Mr. Bodin gave notice that he should, on an early day, bring forward a motion on the amendment of the criminal law.
The order of the day having been read for considering the
speech of the Lords Commissioners, containing her Majesty's answer to the address, Sir G. CLerr said, that, in the absence of the responsible Ministers of the Crown, he did not rise for the non. He had merely to put into the hands of the speaher the
sesnonal nuetion which it was usual to pass before any other
business could be taken-viz., "That this House will business could be taken-viz., "That this House will to-morrow
resolve itself into a committee for granting a supply to her Ma-
jesty." The motion having been agreed to jesty." The motion having been agreed to, it was ordered that
the committee on the Navy Pay Bill be taken on Wied nizances had reported the sufficiency of the sureties tendered for the prosecution of the election petitions for Great Marlow, Nottingham, Weymouth and Melcombe Regis, Thetford, Clitheroe,
Lewts, Wisan, Rutland hire, and Harwich.- Mr. Wgst pre the same effect as the one presented to the Houtse of Lords by
the Earl of Glengall.-On the motion of Sir G. Cf:ERE, the message from the Lorls relatin \(y\) to the Earl of Scarbcrough's Rel.ef
Bill, the Colonisation of Sew Zealand, the Effects of the Bani of Issue on the Circulation, and the Embankment of the River Le communicated to their lordships.
Petitions were brought ap against the returns for Thetford,
connty Carlow, Downpatrick, Rutlandshire, Stafford, Wareham
 Mr. Yorez grve notice that on the introduction of the Poor
Law Bill, he should move the insertion of a clause to prevent the commissioners from enforcing the separation of man and wife,
where the application for relief arises from infirmity and not from improvidence or crime.-Dr. Howang gave notice that on an early day he should call the attention of the House to the case of for a return of taxes levied upon land in the different states of With the imports and simpine interests of the 1 te fit Man. - On deration of the repe

stetropulitus Improcements. - We announced in a late number, that a Parliamentary committee had been apimprovement of the metropolis. The city authorities, it appears, are already tahing measures in furtherance of this desirable object ; and Mr . Walker, the engineer, accom-
panied by the harbour-masters and other officers of the Navigation Committee, have recentiy surveyed the banks of the river above Vauxhall-bridge, and laid down a line of embankment for the improvement of the navigation.
O: Tuesday Mr. Walher was attended by Mr. Cubitt, the bulder, and br Mr. Simison, the engineer of the Chelsea Water-works, when a plan was agreed to be recommended, embracing a spacious promerade in the front of the extensive range of squares and crescent now in progress of erection by Mr. Cubitt. The line is intended at Chelsea, and will constitute one of the greatest modern iaprovements of the metropolis. The Navigation Comsuctee. while they protect the river from encroachments,
are said to be determined to prevent the walks upon the are said to be determined to prevent the walks upon the
banks from being inclosed. It is hoped this example amay be followed lower down the river, but at present the private interests of wharingers and others, who have appropriated to themselves the exclusive use of the banks in the more diment, and effectually shut ont the public from the adrantages of an open and healthful promenade, such as is enjoyed by the inhabitants of so many European capithe Marquess of Westminster's Pimlico estate, leading from the Yauxhall-bridge-road, in a line through Wirsquareses, to the intended, Eaton, Belgrave, and Lowndes squares, to the intended new entrance into Ifyde-park,
waich is to be called Albert's. zate.-In connexion with which is to be called . Nbert's.gate. - In connexiun with
these improvements we may mention that the new buildthese inprovernents we may mention that the new build-
ings at the British Muscom are proceedin, rapidly, under the superintendeace of Sir R. Smirke; and preprations have already been made for the erection of tie grand en-
Wood Pavement. -The disputes so
ween the parishes respecting the pavement of Holborn, having been settled by the vestry of the latter parish consenting to adopt the mond pavenent, the greater part of that iuportant last meeting of the Marylebone vestry, a long discussion took place on the wood pavement in Oxford-street, and of any beng required durng the time that the seatry might be di-pequard to continue the experiment. Upron this suliject it was statel that the company were willing to Ketp the pavement which lath stood the test of trial in axturde-sect in repair for the sum of tonl. a-year, an tance of madanamiced roate. It was ultimaiely arreed that the weod pravement aheady laid down in Osford-strewt be band for, and tinat it be continued as an experiment under thie superintendence of the parish-survevor

on his return in the course of the ensuing month. City Cemetertes.-Anothercemetery in the suburbs of the
city was cousecrated on Saturday by the Bishop of Londen. It is in the Tower Hamlets district, at a short distance from the Mile Ead Road, and comprises an extent of 30 at the ceremony, and at the entertainment which followed the Bishopl took occasion to express his approbation of public cemeteries in the suburbs of Jarge towns, both on the ground of the health of the inhabitants, and on that of the Bishop intends to bring in a bill jn the present session of 'Parliament to prevent any further interments in the city. Marylebone Bank. - An adjourned meeting of shareholders has been held this week at the Bank, in Caven-dish-square, tusust last, for the investigation of the affurs
pointed with a riew to the dissolution of the Company. It appeared from the minutes of the last meeting that Mr. David Llannay, the managing director, had over\(14,30 \mathrm{l}\). and \(2,200 \mathrm{z}\). for shares, mahing altogether \(16,50 \%\). Mr. Abraham, charman of the sharel:ulders committee, regretted that after the lapse of a moath the committee were not in a condition to lay bef, re the shareholders such a report on the attiairs of the bank as it was their duty and disposition to have submitted. The reason information from the accountant, who said " that he found the books in such a complicated state, that he could not make them out; and that the accounts of the bank had been admirably kept for the purpose inteaded; that fucts were not recorded until long after their occuirnoce; and that the whole system was obriously designed to serve the purposes of fraud." The directors had issued a circular to the shareholders, suggesting the necessity for a further extension of time in order tu a tholough invesigation of completely in the dark as to the real state of the affiairs they knew nuthing whaterer of the assets of the bank and could, therefore, make no report. It appeared from subsequent statements that the London and Westminster Bank is a creditor for 15,000 l., and that an advance of \(25,000 \%\). had been made hy other parties; that when is was re ported the hank had made \(1000 \%\) profit, there had wetually been a loss of 3000 l ; that the dividend had been made by debiting certain gentlemens accounts for commissions improperly, and crediting them afterwards, and that the salaries of the clerks in the establishment had nut been paid until after the dividend was declared. The solicitor stated that after the strong expression made a the last meeting of the necessity for taking some steps to prevent Mr. Haznay from quitting the country pending 10,0101 ., which Mr. Hannay had given as security for good conduct, and by virtue oi a juige's onder, had
ordered his arrest, and he was nuw in the Fleet prison. It ordered his arrest, and he was nuw in the fleet prison. It called for the tith Nov. next.

Chartist Ifecting--A meeting was held on Monday night at the Crown and Anchor, for the purpose of welcoming Mr. Feargus \(\mathrm{O}^{\prime}\) Commor to Londun on his relicase from imprisonment. Although it was heid at very short notice, the hall was thronged. Lpou the platform and among the crowd were mant females. Mr. Con nor was receised wht the nust enthomatic expresans of welcome. He addressed the meeting at some length, and with great energy. He said that his zeal was in no way diminished; that his motto was still, No su meore him, and their cheers oh, weri that the eathasiasm for the whanter was still as hish as he trustei it would ever remain until the charter was the law oi the lend. A nun ber of resoiutions, conwematiory of hith Frost and the oflaer charthat conviets, were passed; and the evemilis was far advanced beiore the meetmg sepmated

passengers. The toll paid by the Brighton Company to line, was 1,3307 .- The works of the Bristol and Exxete Railway, between Bridgwater and Taunton, are proceeding
rapidly, and preparations are also making between Taunton and Exeter. Not only, according to all present pro spects, will the railway be opened from Bridgwater to out hopes of being enabled also to take the railway to lington is about twenty-five miles from Exeter, and will be reached by coach in two honrs and a half ; consequently the time between that city and Loodon will then be reduced to less than nine hours, to Bath about five; and it
is confidently stated that the railway will reach Exeter abour the year 184, when the distance betwren Expte and Lenden, 193 milhs, will be perfurmed ly the first class trains in siz bours and half,-On Wednesday, Railway took place at the Compang's offices in Abchurchlane. The object was to consider the resolutions of former mertiny for raising i further sum of an. Whe for port strted thet the dreetors had procerded to raise that
sum in 20.00 , new shares, but only 9.023 had bsen taken up by the proprietors; they were, therefore, le-inne that sume better plan should be desisell to present th.e ahan domsent of the scheme, the total amount paid up in the new shares bing only \(1,411 /\). 111. The disbursements to
31 st of Die. 1810 , were 128,3303 . Gis. ill, and the ri ceipts \(122,562 \% .16 \mathrm{~s} .10 \mathrm{~d}\). , leaving a balance of \(5,752 \mathrm{l} .9 \mathrm{~s} 3 \mathrm{~m}\) The liabilities to 30th Jume, 1841, were 11,331l. 19s. 1d.,0u on bills given for old shares. The report having been received, a long ition ensued, from which it appeared that in addition to the above sum to connect the
line with the Great Western, 25,0001 . would be required to join the London and Birmingham Railway, A resolu-
tion was passed giving the directors power to carry out the resolution for raising the \(40,000 l\) at their discretion and on the motion of Sir J. S. Lillie, the instalments paid on the new share- net hangs req wed the sum contemplated, were atreed to be retunded by the lirecturs dert occurred wh th: Great filostern a nempers acrimal train to Loalia hatal arrivell at the statime at Wooton-Basett, at which place, in conscrqumee of the tacheal behind. \section*{SCOTLAND}

Edinburgh.-On Tuesdey night, the range of shops mmediately ander the south arch of George the Fourth's Bridge \({ }_{2}\) Cowgate, was observed to be on fire. The alarm was speedily given, but from the erections being entirely of wood, and filted with old furnitare and other combustible materials, they were soon enveloper in fiamaes. When the conflagration was at its height, the effeet is described as very striking, the flames earling round the lofty arches of the bridge, and throwing a brilliant light on the old and pictaresque houses of the Cowgate. The flames beat with preat fre u". the arch and its thens, wheh have susained comsilemable damage, and are distigured by the ac"an of the hear, !emst sphintered and almust charre. in mony pices. Time imicy fowerer, is not such as to endanger the ctability of the arch, although it will cost a monsiderabe oras to reare it to its famer comation.

The property extended over about eleven acres, and it was calculated that it would afford ample space for the erection of 300 houses; it hat cost the late proprietors upwards of 60,000 . Some time elapsed be frre any hidding was offered, when \(10,000 \%\). was named tine biduins gradually advanced, and finally. closed \(20,2 \cdots 01\).
New Anphithoutre-It is stated that Mr. Batty, the proprictor of a uumerous stud of horses, has purchased the site of ground at present occupied as the National Swimming Baths, in the Westminster-road, for the erection of an ampnion the plan of Astley's. The season, it is said, will commence in the early part of the ensuing nionth.

\section*{Shiscellancous.}

The Premiership. - The following is a list of the several noblemen and gentlemen who have held the office of Prime Minister since 1820, according to the order of their
succession to the premiership, viz., the Earl of Liverpool (deceased), Viscount (Goderich ( n (WW Earl of Ripon), Mr Canuing (deceased), the Duke of Wellington, Earl Grey, hiscount Melbrume, Sir Robert Peel, Viscount Mel buarne, and sir \(R\) bett Peel once more, the latter gentle ment. It will be seen, from this, that the majority of the ment. It will ve seen, from this, that the majority of the above Premiers were members of the house of Lords.
Viscount Melbourne has been Prime Minister three times, first, in 1831, oia tite resiguation of Earl Grey; second, in May, 18:3.5, after Sir il. Peel had been driven from office by the division on the Irish Appropriation Clauses, and thirdly. in May 1839, after the temporary resignation of the Whig Ministry upon their defeat on the Jamaica Bill. Sir R. Peel was first made Premier by his late Majesty William IV., in Nov. 1834, and was intrusted b Queen Victoria with the formation of the new Government in May, 183), which was, however, abruptly terminated by the return of the Whigs to office. It is now was really installed in power, the Whigs having held office, with a very brief interregnum, for nearly 11 years.

London and Provincial Newspapers.-The following Kingdum at the present time: - In London, daily, 12; weekly, 69 : monthly, 12 ; at various other periods, 18 ; total, 111. UTICE is Lerrby yiven, that only one Meeting of this

SATURDAY, SEPTEMBER 18, 1841.

\(I_{i}\) is not without reason that one of our correspondeats has buen pressing us to give an account of the for, upon looking into some of our English works on that subject, we find the directions very far from what
we can commend. We find, too, that there is much we can commend. We find, too, that there is much
truth in one of the assertions made by our correspondent, namely, that "about many gentlemen's premises, who are men of wealth too, their gardeners stow away their winter store of fruit in dirty holes; so that it is no wonder that it sprils, sets musty or frozen, or is eaten by mice, rats, and other vermin." That such should be the case would be astonisining if we did not erary day see similar instances of inconsistency. (Ine man will spend a large sum of muney in building a house upon the plans of the most skilful architects, will hurry on the workmen as if life and death depended on their speed, and then will have the walls unpainted and papered for years. Another will construct a beautiful conservatory, glaze it with plate glass, and spare no cost upon its decoration, and then will be alarmed at the cost of heating it, and grudge the few pounds required to furnish it with ornamental plants. Finally, in the case of the fruit-ronm, we find instances of thousands of pounds expended in walls
for fruit-trees, and borders for fruit-trees, and in fruitfor fruit-trees, and borders for fruit-trees, and in fruit-
trees themselves, and an excellent gardener engaged trees themselves, and an excellent gardener engaged reseive and preserve the produce; as if fruit could be lkept like potatoes or turnips. No mistake can be greater than to suppose a good crop of fruit to be the one thing essential in a garden ; to preserve it in gool which much convenience is absolutely indispensable. Our French neighbours excite our admiration by the beauty of their winter fruit; and people say it is their climate that gives it such excellence; but ue say, look into their fruit-rooms.
We shall this week explain what the principles are upon which we conceive a perfect fruit-room should be constructed; next week we shall endeavour to show how these principles may be most conveniently carried into execution.
Darkness, a low and steady temperature, dryness, and exclusion of the external air, are the great points to secure
It is well known to all intelligent gardeners. that if the light of the sun strikes upon a plant, the latter immediately parts with its moisture by perspiration, upon it by the sun, a.id independent of temperature. The sreatest amount of perspiration takes place beneath the direct rays of the sun, and the smailest in those places to which daylight reaches with most difficulty. Now the surface of a fruit perspires like that a leaf perspires while growing on a tree it is immediately supplied with more water by the stem, and thus is enablet to bear the lo*s produced by light striking on its surface; but when a leaf is plucked it withers, because there is no longer a source of supply for it. perpecually supplieq by the stem with water enough surface : but which is all day long flying off from its surface ; but as soon as it is gathered, that source of so feebly it removed, and then if the light strikes it ever 20 feebly it loses weight without being able to replace its loss. It is thus that fruit becomes shrivelled and withered prematurely. Light should therefore have Tems on ruit-room
emperature should be low and uniform. If it is fruit inif thave say much above \(40^{\circ}\), the juices of the cay will be ace a teadency to decompose, and thus dese, decumposition of ancther kind is produced in consequence of the chemical action of freezing. In any cay. Atuations of temprerature are producive of decay. A steady temperature of 35 - 40 ', with a dry atmosphere, will be fulud the best for most kinds of better for bee Pears of the late kinds are, huwever, Gus, tor this rip ens them. derrives them of their grittimess, and impinves their quality very essencially. We of the fruitever, conceive that the general construction We would rather make some special arrangement for such cases.
All authors and all practical men are agreed in re-
ommending the air of the fruit-zoom to be dry.

Dampness produces mouldiness, encourages the grow th of minute funsi, and accelerates the progress of decay the moment that commences, from whatever cause. It is, however. to be understood that we do mot mean by dryness what is chemically so called, but merely that condition of the air to which the term is commonly applied. It is for the sake of preserving this staie of the air of the fruit-rom that constant retailation is recommended by many persons; but in that recommendation we do not by any mears concur. A power of thorough ventilation must. no doubt, be pussessed by the gardener, to be used in case of necessity, for the purpose of removing offensive smells, arising from the puatrefaction of fruit But the power hould be rarely exercised: and if the commencement of decay is watched with sigilance, if no substances liable to decay are introduced, if fruit is removed as soon as it begins to spot-and, finally, if perfect neatness is maintained, there will seldom be any occasion or ventilation.
A fruit-room shotidibe, as veat as a dabry. One reason why rentilation by continual currents of air is ohjectionable, is, that they incessantly carry
off from fruit the moisture it contains, and thus act in off from fruit the moisture it contains, and thus act in the same way as light, producing shrivelling, and destroying that plump appearance which gives its beauty to fruit. Another reason is, that an equable temperature is scarcely to be maintained when the air is constantly changed. It may be said indeed that the sweating of fruit throws into the air so much free moisture, that constant ventilation becomes indispensable in order to remore this excessive humidity. But we answer, that no fruit should be allowed to sweat in the fruit-roum. An airy place should be provided expressly for that purpose. No doubt occasional ventilation is necessary; and, as we have already stated, the means of effecting it completely should be provided; but it should be had recourse to as seldom as possible. When your room is once stored with fruit, close it hermetically, says Mr. Vilmorin.
It is recommended in books that there should be in every fruit-room a small fire-place for the purpose of
drying the air ; but it seems to us that this is a rule " more justified in the breach than in the observance." The occasional use of a fire is necessarily attended by fluctuations of temperature, which are precisely what should be avoided; and if the room is well constructed a fire can rarely be required, either for drying the air or for regulating the temperature.
But after all, the best fruit-room will be useless, if the gardener does not take care that his fruit is gathered and stored up properly. If fruit is handled roughly, rolled about from basket to basket. and all sorts of specimens are introduced indiscriminately into the fruit-room, no art will keep it from premature decay. It should always be handled with gentleness and care ; spotted or shrivelled, or second crop specimens, should be excluded, and perfect specimens only should be stowed away. The care of the French, in this respect, deserves to be imitated: "Let every sort of fruit be gathered separately," says one of their most practical writers; "do not even mix the fruit from wallor espalier trees with that from standards, not even though they are the same sort, because those from the wall, or espalier, will ripen soonest. As you gather them, place them gently in baskets, and when you transfer them to the shelves where they are finally to remain, arrange them side by side, with their eye down-
Before we close these preliminary remarks, it will be as well to advert to the materials used in packing up fruit, when stored away in chests or hampers. It matters litrle what such materia's are, provided they are perfectly dry, not disposed to re absorb moisture from the air, and quite tree from taste. But there are few common materials which answer to this description. Hay and straw and moss almost always become musty in confined situations, such as we would have a fruit-room; they are naturally damp, and they become more so by attracting the moisture given off by the fruit. They ought, when never, tu be used in their ordinary state, and moss never, under any circumstances. It has been found, however, that if goonl wheat straw is kiln-dried till it becomes brittle, it will not readily take moisture, and then becomes an canmo lent materiai for packing. Whea stich straw cantant be had, the next best material is Fern, thurombly dried; and if neither the one nor the other is procurable, fine pit sand, previvusly baked, in order to crive onf the
ouslv.
As we have already stated, te shail next weel re. turn to this subject.
\(\mathrm{W}_{\mathrm{E}}\), learn from the Parliamentary proceedings, that on Thurstay evening sir Thomas Fremantle moved for leave to bring in a litl 'to authorise the leasting purpmes, and to endbie Her Hajesty is Commissioners of Wiods and Forests to expend the value thereof in We formation and improvement of the Royal gardens."
We rejoice that this measure, which was one of those
contemplated by the late Ministers, has been at last *ir Robert Peel. Had it been otherwise, we should have almost despaired of its being carried; so much twes misunderstanding appear to prevail concerning the real nature of the plan. We find, for instance, Mr. Protheroe declaring that he shouhl give it his determined opposition. "It appeared to him absurd, when they were granting large sums of money for additional Parks and places of recreation and public walks, that the Government should propese to give away a large portion of Kensingtun-gariens." Mr. Wakley asserted that "the people were already murnuring on the subject, as they considered it would be a great evil to deprive them for ever of an open space of ground such as this. It was situated in a denselypopulated district, and if it were thrown open it would be of immense advantage to the inhabitants of Kensington and its vicinity", Mr. Ewart is said to have followed on the same side.

Our spdee not permitting us to go into the question this week, we shall only observe, that no objections can be more frivolous than such as these. The whole space which it is proposed to lease out is not more than 20 acres; it does not belong to "Kensington (idrdens," and never could belong to them, unless the pasturage attached to the Palace were destroyed; it is not an upen, but an enclosed space of ground, being a part of the old kitchen-garden of Kensington
Palace ; to throw it 0 ;en could not be of any further adva::tage to the inhabitants of Kensiugton; and on the contrary, to lease it out in the manner proposed by Guvermment will be the greatest convenience not only to the people of Kensington and Bayawater, but to the public in general.
Now that the question is fairly opened, we shall go into the whole subject of the Royal Gardens in our in support of these assertions.

\section*{ON THE VINE.-NO. I.}

Tins Grape is the fruit of all others the most agreeable to the palate and constitution of the generality of mankind, and has heen cultivated in the temperate climates of the civilised portion of the globe from zime immemorial In thic countries where the heat of the summer is not sufficient to ripen it in the open air, artificial means have been rawited to to bring the fruit to perfection. In no country has this been so successfully accomplished as in Great Britain. As I have had for more than 20 years the
Vine under my care, 1 hope I may, witheut presumption, be allowit to mine ruble the result in miy er permence. I do not pretend to know more, or to have bad better success than my brethren. It is for the benefit of the younger labourers in the vineyard, and the public generally, that I ate induced to fulfil the promise made to you some montha ago, of sending a communication on this subiject.
For the sake of perspicuity, I shall divide the culture of the Vine into four beads
1. Propasation; 2. Making the border; 3. Pruning 4. General Management
are Curings-Varions are the methode promended the propagate the Vine by euttingt. My prean taking a single bud with about half an inck of wood on each side of it, and insertiog it in a pot four inches in diameter, filled with light rick soil, covering the bod hulf an inch, and pressing the earth firmly about it I then place the pots in a bark bed, or dung bed corered with sawdnst : either of these will do, provided the heat is moderate. They will soon shoot up above the soil, and begin to send out roots, when I water very sparingly for a time, increasing the quantity as they require it. Air is given on all mild days to matre them become atont and of good I give. As soon as the rnots rexch the sides of che pory be done thrice during the growing seasous. Ther will require sticks to support them, and all the sunerffa us laterals and tendrils are removed. I ripen the wood by keeping as drr an atmosphere in the pit or frame as possible di. ne the lattere part of che season, endear uring to at4. his without any reduction of temperand is suffciently r.peri l, I hiep them in a con! honse or frame, just protecsen from front winal the piantung zeazoth If this management has beers !roperly conducterl, they will be quite strm; en ingt for tast purposes the nesumal mode thas manatr are the nearest epproach to of increase by seeds, and
longer than larger eattings.
By Seed. - To raise new varietien, meeds must be saved. and when this in intended, it is al ways desirable to improve upon those me alrealy possess. To accoraplish this, impregample, a blact Grape, as good a bearer, as fine a fruit as the black Hamburgb, with a Muscat flavour, is a desideratum. The most ankely means to obtain this is, carefuly Grapes before the pollen bursts, and to use the pollen of a Tokay or Muscat of Alexandria carefully excluding a anrias are fairly set. Sor the seed thais voraiser in the springs and pot and repot the set diniss, matil they are until they are proved, whea mons valuable varietias will. no doubt, reward the cuttivator fre his atrention.
The Coiling System.-A rery ingentious method of prc-
pagating the Vine (to be grown and fruited in pots) was discovered, and strougly recommended by Mr. Mearns, the worthy carator of the Leeds Zoological Garden, daring the time that he was gardener at Welbeck. Thnough it has not succeeded as well as that respectable horticulturist expected, yet it may be usefal to a certain extent where there are means to carry it out properly. The method of coiling Vines may be thus shortly described :Procure some long Vine branches two years old, with pood one-year's shoot at the end, well ripened, fill a large pot about onethird with light rich soil, then begin to coil解 ang it round the pot, until it reaches the brim, leaving the and round the pot, until it reaches the brim, leaving the most of the young mood out of the pot, after which fill
ap the pot with soil. Plunge the pots in fresh-gathered eaves, or bark, in a north aspect in the open air. Thi hould be done as soon as the wood is ripe, in order to ob tain roots before they are put into the forcing-house. The heat there at first should be very moderate, not more than \(30^{\circ}\) for the first month, and then increase gradually up to \(70^{\circ}\) by the time they are in bloom. By attending properly to this, and frequently syringing the plants, fruit may be obtained the first year, or if not, excellent woonce, Mac ing the tecond year *-T.

\section*{COTTAGE GARDENS.-NO. XXXV}

The Kidney Bean and Scarlet-Funner are two of the most useful vegetables for a family which can be cultivated by the cottager, and where our directions reapecting them have been attended to there will now be an ange pods, which, although generally esteemed, are seldom preserved and made so nuel of with us as they are on the Coatinent. There they form a dish at
almost every table both in summer and winter, and the method of preserving them is so easy, and attended with so little trouble and expense, that we think it would be greatly to the advantage of cottagers in this country if they were to adopt the same practice, which is as follows :before they berome hard and woody; after being cut into alices, they are well rubbed with salt on a board, and put into a stone jar, or a small barrel that is open at one end witu a few vine leaves to cover them. Over these a hat piece of shate of compressing and keeping tha beans in the to be done besids covering the jar and putting it aside to be done, betius coveriag the jar puls it aside, not on the floor, but on a shelf in a dry place until the bemns are wanted for use, for which they will be fit in about sis weeks or two months after they have been prater for some time, wnd afterwards dreased the same as if fresh.

Bees.-This is an important month with cottagers who have bees, as it is now about the proper cime to deter and on those which are considered the best to be reserved for store. As regands the latter, wa may observe that unless a hive contains fourteen or fifteen pounds weight honey, it is doubtful whether it will be able to survive the winter. Those that weigh elevem or tweire pourds, and until they have gaised the proper weight; but any that are lighter than this must have all their honey taken from them, and the boes nuitod to another stock. We have done this successfally ournelves, by following the directions contained in a very useful little work by Mr. J. H. following extract:-" In the morning of a fine day in September, blow a few puffis of tobacco smoke from a pipe or fumigating bellows in at the door of the hire, turn up the hive and give it a little more smoke; then proceed to cut out ail the combs in succeasion, beginning with the smallest, sweeping the bees with a feather off each piece back into the hive, placine the combs into a dish and covering them with a cloth. The bees now remain as destitute of food as they were on the day of their swarming ; replace the hive on its board in the same place it stood when fall, and leare it till the evening, by which time the bees will be clustered together like a new swarm. Soon after sanset, blow a fer puffs of tobacco smoke in at the door of the hive, to which the deprived awarm is to be joined; then tarning it ap and resting it apon the ground, sprinkle it between all the combs, but especially where the bees are thickest, with honey; six or eight table spoonfuls gemenally suffice; spread a cloth upon the ground, and with one shake throw the bees out of the deprived hive upon the cloth; then place the hive that was sprinkled with honey orer the bees that are heaped upon the cloth, and in a very short time they will bave joined the others, and appear as if they all had originally belonged to the same family."-M. E. M.

\section*{ENTOMOLOGY, NO. XVI}

Czank-mliss.-Daddy-long-legs and Old-father-longat this berinial names given to the large gnats, which lands. fields, and pleasure-grounds, and in some pardens bordernny on low lands they are frequentiy abundant. Fannliar as every chilk it with " Drequently abundant. trabufuranations mad history are bus imperfectly known, or Leither-jackets: as the dirty luaking larro are called, Which do so muts motschief in the market-gardeas, are the offypring of our old and familiar nequaintance; snch, how

at the paling, which surronnds any grass land at this sea observing these gnats, especially in the morning, resting with their legs extended and their wings half spread, under the shade of the thorns and trees; and if viewed with Even in the chilly and frosty mornings of October, they are often abundant, hanging by their fore feet cheerles and stupified with cold, their wings covered with dew and tying closed on their backs; as the day advances, they become reanimated, and at every step through the grass bodies after them. It is uncertain whether the later specimens hybernate, but there can be little doubt that some of the larve or pupe live through the winter, from which fies occasionally make their appearance again in May. Linnmus named the Crane-fly Tipula Oleracea, from it larvec being found at the roots of cabbages: both sexes are o small, almost globose, with a stoutish rostrum ; the horn are short, setaceous, and composed of thirteen joints * abdomen is long and spindle-shaped in the femate (fig 3) and terminated by three horny processes, forming the oripositor; the two wings have many cells and are staine with brown, the costal margin, stigma, and nervures being much darker ; the poisers are long, slender, and clubbed the legs are long, stont, and brown, excepting the base the thighs and shanks, which are rusty; the feet are composed of five joints, furnished with minute claws an cushions at the apes; the male has much longer legs, and the abdomen is linear and clubbed at the apex
The female has the power of expelling her eggs with considerable force: they are oval-conical and shinin black, and not unfrequently amount to 300 , which fail probably amongst the grass and herbage as she flies along but some naturalists are of opinion that they are deposited on sheep and other dung. From these eggs maggots are produced, which eventually become an inch long and as thick as a small goose-quill; they are of a dirty, earthy colon, with two pale wavy lines along the back, by the intestines shining through the thick skin (fig. anen unmolested they protrude their little black beads, and elongate the anterior segments, exhibiting two little rust-coloured antenne. The tail is thick and truncated, with four spines or rather fleshy tubercles above and two beneath. I first observed some of these larva in the gar den at the commencement of May, and occasionally found them at the roots of scarlet-beans, lettuces, potatoes, \& until the first meek in August, when various Corresponients sent me very large specimens which had been stroying the roots of carnations, dahlias, and other garde flowers; and last year they were reported to have been very destrective to grass in Goiden-square. It seems remarkable that Reaumur should have been of opinion that they fed upon the earth; and Bouché mantains that these larve live only on the decayed roots of vegetables, and on half-rotten manure: and it is stated by others, that they come to the surface of the earth by night, in multitudes, to feed. During August and September they change to long dirty-brown pupe, with two slender horn-like appendages on each side of the head, the segments and tail being spiny, which enables them to work their way to the surface of the Gnat bursting the thoracic plate, crawls forth, dragging the pupa-case partially out of the earth, so that some-
times thousands may be seen sticking perpendicularly times thousands may be seen sticking perpendicularly from the surface, as represented at fig. 2

As these grubs not unfrequently do considerable mis chief, it is advisable to check them onder wuch circum stances, especinlty in gardens. It is said that lime-water will not kill them, but probably if quick-lime was scattered on the ground at night it would destroy them when they come to the surface to feed; and all the Gnats that are found on the walls, palings, ground, or elsewhere, sbould be killed, especially the female, which would prerent any eggs being deposited in the ground. A mixture of lime and gas-water distributed by a watering-pot over grass, has completely exterminated the larve where they had been exceedingly destructive; and br sweeping the grass with a bag-net, like an angler's landing-net, only covered with canvas, immense numbers of the Gnats might be taken and destroyed. The beautiful Aranea
Diadema catches many of these Tipulze in its webs,
*The details, dissections, \&cc. Fill be found in Curtis's Brit, Ent.
fol. and pto . 93 .
which are spread so curionsly at the deeline of summer but the strength of this gnat, and the facility with which it leaves an entangled leg behind, often disappoints the ferocious spider of his prey. I have, however, seen roung and small one seize the base of the body, and b steady persererance eventually subdue his long-legge victim. Birds also come in for their share, and the Jack saipe is so fond of the larvee that they are very oftem found in his crop.-Ruricola.

\section*{HOME CORRESPONDENCE}

Treatment of Datura Arborea, or Brugmansia swaveo-lens.-As it is generally, I believe, considered that this beautiful plant requires a large pot, it may be worth while o. mention, that I have had one for four jears in a pot nine inches in diameter; and that I have not eren disturbed the roots until this spring, when a few of the outer fibres were removed and replaced by fresh earth. M plan is to keep it quite dry and torpid daring the winter, to cut it down very low in March, and to keep it in mo derate heat for about two months, when it is removed to the greenhouse. The number of flowers has each yea been more than the preceding. It has now 36 full-sized flowers open, and six more nearly so-linee were necidentally broken off. The stem is eight inches in circum ference, the plant about six feet high (all but a few inches being this year's growth), and it is well covered with large and healthy leaves.-P.W. J., Rochester
Nurserymen's Advertisements.-Since the publioation of your excellent paper I have scarcely seen a Nember of the Gardener's Gazelle, but 1 met with one by chance the other day, in which the leading article dwelt on the advantages of nurserymen advertising sets of plants which migbt be sent by post, and I only wish you could persuad some of your advertising friends to try the experiment, I am persuaded, with Mr. Loudon, it would be profitabl to the seller, and a great accommodation to lovers of
flowers, who, like myself, live at a great distance from town. I have received several plants in this way, and nothing can come better than they all bave. I very lately had a dozen Pansies from Mr. James May in a tin bor two dozen British Queen Strawberry plants from Mr Myatt in a bladder, and two dozen Swainston Seedling from Messers. Forrest, and I am confident it would be wort while for some nurserymen to pay a little attention to this mode of sending out plants; for instance they might adver tise list of Calceolarias, stating that any 6 or 8 or 10 , the case might be, could be sent by post for \(2 \% .6 d_{0}\); and so they might say of Geraniums, Fuchsias, Pansies; and many Herbaceous plants might be sent, as I received \(m\) Strawberries, in a bladder; and a few groups of choice sor in each thus advertised I think would pay well- \(\alpha, \beta\), \(\gamma\) Hyirangeas.-A fortnight since I observed the ver remarkable fact, noticed in your last by "A Lady, Mai vern Wells," of the Hydrangeas baving pink and blue flowers on shoots growing from one root. I thought it somewhat singular at the time, but was inclined to believe from the appearance of some of the cymes, that the pial ones would change colour, which I have since found to b the case, as the whole of them are now of a benutiful blue The plant is growing in very wet bog-earth, on a nort border, shaded with timber trees. Another small plan on the same border has on it two cymes of blue flower and one of pink. Yesterday 1 saw a large plant growing in a cottage garden, having apon it pink and blue flower I have no doabt "Alady" will find the pink flowe change to blue.-Henry Ogle, Rosehill Garden.
Radiation.-1 can bear testimony to the "assertion Mr. J. Murray, that a mossy surface might maintaia perennial spriag in an arid soilo" My garden is an and soil, in a sunny and exposed situation, and I found that my Azareas, though planted in a good healh soil, drindted and died away. When I replaced them I surroundel them with moss, and put flints upon that, and since that time they have flourished as well as if they were in the most favoured situation. Will you give us a definition of radiation? I do not think if we were to consalt Johnson his would be satisfactorg to gardeners. Do you imagin any gardener can understand Mr. Daniel's definition, page 138 of the Theory of Horticulture? I am obliged to con fess it is too scientific for me, and I do not understa one sentence of it.-G. [Radiation may be defined \(w\) be loss of heat in space. The earth freezes in the winter beneath a clear sky, in consequence of its heat hying into space. A fire heats objects exposed to it by paruas with its lieat in lines radiating from a centre formed by itself.]

Desing Elowers for Exhibition.-1 was much gretified in looking at your leading article this morning find so many judicious alterations in the rules by whic the exhibitions of the Horticultural Society are. in future to be regulated, having, some time since. suggested the necessity of altering the mode of displaying Roses, wiost hitherto has been a complete puzzle-pate to the most efficient judges you could select. I trast that imminate, the intelligence of the Judge will be able the fore and award, according to the real merit of the whe which, heretofore has been a diseral impossiblik. formert ther the new regulations will embrace what tom suggested, can hardly be gathered from the obs have the you made upon them. My suggestion was to have that Howers borke up, so that the judges could realys withort they are, as produced natarally on their sterus, asitions being boudled together, and foreed into umaturu positht My present object is principally to atafe to you wied observed at the last exhioition, an l which, if carried the shade farther, would answer completely in thow
ing (I think it wes) Mr Io Howes atood higher above the mons, and were aot io numb
choked and strangled in their tyings as most others. I
felt tempted to examine one bonch, and fonnd it stood in a zinc tube (with water of course), and was so raised on the branch or foot-stalk, that a tritle more would have quite realised my views as to the mode of putting up the tlowers. I profess no superior wisdom, but it has long been my opinion like every hing like handicraft trickery in manipulating, and what they call "dressing" of flowers, ought to be
rigorously excluded; and that the things should be shown as they grow, else it is not the best grower that gains the award, but the most artful and practised manipulator. These things and the pothouse-scenes often going toge deerved disrepute in various towns throughout the coundese; and now they are revived on a greatly improved fouting, let them not fall into disgrace by the recurrence of old objectionable practices. This of course does not
apply to the training of plants, which must be regulated by the nature and mode of their growth.-An Old Julge. in the bole with the plant when planting Cauliflowers Braccoli, is a complete cure for what is called "clubbing, as has been strongly and decidedly exemplified in a gar-
den not 100 yards from where I now write.-J. Hislop, Aibtead.
beautiful an ornament to a lawn the Savine (Juniperus Sabina) makes, when left to take its natural growth in an open space and hind) is now about twenty-five years old, and measures twenty-
two yards in circumference. Its branches radiate from a two yards in circumference. Its oranches radiate from a
single stem, which is invisible in the centre, feathering all round without gap or blemish, down to the grass, and rising only about three feet in the middle. It is at all times
a pleasing object, but in the spring, when it has put forth its tender shoots, or in the autumn, when bespangled with dew, it is particularly beautiful. \(-\boldsymbol{P}, \boldsymbol{P}\). [How true is this eulogium ! and yet how much is the Savin neglected ! It is amoug the hardest of plants, and will grow equally most stubborn of all soils the London clay. On the lawn, most stuboorn of all soils the London clay. On a shrubbery and upon rockwork, it is the mont beautiful of all the Junipers in cultivation.]

Putty, to remove Old (457). -The glaziers use a marm iron, which being passed a few times over the putty,
renders it quite soft.-s. Trijacial Oranges.facial Citron, the fact of the regard to Boghoz Bey's trinot strike those who are acquainted with the varieties of Citrons in the countries where they are largely cultivated, as inpossible. It is well known that in Spain, Portugal,
Italy, and Sicily, there is a fruit commonly called the Sweet Lemon-insipid, would be a better name for it. It is possible that the fruit so called in different places is not exactly the same variety; it is, however, notorious for Italy, and probably wherever it is grown, viz., that of bearing the divisions of pulp within one single fru:t, of different flavours. The common story is, that the sour the case gensrally, though it may have occurred. Boghoz Bey's frutt may be only a more remarkable variety of this eteet, or rather mixed, lemon. The idea that such varieties, though propagated by grafting, owe their origin to it, is new, and requires contirmation.- \(W\).
bathing Goosebe-ODserving in p. 392 the description of placed some in pans on June 14th. The fruit will not be ripe for three weeks, consequently they will have had the water for seven weeks befure ripening. With me, however, they have all either burst, or, what is here called, plan : a basin of water was placed under the berry; a piece of woollen cord was thenplut in the water, und passed two ends of the cord berry, in such a manner that the conductor of moisture to the berry; but this was found intoincrease the size of the berry at all. Those berries intended for Gooseberry shows are carefully protected the time thecy are swolling a slight shower fall on them at to persons who are raising and ripening, they burst. This ment, for, should raisiog seedlings is a great disappointfruit, the raiser's hopes are destroyed for a year. Gooseberries intended for seed are taken, when ripe, from the following spring they are well watered, after which the are trags soon make their appearance ; and in October they described a metiod of obtaining an abundant crop, and at the present time the branches of my young trees have more the appearance of large bunches of Grapes than of pose that the large varieties of Gooseberries produce a It is thop, for, in reality, they are most abundant bearers. conside soll, situation, and age of the plant that must be considered: a Guoseberry-bush is thought in itg prime for the groner a fruit when about 5 years old. Let me ask 18, for the information of those who have not yet cuitivated this fruit, whether biz bushes grow in a bigh situafrom the a gravelly subsoil-if they are well shettered whether they are grown below bemetit of the sun; or so that they have the tema from abore? This I consider an important point, as I am persanded the Gooseberry requires a warm and rich soil,
sun. The watering-pot is of little use to Gooseberrybushes if they lave no other supply. At prescnt I lave Potatoes growing among my Gooseberries, and in this dry season they have proved an advantage to them, for they pre vented the ground being dried up by the sun. These bushes have made much new rood, and have produced an abundant
crop of large fruit. I have plants of the same varieties growing in a similar situation, but they have no Potatoes planted near them, and have been exposed to the full influence of the sun's rays ; these have made no wood, and tive greatest part of the fruit fell off, and the leaves are unA elitommencement of the Garlener's MaGooseberries ; but in July ľ31, Mr. and Mrs. Loudon were in Lancaster, and had an opportunity of tasting some October, In the Garaener's Mayazine for the following October, p. 535 , it is mentioned, that "we tasted several
varieties of the large Lancashire Gooseberries, and we must state that, contrary to our previous prejudices as to the flavour of these being inferior to that of the oid ones of smaller size, we were compelled to acknowledge it to be
superior for preserving. as well as for eatiog, and that they require both less boiling and less sugar."一A Tozensman. Compost for Orchidacece.- 1 have lately used the fol-
lowing compost with great success for orchidaceous plants. I procure a quantity of sphagnum, or common hog Moss; half-rotten Willow or Poplar wood (I prefer these woods on account of their lightness and the absence of resin), chopped into small pieces of various sizes, the largest not bigger than pigeon's eggs. To these I add the under stratum of sphagnum which has become almust peat, like-
wise chopped firm, -the whole in about equal parts. These make altogetber a light open compost, which appears admirably to suit the plants, as they root in it freely,
and thrive to my entire satisfaction. I use it chiefly for the species that grow upon trees. For such as grow upo the ground I use stronger compost, an account of which has already appeared in the Chronicle. - T. Applety.
medies for the green- -ly, perlaps the following, though very simple, may be unknown to some individuals. Last year the plants in puts in my greenhouse were so much infested with green-fly, that their health was materially injured. I took the plants, having placed them in a horizontal position, and put them under a cock of strong flowing water, twisting By this means I succeeded in entirely banishing such torments, and never found one insect on
a plant that had been treated in this way-Annnymons.
Nitrate of Soda.-"S. N. V's's" remark towards the close of his communication at p. 0.3 of your last Number is rather too sweeping, that this salt should be entirely ration of a sharp and quick soil. a garden manure with great success im forwarding and prolonging crops of Peas for the table, particularly in hose situations where the baulm has at an early stage curned yellur at the root, and checked the maturisg of successive pickings. From my present gardon table from each crop in succession, till 1 applied nitrate of soda in each crop in succession, tim ath. In the case of French solution during their eariy growth. In the case more than
 one seanty supply into the house-some vears being alnitrate of soda as above (about one part in a hundred) as aced to my most sanguine expecta tions.-F.H.S.
The Fenctian Sumach.-There is not a more ornamental shrub during the summer and autumn morgs han Rhus Cotinus; and yet it is seluom seen uccupying a con spicuous place in pleasure-grounds. A plant here mea brancles, and is strikingly handsome, its feathery panicles beinches, audis alinust to hide the follisge. These when they first expand, are of a yellowish green colour ; when they first expand, are of a y but by exposure to the sun, wheh adds greatly to their beanty they droon in masses, or wave gracefully in the wind -J. B. Whiting, The Diepilene.
Honey Deur.-In a vinery, where forcing was commenced about the 12 ih December lant, was placed, at one end, a tall specimen of Cactus speciesissimus, just high enough to reach the vines ab, ve it, anich are trained une under each rafter. The Cactus was infected with the come mon brown scale; when the period arrived for thinning out the berries from the bunches, or at least white in the leaves aud bunches on that pari of the vine immediate:y leaves and bumches on dimetly coniluted that green-fly iis sume part of the house was the cuuse of 1 t, but ater shept search I cond ind none: Heared to arrast its progress by syincreasing: I endearourch than th. rest of the house. Lut dhat seemed to have \(n\) ) eilect on it ; it did wot ho. spread far, confining itself mostly the neareat to the
 evil, and immedrately removid it to the other end of the house, and placed it un the back patio, in mhind situation
its top did nut reacia the vines by eighteen inches still the havey-dew kept increasing amozingly orer where the Cactus had stood. At this time 1 observet as those on the a leaf a large brown scale-the same sort ds enveloped with honer, and from it a great many young were spreading in erery direction, although I could find none excepting
their pourishment, as they seemed to thrive amaxingly in it. I think there can be no doubt that the scale was, it this case, the only cause of the honer-dew, it having got on the sines from the Cactus ; and as farther proof, atter as Cactus had been remored to the other ead of the house as before stated, the same results again took place on the
rine immediately above it, although in a slighter degree, sine immediately above it, alttiough in a slighter degree,
while no trace of it can be seen on those rings in tiue in. while no trace of it can be seen on those rines in the initervening part of the house which the Cactus dis
Effect of Suol on Pelargoniums. - In Aprit last (see p. 265), I asked your opinion respecting the specks on the Pergh be occasioned by sume rery minute sects, but that you wished me to send in a short time a few more leaves for your judgment. I onisted to do so, but since that period I bave sberrved them closely, and bave come to the cunclusion that the spots on the leave are occasioned by a depusit of small particles of suot on of soot on vegetation it reminded ne of some notes I made on the subjeet. In April, at the time I wrote to you, I perceived my Pelargoniams were louking sickly and that the leaves were rapidly assuming a yeliow tint At this time the front and top sashes of ayy greethouse which is in the centre of the town, were occasionally collected on the surface and inder part of the leaves, more particularly on the former, and that those lease were the only ones affected; I also observed that the soo did not immediately act on its aceumulating, but in the course of two or three weeks the soot disappeared in such a manner as though the leaves had absorbed it, and very minute transparent spots were visible. In a few week the leaves appeared to suffer from the accumulation, by their gradually turning yellow. I have observed similar effects on other persons' plants, though not to the extent that mine were affected, from the circumstance of their houses being near the outside of che town; but from the observations I have made on my Pelargoniuns out-of-doors, which have been slighty injured br the soot, I stould say that the foliage and health of all phanss situated in and near a toxit are more or less injured. This is partieularly the case in a dry season, when there is no rain to Cornvall.

