwards watered, it
would, I presume, prove the best remedy ; or watering the plants with a solution the best remedy; or watering the ficial and more applicable to extensive crops. But this operation must not be performed in the middle of the day. If a few loosely-made baskets or Strawberry pottles were filled with moss and sunk in the flower-beds, the Juli would in all probability resort to them, when they migh easily be secared.-Ruricola

it appears to have no inclination to combine with it ; and when carbon or substances containing it bums, they com bine only with the oxygen, and never with the nitrogen of the air; so that it would appear as if the chief use of nitrogen in the air mas to dilute the osygen and prevent in from combining too rapidly with carbon and other sub-
stances. Under some circumstances, however, nitrogen does combine with other elements, and its compontron amongst the most curious and important substances know. When regetable or animal matters containing ni free in its simple and unat it, like the carbon, is not set decitits simple and uncombined form, but that durin in addition to water and carbonic acid the Therefore cipal substances arising from the decay of ordinary vegetable matters, we find a pungent, strong-smelling gas, composed of nitrogen and hydrogen, which is called ammonia. This substance, though a gas, is, like potash and soda, combined with them neutralises their for acids, and when combined with them neutralises their powers; and, there-
fore, as it is evolved at the same time with carbonic scid it combines with that acid and produces a solid salt, which is called a carbonate of ammonia, just as the co of carbonic acid and lime is called a carbonate of lime. \(-E\).

\section*{COTTAGE GARDENS.-No}

Antend now to the advancing crops. If the first-nom Peas have not been already staked, let it be done without was insufficient, draw a little more to the rows parthing-up staking. With the exception of an occasional hoeing to keep them clear of weeds, this is all that they will require Peas and Beans rill ase. The Spinach between the rom or reas and Beans will also be the better for having the earth well stirred around it, and the plants thinned to about nine inches or a foot apart. It is false economy to
leare them too thick, as it occasions them to run to seed, and prevents the leaves from attaining that size and succulency which they never fail in acquiring when the plants are allowed to have plenty of room. Prepare for the main crops of Carrots and Parsneps so as to get them sown in the latter end of the week. Both like a deep rich soil ; and should it be of a free sandy nature, the more manuring with littery or unfermented dung. If manure is necessary, it should be only such as has been well rotted, and great care must be taken in digging to have it thoroughly incorporated with the soil ; otherwise, instead of the roots being straight and tapering, they will be forked On this account, therefore, we would recommend the cotOn this account, therefore, we would recommend the cot-
tager to consider well beforehand, and arrange to have the Carer to consider well Parsneps follow a crop for which the ground Carrots and Parsneps follow a crop for which the ground
was previously well manured; or, if it can be done, it would answer the same purpose to manure the piece in tended for them in autumn, so that it may be in proper condition by this time. When the ground is ready for sowing, let it be marked off into heds of the usual size; and let shallow drills an inch deep be made nine inches or a foot asunder. The seeds are to be mised with a little sand or dry earth, and then rubbed well between the hands nutil
they are divested of the bristles which make them stick together. The mixture of earth and seed is then to be together. The mixture of earth and seed is then to be
sown as evenly as possible along the drill, which must sown as evenly as possible along the drill, which most
afterwards be covered lightly and levelled with the rake. Parsneps should have a greater distance between the rows than Carrots ; and if sown in drilts, they ought to be from 15 to 18 inches apart, and about an inch deep. The seeds
are smooth, and do not require to be mixed with sand like Carrots, but in every other respect they may be similarly treated. In all cases where it can be conveniently adopted, we would recommend the system of drilling in crops, in preference to sowing broad-cast. The little extra tronble which it causes, we think, is amply compensated for by the general saperiority of the crops over those obtained from the latter mode of treatment. Besides, the drills admit of the intermediate spaces being cleaned and thoroughly palverised during summer, which will be found of great 25 sistance in promoting the growth of whatever plants are subjected to this mode of culture.-M. E. H.

HOME CORRESPONDENCE
Heating Greenhouses.-The best system, both theoretically and practically, for heating greenhouses, is the employment of large pipes of warm water. The importance of a steady temperature in bringing greenhouse plants to periection requires no proof, for without some means ul turist will never be certain of success. The object of my remarks is to place the most certain means of attaining this agent within his reach, and which, being founded on the most sound principles, is equally applicable to the most humble as well On the simple and self-evident principle that a large mass of heated materials will continue to give out much longer
than a swall mass, I have constructed my greenbouse, and the results prove how cerrectly I have proceeded \(\therefore\) ot being able \(t\), afford a regular hot-water aphiaratus. resorted to the flue system; but with this impertant hiffrence, that instead of making and covering wy fues was of brickwork (the opening taruaulatut huns
that when my stove is lighted it takes rearly a day before the mass feels warm. This is the true system, because while it takes one day to heat, it continiuts giving out heat with great steadiness for three days after the

chages of temperature is remored. The only fuel 1 em-
ploy is the waste cinders from the kitchen-grate, which are placed in a small brick stove or furnace outside, and only
sufficient draught admitted to keep a low smouldering fire that requires no one to look after it. By this simple system of placing 2 feet of brick-work round a 1 -inch flue, I have no trouble whatever; you can neither make it too hot, nor cool it down so rapidly as to let the cold of a serere winter's night have the least influence. No fumes from the fuel can escape, as the thickness of the fiue prevents flues; and with two or three trays made of zinc phates, flues; and with two or three trays made of zinc prates,
with the edges folded up so as to contain about 2 in . of water placed on the flues, a pure supply of vapour is obtained. If you could only see the fine plants I have raised and preserred by this system, you would recommend it to
all those humble admirers of Floriculture who cannot avail themselves of crack systems. Light being one of the grand stimulating

The above is a rude sketch of the arrangement. A is the little stove or furnace, with the damper placed at c , the right place, so as to prevent the spuming out of any vapour damper is placed far from the fire). B is the ash-pit, with mea the \(D\) is length being determined by the length of the house. The space of 1 no side of the flue to the air.- If you will only give a place to
theseremarks, you will confer a real benefit on your readers, and on your humble servant, \(T . N\).
Woodlice.-There are in your valuable paper many remedies for destroying woodlice, a common pest to early Cucumber-growers. I get as many \(3 \geq\)-pots as there are lights to my pit, cork the holes at the bottom, put a
small quantity of tobacco-paper in each, and then fill them with water. When I ridge out my plants. I plunge in the bed at the front under each light a 5 -pot containing the from the attacks of woodlice. The paper requires to be renewed about once in ten days.- \(J\). W
Mr. Penn's Heating. - As the Marquis of Ailsa's houses, at St. Margaret's, heated by Mr. Penn, under Mr. Penn's immediate inspection and instructions, without any control whatever, (Lord Ailsa being in Scotland at , time, have been so often referred to in various papers, beg to say, thoroughly knowing the matter, that Mr. Penn heated no less than twelve houses and six frames for Lord Ailss, not one of which has answered the purpose. The
heat in none of the houses, even those which had pipes in front as well as at the back walls, could by any possibility be raised to above \(58^{\circ}\), with an enormous expendi-
ture of coal Mr. Penn's own man consumed three tons of ture of coal Mr. Penn's own man consumed three tons of coals in three days. The boilers are 10 ft . long by 3 ft . diameter, and are perpetually choking up from the great a constant source of trouble and expense. In the conservatory there are eight pipes in the centre of the houses, all raised high above the floor, and yet the heat produced could not be made to exceed \(59^{\circ}\). Further, the air-drains create no circulation of air whatever; it is a dry, ungenial heat in the houses. The pipes through the whole of the uncorered, for the temporary purposes of the crops, that they should not be lost; and thus Mr. Penn's gystem is wholly demolished. The pipes are acting now as common hot-water pipes, and that in a very imperfect degree. The
expense of fuel is immense. I state all this to prevent misepresentations; and the houses may be seen by any respectable persons. A total alteration must take place, when the crops will permit it, the system being entirely defective in every view of it, as to heat, fuel, motion of air, \&c. \&c.-*
Preservation of Bees in Winter. - In one of my former communications I led you to expect a report of my success " Howinter's interment of bees. In chapter 19th of the Honey Bee," I have made some observations on the well as on the subject of immuring them during that season. A Caledonian friend, by combining entombment with acertain degree of ventilation, has fixed my attention more strongly pon the probable advantages of this mode servation. The plan which he adopted I will now detail in hise. own words.-"March 19, 1840. I bave a luried hive. Two feet below the surface of the ground has it re-
posed since the end of November. To give it a fair chance, inserted a small tube of one-fourth of an inch bore in the door-way, bringing it above ground with a curved ex-
tremity. The hive, which is a straw one, weighed in gross,
when deposited, 37 lb . Whether it is alive or not, of
course I am ignorant; but I mean to disinter it on the lst of April, if the weather suit, and will let you know the result. - "April lst. I have the satisfaction to announce the complete success of my burying experiment. I disinterred my prisoners this day, and found them alive and station, than they came abroad in thousands, and made the whole garden resound with their joyful hum, expressing, as plainly as if they had the power of speech, the delight they felt at being restored to light and liberty. The day was uncommonly fine and mild, and therefore well suited and cleaned their floor-board, and then plastered them down again, giving them a new hood, and making all right and tight about them. By the afternoon they were carrying in farina. All round the hive and upon the gravel were the droppings of freces, and the poor creatures must have been immensely relieved by the evacuation. Daring their four months' interment they had consumed only 2 lbs. of honey !" -So mach for my friend's experiment of 1839.40. I will now detail to you my own of \(1840-41\). In the second week of December, as soon as the winter seemed fairly to have commenced, I selected two families of bees, of apparently equal strength and nearly equal weight; the one I suffered to remain as usual in my bee-house, the other 1 interred in fine spring weather with which we were favoured during the second week of this month induced me on the 15th to disinter my buried hive, and to compare the consumption of its honey with that of the family, which had wintered in the bee-honse. The latter had diminished in weight I lbs., Whilst the diminution of the former was olly 4lbs. Having
cleared the exterior of the buried hive and its floor-board from their collected impurities, I opened the hive-entrance ; the inmates instantly sallied forth in great numbers and with great vigour, and spread themselves quickly over the alighting-board and front of the hive, which they nearly covered, making a most joyous hum. After basking in the circles round the in the fresh air, and flying in delighted their domicile of are two or three hours, they cleared became actirely engaged in the importation of pollen, and in the general business of the hive; continuing thus occupied to a much later period in the evening than any comparison omparison equally held goi, they exhibited much more vigilance and vigorous activity than their neighbours, and
commenced operations at a much earlier hour. Since the commenced operations at a much earlier hour. Since the
16 th the weather in this quarter has been cold, showery, 16th the weather in this quarter has been cold, showery,
and sometimes boisterous, and consequently very few bees and sometimes boisterous, and consequentiy very few bees as well as in my own, were immured upon a rising ground and in a northern aspect. I expect communications from other quarters upon the same subject ; should any of them appear worthy of it, they shall be transmitted to you.Eduard Bevan, Llanferry.
Limited Age of Varieties of Fruit-trces.-Mr. Beaton has favoured your readers in your last Number with a sensible dissertation on root-grafting, as a means of increasing some rare plants. I am aware of its beneficial results. My object now, however, is to call his attention, and that of your readers, to the subject of apple and pear trees. Mr. B.'s remarks on the constitutional peculiarities of different sorts may be very just ; but there is something more to be considered,-namely, the natural duration of any sort. 'I am quite a convert to the opinions of the late sort is to date its commencement from the period of its germination from the seed, and that by no process of
grafting can the sort be continued thowerer individuals are multiplied) much beyond the term of the natural life of the original tree. The peculiar affection of some varieties of stock for certain varieties of soil is doubtless a useful branch of study; yet it is also worth while to inquire whether attempting to prolong the existence of some sorts beyond that assigned them by natare is not the cause of numerous failures otherwise unaccountable. I will just state a fact, and should like to have as many opinions about it as you please. About 17 years ago I had a Ribston Pippin Apple tree in the style of a large bush, so much 5 inch 5 inches of the ground, and grafted on it a Manx Codlin, which is now a large and fruitful bushy tree, and never
had a speck of canker about it. What causes can be as signed for disease on the former head, and health and fruitfulness on the latter, the stock, root, soil, \&c., being Climate same?-Quereus.
Climate of North Wales.-As you seem to treat our climate with so little respect, I beg to send you the following :-In a garden one mile west of Abergele there is an American aloe, which was moved nineteen years since out of a hothouse, and carried in its old box to a corner over supposed to be 60 years old. The winter of 1838 did not quite agree with it.-J. B. HI., Abergell.
Relative Falue of the Larch and Silver Fir.-Having been interested by some recent experiments made by Mr. Salvin of Croxsale, in the county of Durham, upon the I thought it proper to visit those localities where I might ee thees in the greatest perfection-hre, pare their respective growths in a given number years and, secondy. to ascertain whether any expering is had arready been made by those who bad been mainly instrus mental in the introduction of these valuable conlerous trees. In the plartations of Dupplin, Dunkeld, Monzie,
and other localities highly worthy the attention of planters, I invariably found that the silver ar greatly exceeded in
growth the larch, as will be proved by the following mea surements, taken with accuracy. After a good deal of inquiry, I could not find that any paius had hitherto been the relative proprietors of these plantations to find out the relative strength of these species of wood. It may not e amise, therefore, to call the attention of the owners of plantations to the advantages the silver fir holds out, which are so considerable as to render them an object of importance in a uational point of riew. I therefore take the liberty to communicate a few facts and remarks to the public through your journal, not without hope that they may induce other proprietors to make inquiries and experiments, the issue of which may probably be to remove the prejudice now prevalent agan the silver fir. Trees the Earl of Kinnowl, near Perth:the Earl of Kinnowl, near Perti

These trees were all planted at the same time, and are supposed to be about 105 years old. Trees measured at Dunkeld, the seat of his Grace the Duke of Atholl:-The two celebrated larches planted 1737 , or 102 years old :1st Larch

Scotch fir

Trees measured at Monzie, the residence of A. Campbell, Esq. :-Silver fir, 2 feet from ground, 10 ft .6 ia. ; and at 4 feet from ground, 9 ft .4 in .

> This tree spreads 14 yards from the stem each way, and all of the above are nearly 100 feet high. The measure ment of the last larch at - feet from the ground, owing to its projecting roots, is greatly increased in circumference. The above measurements leave no doubt that the growth of the silver fir is more rapid than that of any coniferous tree hitherto introduced into this country. The trees above measured are supposed to be about 105 years old. All these trees were planted about the same time. I shall now proceed to give you the result of three experiments tried by Mr. Salvin, to prove the strength or tough ness of the silver fir in comparison with the larch. The first experiment was made in November 1838, and the silver fir sustained a weight of 1 stone more than the larch before it broke. The second experiment was the silver fir and arch, 15 feet 2 inches long each, and each 25 years old. Both trees were seven months under cover, and were as ear as possible of the same dimensions; the silver fir sustained 37 stones, and the larch 25 stones: difference in favour of the silver fir, 12 stones. In the third experiment, the larch and silver fir were both cut and dried in a green state, 12 feet long, 25 years old, and of the same dimensions. The silver fir sustained 64 stones 5 pounds, and the larch 45 stones 5 pounds : difference in favour of the silver fir, 19 stones. Fourth experiment, 1841 :-The strength of the timber was again tried at Croxdale, the eat or Mr. Salvin, near Dtirham, on 18th February, in the following manner: a 4 -inch-square spar of equal length was sawn out of two very old trees, from the heart years old, and seasoned in a warm dry place for more than 12 months.

The silver fir took to break it
\begin{tabular}{ll}

\hline
\end{tabular}
The following are the carious results in the process of

These experiments were made in the presence of many respectable and experienced woodraen. Thus you perceive that although the silver fir was materially heavier in July 1840 , yet in March 1841 it was \(1 \frac{1}{4}\) lighter than the larch. These curious results are subroitted to the consideration of your intelligent readers. Few can hesitate in declaring the immense advantage this country has deired from the introduction of the larch; vet when it appears to be so much the rage for gentlemen to encourage he introduction of various coniferous plants from all parts of the worid, I only claim a fair trial for cae of the mass ornamental firs ever introduced into this or any other country. Let it not be forgotten that at the end of can introduced into Great Britain. I trast the observationa of
others may be elicited by these few remarks.-H. Le Mdire Witham, Lartington, near Barnard Castle.

Roses.-Permit me to suggest to you that it would be of great use to me, and I should think also to other Rose amateurs, if you could persuade some of your correspondents who cultivate Roses; to give you a list by yame of those Roses which have been injured by the late severe winter-mentioning those that have been killed and those that have lost their last year's wood, or nearly so ; for, as most Roses require praning, they can hardly be considif I had injured if only the ends of the shoots are killed. If I had known as much at the begimning of the winter as I do now, I should not have had any of my Roses injured, for they are easily protected : but this experience is rather too dearly bought. If you would publishl lists of those Roses which have suffered from the effects of this winter, you would be the means of saving many valuable Roses from injury or death. Roses are now so generally admired and cultivated, that I doubt not information on this point would be very acceptable to a great majority of your iupon stocks of various heights) planted in a south border nor is one part of the border more sheltered than the other: nor is one part of the border more sheltered than the other:-
of these-Petit Pierre, H. C.. a standard, has had all its weaker shoots entirely killed, and the strong ones killed to within two buds. Triomphe d'Angers. H.C', the same. Miralba, H.C., the same. Rosa indica major, on its own roots, killed to the groand. Josephine Antoinette, perpetual, a standard, is almost dead; but I hope the old wood
will yet put out some buds. Perpetual Blush or Palmire will yet put out some buds. Perpetual Blush or Palmire
had not even the ends of its shoots ivjured. My Noisette had not even the ends of its shoots ivjured. My Noise had some very thick oiled paper nailed to a wooden frame, and if the paper did not quite reach the ground, 1 heaped roond it spent bark procured from the tamet's. This frame placed over the roses, with the assistance of the bark, quire any further description. I am indebted to Mr. Rivers's Rose Amateurs' Guide fot the idea.- A Rose Amateur. [We particularly invite the attention of oar cor respondents to this inquiry.]
Tloobtain a Moist Atmosphere.-D. R. mentions the ill effects of the dry sulphdreous atwosphere produced by
flues in forcing-houses. In order to counteract them, he flues in forcing-houses. In order to counteract them, he a stoat woollen shred in water, which it soon absorbs. For experiment, he took five shreds: two were \(3 \frac{1}{2}\) in. lonig by是 of an inch wide; and the other thee were \(5 \frac{1}{2}\) inches long, and \({ }^{\text {a }}\) of an incli wide. The shorter ones ab-
sorbed and dispersed one pint and a haif of water in three hours and a half, and the longer ones the same quaritity of Water in fout hours ; so that the longer the stred, the slower does the dispersion talke place. D. R. thinks this system might be useful in hotise where a miort tupensive apparatas camot be placed.

Roses.-In reply to a Sabscriber (p. 169) who wishes to know whether Wellg's White Climbing Rose is the same as Madame d'Arblay. I beg to state that it is one and the same rose, raised by me from seed many years ago, with sereral others. Upon the late Mr. James Young, of Epsom, paying a visit to these gardens, he saw sorme of my
roses in flower, and expressed a wish to have cuttings, which roses in flower, and expressed a wish to have cuttings, which
1 readily gave him, and to the best of 货y recollection marked them as follows: 1st, Wells's Large Clustered White, which Mr. Young afterwards named Madame d'Arblay; 2d, Red-leaf Purple Noisette-this, Mr. Young chose to name after Sir Walter Scott; I very miuch regretted the alteration, as it clused couffision. 3d; Redlear Pink Noisette; I amnot amare that Mr. Young altered this one. The Garland Rose is nothing like the pinge clustered white; and are sweet-scented; it is also one of my pink and buif, and are sweet-scented ; it is also one of roy mam, of Maresfield, who sent it out as "Wood's Garland," instead of "Wells"s Garland." Most of my seedlings are ir Mr. Wood's Catalogue for 1841, and are the following: The Garland (Wells's), a climbing Rose; Wells's White, a do., or Madame d'Arblay : Wells's Parple Noisette (Sir
Walter Scott) : Wells's Pink ' Wo. Wells's Red do. Wells's Walter Scott) ; Wells's Pink do. ; Wells's Red do.; Wells's Dwarf Floribunda Noiset

\section*{FOREIGN CORRESPONDENCE:}

East Indies.-By letters recsived from India dated the middle of January, we learn that Mr. Grifith had recovered from his severe indisposition, and had been stay-
ing for about a month at the Botanic Garden at Saharaning for about a month at the Botanic Garden at SaharnnFalconer, the superinteadent of the Saharunpore Garden, Was on the point of setting aut un a three months' tour of the nursery of the garden in the Himalayas.-Dr. Wight, writing from Madras, mentions his intention of spending the hot weather on the hills in the Peniasula, Where he expected to make collections of seeds and plants. had been very, ill frowist over-exposure in maling collections at Chusm, biut was them at Macao, and gradually recovering in healik-Dr. Gibson, superintendent of the Botanic Garden at Dapooree, writes from Hewra, a small nursery belonging to tit, that be is much engaged in introducing and cuititiatiog the sugar-cane, and in supplying medicinal substances, such as semma, henbane, \&cc., to the in the Sabarunpore Gardea they find been very successful in grafting-especially in crown-gratting of large treessome large espaliers of Cishmere Pears, not two years in ing wonderfully. The Apple-tree intionduced in 1830 by
D. Royle into the Mussooree Nirsety, in the Himalayas,
had also produced fruit, for the first time. The flavour Was delicious, and very much resembled that of the Ribston Pippin. Some of the Apples weighed as much Assafoetida plants, from Central Asia, and Praingos, growing in the garden in great abundance. The Hop also had been introduced. and was in a flourishing state. - Of the seeds sent to India by direction of the Hon. East India Company, Dr. Falconer, of Saharampore, writes, "The egetables are superb, and what we grow now in the of Rhubarb had come up at Massooree, and many Pines. Raspherries and Strawberries were thriving, bat none of the Gooseberries or Currants had getminattex, notwithr standing every precaution.

\section*{MISCELLANEOUS}

The Oxygenation of Water by Green Plants and An malcules.-Professor A. Morren, of Angers, and Professor Academy of Sciences at Brussels an important memoir on some properties in water hitl.erto unknown, which, is said, will lave considerable effect upont he Gay Lussac ascertained experimentally that the runling water of rivers, distilled, and aerated water, contain a bulk of air equal
to one-fourth of its own volume dissolved in it. and which consists of oxygen and azote, in the proportion of 32 of proved that this air in the water may contain from 56 to green vegetables, Conferce) and green animalcules in it.
In Julr, in the morning, 100 parts of water hold in solution 25 parts of oxygen, 48 at mid-day, and 61 at 0 oclock in the evening. The quantity of nitrogen always remains
the same. The influence of light on the respiration of plants and animalcules determines the oxygenation water contains little oxygen, and is less wholesome. In rainy days no oxygenation goes on. The oxrgenation in the afternoon, at which time water is much more salubrious than at any other hour for watering plants, since it supplies their roots with the greatest amount of oxygen.

No Crab-apples. - Two very distivct forms of the common Crab-apple are observable in our helges, and probut considered that they differed from each other only as a cultivated form differs from a truly wild one. Later botanists have overlooked them, and one of them is now botanists still retain both, and De Candolle considers them distinct species. Their difference of appearance is recogserver, and there is also a marked difference in the form of the leaf, but too inconstant to be regarded as a character. The only constant characters reside in the pre-
sence or absence of pubescence on the young branches, and on the peduncles and calyx-tube. This pubescence varies from perfect woolliness to slight pubescence in the specimens continually occur which at first sight may render it doubtful to which form they should be referrect, an at-解 form be the effect of cultivation, I know not, but both are now equally plentiful, growing indiscriminately in the same have as just claims to be mentioned in cur books as the recorded varieties of many other species.-Leighton's Flora of saropahic.i the apples, and would probably afford a good pomological mode of dividing them into two primary sets.]
notice of your en or remain unconvi find an explanation by dwelling on the word hollore ; but the subsequent expressions lonse and unfirm exclude that idea of cavernousness on which the thoughts of \(P\). \(P\). street covered with a granite arch and containing a sewer built with bricks nearly as hard as granite, does not, think, furnish a very close parallel to the hollowness of churchyard, made loose and nnfirm by digging up of graces the wooden pavements that many things concur to produce and avities. Being but a poor gardener, and maintaining no vehicle above the rank of a wheelbarrow, I am unable to
try the proposed experinent; but I would advise your try the proposed experinent; but I would advise your

courts of Somerset-house, and then over the hollowest churchyard he can find. - A
Long-leaved White Turnip-radish.-A good new variety of autumn Radish. The root is top-shape reversed, if squarrowed towards the top, and abrupt less pungent than that of the black Radish, and excellent. The leaves are nearly entire, narrow,
radishes.-Bon Jardinier.
Suceet Fennel.-At Naples, in the Roman States, and at Venice, this Fennel is so generally used that one cannot table being without it from January to Jume. In some parts of Germany a very swoetscented Fennel is used strects withoua a piece carried in his morth in the mamner of a pipe. The sweet Femnel of Italy has a small root, from whence arise some stalks like those of Celery, but than Celery, from which it differs in flavour sufficiently to make a change. A borizontal section of it forms an oral Like Celers it inches long hy two or taree or in salad or in soup, like Cabbage; but it is more generally used at dessert with fruit, where placed in a glass its fine and thus eatene withoments amy seasoning. As its power of
be cultivated in France; if it can be grown, it must be
used during the summer, in the same way as Celery during winter. If its qualities are not altered by cultivation in
France, it will be a valuable acquisition; but should its flavour be too strong when grown in the north, it will still be useful in the warmer parts. At Rome in in August,
sown at all times of the year; when put in which is most frequently done, the joung plants are pricked out in October, and fit to eat in December and January.
It prefers a good soil and frequent watering, although it will grow in sandy soil, where, however, it is amaller. Bon Jardinier.
Gigantic Moss.- The Dawsonia polvtrichoides has lately on the road from Eurn Bay to the Hampshire Hills, in densely-shaded humid forest, growing on the ground (not on deeayed wood), and of a large size, of young Pine-trees, or
that the plants looked like a bed of some species of Epacris! The leaves of some specimens were \(1 \frac{1}{4}\) inch long.
Sorving of Seeds.-Heat, moisture, and atmospheric air are necessary agents for the germination of seeds: but light, so essential for future growth, is injurious in the first stage. If seattered quite on the surface, the seeds of many species suffer from the ricissitudes of temperature and moisture. On the contrary, if buried too deep, the supply of nourishment contained in the substance of ing part reaches the light, and develops the leaves, on which the production of roots depends after the pabulum of aquatic the seeds has been appropriated. of aquatic plants will vegetate in water, provided the been exhausted. But. generally speaking, the seeds of other plants germinate best when the soil is only sufficiently moist, without that excess or quantity of water which would entirely displace the free air from contact with the seed. It may be stated as a general rule, that germination is best promoted by sowing in soil containing only a moderate degree of moisture, and covering the seeds no sudden changes of temperature, and to retain them in a somewhat uniform condition with regard to moisture-T. N .

Methorl of Destroying Rats. Mice, and other noxious Animals in their lurking-pluces.-Monsieur Thénard, in 1832, submitted to the Academy of Sciences a plan for destroying noxious animals in their hiding-places. The which is peculiarly destructive to animal life. Animals when allowed to breathe the pure gas fall down as if struck when allowed to breathe the pure gas fall down as if struck
with a bullet. Even when considerably diluted with atwith a bullet. Even when considerably dituted with at-
mospheric air, its effects are deadly. A horse dies in less than a minute in air containing \(1-250\) of this gas. A dog of moderate size is speedily killed in air containing only a
thousandth part of it, and a small bird expires in a few seconds in air possessing 1-1.500 of sulphuretted hydrogen. Monsieur Thenard's first trial «as in an apartment infested hy rats, which showed themselres occasionally during the day, and at night were actively engaged in plunderiog articles kept in the room. There were is rat-holes,
and M. Thenard adapted to cach of them in succession retorts capable of containing half-a-pint, by introducing the beak, and filling up the interval round its neek with plaster. A misture of iron filings, sulphur, and water was placed in the retort, and diluted sulphuric acia was poured upon it : the gas was formed with great rapiuity ing. His next experiment was in an old abbey, when he was equally successful, and having opened part of the wall, he found numbers of dead rats. He recommends the application of this method to the destruction of moles, fozes, and all animals which cannot be extirpated by the asual means. The popular directions given by Thenaru for the production of this gas are as follows:-Mix 4 parts of iron-filings, or very small nails, or scrapings of iron, with 3 parts of flower of sulphur, and moisten it with 4 Add gradually water, stirring it with a troduce it into the retort. pars upon the mixture common oil of vitriol, diluted with \(\overline{3}\) times its quantity of water, and continue to add it gradually until the effervescence ceases. Should any of the gas escape into the apartment and occasion inconvenience, it may immediately be moved by dropping a little of the oil of vitriol on some beaching powder (chloride of hose). (he up immediately, to prevent the disagreeable effects of the putrefaction of the carcases of the animal which have been thus destroyed. This gas might be moost advantageously employed for the destruction of cock climates. The , watrials for making it are cheap an easily obtained, and the process very simple. A retort is merely a glass bottle, shaped something une a pear, with a long neck, which is well adapted for introducing the ga into small holes or apertures ; but for funigating a room glass vessel would do quite as well, shutting up the doors and windows, or battening dows the hatches

Galvanic Protector.-A letter upon this sabject, frow a gentleman said to be the original inventor, has ap peared in the \(B\) rull Adverticer, from which the flow ill perfeetly secure our Dahlias, or other more delleate plants, from the attacks of those voracious pests of the flowergarden, the moilusea, must be highly awceptabie. has had to coatend with a wore frmid. He aray this class than myself (particularly the genera felix and Limax of Linnzems), and I ama happy to informe you that the gal with, forms an effectual berrior agiont these formidable
enemies. I have had them in use in my own garden in trelve months, and can assure you that, although during creatures severely, not a plant has been injured that has creatures sererely, not a plant has been injured that he protection of the galvanic circle. The amnered drawing and description will exhibit the apparatus and explain its operation. The galvanic plant-protector con sists of a taper or conical ring of zinc, of the following dimensions, \((a b\) i, the bottom ( \(n\) d) is inches, and the height accla inches. The top edge is fianaced off about a quarter of an inch, and cut into numerous rim- 725 or randyked points, as repre diately under this pointed flang年ther ring, but of copp ( \(F(\) ), is neatly fitted, being exactly of the same taper as broad \((b F)\), supported in its place by dots of sorter in its perence. these solder in three or four places of its circu. Such is the apparatus: its operation is thus:-The bottom of the zinc ring ( \(c\) d) being pressed into the soil until the lower edge of the copper ing is about \(1+\) meh above the rawl up the zinc with impunity, but, galvanid act with the copper, will receive peatedly watched them, and have observed they were extremely cautious in approaching a second time. I prefer the vandyked edge to a plain one, for this reason-if the larger of this tribe attempt to stretch across and above the copper belt, avoiding contact they would be incepable holang by the poimss 10 th olow with the ring the tector, care must be taken to inclose wixhin the ring the find a road to the plant by the rod. The apparatus acts in thens its appearance in use is like a flower-pot, and its cheapness, atility, and durability must ensure its general adoption. I believe the same principle may be applied to walls for the protection of fruit trees, straps of zinc and copper being judiciously placed along the wall, and arout, June 26 th, 1839.

Duncan on the Cucumber is a very complete treatise upon the cultivation of that plant, and seems to contain informatioa upon every point conmected with it, from the orts which are most worth growing. The directions are
 ful guide to the young gardener. The following extracts convey a good idea of the author's manner of treating his mbject:-

The idminuton of light, the primary source and infpencing priaciple of vepetable development, is of the utmost importance without regarding this as a fundamental law in the process o
culture. calture. In winter it is pre-eminentiy so, because the directes cess of assimilatiou in the regetable organism takes place ex
actly in proportion to the quantity it receives. Consequently important that the structures where Cucumbers are grown b situated in the aspect likely to meet the sun's rays, especially
the tirst rays of norning ; plants thrive under the intluence or hese far more than in any other part of the day, and more than wour be admitted, were it not known. To the Cucumber thi alement to the health and life of plants, causing the elaboration arbonic scid, ammonia, fec., from the atmosphere ; their secre ction of the roots in the ground, and the decomposition of al apon the presence of lisht. And it may be supposed that this principle is influeucing, and has been intluencing, from the re-
motest periods of time, everything in being in the present world the compusition of the atmusthere, and the contiuual decompor-
sition of water, the perpetual change of bodies of all kinds into ther forms, the uncencing re entirely dependent upon the mighty influence of light. N ess that an his minnceavres in the dirit months of winter art unavailing and unsuccessfou, tuless he places his plants, their
roots, in fact their whole system, under the immediate infiuence of the direct rays of light; and them he observes, with unbounded pleasure, his well-contrived efrorts surceeed, his desire
"Allen's Victory of Sufulk, - A beautiful fruit when grown in agood heat, and taken in ant early age. It is uncommonly not force well. It seldum grows longer than twenty or twenty four inches, though it is said to exceed this by the person whi
raised it: the maximum artained here, or anywhere that I hav een, does not exceed the length I have mentioned. sood 24 Nos. 1 ,, , and , either in colour or in bearing, or for
general cultore. The spine is black and thickly set; and if it Were not for its uncertainty,

Allen's Treatise on the Cuewnber contains the anthor's experience in growing Cacumbers, Melons, Sem-kale, Broccoli, and Potatoes, together with a criticism of Smith Ireatise on the Cucumber." Mr. Allen is wel nown as a good Cucumber-grower; but if in writing thi not say that he has done so to the extent that might have been expected. It is a pity he did not employ some person who understands English to prepare his MSS. for the press. There is a braggadocio tone too in it which is by o means calculated to raise the author in the eyes of hi readers. The directions which are given for cullivation are so brief and obscure as to be worthless to persons who are not already well acquainted with Cucumber manageanent; those, however, who are so will probably find a few hints that may be useful to them. We cannot dismiss this work without asking the author of what use he considers the following directions for destroying woodlice:"The most effectual manner of destroying them is by pouring boiling water in them from a small watering-po without its rase." This is like nothing so much as directing children to catch sparrows by putting salt on thei ails.
Loudon's Suburban Horticulturist. Parts II. and III Tag following are the contents of these parts:-The im provement of soils is continued. This is succeeded by \(\mathrm{Pen}^{\mathrm{p}} \mathrm{m}\). slugs, scos on insects and their chapstifentiou, wmphibions mimals, hirds and animals. The fifth chapter treats of the diseases of plants, and finally, the 3 d part is terminated by a disfertation upon the implements of gardening hoes, rakes, pitkaxes, dibbers, spades, and other toole
girdener will not know these tools when he sees them, that he fills his pages with woodcuts of such a puerile
Widnalls Select Catalogue of DaMias, geo., is a pamphlet of 24 pages, containing the prices of the fancy sery, Grantchester, near Cambridge

CALENDAR OF OPERATIONS for the ensuing Week. Inth propagating plants by cuttings, it will be observed, that, as much as opsisibe, in planting those of hards shrees and shrubs ont
of doors this cannot te effected so well, as they mult
 of Currants, (iouneberries, and others, that the most healthy
roots are those emitted just below the surface. Although it the practice em striking strong cuttiuns uf L.omons, Oranges, and of the puts: the only object sought is the never-failing supply of morsture given out hy the pyrous pot; and the siver sand tise end. To awoug the bad effects of deep planting, for strong cut-
tings shallow pants should be used; or else insert a smaller pot made water-tight, within the one intended for them, and make
their ends touch the sides of this small pot, which, if filled with Weter, nulles. Cuttings, with very few exeeptions, should be
cilosen when their tistue is neither so soft as to dam of or buise readily, nor so ripened as to have so their vegetating power greatly decreased. Those which require a bottom-heat to root them,
should never be placed immediately in it, but kept cool until they have formed slight callosities at their lower ends, after which their rital energies may be excited by heat,
of which is the protrusion of roots. The object of covering by glasses is to maintain an equitable moisture, and to prevent ex-
cessive perspiration and exhaustion by the leaves, before they I. - KITCHEN-GARDEN AND ORCHARD.

Piverr.-The plants will now have established themselves in the new soil; air may, therefore, be more freely admitted, and
shading dispensed with, except during the middle of clear days; but do not allow the shade to remain on after three oclock, and syringe them onerhead, atter it is taken off, with tepid water.
The plants will require a little water at the roots, which if given with the syringe, will prevent a too liberal supply. Examine
daily the heating of the beds, that precautions may be taken in daily the heating of the beds, that precautions may be taken in
time, if necessary, to prevent injury to the roots or premature time, if necessary, to prevent injury to the
fruiting, by a disproportionate bottom.heat.
TiNERY.-The late Yines will be pushing their buds; remove themselves as gradually as possible. It is now a good time to make new Vime.borders; and when this has to be done, pay pro-
per attention to effectual draining, and making the border near or upon the surface, instead of excavating the the border near
depth; this will be found effectual in preventing depth; this will be found effectual in preventing that prevailing
disease called "shanking ". Continue to tie in the branches neatly, to stop laterals, to thin the fruit, and frequently sprinkle PRACE-Housu-The fruit in the early house will be swelling Prick-HousK.-The fruit in the early house will be swelling
fast ; keep, therefore, a moist atmosphere, that a premature dispoast, keep, therefore, a moist atmosphere, hat a premature dispo
sition to ripen may not be induced before they are fully swelled. Pradicate insects as the heaith or the leaves, and take means to later houses will require thinning, and the well-disposed fruits
neatly tied in. Tse the syringe freely on the mornings of fine neatiy tied in. Lse the syringe reely on the mornings of ine
days, anu neglect no opportunity of giving air. atting opportunity, and syringe the trees. ©ery fine morning frumigate with tobacco as soon as black fly is perceived.

\section*{Notices to Correspondents.}

We must again remind correspondents who send us fowers for examination, of the precautions to be taken in packing them. cannot undertake to name plants that are withered, especially as W. C. had better water his lawn with lime-water, which is
described in p. 153. opportunity. Many thanks for the recommendation, which, with several others, is under consideration.
J. B. H. We have no published. accounts of the action of
nitrate of soda in gardens. Some are in progress, and as soon as nitrate of soda in gardens. Some are in progress, and as soon as readers. It requires to be administered in very small doses, or it will kill instead of stimulating plants.
that Liebig's observations apply to cases where Potatoes, which. Gluten does contain nitrogen, We Wish Mr. Carroll would tell us whether the assertion that to feed an animal exclusively on
Potatoes is a sort of tarvation, is true in the case of Irish peasants.
H.K.S. writes thus :- " I do not perceive in this week's Chromicle that you have answered a question that was proposed by one
of your correspondents last week. The question is this in sub. the same sort, planted in the same situation, and in an equally
vigorous state, one should invariably come into leaf ten days or a fortaight hefore the other? The fact is strikingly exemplitied in
an avenue of horse-chestnuts, near my house, which I have early tree precedes all the others by about ten days. It is now ready to expand "- We did not ahsw er this question because we
hoped some of our correspondents would have done it for us The reason is, no doubt, that where trees are raised from seed, a possess different habits, just as in the case of an apple-tree, whose
seed when sown will produce apples of different colours and quality. The circumstances alluded to by our correspondents are of soil, \&c. Seedling varieties do not merely differ incal effects and colour of their parts, but also in their periods of leafing and flowering, as is prosed by the May-duke Cherry, which ripens in A Gardener. - The Poonah Grape is not well known in this
country. When introduced from Bombay by Sir Joseph Banks, in 1817, it was described as haring large, fleshy, somewhat oval, dark
red berries, sweet but not very juicy. In the garden of the Horticulturai Society, the sort received under the above name proved the same as the West's St. Peter's, or Raisin des Carmes. The Cannon-hall Muscat resembles the White Muscat; its berries are larger than those of the latter, but not so fleshy or high. fiavoured.
M. G.-Mr. Tover answers to the inquiry made p. 169 , that he Cockroaches, but that it destroys them. This is, we believe, the substance of the answer we have received, but we have been obliged to pics it out of some matter the tone of which is not
suited either to us or our readers. Discipulus's insects were too much crushed to determine readily what they are, but No. 1 is certaini \(\%\) not the red spider,
and No. 2 , although mutilated, appears to be the apple-weevil. If insects are enclosed in a pill-box cut down, they travel perfectly safe by the post, and a penny stamp wull carry two or three boxes.
Juvenis. Any part of the Genera and Species of Orchidaceous Plants can be had through any respectable book seller. nary winters. It requires a light sandy soil, and a warm situation. H. H.-The plants mentiuned in \(p\). 183 are not on saie
in this comery that we are aware of, hut probably they will prorkaps be procured in Paris. A. L. - The net advertised. at 1 kd. per yard is too open for plo-
tection asainst frost; but almost any lind of woollen-net will
answer the parpose. The best material is thin canvass, which may
probahty be obtained from the manufacturers st td. a yard.
Dipping it in a tan-pit would no doubt ascist in renderin
 from you before. In the Notes fror Small Gardens, p. . 68 , wil
found the manner of making gravel.walks. If worms make their
avpearance, the best way of destroying them is to water the appearance, the best way of destroying
walks with lime water.

ī'. Curter.- Macintosh's Practical Gardener, and Paxton's} Pocket Botanical Dictionary.
Mr. Applety's Brassia is B. Lanceana. Monomeria nitida is a species of Dendrobium, but we do not recognise the species.
A. B., Stratford.-Piper nigrum grows luxuriantly in many stoves, het is thy in ripening its fruit. This is probably owing to
the uniform moisture which is kept in these places. It should be the uniform moisture which is kept in these places. It should be
planted in a large tub or box well drained. All the strong fowerbearing shoots should be supported with strong stakes, and the
small useless ones cut away. When not growing much, keep it rather dras, and give it a slight check, and be careful not to yive
it too much water after flowering. Bottom-heat, particularly An Amateur.-The Bellasdonna Lily shonld be planted in a dry
withation ant
sin rather strong or stiff not rich soil, mixed with a situation, and in rather strong or stiff, not rich soril, mixed with a
little coasse sand; it should be kept almost dry after flowering little coarse sand; it should be kept almost dry ater nowerig
until the leares begin to grow, when they should be encouraged encourage the production of fine foliage is the insuring of good
bloom. Many persons cut of the leaves before they are entirely encourage tay provons cut off the leaves betore they are entirety
bloom. Manty
ethauster - the worst practice that could be devised. The Bella exhausted the worst practice that could be devised. The Beila-
donna Lily is said to grow most magnificently by the side of
ditches in Madeira, where it is dried up at the season of rest, and deluzed while in leat
F. \(\subset\). - II tereing the Fig, a prenature dropping of its fruit may
result from various causes; such as want of food or water, or a superabundance of the latter where the drainage is imperfect; and to these may be arded baul-matured woud, or the sort may
be one not adapted for forcing, long tapering fruits are more apt to fall oft than short roundish-shaped ones. Sir Charles M. L.
Monck Hort. Trans., F. 5 ) states, that " Fig .trees which put forth crops of Miss and cast them most probably do so from defect of
setting." This may be the case. but sutill the question reverts the cause of their non fertilization, since the culctual when the plants are grown under favourable circumstances. It is true
insects are employed with a view to aid in this particular, in some parts of the Levant, the process being called caprification.
This, however, is considered supertluous by the French authors This, however, is considered superlluous by the French authors
and cultivaturs; and they ascribe the premature dropping to a alld cultivaturs; and they ascribe the premature dropping to
want of moisture at the root. It mav be proper to observe that
if the young fruit is too far advanced before the leaves drop in if the young fruit is too far advanced before the leaves drop in
autumn it will never attain perfection; for only such fruit-buds as are but iittle developed can wait uninjured for the retarn of
foliage. If therefore such fruit-buds as are likely to be too for-
 developeed, but ins so slight a degree as will enable them to main.
dain their powers of regetation till they receive the co.operation of the vouny foliage. In some cases it is proper to stop the
of
stoots by pinching their terminal buds between the finger and slioots by pinching their terminal buds between the finger and
thumb, and this should be done before the shoots complete their first growth of the season
Discipulus. - If you cut the roots of your apple-trees, 14 or 15
years old, but headed down and re-grafted 12 months ago, you will do away with those parts on which the re-formation of the head depends. Better use the knife to the opposite extremity,
and cut down the shoots to the first bud that has, perchance, and cut down the shoots
escaped the ening liquid. Of course you have learred caution
from your experience with regard to the application of builing from your experience with regard to the appication of builing
water: the dead parts of trees, such as old thick bark, will not be injured; but wherever water at a boiling heat comes in contact
with actual vegetation, the latter must give way
Your ouly bottom-heat.
J. W., Anglesey. If you will refer to Nos. 6, Z, and 12 of the
Chronicle, you will see that this is not the best time for shaking off the soil and pruning the roots of Pelargoniums. We now ex
pect bright sunshine, and if the roots are injured the stems and
 nourishment, and, consequently. your plants will look very un-
healthy for a considerable time. You had better repot your planti in larger pots, getting away as much of the old soil as possible at the same time thosening he beason (about July or Augast) prune the roots and shake off the soil in the manner described in the above Nos. Pigeon's-dung shoud be ased mangreat cater
either for mixing with the soil or for mating manure-water ; had better be applied in the latter form, and in small quantities. for the names of some first-rate Tulips. A list has now reached

NEWS OF THE WEEK.
Oox foreign intelligence has assumed a more satisfac tory and pacifc character, and encourages the hope that the difficulties which have arisen in the political world may yet be amicably arranged. The arrival of the inaugural speech of Gen. Harrison, the new President of the United States, has greatly contributed to allay the excitenent which has recently prevailed on the subject of our differences with that country. At the present crisis such document is naturally of great importance, but its inter sst is enhanced by the tone of moderation which it exhibits. It touches but lightly on the foreign relations of the republic, but insists on the mutual interests of Europe and America in the preservation of peace, and expresses conviction that there is no point at issue between the United States and this country which may not be amicably adjusted by megotiation. It appears, also, that during recent debate in the Senate on the Boundary question, it a as stated that the two Governments had agreed on the essential points of a Convention on principles recognised by both, and that Great Britain had shown throughout he arrangement a sincere and anxious desire for peace. Recent advices from the north-western frontier state that Mr. M'Leod was still in prison; but it was believed in New York that he would be given up on the demand of the English Minister. -The aspect of European affairs has also brightened : it appears that the Allied Powers have proposed a modification of the treaty for the settlement of the Eastern question to which France might be a party and that France has declared her intention to abandon her isolated position, and once more enter into the European compact, as soon as the influence of the Allied Powers has induced the Porte to guarantee to the Pacha the hereditary possession of Egypt in a direct line. In anticipation of this event, the Austrian Government has protested against the recent firman of the Sultan; and is considered certain that, by the co-operation of the other poweri, the concension of the point at issee will be obtained.-In France, public attention is again absorbed by the Fortification question, and the discussions on the bill in the Chamber of Peers are expected to continue for another fortnight before the final decision of the House be known : it is, however, believed that the mensure will pass in an amended form.-From Spain we learn that the Cortes met on the 19th, without any speech from the throne, and without any effort to disturb the goverament, as had been anticipated: it appears, however, hat the question of changing the Regency had even been discussed in the Cabinet, and Madrid was filled with troops but happily public tranquillity was not disturbed.-The Portaguese Government have taken measures to induce Don Mignel to renounce his title of King of Portugal, and all claim to the sovereignty of that country: an Ambassador has been sent to Rome to effect this object, and ar range the long-pending differences with the Holy See; and it is expected that both objects will be secomplished.

At home, the proceedings in Parliament have chiefly related to the Poor-law Amendment Bill, the discusoions on which have extended to great length. The House of Commoss has affirmed a resolution on the inexpediency of confining in the hulks convicts under sentence of transpor tation, and has negatived a motion for the substitution of a property-tax for such taxes of Excise and Customs as press most heavily on the middle and working classes.

\section*{Heome Nefos.}

The Covat.-Her Majesty, Prince Albert, and the Princess Royal continue well, and still remain at Buck ingham Palace. Her Majesty and Prince Albert honoured the Italian Opera with their presence on Saturday even ing, and the German Opera, at Drury-lane, on Wednesday On Monday evening Her Majesty had an evening party at the Palace. H. R. H. Prince Albert paid a visit to Woolwich on Tuesday, to inspect the vessels fitting out for the Niger expedition. Her Majesty held the first Levee for the season on Wednesday, which was very numerously attended; and several addresses of congratulation wer presented on the birth of the Princess Royal.
Parliamentary.-Lord Altamont, son of the Marquis conntr Mayo the next election.-Lard Courtenay, gon of the Earl of Devon, has issued an address, accepting the invitation to stand for South Devon, in the room of Mr. Parker, who has accepted the Chiltern Hundreds.It is reported that in the event of a dissolution of Paria ment Mr. W. Knight, son of Mr. Knight, late of Wolverley-hall, will offer himself as candidate for the Robinson, who formerly sat for Worcester, will again become a candidate for the representation of that cig. A petition has been presented to the House of Commons azainst the return of Mr. A. Armstrong, the hiberal can didate at the late election of King's County, by his oppo neat, Mr. T. Bernard, who contested the counts on the Conservative interest. The Sudbury Election Committe have deeided that Mr. Tomhine was duly elected, and tha neither the petition nor the opposition to it was frivolous or veratious
Command of the Chinese Expedition.-A Ministeria paper itates that Sir W. Rarker will succeed Admirsl

Elliot in command of the Chrinese Expedition, and that
the report of Sir C. Adam's appointment is without foun dation.

> Law Commission.-It is stated that Mr. Nicholls, one of the Poor Lam Commissioners, has resigned his ap. pointment.
The Nayy, Sixteeti wai-stediners are ordered to be built, six of the first class and ten of the second, all to be armed with guns of ten inch calibre. Several of these are converted without delay, so as to be ready by the time the ngines are prepared.
Parliamentary Grants.-From returns lately laid on the table of the House of Commons, it appears that the
amounts issued for the service of the Army, Nary, and Orduance, respectively, from April 1838 to Mareh 1840 (both inclusive), have been-for the Armys 13,598,3971. ; for the Navy, \(10,1.50,6326\); and for the Ortnance, \(3,281,5314\). ; making attogether, \(27,030,5,5,33\). That the amounts for the service of the year ending the lst of
 China, 173,142 ; and Miscellaneous, \(2,760,010 \%\). The estimated amount of demands outstanding, or charges inOrdnance, 610, 401 . ; Canada, 154, 49 Il .; China, 23,422l.; Ordnance, 610,5107 ; Canada, \(151,19 \pi\). ; China, \(23,4120.9\)
 1838, 1939, and 1440, \(1,454,966 \%\). was used for Arniy Ordnance services. There remaius uaissued out of the grant of 19 an the sum of 104.4 al
Goved for by Mr. Paterson it Coinage. - From a return of the moneys coined at the lint from the total value nclusive, was as followes, viz, gold poinage to 18*0, both (in 1540, however, there was no coinage of gold whatever; silver coinage, \(847,981 l\). ; and copper coinage, 14,3361 . naking altogether the sum of \(5,475,079\).
that the total number of convicts recivol that the total number of convicts received on board the
hulks in England, during the year 1810, amounted to 3.73 , of whom 1209 were under twenty years of age. The expense of the convict hulk estabiishment in Englani amounted from Jan. 1 to June 30, 1810, to 29,3201 : and from July 1 to Dec. 81, 1840, to 30,233l.; making the expense for the whole year \(59,5.537\). The expense of the convict hulk establishment at Bermuda, from the 1 st
Legncy Duties.- It appears from a return moved for loy Mr. Hume, that the amount of capital on which the everal rates of legaey duty were paid in Great Britain in 1840 was no less than \(40,441,678 \%\). The amount of capital on which the same duties were paid in Ireland for the same period was \(2,084,2336\); the amount of duty on
legacies received being \(26,394 l\), and that on probates and administrations 40,5816 . The total amount of revenue received in the United Kingdom during the rear 1810 for stamp duty on legacies, probates, administrations, and testamentary inventories, seco, was 2,192,0101. The
total daty received from the year 1797 to the 5th Jan. 1841, in the United Kingdom, amounted on legacies \(33,400,1046\); and on probates. administrations, and testamentary inventories, to \(26,707,980\) !

\section*{\(\sqrt{ }\) Forrign.}

Fraver. - The Fortifications. - Speculation continues ife in Paris as to the result of the Fortification Bill, the debates on which commenced in the Chamber of Peers on Tuesday. In the Ministerialcircles the certainty of a majority For the measure as passed by the Deputies was still confi dently affirmed; but in the salons the success of the ameud It was alleged that the spirit of economy was the ne vading feeling of the Peers, and that the great majorit of the old Generals, forming a considerable portion of that assembly, were strongly opposed in a strategetical point of view to the embastioned, casemated ramparts. The veteran officers shared fully in the opinions of Marshal Soult, whose military judgment is opposed to the complete line of detached forts and enceinte continuée, and whose notion is that an entrenched eamp at St. Denis, connected by some works with the strong position of Charenton, suffice or the efficient defence of the capital, the real security of which aganst invasion was an able systern of tactics in the positions as far removed as possible from Paris. No terially amended by the Peers, if the certainty could be equired that the Deputies would sanction the changes But the Ministerialists insist that if an amended bill was sent down to the Deputies they would throw it out altoe Broglie debate on Tuesday was opened by the Duk aerally approved by the toat the princtpie had been ge been referred, and that the differences amongst its members only arose upon the mode of carrying that great measure into execation. He was, he said, a partisan of the phan proposed by the Guvernment, because he considered it preferable for the defence of the capital. The Duke then examined the question in a political point of riew, and
thought that universal peace was a dream, and that France thought that universal peace was a dream, and that France neighbours. ought to neglect no means of wroviding or her safety. He next proceeded to show the advantage of the continued wall reinforced by bastions and exterior worls, over the system developed by M. Mounier. in the aame of the majority of the committee, and concluded by oting in favour of the bill
Bili for Swpplementary Crotiss.-The project of he mataive to the supplementary and extraondinary creditm re
quired for 1810, was adopted on Friday in the Chamber of Deputies, by a large majority-176 against 58 . One ittm as a "literary man in distress," but who appears in reality to hare been an emissary, sent to the French colonies, to to hare been an emissary, sent to the Frencla colonies, to
procure the return of M . Granier de Cassagnac, a delegate procure the return of Mit or of slavery, was rejected by the house. In the course of the debate, M. L'Herbette haring asked M. Guizot, the Minister of Foreign Affairs, if it was
the intention of the Government, at a moment when there the intention of the Government, at a moment when there ted position and join the Pour Powers in arranging the Eastern question, the Minister declined entering into any explanations on that poiat.

The Armamenis.-The report of the committee on the credits of 1841 is by no means flattering to the state of the French finances. It seems that the deficit in 1842 will be 1,153,974,896f., for which no effective resources Thiers's armaments, which stand thas : - Effective, 493,671; Cavalry, 112,irt horses; Armed vessels, 22 200) batteries, and 1200 field-pieces. The committee further recommends an increase of 5 ships of war in the naval force, and gives permission to build steamers.
Defatcation of a Notary in Paris.-M. Leon, the notary lately arrested on the charge of having fraudulently disposed of various sums of money deposited in his hands, was a member of the Council General of the Seine. The news of his arrest seems to lave created a lively sensation in Paris. He is believed to be a defaulter to the amount of several million francs. One lady is mentioned as having confided to him the sum of \(1,200,000 \mathrm{f}\). The papers stated that warrants have been issued to arrest two other notaries for a similar offence, who had succeeded in effecting their cape ; but this has since been contradicter
The Eastern Question.-A French Ministerial paper states thas M . de \(\mathrm{l}^{\prime}\) 'Epinay, connected with the department of Foreign Affairs, had arrived in London with despatches for Baron de Bourqueney, the French Charge d'Affaires; and that those despatches contain the motives of M. Guizut's refusal to affix, at present, his signature to Eastern other Powers to the protocol relative to the a verbal communication to His mission is to declare that effect to Lord Palmerston until the influence and councils of the Powers isola natures are affixed to the London treaty have induced the Porte to guarantee to Mehemet Ali the heirship of Egypt in a direct line. On the other hand, Austria, on her part, had spontaneously anticipated this desire. Her representative at Constantinople had received instructions to protest officially against the last hatti-sherriff, and there was no doubt that the British Government would, on its side, make similar representations. There is consequently, this paper adds, every reason to think that the obstacles which still cause France to remain isolated will be shortly removed.
French Taxation. -The Minister of Finance has sent a circular to all prefeets of the departments, prescribing an inmediate census, in all the communes of the kingdom, of the buildings, with the number of their doors and winpatent dutiem, with the amount of their rents. The Mipatent duties, with the amount of their rents. The Mi-
nister urges the making of these returns on the ground that the receipts are not in propertion to the expenses of the State, and that it is necessary to take measures for en-
forcing the full payment of all the taxes and impositions forcing the full payment of all
warranted by the existing laws.
Spans.- The Madrid Journals continue to be occupied almost exclusively with the Regency question. Nothing had been yet decided on the subject, but it is stated that the majority of the Deputies already arrived in the capital were of opinion that the supreme authority should be divided among three Regents. A Cabinet Council had been held, at which this question was discussed with much spirit, some being of opinion that there should be only one regent, and others advocating the plan of a triple regency as far preferable. The Minister of the Interior warmly defended the first system, which was energetically opposed by the Minister of Justice, who enumerated all the advantacses presented by the triple combination. The debate at last seems to have assumed so angry a tone, that the Duke thority termin to put an end to a discussion which might have bods lated that on the day of the opening of the Cortes the army concentrated in and about the capital would amount to 60,010 infantry, 6,100 cavalry, and 60 pieces of artil lery. A ereat many conjectures were afloat with regard to the real object of this assemblage of troops. Reports were in circulation of a demonstration on the part of the troops to proclaim the Duke sole regent.-By accounts from the Basque provinces it appears that the partisans of the fucros are obtaining large majorities in the elections. The patriotic suctieties of Catalonia had not dissolved hemselves, but merely changed their name into that of reading-roonis. The Government, it is stated, was aware of this, and had ordered the division of General Zavalia, which was quartered in the Basque provinces, to march to Catalunia. - The first race which has taken place in the Spanish capital was on the 15 th inst. The Duke d Osuma Scott, of the English Enubassy, had horses entered. The English horses were beaten. The Duke d'Osuna won the prize. There was all the fashion of Madrid present, but the presecting newn, we learn by a telegraphic deapatch
inst. The Dulke de Victoria was not present, and there was no Royal speech. Madrid was perieetly tranquil. Fortigil. - The Chamber of Deputies have for some time been occupied in discussing a project of the Com-
mittee on Wines, which seems to have excited considermble interest. The project, it is stated, is nothing leas than the formation of another privileged Douro wine compang nder the name of a bank which ॠas to regulate the trade, and have certain privileges, particularly as to the purchaso outhern districts were opposed to it; while those of the north were generally in favour of it. The government , It was, however, expected that Commisto would be rejected. The report of the War spect to the continuance of the national battalions liad mend pablished. The majority of the committee recoma Continuance of those battalions as desired by until the whole public force is definitely organised.- Priate letters announce the arrival at Rome of the Portuguese envog, with missions--first, to induce Don Miguel
to renounce the titie of King of Portugal, and with it all claim to the sovereignty of that country, and next to a concile the differences which have arisen between the Crown of Portugal and the Holy See. It appears that Don Miguel being well inclined to resign both title and inheritance on certain conditions; a disposition towards which the Councils of Austria and Rome have greatly contributed. The second difficulty, it was thought, would , as the fo!y see required that should be acknowledzed br the present Government: should hope of resolved to send a Legate to Purtugal, in the Italy.-We learn by private letters published in the French papers that ono Asho We ednesday Queen Christina n, and and her Majesty declared, that wishing to unburden her troubled conscience, she came to throw herself at his feet to abjure her many errors, and solicit his pardon for the evils she had caused to the church of Spain. The Pope, it is said, could not suppress his tears; he called into his presence two cardinals and six dignitaries of the Vatican, receive this public confession of the Queen, and having pressed his desire that the declaration she bad made pressed his desire that the declaration she had made
should be written and signed with the Queen's own hand. should be written and signed with the Queen's own hand. This was done, and the document deposited in the archives. Queen Christina must have a powerful influence over her illustrious danghters.
Germani.-The papers receired this week are destitute of any news of importance. The public proceedings of the Prussian Provincial Estates have been as yet very theatrical scandal had taken place at Berlin, which had drawn down a severe animadversion from the King, and the threat of exclusion from Court of all who were recog. niser masks as participators. A severe order of the day had been likewise addressed to the army, it having been asserted that a number of young oficers were
seen in the crowd. This had since been formally contradicted, the fact, on inquiry, not having been proved against a single officer.-The leries effected this year in Austria are stated to amount to \(94,0(1)\) men-viz., 44,000 in Germany, 12,000 in Italy, and 38,000 for Hungary.the tiverich anair fort energetically taken up by the authurities at Frank ployed in demolishing their work. A guard had since been stationed upon the bridge at Mayence to prevent all illicit passage without the knowledge of the commandant during the night. The value of the stones thrown into the river has been estimated at nearly 40100 .
Switzertand. - The extraordinary session of the Helvetic Diet was opened at Berne on the 15th inst., by the President, who for the first time, it is stated, in the last 30 years, delivered the inaugural speech in French. After specifying the object of their convocation, which was to decide on the objections raised by several cantons against the suppression of the convents of Argau, \({ }^{\text {ma }}\) which these objections were grounded and in concluding, directed the attention of the assembly to the importance directed the atcention of the assembly to the inpor the Diet was occupied by a succession of speeches from the Catholic states. The deputies of Uri denoanced the gorernment of Argovia as perjured. The deputies of Schwytz, Unterwalden, Zug, and Friburg, followed Neufchatel was the only Protestant deputy wio spore but this deputy spohe also ayainst Argovia fur impugning the fact. On the fullowing day, Argovia repied, and political purposes. The result convents were shen a majority sufficient for a decisive rote either way cannot be procured.

Eirpt.-We hare no recent advices 'from Alexandria of any importance. The last intelligence states that Ibrahim Pacha still remained at Gaza on the 9th uit., contined to his bed suffering from juundice and dropsy. He had become so much worse that he had been obliged to apply to the commander of the Eaglish ship Benbou, at anchor before Jaffa, for a surgeon, who had been seut to him. The Tuscan steam-boat, which had been por-

Ibrahim to Alexandria. All the accounts from Syria were which Ibrahim had been guilty before his departure from Damascus. The new governor, Hadschi Ali Pacha, appointed by the Porte, had arrived at Dathascus on the inhabitants throughout Syria had expressed their joy at inhabitants throughout Syria had expressed their joy having been restored to the dominion of the Constan-
Tukgry.-By the last advices we learn that Conser timople had been placed under quarantine regulations in consequence of some suspicious cases of plague in the
Bosphorus. The return of Halil Pacha, brother-in-law of the Sultan, was regarded as likely to lead soon to the fall of Reschid Pacha's party.-The advices received from Syria were of an unfavourable wature. An insurrection and cruelties of the Saltan's troops, particularly the A1banian mercenaries, whose excesses, it seems, had been expected with the first fasourable wind at the Golden Horn. Admiral Waller was at Lampsaca. - From these accounts we also learn that a fourth daaghiter had been
born to the Sultan, and that great rejoicings and festivities prevailed in honour of the event.
The West indies.-The arrival of the West India Things remained in much the same unsatisfactory condition at Jamraica. The planters were, for the momeat, oc-
cupied with banking affairs and the difficulty of procuring the necessary labour. The arrival at Savannah-la-Mar of 300 Scotch and Irish emigrants, from Scotland, had, howevét, afforded partial relief.-The Legislative Assembly was continuing its sittings at Barbadces, but there was nothing of interest hefore it. Seasonable showers had In Trinidad the weather during the month of Jannary had been unfavourable for manufacturing produce. The canes, on the other hand, had improven considerably, and the higher wages. -The papers give an account of the destruchigher wages.- The papers give an account of the destruc-
tion, by fire. on the 3 lith Jan., of the town of Mayaques, in Porto Rico, only 8 to 12 houses zind \& charcli being saved: thie number of dwellings destroyed is variously esthmated from 400 to 800 . They were buit chiefly of wood.
Havannaf.-Havanahah papers state that an English Havannaf.- Havannah papers state that an English
ship of war hal sent her crew on shore on the African coast, and attacked and destroyed two Spanish factories,
one belonging to Don Pedro Blanco, and the other to Don Pedro Martinez, under pretence that these establishments were nothing but markets for slaves-of whom flight. The loss thus oceasioned to the two Spaniards is estimated at 500,000 piastres. This act had raised a violent outcry at the Havannah against the English. Usitfd Stites.-By the arrival at Liverpool, on the receipt of New York papers to the 8th inst. They the receint of Aew York papers to the 8th inst. They tain very little reference to the question of the relations between the two countries. But the tenor of the speech is on the whole of a paciffe character. The relations
of the United Staites with Great Britain had been brought of the United corisideration of the Senate on the 1st instant, when Mr. Buchanan said, that he had been instructed by charged from the consideration of the resolation which had been referred to that committee, "requesting the with the public interest, any correspondence which may have taken place between the Government and that of heretofore communicated to the Senate." He then proceeded to state the reasons which had induced the committee to ment, \(t\), publish the correspondence to which the resolution referred. With respect to the Boundary question, the tion referred. With respect to the Boundary question, the essential points of a convention based on matually recognised principles, and alike advantageous and honourable to both. If it were the sincere desire of both parties; as he believed it was, to arrive at an amieable conclusion, the ne-
gotiation must soon be successfully terminated. His gotiation must soon be successfully terminated. His
official position in the Senate had afforded him free access to all the correspondence. He had examined it with care, and would now frankly state the impression which it had made on his mind. Although he could not pretend to say that there were no omens of war in the conduct of the
British Government on the northern frontier, yet this he should assert, with much confidence, that; in the negotiation relative to the North-eastern Boundary, nothing had occurred inconsistent with the sincere and anxious desire Which had always been professed by that Goverament bepreserve the peace which now so happily subsistiod befinal and satisfactory conclusion. Mr. Bnchanan, in conclusion. declared that there was no foundation for the rumour which prevailed, that there had been an angry
correspondence between the British Minister and the Secretary of State since the date of the last corrempondence before the public. - With respect to Mr. MLend, it
appears that he is still imprisoned in Lockport gaol It was reported, however, that, as the excitement respecting him continued onabated, and as, under the circumostances, he could not calculate on receiving a fair trial, it was probable that he would be removed to Albany, the capital of
the state of New York, and there be brought to trial. Nothing certain was known on the point at the sailine of the packet.-The general belief at New York seemed to
the responsibility of the act of burning the Caroline, with
a participation in which M'Leod was charged add for which he had been indicted, the prisoner would be given up; a
belief incompatible, however, with the statement, that the Federal Executive have not the power to liberate a prisoner subject to the process of State law.

\section*{}

Monday. - The Mutiny Bill and the Marine Matiny Bill respectvely passed through committee.
The Duhe of Ancyi. took occasion to express his regret at the course pursued hy (iovernment 10 reference to Mr. Canillish, on
the ground of that gentleman's alleged infraction of the law. His Grace unterly denied the competency of the Court of Session in
such cases, but refrained from further comment, as the question must. at no distant period, come judicially beiore their Lord hins. Mine Marquis remarka var concurred in the propriety of ahs
tainin from the present moment, fir the reasons
stated hy the noble Duke and the converintin Their lordships were then again occupied by the inquiry into
the the circumstances connected with the false returns from the Phoold be proceeded with on Friday and Monday, when Mr. Earle and Mr. Hawley, asmistant poor-
to be examined at the bar of the House.
Tuesday. - The Mutiny Bill and the Marine Mutiny Bill were
 The Marguis of No.
The Marquis of Nosmanay presented a petition from the inha2eno personc, in favour-of the Irainage of Builidings siine. Thie
 much of the value of that care would be lost if sufficient attention Were not padd to the condition of their heallth. - Hts Lordship then
moved the second readfag of the Borough Improvement Bill. The objet of the bill was to sive to corporate bodies the power of the inhahitants. - The bill was read a second time, and referred o the committee on the Drainage Bill
East India Rum Buill. The noble Marquis stated the tenour of the East India Rum Biil. The noble Marquis stated the tenour of the
bint which is to equalise in tmount of duty with that on Wett
India protivce the snar Sions from the sugut-cane, the thate, or the our Fast Indian posses sition was offered to the bill. some sugrestions ene - the bearing
of two of the clanses were thro of two of the clauses were thrown ont hr Lord Ellenbormugh, and
favourably entertained by the Marquis of Landdowne. His L.ordship also said that he feared the present meensure was only intended as the forerunner of future legislation, by which Cube and
Brazil sugars world be adraited at the reduced rate of duty, and asked if he were correct in that surpicion.
The Marquis of LA.vspows E decrinect ciring a definite answer,
merely stating that the bill before the Houtse stood on its own merely stating that the bill before the Houtse stood on its own
merits. The bill was then read a qecond time, and ordered for committal on Friday. The Dake of Werlinotos moved for a copy of the official recond of all correspondence with the Irish Poor-law Commis-
sioners in relation to the appointment of Mr. Egan as returning
ofticer Thursday.-The Consolidated Fund \((8,000,0001)\) Bill, the Turnpike Acts (Ireland) Continuance Bill, and some private bills, were
brought up from the Comitions. The Consolidated Fund BU1
was read a first time. The Earl of C CarLEVILLEE gave notice that on Thursday next
he would move for a copy of the criminal partel at the last assizes for the Queen's county, with the rale of court relating thereto.

 RRD, said that the commercial negotiations with Frauce, interan ent, wnuld probably her renewed, with every prowpect of their of the productions if the twros countries.
The examination of witnesses relative to the Cnion of Cloumel whe then resumed.

\section*{HOUSE OF COMMONS}

Monday.-After the presentation of petitions, Sir B. Prst asked some questions as to the order of public business for the week,
and Lord J. Russmut answered, that he oniky proposed on the and Lord J. Russkil answered, that he onky proposed on the
present occasion to take such portions of the Poor-law Act as related to the duration of the commission, and the Reneral rules .. se observed by the commissioners. His Lordship aiterwards
said that he would ctate on Wednesday the course he intended to pursne with respect to the various amendments that hat heen proposed: that he meant to oo on with the blil on Fhitay, resume
it on Monday, and continue it from day to day throughout the week. The yoble Lord auided that the resolutions of the Pre eident of the Board of Trade were to be postponed from Fridas till Mun-
 gested by an hon. Member, thou
was not yet in his possess
The Huse then went into committee on the Consolidated Fund (9, nof..000. Kill, and some conversation tonk place in reference
to the complaint made by Sir G. CIErk, that large demands for the naral expenditure of the country wre allowed to remais out

agreed to, and the chairman reported progress.
Tuesday.- Committees were appointed to try the validity of the st. Alban's and Walsail elections.
Lord J. Russzll announced that on Tuesday, the fih Apmit fie Lhe 20th April.
Hion of the Howse, the a resolution to the effect, that in the opipermanentiy confined inge the huliks in Gremt Britain, although of hearly two hours' duration, the noble Lodide endeavowred to show that Government, in determining that conviets sentenced had volated the spirit of thie law. It was found that the hulks portation. It had also been found impossible, owring to the nature
 ever, to the hulks was, that corvicts conimed there experienced,
on their discharge, sin but insaperabte dificulties, if they at-
tempted to obtain hooest enployment. The example of France tempted to obtain hovest employmeat. The example of France
presented a thithful picture of what England would come to if
the sygtem of the tinlts. was persperered in. The noble Lord also the sygtem of the fylke was persevered in. The noble Icrd also
argaed that the system of transportation had been too hastily
condentind. He admitted the existence of abuses, but many of
those might have been remedied; and he thought that in spite of the abuses of the system, it had been attended by no inconsider-
abhe benefits, and had reformed a far greater number of oftenders
han would have been reformed hal they remainel \(\%\) England.
 ereated in New Soath Wales by the cessation of a supply of com-
vict halbour, and came to the conclusion, that a new colony mignt
beformed one the north- western coast of New Holland, where the Lord J. Hessenir admitted the force of some of the objections
to the purnishment of the halks, but thought that the dificculty
finding of of adequate penalties forbade the adoption of such a resolution as Lond Mahon had proposed. If the hailss were too
severe on the one hand, yet, on the ofter, thaspration hal
tise terons to

The effectual．The question between himself and the noble mover
was one rather of degree thay of principle．But what he had
chietly aimed at was，to prevent the Australian colonies from chiefty aimed at was，to prevent the Lustralian colonies from
being completely overrun by the reflise of the Eurlish gaols．He
俍 did not think it neecessary that the House should now come to
did
any decision upon the subject，and would，therefore，move the previons question．
Mr．Pasivarun thought Lord John Russell＇s speech was no
answer at all to that of Lord Mahom，Convicts sentenced to
seren years＇transportation were all，in fact，eonseigned to the seven years＇transportation were all，in fact，consigned to the they were about 2,000 ，and it had never been intended that the
prexogative of substitution should be exercisel npon this swerp
 tafion executed as pronounced．He disapproved the hulk sy－tem，
because it sent the convicts back to crime at the expiration of their terms of punishment．He blamivet the mudtern scheme

 knowledge of the circumstances of the respective onfences and of
the respective offenders．With respect to the punisimment of im． prisonneent，he must say，from a pretty extensive experience for
the last 20 years，that it was an infliction almost ineffectual，and left the offender almost always unreformed；and he therefore disapproved atyy ，y，tem1
Mr．Fox Mautr suid that Lord Mahon，while he had approved
the abolition of the convict assignment system，had lost sight of
the new difficulty which that abolition generated in the shape of the new difficulty which that aboltion generated \({ }^{\text {and }}\) ．It the shape of
an increased number of conicts to be dealt with．It meet this dirticulty that Goverament fuund themstives under the neces．
sity of increasing the umbers in the hulks．He would glady
see the divcretion to see the discretion as to commutatiun removed front the Seccetary
of state，and he hoped that this removal might peedily take place．The noble Lord，he truted，would hot press his motion
to a division．－Mr．Estotat thonght that the hulk system
 wonld not adopts motion which，Gy excududing evena a temporary
resort to the holls，would force the country back to the sole re． resort to the hanizs，woud force the MAnox declined to withdraw his motion；and the House，on a division，affirmed it ing the substitution of a property－tar for such of the taxes of escise and customs as press most hearily on the middlle and work
ing classes．He said that in 1840 there were 1,500 bankrupts，and ing classes．He taid that ins ind thents．A sort of civil wart was probaly ten times as many insolvents．A sort of civil war was
going on between debtors and creditors，proittoble only to the
lawers．The masters and the men were constantly at variance． lawyers．The masters and the men were constantiy at variance．
One effect of all this was the increase of crime，particularly for－
geries and frauds．The pressure of poverty，he thought，had a geries and frauds．The pressure of poverty，he thourtht，had a
demoralising effeet on the minds of men．The hon．member
lastly read a few extracts from different writers to show the rea－ lastly readess of a tax ou property．
Mr．Mestz seconded the motion．He believed that in this country，more than in any other，the poor bore too large a propor－ tion of the tares．Taration and representation ought to go hand universal suffrage was desirable；but certainly the suffrage
should be extended．The trade of our towns had now no remune． should pront，and no perospect of any．Sceing no chance of a
repeal either of the corn－lawis the mones－laws，he must strongly repeal either of the corn－laws or the money－laws，he must strongly
support his colleague＇s motion．－M．TuRvze complained of the thin attendance in the House wheli a question of such importance and Mr．Fikuges spoke in support of the motion，the latter dwelling chierty on the thinness of the House． absence of members was probably the conviction of all men of be put upon the journals of the House．He thourght phatsibly nouncemient of a property－tax，nad that，too，，an ind finitite one in
amount，would throw
ande amount，would throw the whole country into confusion．When to its inuluisitorial character friend meant seriously to press his motion to division his hon． division were frecsed，he hrould move the previous question．
Mr．He we hadid hes hestation in saying thar the taxation of this
 tion recommended by the resolution it wass now generally felt
would be the rerr worst wsitent that could be aidpted．－Ir． Pryips advised his hon．friend to withdraw his motion，and to bring it firward when there would be a more foll attendance，on

Prince Albert＇s Fisit to Wooluich．－On Tuesday， H．R．H．Prince Albert，who，it seems，has evinced much interest in the expedition to the river Niger，visited Wool－ wich，for the purpose of inspecting the vessels to be en－ Trotter，Commander of the expedition reeeived by Capt every part of the Allert，one of these vessels，and appeared much interested with his visit．The peculiarities in the construction of this vessel，and the general arrangement of the machinery，were pointed out to him，as well as the nautical instruments，the method of correcting the com－
passes，the sliding keels，paddle－boath，patent fuel，and the passes，the sliding keels，paddle－bouts，patent fuel，and the
ventilating and medicating apparatus，the Iatter of which seemed to be sn object of peculiar interent．Dr．Reid ex
plained the ventilating experiments，illustrating the action compartments and afterwards propelling it into them，by compartiments and afterwards propelling it into them，by cated to the air，which rendered its progress visible ched to the air，which rendered its progreas visible． with a dense smoke，which was rapidly exhausted，and dis charged by the fanners，proving to the satisfaction of His Royal Highness the command which the apparatus had in regulating the morements of the air．The paddle－bos boats also appeared to excite much interest．After in－ the expedition．the Prince landed at the dock－yard，where he was received by the Commandant of the garrison ；and amidst the cheers of a crowded assemblage，he entered his carriage，and proceeded direct for Buckingham Palace．It is stated that this is the first visit which His Royal High－ Decrease of Marriages in Chur
restry of St．Bride＇s，Fleet－street，it was proposed to raise the parish clerk＇s salary from 10\％to 30\％，a vear．The reason assigned was the decrease that had taken place persons frequenting the church．It appeared that in 1825 the average fees were 576.6 s．，and that last yen they were only 422 ． \(10 s\) ；；that for attendance on 322 baptisms he only received 3 l ． 10 s ．；that only one out of ten rich people who were married presented him with a married in 1839，there were married in the church 252 couples， and last year only 162 ；that the clerk was paid for 284 desk attendances only \(8 \frac{1}{2} d\) ．for each attendance，and fo each christening only \(24 d\) ．It was also stated that，in order to induce baptisms to be performed in the church，
directions had been given that no fees should be taken for them．The vestry，in consequence of the falling off in the clerk＇s fees，increased his salary to 30
－Emigration from the Metropotis．－There are now 30 eessels in the London and S．Katharine Docks，fitting out to coavey emigrants to Sydney，Hobart Town，Canada， to sail during the present month and April，wad the will carry out in all about 50,000 passengers．The tide of emigration seems especially to be setting towards Now The Ti peded the completion of this great undertaking are now
stated to have been entirely overcome．The work has been stated to have been entirely overcome．The worl has been
wholly completed under the river，and the shield is below the Company＇s wharf on the Middleses side．The operations at Wapping for completing the shaft by which foot par
sengers will descend are in full activity．Thirty feet of this shaft have been completed，leaving about 40 feet moreto be accomplished．The natural ground，which has been already touched，is favourable for the gradual and safe de－ scent of this ingenious mass of brickwork．Immediatel will be advanced from its present position，having traversed 33 ft ．Gin．The communication throughout the entire length land cunnel will be then thrown open．The run of water from gallons per minute．When，however，the communication he geen thrown open between the whole line，this influx will cease．The engine throws off the water arising from land－ springs，and the visitors＇archway up to the shield is per－
fectly dry．It is expected that the ceremony of opening the tunnel will take place about the end of next summer． Suspected Murder．－A painful excitement has been occasioned at Norwood，by the discovery，on Wednesday， of a respectable femule under circumstances that ronder probable sthe has been murdered．The fullowing appea is Elizabeth Winks，had been married a number of years， but had separated from ber husband．She was housekeeper in Roupell，Blackfriars－road，who has a country in the vinity of Briston．The husband of duede wa also in the same gentleman＇s service．On Tuesuay de ceased left her master＇s residence in town to visit her
father and relations，who reside at Brixton，and was accompanied by her daughter．They left about nine in the evening to return home．On the following morning about six，a policeman，going his rounds between streat ham and Norwood，discovered the body of a female lying on the grass at the end of one of the lanes，within a fen yards of a pond．She was not dead，but in an expiring state it was evident that she had been severely reyed to the Horns，at Yorwood，but she expired in her way to the house．The father of deceased states that she left his house on Tuesday night perfectly sober．Pe cannot account for her being found at Norwood，which was nearly two miles from his house．Another singular circumstance is that decensed＇s daughter has not yet bee discovered．
Milluank Penitentiary．－The report of the Superitu tending Committee states that the total number of was 1.806 and that the total number remored during th same period was \(13 \%\) ．The total expenses incurred \(18 \pm 0\) amuunted to \(2 ., 413 l\) ，from which if the Let proil by prisoners＇earnings，\＆ce，be deducted，the net expense of the establighment will have been 18,913 ．The number of prisoners now in the Penitentiary is about 965.
Susieides．－An inquest has been held on a persod named Joseph Ellis，assistant to Mr．I＇n，surgeon，West minster－road，who threw The father of the deceased stated on the thint thy he naw hil nou fart the lust time．He
had then left his situation two months. The next morn. ing witness found he had not been to bed; and in the which deceased stated that when she received that he would be no more. Witness did not know that he had a love affair. Deceased was disappointed about some money
he expected. \(\mathrm{Mr}_{\text {. }}\) I'on said deceased had been with him seven years. He left, at his own request, two months ago, and without any particular reason. He had seen the
letter, and the female to whom it alluded was at the time in his service. Mr. I'on added, that he considered it a trifing matter, and thought no more of it. He believed money under his grandmother's will, but she was still alive. The sister of the female to whom allusion has been made, stated that her sister had never encouraged the addresses of deceased. She had always been against herself stated that she saw deceased on the evening this occurrence was supposed to have taken place, when should hear from him the next day. The brother of deceased stated, that on the night in question deceased came home and wrote a letter. He appeared as usual, and when he had done he took off his coat, put on an old one,
and said he was going to the Post-office. He never came back. Mr. I'on said deceased was always regular and at"Temporary insanity." The jury returned a verdict of y a young woman named Martio has been committed son, a tobacconist in Farringdon-street, had paid his addresses for the last six years, and was to marry her when her circumstances permitted. They passed the afternoon of Sunday last together in perfect harmony, nothing occurring that could lead Mr. Wilson to imagine that she cheerful, and retired to rest at ten o'clock, desiring her landlady to call her betimes next morning. She was accordingly called, but not appearing by ten, her landlady phial that had contained laudanum was fornd in her room, and in her bonnet-box another phial that had held prussic acid. In the box were also two letters, one addressed to her landlady, requesting that her clothes might be given to landlady, requesting that her clothes might be given to her intention to destroy herself, expressing a hope that the rash act would be forgiven, that her hopes were
blighted, her heart broken, and hoping they should meet in heaven and part no more. The only motive assigned for destroying herself was, that she could not get married so soon as she expected. An inquest has been held on the body, at which a surgeon proved that she had died from the effects of prussic acid. Verdict, "Temporary insanity." Inquests.-On Monday an inquest was held on Mrs. eccurred under the following circumstances :-Mrs. King, of Camdentown, deposed that deceased, who had some time occupied apartments in her house, generally enjoyed good health, but bad for many years laboured under the delusion that she was the victim of a magician, by whom sometimes she was surrounded by glass bottles, pipes,
balls of fire, \&c., for the purpose of blowing her up, and at others that the same evil genius was extracting her eyes at others that the same eril genius was extracting her eyes
from their sockets. At those times her bebaviour would be strange and alarming. Frequently of late she had declared that the magician lived in the house opposite, and she said. to prevent his spells taking an effect upon her,
she had shut close the shutters, and then hung up several blankets, sheets, and other articles. Deceased always expressed a great desire to die suddenly. She had gone in her usual health and spirits. She retired to bed, and shortly before twelve witness having fancied that she heard deceased vomiting, went into the room, when she found life extinct. In answer to the coroner, the bronounced that he had made every inquiry, and had no reason to suppose that deceased had come by her death unfairly. The evidence of the first witness, as to the extraordinary dethe jury returned a verdict of "Natural death." - An inquest has been held on Mrs. Timms, who was killed by being run over in St. Martin's lane. Mr. Tait deposed that between eleven and twelve on Friday morning he was
in St. Martin's-lane, when he observed a crowd of persons around a gig. and learnt that deceased had been knocked down and run orer. Witness sawy deceased taken to the shop of a surgeon, and being acquainted with her friends, went and apprised them of the accident. No Who were both thrown out and much hurt. The beadle said that he had made every inquiry, but could give no intelligence who the gentlemen were, nor had he any wit-King-street. Corent-garden, deposed that deceased was his aunt. She went out that norning, as was her custom ceived the weather permitted, and soon afterwards he reconveyed her home in a coach. She continued insensible The her death, which trok place the following morning. was from internal hemorrhaqa, the result of external violence. Fordicr. "Accinental death."-A A inguest has been hell on the b.dy of a child, ayed three weeks, who
Was drowned last weck in the Liew River by its nother. The mother, a ceaan and comely young woman, was brouglit into the inquest-room from the New Prison, some
months ago it seems she became lost to her friends in London, and wandered into Kent, wherc she was appre-
months to Maidstone gaol. A month ago, whilst in prison,
she was delivered of an infant. She left the prison returned to London, and on the evening of the 19th inst. Went that she had just drowned her infant in the New
duty that River. She said she had done so because she had no food, was quite destitute, and had no means of maintaining the child. She had applied to the parish of Marylebone for relief, but it was withheld by reason of her not belonging After two hours' search, the body was found, floatmother had pointed out. The jnry the spot which the "Wilful Marder

Liverpool. - A man named John Jennings, keeper of a beerhouse in this city, has been tried on a charge of having from the evidence that the prisoner had become possessed of a great number of coins made of a white metal, in imitation of Spanish and American dollars. They were pro with a single oblond were fastened two and two together to each, like old-fashioned sleeve-buttons, but larger, as if intended to be used for keeping together a tight coat o cloak. Mr. Ortt, a butcher, said that the prisoner had brought the coins to his house for safety, and had stated ingly put them under lock and key. They were called for by the police, who, on searching the prisoner's house, wer tis bim where they were. The prisoner had also sold turn the money when the man repented of his bargain A brewer's clerk, whose employer served the prisoner with ale, stated that he had frequently seen the coins lying about the prisoner's house; that he made no secret of them, and never passed them off for silver. He stated that he had bought them in exchange for cloth, from a man who had purchased them at an auction-room some months ago, and was not aware that it was illegal to have them. The prisoner's housekeeper also stated that she had seen them yingabout the house ; that the children were allowed to play sold them ; that the prisoner never represented them, or no value upon them. He had given somes them put change for oranges and other triffing articles. The Magistrates said, the statement that the prisoner considered them no value did not agree with his representation to Mr. Ortt, that they were worth from 2002 . to 3001 . He should onvict the prisoner under the statute for having his possession. He must pay a fine of 40 s , on each piece the number months. The number of coins found was 1,226 , and con-
sequently the amount of the fine was \(2,4+2 l\) sterling. The prisoner was, in default, sent to gaol. The magistrate remarked that it was well the coin had been discovered, for had no knowledge of American money, and might have been deceived by it. He gave orders that Lieut. Harvey, of the Emigration Office, should be informed of the case, so that emigrants might be put on their guard, lest any of it should already have gone abroad. The whole of the false coin is to be sent to the Miat, where it will no doubt be o pieces. The Governor Fenner, it would seem, Las ge bten down to Criceith and Aberfraw, and recovered a trunk belonging to himself, and another the property of his wife, which have been thrown up in that neighbourhood. The beach for 60 miles along the cosst was thickly strewed with portions of the wreck. At Aberfraw, a chest belongto Mr. Thoms, one of the passengers, containing wear ing apparel, book, and 60. in money, had been found; to a couple lately married. In the trunk of Mr. Tions a letter was found, written by Mr Dugan of Wi. Morss a recommending the bearer to his relatives in America. Mr. Dugan was made acquainted with the affair, and wrote to Mrs. Thoms on the subject; and they have both since visited Wales and recovered the contents of the trunk, consisting of clothes, 13 sovereigns, two American eagles, and 250 dollars. It is stated that several other boxes have come on shore at different parts of the coast, and that the hull of the Fenner was seen a few days since
Ashton-under-Lyne.-The principal person concerned in the murder of Garland, the sawyer, which, it will be remembered, took place in October last, has just been captured. It seems the murder had been traced beyond doubt to the saw yer's union; and the officers, to whom was confarted the duty of searching after and securing the suspected pursuit before they ware, mining districts among the Welsh mountains in the which they obtained intormation that one of the ringleaders was at work. This proved true ; but such was the protection shown to the culprit by , but miners, and such the communication kept up with him from the Lancashire sawyers, that lie eluded the pursuit. The officers report that the Cambrian iron mines, nine miles from. Bridgeend, Glamorganshire, are flled with depredators and demurdey. and that on!y a week before they arrired there two various parts of Fnglon a din. cess, the pursuit was rontinued; but it was not until the Ith instant chat they succeeded in arresting Josenh Hol land, who stands charged with having inficted the fatal blont apon Garland, and which, it is now proved, was executed with a heary iron weapon used by samyers in their business. One of the officers had been three days in Dutand scerred himidenta
offence with which he was charged, and gave a fictitions name. He was subsequently brought to Manchester, and anderwent an examination before the Ashton magistrates when he was recognised by several witnesses, and admitted wis proper name. It was proved that on the day Garland where murdered Holland attended a meeting of sawrer another morder was arranged. He was recognised by Garland, and this witness swears he saw the prisoner pull the iron instrument from under his coat and inflict the produced the piece who witnessed the parties running away the time Upon this apidence the pound upon the at mitted to thon cis The to take lis thal on the charge of wiful murder. The fatber of Holland has also been held to bail on the charge of conspiracy connected with the same transaction, and Thomas hassell on a like charge has been committed for rial at the ensuing assizes, his bail having delivered him up.-A fire was discovered in the church of this town on Sunday, which was fortunately subdued before any ma terial damage was done. It originated in the leaden chimney of which had ignited, and, after melting the large leaden pipe, had communicated with the timber of the belfry, whence the flames were observed to issue.
Bingley.-On Saturday a pablic meeting of the inhabitants of this town took place in the Court-house, when resolations strongly condemning the cruelties and oppres sion exercised by the New Poor-law were unanimousl and in strong but respectful language, adopted by the meeting tempt to interrupt the meeting was made by a Chartist, but the Chairman appealed to the operatives, who refused to sanction his proceedings, being convinced that the opposition to the Poor-law has been seriously thwarted by the Chartists Laring obstructed many of the public meetings convened to petition for its repeal.
\(\kappa\) naresborough.-An industrious and peaceable workSimpson is their extensive bleaching premises Oates, and near this place, received a letter a few days ago, requesting him to g 0 and take possession of landed estates, \&c., to the amount of 30,0006 ., left to him unexpectedly by a elative in Lancashire.
Windsor.-It is stated to be the intention of the Dean and Canons to cause the interior of St. George's chapel to adergo a thorough chensing and the ensuing spring. It seems that it is nearly 40 years since anything has been done in the way of beautifying or arnamenting the nave or choir. The windows of the south side of the chapel, near the altar, which are now ription of stained glass, mmedia mand stead. Fears have been entertained for some years past
respecting the stability of the grand western window, which has long been removed from its perpendicular position. The late Sir J. Wyattville, about ten years since, was instructed by the Dean and Canuns to cause the neinto effect; but that architect had at that time so much business upon his hands that he had no time to derote to the undertaking, and he died before he commenced his labours. This fine specimen of stained glass contains eight compartments, each six feet in height. The figures represent Edward the Confessor, Edward IV., Henry and other ecclesiastics, interspersed with heraldic beariness amongst Garter are frequently displayed. The Dean and Canons have also given increased strength to the choir of this chapel, iny the addition of a tenor and counter-tenor before consisted of an organist, eleven lay clerks, and ten dered one of the finest in the kingdom

Southampton.-The company who have contracted with Government to convey the West India and South American mails for the next ten years, for the sum of \(240,000 l\). pe annum, and who are now building a fleet of steam-ship ing the purpose, fin number, of too tons burden, har ing fixed on the docks here as their depo. and howe sta tion, these works present an appearance oí great animation. Upwards of 1000 men are emploved, besides horse and steam power in proportion, and the work proceeds day and night with but three hours' intermission in the 24. The men and horses are divided into dar and night parties, and the latter work by the light of numerous fires burning in iron baskets : the appearance is very striking, as the whole of this force is concentrated on the dock which the mail-packets are to use. It is understood to be a condition of the company's contract with Governboth in point of strength and arrangement, so as to be adapted at any moment to act as ships of war, and that the Admiratry shail, at a price agried un, trake posisision of require it,-thus furnisling the ready means of an addif tion to our naral force of the most formiabile character in the event of hosilitics. The vessels are huiling in the
 are to rendezvous in tas great tidal dock of this harbour Bristol.- The Mammoth, building by the Great Weatern Seam Ship Company at this port, it is said will arceed istence. The saving of roun by her being biilt of iron
will admit of her carrying coais for both the outward and home voyages, a consideration of much importance from
the inferior quality of American coal. Her engines are
of 1000 horse power. She will be enabled to carry an passage of the Atlantic in ten days.
Exetcr.-A gentleman of elegant manners and aduress calling himself Capt. Mazmeth, and his siter Miss Maxweall, some bise sine tis. Wanting a house, they called upnn a widow lady who had one to let, where Capt. Maxwell admired her eldest daughter, to whom he miade offers of marringe. He stated himself to be connected with Sir Murray Maxwell, and the nephem of a gentleman of fortune of his own name near Cork, on whom he depended Maxwell, after going to London with his bride, where he seemed to slrun being seen about the streets, left her for a short time to go to Hanover, where he held a military appointment. On his retura they veat to reside at Boulogne, where the hushand received a letter from Ire land, on which be told his wife that his uncle was dyiog and that he would leave her to so home under the care of his sister, who would juin hinn at their uncle's in Ireland. A fortnight after the young lady's arrival at the houst of her mother, she received a letter from Miso haswell, dith
from Mount Maxwell, near Cork, inforining her that Capt. Maxwell had died eight days after his unele, in a fever, and that his uncle, displeased with his marriage, had altered bis will before his death, leaving him nothing, and that bis own property, being only a life-interest, ceased with lis death. Letters were sent to Corlr addressed to Mirs the from the post-office that no such place existed as that from which Miss Maswell dated her letters, nor was any the name known in Cork or neighbur All inquiries have failed in producing any elucidation on the the Duke of Wellington, the Marquis of Douro, scc. ; that he was related to the Marchioness of Donegal and General Gillespie. He had \(\bar{j} 40\) ! with him when he left his wife besides a large chest of silver plate, \&icc.
\(\boldsymbol{P l y m o u t h}\). - A pootponement, it is understood, has taken place in the risit of the British Associntion to this
town ; it will take place in August instead of July. This will give the members an opportunity of witnessing th launch of ber Majesty - -inp Mindostun, from the Dock yard, which vessel is ordered to be got ready for launching in that month. The local council of the Assuciation wil meet in a few days, when the differeat committees win report progress. he subaciption towards dolraying th extated that immediately after the Mindostan is launched ship of 911 guns, to be called the Exmouth, is to be laid down on the same slip
Norfolk.-At the late assizes at this town, a young lad nged 15, was tried for stealing a mare, the property of Mr
Reherts. It seems that the prosecutor, on 24 th Jen Roberts. It seems that the prosecutor, on 24th Jan. sent his son on the mare in question to see his grand mother at Stition. When the boy had proceeded hatf a mile, he met the prisoner, who came up to him, aïd desired money, and the prisoner thereuponhis head, and desired him to get off the mare. The lad dismounted, the prisoner got upon the mare, and rode off the boy, he told him if his father inquired for his mare, he would tell him he might find it at York on the following night. The prosecutor's son loot ne time in returning home and informing his father of the proceeding, whereapou Mr. Roberts weat in pursuit of che prisoner, whon he orertook near stamford. The prisoner was much irrithe constable that if he had known the old gentleman had been the owner of the mare, he should not have taken him, for he would have blown nut his briuns. Oa the prisoner person were fuund a pistol and a quantity of bullets and powder. The jury found him guilty, and the Judge sentenced hiva to ten years' transportation.
Huntingdon.-At the late assizes, James Inglett, aged 04, was indicted for hilling and slaying Elizabeth Holt, by administering to her a quantity of arsenic. The prisoner, favmer and cow-leech. and in the latter character was in the habit of administering medicines to various kinds of cattle. His great age and long acquaintance with the healing art hid celused him to be regarded with respect
among the simple peopte of has neighbourhood. Deneased had been ill hast rear, and the parish apmetheeary need all his art to restore her to heaidis, but in vain. About Christmas the prisoner was called in to see her, and administered
to her a dose of liquid medicine, which made her very sick and caused great suffering, but she got better after taking it. He afterwards administered more medicine, which ment ber to sleep,
ried without suspucion of therc having been anything improper given to her ; but rumours got abroad, and an inquest was the consequence. The jury returned a verdict and dangeroas thing, to the jurors unknown." On the body being exhumen, the presence of arsenic in the stowhat he had given her, when told that he had killed her, "That could not be, forme had only given her half a grain, and that he had giyen his son and others a grain and a half
without injury." The sister of deecased said, " Then it Was sto strong for lier stamach "" to which ke replied,
of Like crough, poor thing. for her stomach was aimost gone. \({ }^{37}\) The jury at first found the prisoner guilty of ad. ministering arsenic incautionsly, bet the Judge told them he could not reçeive that verdict. They must acquit the
prisoner, anless they were convinced that he acted with general verdict of Guilty. The Judge observed, that all the ends of justice would be answered by its being pubticly known that if any person presumes to administer medically a deadly poison, and death ensues in consequence fine at the time of life which the prisoner had reached, to inflict ton him severe punishments. and as he had been in apon hima severe plenishments six weeks, should sentence him to be furgaol alrendy six weeks, he shought
Darlington.-The small-pox is at present raging with great violence at Hurworth, near this town sons s.lave fallen victims to it. At Northall.
has spread extensively, and many have died.
Dorer.-A few days since, whilst a fishing smack, belonging to this port, was dragging the sea, near the Galloper, the tackle gut fast to an anchor, which, by the aid of the crews of some other vessels, was dragged forth out of destruction of the Spanish Armada. From its size it would seem to have belonged to a vessel of large dimen ions; and from the state of its stock of oak, and othe appearances, it has evidently been in the water for centuries Shemabury. On Twesdar Josiah Misters wis tried For the attewpted murder of Mr. Mackreth, at Ludlow the circumstances connected with which, it will be remem bered, appeared in the papers at the time. After alength ened trial, and the examination of a number of wituesses, whose testimany went to confirm the circumstantial evidence against the prisoner, the jury returned a verdict of Guilty. The prisoner evinced much emotion apon hearing the verdict, which he seemed hardly to have expected Epon being called upon in the usual form, he said Gurney then addressed the prisouer as follows: "Jusiab Misterg, aftera long and patient inquiry, thejury have come o the conclusion to which the evidence necessarily Ied them, that you are guilty of the atrocious crime with whic you nere charged. 1 have seldom witnessed a case 1 which a crime like this was conceived and executed with so much of deliberation, with so much of determination, anotl when you have comed for y reur and you aps pear to have nursued that person with great industry, for the purposi of accumplisthing your design of robbery and murder. Lou have been must ably defended by counsel, but your counsel has been unable to suggest any motive condact in thas pursming ta evidence of your guilt, though circumstantial, has been conclusive, because it is most clear that this crime on the been cummitted by no other person. Prepare for the next world which you cannot receive in this." His Lordship then passed the sentence of death in the usual form, and the prisonar was removed from the bar
Penzance.-A melancholy case of shipwreck, attended with loss of life, has happened near this place. It neems that on Tuesday murniug the inhahitants of Purtleven observed a ressel lying of Prad Sand Bay in distress. They roug launch a boat. The sessel proved to he the Mary Stuart, laden with iron ore from Cardiff, bound to Coustantinople. It a ppeared that her rudder had unshipped, and the cress. feariug the ressel would go an shore, ket go the anchor and brouglat her up about three quarters of a mile from the labd. The situation was very dangerous, but the night being dark, the crew were unable to perceive the precise spot where they brought up. At daybreak the gale commion her iamediate destruction. Towards 9 the gate increased, and by 10 it blew a hurricane. The crew expeeted the ressel would every moment part from her as:chors, and in the hope of saving their lives, cut away her masts, which in falling overboard nearly capsized the ship. However, she righted, and the anchurs kept fast till albout 12, when a heary sea broke her cables, and she went ashore. Several bundref people had then assembied on the beach, with a detachment of the coast-guard service, under the direction of Lient. Smith. The spot where the ressel grounded was within half a mile from the shore, and Lientenant Smith determined to make an attempt to rench the vessel, and accordingly one of the boats belunging to the service was got in readiness, but orimg to the heary smell it was found impossible to carty the sea having abated, Lieut. Smith and five of the men jumped in and pushed off; but they had proceeded only a short distance when wave broke over the boat and swamped it, and all in her were unfortunately drowned. The persons who had been drawn to the spot beheld them perish without being were the wives ant cinidrea of four of thens. A revenue cutter from Penzance shortly after arrived, and succeeded hausted condition. Oaly three of the bodies had been found.