The Destruction of Mess.-It is mentioned in p. 537, that ammoniacal liquor, diluted with water in the propor tion of one to seven of the latter, will destroy Mons. I od the experiment with pare gas-water, dilated with Water is the proportion of one to two , and aleo with
nitrate of soda at the rate of l cat. peravre. I have found the latter to be the most efiectual, and more productive afterwards. I inclose two routs of grass which sprun unon a patch of had covered with Mos: in the spring,
but having been watered with pare gas it has entirels dia, appeared.-A subsoriber
Flanders Spinach. - In your Chronicle for Aug. 28th, p. \(564 b\), you recommend the cottager to sow the Flanders seedech, which will be found quite as hardy as the prickiyFlaed variety; from which it would appear that the true sent fur sinach has a smooth seeu. Bountry they send a prickly seed, which led me to suppose that there must be two rarieties of the Flanders, as of the common Spinach. I therefore applied to a London seedsman for the smooth seaded end prickly who sent tie latter, but sait there was no smonth seeded Will you therefore,解 true Fland " inima has and if so where true Flanders Spinach has a smooth seed; and if so, where it may be had genuine:- We have usualiy imported it from Continental seedsmen.

Vines.-In answer to W. D.'s inquiries in F. 582 , respecting the best mode of pruning trees on the spurring system, I give my own practice; but whether it is the best system I nust leave him and others to judge. In ordes to be understond, I will supprose that the hues have been trained in what I call the old rod system, all over the glass, to the beginning of the summer. When the pruming seazon arrives, I cut the vines duan to the groum; these will make one. iwo, or mure shoots, according tu their strengin, ahich reach the whole length of the ratters. The w-ut two armed, when the pruming season aynant, I reduce to one, selecting the liest, aud catting it to the same length as the rater Hoy persons will be at a lass to know how so long a red or aroor can bo made to breain and show fruit at erery ere, whet is needesary in order :o insure a fill in the reficr. My pian is so simple and soeffetwal that anyboty who reads phan is so simple and suy it. When the housing seathe description of it may are ont I brag thens ia, but immainaiy tum theur wat again through a buie m the adjoining fro:at light. excepting \(\underline{\underline{1}} \mathbf{4}\) feet at ine lower extremity, I then coumence forcin: i the yonal whe the s.p Howing beynd the pait withan the huase, conse

duall, oate eye at a time. natul the whole is in the house By these mems Intrr till to main a fuil and regular crop, the ferties and wood bong aldrays ripe at the lower sidered an answer to the latter of W.D.? In proning these vines, 1 inatigg on the spurs down to one eye and when hoasing eenson agwilu arrives, I treat them na
before; but a littio more attention is required in bringing in a succession of bearing wood. It is weil known in the one eye left upon each spur, a number of eyes will be formed about an! between the spurs and the main stem. In looking over these, after they have made their appearance, care should be taken to rub off all, with the exception of one or two to a spar, and those should be left in the most farourable situation, on the upper side, or front of the spar. Having selected a shoot, tie it down chow to the main stem, and stop it at the second or third joints ; this stopping must be repeated three or four times, until the wood at the lower extremity of the siroot beeomes brown, and the lower eve visible: after that, the shoo may be allowed to grow and assist in ripening the crop This crop being disposed of, the proning season again comes round, and I scarcely need add, that I cut away the old spur and the young one down to one eye as be fore, and by this system I never fail to obtain a full crop
the bunches and berries being large and bigh-flavoured. M. Paweer, Raynham.

\section*{MISCELLANEOUS.}

Substirute for Jesuits' Bark.-The British colony of Demerara has been found to contain a valuable medicine,
which promises to be an efficient substitute for Cinchona. Which promises to be particular degree the seeds, of a tree
The bark, and in a pare
found there, contain a bitter alkali, wlith was firs detected found there, contain a bitter alkalh, which was firs detected
in an impure frm by a Mr. Rodie, resident in Guiana. In an impure firm by a Mr. Ren emploved successfuliy as a substitute for Cinchona in agues. Dr. Maclaran, of Edinburgh, has been inrestigatins this sulyect chemically, and it is hoped will
snon futhish the result of his researches. The tree is the Greenheart of the colonists; a Lauraceous plant, with Very large fruit, resembling a French Walnut in size Galvanic Etching. - We learn from the "Linnwa," plastic process of Jacobi to microscopical drawings. He phad sketcted a microscopical drawing of the curious seeds of Gymonadenia conopsea upon a polished copper-plate,
covered with a ground of oxide of iron (Eisenroth), turpentine and oil of turpentine; having exposed it to the galvanic process, a coating of copper formed upon it, with
the drawing so distinctly preserved, that it furnished ezcetlent prints. In the seeds of this plant, as well as of
other Orchidacees, the walls of the testa, which consists of other Orchidaces, the walls of the testa, which consists of
transparent cells, are said by Goeppert to present ex tremely delicate spiral stripes.

 is Omithaturn coccmeumin, whise scarlet forwers are produced

hundred pounds of this water were distilled in a copper atill, and the fist two or three pounds that came over had been evaporated with the addition of a little muriatic " Hencice there crystals of mamamoniac were obtained. "Hence there can be no doubt that ammonia must be in the atmosphere we breathe, although in quantities too minute to be appreciable.
"Its amount, as inferred from the indications affonded by the rain or snow-weter that has been examined, appears to be very variable, being greater in summer than in winter, during long-protracted drought than atter a continuance of wet ; but this is no more than might be expeeted when composition proceeding in various parts of the globe of all cumposition proceeding in various parts of the globe of all kinds of animal exurize, the volatile products of which,
until otherwise appropriated, will be retained in the general body of the atmosphere as ith a commen reservor.
\(\begin{aligned} & \text { Semper emam quodcunque thuit de rebue, id omne } \\ & \text { Aeris in magnum fertur mare: qui nisi contre }\end{aligned}\)
\(\begin{aligned} & \text { Corpora retribuat rebus, recreetque fluenteis, } \\ & \text { Omnia jam resoluta forent, et in Aera verss. }\end{aligned}\)

Thus ammonia will be constantly presented to the roots of plants in union with the rain-water that has descended from the heavens. even where the regetable nould is \(s\) entirelr destitute of animal matter as to be incapable of suppenots is also another
explain the nancer principle which may he called in into contact with the in which gaseous matters are brought "It was originally shown by Saussure that charcoal has the property of absorthing and even condensing within its pores various gaseous matters ; and Faralay ubserved, not many years ago, the singular facility with which earthy and metallic powders of all descriptions absorb ammonia, when present either in the air or in the bodtes with which they are brought into contact.
\({ }^{4}\) Reasoning upon these frets, I was myself led lest apring to undertake a few experiments with the view of ascertaining whether vegetable mould had not the same property, and I found accordingly that hoth carbonic acid and a mminniacal gases were condensed with its p.
they would be within those of a lump of charcoal.

Liebig in his late volume hay made the same remart, and has extended it to the oxides of iron, to pipe-elay, acc., and hence we have a mode of accounting for the absorption of ammonia by plants, eves in countries where the absence or the rare occurrence of rain might otherwise deprive them of a due supply of this necessary ingredient.
or are we any longer at a loss to trace the ammonia w the substance of the plant, which derives from it its
"Tiat it does actually find its way intor the vegetable crequisation, we are assured by the reseatches of Professor Liebig, who asuertined that the sacciarine juice which
fiows from the different varieties of maple, even when growing in soils that were not manured, contains a large proportion of ammnnia.

The same is the case with the juice extracted from beet-root for the purpose of preparing sugar, and the products of the distulation of herbs, Howers, and roots, with water, contain emmuniacal saits,
"So also does the juice of the fresh tobacco-leaf, and that which exudes from the vine, when an incision is made into it during the period that the sap is flowing.

Its occurrence in short in the juices of plants seem not less certain than its existence in the atmosphere; and there can be little doubt that it is the decomponition of this compound which mainly supplies the nitrogen present in the constitution of organic bodies.
" It may be inferred, h. wever, from some experimente made by Boussingault, that a great difference exists between plants in their power of assimilating nitrogen ; and to this difference that chemist is disposed to attribute the advantage of alternately growing what are called fullowcrops, for the purpose of refreshing the soil.

Daring germination,' he remarks, 'the quantity of azote wirich seeds contain appears to be on the increase, but there is this curious difference.between different inds, that whilst those of leguminous plants, sown in pure earth and moistened with nothing but distilled water obtained an increase of nitrogen which the atmosphere arene
could have afforded, those of barley and other cerealia could have afforded, those of barley and other cereaile
remained in that respect stationary, unless manure were afforded.

Boussingault also shoms, in a subsequent memoir, that peas, clover, and other legumes, absorb azote, even when planted in a soil that contains no decomposing animal or vezetable mstter, but that the cerealia. aithough, it so placed, they may grow. do not appear to secrete this principle.
.- Boussingault. however, does not go to far as to maintain that the latter in no stage of their existence are capable of discibarging this fundtian, but oniy that the plant aiust have already arrived at a higher state of vigour, in order to derive its a apply from such a soliree
"It is on the same prime phe, that at bouz'. the animal in general obtains its food in whe the wanas urg atace bodrea

"It is thus. tion, that in the seed the embryo is surrounded with a ruazs of altumen, from whicia it derive
its supnort, untul its rosts become sufficiently wigurous its supnort, until its rocts become suf
to extraut nourisincent from the grouad.
\(\cdots\) Hence it ietomes in most cases wecaisary that crops cultivated as artuties of foud should hare access to regetable or animal manure from which they may derive theis It could noluwing tuwa bece derinat from any anal exhalations proceeding from that source. When several
it not at the same time regenerated from the atmosphere, ploughed into the ground with others, as leguminous ploughed into the ground with others, as leguminous plants, according to the experiments of Boussingault,

On the same principle this chemist suggests the introduction of the Jerusalem artichoke into light soils, which, owing to the entire absence of mould, appear irreclaimably barren; this vegetable, the tubers of which afford nourishment to cattle almost equal to potatoes, having great power of absorbing both carbon and nitrogen from the air, and thus by degrees generating a certain amount of soil.

I have seen this vegetable very commonly cultivated for the use of cattle in the light lands of the Grand Duchy of Baden, and in certain parts of Alsace."
Among the experimentalists we have Mr. W. S. Dugdale stating, that he finds nitrate of soda much superior to nitrate of potash and saltpetre as a manure, on both gravel and clay. On the contrary, on dry soils, with sand, sandy loam, and crag subsoils, Mr. Rod well derives little or no advantage from nitrate of soda, as a manure for Lacerley, Beetroot, Swedish Turnips, White Turnips, Peas, Barley,
aad Wheat. On the other hand, Mr. Newman finds nitrate of soda very advantageous. He says that the increase on the wheat and on the wheat-straw is more than one-fourth; on the oats nearly the same, and on the oat-straw almost one-third. In his experiments the witrate of soda was only beneficial on land that was out of condition; if this should
prove to be its general character, it will indeed be a valuprove to be its general character, it will indee

Mr. Miles speaks thus of the appearance of his Turnips, manured with glue dross, a cheap substance to be had abundantly - " For a fortnight previous to the 29th of August, in the west we had most delightful rains; and I find the folvery well ; but the turnips manured with the glue-dross most come on-the luxuriance of the foliage wonderful, having assumed that fine purple appearance which I have hefore observed in other roots similarly manured.' About the 10 th of September the crop was attacked by mildew: the Swedes manured with the glue-dross, however, were scarcely injured, whilst all the others were hard-hit. The consequence of which was that the roots of these went on
swelling, whilst the others were for some time at a complete swelling, wh
stand-still."
And he gives the following return of the result of this experiment

The weather throughout the week has been almost uminteruptedty fine. The temperature was unusually high for the period and \(1^{\circ}\) above the mean of July, the hottest month of summer.
State of the Weather at Chiswick during the last 15 jears for

The highest temperature during the above period occurred on in 1836 -thermometer \(32^{\circ}\).

REPORT ON COVENT GARDEN MARKET,
The continued fine weather has rendered the supply of most articles unusually large: prices, however, remain pretty stendy, though the demand is rather dull.- Fruit. Pines are abundant,
at from \(3 *\). to \(\operatorname{si}\). per 1 lb . Hothouse Grapes are plentiful, and the at from sas to ss. per 16 . Hothouse Grapes are plentiful, and coe's Golden Drop Plums are the favourites. Good Peaches and Nectarines have advanced considerably in price. Apples are exe good ingly abundant, as are common Pears ide we onervel-some good Beurré de Capiaumont Pears, for which 45. per hale-sieve were
asked. The supply of Walnuts and Filberts is large ; the former are generally of excellent quality.-Vegetables. Generally spenking, the remarks made on vegetables in our last Report apply to the present one. Caulifiowers are by no means plentiful. Cablet-
bage of excellent quality abounds. French Beans and Scarlet runners of good quality are plentiful. Carrots and Turnips are
excellent. Scorqunera and salsifie have made their appearance and are of good quality. Salading of all kinds is abundant.
lery is fiue, and the supply pretty large. Handsome sampies of Tomatoes continue to be brought. Aasturtiums and Rauisippors for pickling may stiil be obtamed several Camellias, and some pretty Heaths.

TABLES.

\section*{As many Conrisfondsars write to us complaining that their letters are not attended to, we ter they are put to us, to write
answered the second week after
gavan, and to say how and when their inquiry was forwarded.
Me answer every thing ande every body, without exception, imme-
diately if practicable, and by the next week at latest. diately if practucable, and by the next week at latest.
In smatear write, thus - Fonr years back I bought a consi-
derabic quantity of Peach and Nectarine trees from a great Londia Nursery nian, and since they are come into bearing I find
them liear! all wronz named, I have, therefore, trubled you them lear!y ain
whth 3 s specimens, and if you will give me the true names, I
shal esteen a favour. After I know their correct names I
shall probably tell you the name of the party I had them of, as I shall probahly tell you the name of the party I had them of, as I
think there 1s nothing which wants regulating oo much. [The

\section*{NEWS OF THE WEEK.}

Tas intelligence received this week from France possesses a very melancholy interest. On Monday afternoon, the inhabitants of Paris were thrown into a state of great excitement by another attempt to assassinate a member of the Royal family; the young Duke d'Aumale having been fired at during his triumphal entry into the capital, at the head of his regiment, after a long service in Africa. The Prince was accompanied by his three brothers, all of whom were equally exposed to the attack; bit the y proridentially escaped, the ball having been intercepted by a burse be longing to a field officer in the Prince's suite, which was killed on the spot. The assassin was immediately arrested and was with difficulty saved from summary jastice; he will be tried on Thursday nest by the Chamber of Peers. Public attention, although principally occupied by this painfal occurrence, has been much excited by the seditious movements of the working-classes in Paris, and by a serious revolt in Auvergne. At Paris, the outbreak was confined to the lower quarters of the city, and although it was characterised by great violence of language, the people have bitherto been kept in check by the prompt measures of the police. The disturbances at Clermont Ferrand, the capital of Auvergne, were of a more alarming nature: the populace erected barricades, destroved the gates, and fired on the troops, which appear to have had nuch diff.ulty in repressing the rioters; several lives were lust, and a large number of persons were dangeronsly wounded. At Macon, also, a collisiou of a threatening character has taken place between the military and the people, but its origin seems to have been free from any political foeling The ezcitement created by these events has been increased by a remour prevalent in Paris for some days past, that the Duke de Bordeaux had died of lock-jaw, produced by his recent accident ; but no official intimation has yet been received by the frovernment, and the statement is considered to require confirmation. - From Spain there is little news of interest ; the journals are occupied with financial matters and with discussions relative t, the communications between Queen Isabella and her mother; the Cabinet lina acceded to the request of the Infante Don Francesco de Paulo, who applied for permission to return to Spain, in order to reside permanently at Madrid; and the Marquis of Saldanha is expected from Lishon on a special mission, in order to arrange the differences with the Portuguese Government. - The ancession of the Grand Duchy of Luxemburg to the German ('ustoms' Cnion, so long opposed by Belgium, is no longer doubtful; arrangements havin; been mone for removing the froutier Customhouses, and for allowing the free importation of agricultu ral produce.-From Cermany we leara the commencement
of the autumnal reviews in Silesia, and the anticipated retirement of Prince Esterhazy from diplomatic life, after so long a residence in London. - Advices from Greece announce that the new Ministry of Marrocordato has been dissolved, in consequence of the obstacles thrown in the way of that popular statesmin by his Majesty the affairs of Greece are represented as becoming daily more complicated, and fears are entertained at Achens that an insurrection may break out against the Bavarian rule.- The arrival of the Levant mail has put us in possession of recent intelligence frum Turkey; the most important news is the announcement thit the Disan has decided on pustponing the expedition to Tunis, which had given rise to fears of a colhisinn with France; the accounts from Wallachia and Mollaria state that no further attempts have been made to disturb the public peace; and the long-disputed question oi the Syrian tases has been brought to a conciusion.-We learn by recent arrivals from New York that the President has refused to ratify the bill to incorporate the Bank of the United States, which had passed the Senate and House of Representatives, and was a farourite measure of the majority.

At home, the re-elections hare procecded quietly, and have nearly all terminated without npposition. Parliament re-assembled on Thursday after the enjommment; when Sir R. Peel entered into an explanation of the intentions of Government. He prophosed to atopt the estimates of the late Ministry, and to continue the Poor Law Bill, without alteration until July 1912 , in order to give cime for a deliberate consideration of tiae suhje.t. He announced also that he merely meant to mahe a temporary provision for the deficiency of the revenue. and did not intend during the present stsion to propase any nicusure of a more permanent character for the furpmse f equal
 Goverament to wetgh matarel, the morasures tiary mixht thank fit to subwit connerted win the present tinancial and commercial crisis. - Our rexdurs will read witir interest that part of our pariamentary report contaning a discussion on the subject of the prgposed bills for annexing tae gardens and grounds of Erograore to Windsar Cante, and for authoriviag the Goverament to lease che kitchangardens at Kensington for building purposes, and expend the value thereof in the formation and improvement of the Royal Gardens

\section*{forrign}

France.-Attempted Assassination of the Princes.-On Monday Paris was thrown into a state of excitement by the news that the young Duke d'Aumale had been fired at during his entrance into Paris at the head of his regiment. The Duke was riding between his brothers, the Dukes of Orleans and Nemours, accompanied by the Duke of Montpensier, so that the assassin might be said to have fired at the four. The ball or balls struck the horses of Gen. killed. The particulars of this melancholy affair appear to be as follows :-The return of the 17 th Light Infantry, under the comanand of the Duke d'Aumale, the fourth son of Louis Philippe, after a lnge service in Africa, had called forth public demonstrations in honour of the regiment, in all the towns through which it had passed on thee march to Paris: and Government had resolsed to do honour to its arrival in the capital by a triumphal entry. The column formed of the 17 th Light Infantry arrived in Paris by the Orleans railroad un Monday morning, and was marching down the Faubourg St, Antorne, preceded and followed by detachthe Dukes of Orleans, Nemonts, and Aumale at their head when just as they reached the Hospice St. Antoine, a man presented himself before the Princes armed with two pistols, and snapped them at the Duke d'Aumale. One only o those weapons went off; but the ball, instead of hitting him, struck the horse of Theut.-Col. Le Arilant, who rode be-
side the Prince. The animal, an Arab courser of great value, which the Colonel had during nine years in Africa was struck as he raised his head, and saved the Prince. The horse fell dead on the spot; that of General Schneider was also mortally wounded in the shoulder. The regiment, indignant at this atrocity, immediately lowered Duke d'Aumale ordered them to remain. When the first emotion had subsided, the people cried, "Long live the King! Long live the Princes and the 17 th !" The Duke dAumale, who had remas. and said-"It appears I begin to be reckoned of some consequence, since they wish to kill me." The people immedrately took to flight, bearing the assassin with them, but one among them seized him by the hair, and prevented his escape. He was dressed in a frock coat, wearing over it a short blouse called a bourgerou, for the purpose, probably, of concealing his weapo three years in Paris as a partment of the Vosges. It is said that he was once a soldier in the regiment. and having struck his bayonet into the thigh of his captan, was condemned to death by ourt-narthal, but was pardoned. The moment that the erape of che bises ane the people estifie their joy by loud stiouts. saved trom summary justice, and immediately transferred
to the Comecierzerie. On approaching the Tuileries, the King, accompdnied by the King of the Betgians, the Duk of Saxe C'ubury, Marshal soult, and a numerous staff came out to meet his son, and the interriew is described as mest affecting. The Kmg and the otizer memsers of the Royal Family were loudty cheered by the troups. In the afternoon, the regiment procected to Neuntr, when his Majesty gave a grand bamquet to 6 , (17 (1) guests in honour of lis arriad! - The Chantectlor of rrance has since ad ressed summonses to the Peers to assemble on Monda next, tise 2lst, fur the purpuse of proceeding to the trial
of the assassin.
Diventances in Paris.-During several days of the past week, men known ro belong to secret associations had been seen to mix with the groups of workmen who usually meet to take their meals on the Quai de Gerres, and in
the adjoining streets. The authorities at first confined
themselves to watching their mivements, but on the loth, the language held by those persons was of so seditious a nature that the police thomgit fryer to interfert, and arrested two of them. ()u ti.e 11th. matrels assumed still more inpurt th: character. Towards 8 inlsch. p.m. ajout 300 indsidua's, between if and \(20 y\) yars or age, ail dreseed in blouses, asembled on the Place du (iateret, pubs.ce for ever! Down with (ruizot!") This kand was immediately dispersed by a birdde of phine, not, hom-
ever, without meetiug oppositi, n. Stunes wrse thrumat he police, several of whim were struck, and the ufficer in conman! was daugerously wotuded. Frum the Plyee du Chätelet, these men, directed hy chiefs wearing bluu-es and cops ace nuded the Rue st. Denis, singing the "Mareilrise," and crying "Down whth Louss Phippe the Rethen marched through other street;, vociferaring the same cries. They entered several mercens' shops and carried off pieces of red cloth, which they fixed to the ends of sticks to serve as bamers. The then returned to the Rue st. Denis, and thence to the Place du Chatelet. where hey tormed anto close colunins, with the intention of assaling the police; but the moment they perceived them they took to Hlyht. At midnight all was tranquil. The disturbances, however, were renewed on Sunday night, but the precautions of the civil and military authorities put assemblages took piace on the same spots, but no open outbreak vecurred.

Riots in the Provinces.-A collision of a serions nature, but without any apparent political character, ha taken flace at Macon, between the military and a certain class of labourers on the quays claiming exclusive privieges for the landing of the wines, which form the great trade of that town. The rioters in question, known as prorlefiaix or porters, were in opposition to the winecoopers. The authorities established regulations approved of by the Central Government in favour of the latter. Un the 9 th the porters assembled in a mass, and the disturb. ance began by about 20 women exclammg against the emplomment of the coupers. The quays were taken possession f by the rivters, and after the mub had ben five time oy umboned to retire, the forters of he thth, an a porsuas were killed, and several wounded. The fining ceased alter the first discharge as the crowd dispersed, but stonor weso subsequently thrown at the soldiers and the authorities,
several of whom were wounded. Tranquillity prevalled at he last accounts, but the excitement in the town still cominues. Although this unfortunate affair had no political character, it is very likely to assume one, as the Opposition prints already attack the conduct of the troups for wantonly firing on the rioters, and complain that the Aitional Guard was not called in to quell the disturbances instead of the regular troops.-A seditious movement, of which the census was the pretext, took place at Clermont Forrand, he capital of Auvergne, on the 10 th. For some time pas missaries of the anarchical parties had been labouring to ex cite the population to revolt. On the 9 th, the factions erected everal barricades, which ware carried and destroged by hie troups and on the loth the disorders recommenced. Large assemblages of people traversed the stictts, com mithay acts of violence even in the heart of the chy. They then attacked the armed force. hilled four soldiers, and wounded io or 10 . 1 ie troops were then ordered to fire, and several of the insurgents were killed and wounded. The courier who arrived in Paris on Sunday morning, passed through Clermont at 10 , p.u., but was mable to get the despatches; the people were then burning the gea, and the fighting continued. A telegraphie des a dine that patruls continued to a the town in resistance. The parough the stred moth cultory details as to The Paris papers are med with cont Journis insist that these disturbances. The opposition Jour by police: they were purposely organised and got up by the police and the National of Sunday was seized for an artie on the disturbances at Macon, in which it says that Government neglects no opportunity of bringing the army into collision with the citizens, and of habicuating . army to shed the blood of the people. It aminus in . subsequent number that the real motive of tat seizure to induce a the éme utes the Puce Cuarelet, in Paris, were cow nectet wether in some plot goanst the Government
The Evacuation of Mahon.- The excitement which recently prevalled on the pacuation of the French Hosprial in the Balearic Istands bas somewhat subsidell since It occurrence of so many new topics of pubbe miteres. has, however, been omecially announcen, that the fenc Guvernment had already determimed that the renewal the lease should nut be called for, and that the Sprans Ministry dents hasing duthorised the Govemur ut Anodad to call fur the eracuation of the islaad. It is indeed at mitted that the Spanish (iovernment had deliberated onant expedency of renewing the lease, and also whether the wan of the spanoh molitary serice aight not require tre enate cuation of tie hospital, at a more or less pronmab \(p=n o d, b\) it that nothing had ret been dectued of edo ever Ject; that, in all cases, the Rejency would affurd ever faculity, and treat witn all prossible regard the if the which France might leave in the istand; and that hos French Government required the continuance of dis pital, the Gusernment of Her Catholte Majesty was ara pused to renew the lease, and thereby to iestify its gratitade for the services which it

The Buonaparte Family. -It has been announced on
the authority of private letters from Paris that the Cabinet ' not carrying into effect the proposed amnesty to Prince
Louis Napoleon and the other political prisoners implicated
in the affair of Boulogne. We learn from Lyons that the Prince de Musignano (son of Lucien Buonaparte). who had teen attevarg the meetting- and exchrsum, of the Scientific Congress in trat city, had beens,
to quity from the Government.
his journey out of the people who saluted him in terms folloned by a crowd of people who saluted him in terms Napoleon,

finance the Cracemor of the Excurauer would take the fnance, the CHANCRLior of the Exchraugr would take the
opportunity of the earliest Committee of Ways and Means to
state the details of the measures immediately necessary for the statlic service. The total sum requiste would amonnt to a bout
publ \(5,500,001\). The permanent measures of finance, which would be necessary for the equalisation of revenue and expenditure, it was
not the intention of Ministers in the present session to announce, and he must solicit a like interval for stating their intentions in
regard to other measures of great importance. The duty of
forming the new administration had so fully necupied his time, forming the new administration had so tolyy nccupied his time, "I have no wish whatever," said the Rt. Hon. Bart. "to interpose any unnecessary delay, and I forbear from immediate legislation on matters of such importance, not on account of the advanced
period of the year-not on account of the deficient attendance of Members-not on account of the calls or temptations of other
avocations-all considerations of which ought, in my opinion,
and under such circumstances, to be sacrificed, and not suffered and under such circumstances, to be sacrificed, and not suffered
to interpose the slightest difficulty in the way of considering the arairs of the country. The ground on which forbear conse quence is, that 1 confess I have thought, from the eire place, and the general expersions which were mate use of previons to the last election, that there was a general dis-
position and desire on the part of gentlemen opposite to give to position and desire on the part of gentlemen opposite to give to meamures which it might be their wish to bring forward. measures which it might be their whish to bring fot ward.
think that that opportunity ought to be given, and at the same
time that thme measures nught to be considered and brourht forward on the earliest possible occasion. Cunsiderimg, however the great importance of those measures, I trust that I have no
rendered mayself lisble to the charge of not having done that by pressing my opinion that those interests will be best taken care o by a air tume beine allowed to her Majesty's Gorernment for the mature consideration of the questions connected with the finan cial arranmements of the coluntry.
Lord J. Ru'sikl. approved the
to the estimates; and it any of them shond be objectedt to, he
would give them his support. But before the House should go woud committee upon them on Friday, he should feel it his duty not consider that during the fewt days which have elapsed siuce
the new croverument came into offee it could have given any attention to the great meastres time which has elapsed since im portant measures had heen propnsed by the late forernment, and
considering the state of the country, he had heard with great concenn that it was not Sir R. Peel's intention to propose any measure of relief durmg the prewent session. He minerred, from what
Rusht Hon. isarnnet had stated, that haviny mate temporar provision for the sectrity, he did not intend that the House of
renewal of the por-law, hons should meet again till the ordinary time in February Commons should meet again till the ordinary time in February;
he should, therefore, take the opportunity of going into a com.
mittee of supply to state clearly what, in his opinion, should be mittee of supply to state cleariy what, in his opinion, should be

Sir T. Fremaver.e moved for leave to bring in two bills which had been left by the late rowne was for ameving the mansion house pardens,
ness. The first was and grounds at Frnmmore to Windsor Castle. The object of the
second bull was to authuri-e the leasing the Royal kitehen gardens at Kmsinston for building purposes, and to enabiener Majesty's Commishomers of Words and Eors ets to expend the salue thereor
in the formation and improvement of the Royal ciardens, and to enable the said copshold or customary tenure. (ireat inconve nience arose from having a number of detached kitchen garicns,
which it way most cearable to consiniate for the use of the
Royal establisment, and he hoped the house would allow the Royal establishment, and he hoped the house would allow the
measure to be broneht in.-Mr. Gourbura having seconded the motion, Protherof observed, that as the preseat fowernment were nut rejpursible for this meavure, it baving originated with
the late Government, he could not be suspected of any part motive in grving it his most determined opposition. It aypeared to him very absurd that at a moment when they were granting

 the purphase of ansolidating the
should asi for a special grant.
Mr. W. Willitis wished to knuw what would be the proba-
ble amoun of income derved from the lettiug of this land? He ble amount of income derved troma the letting of this land He
highly approved of the maeasure, but he objected to the purpose
for which the profits of the land woald be applied. In the pre-
the embarrassed state of the finances, and considering the vast
expenditure of money which annually took place for the soyal
palaces and the royal family, he did think that the product of
those crown rents should be applied to the maintenance and those crown rents should be applied to the maintenance and
keeping in repair of those royal palaces.
Sir T. Fremanthe said, that the income would be about \(1,000 l\). Mr. WA KLEY said, it therefore appearer that for the paltry sum
of \(1,000 \mathrm{l}\). a-year, the fine old piece of ground which was situated between the palace towards the east, and the church in Kensiogton towards the west, was to be entirely sacrificed. The hoo
gentleman opposite had remarked that this measure had been
brought the great measures in which both administrations concurred.
That was certainly a bad lie inning. Now, he entrated the it was now proposed to sacrifice. The people were already mur-
muring on the subject, as they considered it would be a great evil to deprive them for ever of an openspace of ground such as
this, at a time when thousand, of polmas were being sent to
supply the inhabitants in other portion of the moctinpslis with places of recreation. It was situated in a der, elr-populated
district, and if it were thrown open it would be of immense ad
vantage to the inhabitants of Kensington and its vicitaity. He was really astonished that the late administration, who pre-
tended to be the friends of the people, should have formed the
project of building on such a piece of ground as this; and he little of the poor as well as the new Ministers had adopted thin
Sir R. Pesl said, that as
 Sir R. Peel, guarded himself against poins further in praise
of his administration, were certainly entitled to his admaration,
and had conmanded a conniderable share ot his conftence, and
he acceded to the hringing forward of this measure with greater readiness when he heard that it had reccived the approbation of
that nobie lord, and that it came recommended to him from so cause of much unnece-sary expense, that economy would be the resuit of their consolidatinn; and it was proposed, in order to
defray the expense of that process, that a certain pice of ground
belonging to the crown should be built upun. That piece of
ground did not belong to the department nf the Commissioners purposes, and the public had not access to it. The letting of it altering and consolidating those gardens, which were at present Mr would not object to the introduction of the measure Mr. Ewatr thongint it would be more de-irable that the ground
should be appropriated to the use of the public. The cculso-
Itdation of the gardens was certainly very decirable, hut it was
not desirable that this piece of ground should ic buit upon and
thereby closed for ever to the use of the public. He sucerely thereby closed for ever to the use of the public. He surcerely allowing Kew-park to be open to the public every day instead of driving or riding in Richmond-park not an exclusive but a geSir T. Fremanrle said, that the subject should meet with at-
tention. The bills were then read \({ }^{\text {Irst }}\) time whout further opposition. iromised statement of his opinions. After referring to the pacome for the consideration of the Corn-hws and the distressed
state of the peopic ; far less that it should be postponed for five months longer. A Ho the state of the manufgcturing districts, he did not \(89 y\) tat the it was bound to pass laws which would not interfere with the in-
dustry of the country. We were losing our foreign markets, and our trade and commerce were declinng. He was firmly of op in April last, a revival of trade would have been the result; a worl
adopting them they would also have declared to the whole sonat, by conducting commerce on free and liberal principles, they an individual member of the House, he disclaimed the responsithe question.
Sir R. Peri considered that Lord John Russell had a perfect
Lir reeling of abhorrence at the recent attempt at aswasin between
France, he stated his convictiont that intimate relationis bountry and this were essential to the peace of Europe and
that the prosress of civilisation. He viewed our relations with the
Gnited States with great anxiety, bit hoped that the prevaling gnod sense of each country wonld lead to an amicable arrange-
ment. With respect to the condition of the comintry, he had
hoped that, after an exclusion from office of tea years, he hoped that, after an exclusion from onde measures. If he
would have been allowed time to prepare his mene on the cornlaws within one month after his accession to pw.r, what muse without doing so? He had come into office, and found
ciency, extending over five years, of nearly eight millions; the deficiency for the present year being two mer he was asked to pro-
within one month of his accession to powe pose measures to supply that deficiency. He did not csimatiu independently and conscientiously to discharge its function prepared to retire from the harassing position
found he conld not be of service to the country.

\section*{arpstos succeeded, and was foilowed by Mr. Villiers} HRLDEN moved an amendment, that it was the duty of the
House to inquire into the existing distress, and that no supplees of moneyshould be roted till such inquiry were made. The
 to Monday.

New Houses of Purliament.-The progress of the Works at the new Houses of Parlamence of a strike of the suspended for some days in consquen and chisel is unheard workmen, and the sumad of buildings. It appears that on in this immense range of bundings. Saturd night the ntonember of 469 , refused to return on Mondiy morning, in consequence
of the contractors. The cause of grievance alleged by the
worlmen is, that they are not now allowed time to refresh themselves, which they have been heretofore accustomed to have, under pain of immediate discharge. During th bs is expectation that their grievances would be remedied but such not being the case, on Tuesday morning the whole of them came to the works in a body and took away heir tools, expressing their determination not ro rum ber of labourers are still employed on the works, but if the absence of the mechanics be protracted, their discharge it is suid, must also take place. In consequence of these proctedings, arkmen ; and it is said that in the event of this hiling, Mr. Barry will require sume fresh arrangements to page of the works for any longer period. All the other Forkmen employed by the contractors at the Nelson Mo nument and at Woolwich dock-yard, have applied to thei a is announced that Lord Ashley, after making inquiries respecting the occurrence, has consented to present a peand Forests, in which they state the grievances they have aboured under since they were engaged upon the buildings. Metropalitan Improtements.-It is announced in the dilly Papers that for the purpose of affording a commoWestminster's estate, government has recommended that a street be opened out of the Vaushali-bridge-road through Mr. Elliott's pleasure grounds and the gardens of Emanuel Hospital ; that York-street and Tothill-street be in Rochester-row made more commodious; part of the Stratton-ground taken down; and that Pje-street, Orchardtreet, and the Almonry be removed altogether. The government sar reyors report hat ense inprovements can perty belongs to the Crown, the Abbey, and Emanuel Hospital.
count of the burn Dork, which it was found necessary to sink by scutrling. An attempt was made on Tuesday to raise her, but without success. ppwards of five feet of water was first let out of the dock, in order to get near the scuttling holes, which were then stopped, and six double-actioned pumps were for five hours, it was found inponssible to empty her: the water wa- therefore again let into the dock, and the vessel and submergen. since these experiments were made, the raising of the ship bas been undertaken by Mr. Fraser o diving dress used by the divers on the wreck of the Royal George. He commenced operations on Thursday mornment down and surreyed the ship, and ascertained that in scuttling, the hull had been much injured. Where were several large holes, and planks torn away on each side wader the stern, and also in her bows. This surrey occupied some time, and when he had ascertained the situaimgelf with ies he was divm up again, and provided himself with implements, planking, \&c., and was again at twelse o'clock he was joined by a diver plied to them the patent water-dresses. Air was suppop of the shipm pumps worked some of the holes were 10 feet, and others 15 feet below the surface of the water, and the ballast bole was also opened, and had to be stopped. Mr. Fraser and his assistant plied their hammers vizorously ontil 5 o'clock, at inctime they had succeeded in covering all the holes with planking, and were again raised by the labourers in casion exactly fire hours, and under water on the last octime. A great number of persons assembled at the pierpected wituess the operations, and it was generally exlearing this the vessel would be afloat yesterday. After leaving this vessel, Mr. Fraser proceeded to Gravesend to ship Belly, laden with corn, from Dantsic, which was run down by another vessel in the Lower Hope a few dars since, and now lies sunk in eight fathoms water, nearly in mionannel, forming a serious impediment to the navigathree His divers have been at work there for the last three days, and have already succeeded in fastening chains he paid for rain. It is said that the sum of 5006. will lifting the Betly.
In Iriged Cuse of Total an Irishman, named Bernard Caranagh, exhibited himself for upwards of five years. A medical gentieman who atTheobald' R these exhbitions at the Assembly Rooms, omors hoad, expressed strong doubts as to the alleged piwers of Caranagh, and the latter offered to be locked up geatlemen of the days under the care of any number of cepted, and the medical profession. This offer was acpopter, and the medical gentleman who disputed the ppointed to superintend tire test. Cavanagh was, after bating tuen caretully exammed in order to see that he had room thatever concealed ab-ut his person, placed in a foom on the top floor of the medical gentleraan's house, the alightest cof the door was sealed up in order to prevent courrum is lo feet by 9 , and 7 feet high. It is a garret, arrect He wished to have the windon as woll as the
fireplace sealed, but the parties who made the experimen fearrul of the ill consequences of shutting up a man in so Thursday, the term having expired, the seal was broken and the door opened in the presence of upwards of thirt medical and scientific gentlemen. When Cavanagh came forward, he was found to be quite hearty, though appaThe onewhat thiuner than when be was locred up ring his confinement was knocking at the room door and asking how he was, to which he invariably answered, per the medical gentlemen present, many of which he declined the medical gentlemen present, many of which he declined his tongue when called upon to do so. The case was looked upon by the medical gentlemen present as one of a very singular character; and whilst some expressed themselves satisfied with the test, others had strong
doubts. The majority, however, declined giving an opinion.
Fires.-On Sunday evening, a destructive fire broke out in the house of Mr. Salmon, fruiterer, opposite the by m-park in Piccadilly. The house will be recollected rom its persons familiar with that part of the metropolis, an ornamental wooden balcony of peculiar construction, and from the faet of its being next door to the mansion of the Duke of Grafton, at the corner of Clarges-street. The apid progress of the flames, from the inflammathle nature of the building, prevented from the first all hope of saving any portion of it, and considerable delay having arisen in the arrival of the engines, great fears were for some time
entertained that the Dulee's mansion woald also be deentertained that the Dase's mansion woald also be destroyed. Before ten o'clock the flames had attained their greatest height. Several engines were by this time in full play, and lengths of hose having been hauled up to the roof of the next house, an immense votume of water wha poured on the burniog ruins. Dy haif-past cen ther rooms of the Duke of Grafton's mansion were seriously injured, and it was only by extraordinary exertions that the remaining portion of the building was saved. At \(110^{\prime}\) clock the their operations; but some fire still appearing in the lower art of Mr. Salmon's premises, three firemen of the County Office entered the premises for the purpose of extioguishing it. They had nearly succeeded, when the ronf and party-
wall fell in and buried two of the firemen beneath the uins. One of them, named West, was killed on the spor, and the other, called Weaver, had both legs brokell. In order to extricate him it was necessary to treak through the party-wall of the next house, and to siw in two several timbers by uhicen he was pressed down. These operations occapied several hours, and it wastay morning that the unfortunate man could be released. He was then conveyed to St. George's Hospital, where he lies without the slightest hope of his recovery. The amount of damage is much greater than wases, with stock and furniture, were consumed ; the upper part of the Duke of Grafton's house was greatly injured, and the water penetrated the drawing-room floor, where much damage was occasioned; the premises at 87 , Piccadilly, belonging to Mr. Salmon, but occupied by Mr Ashley, a stationer, were partialiy destroyed by the falling of the party-wall; and the adjoining house occupied by Mr. Nison, was also muels injured. -The floors of the houses which were most damaged fell on Monday, and the fronts hare since fallen, but without any further loss of He. All the property was insured except talamity. In regard to the oriqin lost everything by that the family were staying at Gravesend, the shop being left in charge of one of the sons, who gave the shopman leave to go out on Sunday evening, and shortly afterwards went out himself, leasing a lighted candle on the staircase. An iaques adjourned from Monday, was held on Wednesday evening on the body of West, and several witnesses ined whose evidence confirmed the preceding account, but could give no satisfactory explanation of the cause of the fire. The statements of the parties examined were conradictory, and much mystery still seems to hang over the affair. Mr. Salmon, who was present, stated in regan to the insu:ances, that he should lose about o.l. by the event, and that if the accuunt-Looks were destroyed, he was likely to lose nearly two-thirds of the insurance on his own property. The Coroner and \(J\) ury expresse. their opinion that it nas a rery mysterious a by his death in his endeavours to extinguish the fire, but how the fire originaded ere "as no evidone to shom:"
Accitents - On Saturday morning, about one u'clock fatal acciuent oicurred in the vicinity of Suathrars bridge. The Orien, Ipswich steam-ressel, having been moored in the wildul him on board Recoiving no answer, be went into the George Ind, Southwark-bridge, where he prevailed on
 party of sailors, belongiag beside which their own steame Tus muored. The boat bad not prucerdad aiove tea or tweise yards from Bankside. Then one of the mex belong ing tu the Gravesead steamer, named harnos, leape overboard. The other three ruwhed to whe sile it boat, and the sudutenness of the movemant causing it th lurch, they were all precipit?tediaic che wous one of the whole hour pertined. Ator was found betore it coulil hav been 20 minates in the mater, but every effort to restore aximation was unsuccessful. Two of the other bodies
have since been recovered, but that of Thorntom was not found till Wednesday. An inquest was held on the three bothe unfortunate ffair was purely accidental, althoush doubts are still entertained that Thornton leapt overboard for the purpose of committing suicide. The jury accordingly retarned a verdiet of "Accidentally drowned." -The inng-protracted inquiry respecting the death of who was killed ose of the seamen of the Topas steamer, brig off Erith Rearh some dars de., was brought to a din dictory, but its general purport may be gathered from the following verdict: "The jury are of opmon that being drowned by the collision between the Topaz anit the Bencom, and they levy a deodand of 1 s . apon the Topas. The jury cannot help expressing their unanimons opinion that great blame attaches to those in command of the Topaz on the occasion, in not making an immediate inquiry or look out to ascertain if any person had gone overboard from the collision; also their condemnation of the practice of captains of steam-vessels leaving the deek during so short a passage as that between (iravesend and London; and also that it is to be regretted that earlier measures were not adopted by the mate, who bad he command of the Topaz to prevent the collision:" On Tuesday the brig Isabelht, a Hamburgh trader, laden rith 1400 ynarters of wheat and a cargo of wool, was tranded near the Shadwell entrance of the London Dock. It appears that the vessel arrived off the dock about an bour too late for the tide, and by some mismonnegement was allowed to take the gromd in sueh a position that het seam opened, and it was donbtrul whether she conld again be flocted. Oa lhe rising of the wade, however, the was lifted by lighters alongnid: the dork, when her cargo was discharged, but it whas almost entirely spoiled, and the ressel was a perfect wreck.-An accident occerred to the Monnlight iron steamer, on Tresdar, an her tray from Londiobridge to helsea. Alter tininus pasengern at blackfriars, she proceeded through the secoud sreth of the bridge nhe wane into colisision with one of the barres moored ol the wharf, when the paddle-bor was carried away. Much alarn prevailed among the passengers on board, but the damage tone mas much less than was supposed: accident is said to
strengeh of the tide.