Ruiburyd.-A fire took place a few days since on alug gage train on the Gramd Junction Railway, occasioned by parks from the engine-chimney falling on the top of one ere deatroyed, and part of thase on the second.-It has been decided to open the Cheltenian and Great Western Lnion Railway as far as Cirencester on April 26. -The magiserates of Cuydun were called Guon a Railays simce pany to pas poor-raie on their property in that parish. In support of the rate it was canteaded that they were liable, although the lime was not in use, because rails were laid
down and used for the conveyance of earth and other pur poses constitutinr a beneficial occupation, which was an
that was required. In reply it was stated that thongh profit was not necessary to create the liability, yet that was requisite that some business or occupation should be carried on from which profit mirght be expected to accrue, that though the parish might sufter a temporary loss, that would be more thall counterblancea by the suvantages nould ulimately recelve, anil that the point lad already sonce discussion the majority of the magistrates decided that the company was not liable.-The Directors of the Croymade the fret trip on Saturday, starting from London-bridge at ten minutes past eight; the stopped at Sydenham, and afterwards proceeded to Mer sham tuanel, but were prevented from going through, in
consequence of some waggons being on the lines. The angine used on this occasion was one of very great power The works are rapidly progressing, and the line to withit 15 miles of Brighton, it is stated, will be opened on the Ist June, and to Brighton in August. The first stone of the ners line from the junction of the Greenwich Railway to the London terminus was lamen Wednesday by Col Railway - Another tire has broken out on the premise belongiug to the South-western Railway Company, at the station at Fareham, near Blackbrook, Hampshire, and si horses perished in the flames.

The premises consisted of Frome a statement of the superintendent it appeared that the discovery was mad ay a railway policeman who was on duty at the atation horses, but the fire had increased to such an extent the it was impossible to getat them. In the course of half an-hour the premises were completely destroyed. The loss is supposed to be sook. It is supposed to be the wort the Birmingham and Gloucester Railway bas been held at Birninghan, to consider whether any other than the mailtrains should be despatched along the line on Sundays, when it was moved that one morning and one erening anger train in addition to the mail-train now running be despatched from Birmiagham to Gloucester every Sun-day:- An amendment was then moved to the effect that no other trains are required on the Sabbath than those now ruaning for the conveyance of the mails. U'pon a division the amendment was carried.-On Tuesday morning, \({ }^{23}\) the first train on the Great Western Railway was phocel ing from the Wootton Basselt road to London, just be fore its arrival at the Farringdon station, it came in com tact with a man employed on the line, who was knocked on to the tram, and the whole train passed the line now Reading after, another man, work on the side of the road when a part of the embankment gave way and crushed him.
Dubbin.-The equinoctial gales have set in here with great severity, accompanied by biting and himh cold-
ness. A heavy shower of snow fell on Saturday. The offect of this weather has been very prejudicial to general healti.c couths, colds, and intluenza prevailing in almost state of prisuns in Ireland, dated lot Febl., states the gruss amouat of expenditure of the sereral county gials in reland for the year 1810 to Lave been \(94,403 \%\). 1 s s. As regards criminals. it appears that the total number con1810 amounted to 23,833 , and that the number of summary coavictions before magistrates at petty sessions was 15,261. The total number of persons committed for in-
toxication during the same feriod amounted to 23,227 . The counties in which the largest number of convictions of place are those of Roppery and Cots large - Dt the weekly meeting of the Repeal Alssociation, Mir. Steele delivered a long speech, in which he said that as
head pacificator of Ireland, he felt bound to express his head pacícator Ireland should take if called on to enlist in the British service. He would say, that while they acted peaceably and legally towards the people of England, they shoul also act peaceably towards the enemies of England. He gave British Army. The man who did so while such inustice was dune his country should be let to go forth without the tears or fareweil of his family or friends, withont
the prayers of his clergy, and with the malediction of his country
Kilrush.-A meiancholy loss of life twok place nesr this place on St. Patrick's Day, when seven persons, Who put off in a canoe from the mouth of the Camogne River to see the temperance procession, were all drowned by the upseting of their boat. They were six men and The bodies of two of the men and the woman were found
 cession was given up.

SCOTLAND.
Edinburgh.-A blind man, who gave his name as Thomas Ware, has appeared at the police-ber in this city under the following circumstances:-It seems that some, had disposed persoas in London, with a view to injure name, and circulated a statement that his real name шas Hare, Hare not Ware, and that he was a brother or relative of gains the notorious burker, as weil as prineppai wicatss the pre him in the memorabie triak fated that he had been perse valence of this opinion, he atated that he han sean placed
in considerable jeopardy; that, under the advice of one of
the Lindion magistrates, he had, in consequence, considered it necessary to travel all the way to Edinburgh, which he did on foot, to obtain a certificate from the authorities that the statement was untrue. Being unk nown sitting mazistrate and the superint ndent of police complied with his request, for which the man expressed his gratitude.
Broumielaw.-A few days ago a woman feil from the Nurth Quay at the Broomielaw, and while struggling in the water a sailor sprang from the side of a boat, and got offier on the part of the sailor to take the woman home to his house in Oswald-street, in her clothes dried, which was accepted. On arriving at the
house, the fair one had her dripping clothes exchanged for much better dress belongiug to the wife of her preserver but before the drying operation could be completed, she
found an opportunity, while playing with the sailor's child at the door, to make off with the suit with which she was accommodated, and has not since been heard of Banff--On Monday, Mr. Taylor, gamekeeper to the
Earl of Fife, with a shoennaker in Macduff, and a son of the latter, embarked in a boat hept by Mr. Taylor on the Deveron, proposing to go down the river into the bay to warned that it was hardly safe to attempt to leave the river, but they persevered. They had not gone far when their boat filled and began to sink, when Mr. Taylor, who accordingly leaped from it, but in so doing upset it, and precipitated into the sea. The boy soon regained the boat, which kept above water; but his father was not able to accomplish this. The boy made every exertion to save his
father, and threw his handkerchief and stochings to him to take hold of for this purpose. It would appear, however, that the old man's energies were exhausted; for al-
thongh buats from this harbour were in a short time on the spot, means were tried in vain to resuscitate him. Mr. Taylor mean while had made for the shore, and was within a few feet of it, when either from the weight of his shotbelt, or, as some say, the attempts of a Newfoundland dog water and he rose no more. The body was not found for some time, when all attempts to restore animation were hopeless.

\section*{Stisccllancous.}

The Guiaıal Exprdition.-Letters have been received announcing the safe arrival at Demerara of the Guiana Espedition, and containing some interesting particu-
lars of its future route and destiny. The Cleopatra, in which the expedition sailed, reached there in 28 days, with a fair passage from the Lizard. On their arrival, the
party, consisting of five persons, were severally introduced to Colonel Light, the Governor, who expressed his desire to forward their contemplated operations to the utmost of his power, and provided them with a house in the best who'.e of their iustruments, having had two tents erected in the garden. Mr. Schomburgck was eindeavouring to procure the Parade-ground, fice, open, and commanding tract, on which to erect a teniporary observatory, forming oinervations he may hereafter make nill be conuected. ation, although the Governor and the Attorney-General had given their consent; but it was thought that their objections might be overcome. Mr. Richard Schonsburgck, who was attended by Mr. Hancock, both in the
service of the Prussian Government as naturalists to the expedition, had made a short tour in the country, when the former was seized with the epidemic of the colony, and for some time his life was despaired of. The expedition Was to start in sis or eight weeks' time for the interior,
proceeding up the coast as far as the Parima, where it proceeding up the coast as far as the Parima, where it
would place a boundary-mark to distinguish the Spanish from the British territories; from hence it would make a Hetour towards the Cuyumimy, and ailing down this
Hver till it arrives at its junction with the Essequibo, return to George Town, thus leaving the more disputed or south-west boundary until they have summed up obserrations and recruited themselves. In concarrence with patched to Pirara (on the Portuguese boundary-line) the two officers of regiments, to show the claim which Great Britain had to so distant a spot, and to see that no more encroachments should be made, nor atrocities committed tupon the natives our subjects. It is feared, that when
they arrive at this spot the expedition may meet a skirmish with the Brazilians, for which purpose they and their attendants are well armed, and are to be placed under military law. The officers of the expedition are very sanguine as to their nltimate success.

Photographic Portraits.-At the Polytechnic Institukion there may be seen at this moment one of the most extraordinary discoveries of the present day, by which in drama, not by the hand of man, but impressed by the unerring marks of nature herself, and rendered lasting to called Woicoot's Retlecting Apparatus. The persun who sishes to have his portrait taken is placed in a chair and is desired to sit there for a moment or two, and look into a glass box about five feet from him, in which is placed the metallic plate to be impressed with the portrait,
Haring done so for less time than he may take to read
thus far of this paragraph, his likeness is taken, even to he minutest hair and the slightest shade of complexion it is taken, and therefore most valuable to his family and friends. The discovery not only sares the sitter from the redium or being fixed in the sume posture for many hours ing likenesses, whether in miniature or in oil-painting, a large as life. Mr. Beard, the patentee of the Woleot apparatus, has determined, by the smallness of the price h rame) (being but one gumea, including a rery beautifu frame), to give nearly every class of the public the oppor
tunity of availing themselves of this interesting discoverr.

Effect of Cold on Animals.-We learn from a corre that Mr. Glover, one of the Masters of the Black beath New Proprietary Sebool, has in his possession a black rabbit, which, owsing to the extremity of the cold during last winter, changed to a grey colour all over the
back. Before that time it had not a white hair. It remained grey for a fortnight or three wceks, and then resumed its colour as the cold subsided, and it is now again black. It was in a hutch outsice the house, in rather an exposed situation, not being even protected by a shed.
The Preservation of Birds.- In Guine: the process of preserving hirts is very simple. The bird is placed in a the first running of the distillation of rum. In this spirit it is suffered to remain twenty-four or forty-eight hours, or longer, according to the size, 一that the wine or spirit may thoroughly penetrate every part of the body. The changed in colour by this immersion, are placed smooth and regular. It is then put into a machiue made on purand regular. a mumber of others; and its head, feet, wings, tail, \&c, are placed ecactly agee bit ife. The bird is then carried to an oven, moderately heated, and there slowly dried. It is said that it ever decay.-Indagator.
The Garden Sipider, called Aranea saccata by Linnæeus, is commonly found under clods of earth, and easily distinguished by a white globular silken bag, about the size of a pea, in which she has deposited her eggs, attached is treasure with more tenacions solicitude than this spider does to her bag. She carries it with her everyhere. If you deprive her of it, she will make the most trenuous efforts for its recovery; and no personal danger can make her quit the precious load. If her efforts prove neffectual, a stupifyiug melancholy seems to seize her ad when deprived of this first object of her cares, existence iself appears to have lost all its claarms. But if she sucher actions demonstrate the excess of her abounding joy. She eagerly seizes it, and with the utmost avility runs off with it to a place of security. Bonnet, a French writer,
late in the last century, made this experiment : he threw a spider, of the kind above mentioned, with her bay, into the funnel-like cavity of a large ant-lion, that ferocious one, and conceals itself in a hole at the bottom of it out of sight; this cavity resembles the mouth of a large crater, and any unfurtunate victim that chances to fall into it tumbles with the rolling sands to the bottom of it. The spider being in the trap, endearoured to escape, but was not sufficiently active to prevent the ant-lion from seizing her bag of egss, which it attempted to pull under the sand. She made the most riolent efforts to defeat the aim of her invisible foe. The gluten, however, which astened her bag. at length gave way, and separated; but e spider instantly regained it with her claws, and redoubled her efforts to secure her prize from her opponents. ftwas in rain, for the ant-lion was thaged the oljject of contest under the sand. The unfortunate mother might have preserved her own life from the enemy: she had bat to relinquish the bag and to escape out of the pit. But that wonderful example of maternal affection did she not shibit - -rather did she allow herself to be buried alive, vith the treasure dearer to her than existence, and uas only by force, says Bonnet, that she was withurawn by himself from the unequal conflict. Bat the bag of eggs pushed repeatediy wilh ant-hon; and she still persisted in continuing on the spot. Life seemed to bave beconie a burden to her: the enjoyment of it tas of less moment to her than the prospect of being buried alive in the arave which contained the serm of her progeny. Tlee attach-
 awother learned author, De Geer. After the young spiders are hatched, they make their way out of the bag by an orifice, which this tender mother is care ul tu open for then, like the soung of the Surinam Toad Rana pipa) then, like the young of the Surinam Coad, Rana pipan, they attach themselves in ciusters upon her back, belly, present a ven legs and the about with her, and feeds thens until they are big enough to provide for their amn subsistence.-Indugator.

\section*{SATURDAY, APRIL 3, 1841}

Or the sights which may be enjoyed in London without being paid for, one of the least known and the most interesting is the delightful collection of aquatic birds on the lake in St. James's Park. To this place the inhabitants of the neighbourhood resort for the sake of feeding the wild-fowl with pieces of bread; and anything more beautiful than the birds which eagerly resort from all parts of the lake to the feedingplaces can hardly be witnessed. The water speedily becomes alive with flocks of the most rare and beautiful species, among which are golden-eyed Garrots; Chinese, Egyptian, White-faced, and other Geese; Pintails, Teals, Shovellers, Widgeons, and other kinds of Ducks; Coots, Sheldrakes, Pochards, Smews, Grebes, Cormorants, and many more.
But of the hundreds of persons who enjoy this curious sight, very few are aware that the collection is maintained by private individuals, forming the Ornithological Society of London, of which his Royal Highness Prince Albert is the patron, and that they can themselves contribute to the beauty of the exhibition by paying their guinea a-year to the Society. We therefore take the liberty of making this circumstance known, for the utility of the Society must necessarily depend upon the amount of its funds; and its objects are so intimately connected with the decoration of gardens as to be brought distinctly within the limits
of our paper. There are many persons who are anxious that the lower orders of London should have rational amusement provided for them, but it is extremely difficult in auch a metropolis to devise the best means of securing this end. The Ornithological Society meets the views of such philanthropists in the most unobjectionable manner, and deserves their warmest support.

Prospectuses of the Society may be had at the very pretty lodge opposite the parade of the Horse-guards in St. James's Park, where, also, gentlemen desirous of becoming members of the Society can leave their names.

ON THE PRODUCTION, DISTRIBUTION, AND PRESERVATION OF HEAT, WITH REPERENCE PARTICULARLY TO THE IMITATION OF CLIMATE IN CONSERVATORIES.
"There can be little doubt that radiant caloric must have a
direct and very important influence upon many of the processes of regetation." - D a niell's's Meteorocoapisal Essngs.

These words, written nearly twenty years since by the best meteorologist of our times, will at first sight perhaps appear very much like a truism; else wherefore, it may be said, do we build hothouses? I believe however that has never been recognised appellation, their importance has never been recognised by the world at large, and not in its fullest extent by the learned author himself.
This if true is the more surprising
This if true is the more surprising, since we have for above half a century been in possession of the conclusive iavestigatious of Pictet and Prevost on radiant heat, and
for half that period of the beautiful application of thase for half that period of the beautiful application of those
inquiries made by Dr. Weils, together with the useful experiments of Sir John Leslie on radiating sarfaces; while raore recently the last link has been added to the chain, in the extremely delicate observations of Melloni on Diathermancy, or the permeating power of radient heat at various temperatures through a great variety of sabstances.

It may be obserred that all the labours of the philosophers just referred to are on the subject of radiant heat; a quention which is susceptible of the most accurate, almost indeed of mathematical treatment; while mearly all the eir, and seel to produce by meana of air, more or less heated, those effects which in nature are produced by modiant heat alone.
meiant heat alone.
Teat and radiant heat would be rendered very obvious
of the following experiments which accident recently per
mitted me to make:-On a clear frosty March morning just before sunrise, with an external temperature of \(26^{\circ}\) or less, let any one enter a conservatory, warmed in what
is by some called the best manner ; that is to say, by concealed hot-water pipes, acting npon the air in a chamber under circumstances which leep the atmosphere in rapid motion. The impression on entering such a house will be that of great and oppressive heat, yet a thermometer in the hottest part will probably indicate a temperature of tween 2 and 3 o'clock, let the same person enter a house with a full sonth aspect, having no artificial heat, and having a large proportion of open doors and sashes. The sensation on entering this house will be that of considerable warmth upon the body, but of perfect coolness and freshness to the lungs ; the visitor will in fact be in a thorough draft, producing in spite of the sun's rays, which strike hin through the roof, a very agreeable effect, and altogethe impress him with sense of warmth much below that experienced in the morning; yet a thermometer hung within the house, in the shade, and in the draft, will perhaps indicate a temperature of not less than \(75^{\circ}\) or \(80^{\circ}\) degrees higher than that of the house in which he fedt half suffocated a few hours previonsly
If this statement be correct, it would seem that either our personal sensations or our thermometers are very bad indicators of temperature. The fact is, I believe, that they The mistake in regard to the thermometer consists in ways assuming that when in the shade, it gives the emperature of the air; whereas it merely indicates the state of the balance between its own radiation and that of surrounding bodies, modified no doubt in some degree by the temperature, and still more by the velocity of the ir. In a tolerably quiet atmosphere 1 believe that its effect upon the thermometer is exceedingly small; while as regards our personal sensations, the temperature of the air makes an immediate impression upon the lungs before the state of the radiation can produce much effect upon the body, and hence the different but not contradictory estimates. I am of opinion that the thermometer in the morning exhibited a temperature much below, while that in the afternoon gave a temperature greatly exceeding, that of the air ; yet both, perhaps, measured with sufficient ccuracy the relative quantities of mere heat experfenced in he two positions ; while both, I think, utterly failed to indiate the relative heat-produced effects, because, to use again the words of Professor Daniell, "there can be little doubt hat radiant caloric must have a direct and very important influence upon many of the processes of regetation."
In saying this, I do not refer to the difference between olar and artificial heat, but entirely to the difference beween radiant and air-carrien heat, whatever be the source, a distinction which appears to have ervatogularly neglected, and which in regard to coneconomically and physiologically
This neglect may be in a great measure traced to the undue ascendancy given to the meteorological writings of Sir John Leslie; which abounding in false conclusions, nome only for example his notion of frigorific pulses, down to the yery last pubished in repeated editions, and to the very last, of the Encyclopædia Britannica, public, to the exclusion of the much better works of public, to the exclusion of the much
Professor Daniell and his predecessors.
In illustration of this, it may not be useless to quote the oncluding words of Sir John's article on Dew, a subject great importance to the Horticulturist, and which had just been exhausted by Dr. Wells, in one of the most legant essays in the language.
"It might, perhaps, (says Sir John,) have been judged sufficient if Dr. Wells had contented himself with assuming the coldness induced on the ground as merely an experimental fact. At any rate we cannot help regretting that he should have sought the explanation of this primary phenomenon from the very loose, cumbrous, and risiouary hy pothesis of M. Prevost, of Geneva, concerning what is gratuitously called radiant heat. We are at a loss indeed to conceive how a speculation so repugnant to all the principles of sonnd philosophy should, at this time, have pro cured any favour, unless it proceeds from the blind admi ration which the multitude are prone to entertain for whatever lulls the reasoning facolify, and appears cloudy and mysterious.
The speculation thus boldyy assailed is, perhaps, one of the most satisfactory and unquestionable in the whole in the scisusical theory; and though it suffered nothing na world homa this rather unmeasu all credit, and to have been buried in oblivion.
The late Mr. Tredgold enjoyed, it is well known, considerable reputation as a practical plilosopher, and parti cularly on this subject. In his Treatise on Warming, pub hished in 1324, it is said: "Bodies at a low temperature madiont hept the limited by contact a the warmu they conmicte is chiefl and he refers, in a note, to Sir Juhn Lesles's experiments, proving, as indeed the text itself shows, that he had adopt M. Prevost, in opposition to those of Piofessor Daniell and others.

That Mr. Tredgold's name must not, any more than Si John Lestie's, be taken as a passport to wy statement o opinion unsupported by e, mence, is shown by a subse-
quent paragrapis in the same work, which says: "We cannot employ such a force of heat as would canse water to circulate through pipes by a change of density without
converting it into steam, as may be easily proved by the doctrine of Hydraulics." This unfortanate prediction was made on the very eve of the invention that disproved it ; town was probably a sense of difficuity under such unhot circamstances that, after the introduction of the hof-water system, unconsciousiy led Mr. Tredgold to assibuecirculation to the wrong cause. In his paper pubushed in the Horticultural Society's Transactione, the circulation is made to arise from a supposed elevated head wherer, produced by expansion in the hottest chamber whereas the moving cause is simply that which he had described as unable to produce the effict, namely-a change of densify, which, moreover, does produce the effect by a pure and necessary connequence of the doctrine of Hy draulics.
am obliged to produce these instanoes to support me in an appeal from Mr. Tredgold's dictum on the more important question of radiant and air-carried heat; and especially as this, like all Mr. Tredgold's works, exhibits an appearance of algebraic demonstration based sometimen on groundless assumptions.
In the recent treatise of Mr. Hood, all the reasonings are founded upon a similar idea of the value of atmospheric temperature. The quantity of air cooled by contact with the glass in a given time is made the basis of all the calculations, and no notice taken of that heat which may be t once radiated upon the plants, subject to a very mauch maller amount of loss, and, what is of more consequence, acting independently of those embarrassing considerations, in regard to moisture, which attend the employment of air as the transmitter of heat to organised bodites.
Turning to a still more recent work on the same subjeot similar to F . Richardson-he evidently entertains opinions ater systems, he sarse It may be necessary to obserre that the stmo spheric air, under all these varions circumstances, is made the vehicle for supplying warmth.
The error involved in all these statements, if, as I cons. ceive, there be one, is, it must be admitted, very general. There is scarcely a work upon the sabject in which the power of open fing the ir conmained in an anence to its power of warming the air contained in an apartment as
rapidly as the rate of consumption would seem to demand ad comparatively little attention is given to that which forms the best source of heat in a room with an open fire, namely-the radiation from the floor, walls, ceiling, and furniture, of the heat which has been previously radiated Fem from the fire.
From some cause or other, the term radiant heat seems to have become limited to the case of the sun and to bright fires, or at least to sources which are visibly hot. Radia. deed says) temperatures seems (as Mr. Tredgold inrature of the sir is worth alfully considered the tempearisen, I apprehend, partly from judging of its effects too exclusively by our personal feelings. Everybody has experienced more or less the disastrous effects of sitting ill-fitting door or window. But the mischief so prodeced in very slight degree one of temperature, as may be com proved by taling a thermometer out of the warmest corner of the room, holang it fall in the current of air, and observing how small and how slowly produced is the ansequent depression of the mercury. The eluect of such ference to our organisation, and might probably brediminished by imparting to the air any quantity of heat The fact is, that animals are not made to live in artificial currents of air, whether they be hot or cold; and it is a fair inference that air-heating is as little congenial to the habits of vegetables, besides being open to other objections, which will be noticed in their proper place.
Although I have stated that in most disquisitions upon dered, I do not think that it is correctly estimated consi the reasons before given riz -that neither thented, for nor peran nor personal feelings anfor perature. We read constantly of taking the temperature of the air, as if it were the easiest thing in the world; but it is at saficient for this purpose to place a thermometer out of the direct inimence of the sun-it mast be equally shatesed from the radiation of terreatrial objects. Th error of the inference which ascribes any given chermemetrical indication to the aur, is proved (especially under a cloudless sky) by surrounding the bulb with a palished The air remain unchanged, at the thermometer sink many degrees. The arrangement thus formed. and which was one of the numerous ingenious suggentions of Dr. Wollaston, is the same in principle as the so-calied .Ethrioscope of Sir Joan Leskie, an instrument whose value, in reference to such considerations as the present, has been lost sight of in the bad philosophy with which it was encumbered by its second inventor or adopter. - the very name being founded on the extraordinary notion before alluded to, that its indications were due to emanations of posicive cold from the sky. It proves, however, most de bodies sery much below 2120 , and how fuble ition from rison as a ispecifie calorice of temperature is time air. The small specifie caloric of gaseous hodies is proot euough of their had not been shown the uifins heac, eved by quiet atmosphere in latitudes closely approaching to the poles.
The experiments of Dulong and Petit on cooling are frequenaly reterred to, in proof of the quantity of heat taken off by the air, as compased with radiation; but this
tadiant beat proceded direatht toitso obiet, whie the heated

 then beneath the object to be warmed, it gives out, during of caloric. The experiments of Mesars. Dulong and Petit show very clearly the assistance given by the air in dissipating the heat of any one body, but leave untouched the question of transferring such heat to another and a distant object. effectually by rad power of the air, is shoren by by the contact and carrying are familiar to everybody. Among these may be mentioned the question which some rears since divided the Ladies and the Philosophers. The Ladies, it will be remembered, contended for the superior drauing properties of silver teapots, having no other than what has been called a lady's reason-" "because they did"- Which is a very good
reason, nevertheless, when it happens, as in this case it did, to be true: the Philosophers, on the other hand, maintained that the inferior condecting power of earthenware must render that the most perfect retainer of heat, and, therefore, the best material for teapots. In the sequel, he Ladies were, as is well known, victorious; the greatly superior radiating power of earthenware was more than a match for the greater conducting power and the thinness cooling by the contact and carrying power of the air.

The distinction between what I have called carrying power and conducting power is very important, and requires to be borne in mind. Gases and liquids have no appreciable conducting power; they receive heat by concquired levity, gives place for a fresh portion to be heated and ascend in its turn. Again, it must be remembered that, even as carriers, gases and liquids take up heat by contact only, and absorb no sensible portion of that which brought to a focus which would melt platinum without producing any effect when the concentration takes place in

The enormous differences produced in the rate of cooling and transmission by change of surface, as shown in Si John Leslie's and other experiments, prove beyond question that radiation is the great and important channel by which interchanges of heat take place, and that when it is proposed to substitute for this the carrying power of
the air, we adopt a feeble, difficult, circuitous mode of effecting a purpose which wtll accomplish itself rapidly and spontaneously, by placing the objects, so to speak, in sight of each other. There is the further adrantage, before alluded to, that byradiant heat we communicate heat only; Whereas by using air we introduce a new set of conindeed be requisite to supply moisture, which, when necessary, is easily done; but with air as the carrier-air therefore in constant change-we employ a vehicle whose relations to moisture are extremely dificult to maintain in exactly the proper state. Air warmed and unsupplied With moisture is a very sponge, and exerts an unlimited drying influence upon all fluids presented to it; and air,
if warmed and fully saturated, becomes a wet sponge, if warmed and fully saturated, becomes a uet sponge, temperature with which it comes in contact. The fact is, that air is a very efficient cooler or warmer if it be allowed freely to abstract moisture in the one case or to deposit it or not, at least, in the proportions which might suit the capacity of the air for absorbing or retaining moisture, it is better, I think, to warm by means which are more independent. I do not know whether the reproach of Asop's teaches nothing else that I can understand teaches nothing else that I can understand, perhaps it breath was perfectly intelligible, if it meant to show that the latent heat of the vapour contained in the saturated breath which fitted it for warming the hands, rendered it a very unfit instrument for cooling the porridge.-Alfred Ainger, Doughty-street.
* RURAL CHEMISTRY.-No. VII. AMMONIA is always produced when animal or vegetable , in both these cases carbonate of ammonia is formed, which is a very volatile salt, and consequently is carried away by the air as fast as it it formed. Now water absorbs large quantities of ammonia, which, as well as all its compounds, is easily soluble in that fluid; and consequently the ammonia and salts of ammonia formed daring these processes of decomposition are never retained in the air, but are dissolved and brought
down to the surface of the earth by rain. Ammonia waa down to the surface of the earth by rain. Ammonia wat very closely resembles potash and soda, which are distinguished from all other bases by being called alkalies. Ammonia, however, differs from the two other alkalies in being a gas, whilat they are both solid, and almost all its compounds are more or less volatile, or capable of being converted into vapour oy heat; whilst the compounds of potash and soda are all fuxed, or quite incapable of being raised into vapour by any ordinary anplication of heat. twio of er alkalies have, and consequently it is easily exYe 等? A fand rom its compounds by either potash or soda, as inme and several other bases. Which set free the 10 the gaseous form and unite themselves with fach previously in combination with the ammonia.
yon intona ia not the only compound containing nitrogen
stances ; for although nitrogen and oxygen appear to have no affinity for each other, as they exist together in a state of mixture in the air, and yet do not enter into combinais decomposed, we find that besides the compound of ni trogen and hydrogen just described, a compound of oxygen and nitrogen is also formed, which is possersed of very monly called aqua fortis, or nitric acid.

Nitrogen is able to combine with oxygen in five different proportions, giving rise to as many distinct substances may therefore here be passed over ; the fifth, or that containing the greatest quantity of oxygen, is the only one at in its free or uncombined state, but always in combination with some base; being a very powerful acid, it is easy to understand that as soon as formed it seizes upon some base to combine with, and forms a neutral salt. The commonest are the nitrates of potash, soda, and lime, which are found native abundantly in different places. The nitrate of lime is very frequently to be met with on old walls near which formed nitric acid, which has combined with the lime of the mortar ; and in the same way nitrate of lime may be formed artificially by mixing lime with decaying substances Which can yield the acid, and after allowing them to remain discole together, pouring water over the mixture : this dissolves the nitrate of lime, and forms a solution, which
leaves the salt in question when the water is evaporated by heat. Although nitric acid is a very strong acid, and more powerful acids, which are strong enough to expel it from ite combinations, and we are thus able to procure the pure acid: this is usually done by what is called oil of vitriol, or sulphuric acid-a substance consisting of brimstone, or sulphur, combined with oxygen. When this acid is poured on a nitrate, it expels the nitric acid in the form of very acrid or sour and biting fumes, which may be conliquid which is called nitric acid, or aqua fortis. Nitric acid acts very strongly on all organic bodies, decomposing them sometimes with great violence, and causing their elements to enter into new combinations: thus when on fire. This is caused by the large quantity of oxygen which nitric acid contains, which ersables stances, or at least makes them combine rapidiy with oxygen, which we know is the cause of combustion. When affinity for acid with substances decompose the acid, we obtain some of the other compounds of nitrogen and oxygen before alluded to, and by various processes we are able to obtain compounds of nitrogen with most other elements, setting out with this acid as a source of nitrogen ; for it scems that nitrogen fardly ever wilt combine wit an by the decomptis is being evolved or it was alread by the decomposition of a substance in

Acids have a curious property of changing certain regetable colours. The greater number of vegetable blue colours are changed to red by acids, and this property is in consequence made use of by the chemist to detect the
presence of a free acid; for of course this power of acids ceases when they are combined with bases, as their power are then neutralised. A very common illustration of this change of colour may be seen in the pickling of red cab bage. Every one knows that red cabbages, as they are only bere really dark purple whilst grow rinegar em ployed in pickling them; the same effect would be produced if any other acid was employed. If now we add to some cabbage thus reddened by acid some alkali, either potash, soda, or ammonia, or indeed a portion of any bave, the colour will soon be restored to its original blue because the acid is neutralised by the base; and if the base employed be one of the three alkalies, or their carbonates, such as common pearlash, which is the carbonat of potash, the solution of cabbage will become green, because free alkalies, and likewise their carbonates, have the power of turning vegetable-blue green; and thas vegetable acid, or alkali, in a solution. \(-E\).

\section*{COTTAGE GARDENS.-NO. XI}

Abott this time the necessary preparations should be made by every cottager, unless they have already been at tended to, for planting putatoes to succeed the early crop previously recommended to be reared in the garden. For this purpose every opportunity must be taken to collec all kinds of manure, and get it properly mixed and read by the time it is wanted. The pig and poultry which the generality of cottagers are enabled to keep will produce a much as will manure suffient potato ground to supply moderate-sized family during the year ; but in this, as in most other things, a litile degree of care and management is necessary; such, for instance, as attention to the overing of every layer of dung that comes from the sty with a similar layer of earth, or scrapings from the sides of lanes or commons. The whole is to be turned occasionally and a portion of the best reserved for the garden. The remainder is rery frequently carried array by the neighground for potatoes, on condition that the coctager cleans and attends to the crop during summer. Such at least in the practice in some districts both of England and Scot fad, and we believe it is generally followed with the best effects. In our opinion, it has atendency to keep up that
intercourse and good feeling between the farmers and their regard to the sets of potatoes, we have already stated at p. 116 that the best have been ascertained to be those with single eyes only. The time of preparing the sets is another point which deserves to be noticed. Certain writers on
this subject have recommended that they should always this subject have recommended that they should always far as to say that no harm will result from performing thi operation several weeks beforehand, provided the sets ano not exposed too much to the drought, 80 as to deprive them of their natural moisture; but we entertain a very differtager never to prepare the sets until the ground is ready for their reception. As regards the distance at which poatoes should be planted, a great error is generally comalready observed, and would again repeat, that a clear space of not less than two feet detween the rows will be found the most advantageous both in respect to size and produce. If they are to be put in by the plough without
ridging the ground, we should recommend three small forows of six inches in width to be ploughed between those in which the sets are planted. In the garden, attention nust be paid to any sowings that were omitted last month on account of bad weather or other causes. They shonld now be put into the ground as soon as possible.-M. E. H. - The following books cost from \(1 s\). to \(2 s .6 d\). each, and tagers' prizes : - Martin Doyle's Flower-garden and Monthly Calendar (Curry and Co.); Price's Modern Gardener, an excellent book (Dean and Munday); the Handbook of Fruit Trees (Tyas); and Dodsley's Liconomy of Human Life. We will endeavour to add to this list in week or two.]

\section*{HOME CORRESPONDENCE}

Presercalion of Timber.-1 Che Gardeners' Chro. icle of the 20th February, under an article headed
Kyanized Timber," some remarks were made by Mr. Tillery, gardener to His Grace the Duke of Portiand, which were calculated to excite in the general reader doubts as to the efficacy of Sir William Burnett's patent for the preservation of timber, cloths, cic., from dry-rot, widew, moth, and premature decay. As it is probable paration may have been produced by these remarks, you will, I dare say, give insertion to the following explanation of Mr. Tillery, which was obligingly furnished on an pplication being made to his Grace, in order that it may be shown, that from the facts detailed, the experiment referred to (to use Mr. Milery's own words) was Calcutta Stove is heated with steam circulating amongst loose stones, with tanners' bark to plunge the pine-pots
in. The wood was plunged in the bark where the steampipe enters, and the tan saturated with water every day Ifind that no wood will last long exposed to such s heat as the texture of the wood is soon destroyed, and no pro paration will preserve it against such a severe trial, it can ried in the ordinary way. With regard to the scarlet prepared pieces of decayed cloth, I find on looking to the damp stock where they were placed that it is arched with imestone, and that there are stalactites of lime all over the roof, and a drop has been falling on the scarlet cloth, and not on the others. It has hardened like stone on the
cloth. Perhaps it may have had some chemical effect in decaying it so soon. The limestone is magnesian, and very pernicious to vegetation. The other pieces of prepared cloths and ropes are quite sound."-From the above extract it is abundantly evident that the pood was subected to an action which none prepared for ordinary purposes could possibly be expected to resist, and that the cause of the decay of the single piece of scarlet cloth (out of several similarly prepared, and found sound) is, under the circumstances, satisfactorily explained. The patent has been and is still daily being submitted to the most its preservative powers, and of its vast importance in a national and commercial view.

Horses and Potatoes.-Juvenis thinks that we have misunderstood Liebig in p. 56 ; he believes that Liebig says that a horse fed entirely, not in part, on potatoes will neither increase in size nor strength, and will seribed p. Il i , he thinks tend to corroborate this; for the fact food, for brood mares and young colts, is almost a proof that to a hard-working horse they can onty assue digestive organs. Juvenis would hare had more regard for Mr. Carroll's experience, had be not said that the turnip was superseding the potato as food for the horse. Juvoip both beins well adapted for this soll and climate, and not both being well adapted for this soil and climate, and no
to give either \({ }^{6}\) in feeds of 21 lbs . at night," but to mis them with the usual number of feeds in the proportion of 1 lb. of carrot or parsnep to 3 lbs . of oats or beans. In no country are potatoes used as fond for man and borses so much as in Irela.d, and in no country are the hores that the best entire Erglish draught-horses are imported to improve the breed. Labourers in Ireland, who can onty earn bs. per week, -and in many cases they have fod support a numernus family with it,-being potatorers of Scotland or Encland, where they receive double the wages and are better fed. Potatoes may answer as patroly the food both for man and horte i bet either being entirily
fed on
labour.
Root-grafting.-On reading the article on root-grafting in the Gardeners' Chronicle of March 20, I was forcibly
reminded of what I once saw at Mr. Lee's nursery, Hamreminded of what I once saw at Mr. Lee's nursery, Ham-
mersmith. Calling there one morning, I saw some men employed in cutting up pieces of what looked like stick,
and on inquiry Mr. Lee told me they were employed in grafting the roots of pear trees, and that the practice an swered perfectly well. I remember also to have heard that
in Greece they foot-graft all their vines, and find this essentially necessary for their success.-John Wedgwood, Seabridge.
Pruning Forest-trees.-I beg to add a few observations to my former commanication on the subject of forest or timber-tree pruning. 1. I ans glad to see my opinions considerably fortified by the observations (or "code of rules") of such judges as Lord Braybrooke and Professor Henslow. 2. I also agree with the former, that Pontey's book has occasioned much mischief, which (though then a young
man) I could see by the operations undertaken with the man of carrying out his principles and obtaining his results soon after its publication. At that time my opinions were in some degree in unison with Pontey's, as far as young plantations were concerned; but having since had many
years' experience and observation, my opinions are conyears" experience and observation, my opinions are con-
siderably modified. The "code," in your late Number, is about the most judicious thing I have seen in print on the
subject ; yet the writer of that, whoever he is, does not seem very sanguine in his views as to the benefits of pruning. But I would observe, 3. That before any system o a well-assured confidence that they are adopting the right means to secure a desired end. Now the desired result may vary in a great variety of ways, according to soil, what we call a "wood," or whether for picturesque effect, as about gentlemen's parks and other grounds;-all these should be well considered, and in any pruning operation to pruniag, and so I am ; but in plantations where "timber" is the ultimatum, \(\mathbf{I}\) would never carry it beyond what can be done with the knife, and that only to give a direction to the leading shoot, and to remove those that have any tendency to rivalship, and at subsequent periods to clear the stems of decayed or dead under-branches, so that they do not remain to be a future cross blemish as the living
wood grows round them; all else should sabsequently be doue by timely judicious thinning. When any circumstance renders it necessary to shorten in a bough, it should never be cut in so as to endanger its life, else if it die you must choose between the blemish of a close cut or a snag am still of opision, that taking all the pruning that has been done, by whatever mode, from the date of Pontey's book till now, and put it in the balance with unpruned woods, the preponderance will be against it. My first
principle of reciprocity is more or less disturbed by it principle of reciprocity is more or less distarbed by and grounds, I beg to ask, Did anybody ever prune a tree into the picturesque, or even the grotesque? - Never. I allow that a park scene may sometimes be improved, under a
judicious eye, by a little cutting; but that is quite another matter. It must not be done à la Ponter. But again there is one object kept too much out of sight in all object mostly put forward is to obtain a large bulk in a short time. Now every one conversant with these matters knows this : that take a tree-a Scotch pine for instanceand place it in a favourable soil well trenched first, it will grow at a rapid rate, laying on annual coats of wood from \(\frac{1}{\frac{1}{2}}\) to \(\frac{3}{4}\) of an inch thick, its texture more like cork than to prevent this, or to promote it, that pruning is so pressingly advocated? I have seen in Fifeshire timber of the Scotch pine cut, that in quality would rival any from Nor-
way or S weden, which I am certain never was tonched by any pruning instrument, and grew on soil where little else would live beside now and then a tuft of heather or hard iry grass. Time, I fear, is essential to quality.-Quercus.
Abutilon striatum.-As this seems likely to suit a bed in the flower-garden, any one possessing but a small stock of it and wishing to increase it, for that purpose ought to keep it in the stove, as it will there continue to push even
in the dull days and long nights of winter, and every two joints will be sufficient for a cutting, which will make plant in a fortaight or three weeks. By the time the cutting has pushed far enough to admit of being topped, another From a small plant which I began to propagate in this manner last autumn, I have now upwards of 150 plants in pots and as many more rooted and ready to pot off. If kept in that anything can be made of it.-Jomin Falliday, Etwaham Hall.
Glazing wilhous Putty. -I observe in the Chronicle of the 1 ith inst. your remark made to a correspondent,
Who says that the method of glaring without putty in Lancashire has been in use for some time with large sheets. You say you much doubt the practicability of it with small squares. The whole of what I have glazed by this method
is
'small squares, -W. May, Hope Nursery, Bedale.
Nelumbium speciosum.-Having seen in a late ChroC. E., who observations on Nelumbium speciosum, by I beg to send you the routive of culture I have seen practised successfully every year upon upwards of 20 speci-
mens:-The propagation is, as mentioned by your cor-
respondent, by seeds or division of the roots. By seeds
I proceed as follows:-I cut a little bit out of the onter
I afterwards put the seeds in a pan filled with water placed in a frame or house where it can have bottom-heat, by which means they will germinate in a few days. When they have acquired the length of 4 or 5 incles. I plant them 2 inches deep in a tub 2 feet square, and \(1 \frac{1}{2}\) foot 3 inches thick, and then filled up with rich loamy soil. This tub is then plunged in another about 6 inches larger every way, and kept filled with water, which must be re newed twice a week; the flowering and bealth of the plants
depend upon a strict attention to this. A light situation should be chosen, with a heat of \(65^{\circ}\) by night, which may be allowed to increase to \(90^{\circ}\) by sun heat, but during very My hemia, informed me last year, that he had obtained a new variety between N. speciosum roseum, and luteum; the seeds wereripenedin 1839, and were sown in March 1840, and in the July following produced their delightful flowers of yellow ground, with the points of the petals tipped with rose colour, more double than speciosum, and very fra grant. This rapid perfection does away with the old
notion that two or three years are required to flower notion that two or three years are required to flower
Nelumbia from seed. A gradual rest should be induced towards autumn when the plants begin to die down, and they may be placed in any situation where the thermometer
does not fall below \(45^{\circ}\), taking care to keen them almay moist. In the month of March this small tub must be taken to pieces carefully, without damaging the roots or prove fatal to their well-doing, and even endanger their life. In planting, I place the root in the middle of the tub, covering the roots about half an inch deep, observing to keep the crown above the surface, and I earth it up as it advances in growth. The leaves will acquire a height o make their appearance; in about three weeks after the flower will expand, when more air and shade must be given which will be the means of preserving it in beauty for longer period. The above treatment will also be found suitable to all tropical Nympheas.-Z. Yoscht, Chats. warth Gurdens.
Aquatics.- Since you gave a list of water-plants, have inquired for them at several nurseries, and have no been able to procure them. Can any of your correspond
ents say where they are to be purchased ?-K. [This can ents say where they are to be purchased
Tobacco Fumigation.-I have always found Tobaccopaper the most efficacious substance to fumigate with, for destroying the Aphis, without doing any injury to the plants: if the house is not filled too rapidly with smoke, and is allowed to reach the glass without coming in con out doing any injury. Plants fumigated in frames, or unde hand-glasses, are most liable to be injured by the heat of kind of Tobacco-paper sometimes offered in spring by the Tobacconists, apparently made to meet the iacreased demand; and this kind of paper will bring the leaves off plants, without killing many of the Aphides. It is of a lighter by the smell being very different. Foliage should be perfectly dry when a house is fumigated, and should not be syringed till next morning. If plants are syringed immediately after fumigation, many of the Aphides will recover even where they have dropped of the plants; a fact which any one may soon prove after fumigatin
- D. Cameron, Botanic Garden, Birmingham.
Luminous Insects.-In the observations made in the Gardeners'Chronicle with respect to the different kinds of luminous insects in this country, no notice as far as I have seen has been taken of either the common large black Hair-worm, or the yellow Centipede; I am not gist enough to know their learned designation. That they oth emit and leave in their paths streams of sof blue light, I can vouch for, having scores of times in my youth and sometimes since, pickpd each kind up, betrayed by their own light,) when bat-fowling in a venerable grove of gigantic ivy-trees in the depth of winter, certainly more than once when snow was on the ground. 1 think it probable the insects themselves were displaced from their coverts by the beating of the trees. I may add that the insects, rom the dificulty \(f\) pieking them up in the dark, are extremely liable to be broken; in which case not only are the several pieces luminous, but the fingers also, which uminous appearance may be conveyed by tonch to any other object. This brightness however is exceedingly ransient. The spot where I hove made these observations is in my father's grounds at Dinton Hall, Bucks. As I speak from repeated personal observation, I can safely

Havdy Aquatic. - Aponogetom distachyon, when better known, must become a universal favourite, as it is an aquatic poosessing muchin to recommend it, being of the and fragrant flowers. That it is extremely hardy is now placed beyond a doubt, as the flower-stem of a plant growing in a small pond in the flower-garden of Henry Dawkins, Esq. Sandgate, Kent, kept progressing during the late severe frost; and a day or two after the thaw. I saw its interesting flower floating upon the water. The poed in which this plant grows is not more thely of water triciling from a rock above, and although I smin not aware that the water has ever been frozen, still under such circumstances the temperature must of neceniky be very
low; therefore it is in the power of every one to culci-
vate so desirable a plant, and nurserymen woald do well to bring it into notice. \(M\) M. \(T\)
Snake Millipedes.-Ruricola, in the fourth article on Entomology, seems to doubt whether the snake millipede are destructive. In my garden they are very numerous and last spring they destroyed my early crops of French Beans, by eating into the bean, just at the period of its escaped. hot one bean in ten of those sown escaped. The Julus pulchellus was the most destructive in many of the beans four or five of these were found some penetrating them in the same manner as the wire worm, and others having already excarated a cunsiderable portion of the bean. They also eat peas at the time of gormination; and they injure potatoes, though not so a do as the wire-worm. About a month since, I planted after they had beet-root of a fine kind, for seed, and they did not vegetate, I examined them, end fons, each root, upon an average, 40 or 30 of the different kinds of Jalus. I have not with a microscope positively seen these insects devouring the plants I have mentioned; but I think I have sufficient evidence of the fact to convince

Roses.-In reply to a Rose Amateur, p. 198, who desirous of having a list of Roses which have been injured by the late severe winter, I beg leare to enumerate the names of those which have suffered in this nursery; bu ar the Roses bere are planted in light ground and dry sub soil, I am happy to say the loss is but triffing. The Collowing varieties only have been totally killed, budded plants, and on their own roots having shared the same fate, viz.-Hybrid Perpetual Psyche and Queen Victoriz Clinophylla Rosea, Berberifolia Hardii, Banksia Yellow. The undermentioned Roses have been killed down to with a two or three eyes or buds, but are now breaking very vigorourly, viz. - Noisette Rose's. D'Espalias, Jaune Désprés, Lamarque à Beurre frais, Camellia rouge, Wells' Instaliende, La Niymphe, Fellemberg, io Glegs fered the most.-Macariney Roses; Lucida Duplex and Maria Leonida.-Microphylla; Cocciuea, Hybrid Pourpre Maria Leonida.-Microphylla; Cocciuea, Hybrid Pourpre
du Luxembourg, Rosea, Violet cramoisie.-Buurbon; Ansegise, Marshal Villars, Bengale Macrophylla.- Multiflora; Alba, Elegans, Grevillei or Seven Sisters, Laure, Davoust, Rubra, Superba.-Hybrid China; Saudeur panaché or King of Ruses, George the 4th (Rivers's) Standards - Ming-neuf Juille. The abovomamed are standards and piants on tweir own roots. The rea-scented Roses, which are generally considered the most tender, and more liable to be injured by froat than other varieties, bave suffered comparatively bat little; it is true the tips of the shoots have been nipped, but I do not believe out of all my collection that I have lost above two varie frost set in. I ang is the plan 1 adopted:-Before the round the heads of some of the standards. Others I collected together very thick, placing mats round them for protection; bat I find those protected with fern have ucceeded the best. But what is the most remarkable, al my stock of standard and dwarf Tea-scented Roses, which
were budded in the summer of 1840 , and consequently were this last winter en ceil dormant, had not the slightest protection whatever, and, strange to say, 1 have hardy lost plant, but am happy to add they are now en ceil vivant, and breaking with great health and vigour.-W m . Wood, sen., Maressiela.
Slugs and Punsies.-Slices of Swedish Turnip laid on the beds will entice slugs to take sheiter under them, from this day picked upwards of 50 off one bed, though the turaip-slices were only placed there yesterday. I have seen in more than one book on gardening, that in parting Pansies "the roots should be well washed in clean water." Any anthentic information on this point will be interesting, 3 bearing very strongly on the ererementitions theory. Without absolutely denying that theory, the example principally quoted in proof of it-namely, the RaspberryI mave Raspberries in my own garden, for fifteen years in have Raspberries in my own garden, for fifteen years in the same spot, in high bearing; and I know of If this be pecaliar to this country (North Wales), it opens a new field for consideration. The Raspberry grows wild in many parts of North wales. is there any pecniar amnity between it and its naive habitat that causes it to thrive so long without degenerating or deteriorating?-Bearing on this is a fact mithin my knowledge. There is a farm not far from me where the sanse variety of wheat has been and wated for upwards of 20 years whe instance of his neigh bours the farmer often tries, on a small scale, eties, but they are invariobly infected with smons, mildes nd other diseases ; whereas the olid variety is always free from them. Is there not hare some pecuiar affinity be tween that variety and that eoil? I could multiply similanfairynghornwy, Anglesey.
and Lemson Trefs.-I see in Nent of unhealthy Oranjes and Lo "M." for the treatmeat of unhealthy Oranges and Lemons. I beg leare to state that I have nad in my care, for many years, Oranges and Lemons from the bud; they were trained to the back Wail of a vinery in tuba 104 years the Lemon-tree covered of fruit a feet long, oy feet high, and had a great nucober sure \(4 \frac{1}{2}\) in. in circumference, by is in length. The Oranges made nearly the same progress, and bore very large frut; they were of the "St. Michael" kind. The compost had used was loam from under large Olkw or Beechen,

Where cows frequently congregated from the heat of the ann. In October in each year, I top-dressed each tub by mulching of sheep's droppings made thin, upon which stem, I covered the surface with sifted earth from an old cucumber frame, and syringed them with soft water three or four times a week, as the weather would permit, which gave the trees a clean and healthy appearance.
M. Waller, Glenstuet Caste, Counsy Iimerick.
To grow Melons on Ridyes.-Mr. Porbes, gardener to Sir J. Edwards, Bart., states that he has grown melons on ridges with great success, having on one occasion, at Cheam, in Surrey, obtained three dozen fine frait from six hand-glasses. The system he pursued was to sow the seed in the first week of May, and give the young plants two pots; and in Jane, to plant them out on the ridges. During the time the plants are in pots, water is given but sparingly, to prevent a lexuriant growth, and the premapinched off, but the leaders are not. The ridges are composed of half yellow sandy loam from a pasture, and halfrotten manure from an old cucumber-bed. Cast-iron hand-glasses are used, 20 inches square, with moveable
tops, as it is essential to give a little air before the glasses tops, as it is essential to give a little air before the glasse3
are entirely talken off. To prepare the bed, the soil is dug out to the depth of 18 inches over a space 30 feet long by 6 feet wide ; one foot is added to the north side, making that 2 ft .6 in . deop, and the sonth 18 in ., which is a good slope to the wan. After the mould is put in, six with tiles for the shoots to run upon. For the first two or three days they are slightly shaded with an old net. The glasses are kept quite close till the plants begin to grow, glasses are kept quite close in \(80^{\circ}\) or \(85^{\circ}\); and when the leading shoots have nearly reached the sides of the handglasses, they are raised \(2 \frac{1}{\sqrt{2}}\) inches, with small blocks of wood. Flowers of both sexes are produced plentifully, so fruit is well set, all are pinched off with the laterals but one, and the shoot on which the fruit left is growing is stopped two buds above it; but the leader is never at any time cut back. Every plant ripened one fruit, and consequently six were produced under one hand-glass.-Green Pields, Machynilleth, North Wales.

Saxifraga oppositifolia. -There is a very beautiful apring-flower often omitted in the lists that are generally made of hardy herbaceous plants; and it is the more to be regretted thatit should be so, as it is an early flowerer. The plant refer to is the purple mountain Saxifrage (Saxifraga oppositifolia.) Is it overlooked because it is of native growth : Surely beanty ought not to be despised on account of its being indigenous. In Hooker's Flora Scotica it is said to flower in May; and in Soith's Compendium right, but where the plant is removed from its alpine heights and planted in lower situations, it will flower in the end of February and beginning of March. Along with Hepaticas, Crocuses, Snowdrops, and other earlyflowering plants, its red purple flowers have a very pleasant appearance. It is hardy and easily cultivated, and either in bed, border, or rockwork, it will grow and flower freely Perhaps by giving this notice a place in the Chronicle it maty bring the plant a little more into favour.-Peter Mac-
Wenwie, West Plean, Stirlingshire. wonsie, West Plean, Stirlingshire
Birch Coppiof.-It appears to me that your correspondent ( \(p, 165\) ) is in error with regard to the intention of an
inquirer ( \(p .85\) ) on the subject of Birch stools. I undergtood the required information to be-not what would be most likely to prodwce underwood, but-what would be the best plan, uxder the circumstances, to adopt with regand to the Birela. Taking that view of the question, 1 gave the repiy as you received it. But doen your correupondent wish to form underwood in the rhortest pomible period, with the twofold object of profit and a preserve for game? Then my little experience tells me his best plan would be, in the following autumn, as eariy as possible, to eut down all his Birch. One season will prove if my expecthe produe realised. Should the result be, as hitherto, the production of weak, sickly shoots, let him purchase a quantity of young Birch and plant agaia, taking care to prone them judiciossly as they grow, and to fell them at the age of 14 or 15 years: he will thereby produce a good and profitable underwood, affording an excellent preserve for game. I cannot possibly see the advantage of planting holly. yew, box, or laurel, which your correspondent reno value in point of utility, and only desirable for the purpose of sheltering game, which I think should be quite secondary consideration with every good manager of plantations : still, if the two objects can be combined, it is prietors of woods, if they wish to see them thrive, entifely 0 wappress the preservation of hares and rabbits; for they enay rely apon it, there is not a class of men who do their emplayers so much injury as "kreepers." In the first place, menc who may be at work upon their estates, thereby robbing them of moch labour; and they keep the minds of their employers countuntly in a state of excitement, rendering the inaprovement of woodind property almost impossible, hy representing that this plantation must not be pruned, nor that wood felled, or the game will all be driven awry. I could say move upon this aubject; for expe-
rience, though short, has taught wemelh, \(-A\) Foung
Forester.

\section*{MISCELLANEOUS}

Marchioness of Exeter Camellia.-Of all the Camellias yet raised this is, in our opinion, the finest. We have
before us flowers betveen five and six inches in diameter, very regularly double, with broad rounded petals near the margin, and narrower ones in the centre. The colour is a bright deep rose, with a much paler but still rose-coloured eye. In form the flower is hardly inferior to seed of Middlemist's, by James Priaulx, Esq., of Guernsey. It is the intention of that gentleman to exhibit it at the Regent-street.
Tropical Fodder-grases.-The Gama grass of Mexico in the West Indies, where fodder is so scarce, being insensible equally to the effects of heat and cold-of humidity and dryness. The seed, however, is long in vegetating, in some instances continuing dormant for 14 months; and in another instance taking 2 months to sprout, although
kept constantly wetted near a kitchen stove. The Americans represent it as yielding from 70 to 90 tons of green, or from 20 to 30 tons of cured hay, per acre.
Plan of Order Book.- I have often seen unpleasant surmises and altercations at the paying of long bills. The system of "order-books" does away with these unpleasant feelings altogether, and moreover is an excellent check on servants and tradespeople. All the heads of departments should have an order-book; say, the house-steward, housekeeper, gardener, bailiff, coachman, and gamekeeper; and the tradespeople should have directions not to give anything without an "order," that is, without a cheque with order written on it. When a bill is sent in for payment, it mast be acoompanied by the corresponding orders with the different items, otherwise the bill may be disputed. 8hould a tradesman lose one of his orders, the orderbook is referred to, where short memoranda are entered of
the things ordered. It sometimes happens that a tradesman cannot supply all the articles mentioned in the order; in that case he is bound to return the order, to be made out according to the articles supplied. Por example:-I may order for 10 casts is returned, and I gend one for 7 casts.-D. Beaton.

Garsen 1 and 2 of the

Ash-roots.-An ash-root was grubbed up at Stubwood, near Hungerford, the other day, of the following dimen-sions:-The length, 90 ft . ; the circumference, 10 ft . from the atool, \(11 \frac{1}{9}\) in. ; 50 , ft. from the stool, \(5 \frac{7}{4}\) in. Tull, in bis "Treatioe on Roots," mays roots will follow the opean
mould by descending perpendicularly, and mount again in to do, that have passed a steep ditch, 2 ft roots of a hedge the mould on the other side. This tree grew on land which is only parted by a ditch from that on which Tull 12 ft . of timber, and the The tree contained about 10 or Shalbourne.-Devizes Gazettro.
Anturctic Voyage of Discovery.-By advices from Hobarton we hear that the expedition under Capt. Jas. Ross was about to proceed southerly, having completed the
observations in Van Diemen's Laud. The espedition had visited Kerguelen's I:land, where Dr. Houker had fuwnd the new cruciferous plant mentioned in Conk's Vopage by Mr. Anderson as likely to prose a uieful escunatural history had been lost in the shipwreck of the \(E\). a small schooner, on which they had been placed for transmission to Europe.
Regius Profes*orship of Butany, Glasgow.-We find that three candidates have offered themselves for this. important chair; viz., Dr. Walker Armott, one of the best
systematical botanists in Europe; Dr. Balfour, of Edin burgh; and Dr. Scouler, of Belfast. We trust that the Marquis of Normanby, with whom the appeintment lies will be advised that there are no medical duties attached to a chair of botany; and that the professors at Camhonour to the University, are not medical men.

Gypsum.-Gypsum, when first quarried, has the appearance of spar, and is so close and compact that it, in it becomes brittle and eapy to powder. The best apparatus to burn it is a lime-kiln, and it should be burnt in a manner precisely similar to lime-burning, with this exception that half the fuel will do, as it does not nequire a high
temperature; but should there not be a lime-kiln at hand, temperature ; but should there not be a lime-kiln at hand, materials, such as colke, wood, or charcon, intermised judiciously in a large heap with gypsum, and set fire to, will answer the parpose; when burnt, it shoald be ground ander a common edge-stone on an iron-grating, through which grating the powdered gypsum will fall as it is have the appearance of spar, and be difficult to grind, it is an indication that it is not sufficiently burnt. By powdering a piece in its natural sta wha pestle and mortar, and then by putting a making it hot, and then powdering it, the difference will to the situation, may then be decided upon. A horse ought to grind three or four tons a-day, which would dress many acres. The apparatus for grinding should be on the same principie as that used for griading lime, for
making concrete for fourdations. When the gypsum is heated, the water which is cbemically combined with it, (ific) is the cause of its hardness and compactuess, tlies off, which held it gypsum easily to be acted on, as the bonds Lane Express.
Nitrate of Soda.-I have tried nitrate of soda on Seakale, applied just previously to forcing, and find not only no benefit, but an injury as the result.-Corresp. of Mark Lane Express.

\section*{GARDEN MEMORANDA.}

Masters' Nursery, Strood.-We found here sereral handsome

bearing a profusion of small sweet-scented white towers at the year at which it flower, commencing sometimes in January and
lasting till April. In the npen ground we saw some fine Hyacinths growing and fowering with great luxuriance; the situation of the garden is on the side of a hill sloping to the south;
the soil is fure yellow loan with a gravelly subsoil, and when a
little cow-dong is mixed with it, apper particulady well adnpted Tor bulb,- Haroh 29 .

duced.-W. K., March 26.

\section*{Rebíems.}

Transactions of the Society of Arts, VoI. LIII., Part I. contains some matters relating to Gardening, the substance of Which is the following :-Mr. Webster of Ipswich states that he finds coal-dust not inimical to vegetation. varietrd garden-pots with fine coal-dust, and placed In all of planes in them, such as potatoes, onis, bec He filled hyacinth-glasses with coaldorust, and put bulbs therein, supplying water as required; and the result. when compared to those without the cual dust, was rery marked and evident; large, healthy, streny plants being produced. mental plants thrive extremely well in this material, which is clean and neat, in iffensive, without odour or stain not capable of harbouring insects or maggots, well adapted for in-door floriculture, and enduring for a long period.The same author speaks of the utility of coal-tar and
slacked lime. One gallon of coal-tar, mixed up completely with one bushel of slacked lime, produces a material of warmth and value as a manure, rich and stimulating, and tending very much to keep away the flies when sprinkled freely in and among the young turnips. He says he has rows where none was used. Animal tar, or dipped oil procured from the distillation of bones, and at present eneve a nuisance, if used with slacked lime in the same nonner, forms a much richer and more serviceable manure an that of the coal-tar
Mr. Henry Smith recommends the following method of healing the wounds made in large trees by lopping:-The branch is cat off at a distance of three or four feet from the tree, care being taken to support it in a manner to
prevent it from splintering the stamp. The bark of the stump is then cut into narrow longitudinal strips which after being carefully peeled of with a barting tool as far as the body of the tree, are tied back so os to keep them clear of the saw in the ampatation of the stump close to the body of the tree. The saw-cut surface is then cut mooth with a wide mortice-chisel, and is covered with the strips of bark, cut and fitted to it as accurately as pow sible, and fastened down with brads driven into the deptim rounding parts are next covered to the depth of two or three inches with a cataplasm, according to the followit receipt :-Clay, 4 parts; fresh cow-dung, 2 part ; wood ashes finely sifted, 1 part; add cow's hair, such as that quantity of the compolition required. Mix these material together in a very regalar manner, moistening them with water to bring the whole to a proper consistence. In tout conzaserve the catapiasm from external finury, of the tree. "The bandage and cataplasm must remain the bandage, nails, \&cc., must depend solels on the healed state of the bark. When the bark is healed, the part of the tree where the amputation of the limb took place rill appear as if no limb had grown there." The operation should not be performed during the winter months when the bark will not "run" or separate from the wood, and and when the wounded part is liable to be attacked by frost. About October 1834, he "cut off a large limb about six inches in diameter. The circumference of the body of the tree where the branch was amputated was four
 years old. The bark is healed all over the wounded part, and the appearance of the tree at this particular place is In the mechanical grown tuere.
In the mechanical section we find the following account of Mr. Paxton's engine for manufacturing sash-bars for greenhouses, icc., to the beautiful working of which we can oursetves bear testimony. By permission of the society of Arts we are enabled to use the block with which the details of this curious contrivance are illustrated. In constructing the great conservatory recently built for his Grace the Duke of Devonshire, it was found desirable contrive some means for abridging the manual labour cessary for making the immense number of sash-bars the origia of the present machine, which, in its first state, merely performed the part of a grooving machine, but was subsequently improved so as to make the bar complete. As the conservatory was built under my own immediate superintendence, I can speak accurately as to the advan tages of the machine. It has, as regards that building performed the labour of 20 men for one year, and, consequently, saved in money about \(1200 \%\). The length of direct line, apwards of 40 milea. The present machine was constructed for a particuiar purpose, which it has now satisfactorily accompinhed; but if one were to be permanently in use in any manafactory, or in the establishment of an extensive buidder, the framework might be advantageonsly made wholly of cast-iron, with polished plates are the gage-table; and alluough the are of a particular form, ret by changing the characters easily worked. There is one particular feature in working the machine, namely. that the bar is presented to the sawa below the centre of motion, instead of, as is usuat, above if ; and also to the sides of the saws which are ascending arrengements the teeth to the grain of the wood; for when the bar was presented in the usud way, the saws crushed, instead of cutting and cleaning the wood. When the machine make 1200 revolutions a minute (which it it esmential it sheald
do), the saws not only cut, but plina the wood ; and it
only requires afterwards to be rabbed a little with sandpaper. For very fine work the immense labour is considered which is annually consumed in making sash-bars even in London alone, the greater part of which might be saved by machines of this
description, it is thought that the present invention will description, it is though

This machine ras first used in its present form in Aufour and a half horse power, employed on the premises for other parposes. Half of this power is required for the sash-bar machine, and half the expense of the en gine, including attendance, \&cc., is 5 s. a-day. The ma chine can make bars at the rate of 600 ft . an hour but it cannot continue long at this rate, as time i required both to cool and sharpen the saws. The average number of bars per day is 500 four-feet leagths, or 2000 ft . The greater number of bars used here have been made from Riga deal, and some from oak, \&sc. The attendants required for the machine are only a labouring man and a boy. The first cost was 20 l.
Reference to the Figures.-Fig 1, sec tion of a sash-bar, half size; the other figures are one-eighth. Three operations finish the bars like fig. 1. Fig. 2, an end view of the whole machine. A B C an iron frame fized across the bench, D D E E, its poppets, between which the axis \(\mathbf{F F}\) is mounted, having on it all the cut ters, \(\mathbf{Q}\); the driving pulley, \(\mathbf{H}\); and the circular saw, II, fixed by the screw-nuts, G G. J, the saw-table, having on it the bed, K , whose slope is made to the right, a plank of the right thickness, out of which a plank of the right thickness, out of which the bars are to be cut: it is shown on the
bed, \(\mathbf{K}\), with the saw, II, in the act of cutting off one bar, N ; the plank is then laid with its upper side undermost on the bed ; the next bar is cat off, and the operation thus continued, the plank being reversed for every cat : this is the first operation. Each bar, N, as it comes from
the plank is to be laid on the bed, O against the gauge, \(\mathbf{P}\), and passed under the cutter, \(Q\) : this second operation wil finish one side of it. The finishing table R , is then raised a lithe by, and fixed by the screw, T ; the bars are again passed under the cutter, Q , with their other sides uppermost : this third operation finishes them ready for use. The motion of the cutter, \(Q\), meets that of the bar, tending to thrust the bar from it, rather that draw it in. The cutter, \(Q\), is composed of five separable discs, somewhat resembling small circular saws, of such thicknesses, and having edges at such angles as produce the compound figure required for the bar. These are shown at figs. 3 being indicated by the same numbers in being indicated by the same numbers in
fig. 2 . Fig. 8 is a section of a assh-bar placed so as to show its correspondence with the cutter in fig. 2 .

CALENDAR OF OPFRATIONS for the ensuing Week. IT will beobserred that in the houses a moist atmosphere is nearly always recommended; and as this may be confounded
with humidity, we will explan our meaning of the term -It is that kind of atmosphere induced in kine weather by keping the
borders of the house in a medium state, by frequently wetting borders of the house in a medium state, by frequentiy wetting
the paths and walls of the house from the rose of a watering-pot or springe, and by sprinkling the plants themselves occeasionally A humid or saturated atmosphere is a very different thing, allowed after the plants are in leaf, as it tends to produce the same effects as shading plants. and at the same time supplying them liberally with water at the roots, by forcing them to absorb more fivids than the limited action of light on their leaves will
enable them to get rid of by perspiration, and thereby inducing a woft and unhealthy growth. But even to this moist atmosphere there are exceptions; for, during the time the plants are in flower, rather a diry air in the houses than otherwise ought to be
maintuined; for it is known that an unfavourble or moist state maintained; for its the pollen acting, and produces sterility. If with the setting of fruits in the open an, we have only to observe It is risibly shown by striking the catkins of the hazel, of some other plant, such as yew, which shed pollen in aboundance ; during damp weather it whi be seen that inttle or no pollen is scattered, surrounding atmosphere with it. In the case of Vines, the nee lastely been urged as a supposition only; we think the above facts argue much in its favour
I.- KITCHEN-GARDEN AND ORCHARD.

> Prashr.- Where there are Vines in the Pinery sufficiently advencel, the shading outsie may be dispensed with; but where
there are none, it should be left of gradually, slthough the phants
have become well rooted, by have becoge well rooted, by putting it on a little later, and re moving theartier in the day. Be very vigilant as regards the little extre trouble this entails may be amply repaid hereatier Whilst neeriect may possibly cause a season's failure. Water the plantst modetrutely with clear water; man morewater is unneces sery so soon after shifting into fresh soil; continue the slight syngainst aver-head, and give alr freely at proper times, but guard the hater crops, but lef shos should never be thinned so much as wrould retain its form if cut and laid on its side. The West's St. Peter's, or others iately pruned, should be shaded from the sun the time may be recorered at a for if allowed to do so slowly, an tend carefuily to the advametps shoots, that they do not get broken by corraing 年 contact With thee retters of ginwot stop before
> Pracr-housg, - Continue to preserve \(z\) moist sweet atmo Sphere, by trequently sprinking the pathis aues, mad other parts
quire continued attention to thinning out the branches and tying in neatly the well-disposed ones. Syringe the trees on fine mornings: but there is little fear of insects coming so early if the
trees have been dressed with lime, sulphur, and soft soap, as recommended.
Caznar-horsz.-Continue to preserve a moist atmosphere Cut bact to three or four eyes all wood not required for filling up vacaucies, and omit no opportunity of giving air. Prepare, pre
iously to the fruit beginning to ripen, frames covered with fine viously to the fruit beginning to ripen, frames covered with fine meshed netting, to be fitted into the openi.ss where wis is given,
to exclude birds and wasps. Fra-mouss.- Plants in tube should be watered daily; any sudden check or change of trentment is extremely liable to cuase the fruit to fall off. Give airp plentifully on fine days.
Cucumizas \(\triangle N D\) Mrlons. - The plants may now be watered more frequently, as the weather admits of more air being given till using the precantions to warmit, of ge shat up dry. The linings when renewed at this season do not require to be built above the surface of the siil in the frames, as the heat of the sun will now diry the beds sufficiently;
dung to be used for the linings, as it is of the greatest importance
to the well-doing of the plants; take advantage of favourable to the well-doing of the plants; take addantage of favourable
opportunities for stopping, setting the bloom, \&c. MCSHEOOM-HOUSE.-PTeserve a humid atmosphere; it in a great measure prevents the necessity of watering the bearing
beds, and checks insects from depositing their larva in the Mush beds, and checks insects from depositing their larrx in the Mush
cooms, which they otherwise will do. Now that warm weather rooms, which they otherwise will do. Now that wan
is approaching, beds may be made for summer-bearing
is approaching, beds may be madi for summer bearing. atrawarariss.-Thin the leaves where they shade the fruit, in hot weather, require it twice a day.
Potatosy in pits and frames should be earthed up as they ad Fance, and receive regular supplies of water
Kidyry-beans. - Continue to sow for succession, and supply y with water.

Out-door Depertiment
Check the advance nf weeds by keeping the hoe employed, which aiso prevents the soil from becoming impervious to sun and air Is a general appearance of neatness should may be raiked fine, his department, as well as in the ornamental one. A fex plants of fine kinds of vegetables may be left fir seed, by which you ime two different plants of a tribe, likely to intermix and produce spurious kinds.
Asparages.- Thase beds it is intended to cut from, fork carefully orer, break the soil fine, and gather off large stones. BEETT may still be sown in late situations.
CABbaGBi.-Finish planting out the autumn-sown for cab anging, or coleworts, and sow for sum
Cardoons may be sown in patches, to be thinned in the trench where they are to remain.
Cacluplowsra.- Earth-up the erlient plants and raise the hand-glasses on bricks; prick out the spring-rnised to strengthen.
CaESS, MUSTAD, dec. should be sowa weekly on a south

Potaross. - Continue to plant the main crops.
RADIshes.-Do no not allow the early crops to become woody
or want of water if dry weather oceur - sow sucessione for want of water if dry weather occur; sow successions.
Ternirs - Hoe and thin early crops, and sow a few more. ther render it necessary; tinish prating loosen thr thrit-treeborders with the hoe, , thes and tigs may thill be lavee of flued wails should not have fires thigted in them at this seereson except in cases of strone frost or continued wet weather; the is their assisting to ripen the wood in the autumn.

SToFs.-The Orchidaceous niants may now have greater heat and moisture, which will render shading necessary. A Aply liguid
manure two or three times a week to Musa cavendid hii, and sifit manure two or three times a week to 31 usa Cavendishi, and shity
the young plants as ther advance in growth. Syringe all store plants over-head occasionally; but if this is practised too often it renders shadding necessary, wichir hous be avcided if possible, GRESHOLE.-Syringe the plants occasionally over-head, and keep the house as recommended in the last Number. If the, anc.
culents have been potted and transferred to a dung-frame, they should be shaded lightly and kept nearly close: give them a slight
dewing over-head daily, and the thermometer mey be allowed to dewing over-head
rise to \(90^{\circ}\) sun-heat.
Prits
be shaded from strong - suriculias about opening their buds mot be shaded from strong sunshine, and have all the air pousalbl
siven to there, to prevent the flower-stalks
Thin raving up weak given to thern, to prevent the flower-stalks drawing up weak watering with hyuid manure; continue to cover them up at
night. Sow Dallia-seed if not done before; or if up, do not ailot them to become weak by learing them thick. Propayate violet by clutings under a hand-glass on a asouth border. Put in cuttings
of Crassula and plants of that class now, and continue to pro. pagate Heaths and other greenhouse plants.
Finish parting perennials, planting biennials, Camations, and edginss of every kid; complete new work for the season 23
speedily as possible; pay particular attention to the leeping of speedily 28 pos
walks, lawn,
NCRSERY,-Propagate by layers or cuttings, Laurels, Laures tinus, sc., as early as possible; keep clear all seed-beds from
weeds. Continue to plant, if urgent, damp weather should be taken to have thutumn is preferable: the greatest car and as little injured at the roots as possible. Prepare for planting out in rows evergreens from the seed. beds.
Forisst and Coprice Woops. - If evergreens are to be planted never int more than can be planted in one day if possible. This Walnut Spanish Chesnut, and Heech, and for Firs and Larch on rocky or very hilly situations. Thin those formerly sown, and ciean near them; where walis have to
should not be delayed.-Joseph Paston.

NOTES FOR SMALL GARDRNS.
THF annuals that were arst sown may now be transplanted into the places where they are finally to remain; and if the
weather is dry they should be occasionally watered, till they ary establishec. Sow a suceession erop of annuals for autumn blooming, and place a small stick with the name of the kind on than using a split stick and putting a piece of paper on it with the name, as is too frequently done. Continue to plant and proparate name,
herbaceous perennials. Make beds for Pansies, and plaut then
as described in p. \(14 \%\); several lists of the best kinds will be foun as described in P. 15\%; several lists of the best kinds will be foon in our former Numbers. Dahlins should now be potted and play in a gentle bottom-heat to start them
pots in a mixture or ham, sandy peat, vegetable earth; after they have been potted a few days dhey may be placed out of doors on a stratum of coal- ashes in some she tered situation. Give plenty of air to the greenhouse on tine days,
but always shut up early be careful that plants do not suffer for but al ways shut if eare is observed to flag, press the mould tighty round the edge of the pot, for the water has found a passage be
tween the earti and the pot, and the plant receives no veneifit tween the eartil and the pot, and the plant receives no benent
from it. Search carefully afte: insects; if aphides should appear burn tobacco in the house, and syringe the plants well next day. ENTOMOLOGICAL NOTLCES.
advances insects become very num
As the season adrances insects hecome rery numerous, and the gardener caunot do better than watch the habits and economy of
each, by which means he will be the better enabled to ward of their attacks. During the warm days of April large wasps may frequently be obserred in greenhouses, and flying about sunny
banks the best anese bre females searching ford convenien pillace tombryo The nests vary in size according to the number of wasps whic inhabit them; and as the society becomes more numerous durim spring to constract anest, consisting of a few cells ; in ench these she deposits an egg, which, after going through the larry and pupa states, becomes a neuter wasp, and assists its parent in
enlarging the nest, and feeding the larve contained in the cells, The nest is made of gnawed wood converted to a paper-like sub. stance, and towards the end of the seasors contains, according to Reaumur, from 10,000 to 16,000 cells, of a he
ranged in tiers with the mouth downward3
the nest is thick, consisting of mumerous layers of a paper-like substance, with a circular orfice at the top por the egress of the inhabitants. Waps coess for honey are equally injuriove to hive which they enter to feed on the honey.

> MIGRATION OF BIRDS

Taz arivals during the present month are numerous, but of eourse dependent on the weather. The Ring Dottrel, the Turue throat, the Grasshopper Lark, the Pettychans, the Woodwren, the Puffin, the Martin, the Sand Martin, the Yeilow Wagtail, the Pied the Sandwich Tern the Roseate Tern the Black ' ern the Red start, the common Sandpiper, the Ruff, the Ring Ousel, the La. wing, and the Wryneck, usually arrive between the beginaug this country on its spring and autumnal jonrneys, though it is sp to remain all the year in the north of England and Scotiand. The but is never ceena at that season in the nort ern and midland ones
The followine arive between the middle and end of \(A\) pril. -The Nightingale, the Blackcap, the Swift, the Swallow, the Whinchat and the Redihank. A few Swallows generally remain all year, as does the Whinchat in the southern colluties short-erred

REPORT ON COVENT GARDEN MAREET
Tare supply of fruits and vegetables has been much the same price, but the difference has been but little. Large quantities of price, but the difference has, and cut-flowers have been offered for
dower-roots, plants in pot, and
sale during the week.-Fruits. Fines, chiefly Queen's, with a few Jamaica, are good but not abundant. Hothouse Grapes are more plentiful than they were, but remain at about the same price as Grapes abound. Strawberries of good quality are tolerably abunkinds mentioned last week are plentiful, and remain at the same
 lity. Spring Cabbages are plentiful. Carrots and Tumips do not differ from last week. A few bunches of natural Asparagus, and also Sea-kale, have been offered this week. Cabbage-Lettuce is pretty good and plentiful, as are Turnip and Long Radishes.
Endive is rather indifferent. Celery is abundant, and pretty good. A few Ene Frame Potatoes have been produced, and sell
for \(2 s\). per 1 l . Potherbs of various kinds are abundant. Flovers. Many handsome plants in pots, such as Camellias, Geraniums, Acacias, and Myrtles, have been brought to market this weet; Pansies, walliowers, aut Primroses are likewise abuncris grandiftora and impressa, Eutaxia myrtifolia, single Anemones, Gardenias, Smith's Yellow Noisette and other Roses, Saxifraga ovata, Abution striatum,

John Abell. - The double yellow Rose is a most capricious not, no one knows why. It seems to require a pure air, away from the smoke of large towns, as at Bagshot for example, where, fre believe, it succeeds very well. It is almost impossible to an-
swer your question about Camellias without knowing the state swer your question about Camellias without knowing the state
in which the plants are. If they are healthy, ond you merely see that hoy are in boom nex sping, em plents of roter now that they are beginning to grow, and occasionally a little manure
water from cow-dung. If they are in pots, let them be slightly water from cow-dung. If they are in pots, let them be slightly
shaded during bright sunshine in summer, and repotted in good shaded during bright sunshine in summer, and repotted in good
soil in autumn. If ther are not in a healthy state, prume them and place them in a warm and shaded situation for a few weeks, and you will soon recover them. If you are obliged to treat them in the lafter way, you must not expect
many flowers the first year. You will never have many fowers many flowers the first year. Your wime camelias, unless they are exposed to full sumlight duron your Cam
ing summer.
R.-The objects you mention are entirely different from those young gardeners should have some means of subsisting when ill or out of place, but to secure this they must form themselves into "Friendly Societies," like other persons. The Benevolent
Society in a charity for the aged, and we hope it will be well supported; but the young man who would look to any charity for assistance, is not, in our opinion, an objeet of compassion.
There is no assurance that it is so antil it is cold. The safe way is to screw up the ventilator, and keep it so thil no warmath can be which did not revive for an hour after the ash-pit door was turned open, and which was left so upon the supposition that the fire
was extinguished. It, however, revived in a few hours more, was extinguished. It, however, revived in a few hours more, perature of the sitting-room rose to \(95^{\circ}\), but no damage was sustained, probably in consequence of the stove being furnished with
a pan of water, which had not quite evaporated when the stove Mr. Carrell's case of an oak-tree which has lired for some years, notwithstanding the loss of the bark, is by no means with.
put parallel. As the sap rises through the wood, and descends out parallel. As the sap rises through the wood, and descends
through the bark, the requisite means of maintaining life are left notwithstanding the removal of the bark. In such a case the
bole of the tree with the barik ou will necessarily be thicker than that without bark, because new wood can only be formed belo
a coating of bark; it cannot be deposited if exposed to air a light. Mr. C. does not say whether the bark was stripped all
round, but we conelude it was : if not, the maintenance of life in the tree is still less difficult of explanation, for a small quantity of barik wilh serve to maintain a heaithy connexion across a cir-
cular wound. In the case of the other oak whose trunk had been stripped at the same time, and which is forning bark on the
north side, but not on the south: the action of light upon the latter is no doubt the cause of the tendency to renovation being stopped. If Mr. Carroll were to cover the wound with clay, or
something of the sort, which would form a thick coat, he would find new bark forming on the south side, as well as the north,
unless the surface of the wood is dead, in which case nothing new can be produced.

NEWS OF THE WEEK.
Ous intelligence from France informs as that the longpending bill for fortifying Paris hap passed the Chamber of Peers, all the suggested amendments having been negatived; so that the measure, as approved by the Chamber of Deputies, has been adopted. A republican movement has taken place in Marseiles, encouraged, it appears, by secret societies, which have latterly much incrensed in the South of France: the object of the movement was to set fire to the arsenal, and to seize the bank and other publie buildings.-From Spain we learn that the idea of a triumvirate in the Regency gains ground, and that a large majority of the Cortes are inclined to the experimeat. The late address of the Pope on the affairs of Spain has excited great sensation, and has been described as an incendiary document directed against the liberty, civilisation, and property of the Spanish people.-In Switzerland, nothing of a decisive character has yet been determined in relation to the convents; the intervention of the Federal Government in the constitutional concerns of the Cantons is disputed, but the majority of the Diet appears to be opposed to the unconditional suppression of any religious esta-blishments.-The Levant mail has brought intelligence from Egypt that the Pacha had transmitted a remonstrance to the Sultan on the sabject of the recent firman, demanding a modification of several of its conditions, especially of thiose relating to the hereditary succession of his descendants, the payment of a tribute amounting to one quarter of the revenue, and the appointment of his military officers. Ibrahim Pacha was dangerously ill, and his death was shortly expected - an event considered by the advocates of Turkey as likely to remove all existing obstacles to the direct settlement of the Eastern question. It appears, also, by letters from Tarkey that on the arrival of the Pacha's remonstrance at Constantinople, the Ottoman Goverament referred the matter to the Ambassadors ; and as France has recently nuited with the other allied powers in admitting the justice of the remonstrance, it is comidered that the Sultan will concede the points objected to, and that a definitive treaty, setting the question wholly at reat, will shortly be concluded.The latest news from the United States confirms the impression that peace wili not be disturbed. Rumours had been afloat in New York that the British Minister would demand his passports, but it was generally believed that he American Government would take measures to secure the acquittal of Mr. M'Leod, who had been removed from the frontier to Albany for trial. It was also stated that he Attorney-General had been sent down to interfere on behalf of the Government in favour of Mr. M'Leod. The conciliatory disposition thus manifested by the Exeeutive prevails also in the journals, which have assumed a moderation of tone strikingly in contrast with their late hostiLity to this country.
At home, the principal subjects of publicinterest during the week have been the dobates in Parliament on the new Poor-Law Bill. An animated discuasion took place rela. tive to Infant Schools in connexion with the Parochial Unions, and atamendment in their favour wat carried by a considerable majority, as was a subsequent ameadment to appoint chaplains for the purpose of amperintending them. The Jews' Declaration Bill has also been carried by a large majority, and has since been introduced into the House of Lords without opposition.

\section*{}

Court, - Her Majesty, Prince Albert, and the Princens Royal are well, and stil remain At Buckingham Palace. Her Majesty and H. R. H. Prince Albert visited the British Museum on Saturday afternoon, and the Italian Opera in the evening. On Tuesday evening her Majesty, accompanied by the Prince, honoured the English Oper House, and on Wednesday evening the German Opera, Drury Lane, with her presence.

Parliamentary. - The vacancy occasioned in the repre sentation of the county of Antrim by the succession of Gen. \(O^{\prime}\) Neill to the peerage, it is stated, will not give rise to MiDonnell, Esq., of Glenarne Castle.-The Walsall Elec tion Comnittee have decided that Mr. Gladstone was duly elected; and that it appears systern of treating to a considerable extent prevailed in
the burough, both before and after the election, but from the burough, both before and after the election, but from the doubtrul nature of the evidence, the committee could not connect it with the sitting member.-The St. Alban's petition having been withdrawn, the committee have decided that Lord Listowell was duly elected.- Mr. Smyth having withdrawn his opposition, the Chairman of the Canterbury Election Committee has declared the sitting member dulj elected. - it is reported that the Conservatives of Manchester intend proposing Mr. Entwistle, son-in-law of Mr. Edward Loyd, as a second candidate for the representation of that borough.-Sir Richard Jenkins, M.P and retire from Parliament, and that Lord Clive will be brought forward in his place by the Conservatives-An address from Capt. Winnington to the electors of West Worcestershire disarows the intention which rumour has attributed to him of retiring from Parliament at the next general election.

Command of the Chinese Expedition.-It is stated that Sir W. Parker has declined this appointment, and that it there is no truth is the rumour that Rear-Admiral Elliot will occupy the post of Sir C. Adam at the Admiralty. The New Census. - The bill brought in by Mr. Fox Maule and Viscount Morpeth, for taking an account of the population, provides, amongst other things- That the
census shall be taken on the 7th June, instead of the 1st July. That the ages of persons between 20 and 25 , or 30 and 35 , Ace., shall be set down as aged 20 or 30 yoars, and so on. That all overseers, relieving and peace officers, \&c., shall be bound to act as enumeratwrs within their respecive townships or parishes, \&cc., if required so to do by the names, ages, occupations, \&c. of the occupiers) shall ending Saturday, the 5th June next, the said schedules to be collected on the Monday following. That justices of the peace shall allow to the several overseers, peaceofficers, \&cc., required to act as enumerators under this act, a reasonable compensation for their labour, trouble, and expenses. And that schoolmasters in Scotland shall
also be allowed compensation for their labour by the also be allowed compensation for their la

Silver Coinage. - The late Purliamentary return states the total amount of silver moneys coined at the Mint from 1816 to 1840 (both inclusive) to have been \(11,108,2652\). amount of seignorage reoeived on the said silver coinage amount of seignorage recesved on the said siver coinage 198. was paid into the Exchequer

Post-office Arrangemeuts.-By a recent decision of the to them are charged by the Post-office authorities the same as if stamps were not attached to such letters. It has been determined, that on and after the 6th April the postage of all letters posted in the United Kingdom for Hamburgh, Cuxhaven, and Lubeck be reduced from 1s. \(8 d\). and 1s. the ounce, and so on. This rednction, however, does not apply to letters for the above places when sent through Praace.

\section*{ffortign.}

France. - The Forlifications-Ater a lengthened debete of six days, which presents little either of novelty or interest on the subject, the general discussion on the Fortifiction Bill closed in the Chamber of Peers on Monday erening. Baron Mounier, the reporter, summed up the debate on Tuesday, at great length. He maintained the amendment of the committee in its full force. The debate Was then commenced on the first article of the original fortifications of the capital. The first article of the amendment proposes \(93,000,000\) f. The Chamber then proceeded to discuss the two first articles of the amendment. They were rejected by 148 against 91 . The Bill, as passed by the Chamber of Depaties, will therefore be adopted, the principle having been established
the Chamber of Deputies on Tuesday on the took place in the Chamber of Deputies on Tuesday on the Copyright pulation to the contrary, to reproduce or authorise the reproduction of works of art, even when the original is sold, was eatabliahed by the Chamber in opposition to the GoTernment and the committee, owing to the eloguent speech consing the bill.
Paris and Meaux Railroad. - The bureanx of the Chamber of Depaties have taken this railroad into considerration. The road is to be established along the right bank of the canal de l'Oureq, as far as Meaux, crossing plying Paris, and the daily number of persons passing to and from the towns is estimated at 700 . The grant is for 80 years, at the expiration of which the property of the line will be annexed to the canal de l'Oareq, which is vested in the eity of Paris in perpetaity. The bureaux in gene-

The Eastarn Question.-The Coavention, arranged in London ou the 14th ult., by M. Bourqueney, in the name of France, and by the representatives of the four other Powers, though only of a preliminary nature, seems to be considered in the diplomatic circles of Paris to amount signers of the Convention, it is said, admit the justice of Mehemet Ali's reclamations respecting the appointment of the officers of the Egyptian army and the administrathan of the finances, and, no apprehension being entertained that the Sultan would refuse to accede to these proposi tions, it was expected that the definitive treaty, setting
the question totallyat rest, with the concurrence of France, the question totally at rest, with the concurrence of France, maswer from the Ottoman Government, which could not be delayed longer than a fortnight or three week
Treaty betwean France and Holland. -The committee of the Chamber of Depaties to consider the project of law long deliberation, proposes by a majority to the Chamber Republican Movenent
Repuon an Mocat at Marseilles.-A republican movement toot place at Marseilles on the night of the
\(23 d\) instant. It appears to have been a plot of the Propagandists, through the agency of the secret societies in the South ; the ramifications of which extended to Avignon, Nismes, Carpentras, Montpelier, and Carcaswone. The scheme was to set fire to the port, and to seive the bank
and other public buildings in the midet of the panic.
house or wine-shop, known by the name of the Polonais, having been surrounded, 17 individuals were arreste rmed to the teeth. The conspirators assem to nearly 300 , but had taken the alarm in consequence of
alirmish with some gendarmes. The persons arrested belonged to the lowest elass of society. The Ministerial papers make very light of the whole affair, the extent and rated. The last telearaphic despatch stated that the judicial inquiry was proceeding with great activity; 21 Arrest of the Assassin Cantillon.- We learn that the police have arrested at Beziers an individual who, acorrding to his own account, was the sab-officer C'antillon nate the Duke of Wellington, and was acquitted. The pretended Cantilion was the bearer of an extract, said to be taken from Napoteon's will, in which the Emperor ex
pressed his opinion that Cantillon had as much right to assassinate Lord Wellington as he had to send him (Na
poleon) to perish on the rock of St. Helena, or to shoo Marshal Ney contrary to the capitulation of Paris, an for this reason Napoleon bequeathed him \(10,000 \mathrm{f}\). It seems he had forged General Bertrand's name to this exwas documents. The papers add that this affair, in the legal investigation which wi
Death of the King's Aunt.-The Sardinian Ambassador Duted the hing on Sunday a letter from the Duk of Lucca, notifying to his Majesty the death of Princess
Maria Antoinette Valburge de Bourbon, his aunt. The French Court accordingly was to go into mourning during eight days.
Spain. - The proccedings of the Cortes, being as yet exclusively confined to the revision of the election retarns, afford little matter of foreign interest. It was expected end of the month. The deputitures in the capital 63 in number, held a meeting on the 20th inst., in order to discuss the Regency question: and 61 were of opinion that the supreme power should be divided between thre persons; but the question of the single Regency was
argued with much talent by M. Olozaga.-The Madrid Spain delivered by the Pope in the Consistory of the lst
inst. This document seems to have excited a great seninst. This document seems to have excited a great senHoliness's allocution an incendiary proclamation, directer against the liberty, civiliation, and property of the Spanish people--Letters from Valencia state that the decree of the Regency requiring every person to make returns of his property and means had been resisted. The Political Chief had harangued the people, and the AyunPamiento had appied to the Regency to rescind the decree In despite of this concesion, bowerer, a placard of a ver riolent and inflammatory character had been posted about the city; and the authorities had not dared to take telegraphic lines of communication between Madrid, Bayonae, Cadiz, Badajoz, and Barcelona.
Pompual.-We have reseived no news this week from Portugal of any interest whatever. Private letters from Lisbon mention the appointment of a Commission intended to take the lead in the suggestion of measares for an improved financial administration of the affairs of Portugal, and contain the Royal decree issued for that purpose.
Germant. - The journals give us the result of the proceedings in four of the Prussian Diets relative to the Royal propositions. All accept gratefully the promise to e representation, but and the clause is everywhere added, where the propose committees are adopted, that their constitution shall no detract from the existing rights of the present provincia Diets.-Private letters from Vienma state that a distarb ance, in which the attache of the French Embassy had having been offered to the Government. According to information received from Trieste, it appears that the Austrim ships of war which had arrived in that port from the Levant would only remain to refit, and then return to the coast of Syria.-Letters from Dresden say that the rders for celling out recruits for the Saxom army have not been countermanded, and that, on the contrary, fresh directions have been issued for all the drafts to join thei political events prevent it, a grand system of maneeuvres Por the 5 th corps of the Prussian army, will be commence near that city, in the presence of the King, during the summer
SWrTzirland. - Letters from Berne state that the comamittee to which the affir of the Argovian convents The din referred, had not jet made its report to the Diet declared that all intervention on the part of the Federa Assembly in the constitutional concerns of the canton, ander whatever name and form it was disguised, would only tend to complicate the question, Argan being deter mined on resisting all encroachment on its cantonal autho They then concluded by requesting the committe Argorian Gorernment, who would adjust it to the satis faction of all parties. The majority of the commission t is said, are against the right of Argan to suppress its convents unconditionally. Even the member for Protest ant Vaed is of this opinion: and the Liberal depaty for St. Gell fe of opinion that Argwa ought to suppress only thowe comvents found guity of treasomable actu.