were also archdeacons and proctors present, representing
the archdeacons and clergy of the other archdeacouries the archacacons and the province. The business was of the usual rous tine character, and nothing of particular interest occurred. Raiways. - On Saturday afternoon a fatal collision took fingines and the Esquisite coarh. at the terminus at BridgeTater. Tre coaches taking passengers from the domntrins hase to crosing, was met by the engine as it was proceeding to turn, and came with such force against it that the coach
was smashed to atoms; the driver and the passengers were was smanlied to atoms; the driver and the passengers were One of them. Mr. Burford of Bristol, lies in a precarious
state. The engine was turned over from the violence of state. The engine was turned over from the siolence of ing fruit; both her logs were broken, and she died shortly afterwards. The horses evcaped, and it is considered extraordinary that all the passengers were not hilled, as the could be found. - An inquest has been held on the Rev. R. Ivy, who was killed on Tuesday week, at the Euston atition of the North Union Railway, by the collision of culars of this accident appeared in our last number ; it aill therefore be sufficient to state that from the evidence adduced it appeased that the gates of the turnpike road
were open and unattended, that it was not usual to sound the whistle on approaching the station, and that an em-
binkment prevented carts and coaches on the road being seen from the line. The solicitor of the company stated that the gate-keepers had great difficulty in keeping the names arpeared in the cunmission of the peace for the county, had threatened to puil them down. alleging that the cumpany had no right to obstruct the turnpike road. After several witnesses had been exammed, the jury re-half-yearly nieeting o. the Great North of England Railway was held at Darlington, being the first meeting since the opening of the line. After a dividend, at the rate of five per cent., bad been carried, the directors laid before the proprietors thie pr. ceedings of a meeting of railway
deputies, held at York on the preceding dar, at which deputatiuns were present from the (ireat North of England, Midland Cond North Midland, the North Midland, and the castle and Crrlite, and th.e Durham and Brandlng Junctions, widh wher partres interested in the extenston of the compury be tormed, R-solutions reere pas sed that a new of \(5011,0,01\). ; that interest at the rate of 6 per cent. per annum for ten years be guaranteed in certain proportions by the diffient companies to the holiters of shares, and that the origiual proprietors in these undertakings,
have the offer of the shares. The intention was to take up the Great North of England line at its junction with the Stockton and Darlington Railway, to follow the Parlia-
mentary line of the furmer, with ano tribing deviations, to Shincliffe, a diatarice of 1.5 miles, and then communiSati in wewhld be obtainol whith Gite-l.eal by means of the It was propmes that an Act of Parlanenent he obtained, pany, which woald have its management. Taded off Wi ishow equence of the severe gale which presteamer, in whom the Ent Thurshay the 9rh, the Merlin Lordstip aer Ilimaconite, wa- voilsed to put back. His agan on the 10 th. -The new L rrd Lieutenant, Earl de with erery demonstration of respect. His Excellency am-
until eleter; he then commenced his progress towards town in his own carriage, followed by an immense company, and attended by an escort of the 10 th Hussars. At
Ball's Bridge he was met by the Iord Mayor and the civic authorities. His Excellency here left his carriage and gentlemen on horseback. There followed in the rear up wrus o: (5) private equipages. The streets were hned the Castle, where the Prisy Council whe: assembled. The Bishop of Kildare, the Attorney-General, Mr. Platot, Mr. F. Shaw, the Chief Baron. de. As=oun as his Excellency was sworn in, a salute was fired from the battery in the
Pbenix Park, and a fen de joie from the military drawn up in College Green. Immediately atter the ceremony a Cambridge, and a larze numizer of the notility. - ti the weekly meeting of the Repeal Asociation, Mr. ()'Con-
nell said that severat letters had heen reccived frume warious parts of England, stating that the (Chartiots were abandoning Mr. Feargus O'Connor, and joining the Repeal with this Society if the Chartists got into it. He accused the Chartists of breaking up all Liberal meetings in England, and said that wherever the Chartists were to be
found, they were the decided enemies of the Irish people; in fact, of the moderate Liberal party all oser the empire The Irish people wanted no stimulus to repeal ; they were
proceeding as prosperously as ther could desire towards obtaining their views. He concluded this portion of his speech by mosing resolutions that the Secretary write to cautioning them against forming any connexion with the Chartists. The Chartists had affected to be reformers in England. for the purpuse of tetraying the canse of reform, stroying the callse of repeal ; in fact, they wanted to pat stroying the calse of repeal; in fact, they wanted to pht
down all public demontrations, except thooe in favour of chartism. He then brought forward a draught of the first
petition ti Pariament for the replell of the Union. He said, that he meant to bring forward a series of these petitions, and in the present one be had contined himselt to a
constderation of the means which had theen adopted to carry the Union. It was stated by the supporters of the measure that it was a shlemn branam compert het ween the two commeries, and thit Fishond wis bromet to abide not a compart, but an mfringement of their liberties ar ried by furce. frond, and bribery. It wav ant a monta - +i
 bring tan a different tophe. He thenprece ated theneest that mothmy Administration, that there was no hope for Ireland but in repeal, and in the formation of a new reform party, having for its ohjects the exten-ion of the franchise, the shorten-
ing of P .uliament, and the aholition of the remainder of the tithe-rent charge.-()n Turshay, a deputation, consisting of at least one thousard gentlemen of rank and atation entry, assemblel at the Rosal Escmanc, for the the Refurmers of Ireland, complimenting him oa his curduct in public and private life, and expressing regret tir presided on the occasion. The Duke of Leinster, wh dress, that it was signed by two hundred and iffy thousond names; fifty-four of whom are peers, twenty-nine hon-urables, twenty-five baronts, ninety-seren deputy litutenants, four hundred and two magi-irates, twelve nuruber of Protestant and Diswenting clergymen of rari-
ous denominations, and that a great number of signatures ous denominations, and that a great number of signitures
were still coming up fron the country. Lord Morpeth were still coming up frons the country. Lord and adres had been presented to him, not only because the names ct those highest in the land were appended to it, bat cecause he believed its sentiments were echoed by the frish prople the people, during the time that he had bern amonset them. He had f, what amourst them every thays that course of his iffe he should scize every opfortunty of evineng the att melment they nod esoted; and he oh ould treasere that address as the riciest lierfonom when he co niven to Lord Morpeth thesth place on Tuesiay eremong, in the Tieatre Rosal. The Murque-s of Lumicarde pree sided. and the festival was attended by \(\mathrm{Re}^{-}\)far-i- imm ait parts of Ireland. In reply to his ! asemy diank Lord Morpeth spoke at cubsiderubte ingsin, revard to Tre whole policy of the late Admintstration with that in which they found it. Hi- Lerdahif was frequently inferrupted by loud burs:s of aln! anew ad andory if tand. and
 fered, and all that the has and an tiat coumy ye in some ways to the Treakness. and in polhers th ibe atreastih of England-hos ber own exilastion and throes have rolled bacia upon that counces with feartal retributian. how she hay shed upou every page of their bienced hastory dazho from the word of Whallinwton, or that wiays apmo the lyre of Muore-I can form no aish but that tro such nations should enter into the fullest and frankest participation of every civil right and erery national privilege-
hat they shonld repose in the same liberties, and flouris from the same sources, and that they should be more and and the way to greatness. And, gentlemen, whatever may be the wjject-and whatever may be the spot upon which the energies of the empire may be called into actionwhether it is to plant our standerds upon the nalls of andatiar, or under tiee hatteries of Prhim, or ahove the ruins of Acre; whether it is to open the Euphrates to our to che, and the Niger to onr minsi naries-whether it is to culsolidate dependencies like Canada, or to stem the
southern seis with free institutions and with Christian Woiship, as Ireland has throngh all past records shared in very ligh gehievement \(\pi: \cdot h\) Enaln ned, and has let blood rree.y mingle upon the crest of the brihow and upon the hrougl on coema, so trust hat she is determine niny an age to share those bis of civitiation, and which will enthtab in the abodes of the Heathen the religion of the Cross. And now having cens led to sav thus mimet by the circumstances of the time and the oceasion, in taking leave of you as the mem acted, and by whom I have been supported, I can ouly express myunshaken reliance in the strength and endur pithies. I bellese that may best be resulved into an arden altarlment in the cause of ciril and religinus freedomnot in the cold letter, bur in the living opit-not in the formal language of the lips, bat in the deep devotion of the heart. fresed as such omr callse is grounded upon an immortal princople, and you may all rest assured that It will bring to its adherents no shame. As for myself individually, it is my painful. although at the same tume gratif ing office, to lad farewell to assuciates whose prompt hared and \(s m\) fren and smoothed the responsibilities of office-to Priends whoue warm ant steaty hindmest has glaudened
for vears the recreations, and enriched the storehouse of hindly and pledsant rewillections-and to the pernple, who ment, symputhy, and gratitiate, whe never I hare the means Firmanach. - On Saturday a meeting of magistrary was onnvened tiv fidf.enh of the county tenant, for the farpuse of convering to Sir Rubert Pred their prosest az mast any prothemona on the ant commected with the temme of Mr. Axam rom the shateralty of the sumnty A deament was accordmyly draxn up and thuthes hy fine act athodra to: and conctuling weth the nity of enterme our desidedpentuat incondemnation of an CFiensive se th ining been atfixed to the return of the wri connect ourselves with the persoun or persons who cuuld be gulty of any art which could impair the kindly feeling that, up to the pre-ent period, have sul happily existed in Fermanagh betneen alt classes of her Majesty s suhjects does greater tranquallity or more marked obedience to the does greater tranqualisy or more marked obedience to the
haw erist than in our lovel and united comuty." In acknowledging the rereipt of thes protest, Sir R. Peel expresses his
 rage throughout Ireland provol kingand irritating demonstrations of party feeling, and to remove the causes of dissers sion and ill will: and that the proceeding which the magistrates have adopted is calculated to give strengti and the right hon Baronet, "fthat the course which I have firmly resulved to purste with respect to the administration of Irish affirs will meet with the cordial support of those whose friend! co-operation is almost essential to its -ccers. My firm perillasion also is, that it will be fol lowed by consequences much more important than any that the genernus example of forbearance, and by allaying angry reelings, it will go far to paralsse the agiration by which Ire bend to triends of that country whateser be theirreligiousdistinctions), to lay the foundations of internal peace and social improvement."

\section*{A.OFLAND}

Inverness.-A melancialy a cident oceurred in this ueichhourhout 1 .st Tecel, whin.h tids carried distress into harce and renpectajue cirele. On Mondar atternoon Dr. Basil Trtier son of the late Ales. Fraser Tytler, Eaq. init nephes of the rreant sher:ff. was in a buit on the thel. The boat ind rat into a strone currens. and Mr Eraser, fening that he wuld not in.lid on, camed is Dr Tr fer to come to hassitance. On the latuer remanim to the same part of the boat, his additional weight brough
is to the level of the water, and when they began to it immediately filled. Mr. Fraser contrived to swim
 a tuird attempt the buat upect, and the hationtunte gen-
 tine stream. An aiarm \(x_{i s}\) given. int the stuwgtio and
 town, and huatrel if pequ: required to the old Uruge;
 however, proved unavailing. ard there is every reason to suppose that the hody was carried out to sea. Dr. Tytler was only 26 years of age; he had studied medicine ander Sir Charles Bell, and war already distinguished for hiis profemsional acquirementa

Forres.-We learn by the local papers that in the late heavy rains the burn of Porres was so much swollen that it burst over the embankments in the vicinity of the town, and inundated the whole of the low fields. The waters ran along the Grantown-road, passed the new market green, flooding the bouses to the depth of 18 inches, Below the Castle-bridge the road was partly swept away, and the Mossett now occapies the site. The corn-fields in the vicinity were also partially laid onder water, and by the sides of the road masses of stones and gravel wer brought down. It was at one time feared that the Star well and Castle bridges would have been destroyed b the trees and other floating materials which were accumulating above them. The burn of Altyre swept a way two or three bridges lately constructed on the estate of sir W G. Camming, one of them a stone bridge erected only athour mon larger than nsual kept within its boundary although man at an the ustal, kept within it Mor wer carried off, and a considerable portion of the land in that district submerged.

Kirrie: wir. - The weaving trade in this town is a present in a very depressed state. It has been more o less so, indeed, for the last four or five years, but it was never worse than at this moment. Besides the scarcity of thoseyment the wages are also ext the average wages do not exceed five shillings per week. As might be expected this state of things is but too apparent, not only in the scanty furniture and clothing of the people, but in their dejected spirits, which have been exhausted with uselessly hoping for improvement. The neighbouring towns of Forfar and Alyth are also suffering from the same cause.

\section*{SPORTING. \\ doncaster races.}

The Races commenced on Monday, under innlifferent anspices arising out of the sariety of circumstances which have occurre during the last three or iour nomiths to diminish the ordinary at been the general election, and the depressed state of trade in all purts of the country. These causen maturally aftect Doncaster a character, may be mentioned. Many of the iormer supporter of Doncaster have settled their accounts, and some, whose name were wont to appear as its zealous patrons, have withdrawn altogether from the turf. This is not all: the extraordinary ease witin wich the Derby was won destroyed the St. Leger as a bet of the setting would bave produced the same efrect. Another untoward eircumstance was the omission of the stewards of \(15+0\) to appont theirnuccessors, so that on the whole, the present was hardiy expected to prove a goor meeting
hist io held the ist hene, six races in apperance having ear but broke it to the in reality, and those of a very unpretending character. The company was thin, the betting dull in the extreme.

\section*{SATURDAY, SEPTEMBER 25, 1841.} MEETINGS IN THE ENSUING WEEK.
The opposition offered, both in and out of Parliament, to the plan entertained by Government of
making some extensive changes in the Royal Gardens, connected with which is the leasing out a portion of the old kitchen-gardens attached to Kensington Palace, was last week briefly adverted to (p. 61!). The subject was on Monday again mentioned in the House
of Commons, when Mr. Wakley expressed a wish that the Right Hon. Baronet at the head of the Government should himself visit the spot proposed to be built upon; in which case the plan, he was certair, been on the spot, and the result of his visit was decidedly favourable to the plan. "The public were at present wholly excluded from the ground to be built upon; and it sheuld be recollected that it was proposed to build villas, not a continuous street, which would assure to the neighbourhood a more healthful circulation of air than a long range of kitchen-gardens with manure lying upon the ground for half the year." Mr. Wakley, finding himself beaten upon this point, admitted that villas might be advantageous instead of prejudicial to the public; he, however, feared while they were taking away the gardens attached to Kensington Palace, the Royal inmates would by and by come before Parliament and demand a provision for new gardens. Whereupon, Sir T. Fremantle assured the hon. gentleman that the Royal inmates of Ken sington Palace derived no advantage whatever from Kensington Kitchen-gardens; the produce being supt plied exclusively to Buckingham Palace and Windsor Castle; so that there was no ground for his apprehensions. The bill to enable Government to lease out the ground in dispute was then read a second time, and has since been passed.
It would, we think, be an improvement in the manner of discussing public questions if those who enter into them would first make themselves acquainted with the facts concerning which they debate. The bit of ground the leasing out of which was to be so detri-
memal to public interests. so) injurious to London lungs, so fatal to the ventilation of the good peopl of Kensington, and such a shocking piece of brigandage on the part of the Commissioners of Woods and Forests, consists of about 20 acres, enclosed and intersected with high walls, lying at the back of the stables of Kensington Palace, and reaching to the Bayswater Road, where it contracts the carriage-way, and deprives the inhabitants of the opposite side of the road of both air and sun. Its interior is occupied by a wretched orchard, and some fruit and kitchen gardens, once raluable, but now worn out, unproductive, and ruin ous. Between this plot of ground and wht arc, prowhich the horses of the Royal inmates of Kensington Palace are turned out to graze. Although attached to Kensington Palace, and formerly intended for its ser nice, these old Kitehen-gardens have long been used exclusively for the supply of the Sovereign ; and the tridents in Kensington Palace have had no more to o with them than the hon. Member for Finsbury.
It appears that Government, having been made arare of the inutility of maintaining these Kitchengardens, was desirous of suppressing them, and of conerting their site into a source of income, to be applied of her Majesty, without the harticultural establishments of her Majesty, without applying to Parliament for asfrom the gates of the Falace in Kensington-street to Bayswater, turning it to the west so as to avoid the Palace-stables, and letting out the ground now occupied by the Kitchen-gardens in question, for villa resiPark. At the the manner of those in the Regent's Park. At the same time it is intended, as we understand, to pull down the hideous old boundary wall in Dayswater, and to widen the road there considerabiy. connected by a good drive and a series of handsome vilias, in exchange for Kitchen-gardens crowded with dying fruit-trees, and redolent of manure. It is to this exchange that gentlemen have bestirred themvelv to get ap an opposition !
Few persons, we believe, are aware of the real state land they are Gardens, or know in what parts of the land they are to be found. Who, indeed, in this counThe grounds of a Roygl Garden, properly so called ? The groands at Windsor named the Slopes, or the are not gardens, any more than the open space behind

Buckingham Palace, in the state in which it has been hitherto maintained. The Slopes are plantations, and the so called garden at Buckingham Palace is a private "square." The only thing approaching a plea-
sure garden belonging to the British Crown is the geonetrical flower-garden belonging to the private apartments of Windsor Castle, which, however well kept and gay with flowers, is as guiltess of shade, or other garden attributes, as the Castle courts themsel res Kew Palace, indeed, had once a Botanic Garden, but that, after an abortive attempt on the part of some gentlemen connected with Lord Melbourne's Government to break it up, is separated from the Crown, and is now transferred to the public; and as Hampton Court is no longer a Royal residence, the fine old neglected gardens there need not be mentioned.

Nevertheless, there are Royal Gardens. There is one at Brighton, of microscropical minuteness ; there is, or rather was, another old and worn out at Kensing ton for vegetables and fruit ; another, worse, at Hampton Court, for fruit and vegetables; another, better at Kew. for vegetables and fruit ; and at Windsor there are gardensat Maestricht, Frogmore. Cumberland l.odge, anil Cranbourne, two of which are no better than swamps, and all for the same great purpose of furnishing her Majesty's cook and confectioner with materials on which to exercise their skill. Seven ancient establishments are thus maintained at the cost of the Privy purse, either unproductive or distant from the places where they are required: for it is long since any sovereign of England has lived at Kensington, Hampton, or Cumberland Lodge. Can anyone, then, blame the Government which is desirous of putting an end to such a state of things, of suppressing so many bad and scattered girdens, and of replacing them liy a few which shall be protuctive and near at hand? Such we understand to be the plan now in contemplation - to suppress Kensington and Hampton Court Gardens either wholly or chiefly, together with those scattered over the vicinity of Windsor; to render the fruit and kitchen garden at Kew effective for the supply of Buckingham Palace, and to form an entirely new one at Windsor, for the service of the Castle. For the latter, a considerable sum of money is required; and we think that Government worthy of support, instead of censure, which defrays the expense by an advantageous application of Crown land, without coming to the country for the means.

Fo consolidate and improse the Kitchen-pardens is, doubtless, a lesirable object; but we trust that (iovernment will not stop there. We also contidenty antici pate the amouncement of ant intention of dorming a mightiest of the princes of the earth. The finest gardens in the world are attached to the residences of British noblemen ; and it is disgraceful to the country that the Queen of England should be deprived of luxries enjoyed by so many of her subjects.
In the mean while we are rejoiced to find that material improvements are in progress at Windsor, a will be seen by the report among our Garden Memoranda of to-day.

Some short time ago we gave a prominent place to anservation of one of our correspondents, that the Bay-tree possesses the singular property of recovering the healthy green of life after being to all appearance dead. This has elicited some remarks, of which a part has already been printed, and to which we now beg to add the following letter; premising, however, that the writer does not appear to apprehend the exact atature of the original observation. It was this : that leaves wholly brown, and seemingly, therefore, deal, were carefully marked; and were found to regain their green colour by slow degrees, the renewal of verdure beginning at the base, along the midrib, and thence spreading gradually to the circumference A bout this there could be no mistake, because numerous leares were most carefully marked, and entire brownness was found to change gradually into green. It is doubtless probable that life was not wholly extinct in these leaves, althongh it seemed to be, for we cannot suppose that a lear actual what indicates restored to life; bat the question ceen colour of a leaf does not? and the practical application of the fact is to warn us against cutting down the Bav-tree because it is brown and, so far as external appearance can be trusted, past recovery. Having premised thus much, we leave our correspondent to speal for himself.
Nothing has transpired since you first ventared to concur in opinion with. Mr. Radford that the Bay difered fou other evergreens in the manner of my supposition that the gase was oserrated, and that further and more accurate hiservation would show the fallacy of such conclusions The qualined manner in which Mr. R. spears of the pro gress of reviral p. 597 ), inclines me to the source of he fallacy I beliere to be ia that gentleman": Laving mistaker the sigas of paytial injury ior those of progressire quite killed, not because it is beginning to revire; and a
branch which is alive at the boltom and dead and breaking off at top, has still a little life and a little green bark in the middle; and this is just the state it was in before the proress of recovery began. Mr. R. sees his plant gradually recover its healthy appearance, by the lropping of it dead leaves, or their being whipped off bs the wind, and the protrusion of new shoots, and some small revival in injured parts not past recovery i and because he find leaves with green central parts and brown edges intermixed with the more vivacious parts of the shrub, he mistakes this for evidence of an intermediate stage of revival. In same part notice of the week before last I said that the Fis, and I might say the Myrtle and many others; and the same partial and gradational power of recovery. Professor Henslow says the same of Thuja and Juniperus; and Mr. Collier says that Portngal Laurel revives in like manner. As far as my own observation goes I should say rather that the Portugal laurel and frosts the circulation of their juices is stopped, and their leaves droop and are almost shrivelled; but they quickly recover, because their vessels are not burst and theit organisation destroyed. In the Bay, as in all the others, it appears to me that if the medulla is destroyed there can
be no revival, or none but a feeble and transient show of be no revival, or none but a feeble and transient show of
it, in either twigs or leaves. I could send you specimens of the several conditions of parts on which I have observed the same appearances as Mr. Radford has done: but with the opposite inferesce. I believe them to be the gradations of decay or signs of injury, he of resuscitation. Practically, it is well to observe that where, for screen or shelter, it is advisable to preserve as much of a frost-bitten Bay-tree as possible, the chance should be taken for its growing up again through its dead parts. But where you wish to substitute a more sightly object, and have a handsome green shrub, which will be the case in a single senson, in the place of a browa and blighted one, it is best to cat it down. This may be done, I am certain where soil and situation are favourable, with the sur prospect of a revival, like any other of its tribe; or a "Bay-tree" of the Psalmist, "planted by the rivers."P. \(\boldsymbol{P}\).

The press of other matter compels us to defer our concluding observations upon a fruit-room.

\section*{ON THE VINE.-NO. 11.}
2. Border Making.-A most important point in the successful caltivation of the Vine, is making the border. Unless this is properly done, however ezcellent the inter nal management, however good the con-truction of the is not right at the root, all the expense, labour, and atention will end in disappointment. The site of the Vinery should, if possible, be neither too high, nor too low though of the two an elevated situation is to be preferren But whatever the situation is, the border mast be well and effectually drained. If the situation of the Vinery is in a fat country, the frout wall ought to be as high as the border is deep. In this case I take of onily the surface spit of the soil, that is, about nine inches ; but should the situation be elevated, I talke out as much more-- my of ject being to raine the border above the nataral level of the sarrounding soil, but this is not so requisite in a high situation as in a lor one. The width of the border need not be more than 20 feet, and should not be less thas 15 feet. It is a good general rale to have the border the same width as the houses. The width of the horder being determined, and the soil remored, the top spit, if it be good, may be mixed with the compost, 1 chen slope the bottom with a gentle descent from the houses, makiog it pretty frm. This fall the floor of drain, extending six inches below the level of the floor, and sir inches above it, br one foot wide. The sides are built in the pigeonbole manner, to atlow a ready passage for the superfuow water. I have this floor paved with strong slates or thin flage, and then it is covered all over with broken stomes or brick ends about the size of a man's fist. When these are levelled, I cover them either with small twigs, bean-straw. or thin turf land with the grassy side downward. This is © prevent the soil from falling amongst the stones below. it is now ready for the compust. The caseme, ciopped and thormichly mised with one-fourth raten horse-durg, and onefoncth roten leaves or one-wini dume when leares cannot be had. Boges are escell. nt. brwinn small, and mixed in the compust, but not indspensable. The question now is, how deep shoull the harder se? I ama question now is, hot deep shou. Vines, or any other frnit feet in a lure damp situation, or ciren.or the
 compost slates, against the houses, and keen the burler at teast size inches sbove its intended level. This than t be least siz inches sbove its inkended earth to settle before the planting time. In this place I take the opportunity of stating my opinioz on cropping fruit-tree borders, and more eapeciall It the vine bordes. I strongly reprobate grown, but the injury they do to the Vine is incalulable nut oniy drawing the rourtishmint at of the z-ishat causing a good deal of treading, more than is necessary where no regetables are grown. There ought not to be a foot placed on the border; whenever it is needfal to wati uponis boards should be laid on in the places where the person years, with the help of a covering of duag every maminy
to be pointed in with a three-pronged fork, when the win-
ter is orer. The Vines I intend to plant I place in a forcing-house early in spriog, in baskets lined with thin thrit top buds only are allowed to push. I keen two for fear of accidents, removing one after the Vines are planted and quite safe. As soon as the warm weather of for planting. Holes sufficiently large are opened, the Vines are brought out one at a time, the baskets sunk and left to rot, only just covering them; I then give good watering, and secure the Vines to the rafters, which
frishes the operation of planting.*-T. Appleby, The Fence, Macelexfifild. - (To be continued.)

\section*{RURAL CHEMISTRY.-No. XXI}

The substances requinite for the growth of plants may be classed under two beads, - those which by combining together form various organic matters, such as lignin gum, albumen, glaten, starch, \&c.; and those saline and earthy substances which heve been before alluded to as entering into the composition of all plants. The organic parts of plants are eniirely furmed by the four elements, oxygen, hydrogen, nitrogen, and carboa, and soil, in the supplied to the plants, substances are always present in greater or less quantity a the air, and from the commoa aimospheric chages the fall of rain and dew,-are necessarily gradually brought down to the earth. The inorganic substances which are absorbed by the roots of plants dissolved in water are almost entirely obtained from the soil exclusively. When we burn plants or vegetable substances we invariably find a quantity of ash remains; this consists of saine and soil on which the plants grow. The ashes of some plants are always found to contuin particular salts, the, presence of wich in the soil is evidently of considerable importance of the heal thy growth of these plants. The continual growth of plants on a soil of course diminishes the quantity of these saline matters, and the soil would pecessarily become gracrops, unless either the nature of the plants cultivated on were from time to time replaced, either naturally, by the decomposition of stones, or artificially, by the application of manures. There is one source, however, whence soils derive a continual supply of saline matters, which is the

The water constanty evaporating from the surface of the sea always tolds in solution a very small quantity down to the surface of the ground by rain. In this way the soil, often to a very great distance from the sea, ob the other saline substances contained in sea-water.

With respect to the natural sources of saline matters is the soil, it mast be observed that although their natare position of the subsoil and stons substratum, yet it freposition of the subsoil and stony substratum, yet it freficient in some is rich in; and in consequence the soil becomes greatly
improved by misture, or by spreading over the surface some of the decomposing stones dug from below. The system of subsoil ploughing, so successfully practised in many parts of the country, is connected with this subject and depends mainly upon the advantages derived from ad mixtare of the subsoil with the surface. In this operation plough is employed to break up and pulverise the soi oo a considerable depth below the surface, without bring ing the soil so disturbed up to the top; by this process the permeablity of the soif to air is greatly increased, and to be mixed with the ordinary soil, by the use of a suitable plough. Part of the benefit derived from this operation is doubtless due to the greater openness conferred upon the soil, which permits a more perfect access of air and moisture, and allows the roots of the growing plants more easily to penetrate throughout it; but at the same time advantage is also derived from the greater supply of saline and soluble earthy matters which are thus made available for the use of the plants. We are apt to think that a soil must necessarily contain portions of those substances, which eater into the composition of the substratum; but this is by no means always the case. Thus the surface soil of a chalk district is not unfrequently nearly wholly destitute of calcareous or chalky matters, and soils in such over the surface vnor the the surface soil, for by a judicious use of the former, the soil itself may frequently be greatly improved and probably ome saving effected in the quantity of manare required for the land.
The artificial sources of earthy and saline compounds are very numerous, and their applicability to particular how usually depends apon local circumstances; in general salts at the same time that thes yield ammonia and carbonic acid to the growing plants. Asies, bone-dust, and * Hothouses in which the Pineapple or ormamental plants are
growa, are ofter made use of as a hinery. Such houses ought
to have the front windusis move to have the front windows moveabie, to ahiow the \(\delta\) ines to be
drawn out, and fully ex posed, as soou as the wood is ripented.
The hest plan is to nave a doubse front, he imner one to be reout, ir at ietst during severe frest. t
solely to the Vine, which is by far the bent houses are devoted Be moreabie, and be taken of daring their period of reat. should
many other similar substances are chiefly valuable for the
saline and earthy matters they vield; whilst dung and the saline and earthy matters they yield; whilst dung and te
more common hinds of vegetable and animal manurcs, yield in addition ammonia and carbonic acid. Saline subatances assist vegetation in two ways; some are directly absorbed by plants, whilst others are useful in causing th formation of different salts, without being theinselves ab sorbed by growing vegetables.
Many plants are found to contain peculiar salts which d not exist in the soil in which the plants grow, bat which have been formed at the same time with the gum, sugar, and other vegetable substances they contain. These saits are lime, and magnesia, which are derived from the soil, combined with peculiar vegetable acids formed during th growth of the plants. There are a great number of these vegetable acids, which differ in properties and chemical
characters, but agree in being all composed of the same characters, but agree in being all composed of the same
four elements, or some of them, which constitute all organic substances. These acids are formed in the organs of plants by the combination of the elements of carbonic acid, ammunia, and water, like gluten, albumen, and the other similar substances; but the salts of these acids cannot be formed in the plants unless the bases which constitute them are present in the soil in a state capable of being dissolved by water and absorbed by the roots of the plants, and not already in combination with an acid have for the peculiar organic acid generated by the plant These salts are not found in the ashes of plants, because the organic acids, like all other organic substances, are decomposed by heat, and hence in the ashes of plants w only find carbonates of thone bases which were previous combined with organic acids; the bases having combine with carbonic acid, after the decomposition of the vege table acids. \(-E\)

\section*{ENTOMOLOGY.}

ApHidss.-The typical genus of the Aphide, whic e may designate by the name of Aphis proper, is dis inguished from other genera of the same family by the ength of the antenne, which frequently exceed that o he body, and often equal that of the wings; these antennæ are also setaceous or briste-shaped, but never consist of seren joints, and are inserted near the eyes o the insect. The proboscis is comparatively short, composed of four or five oblong joints, longer and more slender in
the females. The abdomen terminates in a cone more or less pointed, and bears two tubercles or tubular processes, which are either longer or shorter than the extreme poin of the abdomen. As the species are numerous, a convenient subdivision of them may be based upon this las character; those Aphides with tubercles projecting beyond the abdomen forming the first, and those with tubercles not extending beyond the abdomen forming the second division. We shall now proceed to give some account of each species, as far as the same has fallen under our observation ; premising nevertheless, that it is not ou family, for such an undertaking would extend to an almost endless variety of plants apon which they are found to subsist.
First Subdivision: such as have Tubercles Longer than

\section*{the Abdomen.}

1st Species.-Aphis Rosse.-The cultivator of Roses need not be informed that the beanty of his flowers and the health of his plants are materially affected by Aphides of a considerable size, which attack the under side of the buds and tender leaves, and surround the young shoots in immense numbers. Their usual colour is light-green, with egs, antennæ, and tubercles of a dark-brown. Among them a few individuals may be found of a reddish-brow colour; the largest of these appear much swollen, and as they are never seen to produce foung in this state, it is presumed that they are oviparous females. They fre quently cast their outer skins, which may he seen hanging white the stems of the plants they frequent partake of similar form with the old ones, their parts are not fully developed until they have undergone repeated sloughings. Both sexes of this Aphis are occasionally winged, but the majority of such winged insects as appear in the autumn are males ; these are remarkable, even before they become winged, by a considerable enlargement of the thorax and an indication of imperfect wings. The abdomen of the males has a double row of black spots on each side, and in each sex, when they have attained their perfect state the abdomen is terminated by a small semi-transparen tail or style, inclining rather upwards. The wings are transparent and iridescent in certain lights. We may frequentiy discover singuiar excresences on the tuberctes, and sometimes on the antennæ, of these insects, which in all probability are the effect of disease. A full account of the peculiar babits of the Rose-Aphis will be found in a paper by Dr. Richardson, in the 41st volume of the Philosophical Transactions, to which the reader is referred for further information.

2nd Species.-A phis Lonicere. - This is an insect of more oblong and less oval form than the last ; it is foun Woodbine, and is generally of a dingy green colour; the antenne sod tubercles are shorter than taose of the Fuse Aphis, and each individual has two dark stains, one on each side of the body, which may be rudiments of future wings, although we have not been so fortunate as to find it in a winged state. The abdomen ends in a small tail or style of the same colour as the body; the legs, tubercles, and antenne are all of a darker hue.
beneath the leaves of the Morello cherryecies found appear, when infested, as if they bad been sprinkled with soot; their colour, howeser, when seen through a micro scope, is a dull pink, turning to a reddish-brown in the
older ones ; their eyes are black ; the antennæ, legs, and tubercles, if anything, a shade lighter than the bodr their form is ovate, with the head rather large, and the abdomen somewhat elongated, and terminated by a short pilose style; the tubercles are placed nearer to its termin. which appears in September, is nearly of the male but darker about the head and thorax, with large transand iridescent wings.
4th Species.-Aphis Coryli-is found upon the Nit. tree, but seldom in any great quantity, and it does not seem to be very injurious to the plants it infests. The antennæ are longer than the body, and it generally carriea them male-green, and both sexes are occasionall colour is of 5th Species. - Aphis Dahlime
Aphis occasionally infests the involncre amber-coloured of the Dahlia; the eyes are of a dark blood-colour. tubercles, and antennæ of the same colour as the body the abdomen is rather elongated, and, in the perfect insect, terminates in a short thick style. The skin of this Aphis microscope the microscope, the red eyes of the young Aphides may be
seen through it from within. But few males are visible they are black, or very dark-brown, with transparent wings, the costa and stigma of which fre semi-transparent, and of a fuscous hue
6 th Species.-Aphis Sonchi-A small species of a greenish-brown colour, found on the Sow-thistie, with the antennx, tubercles, and legs are nearly transparent.
7th Species.-Aphis Ribis.-Immense numbers of this species may be found in July and August clustered like bees around the young stems of Red Currant-trees; they approaching nearly to a black at a more advanced period. The male is a black fly with transparent wings : the costa and stigma of which are opaque, and of a yellowish-colour, and pilose texture. These insects emit a very powerful smell, somewhat rese
Spanish Chesnut tree.
8th Species.-Aphis Cardui.-A dark-brown or almort black species, congregates together in dense masses upon the stems of the common Thistle; the antenne are as long as, or rather longer than, the body ; proboscis short and tubercles long.
9th Species.-Aphis Ligustri.-A very small but destructive species, injurious to the foliage of Privet hedges; they are at first of a straw-colour, with brown ejes, antennæ, and tubercles; but they become of a dirty-brown as they advance in age. I have not as jet detected any winged individuals among them.-Oswald Mosley, Rolles ton Hall.

COTTAGE GARDENS.-No. XXXVI.
ATtind to the sowings that were made last month, and see that the seed-beds are kept clear of weeds, and the young plants protected from slugs. The Cabbages will most probably be fit for transplanting, and are to be treated in the same manner as directed at page 259, for those sowa in spring. An open situation is always better suited for rearing them than one that is shaded; but in either case it is desirable, when pricking out the plants at this season, to give them plenty of room, so as to geep them dwarg the approach of winter. The great object of transplanting is to check their rapid growth and prevent them from running to seed in the spring, which they frequently do when suffered to remain too long in the seed-bed. Go orer the Spinach the first fine das, and thin the plants to proper distances. Attend to our former directions on this subject as given at page 196. This is generally consideres to be a good time for making a plantilith many prefer waiting until spring. Where our suggestions for growing them in the manner described page 485 could not be conveniently adopted, we should now recommend the planting of the runners that wein then procured, either in a bed, or in the borders adjo. the principal walk, to which they will serve as an edging The latter situation will probably be the most adna tageous for them, and when this is determined on, let the ground be well maured and dug a line is then to be stretched ang the borders, at about fifteen inches from stretched along the borders, ahich will now be fine rooted the waik, and the rusly plants, are to be carefully removed a trowel at the distance of fifteen cr eighteen inches from one another. few may remain in the nursery bed until spring, to repiater. any failure that may happen in the couse
The flower borders now begin to show sowe sig them autumn, and will require frequent attention to neat and orderly. Such plants as bave done and have and not wanted to ripen seed must be cut down, ansighty their stens removed whenever they hecome unsiection Others again, like the Dablia, that are still in perfeud is should be trimmed and tied up; and if the ground the weedy, run the hee through it and endeavou tonspant any Whole as neat and clean as possible. Transf, the place Pinks or Carnations that have stred flower next season. Prepare little patches for planting Crocuses, Anemones and any other favourite spring flowers, which may put into the ground or Mersed,

HOME CORRESPONDENCE.
Potatoe Crop.-A correspondent having requested inormation concerning the reported failure of the Potatoe formation in some parts of Scotland, Mr. Mackenzie has
crop favoured us with, as far as I am able, to oblige 6 A Young Gardener;' there is nothing gives me greater pleasure Gardener, giving and receiving knowledge. I believe that a partial failure has taken place in the Potatoe crop in some parts or for a farmer's grumbling. If they would grumble and get on, their discontent might be endured; but it is too bad, after having violated almost every physical law with ascowling countenance and accuse High Heaven as the cause of their misfortune. As far as my experience and observation go, 1 broduce a failure in the Potato crop. I will point out some of them, in order that farmers and others may escape an evil that is fraught with so much
danger to the community. It is a well-known fact that manger land still remains to be drained, and often upon such land will farmers risk their Potato crop, and in seasons such as the present, it is not to be wondered at that their themselves most expeditiously. They must give their Potatoes the same system of working in a wet season as they do in a dry one; and after their land becomes like mortar from the treatment the Potatues are frequently earthed up when the soil is full of moisture; the consequence is, the bottom and sides of the drill become as smooth as a new-made flower-pot from the hand of the potter, the sides soon harden, and the spongelets of the being a beaefit, is the source of much evil; the drill is like an elongated flower-pot, without drainage, containing stagnant water. Would not the iron plough shed tears of failure will also take place sometimes in well-prepared ground; this will happen from the manner in which the sets are used after cutting. Instead of putting them thin upon a cool floor, they are often heaped in a corner of the Potato-house, as if it was necessary they should undergo a fermentative process before planting. In this case it is not very likely that a healthy shoot will come from a set in which the germinative power is nearly extinct before
planting. There is another cause which I think has had a bard effect upon some part of the Potato crop this season. and during that time Potato planting was going on, the sets were often exposed for hours under a burning skythe thermometer ranging from \(100^{\circ}\) to \(110^{\circ} \mathrm{in}\) the sun, covered up in hot earth, and remaining so for several days afterwards. One would almost as soon expect a hen to Potatoes frens from boiled eggs as look for a crop of principal causes of the failure complained of. II am sorry that anything which I have written should have nettled the Chronicle with so much obliquity as he appears to have read some part of my communications, or it wil prose of little use to him. The only advice that I will
give to such persons as may chance to fall in with such things as Urtica urens, is that of old Aaron Hill, which runs thus,-

Tender-hearted stroke a Nettle,
Twill sting you for your pains
Seize it lilhe a Lad of mettle
It soft as silk remains.
-Peter Mrackenzie.
The Club in Calbagres.-I am obliged by your sugges tion respecting the club, of which I sent you specimens,
and which I shall be happy to try, as well as that suggested by Mr. Hislop. I do not mean to doubt the success attending the latter, but I may state what has occurred to me, which is as follows:-In planting some Cauliflowers in the spring I was advised to use lime or lime-water; I accordingly prepared a quantity of the latter, and had all
the plants in one compartment diped in this mixture; the resalt was, every plant died. I have also used sootwater, from which \(I\) find benefit, but not a cure--C. \(W\).
Management of the Amaryllis.-Having more than once observed directions in the Chronicle for the cultivation of Stove Amaryllis, which are likely, if my expeinduced to send you a few remarks thereon. The point I allude to is the direction to re-por them as soon as they show flower, or before they begin to grow. When first I cultivated Amaryllis I pursued this plan, to the destruction of many of my bulbs, and whenever I have recurred to it
since, or seen it tried by others, the same effect, either of complete or partidl decay, has fillowed. If A maryllis be shited into fresh pots, either suon after the leaves die off, or just before they begin to grow, the whole of the young roots perish, and decay so begun extends to the coats of
the bulbs, forming a canker, which it is almost impossible to cure. The management which I shoulla recommend is invariably to re-put such bulbs as require it when their Juliage is in full vigour or still growing, say in June or received. When the follage dies at the tips water should be gradually withhetd, and the bulbs kept dry till the flower-buds appear. When the stern is half grown water mat be administered very moderately, but the plant should plantare I huere refer to are Johusoni, psittacina, regina, and the mumerous hybrids betwen these and anlica and
equestris; Amaryllis aulica and a speciea from Brazil newly altied to it never die down, and should be grown
or mach sun. They require very large pots, and should the decidus species possible, and Dever aried off, as almost resembling clay, is best suited to these plants, and of course the pots should be well drained. As far as I have observed, most Amaryliis (Hippeastrum, Herbert) make root at the end of summer, and it is in the fibres
thus made that the deposit of sap takes place to sapply the future flower. When Mesars. Colvill some years ago adopted the plan of taking up their bulbs and laying them on shelves till they flowered, their practice did not differ materially from that now recommended, for the fibres were preserved, and the plants not potted, till the buds had started well; they were then potted and lept rather diy; under this treatment, however, they did not flower as strongly as when kept in pots. The Amaryllis is a glorious tube now much neglected, principally, I believe, because from mismanagement they fail to flower. While on this subject I may mention that by following the Rer. Mr. Herbert's directions I have never failed to flower Brunvigia Josephina every second year. This year its head of
flowers is 9 ft. 9 in. round, and about 2 ft . 6 in . bigh. Hav flowers is 9 ft . 9 in . round, and about 2 ft . 6 in . high. Har ing two or three bulbs, one or more blooms with me every autumn. The treatment is simply thus :-Prant it in large well-drained pot, a remove it to a pit or frame, exposed to the sun, and kept shut. The pot must stand in a pan of sand, which must be sept always moist. The flower-stem will appear in July or August, and flower early in September. It should then be cut down, and the plant removed to the greenhouse, bu by no means plunged in bottom.heat, as recommended in the Chronicle some weeks ago. The appearance of the leaves is delayed by flowering, so that the plant seldom
completes its growth the year it flowers, as in the altercompletes its grow
Rablits.-'The following method of destroying rabbits has been adopted for some years in this neighbourhood (Lancaster), and may be serviceable to your correspondent in p. 501. The trap, fig. 1, after it has been once set requires no resetting, so that let the rabbits come ever so
fast, it is always ready to receive them, and it is of no consequence on what part of the trap they come, for as soon as they are on it, it moves with them and down they go to the bottom, when the trap resets itself. Fig. 1, \(c\), represents the top of the trap, a kind of platform, even with the surface of the ground; it may be made of any depth from \(a\) to \(b\), so that the moving part, \(c\), has room to work when rabbits are in the trap; this part moves by It works in a similar manner to a scale beam, and always comes even with the surface when nothing is on it. After the rabbit has fallen into the trap it will try to escape, and easily secured. a knock or two on the moveable platform will frighten them into it. "R.C., in p. 517 , states, that colour will painted and sanded, which will be a sufficient inducement to them without placing greens on it. Fig. 2, shows the working part, \(d, d\), in fig. 1 ; \(\mathbf{A}\) is the frame, and \(B\) is the moveable part. In fig. 1, the earth is removed to show \(a, b\), and \(f\), a run which leads from the trap to the bag net at \(e .-A\) Townsman.

Canker in Fruit Trees.-In the last number of your Chronicle, I find the following passage in answer to Country Vicar: "The trees (apple trees) may be beaded - down without hife being tha werll be apt to canker." This is one of the most important pomological (if not more ex is onsive) ohservations that I have ever seen, and I would beg to ask you, with a sincere desire to be instructed, upon whit you formed the assertion; is it upon theory, or is it upon actual practical ubservation? We all know the ex tensive nischief canker produces upor fruit trees, and nould submit to you, as cennected with the Horticu!tura Society, whether, if there is any ground whatever fur tie opinion rou have erpres-ed as above, it wuhil nut worth therr while to make estense coanner in which matter. The barbaruus and cous explat by sorto apple trees are cut, ind headed, and mutiony has often surfarrier grafter, who abounds in this coeatr, le, I no longer prised me; but if four ebsentapioluctive sate in which hundreds of orchards are to be found, where no expense has heen spared; but the trees hexted in the spring, and regrafed without merey. Suppusing your ubservation to be well founded, does it uet almust fullow as a consequence, that siace grafting must be done in the spring, and ahways requires more or less heading the practeabe? Should you think these obsersatious of sufficient consequence, perhaps you will contrive to give their substance,
public upon the matter.-Yours, An Orchardist, Hereford apple-trees before winter (we may siy in November or December), was made from ample experience, and was anconnected with theoretical considerations; as was als the additional statement, that "if deferred till spring they will be apt to canker." A new head can be formed much sooner by grafting old trees, than by budding them. Our correspondent's objections to grafting are only valid when the lopping off the branches preparatory to the operation is deferred till spring. If so deferred; the sap being in brisk motion, bleeding or ant extravasation of sap takes place, which deluges the scion; and as the sap becomes chemically changed or decomposed, it kills the albarnum, often to a considerable extent, along the stump on which the scion is placed; whilst the sudden privation the remaing sap, by lopping, deranges the economy of be grafted shonld be decided ano long beforb the sen to for grorm the peration, they beason for performing the operation; they should be shortened before the commencement of regetation, as in the case of pruning, to within a little of the place where the graft is
intended to be placed. No harm will be done by taking intended to be placed. No harm will be done by taking
off a little more, so as to make a fresh section, at the time of grafting. By following these directions the pro cess of healing, instead of decay, will proceed with the advance of vegetation.]

Manures.-In your report of the proceedings of the British Association, it appears that Doctor Lankester considered that Macaire and De Candolle's experimenta orrect respectiog the excrements from the roots of plants being such as to prevent a second year's beneficial growth of the same plant on the same ground, and affirmed that wheat has been grown fifty years in succession on the same land, which was confirmed by Professor Henslow and others. It further appears, that Dr. Daubeny read a paper on manures, wherein he suggested a kind of bookkeeping, on the principle of a debtor and creditor, of the quantity of nitrogen, of earthy phosphates, of alkali, \&c., abstracted in the form of a crop and restored in that of manure each year. I wish to try practically the above theory of Dr. Lankenter, with the principle of Dr. Daubeny, but break dowa in not knowing how to get a sumcient quantity of nitrogen to balance the account, and imperfection in my calculation; because it must be a great nutional benefit if, by any process, a succeation of wheat crops can be srown on the same land; much more So, if it can be discovered that it can be so grown and yield a remuneration ; but my difficulty is this : -1 acre of 160 rods, is credited by a good produce this year of 1 ? ton of straw; of 40 bushels of wheat, weighing 651 bs . per
buskel. 2600 l bs. For the purpose of reproducing in each year a equally. For the purpose of reproducing he equivalentu. For the if ton of stram. I can put 13 carts of dung, which will afford more than an equivalent of the component parts of the stram, as silicate of potassa, \&cc.

> 7 bran \& \&o 70 starch 23 glutea

\section*{100}

Of this the bran can be substituted \(=182 \mathrm{lbs}\)., being eractly the material abore taken away. The starch consisting of carbou and the from the stmosphere therefore needs no derived entirely from the atmosphere. therefore needs no substitutes ; the gluten consitle the same ingredients as Davy, of as nearly as possicle the same in
albumen, which is given as :-cirbon 52.883
oxysen 2.3 .972
hydrosen
azote
15.505

\section*{100}

Of this, the carbon, I continue to suppose, is derivable from the atmosphere; the oxrgen and hydrogen, though not in exactly the same propo tions as in water, might in nature's alemtic be still absorbed fich is the first questhe above proportious ia the confirmed. The second is, that in the above? 600 lbs . of wheat grown, there appears to be \(\frac{23}{100}\) of gluten; \(5951 b s\). of gluten, consisting of is z2 \({ }^{5}\) s of azote, making the whole \(9+1 \mathrm{bs}\). of azote or nitrogen (If chemistry can be calcuiated thus by figures). My difficulty is to know what is to be substititited as this equi valent. If have reall through Liebig the rain contain trogen of pharis. Which says, thoughe straw, roots, and much ammona, yet might grow on the same surface, would contain." This difference must be substitated by manures, and he says animal manure wits by the formation of ammonia; at the same time. he "ri:es, sumes.rement ig to I know not what quantities would afford the above equi valent of nitrogen or bran; the hisk of whe at se-ms, by ing passary from Lieisy to be cheif to meet the vigect.
 constituent of outer lorny हusi, an 1 is introuluced into bread along with the fio or and aton the beer. The bras of flour contains the greatest quantity of it." If bran apart from this object, that bray is an exeetlent manure. containing as it does phosphate of lime and magresia in uch quantities as to be quite equal to bone mamare, nuited in the exact dae proportions hiting for the orsmi
of the plants of which it has formed a pent and vith this
great adsantage of being exceedingly cheap, nuw to be purchased at nise sminhiliser pert., whton nitrate of soda wenty-tw, shillincss, and nitrate of potassa twenty-seren shillings per ewt. This has ioduced me to commence expe riments with bran for all crops, as a substitute for other ma nures, which, as far as they bave yet proceected, have proved most satistactory.-H.S. [The theory of excretions of plants on which it was tounded, have on repettion given very duffer eat resuits from those which he ubtamed. The subject is still open to investigation, for as yet we hare no unquestoonabie evidence of any process of excretion, like that dosumed by Macaire, \&c. With regard to the system of buok heepin proposed by Dr. Datubety, and its application to specid prposes, such as the continued cultivathon of whear, any other plant on the same ground, - it must be ussenved enable us with any certainty to make such calculations. It is of the greatest importance, haweser, to prote down It is of the greatest importance, howeser, to the meat means alone can we hopet to arrive at certain and accurate conclusions. The comproation of soils and manures is so various, and the consthtuents of them essential to the growth of plants so litcle hnown, that it is hardly reasonable yet to expect that abstract rules for the application of definite quantites of manures can be laid dowa. The and may to a certanl extent the immediately followed out The estimation of the quantity of nitrugen in common manures is of course more difficult and uncertain than the per-ceatage of earthy mattern, because from the tendency the quautity contained in manure will naturally vary the quautity contained in manure which decomposition greatly according to the extent to which decomposition
has proceded, and according as circumstances have been favourable to the escape or preservation of the ammonia formed. (The quantity of nitrogen present in manures is stated by Liebig in his Chapter on Manures, from p. 174 to p. 20.3.) decurding to Liebig, plants derive all their hydrogen from the decomposition of water; be says (p. 65 ) ganic compound is supplied to a plant by the decomposition of water." \(-E\).]
Fuchsus.- Fuchsias from Mexico, Peru, and Brazil, kinds. Tine best of throm them, are the most tenier flora, cordifolia, splendens, and radicans. The latter flora, cortitolia, splendens, and radicans. The latter, climb upon the trees in Brazil, sending its branches from ne to another, and throwing out ruots from its stem, like an epiphyte. F. cylindracea is a curious small flowering species
from Mexico, rery usstinct from any of its tribe, and sather from Mexteo, very ustinct from any of its tribe, and cather
pretty. F. microphylla major is a fine variety, with mach
larger thowers than \(F\). microphylla. The hybrids from \(F\). fulgens are numerous, but there is a great similarity amongst them; some of the best are F. Standishii, Chandlerii, eximia, grand flora maxima, majestica, and stylosa conspicuad. The hardiest sorts are those from Port Famine and Chili, and the hybrids raised from them. P . discolur, from Port Famine, is the hardiest of all. The best of the Conlian ratieties are, F. coceinea, conica, Thompsoniana. grachls, virgata, inflata, longitlora, grandiGora superha, Thompson's formosa elegans, Bruesterii. F. globosa and Walton seedling are inelined to form dwarf pendent bushes: Ricarto ground, and is pretty when grafted upon the top of the tem of one of the taller kinds. The Port Famine and the Chili kinds are those which must be depended upou for a bed out-of-dours; the tender ones can be mixed
mong them in summer. F. excorticata is a curious New Zealand species, with green and purple flowers and broad light green leaves. Most of the Chill kinds may either be made trees or dwarf bushes by proning. The being able in the way some describe to save the tender kinds in winter is very doubtful, particulariy in a winter like the last. If we were inclined to risk them, re should drain the groand well where we plant them, and in winte from it with some prepared calico, or some other thick frarm material. \(-R\).
an the Destruction of Wusps.-I have for many year had great numbers of wasp-nests destroyed, without hay ing been able in any woderate degree to preserve the fruit from their depredation. The greatest quantity taken in any one year bas been about eighty-four nests, say within a mile of my garden ; and the squibs, which are sold by dealers in tireworks at sispeace and une shilling per duzen answer this purpose. The object of this communication
is to stase. that the wasps did not visit my garden thas year till the l0th of September, and to mention the cir cumstances which may, in sonue degree, hare prevented them. Although nut of themselres sufficient to accoun or the faet, they will probably oe useful in leading to fur winter, which, for the must part. are impregnated females and they are occasionally fumn: abruad two early in the spring, when a hittle warm weather has tespted them to eave tueir hiding-places prematarely; and I am inclined effect in increasing or reducing the numoer of nests, dependent. as it may be in a great degree, on the number ut mpreyuated temaics which have saved taiemselyes from the inciemency of the weather. There is a great adsantage, theretiote, in ctestroying all wasps met witi in the spring; and Mris of time year, for which a smatl payment in April muney was allowed; and it is thought that nearly as many more were inlled in the wiadow of the nouse daring the
 and Cherries, all partiewlarly attructive to wasps, in my garden, than perlaps ever veurred before at this seasen
and nut a single wasp was oiserved within the walls, am only one wasp was seen outside the walls previously to the 14th of Augast; from the 1 th to 2 lit if August eighit netween 101) yards and a quarter of a mile from the gar den ; and no more nests have been heard of to this time 12tis of heptember. The nests were of ordinary dimen so e, sume contaming large wayss. Gthers small ones, and the anall wasys above mentioned was taken in the garden, the only one which had heen seen there: and I cannot give a betier description of it timan by its weight, which wa exactly one grall. Alut six wasps were seen and taken and 31 st of August, when they eame in great numbers, and made such havoc with the Orleaus plums, that what mained of them were gathered on that day; the was which were, therefore, all gathered on the 10 th of sep tember; amh the wasps will soon make an end of the fine red Gooseberries, which are closely packed in mats, , re ferring them to the small quantity of wall- 13 th of September. The reduction of the number of wasp-nests, seems to be accounted for by supposing that the wasps, which are met with and killed in the spring, indicate that many more are abroad prematurely, and are destroyed by the cold weather; but the most unaccountable fuct is, that whate twelve wasp-nest scarcely any wasps were to be seen; and that for four days afterwards, to the 13 th of September, they be so.-September 1 ith. The waspa continue to be very troublesome, but no nests are to be found.-

\section*{PROCEEDINGS OF SOCIETIES}

The autumn meeting of this society was held at their Garden at Edinburgh on the \(2 d\) current. The day proved unfavourable,
and the attendance of company was not large, but the fruit and thowers were numierous, ant in general of excellent quality.
For the prize offered for the best three sorts of Peaches, three of each, there were five compenitors. The silver medal was wotel Magdalen, Red Magdaien, and (ialande, and a 2d prize to Mr.
Joht Robertson, gr. to Lord Gray, Kinfauns, for Early Purple,
French Mignonne, and Galande.
 to Mr. Cathie, Arthres, for Warren's Black Hamburgh, Blac
Prince markabiy large, and the limes only two yeals planted in suly last A ed premium was awarded to Mr. Peter Crocket, gr. to Colone
Feryuson, Raith, for Black Hamhurgh, (inzzly Frontimnac, and Hay, Kur's Meadows, for Black Hamburgh, Black Damascus and Black Froutiguac.
For the best-grown Pine-apple, of any variety, there were four competitors. The silver medal was voted to Mr. James Dodds
gr . to the Eart of Mansfield, at Scone, for a Lemon Queen, weigh Gs 4tb. goz, including crown; and a ad premium to Mr. Jobn
 Durharo, Bart., of Polton

Death of De Camblle.- We lament to say that our atters bring inteiligence of the decease of this distinguished botanist and most amiable man, at Genera, in the evening of September the 9th. He had long beea afflieted severely with a dropsical complaint; and was only relieved from his sufferings at the approach of death. The whole De Candolle, and by them his loss will be severely felt. )f the life of one whose labours are so unirersally b nown hurried sketch, such as our culumns can alone admit, rould be an ill compliment to the dead, and a poor satisfaction to the living. We shall, therefore, content ourCandolle's character were perfect uprightness of conduct and independence of mind in private life, and in the science to which his career was devoted, great learning sagacity, industry, and good sense, with a just appreciation of the real value of the writings of his contemporaries Of his numerous publications his Organographie and Physiulogie' V'éyétale, his Thúorie élémentaire, and his celebrated Proilromus, are doubtless the works to which eighth rolume of the latter work is in so adranced a state as to mable his relatives to publish it; but after that
Death of Prince Butria.-We have also the sad office
annouicing the death of Prince Butera a few days since. This gentleman, originally an officer in the Hanoverian service, married the Princess Butera whose title he dssumed, with her extensire sicilian posfor horticultural pursuits; and the loss of so active and intelligent a proprietor will be much felt in Sicily

Spurless rariety of Dog Violet. - In our notice of this Gige-it should have been to Miss Gage.

Calotype Dra ings.-Mr. Fox Talbot has lately been applying the Calotype process of drawing, mentioned at \(p\) 223, to fixing on paper the portraits of flowers; and i we are to judge from his first attempt, there seems to be
great probability that the art will be much better adapted to that parpose than the process of Daguerre. The specimen to which we allude, and which is now before as, a Dahlia, in a glass vessel. Great fidelity and a fin vigoruus tone are produced, as if it hal been just sketched upon paper with Indian ini, by some master-kad. course impairs the effect of the representation. We really begin to bope that good photographic drawings on paper may be
Botanical Information. - We understand that Mr Bentham is rapidly proceeding with bis exainination of the Mimoseons leguminous plants, and that he has alread determined 180 species of the true genus Mimosa, of which not more than 40 are described in De Candolle's Prodro mus. Piofenmar Parlatiare of Palermo is preparing for pub lication a monograph of the genus Pumaria prope

\section*{Rebietos}

A Manual of British Algae. By the Hon. W. F. Har It is now eleven years since Dr. Greville's Alga Brilannice were published, concerning which we may safely assert that a more useful or beautiful book on British Natural History has never appeared. It is, however, incomplete, being confined to what are called the jointless (inarticulated) geaera, and therefore excludes a large number of the most interesting of our fresh-water species of this order. To supply the deficiency, and at the same time to present detailed characters of the Mr. Hecies in a systematical form, was the tanists, we are happy to bear our testimony to the skill with which it has been executed. The only regret that we feel, is that in these days of cheap illustrations so very difficuit a subject as the study of Sea-weeds, and their allies in fresh water, us withont a serits of explanatury figures. As it is, the bouk is indispensable to every une who studies the Natural History of Great Britain
Books on systematical Botany rarely provide materials for extract, we must, however, take from the prefatory matter the following account of the jounger Agardh's discoveries concerning the motion of the reproductive granules (spornles or seeds) of some of theas curions "The flaments of Conferva ærea are, as is known, articulated or divided at equal distances into little compartment (joints), which have no cammuncation among of the dissepiments. The green matter contained in these joints appears at first altogether homogeneous, as if it were fluid. but in a more sdranced state it becomes more ad. more granuiar. The granules are, at their formation, found adhering to the inner surface of the memorane, but they present at first passes to that of a sphere. These granules congregate by degrees in the midule of the joint, granules congregate by degrees in the midute of the joint,
into a mass, at first elliptical, but which at length becomes perfectly spharical. All these changes are conformable to phenomena known in vegetable life; those which are
to fullow have more analogy with the phenomena of anisal to fullow have more analogy with the phenomena of aminal life. At this stage an important metamorphosis exhroits
itself, by a mation of swarming (un mouvement de foarmillement) in the greea matter. The granules of which it is composed detach themseires from the mass, one after another, and having thus become free, they move about it the same space of the juint wicmbrane of tae joint is observed to swell in one \(F\) int. nill it there forms a little mamilla, which is to bec, me the print froma which the m ving granules tinally issse. By the exilas the tender fintes of which it is comphed separting. Entat an upenate at the end of the maninla, and it is by twis \(\mathrm{Pas=}\) ge tat

 From of the first instant at the motion ane wastrres tiat the granules, or sporules, are furnished \(w:^{-h}\) ? irthe beak, a sind of anterar prouess. arrays cisidythoubte rum the boig of the sect oy its pater edisur. It is un the vibra-
tions of this brak that the motion. is I cunceive, denends at least I have never been able to discover amy cifia Howerer, I mill nut rent.re tw deng the existemese of these, for wich a rery ligu power of a componsa mieroborder, as to find amone the silfinted Infumpia an ayply
ing a glass of insufficient power. The sporules, during body, as if it served to slow them the way; but when they cease to mure, by bendrog it back alung the side of their body, they resume tise sphzerical form, so that before
and after the motion one ser'; no trace of this beak. Tne motion of the sporules befure their exit from the joint consists principally in quick dartings along the walls of the articulation, knocking themselves against them by inforced to believe that it is by this motion of the sporules that the mamilla is formed. Escaped from their prison they continue their motion for one or two hours, and retiring always towards the darker edge of the vessel, sometimes they prolong their wandering courses, sometimes they remain in the same place, causing their beak to vibrate in rapid circles. Finally they collect in dense masses, containing innuwerable grains, and atto selves to some extraneuus body at the bnttum or on the murface of the water, where they hasten to develope tilaments like those of the mother plant. The sphærical spo-
rules elongate at first into egg-shaped bags, attached to the strange body by the narrowest end. Their development only consists in a continual expansion, without emittiag any root. The green internal matter divides in the middle by a partition, which appears at first sight as a hyaline mucilage, but which gradually changes into a comthe joint thus formed, that the young plant increases. The position of the mamilla in each joint is uncertain, at least 1 hit of the the same The exit of the spordes does not take place the same of the articulations already escaped, while in the neigh. bouring one they are not yet completely formed. Commonly the appermost joints empty themselves first, so that it is not rare to see all the upper part of a filament entirely transparent, whilst the lower part continues still to develope. In this manner the formation and dissemination of the seeds continues during the whole summer, and thus a single filament suffices for the formation of an infinite quantity of sporules. If one remembers that each joint contains perhaps many hundreds of spores, it is not astonishing that the water becomes perfecty coloured with them ; so that we might readily take for a Protococcus, or I suspect that from such a mistake have arisen the theories of metamorphosis proposed by many modern algologists."

The Eitchen Garden, extracted from the British Almanack of the Society for the Diffusion of Useful Knowledge, for the year 1833, has been republished by Mr. Charles Knight in a separate form, and we think unadvisedly. That the author of it should recommend parsley to be 30 wn in drills, an inch and a half deep, in March, is in itself a startling circumstance, not calculated to inspire confidence in his directions, which, indeed, are too open to criticism in other respects. He recommends the rarieties, in all respects so much superior, are unnoticed, Suen as Rhubarb, Sea-kale, Asparagus, and Arnial crops, as well as of such indispensable annuals as Broccoli Tae proportion of ground assigned to the various crops is of
little value, for every man must be guided by his own little value, for every man must be guided by his own
experience in that matter, no two families requiring the same quantity of a given regetable. Finally, in this, as in many other calendars, the most material point
in the management of kitchen gardens is left out, that is in the management of kitehen gardens is left out, that is
to say, the arrangement of the succession crops in such a to say, the arrangement of the succession ct
manner, that the least possible time is lost.
CALENDAR OF OPERATIONS for the ensuing Week. Now that the fruit from walls is for the most part gathered, it it a favourable time for making or renewwing fruit tree borders; ; and

NEWS OF THE WEEK.
We learn from France that the disturbed state of Paris still continues to excite uneasiness ; and that an attempt of the rioters to renew their dicetings has called for the most vigilant precautions on the part of the authorities. Numerous arrests have taken place, and patrols of cavalry are still necessary to maintain order in the streets of the disaffected quarters. The preliminary meeting of the Chamber of Peers, convened for the trial of the assassin who fired at the Princes, touk place on Tuesday. when a Committee was appointed to prepare the usual re; ort preparatory to the trial. In addtition to the facts mentioned in our last Number, it is stated that the prisoner has made disclosures which have led to the arrest of se veral persons who participated in the attempt. In the Provinces, it appears that tranquillity has been again restored, although it is stated that the whole armed force in the towns is necessary to prevent an open revolt. The Royal decree, authorising the Minister of Finance to raise a portion of the loan voted by the Cbambers, has at length been published; the amount to be raised is 150 millions of francs, and it is stated that the Minister had endeavoured to proride for the expenses of the country without recurring to the loan, but the recent insurrectionary movements had induced the Cabinet to appeal to credit for the purpose of showing that the confidence of capitalists was not diminished.-We learn from the Peninsula that the differences between Spain and Portugal on the subject of the frontier tariff are expected to be satisfactorily arranged, and that the Marquis of Saldanha was daily expected in Madrid, as the Ambassadur to whom the settlement of the question had been entrusted on the part of Portugal. The financial projects proposed by the special committee of the Portuguese Chamber still occupy the attention of the l.egislature, and nearly all of them have been passed. Private letters from Lisbon announce the important fact that the Pope, Russia, Austria, and Prussia bare at length appointed Ambassadors to the Conrt of Donna Maris, who are daily expected to present their credentials.- From Germany we learn that the rumour of the death of the Duhe de Bordeaux, which we mentioned in our last, was prenature; the accounts from Vienna state that he is fast recovering, and that the use of the limb is expected to be restored before the end of the eusuing month. Letters from Frankfort mention that active progress is makinz in the fortifications of Marence, and that a serious disturbance occurred in that city on the 11 th, arising out of a quarrel between the Austrian gar rison and the pupulace. The Germanic Diet is said to hav decided on important measures relative to the organization of the federal army, and the construction of additional fortresses in the south-western states of the confederation. - The arrangements for uniting the Grand Duchy o Luxemburg to the German Customs' "nion, have been suddenly suspended, and the Prussian custom-house officer have been ordered to return to Prussia. It is said that the King of Holland has refuseri his sanction to the treaty ander which this measure was to be effected, and that th Dutch Minister of Firreign Affairs has consequently re signel his office.-Accounts from the Levant mention that the Pacha of Egypt has expressed his willingnes to send home the Syrian soldiers, and that the ansiety which prevailed respecting Arabia has diminished. Much excitement has been occasioned in Constantinople by the disaffection of the troops, which are said to have made some hostile demonstrations on account of the nonpayment of their arrears, and to have called for an in quiry into the management of the finances in ail ti.e departments of government
At home, the House of Commons has been occupied during the week with the passing of the estimates, and with several unopp sed b.lls. The discussion on the Frogmore Lodge Biil and on the Royal Gardens Bill was resumed on Monday ; boti measures met with some opposition, hut were read last night for the third tis passed. The Bill for the Continuation of the Poor Law Commissinn has also been introduced, and is to be resumed next week, after the financial statena Means has Chancellor of the Exchequer

Plazers.-Attempled Assarsination of the Princes.The preliminary meeting of the Coutt of Peers, to declare its competency to try Quesinet, which appears to be the
real name of the assassin who fired at the Princes, amin not Pappart, as was at first supposed, took place on Tuesday, When a Committee of Inquiry was named to report on the evidence. This report, it is said, to although there appears to be a disposition to bring on the trial as soon as possible. In addition to the facts connected with this alfair. given in our last number, Thich have warranted the arrest of several persons who took an active part in the attempt. Four of them are said to have participated in the perpet:ation of the crime, and one is represeritcul as having lent his shoulder as a support for the hand of the assassin, to enable under arrest said to be from 1 to 20. . duesinet, never a soldier of the lith Kegiment, nor could he have had any cause of rengeance agninst its Colonel, or any o its officers. He enlisted in 18 i2 to the l.th Regiment in \(18.3^{\circ}\) he menaved and insulted his corporal, and was condemned to fire gears imprisomment. with the bulle attached. Ilis time of imprisomment was commated to year; but he escaped a fers hims time, and came to Paris, where he hias lived in different quarters under the feigned name of Pappart, and under this name he was some time
Disturbances in Paris.-The state of the capital continnes to excite unensiness, as the tumaltuons assemblage referred to in our last number have since been renewed in What are bnown as the fighting quarters of the entr, and though not to the same serious extent, they still appear to call for the most rigitant precautionis on the par of the Civil and Military authrities. On Friday, and the two anbsequentevenings, considerable bodites of workmen assembled in the quarters of St. Denis and Sc. Martin, and the Municipal Guards had to clear the streets from time to time by charges of Cavaly, and uprards of 100 individuals were arrested and loljed in the Consergerie. Several persons who had been arrested for formung part of and the rest whll he brougit to triat as speedily as possible. The police have inspected the sheps of tie armourers and gussmaths in the capital. whthin the last few dans, in order to see whether the regurtions for keeping fire-arms in sucia 3 state that they cannot be immediately used, are complied with; and the journals assert that the police have seized The opposition journals, however, persist in their assertions that the listurbances are pravoked unly by the
police, and that the leaders of the rerolationary party have no intention to make any serious atterapt aganst thie (io vernmeat at the present moment. - The latest me cligencwas made by the ponce on Monday, ta the lodse of a portress, in the Rue de (harune. and usany arms and ambeen given up for trial. The Tabanal of C'rrectsmai ring the recent distur aances, when seieral cavictions and sentences were pasised. Thmee alarming wecount- recerect at the Prefecture; but tary demonstratio

The L.wn. - The Monituur of Sunday contains the long expected Ruyal decree, countersigued by the Minister of Dan of \(1 ; 0\) milhions of fratucs \((18,0100,0007\).\() , by virtue of\) the bill passed by the Chambers. The amount of the prein three per eent. stock. Some of the journals declare that M. Humann was opposed to this measure, and bad provided for the expenses untul the lit Jan., without any necessity for against him. The council, they add, deemed that the circumstances were no
time since. The disorders of the provinces, the insurrection at Clermont, and the recent attempt assassination, might, it was thought, deceive Europe, and, ther fore, Government, appealing to credit in the midst of these
circumstances, wished to show that the confidence of capitalists was not diminished.

The Fortificutions.-Drivate letters inform us that the congregation in Paris and its neighbourhood of so many thousands of labourers, employed on the forthcations, and the prosinces, was beginning to occasion uneasiness Already three of the contractors had thrown up their engayements, the officers of engineers under whose they were bound to proceed having insisted that the work should be properly done. Many hindred lainurers were
in consequence thrown out of employment, a circumstance which surgested fears for the period when the works would he terminated. Further accounts on the same subject add that though the fortifications were now of a nature that they could not be abandoned, the works ior the continuous wall were alinost evergwhere suspended, and the labourers were so batly paid that they were leaving, to work on railroads or to go to Algiers.

Alyeria. - Private accounts from 1 gigiers, dated the 9 th inst., state that this province continued perfectly tranquil. At Blidah everything indicated peace. The French post lested, and at this estreme frontier the Arabs continued as quiet as after the treaty of peace. The accounts termiMation had produced a very bad effect among the troops Spain.-Our news from Madrid this week dues no possess much interest. The change in the English Minis try appears to have excited some sensation in that capital A decree has been published by the Regent dividing the kingdom into 14 mihtary disisions. By another decree the period of service for the recruits is tized at five years in the active army and at three in the mititia. A cicalr terior to the political chiefs of the kingdom, recommending them to enforce strict execution of the decrees relative to the press, and not to permit the circulation of any journal , the resp onsible editur of which should be imprisoned or sentenced by the jury, until a new editor should be substituted in his stead.- The Mar-
quis de Saldanha was expected to arrive in the capital in a few days. His journey is shid to be connected with the The negotiations between the Cabinet and the English A inbasidur rearecting the introduction of British cutt an gods into Spath had been suddenly broken off. The Mitisters had as yet produced no satistactory result; and it would appear that a favourabie solution of the question orders for fresh troops to be marched to the north. Accounts from St. Sebastian state that an attempt of the au-
 concealed by the peasants of that nerghbourbo and had failed, and that athough civil war did not exist, nurders and romberies were frequent in that prownee. Incelh-
gence thad been received from Mahon of the lai inst.. announcing tiat the French hark quietly evenated the military huspizal of the listet del Rey, but had left several the mur war unf laison, under the pretext or proteding Minster of Firdace soll encounters many obstreles in attemptag to realise the necessary sums for paym, the divident wa the new caputalseds stock, and it is thuaght tiat he will eitaer shortly accomplish that object or resign. (ireat complaints are makins be the Nod or ores severity exercised towards its members. Sume agitation is fearel, as the artichs are sery violeat, and the aew poli-
cal ciof of Munt, senor Escilante, seems to have re-
 periudical press. The first measure in consequence has been the seizure of the Correo, the responsible editor of whick was tined 500 reals, but having protested against the measure, notwithstanding the prohibition intimated in
demned to the mar,
 cition of the polat il chiet, 14 winchat the editor asserts his intention of the point of the bavonet, and that liis paper strauld be pubushed in spine of hin cercular.
Portugal.-We have received Lisbon news to the 13th inal committee of tue Ciamber ot Deputire hid neaaly all been passed. The one under discussion when the mail
left was the Ilth, by which the buard of pullic cuedit is to be endlumed with the proceeds of the new taxes already dividends. Seseral of the projects that have passed the Deputies had been taken up to the Semate. - (rovernment had applied for authority to pay the legal expenses, and collect the revenues from the end of the present month
till the end of June next, a proposal which was expected to excite much opposition. It had been reierred to the when the packet left. The differential duties. by which a drawback was given upon foremg gowis immorted in Porturuesp shipping, have beenh repealed, so that the ciuties
established by the tarift will have to be fan I muiffecently established by the turit will have to be prat indifferently
by all; but an equivalent additional duty will also be insposed on gouds imported in the shipping of countries Those of this country, for instance, will be liable to pay the additional daties of l-5th on the whole amonat. in long as our orders in Council against Portuguese shipping additional duty of 20 per cent. on the amount of dutien being levied on goods imported in any other vessefs than Portuguese, or vessels belonging to the conntry from Which the Coortes will not conclude their labours before the middle of next month. A private letter received from Lisbon, said to be derived from a highly influential quarter, announces the important fact that the Pope, Russia, Austria, and Prussia hase appointed ambaissadors to the court of her most Catholic Majesty, who are daily expected to present their credentials. It also communicates that decisive measures have been taken by the finance minister for endowing the board of public credit with ample means f.r the punctual payment of the future diridends on the foreign debt.
Germany.-The journals of this week bring us no intelligence of impurtance, but are occupied exclusively with topics of mere local interest.-The rumbur of the death of the Duke de Bordeaux, which we noticed in our List, was premature, and appears to have originated on the Paris Stock Exchange. Letters from Vienna of the 11 th inst. state nothing of his thness; and those from hircitorrards perfect recovery; the pains and irritation o the nerves had diminished, and his general health was good. On the \(22 d\) inst. the apparatus was to be remored and before Oct. 15 his surgeons, it is said, rely confidenty leave for Vienna. - It appears that notwithstanding peace ence are advancing with great activity, and are to be pro secuted as long as the weather continues fine; there seems to be even a question The Prussian girisun is also as strong as before, although a reduction is antucipated Mention is made of a scrivus disturbance which touk place in that town on the 11th, the Austrian soldiers in the gar rison having quarrelled with the populace; when - Lesters from Frankfort state that in consequence of the hat armaments of France, on account of the Enstern ques tion, important measures are to be euforced by the (ieraanh Diet relative to the orranisation of the federal anuy Feteral fortre-ses are first to be erected in the south-mest part of Germany, and the affairs of the Contederation ar satd to form the principal object of Prince Meternidas conferences at Johannsberg. The Prince wo to Vithat place on the lith or Coutidence the Prime Vienna and the funds were rising slowly.- The merchane of Sirasburg were to have a conference shortly with Ger man traders on the subject of a reduction of the tariin. The whole line of railroad between Strasburg aud Bat was opened on Suaday by the Minister of Pubic Work the Prefect of the Bas Rhin and the other authorities, whio assembicd at tie Kuenigwiffien station at Strasburg, ail mmedurely stred for Malamsen. The tram then con timued ia its course to liale. In consequence of the oper ints of this direct and rupid communication, it is expected will ivec me moth mare numerous.

mittee could not exercise over members claining to speak for mittee could not exercontrol which they possessed over counsel．
their constituents the cond
He disliked the principle of a total exclusion，and fared that it would stimulate the excluded members into a more pertinacious
exercise of therr right to debate the matter in the Hone，the
consequence of which would be to multiply scenes by no means creditable to its character．Mr．Ewart then consented to with－ draw his motion．－Mr．Revnis moved an address，praying the
Crown to reduce the depth of the Serpentine，and of the canal in
St．James＇s Park，to four feet，for the safety of bathers and St．James＇s Park，to four feet，for the safety of bathers and
scaters．He quoted returns，showing a loss of no fewer than 34
lives in the course of the last five years，and called upon the lives in the course of the tast fint years，and chan evil，which，
House to provide against the continuance of sech at a
he contended，it would be practicable to prevent at a very incon－ siderable cost．The Chancellor of the Exchzauer objected，
not only that the cost would be very great，but that the water，if
rendered thus shallow，would become extremely offensive，as the rendered thus shallow，would become extremely offensive，as the
Serpentine had，in fact，been，until it was deepened at a great
expense．The effect of the proposal would be to drive the bathers expense．The effect of the proposal would be to drive the bathers
to other waters，and more hives would perish in the Thames than were now lost in the parks．The motion was then withdrawn．－
Sir R．Peel stated that for the convenience of those members who might wish to discuss the intended enactment for the continuance
of the Poor－law commission，he had framed it as a separate bill of the Poor－law commission，he had framed it as a separate bill
from the general bill for the continuation of expiring laws；and he explained that any modification to be proposed respecting that should go into committee on the bill．Leave was given to intro－
duce both bills，which were soon afterwards brought in and reail duce both bills，which were soon afterwards brought in and rea．
a first time．－The Lunatics Bill passed through committee，after Mr．WAELEF had moved an amendlent，which he was subse－ quently induced to withdraw，proposing that the duration of the was ordered that the report be brought up on Wednesday． Wednesday．－Sir E．Kvatchaul．and the Hon．O．Duncombe
took the oaths and their seats，respectively，for East Keat and the North Riding of Yorkshire．Several orders of the day were then disposed of without opposition．On the motion for going
into Committee on the Royal Gardens Bill，Mr．Protheros said his objections against it had not been removed by any argument or explanation he had heard，and he should therefore say no to
the measure．He considered the proposition as calculated to injure both Kensington Palace and the Gardens；and in this shonld at a future time wich to take down the pre－ent dilapidated Palace there and build another on the spot，the occupation of
this space by vilas，let out on leases to private individuali，might
be found exceedingly inconvenient and prejudicial．There was certainly one advantage proposed in the bill，that of opening a new concurred with the hon．gentleman in thinhing that the tion of this garien in the way proposed might be fount exceed ingly inconvenient，should the present Palace at a future time be
replaced by a new structure．Mr．Protheros，however，did not replaced by a new structure．Mr．Prothrrob，however，did not proceed to a division，and the bill went through a Committee， Bill also went through Committee．A few other bills were then disposed
On the
On the motion for the second reading of the Poor－law Cum－
mission Bill，Dr．Bow Ring professed his readiness to leave this mission Bill，Dr．Bowring professed his readiness to leave this
subject in the hands of Sir R．Peel．Mr．S．Wortler hoped an opportunity would be giren for the expression of opinion by those Members who desired 1 mportant alterations in the existing Poor－ law．Sir R．Perc．repeated what he had said on a former night，
that Fndar，the day utended for the commitnent of the bill， would be the most convenient time for its disussion；those
Members who were desirnus of alterations in it gising previous desire to propuse．He hati heard that an expectation had arisen the Irish Poor－jaw，and would take this opportunity to say that
there was no foundation for any such opinion．Mr．WA kLEE thought it important that on Friday every Mernber ctesiring an opinions，in order that Ministers might have due notitication of
the objects desired by the House of Commons．He was content to support the temporary continnance of the commission as now he would defend him．The late Ministry had soaght to prolong people．Sir R．Peel had then suggested five years，which was have said consistently enough，that the bill ought to be continued for five jears；but Sir R Peel did not say this；he asked only a
prolongation until next year，intending meanwhile to consider the whole subject．No Minister，he thought，could act more
candidly．Mr．RIcs urged upon Ministers the expediency of giving to the Complav question a priority of discussion before
the quention of the Poor－law． Sir R．Peer jocularly acknowledged his obligations to Mr． sible for Gorernment to determine what modifications might be nity of ascertaining how local circumstances might affect its ope－
ration in diferent districts．However，in asking at present a prolongation of only six months，he did not intend to pledge
 tru－ted that ant alterations intended by Sir \(\mathbf{R}\) ．Peel wonhi be in
consonauce with the main principles of the measure．－Sir \(R\) ．Pesi explained that he did not mean to accede，in the discussion of
Friagr，to any amendments on the Poor－law itself．The only discassion that could properiy be taken would be on the continu－
tempt to introduce alterations of the Poor－law into the com－
tinuation bill now in progress．He rejoiced that there was hu
intention of altering the lrish Poor．jaw，which，he was con－ intention of altering the Irish Poor－law，which，he was con－
sinest，would wenk well for Ireand when the first M，iticical ex－
citement attendant on it should have pansed away．Mr Fins citement attendant on it should have passed away．－Mr Fisides
regretted that Sir R．Peel should immate the poicy fifcird Grey．

Nere Houses of Parliament．－The following are addi－ tional particulars connected with the suspension of the Works at the new Houses of Pariament，noticed ans em－ last Namber．It appears that the number of minally pro－ vincial，belong to the＂Birmingham Caiun of Masons， on institution established for the purpose of prutecting is laboureragainst the master．The man as a body， 17 stated，have no fault whatever to ind，but a few，and to re－ dress their wrongos，aill are obliged by the laws dimes Union to strike．Various complaints at diferent ins－ quired into by the contractors，were found to be trivis and satisfactory arrangements with the men were soon again effected．On the present occasion，however，on the grounds mentioned in our last，they came to the der，and nation of demanding the dismissal of the fors，they left their this not being yielded by the contractors，they left build－ employment．In the mean time the Oa Tuesday pubili meting of the masons was hald，for the purpost of foily
explaining the cause of their recent strike. Several per-
sons addressed the meetiog; one of whom stated, aniong other grierances, that the foreman had locked up a pump in Palace \(Y\) ard to prevent the labourers from getting a can of water. A resolution was subsequently moved and cartified in the steps they bad taken relative to the strike: and another resolution was also carried, that the masons of London, nut employed at the morks, açuiesced in its propriety. The statement noticed in our last, that pord sons to the department of Woods and Forests, has of that Board made known to the contractors, that whaterer they might suggest, the Commissioners woul assist them in carrying
City Lave Courts.-A special Court of Common Counation the report of the C'ity Lands Committee relasive to important improvements in the law courts of the City. A proposed, the expense of which is estimated at 8 finol. and, after some discussion, a division took place, the 18 in favour of the improvenients
Marylebone.-On Saturday, a meeting of the vestry of this parish was held, at which Mr. Gibson gave notice of a petition to be presented to prorogue Parliament until it had considered the present critical state of the country, and the proposed alteration in the existing Corn Lawro A long discussio by the vestry, as it was a parochial and not a political body. The chairman, who was opposed to receiving it,
stated his intention of not doing so without the order of the vestry; but added, that if they thought proper, the might vote him out of the chair. A gentleman presen
said that, as the representatives of 140,000 souls, the ves trs, he thought, had a right to express some opinion. There were upwards of 1,600 persons at that time in the workhonse ; and, in addition to 700 loaves per day, there was something like 200\%. per week distributed amongst the outdoor poor; and he hoped the vestry would do their duty in this matter. The question was then put, and upon of 23 to

Southwark.-A public meeting of the inhabitants of this borough was held on Monday, in pursuance of a re quisition sent to the high bailiff to that effect, for the
purpose of taking into consideration the present state of the country. The meeting was numerously attended, and was addressed by several speakers at considerable
length. Two resolutions were proposed and carried noa nimously, stating that the meeting bad watched with great anxiety and alarm accounts from the manufacturing and cial distress, want of employment, and all the evils conse quent thereon, aggravated by a high price of food; and that sent harvest, the cone apprehended deficiency of the pre rangement of its currency and monetary affairs, from the of the present iaws of the present laws. A petition to the Queen, embodying
the substance of the resolutions, and praving her Majesty not to prorogue Parliament autil it had taken these ques carried, its serious consideration, was then read, and was carried, after some opposition from a few Chartists, who woved an amendment
ictoria Park.-The preparations for the commencemuch ansiety at the east which appear to be regarded with place, it is said, early in the spring; and several plans Commissioners of Woods and Forests been surreyed, and the different parties holding possession of property have received notices to leave. The site magnitude. is generatly Hat and has few trees of any union is in progress of construction near the spot, which, visitors of the Farsent an unsighty appearance to the Gas and IT Fark
Gas and Water Companies.-Some of the parishes in the eastern districts of the metropolis have lately been making a valuation survey of the length and bores of the corious manin and branch services belunging to the water them, for the purpose of rating them on a fair and equitable per-centage, in the place of allowing the companies to sum for them by the payment of stipula. been fonnd to be and ben compos: ion, it said, ha example, it seems, is about to be followed by other paristes in the southern districts, which are making surveys of revenue purpose, where it is expected that the source derable in consequed by rating will be much more consigas pipes laid dowa by several companies competing with each other
Raising of the Kelso end Betiy,-In our last we gave the purpose of raising the Keloo, sunk in Mr. Wraser for Docks, as far as they had then proceeded. On Saturdar the pumps were resuroed, and the vessel gradually rose as the Free was diministed in ter hold. The operations of Mr. Framer and his men were observed with anxiety by a large again of "pectators until three a'clock, when the rassel was in the bat, and was hauled in safe:y alongside the qua in raiaing the of the docks. Mr. Fraser has also succeeded
the Kelso, she Saturday moraing, and has since been towed up the rive by a steamer, and taken into the docks at Ro herhithe where she has discharged her cargo. The ingenious conhas been enabled diving apparatus, by which Mr. Fraser is said, enab'es the workmen to remain ut:der water, howthought, be generdily used, and greatly facilitate the raising of su:nhen ships. gh of gentlemen was held at the London Tavern for the purpose of forming a company for the conveyance of pas-
sengers on common roads by steam carriages. After the sengers on common roads by steam carriages. After the
chairman had briefly adverted to the advantages of such an undertaking, a secretary was appointed, who read the prospectus of the company, and met the rarious objections to suct a mode of con reyance. Jir. John Squire, the in was appointed engineer, and a number of gentlemen were elected provisional directurs for cirrying out the objects of the company, which is to consist of a capital of 110,000 , in 5.000 shares of 201 . with a deposit of \(5 l\) each.

Murders.-Ou Tuesday night much excitement prevailed in the east of the metropolis in consequence of a reHead public-house in Eastcheap, had been murdered and an attempt made at the same time on the lives of his sister and wife, who were living with him. The particy lars of the case appear to be as follows :-A man named entered the Kiiag's Head about ten P.M.., and, appearing to be greatly agitated, proceeded behind the bar. where deceased was sitting on a chair dosing, and his (Blakes ing a word, dew fro his pocket a butcher's huife, and made a thrust at his wife, mounding her in a serious man ner. Her screams awoke Mr. Burdon, who, while in the act of rising from his seat, was stabbed in the stomach by aking an attempt to stiks. Burdon, stepped orer the body of his victica, and made his escape. Mr. Burdon expired in a few minutes
after, and the wounded woman continues in a very dangerous condition. An inquest was held on Mr. Burdon on Thursday. The investigation lasted several hours
and the fclowing are the additional particulars elicited from the witnesses:-The murderer, Robert Blakesley is the son of a clothier in Basinghall-street, in an ex tensive way of business. He is 28 years of age, and account he had been discarded by bis father. Some time since he hecame acquain \({ }^{\circ}\) ed with the deceased sister, and Burdsequence of his representations prevailed on Mr ever, only a short time together, and after he had spen all the money he hai house. Blakesley had made several Memptstoiaduce her until he could show that he was in a condition to suppor her. This appears to have exasperated Blakesley, and to
have been the cause which urged him to the commission of the crime. It further appeared that on the Tuesday afternoon he bought the knife with which the murder was committed, at a cutler's in Whitechapel. It was a large long knife. and before purchasing it he desired that the edge of it might be sharpened on both sides, as he wanted it for pruniag young trees. so that when he made an openiog in a branch it would cut both ways without "Wilful murder" against Robert Blakesley. . He has not yet been apprehended, and no clue bas been obtained to his retreat, though the strictest search has been made after him, and it appears to be the general impression that he has drowned himself. - The neighburrhood of Deptford was much alarmed on Saturday by a re-King-street, had been discovered dead in his bed under circumatan the been murdered. Suspicion attached to his wife aed a man named Eustace, who were consequently apprehended. At the nquest evidence was adduced to prore that deceased and his wife were constantly quarrelling, and often fought ; and that the male prisoner was frequently encerned in these affrays. The witnesses, however, fave their evidence in a oose and contraiictory manner. A poniceman proven that e had on several occasions witnessed the most cruel treatment on the part of the wife and Eustace towarde death of deceased was chused by evtravasation of blood os the brain, produced by violent meaus and not by nataral causes, the tratises appearing and his wife declined suying having ever struck deceased, and his wie ceather side in more than that she had fouad him ing deadict of " Wilful Murder', against both prisoners, who were consequently committed to Newgate to take their trial.