Russia.-It appears, by letters from the frontiers of Poland, that the numbe ber tier has been greatly exagzerated. There are, it is said only 30,010 , and not 175,000 , as reported, concentrated
upon the whole frontier, and the total number of Russian troops in Poland is estimated at from 50, (1un) to fill ulito The Russians have obtained some fresh advantages ove the Circassians. The fort of Zebel. attacked by 2100 Russians and 3000 Georgians and Mingrelians, had been taken by assault, the Circassians losing 700 to sfie men.
Eeypr. - We are in the receipt of news from Alexan dria to the 7 th inst. . It appears that Mehemet Ali had despatched to the Sultan a letter of remonstrance on the sub conditions, and especially those which relate to the beirship, the payment of a quarter of the revenue to the Sabhme Porte on the ground of tribute, and the appointment formity to the orders he received on his departure from Constantinople, still remained in Egypt, where he await fresh instructions from his Governmeat. After despatchin his letter of remonstrance to the Sultan, the Pacha had set out for Cairo, where he continued with his son Ibrahim. Rumours of the death of the latter had reached Alexandria, but proved to be unfounded. Ibrahim had, however, had severe fits of dysentery lately, and bis constitution was said to be completely broken up. His death wa afford the most feasible opportunity of adjusting the affain of Egypt without further bloodshed, by the Sultan's agree ment in the appointment of Ibrahim's son (a lad of 13 ) as hereditary successor to the Pachalic of Egypt. The 20,000 men returned from Sy ria, and 10,100 veterans, who remained in garrisons in Egypt. He was daily paying u all arrears due to them. Advices had been received in Alexandria that the ostensible opposition to an amicable arrangement with the Pacha was now manifested by Aus that Redschid Pacha ; Lord Ponsonby haviog admited Cabinet present conditions were harsher than the Britso of Beyrout and Acre during the recent sieges, had arrived at Alesandria. The districts of Lebanon and Diarbekir were said to be in a state of great disorder : and the disturbances in the island of Candia were attributed to French and Russian agents in addition to those of Greece, all acting on the Greel population of the island. Private war, and sending most of the commanding officersato the villages destined for the direction of agriculture he intends to give the greatest extent possible. The grow ing crops already promised a more abundant harvest than the last, from which there were still remaining in store ap wards of 400,000 ardebs of curn of all kinds. A circular cus, from the heads of various Caristian seculs, ing of the Jews, had arrived overland at Alexandria. The plague was declared to exist in 11 villages on the west branch of the Nile, and the cases were five per day a Alexandria. It was also raging at St. Jean d'Acre, and in the villages along the coast. The rebuilding of Beyrout was said to be proceeding with great activity, and the Enropean residents had received 40 or 50 per cent. indemnity for their losses. The British Sappers and Miners had ro ceired no orders to evacuate the town. - Waghorn and Alexandria, and the establishoter on the great square panys iron track-boats on the canal, and steamers on the the Egyptian question

Urkey.-The intelligence received from Constantino ple comes down to the 8th inst. On the 6tha stemmer arrived there from Alexandria, with despatches from the Envoy of the Porte, referring to the modifications which Mehemet Ali rished to be introduced in the Hatti-Sche riff of investiture. Immediately after the receipt of these despatches the Ministers and high functionaries of the Porte held an extraordinary counci, at which it was resolved to consult the representatives of the powers parties to the treaty of the 15 th July, before they adopted any dell the conditio news that Mehemet Ali refused to accep proreplace him, as it were, in a state of rebellion with his sovereign, and that it would be of a nature to give rise for freah hostile resolutions on the part of the Sublime Port and the Allied Powers. Nothing had transpired as to tho course which the Porte would adopt. mation had yet been received by the Divan of the disturb ances in Candia. According to some accounts they wer of the most serious nature. Lunissaries, and everb num from Greece had landed there in very considerable num been It was added that two English ships of the linquillity had been disturbed in Samos by the manoeuvres of a fe intriguers, but in consequence of the wise measures adopted by the Prince of Samos, all apprehensiou for the peace of the island had censed. The Sultan had nevad 300 men at the disprosal of the Prince armurder had been di the streets of Pera. The assassin took refuge in the garden of the British Embassy, which was immed ately surronnded by Tarkish troops. The chief of the po lice of this suburb demanded permiseion of the refued, but dor to search the place. Not only was this environs of he was desired to withdraw his men fiom hat to obey, and the garden. Nothing was left the officer but to obey, an

\section*{UwITaD Sxazas.—By the anrival oa Wednasday of the}

Royal mail steamer, Britannia, at Liverpool, we are in
receipt of American papers to the 16 th ult. inclusive. Though intelligence from America has for some time been looked for with more than ordinary interest, the news thas brought contains little satisfactory, or of a conclusive chars that he was still a prisoner, with little hope of being exhaving been irreversibly decreed : only, with the view of insuring his certain acquittal, he had been transferred from the frontier county of Niagara to Albany, where, it is said, no canses of any sort exist that are likely to operate to his prejudice. It is further stated that thoughentions do actually enjoin him, in the event of receiving that refusal of Mr. M'Leod's immediate release which the President of the States will feel constitutionally imposed apon him, to demand his passports and quit the country, no eventual rupture will be thereby occasioned, inasmuch as the declaration of the British Government, undertaking be pleaded and sustained at M'Leod's trial, as constituting an infallible bar to his conviction. Some of the journals indeed express their belief that the Attorney-General of pair to Lockport, and conjecture that the object of this thority of the President, on the approaching trial of the British prisoner. From these considerations, as well as gratifying to see have become of a much more subdued and peaceful character, it appears to be almost certain that Mr. M•Leod's trial will be little more than a formality, end ing in his acquittal ; and the prospect of a war with Great Britair upon this isolated question, even if Mr. Fox should have actually demanded his passports, seem to be con-
sidered by all parties in America to be at an end.-A singular scene had occurred in the Senate. In the debate upon the election of a printer to Congress, Mr. King, of Alibama, told Mr. Clay, of Kentucky, that the character of Mr. Blair, one of the printers, was equal to his own. Mr. King sent Mr. Clay a challenge ; Mr. Linn, of Missouri, wrote it, and delivered it in the Senate. Mr. Clay accepted the challenge. The police of Washington, thus bound the "parties combatant" to keep the peace. But while these offensive allegations were exchanged between the two senators, and while the business of challenging and accepting was proceeding, the Senate looked ou, or port of order! The quarrel was subsequently made up. West Indies. - The Jamaica Gazelle contains an account of the movements of the French squadron, which it describes as highly important to the British West India
Islands. It appears that by the arrival of her Majest's Islands. It appears that by the arrival of her Majesty's brig Sappho the inhabitants of Kingston were put in possession of a circumstance which might have been of the most serious nature, as showing the duplicity of the
French Government towards Great Britain under the ad ministration of M. Thiers. The Sappho had orders to reconnoitre the several foreign ports on her way down to Jamaica. In accordance with such orders, she called in that veassel, they perceived 16 French broad pendants, six of which were double-banked frigates, at anchor. This feet had left France ostensibly to proceed to Morocco, to and afterwards to join the squadron off Buenos Ayres. The Gasette adds, that Jamaica and the other islands wer so unprepared for resistance, that in the event of hostilities, they must all have fallen an easy prey to such an unexpected force.

 Earl O'Neill.
On the motion of Mr. E. TenNensw, the Copyright of Designs Bill
was read a second time, and the committee Iived for Wednestay
 precedency on Tuesday to the continued disclusiou of the Poo
Law Bill over motions of which otice had provisly heen placed
on the paper. The hon. gentleman complained that his motion on the paper. The hon. gentleman complained that his motion
on the state of Vewfoundland would thus be shut out; and sir
R. PEER and Lord START having nred him to press it, Mr
PAEENGTox intimated that he shoond take the sense of the House
One question.
Oor Lhe mation that the Hoase do go into committee on the Poor Law Act Continuance Bill, Mr. FisLDEN moved, as an
amendment, that it be am instruction to the committee to introduce a clause repealing the instruting Poor Law Act. The amend-
duct
ment was negatived. The House then went into
 management of insine or infant poor. Mr. Wrev nbjected to
the coulling of these two clases in the same provision. The
lunatic asylums, he considered different superintendence from that which should manage the infant schools. He particularly objected to the management of
lanatics by contract, and wished to see the care of that class proided for by a separate enactment.
was to meet the evil of an inadequate treatment of their malady Wo parisheet where there mightequatene treatment of tho their malady
customed to deal with it. Han ac-
Had, however, no objection to the experiment of a separate binl, reserving always his resort to the
mode of provision proposed in the present clause, hould the
munatic asylums now existung be found insufficient for the recepLion of all the patients.
Lord \(A\) simes joined in pressing the Government to introduce a separate measure on this subject. Mr. BuLLER regretted Lord J.
RESSELL's concession. Lord G . Sombrger approved it, partica Resszic's concession. Lord G. sombresir approved it, particu-
larly because he thought it very dangerous to let the masters
workhouses pronounce whit poor persons should be deemed inssine.
The words " insane or"" were then struck out.

lowrer classes could not have. He denied that their relieious in-
struetion was neglected in the workhouses. Had that been the
case, heavy judeed would have been the blame of the Comemaiscase, heavy indeed would have been the blame of the Commis-
sioners. Sir c. Lim mox greatly preferred the discipline of a school
 notice also this most material difierence-that in the case of
the evorer classes, the separation of the children from the parents
would be conapultwr

 ducation unon the legitimate childern if unwiling parents. He
observed that at Nerworn the spinitual instruction was that of
the Established Church and to

 tinue to be, whully ungualifed for the instruction of the chitudren; while the mode of education pursued at Norwnow had proved
eninenty beneficial to the roumr persous trained there. With
ceference to an amput
 the policy of aunoving the Dissenters by a new tax on the whole country for the payment of the Church cleref,
Mr. (Goun mers entorced the necessity of a chaplain, on the ground that the largeness of the unions would remove the chil-
drent from the reach of their own natural instructors. - Mr. Cill
 ample, and attanpie of Norwoed, the state must follow that exNorwort already tnjuyed in a chaplain scthou that thenefit which -Mr. Sthat advecated the system of union schoul in oppocibe imperfect from the impracticability of proviung adequate re-
muneration for a competent :choolmaster in each workhouse The school sstem answered well cren as a natter of economy; for the employers were willmg to take the school children with-
out those premiums which were reguired for takme children a workhouse. He was desirous that each rchool should be proFided with a chaplain of the Church of Enyland.
Sir R. PEEL thiought that a large number of children educated together afficriect better securrty for a grod education, than when
they were broken up into smaller division- if, however without
 treated as the children of the s tate, there could not be a doubt that teould be highly desirable that they should be brought up in the
religion professed by the state. It was evident that the succens of the establishment at Norwood had been maninly owing to the
exertions of the chaplain of the Established Church. He doubted, exertions of the chaplain of the Established Church. He doubted,
nevertheless, whether the state coold claim the right of taking an nevertienate child altonether awoy from tits mother, who minght
illegit been seduced, and whose child might form her only con-
have Mr. Lancodale protested against any attempt to force tha reli-
gion of the state upon the children of Catholics and Dissenters

 ome tine longer, when (cenm. Johnsonn called attention to the lateness of the hour and the chairman reported progress.
The House having resumed, leare was even to the Lord
vor to
vor to bring in a bill for amending the criminal Law in Scot-
 Right Hon. Memher for a bill to nake good certain contracts en-
tered into by hanking and nther copartmerships in lreland.
On the motion of Mr
 Sistrorp was proceeding to move for some return of which he
had given notice, when an Hon. Merrber moved that the House had given notice, when an Hon. Mermber moved that the House
be counted and there being only 18 members preseat, the House Tucsday.-The election committee for Walsall reported in fan petition against the retorm, nor the opposition to that, was fifivolome In reply to
the Exchequer said that he would make his financial statement on the 30th April. - In answer to Mr. Herries, the Casacement of the Exr mbal er said he saw the inconvenience of the early
hour at which, under the new regulations, the Post-offce was
closed for the receipt of letters, bit confessed his inahity make any alteration at prevent, - Mr. PAkiverov, inability to move for a committee to inquire into the affairs of Newfoundto an acrimonious discussiom The hon. Memaber entered into a detailed statement in support of his motion. The population of
the island, he said, amounted to between 75,000 and 80,000 , of
whom about one-half were Catholics and the other half testants. Owing to the nature of the climate, agricultural prorin consequence, fishermen. He thought the constitution had been given prematurely to the colony; but he ataributed no blame
to the Govenment on that accunt; for he was aware that the very parties now most for the abnlition were among those ons
nally most zealous for the adoptivn. The number of members of
the Legislative Assembly was only 13 , and the greater part of servant, and another had recently apalied for a situation as nur-
sery-maid for his dauyhter. It was not to be expected that a small body, composed of men in such a rank uf tife, would con-
duct the affars of the colony in a satisfactory manner. This
Lexislative Asembly had accordingty becn guity of measures of
extreme violence. They had arrested the Chief Justice and the extreme violence. They hati arrested the Chief Justice and the
Sherif, umder a plea that they had infinged the privileges of the
Assembly, and tue finvernor, in onter to obtain the iiberation of

ferred till Wednesday, that there might be time for a considerate
selection of membere who world look at the subject without
preindice or pastions.
 The House resolved itself iuto committee on the Poor-law
Amendment At. - Mr. Colatare moved the amendment on
the nuth clause, of which he had given notice, for the appoint. the lith clause, of which he had given notice, for the appoint-
ment of chaplains to the district schools, to superintend the education of all children whooe parents or godfathers did not object
to their being reared in the teriets of the Established Church.
Where an objection existed, he proposed that a licensed Where an objection existed, he proposed that a licensed minister
of the religion of the parents should visit the schools to give
religious instraction to the children. \begin{tabular}{l}

 regretted that tugarand corfee hadd not been included, and gave
notice of his intention to renew his motion for a reduction of the duty of the duty on sugar and coffee immediateiy atter the recess. Hiil,
 a demamded. In his mind the profession of the Jewish aith was
a disquaification for ofice in Christian countr. Chistianity
was a part of our lawt. Our occupecion in Puthiament, said he, commences daily with. Christian worship. We pray for the pro
motion of true relligion. Which can mean only the Christian rel gion. He then vindicated sir R. Inglis? phrage, that this bill
Fould unchristianize England; which he understood to mean
simply, that it would remove the Christian teste now requisite for simply, that it would remove the Christian tests now requisite for
all oamice. He did not mean to say yatevery individulal Jew was
unfit for official daty: nay, some Jews were doubtess itter than (ualificationn for the elective qrancthise, were upon the amount
 ehurch rate. church extenston, and the scoth, church. Such
questions were not to be committed to men who, if cunscientious questions were not to be coimmitred to nie an imposture. On the allusion to those sympathies betwen the Protestant officer and in one Redemer, hat with the Jews no such synupathies existe
 etement of British fociets. The Catholics had suffered under
grinding laws; the fews biar no practical griexance whatever
mere negation of privileges he did not consider to be a practical mere negaton if privilege he did not consider to oe a practical
grievance; noobdy called it a practical grievance that the religi-
ous test is applied to the Lord Chamellor, and in treiand to ge-
 disqualifed for the consideration of such questious wheneves the
necessity of that consideration should recur.-Mr. PenvoLE se-
conded the amendment. Mr. MAccc Ladyend it was no grod argument for refusing to
the jews what vught to be granted them, that something else the Jews wiat ourht to be granted them, that something else
might be afterwards amked for them which oupht not to be
granted Nor could he give much wight tot oujection founded
in the daily prayers of the House. That objection would equally In the daily prayers of the House. That objection would equally
apply akaint the uakers. who disapprove all set forms of prayer.
The prayers of the House were aceurding to a certain creed. so from those prayers. Whatever religion might he the true one,
there must be a great deal of false relision in the flouse. Gentlemen could none of them differ more widely from the Jews than
they already differed from one another. Har,hly as the Catholics and the Dissenters hed been treated by our law, the Jews had
been treated more severely still. It whas not correct to say that
incapacity fiur otrice was not a hardship; nay, the law expressly incapacity fir otrice was not a hardship; nay, the law expressty
enacted that incapacity as apunishment
it had divers offences. Then and the fewer the less dangerous. The Duke of Wellington himhended an insurrection in Duke's-place. He thought a J Jw might
take the declaration with quite as much Good faith as some who
now found a gloss for reconciling their subscription of the chnore articles, and their tenure of the church patronage, with the profession of a Popish faith
community should admit to the administration of its a law a body as every body must see on whome experience was not quite thrown
ways, was a mere steppinz-stone to ulterior objects. Would the
Jews themselves admit a Heathen or a Matometan into the administration of Jewish affairs: Sir R. INGLis said, that practically, and in point of common
scuse, this blll mast, be considered as leading to the admission of
the Jews into Parliannent. He did not agree that mere privation was to be complaincd of as if it were punishment.- Lord SAvDov,
maintained the fituessof the JJews for the franclise they sought.
Mr. Mulves supported the claime of the Jews. He censured
 plained that the Members fur the Cuiversities had rather repre-
sented the dominant spirit of exclusive constituencies than the wistom of learned bodies.一On a division, the third reading was Thurddyy. Mr. SANpond brought up the report of the St
Alban's Election Committee, declaring that the Earl of Listowel had been duly elected, aud that neither the petition, nor the opthe House gand haring been answered in the negative, gave
notice that he wrold, on Mriday, move that the evidence be Taid on the table -Mr. T. Duxcoxisk at the same time gave notice
that he would move, as an addition for the production of the evidence taken before the Canterbury Election Conminttee.
On the motion of Mr. LA Botchere, the amendment introduced by the House of Lords into the East India Rum Bill was agreed to. sir. Hume moved for retunis counected with the
mission of the mails on Sundyy by railroads in Scotand
Lord M Leave to brimg in a bill to enable the commissioners of wide streets to sell, and Her Majesty to buy, certain land in the city of Dub-
lin; and the noble L.ord subsequently stated, in answer to Sir R.
R able for exercising the troops in garrison and for the recreation that he would, on Friday, move for a committee of the whole
House on the subject, in order that the cousent of the Crown to the proposed purchase might be formally signified. said that he woold, on Fridey.or Monden, state when he woald
be prepared to proceed witi the Administration of Justice Bill. The nopared Lord also intimated that immediately after the holidays

 To aninquiry by Sir Eit NATCHBrLt, Lords Riss
that he would go on with the County Courts Bered
The Orinance Survey Bill went though committer pro forma, and was ordered to be reprinted
consideration on the 23rd April.
The House then went into committee on the Poor-law Act Con. posed of. Clanse 23 was partially considered, when it was agreed
that the Chairman should rejort progress, and ask leave to sit again. House having resumed, the Tithes Recovery Bill was read a third time and passed.- On the motion of Mr. R. Go aDov, the lution to authorise \& change in the excise reguanin. The
South Australian Bill was read a second time.
The Metropopili Improvement bill went through committee, and The Metropolis improvement sie went through comnittee, and
was reported-The Report on the Double Costs Bill was recived.
Fridiy. -Mr BLACESToNs moved for the evidence taken be fore the St. Alban's clection committee, and remarked on a rumour that a compromise had taken place to abandon the proceed-
ings inmultaneously on the Canterbury and st. Alban's elections. -Mr. T. Dexcombe deciared his belife that the rumour alluded
 that a Beggar's Opera scene should be enacted in their committee-
rooms? He moved that the evidence before the Canterbury election committee be also produced.
Mr. SANFons, chairman of the St. Alban's committee, vindichted that body from the imputation of having been actuated by
party motives. So little had they sought to warp the case, that
the the whole committee expressed great regret that they had nht sompe competent authority to gutide their decision through the
parpity of the law. Without such authority he feared that
fatere decessors. - MIMr. MiLDDAIA confirmed this statement.-Mr. CLIVE,
chairman of the Canterbury commaitte, assured the House that when the committee met, they were wholly unapprised of what was about to take place between the counsel for the two contend
ins parties.-After a few words from Mr. EsLIorx, Lord Howicz
 evidence thenembefore the Walsall committe ehnould likewise be produced-Some remarks were made by Lord F. Egesion and mittees was ordered to be printed
The House went into committ
Biri- - On the went into collanmittee on the Poor-law Amendmen much desultory conversation arose. An amendment, moved by was negatived by a majority of 136 against 38 , and the clause was as were the 28th and 29 th. - The - 3ath clane was withdrawn on

Money Market, Friday. - There is no pressure for mo ney in the Stock Exchange, bot nevertheless it fetchea aboat 4 to \(4 \frac{1}{2}\) per cent. Consols for money opened \(89 \frac{1}{2}\) closed \(89 \frac{7}{z}\) : India Bonds were finally quoted 2 prem.; New \(3 \frac{1}{2}\) per Centis. 98 皆; and Exchequer-bills, 950 to 11s. premium.

Misid of the Queen and Prines Aloert to the British M. R. H. Prince Albert pid visit to the Britisesty and The Royal party arrived at 3 o'clock, and were received The Royal party arrived at 3 o'clock, and were received
by Sir H. Ellis, who escorted them into the Librarian's by Sir H. Ellis, who escorted them into the Librarian's
office. The visit was considered to be strictly a private one, and therefore none were allowed to be present but those forming the Royal suite, and the officers attached to the institution. The Royal visitors went over all the several departments of the Institation, and the head officers, in addition to showing and explaining the ordinary collection, laid out for their inspection all the choicest objects comtained in the Library and other departments, and which, by reason of their extreme costliness and variety, are not much pleased with their visit, and left the Museam abont half-past five.

Protestant Meetings in the Metropolitan DistrietsA numerous meeting of the South London Protestant Association has been held at Kennington, for the purpose
of petitioning Parliament to discontinue their annual grant to the Roman Catholic College of Maynooth; The Chisholm presided on the occasion. On the opening of the meeting, who was well qualified to give them full and accurate information on the subject of the College. Mr. Lord then delivered an address, in the course of which he quoted various authorities to show the practical working of the college to be pernicious and destructive of the best intereste of Protestantism. A petition to Parliament against any signed grant to the college was ald has onerousty the Freemasons' Tavern, to petition Parliament to adopt such measures as they might the existing connexiou between the State and the Roman Catholic College of Maynooth ; Lord Teignmouth, M.P. in the chair. The resolutions declared that the meeting,
while it desired not to interfere with the private rights of any denomination of Christians, felt called on to protest against any continued national support to, or connexion duties of a Protestant and Christian Legislature and people. A petition to the House of Commons, in conformity with these resolutions, was adopted.

Cambervell Church.-The contest carried on in this parish with reference to the question of rebuilding the church, which was recently destroyed by fire, has ended in favour of the measure, after a long and angry discussion, followed by an amendment to abolish charch-rates.
New Church in Westminster. - The parish of Sto Margaret, which contained ten years ago 25,334 inhabitants, has but one church, which is partly occupied by mons. The chspel in the Broadvar in some measure supplied the deficiency, bat it is now found to be in so dilapidated a condition that it can neither be used nor effectually repaired. It has, therefore, been resolved to build a new church capable of accommodating 1,500 persons. The cost is estimated at 7,0001 , but only \(1,00 \%\) are are therefore making for the accomplishment of this object.
Improvements in Hyde Park. - The Commissioners of Woods and Forests have given their sanction to a phan proposed by Mr. Cubitt for the improvement of Koights-
bridge. It appears that there will be a gate callect the Albert gate into Hyde Park, to be built in the centre of a double crescent ; but as the ground to be occupied is church land, an Act of Parliament must be first obtained. Mr. Cubitt's plan is to erect magnificent editices of Porthad stone. The removal of Goding' \({ }^{\text {B brewery, it }}\) if said, will be ample for the bnildings intended to be raised.
Metropolitan Bridges.-The new suspension-bridge at Hungerford-market has at length been commenced; a number of excavators and other workmen are busily enused for the preliminary works. On the noith shore of the river, opposite the entrance into the market, a high wooden hoard is built around where the works are to be carried on, the paving-stones removed, and the earth esca building blacksmiths' shovs, for the purpose of making the necessary ironwork for the workmen engaged, shoeing the wooden piles, and other necessary works. Similar preparations, it is said, will be immediately commenced on the Lanbeth side of the river, for the purpose of erecting bridge with as much despatch as possibe, the ironwork being in a state of completions that notwithatanding the concession made by the proprietors of Waterloo bridge, it has not been met by returns of money received since the 18t March, up to Saturday night last, leave an average lons to the propio tors of 41. per day
Disappearance of an Official Assignee.-Mr. Abbot, one of the official assignees to the court of Mr. Commis sioner Fonblanque, has absconded, it is said, witi s during last week, but was not in attendance on Saturday. Little notice, however, was taken of that circumstance; but not returning on Monday, suspicions began to be exciled, more so as it was known that he had not paid a sits and money which he had received upon a number or a divends, amou Tuesder it wis discovered that he bad pressed for h. On race of his retreat has get been found It appears that though one of the regulations of the cour is that no offial asnignot shall retain more then 100
upon any particular bankrupt's estate without lodging the
sorplus in the hands of the Accountant-General or other surplus in the hands of the Accountant-General or other
official authority, yet that in practice the official assignees official authority, yet that in practice the oficial assignees generally state they cannot conduct the business without 1,500l. to 2,000 l. Some of the Commissioners have in
vain sought to hare that sum reduced to 1,000 ., and, notvain sought to hare that sum reduced to 1,000 ., and, not-
withstanding the previous failures of other official assignees, nothing had been gained in this particular for the public.
The defalcations, \(i t\) is said, in all these cases fall upon the The defalcations, it is said, in all these cases fall apon the each official assignee.
Morlality of the Metropolis. - From the publisbed table, showing the number of deaths from all causes regis-
tered in the week ending Saturday, March 20th, it appears that the total wa-males 501 , females 489 ; the weekly average of \(1838-9-40\) haring been-males 475 , females 451 .
Supposed Murder at Norwood.-An inquest has been
eld on Mary Anne Messenger, whose body was found last week, as mentioned in our last Number, near Norwood, under circumstances which made it appear probable that
she had been murdered. After a lengthened investigation, however, of seven hours, during which no natisfactory evidence was adduced to clear up the mystery of her death, and no facts of any interest were brought forward in additurned a verdict, "That deceased came to her death by suffocation from drowning, but by what means she came into the water it does not appear from the evidence.
Suicide of one of the Queen's Grooms.-On Saturday
morning, the body of George Hayter, a groom in the morning, the body of George Hayter, a groom in the
service of her Majesty, was found hanging in the harnessroom, at the Royal Mews, Pimlico. It appears that deceased had been keeping watch with a fellow-servant the previous night, and his companion remarked that he was to bed, he went down into the harness-room. Deceased being missed in the morning, a search was made, and the harness-room door being bolted, it was hroken open, and down from about three years since. An inquest has been held on the body, when, from the evidence, it did not appear what was the cause of his committing the act. It seemed he lived happily with his family, and, though
formerly in the habit of drinking to excess, he had for the formerly in the habit of drinking to excess, he had for the
last two months abstained from doing so. The jury last two months abstained from doing
returned a verdict "Temporary insanity.
Hampton Court.- One day last week, the room containing the cartoons of Raffaelle was observed, by a visitor,
to be full of smoke, and on asking a policeman in attendance the cause, he found that the woodwork nnder the
floor and behind the skirting-board just beneath the cartoons was on fire, and so much ignited that in a few minutes the whole room would have been in a blaze, and the cartoons destroyed. The policeman, it seems, mas the means of saving them, for he said he had smelt something for a fortunately done to the cartoons.

Anti-Corn-lawo Mreeting.-A meeting of the members of the Anti-Corn-law League was held on Wednesday at the Crown and An Chartists had avowed their intention to renew their attacks, every pre-
paration for resistance was made. The entrance was guarded by a strong body of police under a sergeant and inspector, while strong barriers were erected at the bottom of the stairs leading to the room where the meeting was held. At \(20^{\prime}\) clock, the Chair was taken by H. Waring that they had met to hear read the annual report o the Anti-Corn-law Association, and to elect officers for
the ensuing year. Mr. S. Smith, Corn-law lecturer, read the report, which contained an account of the origin of the Association, and of the difficulties it had to encoun-ter-first, from the apathy of the middle classes ; and, secondly, from the hostility of the more political portion to the sum of 9624.4 s . 2 d . The report concluded with an appeal to the sympathy of the public in behalf of the association. A resolution was moved by Dr. T. P. Smith, pledging the Association to renewed exertions. A variety of speechess were delivered, calling upon the persons present to give their influence and support to the
advancement of the Association.
Accidents.-On Thursday evening, as Mr. Baker the Coroner, was proceeding along Whitechapel, on his way to the London Hospital, to hold two inquests, a lad ram against him with great violence, and both fell to the ground with considerable force. On getting up, Mr. Baker dig-
covered that his right shoulder was out of joint, and therefore harried as fist as he could to the hospital. One of the receiving pupils reduced the dislocation, and bandaged up the shoolder, so that in a few minates the coroner was enabled to proceed to the inquests in On Wednesday afternoon, belonging to Messrs. Wringdon and Kendall, now erecting at Bermondsey. It appeara that the workmen, to the number of 50 , were employed in erecting the frame-work massive pieces of timjer upwards of 40 feet in height, which were bolted to the joists incended to support the flooring. The wind had been blowing very hard all the morning, and a sudden gust snapped the braces and in an
instant levelled the whole fabric with the ground, erushing seven of the workmen beneath its weight. As soon as had their legs fractured, and were taken up insensible. The remaining five were seriously injured. They were immediately convered to Guy's Hospital, where five of retarn to their own howes.

Fires.-On Tuesday night a ire, which occasione Mr. Fuller, St. Luke's. Its origia is not known, but it appears to have commenced in the back parlour. Fortu nately the family had not retired to rest, and they effecte a fire occurred at the Ratcliff Gas-works, occasioned by large quantity of tar igniting near to one of the gas retorts Wednesday, a barge took fire on the river, close to Com mercial-road. It appears that the barge, which is a new one, is the property of Mr. Beck, of Isleworth, and was named the Legacy from his unexpectedly falling into some
property. She had been down to Gravesend, where she property. She had been down to Gravesend, where she
took in a load of lime; shortly after she had sailed it was discovered that she was on fire in her holds and bulkhead in this state the master hailed a steamer, which towed he ap to the lime-wharf adjoining Dickins's coal-wharf, when extinguishing the fire. The ater some hours succeeded in Abduction of a Child.-A little boy five years of age son of a watch-case maker, City Road, has within the last few days unaccountably disappeared. It seems he had been to his aunt's, only one street distant from hi home, and about two o'clock in the day left to return but he has not since been heard of, though the circum-
stance has been made known at every police-station and workhouse in the metropolis, and handbills circulated giving a description of his person. It is supposed he must have been caught up by some person, and detained
in the expectation of obtaining a reward, as he was well acquainted with the locality from which he disappeared A child, it seems, was missing from the same neighbourhood during last month for many days, but was immedio be well known to the police, that a somewhere located in the metropolis, who kidnap children for the sake of a reward, and the officers are active in their endeavours to discover them.
Inquesls.-Under this head, an account of an extraordinary mortality in the family of a foreigner, named Arzoni, appeared in our sixth and seventh Numbers. It will be remembered that suspicions having been entertained deaths unfairly, the bodies were exhumed, and a postdeaths unfairly, the bodies were exhumed, and a post-
morlem examination made, but no traces of poison could be discovered, or any other cause of death. A jury consequently returned a verdict of "Natural death." About a fortnight ago, Mrs. Arzoni, who was removed to the
Middlesex Hospital, gave birth to a male infant, which Middlesex Hospital, gave birth to a male infant, which been opened, but with no satisfactory results. In the early part of last week Mrs. Arzoni died, and the deaths baving followed in such rapid succession, Mr. Wakley was apprised of the circumstance. In the course of an inquest at the hospital, Mr. Wakley told the beadle that Arzoni ; but a post-mortem examination of the body having been ascertained, he thouglt it useless to hold an inquest. The house-surgeoin said the mother, son, and infant all went off in the same way, gradually, as though going to sleep. Mr. Wakley said he strongly suspected poison ous occurrence, and the faculty having been umble to discover in either case the cause of death made it the most remarkable on record. The only remaining child, under 10 years of age, was also expected to die.

\section*{将robincial Nems.}

Huddersfield.-The Anti-Corn-law demonstration in this town, which has been for some time looked forward to with mach interest, has been held in the Philosophical Hall, when about 500 persons of both sexes sat down to two The meeting was a combined demonstration by the classes and that of the operatives. A more respectable meeting, it is said, has never been held in this town. The meeting was addressed by a number of speakern at considerable length; and resolutions were passed ia opposithe Corn Laws, and declaratory of the meeting to take active measures for originating a petition to Parliament, praying for their total and immedate abolition
Lancaster.-At the recent Assizes great interest was excited by the trial of Boothman, Riley, Wilkinson, and Ridehalgh, for the murder of Mr. Halstead, in August
last, during the riots at Colne. Dr. Brown addressed the last, during the riots at Colne. Dr. Brown addressed the
jary for the prosecution in a speech of considerable length, and numerous witnesses were examined. It was argued on the part of Ridehalgh and Riley that there was no case against them, to which the Judge assented. It appeared in evidence that the deceased was called out as a special constable to suppress the riot, and that he was knocked down and murdered in the execution of his duty. The jury returned a verdict of Wilful Murder against Book man, scquitting the other prisoners, but recommending him to mercy. The Judge passed sentence of deata in he usual form. The other prisoners then pleaded guilty in the House of Correction. - The discovery of the frog in the lump of conl, described in one of our recent Numbers, continues to attruet the attention of the Nataral History Society, and has given rise to much interesting discussion: it appears that the Society have adupted the opinion that the animal went into the crevice to hibernate.
the Police-office in this city to get \& warrant out against his spprentice for some kind of misconduct. Mr, Mubhton
asked if a premium had been received with the apprentice, not interfere. The Judges have lately decided that, as the law specifies that a magistrate may interfere when a sum not exceeding 20l, has been paid as a premium, except a premium has been paid he has no right to interfere. It wish tices to cake a small preminm Holyhead contain an account of the President steamer
Manchester.-An account appeared in an early Number of our paper, stating that a farmer coming up the in one of the Mal hay, bad talked to a woman length taken carriages aboat selling her infant, and had at reign for it, intending to return his charge at the station, where he found that the mother had taken him at his word and left him to make the best of his bargain. The gentleman, it was stated, had a wife and family, and, afraid to make them acquainted with his bargain, he had taken the chird to the police-office, and left sum of money theme for its maintenance till the mother should be found. The story proves to have been not unfounded, and the child bas lately fallen to the charge of the leypayers of this A sho. The police had inquired after the mother in vain. A short time ago, however, a soldicr's wife, named Castleman, who had been with the 79th Cameronians at Ashtonthere again, and and had left that place with them, returned there again, and on being asked abont the child she had taken away with her, she told a story which did not gain credence, and was taken into custody on suspicion of having murdered the child. Ultimately she confessed that she had parted with her child to a gentleman on the hiverpool and Manchester Railway, and had never heard She was taken before Mr. Maude at the New trin howerer who had witnessed the sale of the child, was examined, and stated that Castleman had done everything she could o get back her child ail the way to Manchester, but that the gentleman refused to give it up, taking it into the mnibus when he got of the train, afraid to follow him, because she had no money benides he sovereiga, which she expected he would reciaim. The the journey that he should put up at a public-house, and hat she afterwards went there, but conld not find him. Under these circumstances the magistrate discharged the woman, expresaing an opinion that the man had carried he joke too far, and regreting that was not in his power to bring him up and oblige him to reimburse the parish for the expense of keeping the child. The child was, berefore, ordered to be given up to her
Warringlon.-The magistrates at the late petty ses-保 broker was defendant, that pawnbrokers were not liable stolen from the premy pledged with them, if burglariousiy ueighbourhood of Wigan, and is the spring of last year upwards of 100 watches, and other pledges, were stolen from his house by some parties who broke in during the night, and who have not as yet been discorered.-An exensive burglary and attempt at murder was committed on Sunday at the farm-house of Mr. Shaw, of Padgate, near
 istols pistols and crowbars, and provided with crapes for their aces. An entrence having been effected by the back door, Jour of them entered the house, the other two keeping watch outside. Two entered the room of Mr. Shaw with - lanters, and the other two entered the bedroom of his housekeeper, who being alarmed by their entrance, jumped out of bed, but was compelled to return by a wound in the forehead from a gun, which was discharged at her through the window from ontride. They then proceeded to rob the place, and possessed themselves of 361 . in sold, and a variety of other property. Their arms appeared to be old military horse-pistols. They spoke the Lancashire dialect. On leaving the house they nailed up the back door, and, locking the front door, took the key with them, thus effectually preventing any parsuit.
Nere Mills.-A fire broke out on Tuesday at the cot-ton-mill of Messrs. Stafford, near this town. It originated in consequence of some hard substance coming in contact More 10001 bil art worked, was on the premises at the time, which, beiag an inliammable nature, burned in ruins in an hour after the fire commenced, building was in ruins in an hourafter the ine itswenced, Though great efforts were made to arrest its progress. This town, unfortunately, does not possess a ire-engine, the nearest being at Comstall Bridge, and the distance to this place being five miles, a considerable time elapsed was in could before it arrived. It was, however. of service in preventing the flames from spreading to a larger and wore valuable mill adjoining. At the time the fire broke out, Mr. James Stafford was in the mill, and had pulled off his coat and hung it up in an upper room-there being bank notes to the smount of 2006 in one of the pockets, tamage sugtrined is considerable, but not jue anount of danown
Leeds.-A few days since a man entered the shop of Mr. Morgan, hair-dresser, in this town, and asked to be shaved. When he was prepared for using the ruzor, be always used to shaving himaself in the army. Mr. Morganaecordingly put the razor into his hand, and went down to the kitchon, retorning almont immentiatly: Oa hil rolurth,
he was alarmed at seeing the man with a deep gash in his vered from his body, and he expired almost immediately. He has since been found to be a tailor named Tye. A letter from his daughter, addressed to her mother, was found in his pocket, from which it appeared that he had been in Stockport, where slue had seen him. She state's that he was a wretched-looking object, and that previously to the day she saw him he had been two days without food. He was suffering also from illness, and scarcely apppeared to know what he was doing. They got him something to eat, and appeared to have gathered together
various articles of clothing for him. It would appear that the act was perpetrated solely from the impalse of wretchedness and despondency.
Derby, - A marderous attack was made on Saturday on the man who is left in charge for the night of the Wingfield station, on the North Midland Kailway, about 12 miles from this town. He books night passengers, and receives and delivers the mail-bags. A knock being made head with a weapon that fractured the skull. He instantly put bis hand to his head, when he received another blow, which severed three of his fingers. There were two men at the door, but the night was so dark that he could not
distinguish their persons. After the second blow, the man who struck it retired from the doorway, as if for the pur pose of preparing to strike a third time, when the lock having a spring bolt, it became fast. The men outsid then commenced an attempt to break in through the wiadows. There is a bell on the building, and the wounded man succeeded in making his way to it and ringing it. The they fled. The man with reat presence of pind sough they hed. The man wheat presence of mind sough tity of cotton waste, which he bound over his hand, and pressed on the opening in his head. He fainted, and was found in this state the mail-cart arrived. The driver immediately drove him to the house of a surgeon at Alfreton, where be nowlies.
Chard.-A whole family at Gribb, in the parish of Thorncombe, near this town, has narrowly escaped death at the hands of an old man of 76 , named Major, who has of the family is Coombes, with whom Major resilled, the wife of Coombes being his own daughter. It appears that on Thursday moraing be begged his daughter to send off her husband's breakfast to hirn earlier than usual, offering her water from his own crock, which the said was boiling : his daughter, suspecting nothing, used the water, despatching immediately a little girl to Coombes with the mess. Coombes remarked to his child that the breakfast was very hot, and that he did not like the taste of it, and after eating a portion gave the rest to her. In a short time he Was seized with vomitings ; the child was seized in the
same manner ; and the wife, who, to convince her husband that she had no knowledse of any poisonous matter being in the broth, ate a quantity of it, was also taken ill. None of the family, however, have died. The poison was arsenic, which the old man had induced the postman to bring him from this town, ander pretence of destroying rats. Major appears never to have liked his son-in-law, and wished to make away with him ; but it does not appear that his inwater from his vessel, and the family meal was prepared from their own crock, and the old man partook of it himself.
Trowbridge. - It appears from the local papers that the Chartists have a cort of joint-stock shop at this place, at which every article of provisions, clothing, \&c., is sold, and the shareholders are compelled to lay out a certain sum per week in the purchase of those articles, in propor tion to their number of shares in the shop.
Widcombe.-As Mr. Higgins, of Regent-terrace, was taking a walk with his wife and family on Sunday, one of his childrem, a little giri, eight yearn of age, ran into by at the time could pull back the horses, she fell under the wheels and was killed on the spot, An elder sister endearouring to extricate ber, had one of her arms broken: she was immediately taken to a surgeon, and had every attention paid her ; and it is hoped she will do well.

Brighton.-The Rev. J. Marshall, viear of Ovingdean, near this town, has destroyed himself. It appears that wash-house of an empty house belonging to him which he Wras in the habit of frequently visiting. The discovery Fas accidentally made, decensed not having been seea for some tirae previously. No suspicion was entertained at but the surgeon who was called in pronounced that life had been extinct for some time. It is therefore thought that he must have committed the aet immedrately after he aft his home. Various tauses are assigned for the commisaion of the deed, but all agree that he must bave been lahouring wader insanity. Arrangements, it seems, had been made for baplising one of his infants on that day He was manch attached to his family, and, previoualy to going out, kissed his children affectionately; but there
was nothing ia his conduct to excite at the time any suspicion of Lis intention. Deceased was 10 years of age, and much respected by his parishioners.

Yarmouth. - Considerable exeitement has for some time prevalled, osting to a number of letters and newspapers not having reached the parties to whons chey had been addressed; and suspicion having fallen upon Jervis, one of the letter-carriers in this town, the saperintendent of police searched his dwelling-housa, and diseovered 261
bezzled; and on apprehending him in the atternoon, 41 ed in the morning. Information haid have beem dethe mayor, Jervis was examined, and remanded for further examination to allow time for the Post-office authorities to come forward to prosecute. On being taken to the gaol and searched by the gaoler, four other letters were letter. On Friday, Jervis was brought up for examination before the mayor. A solicitor was present from London on behalf of the Post-office. The prisoner, by the advice ommitted ensuing sessions. It is remarkable that none of these letters had been opened but the one alluded to.

Windsor.-A robbery of a very daring nature has been committed at the Castle. The thief, who, it seems, has absconded, was an under-servant in the Castle, and the broken from looking-glasses and other articles of furniture ; the amount of value being, it is said, about \(£ 150\). The police are in active pursuit, and it is expected the spired, that when the suspected party left the Castle on Thursday, the day on which the robbery was discovered, he called upon a Jew, residing in Peascod-street, a dealer in watches, jewellery, and in old gold and silver, and re-
quested the loan of 10 s ; but this having been refused, he thence proceeded to a pawnbroker, with whom he pledged his watch for 15 s. When he called at the pawnbroker's, he therely said he wanted some money, and asked for that sum upon his watch, which was immediately advanced. He then seemed as usual; and there was nothing in his manner or appearance to indicate that he was labouring under feelings of either excitement or alarm. Thence he has been traced to the railway station at Slough, and no clue after that as to his place of retreat has yet been areo red. a large and valuable portion of the marquee, well known stores at the Castle, where it had been deposited for a number of years past. Amongst various parts which are missing is the long pole which supported the roof. This was studded, and portions of it cased with silver ornaments, and the two knobs at each end are stated to have been of silver. Other portions, containing silver ornaments of value, are also said to be missing. From this circumcarried on for sosed that a system of plunder has been the party who is reported that, during the search amongst the stores, a quantity of raluable property of various descriptions was discovered packed up, apparently ready for carrying away It appears that on his leaving the Castle on the afternoon of Tharsday, and proceeding home, the servant asked his wife for his keys, and went up stairs, where he was ensome cord and put it into bis pocket, merely saying to his wife, as he hastily wentaway, "Good bye ; You'll never see me again." In consequence of the general order nance, by command Lord Hill, for the formation cricket-grounds for the use of the troops at the several barrack stations throughout the kingdom, a field, situated close to the cavalry barracks, formerly used as an exercising ground for the horses, has been ordered to be excluunder the chane to the purpose. The ground will be It is understood that the bate, balls, and wickets will be purchased by the ollicers, and presented to the men in their respective troops

Cornwaull.-A correspondent of the Mark Lane Ex Mr. Tha audressed a letter to that Journal, stating that M. Thomas Shepherd of Woolley, in the parish of Moorwinstow, had an ewe sheep which produced forty-four three times she had three; three times, four; and three times, five. Her progeny were prolific, but not so much 80 as herself, the most that the writer knew any of them to produce being four; she was a cross-bred Nott sheep, and was bred by Mr. Colwill, of Bradworthy, Devon.
Railroads.-It is stated that the Great Western railway will be opened to Cirencester on the 26 th A pril, and that the journey from Cheltenham to London wir then be per formed in four hours and a half.-The Great North of
England railway, which carries forward the communication from I ork to Darlington, and completes the chain from the metropolis to the county of Darham, will be opened for the conveyance of passengers on the 31 st inst. The accelerit being fired by the Post-ofice authorities for the the Great Jorth of England line being included in the mail contracts, all places as far north as Darlington, and radeed hevend fill share in the benefit of the rapidity of post-0ffice communication.-On Monday tro the terminus of the Greenock railway direet from Glasgow. At Paisley the arrival of the trains was hailed with cheers, and on arriving at Bishopton the workmen and villagers turned out and welcomed the anexpected visitors. The
trains in comine over the line were stopped on every arch, trains in coming over the line were stopped on every arch, ran over the whole line of the railway the very day that the great water-wheel of the cotton-mill performed its first are to proceed from Greenock to Glasgow by the railtway and on the following day the line is to be opened to the public. - The exertions at present making on the ruilway lise from Bristol to Bridgewater are very great; a
antertained of this made is daily apparent. No doobt is few days since, Mr. Briggs. formerly gamekeeper to the late Earl of Durham, was standing near the Fatfield stati. \(n\) of the Stanhope and Tyne railroad, and, seeing a child in danger of heing run over by a train of coal-waggons, he rushed forward to snatch it from destruction: he succeeded in that object, but one of his feet getting fast
below the lip of the rail, he could not get himself clear before the train came and passed over his leg, injuring it
so severely that amputation was necessary. He is doing well.-An engine-driver was killed on the Mancbester and Leeds railway on Friday, in consequence of his engine been entirely his own fault, and a rerdict exculpating the company has been returned by a roroner's jurr.- - On Wednesuay morning as the yards of the roller upon which the rope is coiled, the rope threatened destruction to everything within its reach. It struck the hindmost carriage with such violence three or our times as to do it considerable damage, but further mischief was prevented. Fortunately seven or eight pa-
sengers who were in the carriage got out the moment the sengers who were in the carriage got out the moment the day a fatal accident occurred on the North Union
Railway, at Cuppull, near Wigan, to a person named Atherton, keeper of the Standish station. Deceased, it seems, was returning from Liverpool, and was riding ngin ata to which no train was attach. The ceased to get off there, saying that he should not stop at the station, as his time was already expired. This re quest, however, Atherton disregarded, thinking that he could jump off whilst the engine was going, as he had done before. He attempted to do so, but was thrown under he wheel, and killed on the spot.-On Thursday morning Northern and Eastern Railway, near Ponder's-end station, a plank of timber fell on him and broke his right leg and
ancle. He was taken to the London Hospital, where he lies in a precarious state.-On Wednesday night an accident occurred to the laggage-train of the Great Western Railway. It appears the train left Paddington at halfpast 9 oclock, and when it had proceeded five or six miles, burst, and the en procured, and after an hour's labour the train was backed to Paddington, when after a delay of more than three Lours it again started on its journey. The train was unsually long, there being 18 waggons attached to the enbefore the train arrived at Slough, four hours after the proper time.

Edinburgh. - The Rev. C. H. Terrot has been umaimously elected to the office of Bishop in this city, veant by the death of Bishop Walker.
Glasgow.-The approaching demonstration announcad to take place in this city during the Easter recess, it in said will not be confined, as was originally intended, to the consideration of the corn-laws alone, but will embrace the broad general question of the duties on every description of goods and produce imported into the United Kingdom, including the duties levied upon corn and provi-
siong. The Riding-school, Cambridge-street, has been fixed upon as the place where the demonstration is to be held. It forms the place where the demonstration is city, and is capable of being fitted up to hold about fifteen hundred individuals. - During the confusion consequent York, from the south sigrant ressel Liverpool, for New since, a little girl, four years of age, while being carried on shore in charge of a relative, was hustled off the gangway, and precipitated into the river unobserved by any person at the moment but a young man standing on the quay, who, without hesitation, instantly leaped into the water from a height of twelve feet, and succeeded in catching the child just as she was being borne down the sta the current. He kept her above the water until assidance came from the ship. The mother of the child was at time taking leave of some emigrant friends on the deek of ar her chitd, and was unconscious ofroling in the water. Forth and Clyds Canal. -The receipts of this canal for the last year amonnted to \(88,965 \mathrm{l}\). 12 s .10 d ; the expenditure, including a dividend of 38,9100 , 8,390\%. 16s. 5d. . The artieles from which toll arent Ged range thus according to their respecs and linewe herrings, stones, porter, and alo. The number of pris sengers conveyed was 190,120 .

\section*{IRELAND.}

Dublin.- It is stated that the Lord-Lieutenant (Lord; Ebrington) leaves here, on Saturday next, for Eogladin and there is a report that hiss Excellency will ind for his acceptance; but this has since been denied from antho-rity.- On Monday, a meeting of the Repeal Associstion
was held at the Corn Exchange. Mr. OConnell, who was received on his entrance with great cheering wid dressed the meeting at considerable length. After some preliminary observations, he said that he would rener a opic which he brosched on the security of the tenantry of Ireland; that subject should be carried on in conmexion with the repath When he looked to the internal vealth sous, he felt she
should regain her legislative independence. Let it be \(\mid\) allow the rats free use of the traps to feed. He did an
recollected, he said, that since the world began, no country in the world ever treated another with greate perfidy than Ireland had been treated by England. He instanced the breach of the treaty of Limerick as one of his proofs of this assertion. English writers might taun sccase them of creating sedition; but they only sought form them. The learned gentein proce bed that for several months the public writers have been re monstrating with the French and the Americans against their desire to go to war. The affairs of China, of Syria, ad India all indicated war to England. Could England safely go to war with either France or America, and lre True, she misht call out the militia of Ireland : they ould answer to it, to be sure, because it was the law and the law would be obeyed but would that be of any such a time to put arms 10to the hands of men whose fathers and brothers had been deprived of their franchise, nd generally prevented from enjoying their natural rights? After some further observations, he alluded to opic lazulud tenant, apon whiche spoke pointed to report on a plan for giving greater security to the tenants, and rendering full justice to the landlords. The meeting soon after separated.

Tipperary.-There was a numerous meeting of electors and other inhabitants of the county of Tipperary on favour of Lord Morpeth's bill for the amendment of the franchise, and the system of registration in Ireland. The High Sheriff presided. A petition in favour of the bill was unanimously adopted.
line of railroad, -It is stated that the formation of a line of railroad, southwards from Dublin, will be soon undertaken, and that, from the arrangements and agreements which have been made, the delays attendant upon parliamentary notices will be obviated, so as to enable these forms were to be observed. The funds are to be supplied by three great London capitalists. It does not seem to be intended in the first instance to undertake the only contemplated to Cork; but at present the work is county of Tipperary, the extension to Cork and Limerick to be postponed till after the completion of the first work.

\section*{fliscellanoous.}

The Albert Steam-ship.-This beautiful vessel, intended to sail with the expedition to the Niger, under the command of Capt. Trotter, was on Tuesday inspected by a ventilation were explained by Dr. Reid. The apparatus consists of a pair of fanners, or small paddle-wheels, acting upon various tubos communicating with the different parts of the ship, and so adjusted as to have the power of filling the berths with fresh air, and of exhausting them of foul air. The action of the apparatus was exemplified in the
one case by burning volatile oils in the apertures on deck one case by burning volatile oils in the apertures on deck,
when the catins, engine-rooms, \&c., were speedily tilled when the catins, engine-rooms, \&c., were speedily filled
with perfume; and on the other, by irniting gunpow with perfume; and on the other, by igniting gunpowder in the forecastie, when the smoke rapidly cleared away through
the proper channels and was poured forth upor deck is supposed that the pestilent atmosphere of the African coast forms a bed about 50 or 60 feet deep, and that above it the air is in its ordinary state of purity. Provision is mast-head, which is 70 feet high anstant supply from the geniously effected by means of a windsail or canvass chimney, one end of which is open at the mast-head, the other up with hair-filters, pans for containing lime, chlorine, and other chemical agents. Introduced into the medicator, the till it is dried and purified of any miasma that might remain, and is then carried downwards between decks, by means of a second descending chimney. We earnestly trust that these arrangements will contribute to save the gallant men composing the expedition from the dangerous Destruction of Rats. - We extract from themselves.
Destruction of Rats.-We estract from our contemporary the Mark Lane Express, the following observations On this subject, from one of its correspondents, residing at Kintbury:-"Seeing in the Mark Lane Express of the 15th several plans for driving away rats. I consider none since I was twelve years old, I have some experience, and the only plan to safely free a place is Broad's plan, for Which he communicated his plan for 1,000 guineas ; his pamphlet was a guinea-his traps and oils cost me near \(3 l\). and hase bad beod trybled with rats for more than a year, Ind hunting with my ferrets every week for many weeks,
I found and killed only one rat-still I was annoved. I then got a friend at Henford to procure all from Broauk, following his instructions myself, feeding the rats for a week or more in the traps, when I caught them all in one hight-three fermale rats; since which- 25 years-I never toy had a rat in my house. Lpon relaying the tiles upon menting the rats with ferrets, they did not live in the house, but came up a yew tree, and through a bent thie friend of mine was troubled the same. I the morning. A materials, who under a careful servant only now and then caught one. I then told him those days he was alone he rust undertake the traps, and the night he was dining out
has never been tronbled. The mirture is ground malt with Rhodinm and -not a tenth of the expense of the oil of the Quarterly Scre effectual. In one of the numbers traps, and full instractions ; but every minutia must be attended to; no servant can, in common, be trusted, and the place where the traps are set must be secure, that no other animal, cat, \&cc., can get there, or you will be defeated."
Battle (ne weighas usad in Farming. -The magistrates of Battle (Sussex) hare decided that inspectors of weights and measures have no authority to enter farm-houses to examine scales and weights used in the ordinary business
of the farm, although many farmers are in the habit of paying their men partly by flour in weight, and occasionally of selling to other partien.
The Golumbaeser Fly.-A little below Pulmike, on the Danube, is the fortified Castle of Golumbacs, perched on the summit of a stapendous rock, which gives name to an insect whose deleterions powers are represented as most in 1837, Mr. Spescer, in his Travels in Circassis, de. caverns, famous for producing the we found a range of known in Servia and Hungary under the name of the Golumbaeser Fly. These singular and venemous insects, somewhat resembling musquitoes, generally make their appearance during the first heat of summer, in such numbers as to seem like vast columns of smoke; their attacks are always directed against every description of quadruped, and so potent is the poison they communicate, that even an ox is unable to withstand its influence, for he always expires in less than two hoars. This results not so much from the virulence of the poison, as that every valnerable part is simultaneously covered with these most destructive insects; when the wretched animal, frenzied with pain, rushes wildly through the fields, till death puts a happy period to his intolerable sufferings, or he accelerates his fate by planging headlong into solne deep river. The shepherds of these countries, taught by long experience the time of their approach, anoint every part of their flocks and herds anprotected by nature with a strong decoction great antipathy to which, it appeare, the sher hap great antipathy. In addition to this, the shepherds leep a ware of their danger, around which the poor animals, gate. Kind nature has, however, mercifully ordained that gate. Kind nature has, however, mercifully ordained that variation in the weather is sufficient to destroy the whole swarm; hence they seldom live beyond a few days.-Indagator
Trap-Nets for Birds.In the Gasdeners' Chronicle, P. 55 , it is stated that a sparrow-hawk dashed through one of the large panes of glass of the Chatsworth Conservatory, and that a pheasant had previously performed the same in \(G\) I have now hefore me a model, which I made when and others ; and inasmoch used for catching birds of prey describe this engine, and as the same might act the part of a safety-valve to the conservatory, and so save it and others from these repeated breakages, and the poor little birds therein from these attacks of their foes, and the tender plants from a fatal chill, I venture to send an acof the same. H is a circular hoded represents a section 2ft. to 2 fill 2 ft . to \(2 \frac{1}{2}\) t. diameter, and from 12 in . to 13 in . deep, in put. P P are stout wooden pegs, of which there are four, which are staked down opposite to each other at the edge of the hole ; these are 3 ft . long, and 8 in . in circumference at their thickest part. A round iron hoop is provided, made to fit the hole, and a net made to fit the hoop is
sown on to the latter mesh by mesh, across this hoop, but sown on to the latter mesh by mesh, across this hoop, but This the net an iron bar traverses in the direction of \(a b\). ledge in each peg, which ledge is caused by part of the heads of the pegs being cut away; to keep the hoop firm a piece of wood is screwed on over the hoop's rim ; \(\operatorname{c}\) a a are the screw-heads at each peg. Another hoop, precisely like the other, is now taken, and a net made a foot larger in diameter, so as to hang loose, is sown on as before; this position of the dotted line, \(d\). The upper net has no cross bar, but an iron tongue with a slit in it at T, which claps down when the net falls over the snap, S , and thus S is a thin shut despite the efforts of the captive to raise it. is a thin pliant staff, which hangs loosely from the hoop of the net, \(n\); and at its other end it is set, lightly resting on a delicate spring, made in small nets of a quill, \(\mathbf{Q}\), and screwed to the cross bar, N. © \(b\) are screws keeping the
lower net and the snap firm. WW are leaden weights of 2 lb , of which there are three placed on the hoop, so as to fall on three of the four pegs, P P , whilst the fourth peg supports the hinge ; these contribute to the smart shutting to of the upper net. Care must be taken that the spring, Q, keeps the staff, \(s\), sufficiently high above the meshes of the lower net, so that the point, when it starts from the spring, may not get entangled and impede the fall. The wine ; the ing. square, more or less, made of stroag in circumference, painted white. The net, then, being set open, and arranged as above described, the bird, espying trom alott his favourite food lying in the hole, H, under the lower net, rushes down apos it; and, in truth, it is a in repeated gyrations, and at last pounce with the speed of an arrow on the nets ; he perches on the cross-bar, and in so doing presses the spring, the staff flies off towards in so doing presses the spring, the staff flies off towar

h, and the net filling briskly dowa over him, he is impribe greatly imp the wo nets, N and d. This engine might thing to improved upon, bat with that we have now ao thing to do. I know not how the ancients captured their Terence of my boyhood, si Non Rete arcipitris's-eared Cence of my boyhood, "Non Rete accipitri tenditur ception to the then lying that they formed a special exwith the net in Italy, Bird-cas ordinary mode of fowling lar devices has ever been a favourite diversion in that country; and a modern popular author observes, "Dal principio del mondo ia qua gli vecelli sono sempre stati presi daghi uccellatori a un di presso cogli stessi zimbelli, e gli uomini sono sempre stati colti allo stesse Reti.\$-

The Affection of Animals for their Yroung. - The Bear and her Cubs,-In the middle of the last century the the North Pole. Farly out to make whe she was locked in the ice, the man at the mast-head gave notice that three bears were making their way very fast over the frozen ocean, and were directing their course towards the ship They had, no doubt, been invited by the scent of some blubber of the sea-horse, which the crew had killed a fep days before, that had now been set on fire, and was burn ing on the ice at the time of their approach. They proved to be a she bear and her two cubs; but the cibs wer nearly as large as the dam. They ran eagerly to the fire and drew out from the flames part of the flesh of the sea horse that remained unconsumed, and ate it voraciously. The crew threw from the ship great lumps of the flesh of the sea-horse, which they had still left upon the ice, -these the old bear fetched away singly, laid every lump before her cubs as she brought it, and, dividing it, gave each a
share, reserving but a small portion to herself was fetching aw but a small portion to hersell. As she kets at the cubs and shot them both dead, and wounded the dam in her retreat, but not mortall 5 . and it was prising to mark the affectionate concern expressed by this poor beast in the dying moments of her joung. Although she was severely wounded, and could but just crawl to the place where she lay, she carried the lump of flesh she had retched away as she had done others before; she tore it in pieces, and laid it down before them; and when she saw that they refused to eat, she laid her paws first upon one and then upon the otber, and endeavoured to raise them up: all this while it was piteous to bear her moan When she found she could not stir them, she went off, and Then at some distance she looked back and moaned; and that not availing her, to entice them away she returned,
and smelling around them, began to lick their wounds. and smelling around them, began to lick their wounds. She went off a second time as before, and having crawled
a few paces, looked again behind her, and for some time stood moaning. But still her cubs not rising to follow her, she once more returned to them, and, with evident signs of inexpressible fondwess, went round one and then round the other, pawing them, and continually moaning. Finding, at last, that they were cold and perfectly lifeless, she raised her head towards the ship and growled at the crew ; which they returned with a fresh volley of musketballs. She fell instantly between her cubs, and died licking their wounds.- Indagator.
Calotype Photugenic Drawing.-Mr. Fox Talbot has circulated two letters upon this curious subject, of which the following is the subatance: -He last September discovered a chemical process by which paper may be made nown It is not olis to estimate eractly how frerto increase of sensibility estends ; but certainly a much better picture can now be ubtained in a minute than by the former process in an hour. This is accompanied with an ncreased sharpness and distinctness in the outlines of the abjects. The shortest time in which he has yet succeeded in impressing an image in the camera ofscurra has been eight seconds. The image, when obtained, must, of course,
be fixed. It might be supposed that this fixation would be diffcult, the paper being so sensitive. But it fortuaately happens that what seems a reasonable inference is not borne ont by fact, the new photographs being more fixed and perfectly fixed than the former oues. When arec, a great many copies may be made from them, and
thus the original view can be multiplied with fecility. He

The uet is not spread for Hawik or Kite.
From the beginning of the world bill now Here aimays
been taken by the fowiers with , os neand as powible the
baits, and men have alway been caught in the sime nets.
thinks that the art has now reached a poiat which is likely to make it extencively useful．How many travellers are almost ignorant of drawing，and either attempt nothing，or bring home rude，unintelligible sketches！They may now fill their portiolios with sceurate views，without muc expenditure of time or trouble；and even the accom－ plished artist will call in sometimes this auxiliary aid， when pressed for time in sketching a bailding or a land－ scape，or when wearied witt the maltiplicity of its minute details．One of the most important applications of the new process，and most likely to prove generally interesting is，undoubtedly，the taking of portraits．He made trial of it last October，and found that the experiment readily succeeded．Half a minate appeared to be sufficient in sunshine，and four or five minutes when a person was seated in the shade，but in the open air．Several photo graphic processes being now known，which are materially different from each other，he considers it to be absolutely nenessary to distinguish them by different names，in the same way that we distinguish different styles of painting or engraving．The manaer in which the discovery was made is stated thus ：－One day last September，he had been trying pieces of sensitive paper，prepared in different ways， in the camera obscura，allowing them to remain there only very short time，with the view of finding out which was the most sensitive．One of these papers was examined by candielight．There was litle able in a dark room．Re－ turning some time sfter，he took up the paper，and was turning some time ar ber the pas surprised to see upon a her when fore；and，therefore（magic apart），the only conclusion fore；and，therefore（magic apart），the only conclusion
that could be drawn was，that the picture had unexpectedly developed itself by a spontaneous uction．Fortunately，he recollected the particular way in which this sheet of paper had been prepared，and was，therefore，enabled imme－ diately to repeat the experiment．The paper，as before， when taken out of the camera presented bardly anything visible ；but this time，instead of leaving it，he continued to observe it by candlelight，and had soon the satisfaction of seeing a picture begin to appear，and all the details of it come out one after the other．In this experiment，the paper was used in a moist state；but with dry paper the
 peared to be mecasera after a short time，as a minute or two，the sheet of paper was absolutely blank．But，neverthe－ less，he found that the pictureexisted there，although invisible； and by a chemical process it was made to appear in all its perfection．The result of his experience hitherto with this calotype paper is，that if properly prepared，it will keep three or four months，ready for use at any moment，and moreover it is used in a dry state，which is a great con－ venience．He knows few things in the range of science more surprising thau the gradual appearance of the picture on the blank sheet，especially the first time the experiment is witnessed．The operator ought to watch the progress of outline，and general distinctness，it has reached，in his judgment，the most perfeet state．At that moment he stops further progress by washing it over with a fixing Liquid． This is washed off with water，the picture is then dried and the process is terminated．The picture is found to be very strongly fixed，and from it numerous copies may be
taken on common photogenic drawing－paper，by the method taken on common photogenic drawing－paper，by the method
of superposition in sunshine．The original picture does not readily become altered，or wear out by this exposure to the sun ；but in case it does so，as happens sometimes， he finds that it may be in general readily revived．This re－ vival，which is a must curious particularity of the calotype process，not only restores the picture to its pristine strength，but frequently causes fresh details and minutia to appear in the picture，which had not appeared before， at the time when it was first brought out，or rendered visible（owing to that process having been checked too \＄00n）．Further details on this subject，and an account of the chemical processes employed，are reserved for a paper Thich Mr．Taloot intends of lay before the Royal society． tanical drawings will immediately suggest itself to our eaders

The Peculiar Food of Animals．－Some animals have a partiality for，and feed voraciously on，vegetables poison－ ous to others．Hogs devoar Dandelion，and are the best eradicators of the weed in pasture－fields in spring，before the latter are laid in for hay．In America they even seek after the young rattle－snake．Deer eat the Mountain Laurel ；goats feed on Datura Stramonium，or Thora apple，with impunity．Nux vomica is poisonous to dogs and cats，and all animals born blind．Sheep delight in derour ants：sparrows，caterpillars；rooks eat the grubs of the cockchafer in corn－fields and ploughed lands；but reason of the greater reason of the greater length of his bill，and is more par tienlarly serviceable in gardens，on accuunt of the inces sant searches be makes daily beneath the roots of cab
bages，without doing injury to the plants．Indagator．

Horse op Lords＿－Preston v．Hetoille．－The Lord Chancello
gave judgruent im two canses under this name，deciding that Coere there existed a suit in the court of Session，and one in the reapect of the same partie Vies．CFt vezlifr＇s Cocrr．－Btundmis．Eladstone．－The
 in the county of Lancaster，and involves the prewent right to the
large estates of that gentleman．By his will，which was made in 1834，Mr，Blundeld feft his estates in trust for＂the swomd soa of

Edward Weld of Lulworth，in the county or Dorset，for life，with and every other the eldest of Edward weld for life，with remainder
to their smis in tail male，with remainder to the first and every Wther amm uf each brother，exrept an elder brither of Edward Weld，in tail male，with remainder to the second and every other
son，except the elliest som of Lady Stourton，the sister of Edward Weld，it tail male，with remainder to the first and every other
son of the other cirters of Edward Weld in tail male，with re． minder to the first and every other son of the daughters of
Edward weld in tail male with remainders over，with a condition
 owner of Gulworth was the prenent Joseph Weld，Esq－，upon
whom the late Thomas Cardinai Weld，his eldest brother，had made a strict－ettlement of it in 1829 ，when he became himself a
priest，atter thaving had a daughter only，namely，Lady Clifford． priest，after having hat a sum of Joseph Weld，and alleges that
The plaintiff in the secou＇son ondell had mistaken the name of Edward for Joseph．And in proo of this it apperared that Mr．Blundell，who was distantly
related to the Weld fanmly，in giving his solicitors instructions for his will，detailed a short petigree of the family to this effect－
first the Cardinal，seocondy his broher Edward，to whom he
Iscribed a second son and then their sisters，Lady Stourton and ascribed a second son，and then their sisters，Lady Stourton and
two others．The whole difficilly arose from the circumstance
 and unmarried，an deceased Edward were the person really meant in the will，the take the Blundell estates；a result，it was contended，which was
quite opposed to the manifest intention of the will of Mr．Blundell to create a new and distinct family for the perpetuation of
his own name and the enjoyment of his own estates－The se－ said it appeared to said rule of evidence laid down in the case of＂Miller＂．Travers＂
the
8 Bing． 214 ．In his Honour＇s opinion the case might be decided with the greatest facility．The sole question was，who was the
person described as＂Edward Weld，of Lulworth，in the county of Dorset．for the purpose of deternung wond be given－
merely refer to the only proper evidence which could
riz the state of the Weld family at the time of making the will，汶，the state of the had used，rejecting altogether fromi his con－ sideration anything that could be said to appear with regard to
the testator＇s intention．He foumd these facts，bout which there xas no dispute－that Joseph Weld，Esq．，of Lulworth，had at the
time of the will an elder brother living named Thomas，and that he had a brother named Edward who had been brought ap for
holy orders in the Romish church，but died at the age of 20 or 21 ， and that Joseph Weld had two sons，Edward Joseph the eldest， and Thomas（the plaintiff，the second，and that he also had a
sister，Lady stourton．That being so，he then looked at the whole of the testator＇s will，in doing which he merely followed the ac－ knowledged rule as it was laid down in＂Miller r．Travers，＂where
it was stated that the testator＇s intentioss io to be collected from the words he had used in his will，and that words which he had
not emploved in the will could not be added Now the will，after not employed in the will could not be added Now the wind arter
a devise of the legal estate in fee to trustes，directed that the estates were to be held upon trust to permit the second son or
Mr．Edward Weld，of Lolworth，in the county of Dorset，to take the same for life，with remainder upone trust for the first and other sons of the said second son of the said Edward Wed sucessively，
in tail male \(:\) and then upon trust for the e third and every othe
son upon trust for the firct and other sons of each brother except the eldest of the said Edward Weld，in tail male；and for default o such issue，upon trust for the second and other sons，except the eldest，of Lady Stourton，wife of William Lord Stourton，one
the sisters of the said Edward Weld，in tail male．There was no hing material in the rest of the wion，excepl framed it that the first devise was to take effect in possession．The will must be therefor considered in the same manner，in limine，as if，where the tes－
tator spoke of Edward Weld，of Lulworth，he had described him s haviug an elde brother，and as being himself the brother \(n\) Lhe second son．of Edward Weld of tulworth，who bad an elde
brother，and who was himself the brother of Lady Stourton，then twas said it could not mean the second son of Joseph Weld o Lulworth，because he had a son named Edward Joseph，and that
though he was commonly called Edward，yet that on more solemn ccasions he wrote his name Edward Joseph．It was also said
hat though it might be true that the description of Edward might be sufficient for some purposes of Edward
name of Edward given to
sccurate description of him by name，and further that if he coul
be said to be the person designated，he was not desimated full and fitly，and was not at all the person answering to the descrip．
tion of having an eldest brother，and being limself the brother Lady Stourton．Against that it was said that Joseph had an erro given to him in respect of his Christian name，but that he was
described as Weld of Lulworth，and that though it might be well to describe Edward Joseph as Edward for some purposes，yet here the testator was making a disposition of his estates，and evinenti，
speakine of some person who was to be the stirps，and from whom
 have been a very sufficient description of the father，but that here was an error in the description．Therefore，the court ta
on one side \(a\) sufficient description for some purposes，but not \(f\) o others；and，on the other side，two descriptions which by no
means
suited，and a means suited，and a description which was not accurate，but
which two descriptions so fitted and so pointed at him as abso which two descriptious so fitted and so pointed aathim af donbt． He had thought a good deal of the matter，and it appeared to him that no good would arise to either party by sending the matter to a court of law．No case could be sent without in some degre he thought the case would be more fully decided by bimself an of the courts of law．If he had entertained any toubt，he would have refrained from expressing his opinion，and have sent it to a
court of law ：but as he thought it a very plain case，he felt he सas only duing justice to the parthes to declare his opininn，

PROSPECTUS OF \\
THE GARDENERS' CHRONICLE; \\
The Horticultural part Edited by Professor Lindley. \\
Gardening is admitted to be better understood in Great Britain than in any other country, and the number of works on the subject prove the patronage it receives, and the desire there is
to estend the knowledge of its various branches. Many thousand persons are engaged in the business of Horticulture as a means of existence, and a rast number more are interested in the subject, for gardens are now an iodispensable part of the domesNo one will, therefore, doubt the advantage which may be.derived from the establishment of a Journal conducted in an honest and liberal spirit of good-will to all, who are engaged or interested in Horticulture and Garden Botany, and who will thus have The plan proposed to befollowed in the management of The

\section*{The Gavoners Citunide.}

SATURDAY, APRIL 10, 1841.
Tuedday,
\(\begin{gathered}\text { Wededas } \\ \text { Friday }\end{gathered}\)
Amoxg the many wise provisions in the vegetable kingdom which afford irresistible evidence of design, and of the omnipresent foresight of a beneficent Creator, is one which we daily witness without observing it, and which the gardener often interferes with, to his own injury, without being conscious that he does so. We allude to the universal law that in all perennial plants there must be not only a special store of food provided before flowers can appear, but that the magazine in which this is deposited is fllled one year against the demand to be made the succeeding year.

The situation of this magazine varies with specien. In Trees, it is in the pith; in Bulbs, it is in the scales of which they are constituted; in others, it is in the solid substance of an underground stem, specially organised as a tuber for this particular service, as in the Potatoe and the Arrow-root plant; in another class it is the root itself that contains the nutritious matter, as in the Carrot, the Turnip, and such species.

The use of this magazine is to supply to the new shoots such a stock of organisable matter as may be sufficient to enable them to grow for their ellotted term, and to form new matter of the same kind for future years. In its total absence all growth is arrested ; in its partial absence the formation of new parts is diminished; in a fitting quantity it causes the production of exactly the amount of new matter, whether leaves or flowers, which the plant is suited to bear ; in excess it causes the formation of foliage rather than of flowers. Thus we see that the Turnip is formed the first year for the support in the second of the flowering stem and seeds, which exhaust it; and no flowering stem or seeds can, under ordirary circumstances, be produced until the turnip, that is, the magazine of organisable matter, has been formed. If by artificial means a Turnip-plant is forced to throw up a flowering stem before the store of food is prepared, it is weak and unhealthy, and the seeds obtained from such a stock only produce a degenerate offspring, as the seedsmen are well aware.

Let us apply these facts, for facts they are which no one can dispute, to the Dahlia, the great subject of propagation at the present season.

The Dahlia, when it first springs from a seed, begins to form a fleshy fingered rgot, in which is immediately stored up the organisable matter elaborated by the leaves, and out of which the flower is to be formed. If the summer is long and warm, or circumstances are otherwise favourable, this plant will flower the first year, but feebly, and by no means so well as it vill at a later period. If the fleshy roots are allowed to remain untouched during the first winter, the store of food in then is undiminished; and the second year the seedling will flower with all the attributes that may be peculiar to it, there being a constant supply of organisable matter from the roots equal to the demand that may be made upon it. But if the root is allowed to go on enlarging and filling with such matter for a third year, the quantity then stored up becomes so great that over-lusuriance is induced, and leaves are produced in more abundance than flowers; and thus the beauty of the individual is impaired.

If, on the other hand, a root well prepared for flowering in the most perfect manner is forced continually to produce shoots which are abstracted for cuttings, it by degrees becomes exbaustel of the organisable matter stored up in it, and at last the cuttings contain so little matter of that kind that they are in the same state as seetling plants-namely, possessed of the power of growth, but destitute of any supply of properly prepared matter out of which perfect flowers can be formed. The consequence of this is, that plants obtained from early cuttings flower well ; from the next supply, worse; from a third crop, worse still-and so on. Again, if a Dahlia plant struck from a cutting ill prepared or even well prepared to flower is itself compelled to furnish other cutcings, it will become exhausted by the cutrings it has yielded, because
it has no supply of organimble matter on which to draw; and these cuttings will produce plants in a still further stage of debility.

If these statements are rightly understood, they will be found to explain some things that the buyers of Dahlias do not seem to be aware of. Many an honest nurseryman has been regarded with suspicion by his customers, because the Dahlia plants that he has sold have not answered to sample; in other words, because they have produced flowers very inferior to those of the variety they have been sold for. And yet in reality the vendor has been perfectly correct in his dealing, but the plants he has propagated have been debilitated by the excessive demand for them. No blame can attach to a nurseryman for this. When a secdling is raised, it is but a single plant; it gains prizes, is talked of, and gets into request ; and straightway hundreds of plants have to be propagated from that one, in order to meet the sudden demand which, under such circumstances, is sure to arise. Of these plants, a large proportion must necessarily produce bad flowers the first year; but they will recover their character the second year, and for thiat second season all reasonable florists will be content to wait.

As it is impossible for a buyer to know whether a plant struck from a cutting is an early or late propagation, and therefore whether it is more or less debilitated, the wise plan is, in all cases, to buy " pot-roots ;" that is to say, plants propagated the previous year, when they can be had. It is, however, needless to say that new varieties cannot be procured in that state.
The same principles apply to the cultivation of the Potatoe; but we must defer our observations upon that subject till another week.

We are happy to announce that a further supply of seeds from Mr. Hartweg is now ready to be distributed by the Horticultural Society. There are three species of Pinus: an Arbutus, a Viburnum, and a Fourcroya. Those Fellows of the Society who desire to possess these things should lose no time in expressing their wish, as there are not more than 40 papers of the Viburnum and Fourcroya.

ORCHIDACEOUS EPIPHYTES.
Continued from page 195.)
Crrriza tristis, Xalapa, 1835, Messts. Loddiges. -One of the best of its genus, and, like all the others, most easily managed.
Angrectum caudatum, Siorra Leome, 1835, Messis. Loddiges.-Has a spur of extraordinary length. The
plant in Messre. Loddiges' collection is, I believe, unique. Maxillakia cristata, Trinidad, 1835, Mr. J. Knight.-A splendid species; the best of its genus. Grows slowly, but flowers freely.
Coryanthes macrantha, Cataocas, 1835, Duke of Devonshire.-Perhaps the most extraordinary plant in the whole tribe. More manageable than C. maculata.
Epidendrem Skinineri, Guatemala, 1835. Mr. Bate-man.-One of the most beautiful of Epudendra, but will man.-One of the miscellaneous assemblage of tropical Orchidacese; it seems to require more air than they do. chidacear ; it seems to require more alirs.
Sowe varieties are comparatively worthless.
Dendroritar densiplurem, India, 1835, Lord Fitz-william.-Requires a season of decided rest, without which it rarely flowers. Magnificent.
Vanda teres, India, 1835, Duke of Northumberland. - Superbly beautiful; and, when the plant is of sufficient age, most readily flowered.
Monmodes atropurpurea, Caracacas, 1836, Mr. Wilmore.-More singular than beantifol of the easiest culture.
Chysis ACrea, Venezuela and Trinidad, 1836, Messrs. Low \& Co.-An extraordinary plant. When once establish
Pbristeria pendela, Demerata, 1836, Mr. Allcard, -Grows freely, but does not often tlower.
Maxiliaria Steflif, Demerara, 1836.-Remarkable for its long whip-like leaves. It first produced flowers with Mr. Valentine Morris.

Lelia autumalis, Mexico, 1836, Mr. Tayleure. Beautiful, but inferior to L. anceps and L. majalis. In some collections it grows and flowers freely, in others it does not succeed at all.
Trichoplefa tortilis, Mexico, 1836, Mr. Barker.Very curious and very beautitul. Of the simplest cultiration.
Bolbophylacm bafbigerem, Sietra Leone, 1836, Messrs. Loddiges.-Interesting from its restless life-like Howers, which are rather shyly produced.
Devprobrem vobile. India. 1835, Messrs. Loddiges. - A charming species, and of free growth.

Demprobicm moschatem, India, 1836, Messts. Loddiges. - Magnificent. Like the nearly allied D. calceolaria, it produces its rich clusters of b
dom after a season of try rest
Onciderm levcochiles, Guatemala, 1836, Mr. Bateman.-A very distinet and pretty species. An abun-dant-flowerer.
Oncidiem omithorhynchem, Guqtemala, 1836,
Mr. Bateman. - Elegant and beautiful. Flowers freely.

Cfcnocurs ventincosey, Guatemala, 1836, Mr. Bateman_-Inferior to C. Loddigesii, but a good species. ordinary size, and of surprisingly thick texture.

Epidpmphum macroceilum, Spanish Main and Contral America, 1836, Mr. Batemen. - A fine robust apecies ; but in cultivation its spiles do not contain their proper complement of filowers.
Epidendrum aromaticun, Guafemala, 1836, Mro Bateman.-An elegant plant, and delicionsly fragrdat. It flowers freely, but its pseudo-bulbs under artifcial ireatment are not one-third the size of those received from its native habitat.
Laflia cinmabarina, Brazil, 1837, Meams. Youg.
A brilliant species, and of easy culture.
Oncidium deltoideom, Peru, 1837, Mr. R. Harri-son.-A graceful species.
(Pbetsteria Babzera, Xalapa, 1837, Mr. Bgrket.A fine plant when in vigorous growth.
Miltonia spectabilis, Brasil, 1837 , Mean Lod diges.-A beautiful free-growing plant, but inferior to M . candida.

Onchiem Cavendishiaycm, Gualemala, 1837, Mr. Bateman.-A stately and beautiful plant; no difficulty in its cultivation, as is the case with most Oncidia; there are many varieties.

Stanhopla tigrina, Mexico, 1837, Mr. Bateman.-
a splendid and extraordinary species ; growi freely and flowers profusely.
Stanhopea Denoniensis, Perts (9), 1837, Duke of Devonshire.-A shy-flowerer, and in all respects greatly inferior to the last. Its native country is said to be Mexico, but I have the best reasons for supposing it to be Peru.
Stanhopla quadricomnis. - ( \({ }^{\text {( }) \text {, 1837, Mr, Rueker. }}\)
A fine species, and of the simplest culture.
Praivs Alues, India, 1837, Mesarr. Lodiges.-Of a very peculiar aspect. Mowers freely if kept perfoctly dry for a sexson.
Dendrosium yommosum, India, 1837, Duke of De-vonshire.-Exquiaitely beautiful; at presant extremely rare. Dendeobiun sulcatun, Cutiva, vonshire.-Fine species, and cultivated with ease.
Demprodicm Gbsonianym, India, 1837, Duke of Devonshire.-Fine species, and cultivated with ease.
Cyprifedicm purpuratem, Eust Indies, 1837, Mr. J. Knight. -The foliage very beautiful ; the flower inferior to C. insigne and C. venustum.
Phal. \(x\) morsis amabilis, East Indies, 1837, Memara. Rollisson.-Not less singular than beautiful. One of the most desirable plants of the order, but at present extremely rare; a flowering specimen has been sold by Messra. Rollisson for 100 guineas !
Miltonia candida, Brasil, 1838, Mesars. Loddigea. -Flowers very darable and vory handsome, and pleatifully produced.
Barreria elegang, Mexico, 1838, Mr. Barker.Of a most delicate constitution and very unmanageable: the flowers are beautiful.

Burlingtonia venusta, Brazil, 1836, Mearrs, Lod-diges.-A charming plant, but difficult to grow.
Stanhopea Wardit, Mexico, passim, 1838, Messra Loddiges.-This is the most Protean of Stanhopeas, its varietien having given rise to three or four supposed species, e.g. S. venusta, S. graveolens. S. odoratissma, dec
sce, which must, of course, le cancelled. It is a noble plant, and flowera profasely.

Catrleya bicolos, Brasil, 1838, Mr. Ponteg.-A beantiful and distinct species.
Catthea Seinmeri, Guatemalu, 1838, Mr. Bateman. - A beautiful species, remarkable for its diminutive column, and its habit of llawering from stems of the preceding year. It is cultivated with facility, but producea only five flowers in a cluster where it ought to produs
ten.-Jas. Bateman, K nypersley.-( \({ }^{\circ}\) be continued.)

\section*{FORCED FLOWERS.}
(Continued from page 149.)
As the hardy shrubs go out of flower, they require protection from cold and spring frosts till the weather is sufficiently mild to turn them out; the hardy Roses that have flowered for the first time in No. 32 pots are repotted into No. 2t, in the same kind of soil, and plunged in beds as before. Such plants, with proper attention, will last for nany years. Lilacs never appear to require ther make better bushes, and flower nore freely. Deutzia scabra rectuires repotring, after which it and the Lulass are again half plunged in the usual summer quarter.
Clima Roses I plant out in a rich soil, in a damp and sheltered situation; in October I take them up with balls, pot them in pots according to the size of the plant, and half plunge them in a close pit, giving them a little bottomheat, shading them from the mad-day sun, and syringing them over the top erery night ande filled their pots with night or three weeks they will have filled their pots with
fresh roots, and many of them will be covered with flowerfresh roots, and many of thena mill be conered win tower-
buds. I select the best, and place them, part in a warm buds. I select the best, and piace them, part in a warm
nart of the greenhouse, and part in the flower-house; and the remaiader are foreed in succession with other Roses. All the American plants and Dutch bulbs are planted out in the nursery; many will recover and answer the same purpose again. In forcing greenhouse or hardy shrubs I always mark or number all those that remain sufficiently strong, and place the'm in the forcing-house in the same succession year atter year, for ail plants that have been once early excited succeed much better at as early season.
I grow the following stove-plants, which 18 very dew sirable as winter and spring fiowers :-
\begin{tabular}{|c|c|}
\hline Eaphorbia splendens, Bronnii, punicea, fulpens, & Crpripedium insigne, Pancratium amcenum speciosum Besonia netopetala, \\
\hline Poinsettia pulcherrima, & Epiphylum truncatu \\
\hline Zygopetaluns M : ckaii, & coccineum \\
\hline Cymbidium sinease, & Columnea scandeus, \\
\hline Stenorhynchus speciosus, & ra coccinea, \\
\hline Bletia Tankervilliæ, hyacinthina, & crocata, \\
\hline Plumbago rosea, &  \\
\hline Cypripedium venustum, &  \\
\hline
\end{tabular}

The latter I
the grow with several other delicate-leared Ferns, for the purpose of mixing with cut flowers; it is very beautiful placed round bunches of Euphorbia splenplat ony other bright colours.
Plants of the following greenhouse kinds also grow and flower much better and earlier in a Pelargonium-house than they will in a hothouse, if a litt:
is kept through the wiater and spring.

_John Green, Gardener to Sir Edmund Antrobus, Bart.,
Cheam, Surrey. Cheam, Surrey.

\section*{ENTOMOLOGY.}

No. V.-The Thrips.-Various species of these very minute insects attack the different productions of our fields and gardens, and insignificant as they are in size, their numbers empower them to commit extensive injuries. Like most of the insects that have formed the subjects of these memoirs, they are destructive in every stage of their existence; for as soon as they emerge from the egg, which is more or less oval, they are prepared to commence operations with their little beaks. Considerable differences exist in their habits: some live under the bark of dying and felled trees, and even beneath the loose portions of ears of corn; the inmates of our hothouses are infested by one or two exotic species; our choicest stone-fruits are often covered with thens ; and scarcely a flower can be plucked but these little creatures may be detected running over it, and hiding themselves between the petals or mongst the stamens.
They vary considerably in colour, some being black, others have the wings banded with white, but the general int of the larvæ and pupæ is yellow-ochre. Their bodies are depressed, and much broader than any other part in the female; the mouth is placed under and at the hinder part of the face, and forms a short conical rostrum, lying When at rest close to the base of the fore legs (fig. l); the eyes are rather large and coarsely granulated, and there are generally three ocelif or simple eyes on the crown of three last joints often appear to be united, when they look as if only six or seren-jointed, especially in the larva state: they are either wingless, or they have four wings which are narrow and lie down the centre of the back, the edges being ciliated with long hairs; the legs are short, the feet being formed of two joints with a esicle or little bladder at the apex, but not any claws. The larva resemble the perfect insects in form, but are often of a totally different colour; their bodies are soft and they have no ocelli. The pupa is also similar, but the wings are sheathed, and the horns are generally thrown over the head. Some of the species are very active when they have arrired at their perfect state, running fast, slipping and flying well, and they are able to walk about in Th previous stages.
The two sorts most injurious to the gardener are, a lescribed, and species, Which does not appear to be described, and the Thrips Adonidum: the tirst I shall name \(T\). ochraceus (fig. 2, with the wings expanded) ; it is narrow and linear, of a bright and deep ochreous colour the eyes are Llack, the horns appear to be only six-jointed and brownish at the tips; it has three ocelli on the cromp the body is hairy, the tip pointed and bristly: the wings are shorter thata the body in the male, lying parallel on the back when at rest (fig. 3i. narrow, especially the under ones, and fringed; the hairs longest beneath and at the point: tins of fect dusky.

The various sorts of plums so abundant last autumn in be gardens of the Horicuiturn society were oovered with these ninute insects, which had not disappeared ound the base of the stalas of the nectarines and peaches and in the caritits made by flies, wasus, and earwigs, skipping and fying well in the heat of tha day when disthe growth of the frust and ins, they are believed to check the growth of the frust and rause it to heir presence aing and when they are rary oumerous, hatir presence alone hem off plums, sompleasant for the table the to pair of bellows might be usefully emplored to biow them exay; or if dessert fruit could be subjected to a slight dry heat, I have no doubt it would destroy these Thrips: the same insect, it appears to me, is abundant on the purgile clorer in autumn, and it has an enemy in an Acarus
There is so treat a wriety in the form and structure of this famity, that ic has teen divided into several gemera, to one of which belongs the other epecies, called by Mr.

Halliday Heliothrips Adonidum : the larva and pupa are yellowish-white, and the perfect insect is of a dull deep black, with the point and sometimes the whole of the abdomen of a rust colour; the wings are dirty white; the horns and legs yellowish, the extremity of the former black: it is a little larger than \(T\). ochraceus, and is very troublesome in hothouses, attacking tropical plants by piercing the under side of the leaves; and one often sees at the tip of the tail a globule of blackish fluid which it soon deposits, and by innumerable spots of this glutinous matter, the pores of the leaves are stopped up, and large portions of the surface become blotched. I have found sperimens in October, but during March the full-grown larw aud pupæ, which are as large as the perfect insect are found in groups feeding on the under side of the leaves and at this time the recently-hatched but perfect insect of a mate. As this species is imported from some tropical egion, it can endure great vapour-heat, and is conse quently most difficult to extirpate.
To destroy the Thrips, the same remedies are recommeaded as those employed to get rid of the Red-spider especially the application of flower of sulphur with the wheel-bellows.

Fig. 1. The head in profile of T. physoput, Linn., from Curtis's Brit. Ent. plate 748 ;-a, the antemne ; \(e\), a compound eye; \(r\), the beak; \(p\), one of the four feelers. Figs 2 and 3 are highly magnified; and fig. 4 shows the natural length of T. ochraceus.-Ruricola.

THE AURICULA.
The properties which constitute a perfect Auricula in the estimation of a florist, and the principal rules which regulate his judgment when examining this favourite stage flower, are the following:-

In its general
 appearance the well grown be healthy, cover heallay, cover equal to double equal to double the width of the The stem should be firm, erect, and sufficiently strong to support the truss without assistance, and to carry well above the stalks of the pips should be strong, and of such a length as will al low the flowers out open without one overlay-
ing another, the whole forming a compactand globular head of well - expanded flowers, equal in size, and similar in properties. The addition of one ortmoguardleares, standing ap at the back of the truss, gives by the contrast whole, and adds considerably to its beauty by the contrast
they form with the vivid and lively appearance of the they form
flowers.

The qualities which the individual pip should possess, consist in its being perfectly round, flat, and smooth on the edge; the dirisions which form the egments of the corolla should be but slightly indented, thereby renderitag the circle more perfect. The tube, or centre, must be round, of a yellow colour, filled with the anthers or furm . The eye, or "paste, round the tube, should edres, even, and free from blemishes. White, clean on its surroundiug the eye should be dark, rich, or bright, joining the marcin with a feathery edge, cqually distributed all round, but never encroaching so much upon the edge as to rass through to the rim. The margin, or onter edge, must be of a permanent green or grey colour. The circles Which compose tae face of the pip are considered of the
finest proportion when they are of a uniform width; that of each circle being half the diameter of the tube. The accompanying figures will illustrate the properties above mentioned, which are considered to form the standard of perfection in the Auricula.

The annesed list consists of the favourite varieties rown for exhibition, and comprises flowers of each class. Page* Champion.

\section*{}

COTTAGE GARDENS.-No. XII
Ther season is now so far adranced as to admit of every cottager having an hour or two which he can call his own, either before procecding to lis daily labour, or after it is completed. These, we think, he cannot employ more agreeably to himself, or with more adrantage to his family than in cultirating his little garden, and seeing that every. thing about it is kept clean and orderly. If a judiciou system of management is adopted, it will rery soon appear that the extra labour which a small garden necessarily imposes on a cottager is rery tritling, and no more than the greater ander of them may easily accomplish In exposed situations, if the weather happens to be dry as were remored be given to such fruit-trees or bughes as were remored late in the season. This will be of great assistance to them cintil they have taken root and are able to support themselres. If any seeds of Rhubarb can be procured, let them now be sown in a snmall bed, to be ready for planting in autumn where they are intended to remain. This vegetable is not so generally grown in cottage gardens as it ought to be. It requires more room perhaps, than most cottages can afford; but where it can be cultivated without encroaching too much on the space required for the more useful kinds of vegetables, we should recommend its introduction. The sorts mentioned by Mr. Thompson in a former Number, p. 84, as being the best for cottagers, are Myatt's Tictoria, and the Elford; but if these cannot be obtained, some other variety of known excellence for producing long, thick, ffeshy stalks may be substituted. The soil most suitable for Rhabarb is a free, rich loam, not too moist. Seedling plants are preferable to offsets; although the latter will succeed very well if a little care is taken in their remoral. They should be planted in a bed, or in a couple of rows three feet apart and two feet from one another. Eight or ten plants will be sufficient for a family; and if well manured when the ground is dug about their roots in autumn or spring, they will ufford a supply of fine fleshy stalks for a number of years.
In the flower-borders, let a few more hardy annuals be sown in patches, as directed to be done last month. Adoining where the bees are kept, sow plenty of Mimnonette; and if the situation is farourable, some of the more com mon teader anauals may be tried, such as Indian Pinks, China Asters, \&c

Bees.-The activity of the bees and the facilities for obtaining food will have greatly increased by this time and rendered a continuance of the feeding by artificial means unnecessary. Preparations should now be made for getting ready as many hires as are likely to be required for the swarms. New hives are always to be preferred to those that have been previously used; but whether new or old, they must be carefully examined, and if any crevice is discovered by which light may be admitted, it is to lo stopped with a little clay or sof mortar. By the latter end of the month, or early in the next, some drones may probably be abserved. This is considered by Huish to be good sign, as early drones denote early swarms. It will be worth while to keep an eye on the hives in the evening and destroy any of the wax-moths which generally make heir appearance at that time, and may be reckoned among the greatest pests to bees. The same may be siid of wasps : every one of them should be watched as soon a discovered, and, if possible, destroyed.-M. \(\boldsymbol{E} . \boldsymbol{H}\).

HOMECORRESPONDENCE.
Mr. Penn's Heating.-Residing within a short distance of this gentleman's establishment, I flatter myself that I possess an advantage over many of your correspondents in ascertaining more correctly the working of his system. I diaclaim holding any arguments upon the subject, wy occupation not permitting me to do so; nor have I aly interested motives in thus laying before your readers that which has come under my own observation. Since Jas: 1810 I have constantly visited Mr. Penn's houses, and from that period to the present never were plants looking more healthy and luxuriant than at this place. Some of your correspondents condemn the principle as not being perfect, but where, I would ask, is to be found any new invention that is not to be improved upon? In the case of Mr. Penn's original mode of heating, the principle is of the utmost importance to horticulturists; and the improvements that Mr. P. has introduced will ultimately prove its superiurity. So satisfied am I of the beneticial effects arising from this mole of heating, that I intend to hare the apparatus affixed to my houses as soon as possible. I would recommend those who have any doubts upon this subject to visit Mr. Pean's establishment, where, I will renture to say, they will find his plants in a condition hat will bear me

\section*{Tursery, Wroolecich}

Poisoning by Nux Vomica.-In the 14th Namber of the "Gardeners' Chromicle," Indagator leads one to believe that nux-vomica is poisonous only to animals borm blind. Now, as this is an article of popular belief, and may lead to the most serious consequences, I have thought it bat right to endeavour to set your readers on their guard aganst so dangerous a supposition. It is wels known, to all medical men at creatures breathing the breath of hife:
its poisonous qualities are owing to an alkaloid strychnia Which is contained likewise in the Strychnos St. Ignatii, Toxifera and Guianensis, as from them the ourari poiso of Guiana is derived. The effects produced are in all cases nearly the same, viz., irritation of the spinal chord, producing death amidst prolonged violent paroxysms of convulsions, better understood, perhaps, as the worst forms Poisoning by means of nux-vomica, therefure, is one of known. I trust this is enough to show the danger attend ing such loose expressions. Those who wish to follow up the subject will find the cream of the scattered details in Harris, M.D., Dumfries.
Beaton's interesting communication pleased with Mr but I do not concur in the opinion, that by gratting dif ferent varieties on healthy roots of an Appie-tree whos constitutional peculiarity suits a partizular soil, the trees from these grafted roots would likewise be healthy
My opinion is, that grafts should be taken from the bealthy tree and grafted on the stocks of those varieties growing in the sane soil, but which have exhibited signs of decay, not frum any defect in the absorbing power of the roots, but whose organs of secretion, the glands and taken up by the roots in a soil unsuitable to the variety, Hence the reason that Quercus, by grafting the Manx codin on the stock on which before the Ribston Pippin ing a healthy tree, namely, the capability of the secretory organs of the Manx Codlin in producing a healthy sap from the food supplied. In this neighbourhood the Ribston Pippin is growing in a healthy state, and annually 20 to 40 years old. The Golden Pippin is likewise growing here, and exhibits no symptoms of the doom pronounced upon the elder varieties of the Apple. I bave no doubt, whatever Quercus may think to the contrary, that while \(\operatorname{man}\) continues to propagate and to plant in a soil adapted to their constitutional peculiarities, the varieties of the Apple may be contin
Pruning Forest Trees.-I observe that much has been Paid on the pruning of forest trees: as the time is nearly past undecided, I bes to suggest to all concerned that they ahould prune a few trees on Mr. Paxton's plan, and also by shortening the branches, and that they should also leave a tree unpruned between each. They will thas see which attains the greatest height and circumference in the thason. Then whatever isterested will be enabled to judge which system is of njest national adrantage. My system of shortening is, fore than one leading shoot is found to exist and the ree is in a healthy state, the strongest should be selected and the apper or next shoots shortened to half the length shortened down to some healthy shoot; by this means its health will be restored. Yet these shortenings must not include any branch that is longer than what constitutes a rom the top downwards.-Gavin Cree, Biggar
Moisture in Vineries at this Season.-I take the liberty of making the few following remarks upon the week, trusting to your candour and goodness for a charitable construction of what I am about to say. The writer of the article to which I allude appears to deprecate the system of maintaining a moist state of the atmosphere for forced grapes when they are in flower. I mean not quarrel with the nature of the arguments adduced by the the atmosplere in spring. These may or may not be conclusive, but nevertheless they require, I think, a more minute investigation to enable us to decide whether or not the barrenness of cherries, \&c., may not arise from nolar rays, coupled with the then consequent redundancy of misture. However, my desire at present is to call attention to the circumstance that if there are certain Warieties of the vine to which, while the blossoms are in an expanded siate, water is injurious, there are, or the other hand, also varieties to which under the same circumstances both intense heat and moisture are embryo fruit. That moisture is of importance in this process, is, I think, astisfactorily proved by the very general presence of a those flowers where that organ is found to exist. Against this it may be argued, that the moisture here spoken of is provided by nature, and therefore must be sufficient for the end in riew: I humbly reply that "Art improves upon Nalure," and that our vines, being subjected from frst to last to ortificial treatment, they can afrord no just ground for an analogy; and also, although it be true that we see exceilent crops of gooseberries, currants, and applied water, yet who can say but dews may be of infinite service in this delicate process of
fecundation? I was once in conversation with an inteliigent gardener on the subject of forcing the White Muscat grape, a whole house of which rariety, together with otherg, was once under his care : this man told me that the only method by which he could insure a good crop of close, and very moist state, and that his employer, who had, previouly to engaging hime, managed the vines him-
self according to the usual plan, never could obtain free application of water overhead while they are flower, I am well convinced; nor will they bear nearly
so abudantly if they are not so watered. It is so abundantly if they are not so watered. be carried without injury to vines while in flower;
but with regard to the question, Is a moist state of the atmosphere of the house beneficial or injurious unde such circumstances? time and experiment can alone de cide. Science of every description is yet only in its to H ey; and this is more particularly true with reference thorticultare. Nor can we with justice hope or expect tinue can be otherwise while young gardeners shall con while they shall continue to follow after that which profit eth not, and neglect to observe and reflect upon the mighty and wondrous operations of "that Power that directs the tom, and controls the aggregate of Nature." To return once more to the subject, why should moisture be neces sary to the process of vegetable fecundation? ignorance Cucumber-grouing.-Being fond of
fond of forcing, and struck February, by Mr. Mills, gardener to of Cucumbers in Rothschild, I availed myself of an opportunity on the 28 th February, 1840, of going and seeing the establishment; and although a perfect stranger, was kindly received by cumbers well and handsomely grown upon his plants; and being delighted with the manner in which they were produced, I naturally felt anxious to become conversant with the system ; so the method of constructing the pit, and its working, were readily pointed out to me. Upon my return home in March, I had a pit for four lights erected neasuring 18 feet long by 5 feet deep, which was used Since the its worth has 18 , and answered admirably, severest winters that has occurred for years, the particalara of which are as follows:-The seed was sown on the 29 th September, and the plants raised therefrom put out into the pit on the 9 th of November. The progress they made forcing at so early a period. From the 14th of January forcing at so early a period. From the 14 th of January
to the 28 th February, both inclusive, I cut 21 fruit off three plants, and three off the fourth (which was of a different kind), making in all 24 perfect and well-grown Cu cumbers, some of which exceeded 17 inches in length. have been thus particular in detailing the result of my first effort to cut in January and February, out of a sense of obligation to Mr. Mills, and with a view to encourage a pubished. From the success of \(\mathrm{m} /\) Melons, all of which are equally good; out of one I shortest of which exceeded 26 inches long. The early Ielons on the trellis, cultivated above alluded to, are now about half-grown. These cirwork in this part of the country, many of whom were observers of the forcing detailed. The production of ruit, ho nected with Mills's plan, but that which is important to most persons is the saving of fermenting material. The with fresh borse dung on the 2ad Nov. last, and the structure has been heated solely thereby, to the present time, with the exception oaly of such portions as were necessary to keep the trenches filled as decomposition of the original occurred; and, judging from the present state of the afficien have he doubt but midsmmer, if not for the whole year. These facts justify my asserting that if Mills's system be followed with ordinary care and diligence, success will be certain, and the expense of insuring the cutting of Cucumbers at all seasons less than by any other plan hitherto developed to the public; the quantity of fermenting material requisite to commence with being only our-tenths of that demanded for common bed parpeses o say nothing of the durability of the one as compared with the other-S. Price Eatwand, Browston-hall, Suff clk.
Climate of North Wales.-To show you that our Abergele climate is good, I beg to inform you that I cat 100 asparagus from the open ground, without the least forcing, on Monday the 29th of March. My general time is about 6th of A pril.-J. B. H.
Orion Crop.-The garden of George Buchan, Esq., of Kellue, is pleasantly situated in a valley through which most of it has been enriched by manure and good management. For many years the shill of successive gardeners was baffed in producing a crop of Onions; at last Mr. William Falla, a very intelligent gardener, accidentally somed the seed upon a piece of ground which had been cropped with Turnips the year before, when to his astoftermard a most abundant crop was 1 Onions were sown upon the ground which had been
Potting Plants.- Eivery practical gardener knows that in potting plants a good system of drainage is of the at most importance, and cherefore I would recommend to his attention the following facts:- I have been repotting and examining severai hundred plants within the last fem
weeks. In putting the same plants last yeara great numWeeks. In putting the same plants last year a great numper of them were drained with old thing of course a piece of ther the holes, and some rough peat upon the top of the urainage.

Others were drained in a more common way, that is, with
small pieces of pots or bricks, but the latter not reduced small pieces of pots or bricks, but the latter not reduced
to powder. I now find all those pots in which the brickdust was used in and the plants themseives mure vigorous and healthy, but the results are most satisfactory the this was done, . Whether the brick merely may have any other effect upon the plants than not at present good drainage, is a question which \(I\) am worthy of being prepared to answer ; but the fact itself is your service for the Chronicle. \(-a, e, i\).
phe Scale Insect. -There being such a diversity of on Orange trees, \&c., I must tell rou what scale insect me some years back, when on a risit at a friend's horse in the country. In the month of J une the gardener removed from the greenhouse a full-sized Orange tree growing in a larce square box. It was literally covered with the Coccus Hesperidum. All the usual remedies were resorted to for destroying them, but in vain. I then recommended the gardener to water the whole tree with a
strong solution of common salt. To his great horror, all the leaves dropped off in a very short time, and he concluded the tree had been killed. A few weeks afterwards it broke forth into the finest fuliage, and blossomed beautifully, since which it has been in the highest health and perfectiy free from vermin. Perhaps this accidental circumstance may be turned to some acconnt by practical gardeners on other trees similarly affected. - Philo-utilis. French V'ines.-I got a friend at Tersailes to visit the Potager du Roi, who learnt there that their best early Chasselas Grape for forcing was a present from the LonHorticaltural Society. It was superior to their own setting byad before, which had the defect of "couler" setting badly). He said the Putager contairs 20 arpens, Scotch acres. In addition to the very cold climate, it s 80 near the immense pond they call La Piéce Phisse, that it is subject to bad foggo Neither Louisay taste for gardening, except the Duchesse d'Orléans; but as she cannot come there alone, she is obliged to give up. - K. [There is an old variety of Sweetwater which sets badly, and it is doubtless the one cultivated at Paris stated to be subject to that defect. The sort generally caltivated in this country is the Dutch variety, called the White Sweetwater, the same as that sent from the

The Influence of the Moon on Vegetation in Tropicul Countries. - The Trumpet-tree, Mahoe Bark-tree, and ome others are readily divested of their bark when the moon is full; but when in the wane, the bark adheres sometimes hard and stringy roots of the Cassava are dible. The Sugar-cane has ; at others, succulent and charine matter at full moon than at any other time, and this phenomenon is called by the planters " a spring in the cane." Has it been explained? If so, where? Has the Orchidaceous Plants. - Remarks surgested by Mr Beaton's paper on the cultivation of Orclidaceous plants Loudon's "Gardener's Magazine," p. 55", Noveraber 1839:-" For I do not include Orchidaceous plants under these remarks, but consider in their case, as I do in that of the generality of bulus, that they (the Orchidaceous plants) must have their season of rest if you wish to flower them." This is an important observation to those who wish to obtain the greatest quantity of flowers with tho least injury to the plants, and being in accordance with the requisites of nature, is sure to succeed. I think it possible, by a little attention to atmuspheric temperature and moisture, to imitate the dry and rainy seasons of tro pical countries to which these plants are accustomed. The ime of flowering is dependent on, and regulated by, the great object with an extensive tribe of plants, perhaps less great object with an extensive tribe of plants, perhaps less
dependent on solar influence than any other.-. Much of the successful cultivation of Orchidaceæ depends on certain uninteliligible and indescribable manipuations and minutis, which alone can be taught by esperience, whence the empiric has the adrantage over the man of science." This, I think, is nonsense, if the word empiric implies a gardener, or cultivator performing operations he cannot
teach or describe, and if the man of science is an individual wo has acquired tue man or science is an kivi d cm its mel bens and their mutual adaptation to the elo thish by which they are infuenced. The prevalence of ing mask bas dobe much evil, in many instanorioultor and Aorivire by binding the minds of cultivators, and the hands of seientific inquirers. The evil is this. that the cultivator not habituating himself to seek out the pause and effect, stumbles on a successtul methou of cultivation and ascribes it to nis manipulations, while other causes quite describahle, yet unseen by him, have produced the effect. The detailed made in p. \(\mathbf{j} 50\), of cuitinating Or chidaceæ in สire baskets, whil no dut but why jump out of a garden-not into a wive basket Why not tasbion the pots to the exizrace of the phants?
That Orchidacese will arow better wire-bavkets than in pets of the usual make, there cannot exist a loubt; so also would many other thants, if the uutside of the pots is, as in some instances. purits, for the cutiue of the pots is, in most others to the frequeatly ton ariu heat of the hot house. Wines are cwoled in thot couarties by placing the bottle surbuniled wich a moist cluth under the direct rays
of the sun. The danger in drying our clothes saturated of the sun. The danger in drying our clothes saturatod sun, is caused by the skin being chilled by precisely tha
num law that causes the bottle to part latently with its heat.-"Siminr canses produce like effects." Having occasion to cultivate several Orchidaceous plants, partly with a view of preserving those I had collected at considerable trouble and expense till an opportunity occurred of sending them home, I adopted a system that may be worth trial in this country. Having a quantity of garden-pots, surrounded some with a volume of water, by means of a frame 2 in . wide at the top, and tapering to nothing at the bottom ; these were suspended from the roof by a wire in on open pliazs. I sealed the aperture at the bottom of some of the pots, and placed them in a tank of water par-
tially screened by coconnut leaves. Garden-pote could tially screened by cocon-nut leaves. Garden-pots could he roots of the plants would be protected from the rays of the sun, \&c., and hence would never be liable to be corched, chilled, parched, or saturated. Plants thus cultivated might be introduced into forcing.houses, in those piaces where houses expressly for Orchidacea are not put up. In a garden that I lately visited, there were three pine-stores, the plants in which, from the want of the moist atmosphere su essential to them, were a prey to the mealy bug and scale. Had the pathway, which is 3 feet broad, been partially shaded by Passion-flowers or such-
like plants trained on wires a foot from the glass, Orchidaceons plante grown in such pots as are above described and auspended from the rafters would not only have a pleasing, but a beneficial effect. I have not seen the baskets that Mr. Beaton alas "are just the things to grow Orchidncete in," but I have seen imitations constructed of braaches nailed together in a rude manner, and although the plants seemed quite at home in their novel and not very gardenesque-looking dwelling, still I could not help thinking they might as well have been cultivated in magpies' nests, which
ruvenis.
Straxberries. - The last three or four years 1 have fol lowed Mr. Knight's practice of planting every year early in August some Strawberry-roots in close contact with the bottom of my south walls, at the point where the perpen dicular of the wall forms an angle with the horizontal line of the garden soil. Each plant is placed 16 to 18 inches apart, so as to allow the moraing and evening sun to fall on it to the best advantage, as well as the mid-day. I find, however, that Keen's Strawberries, and the scarlet Mr. Knight used for this purpose, produced too much leaf, which harboured slugs, and caused the fruit to rot in wet measons. But amongst my endless seedling varieties I have a Strawberry of superior richness and fair size, that has long been a farourite with me. The leaves are small, and the plant macceeds admirably for a very early crop planted is above directed. The blossoms opened some days go, and I expect ripe frait towards the end of May. The oliage is so low, that it does not interfere with the wall trees above. I find the plants to do well for two years
without replanting from Runners. The name I have given Without replanting from Runners. The name I have given it is the name of the part of the parish I resid

April Ger, - - Miliver, Ess., in the chair. The following gentle. men were elected :-Messrs. King, R. Wright, Lane and Sons, R. Paimer, J. Clayton, J. Cayton, jun., J. Wrench, W. Goute,
C. Noke, C. Thompon, H. W. Bucknall, T. Thomson, G. Bridges, and G. Charlwood.-Mr. Rogers exhihited a seedling Rhododen,
dron said to be quite hardy; it was covered with light pink flowers, more expanded than is usual in the Rhododendron, and
very much crisped at the edges.-Mr. Dickson sent a collection of Auriculas, consisting of Taylor's Glory, Gorton's Champion, seedlings. A box of Heartsease was sent by Mr. Gaines, of Bat tersea.-Mr. W. Masters, jun., delivered a lecture on the History of English Gardening. He began from the time of the invasion
of the Romans, and adverted to the advantage that Horticulture gave a slifht sketch of the literature of gardening, not forgeting the many allusions to flowers and plants that are spread through the works of the poets who lived in the sixtrenth and seventeenth
centuries, and proposed in a future lecture to conclude the sub Sect, and thus present to the so
Progress of English Gardening.
Kilmudock and Kincardine in Montrith Cottrage Garden Socipty. -We learn from a correspondent that this society has heen in
operation for the last fuur years. and has been more successful
ond than its most sanguine supporters could have expected. We,
therefore, print its rules, ke..for the guidance of others.
1. The society shall consist of all persons in the above district, Who shall subscribe any sum not lese than sixpence annually to
the funds. T . That no person shall be allowed to compete unless the funds.-2. That no person shall be aliowed to compete unless
he shall have been a member of the society and paid his sub-
scription four weeks previous to the day of exibition. A. A ge.
neral meetiny of the members shall be held annually on the day seral meeting of the members shall be held annuxally on the day
of exhibition in autumn, when the ofifco-bearers and committee
of eall be elected for the ensuing year. 4 . That the office-bearers shall be elected for the ensuing year. -4. That the office-bearers
and committee shall consist of 13 persons (three to be a quorum), and committee shall consist of 13 persons (three to be a quorum,
who shall have the managemert of the society and power to
choose judges. - . That the committe, or such Judres as they choose judiges- - 5 . That the commititee, or sach yadges as they
may appoint, shail be the only individuals entitied to awrard the premiums, and to determine upon the merits of the gardens, and
other articles that may be put in oompetition, -6 . That no mem other articles that may be put in competition. - 6 . That no mem-
ber shall be allowed to compete for an article for which he gained
 are of his own growth and culture, and no one shall be allowed
to compete while he pots must have been the property, and in the pose. Alsion, of the
competitor for at least eight weeks previons to the diy of competition. -9. That mo field prodwee shall be reccived for competition. -10. If at any time it is discovered that ary member has im
posed upon the society, his name shall be erased frome the list of competition.
The following Prizes are offered on the 9d Saturday of July 1841 - Best two. doozen strawbernee, any sort: 1 st, pruning knife ; 2 d and flat : 2 d , tea-canister. Best six Violas, two nowers of each:
ist. hair besom; 2 d , inkstand. Best Geranium, in pot: 1 ist, one
 ist, divider; sid, half-a dozen common tea-spoons, Best three
sotrs of Daisies, six of each: 1st, garden-rake; 2d. 1ookiving-glass.
Rety

 ist. garden reel and line, od, garden line. Best twelve pods
green pease 1st. basket; 2 d , ditto. Best brace of early Cabbage: green pease 1st, bachel, Heariet six pring-sown Onions. en.
lit, kal-put; 2d, gobet.

Preservation of Wood,-We have already, at p, 147 teresting experiments. By a late communication of this author, it appears he has succeeded in charging timber mith his preparations during winter as well as summer cut into any lengths that may be convenient; to the upper end of each \(\log\) a waterproof funnel or bag is
secured, into which the preserving fluid is poured. The secured, into which the preserving fluid is poured.
fluid forces before it all the sap and air that the wood contains, and with considerable rapidity; and when the
preserving fluid makes its appearance at the lower end, the operation is complete. Sap may in this way be obtained in large quantities without any additional expurposes. In one day Dr. Boucherie, assisted by two men, operated upon seven trees, and collected 1200 gallons of sap.
Mr. Gardner's Botanical Mission in Brasil.-We learn traveller has returned to Rio, after visiting the proring of the Mines. Among his Botanical discoveries was an Equisetum fifteen feet high. His collections forwarded to Rio fom Pa good order, and may be shortly expected in Eugland.
We understand a number of seeds have reached Mr. Gardner's subscribers, among which are some species of Diplusodon, one of the most beautiful plants of the Brasilian Flora-two Andromedas, and some Bignonias. There are also a few Orchidacees, and a fine Melocactus with recurved spines.
Manures. The adulteration of manures is carried on by some of the small dealers to a most disgraceful extent.
Thus nitrate of soda is mixed with Glauber's salt (made for the very purpose, with a crystal resembling cubic pelre)-bone-dust is mixed with the refuse lime and hair of the skin-merchants, and even soot is commonly and Rargely adulterated by the finely-sifted refuse ashes of the London scavengers. Now this is not only in itself a most lagrant fraud, bat exertions, it deceives him in his trials, it perverts the truth. There is an easy remedy, however, in every farmer's power; let him carefully avoid all the pretended cheap the real market price; and let him keep to those who have been long tried as the vendors of a genuine manure Mr. Johnson recommends to the farmer, as an excellent manure for them (applied by the drill), the Urate of the London Manure Company, and the compost of M. Poittevin and Co.; either of them (especially the Urate)
he believes to be still more powerful, both for oats and turnips, than either bones or sprats-Mark Lane Exmuch to be reprehended, we quite agree; but we are not bad a substitute for nitrate of soda as Mr. Johnson supposes. At least we find in Ingenhousz's curious essay on (Appendix p. 20), the assertion, that of all the neatral salts be tried, "the Glauber salt did seem one of the best in promoting vegetation." \(]\)

new part is before us. We cannot believe that such valua terminats are likely, as it is rumoured, to be brought to possible that the Asiatic Society, having berun so pod a work, should have so little pablic spirit as to let it drop. But if unhappily this should be the case, we earnestly trust the East India Company, the most munificent of all patrons of science, will furnish the funds requisite for the prosecution of mans that exist of improving their territorial revenue are nore likely to conduce permanentiy to that end.
The nature of the proceedings of the Society will be apparent from the following extracs.
"A paper was read on the manufacture of Paper in the nanufactured in the proveorge Traill, Esq. Paper is bark of the Daphne cannabina, or Set Burroik, inner which abiounds throughout the Himalaya range. For this purpose the outer surface of the bark is scraped ofi, and the inner fibrous part is boiled in an alkaline lye made of oak ashes. The beat up into process and being again mixed with clean water, is spread upon moulds. These are usually made with fine bamboo matting; but when large sheets of paper are required, calico cloth is used in the frames. The paper prepared for the market is geneally about a yard square, and is commonly of three differont qualities: the finest sells at sixty-four sheets, the second teighty sheets, and the third at one hundred and twenty sheets the rupee, in the Almorah market. This paper is
remarkable for its tougheess and durability, and moreoves remarkable for its toughness and durability, and moreoves it is never attacked by insects, and it was, in consequence,
recommended to the Bengal government for the manuacture of cartridges, but was found on trial to be too tough, as the soldiers were nnable to fear of the ends with heir teeth when loading. Mr. Traill presented a sheet of this paper measuring sixty feet by twenty-five, in which no joints were perceptible
"Mr. E. Solly on the fibre obtained from the leat of the Pine-apple. Mr. Solly stated that in consequence of communications received from India, he had made inquiries respecting the probablenaus of the Ananas or Pineaple, which being very plentiful in several parts of India, mpight be imported from thence in large quantities, and at no very great cost. The result of his inquiries amongat spinners generally was, that they did not consider the fibre as capable of being substituted for flax, in the manufacture of linen and similar textures, because the trials hitherto made with it had been unsuccessful. Mr. S. observed, that this was certainly no proof that the fibre could not be spun, but merely that the method at present employed in flax-spiming was not suitable to the pine-apple fibre;
he had no doubt that it could be emploged advantageously, tither alone or in combination with other fibrous materialis, and stated that a patent had been recently taken ont by Mr. Zincke for the manufacture of thread from this fibre, and from the patentee's statement it appeared, that when the fibre is bleached it becomes capable of being spun in the manner now adopted with fiax, and by the same machinerys because the process of bleaching, by destroying the adhesion between the bundles of fibres, rel between the rolls in the process of spinning. The patentee considers, rols fin teatioul silky lustre, combined with considerible a is mell adepted to form a subetitate fider Mr Soll thougt a mate ror ber fing the object hesides bleaching: he also sngested, as being worthy the attention of manufacturers, the possibility of the fibre being employed in the manufacture of paper, as its strength would perhaps be useful in combination with cotton and other tender materials, or in the manufacture of paper for particalar purposes,
sideratum
"Read a letter from John Sulliven, Esq., Member of the Madras Council, on the cultivation of the Tea plant in the Neilgherries. He states that though from long negleot the plant was neariy lost in that region, it wo hare donbt growing in such a state of lushian manufacture of tea might be carried on with great success, perbaps evoa greater than in Assam. Mr. Sullivan enclosed a memorandum of M. Perrottet, an experienced naturalist, in the service of the French government, respecting the state of the plants at Kaitz when he left the Neilgherries in Oct. 1838, describing them as being covered with leaves, flowers, and fruit, the plants being mostly about four feet high, and in a most prosperous condition. .I. Sun states that the Tea-plant is also growing in great the seed obat higher elevations plants appear to be worthless ; but this he belieres is always the case, as the Chinese are stated to put two handfuls of seed into a hole four fingers deep and eight inches in diameter, and that not more than ten or twenty germinate.

Great interest is excited in India by the very succesaful results attendiag the introduction of the Otaheite or
mountain Case. Great pains have been taken throughoul the Bombsy Presidency to extead and improve the growth of this cane, and to encourage the manafacture of in proved sugar. The cultivation of toe sugar-cane was much benenter by the alteration effected in the assessment tended lands in 1839; it was in consequence greany The fudicious experiments of \(\mathrm{Dr}_{\mathrm{r}}\). Gibsons in the Poonah district, in 1837-8, convinced the natives of the superionity of the Tauritius cane, and likewise proved the suitableaese of

chinery should be sent from England to enable Dr. Gibson to carry out his experiments more completely. The home government, however, thinking that the manufacture of sugar should be left to individual enterprise, dectined sending out machinery. In consequence of this resolution, it site skill and capital should be acquainted that so wide and promising a field of enterprise is open to them.

The Fear-book of Facts in Science and Art, for 1840. Trat was a happy thought which led to the annual preparation of this useful little work, which comprekends of a year. It includes mechanical been made in the course of a year. It includes mechanical arts, natural philosophy, astronomy; geography, and an obituary. The matter is well selected and carefully classified under the heads to which it relates. In this respect, however, it might be improved by a short reference from one head to another when a fact is equally referable to two different heads and only introduced under one.
The following extractis will be interesting to our Craders:-
Coups And Sorl.-On June 15, M. Boussingaul read to the Academy of Sciences, at Paris, a memoir on
the proper Succession of Crops to be observed in agricultural operations; and on the nature and quantity of the residuum left in the soil by various kinds of crops. He
laid it down, as the result of observations hitherto made, (and which are still to be conducted for a series of years, that any given crop influences a succeeding one; not merely by the quantity of regetable and azotic matter left behind by it in the soil, but also by the circomstance whether the plant forming the crop had penetrated deep into, and had exhausted, the soil or not. root; and far better after clover than after either of the other two. crops. The usual succession in the east of France he stated to be potatoes, beet-root, wheat, clover, France he stated this is, no doubt, a faulty system.-Literary Gazette, No. 1223
Sensitiveness of the leaves of Oxalis.-Prof. de Brignoli and Prof. Morren have communicated to the Bulletin of the Royal Academy of Brussels some interesting notes on the excitability and spontaneous movement of the leaves in the species called Oxalis stricta, accidentally observed by two of the pupils of the former in the botanical garden at Modena. This is not mentioned in the list of species designated by authors as sensitive; and Prof. de Brignoli found that it must be teased a long while, as its movements are much slower than those of the Mimosa pudica. The irritability of the Oralis sensitira was already agent in this phenomenon, because even the Hedysarum gyrans slackens its movement in autumn and daring winter, in hothouses. He thinks that all the species of Oxalis are susceptible of contraction when irritated; but as nost of them are natives of the Cape of Good Hope, it is possible that they show no effects from concussion in our climate, whose greatest heat never equals that of Africa. newly-observed phenomenon, which has led, in its turn, to the discovery of an analogy of structure between the leaves of the Oxaidece and those of the Mimosers; an analogy which could hardly have been expected, but which of Oralis is by direct observation. The movesbleness able to modify the sleep of these plants, either by means of darkness or light:- Thence he concluded that the move ments of sleep and awakening were connected with a periodical disposition of motion inherent in the plant.(Physiologie, vol, ii. p. 861.) We see, however, that a single blow makes the leaflets when avoaks take the postare of sleeping leaffets.
Ceyzon Moss.-On Jan. 8, there were presented to the Medico-Botanical Society some specimens of the Fucwe amylacous, with varions moulds of jelly made from it, sent by Mr. Battley; who stated that his attention had been directed to an essay in the Transactions of the
Medieo-Botanical Society, on the subject of the Ceylon Medieo-Botanical Society, on the subject of the Ceylon success into Calcutta as an article of sick chamber, and as affording a delicions natriment to the mother during the suctling of her infant. It is a weed thrown by the sea in great abundance on the coast of Java, it enters largely into the formation of the edible bird's pest so highly prized in China, and it is also imported by the Chinese as a regular article of food. Dr. Sigmond suid, from what he had seen and learnt of this moss, he anticipated the best results. Dr. Farre said, that he had wimessed at Mr. Battley's the mode of preparing the jellies; and in one respect this Fucus was superior to anything of the kind; this was. the rapidity with which a jelly might be formed : in general some hours must elapse
before it could be prepared, bot in this instance in twenty before it could be prepared, but in this instance in twenty natriment might be got ready
CALENDAR OF OPRRATIONS for the ensuing Week. mamphere of forcing-houses should be kept drier whilst Vines, Themehers. and other froits are in fower; epd a moist atmosthere tion is ofter the fruit shows indications of ripening by becoming

 the foliage. It hitus heer frequently shown that a moist atmoHwars at been exarincen, as providence Pines and Melons, but dways at the sacrifice of quality.

PINERY. - The plants swelling their fruit, and other fruiters, may be kept closer than the successions, and have more mirowre.
The successions and younger plants will now commence growing rapidy-they may therefore have water given them more fore
quentiy, but do not increase the quantity given at one time syringe them overhead in clear weather immediatety aner the air
is taken away in the aftemoon; give air freely in call mild weaViNzEy. - Whilst in bloom and setting, keep the house rather higher ry sun-heat, and the eair dry, by abstaining from the use o
the syring. wetting the paths, zc. If the laterals in the early
house were stopped at two eyes above the fruit, the top one may be remored now to give light to the fruit whilst colouring. Con-
tinue to tie in carefull any branches dificut to bring to their proper place must not be strained, but have the tie gratual
sto trened. Preserve a moint atmosphere in all ithe stages of
growthexcept as abore, and where the fruit is ripening in the
late vineries rub oft aul buds where it is not desirable to have a late vineries rub off all buds where it is here the fruit is swelling
branch.
PEACH-mouss.-In the early houses wher fast, preserve a mnist atmosphere, syringe the trees every fine
morning, and give air freely on all fitting occasions. In tying in the
 make itsappearanes or fruit should be immediately dusted with
the infected leaves or
sulphiur lowed to ripen as soon as they are securely stoned.
CHE RYY-Hous. Syringe the trees daily with water at the
same temperature as the house; loosen the surface-soil in the tabs or borders with a hand-fork, and supply the plants iberally
with water until the fruit begin to change colour, after which
gradually decrease the quantity and cease syringing; give abun dance of air. healthy and free Use every possible means to keep the foliage depentis the success of the secoud, or main crop; keep up a free borders or tubs.
CuCumbes and Mrlons. - Keep the Cucumber plants re-
gulary stopped, and do not allow the fruit-bearing vines to be come crowded, or the result will be weakness and sterility; conearly Melons, never add more than two inches of soil at one time and dispose it to form a ridge along the frame or pit, by adding more betwoen the plants than at the front or back. Stop, \&ect, as
directed for the cucumber, and keep up a good bottom-heat, say time; continue to water in the morning, and cover up accordine
STrA wrgrace wer
placed by themseives where they can be kept dry, and have but little water given thers; those in other stages must have aban Frbncr beans.-Supply tepid water liberally at the root, and syringe regularily overhead. Continue to sow for succession.
All crops in frames, as Carrots, Potatoes, Radishes, and Cauliflowers, should have free exposure in fine weather, and be regt larly supplied with water; continue to prick-out Celery; repot
Tomatoes and Capsicums; sow Vegetable Marrow, Gourds, and Cucumbers, for hand-Elasses.
Incessant vigilance is now requisite on the part of the gardener in this department, as numberress minute matters will require the Indirldual attentiou of every one according to his circumstances,
which we cannot foresee ; but the two most important things are the well-doing of his main crops, and the destruction of advain cing weeds; for if they are allowed to gain the ascendancy now they will probably keep it throughout the season.
Artichores.- Dress old, and make new plantations, if no one before ; piant three plants in a patch sit. apart.
BKANs. -Sow successions, earth-up, and loosen the soill be C. \(A \mathrm{BB}+6 \mathrm{EE}\), - Hown .

Cabsiges.-Hoe between and carth-up; tie up the leaves of
owres.-Sow for a late summer crop; earth-up those
CREST, Mcstard, and other salads. - Keep up a succession. Littucis. - If any under walls are
their leaves, to assist their blanching
Psae- - Earth-up and stick advancing crops, and sow succes Potatoks, - Continue to plant; let the rows range from north to south, if possible, that they may have the full benefit of the
smm; be guided by the length the stems attain, in the distance al lowed from row to row, earry planting is preferable to delaying after the middle of this
Orchurd.-The disbudding stone-fruit trees on walls may now be commenced, removing ail foreright stoots, the first time going ver them. Let the coverings down if the weather threatens to come necessary to light fires in the walls, do so in the afternoon If delayed untii night, there is danger of sudden chill before morning, by their being imperfectly heated. Rub ofr the sapertuous
or very strong shoots from Goosebery and Currant bushes wher it is wish whong shoots

I1.-FLOWER-GARDEN AND SHRUBBERYY.
Srove.-Particular attention should be paid to potting Orchidaceax as they show indications of growth; continue to give
those growing regular supplies of water, witt slight syrtaging averhead occasionally in the afternoon. Cyrtopodiums and Ca about an inch in lengtin, using for them very turfy soil, broken into small pieces and mixed (during the operation of potting) with well- rotted cowdung and potsherds: for Peristeria elata, which
should now be petted, add to the above composta portion of leaf should now be
mould and sand
Gasanhouse. - Carefully repot any quick-growing plants that may require it, without disturbing the old ball; tie up and shape shoows, and stopping the most robest ones, particularly of such plants as Epacris and Chorozema. Keep the atmosphere mois
and cool, by watering the paths and shelves, and give air cautiously in rnugh windy weather
Prrs and Frasks - - Continue to propagate any desirable haifhardv plants for late flowernz : if the earlest Baisams are show-
ing their first blossms, pinch them all off, and give the plant the their irst tolossoms, pinch them all off, and give the plants
their their final shirt; repot immediately any Cockscombs which are
showing their fowers, and place them near the glass: commence hardening -of plants, for the tlower- borders by biving them

\section*{NEWS OF THE WEEK.}

The arrivel of the overland mail has put us in possession of despatches from China, India, and the Levant. The most important intelligence thus received is that from China, from which we learn that the dispute with this country has been successfully terminated. It appears Chat in consequence of the procrastination of the Chinese Commissioners, hostilities had been commenced by Capt. Elliot: the ships and steamers of the squadron opened a heavy fire on the forts, and several of them were deasroyed; further hostilities were threatened, when a preliminary arrangement was concluded at Macao, by virtue of which commercial intercourse was re-established, the Emperor ceding an island near Canton to this country, granting an indemnity of six millions of dollars, and establishing fficial relations between the Celestial Empire and Great Britain on terms of perfect equality.-In India there is little new; a revolt had taken place in the Punjaub, and the widow of Ranjeet Singh had implored the protection of the British Government.-From the Levant we learn that the Pacha of Egypt has declared his determination o concede nothing to the Sultan beyond the payment of a fixed yearly tribute, and to allow no interference in the details of his Government. No doubt is entertained that the Sultan will retract the obnoxious conditions of the recent firman, more particularly since the ambassadors of Constantinople, at a late conference, resolved to support the Pacha's claims, and communicated to the Divan their resolution to withdraw from further interference unless these claims were admitted. The Pacha appears to be much embarrassed by the difficulty of raising troops to reist the hostility of the Abyssinians and the attacks of the Bedouins, who are in open rebellion. He is neglecting no measures which can strengthen his defensive position, and is paying the arrears due to his military and naval forces. The plague still continues at Alexandria, and is particularly fatal in the Delta of the Nile At Constantinople public attention was almost exclusively ab. sorbed by the arrival of the flect in the Bosphorus, and great rejoicings had taken place in honour of the avent.-The news from the United States is confirmatory of the pacific intentions of the Government towards this coun. In regard to Mr. M'Leod'scase, it was rumoured in New York that it is intended to postpone the trial to the summer. Several high officers of state had been sent down to attend the proceedin \(\mathrm{f}_{5}\), and measures had been taken to repress any popalar or partisan outbreak on the frontier. Nothing had transpired as to the communications between the Secretary of State and the British Minister, but both parties had declared that there is no probability of the amicable relations between the two conntries being dis-turbed.-Our Euröpean news is not of great importance compared with the preceding intelligence. In France the law for the fortification of Paris has been officially promulgated, and contracts entered into for the works. The trial of Darmes, the regicide, is postponed till May, in order to avoid the gloom which a sentence of death might throw epon the rejoicings at the approaching christening of the Count of Paris. The south of Prance is still in an unsettled state, and arrests are daily takior place in conaexion with the late affair at Marseilles.-In Spain the Regency question exclusively occupies attention, public opinion being divided between the plan of one Regent or a triumvirate. The Senate appears favourable to the Former, and the Chamber of Deputies to the latter plan. In the provinces a spirit of revolt still prevails, and it is expected that a republic will be proclaimed. - In Portugal, also, the most anrestrained excesses are committed in open day.-The majority of the Swiss Diet has decided that the decree of the Grand Council of Argan, suppressing the convents in its territory, is incompatible with the Pederal Constitution; but it is doubted whether this majority is sufficiently strong to enforce its resolation.
At home, little of public interest has occurred during the week. Both Honses of Perliament have adjourned to the third week in April, and the Queen and Court have left town for the Easter holidays. The anziety which prevailed last week for the fate of the President steamship is unhappily not abated, and serions apprehensions are now entertained that she was lost in a storm which occurred shortly after she left New York, in which case all on board her must have perished. It is, however, considered possible that she may have run to the south for a supply of cosle ; bet this opiniou is, it is feared, unfounded.

\section*{7hame Nrbos.}

Trie Court. - Her Majesty, Prince Albert, and the Princess Royal, who continue well, left town at a quarter past three on Wedmesday afternoon for Windsor, and arrived at the Castle at a quarter past five, where they will spend the Easter holidays. The Ministerial papers announce that H. R. IH. Priuce Albert has been appointel Grand Ranger of Windsor Park. The Prince has presented a donation of 1000 . to the fund for the erection af the Nelson monument in Trafagar-square -Two veny beautiful black-mad-white Shetland pomies hive bean presented for the equipage of her Rogul Highness the Princens

Royal, by Mrs. Cox, of Lavford, Essex. These little animale are of scarcely larger size than. Newfoundiath like domestic animals, being accustomed to come into the house, and to feed out of the hand. They were rectived by her Majesty and Prince Albert in the gardens of Buckngham Palace on Saturday last. - Her Majesty the Queen Dowager left town on Wednesday afternoon, by the Birmingham Railway, for Sudbury Hall; and the Duchess of t Windsor
Parliamentary.-It is reported that there will be no contest at the approaching election for the county of
Antrim ; the only candidate being E. M' Donnell, Esq., of Gleparm Castle, who romes forward on the Conservative interest.-It is rumoured that, in the event of Mr. C. burton at the next disolation, a London merchant of high standing and liberal principles will be presented to the electors for their suffrages.-It is kaid that sir . Cocho rane has determined not to offer himsel

\section*{epresentation of the borough of 1pswich.}

The Revenue Accounts. - From she quarterly official In the years and quarters ending respectively on the 5th April 1840 and 1841, it appears that the income for the Year 1840 is \(44,985,166 l\); for the year \(1841,44,675,886 l\).
The decrease om the year is \(309,280 l\). The income for the quarter ended 5th April, 1840 , is \(8,679,7148\). ; for the guarter ended Sth April, 1811, 8,609,2000. The deerease on the quarter is 70,514 . On the year 1841, as compared with 1840, there is a decrease in the Customs of 301,0421 , an increase of 489,2996 , in the Stamps of \(162,722 l\)., and In the Taxes of 275,019 . On the quarter there is a decrease in the Customs of 54, 1151., in the Excise of 44,526l., In the Post-office of 27,000 . ; While in the Stamps there an increase of \(19,216 \%\), and in the Taxes of \(\mathbf{4 2 , 9 8 7 \%}\).
Window Deties.- From recent retarns, it appears that the total amount of window-duty charged on hospitals in duty on uind ses sessed for the 12 following towns in England (which contribute the laryest amount) is as folIows, viz.: Bath, 18,856l.; Birmingham, 7,905l.; Brighton, 1,8,877.; Leeds, 5,6021 . ; Liverpool, 22,551l.; Manchester, 12,9833.; Norwich, 4,8700 .; Plymouth, \(7,2421 . ;\) and Tork, 4,5031 .

Repert of the Vaccine Board.-A Parliamentary paper kas been published, containing the annual report of the
National Vaccine Establishment, which has been transmitted by the Presidents of the Royal Colleges of Physicians and Surgeons to the Secretary of State. It appears from this document that the small-pox has prevailed epidemically with considerable severity since the last report but they do not abate their confidence in vaccination as have vaccinated from that station alone 15,388 persons within the last year, which exceeds the number in any former year by 2,444 , and have sent ont to correspondents lymph ; and they espress considerable satisfaction in being able to state that the matter employed is obtained by Jenner himself, and that they find it as effectual as ever The Board, therefore, discourages an incautious dissemiantion of matter obtained from new sources, which has sot atood the teat of ample experience.

\footnotetext{
\section*{Forsígn.}

Paxance.-Electoral Reform.-This question, brough forward by Messrs. Mauguin and Pages, came under con videration, in the Chamber of Deputies, on Monday. The proposition made by these two gentlemen had for its fects and sab-prefects, the receivers of the public revenues
payers, general and superiur officers of the land and sea forces in active service, the King's attorneys in the Royal courts and tribuaals, and the chiefs of divisions and offices in the ministerial departments. It appears, from calculations made by the French journals, 1 mustered 140 at the commencement of the Legislatare in 1839, has now increased to 179. The question gave rise to an animated and lengthened debate, and Messrs. Passy and Dufaure kaving manifested some partiality towards the proposition, the friends of the Ministry were appre hensive that it would be adopted, or, if rejected, that the
majority against it would be very small. We hare since, majority against it would be very smanl. We hare since, motion has been negatived, by a relarive majority of 33 ,
and an absolute najority of 16 . The smallness of the and an absolute niajority of 16 . The smallness of the dissolution of the Chambers, when the Session has terminated.
The Fortifications. - The journals continue to be mach Peers, relntive to the Fortification Bill, and its adoption by that assembly ; and sbserve that the cousiderable rise which the anwouncement of this important result occa rical had been the fears entertained by the opponents of the Bill. It seems that the works of defence were about to be prosecuted with extraordinary activity. The lans rected to engage as many labourers as chey could possibly procare; and consequently 3000 wheelbarrows have been ardered, and 30,000 labourers engages, independently of the troops to be employed for the same purpose.
}

The Regicide Darmes.-It had been decided that the Chamber of Peers should, on Monday last, form a Court
of Accusation to hear the report of M. Girod de l'Ain, in the affair of Darmes and his reputed accomplices, and to consider how far the evidence collected was sufficient to establish the guitt or innocence of the individuals in custody on that charge. The trial had been, moreover, fixed
for the 25 th of this month, and the debates not being expected to last more than two days, the whole would have been brought to a close in the evening of the eath,
Ministers, however. thought that a sentence of death, passed so near the King's fete and the christening of the Count de Paris, would cast a gloom on the rejoicings
which are to take place on the occasion, and it has been crordingly resolved to postpone the trial until the middle of May. The Court in the mean time will assemble next week, to proceed with the preliminary operations of the
indictment. - It is said that Darmes continues to express his regret that he had failed in his attempt to assassinate Lovis-Philippe, and that he has made no confession as to
his supposed accomplices. His mother, it seems, afte having been arrested and liberated, and arrested again, The Literary Copyrighi Bill - This.bill was rejected by the Chamber of Deputies, on Firiday, after a lengthened The Disturbance at Marseilles.
The Dildurane Marselles.-Accounts from the South state, that the authorities at Carcassone had searched the houses of several republicans, in consequence of the
riots at Marseilles. Some arms and a considerable quanlity of cartridges had been seized. A movement was o have taken place, according to the police information, dopted, it did not occur. New discoveries, it is added were being daily made respecting the conspiracy of the 24th. Proclamations calling the citizens to arms had been seized, and more arms and ammunition had been found on making domiciliary visits. Some men who were amployed on the canal had been arrested on their march suspected persons.
Spain.-The Regency question exclusively occupies public attention. The two following versions appear to so most generally credited:- If the Cortes declare will be summoned to fill that office. But if the determinatio should be for a triple Regency, the names that are put forth are, the Duke de Victoria, Senor Arguelles, and
General Evaristo San Miguel. The decision of the Cortes is still problematical ; but the report is current that if in the Senate a certain number of Senators vote for the sole Regency, on the other hand, in the Chamber of Deputies there are many who are favourable tion is the mhich unites the most suffrages im the provinces. M. Linage, the Secretary of the Duke de Victoria, has published an desire of the Dake to withdraw from pablic affairs, and enjoy the repose of domestic life; but that he would not beforehand take an engarent, in reference to the Re gency question, which his conscience would not afterward permit him to execate, and that he was determined to think proper to adopt. This letter was the theme of many comments, and some inferred from the obscurity of the only accept the single Regency.-The Pope's allocutio had caused an entire suspension of the relations between the court of Spain and the Holy See. It is, however, stated, that an ambassador would be sent to Rome to arran spirit of revolt was strong, and it was feared a republic would eventually be proclaimed.-Nothing is said as to whe prospect of a treaty of commerce between Spain and this country.-An agitation was stated to be getting uy by the manufacturers of Catalonia to induce the Regency
not to take off the import duties on cotton goods; and that the opposition from Barcelona had hitherto merce with Great Britain. If such treaty were signed, Catalonia, it is said, would proclaim Charles the Fifth immedrately
Portegal.-Nothing of importance has occurred since Cortes; bat the new Finance in his approiuted by the Queen to assist Baron Tojal great danger of being dissolved, through personal differences menced having refused to accept such an arduous task. - The disturbed and unsettled state of the country offers a melan-
choly picture throughout : assassinations and daring robberies were everywhere being perpetrated in open day and the guenilus were roving about almost at pleasure. A magistrate, n. ar Braganza, had been murdered in the act of endeavouring to quell a riot in a gambling-shop. Eight highwaywen, whon hare lung been the terror of the prisoned. Two guerillerds, out of a mounted band of ten, hat been fallen in with by the Queen's troops in the Alemieju. and killed.
of late dates. Ther the Eastern question, the pacific conclusion of which is universally reçarded to have been effected. Some alarm had been created at Vienna by the news from Alexandria,
which however had again been allayed by the advices received from Paris and London. - The sittings of the delegates in Burtin were drawing to a close, and a series of
vantages, in a national point of viow, of retaining the
Prusbian tariff. The only fact of interest to be gathered from these statements is that Hanover. Meckienburg, Brunswick, and Oldenburg, as well as the Northern Hanse Towns, are not disposed to join the Prussian League, Subsequent accounts, from Berlin, infoum us of the conmotion to stormy discussion, in whicls several members deciared that to accede to the proposed resolution would be to for adoptine such a resolution, the motion was rejected by a majority of 30 roses to 6.-Athough Eurupean poliwhere has still a most warlike appearance, owing to the ory state, the number of which is likewise much greater than usual.communications between the Bishops of the kingdom with the Holy See, which bitherto have been submitted to the control of the temporal power, shall no longer be sub-
jected to that course, but may be made direct.-The censue
\(1,709,880\), of which 831,870 were males, 878,810 females, 286,530 married couples, 590.905 unuarried feare of the Evangelical Lutheran church, 1,830 Reformists, 30,000 Catholics, 84 of the Greek church, and 356 Jews, On the morning of the \(22 d\) ult., the shock of an earth quake was elt an Coblentz, and up the Rinine as far as Camp, in the Duchy volcanves in that neighbourhood. The steersman of one of the steamers declares he saw a blue flame rise from bill at a distance in the direction mentioned, which, after remaining suspended in the air for some time, descended and disappeared upon the spot it rose from. The barigasteamers are expected to pl daily between these two cities throughout the summer The nen employed in removing the obstruction of the river at Biberich have been impeded by the high wate caused by the melting of the snow. The weather is un usually fine; Dannbe only became free from ice within the last week. SWITZERLAND.-Accounts from Berne furnish the pro ceedings of the Diet up to the lst instant, and state that majority of the Deputies had deciared themseivec favour of the first paragraph of the Report, which decided all with the 12 th article of the Federal Constitution; an that on being put to the vote, it was carried, to 11. Diet will hardly be carried into effect against Argai so far as forcing that canton to re-establish the conventa be brought to combine in sufficient force to aet hostilel against it. It appears that the twelve states and two hall 890,258 a population of forming the minority in the Diet, have a popolation of \(1,301,863\) souls - that is, about 500,000 more than the cantons which formed the majority

Russia.-Accounts from Petersburgh state that the Russian army was about to be reduced by 40,000 50,000 men. Financial considerations, combined wit the greater prospect of the undisturbed continuatlon of peace, were said to form the principal grounds for thil an tinued. Russian influence would, it was expected, be sue cessifully opposed to the pretensions of the Milosch party in Constantinople. - Intelligence has been received from Circassia that the Russians, taking advantage of a heavy on Zibel, mith 3, Ti Georgians and Mingrelians, and 2000 reguiar troops. The Circassians attempted to defend with the loss of two of their chiefs, 300 killed, and 300 prisoners

Italy. - Private letters from Naples state that the King of Naples had contracted with an English company t construct a railroad from Naples to Caserta-the ersailles of Naples.-The Queen bad been happily confined of a daughter on the 28th ultimo.-Accounts from Rome port that the celebrated Bergami, who figured in the trial of Queen Caroli
at Foszombrone. The island of Zante has ggain bee visited by a severe eartiquake, which is described in the following extract from a private letter:- On -othe after the dars and niehtsof a violent gate of wind, a most alarming shock of earth quake was felt about seren in the evenius. It was not so disastrous as that of the shen of October, but the daration was much longer, the fibration being cont. to tairty-fise seconds, while the formar lasted only eight The nine. The consternathu was genern and were in an iastant filled with the terined people, eager to fly, but not knowing where to seek safety. the the:r lowses they dreaud being harica in rains--in where strents they ware drenched with rain. The ciarese and the cries and contusion were terrible. Only a few luuses fell ither the tom or the surrounding country; orbers were more or less shaken, and, as the shocks fecar will we have every reason to fear that in the end the town 30 , become a heap of nearly all the houses on the island, Zante experienced successive shocks, more or leme strong, daring
forty days, making the number amonnt to no fewer than 259 ; and during the remainder of 1840 , vibrations of the
earth, more or less perceptible, nearly every day. All the violent shocks were attended with dull rumbling sounds
and subterranean explosions. Sometimes these noises were heard without being succeeded by any ribration, and sometimes the shocks were silent. Since 1.514 Zante has experienced 21 earthquakes. That in 1.514 divided the
hill on which the fortress stood, and buried part of the ancient town in the ruins. In \(1,6 \pi\) the shocks were repeated for three months, during which an epidemic disease prevailed. In 1791 the great shock lasted several minutes, shocks for six weeks. In 1820) the earthquake, which once more desolated the island, was preceded by a single flash of lightning. That of 1837 lasted with great indisastrous of all. In fine, the unfortunate island has suffered during the sixteenth century two earthquakes; during the seventeenth, three; during the eighteenth, ten; and during the firs

The Levan Alexandria, dated March 17, which state that Mehemet Ali had returned from Cairo, on the 15 th, leaving Ibrahim Pacha there invested with full administrative powers over
the interior, as well as over the affairs of the Military and Marine of Egypt. - Councils had been held in Cairo, and serious inquiries made into the recent mismanagement in Syria. It was declared that 60,000 men were necessary for the effective government of Egypt, and Said Bey had scription, as the Pacha had only half that force on foot at present. It was believed that he would experience great difficulty in raising that number, while the attempt was regarded as calculated further to embarrass the question which then occupied the attention of the Divan. The 60,000 men are the hostility of the natives of Abyssinia, led by a chief who many years since destroyed the Pacha's on, Tussoon, and the threatening attitude of the western Bedouins, who, it is said, were in a conspiracy against the Pacha. The eastem Bedouins had also recommenced their attaciks on the Government convoys in the Suez Desert. The Pacha had paid off the long arrears of his army, and was now discharging those due to hie marine and to their children. He was building barracks for the sailors in Alexandria; the National Guards of both cities were still constantly exercised; a marriage was on foot between a son of Ibrahim Pacha and a daughter of Soliman Pacha; and apparently nothing was neglected to strengthen Alexandria from 10 th to 14 th March, and the cases of plague had risen to 15 per day. The returns from 23 villages in the Delta for 13 days, ending 10th March, were 1001 still remained to be reported on.- Since the arrival of the mail, an extraordinary express has brought letters from had then reached Alexandria from Constantinople. The Pacha was awniting the decision of the Divan, but had declared his determination to concede nothing beyond th payment of a fixed yearly tribute, and to allow no interference in the details of his government.
Turiey.-By the Levant mail we
intelligence -By in lail we have also received arrival of the fleet, which had returned on the 16 th, and resumed its former station on the European banks of the
Bosphorus, exclusively absorbed attention in the Turkish capital - A conference had been held at Therapia, in the house of Lord Ponsonby, for the purpose of examining the reply of the Porte to the last demands of Mehemet Ali, when the A mbassadors came to the resolution of supporting the claims of the Pacha, and notified to the Divan hat if the Sultan did not grant them, his Highness shoul Powers. The Porte would, it was hoped, accede to the wishes of the Ambassadors; but though frequent councils had been held, nothing definitive had been decided on the 19th. -The Superior Board of Health having been officially informed of the existence of the plague at Jaffa, St. Jean d'Acre, Tyr, Said, and Beyrout, had ordered that all vessels proceeding froma Syria should undergo quarantine.
Caxdia.-Advices from this island state that the insurrection there was much in the same state as at the last
accounts. No acts of violence had been committed. Priaccounts. No acts of violeace had been committed. Prilation of Candia cherished hopes of being able to establish their independence, and that they were encouraged in this idea by the Pacha of Egypt, who had supplied them with arms, hoping by that measure to oppress the Turkish in Greeks, however, refused to support the Pacha against their countrymen, which obliged him to submit unconditionally to the Sultan. The Pacha now demands the arms which he distributed to the Greek population; but their leaders refuse to surrender them, declaring that they the Turks, and that they hoped to establishl their independence, with the consent of the European Powers. Further accounts state that the Candiote refugees in
Greece, having resolved to return to their own country to raise an insurrection against the Ottoman authorities, had seized upon several vessels in the Modena waters, and taken them to Carabuse, in Candia, Whether for this or a piratical purpose was unknown. An English sehooner diotes, and taken to Candia. The British Consul at Navarino bad warned all vessels to give the Sapienza isles a wide berth, as the Iale of Schizza is the place where the Candiotes hurk.
of the North A merican, packet ship, we are in possession of intelligence from New York to the 20 th ultimo; four days later than that received by the Britannia last week.
The news thus brought is important, so far as it is confirmatory of the pacific adrices brought by the steamer The New York papers contain a variety of articles and paragraphs relative to \(\mathrm{Mr} . \mathrm{M}^{\prime}\) Leod, and his approaching respecting his case is that Mr. Crittenden, the Attorneybinson, the new United States Marshal for the Western district of New York, had arrived at New York, and proattend the trial. Major-General Scott had also passed through that city on his way to the Niagara frontier, for the purpose, it was said, of taking all proper measures to repress or repel any partisan outbreaks that might per-
chance arise in the course and by reason of Mr. M'Leod's trial. The trial, it will be remembered, was expected to come on in the course of the week, commencing on the 22nd of last month. It was, however, rumoured that it
would be postponed to an indefinite' day nest summer A Lockport paper countenances this statement, and says that the trial will not take place, probably, at the coming England, will be asked for, it is presumed, and granted The same paper adds, that the trial is not likely to be removed from Erie county to Albany, Mr. M'Leed' counsel haring made no application for a change. The liberations on Mr. Fox's demand. No authentic informa tion could be obtained either on the minner of the demand, or the conclusion likely to be come to by those in delibeFox, the British Minister, and Mr. Webster, were said to be of the most friendly nature, and both had distinctly declared that there was not the slightest probability of anything occurring to disturb the amicable relations ex isting between England and the United States. -The President has issued a proclamation, convening an extravs of May, to take into consideration sundry important and weighty matters: The reason assigned in the proclamation is the embarassed state of the public finances. It is entirely silent about the case of Mr. M'Leod, and from this it is interruption of the friendly relations between the two countries in connexion with that case.
india.-No intelligence of great importance has been received by this mail from India. From Scinde and Afflarge, but there are strong reasons to hope he will surrender himeself. Dost Mohamed had, on the 10 th Feb ., proceeded from Ferozepore to Loodeanah. He was desirous to go this would be permitted. - A revolt had taken place in the Punjaub. In consequence of Shere sing having seized the
throne, the Ranee (or widow of Runjeet, who had shut herself up in a fort with her infant son) had implored the protection of the British political agent.-A revolt in Nes-
sanie (Madras territory) had been put down.-From Scinde news had been intercepted by bad weather, but al was believed to be tranquil. Geueral Court had been obliged to make his escape from Lahore to Ferozepore, in consequence of a mutiny among his troops.- The Go and disgracing the natives of the \(\geqslant d\) Light Cavalry, which recently deserted its European offic.rs while leadirg them against Dost Mahomeds cavalry. Major-Gen. sir \(R\). the command of the army of the former presidency, CHINA.-A telegraphic despatch reached Paris from Marseilles on Tuesday, by which we learn that the over land mail from India has reached that port, bringing the important intelligence that the dispute with China has Bombay, that, after some hostilities, à preliminary arrangement was concluded, at Macuo, on the 20th Jan. between Capt. Elliot and the Chinese Plenipotentiaries; the arrangement entered into, the Emperor cedes the island of Hong-Kong to Great Britain, grants an indemnity of \(6.000,000\) dollars payable in six years, and estailishes footing of a perfect equality. We have since received the following particulars relating to this important intelligence. diness appars that in consequence of the insincetity and tartions were made on the morning of the 9ih for attacking the outposts of the Bogue forts. About 1,300 troops wers pee. At the samers, and landed near tire fort of Chum and Hyacinth opened a cannonade on the lower baitery, while the steamers threw shells into the upper tower which commanded it. The latter was soon taken possession o by the troops, who poured down a heary five of musketry on the lower works, and quickly drove the Cinacse from
their guns. In two hours the fort wis in possession of their guns. In two hours the fort whe in tossession of that of the Chinese is estimated at from stul to \%o0. The ships and erews escared unhurt, although the fort mounted 35 guns. At the same time, the fort of Tycocktow was to the soutimard squadron operating abont Herbert, of the Sumarang, supported by the Driud. Moseste. and Columbine. A heavt fire was opened on the fort, and promptly returned; but the Chinese guns were speedily
disabled, and a party of seamen landed to seize the fort. The Chinew made ospiritod resistanoo, but ware poon
overpowered, and the fort captored. The first lientenan vessels tharang was wounded in the assault. The steam. Bay; bot atracked the fleet of junks lying in Anson's Nemesis could approach them, towing 12 armel boats powder Majesty's ships. Her first rocket set fire to the powder-magazine of one junk; 18 others were blown up waters. Next throw shells into the h H.M.'s ship Blenheim began to paring to attack the chief fort of Anunghoy, when the Cbinese Commander-in-Chief made a eormmunication to Captain Eliiot, who thereupon desisted from farther hosthe British Plenipotentiary to Her Majesty's addressed by China, announcing that preliminary Majesty's subjects in the Imperial Commissioner and himself had been made to the following effect, which we give at length, as made more explicis than the telegraphic despatch:-The being of the island and harbour of Hong-Kong to the British Crown." All just charges and duties to the empire upon were conducted at W Government of \(6,000,000\) dollars, \(1,000,000\) payable at once, and the remainder in equal annual instalments, ending in 1846: direct official intercourse between the counries upon an equal footing: and lastly, the trade of the port of Canton to be opened within 10 days after the Chinese New Year, and to be carried on at Whampoa till urther arrangements are practicable at the new settlement. Details remain matter of negotiation. Hong-Kong was to protected by by iv relo harbour protected by by ingun vessels. The Plenipotentiary had published officially his intention to urge the opium indemnification claims upon the British Government, with
the concurrence also of the Governor General ot India.

The Opening of Regent's-park.-On Saturday, at a meeting of the Marylebone N, Lord Kugent brough of the Regent's-park open to the piblic. His Lordship said that he had been induced to bring this subjeet before the vestry, not merely in behaif of the inhabitants of the extensive parish of Marslebone, but unon the part of the inhabitants of the whole metropolis, that they might hare the right of free access to all parts of the Regent's-park. The means of producing healh and receation, thought, one of the most important subjects which could engage the mind of Government, and it was at the same time one of the greatest blessings of civil liberty which the inhabitants of a great nation could possess. The beautify ing of the Regent's-park be, said, had been at the public expense, and it was but fair that the publie should partic pate in any benefits derisable from it. To the poor would prove a very great blessing; and were the impro mark a compuration with that public plef of reser park a communication wh h public place of reso Forests purchased by the Forests-Primrose-hiu, the prospect would be beautia and the space abundant. The noble Lord concluded by moving a resolution to the effect, "That an humble address be presented to her Majesty, praying that free access be given to the public every day to all parts of the Royal Domain called the Regent's-park, concerving it to be one of the greatest boons she could confer apon be faithful and loyal subjects the inhabitants of the metrope is. After some observations had been made in fovourly adopted. Lord Niugent then read an address he had pre pared to be presented to her Majesty, which having also been adopted, the mover and seconder, with the members for the borough, were requested to form a deputation to present it at a snitable occasion to her Majesty
The Niger Expedition.- It will be remembered that his Royal Highness Prince Albert a short time since visited and minutely inspected her Majesty's steam-vessels, when being fitted out for the Niger expedition. On that oceasion the Prince exhibited great interest in the scientific ar rangements of Dr. Reid for preserving the health of their crews, and entered with great urbanity into the provisions that were made for the comfort of all who were to acco pany the expelition. The interest of his Royal Higaness in the undertaking has not, however, terminated here, his Royal Highness having within these few day" presented the the commanders of the Albert, the Wilberforce, and meter, respectively, a highty-finished gold por the success of the enterprise. The foilowing iascription is engraved on these valuable instruments, which have been prepared by three of the first-rate makers in Loudon: "o

he body of Elizabeth Las been held at Horslydown on Friday afternoon deceased's landlady found lier suspended in her bed-room from the rail of the bed. She was then quite dead. The probable cause of deceased's having committed self-destruction was, that having transferred from
her own name to that of her daughter the sum of 50 . her own name to that of her daughter the sum of \(50 l\).
which she had in the Bank, she regretted haring done so which she had in the Bank, sle regretted having done so ; and her regret, two witnesses stated, was deepened by her
daughter having refused twice lately to draw for the sum of \(2 l\)., which deceased wanted. It was also stated that fortnight ago the mother and daughter had a quarrel on the subject of this money, and that the quarrel ended by the former being thrust out of doors. The daughter deposed that these allegations were untrue; that she had since Christmas given sums of 10 s. at several times to lier mother; that the transfer was made at the express desire of the latter, and that she intended next month to draw out the whole sum, that her mother might dispose of it as she thought fit. Verdict, "Temporary insanity."- 0 n Monday an inquest was held at the Lunatic Asylum, HanTell, on the body of James Clarke, an inmate of that in
stitution. It appeared from the evidence that stitution. It appeared from the evidence that deceased
was subject to fits, and on the morning of Friday, being Was subject to fits, and on the morning of Friday, being
missed from his ward, a search was made after him, when he was found at the rear of the premises with his head in a tub. He was apparently quite dead, and every effort to restore animation was without effect. The tub had been apset, and it is supposed that deceased, being seized with a fit while standing near it, had by falling against Verdit it down, by which means his head got into it. has been, Died by the visitation of God. - \(n\) n inquest found under the following circumstarrees, and supposed to have been mordered :-A girl said that on Friday evening, as she was passing throngh spital-square, Wheler Episcopal Clapel, which she found was a small coffin. policeman opened it, and found the body of deceased. To the feet was tied a paper, on which was traced, in a female hand, "God bless my babe-farewell!" The surgeon to
the police of that distriet, who had examined the body exthe police of that distriet, who had examined the body ex-
ternally, not being able to account for death, was ordered to open the body, and the inguiry mas arjourned to hear the result of the exarcination, and to give the police time to trace out the parents. - An inquest has been held at Somers' town on Maria Bull, aged 19, who had comnitted suicide. Flizabeth Patterson deposed that she had known deceased three years. Her brother had been paying his addresses to her. In consequence of some disagreement with ber mother, deceased left home about a month since, and entered the service of a family in Regent's-parlc. Sho believed deceased left that place Monday week last. On Friday night deceased came to wituess and asked her to
let her sleep with lier, as she was too late for her lodgings. She then appeared cheerful and in good spirits. Shortly after deceased was seized with fits of vomiting, and said to a question from witness said she bad not eaten anything that disagreed with her. She sleptat intervals during the night, but on Saturday morning became so ill that it wa deemed advisable to send ber home to her mother's resi dence. Witness accompanied her. She said Edin whatever thens whitness about having taken poison. Edwin
Bull stated that he was brother of deceased. She was brought home on Saturday morning by the sister of the young man who paid hits addresses to her. She was car fied to bed, and he only saw her once before she died, and heard her say nothing. He had no suspicion that any person administered poison to her. She made an attemp Mrs. Bull stated that she was ago by taking laudanum. Mrs. Ball staied that dhe was aware any ing happened, or that deceased had left her situation un il she was brought home on Saturday morning. She then appeared dying, and was instantly placed in bed. Medica an was sent for, but she died the same morning. She could speak, but very faintly. Witness asked her what she had done, to which sbe replied that she had taken arsenic. She did not say that any one had administered it to her; but she admitted that Patterson, a young man who was paying his addresses to her, had a quarrel with her to having made a post-mortem examination of the body He found the stomach in a high state of inflammation but though he had used all the tests, he could no detect arsenic. Althongh, however, witness could no detect by analysation any traces of arsenic, still he felt confident that death was caused by a large quantit of some corrosive poison. The Coroner said the circum there could, he thought, be no doubt deceased had committed the act herself, under deep distress of mind. Some discussionensued between the Coroner and Jary as to the propriety of their having before them the young man Pat to right to eter in wer, time, the Jury being undecided, tourt was cleared of strangers, and the point was again more fully argued and ultimately the Jury, under the direction of the Coro ner, returned a veraict of Temporary insanity
Fires.-A destructive fire happened on Monday morning at the Elephant and Castle, High-street, WhitechaMr appears that the rremises were in the occupation who states that on retiring to rest on extinguished. A bout half-past one a policeman passing by perceired smoke issuing from the top of the shutters flames. It was, however some interior of the shop in could be roused; and when they were, it appeared tha quence of tlie staircase being in flames, and their only es cape was by the windows. No ladders were to be obtained in the neighbourhood; but the police mounted each other shoulders and got on to the leads over the shop-front, from whence they prevailed upon the inmates, who were at the second-floor windows, fo thr they did, and escaped without injury. The fire was soon after subdued, but not before the lower part of the pre mises was destroved.-On wedmesday morning, a very serions fire broke out on the premises of Mr. Turner, floor-cloth and table-cover mamafacturer, Myddelton-street, St. John-street-road. Its origin is not exactly known It appears that about \(80^{\prime}\) clock, soon after the return of the workmen from their breakfast, the japan-rooms were discovered to be on fire, and in a very short time the whote place was enveloped in dames. There was a large quantity of paint, japan, varnish, and other ingredients of a very of the numerous siderahly to quicken the destruction of the numerous and were saved with dificulty : no lives, however, were sacrificed. The loss is estimated between \(3000 l\) and \(4000 l\)
as many as 14 houses having been damaged by the fire.
Fulham Bridge.- \({ }^{2}\) proprietors of this bridge ar about to follow up the improrements in the navigation o the river, commenced by tie City with the removal of the old London bridge. The plan, it is said, has been pre pared under the direction of the bridge proprietors, giving two additional arcies, each of 40 feet span. This plan has already been submitted to and approved by the City committee, whu intend to make a further improvement by dredging away the shoals near the bridge. The work i pleted in the enzuing summer.
pleted in the enzuing summer. quest bas been held at Woolsich to inquire into the cause of the death of three convicts. After the jury had ex amined the bodies, the evidence of the physicians attached to the hulks was given). from which it anyeared that all the deaths had arisen from natural causes, and the jury being satisfied, a rerdict of "Died by the vilit was returned. An inquest. it appears, mast be held upon
the bedy of erery convict who dies in the hulks, and there are always oa an average about 1100 or \([241\), as those who have the charge of thein cannot be reliered from the responsibility of taking eare of prisoners unless they can produce to the secretary of siate eviliace of their re moral in a regular manner, or oy a coroner's inquest, in the event of their death from natural or other causes The registrar of birthis and deaths having been present on other business, the coroner pat some questions to hin, in answer to which he stated that the number of deaths in Woolvich averaged, including the convicts, about seven o
eicht a week. The population of Woolwich is about
22,000 inhabitants, and nearly 3000 mullitary, and the numbers are increasing dails
Robbery.-On Wednesday, shortly after noon, as a phaeton was standing at the door of an ironmonger's shop makings-street, Cripplegate, waiting for a lady who was making purchases, an expert thief put his hand within the carriage and abstracted a large brown paper parcel containing property to the value of 51 . What rendered the act more daring was that the coachman was sitting on the box at the ime, and the vehicle was just opposite a cab-stand, the ranks of which were full. A bystander gave an alarm, and chase ensued, but the thief had effected his escape.
Suicide.-On Tuesday an inquest was held on Lient, Col. T. Dorville, late of the Grenadier Guards, who com mitted selfdestruction. A sersant in the family of M Rolls, of lab dionace, New Road, itrted tiat deceased was a relative of her master, and was staying with his fhthe last few days, when he became so dejected and melancholy that Mr. Rolls deemed it advisable that she and a fellow-servant should sit up with him on alterpate nights. About 5 o'clock on Tuesday morning she was sitting near his bed, when deceased suddenly sprang up and jumped out of it, exclaiming Murder, marder. several times, apparently in great fright. Before witness could recover from her alarm, deceased rushed towards the window, and, throwing op the sash, precipitated himself into the aren heneath. He was taken up insensible and remored into the kitchen, where he was attended by several medical men, who pronounced life quite extinct. The window deceased fell from was on the second floor. When he called Murder !" he seemed as if he was in fear that same one was about to injure him On running to the window, he leant out as if he was abont to call some one to his aid; most. Mr. Rolls stated that deceased was frequently in the habit of paying his family a visit, and was staying with them at the time the accident took place. During the lato frost deceased had met with a fall, and, in opinion, hurt his head. Since then he had at times become very melancholy, and once or twice, he thought, delirious. This circumstance induced bim to direct that his servants should sit up with deceased until he became better. He was under no restraint whatever. Witneas bad no reason o suppose that he contemplated committing suicide, and never knew him attenipt his hife before, and was of opinion that some ane was going to injure him. The Jary returned was gorgs to njure him. The Jury returnea by a fall from a second-floor window." The unfortunate gentleman was an old Peninsular officer, and served at

between Workington and this town, by which the turnpike road, for a considerable distance, was literally strewn
with gold. It seems that a servant man belonging to Mr Walker, of this flace, was sent to the Whiteharen Bank to draw the purchase-money to pay for an estate which bis master had bought, amounting to \(2,800 l\). The sum of
\(2,000 l\)., however. had been paid throagh the bank, and consequently the man received the sum of 800 l ., the whale of which was in sovereigns, packed up in paper. The ont on his return home, and was seen on the rood seoceeding at a great pace. He had, however, no sooner reached his master's and dismounted, than he discorered that many of the sovereigns were loose in the bags, whic haly retraced his journey back towards Ho He immedi ately retraced his journey back towards of the lost gold, and at the bridge-end lie found 17 of the sovereigas together. Proceeting onswards, be picked up several more near the same place, and a num ber of odd ones on the road. A nan namelimraham in Mr Walker's servant proceeded, he heard of some vagrant who bad been seen scrambling for the gold on various parts of the turn pike. It seems they had picked up large quantities of the money, and were traced to various places, and on them was found the sum of 46 . own, but they were taken into custody, and then admitted that they had picked up the sovereigns on the road and had them all np. There is still, it is said, a conhiderable portion of the money missing.
Colehester.-An inquest, exciting great interest, has been held in this town for the purpose of inquiring into the death of Emily Matthews, a single woman, aged 23 , ralent that deceased (who had been removed from the Witham Union-house to the Stanway-honse) had been improperly treated by the surgeon in her confinement, and that her death had been accelerated from being removed plece, from which there appeared to have been no particular ill-treatment of decensed. The foreman of the jury said they colty in thers. But they wished to be satisfied whether any party had been guilty of neglect in the matter. The Coroner observed, that if they should be of opinion that death ensued from neglect, it would be mansiaughter. The foreman asked what good could result from a post-mertem examination, as they had
mo evidence before them to draw a conelusion that crimimo evidence before them to draw a conelusion that crimiobserved, that he was deeidedy of opinion that no possible good could result from a post-mor lom examination of the body. The jury did not wish to hear any further evidence, and returned a verdict, "That deceased died from natural causess." But they strongly recommended that in all fature cases, where fentale palpers are remored under similar circumstances, a more take place between their confinement and removal.
Brighton.-On Monday evening, an attempt to comunit suicide was made by a respectabiy-dressed femaie, w appears that asherman, who was a short distance off his boat heard the splash in the water, and afterwards saw the body carried out by the tide. He pulled round to the spot, and succeeded in getting the woman on board, and conveyed her to the hospital, where it was ascertained the piles. After some time she was iogised as the wife of a respectable man in this tow, but who had separated fram har ix consequence of her intempurate habits, under the inluence of which, it is thought, she made the attempt Windsor
e party supa Monday morning, Richard Lovegrore, datioas at the Castle, arrived bere with the High Constable of the town, and another person, to whom, it stated, he gave himself up. On Tuesday moorning, a prirate examination of the prisoner took place at the Castle, before the Lord Chamberiain, the Mayor, and Mr. Blunt one of the borough magistrates. Gientlemen connected vith the press were not allowed to be present at the exmination; the Lord Chamberkin havigotion whin been come to, to excludo the preast, arose as moch from a desire that the enda of justice should not be defeated, an from the probability of the names of other parties, who might be implicated in the course of the investigation, gettiog into the public papers before the necessary proceadiags were ripe to be iminary inquiry : but the moment wond be safe and politic for publicity to be given to the proceedings, through the channel of the public press, there would not be the least abjection to the reporters being present. The invesligation was consequently proceeded in with closed doors. Fine following, however, appear to be the particulars of What took place. There were nut more than three or four
witnesses examined, and those deposed chietly to the state Witaesses examined, and those deposed chietly to the state Mr. Saunders, were is previoustr to the depredation having been discovered. The person who beld the situation before Lovegrove was examined as to the state of the phe from thear 1839. He proved that at the time he left the whole of the property under his care was perfectly afe. Other witnesses deposed to similar facts, and proved the extent of the valuables whicin are missing from the stores in the lower ward of the Castle. At the conclusion
of the evidence thus farg, the further hearing of the case
was adjourned till Monday. It is stated that, as far as the evidence has yet gone, nothing has been elicited to prove who actually conmitted the robbery, which, it is portions of the valuable property being carried away at intervals. The inquiry, from the nature and extent of the depredations, the respectability of the faniliy of the accused, and the great secrecy observed during the exami nation, has created here very great interest.-On Sunday lady residing in Park-street, was ranning amposs the draw ing-room, he tripped up cn the carpet, and falling on the round end of a small drum-strick he had in his hand, penetrated his eye, entering the head upwards of tivt the poor clifld, that it required great strength to drag it away. Medical aid was immediately procured, and
messenger despatched to town for Sir B. Brodie, who arrived the same afternoon. Not the least hopes were entertained of the child's recovery; and he has since died. a fortune of very considerable amount.
Bervick.-There has of late been a great increase in the manufacture of articles of iron in this place, all the three foundries baving been for some time in full and with a cargo of 100 or 170 tons weight, consisting of raiscellaneous articles manufactured at Helen Iron-works, varying froun 12 ewt. to a few pounds each.
said, is by far the largest exportation of this species of manufacture ever sent from this port. Another vessel similar twen 80 and 90 workmen are employed at the Helen Iron-works, and 40 or 50 at the old foundry; and a large number are also

Reeds and Manchesus collision has taken place促 senger train was propelled by an additional engine, and was piloted, not by the regular engineer, but by C. Innes, the superintendent of all the engiaes at the Manchester terminus. After having assisted the train up the incline, it was his duty to have proceeded to Mills Hill station, a which place there is a shant or pass-by, by means of which e would have been enabled to get upon the other me that he shonld be able to reach Manchester before the starting of the luggage train, and which had to come on the same ine of rails. The luggage train, however, started soone than was anticipated by Iunes; and on the latter coming the drep cutting at Moston, and unfortuaching at a distance of about 200 yards, and as both were going their highest speed, it was evident that no precautio could prevent a collision. The consequence was, that the it, was broken into fragments, the engine into the line, and so severely injured that he died in about half an hour after. An inquest has been held, and a rerdict returned of "Accidental Death." The vants, and there was no deodand laid upon the engines. This aceident cansed considerable delay to the three remainder passenger trains, which were detained till guarter-past 8 , when they were all three joined, and started together.--On Thursday anteraoon a fatal acciden One of the guards, contrary to the instructions given him, was amusing himself by jomping about on the roof of one of the carriages with his back to the engine, which was moving with great rapidity, when his head came in apon the spot. The young man, who had only lately joined the service, had been repeatedly warned against the dangerous practice of walking along the tops of the ca riages, and only about a minute before his death was cau tioned on the subject, and reprimanded by the head guard.

York. -The visitation of the Archbishop, held at the Cathedral in this city, to inquire into the conduct of the Dean (the Rer. Dr. Cockbern), closed on Friday. On the morning of that day a notice was posted on the south door of the Minster, which attracted mruch attention, and which was addressed to the Dean, monishing him that, whereas, on the 23 d day of March last, pending the proceedings of the visitation, he had been pronounced contu macions and in contempt. and had continued ever since wiffully to absent himself from the same, he should appear before the Commissary appointed by the Archbishop, on Fridays to purge husal from the said contempt, on pain of canonical pumishment. After the name of the Dean had been called, and he did not appear, the Commissary (Dr. Phillimore) ordered the apparitor to call him outside. Counsel appeared for the Dean, and laimed to be heard in his defence. This the Commissary refnsed, stating that the Dean must purge his contempt before he could be heard. and proceeded to give judgment, which was to the following effect: "That the Dean, hav-
ing beeal fourd quity of the crime of simony, be deprised and deposed from the office of Dean, and trom every benefice which he might hold in the diocese of York. together with all the bonours, titles. and emoluments of Dean. Aiter the judgment had been delivered, the Archbishop proceeded to the Chapter-house and repeated with great solemnity the sentence of dep.ivation.-A gentleman of this city, a tew days since, uadertook to perform the jourary from here to London and back again in 24 hours,
\(H\) e started from the railway station at \(4 \overline{3}\) minutes past 8 ,
and arrived in London at half-past 7 the same evening. He transacted business with one or two parties there, and availed himseff of the opportunity to visit Coveat Garden theatre, where he remained upwards of a quarter of an hoor, and after walking through the market and purchas ing sundry early productions, ratively no fatigue, the fol lowing morning at 10 minutes before 8 ; thus completing the wi ole journey in 23 hours and 5 minutes, a total distance of 450 miles

Ashton-under-Line. - The trial of John Hulme and John Williams, indicted for the wilful murder of Benja\(\min\) Cooper at this place in December last, the circumstances of which have appealasted the whole of that day and Triesday. From the evidence adduced, it appears that in Ashton-under-Line there is a considerable business in sawing timber and in the trades connected with that employment. About the month of Cctober last, the masters, Manchester, reduced them to the Manchester level. The consequence was a strikc and turn-out of the workmen, and, among others, of the workmen of a Mr. Whitield, others, and deceased and his brother James entered the employment of Mr. Whitfield. The prisoners were paries who hadturned out. On the evening of the 11th Dec., deceased lope being at the this brother in the nit. They had two candles, one in the pit and another fixed to the leg of deceased, so as to enable him to see his work. Soon after they had fixed a piece wood and begun to saw, a loud report was heard, like a piece of diately fell. A person named Hadfield came to their as sistance with a light, and deceased was taken to the Swan Inn, where he died in about two hours. Deceased was wounded in the right side, which was that turned to the public road. Several slugs were found the next morning in the sides of the saw-pit, and there was a mark in the there, on a bank three feet from the level of the road. On being told that he had received a mortal wonnd, deceased said he had no suspicion who had done it. The principa witness against the prisoners was Edward Davis, an ac complice in the crice, a a widemee mas entered into Sorik, and lag decail Several witnesses spoke with more or less certainty to having seen the prisoners comin from the direction where the murder was committed ased by Hulme and Williams, and of the account whicl the accused gave, when apprehended, of the manner in Which they hail spent the elme borated hy the eridence of his neighbours, who were called as witnesses firs the prosecution. The evidence for the nutely analrsed the evidence. He pointed ont discrepanplices, statements, which, while in prison together, they had ample them andes of discharge therelves from the peril unde whic gee, an disclu the law would not trust, there was not the slightest corro boration in the sense in which the law required it. Corroboration there was certainly as to various portions of the statement, but as to points atterly indifierent, not His Lordship, Mr. Justice Maule, occupied four hours in summing np, going with great care and minuteness through the whole ery after retiring for a few mi Wednet der of Corland on the Openshaw road, near this town, on 31st October last. This was another of the outrages arising out of the combination or the saw was adduced a lengthened trial, during whic (Mr Jus proving the guit of the prisoner, his Lodis (Mr. Joil tice Maule summed up, and pointed out the lim aserer legal and violent attacks of this kind, resulto and anintentionally, in the death of the party atcacked, and Jury, after a few minutes consultation, without lerdship the box, pronounced a verdict of Guily. His Laiser. then proceeded to pass sentence of death upon the pim There was nothing, he said, in the case to enable the hold out the slightest hope of mercy, and he entreated hims. priona the ha the awn with with appare unconcern from the dock.

\section*{RELAND.}

Dublitr.-Ou Saturday, his Excellency the Lord Lientenant and suite left the castle, and proceeded in a specis. railway-train to Kingstown harbour, where her Majestlers. term-ressel Merlin was waiting his Excellencys and the His Excetlency, widh Lady Eieanor Fortescue got under weigh immediately and sailed for Bristol. There is a report here in gencral circulation that the Lieut.-Gen. com manding, Sir E. Blakeney, K.C.B., is about to retire frow his command, and to be succeeded by Lon the Slare mee ing of the Society for Africa, has been held at the Trade, and the Cirization Lord Mayor presided. Severa speeches were delivered, and the amount of subscriptions collected was considerable. A deputation frow the soce his subsequently waited upon the Lord Lieunt of the society. Mr. O'Connell was not present, though expected. The

Treasury has at length come to a final determination re specting the Government Docks of this city, and has
resolved that the water in the docks shall be placed under the conservancy of the ballast-board, which already has the conservancy of the river Liffey; that the use of the quays shall be thrown open to the public under the same that the warehouses shall be divided into two lots, and b disposed of by public anction; and that the successful bidders shall enter into possession on the 25th June customs to proceed to this city, to superintend the auction -A meeting of the National Repeal Association was held on Monday at the Corn Exchange \(:-\) Mr. O'Connell was club had been formed there for the purpose of co-operating with the Repeal Association, and more particularly for
orwarding Mr. O'Connell's project for a to improve the condition of the tenantry and secure the landlords of Irelantid. Mr. O'Connell said be did not ap prove of the plan of local clubs, formed to co-operate with might be ; still he felt convinced th repeal wardens in each district would afford a far greater means of support to the repeal question. The leading persons in these clubs could be appointed as wardens, ocalities, as was done with such effect in the Catholic Association. Mr. O'Connell said that a deep sense of hat he pointment of repeal wardens for Cork, said it Fonld be necessary for the country to come forward much more liberally than they had hitherto done with pecuniary means in support of the repeal agitation. One of the objects of establish an effective registry over the country; and when establish an effective registry over the country; and when
they were sufficiently well organised, they would make the epeal pledge a sine qua non at every election. Another object was, to have funds for the protection of the
tenants, who would be assailed by their landlords for acting conscientiously in respect to the franchise. The landlord might want to turn the tenant out of his holding for nonpayment of rent, and the association would advance funds to meet the landlord's demand, until a period mould arris pople subscribed \(1 s\). each, it would give sufficient fund for this purpose. Mr. O'Connell next alluded to the efforts order once more to warn the people against the incenThe Dungarvon people, he said, had published a from amongst them, in which he signed himself a Republived in a monarchy, and they loved and revered the:r sovereign. But this Chartist, if the people had once joined England and in Scotland the Chartists had totally super eded public disussion at meetings. They had effected tyranny which the people would not permit for an instan
from the Crown, or from either Whigs or Tories. Meet nga \(\%\) the subject of corn-laws, for instance, were broke into, and discussion put an end to. Unless a meeting adopted the charter to the full, they were not permitted
to transact business. The hon. and learned Gentleman, to transact business. The hon. and learned Gentleman, after some observations on the question of landlord and minous report on the subject from the committee, which was adopted, and the meeting separated

Edinburgh.-The railway communication with London Is in a satisfactory state of progress. The line of ruilway
from the Metropolis to York has been open for some from the Metropolis to York has been open for some
time; the continuation of this line is now open for the conveyance of passengers as far as Darlington, and the mail from London to this capital, by Newcastle, will be conveyed by this line of railway as far north as Darling mail-conch will henceforth carry the bage The mail by Neweastle to this city will thas be convered in the same space of time as that by Carlisle.
Ayr.-A few days since, when the Glasgow and Port atrick mail which left Kilmarnoek at the usual hour had the east of Spittal-hill turn of the road immediately to the east of Spittal-hill quarry, one of the horses dropped down dead; and on the coachman alighting to see what An wrong, the second horse also fell dead on the road. of horses, which was procured, and the mail arrived here in consequence an hour and a quarter later than usual.
Montrase.-A writer here, whe commenced business some years since as a merchant and importer of green
cloth, absconded last week, leaving debts and liabilities, 100,0001 ested by some, to the amount of upwards of ers hut have sustained Forfar, Kirrignir many in the nejghhouring towns of transaction. The occurrence of such an untoward event, coupled with the already depressed state of the markets, it is stared, has had a prejudicial influeace upon the manufacturing and commercial interests of the town in genenufacturing and commercial interests of the town in general ; but it is hoped that, by prudential manage
matters may still ve maintained on a steady footing.
Greenock.-Tuesday being the day appointed for opening the railway from this town to Paisley, to join the Ayr and Glasgow line, the oceasion was looked forward to, and observed at Paisley, Glasgow, and indeed all along the
whole line, as one of high jubilee and rejoicing. Early in Whole line, as one of high jubilee and rejoicing. Early in
the monning, the hoisting of flage by the vessels in this
harbour, on the custom-house, the steeples, and ever
housetop and height where they could be seen, gave indi-
cation of the forthcoming event, and the cation of the forthcoming event, and that the first start of been previously announced. About eleven, a train of twelve new carriages, decorated with flags, and propelled the cheerings of the assembled multitude, and a salute of 21 guns. With all stoppages, this train made its appearlittle me vicinity of Glasgow-distance 22 miles-in excitement. Two guns belonging to the Royal Artillery, placed near Port Eglinton, commenced firing anothe salute as they appronched, which, with the gons placed
near the station-house in Tradeston, and the cheering of the people, rendered the whole scene most imposing.

\section*{Aliscellancous.}

Shakspere's Signature.-The corious in such matters may remember that about three years ago mach interest was excited by a book being brought to the hammer (a Evans's) with "Willm. Shakspere" inseribed on the title-
page: it was the first and folio edition of the English translation of "Montaigne's Eissays," by John Florio printed 1603. That sold for one hundred pounds: it Was
bought by Pickering, it is understood, for the British Museum. Previously to the discovery of that book and autograph, according to Sir F. Madden's observations on that autograph of Shakspere, and the orthography of his name, communicated to the Society of Antiquaries oy Si F. Madden, in a letter to Mr. Joln Gage, director, there were only five acknomledged genuine signatures of Shak spere in existence: of those, three are attached to his wil in the Prerogative Court, executed on the 25th of March 1615-16: the fourth is written on a mortgage-deed, dated he llth of March, 1612-13, of a small estate purchased Sy Shakspere of Henry Walker, in Blackfriars; and the the same properts dated the 10th of March 1012-13 is in a good state of preservation, except in the folds, where the writing is slightly injured. It is in the enWrossing hand of the period, The parties are, "Henry and William Shakspere, of Stratford-upon-A von, in the countie of Warwick, gentleman:" William Johnson, citizen and "vintener," of London; Henry Jackson, of
London, gentleman; and John "Hemynge," of London gentleman.
Faunileroy.-An account has appeared in the daily papers, stating that the belief is entertained that Faunt nd hae banker, who wes sereral years ago convicted o America. So strong are the opinions on that point, that bill in equity. filed against them respecting his property, put in an affidavit praying time to inquire after him, as, appears that the proprietor of a large hotel in Marylebone, whose name was Pearse, died childless, bequeathing his property to bis nephers, and appointing Fauntleroy execuor. The nephews, who were wild young men, were, at the period of the uncle seath, either in the army or insisted upon him vesting the money left by the uncle in the funds. This Fanntleroy did, but afterwards sold it all out with the exception of 140\%. After Fauntleroy's supposed execution, one of the nephews returned, and him, instituted proceedings against Fauntleroy's executors to account for that property. A bill was consequently , stated their belief that Fauntleroy was America. Having put in an affidavit to that effect, the Court granted nine months to make the necessary in quiries. The nine months will terminate next term. It is said most confidently that Pauntleroy had a protection around his neck against the rope; that he was suspended but for a very short period, and that as soon as he was cut dowa immediately conveyed to a house in Weat mithfield, where the necessary restoratives were directly and successfully applied. All this, it is supposed, was done with the privity of Government and the officers of
justice. Be the report well founded or not. the affidavit was made, and the time alluded to was granted for instituting the necessary inquiries respecting the accuracy of the ramour.
The Peculiarities of Birds.-Nestling linnets, educated ander the three best singing larks-the skylark, the woomark, and we titiark-will adkere to the song of their song of the nightingale. To prevent nestlings from learning the song of their own parents, they should be secluded from them: for although they cannot see till the 7th day, yet they hear the instant they are hatched. Bat the trouble of rearing birds by the hand so early is almost infinite. It is better on that account to wait till they are three weeks of age. The goldincin may be taaght the song of the wren; and the sparrow will readily take that of the goldthat of the Essex chatine song of the Kentisit goldrimeties Surret Surrey, are chiefly preferred. A caged nightingale is conidered superior to a wild one in tone and notes. A nightingale may be heard at the distance of a maile; the quàdruped Fuarine, at that of a league. It is said that small birds fed on hemp-seed lose their bright colours, and become dark and green black, particularly the goldrinch and casary. On the wings of some of the sparrow kind,
spines may be found somewhat similar to the hooke on A Highland Ondagulor
he following account of the Inverness papers contada of Ewen M•Phee, a Highland deserter from the British army :-About the centre of Loch Quoich, under the shadow of two high mountain terraces, streaked with snow, is a small island, seareely more than half-an-acre in exquarto which are seen a few birch trees. It is about a quarter of a mille from the nearest mountain, and is as soltary as the heart of hermit or recluse could desire. who sisnt resides a Highlander, now old and stern. denizen of nance to all the civil powers, and lives a free fine, sprightly, athletic Highland lad, enlisted in a regfo fine, sprighty, athletic 1 ighland lac, enlisted in a regf-
ment of which his proprietor was an officer. He was promised, or was led to believe, that he woald soon be preferred in the army. He went through his ezercisen with correctness and regularity, but preferment came not, and Ewen deliberately one day marched out of the ranks, and and two files of soldiers were sent to appreheod him With the concurrence of the late Glengarry, Ewen wa seized, handcuffed, and carried off a prisoner. As the party proceeded through Stratherick, the dauntless Highdous lean over a precipice, and bounded off from his escort. The party discharged their muskets after him, but without effect, and, breaking off his handeuffs by dashing them against a rock, Ewen was again a free man among the wilds. He established himse!f on Lochiel's property anmolested for many years, hunting, fishing, and rearing goats, without any man daring to make him afruid, or proaming to speak of rent As a companion mea manted to soften or enliven his solitude, Ewen wooed, won, and ran off with a damsel of 14 , now his wife, and the mother of fire children. At length, however, the law prevailed for a time, and the adventurer was ejected from Corrybuie. He submitted quietly, and took refuge in this little ioland nable. With turf and birch trees he raised a but, and found or made a boat to enable him to communicate with the main land. He has about goats, which he quarters on the neighbouring hill, and his gun and rod, we suppose, supply him with fish and game. In winter the situation of this lonely family must be awful. Ewan's strong. muscular, and handsome frame is still clad in the Highland costume, and he never ventures abroad without his dirk by his side. Some of the tenants fear him for his daring character, and others reverence him from his supposed witheraft or supernatural power, which is firmly been and the glen. Ia neal now and onely island, and the home of the outcast is made glad in wharm life bellevalach a contan pos his of a during the nitht and his dirk ion ren by beds during the night, and his dirl is ever ready by day, to Euphly wortal means of defence. When Blward Ellice visited Glen Quoich, after purchasing the property, Ewen called upon him like a dutiful passal in the old feudal time, doing homage to his liege lord, and presented some goats milk as a peace offering. His terms were
 would pay rent for his island, but that he would not molest the new haird, if the new haird did not disturb him in his possession. The grizzled aspect, intrepid bearing. and free speech of the boid outlaw struck the Englishman with surpriee, and Ewen instanthy became a sort of favourite. It is probable he will not again be disturbed. for the island is not worth a shilling to any person bat Ewen MPhee, and it would be cruel to dispossess even this daring and desperate man, now upwards of 60 years of age. The situation of his family, growing up in wild neglect and barbarism, is the most painful circumstance in Ewen's singular story. His wife is still a comparatively poung and agreeable-looking person, and, as she bad some oducation, it is probable she may teach her children a knowledge of their letters, and some oneline of Chriatian duty and belief. Of this, bowever, the people of the glen are wholly ignorant. The few who have had intercourse with Ewen represent him as strongly attached to his family, and of this we had indirectly a sort of proof on the day we were in the glen. One of Ewen's children had died-died in his solitary Patmos, which was destitute of neighbourly aid or consolation. Orerwhelmed with grief, the old man took his boat and crossed to a shepherd 's hut, begging the shepherd to asssist him in making a cofin for the dead child, as he could not steady his hand under the blow of this calamity. "One touch of nature makes the whole worid kin," says Shakspeare. The assistance wa freely given ; some birch stares were formed into a coffin, and the child will, in a day or two, be interred on a spot ex aetly suited to Rwen's tastes and character; for the an cient churehyard used by the simple people of Glen Quoich is also an island, small in extent. which rises out of the maters of the Quoich, near ite junction with the of this This incident is in heeping with the whole history of a fild, uncoaquered Highlander-one of the last types of a herce ad harky race, ini whore nature strong passions

The Peculiarities of Animals.-By attending to the peculiarities of animals it has been found that their fears masy be wonderfully operated apon by means seemingly the most inadequate. Thus, the wild boar of the Rusian forest will not pass a temporary bousdary of network Wild fowl, particularly geese, will avoid corn or other fields which are surpounded by 2 amall rope, stretehed an hedges boynding the haph, It in wid thet the wolf will
ot attack man in the most solitary wilderness, if a slight rope only, with a bundle of straw, or twifs, be trailed along the granad behind him, as practised by the Portuguese. The Varieties of Animals may be perpetuated in their individual species : for instasce, the cow, which gives most milk; the horss, which ponsesses most fleetness, docility, or gentleness; the mouse and other animals, which possess a particular colour: these beng pared with those posses In like manner vegetables will be found to produce the same peculiarity whether in shape or disease.-Indagator.
Astronomical Discovery. - M. Bessell, a German ast. nomer, has made one of the grentest diacoveries of modery times, by having ascertained from parallax of observations, tarde fromg Augnst 1837 , to March 1840 , that the paral2nx of a Cygni did not exceed 31 bundredths of a second, which places the distance of that star from us at nearly
670,000 tiuses that of the sun, or which is nearly 64 riltJions of millions of niles (or more nearly \(63,650,000,000,000\) miles). This immense distance can better be conceived when we state, that if a cannon-ball were to traverse this rast space at the rate of 20 miles a minute, it would occupy more than \(6,000,00\) years in tar be projected from our earth to 61 Crgni at 30 miles an hour (which is about the same rate as the carriages on railroads travel), it would occupy at least \(96,000,000\) years.