Tus Habvesr. The harrest his at leneth been brought to a cloze almest graneraly thronghout the country; if we except some of the northerta districts orm remains to De done. Is Nuttinghamshire. Forkshire, and Derbyshire the cuntry is aniversalty cleared of cora. and although to the nortia of the Treat there are some tields yet uncut, to the south of that river the harvest appears to have been all housed. The general character of the
reports from the most important districts is favourable;
the produce of the country is represented as a fair average ity is stuen to be generally sound and good. From the southern and western counties favourable accounts prevul: and in the important and extensive counties of prome (heshire comberland Yorkshire, Durlam, Northumberland, and Westmoreland, taking them generally, there appears to be no complaint made. Notwithstandug the leary fall's of rain which occurred a few weeks sineo, and which did partial damage and Lancashire on the sea-shore, and in the neighboarhood of rivers, it has not proved to be of any serious extent, and the fine the effect of restoring the crops, so that the corn has generally been found to be sound and abundant in the alrendy been a considerable supply counties there has consisting entirely of the new crup; but the trade appears of foreion bonded coasequence of the expected liberation week been realized, by the release from bond of nearly . 500.000 quarters at the minimum duty of 1 s . per q .
Bridgeutater. - On Monday an exten-ive seizure of smugaled brandr was made by the officers of excise in the neighbourhood of this town. It seems that for some time past the excise authorities have had reasin to suspect that coast, in the neighbourhood of Uphill and this town, and fints have beear made to detect the smugglers and bring them to justice. A ferw days sizice an inspector of police with brandy stationed at a beer-house at Congresbury He at once proceeded with a party of excise officers to the place, but found that the wargons had left early in the morning. They then traced them through several villages, and ultimately came up with them at Nurth Petherton, and seized them, together wi:h the principal smuggler, a man nansed Kirtain, of Plymonti, and three other men and bors. On examining the watggons ther were found to contain 133 kegs, each of which contained about four and The prisoners were brought to this town and underwent an examination before the magistrates, when Kuttain was fined 1002, or in default ordered to be imprisoned for four months; one of his accomplices fined 501 ., or three months imprisonment: and he olhers, anainet whom the
Deal,-The operations for Ronverime tins dernation the iron casson intended for the fixed light on the Goodwin Sands were postponed last week, in consequence of the unfavonrable state of the weather. The delay is said to bave occasioned much disappointment to thousands of spectators. It is 30 feet in diameter, and 24 in depta, great pressure. The water draught afloat is 13 feet. The placed, is 64 feet in height, 90 in diameter, and nearly 200 feet in circumference. It is divided into three parts, will more easy transport. The total altitude of the light cast inj bo eleyation of 40 feet, in all 190. The weight of the lower shaft alone is 120 tons. Mr. Bush, the engineer, proposes to sink it 30 feet below the saods, on a chalky substratum, in the North Galloper Sand, situate midway between the North and South Sand-hesd, soout 12 miles from the North Foreland and three from the Guli-stream Light. It will then be fastened down by anchors, when it will sink by the receding of the tide into the Sands. When the tide is low, persons will eater the arright cone at buttom, and excarabe until they reach the chan 18 feet above high-water mark: this bowe is to support the iron pillar, 80 feet higi, with a lanthorn at the top. It is also said to be the incention of tbe prosector to bring an Artesian well through the centre to supply the fleet

Elon.-In important arrangement has just been determined on by the authorities of the College. The ellowships of King's Colliege, Cambridge, are exclasively bestowed npon the hnys on the la succession to these fellowships has out always he -n regulated by the merit of the resperive candidutes. Prionty of standing was, with pine ocasional exce, cions the rule hy whtela the sucres
 means follomed that the mi.st entted mom industrive vonth rimed
 leger, and in the 5oar I-the, Wr. Justace Cowiesidge and Mr. Minaaa were both saperanazated. The electors of the two colleges have now determaned to bare remurse to an entirely ner antungerent, and have placed ain the candidates for fellowstups eszetly in thera order of ment. The scholarship last Easter ; and the twan) bext araatly distin guished themstlves on the same occasion. Trus the old system of stresessinn mecording to prionity of standing is aboliohed, and, for thellowsh Tre first examinat, wil this school for Prince
ient in modem literature, will take place on Monda

 guages. There whilion or an examination on the same day for a mriter-lini in India, given by Mr. Butrerworth
Bayley; the examinatiou to be in classics, mathermation, and modern literature.

ham has been thrown into great excitement, in consequence of Mr. T. J. Knowlys, a magistrate residing there, having transmitted to the Bishop of conduct of the of a grave and serious nature against the conduct of the trate of the county. The Bishop, therefore, in order that justice might be done both to the complainant, the acinquiry, under the recent act of parliament for the better regulation of charch discipline. The petition of the combeen transmitted to his lordship so far back as June last and it was the intention of the petitioner that the inquiry should extend to the conduct of Mr. Barton for the two by law for cognizable reference to be made to any alleged derical offence. The commission was appointed to sit on the Itth inst., when Mr. Barton was called upon to
answer to the charge of being guilty of "lewd and imanswer to the charge of being guity of "lewd and im-
moral conduct, p ofane cursing and swearing, and intemperance." After the preiminary proceedinge had been arranged, the clergymen composing the commision de-
cided that Mr. Knowlys shoud be ailowed to make a statement exmanatury of the motives which had led him to institute these proceeding i. He then stated that thee tenance and punish all persons who might be a scandal to these realus; whilst it required those in authority, both ually to reforma those who led dissolute lives. Mr. Barton had conducted himself in a manner unbecoming a clergyman, and he therefore held it to be his duty as a magistrate and justice of the peace to take the present pro ceedings, and to support the charge against Mr. Bartou, as
described above. Several witnesses were then called, from described above. Several witnesses were then called from rectory-house at Heysham was very much dilapidated.
Mr. Barton consequently employed a number of masons and plasterers, most of them belonging to this city, to put it into repair. During the time they were at work, Mr. Barton is alleged to have gone anong them, conversing with them, sonetimes in a taniliar, but gentlemanly manner, whilst at others he descended to topics and language un-
becoming his chardeter as a ciergymin ; and on mare than one occasion he was seen intosteated. These things teeiny repeated by the workmen, Mr. Kinulys examined them asseverations, and the renorts of ethers, he fonniled his proceedings. The evidence adduced in supp oit of these allegations was somewhat contradictory and inconclusive. and the counsel for the inquiry having mored fur an adjournmant in order to obtain further testimony, the commissinness postponed the hearing to Thursday. that the propeding tias excited unu-uall interest in the com!y, and that the village of Hilton, where the court is held, is crowded with waitors froms the adjacent townsirps. -The electon of Lurd sianley for the nurthern division of this county took flace on Tuesday, and would have passed off wirthout uppossion bat for the rppearance of ward as a candidate, an he priviou-ly did at Tamworm, and ad Iressed the mite:ne ar seat beneth. Iord sicenley, howerer, on a show of hands, was dee lared by the Sheriff
to be daly elected, and no poll was demanded. Im mediately after the close of the proceedings Mr. Acland was taken into custody for a lhal om the Mayor if this city,
bat was liberated after in Leicester. - This being the seaenn whon the goods from this place are re.re tian uswaly in demand, a "nonder.
able improvement in the stare of traie mas ounidenty anticipated ; but this expectation durs not appear to have been realised, the increa-ed dewand hens very partial, and not sufficient generally to clear out stocks, or to raise profits. Business is represented as being very moderate, past, it is, upoz the whole, anything but satisfactory. aghtia manit-sted in tuis town on Tuesday, to bear whe procet linys beture the magistrates on some furtiner infornations against the Union Mill Company, and also Cheshire, for the adulterations, respecting which some

as well to state, in order to save time, that the defendants did not deny that the sample spoken of was found in the mill, or that it was mized; but their plea was, that they had given no authority for the mixing, and that they were not responsible for the had made an examination of the article in ques ion, and found it to be composed simply of eypsum ir suiphate of lime; and he could trace no vegetable matoramined at consiler ible leng th. and admitted the fuct of having adulterated the flour, but said he had been told by procured frum potatoes, and that its name was arrowroot."
Mr. Bull denied having any connexion with, or knowledge or, the transaction. At the last meeting of the magisexplain. He had then stated that not a particle of the composition had been used, and he did that upon the solemn assurance of the theman. None of the share in the management of the mill, which
took had been left entirely to the care of the foreman; and he could undertake to say, the not one of the partners ever knew anything of the transaction. After all the witnesses had been examined, Capt. Mainwaring, in the name of the magntrates, said that they had conside and case with plainant, and they thought that they had no reason to doubt the testimony of Adams. When Adams made the contradictory statements spoken of, he was not on his to conceal the matter to preserve the company; but when he found he could conceal it no longer, he told the whole truth of the matter. With respect to the three partners, langua opinionas Mayer nor Mr. Turner knew anything at all about the ransaction as individuals, and mere quite innocent of it. The whole blame rested on Mr. Bull, and he was sorry
 fully made out, and must fine the company in the full penalty of \(\because n l\). and costs. An application was then made to the benel as to hosw the eightesn sacks of adulterated
flour seizell should be disposed of, when they were ordered flour seized
to be buried.

Portsmouth.-During the three weeks that have elapsed since our last notice of the operations against the wreck of the Royal George, the divers have been successful in getting up large quantities of timber, which have been deposited in the dock-yard. At the time when Col. Pasley commence. hir- operations, the whole starbowh side, as standing upright to the level of the lower deck perfect, some parts higher; but the larboard or south side of the wreck, which leaned over when the vessel sank, had fallen to pieces, and lay prostrate on the bottom covered with to the share of Corporal Jones, who, it seems, from the first, declared his hope that he would be able to get down to the original bottom below the larboard bilge, upon
which the whole weight of the vessel rested. This object he accumplished torards the end of last month, having after removing the timbers on that side, got up about 300 superficial feet of the outside planking covered with copper: under which he found the original ground on which the bilge of the larboard side of the vessel hand rested, which was very smouth, and had been so compressed by the pressure of such a great weight, that he could scarcely force his iron pricker into it. The operations were for into a sort of concretion, and to remove which some small charges of 191 hs . and 5 llbs . and finally one of 1601 bs ., were fired successively in the centre of the mass, which succeeded in dispersing the obstacle. Amongst the articles recovered by this explosion, was a piece of the kelson, measuring twenty-seven feet in length, and about nineteen inches square, with the scarfs at hoth ends, as well as notches on its lower surface, by which it rested on the floor timbers, and the mortises on its upper surface perfect. Some spare axle-trees of gun-carriages, from the gunner's store-room, have also been recovered, tngether witi the eap of the mainmast, half split acress, on ome side, and an iron fid, as well as some nieces of iron ballast, which, from the very soft state of their outside surfaces, as well as from their unnsual weight and size, must, it is thuy ht, Fave belonged to the wreck. In aldition to the half-anchor ceepers. and to the rake with teeth, already noticed, a tlat scraper, measuring twelve feet in length and eifhteen incins in ieeight, has been drawn over the shoal
to cuar awray the mad, durng the heignt of the spring tides, at winch periol the diving is always discontinued for two or three days. The soundirgs taken iast week, commenceneat of the operations of the present sezson.
Roudive.-On Minday, a publie meeting was held in this town for the purpose of cunsidering the cuuses of the existing sufferings of the working popula'ion in the manufacturng districts. The meeting was numerously attended, about 1,500 of the tradesmen and mecianies of the town, it is stated, being present. The proceedings were of the same nature as chose at other meetings we have already
noticed, and the resolutions adopted were precisely of the
same character; at the close of the meetiog, an addrea the several resolutions, and praying her Majesty prorogue Parliament until some measure of substantion relief for the wnrking classes had been passed. Meeting of a similar nature have also been held at Bath, Leicester, Stockport, Stratford, and some other places.
Salford.-On Monday, a public meeting of the inhabitants of this borough was held by requisition at the Town-hall, for the purpose of considering the present dis. tressed state of the population of the town and neighbour hood, and the ala ter; and the propriety of memorialising the Queen, pray-
ing her Majesty not to prorozue the two houses of Parliz. ment until they have entered upmn a full consideration the corn and provi-ion laws, which, with other commercial rastrictions, are, in the opinion of the requisitionists, the main causes of the exis ing sufferings of the people. The attendace was numerous, and several gentlemen addressed the meeting at considerable length. The resolutions proposed and carried were to the effect, that an intensity of distress, unprecedented in the borough, has prevailed dur ing the last three years, by which the labouring classe hithert nisher. there are at present, of dwe'ling-house 2.030 , and of cotton-nills, factories, and mechanics and other workshops, 71 in number wholly unoccupied, whic would yield a rental of \(27,852 \%\). per annum ; whilst vat numbers of respectable and industrious individuals, who were tenants and mork-people, are deprived of comfortable r sidences and the means of labour and support, thus engendering disease and demoralization, and threatening to involve the whole community in general ruin. That the existing corn and other unjust laws which prevent the poople from ubtaining the means of subsistence in the markets of the world by the exchange of their manufac tured produce, together with the taxes exacted from them, not for the benefit of the state hat for the profit of monopolists, are the main causes of the prevailing lamentable and heart-rending distress. A petition, embodying the substance of these resolutions and the terms of the requisition, was then read, and unanimously adopted.
Sandbuch.-We have already noticed the convictions of rarious persons at Newcastle-under-lune for dealing in which proved to be sulnhate of lime or plaister of Paris At an examination which gistrates in this town, connected with the same subject, in the course of proceedings against James Beardsmore, who is mentioned in the account of the inquiry at Newcastle under-Lyme, it appeared that not only reas some flour adulterated with these noxious ingredrents, but that previously it was alive with minute insects. A chemist
stated in evidence, that he first subjected one sample to an optical inspection, by mean flour, he considered, was essentially an unhealthy flour independently of the adulteration, as was manifest by the examin small insects as on taking up the smallist pertima he could on the point of a penknife, there were many insects observable in it. From his experiments he found it to be the worst sample the package contained. There were in it potatoe, starch, and alum, and about 16 per cent or sulphate of lime. The defendant was convicted in the penalty of \(20 l\). and costs. a stack of hay belonging to Mr. Barnes, of this place, es timated to contain 200 tons. The stack, it seems, had heen "reeking" for some days, and on the above evening an attempt was made by Mr. Barnes to cut through the midule, in order, if possible, to take out the portion mos the flames to burst out with such fury that it was foun necessary to send for the fire-engines. Every possibl assistance was rendered, but in spite of it the whole of the stack was destroyed. 13 corn stacks were near the bern one, but fortunately the wi

Sunderland.-A riot, which at one time threatened se ous consequences, occurred in this town during the chairing of Lord Howick on Friday the 1 sist., ace his election as Member for the borough. As the procem sion was going down Whitburn-street, the whe menced hissing in passing a public-iouse called Coll form Tavern, from which Mr. Attwood the Conser tive candidate's colours were displayed, and ane to violence and outrage. A party of Mr. Attwood fricuds were collected in and around the honse, an stones, it is said, were thrown by both parties. One of these struck Lord Howick on the hand, and another hil Mrs Bell whe bis side. The windows of the public-honse were broken to pieces, and the landlord, person named Liddell, irritated, as he says, by tair struction of his property, presented a fowling piece out of the windows, and snapped it at the crowd, hat it did no go off. The gun was subsequently examined and found rushed in the powse, broke the furniture, and threw it about the streets, destroying property of more than 2001 in value. No further disturbance, however, took place, and but little personal injury was sustained by eitods party. Mr. Liddell was immediately taken following day. The inamined before the magistrates one time, during the investigation lasted a considerablicited. At its closa the law-agent of Lord Howick prayed the Court for ant adjournment of the case, as he expected to be abl of bring proofs which would establizh a Charg of
more serions nature against the prisoner. This was ac
more serious nature againat the prisoner. This was
ceded to by the magistrates, who, homever, liberated the prisoner on his giving the necessary bail for his re-ap-
pearance. The further examination of Liddel was propearance. The with on Tuesday, and after a long incquiry the magistrates came to the decision, that the charge of felony Was not satintuctorily borne out: white they were agree that the prisoner had heen proved guiliy of an assant.
He was then fined \(\overline{3}\)., and called on to enter into recognizances to keep the peace for 12 months.
Whithy.-A murder has lately been committed at Esk It appears that on the morning of the 14 th inst., the wife of Mr. Rnoinson, a farmer residing at that place, was left alone at home, her husband having gone to Egton market and the servants being, at Iburndale, miller, who called at the house about hali-past ten. At noon, when the serrants returned to dinner, they found her lying lifeless
upmen the hitchen floor, with her head severed from her body. From a desk, Which appeared in several places
stained with hlood, 32 sovereigns had been abstracted, stained with hlood, a bor belonring to some of the servant-men was broken open, and a pocket-hook eontaining a quantity of silver token away, which was afterwards the the railroad.
yards below the house, in a field leading to the Behind the kitchen-fire a clasp-knife, the handle of which was partly burnt and the blade marked with blood, was An inquest has been hell!, when the jury returned a rerdict of "Wilful murder agzinst some person or persons the house during the morning of the murder, were apprehended on suspicion, and examined by the magistrates, cluded, when they were discharged. Crieff.-The local papers inforw us that this place has been again visited with two severe shocks of earthquake. The first occurred on the night of Friday the l7th inst. abuut a quarter before 12. The tremour was considerable and the sound that accompanied it louder and longer continued than any before remembered. The second shook occurred on saturdar morning about half. past 2. It was rery smert, bat the sound was not so lond or lons contimued as the first. It was also felt severely at the same time at Comile and westwara
Iyr.-The following occurrence happened near Whitletts, a few days since. Mrs. Hunter, in Laigh Thornyfitt, a widow of advanced age, haviog gone out to assist the berd-boy in ciriving the cattle from a field of wheat into which they had brcken, was attuckent by the hull, and so serionsly gored that she died shortly afternards. The boy, on sreing the ammel attack his mistress, ran for buthance to the neighbuuring farm of High The rnyntat but bet. re a man to whom he mada known the circums had elapsed, during which the bull continued to toss her without intermission. Ori the man's coming up the animat destatel. hat as won as any attenpt was made to not uatil the amisal of more assist tuce that it was forced to re reat. Mre. Hunter died in about half an hour afterwards. At the time the aceident nccurred the family and Hunter and the boy were the only per sons aluut the farm. The bull, though troublesome, was not previoasly consiuerut nicious.
Dumfries.- The means adopted for raising the Solway steamer, recently lost in tha 1 ith on her passage from Belfast, have been abamaned wopis rously delaymi by the diffeculy of procuring a sufficient number: and although at length inf casks were attached to thic wreck, the veasel bat sunk so deep, from the weight of her machinery, that the deck was covered with mud. The recent storms also impeded the operations, and the ressel, with her machinery, fitted up last spring at an expenditure of some thousands of pounds, has been necessarily abeadoned.

At the rear of the apartmeat whuch she recupli-s in t.ee Frunomery St. Wartin. atip has contructed, witit true omichologic intelligence, a long and commudinus wiaty for her cherished pets, which are thas comtorable existence. Dame Turnard each evening hav ing first aseared berself that her winged prisoners want for aionngz. Cuss their do rs ana wadows, anti exty n-st winius cumas to restore them to inberty, a privilege of
 ered dring the allotted period from roof to roof, and ourneved macs th mas to house, they retum at dewy eve to

Which areonly to be found under the shelter of the Penates. In fro:it of Madame Tomnard's apartment there lives an oid employé, named Lebuis, who has purchased by thirty years' service the right to rise at whatever hour he pleases, and do exactly as he likes from morning to night. Lebuis has aisn his putite passim-d passion as harmless and intrains, windows a garden of eight grod feet by fourteen inches. There the fragrant honeysuckle caresses with the amorous enbraces of its picturesque branches the graceful jasmine and majestuc dahlia. Not an hour in the day passes with out Lebuis visiting his floral treasures, and, according to their momentary necessities, exposing them to the rays of the sun, or sheltering thein from this ton great regularly as the shades of evening descend, with carafe of filtered water he imparts new life and freshness to drooping leaf and withered stem. Upon that rarity, fine day, in the late lugubrious Juiy, Lebuis perceived with the cluirvoyance of a true horticulturist, by certain infallible signs and tokens, that his flowers had been rudely sited during his temporary absence, pecked, deranged defiled. He lay in ambush, and was not slow to perceive his delicate treasures, and turning up the earth beneath them with its beak, in the hope of finding there some rains of seed suited to its appetite. He easily seized the adiscreet rover, and the first movement of his indignan oul was to twist the bird's neck; but, moved with com passion at the sightof the graceful creature, whose plumage clittered in the sun like a collar of sapphires and emeralds Lebuis abandoned his avicidal project. Determined, never heless, to prevent the recurrence of so dire a disaster, he attached to the pigeon's neck a piece of writing, upon me evening, Dame Tonnard having proceeded, according to custom, to inspect her little ariary before going to bed, was not a little astonished to perceive paper suspended to the neck of one of them. Wh billet (cou!d it be a billet-doux \(=\) ), and read as follows :-
Madam,-I have the honour to acquaint you, that if you do not keep your pigeons from ravaging my garden should I catch them hereafter within my enceinte, I shal eat them boiled aux petits pois. Your humble servant Lebcis, Employé" This borrible threat made Dame Tonnard shiver like an aspen. She passed a sleepless
night in reflecting on the conduct which it was befitting that she should pursue in such an emergency; and the right, this time an evil counsellor, inspired her with the following reply, which she despatched to her ruthless eighbour by the carrier pigeon :- Monsieur,--Nuu ar f you kill them, yon will be an old assassin. Your ser rant, Yruye Toscon" Leluis' reply was conceived in these terms :-" Madame Tonnard - You are an fool, the worse for being old. If your pigeons retura today, they shall be digesled to-mor servant, Lebuls, Employé. The correspondence ended here; not so the quarrel, "a very pretty cne as it stood."
For many following days, from one window to the other the neigtubours exchanged the most injurious reproaches, to the great annoyance of all the adjacent inhabitants, Whose repose this intestine war most grievously disturbed Accordingly, those who were most litigiously disposed amongst them, set on the pair to make the commissar of police the judge of the trivial difference. This counsel was rashiy followed ; and a reciprocal complaint having been lodyed before the Procureur du Roi, the affair wa both parties appeared at once as plaintiffs and defendants The Tribunal, having heard with admirable patience the eprozches sol sideration of the common category of "faults on both sides." dismissed the parties dos a dos, having first taken care to warn them how they went to lals for the future, hy making them share the costs equally between then
Railroad Travelling.-A French paper has published a omparative tahle of railroad fares in England, France Germany, and Belrium, from which it appears that on the great ralways in England, the price in the first-clas carriages, per league of 5000 metres (above three Englis miles) exceeds If. In France it averages about juc. : in Germany, a trine 2lst inst. The places in the waggons are now charged on an average 10 c. from station to station, instead of 15 c . those of the char-a-bancs are slighty raised; and those of the diligences are retuced about one-tenth. There has been a great increase in the number of trave!lers doring The price from Brassels to Ostend (between 8 It and 90 English miles) is \(4 \frac{1}{3}\) f.

HORTICULTURAL SOCTETY OF LONDON.

\section*{}

\section*{SATURDAY, OCTOBER 2,1841.}

\section*{}

THE history of the older florists' flowers is lost in the dimness of antiquity. We are told indeed that
James Garnet was the first Tulip.grower in England, and Jan Herwart in Holland ; but no one knows by what arts, or by what slow degrees, that gorgeous flower was gradually brought to its present condition. In like manner, the transition of the Wild
Clore Pink into the many-coloured Carnation, Pink, and Picotee-of the Ranunculus of Mesopotamia and the Auricula of the Alps into the beautiful varieties that florists love to craze upon, are equally unknown to us. We are only familiar with the results of these early instances of horticultural skill. But there is a plant now among us in a state of transition
from its wild and imperfect habit to that highly-improved conditiou which is demanded among what are called florists ' luwers, of every step in whose progress we are cognizant, from the first commencement of its alteration, and the subsequent improvements it unlerwent, up to the present period. We allude to
the Pelargonium, which, from a wild flower hardly superior to the Geraniums of the road side, has passed through various shades of improvement, the flowers becoming enlarged in their size, rounded in their petals, changed in their colour, and invigorated in their growth, till at last the oak-leaved, and ivy-leaved, and horse-shoe Geraniums, which were the favourites of our childhood, are no longer to be recognised under the comparatively matchless forms of the Pelargoniums called Nymph and Jessie.
It appears that the first Pelargonium seen alive n England was that called "s triste," a tuberous sort now rarely to be seen; it is thus spoken of by
Gerarde, in his Herbal:- "There is of late brought into this kingdome, by the industry of Mr. John Tradescant, another more rare and no lesse beautifull than any of the former (Stork's bills); and hee had it by the name of (icranium indicune noct odoratum; this has not as yet beene written of by any that I knowe. I did see it in floure about the end of
July la32, being the first time that it floured with the owner thereof."
But in the course of the succeeding century the productions of the Cape of Gwod H ope, the native country of the greater part of these flowers, were, by some abundance into cardens; and we find that before the year \(1 \% .3\), six spectes of Pelargoniums were alive in sherard's garden at lltham. From that periot new kinds continued to be brought over in quick succession. so that Linuæus was acquainted with 2.j) species cultivated in Lurope. This author called them Geraniums, a name which they bear to this day in popular language. It was I'Heriter, a French Pelargoniums; distinguishing them from the Geraniums proper by their irregular flowers furnished with a nectariferous tube running down one side of the flowerstalk. By this time the number of known species had greatly augmented; and in 1812 there were 102 in England, according to the Horlus hewensis. Shortly after that date, the improvement of their flowers was commencel, and it is useless to trace the importation of wild species any further.

A bout the year isis, as near as we can remember, some Finglish amateurs began to cross the species, in the hope of combining in one plant the good properties of both parents. Among these, the late sir Richard Colt Hoare was best known, and some of the most decided steps in improving the breed of these African shrubs appear to be traceable to that gentleman. By the year 1 duced sueh astunishing results, that Mr. Rubert Sweet a well-known gardener of that day, and himself a successful raiser of such plants, commenced a periodical work in i.lustration of the varieties which every new season was bringing forth. That work, which Wras continued without interruption up to Is 3 an, enables us to judge correctly of the progress actually made in those ten years; and it is evilent, upon comparing the first and last volumes. that this progress hai been very considerable. Size of thowers and richness of colour were beth increased, and. in afew cases, a ciecided improvement in furm was perceptible. A mule called by Sweet Diedaleum (for it was the absurd fashion to give these tlorists \({ }^{\circ}\) Howers Latin names; and others called Drakeex and cordiforme, were evidently losing the narrow and feeble petals universal in the wild species,
and were acquiring the roundness and firmness so requisite to constitute true foral beauty. Those, indeed, catled Weltje's Isabella and Dennis's Rival were equal to some of the sorts now cultivated; the latter seems to have been the best-formed variety known in 1ヶ30.

The admiration excited by these really beautiful things, and the great success that had attended such attempts at improvement, produced the usual effect of stimulating the growers to renewed exertion ; the issue of which is evinced in the unparalleled exhibitions which the last three years have witnessed near London. That we are not insensible to the value of
these brilliant flowers, we have already shown by the practical papers we have published on their cultivation at p. 88, by Mr. Cock-at p. 100 , by Mr. Catleugh, and at p. 181, by Mr. C. Weeks. These papers, in fact, presented our readers with the very best known methods of cultivating Pelar, oniums fur coration of a private greenhouse
To-day we give, in another column, a short paper nt the properties that are required in the Pelargonium as a florists' flower; and ve consider this a matter of no small importance just now, when so many are striving in the race of raising yet more improved varieties, and so few succeed. We hope it will be the means of sparing young growers the mortification of being beaten at the exhibitions of such flowers, from not knowing what the properties reall are which constitute a first-rate variety of the present day. The memorandum has been prepared after consultation with the highest of all authorities in these matters; and we are confident that the good taste of all who look at Pelargoniums with the eye of an artist will confirm the laws we have thus laid down.
On another occasion we shall endeavour to show wherein the varieties now in cultivation require, as we think, improvement, and in what way it appears to may be effected hereafter

Tне principles on which a fruit-room should be constructed having been pointed out (p. 611), the manner of forming it remains to be considered.
A perfect fruit-room should be situated near the gardener's residence, and of such a size as will enable him to stow away the whole winter produce of his fruit-trees
without heaping up, or confusion. The walls should be thick enough to prevent the entrance of frost, which may be effected either by building them hollow, or by guarding them externally by a casing of earth. It would be better without windows; but if they are considered necessary, they ought to be made with
double sashes and wadded shutters to fix on the inside. If the room is covered by a roof., its ceiling should be "pugged," or rendered frost-proof by some other means, such as effective thatch. It would, however, be better that the fruit-room should have a chamberover it, in which the gardener can arrangè his summer fruit, sweat his winter store before laying it by, and prepare his dessert as it is required. In that case the fruit-room itself might be communicated with by a trap-doir, and the ordinary entrance to it in the outer wall would seldom require to be used.
In providing means of ventilation, it is to be remembered that the object is merely to remove the foul air that may be generated by the fruit, or any damp that may collect. We have already explained that as the process of sweating is not to take place in the fruitroom itself, little disengagement of moisture by the fruit, after it is brought into the fruit-room, need occur. In these cases, where a chamber is built over the latter, and a trap-door is constructed in it, we conceive that ventilation enough will le obtained by opening the outer door, the trap, and the windows of the chamber in dry weather, when the air is nut below \(30^{\circ}\); and it in wimly weather, so much the better. In fruit-rooms unprovided with an upper chamber, there must be a few wooden chimnevs carried throurh the roof from the ceiling, where they are to be closed by a flap; and upon opening the latter, together with the door of the room, a sufficient current of air for rentilation will be produced.

In all cases the romm must be built on a irry bottom. If the situation is low, the funntations mi'st be raised in proporion, so as to elevare it completely abure the damp of the earth; and if it is Hoored with "concrete." or some substance impervious the better. and in which mice
It mast be dity. fruit-room would be improved by being divided into two or three compartments, to separate the ripening fruit from that which wid. in such a case, the door should be at the end of the truit-room, ami the fruit which tirst ripens should be next the door, while that which is late:t chould be stored up in the furthest compartment. T.ae reasoll tor such an arrangement is, that the coping the other divisions; and as ripening fruit requires more ventilation than
such as is still immature, this is an important provision. Then, when the first division is empty, the second can be opened and ventilated without interfering with the third. In such a case, however, where a chamber is over the room, the seeond and third compartments must have chimneys carried through the floor of the chamber.

In situations where the fruit-room can be built adjoming a hothouse, it would be advantageous to construct an additional closet, which may be warmed by the flue of the hothouse, in order to receive winter Pears. These are all exceedingly improved if gradually introduced into a temperature of \((i)^{\circ}\), or thereabouts, in which to ripen. The Chaumontel in particular, which in common fruit-rooms remains incurably gritty, becomes as melting as the delicious specimens from Jersey

As to fitting up the interior, that requires little explanation, and, in fact, is better left to the ingenuity of the person who directs the construction of the building. Ihere must be shelves, composed of paralle rats, on which to store away the fruit, and a table, on which to place it occasionally, and wooten buxes or earthen -jars, in which to pack particular varieties. The only thing that it is material to observe is, the quality of the wood, which must not be such as to communicate an unpleasant taste to the fruit that touches it. Good clean Pine-wood or white deal is probably the best material that can be employed.

The following account of a fruit-room belonging to an eminent horticulturist, whose fruit is always beautifully preserved, will show one way in which these plans may be practically carried out.

Three or four years ago I made rather a large artificial mount in my garden, which is both usefal and orna mental. The ornmmental side to the east next my flowergarden is covered with blocks of various kinds of stone, in imitation of rock intermixed with plants. The wett side pect high wall which falls back, and afrords a bood al groined over with ribs like a cloister, with a light at each end, where I find ()range and Lemon trees, the American Alve, and other half-hariy plants, stand the winter well, with a kind of temporary duor of mata, to prevent a cur I find , injurious if the ends are left open. ()n the east side of t... pasisage, under the rock, I have mate three suall arcicel cellars, one a place for I ihlia-ronts, Beet ac.,--another a Potatoe-house, and a third a winter fruit room. The first winter I found the dimp and elssenes male the frait rot: But have now merciod the wir hates ir, not sufficient to endanger frost: and I find the fruit to The room is ager and beter so as to require a candle when fruit is wanted for the table; and I beneve this has a tenAency to meserse the fruit longen
such being the views we entertain of the manner of constructing a fruit-room, we shall be happy to receive any criticisms upon it with which our practical correspondents may favour us.
ON THE PELARGONICM, AND ITS PROPERTIES AS A FLORISTA FLOWER.
Thers are few flowers that better repay the atcention they receive thaa the P'darg mium. Its lisely appearance, ts delicate and brilhant colvurs, the tragrane of its fo liage in many cases, the profluswan of its beautiul howera, and its easy cultivation, reader it deserveniy a farourice with ail clases, down to the cottager who graws it in hi humble window. The great improrements that have been achieved within a few years in the properties of thas dower, and the spleodid varieties we now pussess, hear triamplant evidence of the advantages to be derived from judicioug ross fertulisation. The long, narrow, timsy perals of the rated tit their very base by broad open spaces, bave been uereeded by the beautiful compact flowers of the present day, with broun stout petals so entirely overlaying ench other as to leave searevly an indentation in the outione on hower : whale the coarsese-s which prevanch in che ing iar the old sorts is replaced by a brmer impatweweaty ite are chefiy in levted to the real and perssidrance of two ama ceurs-Edruand buster, Last, ass the her. M. Gin.., -
 time and attention to the dosighinit cocup, still ancentible sueh further insprovement as this dower is stil these altera of. It is difficult to conceize to what exteat cheal has
 opracat of sume laseat beauty which we hat beture de spasted of seeing.
The success of these gentiomen has callori trith nucher us competitons in the seme field; and every year may therefore necemany for purchasers to exercise some discrio
 our reaters the properties which, in our opiaion, consti-

 shoudd possess according to our notions of pertection, the other, a igure of an old variety, in which to be trewed:
The Properties of the Pslargonimm- The flower showid
from crumple or unevenness of any kind, smooth on their edges, and forming a compact surface, round which if a circle be drawn, the perfect symmetry of the flower would appear by the extremity of each petal touching the circle without extending beyond it. It is indispensable that the flower should be of a stout, firmatexture, with sufficient liberty at the botow or he cap to preveat its beins in the panded, a fine cupped form, and preventing the falling ack or reflexing of the petals. or delicate, should possess great clearness ; the under petals must he iree from veins, and the urper petals should hare a large dark spot running to the bottom of them, as destitute as possible of a small white feather, which is usually present, and which greatly impairs the richness of this important part. The beauty of the flowe is greatly enharicet by having this sput clearly defined and if it is surreunded by a dash of crimson, that, should have a distinct termination also. The petals ought \(t\), be quite free from the least appearance of a watery ellge. Finally, it is essential that t:le leaves should be large, delicate, and have a healthy appearance, and that the truss should be composed of several flowers sapported by a firm footstalk standing quite clear of the folisge.

\section*{COTTAGE GARDENS.-No. XXXVII}

THe principal operations to which attention is to be directed this month are, the protecting of Grapes, the gathering of Apples and Pears, and the taking up of Potatoes and other usefnl ronts that are intended to be preserved for winter store. The first of these will now require to be speedily attended to, so that the frait may be preserved from the attacks of birds and insects, which soon commence their depredasions after it has changed colour and become nearly ripe. Wasps and flies are, of all and become nearly ripe. Wasps and flies are, of all
others, the most destruetive to this fruit; and when they others, the most destructive to this fruit ; and when they
are numerous, a few wide-mouthed bottles, half filled with sugared beer-dregs, may be hung up in different places to entrap and destroy them : but this will only prove a par tial protection, compared to barging the bunches, or covering the Vine with thin bunting, or any other cheap
materal of a similar deseription that will admit of a free cireulition of air. For , ne own part, in cases where the crop is not arer-abundant, we think the method of bagging is preiersibe to the cther, although the preparation of the bass in the first instince may be a littie more troublesome, but when once made, and properiy taken care of, they of wanswer the same purpose for years. They should be of various sizes, and preparel in sum a manner as to be thus protected, the fruit wiil retain its flarour and continue in good condition fur a considerable time, provided the weather is dry and farnurable. With respect to the gathering of A pples and Pears, great care is necessary, so as to elisure their successful keeping. Those aecguainted with feuit will tell at a glance when it has reached the state in which it shoula je gataered. The cottager, however, crauot be expeetel to do so, but he will not err very much if beattends to the ru'e whide' io commonly observed in this matter, that is, to note when the fruit berins to drop aaturaily from the tree, or to part freely from the tions of being movel. Faning in these outwand indicaand if the seeds appear of a black or open a single fruit fit to gatier: bur if ther happen not to be coluures, then
 beciuse, if zathered prematurely. it will very soon afterward shruvi an ! whsted and never acquire that fiavour, or keep so we:, thate- the most faveurable circumstances, as when it is suffered to remain on the tree unti' it is thorougity ma tured. The excellent remarke on this sabject in a forme Number of the Gardeners' Chronicle, p. 611 , deserve to
should fonit be shaten from the tree, as we ton freqnent? see it done; on the contrary, it ought to be all hand-picked aroid bruisiog. When transferred from the basket in which it was gathered, to the place where it is finally to remain, the fruit should, if possible, be arranged side by side, with its eye downwards.-M.E. H

HOME CORRESPONDENCE.
Tatural Hlyorometer.-One day lately, when I was examining the old flowers of the long-rooted cat's-ear, Hypochzeris radicata, the pappus was perpendicular with the stipe, or it was what may be called shut up; and when \(I\) tried to open it, it still went back to its upright position. Yet, when taken from the receptacle and laid upon a table, the pappus in a few minntes expanded, so as to form a right-angled triangle with the pillar that supthis kind serye ss an Hygrometer at times? - Peler Mackenzie.
The Wincopipe.-Lord Bacon mentions a small red foner growing in stubble fields, called by the country people Wincopipe, which, if it opens in the morning, ensures us a fine day: is this flower the Pimpernel? - P. M. We presume so.]
display of greenhoenhouse Plants.-The stages for the display of greenhouse plants are frequently formed of an equal, or nearly equal, series of ascents, in consequence of which the upper plants are by no means so well seen as the lower ones. The proper plan is to commence by small elevations, gradually increasin; as the shelves recede from the eye, somewhat in the manner shown in the annexed diagram. The lowest shelf is supposed to be eighteen inches from the floor; the first rise is 6 inches, the next \(9,12,15,18,21\), and so on. The advantage of this arrangement, in commanding a view of the flowers, is too obvious to need pointing out.-A. Ainger

Hot Water-I feel much satisfactionin finding, by your last Number, that Mr. Green and myself agree as to the merits of the hot-water system, of running pipes through tanks of water, as adopted by Mrs. Lawrence, and the trough system in his own Cucumber pits. I also like the open-trough syatem of Mr. Corbett, if the vapour can be coninned at pleasure, for ripening of frait. In the winter of 1830-31 I had a hot-water apparatus set up so unskilfully, that I resolved to be my own engineer in future. My last hot-water design was for heating two new forcinghouses here, when I fancied I hadinvented something new; but when the second Number of the Gardeners' Chronicle appeared, I found I had been anticipated at Ealing-park Thave siuce altered the system of heating our conservatory here, so effectually and so economically, that I feel confident in recommending the plan, or some modification of it according to circumstances, to others who may be similarly circumstanced. About ten or a dozen years since, nine persons out of ten who adopted the hot-water system erred in using too small a quantity of pipes for the surface to be heated, and thus increased instead of lessened the labours of the gardener. It was a case of this description that I cured at a trifling expense. The conservatory here is heated by pipes running under the paths all round the house in a cavity, the sides of which are of 4 -inch brick work. All we could do last winter was to keep out the frost by constant firing. I see that at Chiswick the conservatory is lept at \(34^{\circ}\), but this is far too low for the comfort of a family where the conservatory is, like ours, attached to a suite of living rooms; I therefore aim at from \(40^{\circ}\) to \(45^{\circ}\) as the standard heat for our house in the winter. By way of contrast I may mention that I had a similar case in hand in the hard winter of 1829-30; and after consulting with the London firm who erected our apparatus, and with one or two other houses then in public favour, for their success in heating, all I could learn was, that we ought to lay down one more pipe all round the house: this was done at a rather large expense. Instead of recommending the same thing here for an additional supply of heat, I removed the grating from over the pipes, had the cavity dusted out, and employed a bricklayer to plaster the sides and bottom of the carity with cement about a quarter of an meli thick, where the pipes entered the cavity and made a water-proof joint, as recommended by Mr. Green in the article on his Cucumber pits. The only trouble we met with was, that the mats eomplained of scratchns his knuckles when plastering under the pipes. Thus we have a trougin of "dier 20 inclues deep ty 14 inches wide, Wiich, when heated, forms a powerful reseryoir of heat and a constant source of congenial vapour ; this we have found to be superior to all other modes of keeping up a Another moisture in the atmosphere of our glass-houses. to rum along the froat wall in the neual way. at the level of the greund or a fort or more above is; alil that would be recquired would be, to cement the front wall from a few inches above the top pipe to as many inches below the bottom pipe-or, indeed, as low as it would be desirable to
have the depth of the water-trough ; then build a 4 -inch wall or a brick on edge in cement on the other side of the pipes, filling the inclosed space with stones, gravel, or earth till within the proposed distance from the britom prough. Again, cement it over to form the bottom of the altering an old one with a come building a new house, or we pull down the top and both sides of the flue front, if the bottom of the flue and the front wall for two parte of water-trongh, and by building a brick on edge on the onter edge of the flue-bottom, we bave a trough at once which can be made to any depth. In the case of a new house, we should of course have to make a bottom for the trough on arches, as we would an makirg a bottom for a flne. Nom
if we make this bottom 10 or 20 inches wide, and pot thres courses of brick on edge on its outer edge, and then the same quantity of brick down the middle of the trough the have it divided in two equal parts, the part nest the front wall to be used as a flow trough, the water to enter the outer division of the trough at the farthest-off end of the house, and to return by it to the mouth of the under pipe at the end next the boiler, where the flow-pipe discharges into the front trough. If the boiler is at cne end of such a bouse, five or six feet of iron piping would be sufficient boiler, might be put up cheaper than the old flue. Ti bonler, might be put up cheaper than the old flue. To
conclude, I know of no arrangement of pipes below or above the surface in a house where the pipes might not for little expense be encased in water; and I should recommend them to be so placed for the sake of the vapour, eren Where the pipes were more than sufficient to heat the space intended without such addition,-D. Beaton.

Rhododendrons.-F. asks, a few weeks back, whether the recent wet weather has forced Rhododendrons into blossom in any other gardens but that of your correspond ent's? I have been lately at Saltwood, the residence of Archdeacon Croft, who has some acres of Americansgrowang in a natural peat bog. Here I saw R. catawbiense,
 was also told that R. arboreum, and many of its varieties, grew in the open air during the winter. I also found Indian Azaleas and many South American plants growing in great laxuriance, whist the whole surface of the bog was covered, and the surrounding air scented, with Mimulos moschatus. I conld name several other instances of Rho. dodendrons blooming twice this season, and among them is a plant of R. catawbiense at J. Godfrey's, Esq., Ash, which is now in flower; and should the wet season continue longs he will scarcely have a blossom on his American plants in the spring.-A. M., Sept. 20.

Fuchsias.-Seeing some remarks respecting the hardiness of Fuchsias during our winter in Norfolk and elsewhere, I beg to state that I planted a good-sized bed \(\pi\) ith the Fuchsia Ricartonia in May 1833, in a situation very little sheltered, at Aigburth, near Liverpool. The plants have remanned there ever since without the least covering, and at this time they are the admiration of all that see them. Last winter they were cut down quite within the ground ; but they very soon began to show themselves after the frost was over, and by the middle of July were in foll bloom, and will remain so till the frost destroys them again. The Aloysia citriodora stands the winter here perfectly well; but I prefer cutting it down in the autumn; this prevents the wind from blowing it backwards and forwards, so as to make a hole all round it, and let the water get in and rot the roots, which is much more iniurious than the frost.-Robert Towen, gardener to D. Waterhouse, Esq., Aigburth, Liverpool.
Prize Dahlias.-As 1 entirely concur in the sentiments of your correspondent, "A Lover of Gardening," (contained in a letter addressed to you in the 22 nd No. of the Chronicle, ) on the propriety of giving the names of wia ning flowers instead of winning gentlemen, I take learo to forward those of the twenty-four Dahlias for which I was awarded first prize, gold medal, in the amateurs' class at the last South London Floricultural Society's Exhibition, as also the names of the ones exhibited by my gar dener at the same meeting, and for which he likewise had the honour of being awarded a first prize.-AmatBuas: Eclipse (Widnall), Garrick (Widnall), Scarlot Defiance (Cozens), Highgate Rival (Steins), Beauty of the Plain Phenomenon (Whales), Lewisham Rival, Queen of Sarum Grace Darling, Hyla, Optime (Thurte!ll), Baoomsbury
(Pamplin), Purple Perfection (Stubbs), Ruby, Rival (Pamphin), Purple Perfection (Stubbs), Ruby, Rival
Sussex, Exyuisite (Holmes), Le Grand Baudin, SpringSussex, Exquisite (Holmes), Le Grand Baudin, Spring tield Rival, Maria (Wheeler), Pickwick (Cormack, tive (Lome) Eulipse (Widnall), Cxbridge Magraet (Catleugh), Tournanent (Catleagh), Beauty of the Plain, Phenomenon Lewisham Rival, Yellow Defiance, Grace Darling, Hylas Optime, Charles XII. (Mortiboys), Bloomsbury (Pamplin), Ruby, Rival Sussex, Springfield Rival, Exquisite (Holmes). Conservative (Lowe), Nicholas Nickleby (Cormack), Pickwick, Maria (Wheeler), Andrew Hofer, Eva, Penelope, Miss Johnson.-Charles Knight, Th Villas.
Glaziuy Hothouses.-I was asked the other day for my opinior resnecting the glazing of hothouses and framesthe size of ite lap-and whether the panes should be

 ufon one atucher as posible. For this former I thick \(3^{3}\) quarter of an inch is a very prorer gauge: it nay be eves somewhat less then this, but in no case suouid it exced it. My reason for recommending the laps to touch. from having observed the bad effects that resuit in alnos every instance where the panes were bedded so as to
a small racuity between them. When heuses or pits are
clazed in this manner they are always leaky, not only in et weather, but at other time, from there beisif a ho haps ment of rain blown into the house by every gust of rind. Another objection, in my opinion, to the leaving of a space between the laps, is that in winter during serere weather, where houses are not kept at a high temperature, the water at the lips becomes frozen, and occasions the bre akhere lias been anything lihe a slarp frost. I believe there is more art in glazing properiy thau most people are awar
of. 1 had some sishes glazed by my carpenter that ap peared outwardly as go d in peery respect as if they had leaked liked a basket, and I was uitimately onigen to have the glas taken out and relaid. The secret, if any, appears to me to be somealiere in the bedding of the panes, and ice. I may, however, point out one error in glazing, which even tradesmen are sumetimes in the hablit of committing, and this is the cutting of the panes too large without allowing sufficient room on each side for the bars moist heat is required to be kept up for the purposes of forcing. It may be worth while for those who have
glazing to superintend to keep an eye to this, and as the subject appears to me to be of considerable importance, perhaps this notice may induce some of your numerous \(-M . E . H\).
Indian Corn. - Your correspondent "R. R." must have been misinformed on the supposed edibility of the sprike 20) years in India, and been in other intratropical counmen wors not that R . B " furnd of neither good nor tender. It is, indeed, when mature, among the toughest of vegetables. Camels and elephants may contrive to masticate or swallow it; but the power
and inclination of horses or hogs to do so may be reasonandy dispated. But if the spike or coil of the mature Maize be, as "R. R." declares, "detestable," he may be assured that the immature or green corn is excellent if, when tender, it be broiled dry, and well buttered, with a little pepper and salt. The undersigned has enjoyed a getable. It is usually held by each hand and munched. Perbaps, when very young, the spike or core may be als? eatable; and perhaps the grain, when no harder than
green peas, would be as good, if similarly served. While on this subject it mas be remarked that ferred. Whrubs are more beautiful than the Maize, or Indian Corn. Some within sight of the writer are eight feet high, with foliage the most graceful and of the most lively and beautiful
green. \(-E . M\).
Rool-pruning Fruil Trees.-Having adopted Mr. Rivers' plan of root-pruning Pears, and other kinds of
fruit trees, I have found it suggested that though the fruit trees, I have found it suggested that though the
Pears were thrown into fruit, yet that the fruit would te small and gritty from the clieek. Jow 1 have the experience of two years, and have in my garden trees which have not been root-pruned; and I can affirms that the fruit produced on the root-pruned trees is quite equal to always be recommended that the root-pruned trees should be well manured, and encuuraged to make many and healthy ruot fibres. This is eosential; if the tree is root-pruned stunted and produce yoor fruit.- Totty. The Bittersueet.- lesterday I found a young child of mine eatins the ripe berries of the Solanum Dulcamara; beliering that they are of a poisonous nature, I felt rather uneasy about it, but it would appear that the quantity eaten must have been small, as they have produced no
effect upou the child. It is stated in Woodvile's Herbal that the berries cause violent vomiting and purcing should like to know if there is any medicine that can coum P. M. TThe fruit of this prries when taken inwardly.narcotic poison; but modern experiments show that if it acta as such, it cau only be when taken in excessive quantity. dangerous effects are anticipated, the stomach should be speedily emptied. Vinegar or any other vegetable acid an antidote to narcotic poisons.]
discussion of Honey since the commencement of the my attention has been directed to the habits and economy the Aphides, a subject well worthy the attentive rapid and amazing increasener, when we consider their rapid and amazing increase, and the injur:ous effect they
have upon regetation. As far as my observation has extended, upon regetation. As far as my observation has extended, I am satisfied that the Aphides are the cause of of they chex, which is their excretion, and not an exudation
Would a sacelharine exudation of a what assume tie appearance ( ds is always the cose when A phides are present) as if the leaves were smeared with suot or ganpowder, and which may be frequently scen in greenL.ouses where fumization has been reqgected, and mion: Mhely has given canse for the opnion that plants will not hag the the neighourhood of a large tomn? In eximimthat were on the upprer side of the leaf, If fund an abausdance of what I considered to be their egrs, but on closer inspection I hadd reason to doubt; many of them were in the act of emitting a filmy thaid. The manner in which it appears, it is elevating the abd meat ; it first a swall spech edtly whe it is enlarged by another emission, and so repeat. triateden by the application of the two hind-legs it is thated, and by a sudden jerk thrown off, and roliing
plentiful on this species. I have been thas particatar deas has been futad oa the leaves of the lower batacines of trees, where Aphides could not be disevvered. That the in a fimp case is a mell knomn fact for their cleanliness and comfort-so the Aplides crowded on the leaves and young rood would be annoyed by their excretions were it not for a provision of this nature, but fall. The Aphides when touched or irritated by pressure emit from two tubular projections on the abrlomen a liquid of a green culour in the Cabbage species ; this, I apprehend, is done for protection or anooyance, after the manner of the Asparagus beetle, our correspondent A. .. Z. at-
tributes the discolouration and unhealtin appearance of his Pelargoniums to the deleterious effects of soot, but rather suspect that Aphides are the cause ; were it necesplants which and youted in the manner as he de scribes on the upper or under side indifferently, according to the position of the leaf on the plant. Nors the spots on my plants are the undoubted eliect of Honey-dew soon as his Pelargoniums are taken in, and to repest it fine month during the winter time pasing proper attention to soil, water, air and temperature, be wil have no cause to complain of the spotting his Pelargonium leaves.-James Falconer, Cheam.
Prescreation of Pelargoniums in Winter.-I wish to \&c., through the winter, being possessed of neither greun housenor pits. Thave only twotwo-light frames, and another single light. My method is the following :-I have pits dug about 3 or 4 feet deep, corresponding in extent to the frames, which are fitted on them; the plants are then placed on boards within, and the frames are surrounded with stable manure for the space of two yards all round The manure is piled up level with the lights in the midule afiner, i.e. November, Decan hanuats, and straw, which are taken off, if the sun shines at mid. day, for an hour or so. I find this plan succeeds very wel in every respect, except with regard to damp, which I caa-
not tell how to avoid, for I can give but little air. I have been advised to put some dry riveranel inches thic at the bottom. I should be glad to receive any sugges opinion of the entire plan, and should rou think it likely to benefit small gardeners, I should be proud to see it in your valuable columns. been tolerably successful as yet, for I did not lose a single my neighbo my neighbours, some of whom have greenhouses, lost num-
bers.- \(W\). \(W\). [All that is required in protecting Pelarnot sink a pit, as our correspondent does, but should throw up a bottom of earth, one-and-a-half fout high, on which to plant our trames; and instead of employing stable litter, we should use dry stidw, so arranged as to shoot the water away from the framcs. Insteat of one mat for rovering wilh we should use two, and, if required, a slight moveable thatch of straw as we.1. So treated the prants courd not die.]

Hot H'ater--A correspondent," B. Mefiee, Pine-apple should have stated how long Mr. Fow.er's apparatus had been ixed prevanaly to the al-crations being made, for on inquiry he finds that it was put up in the easly part of \(1 s^{2} 29\), and stond without any change for eigit years and a balf, which surficienly proses that the apparanus performed its wurk well for that t.me. Oar correspondent atso say 3 that he has paid attentius to the var. ous moites uf heating and after a careful insestigstion, he has comen ment that Mr. clusion, in comnman with many practich men, that, ecoFumber"s plan is the
nomr, and power.
The Manayfment of Terobnav--firing succeeded in keeping the daffereat sarts of Terbenas in sman pota througle the wiater, when my neigaluars inter secon beg to state the method I adopt. In the first or sings of the different kinds as I require for filling the beds in the following year: about six pots of a sortberig usaity surts,
 prepare as many loses, two feet square, as fiave sorts, rest with one part cand, one leaf mould, and two parts good rich loam. The l'ints are then phat.
 They soon thase root ant orer cold frame during tha mater, and the lights are thrown off except in wet Early in the spring they begin to youc yous
 \(A_{1}\) ral, at winh th \(\rightarrow\) the 6 ases are tur.ed ous, moe als being removed awed the ma-spumtan the yonnt forme irom the sixty pots thane oit of the bren ins one wh' strongret. take the lend and hever it: thas the plats In the centre of the bel being the haghest. 1 striaing cance is perduced.-G. Fic:
Bohemin. Hastings. - It is \(3^{\text {bout }} 21\) sears azo that firs! met with Trifolium oncarnatum in Beigiuas, anad brought home some seeds. A short time after I indused comed "elovernick;" by way of chayge ; the results were
not such as to justify their continuing the plant in culti-
wat Clower and the Treforl each requring the same chamival constittient to flourish in ; and if so, the land was equally unfitted for Trito ium and Clorer. Pertans a dressine of grpsum would in cither case have restored the land to state that would hase made pacti prodactuse. Aurnt iz years since a more general a'tempt was mate to bring it into notice by the London secdsmen and Mr. Luudon, all of whom recommended it as a fodder plant, well colculated ing ing much sooner in the year. and also uf producing a
greater weight than common red Clover. For the few years following I found it everywhere I went in smail quantihowever, ascertained that Wi,eat, as an after-crop, was not so productive as where Clover had grown. From this time it has chienty been used to fill up the pratts of a Clover-field where the Clover bas faited; our practice beiag to son clover on the land previousy occupied by Wheat or Barley, so that the two crops are growing to gether till the Wheat or Barley is harvested. It is no as the Trifolium grows more vigorously than the Clover, it is put into the spaces, and really is in time to be as tall as the Clover on the first cutting in the spring, which Clove would not; in fact the practice of repairing Clover with Clover is certain failure. When the Trifolium is sown, either as a foll crop or to mend Clover, as before de scribed, the last week in August or the two first in Sep tember are the most proper times; the plant is then either fit to be fed duwn, or cut green, or hayed the tollowing season. The seed being large, from 2albs. to 3ulbs. per acre will be required; it may alsu he shwn in spring, but with less advantage. - If. Masthes, Eiolic Alurscry, Canterbury.

New Medicinal Plant-Dr. Jeffeys of Liverpool has angustifolium, as a styptic. It is much used in South Ame rica and Belgium, to stop the hemorrhage from small vesleaf, or in fine powder. It is said also to be taken inter pally for the same purpose, in form of infusium proportions of about half an ounce to a pint of boiling extensively Peru the plant is called Moho Moho, and is this pepper much resembles in smell.
The Viger Eupedition.-Advices have reached us tresels of this interetithe 9 th July, at which time the Vogel and Mr. Ansell were well, as was the case with the officers generally; but some deaths had occurred among Niger before The expedition was expected to reach the Niger before the end of the rainy season.
Rrapf have fonssinia.-The missionaries Irenberg and Krapf have found a station whence Aden can be readily applied with chalk, clay, and garden soil, the last a desideratum at that place. This station is Tajurnh (lat \(\left.11^{\circ} 58^{\prime} \mathrm{N}.\right)\). The following is the range of the thermome ter there, scoordine to Pahrenheit's scale:-

GARDEN MH,HOKANDA. Horticultural Suciety's Garden, Chiswick. -The crop of fruit
here bas been generalty good, but tit has been observed that there
more Pears than Apples. Among t:e early Peats we fount the Dunmore; Drapiez d'ftes, A monary the mely Pears we foumit

The Farmary' Encyelopedia, a dietionary of rural ffairs, by Mr. Cuthbert Johnson, is in course of publication by Messrw. Longman. The firat Number appeared op the
lst September, and it is to be continued monthly. W reserte cur opumen of the work till the sew... Nomber
shall have reached us: for the present. ne sini.' mily say shall have reached us: for the present. We shal. (inity say. the Botany, which is worse than we coult hare thougit Nossbib. III. and IV. of the Phytologist have reached us. We have alreaty epressed a fincourabic uman of thas periadieal ( P . H50); and that amion in en.tirmed tiv the those who occupy themselves with our wild plants. Mr. Edwin Lees has communicated a good notice of the rare flants about Aberystwith and other local wis. nuramhare extract the following memorandum by Mr. Cam. rom, of Birmingham, concerning the cultivation of Clabmones, " Lycopodium clavatum grows freely with us in a peat bed in a shaded situation, and appears as manageable as
many other plants. Thuse w... should. up,n obtaining piants fiom their uatise hant it on the moors, put them into light sandy peat, and ! wee the pots in a shaded situation unthl well reoted. when they naay be turned out, with the balls putire, imto a faramoble stuation, where they will require litele further care or attention, except putting a hitle peat over some of the running stems to encoarage them to make fresh roots. Lycopodium Selago may also be grown in the same way as Lyc. clavatum, but does better in pots kept in a cool frame, or under a hand-glass, during the winter at least; it is also a plant well adapted for growing in the house, in aglass jar or glass case. Slugs are very fond of this species, and when once they commence will soon devour the whote plant if not sought ont and destroyed
Mr. Selby's History of British Forest-trees-(p.472) continues to merit the good character we have given it ; or we should rather say, it improves ass it proceeds. The good sense and practical knowledge of the anthor will ren. der it a most usefol book to the planter. Nothing ever surprised us more than the credulity with which country gentlemen listened to the ignorant exaggerations of the ate Mr. Cobbett in his writings about the Locust and other trees. That he should have been able to persuade his cuscomers to cive him his own nrice for rlante of the Ronbinia Pseudacacia, while they would not take them of respectable nurserymen at any price, was certainly as strange event, and shows how much there is in a name. We do not know whether this folly is yet over, but if not the sen sible remarks of Mr. Selby will doubtless put an end to it We entirely agree with the author in the recommendation of the Wild Cherry to planters on light land. It is one of reat ry best and quickest-growing of our trees, and of heary land. The following character of it is fully borne "It is, therefore, one of the few trees that can be adrantageousiy planted as a nurse or subsidiary to the oak, as
it is neither apt to overton or crush its neighbours by rampant or the ash, or to hurt and injure them in winds and storms, as is constantly the case where trees with a more flexible or easily agituted spray are introduced. It has also this further recommendation as a nurse to the oak, that, although a quick-growing plant while voung, and fulfilling the duty of a protector, it naturally yields to the tree it rowth, and is aftericards content to vegetate beneath its shade, rendering it even as a mere neighbour the least dangerous to oaks in cases of neglect, of where regtlar thinhing has not been duly administered. On account of these analities we recommend it to be freely introduced as subsidiary to the oak in all plantations where the soil is of tolerable quality; in such it soon begins to malee a return, and becomes fit for a variety of purposes. Thich may take place about the fift or sixth year after planting will afford good corf and crate rods, hoops, ce. , the acond, two thrce straight poles, fit for the hop-yard, or small railing; after this, it furnishes ralling of a larger size, and posts which hare been found to be very durabis. wuch or the trees as are allowed to attain a greter age, say twenty-ive or thirty years, acçuire size sulfient for gate-posts, barrel staves, and other uses which will repay the planter for it occupancy, and this withore injury to the oaks which are intended to remain as the fint crop.

By producing suckers in abundance, it also furni-hes a plantation with a protidable underwood, wiste. miy te cut Deer every five, six, ten, or more years, ace This suckerbearing propensity also readern it an eligible tree for narrow belts of lartation as it fumishes an undewmat withow tronithe expuense : and in threee caxe (unfortunately of

 brosh-liw hends, the fiean, iustend if . .e.
other species in this hide-touni st
a race of auxiliary gr und
cipal trees of considerable value and handsome appearance through neglect',
In the history of the Ash we find the following method of renovating an old drawn up bide-bound specimen, of rides such a rlentifn! surn
no cartail the head of an old wind-shattered and bound, is a very different operation that hat topping of a vigorous tree, so deservedly reprobaied. It is strietiy in accordance with the principles of regetabie physiviogy, and is no lena certain to intigorato the vegetaise powera
f the Ash than of the Hawthorn, when the latter is im. proved by the reduction of an old hedge to half its former contrary to nature and in bad taste, that the very omission of it is rather so, inflicting, as it does upon our sight, a withont any of the interest of old age.

Great numbers of Ash, reared in narrow and ex posed plantations, have, from want of proper and timely thinning, grown up too tall for the unprotected situation they now make no progress. It is in vain to deny that the real make indeed, the only remedy is a severe one, namely, to enable the tree to form a new head, more perfectly adapted enable the tree to form a new head, more perfectly adapted
to its site, by first cutting off the branches that form the present summit. The saw should be applied first above principal ones; indeed, we may often observe, about this part and lower down, that nature is even giving a kind of hint that she is prepared to second us, for the young
shoo!s which she annually sends forth from the stems shoots which she annually sends forth from the stems of the branches would immediately expand and form a a proper point at which to cut, and in many a large tree most of the branclics disided will not exceed tho thickness of a man's arm, so that the wounds, considerim they are in the most active part of the whole plant, will
never prove injurious, but will generally be covered, in never prove injurivus, but will generaliy be covered, in great part or entirely, by the advancing bark. The opera-
tion of cuting witil the saw should not only be performed tion of cutting witi the saw should not each branch ought to be twice sawn, the first cut being merely to get rid of the weight of the branch, in order to prevent splitting, and the second cut very carefully made at the proper point, ne or two feet lower down.

The shoots of the first summer will, perhaps, be weak, but afterwards very strong, until a new head, capable of instead of a tall and hide-bound victim to the winds, a sturdy, storm-defying Ash, spreading its boughs in characteristic beauty. So, too, the old, misshapen, wind-shattered Ash of the hedgerow may be taught to exchavge its ragged, blackened twigs, for those fresher branches which its venerable trunk is still quite, able to nourish, when rer lieved from the burden that was sluwly yieldi
storm because its period of growth was past."
storm because its period of growth was past,". Selly will
We trust that in the course of his worls, Mr. turn his attention to the Elder Tree, the value of whose timber in blowing sand where little else will grow, is by no means undeserving consideration.

The Florist and Amateurs' Guide, by Joseph Wakeling, is a cheap monthly publication, devoted, principally, to matters connected with fioriculture. Mr. Wakeling the proprietor of the work, is well known for the accuracy embellishments of this work are exclusively confined. In this department of his art, Mr. Wakeling has no rival ; he is a florist himself, and combines a knowledge of the pro perties of flowers with the requisite skill in his profession of paramount importance, that of giving an honest representation of the object before him. His are not imaginary likenesses; there is "' nothing extenuated, nor aught set
down from fancy ;"" they are faithful transcripts from the originals. The letter-press portion of the work we consi der susceptible of improvement, and would recommend Mr. Wakeling to have more attention paid to it.
CALENDAR OF OPERATIONS for the ensuing Week. Tass is one of the best months in the year for transplanting or
removing fruit trees, when the weather is favourable, that is, damp and not too cold, therefore, those who have orchards to
plant, or wish to check the growth of froit trees
 observed in shinting trees to ensure succes, is to preserre the
Toty rroe niniury as much as possibe, securing unharmed alt the

NEWS OF THE WEEK
Our intelligence from France contains some additional particulars respecting the Iate attempt to assassinate the Princes. It appears from the confessions of the prisoner, that a plot had been formed by a secret societry for assassinating all the menhers of the howal Family wherever they could be met with, and that the louke of Orlems was the party against whom all their designs were principally directed, because his death would lead to a Regency. In consequence of these disclosures, several individuals have been arrested. The tranquillity of Paris is no longer disturbed, althoush apprehensions are still ematained of renewed collisions with the populice: the intelisarmee from the provinces is favourable ; the census has been resumed in the disaffected towns, and in thany inst mase completed without further interruption.-From Spma, we iearn thest the Regent, in accordance with Semir Arzielles, the guardian of the young (queen, and wi's the approbation of the British Government, hos deritei on arrawing a marriage between her Majesty and the son of the Infanta Don Francisco de Paula. This phan is snid to have been suggested in the hope that it may predude any other arrangement contemplated by the great Powers, in order to bind Spain to their policy. - In Portugal, the bill for endowing the Board of Public Credit with additional revenases had pased the Chamber, and an attempt of the Mryelite party to create a new revolution on the frontier hal terminated in the entire failure of the scheme. and in the overthenw of the insurgents, who were compelled to take refuge in the Spanish territory.- The eleventh anniversary of the Belgian Revolution has been celebrated in Bruss is with much ceremony, and without the manifestation of any party feeling. The papers confirm the report that the King of Holland has refused his sanction to the projected union of Luxembourg with the German Castoms' Union, and hopes are again entertainet in Prussels that this deci-vion may ead to some commercial arrangement between Belgium and the Grand Duchy.-The news from Turkey, receives by the Levant mail, is, on the whole, sativf.etory; the Sultan's health has materinlly improved: and the Convention of July las been ratified, and returmed t.o) I.ondon for the exchance of ratifiogtions. Some measiness has been felt in regard to the political movernents of the Rayah or Christiun population of the empire, and as a measure of conciliation, the (ionermment has granted thers all the commercial and other pmateres his pears to be entirely restored; several important privileges connected with their local Government hav been conferred oa the monntaineers of Lebanon, and the Sultan has agreed to their petition for the refuction of the tribute.-From Egynt we learn that the Parbu is devoting his attention al nost exclusively to agriculture, in the pursuit of which lie is followed by his son and nephews, and by all the superior officers of both services. The Nile had risen farourably, and the irrizztion was complete, promising an abun lant crop, if the riser dud not continue to increase.-From the United Stite= wo learn that the Bank Bill, after passing b th Howses. had beea vetoed by the President; and all the members of the Cibinet. ercopt Mr. Webster, had retired in consequence of its filure.Mr. M•Leod's trial was to take place on the -ta; his detention had been the subject of debate in the Leegisisture and no doubt of his acquital appears to be enter mined.
At home, it has been announced that Parliament will probably be prorogred on Thursilay raxt by Commis siun. In the Lords, the Nary Pas Lan, the Froemore Lodre Bill, and the Roral Garden Bull have lween passed, and the Administration of Jastice Bill has proceeded tarough its early stages. In the Commons the Ciancellor of the Exchequer has given his expianation of the ways and means by whieh it is intended to meet the supply voted in the present session. To meet the deficiencr of the revenue, he proposed to make a temporary provision by funding five millions of Exchequer Bills, one half of Whicu he expected to raise in moner. He alons ate the money subscribed was sutfient to redace t.an mi.....ns and a haif of the unfunded debt, and that the (aton of seting stock, or of isuing ners Exehequer Biils, secturet the sum necessary for the supply. The ressintoma \(f\) : arrying thege medsures int affot were rated withont antion. M. In the debate on the Poor Law ('ommissioa Cit. an imernet.an

Hothouse: Mr. Freshtielt has come forward as a Compervative candidate, and Mr. Robert Puls ford on the Liberal interest.

Prorigation of Parlumant.-It is stated by a Ministerial paper that "Parlument will most probahly b prorogued ou Thursday hext, as litele doubt nuw exist that the puhic business will by that time be in a sufficiently firward state to admit of such a course. Her
Majestr, for causes that minst be ohvious, will not officiate persunally at the ceremony.

\section*{- Forctall.}

Fancer. - The late Attempt to Assassinate the Princes. -In addition to the particulars atready given in our two last Aumbiers un this sublyect. the following details gathered from the \(j\) arnals nay jurtips be interesting. In conduence of the confersman of (luemisset. several other inciergerie ; and is womld appear, .uciod!nz to his deposi-

 with. The Duke of ( ) leans wrs the party ayainst whom their designe mere punerpally directed, thecause his death would lead to a Resemry, and they considered that Regencies are al ways favourable for revolutions or other disturbances. In order to execute this design, some conspirators were 17 th Regine coun, and a report that the King and all the Princes were to go out to meet the Duke d'A'male, made them think that fortume had placed a readier opportunity within their reach. which they onght not to let ship. The assassing consequentiy went to the Place de la Bastille assembled, which would cover tiee attempt, and afford them facilities for eseaping, after it was made. Eight members of a suciety, which it seems is now known to but he alone kept his oath. Thes had all made solemn pledges not to betray each other, but Quénisset, by the cowardice of sis recouplices in not joining him in the act and therehy breaking their enpasement with him, con ceived himself releasel from has oiligation
Disturtuates in Paris. - The jurnals are still much occupied with the recent disturbances. and with the present state of domestic affars: which, if not any longer involved in actual dadger, seems to) threnen and contis between nals have already tried up warls of one humdred persuns mplicated in the late riots: forty-tine were condemmed on Friday and sixty on the fuli wisk day, to an inprisulato the gravity of the ffelue. Mr. Barivg, the late Chancelior olapsed since he made his finan-
satisfaction that the six mons statement had not been fond to have materially varied his
cial calcnlations. He doubted whether the success or the ceancele that
of the Exchequer would turn out to be so complete as
Minister expected. The terms on which he had dealt were certainly fair ones; but, after all, it only amounted to the very plan
which the late Ministry was blamed for bringing forward. If be
thought the delay were asked merelv for the purpose of giving fair the for consideration, he should make no objection; but
as there had becn time ehough to turn out the late Ministry on
the point of finance, the point of finance must have been fully considered, and the Chancellor of the Exchequer aus
been ready this session with some intimation of the resle
Mr. Gor.
 been hlamed for propnundine the very plan which the present
Ministry had adopted. But the difference was, that the lat
Ministry had been long in office, with full time to digest thei plans: the present Ministry had had only three or four weeks to

 the it was too strong for their attempts.-Mi. Hiwh., ex, petert Mo extensive commercial did amons themelvea mpon the great and often-debated question of the Corn-laws. He vindicated the
budfect of the late Gorernment, and declared himself disappointed at the course wheh Mimsters were taknc, and at their diay in entireif cut of employ ment, or ouly partaliy worhius, in Manchester and other mannfacturing towns. Such a state of thines called for an early remedy, and the only efficetual one was the
extention of our commence, by opening new elannels for it.
emplorment. The question of free tratie, he considered, was largely indebted to Lord Stanley, in his remarkable speech on his recent Mr. Seorr. Wa: all presed the forernment to consider the state of the country before the prorogation--Sir R. PEEL hoped he
shonld not bedeemedguilty of dirrespect to the gentlemen opposite, should nct berteemed guilty of cireapecto the genter enopposite be charged, as some had charged them, with the blame of all instance, in the case of China, they had objected to the policy of Lord Melbonrne's Government; but that pelicy being once
adopted by Parliament, the then Opposition could not, without injury to their country's honour and interest, have opposed the grants which were necessary for carrying her through the con make, this Government was disposed and determined to attempt, although there seemed very little chames that reduction could be
carried to any such extent as would relieve the country to carried to any such extent as would relieve the country to the said of the present deplorable state of the country. He begged that gentlemen would remember, at a future day, their own account of the condition of public affairs at the accession of the
present Ministry. He admitted and sympathised in the existing distress: but he catsioned member agnint the exaggeration of
it. I cave lad hen citcd mme day agh. Dn Mr. Humber, of extreme wretchanesi (risernment had minired into at. and the untrue. He was resolved that while he had the powers of Govern ment, inquiry should be made into all cases specifically stated.
Lurl P.unk enlarge trade and commerce by removing restrictions, then there the country. The late Government had been displaced in pursuing a course of policy on which the present Government should
have their minds made up, and be able to state their intentions to the nation. The prescnt Government was accountable for the defciencr in the revenue, for white in opphsitim the jarty which
supported it had, year after year, in ged the late fovernment to increase it milatary and haval experafture. FIe wowhld hot be licve that Parhament wat a'o \(t\), I e porosued without any in-
dication of the policy of Government on the Corn-laws. It was its daty to stand on the Com laws, if it was determined to np. hold them, and give the agriculturist some security as to their they were bound to allay suspense, by fndicating what they

 in Paris; who having failen in love with tle. .ese enn of cares admission to his father's family as a arverness ; but the marriage being, through the isple anonee of a foot The iddy of the nobleman, huwerer, lite iddy of ine noblemand her rases money upon ber diamonds of the City merchant, who thus
gets ber into his power: The said merchant has a ward ! order; abont half a distance from home Endymion was beaten, who is in her turn rein, and resolved to marry ouly a title, and she becomes emamnared at the Opera of a youns barrister, wi.om she subsequently meets in the Park. The barrister afterwards parleys with her maid, and (with a half-pay captain whom he does not know, but who has forced himself upon lis acquaintance from a tavern, and ingeniously mads himself secessary in the love affirir) tahes lodgings opplosite her hasuse; he next catches her truant canary und takes it howe, ded being surprised by the merchant guardian, is bowed out of the huuse in consequence of his taking Capt. Tarradiddle to be a swindler. But as the young barrister subsequently meets the merchant without the suspicious captain, and has mand, whom the nobleman has turtued ont of comirs, affirs assume an altered aspect, and the yonng genteman is permitted to aoppire to the merchant's ward. The destinies of the losers being thus decided, the merchant has only to win the proud lord and his extravagant lady over to his will. The last is gained hy means of the moneys which she has borrowed and a fear of expmuse ; and the first, by the information from the merchant, confirmed by the possession of a precious porpreviously surfooit of te deal. The price of secress, both with lerd and Iady, is to the the recognation of the son and daughter, which. with the marriage of the young barrister and the ward, brings the play to a happy issue. Such are the materists of the play. The acting was on Farren, as Cat' . T'arrutud bo, and Mr. Bartley as II'arner, whose pertiormances met wilh much approbation. The play, however, was cheered from act to act, and announced for repetition for one week; but notwithstanding t! ese demonstrations of su-cess, it appears to be but of a mediucre character, and not likeiy to preserve for any time the apor in went whe as the the of a superio character, and the scenery and costumes very beautiful.

The Royal Household.-The following has been published as the expenditure of the Lord Steward of the Royal Household for 1840.- Bread, 2,3501 . ; butter, bacon, cheese, and eggs. grocery, \(5,10410 l\); ollery, \(1,350 l\). ; frait and confectionery \(1.9 \% 0 l^{\prime}\); regetables, \(520 l\).; wine, 52501 .; liquors, \&c. 2,0001 ; ale and beer, 3,0000 . ; nax candles, 2,150 . ; stationery, \(8 \% 01\); taliow candtes,
fuel, \(6,981 \%\); turnery, \(400 l\); braziery, \(950 l\); china, glass, \&cc., 1,5762 . ; linen, 11,9931 ; washing of table and other linen, 3.2501 .; plate, 25.5 . Total annual expend ture of the Royal Household, \(69,765 \mathrm{l}\).
Burning of the Ship India.-Private letters from Rio Janeiro bring intelligence of the loss of the Emigrant ship India, by fire, when in \(14^{\circ} \mathrm{S}\). Latitude, and about \(\mathrm{fi}^{\circ}\) ) miles distant from that port. It appears she was on Philip on the 5th June, with 214 persions on board; and had a very favourable passage until the 19th July, when. owing to the carelessness of two of the crew who et a lighted candle fall on some spirits, she tonk fire and was soon burnt to the water's etige. Providentially yust as
the fire was discovered, a large French Whaler hove in sight, and bearing down to their assistance before the India sank, rescued 193 of the passengers and cres. The ap pearance of the French ship at that moment was the more remarkable, as they had not seen a sail before for 14 days Being well found in provisions, the French Captain aftorded hen every accommodation, and proceeded at once to Ric where they arrised safely on the 25 th July. Sisteen live were lost, and the account adds that but for the timely arTheir the French ship, all on bor one third of the passengers, and the progress of the fiames was so rapid that they would have been unable to save a single article of provision or even to supply themselves with a compass.
Lutar Puenomenon - A correspondent of the Times gives the following account of a lunar phenomeion ob
served on Saturday evening the 24th ult.:-At 5 mimates
 30 degrees in diameter, the moon being 20 degrees above the horizon ; at the east end of the horizontal dinmeter of the circle was an indication of a mock moon; at s o clock saw another at the west end; both increased in brilliancy till five mimutes past \(i\), beth having a taper tail diverging from the circle, 2 deyrees in length. The east nebunsity showsed the prismatic colours sery brilliantiy, but there were nome at the west. The zenith of the circle was now much brighter, and began to form into, very pale rays, but which did not last more than half a minute. At 10 disates past a a bright asterof altritude. Fron this tis disappearing, at 45 degrees of ale both the moons and the circle graduaty faded till 2 minutes past 7 , when they disappeared; and the cloud rising from the south-west, prevented farther obsi rvation
Elcetricity in Stenm.-Private letters from Liege, o the 14th ul-, state that Baron Segmier, member of the French Academy of Sciences, accompanied by the Count de Rumgay, French Ambassadur in Belgium, had on the preceding day been present at some experimemts of M evistence of electricty in steam. Baron sieguier, after having witnessed some experiments upwn others, got upon the mon-conductor, holding in his hand a metal rod, which he phonzed in the steam from a steam-Lonter, and having done so, M. de Ramigny drew electric sparks from every

Fossit Remcins. - We learn from the Irish papers that an materesting discovery of fossil remains has intely been
made in the county Longford. It consists of a fine wull :and uthar portions of the female staleten of the Cernas margaceros, or fosil dese of Ireiand. The male skeleton is of frequeat occurrence, and the desideratum to comparative anatomists of any portion of the female skeleton is thus obtained. Mr. J. Krantz, of Berlin, and Dr. Buekland, it is sud, both conenr in stuting this to be the first specimen they ever m:t with. The superciliary lintes or openngs, sufp sed hy (avier and others to be for tire purpose of adiantiag bloud-vesscho to nourish
 skeleton they have never been found to exceed one inch and three cmerters. This stull proves the female to have had no horns.

\section*{Che Gifuneners Cbrontle.}
§ATURDAY, OCTOBER 9, 1841

So many inquiries reach us as to the mode of presrving half-hardi plants over a winter, or, as iney duce some remarks upon the subject, now that the duce some remarks upon the subject, now that the
chills of autumn are warning us of the approach of frost and snow.
Two principal conditions are required in the construction of a winter-house-first, drymess ; and second, exclusion of trist. If these are fultilled, other circumstances are comparatively unimportant; if they are neglected, places the beat constructed otherwise are
The l'ost peifect of all structures is a glazed brick pit, with the walls built hollow, and the sashes protuctel br a moveable covering of thatch or asphalte, or matting. The two former are the best, because thev are the diest; the first is the best of all, because it is wanm.st. But such a structure will be worse than 'h. malest subatitute if it is not so completely e.evarel alove the surrounding ground as to be free foom the damp that. during winter, will necessa:ily rise epward into it. The bottom in the inside should be, a: leat, a fost or 18 inches above the ground level -or, if circumstances should render this impossible, well-drained, dry ditch cut round it will answer the same purpose. It ought, moreover, to face the north. If it faces the sruth, the sir within it is apt to become beated by the sum, and thus the plants are stimulated into temporary gemoth at unpropitious seasons.

The :ects-it! fir a wint \(r\)-house being dry, seems ? ?: .llt of the nature of vegetation- which, bisfonicely passive, cannot resist the influence of s.rmanis. media. If the air or soil is damp, plants eyp ed to tisem must absorb that moisture ; but from the lowness of the temperature of a winter-house their powers of digestion and assimilation are torpid, and therefore the water they receive, instead of becoming ineorporated with their system, smagnates in their cells and cavities, where it becomes putrid; and as soon as this :th. - lace. the exil extend; with rapidity causing both brancles and siems to become rotten; for decay in plants is al ways contagious, and will spread through a.. the parts with which it is in contact, until the renovated forces of vegetation restore the equilibrium of chemical constituents, and thus arrest contagion.
If the sides of such a pit are not hollow, it will be recessary to guard them by an external covering or sary \(10 \downarrow\) ) sin very severe winters. It is essential that the material to be thus employed should not be liable to fermentation, and should be as dry as possibe stable litter, grass mowings, tan, decayed leaves, are all hat ma evials. Dry straw, Fern-stems, or bowis of Fir-trees, are good materials, and so is a to thruw of rain. If fermenting materials are employed, they are sure to raise the temperature of the pit. and thin to rouse he powers of vegetation, which \(t\) is most essential to guard against.
The plants to be preserved in such a pit should be of October, the ground and potted in the dry weather of October; and they should be exposed for a day or two to the enn before they are finally arranged within it; this is in order to render them as dry as practicable before they are housed.
Supposing all the above-mentionel precau:ions to in inne.. it wall eily be necessary to when the sashes inder weader. fer the purpose of disipating any tur-
ther nowthe that may coilect; light should, howther owisture that may coilect; light should, how-
ever, ! armitted when it cm bedone without exposing thanans to frost ir rain ; but if they are quite for whets they oufitt to be, they may remain shut up
Fuh wiog the est kind uf hybermatory, it will not He whe liur a ga dener to devise substituits for it. He the hias too glazed pit with hellow walls nay tacil: unk a whiter-house widh very rule materials The wain may be made of earth. provided it is thick enouch; and the roof may be of thatched hurdles. or frame, betier. of viled linen stretched over a wooden frame. and zuarded by thatch. Or the walls may be formet of swo rows of hurdles, having the interval between them stutfed with dry straw or fern. In such buillings, Pelargoniums. Verbemas, and all such halfbardy Faris requirel for the decoration of borders, nay be safely stored away ; and even Alpine plants.
Which aic 13 a growing state during the wiuter, might prolahly tee so preserved. It would, however, be better
to keep them apart, because they might suffer from too much drymess.
Let us not, however, be misunderstood as to the sense in which we use this word dryness. We do not mean that the soil of plants in a hybernatory is to be dry as dust, or like that of a sunny hedge in the Dogdays. We mean that it is not to be wet, nor even damp enough to engender mosses and green scum. or by its evaporation to render the walls perceptibly moist If the soil is dried up, it will kill the plants enclosed in it; but no person can be a gardener who will not now understand what we mean ; nor is the over-dry ing the earth likely to occur where plants are exposed to the ordinary atmosphere, even if enclosed in such pits as we have described ; for the suil. though originally too dry, will gradually absorb the moisture of the atmosphere that rests upon it.

Perhaps it would be even possible to winter halfbardy plants by packing them in chests kept in a dry and frost-proof chamber; arranging them layer upon layer, resting on cross bars, so as not to touch each other. If this were attempter, it would, however. be necessary that no packing should be introduced between the pots; for it would become mouldy and that would destroy the plants. Xiar could the cheses be preserved in a kitchen-curner. as one of our corre spondents suggests, for that would be much tow warm. The chamber to hold them should be frost-proof, and wo more. We camot, hewever reeommend this expedient: becanse, alhough plants misht thus live through the winter, they would probably perish at the appruath of spring. At that season, and lany before the frosts are game, it would be necesary to expose them tu light, and to give them water upoin which to feed, and frames of some sort would be required for that purpose Now if there is a frame of any sort in the gardener's possession, he might just as well fill it with plants during winter in the way we have pointed out, as leave it empty, and pack up his plants in bozes. Oiled linen would do very well for the sashes.
As space is often a great object in a garden, where there is seldom much room allotted to hybernatories, we may as well add that, instead of taking up half hardy plants and attempting to preserve them, it is better to leave them in the borders to their fate, and to propagate pans full of cuttings of such things early enough to be well rooted by the end of September Cuttings thus prepared maxy be wintered in their nams and in this way thousands of plants will only occupy the place of fifies.

Tuat we have been striving diligently during the Whole season to find room for the proceerlings of lucal Horticultural Societies, of which every phest brings us
reports, our columns afford weekly evidence. 'That, in spite of our wishes to oblige our country Iriends by their insertion, we have nevertheless fallen much into arrear, the heaps of papers before us too plainly testify. We trust that the Number which we now present our readers will satisfy them that we have every disposition to give their prnceediags the publici'y they resire.

Ir is well known that melting Pears become in some soils incurably gritty: the reason, however, is unexplained. Mr. Edward Solly is encasel in the chemical examination of this and other facts of the same nature, and we shall be greatly obliged to any of our friends who will send us samples of such Pears together with about 1 lb . weight of the soll in which the trees grow. The investigation is of great horticultural interest.
The subject of glazed flower-pots continues occa sionally to form the subject of letters from correapondents. They, however, contain so lithe evivence upan the subject, and are so destitute of never viell, that in a week or two we shall condenae them an into a short paragraph. unless we recile in the better matier than is at pretetut in cur possessing.
ONTHE IINE-N. HI
3. Pruaing--hbe best an che of punat to. Vine to

 that it is now practiset lay naust of C.er Cho..... Chapegrowers in this country; and its son wi.n of dy? tion to the habits of the vine tuker his ris. sems a ween pianting, I train one shoot to each ratter, supping at thi irst joint oil the laterals, and clipping of every tendril When the choot lass reached tbree-fourths of the lepsth of the rafter, I cut off the buttom laterals. and continue irom time to time to remove them an tos stop the shay a wood lardens. This season 1 do not stap of the house ouy onjeet being to obtail as long and strung a shat a prossible. The second seasona I prune coxa so three eye from the bottom of excia rafter. and allow one buach of fivit to eacin Siue to prove the mand. Itrane way a most shest to the ratter. managiag in stop it by piachion off the emd near the top of the rafter, to strengthen the tower bials. The twu buttom eyes I stop at the third or fourth joint to make spurs. If the Vines "are strong,
they will pust again, when I stop them at the first joint, repeating this as often as they shoot again. I tie them in at nearly right angles, to give the leading shoot all the
benefit of the sun and air. In the third season the Vines should be very strong, with short joints and plump buds; and I expect this year to have some good fruit, and prume accordingly. If the wood is sound, frm, and of a good
brown colour, I cut at one-third the length of the rafter, which will mostly be siz or seven feet. I then have ten or twelve buls, from each of which \(I\) expect a bunch of fruit. More may show, but that number is quite sufficient for the third year, as the Vine has to make wood as well as to bear fruit. II train the top shoot up 't ister again, repeatiog the same operations of removing tendrils, stopping laterals, 8 c , stopping it at the top. The and only leare one bunch on each spur. This is a general rule every year afterwards. I tie each spur at right angles from the centre, so that I hare two rows of bunches,
one on each side of the rafter. The fourth season I bring up the spurs to two-thirus of the intended length of the up the spurs to two-thirus of the intended ength of the with this difference, that if any of the spurs are weal and show poor bum\% ose of fras, I nap off the heath to stremehten the spur. The fith tesenth to an , एentthe length of the rifter, so that in four y, ins il hue all
the rafter clothed with fruit-bearing spurs; anter which a.1 they require is to cut through the socond bud every

 years sem they bly hame are cut down to get into a hearing state again, and then cut down the remainder. The question may be asked,
when is the proper time to prune the Vine? This entirely depends upon circumstances. It they are to be forceed depends upon circumstances. It it mare serve as a general rule, to pruce at least six weeks bar she to begin to force: if it can be done two months prewrous, will thien be stopped so as net to bleed where hronghir into a higher temperature. I have been thus particular in roughly convipeed of its excellence, and confidently re common-l it is thanhet mate.
4. General Management. Times of beginning to
Force. In places where there are a nuinber of houses devoted to the Vine, it is possible to have ripe grapes all
the year round. Tn peconmplish this completely. six

 on the 1 or of December, an 3 so \(i\), t..endis dhe es very

 To cause the Vines to brent equely elf the the shoot, I tie thems down to the front wiadome, antil the buds are all expanded. My reason for this is to have the whole length of the Vine in 2 cqual temperaftre, so When evary of it may not be more carefully separate the Vines one by one; and as it is convenient I regulate the shoots, stop them, and thin the number of bunckes, and do all that is required. Then I tie them ap loosely th the I think it stand they lang down auring the early part of the season.

Syringing and Steaming.-During the time of furcing the vine (except while they are in blossom, and the ripening of the fruti), I syringe thens freely with rain-water

 berries begio to colour, I ai... ase syringrog, in : steam a fortnight longer, hot sunny morning. As soon as the grapes an wi.rly ripe I keep as dry an atmosplere as possicues
the fruit a good flavour, and to ripen the wood.
6. Covering the Border. - This in the early part of the f.... re seter: is a swiluidy necensary

Notrost must be all it does, the Vines will honed sastu ist oun anaus, anc the bunches will be crippled, and perbaps never wame out
and I I a cipmation to cover the litter and dung to keep of the heavy rains and snow.
万. The Tomperalure the Vine requires.-In forcing operations. the nearer we approach to nature the manc forang the Viae with a ios temurertcure. The hrat week

 two or three degrees. If in the aight the iest:...s a litcle, I am not much ularmed, as I consider is inturs 'se
the night to be cooler than the day. During the time the Vines are in bloom, I keep a rath.er lighter temperature. about \(75^{\prime \prime}\), with a monist atmocphere; hime as soore as the berries are fairiy set, I let the temperature fall to io which I
the fruit.
8. Selling the Fruit. - In the open air there are mariy contingencies to assist nature in this needtul office, sueb as, for instance, strong winds, numurous inserts, and
changes of temperature, which cannot conveniently tahe place in artificial treatmont. It \& neces-aty. to use mannal operation to effect the setting if the fruit, and more tspecials in the caricior part of the forcing season. I use a camel-liair penci to disperse the pollen pollen, while others have plenty to spare. In this case I take a sheet of white paper and hold it under the bunch that has abundance of pullen; I gently shake the bunch, and then, with the came-hair lenelhespens I have set such hinds as are defictent.
some of the most diffevi hinds.