American Apology.-A Pennsylvania paper contains the subjoised apology:-" We yesterday spoke of Mr. HaHamilton having complained of our remark, we willingly retrict and here state chat Mr. Hamilton, of the Chesuatstreet Theatre, is no-thing

Sharp Chisel.-A physician passing by a stone mason's bawled out to him "Good morning, Mr. W hard at work, I see ; you finish your gravestones as far as 'In the memory of,' and then you wait, I suppose, to see Who wants a monument next?" "Why, yes," replied the old man, resting for a moment on his mallet; unless right ou

The Flower Painter:-Maria Von Osterwyck, one of the most admirable flower-painters of her day, had a lover, dissipation distressed her much. At length she promised to give him her hand, on condition that during one year he would work regularly ten hours a-day, observing, that \(t\) was only what she had done herself from a very early

He agreed to the bargain, and took a house opposite to her, that she might witaess his industry. But habit
was too stroag: either hia love or his resolution failed, was too strong: either his love or his resalution failed, to be his wife, and no entreaties could ever after alter he determination, never to accept the man who had shown so little strengti of character, and so little real love. She Was a wise woman, and, as the event proved, net anded by unitors.-Indagato

 Which occurred upon the former occasion when the Council had cases to ahow that in principle it was no objection to a judge's cases to show that in principe that he had been engaged in in tas zs intle to be talen for granted that the opinions which he enterhis mind after he had become a judge. Coming now to the case appearing as he did for the anellant. he felt all the dificulty of san athempt to impugn successfally the decree of ajudge solearned,
so patient, anal to eminent as Sir Herbert Jenner. But, notwithstanding this dixticnity, hee hoper to be able to show that, to a
 Counsel then proceeded to state the the there were some fact in admitted hay cuery party that the testatur was naturaily a very
shrewd man. and that dinwn to the rery lact moment of his lic he was perfectly competent to manaze mis own affars. Anuther
fact of the greatest importance in the cave was. that 1 uob ondy
 any undue infuence had been used for the purgose of induccing
the testator to execute them in the form in which they now appeared. The questron then which arcse in the very first stage
the couse way whether they. \(f\) renuine un primid focie conotitute a grod and valid wull; and if s , whether t. cre he anythins really entitited tout that comanectere. The conclusion that they appeared out of noll controversy that they vere of a
Tene deliberately character, that they
crecuter they professed to attain, amit that there was nothing Cousel proceeded tin zive a mizute detail or the whie cad
which is too volumimous to be fiven entire, and concluded ment of the court below could not be maintained. Mr. Pember-
ton then rose to follow ou the same side, on beakif of the appellants, whd proceeded to comment at great length upon the
jodgment whick hat been given in the court below, pad the
crounds upon which the etinin and decree promonoced therein
 by calling upon their have been entered in their roinds at the abered
conduct of the executors, even to dismiss from their consideration any charges of mi-conduct, and to come to the concicteration of the
facts and apply the principle of law as laid down in all the leading cases, ruluy such sublyect, to those facts; and if they did so, \({ }^{\text {as }}\)
he coubted not they woud, it was imporsible not to see that the e doubted not they would, it was impowible not to see that the
ecisicn of he lamed Judte in the court helow was entirely
dit their Loris anips not to he led attray hy any extranicons statements or arguments, not to subvert the true and recognised principle
wi.ich for a long period have heen held the binding rules in cases Gathere to its ancient and wholesome provisions. The solicitorGeneral then rose, asm said he hhips as counsel on behalf of the Panu is they at the present moment stoul before thenr Lordlluys. He was cnly andious to have their Lorth-hip jucgment
in cuch a form an ould he effectu I and for that purphe it was
necessary that their Lordships thould know the po ition in which

 the legatees. At a subsequent perind Mr. Hitchings came for
ward, and said he was the next of kin : he opposed the will and
codicil but his oppositionto the coricil was very different from the
 nothing, and no person was entitled to probate except the execu-
cors. Should their Lordships aufirm the judgment of the Court the Court below and go through all the proceedings as if the pre ceeded to adidess the Court at great length, and had not concluded
at the close of the day, when the Court rose and adjourned unti Rolls' Court. - Vatelte v. the London Dock Company and of an - Mr. parte indunction obtained by the plaintiff, restraining the Dock Company from parting with out of their possession is hogsGoldney, Magens, and Estenais, from selling the same, and also was introduced at Bordeanx by coint Valdez to M. Valette, the brandy merchant, and to a celebrated wine grower there, from wine was stiniped fror England. and arrived in January last in the
Loncon Docks, where Mr. Goldney, the other defendant, ad London Docks, where Mr. Groldney, the other defendant, ad-
vanced 6 jol. to Magens upon receiving the bills of lading and the credit of Marens, whose bills to the Bordeaux merchants had been dishonoured, and ther filed a bill against the parties decounsel contended that the nan-payment of bills was no proof of counsel contemded that Mr. Fherefore prayed that the injunction should be dissonat bing an innocent holder for a valuable consideration, and with out any notice of the nature of the transactin, Memberton and
cruld not be maintained as against him. - Mr. Per Mr. Wigrann, in support of the injuyction, stated that the goots
had heen obtained tin the following traudulent manner oi the plaintiff:- Mayens represented himpelf to be one uf
cantile cempany, having offices iu Paris, called the
General Agency Company of France," carrying on busintiss in the Rue de Richelieu, he being their agent in London, where they
also had opened an establi isment. The sum for which the were sold was 20.000 francs, one--half to be paid for by good bulls, Byils purportang to be from counts folding offices in the fremeh service, and others, were given, wibo, on their becoming due,
either could not be found, or were beegera, were foisted on tip Bordeanx merchants for payment, and yeppresentations of Mmgens's furniture having been sold in Puis under executions
issued froun the Tribual de Conmerce being sent froni this
country the present bill was fled. Amonst the affidavits decountry, the present bill was filed. Amonsst the affidavits de-
tailing the poverty of Masens, and that there tint not exint in Paris
 Was one by the notorions Vidocq. It wad cuntended that the
whole case was mixed up with frand, and that the suit might as well he abandoued as that the defendants should have the power
of selling the wines and brandies. The injunction was necessary of selling the wines and brandies. Rep
to prevent this.- Mr . Kindersley replied, and urged that if the into prevent this.- - Iissulved, the bills should not be used by the p:aintiff arainst the defendant Mayens as long as the goods were
retained. - Lord
Langdale reapitulated the case. tie said that no answer had been given to the case presented by the plaintifis the transaction was so irregular, and the presumption so stron eutitled to ir if the injunction were dissolved, that he would no meur the risk, and would therefore chish Lordship thought that it should se made an order of court that no proceeding should be insti-
tuted on the bills so long as the hrandy and wine remained in the power of the Court. It would be better if the goods could be sold,
and the noney paid into court.- Mr . Pemberton, on the part of his client, undortook not to proceed on or part with the bills.
 and the defendant carried on the business of an auctioneer in damages for a breach of contract, arising out of the foilowing circumstances:- -In March, 1434 , the son of the plaintiff was api-
prenticed to the defendiant ffor the purpose of leaming his business, and a premium of 19g!. was paid notmittel brenches of the Geed thus entered into, by not treating the apprentice as one of the family; that he had not supplied hime with intiticicnt board to do. For the first year of the apprenticeship, young Butler wh
well treated, zad the engagerente was satisfactory to all parties int from that tume a comrse of petty anmoyance was commencen door. The aervant wa, then ordered not to clean his hoots. He was not as fefore treaten as dene was then opened, and his papers becked orer, and when Mr . Cromin was sprken to, he was toll to with his father, who now eame befure the jury for compensation berause it could not be said the cefendiant was out of pocket for the ayprentice's board and lody.ug while he was with hiva. If they could not do less than give the whole amount of premium man, was then examomed, He stated, that when he had been
year and three months, ho went home one night and gave
douib hnom at the donr. The refendanit nojected, and upo wimesinking at the donr. The fefendant objected, an be cad aiways dovie so, he repied he

his cinal except being his apprentice.
for shme days. Mr. C. Mn complained to wituens's tather of What he called his insubordimation. Mr. Cromin once swid, when
witness had been to Brighton, that he was not ili, for he could

there were only four eggs and bacon, he went out to supper. Mr. a man, but Mr. Cronin paid him. At another supper witnes and he might go out again to supper if he liked; there was cold meat. The next mornimg he sam Mr. Cronin looking as his poperi him. Witness told Mr. Cronin, if he persisted, he would pat his insisted upon witness leaving, and he did. He had been livma with his rather since, - Cross-examined with. Mr. Cronin. Had applied to Mr. Webster, of the Haymarket, and to the manager of the matter, but his father incisted upon having all the premiam hack. On the lith sugust witness Mad Crmine complained of his
home, because it was ater six. Mr. Crnin
handwritinu: witmess tnld a clerk it was not gentlemanly to write well a langh .-Mr Clark-on. Did you ever call Mr. Cronin
a scoundrel and a coward \& Apprentice. I never told him he was
a scoundrel, I aid he was a coward. - Mr. Clarkson: Has he not said he wished you well : and did he not give you letters of readvertise for a Government situation - - Apprentice: Yes.-Mr. Theatre - Apprentice: Yec.-Mr. Clarkson: Did you ever recite Apprentice: Yes, but in a stationer's warehnuse laughter, -
Mr. James. It is a voliloquy of Humle's.-Mr. Clarkson: Weul, you know best.-Cross examination continued. Had been struck ing to Mr. Webster.-By the Court: He partook of the'same pro-
visions as the family.-Mr. Clarkson then addressed the jury, and expressed his deep regret at the painful task he had had to perform, after the many offers that had been made to settle the
matter. It was, in fact, true that the jury could not decide the question; the apprenticeship would not close until next year, and deed, which the jary had no power nor the court to cancel, unless indeed, Mr. Cronin were to take back the most unmanaceable ap prentice he ever heard of, whose services were in disobeying the famity did, and in reciting in a stationer's shop. The
only thing which the jury could decide would be the injury for the three months the apprentice had been at his father's house Mr. Clarkson then went over the facts as elicited from the ap
prentice, and commented upon them. - The Secondary said he quite agreed with Mr. Clarkson, that the jury could not setile this dispute unless the parties agreed to cancel the indenture. Why could it not he arranged "- Mr. Clarkson said he had always bee willing to do so. He would leave it to the Secondary. The se of the col the apprentice, which had been very improper an last arranged that the indentures should be cancelled and a verdict taken by consent for 601 .

\section*{che Gataeners (ebronicle.}

The Potatoe, like the Dahlia, is a plant for which nature provides a store of nutritious matter whereupon to subsist while young. This nutritious matter is lodge.l in a short, thick, underground stem, covered with buils or eyes, technically called a tuber-vulgarly, a root; and it consists of no other thing than starch, -that substance which many suppose to be of no use except to a laundress. Starch is, however, one of the most valuable secretions that plants have the power of forming ; it constitutes the nutritious parts of the Potatoe, the Yam, the tropical Mandioc from which Cassava bread and Tapioca are prepared, of Sago, of Corn, and, in short, of all those plants that yield us flour.
In its ordinary state, it consists of little, hard, dry grains, too small to be seen with the naked eye, and incapable of being consumed by a plant, because a plant can feed on nothing that is not either fluid or in the state of air. As soon, however, as the Potatoe begins to grow, the starch dissolves into a thin, sweet liquid, and then it acts as the best of all food for the young roots and sprouts.
The statement we last week made, upon introducing the Dablia, applies, with certain limitations, also to the Potatoe. Although the latter is not injured by excessive propagation, as happens to the Dahlia, it is clamaged by other means. In some pauper districts, a Potatoe-field is set with Potatce-parings ; that is to say, with the buds from which new plants are to
spring deprived of the greater part of that food on which bounteous Nature destined them to be maintained in infancy. The consequence is, that weeks are lost before the new plants are so established in the soil as to be capable of producing new tubers; and cven then the debility caused by the want of early food prevents their forming tubers either of good
quality, or in any such quantity as will reward the quality, or in any such
On the other hand, an excessive quantity of food proves pernicious to the young Potatue-plant, but in an unexpected way. The late Mr. Knight, thinking that the more food a Potatoe received when young, the more vigorous and healthy it would be at maturity, and the greater the produce, advised that a field should be set with whole tubers. But it was found, from a series of experiments in the garden of the Horticultural society, that this does not increase the crop, the gross produce from good sets with single eyes exceeding that from whole tubers by onethird, or to the extent of \(7 \frac{1}{2}\) tons per acre. The
reason of this was, that the young Potatoe-plants, springing from whole tubers, grew with such rapidity and luxuriance that they were unable to maintain their stems erect, and, being laid by the wind, became broken and unable to perform their allotted duty efficiently. Thus the deficiency of a crop of tubers in a Potatoe-field denends upon the same principles as the
loss of a crop of Dahlia flowers in a garden; the difference between the two cases consisting in the variation of those principles accurding to the peculiar nature of the two crops.

A great outcry has been raised in Ireland at a supposed iutention on the part of Government of suppressing the Botanical Garmen of Glasninvin, one of Such an act on the part of either a Government or any other publie body would be so discreditable, that we should regret extremely the necessity of animadverting upon it in adequate terms. It is, therefore, with no little satisfaction that we find ourselves enabled, after a careful inquiry, to announce that we do not at present see a probability of the event occurring which, on the other side of the Channel, has produced so mauch exciternent.
The report has originated in consequence of the Lord Lieutenant of Ireland having this year refused to propose to Parliament the renewal of a grant of 5,3001 , which has been for many years entrusted to
the Royal Dublia Society for the maintenanee of the

Glasnevin Garden, and for other purposes connected with " the advancement of science and the diffusion of useful knowledge." The refusal has been caused by certain differences between the Society and the Irish Government, the nature of which we shall endeavour to explain.

In the year 1731, a few gentlemen embodied themselves into a Society for the improvement of Ireland, and more particularly of its husbandry, manufactures, and other useful arts and sciences. In 1749 the Society was incorporated; and from that time forward it has been aided by annual grants of public money, varying from 500 l . to \(15,000 \%\). Between 1800 and \(18: 29\) alone, the Society received \(246,341 \mathrm{l}\). of public money; and since that period the annual rote has been \(5,300 l\). We need scarcely say, that the Government possessed a right to require that sums of this magnitude should be expended in a manner which they approved of, and considered most conducive to the public service. In fact, it was their bounden duty to inquire into this point, in order to satisfy themselves that they were justified in continuing to recommend such grants to Parliament. Accordingly we find in the year \(!8 \geq 9\) that the Select Committee on the Irish Estimates advised certain alterations in the management of the Dublin Society ; these alterations were, however, resisted. Again, in 1836, a Select Committee reported to Parliament that the administration of the Society required great improvement, and recommended various changes in order to render it of greater public utility ; these recommendations most assuredly in. dicated no intention on the part of Government to withhold the usual grant of money, but were framed with a view to render the application of public money more beneficial to Ireland; in our opi:nion, they were, upon the whole, wise and well conceived; but at all events, whether wise or unwise, it is clear that if the Government considered them necessary, the Dublin Society was bound to adopt them, provided the annual grant was to be continued; the effect of a refusal to comply with them could only be the abandonment of all claim to public assistance. The Society has for 11 years refused to adopt the Government recommendations, and the grant is now withdrawn.

This is, we believe, the exact state of the case. We purposely avoid discussing the points of difference between the Society and the Government, for they are in reality foreign to the question. We may, however, be permitted to express our surprise that any gentlemen, as ociated for the purposes of "advancing husbandry, manufactures, and useful arts and sciences," should first establish a news-room for reading political newspapers, and then sacrifice the existence of the Society for this indefensible measure. Nevertheless, the abandonment of this part of theirestablishment is one of the points insisted upon by the Irish Government, and refused (!) by the Society. We know that, in the opinion of the best friends of the society, the want of skill and vigour in many of its scientific departments is distinetly traceable to this news-room, where idlers, congregating to read the papers, elect each other into committees without the slightest reference to the fitness of the parties for the position in which they are placed.
We should have gladly refrained from these observations if they had not been necessary for explaining the case of the Glasnevin garden, which, as we have already stated, has been maintained out of the funds entrusted to the Dublin Society by Parliament. It appears to cost about 1,2001 . a-year; and the Parliamentary Committee of \(1,30^{\circ}\) were so satisffed of its utility, that, notwithstanding the miserable management of it which had been found to have taken place up to the appointment of Mr. Niven, they resolved that it would not be "judicious to abridge its dimensions or to curtail the expenditure that may be necessary for maintaining it in a high state of perfection.' If it is now sacrificed, the public will see, from what we have stated, that the blame will lie with the Royal Dublin Society, and not with the Irish Government.
But we have no reason to suppose that it will be sacrificed. On the \(29 t\) of March last, Lord Ebrington named a committee, consisting of his Grace the Duke af Leinster, and six other noblemen and gentlemen, among whom are Sir William Hamilton and Professor Lloyd, to consider in what way the Parliamentary grant, hitherto entrusted to the Royal Dublin Society, can be " most effectually devoted to the advancement of science and the diffusion of useful knowledge." The public may rest assured that the interests of the Glasnevin garden will not be neglected on this occa-
sion. We hear indeed that some of the members of the Dublin Society talk of letting it for market-gardens, or for a cemetery, in support, we imagine, of their newsroom. But these are idle threats which the Society has probably not the power, and surely not the folly, to think of carrying into effect. If they should make the attempt, they will furnish the Irish Government with the best possible ground for having withdrawn Parliamentary assistance.
We have received the following subseciption on account of the
Gardeners' Benerolent Int itation, riz. Gardeners' Benerolent Institu ion, riz.
Mr.J. Halliday, Elmh.am Hall.

\section*{MR. PENN'S MODE OF HEATING.}

I mave been frequently asked for my opinion of Mr. Penn's method of warming hothouses, but have refrained from giving it, until a fair trial had been made of its working under my own immediate observation. Two pits were Mr ene course of erection here, when the first account of Mr. Penn's mode of heating appeared in the Crardener's
Magazine. I was not misled by the very tavourable opinions expressed in that Journal, for other new plans have received, upon their first appearance, equal eulogiums, which, after experience, pruved premature; but the Editor's opinion being backed by those of an experienced practical gardener like Mr. Wimot, I became prepossessed in favour of it, although there existed in my own mind many doubts of its utility, which I now find from experience to have been correct. I sent for Mr. Penn to Clatsworth to heat the two pits in question, and I then pointed out to him, that unlesa the heated air could be delivered at the front of all hothouses, the plan would prove a failure as far as practical herticulture was concerned, particularly in the forcing of Vines or Peaches, it beinr well known that all plants are disposed to grow endeavour to prevent, would be rendered woled by endeavour to prevent, would be rendered twotuld by Mr.
Penn's contrivance of mahing the beated air is ue first at the top of the house; for thus the most easily excited parts would receive the greatest excitement. I therefore made it a condition with Mr. Penn, that unless be would place his pipes at the sides of the pits (which ane spanroofed) instead of the middle, as proposed, I would not have them put up at all. He agreed to this, and so far as circulating the air goes, when the pipes are hot, his object is fully attained, but at an immense sacrinice of heat.
By allowing the heated air to issue from small apertures, the circulation is rendered pereeptible in curreats from them, but in the intermediate spaces it is as motionless to appearance as air usually is in huses heated by artiticial oneans; for by all plans the ranified air creates motion, which is only renderend more rapid by allowing
the heated atoms to escipe through contracted autlets The hea:ed atoms to escape through contracted outlets. The two pits here act very well, and so they ought, for
they enjoy adiantages over every other hothouse we have seen; inasmuch as they are eflectually covered every night with a thatched roof more than 6 in . thick, which runs upon rails, and encloses every part from which any radiation could take place; they are glazed with patent sheet glass, having only three laps down each side, wheh laps are cemented close, and they are built in a low sheltered situation, the floor level being more than 2 ft . below the surrounding ground. Theg, also, have a surface of piping, in proportion to the cubtio contents of air to be heated, of 1 to 10; whilst the proportion in the great store here is abrut 1 to 30 . In other words, to heat these small pits in an more metal pipung is requived in proportion than vantages except in the glass being the same. The calcrlation of 1 of heated surface to 30 of air has. during the last winter, been proved a liberal one, by enabling us, although there is about 60.000 ft . of glass curiace exposed, to keep up the internal heat to \(60^{\circ}\), without using all the heating power at command, and this during the severest weather, when we had from \(20^{\circ}\) to \(35^{3}\) of frost at night, and rith a consumption of about two tons of coal per
night. The pits heated by Mr. Penn, having a surface of only \(1,330 \mathrm{ft}\)., and that, as I have stated, covered at night with more than 6 in. of thateb. consumed nearly three tons per week at the same time. The cubbe feet of air in the large stove is \(1,650,400\), and in the pits only 3,430 ; and the large house is ijis fr. high, covered with glass on every side. Any one at all conversant with heating hothouses may draw his own conclusions from these faets.
i cannot perceive the least difference, in point of health, in plants beyt in these pits over those in of hep houses; neither did I see any striking livuriance about Mr. Pena's own plants. as has been asserted hy others, and as suon as the warm weather arrives I intend to to away with the chambering here. The pits were erected oe:ore Ir. Penn s phan was published, aud pipes of Mrencinesier, bho he ted heating them, by Mr. Walker. of Manchesier.
the great tove ; but as I was ansons to iry Me. Pen s plan, Mr. Walher at once gave up the j b. i thould here observe, that Mr. Waker had prepaed on'y two pipes for each side, although told that an extranruisary quantiry-asing fonr is-incil mige on earla sude the pits, Which are ont y \(1+\mathrm{ft}\). कृ:
The great objecti.n to Mr. Memn's plan consists in the immense quantity of beat consumed by the surrounding masonry in whech the pipres are chambered, and in the drains-I shold certainiy say ju per ceot. at least; and in cases where the air is conducied to the highest part of In house time by shatts, the loss must be still greater. pipes musit be made hot before any circulation takes place, pipes must ue made hot before any circulation takes place, fuel, to keep up a proper heat, as they did in the most men
vere weather in winter, and half as much as is now con-
sumed by the great stove. This may be accounted for by the quantity of surrounding materials which have to be heated as well as the air of the house.
I am convinced there ought to be no chambering; and drains are useless, except in small houses having pits in them. The pipes should always be placed at the front, and the drains made from the back path to them; but there should be no chambering of the pipes, or endeavours to cause a great heat to issue from small apertures. should also be borne in mind, that the air cannot pass bastraction of heat, which is never given out again for the ase of the house.
I cannot conclude these remarks without bearing testimony to Mr. Penn's upright and honest intentions. He fancied a circulation of the air in hothouses would be as benefieial to the health of plants as to animals, and being rich and a good mechanic, he soon found means of reducing his notion to practice. Mr. Penn has repeatedly said, that he has no pretensions to a knowledge of gardening; and thing very extraordinary about his plan of heatiog, if others, possessing perhaps less knowledge of horticulture than himself, had not assured him to the contrary.-Jos. Paxton, Chatstoorth Gardens, A pril 7, 1841.
[In the sentiment expressed by our correspondent in the last paragraph we quite agree; and, entertaining that opinion, it was always with regret that we found it necessary to mix up Mr. Penn's name in a discussion which
we now close with the following observation. In our Notices to Correspondents of Jan. 30, is this answer to a Constant Reader,-" There is no truth in the statement that either the Orchidaceous-house or vast conservatory at Chatsworth is heated upon Mr. Penn's plan." In the Loudon comments upon this statement as "i not being worth notice," and we suppose he means his readers to believe it is not true. In fact, he refers to an account published by himself of a visit to Chatsworth, in May 1840, when he mentioned the existence of an intention to heat an Orchidaceons-house upon Mr. Penn's plan; and he states that Mr. Penn has requested him to say that he has heated an Orchidaceons-house there, and that it has given satisfaction. We should have thought Mr. Loudon had know the difference between the and an. The fact is, the Orchidaceous-house is not heated by Mr. Penn ; but a pit, Orehidaceous-house is not heated by Mr. Penn; but a pit, heated, and does not give satisfaction.]

\section*{RURAL CHEMISTRY.-No. IX}

There are three other acids besides nitric acid which are of importance, as entering into the composition of some of the commonest salts in nature; they are called
sulphuric, muriatic, and phosphoric acids. Sulphuric acid, or oil of ritriol, is one of the strongest acids we are acquainted with, being able to expel or drive out most other acids from their combinations, and, consequently, we are able through its means to obtain nearly every acid brimstone with oxygen, but it is not obtained by merely burning sulphur in the air: when this is done, acid fumes, it is true, are made; but the anid thus formed is not sulnecessary to compose that acid, and stands in the same relation to sulphuric acid which carbonic oxide does to cearbonic acid ; it is called sulphurous acid, and is always formed when sulphur is burnt in common air, when it is unable to obtain enough oxygen to be converted into the stronger acid. A portion of sulphurous acid is formed Whenever we light a common brimstone match; and the this acid, and not by the sulphur alone, which has no smell, but which is used to tip the matches because it has a strong affinity for oxygen, and requires less heat to enable it to commence combination than the wood itself; but enough to fire the wood. Sulphurous acid does not form any important compounds when combined with bases, and its principal interest consists in its bleaching powers. It has iong been used to destroy colour in things desired to be bieached, which are merely hung up over some burning formed. Articles thus lleached, however, frequently retain an unpleasant smell of sulphurous acid. It is like contagion; and, therefore, sulphur is burnt in houses where persons have died of an infectious disorder, and in other circumstances where evil effects are feared from the communication of disease. In these cases sulphurous acid has really a useful influence, as it seems able to destroy minute quantits of poisonous matter diffused througiout the air; but it must be remembered that it can have no
power of improving air which is unwholesome from the acid, for in these circumstances barning sulphur would only tend to make the air worse, both by boing oxygen and also by adding sulphurous acid. The bleaching power
of this acid may be very well shown by holding a lighted brimstone match near a dark purple or blue flower, the and we maveasily thus, either in part or wholly, render the fower white. Sulphuric acid is made by burning sulpoore osyent than it could get by merely burning in the air, becaue the nitrre aced is the salt contains a very large quantity of oxygen, and is easily decomposed by any subphar is burst in this manner, and the fumes prodaced by
its combustion are condensed in cold water, a very acid acid. It is a heavy, very corrosive, poisonous liquid, al though its elements are only oxygen and sulphur, the one being that part of the air necessary to support life, and the other a tasteless, odourless, yellow substance. Sul phuric acid in its free state is only remarkable as bein one of the strongest acids we know, destroying regetabl and animal substances; that is to say, abstracting and combining with some of their elements, and causing the ffinity for bases, with which it forms a class of compound called sulphates, some of which are of
ance, and mnst be considered hereater
Muriatic acid is interesting as being one of the compo ments of common salt, which is a compound of that acid oda. This acid is and is therefore called a mer as nitri acid, namely, by the action of sulphuric acid on a salt containing it. Sulphuric acid is mixed with common acid the mariatic acis is expelled by the more powern bate of soda, is thus formed, and the acid fumes driven ff, being made to pass through cold water, are condensed, and a strong solution is obtained, which is the muriatic
acid of commerce. These acid fumes consist of a gas called chlorine, combined with hydrogen, the inflammable lement of water. Chlorine is an element which is neve found free, but only in combination with some other eleion when breathed, even though it is largely mixed with air; it is remarkable for possessing in a very great degree he power which sulphurous acid has of bleaching or destroying colours and also contagious matters. It is therefore, very largely used in all cases where it is wished to destroy or remore colour : it is, however, a very power ful agent, and therefore must be used with great care, as otherwise if linen, for example, be bleached carelessly by means of it, the texture is destroyed, and the linen be-
comes rottell and useless. Small quantities of this gas are used with very beneficial effects in removing foul smells, and otherwise rendering sweet and wholesome the air of large buildings, such as hospitals. It is unnecessary cor us further to occupy ourseives with this element than to know that when combined with hydrogen it loses all these pecaliar powers, and forms a strong acid, Which, by combining with bases, forms a series of salts called,
Phosphoric acid is also obtained by decomposing one of its compounds bysulphuric acid. The most abundant comound of posphoric acid is that in which it is united tolime called the phosphate of lime : this substance is an ingredien When phosphate of lime is mixed with sulphuric acid, it is When phosphate of lime is mixed with sulphuric acid, it decomposed and the phosphoric acid is set at liberty Cnlike the three acids already spoken or, it is a solia, very easily soluble in water, and called phosphorns, co bined with oxye It may be artificially made by burning phosphorus in the air, from which it abstracts the oxygen and leaves the nitrogen unaliered, just in the same way that carbon burns into carbonic acid; only that in that case the product of combustion is a gas, like the air, whils the result

\section*{COTTAGE GARDENS.-NO. XIII}

The second crop of Peas and Beans will now require to
 at p. 164 for the first crop. The rows of each should therefore be well earthed up and the Peas staked. The some more ground got ready for another soming.
rule usually followed with the view of keeping up a suc rule usually followed with the view of keeping up a saccession of these vegetables, is to sow again when the lastsown have made their appearance above ground; but the limited space of a cottage-garden this cannot always be done, unless other crops are dispensed with that are probably quite as valuable, and take up less room. The number or wings, and the extent occupied by the Pea and Bean erished or disliked set apart for seed-beds, make another sowing of any of the sorts of Cablages mentioned at p. 148; also Savoys, Brussels Sprouts, and Canliflower. Attend to those formerly sown, and see that the young plants are not allowed to b overrun with weeds, or to become stunted ine chergmend watering, unless a continuance of drying winds during the day, and the absence of heavy dews at night, should rende it absolutely necessary; for although watering is un points relating to it that may be useful for the cottager to bear in mind, and which it may not be out of place for us to notice here. In most cases, rain-water, when collected in open barrels or cisterns, will be water is equall suitable Surposes; but pona or should never be used until it has been for a considerable time exposed to the action of the sun and air. For growing crops, manure. water, or the drainings from the duag-pit, properly diluted water that slould be given, this will of course vary according to circrmstances : for example, in the case of trees or buishes that may have been planted late in the season, as mentioned last week, the ground should be frest loosene with the hoe, and then weil moistened for a foot or the administered until the second pair of leaves appear on the seedling plants. To saturate the ground, or give more water than it can absorb; would rather be hurtful than otheswise. a frequently see such a difference in the appedrance of decorating the porch pors indows of the cottace. purpose of due attention is paid to watering, and sufficient drainago given to the pots so as to allow the water to pass off freely healthr; while on the other hand, by negleeting these precautions, and either giving too lithe water, or a super abundance of it without proper drainge, the earth will become sour and sodden about the roots, and the plant M.E. H.

\section*{HOME CORRESPONDENCE.}

Small Portable Groenhouse.-This is a sketch of a plan upon Ward s principle for trying experiments by the under the soil ; it is filled with small piesss of sponge, which may be sapared water that you please. The drawer
may be removed and the sponges washed for a fresh experi-
ment. The plass may also be of different colours, to try the effect of different rays of light. Where there are children, house affords great
 at pleasure, may be fitted with the minatest pots, so e to take some of the smallest of the Roses and Myrtles, which will flower beautifully. The seeds also of the Yewtree, Pinaster, \&c., will add to the variety, Ts welltam of the anpangs must be perforated with small heles to admit of the absorption ; and should this not be quite enough, some small skeins of worsted may be drawn up through the soil, which will have the effect of capillary attraction, and infuse the intended influence with gras \(\underset{\text { success. }}{\text { Vineries. }}\) - \(H\).
ineries.-My mode of heating and ventilating my conservatory, rinery, and melon-house is the very reverse of Mr. Penns. My principal source of heat is the front of each, and the external ventilation brought immediatesy in contact with the heatedsurne leaves in every part of the house, whether the external air is admitted or not. People who know nothing about the culture of the vine are apt to deceive themselves by the appearance of large shoots, a broad-jointed naturally large leaves. Nature must by inof the water some way, and it enlarges the the joints, and extending the surface of the leaves ; and if the damp atmosphere is in great excess, roots are absolutely sent out to a jo to a vine growing on the sides of hills in the cointsias where the best fruit is matured either for wine, raisiss, fresh grapes. I have only one vinery, which has bers under my own management for 38 years past. he habit of year or two, like a young gardener, I was in the habit and the leaves, wood, occ., had all the abore appearances I had some large bunches and berries, but no richness; a or When withering late irr the season, they iltle reflection soo convinced that this management, which might do for cucumber or other intertronical plants, was not suited to the Vine. As I do not wish early grapes when my gardes supplies me with other fruit, I never shut up the vinery hegin forcing till the Ist of April: one fire is made of ant thracite coal, with a free draft, the ash-pit door being open for about half an hour; a few house embers are then throw on the top of the fire, the ash-pit door is then closed next morning, and the flue (a common one) is process of cold the following morning, when the same pred. And lighting the fire and closing the draught is repeated. And this is done at all times except on very hoty opened a middle of summer. The house is immediately, to get the intle at a time after the fue has beco sible, the rentilation inside of the glass dry as soon as possibe sun; the cost of fuel amounts to \(4 d\). per day. 1 have not raried my plan, fuel amounts to 4 . per for 35 years past, and the vines nor had one alle in the early part of the season, the floor of the house is sprinkled with water at the time it is closed, about sun-set in cold weather; but in rery hot weather the house is not closed till it is cooled down, as find the sprinkling with the floor hot raises steam and does injury. As soon as the vand day the aic npeness, no sprinkling at night, but nighe or two I was rather annoyed by the red-spider; bat I soon found a small quantity of flower of sulphur put on the hottest part ef den nue once or twice a week in the eare commonly ripe, the early sorts, the beginning of September ; ther hang on the vine till the Ist of February, with a dany flue-hathered ventilation to prevent rottrag. The fruit is then gataerly and put on strings in an ards the beyinoing of April, the house being thrown open from the ist of soak of dungwinter the plants, and give chem Strangers are surprised water, and afterwards rain-water \(\begin{aligned} & \text { at the dry state of the atmosphere of my house. A Swiss } \\ & \text { mater }\end{aligned}\)
gentleman called to see my garden last summer; he was first forcing-house he ever was in that the damp did no dew his glasses. All my neighbours' grapes are gone six weeks every jear before mine. I have sent you a few
bunches; you will perceive they wither up to a half-raisin tate, but never rot. I should like to see some lept to the same late season raised by Mr. Penn's method.-John Williams, Pitmaston.- [We found the grapes referre n this letter of excellent quality on the 2 thedarch.
Luminous Insects. The Iuminous centipede noticed b your correspondent ( p .213 ) is the Seolopendra, electrica excited.-J. Murray.

Orchidaceous Plants.- I observe that in some of your articles on Orchidaceous plants you recommend that some root into. Being but a beginuer in this line, I cannot pre tend to mueh experience; but I will mention to you the plan I have adopted for some months past, and which I on account of its rough bark, and then procure fine short with earth and the fresh moss stuck on it It soon root (being kept in the Orchis-house) and forms a soft, moist carpet in which the roots of the plants luxuriate, and they grow most vigorously. Common moss rots and dries, and rfe
Effect of Blue Glass on Germination.-The most perfec success has attended the employment of dark-blue glass in causing the seed of the Clintónia pulchélla (a very shy one) to germinate : the form of the glass may be seen or traced by the seeds that are up; the rest are scarcely appearing
above the earth. The colour of the glass is strictly Prussian blue; Violet-colour was recommended, but when a Violet was shown to the man who sold the glass, he said they never made it of that colour, so where your corre spondent could have got it I know not. I think it took about eight days in causing the seeds to germinate; it was in a gentle hotbed of leaves and horsedung.- \(-F_{\text {., }}\) A pril 5 . Roses.-Having just finished pruning my Roses, consist answer "Rose Amateur's" queries. I do not think I have lost one, exeept Josephine Antoinette, by the winter, and that was a very poor plant. Hybrids, Gallicas, Mosses fals or Chinas and Bourbons have some of their branches amaged, but have quite enough wood left after pruning Bourbon Armosa and Perpétuelle de Neuilly, which Desprès, not at all. These, I speak of are budded on stocks of various heights; budded Noisettes are also little damaged, while those (as well as Bourbons) on their own roots are very much damaged, and will take the whole
summer to recover. Of Thes, Strombio is alive, and just beginning to bud out; Taglioni and Bardon are Less hurt and no donbt will flower well ; these two are badded. The virtue he ascribes to the oiled paper I attribate to the tan, 9 -foot wall and extending 17 feet in length, and the tips were scarcely touched; and I have met somewhere (I chought in the "Theory of Horticulture," but I cannot again find it) a most luminous explanation of this matter, proving a yellow Banksia that was killed down to the roots in 1838, that I almost ruined by over-covering in 1839-40 now exteading 16 feet along a wall 8 feet high, the top of had sawdust to its roots, straw up its stem, and Cherrynets only over its branches: it is in the most vigorou heape to have Roses in future 10 months of the year, and I appeal to you whether those I sent you on 30th March were not equal to Sune Roses". "Rose Amatear" con-
founds two Roses which are quite" distinct-Blush Perpetual and Palmire.-X. X. \(\boldsymbol{X}\). * They were.
Gloxinia rubra.-It gives me great pleasure to state to jou that Mr. Lowe's stock of this plant is genuine; many reports to the contrary having been industriously propagated. Mr. Lowe sent one to the Fence last antumn, which is now in flower, and is a beautiful crimson, with cearlet shade down the centre of the flower ; in fact, it is ous true Gloxinia rúbra. I trust, in justice to Mr. Lowe week's Chronicle.-T. Appleby, Fence, near Macelesfield.
Weeping IVillow. - There seems to be a difference be tween the growth of the Weeping Willow in England and in most parts of the Continent. In England the summer does not seem regularly hot enough to develop the ful length of its gracefully pendent twigs, which, though they peefect looseness and perpendicularity that distinguish the tree when in perfection. In an English autumn, too the leaves tum yellow before the natural time of decay the extremities of the twigs, not being ripened, wither,
and the leaves are blown, or, it may be said, whipped off them, by our storms, long before they would otherwis drop off. But even in Germany the Weeping Willow attains its perfectly drooping character, and the leaves remain on till the frost comes, lon
Morello Cherry, and others. -The Marello Cherry does berry, or from Morella the morel, as some will have it in one case from its colour, in the other from its flavourbuat to be a corruption of Amarella, a name by which it is known and printed in some of the garden catalogues of Germany, and which well suits the pecaliar quality of its

Amarena, evidently from the same ad, ective; and the Wild the variety (if not species) is called Marasca, and from this the liqueur Maraschino, made throughout that country, takes its name; all from amarus, bitter. It is sinViscor that this cherry is known at Rome by the name perhaps fro, and at Constantinople by that of Vishni, bot some Greek wor England than generally on the Continent: those of the South just mentioned are redder-perhaps not quite so acid. They are the only round and soft-fleshed Cherry I know in Italy , all the rest, white, red, and black, bein heart-shaped and hard-fleshed, and almost devoid of acid, ripe or unripe. If, as I suspect, they are a natural variety or species, of which the wild Dalmatian Marasca the original, I should suspect all our sweeter and rich flavoured soft, round Cherries to be hybrids between them and the other sorts. Is it nown what the Cherry Pontus is? It can hardly be the parent of all the Cherries, wild and cultivated, of Europe. I distrust the story of Lucnllus, except it relate to some one fine variety. Is the Yellow Cherry of Franche-Comté known in England burgh, while others require a houstar

\section*{Duration of Flowers dependent on}
ation-My ne of the gars of them with a carper's rule and observed that the floring so injured drooped immediately, and died in the course of so injured drooped immediately, and died in the course day: in which they first expanded, and I hope to preserve them in full beauty for a month longer by keeping the plant in the shade. - J. W. B., Exeler. [Th circumstance alluded to is a singular phenomenon common in the whole Orchidaceous order. He found died. This was not becuse the anther was removed, but because in into contact with the stigma, and thus the act of fecun dation was accomplished. In general, from the absence of insects, or of those other disturbing causes to which Orchidaceæ are exposed in their native places, the pollen cannot come into contact with the stigma, and so long as this is prevented the flowers of many species will retain their freshness for weeks, as if in expectation of that event for which they were crested. But as soon as the act of fecundation is accomplished, that is to say, from twelve to twenty-four hours after the pollen touches the stigma, the flowers collapse, the bright colours become dim, the ovar begins to enlarge, and the beauty of the flower is gone.]
of this consh Plane. I believe the common Ple-tre of this country is the Occidental, imported from the shabby than the Oriental Plane, more generally affected by cold, and in all respects a species inferior to the latter, is surprising that it should be so general an ornament of parks and plantations, especially near London. Pray tell your readers never to introduce so unsightly an objec into their grounds. The nurserymen would soon cease to grow it if they found their customers refuse in, and then we should have Oriental or Spanish Planes in their roan. By the way, can you inform me why the latter is called Spanish, and what enidence there is of Planes being [We recommend this to some of our Spanish friends for an answer.]

Cockroaches.-Your inquiry after "the best method of destroying Cockroaches" has not yet met with a satisfac tory reply. I cannot say that I am able altogether to supply the deficiency, but I will give you my experience. These insects were never seen in my house till about five years ago, when bome alterations took place which made my kitchen, with its hearth and chimney, parmanentl much warmer than heretofore. They began then to mak their appearance, and in the next wo years increased 80 prodigiously as to become an intolerable nuisance, Variou tried to destroy or expel them. Hedgehogs were introduced; but they seemed during their stay to make no impression on their numbers, and they toot the first opportunity to escape into the open air. But if these anionascould have been rept in a situation so uncongenia to their health and habits, I do believe a whole herd of such "small deer" in full appetite would not have suf ficed to clear the house, or keep pace with the repro ductive power of the insect. Poisoned wafers and paste disappeared, but did not abate the plague. Snuff was tried, as recommended by the "Household and Cookery books. (a remedy, I see, much relied on by one of your subscribers) ; but this also appeared to do no good, as neither did sulphur fumigations to the holes and crevice in which they seemed to abide. If any sufiered by these means, their numbers were too trial to be any abatemen of the nuisance. Finding this to be the case, and that stronger measures were necessary, fook out my kitchen range, and removed two cupboards that abutted agains the chimney, with all their "battens and linings," and slabbed the walls and the interior of the chimney as high as the smoke-jack with quicklime and water. In this way I have no doubt I immured thonsands of the animals and destroyed their egrs. Their nombers were now sensibly diminished. In the mean time, I had discovered that amongat the best traps for catching them, were paper-bses mod with dried roots, corks, and sach loons rubish had been thrown. In oatmeal, sugar, or brosen bist in great numbers in the middle of the night; but I found it gecessary to carry them out into the opea air before daylight appeared, as if fef till morning, they imvariably re-
treated to the chimney, behind the grate, and into such crevices as we could not close. Being carried out of doors, they did not leave the bags; and being benumbed by the cold, they were easily destroyed in the morning. Labouring extirpated two successive springs, altho able fewness And now ravin a great fondness for aw, having learnt that they have drown themselves in mixture of beer and sugar, and place glazed pans upon the grate, and about the hearth, half filled with this fluid, and so entrap many stragglers. I have also made an opening at the back (which is unhappily in the middle of the house and always too warm, , so that cold air circulates behind the During this seems to be a check to their procreation. During the necessary personal attention 1 have given to this subject, \(I\) have found some amusement in observing the labits of the animal. The rapid disappearance of their black legions in the night on the appearance of lights and a little noise, their manner of throwing themselves of ceilings and walls to facilitate their escape, the ingenuity and agility they display in seeking the shady sides of objects, and the manner in which they find their way int chinks that are hardly visible, are all quite wonderful Their motions are sometimes too rapid to be effected with ant the aid of their wings, and although I have never seen them take flight entirely, I suspect they do so periodicall like the winged ants; for two years ago when they wer most namerous about my house, they found their way int a tan-pit in my grapery, and into a melon-frame at a good distance from the house. I may also mention, incidentally that when they first lappeared here, a good many crickets abode about my hearth; but they soon disappeared under the influence of the more active intruders. The history of the asclimatization of the Cockroach is also curious When I was a boy (some 45 years ago) it had not been heard of in our village. It is now a troublesome pest even to cottagers, making free with the bacon in their chimneys. Some years ago it was thought it would not bear a temperature of \(45^{\circ}\); but 1 have seen it lively when the air was cooled down to \(35{ }^{\circ}\); below that it languishes and dies, being exposed a short time to frost. In cun ridding youbt of the efficacy of any "chtch and kill, The best means of prevention would appear to be, to do all you can to keep your kitchen cool, and to stop and point" ap all crepicest pour fireheath. I beliere they never breed in chimneys in which there are not con es. \(-P\).
Effects of Coloured Light on Tregetation.-In reference at Rome in 1838, the late Dr. Morichini, whose discovery of the magnetism imparted br riolet light is so well informed me that the Professor of Botany there had made germination the effects of ciolel, \&c. light on the iolet and blue media were decidedly favourable to yegeta tion.-J. Murray
The Food of Plants.-1 cannot bat think we are greatly at fault on this question. There is much that is clonded and obscured, as well as confused, connected with the subject. Science has been seldom consulted on the ooca sion, and speculation and theory have been confounded the sound rationale of practical detail. The problem eems to me more complicated than is generally supposed and the invention will depend on more subtile elements than usually enter into the estimate. Food, to serve as nutriment and be assimilated, is one thing; and slimuli to impart a tone to or excite the fanctions belonging to regetation, so as they may exercise their office in a healthy condition, is quite another affair. I am not quite sure
that because we find, on chemical analysis, sulphate of lime in wheat, nitrate of sod in barley, phosphate of lime in the oat, and so win others, it necesaarily fol lows they must be supplied with these several earthy and alkaline salts, until it be clearly proved, by experiment, that the salts are really absorbed, and selected with rare discrimination from the scil, and not produced by the plant. If the former be ascertained, then " sweet to the Pweet, sugar to the sugar-cane, pungent solutions to the Piper nıgrum, Capsicum, Zingiber, \&c., as well as akaine matters to Salicórnia, Salsóla Káli, de. I beieve that there are fatal antipathies among plants, as well as reciprocal ammilies. In 1839 proved clearly that sels. This fuct was subsequently verified by Macaire and others. It explains the necessity of the ratation of crops, as well as the phenomenon of individual plants never perishing in juxta-position with several of their congeners, On they luxurate in heathand gour near other plants. On the simple principle wo frequently exemplified in the for one is poison to anothen In ye, we are miserably defective ; indeed, nothing has been done Charcoal, the scalpel, the syringe, fumigation, \&c., exterchand mechanical acts, constitute the sum tutal, with has been administered internally to the sicily plants growing chamomile will restore (as it constantly does) ealu to diseased and drooping vegetation, then let an nusion of chamomile be tried, and so on. I merely results of experiments.-J. Murray. Moisture in Vineries. - I perceive a contribator to rect Number and Mr. Paxton give different opinions as respects the humidity honses should be rept at whilst the vines are in bloom. I was till lately an advocate for a moist heat for vines during the blooming season, but by
accident found out ray mistake by the following fact. A vine accident found out my mistake by the following fact. A vine
of the Tottenham Muscat (a bad setter) was found to be is
the way in a peach-house here during some trifing alteration, and it was layered along the border to the end of the house, and turned up over the flue to the rafter. A por-
tion of that part of the stem furnished with spurs was pressed directly on the flue, and when a fire was applied these soon broke, and the bunches were unnoticed until the other day I found they had set and half swelled, not a flower having been abortive. The clusters were so thick that it was found impossible to get the thinning-scissors between the berries. This being near where the fire comes into the house, the flue is at times so hot that the
hand can scarcely be held on it. The rest of the bunches on the vine have since set in the usual way about sufficient to fill up the bunches. If this is not confirmatory of a know what is.-John Spencer, Gardens, Bowood.

Coloured Light for Plants.-I have read with considerable interest some remarks upon the germination of seeds, by Dr. Horner, of Hull, published in No. 13 of the nate more quickly under violet-coloured glass than under glass of any other colour, and attributes this to the great power possessed hy the violet-coloured ray in prodacing
chemical action; be also states that the mere mechanical effects of glass placed over seeds will prevent the soil from drying so rapidly, and of course assist germination. Now, may not the whole effect be produced by the latter circumstance, and the chemical action of the violet-coloured ray minate much sooner when the soil is kept moist by a sligh shade thrown over the glass, and we also know that this effect is produced by this H. may be purely mechanical after all. I would therefore respectfully submit these considerations to Dr. Horner, who may probably have made the subject more clear and conclusive by experiments which he has not published.- \(a\)
Ab\&tilon ritifólium. -Those interested in half-hardy and ornamental plants will be glad to learn that Abútilon vitifotium has lived out of doors through the last severe winter in the neighbourbood of London. It grows against a sonth wall slightly protected, and has only been injured in its top-shoots. \(-R\). \(F\)
Fúchsia fúl, \(\epsilon\) ss and its Hybrids.- You are no doubt aware that Fuchsia fulgens is easily forced, and may be had in flower at all seasons of the year. This property is communicated to many of its hybrids. Several of them produce their flowers as soon as their leaves, and may be thised with the greatest success. By taking advantage of this property, we may now have these universal favourite producing their elegant blossoms all the winter.-R.F.
Half-hardul Shrubs.-Grevilléa sulphúrea.-A plant of this species having survived two of the most severe winters we have for many years experienced, may, I think, warrant our ranking it among our hardy shrubs, at least in this country. The specimen in question has stood for the last five or six years unprotected on a sunny bank in my lawn, and has been in bloom for some time; the beauty of its fowers is not such as to recommend them to much admiration, but it is interesting to know how many of the productions of our distant colony will endure the climate of England. My Oranges, Lemons, and Citrons, protected age slightly injured, though of course the cold which they endured must have been intense, as the fruit was frozen to a degree of icy hardness and solidity. The hybrid Rhododendrons from being buried in snow have escaped without injury, and one rariety, between Arboreum and Catawbiense, actually expanded its exquisite carmine blossoms before the snow had entirely disappeared. Acácia verticilláta, a standard plant, is dead, and against a wall nearly so. A od-eared species of vigorous growth, raised rom; as is A. dealbáta, now in bloom. Vibúraum odoratíssimum sgainst a wall is dead. \(-A\) Dexonian.

Jasminum ligistrifolium.-Allow me to second the commendations of this lovely plant which recently appeared in the ehromicle. It a species well deserving lection: its habit of growth is neat, allowing it to be easily trained; its name aptly describes its foliage, and in the abundance of its blossoms it yields to none. In the stove it produces its fragrant flowers at a very early period of the year, but in a lower temperature, in which it
can be doubtless successfully cultivated, it will come in with the Caetuses and Pelirgoniums. The smallest plants are literally covered with flowers.- A Devonian.

Ceropéyia cleyans. - This is an interesting stove-plant that deserves to be more generally cultivated. It is a native either as regards heat or hamidity, owing to their altitude, eiographical position, and the reciprocal action of the monsoons from the Arabian Sea and the Bay of Bengal A moist stove, with a moderate temperature, accordingl
suits it. I received a plant of it in April suits it. I received a plant of it in April 1839 , when
fowered the following May, and since that time there has been scarcely a Hower but might have been picked from it, though the auturmn seems to be its flowering season, as
it then produces thema in the greatest profusiun. Cuttings it then produces them in the greatest profusion. Cuttingss
put into \(4 \hat{0}\)-pota filed with equal quantities of peat and sand well mixed together, and placed in the stove without any glass over them, will strike readily. To cultivate it, duse a mixture of past in whieh compost its roots soon full and even hecome bound in the largest-sized pots that are made, fliage, wood, and fowers growiog with proportionate lururiane, woid suit it well. White and brow stove-conservatory wouid suit it well. attack it; which is scale, mealy bug, and green fiy never attack it; which is

Rhododendrons as Standards.-To make standard Rhododendrons, they are taken from the seed-bed and planted about eight inches apart, after which they are to remaia for three or four years without thinning. When the plants are from four to five feet high, all the side shoots are pinched off, and this is constantly done till they attain the desired height, when the bead may be allowed to form. It the Rhododendrons are planted in good heath-mould, they will make strong smooth stems at this age, have a neat appearance in the pleasure-ground, and flower as freely as when grown as low bushes: I preter the stems at high, as I find strong winds injure taller plants. Rhodo-
déndron Arbóreum tlowered beautifully here on a south wall last May and June, but did not ripen seed; it has survived uninjured this last winter without any protection. L., Keane, Lismore Castle, Waterford.

\section*{FOREIGN CORRESPONDENCE.}

Vionna, March 18.-Dr. Endlicher has just finished
his great work on the genera of plants. He is at present occupied zealously in altering the Imperial Botanic Garden, which, notwithstanding the many fine plants it contains, vernment purpose, and it is probable that a building will be erected in the garden for the reception of the imperial herbarium. Dr. Endlicher has presented his private botanical library, to which is added that of Jacquin, and the Emperor has granted a considerable sum to its increase. A Hungarian translation of Professor Lindley' Outline of the Principles of Botany has lately made its appearance.
\(V\) asse Rirer, Australia.-Our letters from this remote colong are to the 23rd of last August. The condition of the settlers was progressively improving; land was in high demand, and alf sorts of agricultural animals much wanted. Wheat was 12s. per bushel, mutton 1s. 3d. per 1 lb ., and the traders were reaping a rich harvest at the expense of
those who were compelled to buy their goods. Brood mares, and bulls of the true Durham, Devon, or Hereford breed were eagerly sought for. Our correspondent recommends the addition of open bottles of water to the Ward cases aw platian but growing in the ground, as large in the trunk as three moderate-sized men's bodies, 40 feet high, and as large as 20 of the largest orange-trees seen in Portugal or Spain. The foliage is described as extremely rich, and the flowers
in such abundance, and of so deep an orpiment colour, in such abundance, and of so deep an orpimener "flower the
that the plant well deserves the name of forest." When cut dowa or burnt down, it springs again vigorously. It seems to love a sandy soil. The flower in the "Sketch of the Vegetation of the Swan River Co really are said to be coloured much toment, with a soft lustre. This country abounds in gay flowers. There is among others a Drósera or Sundew, with white flowers sweetly scented. A fine purple Kennédya, and a handsome plant apparently an Isopógon, are common ; severa species of the Seedlings of the Isopógons, Petrúphila, description. Seedlings of the Isopogons, Petrophila, plant called here Blue Geranium, were preparing to be sent to England. At Augusta, Swan River, there is a fine yellow flowered plant like a Patersúnia, but producing very differen seeds. Several annuals imported from England grow here in great luxariance, and altogether it is one of the most romantic places our correspondent ever saw; the beautitu bar, and ever and anon the wild scream of a tlight of swan going over to the fresh-water lakes, and the air perfectly redolent with the powerful scent of Stocks, ©notheras, and Mignonette, render it a delightful situation. A box of plants had just arrived from England which had been months on its passage ; the plants were however in pretty good condition, and the greater part of the fruit-trees alive. Some Magnolias were looking well, and will in all probability succeed.

PROCEEDINGS OF SOCIETIES.
ROYAL AGRICULTURAL SOCIETY OF ENGLAND.
 tion be issued to the Liverpool Committee - That a catalogue
should be prited with the names of exhibitors of implements, machinery, seeds, soils, and other matters, and be ready to be dis-
tributed as early ai possible in the week of the Liverponl Meet-
ing,--a resolution which was carried unanimcusly ing,- - resolution which was carried unanimcusly. A commumi-
ceation having been addressed to the chairman from his Grace the
Duke Duke of Rielinent in refertuce to the alnemuded bye. iaw of which
he bad given uotive at the last monthy meeting, Mr. Raymond Barker, in the absence of the nothe D Duke, proposed and supported
the following new brectaw in question, which was carrued unani-

 nantry, and cumminacatel
Hospital, presented a motel of a mowing-m
Rogred Hurticutturus Stsciety of Irelund, Ap of the council, Mr. Moore exhibited a drawing, made by a Dablim artist, of a new speciez of Francisce from South America,
nation of the branches. The seeds from which this plant was
raised, werepresented to the Royal Dublin Society by Lord tran

 stems four feet long. Mr. W. thiuks this a distinet variety from
the ordinary state of the species, froms its remainulus so much
lenger inf fructification, and in having the stemas so mueh more
elongated.

\section*{MISCELLANEOUS.}

Brocooti di Rape.-The Italians make great use of the urnip Broccoli ; the leaves are eaten, and the tarnip. Then it is large enough. It does not produce a head iti Rome the leaves are used in salads, and dressed in ragouts, ike Chicory.-Bon Jardinier
Sea carrot. (Daúcus marítima.)-M. Vilmorin in ex perimenting on the wild Carrot also procured seeds of the but top. and the rest had roots about the size of Rampions Seed was saved from the best and most fleshy of the latter,
and this has produced a fair proportion of plants with and this has produced a fair proportion of plants with others being swollen and short. This race appears to bave a great disposition to produce varieties, and as it is
naturally more vigorous than the common Carrot, it is probable some good ones may be produced.- BonJardinier plant furnishes a good salad; it is like corn salad in flaour, but better; its leaves are larger, tenderer, the pro uce greater, and after being cut they grow again quickly June or July, and last till the frost destroys them.-Bon Cardoon.-In managing this plant it is necessary to bear in mind that if sown too early, or not duly supplied must be regulated by the nature of the soil; if the latter 3 of a dry hot nature the end of April is early enough, but otherwise the middle of that month is a proper season for sown in the end of March. Prepare the ground by forming shallow trenches a foot wide and four feet apart,
mixing well a little dung with the loosened soil in the renches. In these sow the seeds in patches of three or our seeds nearly together, with intervals of from 18 inches
o 2 feet between the patches. When the plants come un, he strongest one only should be left in each patch. Watering plentifully and keeping the ground clean are all hat is requisite till the middle or end of October, when natting for a few days, and then more closely with hayoands so as completely to exclude the light. In three where the frosts are generally more intense than is the alken up with balls, when the leaves are perfectly dry, and placed in an airy house or shed between Iayers of straw. Chatched hardles afford very convenient means of protecion both for Cardoons and Celery.
Tree Rhododendrons,-Mr. J. Rendle, jux., nurseryman, residing near St. Austell, Cornwall, has now several Arbóreum) flowering in the open air, without any protec severe winter. The flowers are a very bright scarlet, well formed, tund the plants remarkably healthy.
Double Red Azálea 1 nedicu.-A beautiful double Azálea Nursery thia is now in bloom at the Sawbridgeworth ery double, and of an excellent red colour.
Ill bloss Corymbiforra.-This beautiful plant is now in bas been kept during the winter in a house, the temperaare ranging from \(40^{\circ}\) to \(50^{\circ}\), where it grew luxuriantly and February, there not being sufficient heat, the blossoms fell off before they expanded. Since February the plant last Christmas appeared to have finished flowering are now in full flower again, and every new shoot the plant makes is set with blossom. It is remarkable that it should be shy of lowering in a pot before the first time, and when
once in flower that it should blossom freely. If kept in a tove during the winter, it will continue to flower the whole year. Let those who wish to have it early in perfection phants out in a light rich soil in the conservalowering the same summer.

An Improved Mode of Rearing Onions.-In autumn ast the Inverness Horticultural Society awarded a first rize to Mr. W. Mackenzie, gardener to Sir J.W. Mackenzie renziehaugh, for several very large Onions. Mr. Mac node of rearing his Onion crop:- "In autumn I make hoice of a piece of ground well exposed, hattered only oy a hedge, and of a sandy rich loam, well manured with vegetable mould and pigh cung. After digging, I open then spread a little pigeons' dung in the drills, which had been three months previously exponed to the weather; covering the seed with the foot, and afterwards raking smooth the surface of the ground. On the 6th May I thin the plants from three to four inchen apart; and the thinnings are lifted, with all their roots, into a light, rich,
well-exposed piese of ground, prepared in spring with the same compost as above, with the exception of pigeons
dung. The fibrons roots are alone covered, the mould being geutly pressed with the back of a spade, watered
overhead as I go on, and in dry weather watered every
evening for eight days. Not one in fifty evening for eight days. Not one in fifty went back or
was seized with the maggot; whereas the spring-sown Was seized with the maggot; whereas the spring-sown same ground, and manured with the same compost. The soil in Rosehaugh garden is a sandy, light loam, having been regularly cropped for upwards of sixty years, is quit exhausted, and for some years back Onions were not doing
well. After trying several experiments, in July 1839 well. After trying several experiments, in July 1839 all the slops of the honse were thrown, and where it re mained till February following. The ground intended for Onions being dug the autumn preceding, in February beds, three inches thick, and left it in that state till the 8th of March, when the clay was all broken smooth and stirred up, mixing, at the same time, some of the earth with it. I then spread on the surface of the beds a goor barrowful of pigeons' dung, fresh from the pigeon-house James's James Keeping, Portuga, Deptford, and Blood-red Then I pressed them hard with the back of a spade, and earth from the alleys; and about the list of August two persons went along the beds with a pole, each holding one of the ends in such a manner as, when walking up the alleys, to strike the stems about an inch or two above the bulb. I found this process of great benefit, as the growth of the stem is thereby considerably checked, and the whole hourishment thrown into the balb. About the lat of Sep tember I commenced lifting the Onions, and laid them very thin on a clean piece of ground well exposed to the sun ; some days afterwinds removed them to a loft that had free access of air, and those that had any crops strong ritches of billow, an pice to where they were left till the approsch of frost, when they were all hid on a bed of ferns, and covered with them to the thickness of six inches, and the roots are to-day much sounder than they were when taken out of the ground The autumn-sown, and May-transplanted Onions from the autumn sowing, and also the spring-sown, where the clay was used, as treated above, were superior both in size and quality to almost any that I have seen grown in this country; whereas the spring-sown, in the usual way of manuring, were almost all destroyed by the maggot; and such as escaped its ravages were not ha
have not lept near so well as the othera."
Galvanic Profectors.-Mr. Saul, of Lancaster, states, that the effect of this invention may be produced with and fin garden-pot, by merely knocking out the bottom and fixing on the top of the outside a flange of zinc about of flanges, such as pot and iron, but the slugs are able to pass over all those that are not made of zinc. The pot protector has, he says, a better appearance on the flower fowers to grow in, at a very trilling expense. The flaage is hooked upon the pot with three curved pieces of zinc.
Potatoes.- Mr. Parker, of Sweeney Hall, near Oswestry has communicated to the Salopian Journal some interest following are extracts :-Ope acre was planted with about a dozen varieties of potatoes, the manure having been ploughed in before winter; and three acres were apportioned in 25 lots of different breadths, with the manure put in at the time of planting. The principal sorts planted with a three acres, were the Blad Hampshire Kidneys, and as far as he knows and believes, the whole crop was very productive and of excellent quality. The late variety of Blue-meals, mixed with Blue-kidners, produced 7 录 bushels o the rood, equal to 1240 bushels per acre. About London, 40 bushels are reckoned a ton,-the above would shire their bushel weighs 9 jlbs ., then the produce would be 52 tons per acre. Mr. Knight nised 34 tons. A crop of potatoes at taking up shonid be worth \(5 s\). A rood; but \(5 \frac{1}{2}\) bushels to the rood, equal to 11 s . in value; while the Blue-meals and Pink-eyes grown with dung pat in at the time of planting averaged 6 bushels to the rood. The Farmer s-glory is a coarse potato, and said to be hotfavoured in the spring, bat he found it excelient, When Blue-meals and three-fourths of the varieties are remark. ably good at this time; the Pink-eyes not so mealy as usual, being rather tough and flaky, but dry enough. It should not be forgotten that in the year 1837 the Pinkeyes and Eariy-white were of the best quality. Mr. any one desirons of judging for himself should have an opportunity of doing so, and he has probably a huadred bushels either for distribution, exchange, or sale. For distribation, he proposes to give small samples of about in order to prove, their respective qualities : for exchange, any one may send a basket of somit potatoes, and take way any varieties which may be desirel, and can be apared, instead of them; and for sale, particularly among his friends, in parcelir of one, two, three, or more bushels, for planting and use, at the market price, or 2\%. a bushel; 30 that they may not be bought up by market gardeners in large quantities on speculation, but sold or given for ingrent excellence, has been added to hia stock, which he believen is well known in Shropshire, and is always good under any kind of cultivation: it is a dari-purple smooth kidney, and the flesh is of a very high colour, mealy and fine-fiavoured, but a little flaky: of this he can only spare
the samples. There will be no difficulty in procuring any of the above varietiea for seed, so that what he has to
spare of them need not be sared for that parnose, excepting the new variety or varieties grown from the seed-ball of Maesbury fed, the cistribution of which will be accompanied wiut he following memorandum :- W These po tale ar for gathered in the autamn of 1836. The produce of them in 1840 was 4801 bs . to the rood (equal to 34 tons 5 cmt . pet acre), or ive bushels, which is pretty large for a summer variety. It partakes much of the good qualities of the Maesbury-red, and crops better. The rosecolour of the rough rind sometimes penetrates deeply fato the bulb at the eyes."- Applications for potatoers must be made on or before Wednesday, the 21st A pril.

\section*{GARDEN MEMORANDA.}

Elmham Halt, Norfolk.-In some cases the winter here has been more severe than in 1839. Cedras Deodara, except where its
branches were under the show, has get its leaves completely
browned, a circumstance which did not then happen to it. Ca préssus Tournefortii, C. expansa, and a s.eecies of Juniper from Nepact, have lost two thirds of their height. Puus inslgnis
sarcely tonched. The Hartweg and Douglas Pines, from Mexico and North-west America, are not affected in the least; the for-
mer were protected with hand-glasses, which during the severity
of the weather had a coatiny of three or four inches pit of the weather had a coating of three or four inches of snow very little, frost, if any, could get at them. Arancaria mbincata,
with a slight covering, uninjured. Everireen there are a good many fine specimens here of to fect high and plards are not so much infured as \(m\) 183s. Among omamental than in 1838 . A fine plant of the Maria Leonida Rose, alous 13 hat year, are killedthis. Clianthus pumiceus, which had just reached the top of a wall 16 feet high, and was in full flower about, or a Little after, this time last year, is quite dead. Alvo Búddlea mada-
gascariensis. Physiantbus undulatus, Solanum crispum, Tecuma stans, Aristolochia trilobáta (this fiowered on the open wall last Fuchsia, which offered last year to become a sherrb, proves herbaceous this, like the others that are natives of lower latitudes.:
Banksian Roses in some parts of the garden appear to have sufBanksian Roses in some parts of the garden appear to have suf-
fered more, and other parts less: and Figs upnn the walls, though thickly wrapped with hay-hands, appear to be as much injured as
it 1838 . On the other hand, common Laurels whels were cut to the ground in many places then, have scarcely been touched Mere-John Bualliday.
in the Orchidaceous-house, and thefr fine helathy tspearence in in the orchidaceous-house, and their me heathy appearance atranged on a board placed aslant, with a little moss, and are surc-
ceeding tolerably well. Several fine plants of Camarotis purpti-
rea, in belets, suappended from the roof, were flowerine rea, in bonkets, suspended from the roof, were flowering abun-
dantly; one plant had three or four recmes of beantiful purple
blossoms. A variety of Oncidime luriden had fusion of flowers, much brighter coloured than the common ono-
phifius bicolor is handsome, and as easily cultivated as Pháius trandfolius, which it resembles in habit ; the flowers are brown ish, with a white labellum having an orange mark in the throat, just expanded its brilliant orange-scarlet fowers, and seemed to
differ slightly in colour from Mr. Bateman's variety exhibited last year at the Horticultural society: A plant of Partonia robea was
producing its lirely pink flowers in abundance, as well as Aspasia epidenur ides, which is remarkable for the starch. like scent of its
hlossoms. Wime-glasses about half siled with beer and sugar
are placed among the pots, and make exeellent treps for cockroaches. Many of the marnificent specimens of Camellins were infull beauty, and their branches were literally borne down by the weight of the fowers; C. picturata is a beautiful blush with
pintr stripes, mut about stin. in diameter. On \& wall near the
entrance a plant of Magnolia conspicna was covered with ite fine large white fowers, this is a desimble plant, as it succeeds
well in the smoky atmosphere about London, is very hardy, aud produces an abundance of fowers.- pril
The Horticultural Gardens -The quantity of flowers in the
large conservatory is wonderful; plants that we are in the habit
of seeing in pots with a few blooms, are here so thickly studded of seeing in pots with a few bloums, are here so thickly stuabit
with them as in some in-tances completely to hide the leaves.
The branches of The branches of Clianthus puniccus are laden with large cranison. Howers; and near it are Goódia pubescens, a conipleto mass of
yellow, composed of thousands of bloscoms ; And Pultenze'a
stricta, rather deeper yellow than the last, and having a tinge of
red. Iotee Célsi is doin stricta, rather deeper yellow than the last, and having a tinge of
red. IIvee Célsi is doing admirably planted out, produces
fowers in the greatest aboundance, which are larger than usnal. There is quite a tree of Pols gala grandultora cosered with handof bright yellow blossoms. Trymálium odoratissimum is foiker-
ing in great luxuriane, and its braches hang about with care-
less ease. These and many other kinds, both in and ont of less ease. These and many other kinds, both in and ont of

A Treatise on the Cultivation of the Cucumber. By W. P. Arres. London: Sherwood \& Co

Tas author informs us in the title-page that this is "4 reatise on the cultivation of the cucumber in pots, so as o produce cucambers every day in the year, with less rouble, more certainty, and less expense than by any ther system hitherto published." He gives plans for he construction of a cucumber-house and cucumber-pit irections for growing the plant in these, on dung-beds; in the open garden, and on balconies and walls; also for saving seed, destroying insects, and curing diseases and he conclades with a description of the best varieties. Upon the whole, the book is a very good one, plainly written, and generally contains excellent reasons for the practice recommended; but although the writer finds faul with Mr. Mills, and other authors, for not advancing romething new in their respective publications, there is little which has been advanced by himself that can be so considered by cucumber-growers. His observations upon low temperature at night and in cloudy weather are ast, and have been frequently advocated by our best ga teners; but the reason which he gives ( p .26 ) why cu cumbers, like all the rest of the vegetable and animal creation, should require rest to recruit themselves, namely, by exhaling carbon fixed by the sun's action upon them the previous da?, and inhaling oxygen to effeet their support against the heat of the following one," is a very obscure explanation of the phenomenon to which it alludes. The principle of suiting the angle of the house to that of explained by the late Mr. Knight and Sir G. S. Mackenzie so long ago as 1808 and 1815 . in the Horticultural Transactions. As to the practical directions in this treatise, they are excellent; and we cordially recommend it to the young gardener and amateur, who will find in it much sound practical information. In particular, we would direct attention to the author's systens of pot-culture, as regards stopping the leading shoots, manuring the soil, ar carivation.
Mrs. Loudon's Gardening for Ladies, is one of those books of which we can speak in terms of unqualified commendation. It is just what was wanted for the purpose of the authoress-that of teaching ladies how to garden for themalves; and it gives us great pleasure to find that to has already reached a second edition. We commend it to the especial patronage of our fair readers.

The Memory-Sheet of Garden-work is a calendar in the form of a sheet almanac, pasted apon linen, and folded up like a map. It seems carefully prepared, and will be found a useful aid to the gardener

Vinth Annual Refort of the Comnittee of the Royal Horlicultural Sociely of Cornurall. - We recommend the proceedings of this Society to the attentive consideration of other provincial Horticultural Societies, for it has been prosperous from its commencement, has effected a great mmonent of good, and seems to be in a position from Whenee the sphere of its usefulness may be much experseverance in the objects which it was originally determined to pursue. How many provincial societies have tallen into disrepute by an opposite course !-allowing per nomal objects to take the place of public ones; permitting davis to compar wrong-headed, or narrow-minced indivi engender discord where all should be peace and harmony. The followiag extracts will show much better than we could do how excellent a spirit animates the Horticultural Society of Comwall.

At the general meeting on the ad March the following That tor passed
That the society's bronze medal be given to such of

fead by the sereretary, a donation of 2l. be roted to the Tywardreatli Cottage Gardening Society.

That Menters of the society be entittea to compete for ell prizer gffered by the society; cottagers and market gardeners for the prizes ofered for thair reppestive cluma
and a certain proportion of prizes shall be thrown open also to public competition among such other perso
may pay an entrance-fee of 5 s . at each exhibition.
"That Cottagers who shall compete for prizes must be labourers, not receiving parochial relief, and must, before they are allowed to exhibit, give at least one week's notice of their intention to do so to the assistant-secretary, stating what articles they purpose exhibiting, and that they are the produce of their own gardens."

In the Report itself, it is observed, that " the importance of horticultural pursuits has been so eloquently enforced, fore us, influence on cottagers so beautifuly set be delivered at the last cottage-gardening meeting held at Penzance, that your committee cannot refrain from making the following extract:- 'The culture of the garden is connected with health, with peace of mind with friendly feelings, with emulation without strife, with thoughts which prepare us, by reading the book of nature of the garden was the employment of Adam and Eve in Paradise.

\section*{On to their morning's work they haste}

He did not aim to address those whose circumstances enabled them to make the culture of the garden their amusing and instructive eajoyment. Their patronage of this society, their contributions reared with so much care, ex pense, and skill, were sufficient proofs of their sympathy in opinion and sentiment; but it was his object particu-保 tion might not have been sufficiently fixed to the subject Let them reflect that what the rich seet to enjoy as an amusement, as a luxury, is in their power; that in the feeling of the enjoyment of a garden, poverty can compete with wealth ; that it is a feeling which is a principle of our nature, and if once cherished. can never be extinguished, though for a time it may be smothered. If Romilly, who had attained the highest eminence in the field of intellectual exertion, the courts of law, whose sentiments gave a tone to the ministrations of the legislature, could speak with a sigh at the remembrance of the litule garden in which he was reared; if Fox, whose eloquence fascinated the senate with its sweetness, and roused nation with its thunders, could hasten eagerly from the tumult and triumph of debate to prune his geraniums; i Napoleon, raised to a pinnacle of power beyond that which any other human being ever attained, when kings in his anti-chamber awaited his bidding, could say that if he were in his father 's garden, blindfolded, he should know it by the smell of the earth;-if such were the strong impression of innocent enjoyments, thus shown to be so strong that no time or circemstance conld totaily oblite rate them, how ought the poor man to feel, how prow puglt the cettager to be, when he rects that this pure pugut ua be, phe may be his durig whole of his earthly pilgrimage, without interruption and whole of his ear

CALENDAR OF OPERITIONS for the ensuing Week IV consequence of sume remarks made last week hy "Inqui-
sitor" on my observations reppecting the atmosphere in hot houses, 1 beg to say that I do not arrogate to myself an exclusive
knowledife oi the natters set forth in the Calendar, and therefor feel happy at all times to hear opinions that differ from my own
but advise such treatruent and managenent as experience and ught me as the best, which in forcing Vines an
 Alexandria does require a greater heat than some other kind
whilst in bloom, and that a close atrnosphere is also favourable is whilst in bloom, and that a close atriosphere is also favourathe is
true : but in the moisture my experience will not allow me to co rue : but in the moisture my experience will not allow me to co
incide. Frencil Beans are a difierent affair, the pistil and stamens being effectually protected by the hood of the flower from the
effects of noisture. "Inquisitor" inquires why moisture shouly be necessary to the process of vegetable fecundatiou: 1 neve
knew it to be so in any case; or why do gardeners choose the knew it to be so in any case; or why do gardeners choose the

protection. It is difficult to find any heating apparatus feeble enough for so small a apace. A Joyce's stove might do if you can
get a pupe to carry ott the carbonic acid or carbouic oxide it generates: that, however, is indispensable. As you have time om heating by Mr. Ainger, of which the publication was com menced in a late Number, and which will be speedily continued. many are given for the scale
Geiorgius.- If dusting wilh sulphur does not destroy the cater pillars belonging to the family Tortricide which infest the Roche he must resort to the tedious practice of handpicking. The best
method of destroying sparrows is to place about their haunts cor
soaked in a solution of corrosive sublimate, which is made dissolving some corrosive sublimate in water, and allowing it to
remain till it beconmes clear. remain till it becomes clear.
\(\boldsymbol{G} . \boldsymbol{B}\). \(H\).- The article on S Mr. Kyle--The beautiful climber from Sween River is Kenmédys
(or Hardenbérgia) macrophylla, one of the finest of all greenhouse climbers. will find an answer to her question respecting Calceolarias in the second colum of p. 194. Chrysanthemums grow
freely in any light rich soil; a good compost for them is three parts leaf-moun and well-rotted dugg, and one part of turfy loam and seems one of the best of the class (Anemoniflora) to which it belongs ; the large round guard petals are particularly good. Th
question respecting cotton-seed will be answered next week.

 INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN

NEWS OF THE WEEK
The recent discussions in the French Chambers on the Bill for the supplementary credits for 1841 , gave rise to a more full development of the feelings of opposed parties in France than any circumstance which has occurred since the accession of the present Ministry. M. Guizot stated on the part of the Government, that negotiations are pending with a view to put an end to the isolation of France, and that the Eastern question is so far settled, that the general peace of Europe will be consolidated without France altering her policy or suffering in her honour and interests. M. Guizot then adverted to the intentions of the Cabinet of M . Thiers, and stated that it was part of the plan proposed by that Minister to raise a disposable force of \(900,000 \mathrm{men}\), and to demand of Europe at the head of his army, during the present spring, a modification of the treaty of July, and to declare war in case of refusal. The debate assumed an angry and personal character, but it had a general interest beyond the walls of the Chamber, inasmuch as it established the determination of the existing Government to use its best efforts for the preservation of peace-In Spain the Regency question is still the exciting topic of attention, but the Senate has not yet arrived at any definitive resolution. The public are no less divided in opinion on this important question, and it is still doubtfol whether the functiuns of the Regen will be confided to one person or to a triumvirate. It appears certain that the Duke de Victoria will only accept the single Regency, and as be carries with him the feel ings and influence of the army, it is generally expected that his views will be adopted: the provinces, how ever, are in favour of a trimmirate, and there is also a strong party opposed to any plan in which the Dake de Vietoria will be included. The perplexities of the country are still further increased by the deficiency of the budget ; and the poverty of the state is said to be so extreme that the allowances to the Crown cannot be paid in full. -The proceedings of the Prussian Provincial Diets in regard to the national representation, and the reported declaration of Prince Metter nich that Austria would withdraw from the treaty of London if it were not executed with equity and justice towards the Pacha of Egyph, are the most important points in our intelligence from Germany. - We learn from Switzerland that the Diet has adjourned, and that the Catholic party are likely to resort to force for the purpose of resisting the suppression of the convents. Public feeling is greatly exasperated on both sides, and the questions at issue excite the most angry feelings in all parts of the confederation.Our Levant news does not contain any decisive intelligence respecting the Eastern question, the ambassadors at Constantinople having resolved to refer the matter to the Con ference of London. Recent adrices announce the outbreak of an insurrection in one of the Turkish provinces, by which the dissolution of the monarchy was proclaimed. The rebellion in Samos and Candia appears to have been put down, and tranquillity is now re-established in those mportant istands. - The diferences existing between Persia and this country are said to be adjusted, and it is expected that diplumatic relations willforthwith be restored. -From the United States we learn that the trial of Mr. M'Leod has been postponed, in consequence of a legal error in the preliminary proceedings of the Court; and it is stated in some quarters that a Gorernment Commission has decided against the validity of the trial, on the ground that Mr. M'Leod was not concerned in the destruction of the Caroline.
At home, little has occurred of public interest during the week ; the uncertainty which still hangs over the fate of the President completely absorbs the attention of all classes. No authentic intelligence has yet been received to allay the anxiety of the public, but it is still hoped that she may have reached Bermuda- The trial of the great cause respecting the will of Mr. Wood, of Gloncester, has been proceeding before the Privy Council during the week, and a condensed summary of the arguments will be found under our Law Report; batits further hearing is adjouraed, and a considerable time may yet elapse before a final judgment is pronounced

Cover.-Her Majesty, Prince Albert, and the Princess Royal are well, and continue at Windsor. Her Majesty and the Prince have taken and the Castle, or in the Pari. to take her accustomed airing carried out every morning to take her accustomed airing. and succeeded Lady Barham as the Lady in Waiting Lord Lilford succeeded the Marquis of Headfort as the
Lord in Waiting, and Mr. Rich succeeded Vice-Admiral Sird. Otway as the Groom in Waiting on the Queen.
Parfiamentary.-A number of citizens having pressed Sir P. Laurie to alow bimself to be nominated at the mext election for the representation of the Citr of London, is general report has accepted their Ma H. Lambton does not intend to offer himself again for the County of North Durham, bot it is said that there is not the slight-
been given to the report, that it is the intention of Lord Teigmouth to sccept the Chiltern Hundreds after the withdrawing himself as a candidate for the representation of the County of Antrim, in favour of Mr. Alezander, who is the ouly other candidate, and who is also brought forward on the Conservative interest.-Mr. David Bell, of Glasgow, bas addressed the electors of the Kilmarnock District of Burghs, announcing his intention to oppuse the present Member, Mr. Colquhoun, whenever an election takes place.-The representation of Nottingham, vacan by the death of Sir R. Ferguson, will be contested by Mr. Larpent, as the Ministerial

British Ambassador at Constantinople.-It is positivel reported in the diplomatic circles that Lord Ponsonby bas received leave of absence, and that he is about to leav Constantinople for London. By some of the Opposition papers this circumstance has been construed into a recall Order of St. Patrick.-It is stated that the Riband of the Order of the Knighthood of St. Patrick, vacant by
the death of Earl O'Neill, is to be conferred on the Earl of Arran.

National Debt.-From a return lately laid before the House of Commons, it appears that the gross amount of tion of the National Debt on account of banks for savings (including Friendly Societies) in the L'nited Kingdom,
 \(38,842,6536\)., and the gross amount of sums paid by the said commissioners, inclucking interest, was \(14,075,171 /\). commissioners, in 3 and \(3 \frac{1}{4}\) per Cents., is 24,003,306l.
Salaries in Public odices.-From recent retarns we and in the salaries, \&c., in all public offices, within the ear 1840, bas been as folluws,-viz., total increase in the number of persons, 495 ; total increase in salaries, emoluments, and expenses, \&c.., \(72,1111.3\) s. 1 d . The corresponding diminution within the same year has been, in the number of persons employed, \&cc., 228 ; and in the emoluments, salaries, and expenses, \&cc., \(56,8961.0 s\). \(2 d\). thas leaving a balance in favour of increase as follows:iz., in the number of persons employed, a net increase of 267 ; and in the amount of
increase of \(15,215 \%\). 2 s . 11 d .

Beer Returne.- It appears, from a return lately moved in the House of Commons, that the quantity of ale and porter exported to foreign countries from the United and in 1810 to 1 14, 618 barrels. The East and West Indies, China, and the Australian settlements, are the countries which receive the largeas quantity of malt liquor. The quantity taken by the United States of America is very trifling.
he Army.-It is stated that the exchange of fint for percussion.

\section*{fforrign.}

Trancer-The Supplementary Credits for 1841. -The debate on this bill commenced in the Chamber of Deputies on Monday, and is interesting from the turn it took on the Europe. In answer to a question from the Duke de Valmy, calling apon the Ministry to state whether France was sufficiently prepared to assert the due influence of her interests and pretensions, M. Guizot replied, that it was
true negotiations were pending, and their object was to put an end to the difficult situation in which France and Europe had been placed by the treaty of the 15th July. If their result was successful, France would resume acts in which she did not participate, and the general peace would be cousolidated withont France altering her policy, or suffering in her honour and interests. The ations with all posisible care and solicitude, but he declined giving any further explanations for fear of compromising the negotiations. M. Berryer followed M. Guizut, and
said, that he would be the first to congratulate the goverament on the sluess of che negotiations, if it was such as the kinister described; but be tholight the people could not be burdened with so enormous a sum as \(\$ 50.000,00\) uf. replied that the isspe of che on the union of the Chambers and the Government, and that the committee, aware of this, hau perieived the necessity of not reducing the Military Forces of Prance. M. Govin and then severally addressed the House. M. Thiers follosted and animadverted on the imprudence of asserting, in the
face of Europe, that France was unable to make war, face of Europe, that France was unable to make war
becanse ber Government would be impotent to preserve order in the interior without the strong arm of a dictator He then repeated the same arguments already adurced by M. Gouin, and maintained that the real cause of the nuan given of late to public works for the sake of gratifying the tuents, were incessantly claiming the establishment of roads, canais, bridges, and railways, in the districts which day, by a speech in which he deprecated the obstinacy of Prance in retaining possession of Algiers at the cost of so many sacritices. The debate was resumed on Tuesday. fillaved by M. Billaat who said that it was the duty of every deputy not to grant credits destined to promote a
policy which he disapproved, and that, the Ministry not Had M. Thiers, he said, retained power, Prance would now have under arms a force of \(500,000 \mathrm{men}\) and a fleet of 230 sail, with which she could have remained isolated without danger, and been at liberty to choose lier allies. But the present Minister of Fcreign Affairs, he added, was isolation of France frightened him, because his motto was Peace for ever and peace everywhere. M. Guizot, who succeeded M. Billant, said, that if he declined answering the guteries aduressed to him on Monday, it was or reasoms which be deenied serious and useful to the country. If he likely to produce a beneficial result for France, he would have abstained from renewing them; but the moment would come when he would prove to the Chamber that he mended. The plan of the Cabinet of the Ist of March, added M. Guizot, was the following:-In October Prance would have liad 600,000 soldiers of the line, and 300,000 moveable national guards. At the head of this force the Cabinet would have demanded of Enrope, in the spring, to modify the treaty of July 15th, and, in case of a refusa, declined adopting that system ; and such was the motive of its formation. M. Thiers next ascended the tribane, that the closing of the Dardanelles to ships of war of al nations, which was the object of the present negotiations, was an illusion-a word, and that Russia alone would be benefited thereby. He was not, he said, a partisan of Russian alliance: he still regretted the loss of the friendship of Great Britain, and the Cabinet would sooner or later perceive that its policy had been useful to Russia alone. The general discenssion was then closed after another short conversation between M. Guizot ard M. Thiers, and the first six articles of the bill were adopted.

The Fortifications-On Friday, the King visited the works of the Fortifications in the Park of Nenilly and the Bois de Bonlogne. His Majesty, who was accompanied by Marshal Soult, found all the works stopped along the whole line that he traversed. This interruption is, ascribed to a contest which bas arisen between the Administration which is on the point of being settled. His Majesty ordere that the works should be resumed with the utmost activity A Council, which was to take place on Monday, at the War Office, between the Marshal, the Director-General o the Fortifications, and severol officers, it was said, would definitisely regulate the division of the works. Those of the Bois de Boulogne will be finished the first. It is also stated that it has been decided that the works should be commenced at every point of the continued wall simul taneously. Besides the 35 millions of francs which hav been voted for 1841, for the service of the Fortifications, it seems there are to be added 7 millions, which remained from last year.
Libels on the King. - The trial of M. Montour, responKing's dignity and person by the publication of tertin King's dignity and persor by the publication of certain
correspondence, will take place on Saturday, Aprll 24 befure the Court of Assizes.
The Regicide Darmes.-It is stated that the trial of Darmes, the regicide, will not take place before the 15 th
May, as several persons will stand with hem at the bar of the Court of Peers.
The Paris Telegraphs.-There are, it seems, in Paris, five Telegraphs, viz. the central telegraph in the Rue de l'Universite, which is about to be transferred to the Ministry of the Interior ; the telegraph at the Ministry of Marine, which corresponds with the line of Brest ; the telegraph on the church of St. Eustache, for the line of Lille; and the two upon the towers of St. Sulpice, one of which corresponds with the line of Strasbourg, and the other with lyons and Italy. At the central station , miluutes, by line of \(2 i\) telegraphs; from lille in two minutes, by telegraphs; from Strasbourg in six minutes, by 46 tele graphs ; from Lyons in eight minutes, by 50 teleg
and from Brest in eight minutes, by 80 telegraphs.
Impurtation of Foreign Cattle.-At the commencement of the present session of the Chamber of Deputies, it was proposed to diminish the duty on the importation of foreign cattle, which it seems is 55 franes the head. Since then it appears that a considerable rise has taken place in the price of meat, and it would seem that the poor must soon altogether do without it, unless the Legislature permit mportation. In reference to this subject the following facts have been pubhshed by the Journals:-From 1819 , consumption of Paris was 76,000 oxe of 360 kilogrs. each; from 1829 to 1839 it was not 70,00 oxen of 3.5 kilogrammes, though the population hat
augmented one-sixth. In \(1825,8: 30,0010\) inhabitants Paris consumed \(46 \frac{1}{2}\) millions of kilogrammes of butchers meat. In 1838, 920,000 only consumed 418 millions of kilogrammes. In 1789, Lavoisier estimated that the Parisians consumed 75 kilogrammes per head in the year now they consume but \(18 \frac{2}{3}\). The consumption of wine, the other great source of strength to the morking popuit was in 1809.
Spani-By the last accounts from Madrid. it appears that the question of a Sole Regent was gaining ground, and it is openly asierted that the Duke de Victoria was privately using intimidation and corruption to gain his ends, menacing a coup detut if he was not elected. The senators and depaties continued to meet for the saire discussing the Regency question, but had not come to any
the Regjusted, and it had not jet been decided whether appears that the public are much dirided on this important question. The niajority in the Chamber of Deputies is avourable to the appointment of three regents, whist that the Senate is arrayed on the other side. The same indecision prevails in the Cabinet, two of wiose members the penuties a hecome regents. The comittee of he Deputies to which the Regency question had been he five others being supporters of a remency consistion three members. The Senate had not yet appointed its committee. All the monied men, it is statel, are partisans of the single regency, because they see in it a greater guarantee of stability and order, and they foresee that the Duke de Victoria will not be prevailed upon to share the Duthority, and that consequently he would either retire, resort to force. It seems to have been proposed by Regent, and to impose upon him a Council of Regency, consisting of four members; but this plan does not appear
 f his first letter which had anined principally throug解 regency, was about to publish a second letter on the same subject. The great majority of the accounts from the provinces were in favour of a triumvirate. Subsequent accounts state that a third party had arisen, who on no pretence will consent the the appointment of the Duke de Deputies of the 1st the budget was presented. The fitems rere as follows :-

Reals. .066,842
Receipts
\(885,126,551 \quad 8,851,265\)
Deficiency \(221,197,751-2,215,077\)
Such, it seems, was the penury of the state, that Queen Isabella's only to the extent of one-third of the sum as signed to the crown. The Committee of Deputies charged to report on the abdication of Queen Christina hav declared that act legal, and the report after a short discus sion has been adopted by a majority of 139 to 4 . In the
siting of the Chamber of Deputies on the 2nd, Senio da Silva interrogated the Ministry, to know if any officia information had been received relative to the marriage of Queen Caristina with Señor Munoz. The Minister of the seekior rephied, that although the Geriage in cuestion, had failed in its eforts. In reply to another question of Senior Silva, respecting the guardianship of Queen Isabella during her minority, the Minister alded that the pretensions of Don Prancisco de Panlo, the uncle of the Queen, had been submitted to the Supreme Council of Justice and, in conformity with the decision of that tribunal, the matter should be referred to the Cortes. The Ministry wa arged by other deputies to afford explanations as Whether Queen Christina had exercised aty the Oneen' Spais since her abdication, by apporamentor mpined that the regency alone had exercised this prerogative. The Government, it seems, have submitted the Pope's recen address on ecclesiastical affairs to the Supreme Council of same tribunal in virtae of whose decision the Bish-Nuncio had been espelled from the kingdom. ment. The law for the arrangement of the Navarre Fuero had been presented to the Cortes. The Juntas of Guernica racter. They had resolved that a deputation should a the necessary measures sales of Church property but that the produce of Charch property already sold should be lapplied to relieve the to quit their convents
Portugal.-By the arrival of the Iberia steamer a Falmouth on Tuesday, we are in receipt of recent adrices from Lisbon, but they do not contain any importar intelligence. The financial difficulties of the country the finance committee would propose a considerable diminution of the allowance for the maintenance of the court a measure in which, it is said, her Majesty has expressec a disposition to acquiesce strike of the arsenal workmen, the pretext for whic appears to have been the non-payment of the some weeks ; but was appeased without difficuly. fact of Lord Howard de Walden having presented a from Lord Palmerston in sufport of the caion of the English bondholders, had excited *arious animatversione from the Septembrista papers, which, it appears, credtor the fulfilment of their obligations to their hinisters aho as tae payment of a tribute, and liken to Pachas. Ta rould venture upon su under consideration anmercial ©neen Doña Maria attainea by the Portuguese cabinet. - Quen instant

Germany.-The Prussian Provincial Diets are artively pursuing their task. The Diet of Prussia has published a reply to an urgent petition for constitutional forms, soon after the promise given by the king to improve thie representation of the nation, allord a surefer the boon of that it is the wish of the sovere!gn to conter the brovince has been resolved that it is desirable, in the case of a reduction of the taxation, that it should duchy of Posen, in its answer to the first of the propositions, gratefulify
acknomledges the benefit of a permanent committee, but differs from Prussia, as it prefers to choose the members composing it from the several separate estates or classes choose them from amongst the assembly indifferently. choose them from amongst the assembly indifferently.
The Diet further demands that this committee may be charged with the right of preferring griesances against the provincial authorities, with the management of the
institutions founded and endowed by the estates, and with institutions founded and endowed by the estates, and with
the inspection of the institutions for education. The a vowed ain of these demands is the preservation of Polish
pationality in the province, which, it is feared, would otherwise be swallowed up by the superior weight of German activity and intelligence. This fear makes the inhabitants of Posen adverse to a general representative
body for the nation at large.-Saxony has rejected the propositions for limiting the trade of pediars and of commercial travellers, which originated in the jealousy of the greater shopkeepers in the towns.-Subsequent accounts engagel on the new penal code, which is to be completed engaged oul the new penal codd, which is to be completed
by the end of the year. At present, the new enactments by the end of the year. At present, the new enactments
for the penalties are much less severe than hitherto, duelling penalties; but the punishment was never inflicted, so that penalties; but the punishment was never inflicted, so that
the offenders might be certain of being condemned to death, and then suffered to escape with imprisonment for one or two years, and often for a much shorter time. The
law, too, made an improper difference between noblemen and citizens. The new law makes no exception, and exempts the seconds from all punishment when they have endeavoured to effect a reconciliation, and sentences the combatants, when a life has been lost, to a term of labour. It is said that the king is much interested in the tribunal in declared that henceforth the sentence of the without favour.-Intelligence has been received from Vienna, which mentions that Prince Metternich had lately declared that if the treaty of London was not executed in Mehemet Ali, Austria would vithdraw completely from it Mad leave to the authors of a war which would then become inevitable all the responsibility of such a calamity. -We have received some further account of the new Delegates of the German Union. An agreement respecting the free navigation of the Rhine, Maine, and Necker
has been entered into. All the states have agreed to an equal duty on corn, except Sazony. Bavaria had adopted the English system of a scale of duties. It has abandoned
this for the general 10 per cent. duty of the tariff; but as this for the general 10 per cent. duty of the tariff; but as
Saxony would preserve to itself the exclusive supply of the lower districts of the Erzgebirge, and as it at present can export corn to Bohemia at a moderate duty, it refuses to jois the arrangement. Prussis levies a double duty on extraordinary demands on the part of Hanover, Branswick has renounced its connexion with the Hanover and Berlin to conclude a junction with the Prussian Commercial Union. Since the departure of this commission, mercial Union. Since the departure of this commission, and compromise the principal cause of difference, which consists in a system for establishing the railroad communication of both countries with Prassia and Hamburg.towns in 1840. Munich contained 106,531 souls ; its garrison incladed, of which 74,303 are Catholics, 6,914
Protestants, and 1,423 Jews. Since 1839 the increase of population has been 2,095. Augsburg has 36,869 souls; Nuremberg, 46,824 ; Bam Serg and Ratisbon, about 20,000 each. Bavaria contains 30 monasteries and 30 nunneries. Beme that the question intigence has been received from was decided in the affrmative by twelve cantons against nine who proposed its dissolution. The deputies of Argau had entered a protest against the decree of the Diet of the Federal Diet, the Argovian government, it seems, was proceeling as actively as ever with the spoliation of the convents of the canton. The Catholic population, on the other hand, emboldened by the admission of their rights by the Legislature, were preparing, with the aid of their
allies, to enforce the execution of the decree. The exasallies, to enforce the execution of the decree. The exas-
peration was carried to the utmost pitch, both in the peration was carried to the utmost pitch, both in the
Freyenamt, the seat of the insurrection of Jan. last, and in the Frickthal, or Austrian district of Argau, which had remained neatral in the last contest. The Argovian Catholics had been likewise promised support from the
Conservative party at Lucerne, and the people of the smaller cantons were ready to take up arms for their defence. It was at first expected that Mustria and the other foreign Powers would have postponed addressing the Diet. This, however, has not been the case. The Minister of Austria conmunicated to sereral deputies the last despatches from his court. Which were couched in the most menacing terms. The Russian Eavoy has also had
a very warm altercation with M. Neuh us, the President a very warm altercation with M. Neuh uss, the President
of the Diet and Vorort, and the English Charge d'Affaires, it is said, bas taken a rather imperions tone with the avoyer. The accounts do nut mention what course the
French Envoy had thought proper to parsue, but the French Envoy had thought proper to pursue, but the
Liberal press throughout the confederation was unanimous in rejecting with indignation the offer of mediation which France was supposed to have made to the Helvetic goverament.
Holland.-Accoumts from the Hagte state that a case
of forgery, recently discovered there, had produced a great sensation. It seems that a manufacturer of Leyden, who had fallen into difficultits some time be:ore the accession of the present king, and had obtained his Majesty' 8 con-
fidence while Prince of Orange, had received rarious sums of money from him ; and his royal benefactor had gone so far as to put his name to some bills, which the manufacturer readily got cashed. Taking advantage of this, he
forged the Prince's name on several other bills, circulated them, and obtained 100,000 florins frum one capitalist alone at Amsterdam. The man mas arrested not long ago
at Rotterdam, and is to be tried for the offence. He has at Rotterdam, and is to be tried fer the offence. He has
endeavoured to screen hinself by the atening to disclose some secrets concerning the present king, of \(\pi\) hich he boasts that he is in possession. His Majesty, it is said, is determined that justice shall parsue its course with this
individual individual.
Belgiumen.-At the clo e of last year an agent of the investigating the investigating the working of the peuny-postage plan.
report of this examination has recently been submitted t the Belgian goverument, accompranied with recommendations for the improvement of thie post-office. Tue pincipal features of the chanes recommended are the antion of a uniform rate of 2 d . ( 20 centimes) on all inland letters, except those which already cost but ld., optional pre payment by means of stamps, an increased allowance o
weight, and proportionate reduced charges in the transweight, and proportionate reduced charges in the trans-
mission of packets by the post. This subject is also exciting a lively interest in France. If a uniform asstem be adopted in Belgium and France, there can be little doubt it will become general throughout Europe.
Gagres.-The Continental papers state, on the anthority of private letters, that Prance has expressed a desire
that the gosemment of this country may be re-constituted with the aid of the great Powers, so as to acquire the requisite strength to snatch this unhappy country from anarchy. The overtures made by France appear to be eagerly received by the other Powers, with the exception,
however, of Rassia, which, without doubt, considers that a strong government in Greece would be a new obstacle to certain projects of aggrandisement in the East.
Princess, but a Prince, with which the King bas presented by her Majesty, and that the royn has been received the name of Don Alphonso, and the title of Count of Caserta. The King had remained constantly by the Queen for the last fortnight, but was obliged to come back suddenly to the capital, on account of the death of the
Minister of Finance. It had been arranged that the Minister fof Finance. It had been arranged that the
documents for finally settling the sulphur question should all be produced by the 20 th of June nest, and that the liquidation should take place on the 20 th of December.
us that the ambassadors of the Four Powers, after holding conferences on the communications made to them by the Porte relating to the representations sent by Mehemet able to come to an understanding among themselves, have resolved to refer the matter to the conference of London Nothing had been decided upon respecting Reschid Pacha It is said that he has three times temdered his resignation, but the Suitan has refused to accept it, considering that services. The state of affairs in Constantinople is said to be very unsettled; but, as the will of the Four Powers, and of the Conference, would soon be known, it was hoped that all fears of the prolongation of the crisis would be speedily removed. The Sultan, it seems, has written autograph quent advices recived cií France infurm us that a general consternation prevailed in that capital, in conserquence of several couriers having arrived there with despatches announcing that the whole country about Diarbekir was in a state of insurrection. The militia had been disarmed, the civil and military authorities put to death, and the dissolution of the Osman monarchy proclaimed by the rebel tribes. The report was spread in Diarbekir that the Russtans had set fire to the imperial palace at Constantinople, and blown up the Seraglio, the walls and towers of the city, together with the fleet, the army, the Sultan, and the Divan. A report was also current polite terms rithdraw again become stubhorn, and had in polie terms withdrawn his given word. Erery one at Constantinople was ansious
to learn what counsels the Sultan would adopt in conseto learn what counsels the Sultan would adopt in conse
quence of the new and unexpected turn which affairs had taken in the East.
Egrpt.-Letters from Alexandria, received this week, of the 27 th ult., bring nothing decisive respecting the Egyptian question, and they all express a hope that, in spite of the councils of the British ambassador, the reprewill induce tiue Porte to modify the late firman of the Sultan.

Samos and Cavdra. - The troubles in these islquds appear not to have been so serious as they were repre which arrived at Ischesme on the 15 th Marcin to take troops and convey them to Samos. will suffi e to restore order in that island. Letters from Candia say, that about a hundred individuals had arrived from the Murea in that island, Turkish government: they met with most encouragement from sume Greeks who joined them. Three Enghsh ships of war, however, sufficed to keep the regels in awe, and as the consulate authorities did tieir utmost to quiet the people's minds, it was hoped that all would be puat an end to without bloodshed. The same letters add, that
there are now eight Turkish men-of-war, viz. two frigates, three corvettes, and three brigs, with 2,500 regalar troops,
at Andron, in the harbour of Suda; likewise an English ship of the line, a frigate, and a brig. Three more English men-of-war were expected from Marmorizza or Malta, and the Austrian commudore. Bandiera, it was expected would soon arrive with his squadron, so that it was thought tranquillity would not be again interrupted. It is further addell that the condiot insurgents had sent a deputation to ference of the great powers of Europe to procure a free coristitution for the mhabitants of the island
Plersia.-Intelligence has been received from Teheran, conveying the important information that the differences factorily arranged, the Schah of Persia havi: g declared himself ready to cede the fortress of Gurian taken by his troops in the list war. It was consequentiy expected that the British enbassy would return to Teberan forthwith.
Americ.--By the arrival of the steam-ship Caledonia papers to the list inst. The news by this arrival is not of much importance. The ouly sulject of any interest to the English reader is relating to Mr. M'Leod. It appear that in consequence of an error, committed by the clerk of day notice of the drawig of Jury, the the bed held, and the trial of Mr. M.Leod was of necessity from this cause, independently of others, postponed til the nest
term of the court. A commission had been issued for the examination of Mr. Forsyth, Mr. Fox, and other witnesses, Who evidently were not in a ituation to give any evidence that could be applicable to the case, except in so far an political and international considerations of the highest importance are inseparably blended with it. The grant of an admision, hower, was regarded as tantamoant to New York, that in the performance of its judicial duties it is bound to recognise and to respect the political relations of the Federal Government. In connesion with this subtaken pla ment in which the former sirnicel the ere 1 mion to demand his passports, and that a copy of this correspondence had been put into the hands of the Execative of the State. The tone however of the latest advices from Washington is essentially at variance with this information In the Legislatere of Maine, the chairman of the com very voluminous report on the present position of the boundary question, and 1,000 copies with the accompanying resolutions were ordered to be printed. The report does not advise any immediate action by the state, or indicate definitely any future period when the state ought to act with with, to repel the existing invasion of the state, and, \(i\) necessary to secure it against future invasion, to take military possession of the disputed territory. One of the the proposed joint commission of survey and nettlement ought to be closed within the present year.

Canada. - The news from Canada consists exclusively of details relating to the election of Members of the Legislature of the two united provinces. Gireat confi dence seems to be entertained that a decided majority of the representative body will be ditposed to act in harmomy with the Executive Govermment.
* Buenos Afres, - We have reecived accounts from Buenos Ayres to the 23d Jan. It appears that the country was in a very unsettled state. The Governor of the Banda Oriental had raised about 8,000 troops to protect his province from Governor Rosas. They were pressing for Prodece of all kinds yas very searce and high. Two signal trimphs tove been abtained over different divisions of the remnants of the forces of Lavalle and those of La Madrid and Brizuela. General Pacheco, with a foree of 550 men, attacked then in their camp, and, after atrong fall fall. The number of killed of the vanquished in the batue were 44 officers. 360 muskets were collected on the feld a great quantity of cavairy equipment, 2,000 horses, the Ist, General Aldao obtained a sictory over a body of the lit, fall field of battle a great namber of killed, wounded, and prisoners. The infantry being surrounded, hoisted a white fiag, and craved their lives, which General Aldao granted them. The publication of this news at Buenos Ayres was hailed by a salute from the fort, a peal beils, and a discharge of rockets. At sun-set the salate bands of untisie traversed the streets, accompanied by crowds of citixens.

Monay-market, Friday. - Consols for the Account opened at \(90 \frac{3}{3}\) to \(\frac{1}{2}\); and the only fluctuation that took
place was in there being occasionally brayers and sellers at yeg ; the last quotation bens \(\mathfrak{y} \frac{3}{3}\) rather buyers. Bank Stock closed at 171 to 3; and Excnéquer Bills 13s. to 15 s . prem.

\section*{filetropolis and its frimitu.}

Lord Mayur's Dinner. - The Lord Mayor's Easter ewtertainment was given on Monday in the Egyptian hall of the Mantion House. Among the guesta present were the Duke of Cambridge, and other distinguished individuast
His Royal Highness, on returning thanks for his health being druak, said that he always fett anmitigated pleasure
at meeting the citizens of London. He had always found that he and every member of his family had been received with the highest respect and the greatest cordiality by that politics in accordance with, or opposed to, those of the existing Ministry, the Royal Family had never discovered any difference of feeling as regarded their reception. With regard to the kind and flattering observation made by the Lord Maror upon the amiable and excellent disposition of his revered father, he was aware how much he owed to him for the inculcation of those principles by which his conwn, whom he had endeavoured to rear in the same principles, and he sincerely trusted that he would prove an ornament and an honour to his country. The evening seems to have passed off pleasantly, a late hour having arrived before the company had entirely separated.
Design for a New Roof to Guildhall.-This noble hall has evidence, in its present state, by the large buttresses in the exterior, of having possessed in former days a splenthe destruction of the old mooden roof at the great fire of London in \(16 \mathbf{L i t i b}^{\circ}\). It was built as a temporary expedient, and it has been kept up by repeated repairs from time to time, and is not at all in character with the other parts of the of what is sapposed to be the character of the old roof has been for some dars exhibited in the reading-room of the Corporation, and has attracted great admiration. It shors how it may be restored without injury to any part of the present walls or openings. It is proposed to alder the namented with stained glass; the effect of the present tracery to continue for the purpose of carrying up the roof will spring, of a similar construction to those at Westminster, Eltham, and Hampton Court, enriched with pendents and ornamented open arches. The soffet, or ceiling, will be pannelled, and enriched with bosses at the intersection of the monldings. The drawing has been made with by his motion in the Court of Common Council, referring the subject to the consideration of the City Lands' Committee
ily Antiquilies.-TThe the foundations of the French Protestant Church in Threadneedle-street have found, at a depth of 14 feet belom the surface, a fine specimen of Roman tesselated pavement
It is a very perfect specimen of tessalce of the third or fourth century, and is about nine feet long and six fee wide. The proprietor of the ground has allowed the pave ment to remain as it was found, at the base of a pillar near Threadneedle-street, and placed over it a platform in order more freely to allow public inspection. Many per sons have availed themeelves of the opportunity of witnessing this ancient specimen of art in the earlier domes tic architectare thengh, is that of a Roman house of the higher order and within the last few years similar specimens have been found, in nearly a direct line, in Bartholomew-lane and rithin the Bank, which appear to show a connected series fthese villas. All remants of these were lost to the public, as they were broken up by the workmen, as was he case about two years since in Paternoster-row, where are ras thus broken up. The site of the late Royal Exchange has produced few objects of interest to the antiquary, bu rithin the last few days the excavations approaching Cheapside have disclosed some solid specimens of Roman masonry. Under St. Bartholomew's Church were found some carious structural arches coeval with or antecedent to the Norman period.
Public Buildings of London--A very great number of persons have visited the Tower during the week. A large number of warders were daily in attendance to conduct the visitors over the armouries and the Jewel-office The reduced price of admission brouglit a great many per ons until the regalia, wich ona, nem the aew builang preparing is completed The total number of visitors during Monday was-to the armouries, 1,\(045 ;\) and to the Jewel-office, 385 ; and the amount received for tickets, at the reduced admission of \(6 d\). each, was \(40 \%\). \(1 \mathrm{j} s\). The number of visitors to the Jewel-office was larger than in any three months under the old system, when the keeper of the regalia was in the habit of exactiny very large fees from individuals for admission. The British Museum also has been crowded with visitors, upwards of \(t, 000\) persons having gone through the rooms in the course of Monday. The attendance at the National Gallery has been greater than has been known on any hoday occasion
Chartist Meeting -TThe Chartists held a meeting on Monday at White C'ondut-house, for the purpose of elect ing delegates to form a convention, in conjunction with ten Through some misunderstanding as to time of the country delecates attended the meeting. Mr. Par ker, a journeyman tarior, took the chair. The meeting was addressed by several leading Chartists of London, an resolutions expressive of continued adherence to the prin ples of the people's charter were agreed to, at. d embo died in a pettion to Parliament. The delegates wer made for calling the Convention tagether early in Mar. The greatest order was preserved during the whole of the proceedings, but the meeting was not numerously at tended, there being at no time more than about 400 per

Resignation" of another Official Assignee.-It transpire
in the courge of Monday that Mr, Jawes Clark, apother of
the official assignees, has withdrawn himself. The reason assigned is, that he has sustained losses by a suit in Cban has consequently resigned his appointment. As far as cs at present be ascertdined, his defalcation is only abou , froul. spread orer 200 or 3110 estates. One of the es tes in which he was the official assignee beiny before the Court of Binkruptey, a good deal of surprise was occa sioned by his non-appearance, which was, however, at las cleared \(u p\) by the receipt of a letter tendering bis resignafion. It is further stated that Mr. Clark has within the ast two or three weeks paid moneys which he had received in his official capacity into the Bank of England, to the stent of s,00ull, and there remains a balance of 912. 1. \(\frac{t 12 .}{}\) in his private banker's hands. In the def ciencles stated, an allowance must be made har had under management, and which have not yet been brought to an

Oxford and Cambridge Boat Race.-This interesting contest, which seems to have absorbed the attention of Wednesday brought to an issue. The first of the matches hetween the Universities on the London river took place
in 1836 , and, including the one of that year until the present period, three races have been contested, in all of which the Cantabs have been successful. At twent minutes past six the boats started from Westminster-bridge at a given signal, amid the cheers of a great multitude of persons who lined the bridge and banks of the river. The Cambridge boat took the lead at once and maintained her uperiority to the last, passing through Putney-bridge, the himit of the race, one minute and five second ind of the Oxonians. The distance, about six mines, was and at Vauxhall and Chelsea discharges of cannon greeted the cutters as they shot past. The assemblage of persons at Putney was very great, and conveyances of every description were jammed together on the bridge. No accident, however, occurred either upon the niver or on shore. well managed, and offered no obstruction to the boats as on some previous occasions, and the spectators in general expressed themselves highly gratified with the spirit and kill with which the match was contested.

Church Rate Meeting.-A restry was held on Tuesday at West-Han to elect charchwardens and other officers. The Dissenters mustered their forces to abolish all church offices, declaring there should not be a bell rung ar an dusted; but notwithstanding the efforts of the Anti-Church-rate Society, they could only muster from 20 to 30 hands in a very large vestry. The majority was therefore in favour of the rate.

University College, London.-It appears from the report of the Council that the students of this College have University of twelve gold medals, and \(1,040 \%\) out of the 1,280 granted in the form of Exhibitions and Scholarships, have been obtained by students of this college. Those who most distinguished themselve , William Davi or place in the year 1840, were Mr. Wienam bitioner in mathematics at the matriculation examination ; Mr. Joseph G. Greenwood, on whom, on taking the degree of B.A. with honours, was conferred the University Classical Scholarship or 50: a-year John Wood, who, on taking the degree of B.L., obtained the Law Scholarship of sul. a-year for three years; Mr. Edmund Parkes, to whom, besides three gold medals, two exhibitions of \(30 l\). a.year each, for two years, at the first examination for the degree of Bachelor of Medicine, were awarded ; and Mr. Richard Quain, Who, on passing the second examination and taking his degree of B.M., obtained the Medical Scholarship of 501 . a-year for 2 years. about ten o clock, in Chelsea Reach. A party of five young men, coming from Richmond in a boat, were upset through carelessness, the wind being high and the water rough, and two of the number were drowned.-On Monday afternoon an accident occurred to a young man in the employ of Messrs. Bicknell and Co., sperm-onl manufactory, Newington Butts. It seems that he was engaged in superintending a large cauldron of oil, which was in a boiling state, when by some accident he fell into it. His screams attracted the attention of his fellow-workmen, and as soon as possible he was extricated, and conveyed to Guy's Hospital. He sustained so mach injury that he expired on the following day.-Another accident occurred on Tuesday morning to Mr. James Elmer, builder, of Marylebone. It appears that he was on horseback, passing through Jermyn-street, when the animal suddenly started at a batchers dog which snapped at its it. Mr. Elo and fell upon his head on the edge of the kerb-stone, by which he had his skull fractureri in a very serious manner. He was conreyed to his residence immediately, but no hope is entertained of his recovery.-Capt. Seymour, a gentleman residing at Englefield-green, who was out with Majesty s buckhounds on Saturday, was nearly deextraordinary conduct of a young man named Parker, whose father rents a large farm at Warfield, near Windsor Great Park. It appears that as Capt. Sevmour, with several other gentlemen who were following the hounds, was approaching a gate leading to a field in the occupation of the elder Mr. Parker, the son of the latter attempted to stop them, with a pole in his hand, at the end of which
was a sharp iron spike used for agricultural purgoses. A
the horsemen were not disposed to be prevented parsuing and strock Capt field, twe joung man raised his seapo Ihe flesh \(h e a r\) across the face. T spike penetrated the flesh near the rigat eve, causing the
blood to fiow copionsly, and compellmy the gen:lem in the give over the hunt, and return home.
being examined, it was founl to be within han the wsun the it is said, have been commencent by Capt. seymour to p his assailant.-On Tuesuay night, a marie 1 . named Parker, whose husbad heeps a ce bult's stiop thrown out of the first-Hoor windor. The unhappy woman was immediately taken up and removed to ti Westminster Hospital in a dangervus state, leer head beiog fractured, besides other injuries of a serious nature. appeas that she and her husband used to drink and har frequent quarrels. The husband's account of the affair is, that he and his wife having had some words, she ran up
stairs and bolted herself in the front room, first floor. He knocked, and endeavoured to obtain admission; bat she
threatened that if he forced the door, she would throw her self out of the windore. He kicked the duor, a part which gave way, and at that moment he heard the window raised and something heavy fall ints the street. He ran down stairs and found his wife in the situat. ma described. From the woman's situation, little or no hopes are erter tained of her recovery.-On Tuesday night, the imhatitant hearing loud screams of murder proceed ing alarm oy dwelling-honse of Mr. Davis, pianoforte manufacturer, and irmmediately afterwards a female was observed to ends atic window upon the feet. She immediately started up on her feet, and made for the edge of the leads, apparently with an intention on runs by the side of Mr. Davis's house. By this time however, the assistance of the police being obtained, a situation. A surgeon, residing next door, attended and conveyed her in a coach to St Thomas's Hospital. It that she was living in Mr. Davis's amily as houd the lelusion that some persons has hoen labouring under and on that night she imagined they were breaking into her room for that purpose, and under the influence of that delusion, and to escape, she leaped from the windur.
Robberies.-Information has been receivedat the inctro
olitan police-offices that, within the last few days, several aluable articles have been stoien from the residence of the Earl of Chesterfield, South Audley-street : they consist of a purse of money, several articles of plate and jentene night the following robbery took place near Greenwit Church: A young mav, named bris Tuesday morning, and, accompanied by his wio and the remainder of the day. About twelve o'clock at night the party were proceeding to London; but when near the charch-gate, a respectably-dressed man rusiring the cause
violence against Mr. Briscoe, who, on in' anch violence, was immediately knocked down. A mitb oon collected and some police constables arrived on the pot, and having removed Mr. Briscoe into a stop, it was ascertained that his right thigh was broken, his pockets ransacked, and his hat stolen. A coach was procured, remains in a very precarious state.-On Monday a quantity of property was stolen from the Treasury, consisting chie dy there were no fewer than seren robberies of watches, jewellery, and plate effected at gentlemen's residences in aumerous depredations ader the following circumstances. On joints of meat haring bert purchased and ordered to be "sent home, the butt.u's where he has left the joint. A fellom, attired as a butcher, after watching the boy, and seeing the meat uplivered, in a short time calls at the house, and bis informs the servant, or other party, taat the usually given to him and he makes bis escape with the property. A description of the thite is given, and police are on the alert to capture him.
Inquests.-On Tuesday an inquest was beld before Mr . Walsley on a female infant, whose mother, with her parents, persons in a respectable sphere of life, resides in wife of 3 nity of Grosvenor-square. Elizabeth Price, the wris. mechanic, stated that shie had deceased to weth seme noth
fre she ras going win to ie it the brest, when she found it lying on its rimht side cold and stiff. She imme diately sent for a medical geatleman, who said it hau ber dead some time. Mr. Wahley ohserved that fine, healthy children under the age of is monthis was rery grat, all atcount for it. Immediately on an infont bring tound dend in bed, it was invariably rumoured that it had neenover. but no such thing, not one in a hundred met its ueant. In way; death was the result of some internal compry reason-namely a pecuniary one, she being liberaily paid to keep the child alive if possible. Verdict, Found dead Sarille-place, Miss Elizabeth Baker, a young lady residing
existence by suspending herself to the rail of a bedstead At the inquest held on her body the sister of deceased past, and became much worse when witness arose on Saturday morning. When this was commanicated to deceased
who had also been ailing some time, she appeared much Thected, and wept, saying, "I cannot bear to part with my mother. "hat shall I do? I should like to go and lie
with her." Deceased afterwards took breakfast with her father, witniess, and another sister about eight. She
missed deceased at eleven. Searched for her for some time, and ulimately went to her brother's bedroom, the door of which mas lucked, with the key inside; forced the handkerchief attached to the rall of the bedstead. Wit ness imnediately took her down and sent for medical as sistance, but it was unavailing, as she was quite dead Deceasel had not been from liome for nearly four years. She was very much attached and very attentive and dutiful to her mother. Witness has no doubt deceased's mind was affected by the prospect of her mother's approaching suicide was committed by a lady named Lee, residing at Holland-street, Kensington. It appears that the unfortunate lad, who was between fors and 80 years of age, had for some years past been most eccentric in her habits. Ort
Tuesday a perzon named Brown, residing at No. 3 in the same street, committed suicide by cutting his throat; and on Thursday morning a man named Brookes, residing mithin 300 yard of the spot, also committed suicide by
strangling himself, haring first, it is believed, meditated the murder of his wife and family; which events are said to have made a deep impression on her mind. When discovered she was weitering in blood from a wound in her threat, and on the table were a knife and a pair of scissors, when on examination he found that by means of the scissors, the trachea had been lacerated to a great extent, and although every attention was paid that surgical skill could suggest, death ensued about one \(口\) 'clock. - On Tues-
day another attempt at suicide was made by a man named day another attempt at suicide was made by a man na appears that a member of the family going into his room,
found he had barged himself by his bandkerchief, and that life was not extmet. He was cut down and promptly ristured; but he subsequently got a rope, and was on the point of making a second attempt, when he was prethe supposition that the recent repeated suicides in the neighbourhood have operated upon his mind.-On Tuesday morning a widow lady of fortune, residing at Pecka pistul; the ball entered below the left ear, and lorged below the right eye, where it still remains, and but faint the daugh.ter of a wealthy Dublin merobant, and the widow Suspecterl.
Suspecter Murder of a Chilh.-A case, which has
caused much sensation in the neiglibourhood where it was discovered, was gone into on Tuesday evening, before Mr. appeared that on Friday morning a lad was directed by his mother to go for a bundle which she saw lying in some ruins in Buaverie-street, Fleet-street. He did so, and upon untying a piece of coarse cloth he found the body of round the neck, and another round the body. tied tightly had no cluthes on, and frons subsequent evidence given by a policeman, it would seem that the child was alive when placed there. On the previous night another youth saw a woman tahe fron her basket a bundle, and throw it into
the ruins ; but as he supposed it was a dead cat, he took mof further notice of it. The woman then walked hurriedly down Temple-street, in the direction of Black friars-bridge.
A surgeon had no doubt the child was born alive. The A surgeon had no doubt the child was born alive. The
Coroner suggested an adjournment, and the inquiry was directed to stand over.
Fires,-On Saturday a fire broke out at Willow-walk, he back-room windows of the first being given, the inmates were aroused, and a messenger despatched for the engines, by the aid of which the fire was until the farniture was entirely destroyed, and the house materially damaged. The fire is supposed to have been caused by some clothes having been incautiously left hang-
ing before the fire after the family had retired to rest. -On ing before the fire after the family had retired to rest.-On
Tuesday morning a fire broke out on the premises of Mr . Gooch, a large academy in Bermondsey. It was
first discovered by a policeman on duty, who aroused the inmates. Six or seven engines soon arrived, but the fire was not subdued until the whole of the premises were totally destroved. The building was almost wholly comwas fortunately detached. The fire is supposed to have orizinated in consequence of the carelessness of some carIremises during the Easter recess, The damage done is estimated at ajuat 1, moct 6 .
Mortality in the intotropolis. - From a published table Showing the number of deatha, from all causes, registered
in the wees endilig Saturday, 10th April, 1841, it appears In the wee's ending Saturday, 10 th April, 1841 , it appears
that the total nunber was \%iso-of which 40? were males, and 378 femaits; - the weelly average of \(1838-9-10\) having been-males tia, females i.jl.

\section*{Z3robimeial Nrfos}
city was held on public meeting of the inhabitants of this
the propriety of petitioning the Legislature for a total
repeal of the com-laws. The number of persons present does not appear to have been so great as was expected. The place of meeting was in front of the Tradesmen's Re form Association office, from which the speakers addressed belonging to the Liberal party in this town : Sir J. Walmsley acted as chairman. The business of the day was opened by the chairman, who said that the meeting had
been convened for the parpose of considering the propriety been convened for the purpose of considering the propriet of petitioning the Legislature for a total repeal of the corn-
larss. The rarious speakers who would address the meeting would point out the injurious effects of the corn meet not only as regarded the means and the comforts of the people, but also as regarded our commerce and manufac tures; and he trusted that ther should hare everyman's help ing hand, that no man might be said to be supporting the corn-laws, lest haply he might be sinning and fightin giis day our daily bread," hress day our daily bread. The meeting was then ad dressed by several speakers, and after a variety of resolu-
tions had been passed, the draft of a petition was read tions had been passed, the draft of a petition was read
and its adoption mored and carvied, after which the meeting separale.-No news bas jet been received of the steam ship President, concerning whose fate very great and general anxiety begins to be felt, not only by those who bave friends and property on board, but by the public at large. A variety of rumours respecting her safety have been current during the week, but all, on investigation have proved unfounded. A very general report, at the early part of the week, to which some credence was given was, that she had arrived at Madeira, in a damaged state, but that all on board were well. This report, it seems, originated in consequence of some letters having been re ceived by Mrs. Power, whose husband was on board the that he had received intelligence from Madeira to that effect. The report, however, proved to be entirely without foundation. Mrs. Power bas also received, it appears, a letter from Captain Fayrer, the late captain of the Presi-
dent, assuring her that there is nu fear of the safety of the dent, assuring her that there is nu fear of the safety of the
President; that no doubt something had happened to the rudder or that no doubt sometling had bapp reputation on the stability of the ship. He had no doubt she was gone to Bermuda, owing to the wind being contrary to not probable and still worse for Halifax, and at it was muda, as she would be out of the track of homeward-bound ships. The family of the Duke of Richmond are, it is said, in very great distress of mind, in consequence of his state of suspense ; his Grace's second son, Lord G. Lennos, having embarked at New I ork in the President, at join his regiment in this country. Insurances at Lloyd been effected on the President and cargo in the course the week.-Since the date of the preceding intelligence,
the Caledonia steam-ship and the packet Tiro'inla arrived from New York: they bring no information what ever of the President. The only hope, therefore, that now appears to remain is, that she may have succeeded in reaching Bermuda, or the Western Islands. Capt. Fayrer, her late commander, whose opinion and knowledge of her capabilities as a sea-boat are entitled to consideration, is still of opinion that she is safe. The absence of any intelhigence, however, by these two arrivals greatly shores shores again. In connexion with this subject, it appears that her Majesty upou leaving Buckingham Palace for Windsor Castle left strict commands that immediately upon the news of the safety of the ship reaching London,
a special messenger should be despatched to Windsor with a special messenger should be despatched to 1 indsor with the intelligence; and it having been stated in London on Tuesday evening that information had been received which left no doubt that it had been heard of and was in safety, evening suessenger started express for \(W\) indsor tha jesty through the Lord Chamberlain, when the Queen and Prince Albert expressed the highest satisfaction.
Manchester.-The young woman, Frances Bostock, who was assassinated on the 8th March last, at a beer house in Liverpool-road, died on Monday. The circum stances of the case have apper in and it will be recollected that a man named Hampson with whom deceased had lived since the death of his wife, was appreheuded soon atter he committed the act, and Hampson, it seems, is 33 yo five children, four of them by his years of age, and the other by deceased, who was about 21 years of age. Hampson's wife, it is said, died of poison, but by whom administered could not be ascertained. An iaquest has been held on the body, when the evidence haring been heard, the jury returned a verdict of "Wilful murder agains Willam Hampson," and
trial at the next dssizes.
Leicester.-A curivus custom, on Easter Monday, exists in Halliton. It seems that an inhebitant some vear since, bequeathed a piece of land to the rector of the town for the trne being, in trust for the providing of two harepies, a quantity of ale, and two dozen penny loaves, to be
surambled for annually on Easter Munday. This land, whici was called Hare-crop-Leys, being enclosed in 1.10 a piece of land was allotted to the rector in lien of the same, since which period the rector, instead of the two hare-pies, provides tro large pies made of veal and baecn, two galluns of ale, in wooden botties, without handies or strings, are put into another sack, and the penny loaves, cut into quarters, are put into a basket. The men who
leave the rectory, by those who intend to engage in the Hare-pie Bank, which is situated about a quarter of a mile hare-pie Bank, which is situated about a quarter of a mile
south of the town, the pieces of bread are occasionall south of the town, the pieces of bread are occasionally
thrown to be scrambled for. The place of rendezvous conEists of a bank. with a small trench round it, and a circular and ine centre, into which the pies and ale are cuously thrown. Upon a signal being given, those who are fond of the sport rash forward to seize a bit of pie, or endearour to get possession of a bottle
Hull.-A question is now agitating the Wesleyan bod throughout the country on the subject of wearing clerical gowns in the pulpits of the society by its itinerant mi nisters. A pamphlet lately published on the subject state that the system, if adopted by all the itinerant preachers Waddy, the most popular Wesleyan preacher in this town, having had a silk gown presented to him br some ladies in his congregation, has appeared therein in public; but hi so doing, it seems, has nut met with the a pproval of the office-bearers of the society here. The Rev. Mr. Bunting at Manchester, also appeared in one on the same day as proved of, Mr. Bunting bas withdramn strongly disap Conference, when the roatter, it is said, will come on fo disenssion.
Warrington.-Within the last 12 months a party of burglars has infested the country within a circuit of 20 or 20 miles of this place. The robberies committed were of frequent occurrence, and gradually became more daring At first they paid their midnight visits, armed only with ludgeons and crowbars; hut more recently they have turned out each well equipped with pistols, dark lanterns,
crow-bars, and all the implements of their trade. At crow-bars, and all the implements of their trade. At
length, the burglary and attempted murder at the house of Mr. Shaw, of Poulton-with-Fearnhead, about a mile from this town, an account of which we gave in a former Numer, brought things to such a crisis as to be no longer offendes, and reward wis olfered for the ketection of the rade, and the hope of a free part and give eridence ageinst their conpanions The deputy constable of this town rendered himself active in the inquiry, and, after searching the country for many miles round, at length obtained a clue to the offenders, and, assisted by the Manchester police, took nine of them into custody. They all turn out to be men of very depraved habits and desperate characters. They tave undergone an examination before the magistrates. The most direct evidence brought against them was the testimony of an
accomplice, named Sutton, who was admitted Queen' accomplice, named Sutton, who was admitted Queen's
evidence. From bis statement it appeared that, in addition to several other rouberies, the prisoners were the
parties concerned in that of Mr. Shaw's house. Further evidence was produced to corroborate the teatimony of the accomplice, and all the prisoners were committed to take their trial at the next Assizes
Newcastle-on-Tyne. -The aspect of the country in the neighbourhood of this town is, generally speaking, highly gratifying, and every agricultural operation incidental to the season is in as forward a state as could be desired. All accounts concur in representing the young wheats and pastures as remarkably vigorous and luxuriant.
the Considerable erider created in the garrison here,
body of a private in the 95 th regiment, who died last weelk, to be interred in the Castle burial-ground. It seems that deceased was a Catholic, as most of the depiot are and during his last moments received the consolations of the Catholic priest. The corpse was consequently interred in the Ner Cemetery, neariy the whole of the depot attending, under the superintendence of a captain. It is said to be in contemplation by the Catholics of Suields to bring the affair before the authorities.
Bradford.-A notice has been exhibited at the parish church of this town, to the effect that the churchwardens are about to adopt final and decisive measures for laying rate. It is a notice of action in which an inhabitant of the town is plaintiff, and the churchwardens are defend ants. The ground of action is stated to be to compel th defendants to show cause why they have, year after year, neglected the repair and reparation of the parish church It further sets furth that the answer put in by the defend ants shows that the churchwardens have year after yea asked for a rike at hie hands of the rate-phers instry duly and legally convened and assembled, and that the rate-payers liave in eac.a and every instance refused to grant hem a rate: they were therefore without fuads for the necessary repair and reparation of the church. On these grounds issue is joimed. The defendants are then cited to appear in the Consistory Currt of York on the \(2^{7}\) th inst.; themselves specially, and the rate-payers in dividually and generally, are thereby cited to aplear in the said court to show cause why a monition showd no be issued commanding the churcimardens forthwith to gire notice to the ratepayers of the parish, that a vestry breeting will be beld on a certain day in the restry of the parish church, for the purpose of lating a rate for the repair and reparation of the partst church. The rate grant the churchwardens a rate fur steh purphee, leat the be guitig of contumacy. It is also sidu tast the rems sub ecclesiastical autho'ity, and tiat sume of them hare bee struck out of the list ds inlegnal ; and that in the amended Mona suth.-A meeting vi the parishiuners in this town has been cailed for the purpose of making a rate for the current year. It was keld in the vestry, the vicar taking

Mr. Tyler, a parishioner, proposed a rate of \(4 d\). in the pound. Mr. Richards, the representative of the Dissenters, months. A show of hands was taken on the original motion, the vicar having declined putting the amendment, and it appearing to be in favour of the anti-church-rate people, Mr. Tyler demanded a poll, which then commenced, and finaliy closed on Saturday evening, when the uumbers were as follows:-For the rate \(122: 3\); against it, 163. Beatey Heath.-On Monday, Mr. Sidney Suith deivered a lectare upon the corn-lawn, in the Market-bouse of this place, under the auspices of the Crayford Anti-
Com-law Association. At an early hour the Market-Com-law Association. At an early hour the Marketgreat number of persons were standing outside. The number assembled was nearly 700 persons, and consisted both of the middle and workng classes, about one-fourth of the whole being females. Athough no seats were prose audience remained standing for nearly four hours, when they passed a vote of thanks to the Jecturer. On the tions against the cornolaws had been puts in circulation by the society, in every district and village of the neigh ourhood.
Rochester.-It seems that for several weeks past letters have been received through the post-office here and at
Chatham by several respectable families. They are written by some unprincipled person, who states that the son of the parties, who is stationed out at such a place, is either throwing families into great distress. One family has had three or four of these letters, as also has a widow-lady her that her son was drowned at the place he was stationed at abroad. It, however, happened that her son was in this country on leave of absence, and was visiting at Stafford. Some clue, it is said, will been ond it is loped that he will beomended.
Bristol.-Charles Rudge, the young man indicted for the wilful murder of Martha Sheddon, on the 2 tth Jan.,
at Horfield, near this city, the particularg of which were published by us at the time, has undergone tio trial at Gloucester. The case for the prosecation, however, broke down for want of eridence. Mr. Justice Coleridge observed the case stood at present he felt that he could not carry prisoner guilty. The jury would perhaps say what they prisoner guilty. The jury' would perhaps say wiat they deliberation, declared themselves satisfied, and returned a deliberation, declared themselves satisned, "Not Guity." The counsel finr the prisoner afterwards stated, for the satisfaction of the jury, that he afterwards stated, for the satisfaction of the juili
could have proved beyond a doubt a clear aliti.

Gloucester. - The following details, descriptive of romance in reat life, are said to be as true as they are strange. In the neighbourhood of this city, a young lady of higilyrespectable connexions became, by accident, acquanted affection besoming reciprocal, the day was fixed for their nnion, which was to have talken place in this oity. Agreeably with this arrangement, and as the matech was a desirable one, her parent parted with a lucrative business in the country, on which she and her mother lived in respect the celebration of the wedding arrired; but the bridegroom eame not; his parents had peremptorily forbidden the match, and he was already, by their contrivance, on the wass, bound for Jamaica. A letter reached the poor girl, ouly to confirm her fears; his parents' consent had been withheld, and he had suddenly left the seaport town in the West of England where he resided, not a faithless, but an unhappy lover. Time passeu, and industry on the part of the hapless girl but ill supplied the loss of the comparative independeace herself and family had left when they came to this city; and though blighted in heart, she cheerfully succeeded in helping to support her mother and amat in comert. Time had cast its shadow orer the areat event of ber life, and nothing more had been heard of her shsent lover, till a welk or two ne, when, to hersatoni,h ment she received a letter from him beathing the de rotedness of unbroken attachment and unaltered affection, not the less welcome though wafted scross the seas. Another and another followed, begging forgiveness for the former apparent neglect-and still another, the last accompanied by the consent of the parents of the absent one. The poor girl's hopes were at the highent point of naity, when she received a still more welcome epistle, ssuring her that her lover had landed at Falmouth, and as hastening to perform his neglected promise. The day the dark tidings of the grave-her lover had been suddeuly seized with illness the night before his departure for this city, and was a earpse before the moraing. As a melancholy satisfaction to the poor girl, the mather of the inteaded bridegroom visited her immediately, when she confessed that her son had been a voluntary exile, and would have reasined me, had not his parentr, whom he loved and
respected. given their consent to his; union. After frerespected. givea their consent to his, unios. After frestantly quitted Jemaica to claim the hand of his first lore ; hastening to meet her, death arrested his progress bei: re he had been many hows on his natire share. As a proof of the sincerity of bis attachment, the lover, in the hour of dissolution, bequeathed to his bride elect 2,000 I.

Exeter.-As the Regulator comch from Falonouth to this city was changing horses at Crockernwell, whilst the horseleeper was engaged in taking out those which had gone the stage from Okehanpton, owing to some sudden
were standing ready tackled, with their cloths on, sud-
denly started off without the coach, running the whole way to this city, about 11 milen. The animals, it seems very singularly, kept together the entire distance, \(n s\) if they had been yoked to the coach, under a coachman's guidance. On their arrival at the turnpike-gate the man stared, as did many others on the road, to see the horses without their bur. The horsekecting some accident, took but was soon distanced, arriving, however, only half an hour after the horses. The animals, it appears, kept their accustomed time, and only one of them lost its cloth on
St. Ives.-On Thursday, 400 gentlemen, who resisted the church-rate, dined together to celebrate their triumph.
In the rural parish of Headcorn, where a rate was a short ime ago refused, citations have been served, calling upon the churchwardens and all the parishioners to appear in meet and make a ehurch-rate.
Windsor.-On Saturday a further private examination of the prisoner Lovegrove took place at the castle, in the of the Horsehould. Amorg the witnesses examined, understood, were Mr. J. Lovegrove, Mr. Morris, silversmith, of Peascod-street, at whose house a search-warrant had been executed, and his wife, and other persons, whose names have not been allowed to transpire. The result of the lengthened investigation was, however, the discharge
of Lovegrove, the magistrates being of opinion that the of Lovegrove, the magistrates being of opinion that the further detaining him. In reference to this subject, proclamation has since been issued by the Lords Commissioners of the Treasury, stating that whereas divers Her Majesty's stores at Windsor Castle-a reward of one hundred pounds will be paid on conviction of the offender the conviction of the person or persons who stale the said articles, or who feloniously received the same; and Her Majesty's pardon will also be granted to any person (not being the actual thief or receiver) who shall give the like vidence.

Dowlais.-On Tuesday afternoon an accident happened at the Iron-works here, by which a number of men lost
their lives. In order that the nature of the accident may be understood, it is necessary to state that the furnace is composed of four square walls outside, and a circular wail in the inside, and that the space between the inner and outer walls is filled up with loose stones and earth, which have become so closely compacted as to form one solid mass. In consequence of decay in a portion of the inner pierced, that the necessary repairs might be effected, and a space cleared for the men to carry on the work. A scaffolding had been raised over the workmen, to protect them in case of any of the stones giving way. The men went on with tiueir work till three o clock on ere siving way mass, to the weight, it is estimated, of one hundred tons, came down on the scaffolding, breaking it to pieces, and burying eight men. The persons present at once began work being small, only one could be engaged at time inside, and it was some time before the first man was dug from the ruins. He was buried up to his neek, but was protected as he lay by the fallen timber, so that his life hours more, two other men were extricated, who, though serionsly braised and injured, were alive, and are likely to do well. After seven hours' additional labour, at three \(a^{\prime}\) clock in the morning, one of the remaining sufferers was renched, and found to be quite dead ; at six two more were dug out ; and about eight, two more, all dead.
morl - an saturday, as the down-mail was descend ing Rhyallthill, on the other side of St. A saph, the leaders paee. On tod a a dog, which Bent them or ch a rupaway over and broken to pieces. The inside passengers escaped without much injury; but a gentleman of Llanfair, who was on the of bell as dhe driver received some severe contusiuns. The guard procured a pony, and proceeded to St. Asaph with the mails. Having obtained a chaise and pair there, he reached here not much hehind his time

Pebmarsh.-A few days nince, as some men were digging in a garden near the Windmill in this place, when about a foot only from the surface, they arrived at an earthen quart jug. On examination it was found to contain 269 pieces of silver coin-one of Oliver Cromwell, one of Philip and Mary, the remainder being those of Charles I . and \(\bar{T}\)., Elizaberh, and James II. The weight of the whole was 41b. 7oz. The garden in which they were discovered being parish property, the churchwardens and overseers have taken possession of the treasure for the present. The pot is glazed, and would appear to be, compared with the date of the coins of modera manufacture.

Lyndhurst.-A painful accident has befallen the son and two daughtere of Mr. Neale, formerly of this place. Mr. John Neale was driving his sisters from Lyndharst to Ringwood on Tuesday evening, where the young ladies had been placed at gchooh, in a chaise-cart, and when near Boldersood, the hames of the harness snapped, which so startled the horse that he went off at full gallop, and soon became umazuageable. The cart soon atter came in conthe with a tree, sou the pars fell on Mr. Neale's back. His injuries are very severe; his head and body manch bruised, his hip-bone broken, and his ancle dislo-
cated. His elder sister, aged 10 years, was very much back of the head; the youngest sister had her right armo broken. The children, though dreadfully injured, got up
and found their brother insensible. In this lonely site inn ind their brother insensible. In this lonely situm they drew up their brother to the roadside, and set ont search of assistance. They wandered about for nearly aq the trees, and arrived at the house of Mr. Boxles, one of the keepers of the forest, who found Mr. Neale lying where his sisters had placed him. Mr. Bowles immediately re. dangerous state. If the accident had occurred much later in the evening, from the road being seldom frequented a in all probability have perishod of the sufferers, they would in all probability have perished
cause able interest. Christopher Hodgson, assistant-oserseer formation, by which he was charged with hariur antered the rate of the Black Horse beer-shop, from 10l. to 1.5l., in order that the license might be renessed to a fresh fendant pleaded that he was not guilty, but acted through ignorance. The furmer landlorll of the inm and his suc. cessor were examined, and it was endeavoured to shom that the alteration was made in consequenee of the pre was contended that the alterations could not affeet the case, as the rate-book was altered before the proper time for laying the rate. The handwriting was proved to be book under orders from the defendant. The full penalty was 20.0, but in consequence of the good claaracter of de offence wilfully, he was fined in the mitigated penalty of

Railways.-An accident attended with the loss of lifo of one individual, and the serious injury of two or threa mingham Railway, near Bromsgrove station. It appears gives ased andiars the trains up the inclined plane at the Lickey was being got up, a plug from the boiler was blown out the consequence was a sudden mal, of the water and steaw, and the fire-door being open, all on the platform of the eng:ne or Cren ender were more orleas scaldelo and Mrs. Walworth. Mr. Creaze was so seriously ins jured, that, after lingering a short time in much pain, be expired. Walworth and the stoker, with Mrs. Walworth, An inquest has since been held on Mr. Creuze, and a verdict retarned "Accidental death," with a deodand of 252. on the engine. There have been one or two other casualties on this line during the week, but none of a serions nature. Tuesday moraing, at no great distance from Spetchley the lading of one of the luggage waggons was ignited by the sparks from the engine furnace, and goods to 10 me and the following night the second up-mail train was delayed an hour and a half at Deptford in consequence of one of the boiler tubes of the eugine the line of the Eastern Counties Railway, by which a passenger named Lovell wns much injured that it is supposed he will not survive station in Mile-end, Lovell ulighted, and was in the zot of stepping across a platform with a stick in his hand, apos which he was leaning, when, wing tombled, and his stick breaking, he fell backwards on the mils. At this instan a policeman called out "All right," the traia started, and the engine and carriages passed over the unfortunate man, He was picked up apparently lifeless, and convejed to the London Hospital, where on examination it was ascertain ow that his left leg was severely fracthe left limb was at once amputated, but no hopes were entertained of his surviving. -The Taff-Vale railway has been brought very near ompletion. The entire main line

\section*{IRELAND.}

Dublin.-His Wireelleney the Lord Lieutenatt is erpeeted to return to Ireland on the 20 th inst. The subject of railroads in this country appears, at length, to hape bectists taken up in earmest: nemenber of ends, and they are to be secured by the Gove...c. their outlay. It is said that the Messrs. Baring stand the head of the list.-The unual weekly meeting
National Repeal Associatiou was held on Tuesday, Corn Exchange. The meeting was numerously atended Mr. O'Connell on his entry was received with loud cheens Dr. Murphy was called to the chail. Queen's County, pur suant to a communication addressed him by the the partiton, and requesting he would inform them Justice on the registry appeale at the last assizes of Maryborough. Mr. 0 Conneli, in moving that his letter be inserted on minutes, observed, with Lespects at the late election, that taking place among the sicernsir last day's meeting there was no ground whatever for such a Wath respec to the Quean's County, he observed are justicn whe did
done to the claimanter for the registry, melthongh he
not attribute any unworthy motives to Mr. Schoales, the assistant barrister, yet he could not help saying, that he He had no partisan feeling on the bench, no doubt; and he did not attribute such conduct to him, but let it be recollected that he was always an Orangeman, and a "'prenfor his resignation, and as that noble lord did not do so, he (Mr. O'Connell) had a duty to perform, and he would not shrink from it. Mr. Schoales was called to the bar 50 years ago, and he must have been at least 25 on that occasion, 0 that he had how arrived at an age which renthe duties longer ; and if he did not do so, he for one would bring his case before Parliament. There was too much succumbing to the bench in this country. Let them take for example Judge Jobnson, who for several years past was unable to go circuit, and yet he was allowed to remain
on the bench. The Chief Justice of the Queen's Bench was likewise incapable, and he deeply regretted it; but he eminent personage, and he was consequently unfit to discharge lis most important duties. The letter of Mr. Lalor proved that, and he would move that a letter be written to Mr. Lalor requesting him to embody the statements in his letter respecting the Chief Justice and Mr Schoales in a petition to Parliament, and he (Mr. Connell) public.
and murders are being committed in this frequent outrages an extent, indeed, that the North Riding may be said to be in the occupation of her Majesty's troops.-On Wednesday a troop of the 17 th Lancers arrived at Nenagh from Limerick, and 2 companies of the 20 th Regiment of Foot.
These troops are ordered to be detached, in bodies of These troops are ordered to be detacbed, in bodies of
20 or 30 , to the more disturbed parts, and a constant night patrol is ordered to be kept up. The arrival of two or three pieces of cannon is also expected from Limerick. All the troops are to be under orders for active duty at five minates' warning.
Cork. - The mayor has convened a meeting of the inhabitants of this city for Tuesday, to take into consideration in the poor-law as will place on the unions the general expenses of the workhouses ; and for such modifications and amendments of the law as the short experience of
its operation in this country has shown to be indispensable.

\section*{Edinburgh.-It has been stated}
that the Earl of Stair will be her Majesty's High Conmi sioner to the ensuing General Assembly; but a counter statement has since appeared to the effect that Lord Bel aven will continue to fill that important office
Dundee, -A distressing case of suicide has occursed in this town, arising out of the following circumstances:-A
young man, belonging to Forfarshire, who had been for several years labouring under consumption, had been per suaded to come to Edinburgh for medical advice
sulting physician heard and examined his case, and, it is said, gave him to understand that it was hopeless. Of this the young man wrote to his friends, and requested a brother to come for and conduct him home; but, without waiting for his arrival, took the coach to this town on in that town, shot himself through the head, and died instantly. So determined had he been to effect his purpose, that he had put three bullets into the pistol. His brothe knowingly, on the road, and on the following day was made acquainted with the melancholy catastrophe.
Glasgour.-We have had very fine April weather for some days, a little rain occasionally, but more sunshine. Sowing goes briskly on in our neighbourhood. The wheat braids
look fresh, healthy, and promising. The trees in our Green are beginning to don their summer foliage. Altogether the country looks as cheerful and hopeful as we could desire. - An aceident, which terminated fatally, has occurred In one of the coal-pits. It seems that a man named upon the head by a heary piece of coal falling from the roof of the pit, by which his skull was severely fractured. He was removed to the Royal Infirmary, but not withstanding everything that could be done, he has since withstand

\section*{THEATRICALS.}

Drvix Lave. -The German company assembled at this theatre continue to bring forward successtully the best works of their modern composers, Der Freischutz and Oberons
hare been the pieces performed during the week, and the have been the pieces performed during the week, and the
operas throughout have been very well executed. Herr Staudigl appyears to have contirmed the opinion formed of him last season, that he is one of the best bass-singers of the day, besides being a superior actor. His performance in Der Freischutz meets with general approbation.
Covrnt Gardes.-A new fairy extravaganza, called Beanty and the Beclot, was produced at this theatre on of such performances, written wholly in rhyme, with some cleverness, and many attempts at jokes. The chief recommendation is the scenery, which is well painted and ingeniously contrived. and the introduction of gas, to light niousily contrived. and the introduction of gas, to ngas
it from the top, which is a modern invention, adds very greatly to its beauty and erfect. Besides the seenery, a
good deal of dancing is introduced, and the object appears
to to bave been to get up a spectacle adapted to the season, Which on the whole is successfully accomplished. The
plot of the tale it will be needless to enter into, as it is plot of the taje it will be needless to enter into, as it is
well known in nearly all languages: in some respects it is
only a modification of the "Archputtell" of the Germans.
The principal part, that of Beauty, is given to Madame Vestris, while Mr. Harrison is the Beast. Sir Aldgalo Pump, the father of Beauty, is played by Mr. Bland, and the two envious sisters by Miss Rainforth and Miss Grant. Aldgate Pump, which he performs with great drollery. The piece was very favourably received by a full house.

Havmariet.-This theatre opened for the summer season on Monday night. No novelty, either in the way of drama or performer, was brought formard. The whole interior of the house has been repainted and decorated with much splendour; the seats have been newly stuffed, and backs added to those ip the dress-bores. The pieces selectea for the opening were Mr. Wilks's faree of My Wife's
Dentist, the Rent Day, St. Mary's Eve, and Tom Noddy's Secret. In the Rent Day, Mr. Wallack appeared in his original character of Martin Heywood, which he played well, and to the satisfaction of the audience, who called for him at the end of the piece. Mrs. Strichland plaved the wife of Hegured with considerable talent; and Mr. Webster as Bullfroy gave a good imitation of Buckstone's manner, engrafting apon it some original drollery of his own. In Sh. Mary's Eve, Madlle. Celeste appeared, for the first time these two years, as Madeline, and her dancing and anting were displayed in great excellence and with very happy effect. The entertainments sppeared to afford very agreeable entertaimment to a full audience.
English Oprra- Bouse.-Keolanthe continues to be performed at this theatre, and with undiminished success. After the performance of the Opera on Monday night, a new musical plece called the Deer-Stalkers was performed for the first time. It is a long and confused admisture of Highland chieftains, clans, freebooters, maidens, songs, bagpipes, and flings; and appears to be meant as a mere vehicle for Mr. Wilson's Scottish ballads and Mr. M'Ian's Highland acting. The music is said to have been arranged by Mr. E. Loder. Mr. Wilson's singing of "Bonny wee thing" was very beautifol, and his "Tullochgorum" full of national character. Miss Gould, in her Scotch sing by Mr. Loder, very sweetly, and was encored in it. The piece contains some effective and some amusing things, and, if reduced to a reasonable length, may be tolerably successful.
Olympic. - This theatre opened on Monday night under favourable auspices. Three new pieces were produced, tion. The first was an adaptation from the popular tale of "Charles O'Malley," in which, without doing injustice to the original plot, the most amusing incidents of the story were collected together and presented in a dramatic form. Amongst these were the college scenes, to which full effect was given by the acting of Mr. T. Lee, Mr. T.
of Mickey Free, Frank Webber, and Dr. Mooney, the vice-provost of Trinity College. These, aided by the performance of Miss Hamilton, who appeared as Mary Brady,
secured a successful reception of the piece, the name of which is The 1rish Dragonn. The second piece was the Lillle Gipsy, in which Mr. Wild appeared, and Miss Forester represented, with great effect, the Little Gipsy. It is an amusing trifle, and the manner in which it was
represented ensured for it the a pulause and hearty laughter of those who witnessed it. The concluding piece was a mythological burletta, eatitled Olympio Frailties. It is in the style of those burlesque representations for which this theatre, under the management of Madam Vestris, was celebrated, and equals any of its predecessors in formances were much in the Taken altogether, the perOlympic once so attractive, and appared to be very successful.

\section*{stiscellancous.}

Christianity in China.-From some statistical detaila, furnished by a native of China now resident at Rome, we learn that there are at present about 300,000 Christians in China. The greater part of them are indebted for pastoral care to the Lazarists, but some likerise to the Dominicans and Franciscanis, and to a small number of Italian priests. The whole number of priests, European and Chinese, does not exceed 340 . Of seminaries there are but few, and those few are little more than common schno!s. The Cliristians are not allowed to practise their religion publicly, but with thcir private assemblies no number, and these place. The churches are but few in number, and thooe not capacious enough for their several vately Hi , who was very friendly to the Christians, has remained intact, and it seems that a notion has long prevailed aniong the Pagans of China, that as long as the cross remains standing on the steeple of this church no serious calamity can befal the empire. In Canton there are between 8000 and 30 ? Christians, who enjoy greater liberty than in any other part of the country. In Macao there are upwards of 1000 Catholies.
Early Larks.-The following ornithological fact shows the exceeding mildness of the season:-A boy was harrowing a field in Sussex, a few days ago, when a lark flew up a short distance before him. He went to the spot and found a nest with three eggs in it, which he removed out of the way of the harrow, and afterwards replaced as near sirnation as might be On returning to wor after diener, he again looked at the nest, and was surprised to see that the eggs had, in the intervening time, been hatched, three young birds occupying their room.
Too Late.-A Paris journal states, that a banker of the Chaussée d'Antin applied, a few days ago, to a money-
lender for the loan of \(5(1,000\). upon his wife's diamondss desiring him to get the diamonds taken out of their set tings and replaced by imitation stones, in order that the lady might not perceire the loss. "You are too late," are the imitations which I mounted at her request when she sold me the real stones."

The Oxy-IIydrogen Light.-A pleasing and new application of the porrers of hydro-oxygen light is at present ahsorbing the attention of wisitors at the Polyterknic InThe exhibition consists in displaying on the large dise in the theatre of the establishment a series of magnified pic tures, properly called "dissolving views;" the effect's of which are surprising. The first picture represeats three
line-of-battle ships, one English and two foreign, preparing for enęagement. On a sudden, and by imperreptibl means, the commencement of the aetinn is in cited by
the arrearance of larze volumes of smoke. These, in the apyearance of large volumes of smoke. Hitese, in
turn, are succeeded ly a representation of the concuerel foreign ships in a cripped state ; their yards shot away, their rigging floating abont, and the standard of England flying from the renaining stumfs of mants. This accom plished, the vessels fade from the visiun, their receding sbadows giving place to a riew of Greenwich Hospita These changes are so nicely graduated that the eye scarcely recognises the transtormation. One of the most pieasin series of views is that in which are represtated the old
Royal Exchange, with its subsequent destraction by fire, the appearance of the ruina, and the new building. Theae
changes are brought about as if by magic, the second
taking the place of the first as if it actually grew out of Altogether there are eighteen of thene metamorphoses, and nothing seems to have been prodaced for a long time at this Institation so well calculated to please.

The Planets.-The planet Mars bes again paid us a visit, and is now rapidly approaching the point of his years since he appeared in the same ponition. This planet may now be seen, about 10 or 11 o'clock in the evening, not far from the south-east quarter of the hean ens, low eleration, and may be distinguished from other stars
by its size and ruddy appearance. Venus still continues to shine with splendour, like a small brilliant moon in the western and south-western sky. When viewed with a telescope, it appears like a beautiful half-moon, approachappear like a slender crescent, but more expansive than at present, or like the moon when about two or three days old. From the present period it will gradually appear less elevated at sunset, and about the beginning of May it than seven weeks it will have disappeared from our evening sky. Jupiter will not be seen in the evenings till the month of May, nor Sisturn till the month of Ju
A Safely- \(\mathbf{X i t e}\) at Sea.-A trial was made last

Safely-Kite at Sea.-A trial was made last week, at Sandgate, of the mariners* safety-kite, by W. Walker, of the mounted revenue-zuard, before Lieut. Batf and several
experienced nautical men, and found to answer in every respect the purpose for which it is designed. A wrec having taken place on the 13 th Nov. last at Dungeness, when two lives were lust in consequence of the high sea preventing any communication from or to the shore, the sdea of a kite on board the wreck, 10 as to be lowered a will when over the land, first struck Mr. Walker as the most feasible and certain method of rescue. This has been accomplished in such a simple manner that a child
might manage it with precision, rising and falling within three feet of the earth, arain rising withnut assistance, car
rying out 100 fathoms of line, if necessary. Communica rying out 100 fathoms ofline, if necessary. Communica-
tion in the instance of shipwreck at Dungeness would have tion in the instance of shipwreck at Dungeness would have board. Even uninhabited shores might be reached by an ordinary swimmer attaching the line under his arms. A light has been discovered to attach to the tail, which neither wind nor rain will extinguish, to be us

RupidVegetation. -The following extraordinary prodigy in the regetable kingdom is, we think, deserving of notice, and is by no means le-s singular than true :-A few dass ago the shoot of a common briar, or bramble, was cut on Thistle-hill, Knareshorough (near the place where Eugen Aram was hung in chains), which when measured was found wands since last March.- Hallyitix Guardian.
Sounding the Sea by Eie:tro-Magnetism.-Electricity is daily extending its sphere of operations, and is jecoming more and more extensively applicable to useful purposes. An ingenious apparatus has been contrived, for the pur-
pose of taking soundings at sea ios electro-magnetic power. pose of taking soundings at sea by electro-magnetic power At present great difficulty exists, when taking sounding strikes the ground. The object of this new contrivance is to obviate this difficulty, and it is accomplished in the following manner:-To the bottom of the hammer of a bell is attached a piece of soft iron, which is placed opposite an electro-magnet ; and it is so arranged that when the communication between the coils of wire round the magnet and galvanic battery is completed, the magne attracts the iron and holds back the hammer. As soon as the connexion is broken, the magnetic power ceases and the hammer, acted on by the spring, atrikes upon the bell. This part of the apparatus is intended to remain on the deck of the vessel when the soundings are made. The insulated wires from the galvanic battery, properly protected from the' action of water, serve for the cord to Which the weizkt is to be attached. The manner in whick hexion between the ends of the wires, is extremely simple and ingenious. When the pressure of the weight bears on the hook, the electrical current is interrupted and the magnet keeps the hammer from the bell; but when the weight reste ca the ground, the connexion is broken, the attraction of the magnet instantly ceases, and the hammer, being thas liberated, is forced agninst the bell by the pring. It would thus indicate with the utmost precision the moment the weight reaches the bottom of the sea.

\section*{Zlatu.}
 Committer of the Privy Council sat on Saturday, and continued
the mearing of this case. The address of the Solicitor -reneral
ocerpied the Court thring the whace of saturday. Monday, तud part of Tuestay. The ausmonts of the learned. connsel were

 That the declarations of Wood agninst doinn actsof of cerarite in bis

cited many cases to show that the ground upon which the learned the party who "the fact of a testamentary paper being sent to reject its whalidity; alt that a framudulent party has to do who wishes to nuvalidate a will is so get pomession of it, and instead of burn-
ing or otherwise destroying it, to forward it to the person in
 mo prim, under such circumstances, of the handwriting being
that of the asserted testator." The solicitor General concluded his address by earnestly appealing to the Court, for the sake of had talen-mamely, that the codicil propounded by the legatees
ought to be admitted to proof, and therefore to reverse the de-
cree of the court below.-Sir W. Follett, who followed on the of the case further than should be aboolutefy noing into the facts thimseif to the doctrine laid down, erroneously ai he thought, by
the eiean clusie, as he shonld contend, in fororitr of the codicil, in suppnit
of which, and for ho otier purpose, he appeared. The question of which, and for no otier purpose, he appeaded. The question
now to be raised was: whether or not that codicil, under the ciradmitted or not. If the doctrine laiid down by sir Herbert Jeenner
were good law, then he admitted he, Sir W. Follett, should have great difficulty in showing that the codicilo ought to have been so
admitted. But, after calling strict attention to the doctrine he intended to assial, he should slow that upon every ground of
reazon, of juctice, of law, and of practice, even in courts of eccleof the learned judge in the Court below were, "The principle which sinms to testabished is this- that it is a rule of law absolutely so connect the act with the deed and this rule is for something facility with which handwriting may be imitated so closely as to deceive those who are best acquainted with that of the supposed
testator. It is therefore required that there should he something testator. It is therefore required that there should be sometting found in his devositories at his death, that there should be some circumstances of such strong probability that it was the genuine act of the decensed as to leave no reasonable doubt on the moral stanted the offect will be to stop the whole course of justice in the
ecclesiastical courts. He should contend the ecclesiastical courts. He should contend that such rule did not criminal, and that the converse of the rule with respect to probates generally was daily acted upon by the courts of
Doctors' commons. The learned counsel then cited a long string of cases, showing that even where there was a contradiction of against the evidence of handwriting, he hins goue invariably on the probability of the paper propounded in each case being re-
nuine ; whereas, if the rule nuine ; whereas, f the rule 1 , owd latid down were a true one, the
judge in each of these cases had but to say, " 1 will not recive The ecclesiastical courts were bound by the same rules of evidence in all other respects, and undoobtedly in this. In civil
courts, and in courts of criminal jurisdiction, evidence of handWriting is that which alone can be procured: in actions on bills
of exclange and boods in one coutr, and in indietments of forgery, whether of wills or any other instraments, in the criminal
On the opening of the Court on Wednestay morning, Lord
Lymdhurst stated that it was the intention of their Lordships, Lyndhurst stated that it wast the intention of their Lordships,
after that daa. to procest
with tive. funtier hearing of the cause on the first five days precedang Hitary Perna.-The Attornes-
General, on the part of the ber, expressed his concurrence in the arrangement.-sir W. Follett then resumed his argument on be-
half of the parties claiming under the cedients. If their Lord-
ships ships, he said, were sati.sifel, from the evidence which had been there was no oth:er circumstance in the case to prevent its heing
thed
allow writing; on the contrarr, there was no fact to show that the
codicil was not the act of the testator. That some of the testamentary papers had been burned, and some torn, proved the
genuinenessof the codicil. As to the letter written by the testa.
cor her, which, it was said, show strol conclusion, he called upon their Lordships to uphold the codicil, which had been recognised by the testator, in order that, if full justice could not be done, part at least of the intentions of
the testator might be carticd into effect.- Sir Frederick Pollock followed, and said that he appeared on behalf of une of the nest of kin, and he had to argue that this was a case nf intestacy,
Before, however, he proveded with the case, he culd net heip
adiverting, with deep regret, to what had fallen from his learned friend with reiereuce to what had taken place the first time the
Court assemuled to hear this cause. He begged to state, that nnthing which passed on that occasion on his part was incon-
sistent with the most profound veneration for the judicial station and the deepest respect for the learned judge to whom he ob-
jected. He herged to state that he had no instructions from his client. The objections were his own. His own feelings were not concerned, but the ohjections were urged on behalf of the pro-
fession to which he had the honour to belone. The Attomey Gencral had said that it was not to be considered as any objec. tion tha a judre that he had been counsel in the cause; and that was a rery unnecersary communication to make. There could
be no douht, for instance, that if the plague or some other calamity hal dippersed the judger at Monmonth. and he Sir F. Pollock had hau the honour to be appointed one of the judges of the land,
there coold have been no objection to his going. There whe no legal objection to the most intimate friend of a party sitting in judgment on the canse of his friend, sray, a jutge might sit on
the cause of his own father, and, as his eidest son, adjudicate to him an inmense estate. Diemissimg, however, this sulject, he
had to staie that he appearell fir Fuiward Hithings. had to state that he appeared for Fiward Hitchings. It was de-
sirable that their Lordishpes should know who Fdward Hitchings was. It appeared from a statement made br Hitchines himself, in the responsive allegations put forward in his belalt, that Wi od, the father of the present testator, by his will pave Eiward Hit.
 titled to ome aalf oi Mr. Wood's pronperty. Mr. Yitchings came
 most bound, with the assistance of his learned friend, to state his own case. He should, as far as possible, avi in tupics which had
been already exhausted. He was ansions, in the first plece, to give an explicit statement of the course he meant to pursue, but
before he did that it was material that he should call their Lordships' attention to the singular contest which was now going on.
Here was all
 pentice a a pacicil. These whit propounded the cortiml hard, appa-
 entertied to probate. It was imposible that any coust would
graxit proinate of the will of the executors, and at the some time
sustain the codicil. That wras the sectet of the extreordinary sostain the codicil. That was the secret of the extraondinary
contest which was now goina on The learued commel proceoded
to argue his case at great length, and cited a rariety of cases in
support of his posicion. He referred to the circumstances of

 more particularly when those personc were comidential enticiters
of te decaed, and in smeme of which cases the court, repuinh
 not the slifhtest tuspicion of fraud, rejecting them solely bectase
they were hot proved to have been read over to the testater pre-
viousiy to the execution of them. Sir Frederick proceeled toremark that there was the strongest possible reason for believing
that paper had no existence until after the execution of paper \(B\), and entered upons some arguments to enforce this proposition-
Lord L madhurst saill, as this would be a ather an extended argument it had better be postponed. The coirt then atiourner dat Vice-Cbancellor's Cocrt. - Wilson v. Boddurd. - This case

beconing, it will soon be beyond the means of the jaded artisan of the interior to reach the outskirts, even on a Sunday; and the heavenly aspect of Nature will become to him an unintelligible expression when he finds it explained by nothing better than muddy or dusty streets, soot-begrimed walls, or, at best, the miserable, dirty roads and lanes that border the ave nues of London. Instend of the healthy exercise to be found in open fields, or the light and buoyant feelings of which all but the most brutal are conscious when they exchange the dreary aspect of a huge metropolis for the quiet and soothing beauties of rural scenery, the poor man must settle down in the squalid tap-room of a public-house, and spend his leisure in the most debasing and pernicious listlessness. Alas for the country or the city in which this becomes \(\varepsilon\) matter of inevitable necessity! and woe to the Go vernment which, by its supineness or parsimony, neg lects to provide for the poor man all the innocent en joyment that his condition in life is susceptible of !
It is alleged that if the Parks are rendered freely accessible, without distinction of persons, the property in them will be damagen, and the higher classe of society will be unable to use them as a place of resort. Such arguments hardly deserve serious notice. Disorderly and ill-disposed persons abound in all places, and we have always understood that the Commissioners in Scotland Yard had such people under their eapecial care: it would be a curious optical phenomenon if the eye of the police could reach no further than the circumference of the Regent's Park. It is, moreover, a libel upon the poorer classes to say that they are alone the mitchievous part of the community. We should like to see a retum of the names and qualities of all the persons brought before the London police for street-rows, drunken brawls, break-ingbell-handles, twisting off door knockers, and similar intellectual amusements; such a return would be an act of justice to the poor, for it would show that the best standard of respectability is neither birth nor station, nor the length of a man's purse. As to the allegation that the higher orders could not use the Parks for their pleasure if the poor were allowed to frequent them, we really doubt whether the higher orders approve of being made a party to any such ar gument. The English gentleman provides places of recreation for his family at his own charge, and des pises those who would appropriate to him those public lands of which alone the poor man can have the enjoyment.

Another objection to opening the Regent's Park is said to consist in the loss of income which Government would sustain from being no longer able to let the ground for pasturage. Upon this we shall only observe, that public parsimony is worse, both morally and politically, than public prodigality.

When the Regent's Park was first plantel, it was necessary that the trees should be protected from the numerous accidents to which they would have been exposed from a crowd, and also that the greensward should have time to be securely established: its original enclosure was, therefore, a necessary measurejust as the temporary enclosure of the Green Park, in consequence of the alterations and improvements in that place, is now required. But the moment that necessity ceases, all barriers should be swept away.

\section*{COTTAGE GARDENS.-No. XIV}

Notime must now be lost in getting the late Potatoes planted. As this is ane of the crops on which the cottager and his family must rely for a part of their support during winter and the following season, untlits place is supplied by the early crop from the garden, it is of the ntmost imby the early crop from the garden, it is of the avmost im-
pertance for him tosee that the planting of it is properly portance for him to see that the planting of it is properly
attended to, and not delayed until the growing zeason is too far advanced for the roots to attain their natural sise and come to matarity. They should, therefore, be get into the ground, if passible, in the course of the ensuing week, or not later than the first week in May. One of the best late-keeping sorts is the red or Devonshire Apple Potatoe. It in large and round, with deep pink eyas, and is generally esteemed as being produetive and good-itavoured. Attend to what was stated at p. 116 and p. 212, respecting the size of sets and the distance between the rows. The mode of culture there recommended is that which has been proved by repeated experiments to be superior to the one that is usually followed. In a warm part of the garden prepare a piece of ground for making a sowing of Eidney Beams. Although not so valuable for the cottegor as the Scarlot-renner Bown, which will be noticed nest week, it is nevertheless a very usefal vegetable, and will probably he preferred by some to the latter sort. Those best suited for our purpose are the dwarfgrowing kinds, such the Early cream-coloured, Eariy purple-spochled, and the Negro, either of which may now be sown, provided the ground is in good condition and tole-
will dry : bat where the soil and situation are damp, it will be better to defer the sowing a little later to avoid the chance of a partial failure from the seeds rotting in th ground. When the piece intended for this crop has been finely dug, stretch a line across it and draw drills 2 feet apart, and about 2 inches deep. The Beans are then to be dropped along the bottom of the drill at the distance of 2 or 3 inches from one another, and aftermards corered neatly with the rake. A small space of rich ground should neatly with the rake. A small space of rich ground should be got ready for pricking out some of the first-sown Cab-
bages, \&c., from the seed-bed. The manner of doing this is to dig the spot very fine and forme it into of doing thin sized bed or two, for the convenience of cleaning. Lay rod or a thin piece of board across the bed, and put in the plants very carefully with a small, bluntish stick or dibber in rows, 3 inches apart, and the same distance between the plants. In this iituation they will remain ontil they are fit for final planting, withoat requiring anything more than an occasional watering, and to be kept clear of weedsM.E. H.

ON THE PRODUCTION, DISTRIBUTION, AND PRESERVATION OF HEAT, WITH REFER ENCE PARTICULARLY TO THE IMITATMN OF CLIMATE IN CONSERVATORIES.-No. II Tris remarks already made on the distinction betwee radiant and air-carried hent, may prepare us for a practical application of that distinction to the various modes of producing heat which are now in use: and first as the simplest, it may be well to notice the plan whic has somatimes been adopted for small conservatories, and which will perhape be more estensively used, of placing within the building an ordinary iron stove and flue-pipe The stoves so employed are such as have been found best adapted for general purposes, and therefore a consideration of the arrangements best fitted for conservatories will probably apply to stoves of every description.
The point which has always been put forward by the inventors of stoves (using the word stove in contradistinc tion to a mere grate or open fire) is their wonderful econamy-a quality which has been time out of mind familiar to the artisan, who has seldom emplored other
than close stoves in his workshop, and which, whatever be its amount, results mainly from the elange of an open into an inolosed fire, and depends in comparatively slight degree on the peculiaritien of the stove itself. The sensmthon that has within a few years been made regarding toves, bas been produced, not so much by any essential novelties in their construetion, as by the proposal to introduce the close stove of the workshop and the hall into the dining and drawing-room-to supersede, in short, the open English fire, on the ground of economy. The estimated saving varies greatly according to different calcula Cors; some asserting that the open fire wastes eleven woalfohs, and others as little as three-fourths of the fuel The least of these is a very serious accusation, and if true a very curious one. We do not, in fact, hear such heary complaints of the coldness of English rooms, as always form the prelude to the advertisement of the last new stove, of people being frozen on one side and roasted on the other; while the notion of the so-called English disease, consumption, being produced in a great measure by the open fires, is refuted by the latast returns, which show that disease to prevail even more extensively in France. It is true that a winter dinner-party in a room whose fire has been lighted less than half an hour perhaps, with a dor constantly openiag into an unwarmed hall, is suffe iently uncomfortable; but a close stove used in the same manner would be oo better;-indeed, it is familiar to all experience (las rapidly not obvious) that stoves
But as regards economy generally, let the process for aving be analysed. It muat be allowed that an English sitting-room in which a fire is maintained the greater part of each day produces, even in the coldest weather, 3 considerable and pleasant sensation of warmth, which is appreciated the moment the room is entered, and which increases almost to excess as we approach the cheerful blazing or glowing fire. But the person thus agreeably acted upon is gravely told that the fire in question wastes eleven-twelfths of its heat, which may be all saved by the farourite stove of the moment, and that this is the recipe:
Let the fuel, which is now almost burning yot on one ode (as is admitted aven by ita detractors), be pat into a close box surrounded with fire-brick or stone, two or three inches thick, encased in cast or sheet irow; and surround this agtion with a stratum of air some four or six inches hick contained alao in an iron case, or jacket as it is called ;-substitute, in short, for the open blazing coal, a series of dismal-looking black bores, and eleven-twelfths of the fuel will be redeemed fromi waste. If this were true, we might perhaps be content to sacrifice the cheerful appearanee of thit open fire; but as the amount of tho saving is, I thinw, even in the lowest estimates, much exaggerated, and as the quality of the heat so produced is prejudicial to some persons and uapleasant to mant. may be useful to trace the source of the economy that really exists.

The art of warming has slowly progressed in cheapness by gradually diminishing the quantity of ventilation, which must always to some extent accompany combustion. The savage who lights his fire on the plain or in the forest, and squats to windward of it, suffers probably no more from the wind than if the fire did not exist. so that the heat he receives is all clear gain. And this is nearty true of the barberian who, with a hole in the roof of his hut, lights Mis fire apon the floor. The whole inclosure forming the fireplace, no sufficient elevation of temperature is obtained wrive at the cirilisation of chimpers, it ruast be admitted
that they may be so contrived as in a great measure to
It should be premised that a heated flue acts very much like an exhausting air-pump, the area of the flue repre senting the area of the harrel, and the height of the flue corresponding with the length of the stroke. It is clear therefore, that the old enormous fire-place (under a large open-throated chimney) in which the whole family could ir which must rush towards the warmed flue, be the most encomfortable place imaginable. This difficulty was, however, met, by inclosing the fire-place next the room with the high-backed settle, leaving a small opening for ingress and egress, and for the admission of the air. Thus was formed the ancient comfortable winter's fire-side, of which the annexed sketch represents the principle rather than the construction, and which we still occasionally meet with in an old farm-house or road-side inn. This arrangement consists, it will be observed, in converting the fire-
place into something like a huge stove, where, however, place into something like a huge stove, where, however, are required to do.

As fire-places became applied to bed-rooms and other mall apartments, as well as to kitchens and baronial halls, they were made smaller and smaller, till they were at length but just sufficient to contain the grate: they retained, nevertheless, a very wide aperture to the flue, retained, nevertheless, a very wide aperture to the flue, at last the means of exciting through the apartments of at hast the means of exciting through the apartments of tioned to the benefits derived from their fires-" a wind," as it was sometimes termed, "fit to turn a mill." This, therefore, was the age of India screens and listed doors; the first of these rendered familiar to us by the comedies of the last century, in which they frequently play a prominent part.
In explanation of the unčue quàntity of draft produced by the old-fashioned grate and chimney, it should be anderatood that of the whole quantity of air which passes through the apartment in obedience to the exhausting power of the flue, not one-tenth, perhaps not onemajority does not, in fact, pass through the fire, but enters the flue between the top of the fire and the ander side of the mantel. This is now so obvious, that we are surprised to see how long the evils attendant upon the old arrangements were endured. In time, however, the propriety of diminishing the throat of the chimney became apparent: this was at first dome by very inartificial contrivances, which gradually made way for the register grate, in which the aperture above the fire was limitable at pleasare to what was just sufficient to carry ap the moke; and this, combined with polished Rumford cheeks to reflect the lateral heat, combustion of the fuel within brick or stone walls instead of iron, a fire close to the hearth or nearly so, and a low or evanescent fender, perfected the art of warming dwelling-rooms.
It must, nevertheless, be admitted, that the moet economically constructed open fire-place does draw threugh the apartment more air than is required for combustion; a certain quantity must still be allowed to pass into the Gue above the fire. Bat the degree in which this takes place has been runch exaggerated, while no notice is taken of the loss in direct radiation which is eustrined by baxing up the glowing fuel; and, above all, the benefit arixing from the moderate ventilation effected by a register grate is totally forgotten, except by the public, who have, with few exceptions, refused for their sitting-rooms to abandon the open fire in favour of the clove stove, and have dodined to be made disagreeably hot even at the very low prices offered in the advertisements.
There erists a vague notion that the air which pasoos through and above the open fire is wasteful, not merely 38 it cools those whom it meets in its course, bat also becanse it is supposed to carry with it a large portion of the heat emanating from the fire. It is frequently said that three-fourths or five-sixths of the heat go up the chimner; which is altogether a mistake. The cold air, as it approaches the fire, abstracts nothing from the radiant heat which traverses it, and, excepting what little it may pick op from the substances with which it comes in conThe state of the air, as before mentioned, forms a very small part of the sensible condition of an apartment as warmeth, unless it be in rather rapid mation. The idea room is, i beltere., rather fallacious In lhe a dwellingTre find relief in fanning, and in a moderntely warm roon may be absolutely chilled by agitating the ait with a large may be absolutel I chilled by agitang the aus with a lurge

Warmth we perceive is principally that radiated from the require of the air is sufficient stillness not to interfere too much with this primary, natural, and agreeable source of temperature.
Air-heat, on the contrary, is never, and never can be made agreeable; and hence doubtless the wise provision of nature in causing its rapid ascent with a moderate increase of temperature. The advocates for air-heating ascribe its universally disagreeable effect sometimes to dryness; then finding that an evaporating bason does not mend it, the sphere, or to an imaginary decomposition of the chemical onstituents of the air ; when the truth is, as I believe hat the evil consists in heating it at all; and if we may animals to the planet they inhabit, this would seem certain. Man, by artificial sources of heat and by clothing, and animals by clothing also, have their bodies warmed and kept warm in any required degree; but if a necessary and genial temperature extended to the air, what are wee to do
when we quit our houses? Evidently something like what has been recently done for the diseased, and which is required by the diseased, but by them only. There are no unpleasant and unhealthy, from the dry simoom, which is said to be eminently so, to the dew-dripping south wind, which produces the weather called significantly muggy. Air is never an agreeable warmer, but is almost always welcome as the moderator of other sources of heat. An east wind in rapid motion is one exception : in this in stance, however, it is the dryness and the velocity, rather
than the coolness, which offends ; nor is the effect even of an east wind, perhaps, so prejudicial as a current of only an east wind, perhaps, so prejudicial as a current of only
moderately-warmed air kept moving through inhabited apartments. Some of the artificial schemes of ventilation perfectly as they accomplished that purpose, have been abandoned on arcount of the specific ill effects produced by currents of warmed air upon the skins of human beings. It will be said, perhaps, that the sudden chilliness which we experience on enteriag an unwarmed, and parere; but the effect in question is due to the cold walls, which return little or nothing in exchange with the body, and which produce the well-known sensation called striking very cold. The air when the doors are open cannot differ much from that external atmosphere with which it is in the walls and how little to the air of an apartment (always excepted the case of its rapid movement), may be ascertained by keeping a fire in one of two rooms, taving a closed door between them till one is well warmed. I then the door be opened, a few minutes will effect such an exchange of atmosphere as to preclude much difference in that respect; yet the warmed room will still maintain nearly its former relative superiority to the other solely by reason of its warmed surfaces. To extend the analogy of the settle-inclosed fire-place, the walls of a chamber form the settle; or, to go forther, they are the jacket of the stove, which radiates imunards upon the occupants, as the iron jackets are destined to radiate outvards; and the public appear disposed for the present at least to live within the jacket, and to enjoy the sight of the fire. It is not, however, desirable to go so far as to admire gasstive, not within the jacket, but within the fue.
The essential distinctions between a stove and an open fire are-
18t. That the primary radiation from the fuel of the stove is received by the small surface of its case, while apartment.

2d. That as air is warmed by contact only, it can never obtain from the room with an open fre such a temperature an is derived from the more highly-heated surfaces of the stove.

That the stove-heated room, which would, on this last account, seem to demand a better ventilation, has its ventilation much diminished by the circumstance that mo air passes into the chimney but what passes through the fuel, and is required for combustion; and frequently even less than this, as is shown by the explosions which sometimes take place when the air is freely admitted to the infammable gases which are leaving the fuel unconsumed.
This supprestion of ventilation till the admitted air is but just sufficient to consume the fuel wonld be the height of economy, if it could be obtained without suppressing also the radiation from the fuelinto the room; but as this cannot be done, it is a question whether, as a mere matter of cheapaess, the stove posseases any advantages over the well-constracted register grate I speak only of living-rooms, becanse there can be no doubt that for shops, halls, and public buildings, whose doors are frequently openagg to the external atmosphere, the stove is radered innoxious by the occasional admission in large quantities of unwarmed air, which if excited by the powerful
draught of an open fire, would be unbenrable, or nearly so. But, leaving the questions of temperature and economy to consider the physiological effects of stove-heat, it remains to determine what analogy exists between the consequences produced upon animals, and those which are likely to be produced on vegetabies. in many respects, sphere than animals, and therefore the first inference would phere the whe the the ince would tories, which cannot possibly admit of that exposure to the open air which is found to mitigate the effecter of stove. beat in other instances. If any stove is to be employed, that is doubtless the best in which the heated air is permittred to aremd the moment that its accquired levity is
sufficient to orercome the friction of displacement. Tbore the heated metal hy means of tortuous passages, or smentl tubes, are monstrous aggravations of the mischief of stoveheating. So far from enforeing a prolonged contact
between the air and the source of heat, it should be diminished by every means in our power: it is just pos sible that, by so doing, an intensely-heated surface might produce only the same effect on the air as one of more noderate temperature, with which the contact was pretangling the air against the heated surface is one of the most common and erroneous of the numerous strange projects which have toeen brought forth in connexion with the art of heating. The air, by simple contact, remains ascend, and this is not till it has acquired more than an agreeable degree of heat. All the double cases, therefore, huity nuity has been misemployed, are purely injurious. If a
stove is to be applied to a conservatory, by all means let it ave the largest convenient jacket, freely exposed to the atmosphere. In this respect, doubtless many of Dr Arnott's stoves have the merit of great propriety: it is a ase of the flue-heat, though that is at the option of tho user, who may attach any length of iron liue-pipe that he pleases.
The common German stove was at a very early period used for warming conservatories, and still earlier a हort of is probable that a judiciously-placed open fire would produce a more salutary heat than any other contrivance ; but it possesses the insuperable objection of requiring frequent attention: no fire in an open grate can be left for six or eight hours, as may be done with a rell-constructed stove. It is to be observed, on the other hand, that this prolonged duration of the fire is obtained only by reducing the rate of combustion; and as heat is to be prodnced
only on the condition of destroying fuel, a corresponding mall influence is exerted on the temperature of the house, which may thus occasionally sink so low as to injure its contents. This evil was prevented in a great degree by the old brick-fues, because the large mass of heated matter they presented formed a reservoir of heat which maintained the temperature of the house for some hours after the fire had become extinguished. The briek-flues had the further advantage of never acquiring so high a temperature as the iron stoves; and I am much inclined think that heated brickwork in some forne is the best of all the contrivances for those who do not choose to ncur the expense of adopting that next subject, namely, the system of heating by circulating water.-A. dinger

\section*{ENTOMOLOGY.}

No. VI.-Twi Peak-Tree Blistrer-Mote. - Yos more than hal? a century the Pear-trees have been observed with their leaves blistered in the autumn; and for the last five or six jears they beve been unusually subject to this disease-at least, in the neighbourhood of the metropols ; and it became so general in 1835 in the Royal ural Society at Chiswick, that almost every leaf appeared as if it had been scorched and blistered by hot cinders; yet so limited is the knowledge of the economy of insmets and the effects they produce, that this singular appearance has not unfrequently been attributed to the rays of the sun being concentrated by drops of water standing upon the leaves, and I am not-aware that any figures bave been given of the insect which is the true source of this malady, although Mr. Knight has discussed the subject in the Horticultural Transactions.
There is a considerable number of insects called "Miners," from the caterpillars feeding only on the pulp or parenchyma of leaves, leaving the two caticles matorched, and then the tortuous galleries within changs their colour, and often partake of a red-brown or ochreons int, as in the leares of the Turnip, Vine, and Primrose ; and those of the Rose, Cineraria, and Bramble must be amiliar to most observef. It is rather remarkable that this singular mode of lile is not restricted to one order of insects, for certain species of beetles, moths, and hies have the same propensity. The caterpillar, however, of the Blister-moth, instead of a winding path, forms a large blister on the leaf in a similiar manner to those which affect the Celery, the Oak, and Elm.
The beautiful little moths which produce these larve were named by Linareus, Tinea Clanohélla. They min attack Apple-trees also; but Pear-trees seem to be more their taste, and the Chanmontelle and the Glont-mor ceau are reported to be their favourites-it may be forly heir being generally trained against walls. In the part of last September some Pear-trees against a west dat wall brown blisters (fig. 1), and on opeming them one ond little sprawling maggots were found inside, which tirely eaten up the parenchyma; and on falling out they suspended themselves by a nine silken thread, in order, pro bably, to reach the ground or some other spotin sare fleshy undergo their transformation (tig. 2). Whey are longish hairs, haring six black pectoral, 3 abdominal, and 2 anal feet; oneach side of the third and two following segments is a tubercle terminated by a hair, and these hare very much the appearance of 6 feet : the head is of \(z\) bian and rust colour; the first or thoracic segment has ack and the two apical segments are oftea dark (fis, 3 bighty and the two apicai segmeats are oftea dark (has. lewnelf het
always from the upper surface; the under sides frequently exhibiting no spots whatever, or occavionally only a sut fused brown stain; and falling down, either formed co coons by the sides of the clods, or upon the leaves that emerge from the blisters until the third week in Septem ber. The web containing the chrysalis is beautifully and very ingeniously constructed: the caterpillar having fixed tself upon the surface of a leaf, it spins some exceedingly fine threads, scarcely half an inch long, forming a band or warp about a line wide, which being attached at the ends, inclines the leaf to be drawn together at certain points as first, and pnites then sins a similar band, parallel to the at both ends; beneath the middle, leaving an open space boat-shaped cocoon, keel uppermost, of a very fine, close texture, each end being placed at the opening between the bands, and at either extremity a long slit is visible, with a brown, shrivelled filament attached to one, which is the gkin of the larva cast off and expelled through the slit when
it assumed the pupa state (fig. 4): within this boat-shaped it assumed the pupa state (fig. 4): within this boat-shaped the little moth emerges through the opposite slit as early as the end of the following March-at least, I bred two on the 29th; but their usual time is the end of May or the beginning of June, when the female deposits her eggs, it is said, beneath the leaves; the young maggots soon hatch, and immediately penetrate the under cuticle to feed upon the pulp.
esting clerckella is a minute but active moth (fig. 5), resting with the superior wings covering the others, as represented in the magnified fig. 6 ; it shines like pearly
satin, the horns are long and slender, and the extremity of satin, the horns are long and slender, and the extremity of
the upper wings is beautifully ornamented, the ground colour being a rich orange, leaving a silvery spot on the outer margin, with a black spot at the inner angle, edged externally with a rosy and lilac metallic semicircle, which is bounded with black, the whole forming an eye-like spot from the centre of this extends an orange plume, from which radiate four black streaks, extending to the tips of the long white fringe with which they are surrounded: the under wings are very narrow, lance-
The late President of the Horticultural Society was of opinion that when these larva abounded in the leaves the fruit did not attain its natural size, and it rpened without acquiring either sweetness ur flavour ; and their successive Knight's Pears, that he had once resolved to root them up. I think it probable that though the maggots escape from the attached leaves, they may spin their webs upon fallen ones at the base of the walls; these ought, therefore, to stirred in the winter all along the wall . many find shelter in the shreds that fasten the branches, as well as amongst the mortar between the bricks. To check this disease, it
will be adrisable to wash the trees with soap-suds the end of May or beginning of June, when the moths are pairing and laving eggs for a future progeny; and if a very valu-
able tree be only partially attacked, the blistered leaves might be gathered and burnt as soon as any spots began to appear in August. - Ruricola.