Thinning the Blerries.-As sonn as the berries are set, and begin to swell, it is time to thin them. For this operation there are proper scissors, with long bandles and
short blades. Provided with these, some good soft matting, and with something to catch the make excellent vinegar or tarts, \(\mathbb{\&} . \mathrm{c}\). , I commence the operation by tying up the shoulders of such bunches as require it to the nires on each side of the rafter; or, if the bunchics are very large, I fasten some thin narrow lath to the rafter to tie the shoulders to. Some persons use shoulders off from the main body of the bunch; but I do nut like these so well as the matting the props, they being apt to drop out. In order to have large berries I thin tery freely, torss. under the best management, do not swell to such a size as others; hence it is necessary to know the medium size to which every variety will swell, and thin accordingly.
10. Watering the Roots. As the kind of border I have 10. Watering the Roots.-As the kind of border 1 have
recommended is well drained, during the hot dry weather of spring and summer, a good steeping of rain or river water will do good, especially while the Vines are young. I have used manure-water a:ternately with clear water with evident benefit. If the borlier be well watered once a week, it is sufficient. Remember to plave boards to surface becomes rather dry, go over it with a Dutch boe and a rougl rake. I do not approve of a very smooth
surface; the more frequently it is stirred, the less water it will take: if, however, it is so smonth as to let the water run off mstead of sinking in, I point the surfaee over with 11. Covering the Vines in Winter to heep aff the Frost quence of other fruits beine grown in the h.muse, I find it necessary to protect the line trom the severe frost : I have used haybands, long straight wneat-straw, and narrow tar-
paulin ; they have all mawered pretty well, but the tarpaulin is the best, as it heep's them idry, and, of course, renders them more able to endure frost.-TT. Appletiy, the Fence, Macclesfictil.
* ENTOMOLOGY. - No. XUII

Trap Celery-Fly (Tephritis Onopordinis.)-For several years past the Celery has suffered in varions parts of tropolis, from the attacks of the larre of this beautiful littie insect; and in the market-gardens at Battersea the most promising crops have been destroyed by then. In deed, I have scarcely ever wohed at any beds of that use ful vegetable since myattention has been called to the subject without noticing the blisters formed by the maggots according to the age of the enclosed larve. On examining these blisiers, they are found to be considerably inflated? and, on bolding them up to the light, a maggot mav b seen moving between the thin and somerhat transparent cuticles, where it has been consuming the parenchyma thuse parts of the blisters where it commenced its operations being withered, they become ochrenus or brown, and the other portions but rccentls deprised of the pulpy sub stance partake of a pale green tint; in this way one mag got whil form a juatch miore than an inch in diameter befor tis grown. Serer!! fretuent ine tet pear to duso: but th:s may happen frem their cells uniting, their frogress to maturty. I hare found them at work a: Midsummer, but in Jub nonst of the blisters were empty. It is, however, in Senteruber and (hetober that the plants It is, however, in Sentember and, wotober that the plants often reveling in every ieaf, ami have nit disappeared in some seasons eten in Nibumber. These larray are of a
glossyprate green, with tie atmentary conal shining throngh glossy pale green, with tre atmentary canal shining through
the back: the bead is attemated thed the tat: obtuse, w:th a few tubereles (fig. 1). The macrots leave there habitations, and prebabig enter the earth to ande rgo their trans-
formation to the pupa : thas, wowever, is tout absolutely formation to the pupa; this, however, is trot absolutely the leaves when shat up in a box. These chrsealiono firm 2: anp nothing mure than the adurated shine of the men ants, with are antractert, sed berome stinung, ncurenus, 3 ,harmens treen olour, which in adelicate nsmpha o forme in Fesrintry on opening the cases nf some which had transiurmed lare in the antumn. The beautinul and el-gant flies comprised in the genus Tephritis whith inhatit England amount to 40 apecies;
leares of plarits exposed to the sun, whien they skip and cidle ainne in at cory reculiar mamer, their wings being slichtiy tevared lihe thase of a biaterfly. They seem the they reanit to obtan fond from the flosmers. The females of in any of the srecies have the apex of the abdomen furof ta any of the shecies, attenuated process protecting the ouprositor: * as if it were tor depositing the eggs between the caiyxes of such flowers; but it is othermise in the +ery-1, It is esilent or in the leat. It in for I liare obserred the flies from the matule of May to the end of July on plants under paling, mitdle of May tw the enct of July on flants under paling, apon lasiel leaves, as well as vaious flowers in gardens, confined to the Celery, for I have examples of the fly bred from blisters on the leaves of smyrninm Olusatrum (Alex anders), and they frequently infest the Parsnep leaves also.

leares have begun to decay ; sufficient time s!nitl imen-
 firmuess as not to come of calyeinerg arntly ma' ,n? what invariahts does when thes are immature. The mode of presersing the crop is another puint nhish deserves to te
particularly atten'ed to. In varions pants of the c unstry t is customary to pit the roots in some comorniment and after corering them with strms, a layer ot wh thrown orer them of sufficient thek ress th tre's.i. toce; adopt is, to stow them ais ay hen a urr. dara chenor ...e ar, Where they may be prutected from fiost. and t. rni \(\quad\) a precaution is highly necessary to the ruffert keemine of the Potatoe, and from its being delayed or neglected aitogethr: the future crop may be very seriously injured.
See to the young Cauliflowers raised from the sowing hat was made in August. They will now be fit for transplanting, which should be performed in the same manner as directed for Cabbages-with this difiference, that, as they are more tender, they will require to te placeit in a tion may be given to them during the severe weather. \(\boldsymbol{M} . \boldsymbol{E} . \boldsymbol{H}\)

HOME CORRESPONDENCE.
The Primrose, Cousslip, and Oxlip.-In ynur report fo the proceedings of the Botanical Society of Edinburgh, p. 640 , it is stated, in reference to the rariable offypring belief that the varieties arising from Prinula vulgaris and P. elatior of British authors, may be correctly referred to one species ; but that the P. veris is a distinct and wellmarked species, nerer seen to amalgamate mith, or plass into the others." Bearing on this point, one or tro cases have come under my notice which seem to lead to a contrary conclusion. I once saw a number of seedlings from the Corslip (P. veris) among which there was as great a diversity, both in form and colour, as is generally
found in a bed of seedling Polyanthuses. Nany retained the corsslip form, but varied in colnur from detp yellow, through all the gradations, to dark red: others, again, approached the Polyanthus in breadth of corolla. On the other hand, the Primrose ( \(\mathbf{P}\). vulgaris) does not appear to rary much in form, but only in colour, when raised from Tyrconnel, there are Primroses of more than a duzen distinct shades of colour, which must originally have prung from seed; but although thene plants, I have no recollection of ever seeing one among
them with more than a single flower on a stalk, or betraying any disposition to assume the cupped corolla of tie Cowslip. Mikit not the Oxlip (P. elatior) be a hybrat between the Cowslip and the Primrose? The fioners " the common Primrose on the fower-stalk It is much leewould be a near approach to the (ylop) than either the Cowslip or the Primrose, which seems to indicate that t is not reproduced freely by seed.-J. B. Whitzng.-[This is also the opinion of some good botanists.

The Vinery.-Though the papers "On the Vine" in dicate your intention of laying before your readers full information as to the culture of it, 1 am desirous of calling your attention in good time to the methods of succession orops in the same house. The most abundant supply \(o\) fruit in my neighbourhood is produced, I understand from three Vines to each rafter ; the first, for the earlies crop, being attached to the rafter until it is time tomo duce the second Vine, when the first is removed to the centre space of the light, and the second succeeds to the rafter. The third is, of course, disposed of on one side the rafter, the second occupring the other; hut have not heard from the skiful cuitivator himsel abject of \(m y\) present communication is to request that, at the prope time, you will acquaint your readers with the best mode a present in use for producing a succession of crops, and present in use for producins a should be introduced into whe house at the same time. Many excellent observation the house at the same time. Moared in the Gardeners Chronicle. Will you inform us, whether any, and if any what tender sorts may, at any period of the successio, cultibrought into a house where the main reliance of the cat vator is on the more certain and more prode and whether any arrangement of the ronts of the carted spectes in the border, anc, as to their stems, ofow of the to give a hope of success, which is at pren on question on the absurd plan of mixima mingery dater Fariety of species of different habits

Pratied greuers know the value of information upon tle minuthe of their craft; and, in consequence, are thakial to you for giving admission to the observations of inden-mote, as weil as to the more learned disquisitions of sumatife searciurs into the arcana of nature. Every peron of experience in sueh matters hoows the uecessity and as I think I have attained this object, I am desirous of givins, fir the benefit of others, a description of the cess. Ihad long thought that the ordinary way of putting athent this, but a clumsy proceeding, and one which, if it a:ifrids an opportunity lor the roots to spread themselves freely, atti rds also a harbour for worms, slugs, woodice,
aill wher sermin. To remedy this, I put at the bottom a pece of perforated zinc, an inch and a quarter, o mure, square, according to the size of the pot, so as compietely to cover the hule; this perforated zinc may be had chad to get rid of their refuse shreds, and may, by the l.e.t, a struas pair of scissors or small shears, be readily shecu, with requisite size, upon this place a small pot resing parily upion the zinc it renders it immoveable. tica put in a quantity of good mooss so as to form a laye of a third of an inch, or more, thick, when pressed together of potting the plant. I have foand this method to suc ceed perfecty : constant drainage is effected; the moss particularly with the addition of the potsherd, prevents partial dewmposition, where it is in contact mith the soil, affords an agreeable receptacle for the roots of the plant, cayed for a twelvemonth. All sorts of vermin are entirely excluded ; the operation of sh:fting is much facilitated, as the earth comes out of the pot unbroken ; and it is, moreover, a much more cleanly process than the one commonly are placed out of doors, it will still be desirable that they sort ; because upon tiles or slates, or something of the will be attracted by the water which drains frome it, and belend s, as the zine is close all round, they wiil thit the Lule i. low it uith their casts, and tius impede the drainage. -J. B., Lyynn.
Dathra-Aturea.-A correspondent, "II. S." of Farn-
hain, near C'avan, sars, that he has a specimen of Brughansia sanguniea, which instead of cutting down low in the spring in order to make it flower, as mentioned by bounds. The plant has been in a tub about one foot in diame'er for sume vears, placed in a conservatory on the ceatre border, into which the roots have penetrated. He finds it necessary to keep it dry during the winter, and tiee water that he does use is placed in the house some are before it is required. The dimensions of his plant indibes, and of the branches 39 feet; it has been in flower ne May, and bas now 100 fomers on it, averaging 9 \(D\) in length
Darcation \(f\) Titality in Seeds. - There are many remarkable instances on record of the duration of the gerE. Dative fumer in the steds of phants. There are few girdemers who bare paid any attention to the matter at all, ty cn the subject. We Whave read of seeds springing after Lave: Lin cormant for 4 y years in the garden of L \(\mu\) val, was trencied supposed to have rengived undisturbed since tie time of Citarles the First; also of Raspherry seed
 A a tumulus near Maiten Cdetle. But these cases duminwetciun. Conversing some time aso nith an individual quout the quality of the limestone rocks in a certain part of the ciounty in which I was then travelling, he told me oi one limesty in which I was then travelling, he whict he iever inten eed to put upon his ground again. When I asiked his reasun fur rejecting the lime, he cold me that in that he never intended to une it agrain if to could get other
lime. I beliese geologists have wot yit setth 1 the nere of the monntain linestone, but the majority of them say the
it is many thousduds of years old. Tume of scells remain inge for so long a time, along with the remains of zon phytes, mollusca, and crustacea, and after endaring the spread upon ground intended for other crops than that of sorrel and Charlock! It was in vain to tell him that the seeds were in the soil before the lime was applied to it, and that it was the action of the hme upon as tenaciously as the philusophers of old did in mantaning he P'olemaic system of astronomy.- \(\mathrm{K}_{\mathrm{c}}\) ter Mactenaic, West Plean.
Disinfection with reference to Vegetation.-That the diseases to which plants are incident, whether from par
sitic attack or otherwise, are sometimes contagious infectious, there can be no reasonable doubt. That which commits such havoc on the root of the Saffron Crocus is of diseased plants will not unfrequently be found to have its influence over others in their immediate vicinity. What in common parlance termed "blight," will so far musacts and reacts on itself in reference to its various tribes, and that, so to speak, these symprathies and anfipethies are observable and distinuvibuble. I apprehend we have paid far too little attention to this important pres the eeonomy of vegetation. Ao one can domt that phants that its alternations and vicissitudes control or modity the unctions of their econvmy. Tentilation esery one whl allow to be essential. An atmusphere chemically pure is ributessary as a geaial temperature and an eqents of the peculiar habits and condtions of individual plants and kindred tribes. They are diversitied in their liveries of place, circumstance, and condition, but the atmosphere is common to them all, and its heathy condmon ts essenconnected with the well-being or luxuriance of vegetation. Plants, it is true, do not entirely abandun swamp where a stagnant atmospliere prevalts, T a pewent filled region; the picture of versetation is everym here wenomy there is no blank unsupphed in the economy plants, or in almost any region. I here. h. .)wever, refer to the general aspect of vegetable creation. Cæeteris paribus, as far as the food of plants is concerned, it will be, howon, occasionally fuund that the entire inmates of the conservatory are in a bealthy state, and only rivals in hand the plants are sickly, and a languid and fading vege tation characterises the aggregate. This arises unhealthy atmosphere; morbid from something
may be, than want of ventiation. Decaying vegetatio though buried in the soil it may minister to forms of beaut and of loveliness. The necessity a a purfied ar ais thander-storm is the grand phenomenoon which minister dhere, which is connected with decaying verdure and the immaturely fading leaf. Its electricity may stimulate the dormant or sinking powers of vegetable life, as well power in heat and moisture; but it seems to me that the most important feature of its ageney is the imetuaturis on a disinfecting agent, equaliy efficient in the decomposition of noxivus animal miarmata, as in that of decaying vege table matter-1 mean nitrous acid gas, as a mionectant presence of nitron chlorine. I have clearly prourg the thander-storm, by employing tincture of logwoed which 1 find a rely sensible test of its pre-ence. Tuis tac enables us to account for the deports of nitrites on some Walls under particular circumstances, as well as the precipitates at Tirhout and elsewhere. Our atmospier chemically consists of 21 parts of oxygen and orm of nitrogen; these proportionals reversed formi acid, or aquafortis. A portion of the atmosphere is, ay for this singular and inportant result the esperimients the Hon. The Bay Tree. The letter of
H, \(\boldsymbol{P}, \mathrm{p} .627\), is conclusive in one respect, vizo, that \(\boldsymbol{P} . \boldsymbol{P}\).
has
tot yet directed his observations to the fact stated, The Bay here referred to, was, to all appearance, dead in portions to le geen in it-not "a leaf with some green in it," nor "a brani"' whit a little green bark in the middle; \({ }^{20}\) proms of remotery bugar." I must repeat, the tree was, c..1 1 at! cry state it is one which has bearen cut doxamined,

 manner in which Mro R. speaks of the progress of reviral,
p. 597 ,", and thinks "that he is already disposed to mo-
dify his opinion.'
Now I should state that the note you who attended your botanical course the past summer. and I should have regretted had be addressed you in a tone of confiteme on a suhtect upon which i.e rerfuised information. I man reanad rou that he irat prodnced a protion
 tie portion he then exhibited, in order that the fact (if new) might be accounted for: and here is the great difference between P.P. and myseli- he takes it fur a supposition, hove witnessed the same. \(P\). \(P_{\text {. supposes }}{ }^{6 /} \mathrm{Mr}\). R. sees fin \(p\) mt gradally retover its healtuy appeawe by the this i- but sufpusition, and not the fact. The fact is, that hor,wntwis ant brown leaves (the colour of a piere of the lont) became, by a gidual process, green and living the lant) becase, by a gidual process, green and living
braches, (In this I speak with the utmost contidence. I braziches, on this 1 spatak with the utmost confucuce. I
markid many leaves of the last specimen sent you, together with squre leases then from various parts of the tret Isaw ing son mark others in their hrown state with the parent dipad brown to the green state in which they wer when I hft them for yon; the process commenced in the filltib, frat as if some persom had taken a pathe diplet gradually diffusing itself, then a yellowish hue, then
 L. urestinus and I ure's recover. so far as my oliservation Ins gone by thowing cut fresh shouts: the liay, in addidion to frest shoots, converts the apparently dead to living branches. I may add, it will be found that the brown leave adlere fim!?, and there is something like pliability in
such of them as will recover, and the Bay referred to is has rectered, and by no means an unsimhtly if \(\boldsymbol{P} . \boldsymbol{P}\). will favour me with a visit, he can then confirm, by olservation, my statement. In p. 597 does the revieal or which you speak refer to the in ping ". The oisersi tion of Professor Henslow " is certainly correct; but I submit, it does not apply to our case-the Bay: in the one, the old leaves are shed and new leaves substituted, thus reanimating the appearance; the other, old leave two or three inches long and one broad, from brown become green. -John Radford, Winchmore Hill. [We are glad to be able to publish this letter, for it is of the first importance that the singular phenomenon, first noticed by Rarl, should that the facts have been stated mos accurately, and we continue to regard them as of great physiological value. We did not see the Portugal Laurel leaves referred to at p. 597, but gave the information upon the testimony of Mr. Collier.]

Laws of Gardening.-Criminal injuries to hedges and fences are punishable by several Acts of Parliament, but less severely than formerly. The cutting, breaking, or throwing down, with intent to steal, any part of any liv or dead fence, or any wooden post, pale, or rail, set up or used as a teme, or any stile or gate, or any part thereof,
is punialule sumnarily before a magistrate, with the forferture, for the first nifence, of the value of the articl stolen, and not exceeding \(3 l\). ; and for the second offence. a year's mprisonnent; and for any subsequent offence the aldithomat pumshment of whinping may be inflicted 7 th and Sth (res). T1., cap. We, sec. 40 . Ame if searehing. any such article of the value of ils. shall be frund in po-siosion of a person, and be do not show that he came lawtully by the same, he is to pay the value of the articire, and not exceeding 2l. Maticious injuries of like nature, but wathout proof of an intent to steal, to any such article, or to a wall, subjects the utfender to pay the second offence, inyprisonment for a year; and for any sub sequent offence, the additional pumsiment of whippis, bith eap., sec. 2.3, of with Geo. 4th. For small wilful or mahcinus injuries to fences, not exceeding i\%. damages, the summary remedy before a justice is prorided hy the same act.- \(A\) Subariber
The Club in Cuhbuyes, \&e.-Last rear I was much troubled with the club in the roots of my Caulflower Cabbage, and Broccoli plants. I tried lime, soot, and other things without success. This spring \(I\) used the fol lowing mixture, which has completely kept the disease under:-Take 1 gallon of fresh soot, and 1 lb . of pounded saltpetre: mix them with water to the consistence of coal tar; dip the root of every plant in before planting. B his simple method 1 have not got a single club-rooted plant in the garden, although many of them had begun to club in the seedbed.-G. Fielder,
Vinevards in England.-On a reference to Doomsday Loon. It appears that vineyards were not uncommon at there was a rinetard at Beaulieu in Hants, on the bor ders of the New Forest, where wine was made, and alo brandy; and at a still later period there was a vinevard at Tunbridse, near the oid Castle. What the quality of the wines many have been at either of these vineyards is not probably now remembered; but the writer of this article was told, many years ago, by an old gentleman who had tasted the Beaulitu brandy, that, considering its age Was not bad.-D.
Bifacial Oak,-H. L. should have stated whether the oak he refers to assumes this variety in its foliage every year, or only this season. If the latter, the pecnliarity of the season itself may account for it; for there is a very - mumer shenarance in many oaks this year gince the Mid-

economic value it is beyond all question the "f facile princepss" of the family. The wood is light, strong, and wrought, and highly perfumed with a mosts, easily aromatic odour which it never loses. In durability it is certainly without a rival; Kyanised by the han lof nature the Himalaya mountains for ages. Rot, under any aset, is unknown to it. You will see in the Himalayas Deodat tinbers built in the walls of old temples. now teveiled nearly to their foundations; the surface bleached and ragged, but the body of the wood undecaved. aud emittins its characteristic odour fresh as ever. In Cashmeer, th pillars which support the roof of the Jumna Mustid, great Mosque, built in the days of our later Henries, are formed of Deodar-trees denuded of their bark; they ez hibit not a crack or sign of decay, and still smell like pencil-wood. All the boats in the valley are built of Deodar, and when they get crazy at the joini \(s\) by hey the old planks have their weathered surface ane of by the adze, and are then undistinguishable frea the sen wood, along with which they are rebuilt. The wood is so straight and equal in the grain, that it gises ? ? mo. ? ! re feet broad simply by the action of the wedre. Timber sarss are unknown in the Himalayas. It is hardly possible wo would follow from getting it established in Binain, where
there is every prospuct of its growing well. The Court of Directors are lahouring zeatousiv tin this ariant en at a very considerable expethee. IIe are auth rised to ath, that parties who wiil pay the cost of carriage will be sup plied with fresh seed, to be formarded by the nethua
 Of the Hinnlayan Conifre, the nest in ralue ataer tha Deodar, is the Cupresus torulesa, which grams to the size of a stately tree. It is rery hardy, a quak grower. and yields excelient timber. We strungly rer.mant beauty and the valuable wood rilichi it affurds.--Z:ta.

Prangos pabularia. We learn frum one of our Indian correspondents, that this celebrated umbelliferous plat has completely established itself in the Himalayan muun tams within the Company's territories, and that it has Howered this rear in the Mussoree earten. It would appear, from the ohservations of Dr. Falenitr in Thibet and of Mr. W. Grolfith in Affighenistan. that the value of the Prangos was greatly overrated by Monreroit. Buth of these travellers met with the plant in great abuman... but neither of them could discorer that it \%1s heid much estimation as an agricultural product. It wa applied to no use by the inhabitants in many places where it was found growing spontaneously in great 1 :ofusiun. Zela.
pression Preserbation of Grapes.-Acting under the imto the that Grapes when left to hang long are injurious ca thes, as, so long as they remain on, the plo cannot be pruaed; and that when prnming to led befors the san begine wound cannot de sumently the Twes wise called isto action bleed profusely, which has a tend ney to weaken them. It is well known that Grapes will not in a moist atmosphere; and in the winter montas maintain a dry atmosphere is attendud whth lihour and large enasumptor frel the it is 1 ossible left on the Vines if not more so, 1 have proved by the adoption of the following method --In the last wets in December or first week in January I prune the last h.0use of Grapes, "which were ripe in September, and citt the whole of the Grapes remaining, with a joint or two, more, of wood below the bunch. I make a clean cut and apply sealing-wax as hot as can be used to it, and seal the wood closely, so that no air can enter the tissues com

tion of Risses, \(2 d\) best Stive Plants, 2 heat Bnuqnet Cut-flowerhest Celery, 2,1 her dish mixed Grapes. 10. Mr Hackicy, in P. Ypanght, Eqq, Z pr zes, best bunch Brack Graues, bes' \(f\) Sec tarines, best Muhroms. 11. Mr. Heafy. gr. To Lord Clarma,
prizes, the hut Melon for weight. and hent for flavour, hest dish and best Tumatoes. 12 Mr. Lacer, Writo to Mon, best Lettuce, \$ prizew, best 6 Peaches, best Winte Currants, and best Onions, 13. Mr. M'Mahon. gr. to M. Fitt, Esq yú prizet, for beat 6 ammed
Fuchsias, 2d best Verbenas, aud 2t best Herbaceous Plants, and for a good Specimen Flant.
Lruth and Neighbourhood - The last exbibition was held in the times to maintain he high character which it has obtained, hy and the evtrenticly valiable productions of the Eitchen-garden truncst t . frars we coverved some fine Pines exhibited by the
Rev. H. Drackentury. The splentid collection of Dablias beRer. H. Drackentury. Elat splathe hurre away the preml-r prize, and The inse growth and excellent quality of the vegetables shown by
the Rev H. B. Bensan excited geveral admirating. Gratifying as the ahnre extho:tion cospeasedly was, we were still more de liwh eft with the fine di-play uf vegetables on the cottagers
taises, surfassing ail that we hat crer before witne sed in + ins iepartrent of the whcety's operations swhere its value and table products, but in the improved habits of our cottazers, and the comfort and happlness it is calculated to diffuse amongst our laulahle \&ifit of cmuation, urying and stimulateng enen other

 Amato, Ne Plas Ulitra, Climax, Suffolk Hero. In addition to

Notlingkam Floral and Horticultural Society,-On the \(22 d\) Sept.
the annal meeting took place at the Assembly Rooms for exhibition of Dahlias, stove, greeabouse, and herbaceous plants, Ericas and hardy hiruly, and cipecimens of all fruit and rege-
tabled. This being the time at which the Dahlia is in bloom, con tables. This being the time at which the Dahlia is in bloom, com-
siderable efforts were made by the competitors to render the exhibition in thin- department as attractive as possible, and their efforts were perfectly succoufnl, for it never has been (inir int to
witness such a display of Dahlias. The beauty of the display of this department was greatly eiriched by a splendid device, com. ment by Mr. J. Spencer. The displays of stove, greenhouse, and brulliant; they were arrangedt in pictursthle amit to telul gromys sent by \(r\). Wrigit. Esq. and \(G\). Walker, Esq. The beaury if this department received a great addition in a splendid collection of
autunnal Roses, sent by Mr. J. Pearson. The fruit was exhblbited in excelient condition, and consisted of several humdred plates
from the sardens of F W ripht, Ewn., J. Mines, ame Mr. J. Pearson; and freat cre.lit is due to the committee of tise s.) iety, wh.
have hown the mint i raisewnorthy exertions in promotlig the interest of horticulture, and who have put forth on this occasion of fruits, in which they perfectly succeeded. prize was recemmended to the Hon. H. Xing.
Roynl Horticultural Society of Cornwall. - The third and last exhibition for this season rook place in the Asembly-room, Truro,
on Sept 2 1st. The attendance was large and numerous, and the ex. on Sept. 2 lith The attendance was large and numerous, and the ex.
hivition. though not particalarly remarkable for its display of plante,
was quite evual to the erpectations, considering the wet and unprowas quite equal to the expectations, corsidering the wet and unpro: pitious season that we have lately experienced. The devices exhi-
bited were rmarkabie for the god taste displayed in their design.
The lst prize was gwen for the device of a bower, which was beautifully and perfecty forned of Moss, covered with Dahlias, An extra prize was given for a harge Vase. formed with numerous flowers, and There was also anether elegant design, surnounted with a crown,
and dispiagnag comsidernble taste in the arrangement of the flowers and dispiaytng comsiderable taste in the arrangement of the flowers,
In the poom there was a large case contaicing about 6 varities of
Wheat, aud specimens of other grain, booth in their healthy and Wheat, and specimens of other grain, both in their heaithy and
diseased state. The display of Orchidaceous Plants. though hot nu-
mimerous, presented some rer good specimens. The Stanhuipeagrandi-
 Brail. There wais very ime Catkleya Lodidigesil; and among and the Zsgopetalum Mactaif. A mone the other plant was a beaus
tiful climber. the Ipomera ruibro-corvilea, and a good specimen of

 variety if Dablisa and slarigold, and the show of these was not ex. mnen, Messrs. Pontey, Rendle, Lucombe, Pince and
Bon, Rechard and Fox, exhibited haree and fin The Fruit chlubited was exceedingly fine, and there was a large thow

 The Flowers whech they exhiutited weree good, and there was a large collection of Fruit, amo nuy which were Grapes, A Ipples, Pears, Plurgs,
 Veral rich combs of honey. But the Yeeretable part of the display
was the best, and this was certainly hishly creditalle to the erhi
 ties of culituary articles shown, went far to prove the great atility.

were awarded to Cotagers.- West Brito. -
St. Columb Cottage Gardening Society. - On Sept. the 22d, the
nual exhibition of this Society was held in the National Schobl Room, which was very tastefally decorated with evergreens foowers, \&c., for the oceasion. The show of vegetables by the
Cottagers was exceedingly fine. and surpassend the Cottagers was exceedingly fine. and surpassed that of any
former year. Several persons were prevented from attending but, not withstanding the rain, a great many strangers were pre-
sent. and fine weather secmed the only thing wanted. was taken by the Rev. P Carlyon, who opened the meeting by stating that he was glad to perceive that the character which nsed to be given to the Cornish as a band
changed to that of an honest and industrious who rather lonked on a wreck with the eyes of pity than of plun when a poor man dashed into the waves to caution parish riners, who were about to launch out from their broken ship in a was, that all were safely broughit to land. They niight truly say that the Ethiopian had changed his skin and the leeparid hir
spots, with respect to Cornwall. Heattributed the change to thrce causes - the spread of religion, with the establi-hmen schnols-the encouragement of literature, and the patronage o agriculture and horticulture, which were so closely compected.
He then proceeded to notice the different fowers, frults, and ve getabes proceeded to notice the different fowers, frults, and ve successful crmpetitors to greater exertion, amid the loud appro-
bation of the assenibly. The meeting was then addressed Captain Rogers, R.N., who dwelt on the improvement of the gar dens, reconmending those wholived in ligh situations to make tanks to catch the water rom the roors of their hruses. He said see so good vegetabler produced there by the cottagers as those
he then saw before him.- West Britcon.
- Sandhach Floral and Horticulturcl Soriety.-The second meet ing took place at the Tuwn Hall, Sandbach, on Sept. sth, ath
was rumerously and respectably attended. A splendid colleetion of Plants and Flowers was exhibited on the occacion and the Fruit and regetables werc equal if not superior to
former menngs at this season. The following is a statement of the principal prizes awarded :- Dahlias, Nurserymen, the

\section*{IISCELLANEOTS}

Mr. Schomburgk. - We have letters from this enterprisg traveiler, dated Georgetown, July 31st. He had jus eturned from his surveying expedition to settle the boun-
dary line between British Guiana and Brazil, after an abserce of three months and a half, during which time his mssion had been perfectly successful. He had had tor rents of rain to contend with, as well as matters in othe respects unfavourabie, so that bis brother, who was occu pied with the aatural History of the expedition, had found ke had eucceeded in getting together about 200 species
 whjects of Natural History. Very few new Orchidacee had been saved; one of thein was a plant resembliug Max illaria cristata, and another a species of Sobralia. A large schooner had perished, among which was a splendid Cory anthes, with a flower upwards of six inches in diameter Mr. Schomburgk expected to leave Georgetown in a month for the south-wentern boundary of the Colony and Rornima that noble station for fine plants. The journey would rital Economy of the Colchicum.-The sital economy of this plant is so exceedingly curious and beautiful, and the evidence of design is so visible, as to merit a detailed de seription of its peculiar structure. The lowest portion of the stem is excessively swollen into a cormus or solid bulb which lies deeply buried in the earth, invested by the dried leaves and spathes of preceding years. The enve loping leaves are so firmly agglutinated as to be only distinguishable in a thickened scale or protrusion. In the axil of this scale, in- gronve on one side of the bub, at point a little above the life-knot, or part from which th horizons depend, and connected with it by durin the summer months, absobs its chief nourishment from the parent bulb. gradually swelling and enlarging; and so soon as the first chilly winds of autumn have breathe over the earth elongating its summit and protrudin through the soil a long tubular spathe or sheath, whic envelops the entire bulb, stem, and roots. In this sheat hie two or more perfectly-formed flowers, each consistiog petals, and also the rudiments of one or tro other blos soms. On renioving the membranous sheaths, we per ceive at the base of the flural tube, inmediately above the young roots, a few rudimentary leayes closely encircling a smaller bud or germ, destined to become the bulb of or ded that side of the young bulb which is farthest from the parent bulb of the present year. On entirely removing the leaves and open. ing the elongated tube of the fiower, we discover the three inner divisions of its periam are attached stamens, surrounding three linear stigmas, whose styles are continued down the floral tube to ks base, where the. taining the ovules. After fecundation, the corolla withers, the young bulb becomes swollen, its roots burst through their membranous covering and protrude downware. Throughout the winter it absorbs, through the lateral attaching fibres, the greater portion of the parent bulb, the ain of subegenty decomposes, The nutrimen the sed tont 1 the for breezes of canths, and until the firbt warming breics, when the again stimulate into motion the rital juices, when hitherto buried germen, protected from frost or aciface, by its several coats, is pushed upwards to the suracen the fully developed capsule surrounded by shining gred, leaves displays itself, and on becoming fore the earth. Prufessor Christison, of Edinburgh, adds some interesting observations upon the same subject. "The departaet, of the inquiry to which my attention was larent during its secol which berinal litile later, almost between the bulb and root proper, as you describe, little buibs are produced upon the body of the parent, s winter surpect, about the same the original buib, though piump and large, is quite watery, free of starch (so as to shrivel to a skin, if dried), and probably no longer of any uin owards the noarshment of what 1 have called the cipal young bulb then pushing up its germen amidng inleaves), but mercly serving the purpose of prepaing of altozether from the parent, and may be found about ize of lated in its radicles. What 1 wish still to seertain is, how long these infant-bulbs take to attain such maturity as to throw up flowers, and whal
years are necessary; and it is not improbable that during the interval the little nursling grows, not by direct enlargement, but by feeding a new balu every year, itself, annually dying, exactly like the ma
The Flora of Citshmere.-This has several anomalies; fer, if any, oaks descend on the northern side of the Peerprnjab into the raller; I have not seen one yet. I have with respect to plants that are associated with the Oaks Sie, avout IIusiouree, as Androme la, Rhododendron arboream. Mahonia neplentis, so common in the hills elseor 3 firs, and Deodar; but I have not seen the Cupressus torulosa, the lofty cypress of the Mussooree hills. In the Sale you see Nelumbium and Euryale ferox, growing alone with Menyanthes trifoliata ; and Cotton, a poor sort, growslirted with pines. I got Staphylea Emodi growing along with Ribes Grossularia (or R. Himalense ?) while it grows, as you know, at Mussooree on low slopes near Budraj.
Among Ranunculacee I have got a species of Hepatica, Ceratocephalus, and Callianthemum, all of which I believe to be new, and making up the very blanks you notice in ledge besides your quotation, but my plant has leaves with umbelliferous habit, eight white strap-shaped clawed petals, with the nectanferous pore high up on the claw, and calus, nor your R. pimpinelloides. Further, I have got a new Ranunculaceous genus-new, unless Jacquemont has got it-having the habit of Trollius in its leaves and mode of inflorescence, plane, with no fovea at the claw, and solitary trans-versely-attached ovula, being neither pendulous nor erect. Itforms a transition from Adonis to he Ranunculee. This mentioned by you. I have called the genus Chrysocyathus. It grows intermixed with Trollius, "inter nives
deliquescentes," and till I examined it I took it for a Trollius. I have got a new species of Adoza, forming, I believe, the second of the genus A. inodora (mihi), a larger plant than the A. Moschatellina, and with the lateral flower, \(1 \%\)-androus. and 6 segments in the flotiers. I have also a new Epimedium, a large handsome-leared herb; E. Hydaspidis (milhi), and two species of Alchegardens, grows wild in the shady forests of Cashmere. near masjids and over graves. I have Dudonea brought ing along the banks of the Chenals. Fothergilla involucrata (mihi), belonging to the Hamamelider, exists in
vast abundance in Cashmere, forming whole tracts of low jungle. Strange that it should not have been brought before either to you or to me. It occupies the place that the distance does not look unlike it. Thus, Hamamelider are found at opposite ends of the Himalaya range, Bucklandia and Sedgwickia in Assam, and Fothergilla in Cashmere, but none of the family have yet been met with in the abundance in several directivns, most so on Ahatoong, a low trap-hill in the valiey ; butit is not here so vigorous a plantas any useful purpose, except as a plant highly prized by Europeans. They sometimes use the roots to destroy worms br steeping them in Dhan fields, as Calamus aromaticus
(Putch) is used in Hindoostan.-Falconer in Hoyle's Illistiations.
New British Plant. - Some years ago Mr. W. Pamplin, bookseller, of Queen-street, Suho, observed a Gentian with large flowers in the neighbourho of of Tring, in Hert-
fordshre. F.llowiny his indication, the Rev. W. HI fordshre. Following his indication, the Rev. W. II. Coleman of Hertford has obtained specimens which have
confirmed him in his suspicion that it would be found distinct froms G, amarelia. In fact it proves to be the Gentiana germanica of foreign authors. He observes the plant is much smaller and less branched, while the flowers are femer and larger. Tue leaves are broader-minutely corolla distinetly dentate, as are also the segments of the corolla. The calyx is more rounded at the base, and its tube is equal to the segments; while G. amarella has the segments rather lunger than the tube. The segments of
the corolla of such specimens of the Gentiana as he has examined, in æstivation overlap those adjacent to them on the right-whthe those of \(G\). amarella overlap towards in the ovary of \(G\) imprortant differences than these consist w. deat at the throat, while in G. amarella the orary is sessite, and the corolia alroust eylindrieal. Dr. Grisebach has alr-ady referred the figures of G. ansarella in maniea; and bore the Flura Londinensis, to G. gerG. a mareila are quite distinct species.

Botanic, \(l\) News.-Mr. Willam Griffith, so well known has amouncour his admiable anatomical investigations, called ". Comeributions to the Boblishing a work to be object of the putiticati n woll be the elactataion of severat calieetions andele by him during the list five years in varioas parts of the N. E. irnntier of British india; and Whech are about to be:a:strifuted in Enyland by Professor T) these will be orders of the Huw. Cuntt of Drectors. T) these will be aduld ofler private cullections of the athur: and the mhele will com rrise, on a rough estimate.
2isjo species from the Khasiva Hills ; 2,000 do. from the Aenasserin Provinces ; 1,000 do. from the Province of
mee country; 1,700 do. from the same great range in the Calcutta; 1,200 do. from the Naga Hills at the extreme east of Upper Assam, from the valley of Hookhoong, the district Mogagam, and from the tract of the Irrawadi will be added a collection made under the superintendence of Lieut. Kitzoe in the furests of Cuttack. Steps have also been taken to procure additions from the Himalayan range about Darjling, from the Rajmahal hills and the coast of Arracan. By these mieans it is expected that, notwithstanding the reduction in number which will occur on the abstraction of forms common to two or mare of
these collections, Mr. Grifith's materials will even then exceed those formerly distributed by Dr. Wallich, under the orders of the same great patrons of Botanical science. The publication will be conducted on the principles of and imperfectly known species. It is not intended that it shoould be parely systematic ; it will embrace details of structure and function, and enter into the interesting subject of botanical geography. It will be illustrated by quarto or small folio uncoloured plates, in the beat style
of lithography, from sketches by the author; the accompanying letterpress will be in ortavo. The author's in tention in presenting to the scientific world tbis prospectus, is to secure for himself the publication of the materials collected by himself, and he feels confident that this claim will be recognised by all European botaniats.

Active principles of Toa and Coffee identical.-A correspondent who has that this distinguished chemist has lately ascertained the prineiples called Caffein and Thein to be identical.

The Dumore Pear. - This variety is highly deserving account of such a fruit being wainted to come in for use, between Williams's Bon Chrétien and the Marie Lnuise, when there is a scarcity of large and good Pears. It was raised by the late Thomas Andrew Knight, Esq., and it has borne frrit both in the past and present sensons in the garden of the Horticultural Society, where it grows vigcronsly as a standard, producing fruit betwees four and five or obovieng, a ese small open, in a shallow depression stalk from an inch io inch and haft in en the of dium thickness, somewhat fleshy at its junction with the fruit, which is rather oblique; skin brownish-red next the sun, yellowish with a speckling of brown where shadel; and sometimes a considerable portion is covered with smooth brown russet ; Hesh yellonish-white, meting, of a Beurré consistence, and rich flavour esen in the present not most farourable seasun. The fuliowing is a note by
Mr. Knight, in the Transactions of the Horticultural Society:- "This variety is as large, I think, as the Brown
Beurre, and I have never tasted the last-mentioned sort better than the Dunmore. Whea it has remained to ripen and grow yellow upon the tree, I have thought it the best and nost melting Pear of its early season. Graits of it, which were inserted into stocks only two years ago, affurded an abundant blossom and are now bearing fruit, though the weather in part of the spring was extremely unfavourable and destroyed every blossom of the more delicate appears to be extremely well adanted to cold and late situations." - R. T. [This is as good as Brown Beurré.]

\section*{THE PLEADING OF THE FLOWERS.}

My beauties, I had you adieu,
No longer your charms I'll suryey;
Henceforward, shut out from my view, Henceforward, shut out from my view,
Let your blussums and flowers decay. Too long has your lovelimess pleased me, From your shares I will fee far away. Ou have robb'd me of time and of treasure, moment you give me some pieasure, But the next all your value is gone. A blast of the east wind may blight you:
Let the smand the zephyss but -litht you Let the sum and the zephyrs but ing gone.
And your fragranee and beauty are gone. The snails mar yur beauties derour,
The wondice ycur petals may nibble; I'll never more give up an hour
To list to your plaints and your quibble; For beanty is sinin-deep, you know. My pleasures much deeper must fow Let your roots for rich provender seels, Let the whou all your tinery streak. For your pain I will find you no cire.
No stichs nal! shent youl, I tell yourNo stichs thal! shaprt yon, I tell youYet a gentle sweet wh apre i hear, Yet a sentle sweet wh qper I hear,
A silvery seumd I cau't titte:
With yomr perals and toulten I fear
 Luton, Bedil.

Model Mapping, is an ingenions pamphlet by Mr. Bailey Denton, upon the art and utility of executing maps of estates in relief, so as to show all the inequalities of the surface with unerring fidelity. The specimens of this many and Svitzerland, have rendered our readers familiar with the nature of the invention. Mr. Denton considerz its utility to landowners very great in any ouestion connected with drainage, which cannot be possibly shown th any other way

For example -in the Model Map, the lowent grounds of an estate or district being shown in depression, the
course of all main drains or sewers would have to be dicourse of all main drains or sewers would have to be di-
rected thruigh such depressions, and all other drains and sewers would be collateraly arranged and worked into them with accur cy and fac:hty. This bservatien applies to all ground and property where draising can be effected. The practue of dramage is maw appreetated by all landed proprietors, and gencrali's apphai by ald agriculturiste, and it is, therefore. here neciiess to enlarge on its benefit; on the inent whe is, rather to aduress landed proprietors well as the qualiny and capmillty, of the land itself, and to infite the alteaiun of auilurities lader mhom the Drainase of Towns and hillaces mar line to be carried into operation, to the fundumental adrantage to be derived by organining the sewerage of future buildings in this view it may be well, in the first place, to allude to the universally admitted fact, that by a systeniatie mode of diaining, based un a consileration of the contur of the neighbomrhood, bozgy and mar-hy land may be brought
into cultivation and fertulity. It does not necessarily follow that becanse land is a swamp, it is the lowest land o a vicmity; it may be, and mine generally is, lower than the lands immediately surroundiag it, which form an embomkinent and a barrier to its otherwise natural drainage; but it has been proved, by a close and comparative ex

Amicus,-The high character given to "Maclean's Favourite" has since fruted in the Horticultural Society's garden, and still sert Apple, many of which description properties of a frrst-rate des Stone Pine R. (' writes thus: - "While gardeners, generally, stontly deny that anuuais, biemidals, Rc., are herbaceous plants. there are ider evers plant whose stems die down naturally to be herbaceous, regardless of the nature of the root, or the duration of the plant teelf. I write less to dispute the correctness of the definition in a late number of your paper, than to ask Why a bubous-roote plant, or an annual, or a biennial, is not a herbaceous plant.
have met with botanical writers that adopt the term herbaceon purely in contradistinction to ligneous, thus dividing plants into two great classts-those with ligneous or durable stems, and those with Lierlbaceous stems, or such as die naturally after a
certain period. \(I\) see, also, that in one of the natural arrangecertain period. I see, also, that in one of the natural arrange hents in the "Hortus Britannicus" this classinication is adhered number of species; sol many are set apart as lieneous and the rest as herbacrous. In this vieve of the case bulbous-rooted, tu-bernus-rooted, aunual, biennial, percmial, \&c., are merely spe cific terms applied to herbaceous plauts, as tree, shrub, under shrub, \&c., are applied to the ligneous divisionn of plants. The
lierivative signitication of the word herbaceous, it may be argued forbius the application of it to bulbous-rooted plants; but if muder the term hershn grassy plants generally were included, there
cannot, it seemis to me, be an objection to ranking annuals and iennialo echnicality, is applicable to a plant simply on account of the
 tionu upon the real meaning of the term. herbaceons. The noly
biection we have to mahe to them is, that it is not used in si objection we have to mahe to them is, that it is not used in so
wiie a sense in arardening. What gardeners meanin by a herba.
ceous plant is stated at p. 585. When the word is enmployed by botanists, it is with reierence to the texture or colour of a part, and not to its duration. Parts which are scft and succulent, and those which are green, are called herbaceous, that is to say
having the texture or coleur of herbage. The word, therefore has three acceptations- one in common parlance, which \(R\)
has explained; \(\mathbf{a}\) second in gardening, and a third in botany, Major: An Amateur, and other inquirers will find an answer in the leading article of to-day. It is better that the laps in glass sashes should be puttied than that they should be open.