\section*{HOME CORRESPONDENCE.}

Effect of Transplanting.-The late Edward Bellamy, Esq., who had a most excellent garden at Starcross, in
Devonshire, productive of every kind of fruit in abundance, and a most highl \(y\)-favoured situation and soil adjoining the river Exe, and close to the sea, managed his garden in a superior manner under the care of his two expert gardeners, one John Bargess and his son; yet, with all their care, could never succeed in Greengages. Mr. Bellamy, in a freak, we suppose, took up out of this hothouse kind to his estate in were. ous district, exposed to north, north-westand easterly winds, Where searcely a blade of grass, onily for sheep, appeared till late in May. It is remarkable that these trees the second year, under this cold transportation, bore abundantly the finest fruit imaginable for three years. When they ceased
bearing again, and grew like Willows, Mr. Bellamy had bearing again, and grew like Willows, Mr. Bellamy had after he planted out terr every year, keeping up a stock of
40 , but always moving 10 of them vearly in twins, and 40, but always moving 10 of them yearly in twins, and
never after wanted for an abundant crop of Greengages in hever after wanted for an abundant crop of Greengages in most hardy Apple or the common Gooseberry. It is evidently the care that it was the check
Lalia supertiens.-In your Garden Memoranda, page 167, you say Lelia superbien is about to be suspended Those of your realers who are fortumate enough to pos
sess this most splendid plant will, no doubt, be induced by your notice to "go and do likewise." This is a very
different mode of treatroent from that recommended by Mr. Skinner, of Guatemala, the gentleman who first dis covered and sent it to this country. Mr. Skinner is
an enthusiastic admirer of the Orchidaceere ; he has long studied their different pecaliarities in their native wilds, and also in a domesticated state, having collected into his own garden at Guatemala every species he could procure from both shores of the isthmas of Pa nama, and from all parts of the interior. Like our own fiorists, indeed like any one who devotes his attention to one particular object, Mr. Skinner excels in the cultivation of his favourite tribe of plants; his suggestions for fidently relied oa. Lalia superbiens and Odontoglossum grande seem to be his chief favourites ; he often regrets in his letters that we injure them by giving them too mact warmth. Speaking of the Lelia superbiens in a lette now before me, he says "it is decidedly a greenhouse
plant." Its native habitat, in the state of Quesaltenango, hear Chantli, is very cold, the summers there being never so hot by many degrees as our English summers, the ge of the fer plants whose magnificent flowers attract the notice of the Indians of Panama; they carry it about with them, and plant it before their doors, as those of Surinam do with Oncidium Lanceanum. I have cultiated this moble plant along with many others from the same quarter, according to Mr. Skinner's directions, very little attention; when it finished its growth, I removed it to the stove to ripen its shoots more perfectiy, as I thought, but I soon saw the excitement was too much for it, causing it to swell too much the buds destined for next season's growth, and if I had not remored it to a cooler place, it would have made a second growth late in the autumn; this would not only weaken the plant, but prevent the ripening of the shoots made in the early part of the season. Probably no better criterion of good management can be fixed on for the Orchidaceæ than to see the buds for the next growth in a prominent forward state at the time we set them to rest; unless this be the case, the plants will require stronger stimulus to excite them into growth next season, which partakes of forcing rather than assisting nature ; besides, when we are compelled thus to force incipient buds into growth, the strong est or foremost of them takes the lead, and robs the rest of their nourishment: whereas, if the buds were all ready tittle excitement would be required to were set to rest, little excitement would be required to induce them to cool their next growth, and if they were kept rather next growth, all the buds would probably grow with equal rigour; when these were once started, the Many people, and especially young beginners, are often guided by the foliage and general appearance of their plants, without any reference to the state of the eves or buds at the time of setting their plants to rest. More disthe other canses of finilnre puthis one cause than from all the other causes of failure put together. No definite rules can be laid down to show when a given plant ought to be
put to rest. One plant may bave done its growth, and to put to rest. One plant may bave done its growth, and to
all appearance is ready to go to rest long before its buds are in that forward state necessary to ensure active gronth next season ; while another plant may have its buds ready to burst ere its last gronth is sufficiently ripe to go to rest: this last is generally the case with plants kept in a bigher temperature than in necessary for them. It is not uncommon so see such plants ripening off their shoots in September, with a young shoot rising up from the bottom of the ripening shoots; nine out of ten of these unfortanate late shoots damp off in the winter, and leave no eve to succeed them next season: the plant gets into a deranged ing, which will take two or three seasons of good nurs ing to bring it round auain, and many of hem have not The way I would treat Lxelia superhiens at this early period would be to place it in the warmest end of the greenhouse, and there let it remain till all its shoots were three-parts grown-say till about the end of June; I would then place it in the stove, and let it have as much air as possible: this would enable it to ripen the young shoot under solar infuence, which is infinitely better at all time and for all sorts of plants than that of fire-heat. I would watch its buds narrowly, and leave it in the stove till they were in a forward plamp state; 1 would then remove it to a cooler place, and allow it to go genily to rest as the season declined. If all has gone on well with it, the flower spikes will make their appearance as soon as it is at complete rest in November; at this time the same heat given to the Cameliia suits it best, so that it may safely be taken to the drawing-room for the winter, and having previously fisished its growth little or no water need be given it while in the drawing-room. Nine-tenthas of the Orchida cese found by MraHartweg in the Mexicas statea and in under the old mode of perier this stere culture; course this does not apply to those found near the coast. -D. Beaton, Gardener to Sir W. Middleton, Bart.
Mirabelle Plum.-A very common frait in Germany, is a small yellow plum, called Mirbellen (qus from Myrobalanus) : it makes an excellent preserve. There is white Sloe in country gardens in Eugland; but I think that is smaller than these, though it is larger than the common priple Sloe.-S. [This is dovbtens the Miragood for nothing else.
Franifort g lise.
Franigfort.-A new white Aralea indica, with large
flowers of great beauty, raised in Rintz's garden at Frankthere : also a pretty white in Baron Pronay's greenhoase vestris of a pretty white Leucoupermam. The Pinus ayl mul of the forests on the banks of the Maine scems of a in E brighter green than the Scotch fir commonly planted ingland, which is usually of a bluish and more glancous of Az lintz has also raised a splendid deep purple var Rhodice phoenices, and a fine blush hyrid, between all rusty character on the leaves.-s, completely devoid of
Birch Coppice -I am
cations of your correspondents obliged by the commurion the management of Birch, in reference to my inquiries on the subject. From their observations I am led to infer that, in the case to which I invited attention, vis. of catting down birch-trees of twenty years old and apwards in a mixed plantation,
there is but litle hope that the stems will survive so as to there is but litte hope that the stems will survive so as to
form underwood. On future occasions, I shall be carefol to cut at the 1 . and I true very earliest period of autuma, as bigesced result of this system. If, howerer, the failure in the growth of the stools is caused by the bleeding of the stem, as is supposed, I would beg to repeat the inquiry whethe this might not be prevented by some external application. Being on this subject, I would venture a remarl: on the great importance, in all cases where a renewed growth of shoots is desired, of leaving the stems with a clean smooth cut, without shattering or splinter. This can, in general, be effected by only cutting with an upvard stroke, instead that this method is too generally practised. I am aware that this method is more troublesome, and that it is difficult to induce labourers to follow it. Indeed, it is not all who can so use the bill-hook. It is lamentable to see the miserahie manner in which coppice and hedge-cutting is frequently performed, and the injury and decay that result. -F., Berks.
Roses. - Perceiving you inquire the fate of Roses during the late severe winter, I may mention that a Macarnney Rose, trained on the house in a W.S.W. aspect was to all appearance killed, but it is now shooting out in all its branches, and fast recovering itself. It was the February frost that injured it, at which time it was cosered with buds. I always look at the thermometer (placed at the back of a hollow wooden pillar in the aspect before I saw it ans. and P...., and the lowest point at which I saw it was 15 on the evening of Wednesday, February the 3rd. It was once also as low as 16 , on the morning of Friday, January 8th. There is, I may say, nothing injured besides the Macartney Rose, not even a Treeprony, though left Without protection of any kind. Seed of the Nemuphia iasignis, self-sown last year, up and is now in flower; but the colour of the blossom is gone, and it is white with scarcely a tint of blee. In saying nothing is destroyed, I must ercept one decidnow shrub quite killed, bat I do not know the name of it. Perhaps 1 ought to add, respecting the climate, that it is high ground, in laitade 2.15 , and West longitude 2.35.-

Honflewr Molons.-Honfleur produces excellent Melons, far surpassing all others in size, if not in flavour which are thence despatched to Paris, and even to Holland May is the season to som them, and we are rather sar prised at not having heard of any experiments being made to raise them in Eagland, although well aware that they require a warmer clamate than oars, and that Hondeur, facing the morning smo, is shellered from almost every wind except down the Seine. Soure horticulturists may wish to make the experment. We beg the plants are saised much like Cucumbers in England and when the weather becowes warn, in May, are troms planted (something iize Engiish Canifiovera), two or thre together, into many other smalt hot-beds covered with about six inches of the firiest sifted mould, where they are kept covered with hand-glasses till the plants acquir streagth, or till the summer is completely set in, when they are allowed to grow in the open air, like Pumpkins, or Pompions, being require with water that has stood one day in pots exposed to the sun, prevent sudden cold. We have actuall seen gardens resembling fields covered with Melons Honfleur, some of which weighed 20,30 , or eren 40 pounds each, which are more prized for their rare six than the flavour, as the moderate sizes are generally pre ferred. We believe the gardeners keep seeds two or three years before they are sown. By choosing favourable aspects in valleys, and using proper precautions, French Melons may flourish in warm aummers in Eughand, although they cannot be expeeted to equal such as Honfieur produces. We remember sowing English Broccoli at Hoaflear which there surprised the French gardeners more than their prodigions Melons astomished our ejea.-J. B. Tree Guards.-A cbeap and expeditious fence for protecting trees in parks against deer, horses, \&ic., may be made as follows:-Provide some stakes about the thick ness of the wrist. seren feet in length, and tolerably straight; chop each a litrle flat on one side; then get some ron hooping, a little thicker than coopers are in the habit of using for barrels; punch holes through it six inche apart (with one near each end) ; nail it to the stakes on the chopped side, one foot from the top of them, and one foot from the bottom; then raise it and bend it circularly nearest the tree; the boles left at each eud of the hoo are then clenched up with a nail, and the guard is com plete.-W. Brown, Merevale Hall.
Carnations. - Where it is desirable to have late flomer-ing-beds of these, thiss is a very good tiune to propagato quired either in preparing the coutiangs or prickiag them
than placing a hand－glass over them when pricked out．
Having fixed upon the stem from which you mean to draw the piping，take the former in your left hand，and the top of the latter with four or more leaves between the two first fingers and thumb of your right，making a gentie ateady pull；the stem will give way at the place mont suit－
able for ite making roots．Then，on a south border，where able for its making roots．Then，on a south border，where the surface equal to the area of the open end of the hand－ lights destined to cover the cuttings to the depth of two inches，and filled with pure mand neatly levelled but not be inserted，the sand settled with a gentle watering，and the hand－light put over them．Treated in that way，one may safely calculate upon \(9-10\) ths of them taking root． Plants so obtain
John Halliday．
animal has been mas the destruction of this troublesome I can，I think，furnish them with a satisfactory answer My house had been，as I believe most houses in London are，infested to a most disagreeable extent with this crea－ ture，which in warm weather occasionaily ascended from the usual remedies in vain，and at length determined to take the bull br the horns ：I sunk into the hearth，rather on one side，that is to say at the end of the fender，a small wash－hand bason．It was let into the stone like a coal－ plate，and so placed as to be nearly in the middle of what had appeared to be the great thoroughfare of the cock roaches．The effect was surprising．in ithout any bait，
they tumbled in by hundreds，and in a few weeks my kitchen，which had been literally covered every night kitchen，which had been literally covered eviry wearly free from them；a few stragglers were alone left． About three months since the basin was broken，and the creatures soon began to gain ground．It was replaced at the cost，I believe，of a shilling，about a fortnight since， and they are again rapidly on the decline．Although the basin has been used without a bait，I have little doubt that a small quantity of stale beer，or a touch of blacking， would greatly increase the effect．I tried the plan re－ eommended by your correspondent＂P．P．＂of pointing ap all discoverable crevices，but the beasts appear to aunt impossible places．The other recommendation of放 difficult adoption，unless by a certain which would Lord Mayor of the last century，of whom the City wags advertised thant＂sthe Mansion－house cat had happily kittened in the kitchem－range．＂－A．A．

Galvanic Protectors．－ 1 if your correspondent Mr．Saul of Lancaster thinks he has formed a Galvanic Protector by a mere rim of zine，he is miserably mistaken，and is gnorant of the principles of the conditiona necessary to sustain the voltaic circle．There mast be two differently oxidizable metals，－iron and copper will do，but mot
well as sine and copper－J．Murray，Manchester．
Magnesian Limestone．－In a recent communication concerning Sir William Burnett＇s patent for preserving mood and canvass，it is assumed that magnesia is inja－ rions to vegetation．This is not the fact．It was stated by the late Mr．Smithson Tennant，that seeds would not vegetate in carbonate of magnesia；and hence it was in－ ferred that magnenian limestone was injurious to，if not
destructive of，vegetation．On repeating thene experi－ ments，I found that seeds gorminated in carbonate of magnesia equally well with those sown in other earth： and on my mentioning my experiments，many years ago， to Professor Jameson of Edinburgh，he informed me that the farmers near Kelso had，from time immemorial，oev－ ployed the magnesian limestone of the district with simi－ lar benefit to that resulting from other limestone．\(-J\) ． Murray，Manchester．
Healing Greenhouses．－In p．197，＂T．N．＂recom－ mended an apparatus for heating greenhouses which ap－ penrs to me by no means suited to the purpose，insmarh as ine should be the heating apparatus of a plant－struc－ the variations of a climate where heat in often required upon the shortest notice，and wanted only for a few hours． To effect this with in apparatus requiring a day to heat and three to cool is imposible．The this flues with sime covers that＂T．N．＂deprecates are far better suited to
the purpose than anything requiring a day＇s preparation． the purpose than anything requiring a day＇s preparation．
＂Light，＂he says，＂being one of the grand stimalating agents，I take care to let in as much as I can by all means．＂This is a redeeming point that cannot be too fully borne in mind by persons growing plants or building greenhouses；and if＂T．N．＂will only take a couple of him for all he has said on the subject－M．T．（We nuat here observe on behalf of our correapondent＂T．N．＂ that he does not offer his apparatus as a very good one， and notwithstanding the criticism of＂ M ．T．，＂＂we think ＂T．Notwithatanding the criticism of＂M．T．，＂we think than common fives ］
Gaindoners＇Wagos，－I most cordially assent to the ject of Gardeners＇wages ；and the sort of agitation at－ tempted in the printed correapondence apon the subject I think ill advised indeed，for I feel sasured that the attempts of a few maleontents to represent the whole body of under－gardeners as a body of discontented growling paupers，meets the disapprobotion of every apinited prac－ Comfrey．－In Builey＇s Dictioniry I Ind that this plant is calted an excellent wound herb．I comalted this old table wha considered by people in forme dere ta
excellent esculent．I tried it myself dressed in the same
way as spinach，and found it sustain its character．It is free from that flavour which spinach possesses，that ren－ ders it to some palates not nice till a taste is acquired for it．Can you tell me why Comfrey is not more in use as seded by spinach？It has this advantage for cottagers， that it is perennial；and if it will throw a second and
greater crop of leaves after the first and successive cut－ tings，it must be valuable．I find that it thickens from the root，and grows more bushy each year．I carried
soil from a brokeu－up garden，that dates itself from the time of Elizabeth，in which this Comfrey grew；aud that soil was afterwards remored twice ：but notwithstanding every disturbance，and diggings without any attention paid to it，this esculent showed an unconquerable tenacity for life，and in consequence this year attracted my atten－ tion，and I had it cooked．－Your Constant Reader of the cinále，a plant belonging to the Borage tribe，and，like all others of that natural assemblage，is perfectly free from unwholesome qualities．It was formerly regarded as a vulnerary，that is，a plant capable of staunching wounds，
a merit to which it has no clim．It has probably gone out of cultivation because its leaves become harsly and coarse unless very young．If gathered while tender，they
are certainly a good perennial substitute for spinach；and the young shoots，blanched by being forced to grow through heaps of earth，are eaten like asparagus． would be a good plant for a cottage garden，provided the grow more than a foot high，if he means to eat it．The worst of it is，that it runs about very much by its creeping underground stems．］

\section*{FOREIGN CORRESPONDENCE}

Frankfort，April 13，1841．－I must not neglect to give you a short account of the Frankfort Horticultaral Exhibi－ tion at the Easter fair this year，as yon may not have another communication on the subject．The stock plants of the show were－Camellias，Azaleas，and Australian Aca－ cias；some handsome Rhododendrons，very fine Auriculas， Cacti，icc，and a few good plants of Palms，Dracra， species or novelties but very handsome specimens of well－ grown floral varieties．Among the Camellias were some both pink and white，more verfectly resembling Roses in bud，fower，petals，and expinsion，than any I ever remem－ ber to have seen－particularly a splendid white，which one might have taken for an opening Rose unique；and one pink or light crimson，with exactiy the loose，harge，con－
cave petals in the whole flower that one sean in the Isle de Bourbon Rose．There were also some fine cup－shaped Camellian，fail of small petals，paler and paler，approaching the centre；for one of these Baron Pronay sot the beat called cald alve the largo，flat－iowered Rothschild，and some rose－coloured Anemonefioras almost as large；very fine speciment of the marbled Chandléri， Donkelséri，and others of our sorts．The Camellias ap－ pear to flower abundantly here，as the gardeners do not pall of the Baon tained a 1 tained a silv er in the yellow Sinensis．Mr．Stein＇s scarlet Rhod．Arborreum， surrounded by various red Camelias，did not yield to them in colour ；the varieties of pink and crimson Rhododen－ drons were very large and handsome，especially Rintz＇s plant Rüppelliánum．There are some white variations of R．albitiórum with very dark spotag leaves not silvery，rusty， nor clanamy．I do not know their erigin．Among Mr． beset ith long white spines than any I have seen．Cereus similis not so good as in England．A fine plant of Zamia horrida，with a large cone on it，was one of the chief ca－ riosities．There was also a plate of seed of Madia sativa， a bottic of oil made from it，and the cake from which it was expreseed．The arrangement deserves the highest credit， In a long tent placed so as to include two pollard trees， mere ranged stands of plante，from near the ground to the top of the wall on each side．These formed a semicircle were half concealed by evergreens of all sorts；but it would have been better if they bad been hung with handsome climbert，Kennedias，Tacsonias，\＆e Between the two trees was a well－constructed group of granite rocks，over which a copious cascade flowed into a basin filled with gold filh．The rocks were very bataraily fringed with succa－ lent plantss，Cacti，Moss，doo，and richly planted with Fan－ pelms，Dracenas，Cerei，Musa，Canna，Pothos，Cycadew， Pines，ad brilliat A aleas and Heathe Po wile in the mid He a staly Arearia rose from obove the gushing stream． The wis Oraage trees and large Rhododendrons of fine sorts in Oraage trees and large Rhododend Camellias，Euphorbias， and other smaller plants，groups of Ferng，bird－eages，sce．

Berlin．－Dr．Walpers of Berlin has announced his in tention of bringing out a wort catitled Reperforium Botanicess Spociolis，which will contain a review of all the species of plants which have been publisued since the appearance of Decasadolle＇s Prodromus，Willdenow＇s and Schultes，Kunth，\＆ce．As the number of botanical books is daily increasing，all lovers of Botany have felt the want of a work that might afford them aecarate infor－ mation where new plants have been described．It is the object of Dr．Walpers to satisfy this want by the work in Wha Phintown Mmy distingaighed Germas botwaista
have promised their assistance，and have partly undertaten the arrangement of particular families．Plants described
in the works before mentioned will only be referred to； the new species will have their synonymes given，together with their native country，and all the books in which they are mentioned．If these works are expensive，rare，or not ＂Elenchas of booksellers－as，for example，Boissier＇s ＂Elenchus Plantaram，the diagnosis given in the work Dr．Walpers believes that the utility of such a rork cannot be doubted；and he begs for assistance，particularly in the ommunication of books sad notice
Himalayas．－It appears to me that a point of consider－
ble importance in descriptions is uniformly omitted whether the plant is gregarious or solitary；it is one of much importance as regards their geographical distribu－
tion and general habit．For instance，all the Salvias I am acquainted with in this country，especially Salvia plebeja scandens ；while by garious，reater part of the Labiate aria more solitary in their babit．It is a point which throws great light on the descriptive appearance of a country，and strikes one much in these mountains，where for miles the under herbage is composed of masses of the same species－ sometimes Balsams，sometimes Goldíussias or Salvia， almost to the exclusion of other plants．－R．P．E

\section*{MISCELLANEOUS}

Horlicultural Suciety. - We understand that the great exhibitions at the Garden of the Society are likely to be more attractive and more numerously attended than in any former year. The number of tickets issued already exceeds that of the corresponding period last year by places in the tents is such, that nearly all the great iron Antros been secured by the gardeners of Sir Edmund Antrobus, Mrs. Lawrence, Mr. Norman, and others. sandy sea-coast, where it must necessarily be under the constant influence of a moist and slightly saline air. This quality is in proportion to the approach made artificially in providing it with such conditions of life. It succeeds in any rich garden soil which is loose and deep for its long should consists, and well mixed with manure, which tained. Sea-kale is propagated either from pieces of the roots or by seeds. Plants from seeds are, however, esteemed the best. Sow in March or April, either in a bed, partransplanting in the following spring, or in the comHere, where produce. traced two feet apart, then leave an interval of three feet, mark out three more rows as in the first instance, and so on. The plants should stand two feet apart in the rows ; therefore if sowing is employed, a few seeds should be dropped in patches, in order that the strongest plant only in each patch may be left upon thinning them, and that those so left may be about the distance abovementioned from each other. In the first winter some dung and leaves should be spread over the rows, and doned in early in spring as manure. The same may be the the second winter after sowing, for the plants will then be too young for forcing, although a little produce may be sparingly gathered without injury. The third winter blanching-pots, either those made with lids expressly por the purpose, or large garden-pots inverted, should b placed over the plants, pressing the rims closely down dung and leaves, or whatever substance will ture of long degree of warmth, should be formed so as to include three contiguous rows wader chem. Too much heat, or the in troduction of steam from the fermenting materials, wil destroy the buds and crown of the plant. A temperature moder of as murh as can be safely applied. In some plants in autume thents are blancled ; covering the forcing pots are preferable. Sea-kale may be forced like Asparagus in brick-formed beds, or in pits; a less degree heat is, however, required for Sea-kale than for Aspaagus, for the one naturally shoots up early in spring and sould be cut only esch alternate getr. but if this is not of importance, they bear cutting every year, care beine bad to leave them plenty of shoots to form foliage for the ummer and autumn. If after fowering the young seed are picked off, the plants will shook mach stronger id the succeeding spring. A shght addition of salt to the soil, it is probabie that nitrate of soda might be employed ad vantageously, but this remains to be proved.
Improcement of Wild Plants.-On reading M. Filmorin's paper in the Horticultural Transactions on the culture of the Wild Carrot, I had an observation of the When I first cultivated the Cape Broccoli, I asked Mr. Lee abunt the masagement of it. He told me that ought to thow awny all the fime large planto, and only wet
out the small ones, such as one would be inclined to thrum awa.. M. Vilmorin says, that in the third sowing the
largest roots were in seneral largest roots were in general coarse and ill-slaped, and in
the next sowing hetter sowing the roots were smaller, but the quality better. Thus, it appears that size and quality were in in-
rerse ratios. \(J\). W.

longer, many of the flowers not heing yer expanded. In this chi-
mate they are quite as hardy as the american species, and flower chased earlier mine or the season. There is one plant that was pur-
road Nursery, under the name of Mr. J. . Anncht, of the Kincs
riscumference. At the present, time it forms one of the most beautiful objects one can prossibly cemeeve. During the severe frust same appearance as has beeli spondenthed by sume to the sun as if they had been slightly scorched; notneng of this dodendron will not grow unlest it opinion to suppose the Rhoflourishing here as underwood on louse stony bank w where there was scarcely any soil to cover them; but wherever the soil in-
clines to be clayey they will not answer.

\section*{Revístos}

Journal of the Royal Geographical Society. Vol. X Part 3. London: Murray, 1841
Amovgst a great quantity of highly interesting infor mation relating to geography only, we find some scattered In Kasaria, a province of sie Mirac
hills of Baghrio, Mr. Ainswurth four, on the limestone hills of Baghran, Mr. Ainswurth found on the 15 th of May "patches of suow and an early but brilliant spring
vegetation, consisting of sweet-scented hyacinths, blue anemones, white and yellow squills, and a fers ranuncu-
luseo luses and red tulips. These flowers sometimes almost
carpeted the recki carpeted the rocks, and contrasted brightly with the stony
sterility around, where steep and barcen cyids were thrown sterility around, where steep and barren cliffs were thrown into deep relief by a clear sunshine, and their shadows darkened by long ridges of snow
At Músh, in Syria, Mr. Consul Brant found that - Grapes are gromn in vineyards on the sides of hills, and a great abundance of meions are produced; there is no scarcity of any kind of common fruits. The only trees to be seen are a fem planted around the rillages: the recesses of the mountain-range on the S . are said to hare oak-fovarieties of the oak ; one produces the gall-nut, and another manna : the latter is a saccharine secretion which does not possems any medicinal quality, or any pectilaz
favour favour. It is collected by suspenting the they ace them
the leaves on uatil the: are quite dry ; the
 skimming off the pieces of broken le man any extra-
neous matter: this nanna is ured for maning instead of sugar. It is a sery uncertum protuec, nudi is
often for a succession of pears not, be foual in sufficient quantity to be warth collecting : dry seas ms are in jeveral summer, one of more than aa afulde deuree of heatand The same intelligent traveller infirms us that at Bitlis lected on the mountains. There are two planta : ond with a white and the other with a pink flower. The formaer
yields a white gum, which is exported to Europe ; che.
latter, a brown kind, of very inferior quality, which is
used entirely in Turkey.- The gum is collected by persons who traverse the mountains for the purpose: they clear away the earth froin the roots of the plants, and make in. cisions in them, from which the juice exudes, and in : day or two hardens, when the people return to gather it. The occupation affords but a trifing remuneration under such as can do nothing else, as old men, women, and children \(;\) but when the demand is great, and the price unusially high, other labourers take to the parsuit, and then an immense quantity is collected, for the plant is most abundant on all the mountains.
fact was observed :-
The sut santry were reaping, were remarkably fine and clean, and I observed the grain was sown in drills. I learned that drill-husbandry and a careful system of agriculture were universally practised in this part of the country. A long wooden block, with a sharpened end hollowed on a slope, deep. A boy follows, and lets the seed fall from his hand into the trough, from whence it runs into the drill; the grain is picked over by women, and the finest heads se-
lected for seed. After the crop is reaped, the weeds are cut down and barned. Hoeing is not practised, nor frora the appearance of the crops can it be required. The fields are never irrigated; and although there had not been any
rain for some months, and the soil appeared dry sand, yet the bottom of the drill was quite moist, and the people said that in ten days the seed now sown would appear above the ground. said they learned it from their fathers, and they followed it because they saw it produced excellent crops: this was all they knew on the subject. It was curious to find prarsystem of agriculture which had been introduced at no distant epoch in our own country as a novelty.
Of the valley of Kashmír, the supposed source of so many of our European fruits, the following graphic ac-
count is given fron the Travels of Baron Hiigel:count is given from the Travels of Baron Huigel:

The valley of Kashmir is bounded on the southern side by gently-rising declivities ; the descent of Pír Panjal is covered by the most luxuriant vegetation ; and the eye rises gradually from the magaificent forms and colours of of the highest mountain chain. On this side, between the gently-diminishing ranges of hills, lie greater and less valleys, in the centre of which flow the purest mountain This is the romantic district of Kashmir. From the little open plains, covered with southern vegetation, the traveller arrives on the banks of a river which winds through the deep fertile soil. The valley narrows the further he ad vances, and the mountains approach each other more table world are then more attractive to a European, as they develop themselves more closely allied to those of his distant Fatherland.

Apple, plam, and apricot trees, encircled by rines, here grow wild. Elms and willows conceal the bants of muring one course of which may White-thorn and spindle trees (eu, \(n:\) mus) surround wide-spreading maple and limes, or enormons chestnut trees, under whose shade the lily and narcissus, larlspur and aconite blossom, together with the lilac and the rose.

Nearer to its source, the river changes into a foaming cataract, rushing over dark rocks. Here begins the region of the pines, from the majestic déodár (the cedar of the Hi malaya) to the fir and other varieties of that tribe. Still kigher, the river divides into many strearas, which flow cataract, fall into the abyss below.

Alpine plants, many species of Rhododendron and Daphne, here begin at the foot of the alder and birch, which bend beneath the weight of snow; and after these a strange vegetation, slightly elevated from the soil, appears on a plain already situated in the regions of eternal snow.

Iq the south, on this side, the eye is directed to the bare and frowning precipices of the Pir Panjsi, and then anges, to the plain of the Panj-ab; glowing in the golden ranges, to the plain of the
bold forms-the snowy whiteness brings the highest point nearer to the eye than the lower declivities-the snowy hills there appearing to enclose the plain like a wall. Over these the previously-mentioned Jamál rises nearly at each end of the valley ; and the white and black double pyramid of the Mer and Ser, like a monument of creation when God divided the day and night. But on these heights, which rise more than 15,000 feet above the level of the sea, the first moment alone is agreeable. The air here is so rarefied, that a painfol headache is the consequence even of a short stay, which, increasing every instant, lasts long after the descent to the plain. To the southern side of the valley of which we bave spoken the zoologist and botani-t must direct their iteps, either to discover new obived. bickest woods are mingled with open plains, Hor aeither finds trees levelled by the axe, nor
lowers pressed by the foatsteps of a living solute stillaess reigns. The treasures of loveliest forms of nature are there prodi-
without an intelligent ipirit to be gladiened
by their beauty. The brook flows noiselessly along; no air rustles through the motionless leaves, and the deep
silence is only broken by the sweet tones of the blue thrush, and of the bulbul (the nightingale of Kashmír). These approach man fearlessly as in the days of Paradise, and are his faithful companions in his lonely pilgrimage.

On the heights below the highest peaks, close to the snow-line, saxifrage and juniper are found at a height of The mines of Kashmir lie on this side. It is a very re The mines of Kashmir lie on this side. It is a very retemperate, almost colli, climate of Kashmir, the few plants appearing there belong to the scanty vegetation of the north; whilst on the northern side, towards Kashmír, the hills, even to a considerable elevation, are adorned with growth belonging to the laxuriant south.
CALENDAR OP OPERATIONS for the ensuing Week The season bas now arrived when ires may be dispensed with e necessary ; tender plants will not be so liable to injury from
cold if allowed to become dry before the house is closed ; theredore plants in houses where the temperature is allowed the the root in the evening, and the hooses should be closed early, that they
nay retain suffient solar heat for the night. of course if cold or may retain sufficient solar heat for the night. Of course
wet weather occurs, this treatment must not be continned; but,
wit under ordinary circumstances, plants thrive better by being kept
lower at night: besides, the saving in fuel is an important matter, though a great deal is wasted in most gardens. 1 .-KIICHEN-GARDEN AND ORCHARD.
PINEAR. - Should the tan-beds begin to get too hot, as they
robably will if the pits are large, a good watering with limewater will cool them and kill the worms, which usually become wroblesome at this season by entering the pots. The plants
should be watered once with lime-water previously to the bed, to should be watered once with lime-water previously to the bed, to
make the worms leave their pots. Do not syringe overhead any make the worms be in fower. It will be found that the plants in large pots which are plunged over smanler ones, as formeriy recommended, will take water oftener than those plunged without
pots under them \(:\) this is a great advantage, inasmuch as their roots are not so liable to injury, nor so soft and tender, as when
kept constantly moist. In administering air and water, let the prevailing weather and the state of the plants guide yo hinskr.- he them any fre-heat unless cold or wet weath occurs. Syringe them every morning, and shut them up dry in the afternoon. Thin out to one good shoot, where more eyes have started, retairing the one nearest the main stem, if possibie;
otherwise the spurs become long, weak, and unsightly. Continue otherwise the spurs become long, weeak, and the ornsing in the evening is the

\section*{NEWS OF THE WEEK}

Our Foreigs intelligence is not of very great import ance; the French Government have decided against the dissolution of the Cbambers, and have introduced the nem bill for the recraitment during the ensuing year, which affords some details of the warlike preparations rendered accessary by the policy of the late Ministry. A warm dis cussion has taken place in the Chambers on the expediency of continuing the uccupation of Algiers; it appears to be the intention of the Government to restruin their views of conquest as soon as the present campaign against Abd-elKader is terminated, and to come to some settlement as to the extent of territory ultimately to be occupied by France. In the course of the debate upon this question it was shown that nearly all the present ministers had expressed their disapprobation of Algiers as a French colony. The fortification of Paris is in active progress, and numerous labourers are at work on the detached fortresses. -In Spain, the Regency question is still the chief topic of attention ; the most recent advices inform us that a large majority of the Senate have decided in favour of the single Regency of the Duke de Victoria, and that the party inlined to a triumvirate is so small that there is little doubt of the appointment of the Duke to that important office. -The differences with Rome appear to have given rise to much excitement among the clergy, and the Government has resolved to proceed against several ecclesiastics in the Civil Courts, for inculcating doctrines leading to revolt. Secret efforts to revive civil war in Spain have also been discovered, and it is stated that the King of Naples has addressed a circular to the Northern Courts, calling upon their intervention in farour of Don Carlos.-In Portugal, financial difficulties continue to embarrass the Government and the Ministry has been obliged to adopt a new plan to prevent the necessity of any future obligation to private capitalists. The negotiations for the treaty of commerce with England are likely to be soon concluded. -From Switzerland we learn that a fresh excitement on the subject of religion has broken out in Lucerne; the vote of the Extraordinary Diet in reference to the suppression of the Convents still remains inoperative; the Canton of Argau having not only disregarded it, but proceeded to alienate the property belonging to the clergy, being certais, it is said, of the support of the Federal Directory and of the great majority of the people. The whole Confederation, indeed, appears to be in an unsettled state, chiefly arising from religious differences; and many inhabitants of the Catholic cantons are preparing to emigrate to Algiers.-From Russia we are informed that preparations are in active progress for the emancipation of the Jews throughout the empire, as soon as they are qualified by intellectual civilisation to receiv and appreciate the concession. In order to facilitate thi object, schools have been orgenised for the instruction of the Jewish children, and learsed Hebrews from forcign rountries have been invited to superintend them. It is said to be the intention of the Emperor, not only to releas them from many existing burdens, but to admit them without limitation to the privileges of other Ruasian sub jects.-From the Levant we learn that the late change of Ministry is likely to be instrumental in leading to the final ettlement of the Eastern question; and that the remon strance of Austria on the part of the Allied Powers in fa vour of the Pacha of Egypt will induce the Sultan to grant the hereditary succession. We also learn that there is some probability of the abdication of Mehemet Ali in fa vour of his son Ibrahim Pacha, as soon as the dispute with the Porte is settled
At home, Parliament has re-msembled during the week, but the business transacted has not yet been of great public interest. In the Commons, Lord Morpeth has an nounced that the amount of rating to govern the Elective Franchise, regulated by his Irish Registration Bill, will be raised from \(5 l\). to 8 l., as far as counties are concerned, but that no change will take place in boroughs.-Great excitement was created yesterday in the City by a ramour that a ressel had arrived at Waterford from Bermuda, bringing intelligence of the safety of the President ateamship. It appears, however, that the report was entirely without foundation, no arrival from Bermuda having been reported by the agents of Llayd's at Waterford or elsewhere.

\section*{720me Nepos.}

The Court-Her Majesty, Prince Albert, and the Princess Royal returned to Buckingham Paiace, from Windsor, on Wednesday afternoon. The Queen held her first drawing-room for the season on Thursday, at St. James's Palace. It was not very numerously attended and although the assemblage in front of St. James's equipages to engage their attention. Her Moriliant companied by Prince Albert, honoured the Itaian Opera with her presence in the evening of that day. - We regret to hear that the Queen Dowager is indisposed at Sudbary. It is stated that Her Majesty, finding Sudbury Hall too small for her establishment, has it in contemplation to
take Shagborough Hall, the sent of the Earl of Litchifeld, as a summer revidenca.

Parliamentary.-Mr. Alexander, the Conservative candidate for the county of Antrim, was returned without ar, that Mr. H. Lambton does not mean to offer himself again for the county of North Durham.--it is stated that Mr.
Hutchins, the member for Penryn, has written to his Hents, requesting them to announce that he shall not, in the event of a general election, offer himself again as a candidate for that borongh.
Post-Ofice Returns.-From the Post-office returns, recentiy ordered to be printed, it appears that the tota namber of chargeable letters passed through the London 1840 (one month after the general reduction of postage) was \(2,102,281\); and for the month endiny March 26 ,
1841 , it amounted to \(5,1060,127\). In the Londun distris: department the number of letters during the month end ing Jan. 4, 1840, amounted to 1,3112 , 655 ; while in the month ending March 27 , 1841, the number was \(1,666,1: 38\). The number of letters delivered in the United Kingdom and in the week ending March 21,1841 , it was \(3,721,455\). For the year ending January 5, 1840, the net revenue for the United Kingdom was 1,633,764\%. 28. 9d.o and for the year ending January 5, 1841, it was 465,92

Constituency of Great Britain.-The number of electors on the various registers of Great Britain for the year county voters, 452,651 ; total number of borough voters, 319,189. Wales-county voters, 36,833 ; borough voters, Wales, 819,612 . In Scotland. the total number of county voters was \(4 \overline{4}, 092\), and that of borough voters 35,607 , making altogether 82,699 . Thus the gross constituency of greass trital constituency of Ireland was in 1839-40, 54,687.
Civil Contingenties.- From an account recently presented to the House of Commons it appears that the total amoust expended under the head of Civil Coatingencies, is the year 1840 (for the Thole of the United Kingdom), lowing items, viz. :-Extraordinary disbursements of Ministers at foreign courts; expenses of entertaining and conveying persons of distinction, ambassadors, governors, being part of the Civil List); and varions public services, the The estimate of an amount that will probably be required to defray the expenses undor the head of Civil 130,000 l., from which if 10,000 . (the balance in hand) be deducted, there will remain the sum of \(120,000 l_{\text {., }}\) the mount required to be voted

Reduction of Duty on Frenoh Wines and Spirits.-It is reported that the proposed reductions to be made unde the hew commercial treaty with France will be to 10 s , per gallon on brandy, and to 1 s. Gd. per gation on wine, and
that the conclusion of the commercial treaty is dependent on the ratification of the politicidl treaty, which will with draw France from her present isolation.

Bankrupscy Commissioners.-By a return lately moved for in the House of Commons it appears that the number of fats opened by the lists of Commissioners of ending rupter in the country, wac., 1,174 ; wa average of 793 per аипй.

\section*{ffortign.}

France.-The Supplementary Credits Bill has passed the Chamber of Deputies by a majority of 195 to 38 .
The Recruiting Bill.-The new law of recruitment came before the Chamber or Depurics in 1841, it appears will have been about 60 millions sterling, of which onethird is war expenses: and these, too, not covered by the ordinary revenue of the country. In addition to this comes the impost of ruen raised yy the conscriphon laws, The Minister of War said that the dectine in the revenue, number of working and earning men carried away from work, and forced to take the musket and live idly in bar racks. Hitherto, it seems, 40,000 young men were taken
annually; now 80,000 will be taken, which must make a sensible difference in the number of hands disposable for work. The 40,000 were tept for seven yeurs; whereas mow, after four yeart, one-ham the soldicrsare to be sent army and the reserve at \(550,000 \mathrm{men}\), a lower estimate than Marshal Soult at first calculated; he made the new Isw produce \(620,000 \mathrm{men}\), not counting volunteers. A deputy wished to introduce a clause in rance, amenable to the conscription laws: but this was opposed by M. Guizo and M. Odilion Barrot, and the Chamber rejected it.
Dissmlution of the Chambers. -This question has been muth discussed in the journals and diplomatic circles of Paris; but the prevailing opinion at present appears to be
that no dissolution will take place. The subject. it is said, that no dissolution will take place. The subject. it is said, Cabinet. The prorogation of the Chambers is expected to take place about the 15th May.

Algeria. - The debate and division upon this question, Whether the French Government should continue to occupy the interior of the regency of Algiers, or limit their occupation to the coast, have been adjourned by M. Guizot, who said that at present they were eatering upon a cam-
paign against Abd-el-Kader, in doing which
would come the question of how far the occupation by Freach soldiers should extend into the country. M. Piscatory made a bold, and at the same time humorous, attack upon Algiers. He took the ministers one by one, and showed that they all condemner the occupation of Algeria. The Finance Minister, he sata, Miniser, had declared his wish to fing Algiers into the sea. Marshal Soult always said it cost more soldiers than it was worth.
Half the Chamber shared these opinions. And yet, year after year, 10,000 men, and three millions sterling, were M. Piscatory, all he wiehed for was an earthquake to rid them of the country, as it drove once before the Spaniards from Oran. M. Guivot undertook to show that Algiers Whas not so desperate a case. Ten years was a short trial. he said, at the history of the English race in North America, who had marshes, climate, and natives to contend sacred and their farms devastated. -In reference to this subject, a telegraphic despatch reached Paris, from Toulon, on Monday; from which we learn that the campaign in Africa is beginning to assume some interest. General from his expedition to Medeah. He had crossed the pass of Teniah, and reached Medeah without striking a blow : but on his return he had had a serious encounter with the on the 6th, reappeared in the environs of Algiers, and made a daring attempt to carry off the Govermment herd of cattle. It was with great difficulty the 26th regiment loss of 11 killed and 57 monded. The loss of the Arabs was not known. The grand operations, it is said, will be in May.-The Dalke de Nemours landed at Algiers on the 10th; nearly at the same moment as his brother, the Duke of Aumaie, arrived there at the head of the 27. , The Easlern Quessioh.-In the diplomatic circles of Paris, it is considered that the change which has taice place in the Ottoman Cabinet will facilitate the arrange ment of the Eastern question on the basis laid down in London by the representatives of the five Powers on the 14th ult, to which Redschid Pacha, from his enmity to Mehemet Ali, was strongly opposed.
The Fortifications,-The commission for the expropriation and estimates of the lands required for the fortificafons went on Saturday to Mont-Valérien, to survey and value the site on which the citadel is stand the thert he warks on this point have bee. already belonging to the State. Immediateiy after the necessary formalities have been gone through as fo the ground about to be acquired, the works of this fortress will be continued by upwards of 2,000 men. The encampment of barrecks or hut to the south-west of this hill are complete and ready to be occupied. The works of the redoubt in the King's Park at Neuilly, which have been suspended since the end of Deosmber, were, resumed on Saturday, and continued yeaterday by from 60 to 80 ordinary labourers. This number will be increased by as many men as can be engeg nasis airend half finished, and the materials for its erection are on the ground. But before completing the trenching, numerous pumps must be brought into play, as the whole excervation is full of water. The labourers appointed for the works as the Poat de Boulogne will carry on their ink other directions.
Flandres, as well as to poiats in ot

Railroads.-It is anoounced that certain capitalists already engaged in railroads, supposed to be the Rothschilds, and the St. Germain Company have offered to commence the Lille ralroad, and carry it as far as Pontoise, making the engagement not to throw shares on the market for a vear, the Finance Minister objecting to any competition of the kind with his loas. The plan is preferred of running the railroad to Creil, that is, due north, inttead of to Pontoise, which is said to be the most natural and most easy line.
Spark--The regency question, whith will continues to be the all-absorbing subject of interest in Madrid, appears now very likely to be brought to an issue. Intelli-
gence has been received, by ielegraphic despatch through Franes, that, on the 13th, the Assembly of Deputies pumed a vote, carried by a majority of 80 against 44, to invite the Government to bring on mmediately the question of the regency, which the proceedings of the senate tended to deliny. The sole regency of the Duke de Victoria was still regarded as the most probable event. Those who advocate a regency of three peraons, on the other hand, did not regard themedves as defeated, and hasd prethe a list of regents, from which the Duke was excluded, fante Don the hend of that body being filled by the fre members, Messrs. Arguelles and Gomez Beeerra.-The differences of the Government with Rome was the subject of a short discussion in the Cortes on the 12th. One of the ministers said that in consequence of the Papal allo-
cution, the clergy of Toledo had addressed the government in rather disobedient language, whilst in Seville, Malaga, and siguenza preachers had inculcated doctrmes leading to revolt. As far as this misdemeanour was poiitical, he added, these ecclesiastics should be tried by the civil courts. The applause of the ginister. He aleo said, that Goveroment was fully aware of the effort made to reawaken civil war in Spain, and lnew the whole proceedangs of the meuting held for the purpose by Spaniards is forciga capital, on the 18th of Mardil hat. But
all their plans had failed. - The Dean and Chapter of
Toledo, it seens, have folloned the suggrstion from Rome, and have formaily refused to acknuwledge Señor Valleja as archbishop of the diocese, he having been nauned bas, in consequence. thought proper to address a circular letter to all the prelates of the kingdom, in which he dopastoral zeal and influence in order to remove certain scruples and uneasiness which had arisen in weak minds, since the interruption of ecclesiastical relations between Spain and the Court of Rome.-Letters from Tolone state that the differences between the Mabrid Government and pected that the former would adopt some strons menare to enforce its authority. - It is asserted that the King of Xaples has addressed himself to the courts of Russia, Prussia, and Austria for an intervention in favour of Don Carlos.- It was reported that the Cortes would be prorogued before the latter end of May.-Subsequent adice vote for the sole Regency of the Duke de Victoria, and that the triple Regency counted barely 20 to 25 partisans therefore, now be regarded as fixed up on this question. Portcgal.-By the arrival of the Braganza steamer Falmouth, we have intelligence from Lishon to the 12th inst. The Queen's birthday had been celebrated with the usual demonstrations on the 12th.- Minister, Baron Tojal, had not been able to come to what he considered moderate terms with the Bank, Confinge Company of capitalists, who had been in the habit of realising such large profits for years past by the contractu ander which they made their advances to the Govemment expected. Baron Tojal was about to issue a few hundrod contos of treasury paper, in which he would pay the obligations of the Government pensions, would be received by the collectors of revenue for the expected to be able to save the loss hitherto experiencod oy its transactions, for the collection of those imposto with the Confinça Company. - the treaty of comere probability of the negotiations on the treaty of commer with England being speedily concluded. official returns, that by far the greater part of the receipts of the Lisbon and Oporto Custom-houses arises from im duties on wine destined for the Ruglish market. -Th rumour that the Portuguese Envoy at Rome has receive instructions from his Government to assure Don Miguel that if he will sign a declaration renouncing all pretensions to the crown of Portugal e vearly allowance of 60 conto de reis ( 14,0001 sterling ) ifl be made to him as an im demnity for the rents of his property, which formed demnity for the part boring in Italy in consequence of a protest, in which it was declared that, had aigned that convention under coercion, and that be did not cede his rights to the crown of Portugal has prodaced some sensation. - From the Algarve the ac counts of the guerillas have not improved; a party of and Odedix, and, unopposed, took away thie another went to the prisons of Ribeira do Alferes and helped them selves to quantity of coarse cloth, after which they com pelied all the tailors is the neighbouring villages to go with them to the mountains to make it into clothes for themselves and followers.
Grbiany:-We have no intelligence of any interest from Germany.-Berlin papers inform us that a Cabinet order of the 20th ult. explains the ordinance issued soms yeara ago, by which the Jews are prohibited from giving Christian names to their children ; that those only are to be considered as prohibited names either derived from toc name of our Saviour, stch as Caristian, Chinop, such as Renatus, Anastas, Baptist, and Peter.- Proposals, it is stated, have been made for a railroad to connect Fiume, Trieste, and the Adriatic ports with the Hungarian rivers the Save and the Kulpa, at Sipek and at Carstadu The fmportation of corn from Odessa and Trieste is the siderable. With very little expense, by conacolngugt, Adriatic with the Hungarian rivers, Hongary, it is does.Thigut furniah the supply that 8outh Rusi assent to the The King of Wartemberg has given his asserichshafen by Ulm, and that the works will be immediately commenced
Switzerland.-The excitement occasioned by the affair of Argau is still kept up by the coming change in the constitution of Lucerne. The democratic party ia that canton, the Catholic, it is said, have made the same, mistake as the Protestant democratic party of Zurich, viz, proposed laws and taken measures calculated to mane the peasant population think that they were irreligions. The consequence has been a reaction, and the separails. In Zurich this was followed by a violent revolution, which changed the Government and the Great Council In Lucerne the
legally, but quite as effectually. The eeclesiastical party have got complete hold of the government. One of the articles of the new constitution is, that every has shall hare full with. an of veto. plead. Of the nine members of the council of education in each district, four must be ecciesiastics, and the preas mant contain nothing explain the
nature of the new constitution. Great doubts and differdinary Diet. Argan was thereby invited to modify its resolutions respecting the convents; but how far, or in Fhat sense, remains still ambiguous. From later advices condition. The Government of Argau, disregarding the condition. The Government of Argau, disregarding the
decree of the Diet, was proceeding with the alienation of the property belonging to the clergy, being certain of the
support of the federal Directory, and of the great majo. support of the federal Directory, and of the great majo
rity of the Swiss people. Several of the cantons were rity of the Swiss people. Several of the cantons were a
prey to domestic feuds. The Catholics of Jura were
struggling to shate off the yoke imposed upon them by struggling to shake off the yoke imposed upon them by
the Bernese Governiment. Numbers of them were preparing to quit the country, and emigrate to Algeria, colony, under the direction of their former prefect, M. regimen established last year at the point of the bayonet. A party of Radicals was organising itself in the Canton of Vaud, and Geneva appeared seriously intent on political prove injurious to its prosperity; since the slightest commotion would have the effect of driving from its territory the numerous foreigners who reside within the
canton. Austria, on the other hand, was said to be secretly kindling the flame of civil war, and had assumed and the Swiss journals which had been loudest in con demning all appeal on the part of the Vorort to the friendly interference of France, are now the first to demand her mediation.
ltaly.-We learn from Venice that the long bridge continent to the city, for the passage of the Milan railroad, will shortly be commenced. This sigantic construction, which will cost \(4,830,000\) lire (or \(3,671,400 \mathrm{f}\).) is to serve as an aqueduct at the same time, and by this means Venice will be furnished with a constant supply of
fresh water. A Leghorn letter mentions that the Tuscan fresh water. A Leghom letter mentions that the Tascan
Government has authorised the formation of a railroad from that city to Florence, passing by Pisa. The works are to be commenced between Leghorn and Pisa.
Russia. - It is reported that the Emperor has given his consent to the making of an iron railway between St.
Petersburg and Moscow, which has been projected for some years. It is to be executed by a joint-stock company, which has many offers from foreign countries of persons willing to take part in it. It will probably be had made the preliminary survey of the line. Gerstner peror has enjoined the ministerial department and all the possible the number of persons employed in their offices. Orders have been given to tax the passports of all Russians travelling to foreign countries, as directed by the akase of September 1, last year. - It seems to be the intention of the Emperor to employ this year a very con-
siderable force against the Cirpassian siderable force against the Cireassian mountaineers. The
division of infantry stationed at Taganrog is already gone to Georgia. The 11 th division, stationed on the other side of the Dniester, has also received orders to be in
readiness to march, baving been already raised to its full complement. The 12th division remains for the present in Bessarabia, but is recruiting with great activity, and seems only to wait till it is complete. The troops in Georgia are greatly reduced by typhus and other epidemic disorders ; but the six divisions, consisting of \(72,000 \mathrm{men}\), which are advancing, united with the troops in Georgia, may certainly operate very decidedly on the offensive, in these provinces, chiefly in consequence of the severe winter.-By private letters from Petersburg we are informed that the Emperor has resolved to ermancipate the Jews in his empire as soon as intellectual instruction and civilisation shall be so far adranced among them that this great boon may be beneficial to themselves. Since
the beginning of Feb. this year there have been deliberations at St. Petersburg, the aim of which was to obtain this object by a judicious improvement of their moral and civil condition. 200 new schools are now organised, and the gouth educated in these schools, as well as the old ones which join in this attempt, shall enjoy, without limitation, the same rights as all other subjeets. At present, measures are in progress to invite to Russia from government schools acted as head-masters, teachers, \&e. Who shall manage the several primary establishments, since qualified persons are not at present to be found
among the Jews in the empire. The number of Jews in among the Jews in the empire. The number of Jews in
Russia and Poland is about 2,00,000. His Excellency M. Uwaroff, minister of public instruction, it is said, deTotes the most energetic efforts to this object.
SWeden.-tecounts from Stockholm state, that very
important inteliligence respectiug the Sound toll had been received there from London, and that this important question is likely to be settled to the satisfaction of all parties interested. Three estates of the Diet (without mitght be closed on the 15 th May. A letter from the Diet had been presented by the Minister of the Interior, in Which his Majesty says, that though it is manifest that country, he will not the Diet is a great expense to the conntry, he will not close it till all the important matters representation, are especilily the reform of the national thought, may continue till the end of October.
Toreker. - News received by express from ConstanMinte, dated the 29th ulto, announces that the present
Moreign Affairs, Redschid Pacha, has Deen
dismissed by the Sultan, and replaced by Rifaat Bey,
formerly Ambassador of the Porte at the Court of Vienna. The Minister of Commerce, Fethi Achmed Pacha, has Parh been replaced by the present Capitan Paeha, Said Pacha, brother-in-law of the Sultan, Tabir Pacha is
appointed Capitan Pacha, Great Admiral. These changes, which have been sume time expected, it is thought will Eastern question, since no ministry would venture to Eastern question, since no ministry would venture to
oppose the opinions of all Europe. At Rifaat Bey's first conference with Baron Sturmer, it is said the new Minister for Foreign Affairs solemnly promised that within?a few days the Porte would publish a new firman with the cession to the Pachalic of Esypt.
Eexpr,-Accounts from Alexandria state, that the abdication of Mehemet Ali, in favour of Ibrahim Pacha, is by no means an improbabie event. The armaments of the Viceroy are described to be, like those of France, only in a state of armed peace.
aland, - By the latest intelligence received from thi ialand, we learn that on the 19th ult., some Turkish ves sels of war, with about 2,000 regular troops on board, had
arrived from Constantinople, and Capt. Waldegrave, of H. M. S. Revenge, together with the foreiga Consuls, bad issued a proclamation, urging the Candiot Greeis, who were in insurrection, to lay down their arms. The resuit of this appeal was not known. The excitement in Greece tinues to be very strong; and it is generally supposed that King Otho, although his Government makes some outward show of taking measures to prevent assistance being aurorded to these movements, is secretly aiding them. One rebellious subjects of the Sultan; but it is said that the Greek Government had not been able to trace whether they proceeded to Candia or Thessaly.
Grerce.-Accounts from Athens state that a shor time since a gang of coingrt were discovered in that city circulating Turkish gold coins of their own manufecturs Greece pastes current in mellowed to be in circulation in Greecs, pastes current in mercantile transactions, and in exchanged by the money-changers when Greek silver is inance, their various gold coin has been repeatedly debased, during the last 25 years especially, as is shown from the fact of the value of the Turkish piastre having been reduced during that period from ninepence to twopenoes. farthing, which latter is its present value. Benides this, their gold coin passes current in Turkey for so much more than its actual intrinsic value as to leave a considerable profiton coining it with gold of the same atandard as that used by the Constantinople Mint. It wonld appear that
foreigners resident at Athens are alone implicated in this transaction, and that a diplomatist and also a consulgeneral are to a certain extent mixed up in the proceedings,
but that the Greeks have had nothing whatever to do the affair. Although Mons. Tricoupi has been appointed Minister to the Court of St. James's, there appears to be some sort of doubt whether he will really proceed there, as the terms on which he has accepted the post are considered by the chief part of the public and his friends to be so entirely at variance with his former political line of conduct, and so detrimental to the true interests of his country, that he has been very generally avoided since his appointment by his former supporters. It is, however, thought that it will end in M. Tricoupi affording some explanations, and proceeding to his post.

Wbst Indies.-Accounts from the Mauritius to the 23d Jan. have been received, and among other matters mentioned is the irregular conduct of the labouring population, who were unwilling to return to the plantations although the usual holidays had long expired. In the pre-
sent state of the plantations, the cane being very forward, sent state of the plantations, the cane being very forward,
the consequences were alarming, and notwithstanding the consequences were alarming, and notwithstanding emigration was still suggested as the only remedy for the evil, present results proved the attempt that had been existed bunsuccessul. The 1 iglish Governments had been much discussed in the island; but the latest accounts received out there from either quarter had considerably cooled the party spirit which existed between the people of the two countries. The small-pox had again broken out and was spreading rapidly.

Cnited States.-By the Europe, arrived at Liverpool, on Tuesday, we have received New York papers of the lst instant, one day later than those by previous arrivals.

vas still defraved by the mother county and that being the
case, he thought the tother country was not liable to the charge
of harshness against the coluny. Mr. Baring concluded by moving of harshness against the colvny. Mr. Baring concluded by choving
the previous question. Mr. . . Br.LR did not thalk the expen-
diture of the gaols and police ought to be thrown on New South diture of the gaols and police ought to be thrown on New South
Wales- Lord MA Hov thought that thie colony had established a
very strong primus fucie case of a grievance, and therefore he should support the motion.
Lord \(J\) RUSERLL said that the Colonial.office was continually
called oo by one colony or another to relieve it from some parcalled oo by one colony or another to relieve it from some par
ticuar burthen, and to transfer it to the mother cuntry. If
howerer, there were a sum of so, oonl. a year to be disposed of in
this manner, there would be no dificulty in discovering ways of however, there were a sum of so, ooul. a year to de disposed ofs
this manner, there would be no dificulty in disisorering ways
applying it; but he must say, that when he came to weigh th claims of the different colonies, he thought New south W ales had
been sing inlariy favoured, and had no tiar ground of complaint
against the mother country. The colony had, in consequence, flourished in a remarkable manner, and was at present in a highly
prosperous condition. .or was it true to say that a stop had been
 stop to emifration to Australia, on the contrary they were de-
sirous to afford it every encouragement The real question before sirous to afford it every encouragement
the House was simply whethe .ew South Wales should be re-
lieved of taxes to the amount of sulo.l.a year, and whether the amount should in future be paid by the people of this country,
He was happy to say that a gratifying change was taking place in
the character of the populaton of New South 1 ales, and in proportion as that population became more and more assimilated to
that of the rited Kind mit would become more and more in-
cumbent on the Government of the mother country to extend to the colony those constitutional guarantes which would give to
the colonists the right of taxing themselves, and of controlling Sir W. Molssworth thought New South Wales ought to be having been made the receptacle of the worst criminals of the mother country.
Sir R. PELL said, if he had 50,0002 . a year to give away to a
colong, the last way fin which he would apply it would be in pay-
ing for gaols and police. He was finduced, he said, to tale a ing for gais and police. te was induced the saul,
part in the deate only out of sympathy for the public treasury
of the country ; and he would not ineur the responsibility of im. posing on the people this additional charge of 30,0000 , a-year, uniess it could be shown to him that the honour of the country
was pledged to it. Mr. Waro said that the lands in the colony
would never have been purchased but for the belief that the fiund scocruing from the sales would be applied to the importation of
free labour. Sir \(R\). IvGIS thought that New S Iuth Wales had

\section*{fotetropolis anio its Zoininity.}

Extending the Thoroughfares in London.- \(\Lambda\) bill of importance, with regard to the improrement of the of Government. Its object is to promote further improvements in the cities of London and Westminster, particularly in two parts of it; first, to open a convenient to Newport-street and Long-acre. To effect this very important change, it appears that it will be necessary to phll down three houses in Leicester-sfuare, and also houses in Princes-street, Cranbourne-street, Bear-street,
and Castle-street, in Little-court, at the back of old Slaughter's Coffeehouse, in St. Martin's-court and lane. Tise second improvement proposed is to continue the line of street from Waterloo-bridge, now completed to Bowstreet, northward into Broad-street, Holborn, to extend
Oxford-street in a direct line through St. Giles's, so as to communicate with Holborn at or near Southampton-street. It is further proposed to open a spacious thoroughfare wharfs, \&c., of the river, by widening the northern and southern ends of Leman-street, and by creating a new sonthern ends of Leman-street, and by creatiog a new
street from the northern side of Whitechapel to the front of Spitalfields church. The bill enacts that the Commissioners of Woods and Forests are to have the power to make and plan the improved thoroughfares, to charge Exchequer Bills from the Treasury, \&ce. It further provides that the streets are to be made according to maps or plans to be deposited in the office of the Commissioners, without the consent of the Lords of the Treasury

Church-rates.-On Saturday, Mr. J. Haycraft, and three other tradesmen, were summoned before the Greenwich Police Magistrate for refusing to pay church-rates. They severally urged conscientious seruples for refusing the churchwarden stated that he had received a letter enclosing 51. 10s, in discharge of the rate due from Mr. Haycraft from an anonymous writer. Lpon bearing this, Mr. Haycraft, addressing the Magistrate, said that it was really too bad; he had a summons in his pocket, and the
money had been paid without his knowledge or consent. The Magistrate said that, as the money had been paid, they had nothing further to do with the summons. The made out.
Accidents.-On Saturday forenoon, as Baron Parke was proceeding on horseback through Hyde Park, on his way to Westminster-hall, near Grosvenor-gate, his horse suddenly became restive, and threw the learned Judge with considerable violence to the ground. Several persons went to his assistance, and the learned Baron was conveyed to his residence in Park street, where on examina tion it was found that the left side of his head and his left arm were severely bruised. It is, however, since stated
that the learned Judge is going on favourably, and that no serious consequences are apprehended from the effects of the accident.-On Sunday evening a waterman named Smith took into his boat seven youths of both sexes for a row to Westminster-briage and back to Hungerford-stairs, when, on arriving off Whitehal-stairs, about 300 yards from the shore, another boat, in which were three boys and three girls, came in an opposite direction violenig them, however, time to get into the other boat, which, having become overloaded, shared the same fate, and the whole thirteen persons were immersed in the stream. Two watermen went to their assistance, and got he whole of them into their boats, except two young women, who were
drowned. The drags were employed without success.On Monday night two mien, named Locker and Warren had been out for a day's pleasure. They resided at Peck ham, and came from the Kent-road by the Canal-house. Over that bridge they passed safely; but when they arrived near the next bridge, over the Peckham branch, Locker walked into the canal. Warren, it seems, was not able to render assistance, but ran to the Canal-house, a distance of a quarter of a mile, when the drags out. Life, however, was quite extinct. The place where this occurred, it seems, is very dangerous to any one passing by, unless well acquaisted with the pathway. The number of deaths by drowning in the Surrey Canal, it is stated, has been lat terly very great indeed.-On Satarday afternoon, a fatal accident occurred at Kennington-cross, 10 a respectable female about fifty years of age. She was crossing the galloping along, and before she could get out of the way, she was knocked down and run over, and the wheels pass ing over her, crushed her legs and head in a very serious manner. She was picked up and conveyed to the shop of a surgeon. She lived, however, only a few minutes. An inquest has bee had minute or two preceding the accident set down a gentleman, and whilst conveying bis luggage into the house, leaving the cab-horse unminded, Lee atamal was frightened by some children in the road and darted across and through the hackner-coach rank that stands at Kennington-cross, and caused the fatal accident. Verdict, Accidental death, - the jury remarking that on no pretence whatsoever ought the drivers of hackSupposed Murder of a Female at Islington.-On Munday morning a policeman in the Chalk-road, near the Sutton Arms, not fior from the scene of the murder of Mr. Templeman, observed what at first appeared to be a bandle of clothes lying in a pond at the corner of the
saw a woman' 8 bonnet ; and, assistance being procured,
the body of a female, between 30 and 40 years of age, was
talen out. The face and front portion of decensed's perse taken out. The face and front portion of deceased's person
was corered with clay. Restoratives were applied, but in was corered with clay. Restoratires were applied, but in
sain. The pond where deceased was found is only three feet deep, and the spot where she ras taken out near the centre, so that it is thought she could not have walked in cation. An inquest has since been held, when J. Calla ghan, the husband of deceased, stated that she bad been missing ever since Easter Monday. The last time he sam her alive was on that day, when she brought his dinner to intoricated at the time and could not eat any He was ceased cried very much in consequence, and said it would be a long time before she would bring him a dinner again. She then left him, and had nut been heard of by him since everywhere he could think of. She was a most woman. He could not imagine how she came into the pond, unless she had thrown berself in. Many years ago she attempted to destroy berself near Tyburn. He was
not aware that she had quarrelled with any one who would have been likely to have ill-used her. A surgeon stated that he had made a post-mortem examination of the conclusion he had come to was, that death had been produced by drowning. The Curoner suggested that an open verdict should be recorded, as there was no evidence whatever by what means deceased came into the pond.
The jury returned a verdict, "That deceased was fonnd dead in a certain pond; but how or by what means she came there, there was no exidence to show.

Inquests. - On Tuesday an inquiry took place at Southwark, touching the death of Mr. P. Hopkins, surgeon, residing in Kent-street. T. Mansfield deposed that deceased was his brother-in-law. On Tuesday night witness met deceased and his wife at the house of his brother. oclock on Wednesday morning, when they left, and witness accompanied deceased and his wife to their bouse. Or getting home some words ensued between deceased nd his wife ; deceased was very violent, and threatened dows, and struck his wife. Witness remained until fire o'clock to keep peace between them. At the time deceased complained of being thirsty, and took a bottle from a shelf in the shop containing some liquid of a dark colour, and poured a small quantity into a glass. Mrs. Hopkins
perceiving this, came behind him and snatched it away, perceiving this, came behind him and snatched it away, and threw the contents upon the floor. A fer minutes
after she had done so, she retired into another room, when he took the opportunity of her absence, and regaining possession of the bottle, put it to his lips and drank fiom house. When deceased poured the liquid into the glass, he appeared as if he was measuring out a certain quantity. was in a state of intoxication. His opinion was that he took the liquid to compose himself after his previous excitement. Another brother-in-law stated that deeeased was very irritabe had frequently beard him say that he could alwass set himself to rights in ten minutes when in that state. The wife of deceased said it was laudanum
her husband had taken; that on Wednesday morning, on her husband had taken ; that on Wednesday morning, ond becoming alarmed, raised him up, when she found his face dying. She sent for a surgeon, who bled him, and used every restorative, but in vain. Deceased was in the habit of taking small quantities of laudanum when he was in toxicated. Witness had no doubt he took it being intit. Verdict, \({ }^{〔}\) That deceased died from having taken too great quantity of laudanum whilst under the influence of the Fleet Prison respecting the death of Zachariah Edwards, aged 35 , ซrmerly Captain in the 12th Royal Lancers, and a favourite godion of his late Majesty. The surgeon to the prison deposed that he was not called to deceased until three days previously to his death, which took plaser on Saturday. He found him labouring under typhus for five or six days, and had been attended mostly by a friendly medical gentleman. He did all he could to save him, and, besides the proper medicine, he bad all the nourishmen his state required; but, notrithstanding, he expired by great mental ansiety An inmate of the prison deposed that deceased was his friend, and they bad been acquainted since 1823, when they met in France. He was a man most gentlemanlike manners and amiable di-position. He afterwards lost sight of hien, and when they met again beme
found he had sold out of his regiment, and had beom found he had sold out of his regiment, aich subsequently partner in some mercantiee concern, which sectested had been in prison eight months, and ten days before his death was seized whans, plaining of a severe pain in the chest. He wat aftluen persons, with his situation, allowed him to languish, and at length die, through want of the necessaries of hife. He , had mention in particular of his guardian, who, he ciosed his doord to do anything for once he had given him thou doors. Witness had once seen thia gentieman give hima check for 7000 . On the night previously to his deatu hi called witness to his bedside,

Duriog the time deceased was in prison he had no funds, and was literally starving, because, having been refused aid by his guardians, he would not apply to his fellow-
prisoners. Witness had known, but not until afterwards, that a few potatoes were his sole food for 48 hours. Lately he had drunk freely to drown his cares. A fortnight ago he explained his condition to a clergyman, then a prisoner, but since enlarged, and the Rev. Gentleman applied to he was in prison he would do nothing for him, but when he got out his doors would be once more opened to him. and his friends were in such good circumstances that witness thought they might have made a compromise for him, and saved him from prison. Deceased's mother, an
affluent lady, and his brother, a Major in the Army, had been applied to by deceased, and had refused to assist
him. Two other prisoners testifed to deceased's state of privation, and said that he used to complain most of pain in the heart. Had it not been for the aid of a former partner of deceased. he would not have received any aid penury was known, both the governor of the prison and taken to drink to allay the anguish hitn. He had latterly had no doubt that he died of a broken heart. Mr. R. Oastler, a well -known inmate of the prison, said that deand had often when a boy dined at the Royal table. He used to contrast his former position with his present, and iament the craelty, as he said, of those friends who could and ought to relieve him from a prison. He (Mr. Oast-
ler) prison could not know the situation of those prisonere who were too proud to lay open their wants to him, and necessary relief. The Coroner said that he bad, perhaps, allowed matters irrelevant to the inquiry to be introduced, but he had done so through a motive of humanity, seeing that the inquest was on the body of a prisoner, and that by giving a greater latitude than ordinary to the evidence imprisoned and means of alleviating the position of persons jury then returned the following verdict:-"Died of typhus fever, brought on by extreme anxiety of mind." Mr. Oastler then said that unless some different measures to hold many inquests in it, for it was a fact that many prisoners were dying of broken hearts and from want of sufficient necessaries of life, and concealing, through false Rride, their real positions.
Repeal of the Corn-Lares.-On Tuesday evening a numerous meeting took place in the City-road, to hear a lecture on the corn-laws, by Mr. Sidney Smith. The lecafterwards passed a petition for the total and immediate repent of the corn-lawa, which was numerously signed before the meeting separated.

City Improvements.-A Aong the recent improvementi may be mentioned the introduction of wood pavement, Poultry. This is the first instance of the employment of his kind of pavement in the City.
Fires.-On Wednesday morning a serious fire broke out at a lacifer match manufactory, in Primrose-street, Bishopsgate. The engines arrived shortly after the alarm was given, and succeeded in subduing the flames, but not It is supposed to have originated by the ontirely consumed. the drying-room, and the congreves igniting. Severa of the workmen nearly perished in the flames. They were taken out into the street in a state of insensibility, occasioned by the smoke from the brimstone and phosphorus. Three boys escaped by leaping out of the back windows on to the roof of an out-house, and were much injured The factory, it seems, has several times been on fire; and was attended with loss of life. On that occasion the inhabitants petitioned the Court of Aldermen in hopes that means would be resorted to to prevent such dangerous saccess.- On within the City, but, it would seem, without success. - On Wednesday morning a fire broke out in the ever, were coafined to the first floor, in which it commenced. Mr. Nichol, it appears, came home late the prehous night, and, as was his custom, remained reading in out the come time, whea he fell asleep withoat putting and he supposes that he must have thrown the bed-curtains over the light, as he was awoke by a feeling of burn. iag, when he found the bed on fire.-On the afternoon of \(\mathrm{Mr}_{\mathrm{r}}\). square. The flames were not extinguished until a great portion of the stock was destroyed and damaged, and the roof burat through. - [On the subject of fires we have reMurray, who suggeats from a correspondent, Mr. J. many unexplained fires that take place, may be the careless flinging aside the contents of a pipe, or a cigar before thas been extinguisherl. He mentions that the Hospital of St. Peter's Port, Guernsey, was lately set on fire by the contents of a pipe; and a case af Powey, which will be ceen under the head of our Provincial News, would seem to corroborate this riew.]
Mortality of the Wiolwich Convicts.-On Thursday afternoon, an inquest was held at Woolwich, on five con-
victs. Mr. Cartar. the Coroner, addressed the jury, and seatiss of they had been colled together to inquire into the deaths of no less than five conrictes, and it was certainly an
convicts were so frequently being held. The number inquests had not only increased twofold in consequence of the number of convicts being much greater than it was formerly, but they load lately increased to a very serious amongst them ; and he had also been informed by Dr . Hope that the same complaint had also attacked many o he soldiers in the dockyard. It would be for the jury \(t\) e perfectly satisfied before they delivered their verdic kindness had been used towards the deceased convicts. It would be found by the evidence that in three out of five cases the disease had been most rapid, the convicts dying within 48 hours aiter being admitted into the hospital-ship. Dr. Hope regretted much to say that, from the state o many of the convicts under his care, the attendance of Mr . Carttar and a jury would very soon be again required. He believed that what had appeared of the disease was but the commencement of a general attack. After hearing the evidence adduced in the different cases, the jury returned verdicts on all "Died from Natural Causes." In reply to a question from a juror, Dr. Hope said that with respect to the quality of the food given to sick convicts, every delicacy which he might have occasion to order was always
supplied of the best description, and that they reccived every possible attention.

\section*{ZProbintial News.}

Liverpool, -The public dinner to Commodore Napier took place, according to anoouncement, at the amphitheatre, on Monday evening. There were 650 persons present, and the boxes were filled with an assemblage of fashionably-dressed ladies. The scene was altogether very brilliant. The circle of the amphitheatre was boarded over, so as to be on a level with the stage. Suspended around and in front of the stage were about a dozen flags and banners. Two small banners bore the inscrip. tion, "Napier and Victory;" a third, on which were "Ready, aye ready," and was headed "Napier." The Mayor, T. Boltep, Esq., presided. The Commodore who was accompanied by Major-General Napier and other principal gaests, was received on his entrance with enthusiastic and long-continued applause. His health having been drunk, the Commodore made a long speeck in returning thanks. He commenced by thanking them for the honour they had done him, and then proceeded to remark, at considerable length, on the late transactions in the Levant, in which be had himself been so prominently engaged. The gallant Commodore, throughout his speech spoke very favourably of Mehemet Ali, whom, he said, he who proud to call his friend. He said that he was a man but, measure him by an Oriental one, he would be bound to say that no country of the East has produced such a liberal and open-minded man as the Pacha of Egypt. The Comionodore concluded by expressing his hope that after all they had seen, the five Powers-or at Porte that it would -who had a right to exact from the finish by giving him the bona fide government of Egypt and establish him in the Pachalic of that conntrs; and is they did that, he was morally sure that no cquntry in the Great would benent balf so much by the arranement a which the two great political parties of this city have met for some years, was characterised throughout by a spirit of harmony and forbearance which was exceedingly gratifying.-A nother week has elapsed and no tidings hare any vessel has, probably, ever created so anxious an interest in the minds of the public, and, as facts are not to be obtained, speculations of all kinds are rife. Those who still entertain any hope of her safe return, rest it on the supposition, that after becoming thoroughly disabled, as to both her salling and steam-machinery, she would necessarily float helpless like a \(\log\) upon the wide Atlantic, until it is thourht that dame upon the same track. lasse, during which her timbers might hold together, and yet no port be obtained. The circumstance, however, which the under writers still lean to, who are perhaps the best practical guides, is the possibility of her having pat into Bermuda, and as the dates thence do not come further down than is not considered possible she could have reached that port, this supposition is very generally entertained among them. The Lisbon mail-packet, which has arrived at Fal mouth, and which it was hoped might furnish some infornation, has brought nothing on the subject.
Bury. - On Tuesday a deputation from the Anti-cornlaw Leayue, in accordance with their resolution, paid a ferring with thems of this place for the parpose of conof the Corn-lawa. The meeting, which was called by circular and was well attended, was held in the Commercia!buildings. The chairman, R. Walker, Esq., said, the preseat meeting had been oalled at the request of the Na tion from that body, who had come to address them on that subject. The question of the corn-laws was one of the most important which conld come before any pablic assembly. It was not a question of party, for it concerned all parties alike. He was glad to see thint the League had taken up the question in that light. They had not viewed it as a political question, and the consequence had bean had done a great deal within the last few years, and he had no doubt that in a very short time, if they pursued the
same course, they would succeed in accomplishing the object they had is view. A number of speakers followed, nary topics, after which a vote of thanks to the deputation was moved and carried unanimously.
Anti-corn-law Associations of the deputies of the various Anti-corn-law Associations of the kingdom was held in this

That this meeting recommends the were passed: National Anti-corn-law League to invite Council of the deputies from all the Anti-corn-law Associations of the kingdom, to assemble in London at the time when Mr. Villiers shall bring forward his annual motion upon the Corn-laws. That, in the opinion of this meeting, it is desirable that the deputies, at their approaching risit to London, should wait personally upon the members of the House of Commons, to ascertain their views upon the Leicester at a
Esday an attempt wes ing of the Town Council on Wednesday an attempt was made to introduce the trade of
stocking-weaving as an employment for the felons in the gaol. The motion was, however, lost by a majority of 14.
Lancaster. On Tuesday Lancaster.-On Tuesday evening Mr. Murray, the lecurer of the Anti-corn-law League, delivered an addreas to crowded audience in this town. Mr. Murray dwelt at considerable length on the subject of wages, and the doctrine of dear bread keeping up wages. He condemned in strong terms the law which compelled the throwing of large quantities of grain into the Thames at the time when thousands of our fellow-countrymen are starving; and
showed that it was through the infuence of this law that so many operatives had to travel through the country in search of employment. He advised his hearers to join in stitutional means, and to unite together for the purpose of gaining a repeal of the bread-tax. Mr. Lund, the Chartist, made an attempt to address the meeting, but did not suc. ceed. After Mr. Murray had been listened to with great attention for about two hours, three cheers rere given, and
the meeting quietly dispersed. - We have received a letter the meeting quietly dispersed.-We have received a letter has a correspondent in this town, informing us that there turnpen an advance of tolls on the Preston and Garstang
 Rail affected by the openiag of the Lancaster and Presto in way. A meeting of the trustees of this road was held when it was agreed that carts, and vehicles drawn by one horse, should in future be charged sixpence instead of fourpence, as it is the wish of the trustees to keep faith with the public creditors, there being no alternative lef but to adrance the tolls. This may be considered the se Lan brought on the omners and occupiers of land on this line a great place for the disposal of agticultural produce; bat now it is become a deserted place, and the farmer has to travel 10 and 15 miles to Preston market with his horse and cart, and to pay an increase of tolls to the different gates on the road.-(n Mionday last a half-bred ewe longing to Mr. J. Stephenson, of Aleocks, near Wray dropped two lambs, one of which had two heads and necks, four front legs, two tails, and another leg abuve the tails all of which were well formed. This wonderful freak of nature has been visited by great numbern of the curious. Notangham.-This towa presents a very animated appearance, in consequence of the election for the repre sentation of the borough about to take place. Both partie are making the most active exertions ; pubiic meetings have been held, and the contest the resit of confidently by the friends of both candidates, promisem Wednesday morning, and was duly proclaimed is the mar-
Wery ket-place. The numination has been fixed for Monday morning, and the polling will take place on Thursday.
York. - On Tuesday a meeting of the ratepayers of the parish of St. Michael le Belfrey, was held in the vestry, enting a dutiful and logal address to the Queen on the subject of the late proceedings against the Dean, Dr. Cockburn. The Vicar presided, and there was a numerom attendance of parishioners. It was stated, however, that tence, and it was thonght advisuble not to preceed further at present, and the meeting accordingly separated, after agreeing to an addreas to the Dean, expressive of their concern at the late proceedings, and of their hope that ers ong he will be restored to the high office of which he hat ately been deprived
Bedford-Mr. S. W. Hill, of this town, appeared before the magistrates at the petty sesvion on Friday, to The charchwardens produced their books a church-rate. ppeared that the rate was granted on the 13 th June, 1840 , and that they called on Mr. Hill for his rate, to 8 s. 51d., which he refused to pay. Mr. Hill stated that he considered the churchwardens had taken a vindicive course in summoning him, and believed that it arose rom pirsonal pique. He said the churchwardens knew Ecclesisstical Court. He wished the magistratez to informo him how far the case could be gone into without his disputing the validity of the rate; for he was aware if he did 1) their jurisdiction was ended. The chairman replied hat they were acting only ministerially, and if Mr. Hill conld prove that the churchwardens had not applied for
the rate, or that he was improperly rated, they conld hear him ; bat if he intended to dispute the validity of the rate, Mr. Hill was right in saying their juriediction was ended,
and he must pursue his own coarse. Whatever apinion might be held on the subject of church-raten, aif long sa
he law existed they were bound to administer it. Mr Hill then gave notice to the magistrates that he should
dispute the validity of the rate on several grounds, amongst dispute the ralidity of the rate on several grounds, amongst
which were the following, viz. : that the rate was not made in vestry; that property was not equilly rated, and some altogether omitted which ought to be rated; that there were many arrears of the previous rate, and that many persons were excused who were better able to pay than ceived Mr. Hill's notice of disputing the validity of the rate, and dismissed the case, having no further jurisdiction. Mr. Hill said be should appear to any citation he received from the Ecclesiastical Contrt, and retired.
Manchester. - On Thursday Mr. Farrar, jun., was brought up at the New Barley by summons, for refusing to
pay is. 4 d. , with which he was charged as his portion of he church-rate for the parish of Prestwich. Mr. Farrar, it appears, some fers jears since, made a similar but un-
successful resistance to the pavment of the church rate. When called unnn by the magistrates to show canse why he should not pay the rate, he disclaimed all intention of carrying the matter to the Ecclesiastical Court, inasmuch as he said that he considered that court to be nothing several objections notice convening the meeting at which the rate was made was not generally distributed through the parish, but merely put upon the church-doors; and secondly, that it
was not signed by the churchwardens. In answer to these objections Mr. Maude said that in ancient times there was only one church to a parish, and then it was only necessary to post the notice on the door of that church, as it was
presumed that all good subjects attended it. Mr. Maude added that the law did not require the notice to be
signed at all; it was quite sufficient that such a notice should be given as the parishioners might reasonably suppose to be genuine. The attorney for the churchwardens said, as a reason why no signature was required, that formerly there were very few persons who could write; and if have been no rates laid in many parishes, where the churchwardens were like most of their neighbours in the matter of education. Mr. Maude recommended the de Fendant to pay the money without incurring any further
expense, submitting to him that as a nember of a civi community he ought render himself answerable to the law. Mr. Farrar declared that his ohjection to pay the rate was a religious objection, and when Mr. Maude pro
posed that he should allow the churchwardens to take his umbrella as he was going out of court, and redeem it for the amount of the rate, he begged to decline any such was ordered against him. Mr. Peter Buckley, who had been summoned for a rate of 11.1 . s. \(2 d\). , declared that he would act precisely as Mr. Farrar
Windsor.-H. R. H. Prince Albert having expressed a desire to see the Guth Royal Riftes go through their using drill morements before effect were conveyed to the comulanding officer, and morning the regiment was reviewed hy the Prince in the llome Park. After several movements and changes of position had been performed with great ste liness and frecision, and also the new manual exercise, , mith percussinn
arms, the regiment firmed rallying squares, skirniohed, and went through the other evolutions of a sham tight. His Royal Highness afterwards expressed to the officer in command, his unqualified approbation of the soldier-like appearance of the men and the admirable precision with
which the various evolutions pere performed. The Queen and the ladies and gentlemen of the Court were prevented from being present by end Majesty witnessed the while of
the windows in Victoria Tuwer

Monmouth.-At a parish meeting held a few days since in this town. a rate of 4 d . in the pound was proposed
to be granted to the churchwardens to defray the incidental expenses incurred daring the last year for repairing the churches of St. Thomas and St. Mary. The meeting was numerously attended, and several anuendments were proput the opposition to the rate meeting, which was nerapived : original motion to the meeting, which was and at the close there was a majority of 28 for

Kerne-Bridge.-A murd-r was perpetrated near this place on Saturday night, on the budy of a man named house at Drybrook late in the eveniog, and was found on Sunday in the river, with marks of riolence on his body. Three men, two named Kuight, and another named Good, have been appretended on suspicion of beins conceraed in
the transaction. An inquest was held on the body on the transaction. An inquest was held on the body on
Tuesday. The eviderice is withheld by request of the Coroner, as by its publication the ends of justics might be defeated.

Cormarthen. - At the quarter sessions at this place last chairman, in dismissing the prind oner for trial; and the on the circumstance, and observed that they ought to be thankful that they lived in so peaceable a county

Mavistone. -The appearance of the bine where hops were gi present very ferr tieas to weaken thegour, and there dens, howerer, where the blight prevailed last seasoa, the fine looks sichy and and far as can be judied at present, the gtate of the bines is unpromising. The bines in Town Malling look healthy well, and there are rery few fleas, the moist weather being sgainst the increase of that insect. Generai report speak Tery favourably of the appearance of the bines.

High Wycombe. - The failure of Mr. Rumsey, solicitor. rear, has caused quite a panic here. His liabilities are redeposited property in his hands, it is said, will be nearly ruined by the circumstance.
Thernbury,-The neighbouring village of Tockington, daring murder, which was perpetrated on the morning of Saturday, in a beer-house at that place, in the open day. and in the presence of three or fonr persons. peceased years of age. The murderer is named Wayman, a discharged soldier having a pension, and as an additional the country butchers by shonting animals for them, and enveying letters and parcels to and from the post-office or the farmers in the neighbourhood. On Saturday morning deceased was proceeding to Bristol market, and on his arrival at Tockington, stopped at a ciler-shop, and called with the persons inside, the prisoner, who, it is supposed had been watching him, came and called for a pint of cider.
The landlady obserring a pistol inside the breast of his coat, with the muzzle towards her, in which she saw some brown paper, mentioned the circumstance, and stated her ears of the pistol being loaded. The prisoner, however aid there was beting in il, and from the curther notice was taken of the matter. In the course of conversation the prisoner said he had been to the post-office to fetch a letter which contained \(50 l\). Mr. Fisher jocularly said, You know that is a lie ;" upon which the prisoner replied that if he had said that unside, be should never have been able to kick any more. Mr. Fisher repeated the rema:k, into the back kitchen, and on returning instantly clapped the pistol to Mr. Fisher's head, and shot him. A surgeon who was riding by at the time came in and examined the wounded man, when the prisoner said, "I know that's a dead shot." Medical assistance was unavailing, and he died in a quarter of an hour. The prtioner, on being apprehended, said, "I know I shall be hanged, but I shall die happily; for it was all for that woman," by which he was supposed to mean deceased's wife, for whom some 29 years ago, previously to his enlisting as a soldier, he pro-
 on Friday, and that he said he had had the pistol loaded on Friday, and that he said he had had
for some days, and been waiting for deceased, but could for some days, and been waiting for deceased,
not find him before that morning, when, thinking it a connot find him before that morning, when, thinking it a cond verdict of "Wilful murder," and the prisoner was com mitted to take his trial.
Devonport.-Members of town-councils are not only exempt from, but absolutely disqualified for serving on juries. In a recent case, tried in the Sheriss \(\begin{aligned} & \text { this town, a Mr. Liscombe, one of the town-council of }\end{aligned}\) the borough, having objected to serve on a jury on the ground of his being a member of the town-conter ane trial had proceeded for some time, a copy of the Act of Parliament was obtained, and the disqualification discovered Mr. Liseqmbe was therefore directe. to leave the jurybox, and another gentteman who had been summolled, was
juror, and bad remained in court, although not called, was sworn in his stead.

Forey.-On Thursday morning two shipwrights going to work perceived smoke issuing from the sloop John, of
Plymouth, Pascoe master, lying in this harbour, laden with ironstone. On going on board and removing the companion, they discovered the cabin to be on fire. After inefcame on board. The latter exclaimed that his brother was below, and immediately, regardless of danger, rushed below, and after groping around, succeeded in finding the body, which with some difficulty was dragged on deck, the it appeared that he must bare been dead some time; the left hand was burnt to a cinder, and there were othe marks of fire on the body, also some bruises on the face which indicated his ineffectual struggles and attempts to escape. He was between 40 and 50 , and has left a widow. He was left on board hes night previont was occasioned by letting his unextinguished pipe fall in the bed-plice, where became necessary to scuttle her.

Newcastle.-A distressing and fatal accident took place
Wednesday afternoon, in consequence of an explosion Wellington Colliery, which is situated about half-way between this town and aid that the colliery had a threathave been lost. ening appearance some time ago, but all fears as to any danger were allayed. At the time of the explosion 34 men and boys were in the pit, of whom three only hare escaped. hare been made for the recovery of the remainder. The pit itself is much stattered.

\section*{COTLAND}

Edinburgh.-On Monday morning, two young men were coming up Greenside, both of them intoxicated, and observing a light in the window of a public-house in a alunitted. The landiord, however, refused to opea the door, and the young men, supponing that the window was at the bottom of the area, resolved to leap down and force an entrance by that means. In this calculation they were anfortanately mistaken, the area being several stories down from the street, and the consequence was that one of
them had his leg fractured by the fall. while the other,
still more unfortunate, had his back broken. Ther were both conveged to the Royal Infirmary, where the latter died on Tuesday morning.
he whale-nobing trade, as far as this place is oncerned, seems to have become quite extinct. For from the port hare been getting gradually less : and this year it is stated that not one is to be sent out, those previnusly engaged in the trade having for the present entirely
abandoned it. The remaining vessels that used to be so employed are now undergoing repairs and alterations to fit them for the Baltic trade.

\section*{RELAND}

Dublin.-A meeting of persons interested in the promotion of Irish manufacture has been held at the Royal Exchange. Lord Charlemont, who was in the chair, mado siasm of the promoters of the movement, who, he said, wished to impose on the buyer an inferior article of home manufacture at a higher priee than the better and cheaper one of British growth. The noble lurd entreated the meeting to banish all ideas of exclusiveness, and to enter the market upon the fair principle of open competition. addressed the Mr. Afenry Grattan, and some others also meeting has been held of the repeal wardens, in order to devise means for moro effectually collecting the rent. T. meeting and adve chair. Mr. Of the topics alreedy fis meeting and adverted to maay of the topio dready 4 collecting a sufficient sum of money, and said that if ouly two millions out of the nine millions contribated a shilling each, a fund would be raised of 100,000 , and it would then be impossible to prevent repeal being carried. The
volunteers were now formed, and he hoped that in twelve volunteers were now formed, and he hoped that in twelve a a volunteer. -The usual weekly meeting of the Repeal Ats sociation was beld on Monday, at the Curn Exchange Mr. O Connell announced that in the course of the wee fred received 100\%. from Boston, United States: an from Philadelphia, United States, 2006. towards the re from Ballymagarret, near Belfast. He wished the corre spondence from America to be read. Mr. Ray then read long letters from the secretaries of the Boston and Philade phia repeal associations. Mr. O Connell said that an ex pression of delight and gratitude on the part of the asso ciation should be made at receiving those letters. The first letter requested that every man in the Boston Asso ciation should be enrolled as associators of this body. It regrelld no persons would not demand anything that was not strictly correct. The mere contributions towards the funds of ho association showd be loohed upon as of great value, ber read to the canie arcompline, they should be considered as of the greatest possihlo impurtance. It was also a source rratification that this expression of sympathy came from Buston-the birth-place of American freedum, and the grave of Eritish tyranny in America. Ammerican peopie, and that town afterwards was he withess He had etreat from the country, and of their disgrace. He been taunted with expressing an opininn that, in cas are the lish ought co sere done try. He had also heens over England. Well now, he would avow that he had preference for the men who subscribed to that nobie do cument. This expression of American sympathy would be mmediately published to the world. All the liberal If he papers in Dublin-in all I reland-would conthe sightest sur it in a single Liberal newspaper with ever; for the Irish papers would let the people of England know the Irish papers would let the people as their circulation of them would enable them to do; but would any of the English papers publish it? No, they would not. Some them might contain some remote allusion to it-lake conto suppress the entire spirit displayed thercealed from the bulk of the Enclish people, but wherever there is an In heart-whether at the foot of the Himalaya mountain among the Royal Irish at Chusan, these expressionarts. American sympathy and support will arouse tweir beeded After some further observations, Mr. O Connell prom onis to say that the Irish Parliament is not dead-it was oniog sleeping; and here they had the American cocks cromore. , to awake it into life and animation once and He (Mr. O'Conuell) was the father of Irishmen ass Irishwomen-he was the grand the firmness of the men girls ; and he would swear by the fir ut al and sho the beauty and purity of the women, that relain hase he be once more a nation-that she should ago country parliament, and that ser. gentleman continued to adidress the meetiog at great beagth. He concladed by sain conine as a mark of respect to the Americans, baey wour of the their proceedings that day to the considera. The hon noble documents they had received from them, thanis to the gentieman then mored a special Repel Associations. The Boston and to trried araidst enthnsiastic cheering. Th motion when the admintion of members It wain strued that the repenl reut for the weis wouk amoun to about \(500 \%\) - A letter received by the Cal
steamer states that Alderman Perrin, who, it will be re-
membered, absconded from this city about two months since, after raising about \(20,000 l\)., had been arrested, on the day of his landing in New lork, upon a civil bill process, at the suit of a merchant of this city. Having given
bail, however, he was at once set at liberty.-A person of the name of Murray has been arrested on private information, at Drogheda, and conveyed to this city, charged with being implicated in the murder of the Italian organ-
boy at Rathfarnhan, the particulars of which were pubboy at Rathfarnhan, the particulars of which were pub-
lished a short time since. On his arrival here for examination, the prisate informant did not appear ; but the prisoner is detained in custody.
Longford.-At the late Quarter Sessions, informations were returned against a magistrate of this and the neighbouring county tor felony, namely, for robbing a gentleman, in whose room he slept at an inn, of four sovereigns.
He denied the theft in the first instance, but, on being searched, the money was found on his person. He thea acknowledged having taken it, but said it was merely a joke. The gentieman who was robbed, not having been even an acquaintance of the magistrate in question, did not taken. Bail, however, was accepted, and the gentleman was allowed to go at large. In due course the case was gistrate was not forthcoming. His recognizances were accordingly estreated, and a Bench warrant will be issued for
his apprehension. He is said to be a man of some 15001 or 1600\%. a year, and related to a nobleman in the ricinity. Birr.-An accident has occurred here to the Earl of machinery for which he used the small steam-engine fitted up in his laboratoryat the Castle for polishing the speculum o besir feet, he so is mak.... hin left thon be obliged to have the first joint amputated.

\section*{THEATRICALS.}

Italian Oprra. - The performances at Her Majesty's of the company, which may be saided the whole strength Two operas were brought forward, each of which exhibited a different set of principal performers. The first was Norma, in which were Grisi, Lablache, Mario, and
Granchi; the second, Lucia dín Lammermoor, with Persiani, Rubini, and Tamburini. Between these pieces there was a diveriissement, in which Guerra, Madlle. Guy Stephan, Albert, with several lesser stars, made their ap-
pearance. The old favourites of the public were vers cordially welcomed as they successively presented themselves to the audience. Rubini in particular was received which have been worn almost threadhare by repetition will be needless to make any remarks. Lucia di Lammermoor appears to owe the favour it enjoys entirely to passion of Rubini in the last scene. In Nowna Grisi's great advantage. Her delivery of the famous air "Casta
Diva," in particular. gave a digmity and grandeur to the part of the Druid in Priest which he alone is capable of imparting to it. Mario, feeling; and Madlle. Granchi was a most pleasing and effective Adalyis 1 . The house was crorrded to excess, and the whole aspect of the theatre was gay and brilliant roung singer, who hasenoiselle Loewe, the celebrated in Germany and France, is arrived in town, and, it is said will immediately make her appearance at this theatre. performed by the German cumpany at this theatre. The by Staudigl in a very pertect manner. Mis performed mann is a pretty and pleasing Fatimer. Madame Schumann is a pretty and pleasing Fatima, and sings beauti-
fully. The choruses are performed very effectively. The piece is got up with great splendour in regard to the scenery, costumes, and decorations. But the machinery
does not work smoothly ; and the noises made behind the scenes sometimes interfere disagreeably with the music. It has been attended by very full houses, and the opera has Eeen received with great applause.
composed by Mr. Samuel Lover, entineretta, writen and in Itatia, was produced at this theatre on Wednesday \({ }^{\text {night. }} \boldsymbol{R}_{\text {osa }}\) (Mr. Strettong is a brief outline of the plot:possesses two daughters, and has enrolled himself among Two Carbonari, and is deeply implicated in their plots. Two gentlemen, Valmont (Mr. Barker), an officer in the Austrian service, and O' Donnell (Mr. Balfe), are atare personated by Miss Gould and Miss Walstein. Two other gentlemen, Couent de Ruse (Mr. Wilson) and
Buazard (Mr. Duruset), have betied that they will enter the artist's house, and make a conquest of his daughters The first feat they accomplish during the absence of ceived by the laies, who introduce their accepted lovers to them under the disguise of their father and their footman, the Latter disguise being adopted by Mr. Balfe. The Count de Ruse having pussessed himself of certain Ratharine doumients, threatens one of the young ladies, political delinquencies, unless she consents to elope with tending to escape is territied, but promises to comply, intriend Buzazard, the comic character of the piece, whose peculiar humour consists in being short-sighted, are to be
prepared with a travelling carriage at a certain hour. The
time arrives, the young lady is dressed, ready for diate flight-the Count makes his appearance, and having first given over the perilous papers to the other sister, lowers Katharine into the carriage, where his friend re-ceives-uot her, but Mr. Balfe in disguise; and with the discorery of this disguise the curtain falls. The music is
of a pleasing description; but the operetta, though now and then presenting some ridiculous situations, has no great interest or humour. The performers sang well, and

Atmospheric Phenomenon.-On the morning of the 7 th of this month, when the sun was about \(14^{\circ}\) above the horizon, there was seen in the neighbourhood of Stirling part of a beautiful cirele surrounding part of that luminary. was about \(37^{\circ}\), so the diameter of the circle would be about \(45^{\circ}\) or \(46^{\circ}\). According to Newton, Mariotte, and others, \(46^{\circ}\) is a common diameter for halos. Within the circle the vapour was of a dark grey colour, the breadth nearly the same as the rainbow. On the south side of the
circle the colours at times were very distinct ; the wind circle the colours at times were very distinct; the wind Was from the south-east, and darls clouds floated at inter-
vals along its sufface. The dark colours of the bow were vals along its sufface. The dark colours of the bow were whiteness. It is generally believed that halos are produced by crystals of ice floating in the atmosphere, al though philosophers are divided in their opinions as to the manner in which the refraction of the rays of light takes place. It is a well-known fact that small particles of ice influence these particles wert upo the atmosphere? For some dayn before the halo appeared, the state of the clouds indicated that there were different currents in the air. The morning on which it appeared was rents in the air. The morning on which it appeared was
pleasant; it began to rain at 12 o'clock, and continued till pleasant; it began to rain at 12 occlock, and continued till
t. There was some snow upon Ben Lomond, Ben Ledi, and other Bens of the Grampian range; next day the wind shifted to the north-west, and oftea. On the morning of the gth there was sharp white frost, wind north-west. Would there be any harm in hazarding the conjecture that the particles of ice that formed the halo were produced at Greenland, that wholesale manufactory of iey particles, and the higher regions of the atn [According to Harvey, Encycl. Melrop., the canse of halos is not fully understood. He states that Mariotte accounted for their formation by the refrection of prismatic crystals of ice descending through the air in all possible directions and receiving the solar rays under every he concludes the diameter of the halo should be \(44^{\circ}\). The one observed at Stirling being computed \(45^{\circ}\) or \(460^{\circ}\), agrees
so nearly as to afford corroboration of the above cryatal line theory. Parry measured several, and found their diameters always equal.]
Curious Fact.-A cannie southland farmer, who ie also tacksman of a quarry on his grounds, was greatly zanoyed by the accumulation of water, caused by the stoppage of a leaden pipe which had got choked up with sand and weeds ; and being unable to clear it out, on account of its being curved to a considerable extent, hit upon the following novel expedient to effect his purpose:-He caught a live mole, and put it into the end of the pipe, which be plogged tremity, which it did, and thus accomplished the intended purpose. The anional was so much exhausted on its egress, that in spite of every care bestowed on it, it died in a few minutes.-Ayr Alvertiser.

Hong Kong.-The following sccount of this island, from the pen of Capt. Basil Hall, may be interesting at the present time, when it has so recently become a part of her Majesty's dominions :-" It was indispensably necessary, however, before steering to the northward into seas so made sail accordingly for the inan of Hong of the great cluster called the Ladrones. Here we found a noble cascade; and the night being perfectly calm, with a sea as smooth as a mill-pond, in consequence of the ancharage being land-locked on every side by lofty islands, in rafts of ten or twenty at a time-an expeditious method but practicable only when the distance bappens to be small, and the sea unruffed. It was almost dark when we anchored, but the moon, which was nearly at the full, rose shortly afterwards above the hills. The islands in daytime night the mountains appeared to form a continuous bar rier. The nature of the ground also beit. black and unbroken, it seemed as if the ships had been transported by lying in the process to the centre of a solitary lake, had taken up our station near the waterfall, but before this curious basin was lighted by the moon, and when the most perfect silence prevailed over the whole scene, a fleet of several hundreds of Chinese fishing-boats suddenly adislands. They were rowed about each, from behind the place to place, were rowed about with great celerity from place to place, and in each boat two or three men stood they waved backwards and forwards, while others of the crew were employed in beating, in the most furious manner, several large gongs, suspended to the masts. To
give full force and finish to this extraordinary serenade, a chorus of yells and shoats were set up from all the boatmaen, at the full stretch of their voices_an uproar which
rendened the echoes on all the surrounding hills, and rendered the whole scene so truly diabolical, that the sailor8, astonished and delighted at this sudden irruption, insisted upon it that a legion of Chinese devils must surely have been let loose to frighten away the ambassador. But his tumultuous and anusug uproar was evidently intended placed across the narrow channels, between the surrounding islands."
Ancient Grave and Relics.-On the 22 d ult., as Mr. was removing sand and gravel from a small hillock, over, grown by whins, about 200 yards from the nurth side of the high road, he accidentally, at \(3 \frac{1}{3}\) feet from the surface, came upon one of the Druids' graves which abound in this district. No cairn, however, as is usualiy the case, marked the spot. The place of sepulture was an oblon feet broad, and 25 inches deep, formed 3 feet ling by 2 undressed, massy stones on their edges. The bottom composed of sandy clay, firuly packed; and a rough slab, 4 feet long. 33 inches broad, and 8 inches thict, covered the whole. Assistance having been procured, this ponderous lid was pushed aside, and an eatire skeleton and urn were discovered. The body, from its posirest, must have been interred in a sitting posture, the face resting on the drawn-up knees, between which the urn doubens conting the heart and other viccora, was the gleleton fell to incen' exposure to the atmosphere, scramble to secure the treasure it ura was broken, in a thin. In the grave were also found eight pieces of jetsubstance like cannel ceal; two of the pieces are of rhomboid shape, two inches long, an inch broad, and onesame of an inch in thiekness ; two smaller onen of the same shape, and two of a triangular form. All the pieces ligaturesute holes neatly drilled in them, through which have passed, attaching them to oblong beads, of the same substance, one hundred of which, many of them an inch in length, were likewise found in the grave; the whole diameter, very mang of the same materiah, 24 inchen in When the different pieces were together, they must have ermed a curious pendent ornament, accessible only by distinguished personages at a very remote and uncivilised period. From the size, shape, and appearance of the bones, as well as from the finding of the beads, conjectured by medical gentlemen and others that the grave is that of a female of rank. The urn is ten inches年, dented all round by the clay, diried in the sun, and is inThere was nothing found in it, but a small spiral shell, carbon of the viscera appears to have been abworbed by colay at the bottom of the urn, which is of a blacker anything like other parth. It is impossible to fix with bility, from a consideration of the whole circumstancenwonid carry us back to adan of

An Outlaur. - The New York papers state that there is living about 35 miles west of Shreveport, in Texas, a man named Rose, who has made himself infamuus in that region by the number and audiacity of his outrages. His house is buit on a bluff orerlooking Silver Lake. He is one of deose who ran away from Mississipni with his negroes, in debt to his creditors many thousands. It is said he has lately killed several men, and among the rest a deputy sheriff of the county in which he lives, and has openly bidden deniance to the civil authorities. But he has made his house his castle, having a cannon muunted so as to command any approach to it; has a large supply of arms and ammunition, and regular guards stationed to give him in stant warning of the approach of any one who might be disposed to drive him from his eyry. By a gentieman ricintly arrived from Shreveport, it seems that a strong party of some 60 or 70 in number were about starting with the determination of storming Rose Castle, and admi nistering the law of Judge Lynch apon its desperate master. frontier fect hat there will be a smart encuunter on the froutiey fr his oun equally desperate with himself, who may fear that this summary mode of redressing wrongs may be practised upon them.
Coal Mines in France.-A distinguished Freach mineralogist has lately made known the following fact, which he countrs important to the commercial interesis of the the Sory:-"A wonderful discovery has just been made in square leagues in extent consists of a coal-mine of the mine is found to be superior to the coal produced from the most celebrated collieries in existence. The South o France, Africa, Italy, Spain, and even Great Brıain will rade of siderable advantage from this discovery, and th rate of the Mediterranean wull be benefited by it to an Noab's extea.
Noang to the book on American paper remarks that, acthe daughter of Enoch, was five huadred and eizhty year hy when sae was married to Nosh. This is considered by the American editor as an example that should give列
Neso Version of an Old Proterb. - A traveller, stepping in at an inu down east, was asked how the business-men traveller, " manr of them have rot "Oh," answered the "How so-has trade become mote upon their legs again." "No, no mean that many who formerly rode in their coaches, are now
Prolific Sheep.-Mr. Sheriberd, of Woolley, in the
parish of Moorwinstow, hed an ewe sheep which produced
 times, four ; and three times, five. Her progeny, too, were prolific; but not so much so as herself, as the most that any of them was known to produre was four. She was a cross-bred Nott sheop.-Mr. Botterill, farmer, of Wroot, near Doncaster, has mow in his possession a flock of twelre ewes, which during the present season has produced no less than thirty-sevea lambs, being three each for eleven of them, and for the remaininy one foar.

Instinet in a Pet Lamb.-A pet lamb, in the possession of Mr. Booth, of Norton Grange, near Malton, displayed in. achment to an Alderney cor, aiso in his posses....n. which was accounted for by Mr. Booth finding the little nimal on a late occasion in the act of sucking the milk from the cow, which anpeared quietly to supply the place fits dam
The Murrain.-Much doubt has existed as to whether this disease ever attacks the human subject; and notwithstanding some well-authenticated instances in the soutb, it has generally been supposed to confine itself to quadrupeds. There is, however, a man mamed Atkinson residing at Bassenthwaite, near Carliste, who is said to be now snifering severely from the disease; and if this be true, his case may perhaps aford an opportunity of a more perfect diagnosis of this epidernic tlian has been hitherto obtained.

Progress of Education.-A person forteaching hisinfant asked a village school mistressher th much gravity demanded how he wished it to be taught to the child? The former, greatly surprised at the question, inquired the woman's meaning; when she informed him that there were two ways of teaching children their letters-the first gram the other the old was was only twopence!-A surgeon in Glasgow the other day received the following note from one of his patients, an Irish midow:-"I Writ this fu Lias to lat You No that the podirs Yeu gar to me on sunda last is Casid Ay grat bodkin and the sualin is Cup into the boda And if you Can give ani thing or Com yoursalf you Wii be Pad for it and I am trubild with grat pans in the Witomick also.
Age and Childhood.-A pair of garters, beautifully nitted by Mrs. Spencer, of Stenigot, near Louth, 104 ears of age, was presented by her to the committee of the Bazaar in Louth, for the benefit of the widows' aud orphans' fund: a pair was likewise presented, which had been bnitted by a child four years of age. The beauty of the work of each pair was much admired, and they were connidered masterpieces of handworis in the extremes of life -age and childhood.
The Jones Family. - At the last Ludlow sessions, the following carious coincidence in names and trades occurred: -William Jones, a wheelwright, the overseer, who supports his father, William Jones, of the same trade as himself, summoned William Jones, a wheelwright and school master, for not supporting bis father, Witham Jones; and maso snmmoned another wheelwright, named William Jones, for not eupporting a desticute father of the same name and trade. Thus were three men and their three fathers, all aix of the same name, brought before the magistrates at the same time.

Ancient Labourers and Leases.-In the recent work of Mr. Spalding on "Italy and the Italian Islands," in the "Edinburgh Cabinet Library, there are some interesting details on this subject. It appears that "most of the Italian estates were cultivated by the proprietor on his own account. On extensive farms, the common practice was, that the ordinary labour should be executed by slaves kept on the ground; but that for the occasional work, including in particular hay-making, vintage, and corn-harvest, the owner hired free lahourers, who chielly came down from the Apernines, as the mataineers do at the present da in Itoly as well as in our own isiand. It was one of the tants flung on Vespacian, that his earliest ancestor known Pome as a Ganl from berond the Po, who had becume tealthy by fumishing on contract bands of those poor wealthy by furnishing ad contrat bainm. The slaves on Highlanders to the landowners of Latium. The slaves on a large manor were accurately classed and trained in different departments, the males being usually employed in
the field-labour. while the females, confined within doors, manufactured clothing and other articles for the establishment or for sale. Leasec became more common under the emperors, and were of two kinds. There was. first, the tenant who paid a fixed rent in money or produce; but from this class of occupiers it is sery clear that besides such parment personal services were commonly exacted; and in the latertimes of the empire, the leaseholder usually received the apparatus of the vintage and oil manufacture 33 what we call in Scotland steelbow. The other kina of tenant was the in the time of Cato down to who can be traced. the present day. This class paid as rent a part of each crop, the proportions being different oil, and rarying infinitely in different quarters; but it may be confidently inferred, from the large share usually exacted, that the landiord must generally, as among the modern Italians, have supplied the live-stock for tulling the land."

The British and their Colonies.-The British races at the beginning of the 1 lith centary amounted scarcely to hemispheres. It was only at the beginaing of the lith century that the first permanent Bricish colony was planted in America. In 1780 the Britioh races there awounted to two millions. It has bes doable themselves aboni every of fresh emigrations, they doabie themsetves about every tweaty years, as the following will \(2,000,000 ; 1800,4,000,000 ; 1820,8,000,000 ; 1840\),

16,0:00.000. According to this calculation, in the year 1940 these races will amount to \(576,000,000\), and so on checks to population-want of food and want of space.

miners. Mr. Beattie.
the father of the infant, by a d

curators of his chil
detendants having

sill was filed to make the infant a warld of the court, and an order
was obtained from the Vice-Chancellor appointing her materna
grandfather and her great-aunt as guardians, on the ground that
the tuors and curators named by her father were resident in
Scotland, and that she beigg domiciled ial England was without Soper protection. At the time this order was obtained the plain-
prope tiff was residing in Albion-street, Hyde Park, under the care the
Miss Stewart, a sister of one of the Scotch guardians, and on the
Ith 1; th of January Miss Buchalian, the great-aunt, arris subsequently
on take charge of the establishment. A petition was presented by the Scotch guardians detailing these facts, alleging
that they had not cntertained the slightest idea of changing the establishment of the infant, or of interrupting the
and intimate intercouse be named guardiand her relatires, and praying that they mingt be named guardians in Englana, and or
order of the 6 th of January rescinded. The Vice-Chancelor on
hearing counsel and reading the affidavits made an order to that hearing counsel and reading the affidarits made an order to nat
effect, his Honour being of opinion that the usual preliminary inquiry before a master might be dispensed with, as it could not put fully acquainted. Against this order the grandiather and annt now appealed.- Mr. Wigram, M. Neal
port of that appeal, contended that there ought to be a reference to the master to inquire as to what was fit and proser to ape conted
tor the benefit of the infant The tutors and curators appointed for the benefit of the ill resident in scotland. One of them, Mr. Hope Johnstone, was, they admitted, in England occasionally connected with the Scotch law courts, and seldom or neser in England. The infant was a in sotland, and being now domiciled in England, and likely to remain so, and being also a wara of the appointed to superintend her education in England. - Mr. K. Brace, on the part of the "cotch guardians, disclaimed any hos-
tile opposition to the relatives of the infant. All they desired was oo pur the court in pos-ession of the facts, and leave his lordship o deal with them in the manner most conducive to the future
welfare of the child. Having accepted the trust reposed in them by their late friend, Mr. Beattie, they could not conscientiously resign it without an order of the court, although. if they consulted their own ease, they might rejoiee to be relieved from the burden
it imposed on them. The whole contest was ahout the lemal right of guardianship, for the Scotch guardians expressly dectared that they were satistied with the appointment of Miss Buchanan as
the head of the infant's establishment, and they proposed no change. With respect to residence, it ought to be borne in mind that Mr. Hope Johnstone passed many months of every sear England, and that the other glardians visited it frequently. And
 2,3001, a year, and by a clause ir the settlement, the allowance to a minor was ined at ahout 5001 a
with this allowanee the Court of Session in Scontland took cognizance ; and one of the incouventences ther guardians would be guardians in Englayd and appointing other guar before the Cowrt
that two separate accounts must be passed -one of Session. and the other before a master in Chancery. The earned counsel concluded mint in the character of testameutary
stood before the court so much guardians, that it was

\section*{THE GARDENERS’ CHRONICLE.}

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY
No. 18
SATURDAY, MAY 1, 1841
Pricr 6d.

\section*{PROSPECTUS OF
THE GARDENERS' CHRONICLE
AWEELYECORD OREURAL BCONOMYAND OENERAL NE} rdening is admitted to be better anderstood in Great Britain Gardening is admitted to be better understood in Great Britain subject prove the patronage it receives, and the desire there is
to extend the knowledge of its various branches. Many thousand persons are engaged in the business of Horticulture 28 a
means of existence, and a vast number more are interested in the subject, for gardens are now an indispensable part of the domesNo one will, therefore, doubt the advantage which may be deand liberal spirit of good-will to all, who are engaged or interested cheap means of intercommunication on profersional subjects.
The plan proposed to be followed in the management of THE Giabmeners' Chrovicie, is in the firit place to make it a
weekly record of everything that bears upon Horticailure or Weeky record of evergthing that bears upon Horticuiture or
Garden Botany, and to introduce such Natural History as has a
relation to Gardening, together with Notices and Criticisms of every work of importance on the subiect which may appear.
Connected with this part of the plan will be a WEKLY CALENDAR OF GARDENING OPERATANS ance to the memory-Foreign and Domestic Correspondence and Procedings-Notices of Novelties; in short, everything tha ployer. Thas the Gardengr, the Forgstar, the Rural Archi have the improvements in their respective pursuits recorded. GARDENING is in many resjects the art of creating an Artifound : evidence, however, regarding the
PH YSIOLOGICAL INQUIRIES, and all those interesting topics Thich elucidate the barmony of nature, and the dependence of a subject of discussion.
Another peculiar feature will be the introduction of informa-
tion relating to FORESTING, or ARBORICULTURE. This is one of the most important subjects to which the attention of the pub
lic can be directed; for it is often little understond by those who have occasion to practise it, althongh the amount of property
affected by the management of timber stants second inly to that of land. The natural laws whinch guverr the proxduction of thim it is influenced by soti, and cunseluently to what circumstances
are to be ascribed the great inferiority in qualty of same spe-
cies grown in different places, are alt points to which attention Will be given. We shall endeavour to collect information upon trees, aud the cause of their decay, whether natural (ir acciden
tal, as well as to convey the earliest nctices of the introduction, new species, which promise to increase either the beauty or
of woodland property. When to plant, to prune, and to fell, GB BTATED WERELY IN THE CALENDAR, Although it is not intended to occnpy our colmmas with the
details of AGRICULTURE, yet as Gardening tithe parete o
Farming. it wroald be impossible, even if it were desirable, to ex clude the general principles which relate to the cultivation o plants, whether upon a large or a small scale. Whatever, there-
fore, may be found important in that respect to the Farmet will To the ELORIST our Miscellany will have much interest, not
only because everything relating to those rare and beautiful productions which are his peculiar care will be constantly treated of the merits or demerits of new rarieties, and with their best modes of cultivation, but aiso because we shall take care that such
opininns as may be given are the results of an honest examina tion by competent judges unuussed by personat interest. paper. We consider it unnecessary to dwell on this head further paper. We consider th unnecessary to range ourselves under the

The Gavonexs Chmonde.

The season has nearly arrived for planting out in the open ground such species as it is proposed to Acchimatise. Let us then consider a little in what way this operation should be conducted with a view to success.
In former days menentertained the mostexaggerated ideas concerning acclimatising, and seemed to believe that all the productions of the tropics might be had in England, if we could but gradually inure such productions to the climate. As the negro could be acclimatised, so it was thought could plants from Negroland. We were told that the course to follow was to accus tom tender plants to cold climates by slow degrees; to introduce the productions of the tropics to Madeira and there to save their seeds; then in Spain or Portugal to sow those seeds, and when the plants thus obtained produced their fruits, to cominit them to the earth in the warmer counties of England, or the yet milder districts of Ireland ; and at last to sow in Middlesex the seeds so saved in Devonshire or Ireland. Some such process was recommended, if we remember rightly, by the late Dr. Macculloch, an ingenious man, who considered it a certain means of success. We do not believe that the experiment in this form was ever tried : and if it had, we have no doubt that it would have failed; for experience tells us that the constitution of plants is notaffected by such means. On the contrary, we find, what it is rather disheartening to know, that the constitution natural to a species of plant is almost unchangeable. When we look around us at the cases which a half-informed person might regard as instances of acclimatisation by seed, we find they are all unfavourable to the supposition that species may be rendered less tender by art. Take, for erample, Kidney-beans, Onions, Potatoes, and Mi-gaionette-all plants of the most extensive caltivation, for many years, and perpetually reproduced by seed: are they at this day in one single degree more hardy than they were in the first year of their introduction? All experience says - no. The first frost of autumn destroys the Potatoe with as much certainty as in the days of its discoverer, Raleigh.

To be sure, we are occasionally reminded of apparent exceptions to this, and are told that the Larch Fir was originally treated as a greenhouse plant ; and we believe that there are those who infer from such a circumstance that the Larch has become hardier than it was. This is, however, a mistake: the Larch was originally as hardy as it now is, only we did not know it, and put it into a greenhouse from ignorance of its real nature.
But although to acclimatise plants by seed-saving seems a hopeless task, means certainly do exist of rendering half-hardy species less tender, and these we proceed to explain. One of the principal causes of the destruction of exotic plants in the open air is not so much the actual amount of cold to which they are exposed in our winters, as their being ill preparel to resist it. We know from experience that a low temperature acts injuriously upon plants in proportion to their, watery contents; that young shoots filled with watery sap perish in winter, while the old and drier branches are unhurt; and that succulent herbage, of whatever kind, is the first to indicate the action of frost. Means therefore should be taken to cause an exotic to prepare itself for winter by getting naturally into as dry a condition as circumstances will permit. But the only means we possess of effecting this consist in choosing a thoroughly well-drained soil, and an elevated situation; the first preventing a plant filling itself with moisture during winter, or overgrowing itself in summer, so as to be unable to ripen its wood; and the latter securing it from the action of
those early frosts of autumn, or late frosts of spring,
which are so pernicious even to our own wild trees.
In an elevated situation, a plant also escapes the risk of being stimulated into growth by a few days' warmth, succeeded by nipping cold, which so often occurs in our variable climate. This was very remarkable in the hard winter of \(183:-38\), when so many exotics perished : on that occasion the Araucaria Fir was killed in warm and sheltared valleys, but stood unscathed on the hills of Hampshire; and all over the country the same fact was remarked in other species. Hence the destruction that occurred in the garden of the Horticultural Society, and in other parts of the warm valley of the Thames.
Where perfect drainage cannot be secured, it is scarcely worth attempting to naturalise an exotic tree ; for, in the first place, it cannot ripen its wood-and secondly, the water that surrounds the roots in winter is absorbed by them incessantly, and gradually gorges the branches so as to render them susceptible of an amount of cold which would be unfelt in a drier state. On the other hand, we find that wherever great success has attended the preservation of tender plants in the open air during many years, it is invariably connected with a soil completely deprived of its superfluous moisture either by nature or att. Mrs. Ferguson's seat at Biel, in East Lothian, in latitude \(5 . j^{\circ} 55^{\prime}\) N., has long been remarkable for the number of green. house plants which flourish there in the open air. We find, upon reading the statements of Mr. Street, the Gardener there, that in every case the complete drainage of the soil has been the first thing looked to. We have already noticed this place ( p .23 ), and a comimunication now before us, which we shall endeavour to find room for next week, entirely confirms this statement.
In selecting the station in which an exotic should be planted, it will always be found better that the place should be shaded than exposed to the full influence of the sun. One reason is, that a plans, even if frozen hard, may be recovered if it thaws very gradually, although it will certainly perish if the thaw is sudden. Now in a southern aspect a plant is in the most disadvantageous position possible with respect to this circumstance. We received the other day from Owston, near Doncaster, a branch of the tender shining-leaved variety of Laurestinus, which has lived for many years in a situation where it never sees the sun for an instant in the course of the year, and it stands frosts which are fatal to the same species elsewhere in the sun. Another reason is, that in a warm sunny place a plant is stimulated into early growth, and subsequently suffers from the late frosts of spring; while, in a situation to which the sun does not reach, a plant commences growth later, not earlier, than elsewhere, and thus avoids getting into a tender condition at an unfavourable season. We have seen this remarkably exemplified in the Tree Prony, which flowers abundantly on the border of a shrubbery facing the north, and has its blossoms as regularly cut off by frost in the warm nooks of a southern exposure.

Two things are evident if the preceding observations are just. The first is, that it is extremely difficult, If not impossible, to acelimatise exotics in low gardens incapable of drainage; the second is, that some situations are naturally so favourable for this purpose, that skill is scarcely necessary to produce success. England abounds in such places, and it is there that the great attempts at establishing tender exotics should be made. Thie higk ground at the back of Cowes, in the Isle of Wight, which we see by the papers is to be laid out as publie gardens, would be admirably suited for this purpose: and if the projectors of that establishment are well advised, they will make it form a prominent feature in their plan ; for the mild climate of the island, taken together with the advantages of soil and situation, would enable such gardens to become unrivalled for fine specimens of tender exotics.

The ink of our last paper was scarcely dry, when it was announced by The Ubserver, a newspaper supposed to hare access to official sources of information, that "the most active means are in progress for selecting a plot, at the Eastem end of the metropolis, sufficiently extensive and in every way suitable to the purposes of a public park." We find from a subsequent couversation in the House of Londs that this intelligence is true; and we trust that Govermment will be able to carry out so excellent an intention. When the ground is selected, we shall take the liberty of offering
some observations upon the manner in which it should be planted-a subject of no small importance, which seems to be but indifferently understood, if we are to judge from what has been done in Hyde l'ark and elsewhere. The great good sense of the noble Lord at the head of the Woods and Forests makes us coufident that practical suggestions will meet with full consideration; and we have no intention of pressing visionary schemes upon either his Lordship or our readers.

\section*{ORCHIDACEOUS EPIPHYTES. \\ (Concluded from page 227.)}

Epidendrom Stampondianum, Honduras and Guatemala, 1838, Mr. Bateman. - Very graceful and pretty.
Remarkable among Epidendra from its mode of fowering from the base of its utems. Deliciously fragrant Epidendrum alatum, Honduras and Guatemala, 1838, Mr. Bateman.-One of the best of Epidendra; deliciously fragrant, of stately aspect, and a free-grower.
Stanhopea saccata, Guatemala, 1838, Mr. Bateman. - Very distinct and pretty. One of the most freeflowering of plants.
Mormodes pardina, Mexico, 1839, Mr. Bateman. Of stately habit, and some of the varieties very handsome; others colourless and of no value.
Cologyne Gardneriaxa, India, 1838, Messts. Loddiges.-A lovely plant, and among the best of its genus; grows freely.

Aerides affine, India, 1838, Messrs. Loddiges.A delightatul plant, and of the easiest culture.

Cielogyne Wallichlana, India, 1838, Duke of Devonshire.-A pretty little plant. The flowers do not appear until the leaves have fallen. A terrestrial species.
Abrides qunquevulnera, East Indies, 18399 , Messis. Loddiges.-More beautiful even than 1 . odoratum, and as easily managed.
Dendrobucas macrophyllua, Eust Indios, 1839, Messrs. Loddigen.-One of the loveliest of Dendrobia and a free-flowerer, at present extremely rare in collections. I know not why it should be called Macrophyllum, as its leaves are certainly inferior to those of many other species of the genas.
Saccolabium compressum, East Indies, 1839, Messrs. Loddiges.-An interesting plant, but, like the proceding, extremely scarce.
Cazarotis porpurea, India, 1839, Mesgrs. Lod-diges.-A lovely little plant, of freest growth.
diges - besutifal plant of very singular hesirs. Lodcaltivated.

Maxillamia macrophylla, Peru, 1839, Mesgrs. Luddiges.-The great sise of the leaves gives this plant an imposing appearance, but the flowers are rather dingy. Oncidiva Batemannianum, Bramil, 1839, Mr. Bar-ker.-One of the most gigantic of Oncidia, as grown in Mr. Barker's collection. A distinct apecies.
Oncidium Insleay yin, Mexico, 1839, Mr. Barker.A beautiful plant; in its habit exactly resembling Odontoglossum grande, but totally distinet in its flowers.
Lamita puepuracra, Mexico, 1839, Horticultural Society.-A pretty species, but very difficult to flower.
Cfcnoches maculata, Mestioo, 1839, Horticultural Society.-A very extraordinary species of a very extraordinary genus.
Catasetum longifoliey, Demerara, 1839, Mr. Brocklehurst.-This is the most beautiful of the Cataseta, the cultivator. Though not originally figured from Mr. Brocklehurst's collection, that gentieman was the first to Hower it.
Epidendrum vitrllinue, Mexico, 1839, Mr. Bar-ker.-A magnificent species when seen in perfection, which is rarely the case.
Galbandra Bauert, Mexico, 1839, Mr. Barker.A most remarkable plant, and of the most prolific habit. Extremely rare, and apparently not less so on the other side of the Atlantic than on this.
Epidendrum falcatum, Mexico and Guatemala, 1839, Duke of Bedford.-Judging from native specimens, this must be one of the finest of its genus. I have wild diowers nearly twice the diameter of those represented in Sir W. J. Hooker's plate.
Cybtochilum stellatum, Brasil, 1839, Dake of Bedford.-A finer species and of more robust habit thau C. flareseens.

Sghomberghis marginata, Demerara, 1839, Mr. Brocklehurst.-This plant has been over-vaunted. Its habit is striking, but its flowens are dingy and produced with excessive reluctance.
Odontoglosely Cuowesii, Demerara, 1899, Mr. Clowes.-A pretty species. Grows and flowers freely. Barker. -One of the preftiest of the dwarf Odontoghtosisa.
 shire. This plant, as cultivated at Chatsworth. far surpasses the old P. grandifolius (better known as Bietug Tankervillix: in the stateliness of its appearance.
Dendroancy Paxtoci, Indiu, 1a33, Duise of Devon-shire.-d very tine speciea.
Dendrobita Cambridgeanum, India, 1839, Duke of Devonshire - A most singular and beautiful species grows freely, but does not flower so readily as some of ite kin.
Dendbobium Devonianum, India, 1840, Duke of Devonshire. - Second to none of the Dendrobia in henaty and eleganee; exceedingly rare

Saccolabiem rubrum, Indim, 1840, Mossrs. Rolis-nou-A charming species.

Angractur bilobvi, Sierra Leone, 1840 , Messrs. Catasetcim laminatem, Mexico, 1840, Messrs. Loddiges. -A remarkable species. It has lately appeared in the Wentworth collection
Sobralia decora, Guatemala, 1840, Mr. Bateman.Pretty; the frrst Sobralia that has flowered in Europe, but inferior to most of its 1
with the ntmost freedom.
Maxiluabia Skinngen, Guatemala, 1840, Sir Charles Lemon.-A noble species, with large urange flowers, twice Leme size of those M. aromatica.
LLRLA MAJALis, Guatemala, 1840 , Mr. Llewell
Chysis Lelevis, Mexicte, 18ino, Mr. Barker. -A hand ome species, but of smaller gromth than C. aurea Onclidum incurvor, Mexico, 1840,
Elegant fiowers, of a most singular colour.
Stanhopra Martianta, Mexico, 1840, Mr. Bateman. -Distinct and beautiful; the colouring clearer than in any other Stanhopea.
ODoxtocasossum Bateman.-M Maguificent I of the easiest culture.
The last seven species will be figured in the forthcoming Parts of my, work on the "Orchidaceex of Mexico and Guatemala," As a list of first-rate species, the above Here introduced priot vizs:- Saccolabium guttatum, Phaius grandifolius, Cymdrobium Pierardi, D. speciosum, D. Calceolarin, D. fim drobtum Pierardi, D. specinsum, D. Calceoraria. . branamspeciosus, Aerides odoratum, Renanthera coccinea, Phaius maculatus, Dendrobium chrysauthum, D. secundum, D. moniliforme, all from the old world; while from the new nense, \(O\). papilio, \(O\). pulchellum, Stanhopea grandifiora, S. insignis, Cyrtopera Woodfordii, Catasetum tridentatum, C. cristatum, Zygopetalum Mackaii, Z. rostratum, Catt-
leya Loddigesii, C. labiata, C. crispa, Gorenia super ba, Maxillaria aromatica, Brassia maculata, B. caudata- 35 in all before 1831. There are many minor gems of great beauty, and which to some may prove as interesting as those of larger growth. I will only particularise the folparettia falcata, the whole genus Cirrhonetalum. many of the Coelogynes, Dendrobium denudans, Fernandesia lunifera, Hexopea crurigera, Leptotes bicolor, Maxillaria stapelioides, all the Masdevalias, all the genus Ornithocephalas ; various Oncidia, especially \(O\). triquetrum, \(O\). stra mineum, O. bifolium, sc.; Pleurothallis chitonoides, Rodriguezia secunda, Stenia pallida, Sophronitis cernua, \(S\),
grandiflora, \(Z\) yropepetalum cochleare. As splendid species grandifiora, Zygopetalum cochleare. As splendid species,
Which although in the country have not yet flowered, I may mention-Grammatophyllum speciosum, Arundina bambusifolia, Sobralia macrantha, S. Liliastrum, Lælia superbiens, Odontoglossum nebulosam, Schomburghia tibicinis, \&c. The last was on the point of opening a fine spike of flowers
James Bateman.

ON THE EFFECTS OF COLOURED XIGHT.
Mx frrst communication on this subject having obtained good deal of attention, I beg to offer a few more extended remarks, as a little doubt and misconception respecting it
seems to exist in the minds of some of the readers of the shronicle. Lightcoming from the sun is not simple, but composed of different rays; as is proved by causing a ray to pass through a triangular piece of glass, called a prism. To illustrate this, let a room be darkened, a small hole made in the shutter, and the prism B placed near it. If the ray of light A, when it passes through, be made to fall on a sheet of white paper, what is called a spectrum, C D, orange, yellow, green, blue, indigo, and violet. As thus:

If these rays be made to pass throughalens, they are again collected into a focus, and white light is produced ; or if these sesen colours be mixed together in due proportion. light proved, both syathetically ind analytically.
Ibefore stated that the red ray possesses the greatest heat-giving powers, as is proveit by the thermometer: while the violet possesses the greatest chemically-acting powers, as proved by its effects on various re-agents-as common marking-ink, chloride of stiver, cer. I might
have added that in the mictle of the spectrum, at the edge of the yellow. resides the greatest iluminating pouter. Thus, then. is the solar light composed of distinct ray each having its own properties - the light-giving or haninous, the beat-cansing or caloritic, and ile chemichiy-
acting ray, Thich may he separated eatively from each acting
T: Las teen incupestably proved by Mrs. Sowervilie, the Royal sociest, and by wibich the previous experiments
of Morichini on the subject were confirmed. She found
that, by exposing sexing-needles to the violet ray for abou hat, by exposing sexmin- -needies to the vile rey for hou the rays by a lens, the effect was more quichly produced The indigo ras has also a similar power, as likewise have the blue and green, though to a much less extent ; but the vellow, orange, and red are entirely withoat it. Needles also become magnetic bo exposing them to the oolar rays incentrated by lenses of the colour of those rays, which power. the violet-coloured light, is it at all to be wondered at-the general effect of light on vegetation being consideredthat it should quicken the germination of seeds? Your correspondent \(a\). \(\mathscr{E}\). Will find that if red, orange, or
yellow glass be used instead of violet-coloured, the same quickening effects on the seeds will not be obtained self-evident proof that there is something more than mer mechanical advantage in the use of the square of violet-
coloured glass. Again, if transparent glass jars be filled coloured glass. Again, if transparent glass jars be filled with different-coloured solutions, and their shades be then the violet-coloured fluid will produce pre-eminent effects in exciting the growth of seeds; next in power to it the indigo, then the blue and green-the orange, yellow, and red being altogether porerless.
I was gratified to see that your correspondent \(F\). has and with effect of coloured light as reconmended by me him is, as I stated, the next but one in power to the riolet. He rather unceremoniously, I conceive, doubts of my havirg used violet-coloured glass, because his workman ays that he never madeany. I can assure him that any respectable glass-stainer (the proper persons to apply to that it is formed by the admixture of cobalt and manganese. Stained glass is but about one-third dearer than nese. Stained glass is but about one-third dearer than
common glass, and will, I doubt not, be soon universally common glass, and will, I doubt nor exciting thetardy germination of seeds. Its ap pearance when in use is pleasing and beautiful. The activ duties of my profession afford me neither opportunity no leisure to multiply experiments on this interesting sub ject ; but those who possess both would, I doubt not, derive great scientific amusement and many curious results, from testing the effects of different-coloured light on the colours of Howers.-F. R. Horner, M.D., Hull, April 2 l.

\section*{RURAL CHEMISTRY.-NO. X}

The class of substances called bases, or those with which acids can combine, are also very numerons. The comm a few substances called earths, because they are the principal ingredients which enter into the composition of the soil in which plants grow.

The principal source of potash is the regetable king dom, and the simplest method of procuring it is by burn ing wood. When this is done, after all the carbon, hydrogen, and oxygen is burned, there remains a quantity white or grey matter called ashes, which when put into
water renders it caustic. This is occasioned by the presence of potash, which not being altered by the heat occa sioned by the burning of the wood, is left in the ashes. In this way, however, we do not obtain the potash pure, because, being a powerful base, and having a strong acid formed by the burning of the carbon contained in the wood, and therefore the caustic substance found in the ashes of the wood is an impure carbonate of potash. It is purified by pouring water on ashes, straining off the clear liquor, and evaporating it; a white salt is left which is the carbonate of potash separated from all the other purified it in when pure and free from any acid, it is found to be a very pure and free from any acid, it is found to be a very
caustic solid substance, which has a strong affinity for caustic solid substance, which has a strong exposed to the air it rapidly acquires carbonic acid from it, and be-
comes converted into the carbonate. Potash has also a comes converted into the carbonate. Potash has also a
strong attraction for water; so that when dry pure potash is exposed to the air it very soon becomes moist, and in a short time has attracted so much water from the air as to appear changed into a liquid. This power of attracting water from the air is common to most of the salts of potash, as well as to many other saline compounds. Pearlash, if left exposed to the air, rapial y becomes moist, and finally runs into a liquid, which is a very strong solution of that salt in water; and therefore it must always be kept in a dry place, and in rell-closed vessels. In the damp place becomes very moist: this is not occasioned by any attraction which the salt itself has for the moisture in the air, but by rertain saline impurities, usually contained in the salt, which have this power in a high degree. One of the most important of the salis of potash, is the which is found native in many places as a white powdery matter on the surface of the gronnd, and is procured pure, by washing the earth, and evaporating the solution of nire thus outained
- itre is a perfectly neutral salt, and in that respect ar less mberic than pure notach hias still rery convilut able canst:- phwers, in consequence of which it is so comounly u-ed in washing, and for other househuld puryeses. Cusbutc acid, in e"mbiuing with tie rianains.
ducs not seen able to neutralise them, or destroy their caustic powers so completely as it can most other hases,
of the alkalies still possess some of the powers of the
alkalies themselves. The other compounds formed alkalies themselves. The other compounds formed by tral, and in them no traces of the caustic nature, neatral, and in them no traces of the caustic nature of the
bases can be found. One of the principal uses of nitre is in the manufacture of gunporder, which consists of nitie, charcoal, and sulphur, finely powdered, and very carefully mixed together. The chenaical action which takes place during the burning or explosion of gunpowder is very nitric acid, -a substance containing a very large quantity of oxscen, combined by a comparatively weak attractio with a portion of nitrogen. The finely-powdered charcoal has a very strong attraction for oxygen, and when mon the heated is able to decompose the mitre, seizin acid, a small portion of which combines with the potash of the nitrate, and forms carbonate of potash. The us of the sulphar in gunpowder is similar to its use in the lighting of a common sulphur match; it very easil catches fire, and the flame thus produced instantly leat the charcoal so much that it is able to decompose the nitre. The mechanical force of gunpowder when fired is occasioned by the instantaneous production of a larg quantity of gas from a small bulk of solid matter; as of course the nitrogen and the greater part of the carbonic state, and comparatively but little is absorbed by th potash.
Nitre is one of the few compounds of nitric acid which are found native, and indeed it was formerly almost the been source of that acid; but of late years its use has nitrate of soda, which is found in large quantity in South America, and is a much cheaper source of the acid than nitre is. Nitre is also used as a manure, and wil therefore come before us again on a future occasion.

Salts of potash are met with in many plants in small quan tities: they are likewise commonly to be found in the soil ; and potash is by no means uncomon in stones indeed, it is evident that the sals from the gradual breakin soil must hare been derived from the gradual breaking
down and decomposition of stones and rocks containing down and decomposit

The second alkali, soda, is in general characters very similar to potash; it is a very strong caustic solid sub stance, and has a powerful attraction for acids, and is consequentiy never found in a pure and separate con dition, but always in combination with an acid or some other substance. The most abundant source of sola is common salt, which exists in very large quantites in sen it is called rock-salt, to distinguish it from the salt ob tained by the evaporation of sea-water, called sea or bay salt. The only other compound of soda which occurs native in any quantity,

\section*{COTTAGE GARDENS.-No. XV.}

One of the most striking ornaments of a cottage garden uring summer, and at the same time one of the most useful vegetables for a cottager to cultivate, is the Scarle runner Bean, of which a sowing should now be made in some warm sheltered situation where the soi is tolerably free and good, and where the young twining stems are not likely to injure or interfere with the other crops. If there happens to be any particular part of the garden which it aware of a better plant for this purpose, as it grows ran pidly, and will continue to yield a profusion of flowers, a well as an abundance of green pods for use, until cut of by the frost in autumn. Like the dwarf-growing kinds mentioned last week, the beans are liable to rot if planted before the ground has acquired that degree of warmul which we expect it to have at this season. However de sirable it may be to have an early crop of this vegetable we would not recommend a sowing to be made until about this time, as the young plants are extremely tender on th making their appearance, and are sure to be killed be alon shghte fros. A good place to sow some woun berte as they adrance by means of a temporary trellis of rodi and lines; or a row may be put in close to some wall or ont building of the cottage, and made to run up some lines nailed against it. In either case the ground must be dug prout deep and finely broken with the spade. A dril of abous two inches deep is then to be drawn, inches' distance, and are to be deposited at ive or mix inches dist Knight's afterwards neatly covered. Make a sowing of Knight Protecting Broccoli for a late spring crop. Sow Transplant more Turnips, Radishes, and Cos Lettuces. Transplant the first-sown Lettuces when about three or four inches bigh into a bed or burder of well-manured ground, in for a a foot apart. Prepare a bed in a shady situation for for sowing of round-leared. Spinach, which is the best in dry summer use. It is, however, so apt to run to sced in who are foud of this esculent to try as a substitute the New Zealand Spinach, of which three or four plants would afford a tolerable supply of leaves during summer, if placed in a warm corner of the garden four feet apart and abeds dintly watered. Attead to neatness, and destroy we stir he suit, wheiner it be reedy or not, among tie early-somn Turmips, and between the rows of Potatoes. In fact, tiae hoe and matturk, for cleaning and thoronghy operation Whe ground, should now ije cunstantiy kep time to spare dutiug dry weather, whe generality of cottagers are not aware of the importance of frequestly stirring the soil, but its
beneficial effects on the growing crops will soon be apparent to those who \({ }^{\text {m }}\)

\section*{HOME CORRESPONDESCE}

Potatoes.-In the Gardeners' Chronicle of the 17th of this month, an extract is taken from an article of mine on the cultivation of Potatoes, published in the Sulopian Journal of the l4th April. By your ruoting a part of a sentence without the context, it might seem that I was and the experiments have been directed rather to the quality than the quantity of the crops. In mentioning ans "es traordinary" case of growing "atternate rows of Buehel, and which produced is bushels, of \(951 b s\), to the bushel, and the Maesbury-red \(1 \frac{1}{3}\) bushels to the roou, the Bhe-meals must be considered as having "encroached upon and got think that so large a crop ais \(7^{3}\) busleels of Putatues was ever grown upon a rood in this part of the country; but bushels to the rood were grown in my field, according to the portions which I weighed in the autumn of 1840. The largest crop that I have kept any account of was in the year 1836, When the Bread-fruit, which is now considered the rood. In the year 1840, the greatest produce was 6 bushels of 95 lbs . each to the rood, or rather less than 19 tons to the acre, 112 lbs . to the cwt . and the produce of
the Sweeney seedlings was 480 lbs . to the rood, or 16 tons cwt .12 lbs . to the acre, instead of 34 tons 5 cwt ., as stated in the Gardeners' Chronicle.-Thos. N. Parker, Sweeney Hall. [In calculating Mr. Parker's crop, we assumed that the Shropshire rood was the same as the rotl, because it was evidentiry not the rood, properly so called, which is \(\frac{1}{}\) of an acre. It appears, however, that the Shropshire rood is neither a rod nor a rood ; and hence the erro which Mr. Parker has pointed out.]
Mr. Penn's Heating. - I am not much inclined to ontroversy, but some of the statements made by Mr Paxton relative to Mr. Penn's mode of heating appear to e so extraordinary that I trust you will allow me the pace falk the fact as stoted. Mr. Parton says that place, face of 1,330 feet, with a heating surface of 1 to 10 , and "effectually covered at night,"' cousume nearly 3 tous of coals per week. Surely there is miscaleulation here,
or the Derbyshire coals must be of a different quality from the Welsh; for I find that a pit containing 4,400 cubic feet, exclusive of the space occupied by the tai pit, and having 820 feet of surface, with a heating surface of 1 to 20 ouly, which, according to the abore estimate, should require more than 3 cwt., has in fact consumed only 6 cwt . of coals per week, being in pro Paxton to have been consumed. The house I speak o has been kept at a minimum temperature of about \(70^{\circ}\) without any covering throughout the late severe winter ad although for orchidaceous plants a somerrhat bighe emperature may have been kept up, I consider this dif ference has been fully compensated a thatched roof every night," adopted at Chatsworth. Mr. Paxton assumes "that an immense quantity of heat, not less than 50 per cent., is consumed by the masonry surrounding the air-chambers and drains ;' and in a subsequent part of his letter, that "this hea is never given out again for the use of the house." he says, that "the pipes must be made hot before any circulation takes place." Without any intention ts dis parage Mr. Paxton's scientific acquirements, I venture to known corecs of his assumptions. economist of fuel in Europe, frequently warm their houses by forming Fiorizontal zig-zag fire-flues under the surface of the ground upon which they are built; thus charging the increases the temperature of the honses. In like ner, the heat absorbed by the masonry of the chamber and flues is again given out for the use of the house, and nstead of 50 per cent. not 1 per cent. is consumed o rendered unavailing. The circulation of the air com mences inmediately the equilibrium is disturbed by
the pipes being made in any the slightest degree warme than the surrounding air, and it does not cease until the equilibriun is fully restored by the heat of the pipes and air again beconing unifurm. It is quite true that a con siderable prortion of heat is absorbed, in the first instance, by the brickwork, but everyparticle of it is evolved befor the circulation ceases ; in fact, the olly heat lost is the portion transmitted through the glass and esterior walls, and this effect is of course common to all houses, by whatsoever means they may be warmed. I cannot leare your leader of March if refring some ouservations really to take place is this : the heated air accumulates near the upper part of the huuse, where it loses its heat With a rapidty proportionate \(t_{1}\), the cold of the exterua if you had studied to describe the workiog of the old system, which Mr. Penn's invention is calculated to, and will, superserie, you could not have done it more accurately. Luker that system, truly does the heated air rise to and acci:mulate near the upper part of the house, so that the external is auting upon the internal atmosphere \(t\) the greatest posibie disadvantage, the urper stratum of air in the latter being probibly some 15 or 200 freely circulating as it does on Mr. Yean's plan, the tem perature of the whule bouse is nearly uniform, and conmequently the abatraction of heat through the glass is
much less rapid; hence the cconouly of fuel which is the result of usime \(\begin{aligned} & \text { Irs. } \\ & \text { I may observe in conclusion, that I have dis- }\end{aligned}\) continued the use of the air-chimners fur niany months past, and find that the warm air issuing directly from openings in the chamber is more readily and equally dif fused: but I do not see that this modification detracts at all from the merit due to the inventor.-C. S. Croveley, Brond Green Lodge, Croydon, April 23, 1841 . [We
willingly insert this letter, and if we receive a reply from Mr. Paston, we shall print it also ; but there must term nate the discussion, which bas been carried far enoug fur any useful nublic purpose. We can only ada, wit reference to our observations of March 10 , that we differ from our correspondent in considering that these obser vations apply to houses heated in the ordinary manner, and not to Mr. Penn's. We conceive that the radiant heat from exposed flues or metal pipes keeps the lower stratum of air always warm; while that from chambered pipes is forced away from the lower part of the house to the uppe nd becomes cold before it can reach the bottom.]
Heating Mushroom-houses with Hot Water. Whar received a communication upon this subject from Mr. T Sellers, Gardener to L. V. Watkins, Esq., of Pennoyre. He agrees with Mr. Mearns, p. 84, as to the value of hot water as a means of heating. He adopted the system abou crops of Mushrooms being vigorous, abundant, and good fiavoured. The accompanying figures represent Mr. Wat kins's house at Pennoyre, as well as the system of heating it It was executed by Mr. Williams, ironfounder, Brecon ; is simple and economical, and was put up at less expense than fire-flues. This is an important point where fuel is expensive and the consumption as great as in the neigh bourhood of London. The same fuel that hests the suc cession Pinery also serves for the Mushroom-house, which

is, in fact, a shed behind the furmer. Fig. I represents a section of the interior of the house, with three beds for Mushrooms ( \(u, a, a) 18 \mathrm{ft}\). lone and 3 ft . wide ; and thre shelves for forcing Nitubarb \((b, b, b) 1 \mathrm{ft}\). 3 in , wide, and 18ft. long : if circumstances. permit, these shelves may be made wider, and usel for Mushrooms. Stones are place on each side of the passage at \(c, c\), for the standards to be placed on which support the bearers of the shelves, and mortised at 12,4 . The stones shoull he about bin. squar on the surface and 3 in . thick, and the standards abou 3In. stmare. When the standards are set up, one ent of the cross bearers, e, \(e\), shonh be mortised into them, an the other into the wall. \(f, f\). These cross bearers may be fixed at erual distances as the height of the hurdding wil allow. When the standards and cross bearers are fixed the shelves may be furmed by laving along the latter board patting fresh dung. if a board Sin, broad and lino vicl Flacell behind the stantard at \(i\). or cat so as to come flash with it. When the shelves, are fixed, a trench 9in. deep is made in the passage, \(l, m, n\), for the reception of the nipes; on each side this trench, a brick wall, \(i, i\), is built to prevent rubbish frum falling in. The bottom of the trench must be puddled with clay, so that the water thrown on the pipes will not escape. The pipes nsed are about \(1 \frac{1}{2}\) in bore, and they are laid in the trench 3in. apart; wooden trellis, \(n\), is placed over them. resting on the brick walls, \(i, i\), and forms a path. Fig. - shows a section of the
 furnaces for heating the Piner and Mushroum-house, and they are sn emstructed that the sama Iquantity of fuel is found sufficient to keep up the temperature in Gothe huises. When a stroligg fire

\section*{tion of the plan.}

Honey-Deu.-Haring generally obserred the pheno menon of honey-dew accompanied by aphides, I was in duced to beliere that in all cases it was an animal secretion ejected from the bodies of those minute insects; but a cir cumstance occurred the last summer, which my mind great doubts as to the accuracy of my forme opinion upon the sobicas a eficacious io the solil a mete the genious conjectures, I shall content myself upon the pre-
sent occasion with simply relating the occurrence to which I allude. Soon after my return from town into Stafford shire on the 7th of July last, I had occasion one very warm erening to pass through a gate that forms an entrance into my ground. It is shad by ar treme branches of which overhang it and the adjoinin gate-post and palings; but there was nothing remarkable at that time either on the gate, post, or palings to attrac my attention. Early the next morning, however, on passing the same way I was surprised to find the whole of them cosered with a saccharine fluid, not in small distinet drops, as honey-dew usually appears, but in large quantities, a if a bucketful had been poured down from the trees above : for it had trickled down the post and pales for considerable distance from their top, until its viscidity had checked the further progress. It was apparently impos sible for the inconsiderable number of aphides which I discharge of this fluid, and it must have proceeded from the extremity of the branches, for 1 did not perceive an similar deposit an the tranks of the trees or onthe ground around them. I had before remarked that the preceding evening was suitry, and this viscid discharge took place during the night. In a few days it became of a black colour, and seemed to be converted into a sooty carbon I may probably trouble you again upon this subject should similar circumstances fall under my observalan Place

Failure of the Potatos Crop.-In consequence of a par tial failure of the potatoe crop for the last three years, bate used every exertion to discover hie couse attri but an appe \(h\) of farmer to dig lis putatoes before they are ripe, anc is, those
them in large quantities in pits : the consequence placed towards the centre of these pits heat, and lose thei regetative properiy, while those placed near the sides ar presersed by the earth with wheh they are covered, and by that means become mature without injury, and eve retain a moisture that the others' do not. Thave seen many persons take potatues form the cente for seel thinking from the dry appearauce of them that they would be more sure to vegetate than the others; but I have prevailed on them to pant som. or those rrom ncar the sides of the pit. The latter they found to grow to their satisfac tion, while the others, on wineh they relied for a crop , shons that the hear ge pits is the principal cause of the failure.

\section*{FOREIGN CORRESPONDENCE}

Paris, April 1841. -The Camellia season just passed has been more than usually brilliant, both with amateurs and florists; the blooms were generally perfect, large, and abundant, and the striped and spotted varieties more true to colone than in former seasons: this, perhans, is to be attributed to the fineness of last summer and antomn which was particularly favourable to ripening the wood and setting the buds. The Paris srowers hare not the opportunity of showing off the flowers to the best adven of their honses being generally low an span- fel. the plants are too often toll and slender, hnt this is in a great measure, owiug to the soit which is en tirely peaficient attention is form hand some bushy plants, as in England; the principal aim is to proluce a saleable platat in the shurtest possine space of thine, and it connot he denied that peat does accomplish this. The ervor of this practice is, however, fully known to the ernmers, who are also equaly anare of tac adran
of a compost of loam and peat, but for the reason ole mence is the undotyamearance of the whe amd four years uld plants; but it is not a little singular that the same system =huald be adopted who las the finest and most ertensite nrimate meribortion th France, and win has done more than any oti. r p reon

 peat cathation. Ta, Ab Las. he we-r, aldoter imgrowing his phans is inves notead of pots, and thas propagithon of Cartias is liere carried to an exient alpropt meredible, sume houses making as many as 8000 ad 10,000 p'auts in a season; inarching is now teldom or
never practised, budding and grafting being found much buds grated, and after 5 or 6 wreeks ranly for sale: the principal means of aicomplishing this, is by a good buttoriouter air of the house. This work is perfurmed from Fe bruary to October, but cuttings are made all through the year and struch in thumbs, GO under each glass, and it is 800 or 1000 glasses in full aperationatiun-house with operation. the readers who are unacquinted with the iminense quantity of cut-flowers fetes plants uf Camelhas required in the paris season for the same as in England: toward the midtle or end of May the plants are planged in the open ground in any airy siin the houses are allowedl a free current of air, by removing all the top lights, both front and back; but the full rays of the sun being too powerful for the young wood, are broken by a framework of lath fixed to the top of the
house. There have not been very many fine seedlings raised here ; most of those with French and Belgian names are obtained from Italy, where the seed is more easily
ripened. The price of new rarieties is regulated by the number of leaves, and the catalogues generally specify the charge for three leaves, and so on in proportion. Much injury has been done to the trade by sending out the same variety under many different names, and the following list
will give some idea of the extent to which this has been practised:
Alexandrine. Perfectayms Autratah War.,
Aurantianra,
Autcis naibar

Mr. Kelaart finerved that a he he produces the thuest ruanters or Chuamon, and that for some time

 society where these discrepancies exist, and endeavour to re-
and

 Ill was the property of (ievermment nut. within a few years
 K . ne xt derrrited at considerable teryth the Cimamom (iardens of Ceyton. These were not, properly speaking, gardens; Cinnamon plantations ranges from shy to sump acres. The trees are net after having attained a certain age. The soil of these plantation
contains, with very few exceptions, only silght traces of decom posed vesetaile mattcr. In many portions where trees produccuy
the finest fualities of Cinuamon srow, the soil contains ouly from one to three per cent. of vegetable matter, the rest being formel of coliombo for several tuches in depth is of the firtest silicioun faint idea of the Cimnamon Gardens of Ceytm may be hait ly ima: gining an extersive field crvered with snow having the loveli-
ners of an Eastern sky spreat above, and the cimnamon bushen ness of an Eastern sky spreat alove, and the Cinnamon bushes
growing on the universal white below, with their tender crimon growne intersper ed amount the green. The aromatic odd or which
folis said hy sumer to be diffused through the atmusphere of these
is spicy groves is only imaginary; there is, however, a freshness in
the air and a beauty throughout the Whole scenery which make
some of these gardens the favourite resort of the inhavitants in some of these gardens the favtourite resort of the inhatitants in
the coolness of the morning and in the shades of evening. Mr. falls of rain, and to the supply of water from neighbouring lakes and poot- and as the carbon so necessary to regetation is now
known to be derived tirm other somurces than the soil, these, he
 them is thick, spongy, and but -lightly aromatic. Cinnamon trees will prow in almost any soll within the stuthern and weestern
parts of the island, but heyond these limite they are not found. No plausible reasons have as yet been assigned for this peclu-
lianty, Mr. K. then cuumerated some of the plants amonir the Cinnamon bushes: as also the animals commun to these gardens, of which the pigeons and crows serve a very use-
ful pury se, by eating the berries and afterwards depositiug the ful parp se, by eating the herries and atterwards wepositing the observations on the abandoned gardens or woodg of Clnamon,
which have been allowed to be overrum with will plant and weeds, Mr. K. described the mote of prepariug lands for planting Cinmamin, and nther interesting matters connected with its
cultivation. Next followed a detail of the process of decortication, cuntivation. Next ollork of the Canmanon for the market. The produce of all the Cinnamon trees on the island was, during the mo-

 Cimamamon sorted by the (invenumenter otticers, who, frime their
Lon erperience, are better calculated to previt cuntusiun in the
 lengthas those or the other qualities, phe mure slender, coluur
brighter, of an orange tint something like Venetian gold;
texture finer, pliable, fractures readilf; taste, sweetisis, pungent:

 the first curt. The third sort present- a less smowth surface. and is easily dintinguiched from the two nther rualites, in its cithur
being still deeper, taste more sharply pungent, approaching tel acridity: the sweetness scarcely perceptible. In connexin, with
this description of the three varieties of Cinnamon, Mr. K . alluded to the Matabar Cinnammon, which incinuted everal sorts in bne qualiticurf Ceylon Cimnamom. He eremarkest that the Cassia lignea or commerce wai of three, kinds: that tronn China, omemetimes
cailed Chinese Cimanon, that from the i-iands bordering on ever, Ciumamon. The latter was evidently the produee of several s.ipe-
cies uf cies of Ciunanion trees growing on the continent off thdia. The
Chinese vanety has characters which clearly distingrich it from Cinnamon. its suhstance is thicher, its texture peculiar, fracture
shorter. of Cevlou Cunamon. It is in taste, however, that the strihing difference between cassia and Cinuamon is most percepthble.
The equilh of Cassia are made of single rolls of Hark-those of The quill- of Cassia are made of single rolls of bafk-ethose withiu the sther. He thes desenibed the product of Cinnames

\section*{MISCELLANEOUS.}

Preservation of Wuod-M. Payen, in a recent comthat in all the organs of vegetation, and every woody part azotized matter exists of a highly alterable nature; and he ascribes to this the decay of those parts. Such jreagents as taunin and nitrate of mercury readily indicate its presence; and he concludes that whatever will preserve nimal matter from decomposition will do the same for regetable substances. He uses acetate of lead for this purpose, and he states that it may be introduced into wood by a process analogous to that of Dr. Boucberie whether nerrly felled or a month afterwards.
Araucaria imbricata.-At the meeting of naturalists at Turin, which took place last September, it was announced that this plant had flowered, for the first time in Europe, in the garden of the Marquis Ridolfi.
Secreting Glands of Leares.-On the same occasion M. Trinchinetti explained his views concerning certain glandular organs upon leaves, which he conceives to be to be small bodies, sometimes conical, sometimes globnlar either naked or hairy, and sometimes defended by apine He named them periphylls because ther chiefly occur near the periphery, or circumference of a leaf.
Plate presented to Mr. Bantor, Jun.-The committee of the Bath Royal Horticultural and Botanical Society have presented a handsome silver cup to Mr. Wm. Hart Baxter, son of Mr. Wm. Baxter, Curator of the Oxford Botanic Garden, as a testimony of their approbation of his conduct during the time he was Curator of their gar den. The cup bears the following inscription:-" Pre sented, by the Committee of the Bath Royal H. and B Society, to W. H. Baxter, as a testimony of their appro-
bation of his conduct during the time he acted as their Curator.
Nilrate of Solla.-Being determined to follow up my against nitrate, that it prove or disprove an objection best a stimulant to inert tillages, I again tried it on a rood out of the centre of an arre sown with nitrate in 1839, on thin sropy gravel land, and manured the remainder of the field with an excellent dressing of good manure, say 20 yards per acre. The nitrate was put on nure was got on and well dressed in early in the season.
 of sowing the nitrate, I was walling past the fiel with an experienced farmer who had the strongest prejudice against the use of such a slight and new-fangled dressing when I directed his attention to the field, and inquire if he could perceive any difference in the appearance of the grass, when, knowing I had used nitrate in the freld,
he replied. "No." I then directed his attention to a part of the field farther from us, and his observation was, that I wanted him to see my land on which the nitrate had been used, and say that it had the advantage over the manure, but that be was not to be caught; for if it was are a part of the held looking better than the rest, to point it out, and he directed meto the nitrate. I in formed him the nitrate had been used there; but he would not be satistied until we had found the larger particles of nitrate still undissolred on the surface, when from that time until the storing the hay, wes a constant watcher time urer the nitrate, and he assisted me in measuring 6 square lo square yards out of the nitrate piece, and an equal quantity green gave the following result:-Graes cut 26 th day of June; weight of grass from 64 yards of nitrate land 338 lbs . ditto from 64 yards of manured land, \(25 \geqslant \mathrm{lbs}\). being rather more than one-fourth in favour of the nitrate Anxious to know whether the grass grown by nitrate was more succulent than the other, I had both pleces made as dry as possible, put into two small cocks, and corered the thatch. Ligateen days from the tim an ill erening when I had them weighed, and found the aitrate grass wasted from 3381 lb . to zialbs., being little more than one-fourth the original weight; and the manured grass from \(252 l b=\) to belbs. Haviner done this, ine fond one-furth the original weigh of one lot uver the uther; but I gatued the kaowledge that the nitrate hay was neither more nor less than 1 qr heavier than the manured hay. Weight per acre from manure, supposing the whoie as good as was the trat piece, 2 tons, 4 cwt., 2 urs., ' los. ; and from nitrate. that this sedson I shail use nitrate of soda on \(2_{11}\) acres grass land; and would recommend the public, to whom cheap dresaing is of compoquencen to tout it on mamal scale.-Abstracted from waite on Nirrate of Sode.

Hints on Agricultural Economy as the Antidote to Agri cultural Distress. By Owen Owen Roberts. A Pamphlet. London. Simpkin and Marshall
Nothing can better express the contents of this littie work than the motto happily prefixed to it:- "Mach food is in the tillage of the poor; but there is that is destroyed for want of judgment."- Proverbs xiii. 23. It is in reality an attempt at showing the small farmer, especially the Welsh race, how large are his losse by unskilful management, and how mach he might gain by an altered plan. Perhaps we ought not to call it in attempt, for the suceess of the author renders it some thing more; in fact, if any one were to ask us what boo fond the small prompase we should certainis moint to this
The only thing we are disposed to criticise is the tone, which is evidently intended to produce an effect upon a particular class of individuals. Granted that the little farmers form the most impracticable pirt of the community and that it is of all things the most difficult to make them interests, still we doubt whetber they ar likely to be rendered either more pliable or far-sighted b being told they are "idle bigots" or "lazy jolterleads. terms that ther education and contracted intellects, the fesult in a great degree of their sucial condition, they are incapable, as we believe, of comprehending the micaning of thugs which to others are as clear as the sun at nom-tar.
The subjects tmbracel in this little locok are the general principies of farminct.-"The Adrantages of a legralar cation of a Recular system of Management to Ferm containing 50 acres of Arable Land-The Necessity of Systematic Economy in the Management and Conemaption of Agricultural Produce, as well \& the Fecding of Live Steck
is in securing an increased quantity, and improving the quality of Animal and Vegetable Manure-The Importance the Application of their Labour." Besides which there are good practical directions for performing all the principal details of husbandry, including cattle-feeding, paring, burniag, cropping, brewing, baking, gardening, and even housekeeping ; the whole in 117 pages. Perhaps the author is somewhat enthusiastic and disposed to expect more rom land than can be obtained under commoncircumstances but these are small defects compared with the general cha racter of the work. The first thing in all arts is to fix a
standard of possible excellence, and every one may then standard of possible excellence, and every
strive to approach it as nearly as he cain.
The following passage puts one of the common objections to improvement in so strong a light, and is so true, that we are glad of an opportunity of quoting it. "Many are deterred rom adopting agricultural improvernents by the taunts of individuals who have, as the saying goes, paid their way and saved money by the system pursued by their fathers and grandee pointed nut in various parts of the country where such has been the case. But how have thay paid their way and saved money? In a great majority of instances, where usages in agricultural practices, it will be found, especially in the Principality, to have been the result of a thrifty, penurious habit, depriving the individuals themselves, and thuse dependent upon them, of every domestic corafort beyond bare sustentation which they have enjoyed, if such a term be applieable, in common with the four-footed animals constituting the other portion of the live stock of
the farms. This, in nine cases out of ten, will turn out to have been the true source from which money has been saved: and the amount asved will, in too many instances, be found proportionate to, and dependent upon, the possession of a low, servile disposition, inducing its possessor to submit to any privation, put up with any insulting treatment, and passively bow to any degradation that meanness could invent, when pecuniary advantages were likely to be the result.
"Wealth thas obtained is dearly purchased, and a few hundreds or a few thousands, so saved, is a poor inheritance to leave to a child as a substitute for a liberal education, inculcating honest independence, coupled with moral parent's hands. It will afford bim but poor consolation to betold that such was the case in the grandfather's and great-grandfather's time ; when he has before his eyes the improvement that is daily taking place in every branch of scientilic knowledge, whilst agriculture alone seems left as a monument to commemorate the habits and customs of past ages, when the inhabitants were just emerging from barbarism, and but little scquainted with the comfort and conveniences of civilised life.

The author's description of Welsh cows is, we shoul bope, a caricature. "The amount," he says, "of the farmer's profit must most materially depend opon the selecfion and the rearing of a good sort of mileh cows; yet how often do we see, especially in many parts of the Prin looking, duck-legged, heary-headed, bull-necked, gimleteyed, thick-skinned, goose-rumped, razor-backed creatures, which are designated neat cattle. The profit from such tock muat be erceedingly small, either in the dairy or laughter-house. One great cause of such things will be ound in the penny-wise and pound foolish habit so general among farmers, of selling the most select of their young stock, merely because they fetch a few shillings per head more price than the refuse, which they keep in their stock, until they are three or four years old-when it turns out that their value, in the dairy or in the slaughter-house, is but a senall recompense for the fodder wasted upon hem.
The remarks on draining are excellent, and we repeat advise the anthor in a new edition to extend the chapter on Potatoes, which although good as far as it goes, is much too short, considering the unskilful manner in which this crop is often managed.

CALENDAR OP OPERATIONS for the ensuing Heek he unsinhtly winter corerings from their plants which have been protected : but we would caution them that this has oiten proved fatal error, especially with Pinuses and other early-growiug
flants, which are readly detroyed by frost, when they commence to grow, and are full of juices, as is the case at this season, but
those which are nether growing mor have unripe shoots upon them may be uncovered with tolerable safety.
I.-KIFCHEN-GARIEN AND ORCHARD.

Pingry.-Continue tio watch the beating of the tan-beds: we so prejudicial to the weli-doing of Pine plants, or so often the cause of raschief with young benwers, as the overheating of the ther will allow; if this is neglected the fruit-stems become trawn The wrealky, and the froit does not swell so large in conser, when The frouting plauts will nuw renuire water pretty oiten, but it i sticks to support the fruit before it becomes large enough to bend

\section*{NEWS OF THE WEEK}

The death of General Harrison, the recently-elected President of the Cnited States, who expired on the 4 th inst. within one month of his inauguration, is the principal point of interest in our Foreign News this week. This un expected event is said to bave cast a gloom over all political parties in the Union, and to hare ealled forth a unanimous expression of respect and attachment to the memor of that distinguished personage. The office of Presiden has devolved on Mr. Tyler, the late Vice-President of the Republic, whose political principles are said to be in per fect unison with those of General Harrisun, and who is described as eminently qualified fur his high office.-In France, public attention has been engaged by the trial of the Editor of the Nerspaper "La France," for a libel on he King in the publication of eight letters, purporting to be written by his Majesty to Prince Talleyrand: the jury returned a verdict of "Not Guilty" in this cuse, without ffirming or denying in any way the authenticity of the letters. It is stated that the French Cabinet has despatched an expedition to China for the purposcof establishing direct relations with that country.-In Spain, the absorbing topic of attention is the Regency Question; the majority in the Senate are favourable to the sole regency of the Duke de Victoria, and the majority in the Deputies are as decidedly partisans of a triumvirate. The debate on this question is still in progress, and much doubt is expressed is to the ultimate result. Another question of public indest has arisen in connexion with the tutelage of the oung Queen Isabella, Queen Christina being disqualified by absence and other causes from retaining that office; and several persons are intriguing to be appointed her successor. Accounts have been received in Madrid, that Cabrera, the Carlist General, has again entered Spain ; but the report has been subsequently contradicted, although everal rumours to the same effect have reached us through other channels.-From Portugal we learn that there is great probability that the commercial treaty with this country on reciprocal and liberal principles will shortly be completed, and that the claims of the English bondholders re likely to be soon adjusted. - In Germany, the Confederation are actively engaged in completing the frontier defences, as a balance to the fortification of Paris; and the works are advancing with great rapidity.-From the Levant we learn that the Sultan is willing to concede to the Pacha of Egypt the power of choosing his successor, and that it is probable that a modification of the Hatti Scheriff will be adopted as soon as the opinion of the Lomdon Conference is known onthe propriety of that concession. At home, much excitement prevails in the political ircles, in consequence of the debates on the Irish Parliamentary Voters' Bill having terminated in two divisions both of which were unfavourable to Ministers. On Monday night Lord Howick proposed, as an amendment upor the first clause of the bill, to establish a 3 . rating fran chise beyond all charges and the rent specitied in the lease. After a long and animated discussion, in which the Ministry resisted the proposed amendment, it was carried by a majority of 21 . On Thursday the question was again resumed, on the consideration of the 88 . franchise clause of the original bill, which was negatived, after a prolonged debate, by a majority of 11 , in one of the fullest houses o the session. The bill is, therefore, virtually abandoned.In the House of Commons last night, Lord Joha Russell gave notice of a motion for the revision of the Corn Laws, and the Chancellor of the Exchequer brought forward his Budget for the year; particulars of both these importan subjects will be found under our Parliamentary report.

\section*{3 3 ) ome NTems}

The Cotrt-Her Majesty, Prince Albert, and the Princess Royal are well, and remain at Buckingham Patace. Her Majesty held a Levee, on Wednesday, at St. James's Palace, and a:tended the Coneert of Ancient Music, at the Hanover-square Rooms, on the erening of hat day H P H. Primee tibert was, on Tuesday, in vested, at Buckingham Palace, with the ensigns of the vested, at buckinen Fleece, by bis Frace the Duke of Wellington, who was nominated by her
Queen of Spain, to perform that cerman.

\section*{forcígn.}

Prancr,-The Recruitment Law.-The Chamber of Deputies have passed this bill, by a majority of 212 against 46. The disemssion was not remarkable. Some bandwehr, should meet at certain periods and be reviewed. But it was thought that the meeting of all the military of the country, at certain periods, especially of that class of
soldiers who have most mingled with their fellow-citizens and are most independent, might lead to effervescence, or demonstrations of military opinion not always safe or convenient. The Ministry were, therefore, not favourable to the idea of annual musters of the reserve, which is con-
zequently left as it was before. At the same sitting the Chamber passed the bill for military pensions by 2228 against \(12 ;\) the bill for the credit of \(5,611,500\) f. for the
marine hy 217 against 13 ; and the bill for \(2,500,000\). for marine by 217 against 13 ; and the bill for
horses for the cavalry bv 207 against 20 .

Acquiltal of the Editor of "La France." -The Paris journals are much oceupied with the trial, that came on Editor of La France, for the publication of three letters, said to have been written by Louis-Philippe to the Prince de Tallegrand, when the jury set aside the accusation of libel, and returned a verdict of Not Guilfy. Their compolitical parties to which they are severally devoted. The Legitimist journals consider it a great triumphi, but on the opposite side it is thought that the jury could not have decided as to the anthenticity of the editers, of La France might very well have believed them geanine, and might have published them in good faith

The Law of Expropriation.-The Chamber of Peers has passed this. bill, as voted by the Deputies. It seems
that the Peers erased last year the clause enabling railroad companies, or any similar company, from taking provisional possession of ground absolutely necessary for the line, and allowing the jury to fix the amount of compensation after. The Chamber of Deputies, Gowever, having agnia passed the clanse, the Peers, instend of rejecting it, have proposed only to modiry the clanse a little. thought, will greatly facilitate railroad enterprise.

The Buenos Ayres Trealy.- The Chamber of Depoties, on Saturday, was occupied with reports of petiwass a petition from the Frenchmen established at La Plata, protesting againut the Buenos Ayres treaty of Oct. 31, and complaining of the dereliction of the allies
of France by the Prench negotiator. The committee on petitions proposed the order of the day, which was-supported by MM. Dupin and de Lamartine. These two lastmentioned deputies, as well as M. Guizot, drew a distinction
as to the degree of protection to be extended to French sub. jects in foreign countries, pointing ont that, although they were entitled to protection, it did not extend so far as to involve the interests of the noother country by meddling in political events and changes. Life and property of French could be undertaken to favour a particular party in an intestine struggle. These arguments secured the passing to the order of the day.

Expedition to China, -Private letters from Paris annoonee that the French Cabinet has despatctied an expe-
dition, connisting of a frigate and corrette, to China. M. Jamigny, the writer of an article which has lately appeared relative to the English position in China, and charged, it is said, with a mission to Pekin, to establish direct relations with China, and they are bearers of costly presents to the Emperor. M. Jansigny has already lett:
for Cherbourg, and M. Page quitted Paris on Sunday for the same port to embark. The former goes first to Pondicherry, where he has also a mission.
Paris and Rouen Railzay. - The bridges at Maison and Bezons. on this line of road, have been commenced under the contract of Mr. Brassy, the engineer, who executed nearly 50) miles of the London and South-western Railway, and who has contracted for the frot Rouen Railway-for all the tunnels and the principal bridges.
and Britannic Steamers.-Our readert will remember the circumstances of the collision which took place between these vessele in the British Channel, of the 25 th Oet. last, when the former was 80 mach in-
jured that she sunk within a quarter of an hour after, and also the legal proceedings that have since ensurid. The Tribnnal of Commerce at Hevre, which hed been declared weeks in to trivately examining the docupied for nome nected with it, after a first hearing of the parties. On Saturday this Court delivered its sentence. After recapiturating the evidence, whereby it was shown that the fault lay on the side of the captain of the Britannat, who was coming up chawsel with the wind in his favour, and all the captain of the Phenix was going down Channel against the winci, without any sails, and with tharee lights at his
 that the captain of the Bridannior diat not suen the Phevix till he was close upon her, while the captain of the latter
was aware of the Britannin's coming, though he could not judge of her distance from her carry ing only one light, but that he had done all he could to get out of her way; and alsey visited the Britannia, proved that it was this ressel
the which ran in upon the Phenis, and not otherwise, as had been alleged; the Court declided that the General stean
Narigation Company was liable to the company owning the Phenis, for the loss of that vessel. In consequence
of this the Court adjudged that the former company should
pay to the latter \(700,000 f\)., with interest from the time of the demand heing made; or, as an equivalent for this, that
an offer which the former company had made, of giving op to the latter, within a specified time, the Britannia steamer, with all her engines, \&cc., complete and good, toat the with the value or produce of her passengers' fare (about (MOl) should be accepted; and that this should serve as a bar to any further proceedings or other claims. Algemia.- The following particulars, derived from recent letters from Aigiers, expetiaing trone Mediah, are not withwell grouped together on the heights, and then gave orders to the 24 th regiment to attack them. The soldiers of this regiment haid down theirknapsacks and ran towards the flank. The lieut.-colonel of the "4th (the Duke d'Aumale, commanded this attack; but the Arabs could not
be said to be routed, since they precipitated themselves as that atter their fall seemed impossible men could have tumbled from such a leight without breaking all their bones. Our men stopped While this was going on, information was brought to the General that a battalion of Arab regulars was concealed in he ravine which borders the plateau of the cross, apon and the Moorish squadrons were ordered immediately to attack thera. This charge was executed with great cool ness. The gendarmes were supported by a battalion of the 23 d infantry. At first the road by which they de-
scended was so narrow that they could not deploy in line; but by degrees it became wider, and the soldiers fell with their swords and bayonets on the regulars, of whom they selves with ail the fury of despair. They could not long stand the attack of our soldiers, who pressed them close men and horses strewed the ground, and the Arabs had also many wounded. This battalion of regulars which sulicred so much was that of Milianah, commanded by part of German and Spanish deserters. The unfortonate people, who had come we know not whence, were so much overcome with fatigue that they had not strength to clamber up out of the ravine to escape from our troops. some prisoners sere taken, who were killed on the road, becanse the of his companions fall, preferred lying down by his side, and thus receiving his death to making a single step further in advance. One of these deserters saved
himself by hotding on to the tail of an officer's horse, and four of the strongest also saved their lives by making des perate efforts not to remain behind.
SPALN-The Tesolutions of the Spanisa Senate, as to tion, was communicated to the Deputies on the 16 thi inst. who appointed a committee to report upon them. On the 19th, a preliminary amendment proposed to the effeet that the vote for the Regent or Regents should be taken by ballot, was rejected by 123 against 50 , and the qeneral in great uncertainty; for though the majority in the Senate were decidedly favonrable to the sole Regency of the Dake de Victorin, the majority in the Deputies are as decidedly relative to the nomination of a mixed commission of senators and deputies, to draw up the form of discussing and deciding tee Regency question, was rejected in the Chamber of Deputies by 99 against 20. The Provisional Regency had held an extraordinary council, at which the expediency of distulving the Chamber orle de Victoria was said to have protented that mo matter what the issue of the election of the Regency might be, he was determined not to abandon or commit to anybody the keeping of the Queen lsabella, regarding himself as personally responsible for the safety of her Majesty and of the throne. by way of enforing orer, tion had sprung up in reference to the tutor, or guardian of the young Queen's property. Queen Christina at prerent exercioes the tatedige; but it ill deny her the ight of majority of the Chamber will deny her the right of re taining it, against which absence alone secos a sumcien bar. Shouid hes fienas persist, howeren, an sustaining her right, it is said that other objections than those of absence will be put forward by the Queen's enemies. The be named by the inte King in his will. If not therein named, the father or mother of the minor sovereign is to become tutar, as long as they remain widowed. Finally the Cortes shall choose ; but the powers of Regent and those nit be the sorerion. clause it is sad, are founded the hopes of Din Francisco de Puo to be the Regency be con ferred on the Duke de Victoria. -The proceedings of the Spanish priesthood also shured the atteation of the Cortas, in addition to the two previous questions. The conferences
with the Pope and Church were becoming daily more menacing, and the late outrages in the chunches by the hood. The priests of the south refused absolation to purchasers of national property, and were otherwise exannounced in the Chamber of Deputies that he was folly aware of their plots, and was prepared to resist them.
Accounts from Catalonia assert that the Giruna authorities Accounts from Catatonia as:ert that the Giruna authorities had official information of Cabrera's arrival in Spain with
nine companions. The last accounts from the island of Hyères, however, made no mention of his escape from the vigilance of the French police; and the report itotif has since been contradicted.
Portugal.-By the Tagus steamer we have received the issue of 600 contos of reis \((150,000 \%\). \()\) in notes for the arrears of the decima and other assessed cares had public credit for circulation and redemption, bo the of venues alluded to come in.-There appeared every probability that a commercial treaty with England, on reciprocal and liberal principles, would svon be completed, it being anderstood that the Portuguese Guvernment had come to a decision on the most imprirtant points. A Spanish op-
position to this treaty was talked of, and from communieations in the Madrid papers, it appears that the parties tions between this country and Spain are equally disposed tions between this country and Spain are equally disposed, if they had the powcr, to prevent a treaty between it and
Portugal. -The claims of the English boudholders had again been brought, hy Lord 1 . Ge Tladen, strongly
under the notice of the Portuguese Gurernment, in consequence of renewed instructions from the Britush Cabinet The present government was considered to be desirous of doing justice to its foreign creditors to the greatest extent prevalent at Lishon, and both the King and Queen wert suffering under that complaint.
Prany. - We learn from Berlin, that the sittinge of the Prussian provincial diets were drawing to a close, and Prussia continued the most active. One of the royal propositions recommended the nomination of committees to prepare the measures which should be submitted to the assembled Diets. The government wished to communi cate to these committees the matter which it intended to
bring forward, but the Diet had, by a majority of 65 to bring forward, but the Diet had, by a majority of 65 to
voices, reyuested that such communications might be voices, requested that such communications might be
made to its members generally, and not to the eommittee alone. The propositions regarding the publicity of pro ceedings and biennial Diets were lihewise agreed to, and a strong petition in favour of freedom of the press. accompad decenct" was likemire roted. mooted during the discussion was the loss suffered by publishers when works were seized that had received the permission to be printed. New regulations in some deto, and hopes were entertained that ulterior liberal mensures would be projected. -The King, it is said, toot great interest in all the discussions of these legislative Brunswick will not separate from the German north western leagne, and the only difficulties are now said to be raised on the side of Prussia. The true reason appears to be that the Brunswick negotiatior stupulated for some ad vantages for the great fuirs annually held in that city of both to be the cheapest comunissimers for the pablie and in its rivalry with Leipsic, Branswick would have pediments to the navigation of the Weser, and if Bremen, which is the natural harbour for the town, had merchant as enterprising as those of Hamburg. The former disad vantage has beell removed by the agreement between Prussia and Hanover to lery no more turs upon ana the railway from Brunswick to the Elbe is completed. The Hanoverian districts in question. however, are said not to relish the measure, which is considered tantamount an increase of taxation. - The Royal Family of Prussia ex daughter of the Prince of Prassia fell out of the palace window at Berlin, and would have probably been kined if she had not been caught by a lad who was passing. The Prince, who is heir-presumptive to the throne, loaded preserver with presents, aud promised - ccounts from Vienna state that the relinnous ceremonies of the las week have engrossed public attention, to the exclusion of almost every other topic.-The effect produced ow cation Bill was with the atmost speed in carrying into effeet the Ime defence adoptert by the Contederation. cations, wuid, it was said, froceed in a fem dars to Carls ruhe, in ordier to meet the Prussian and Daded he systed to be adopted for the furtification of Rastadt; after which the with the utmost the French project appeared to find an echo German heart, snd much illwill was still felt against FrankGerman heart, and much the Lower Danube the same fort. From the Pline to the Lower Dan the year, it mas feeling prevailed. - At the present senson of the year, vications from Fromee to Ratisbon are, daily, and that they sications fram Frumee to Ratisbon are daily, and that the

proceed every fourth day to Vienna, passing a night at th proceed every fourth day to Vienna, passing a night at the plished in two days, and for little more than \(2 l\). Thus,
 pleasure, to visit Vienna, can accomplish the journey and for about \(12 h\)., and ia less than the same number of days. A meeting of inhabitants of the Rhenish provinces has taken place at Cologne, for the purpose of raising funds to continue and complete the building of the cathedral. Many wealthy
SWITZERLIND.-The must recent accounts slate that a battalion of Zurich troops when they marched into the Argovian territory to aid the local government during the late troubles, were quartered in the abbey of Wettington, tired, they took with thems the, fine painted windows that adorned the chapel. In conserpuence of this, the Argovian Government has demanded an indemnification of 40,100 rom the amount claimed by the later canton for thed penses of its military aid gisen on the occasion alluded to. Rusini.-Letters from Warsaw speak of orders given Reselav-Letters from Porsaw speak number is no longer denied, to fall back upon the Russian frontier, and camp will, it is said, be formed in the course of the yea upon the Unieper, after which the Emperor will visit
Germany. An ukase ordains the regulation of the Jewish Germany. An ukase ordains the regulation of the Jemish
schools, and reserves the nomination of teachers, as in the Christian institutions for education, to the Crown.
Denmare. - The King has addressed a rescript, dated the 13th inst., to the finance commission of his kingdom, directing that all the surplus revenues of the state should lic debt, that the tares should be diminished as much as possible; and that the lottery should be abolished
Turkey.-By the Levant mail, arrived at Marseilles on the 22nd inst., we learn that the health of the Sultan his being poisoned. New instructions had been sent to moditication of the Hatti Scheriff. The Divan appeared moditication of the Hatti schering. Sultan's power of willing to convey to Mehemet the Sultan's power of
choosing amongst the sons of Mehemet, or amidst the choosing amongst the sons of Mehemet, or amicst owere, consented to by the Purte. The Turks object to hereditary righ descending necessarily to the eldest son; the law of pri mogeniture not existing in the Ottoman empire. Private of reform, in consequence of the fall of Reschid Pacha but the dismissal of the Board of Admiralty and the Com mission of Public Utility would appear to be at variance with this statement. The removal of Reschid Pacha, it is said, has long been the object of the Austrian ada to well disposed to submit to Figlish intluences, but because would have been impossible to have obtained any modification of the obnoxious Hatti Scheriff, so long as he con be at an end.
Egypt and Sybia.-Syria is now finally evacuated by the Egyptian army, the last division having embarked for Alexandria at Gaza, on board a Turkish frigate, on the 27 th Feb. Gaza is now occapied by two battalions of
Turkish infantry and 500 cavalry. Jaffa is entirely evacuated by the British; Col. Colquhoun and the detach ment of artillery and sappers under his command left and Col, Bridgeman, with the greater portion of the staff officers employed in Syria," left five days after wards for Jerusalem. The plague still prevails in Egypt, Accounts from Alesandria state that the Pacha's armaands were still continued. Ibrahim; heaith was better the management of his estates at Cairo.
United States.-By the arrival of the British Queen on Wednesday, at Liverpool, we have received the melancholy tilings of the death of the President, General Har rison, at Washington, on the
cause of his death was an attack of pleurisy, that baffled the skill of all his eminent medical attendants. He was in the 69th year of his age. He died within one month of his inauguration, and is the first President who has died in office. The funeral took place on the \(i\) th, from the President's house, and the corpse was deposited in the Congressional Cemetery. The order of procession is re presented as having been very imposing; extending over two miles of space, the longest ever witmessed in Wash personages of distinction now visiting the capital It appears that the esteem, confidence, and affection which the American people recently manifested towards him, when they clothed him in the highest dignity, and enSrusted him with the most important functions in the State, follumed him without abatement to the tomb; but
though the regret for his loss was great and universal, though the regret for his loss was great and unisersal
this feeling seemed to be unaccompanied by any senti ment of distrust or unkindness towards his constitutiona suceessor. The: otfice of President has now devolved
upon Mr. Tyler, the late Vice-President of the Republic, a gentleman whose political principles are said to be entirely in unison with those of General Harrison, and who which he has beminently qualified for the station to other political news this arrival, the United Staten journals appearing to be entirely engrossed with the sabcurred in the case of Mr. M'Leod.
mouth Comanche Indians were committing acts of murder on all who fell in their way. They had appeared as far as a position to resist the invaders; indeed, a revolution was every day looked for. Bustamente was still at the Convent St. Augustin, but over the gateway had ordered two ferment, and every man was his own master.

\section*{house of commons.}

\section*{Monday. - The House on the motion of Lord Moaprit, went} apon Lord Howncz rops to move an amend (hment upon the trat
clause. He laid it down as a principle, that the bais of the
 The best franchise for an Irish county voter world, he thought,
be a rating on a certain amount beyond all charges and the rent
specified in the lense. The tenants' temptation to put their Values unreasonably high for the sake of their votes would, he
said, be countervailed by their desire to aroid paying two heavy a
ratc. The excess ou which he world propose to require a rating. ratc. The excess on which he would propose to require a rating.
in order to couter a franiehise, would be an excess of 5l. beyond
 member professed to allow, would not be unfairly represented by this S3, rating. There were some persons, not incloded in the
gi. leaseholders' test whom this 51 ramse would admit: those,
 more than 51 . beyond that low rent. Bot as he was aware that
on the other hand there ould be many voters whom the 88 .
leaseholder. neasholder. tent wotld admit, but whem his 3 t. property rating,
leould exclude, he was disposed to move alon another change, admitting a large class of voters-a change which1 weuld subsiti-
tute for the fuvernmeat propusal of a rating on a lease at a low reut, a propusal of a ratilig at a hygher rent, but without any
lease. The circunstances of treland, however, were so uifferent frem those of Eugiand, and her general wealth io far inferior,
that the Euglisit jut. fratechive woutd be too high for Ireland. that the Euglish juc. tranchise would be too high for Ireland.
What the proper amount would be he was not yet prepared io
state ; but he thought that it should be an amount which would give a constituency at least as numerons as that which wourch
immediately after the Reform Act. Al he should now ask of the
in House would be merely to consent to the principip. It would be
said that tenauts without Jenses would be deficient in independ-
ence. He did not think it was found to make much difceren ence. He did not think it was found to make much diffcrence
whether the texant had a lease or not. The moost dependen tenants in Ireland were the tenants of the smallest farms, such
tenaute as the (iovermment measure proposed to enfranclise. That measure would lead to the fraud of leasing small properties
at very high rents, with an engacement for r rebate so long as
lithe the voter should, continue to vote with his landlord. But even
by adopting tue lown amount of sit, it was, he thought, by na
neaus clear that aty cemaiderablete number of vaters wiuld be

 that the people of lreland were entitled to a suficient representa-
tion, which at present they did not possess. There had been a great reduction in the number of the Irish voters, chiefly among sidered, be a great boon to Ireland, and one which the Conserva-
tive perty iself would find it expedient to concede rather than
suffer the constituency to dwindle as it otherwise must. He then suffer the constituency to dwindle as it otherwise must. He then
moved to omit those words at the end of the first clanse which ab. rogate the beneficial interest tranchise created by the Reform Aet,
for the purpose of enabling him, in the second chase to defie
that heneficial interest by the 5 , rating propounded in the earlier part of his speech.
Lurd hoperh said that though the propnsals of Lord Howick
mieht have been unobjectionallet if moved as additions to the might have been mnonjectioname if mored as acuitions to the stitutious for that franchive. As to the amencments proposed on
the first clause, he regarded it as muerely verbal. Fie argued frum certain details of the kefiorm Billt that the Coinvernment mea
sure was not ineonsintent with the letter of that bill ; much iess sure was not ineonssatent with the letter af that bill; much iess
was it iuconsinteat witn tiue spirtt of that enlarging measure. All
 to rate the preperty belowi its real worth; and thus the franchise
propo ved ins Loord Howick would autu:t niach fewer viters than it papeared to include. He read a variety of extracts from the
recently-printed returns, to show the frequency of the practice recently-printed returns, to show the frequency of the practice

adivisable, and by it he was
}
proposed by Government. The diminution in the constituency
had gone on at the rate of a thousand a year, and as the unwill ingness to grant leases continued, this diminution would \({ }^{\text {got }}\), on,
even if the franchise were given to an \(87 \%\), or even to a 5 . rating, He ssid that he atteched but little importance to the constraint sapposed to be exercised by landlords over their occupying te-
nants, for he believed coercion hads seliom been exerised to any
great extent.-Sir C. GREY opposed the amendment, which he
 principle of beneficial interest should be swept away. The coun-
try would not asill be persuaded to treat that as a tivial mater.
He agreed with Lord Howick that an undne and unnaturl dill He agreed with Lord Howick that an undme and unnatrral di-
minution of the Irish constituency, from the amome intended by the Reform Bill, was not to be pernaitted. It wha acsumed that
such a diminution had alrendy thten place.
rer, had expressed his opinion during the progress of the Reform
Bill, that it would not bring the number up to 30,00 . There so little oppeasition, that the numbers amounted to 52,000 . They

 vas framed and expected to vield. When he should see an alann-
 because some zentiemen dedined to grant leazes of their pro-
perty, con-ent to inmulate the coustituency by letting in voters without any property whatever
Mr.fration hacl been stimulated by counties in which, thongi registration thad been stimulated by contest,
yoters wes, in his opinion, uneasonably small in proportion to
their popalation. He said, however, that he would not multiply statements to show the insufficiency of the Trish constituencies,

Lord 3. Russelc said, that when the Legislature had taken up

 it would introduce inctivemence thit) subsequent clauses. The
 ure, he said, to talk of future redress for the evil of excluding the
rrish from representation tere present was the time to remely
that defcct. If it were intended to distranchise them, that thoult be done openly anul expresely, and not in this indirect and tor-
tuous way. Enyland, he was persuaded, wished to see them houestly and fairly represented, and not defraudel of their rights.
The Hust could not, he edded, without exceiting great indignation, withdraw the franchise bestowed upon them, and take a step
which would justity an aurry pirit in Ireland. Shen his case was pecularly defective, -he had made a general
 under cover of that made a succeessul speech. Referring to
and fanced he had mand expectations enterthaned himelf, with respect to the numbers of the Irish con-ththency, he showect that if the tumbers were really diminished, what were the remedius propsod ". In 32 Irish coun-
ties, Government proposed the same uniform frauchise which bething to occupation. If property were excluded from the county what confidebce could be placed in the legislation of a set o Ministers wbo, after taking time to deliberate throughout the
recess, had Dronght forward such a measure as this, suddenly reces, hine, two or three days agro, their \(5 l\). to an sl. qualitication Their objection was nut to mere amount-it was to principle they required for the cuunties a qualification of property, not of
occupation. To the general principles laid down by Lord Howik he agreed, although he uid nut intchad to support his details. The iffit hat heen an abstract resolution atfirming the principle of
beneficial interest as a part of the francluse; and that amendment he should support. If it were carried, he thnught, it mus
we fatal th the princule of tisis bill-to that priaciple which went ve fatal the the princple of this bill-to that priminple which went ties, and in conties in Irelant, then of counties in England al-o.
He vindicated, by reference to the testinouy given in 1825 by the leading Catholics, the disfranchisement of the 40s, freeholder under the Reliei Bill; and concluded by strongly declaring his
opinion that the conduct of Ministers on this question had disenMitled then to the conid refrred to some detaids on the disfranchise-

 he contended that representation ought to be founded, and on that naxi- Ireiand ourht to have 1,0 members.
Ministers, to restrict the francinise but tor enlar suggeste.