NEWS OF THE WEEK.
The arrival of the Overland Man has just put us in possession of important intelligence from India and China embracing the procesungs during ite attack on Canton. and various interesting events connceted with the alfairs If Indid, Atfinhanistan, and Persia. In China, the warlike preparations of the Imperial Connmissiovers s:bsquently to the conrention of last March for the expor tation of teas, had induced Cupt. W.line to order up to the walls of Canton an expeltion consisting of several vissels of war, aud sea and land forees amonnting to upwarde of 3 , the men. Atter some prelininary skirmishes, the troops, under sir Hugh Gough, were landed on the 24th May. The attack commenced on the fuliuwing day and in less than half an hour after the order to advante was given, tive british troops and seamen lowked down on Caitun, within a bundred paces of its walls. The Man
 tad Capt. Fitiut entered into a convciaton by mash he arreed to spare the city sid withuraw his furces. on cer ann cometions, the usot mportant of wine was the payment of six mallions of dondars as an indemaity to the
Bitish Crown. Thuse conditons hating kenn comphed with, the truops and ships were withdrawn: and much dissatisfaction is said to have been expressed by both the naval and military commanders at so unexpected a resule Gir Fleming Senhouse died shortly after from the effects of fatigue and anxicty durin_ the actions. Sir Gorion Bremer had returned from Caleutta with reinfurcements, and the arrical of the new Pletipetentiary, sir Huntry Potlinger, was looked fur with much interest.-- From Inda and Persia we learn that Nusseer Khan has at lengeth cume to terms with the British agents, and has surrendeped himself to their prutection. Shere Singh has given up the raluable prosince of Peshawur to the Indian Gorernment; and our troops baye been agaia victurious over the refractory tribes in Atfighanistan. These successes, it is sadd, will be followed up by proceedings calculated to settle the disturb ances in Persia.-The iutelligence from the Levant, brought by the same mail, continues to be satisfactorg; tranquillity has been restored in Syria, and the mountain. eers have expressed themselves contented with the reduction of the tribute conceded by the Porte. The Pacha of Egypt has restured the Syrian troops, and has transmitted to Constan inople a second instalment of the tribute to the amount of allumol. - ()ur European news is also of considerable meteres. In France, the disormament of the nary, and the unficulties cumeritell with the alfur of T in nis, form the pracipal tupics of discussion. The reduc. tion of the navy is warmly opposed by the journals , every shade of poltices: and it is said that the C'abinet, beng unable to conv to any a jreement on the guestion has resolved on referring it to the Chambers, which are to be summoned for that purpose in December. Numerous arrests have been wade in cunscyuence of the information given by the assassin Quenisset: and the esisience of an organised conspiracy, having for its whject the tutal entinetion of the Royal family, appears to have been established. Nuthing idas occurred during the week to dasturb the tranquillity of Paris: the accounts from the promices are also favourable; and the operations of the census, with a fe unimportant exceptions, are proceeding without opposition.- Our news from spain announces ti.e outioreak of an insurrection in fuvour of the ex-Queen Christita. Gen. O Dunneil, it tie head of tivo battainuns, has tiken possession of the citadul of Pampeiuna, on brialf of the insurgents, and several bodies of treops sent against him have declared in farour of the movement. Gen. Narraez is also said to have succeeded in effecting a similar outbreak in Anclulusia. - From the Lnited States we learn, by the arrival of the Great Westem, that Lord sytenham, the Governor-general of Canada, died on the 19 h ult., the day after tire close oi the Cauaina Parliamen:
At home, both Holises of Porhantent assembiel during the early part of the neek, greprratory to the Prof usaion, iu onter that there might be no dellay in the pro gress of the nieacures before the Legiolature; and the Roval Aseent has been gisen to several Bulle, ameng wisen the Puor-Law Cunmission Contisuance Eil, the Adminiso tration of Justice Bill, the Fingmure Lodge, ata Koyal Gardens bills, bay te farticulaty mentioned. In the Hosse of Lords numurious petitions againat tie Prowes. tion were !resentel, wincin हave rise to some interesting discussions on the suid.ject of the Corn-laws, durias mLicin the Duke of Weling on, in stating the reasono ou miach Gurerament had resulved to poespone the comsiterati a of the question, declared that it was inencubent un thone who had to deal with it to weigh maturesy, nut viry ite bearings with respect to cher subjuctis coince ted with commercial interests, but also with reference to treaties between this country and fureign powers, between foreign powers with each other, and the general relations by which_it was connected with the social system of the United Kingdom. On Thursdav, Pariament was prorogued, by Commission, to the 11 th of Nuvember ; and the speech read by the Lords Commissioners on behalf of her Jiajenty will be found under our Parliamentary news,

hat for their cliject the limitation of the issue of paper measure, hecamse formerly they recived wosh from the buk for bilis at jomercent. discmut, whist they chareed the merchants \& per cent. The bank shares had in consequeace fallen.-The Prussian papers inform us, that in
order to reinforce its frontier castoms' about to place there military colonies, like those of the Hungarian Banat. The King has consulted the Supreme Court of Berlin as to the expediency of making reforms in the mode of administering justice, and as to whether it Woulche better to substitate publicity of trin and rerha tribunal has given its opinion in favour of such a reform. Letters from Prague bring intelligence of an accident which happened to the Prince of Prussia, (the heir presumptive, ) at a grand review of Austrian troops near Kuttenberg, in lohemia. The Prince was riding along the front of a detachment of Riflemen while the men were firing, when he received a wound in the thigh, and upon size had penetrated and lodyed in the flesh. After its ex traction and the application of the necessary bandages, the Prince got into bis carriage, and continued on the ground until the manoenvres were terminated. Upon inquiry, the riffemen acknowledged that they put sufts of grass into their pieces to increase, as they said, the report of the blank cartuidges, but the officers declared that it was not unusual for the men to put in stones. At the tevicws in Silesia several men were wounded by shots
of stones: and other casualties are said to have happened at the l'russian as well as Alustrian reviews, which, how ever, were only such as are considered inseparable from the fatiguing manceuvres, for the execution of which be tween 30.000 and 40,000 men are assembled. The Archbiskop of Cologne has tinaily resigned his See, and declined returning to Cologne. The Catintt of Berlin has been officially made acquainted with this resolution, and will shortly proceed to the nomination of a new archbishop in the room of M. Droste de Vischering.
Russia.- Our intelligence from Russia states that the object of the conference held at Warsar on the 17th uft between the Emperor and the King of Pruscia was to take into consideration a yroposial made by the Britioh Govern of Earope geacral diswraing or dimin vourable to the mainteanance of peace. - Letters from W ar saw inform us that on passing through Kalisch, after the evien of the regiment of chasseurs of Kutusoff, the Kin Prussia proceeded immediately to visit the monument 1814. General Berg; who was with the Kiag, translated the Russian inseriptions into German. The last is as fol loas:-" Ihy linu bicus the alliance and friendship of Russia and Pu:sha for i.ee peace and prosperity of the The mations, and the tertor of fhir common ememies. the steps of the monament, and wich his owa hand wrote under the inscription the word "Amen." - The Emperor has recalled Count Guriew, hitherto Ambsssador at Naples, at his own request, and has oppointed coont Totook to sueceed him. The comn.ercial lished by the Minister of Finance are regarded as a valuThle ornitibntion to Russian statistics, and show the great progress which manufactures, and, thromgh their commerce, have made of late Fears in thet country; its
most extensive commercial relations being those with most exte
Engtand.
Turgey and Stria.-By the arrival of the Levant
Mail we have intelligenee frose Constavtinnte te the It th ult. The wost important part of the mews thus brougit is tranquil, and that the mountainers had expressed srat satisfaction at the dimimution of the tribute conceded by son of the Pacha of Igypt, has been promated to the rank
of One Tail, with precedence over all Pachas nominated in
times past by Mehemet Ali. They were reanired to assume immediately the Sultan's aniform.-Lady Ponsonby has been seriously indisposed, having been thrice bled; the last accounts report her as being still weak, though tinople. A steamer however is lying at his Excellenen's disposal at Therapia, and it was hoped that in about ten days Lady Pousonby would be strong enough to proceed. the country where the plague had shown itself, that malded has entirely disappeared.
Egypr. - The Levant Mail brings us news from Alerndria to the 16 th ult. The Pacha was at Cairo. 1,700 them sailed on the morning of the 8th ult. for Syria, in wo of the Pacha's frigates. This affair, it seems, was ept so secret. that Col apier received no intimation of \(t\) from the Giowernor, and it was only by aceident he quenee of his applications to Colonel Barnett and Captain Maunsell, a steamer was placed at his disposal, and he lêt to observe the course taken by the vessels carrying the Syrians. The remaining 500 Syrians were waiting the
arrival of others expected from the interior, and vesels theis coarseratice home-A Atmmer was on the pruint of ea ing for Constrinople, whe a aciond mst lment of the Bedunas nere a atain b =coming troublesome, and the Pacha had sent ag ainst them a force of 300 irregular cavalry, atd given notice that the nails must take an
esert, which wall be provided for them by the Govern ment. 'The Pdeha had been for some dars uncell, but I s again ristort to his ustal health. The rise of the Nile had attatined a point which excited considerable alarm, but the ciykes have been heightened and strengthened, and every precaution has beell taken, so that as yet no damage of any consequence has been occasioned, although a few villages have suffered severely.
Turrs.-Accourts received from this Regency state hat the Bey has just made the abolition of slavery general hroughout all the districts under his command, and that the slave-market at Tunis has been destroyed.
India and Persia.-By the arrival of the Overland Mail which reached Marseilles on the lst inst., we have received intelligence of high interest, embracing not only the proceedings in China, which are given below, but va rious other events of importance in India, Affgganistan, and Beloochistan, as well an account of some apprehensions entertained in relation to the acts of the Schah of Persia. Ninsseer Khan, the young chieftan of Khelat, has at length come to terms with the British agents, and has ourrendered himself to their protection. This is looked anon as important fact, as it will contribute to the upanquillity of the districts meot of the Indus besides placion a large force at the disposal of Gavernment for placing a lange for anment for Those disturbances appear likely to be diminished from another cause-viz., the surrender by Shere Sirgh of the Valuable province of Peshawur to the British. The troop. in Afghtnistan will then have to protect this new acquisi tion, which, it is said, will be an agreeable task. Iue Sikh districts are described as comparatively tranguil an der the government of Shere Singh, which appears to be consolidated, particularly as the young wicow fial so Nehul has brought forth a son stur-barn. Offich the refractory tribes in Affghanistan, in which the British were, as usual, friumphant. These victories, and the suc cessthiphher adopted by Earl Aveklind, whin, it :s expecte enable fuit attention to be devotid to the proveedms of the Khan of Herat and his Minister. Hur lajesty simp Endymion will, it is stated, proceed frum b-mbdy wituout delay to the Persian Gulf, for the purpose of protect has British interests tieere In Brrmah, some dispo to dis has been exhibited by Tharawaddie, as if tenaing toll diel at Sukkur on the 31st of July, and Major Outram ha ancceeded to the political agency.

CHINA. - The intelligence brought by the Orerlasd Mail from the geat of war is of great importance, and the operations of the British forces at Canton, and their ima modiate results, will be read with interest. Our last news it will be remembered, informed us that Capt. Elliot had at the end of the month of March, conctuded a convention with the Chine. and an underatanding on b.ith eid ported, the Chinese were not idle in maing preparation for war. Troops were qisembied at Cantunatad in lideh buthoni, new caman mare cast, the forts were put into a atate of defence, and several theets of sinali firevessels werc got ready to destroy the Brimisman Capt. Elliot went in a ateamer on the 10 th May to Caman where hee = w the preparations made by the Chiacse. he had an it.terrieg with the Mandario governar, and an riu to british foet he or six days On the 17th Capt Elliot went again towards Canton, and and the conarand of Sir Fleming Senhouse and Gen. Sir Hugh Gough to ove up the river, and anchos near the by potios Coowds of the craze:'s fled, and the merchanis jegan to remate theas groods. On the 20.1 , the Mandann Guremor Iu issued a prociamation declaring that there was no ground for alarm, and on the 2list a British proclamatione Wag isened, deming all the farcigners to retire from that
louked upon \(\mathbf{8 5}\) a trick to deceive the merchants into a
fuke security, with the object of seizing them during the
nitht. At Il o'clock that night the Chinese began the night. At 11 o'clock that night the Chinese began the the forts. The fireships were let loose, bat the British men-of-war were on the alert, and a steamer towed off the tween several of the British ships and the fort of Shaning, which was silenced in the morning. Eight new brass guns were found in it. During the engagement a fleet of war-junks came retreated into the creek. Thither the Nemesis pursued them, and during three lhours the sailors were busy in setring fire to at least 40 junks. Having completed the Work, the steamer emerged from the creek derorated with
the flays and pendants of the junks; the sailors too being the flays and pendants of the junks; the sailors too being
dressed in Chinese robes--some with Mandarin caps, and others, particularly one boat's crew, having each a Chinanain's tail hanging at the back of their necks. On Sun-
dar the 23 l Mar, the squadron and the tronps arrived, and Capt. Ellhor, Sir F. Senhouse, and Sir H. Goigh, held a conferenue. They then sent Capt. Beleler, of H.M.S. Sulphisr, to reconnoitre the river, and to find a place for landing on the north side. This reconacissance was attheir boats. An excillent place for landing the troops and guns was then discorered. On the ? the, at two in the afternoon. the tronps being in the boats, the steamers took the right column, under the cummand of Major Pratt, of II.M.'s - 6 th Regt., to serve and hold the facturies on the bank of the river to the south of the eity, while the Nimesis tow the left column towards Tsing-hae, fire miles up the river. The guns were landed during the Britsh factories had been most thoroughly plundered by the mob of the city. In the official account sent by Gen. S:r H. Gough, an animated detail is given of the gallant proceedings of the troops. The Mandarin Governor of less Capt. Eliot agreed to spare the city from an assault and withdraw the British troops and ships of war from the river, upon the conditions-first, of the three Imperial Commissioners, and all the troops under their cormand (the provincial troops alone excepted), quitting Canton and its vicinity. and marching 60 miles from it, and on the forts not being restored; sscond, \(\ell, 000,0 n 0\) dollars to be paid for the use of the British Crown within one week,
the first million before sunset of that day (the 2 th) ; and third, the troops to remain in their positions until the two former conditions were completed; and the ransom to he increased to \(\bar{i},(010,600\) if seven days elapsed, to 8 , (1) 0), 000 if fourteen days, and to \(9,040,000\) if twenty days were allowed to elapse The losses sustained in the paid missioners was also required to the convention. This was soon granted. After three days' delay, the whole of the conditions having been complied with, the British troops, Who had previously had several skirmishes with the Tatar troups. were withdrawn, the Chimese furnishing every mens to get nd of them and their guns. The heat was was apprehended from the rice-fields around the furts, where inclucting had taken their stations. Ninety-seven men, Sir Ping fifteen officers, were wounded, and thirteen killed morning of tenhouse died on board the Blenhem on the tigue. The lat fith June, of fever, caused by excessive faJune; it represents the Chinese as highly incensed with the uncompromising. The Emperor's nephew', Yeh Shan, had English tid to his uncle, in which he declares that the of the inhabitants for peace tore his bowels with anguish, and that he had given them several milions "for the oplum," and to induce them to withdraw ; and that, as the repairs \(f\) bed the barbarians away, be would set about apon of the forts on the river. This report is looked security an in irefragatle proof of Chinese peridy, and no security for peace is considered to exist. In the mean
time, Capt. Elliott was husy in selling the sites of the bouses in the new city of which he has laid the toundation n the island of Hongkung. Preparations were, however, to procerward for an expedition destined, as it was stated, even Pekin itself. Sir Gordon Hremer had arrived frum Caicutta. The steamer having on board the New PleniPotentiary, Sir M. Pottinger, and the Admiral, Sir W. of Malacea, and pasen on the 28th July, in the straits Auzust.-In reference \(t\) ) Capt. Elliot's convintion it is offeers of has given much cisoitisfaction to tive general other con the expeaition, and that it contrubuted with Indered cuses to hasten tire death of Sir Flemin 5 Senheuse. lase otimrate letters emin inatiealy tecelare that this galhave tacer rereatud!y protested, that "he wouid far rather his nanen ulider the walls of Canton, than have affired Hugh forythe convention pf the 2 Th of May." been received to the 10th Juty. They contain the dicus. "Cans of the Legislative Assembi'y on the vilject of th. posell to meet the emergency, but had both been nogutive? as increasing the burdens of the colonists.
enumerated in the tarift of July 1840 on articles not
increase the revenue as to leare a moderate surplus, wh:ch standing paper currency. The her fuidation of the out bearing 5 per cent. incerest, chargeable on the revenuts u the country, should be isshed, purchasable by tender petition on the subject was about to be addressed to the July state that instructions had betn papers of the 8th Colonial-office to exercise more stringent measures wh the frontier ayainst the Caffires. The small-pes had appeare
in one or two districts. lut the mortality was not such as to produce general alarm.
Vitmed Etatis--By the Great Westem steamer
Khich arrived at Buistul yesterday, we have received Nem
York papers to the 25 th ult. They bring intelligence
Canada, from lock-jaw, the resuit of the aci ident allaidel to in our last. His lordship expired on the 19it. ath Wovenor. The Whig Cungressional (ummitise hary published their addreas, enteriner mito a cesiow of thate late ploceedings of Cougresi and President Tyier; aud comant of which is ore to restrict the jown of the Lresi dent in the exercise of the veto. The news tahen out by the steamer of the state of trade in this comntry. created great sensation in the United sates, and prodined en-
 considerably increased, not only on the border, but through still occasions mucla ansiety to the friends of petwe, although tiee adherence of Mr. Wicbeter to the Cabinet and the nomination of Mr. Everett to the Court of London are considered as arguing favouratly of the feelings of the President on the sulject. In conntrion with this topic, considerable sensation liad been created by the discussion in the House of Representatives, during which Mr. Quincy Adams condemned the cuarse adur ted by those who seemed desirous by their remarks to foment discord and provoke war. He declared, as he said, the face of the country and the world, that in regard to the affair of the Caroline, a due consideration of all the n the wrong;" and in commenting on the foct that the state of Nem York had resolvell upon trying Mr M'Leod, Mr. Adams insisted that it was purely a ational and not a state affair, adding that there was not an this idea of holding indiriduals responsible in a case lithe his. It was thought that the op, nion of this gentleman who is held in high respect by his tellow-citrzens, wonl. have much influence over the public mond. In connec-
tion with this subject it is mentioned that the Enited States Government have sent two companmes of troops th the Aroostook, on or near the diaputed territory ; hut it was thought that this movement is in accordance with an passers. Another topic had also been started. Whit h mas espected to give rise to mach excitement in Congres
dearour by representation or negotiation with the Liatiou Government, to procure the liberation of American citizens now undergoing punishment in the British renal referred to the "committee of the whole House" is a maority of only one. - An extraordinary scene had tahen place in the House of Representatives dring debates, which had excied a stroug sen-a. Willmore was
the Union. It appears that while Mr. speaking, Mr. Wise, of Virginia, crossed the floor of the house to the seat of Mr. Stanley, of North Carolina, and high words ensced between them, durmg Nhich A.r. Wise said that Mr. Stanley deserved lis conitempt. and Mr Scanley applied the term "liar" to Mr. Wise. Mr. Wh se struck Mr. Stanley, who returned the biuls. Gre...
 beligerents. - The fortifiction and nat the nas al \(4 \cdot \mathrm{c}\) yards and forts in an active state.

\section*{fitetrepolis and its L'rimity \(^{r}\)}

New Houses of Parliament.-The late workmen still refuse to cotn to emplorment, and no fresh hands bave as yet been procured to take their place. 10 conser quence of the masons having addressed a letter cotainMajesty's Commissioners of Woods and Forests, contain ing at length the several charges of oppression wid Messry. complain of against their foreman, the contr-statement, in Grissell and Peto, have pubtished a contere without the which they assert that these charges ane erplanation of slightest foundation, and give their own explanationderthe causen that have led to this unforturate misen standing. They state that the secession of the nor of the has originated, not in any oppression on the par oforn foreman, but in an attempt which, bad it been succeash, would have robbed their employers of one-third of ters labour they have paid for, and have placed the industriems anced and idle operative upon a par with the since, a few and experienced workman; that a short thme sirrangemen: of the wortmen deternined to org conze ain quatuy among thenseives, ly wedich caly a cen anith a veit in siven time, and that any workman who pressincat in to a more than the allottel quantity should be subjected esolsfine. One wan, however, nut intueacow head in two or tion, comple:ed the working of a wincow-head for timis tiree dajs less than the allotted time. and for bp "chasing," as it is called, he was fined five shinings by his felluw-workmen. On his refusing to pay it, a meetinst Thas held for the purpose of proposing a strike and chet
therefore resolved to adopt Mr. Allen, the foreman, as the
cause of their turn-ont, because he had been instructed by Messrs. Grisseil and Peto to protect a workman whom they
considered to hare dune only his duty. The consequence of this w.s. that nutice was given br the men that they shmuli suspend their work, and not resume it until the
foreman \(\pi\).as discharged. This has not been onncelded by the contractors, and the men, as our readers are aware seens, were entertained on Monday that the masins would Suturd the the an interiew with them. hut this was refused. Another neeting of the body has been held during the week, when it was again deter mimed that uothing short of the discharge of the foreman shauld andure thens to turn to their work. The ques as the time allomed the contractors is within a day or two of expring; and Messrs. Grissell and Pet, it is added, will
rather throw up their contract than diseharge the foreman rather throw up their contract than diseharge the foreman, ftified to learn that in the House of Commons on Friday ast, Lord Lincoln announced that it was the intention of Gurernment to carry into effect an alteration for the imsBoard of Woods and Forests, on the death of Lady Gordon inhabiting a house in Piccadilly which interfered with that improvement. Arrangements had bees made some should happen, and it having recently occurred, the house will be pulled down and the site throw ing Gree Park, as soon as the representatives of Lady Gordon hase
given Government possession of it. On the same occasion, Sir F. Trench gave should move for the appointment of a select committee to consider the practicability and expediency of a plan for
improring the navigation of the Thames betweeen Tauxhall and London bridges, for creating an embankment embehishing its banks, remoring the oustructions whic at present exist, and for rendering the banks of the river capable of contriluting to the health of the inhaoitants the practicability of a railroad along the banks, with the practicability of a railroad along the banks,
Wikley also presented a petition, numerously signed. from the inhabitants of Finsbury, setting forth that the borough was so densely populated, that it was scarcely healthy fo the minl. indean's that the children of the phorer classes for want of any other space for recreation, and thereby running great ri-ks; and earnestly praying the house to consider if some step cannot be devised for throwing open spats of ground for the health and recreation of the people. In conmerion with the same subject, it appears that, in provenents recommending the river to be embanked and a road furmed from Vauxhal-bridge to Battersea-bridge, Government surveyors have recommended the nhl house The cardens in Paradise-rowea-bridge to be taken down caries company, will be remored to Parson's Green.
Wood Pavement, - At a meeting of the Marylebone wood paving proposed to the board to lay down 600 yards South Molton and Dake-streets. He produced a model to the board, and said that the only possible objection to presented a proprietors were willing to lay down a specimen on a hiill blucks of Norway fir or Eevere and continual traffic, in the same to be kept in repair for seven years at sirpence per square yard. He remarked, that though the surface base blocks would be found as good as ever; and that if at the enil of six months the specimen was not approred, After it biad been moved and carried unanimously, tha the proposition be complied with, a gentleman present ob surbedect from the had received a communication on the a misaken. Stepherson, the engineer, stating that ant quick!y worn out, as was proved by the sleepers on hasi been down nine yaten Railway, which, thangh they In ronnesisn with chis subject, we may ment:on that the Strand wis chised again on IV edne-dar, in consequencenf a pirrion of the experimental wood pavement recently laid a nex pion ot wend provin will he ; a

Ramsgate.-It is stated that a survey is in progress for the purpose of ascertaiuing the practicability of a plan containing a fleet of men-of war, or merchantmen of the argest clas:. As the Good,win and Brake Sands afford on-iderable shelter to tuis part of the coast, it is thought that if the additional works necessary for carrying this plan into effect can be made at a comparatively moderate expense, it will be one of the most raluabe undertaking
at madern times. The survey is now making under the arrection of sir \(J\) nhan Rennie.
Sunterlond.- We noticel ia a former Number the parisl removal of the lighthonse at this port. The undertaking has now been suecessfully completed, and the lightfanise has been convered froin the north pier in an entire state to its eastern extremity, a distance of nearly 500

The following is the plan which was submitted by Har, when it was under their consideration to pull down May, when it was under their consideration to pull down wis to be cut through near its foundation, and the whole timbers were to be insertud, one after another, through the building, and extenthing seven fect beyond it. Above, and at right angles to them, another tier of timbers was to be inserted in like manner, so as cradle was to be supported upon bearers, with about 250 wheels of sis inches diameter, and was to traverse on six inches of railway to be laid on the new pier for that purpose. The shaft of the lighthouse was to be tied together with bands, and ite eight sides supported with timber braces trow cradle pushed forward with powerful screws along the railway abore mentioned, on the principle of Morton's patent slip tor the repairng of ressels. The project was approved of, and the necessary arrangements were made for carrying it into effect: the only deviation from this plan being, that during the progress of the work a windlass with ropes, No crack or apperarance of settlement is to be found in the building, which has now only to be firmly established on its new foundation

St. Aibans - On Monlay this town was thrown into great exentement by the report that a young woman hai It seems that early in the morning the perple of the house were warmed by screams proceeding from one o the beti-roms, and on proceetiug to it, they discoveren the foung woman lyng on the bed, covered with wounds, and bleculns copiously from the throat. On examination it was found that though the imain artery had escaped, the divsion of wheh would have coused immediate death, so mony and scrious wounds had been inflieted, that not the slightest lape could be entertamed of her recovery. only answer by a ferw siqus. The soldier, on being taken into custody, at once adnitted that he had inflicted the wounds on the girl. and that he intended to murder her An examination of the prisoner took place on the same day, but merely for the purpose of taking sufficient evi. dence to remand hien until the fate of the girl is known.
\(W\) indsor. - The examination for the prize lately insti tated at Eton College, by H.R.H. Prince Albert for th encouragement of the study of modern languages, has just
concluded. The ecamination occutied four davs. The suecesstul commetior was Mr. stapson, pupil of the Rev. E. II. Phiering; the five ceat in order of merit arere Messrs. Dodson. Lanioton, De Hursey, Pigots, max.; and Horten. It is stated that all the compeators acquitted ermatises with much credit. The examination exeited great iaterest in the school, and it is thougat that the in ritution of this puze by his Royal Highness will bave to modern languages. The subjects in which the examination took place were German and French. -Thirteen milk-white goats, whith were sent as a present to Prince Alhert from the continent a few montas ago, were in spected by her Majesty on Sunday, as the Queen was driven through the Long-walk by his Roval Highness. The cotour and peculiar oreed of these antmals render them, it is said, of great value and rarity.-A review and |sbam fight by the 72 d Highlanders took place in presence
of her Majesty on Monday. Her Majesty, accompanied
by the Duchess of Kent, proceeded acro-s the (quadrmale in the encto:are, heneath the wall of the the (quadrangle end of which tise Queen and her ihustrions mother vien the movements of the troops, with which they appeared highly gratified. Prince Albert, with sereral of the mem hers of the Rnval household, stationed himself at an angle the evolutions, and expressed himself nuch pleased with the high unscipline of the regiment.
Railvays.-A serious accident, attended with very dis occurred day. on the London and Brighton raliway on Satur ang , drawn by two engines, was approach ing Hayward Heath, when the first engine got of the rin, and buried itself in the embankment, checking the other, which burst and occasioned an alarming concus sion among the carriages. The stokers of both engines, and two passengers, were killed on the spot, several othen seriously injured, and the line was strewed, with tn precks, of the three first carriages, which were dashed to time very narrowly escaped. The body of one of the stokers struck one of them on the neck and knocked li, out of the reach of the train; while the other was struct The soune portion of the train and thrown into a ditch The uccurrence caused the delay of all the trains unt. seven o clock, when the up-train passed and arrived in on the bodies, when, after a lengthened investigation, which elcited no new facts beyond what are given above, except that the most probable cause of the accident was the bulging of the rails on the line in consequence of the late heary rains, the jury returned a verdict of "Accidenta death, with a deodand of one shilling on the engines; the jury being of opinion that the four-wheoled engines at present used on thils the are not safey constructed sequence of this accrdent the Board of Directors have made known their intention to discontnue the use four-wheel engines, and to place a luggage-box immedihare been issued alwass to second class carriage next to the engine, in wh.cin no one is to be allowed to ride:-Ou Thursday afternoon the town of Brighton, which had been so much alarmed by the accident teported above, was again thrown into a state of great excitement by a report that Patcham tumel bad falleu in. On inquiry it appeared that the mail train, whith left Brighton at a quarter before 11, passed through in safety, no arpearance of danger then existing. The time for the next train to leave Brighton was a quarter before 12, when fortunately, before its arrival, sume of the labourers employed on the spot perceived the Brighton end of the tunnel in a tottering state. They immediately raised an alarm, and caused the proper signals to be hoisted at each end to prevent the trains dpproaching. A great portion the tannel exact time the irst traiched to Brighton and he Hassocks-gate station to inform them of the occur. rence. In the meau time the directors had caused several fys, post-chaises, \&c., to proceed to Patcham to bring the passengers on to Brighton, where they safely arrived two hours after the appointed time. A gorerument messenger was in the first train from Londor, having cone down to examine the spot whare the last acciuent occure. The accident is attribated to the late heavy rains.-On Wednesday a man was examined at Croydon, chargea with trespassing on the Brightou railway, to the serfor perii of his own life and eudangering the safety railway traiss. it appearcd that ceding along the liue at Purley, when the engineer observed defendant lying completely across the opposite line of rails. At this tiale in was espected every moment at the spot, and the doan-train slackened its speed, and proceeded to meet the other, to which it reported the circumstaned the spot, where defendant was still lying acr ss the rails, when it was found necessary to stop, and dchud ant was taken off the line, and placed in one of the cas riages, and conveyed to the Croydou station. Crordon fair bated at the timie, and said he had got on the ralls. The magistrates sald, that the accidents on railatays were sufficiendy alarming wthout having them increant bud such gross miscons felt it their duty to pass shich beentence as would deter others from acting in a similar mansentence as would deter of efendant to pay a fine of 5 l. or be ner. They then ordered dere A pats, ir is said, hare imprisoned for two months.-Arrangements, the Brighsth been completed between the contractors for they for t..e conseym the directors mail by ralloud. "Wilful murder" against him. It seems that he did ne deny the act, or assign any reasin for it. IIe is abont 60 years of age. has been 21 years married, this numa being his second wife; hut it dad not appear that they had ever lived on bad terms. It is thought that he must have committed the deed under the influence of temporar insanity.

\section*{SCOTLAND.}

Sulhertandeme-A serious riot has taken place on Lord Reay's estate in the parish of Durness, in this county. It seems that a Mr. Anderson, who is privcipa tacksman in Durness, under a lease from Lord Reay, hat served notices upon a number of small tenants to quit his property. As they refuvet to leave, the siterift-subanitut of the county, together with a force of sheriff's officers proceeded to the spot. The people turned ont and met armed with sticks, thils, and other meapons. The ettrer however, succeeded in reaching the inn of Durine withon molestation. In the night, the people, with increased num bers, made an attack on the inn, tore down the railings in the doors. They then mate an atteck on the constahles and after a hard stuggle knocked them down and diagse them out of the house, where they met with similar treat thus succeecied in driving away the cosatables. r.turies to the inn, forced an entralse in'o thie room in which the sheriff and procurator-fiscal were, and violently drove them out, threatening to take their lives if they remained that night in the parish. They were consequently compelled distant, which they reached abont five in the morning with the half of their party. The remainder concealed themselves in the stauding corn and among the rocks, and made their escape when daylight broke. There is no account o proceedings, but if is thought that very decided measures he ad-pled to prevent their recurrence.
Isle of Skye.-A few days since Mr. Lindsay, officer of Facise in the island of Harnis, to ath appeatance conte
his iteoth in the fillowne nammer:- He went out to promontory which juts into the sea, near the mansion of Rodul, for the prapree in

\section*{ede (Gucuencug eivoniche.}
S.ITCRDAF; OCTOBLR 16, 1N11.

Root-pruning is a subject to which we often had occasion to advert in the early part of the year. Now return to it, in the hope that it will receive during the ensuirg winter the attention it descrves.
It is a conmen belief that the size of the head of tree corresponds with that of its
one balances and equals the other.

\section*{High in the gir it waves its giont head,
Is far lielow its arm-lhe ructs are -pread,}
said the poet; and although this is not strictly true, yet it is sufficiently so for a motto to a chapter on soot-pruning. If the roots of a plant are large and numerous, the head must be so too, for this plain reason, that the anm unt of flud finod received by a plan is in proportan to the size and extent of its, roots, and
that food must be expended in the formumumen of franches that foodmust be expended in the formulten of limenches.
There can be no interference with such a law as this. Suppose one tree absorbs 20 lbs of fluid food (or sap) atd the other 40 lbs , by the roots, all other "circum stances being equal, it is evident that the one will have \(t\) wice as much organisable matter as the other; and, as such matter cannot be returned back into the soil but is irresistibly driven upwards by the force of vegetation. it can only be expended in the organisation of leaves and branches; and consequently the leaves and branches will be twice as large or twice as numerous in the one case as in the other. Of course the reverse of this is equally true.
This subject is adverted to in the Theory of Horti culture ( p . \(2 f \cdot 2\) in the following words:
"It must now be obvious that, although root-pruning may be prejudicial in transplanting trees, it may be of the greatest service to such established trees as are ton prore to produce branches and leaves. instead
of flowers and fruit. In these cases, the excessive of flowers and fruit. In these cases, the excessive
vigour is at unce stopped by removal of some of the stronger roots, and consequently of a part of the superfluous foul to which their rankness is owing. The operation has been suceessfully performed on the walltrees at Ouiton, by Mr. Errington, one of our best has never proved an ohjectionable practice, under judicious management. Its effect is. pi, t.nntw, to cut off the supply of food, and thus to arrest the rapid growth of the branches: and the commexion between this and ( 85 ). It is by pushing has already beent explained that the Chinese obtain the curious dwarf trees which excite so much curiosity in Europe.
It is one of the most commen of all things to find trees of every kind unproductive of flowers although in a state of robust healch, and this excites surprise. no is very strange," says the gardener, "that I get it would be those finely-grown healthy trees!" But and coarse shoots are notre if he did. A rank foliage in hearse shoots are not better evidence that a tree is both cases it shows face and corpulence in a man; in more than he ought, and short commons are an excellent remedy in the one case as well as the other. In toluxuriance no mode of obstrueting the tendency the atmosphere except by crippling the roots; for with we cannosphere and its action on the veretable system We cannot deal in the open air. Attacking the roots is therefore the true mode of operating.
winter this operation is performed period of the place beirreen the fall of performed, provided it takes the buls in the fall of the leaf and the swelling of the end of Nuring; but it is better to execute it before all round and undermined in propous should be cut through the head. A tree bined in proportion to the size of be cut th within istween or \(t\) feet of the trunk: bui care should we taken not to approach much nearer, the operation, yh the tree is not likely to be killed by bear a too scanty fot may he so much stunted as to thus a tordenty foliage the succeeding season, and thus a carden is disfigured and a season lest. But fecover the latter event should take p'ace, the tree will No one who bas ne season
this practice can forglected to observe the effect of asice if steadily form an adequate inlea of its importannually steadily persevered in-we do not mean by trees are again becorn, but by renewing it when the Mr, Rivers its favour in former Chronictes, and by Mr. Rivers in his valuable paper in the Transactions

Forticulural society, and his separate publi-
cations, is strictly true. It may be practised upon all
f.inds of fruit-trees with the best effect: and we shall probably from time to time introduce into our columns particular instances of it. It is the only method of cultivation that should be recommenfed to the cottager: for it enalles him to obtain the largest possible amount of produce in a given space of groum. In proof of this "e would onily advert to the sarden of vilest of (race. at St. Juhn's Wood, where. on the vilest of all soil, the Lonten clay. tire-eighths of at acre of ground are walled in, the produce from which may be judged of by the fact that \(: 20\) dozen Peaches
have been gathered in a single season from the walls. have been sathered in a single season from the walls,
which are low, and only ceenpied with fruit-trees on three sides of the quathangle. The tree there are crowded :ogether as in the murseries; they are coverel with the finest fruit : even the old trunks are furnished with fruiting spurs; and all is in a state of health which nothing can exceed
It is not merely to fruit-trees that ront-pruning may be advantageously applied ; it will be found amost ad vantageous practice with respect to many ernamental species, such as climbing plants which it is desirable to bring within small compass, and even large trees which it may be wished to cultivate in a garden where room is an object. But to these points we shall probably return hereafter.
ON THE PRODL(TION, DISTRIBCTION, AND PRESERYITION OF HEIT, WITH REFEROECLIMITE, IN CONSERVATORIES
As anorymous correspondent having made some bhjesWus to the dan of boller-setting proposed in a previmen tional reasons fir believing that the plan is ge:? I am obliged to return to the subject, which is one of great impurtance, irreapertive of herticmltural riews. The state of London-bridge at centuin hours of the day, and in cert oin
directims of the aind, is sumfitur of itself to excite the mo-t lively interest in the question, and to demand fort every honest attempt to impiove the present practice the
atmost indulgence. It was probably the excessive annor aure prolueed hy the conreceation of sterm-honts in this part if the risee that wizr sted th the City anthrities their im inti. if.r porn-is to remedy the admited dethey have received any sativinctory answers
It is rue pollas, that the cimentity of sont 11 rown

\section*{Frum ail these consheretions, barme out by in, erinent,} I retwin my of imion, that the nemal seet if 'me es far naces is deflelent temprerature, and thay thas demit is to combustion, and then arranging for the twansmin of the heat to the bodler.
With the first of these viens, I slomid e hermue to reaommend that the fue the consumed in embate wet slowiy-colducting materials, and certainly wot in contact with the hemler. Those portions of treeh eonl which he
against the boiler undergo for some tiace dastillation rather than combustion; and while they are thus wasting. they intercept a large part of the homet F -artace from the central portion of the fuel, whach is proinabiy to a state of incandescence. The phenomenon of a lictp minal whth a hot centre and cool externor 1 s familar in the case of burning coke, and ma smith's forge : and a simblar eftect in an inferior degree is easily productble wathin a bailer surrounded furnace.
It should be remarked that there is noting new in the proposal to burn the fuel withu brick walls : on the con trary, a very large number of furnaces lave at th times inefficient in another respect to se next noticed. I have
 in favour of putting the fuel close to the buller, winch is, I The detoct with
The defent which I muppee to hase exi-ted in an: brick-
 and purne: whuting tut the radiant heat form meny part to wheh 1. mund apiy ewth at the sualer dat mied

 This proposition, whether it be good or bad, has more novelty than the former. I dio net receviret to mave seen any buiter, or any de-ign for ore, in wlucid the blea was involved. It may be stated, I thiuks, on an mamye, that rick-built boiler-furnaces bave not auted .i. y radiation, upon more than one-sixth part ace whith might have been presented to them oy slightly lowering the fires and abandoning the circuitous flues. In the \(b\)-liers of Mr. Watt chines at he Abien Hiks, the proportion was certamly less than one-tweif h. The objection mate to my plan by the correspondent before mentioned is founded on the greater distance at whith I propuse to place the fire, in urder to allow the radiant heat be bad, because radiant heat dimnishes as the square of the distance.
In open space it is quite true that a given surface would at double distance recelve only one-fourth of the that radiating from any point, and we the smme removal in a clase and nearly heat-tizhis chamber would by no means produce the same consequences. If, morenver, white the distance is doubled, the receivinguriace be incrensed sistid it is clear that a constderabte gan may be secured, and this is altogether independent of the question whether excessive heat noper a swai' sumace hat shown by the non-erapmation of water in the red-hot hat shown by the non-erapmation of water in the red-any pplication to bouler-farnaces an the grotind that their tem peratures are never suith as to extile that remelient wetmon betreen the ron and h. Whter, when sts wee atided th This is a question whed coes nut atcmit of any rery de-
 mast be seme quantry of ontur-surtace thri weh whan would be mpoombie st force a! the heat wnith a yrea

 re purturn ot the - 1 trusting entireiy so the suipne ant, A f.u.iseact as it generaig to whectimulatuns of some.
fan thlustrating the surtest course is tue rand winea lexted air will aiways follow, beeause it is impelled to this course by the draft. Without which the fire wilt not burn. And thrs seing the case in every instance, the Fhole of the heat wouid ai once be drawn away from the arch of the bouker into the flus. Although the arrows in the diagram are mentionations
as showing the probable course of the heated air, and although it would nos prejudice, but might, in fact, im-
prove the effect of the radiant beat if the smoke and gases could be supposed to escape at once into the space ontside the boiler, nothing. I imagine. san be more certain than that the cursent would be exectly as I have described centre over a fire, and its circumference in contact with a boiler under low pressure, could not possibly remain quiet, it would inevitably be in rapid motion ; and it needs little science to predict that the movement would be uprelatively coul boiler. The objector seems to confound the smoke with the heat, when he says that the "heat will be drawn away," The radiant heat, which it is the great object to render effective, is not susceptible of being drawn amay, and wonid, as before mentioned, be benefited
if the course indicated by the arrows for the smoke could be shown to be wrong.

Lastly, the author of the letter under consideration objects to my passing remark, that so much of the boilers of locomotive engines as surrounds the fire may be the least effective portion; and be replies by quoting the estimated effects of the fire-box as compared with the tubes of these borlers, which is a totally different question. My
remark, whether correct or not, applied evidently to remark, whether correct or not, applied evidently to the fire-box, the upper part of which is exposed to exactly the sort of radiation which I advocate.

Io not know that any apology is required for reverting to this subject at such leagth, because it is really one of nationd interest, and has more tha
attention of Parliament.-A. Ainger.
P.S. Oct. 1.5 th . - By the report presented yesterday to the Court of Common Council it appears that mo less than 41 communications have been made to that body on the subject of the foreguing remarks. Of these it is stated Hood, tendering general adrice . monding the old plan above discussed of introducing fresh air to the rising gases ; six suggest a furnace which shall nse of steam in combination with air: no less than 15 advocate the substitution of coke or anthracite for common advocate the substitution of coke or anthracite for common
Of the three papers first mentioned, two of which are described as being too valuable to be curtailed, it is, of
course, impossible to speak at present. Of the remainder, nous verrons. There is, however, one remark which is peculiarly applicable to boiler-furnaces, and especially some of complicated arrangements. That apparatus is perfection, to adapt itself to the probable skill and intelligence of those who are to manage it A furnace might mechanic ang well under the constant control of a good haods of an average stoker. This observation does not appiy to the three points on which I rest my hopes of sucterrals, radiation to the largest posible -conducting ma face, and avordance of circuitous flues." All these, in
fand face, and avoldance of circuitous flues." All these, in
fact, rather simplify and render more manageable, while the combustinn within brick walls, and at a litcle distance from the boiler, is notoriousty favourable to the use of coke or anthracite coal, the advantages of which have been sacrificed to the bad construction of common furnaces.

\section*{ENTOMOLOGY.}

GENES-APHIS.
Secomd Subdivision: or such as, have Tubercles shorter
than the Abromer. than the Abdomen.
1st Speries: Aphis Thise.- Found on the under side of the leaves of the Lime-tree, of a yellowish-green colour antenux not so logg as ibe wings, but as long as the body, beautifully variegated with aiteruate black and whice jounts ;
 hatched at the end of April. Maies with a double ;eggs block spots duwn the back, and smallier ones on each vire colostate of toe mings fuscoud; stigma yellowish, wish supo \(u\) f, and tree on the inferior wings ; Jegargin of the and binetinh.

21 Speries: Aphis Aceris pseudo-platani.-This insect are nearly as long as the body; tubercles short; eyes bright orange. Each sex becomes wioged, and varies in colour from green to brownish black; they cast their coats in April; the pregnant female assumes a darker colour, with the head and thorax black towards autumn, and in of the tree, anci the parent dies soon after.
3d Species: Aphis Pomi.-Beneath the leaves of the Apple-tree; of a dirty-green colour, eyes crimson; thorax compressed ; antennæ, lege, and tubercles, brown.
4th Species: Aphis Malver.-Under the leaves of various apecies of Mallow; of a light green colour, with an elongated abdomen, terminating in a style; the tubercles
are more depressed than usual ; their tips and that of the are more depressed than usual ; their tips and that of the dark-brown ; wings very transparent ; stigma fuscous tubercles depressed and style pilose; both more transparent than in the female, and not coloured at the tips. This species is also found on the Hibiscus and other plants of 5th Species: Aphis Amygdali persice.-On the Peachtree; body light green; eyes deep crimson; antenne long; legs and tubercles, which are
amber colour.
6th Species: Aphis Pruni.-Very similar in every respect to the former. Both sexes beeome minged, predark brown; wings long and transparent; they are foand dark brown; wings long and transparent
on the leaves of Plum and Apricot trees.
7th Species: Aphis Ribis nigri.--Found on the blacl Currant tree, of a transparent green colour; eyes deep crimson; antennse and tubercles transparent, tipped with grey; the fly is of a dirty green colour, striped with black the thorax, head, and antennee are black.
8th species: Aphis Lathyri.-On the Sweet Pea beneath the leaves ; colour green, becoming when old of a dark purple ; antenne longer than the body; abdomen acu9th Species: Aphis neariy extending to the tram oth specier : Aphis whitish tipped with grey black grey colour; antennæ whitish, tipped with grey; tarsi of a similar colour; a small species hatched very early in
A pril, sometimes in March, from eggs deposited on the April, sometimes in March, from eggs deposited on the
buds of the Spindle-tree the preceding year ; in September buds of the Spindle-tree the preceding year; in September
they are to be found nestling near the midrib, beneath the leaves of that shrub. The winged insects are of the same colour as the apterous-tbeir wings are transparent and iridescent, twice as long as the body; their legs hairy
and variegated, the tibise and tarsi alternating in colour. and variegated, the tibise and tarsi alternating in colour. he dinecies: Aphis Viburni difers from A. Euonymi in the antenne not being so \({ }^{\text {tong, and the legs beigg of oll }}\) Waytaring Tree.
1lth Speciest Aphia Bellidis.-A speciea very similar to the foregoing is fonad on the-Daisy in the spring. We have not discove
wo last species.
12th Species: Aphis Tanaceti.-Not uncommon on the young shoots of Tansy ; yellowish green when young becoming of a dull red, at a more advanced period, with transverse wings of a darker colour across the back; an-
tennæ longer than the body, of a dark brown coloar; eyes tenne longer than the body, of a dark brown coloor; eyes
crimson; tubercles shorter than the abdomen. The male is a winged fly, of a yellowish red colour, darker on the thorax; wings transparent and iridescent.
13th Species: Aphis Millefolii-A remarkable species found on the stems of the Yarrow and Sweet Maudlin in great abundance, during the autumnal months, of a gresish green colour and ovate form ; thorax fuscous; eyes, head, antennæ, and legs, dark brown. Every segment of the abdomen is strongly marked by transverse rows of light brown hairy spots, across the back, and the two posMany individuals sarrounded by dark brown bairy circles. Many individuals have also a broad longitudinal stripe of green down the centre of the back, and others less broad on each side. The abdomen ends in a dark bruwn hairy style; the tubercles are dark bromn, gradually narrowing from the base to the apex. The whole body, exclusive of the head and style, is divided into twelve seg-作, and they may therefore be considered the thorax; after these segments those of the abdomen commeace, and between the 5th and 6 ch segments of the ab domen the tubercles arise. The under part of the abdomen is of a uniform greyish green, with the excention of the two posterior segaients, upon which there is a very resegment dari brown stain. The male is browe, with the segments defined by transcerse rows of darker spots; the apper side of the abdomen and the heal is harry; the thorax, antenne, and legs are of a dark brown, and the wings are perfectly transparent; the younger males are of a dull red colour, with embryo wings, dark legs, antennes, and pruboscis.-Oswald Mosley, Rolloston Hell.

\section*{COTTAGE GARDENS.-No. XXXIX.}

Tae esculent roots that are next to the Potato for usefulness to the cottager are those of the Carrot and Parsnep, which, although capable of eaduring our common winters When left in the ground, are usually takea up about this time and preserved in a similar manner to that which was last week recummended for Potatoes. As soun, therefore ai the latter are pitted or housed, take advantage of the first fine day, and with a spase, or three-prouged fork begin at one end of the Carrot-bed, and dig up the root carefully without cutting or breaking them. When this has been done, the whole are to be gone uver again and deprived of their leares, and the largest and best routs are
then to be selected fors store. Soace recomaend entting thoue as close to the crown of the root as possible withonit
going so far as to injure it; while others prefer beaving about an inch of the top. The former plan is probably the spring, and thereby losing their flavour, which they will then paturally do if suffered to exhaust their strength in the formation of leaves. After being topped and sorted, they are to be removed to a dry open shed, and exposed for
a few days until the little earth adhering to them han dried sufficiently to allow of their being stowed away without danger of rotting and injuring one another. This must be particulariy attended to, for if laid together in a met stat they will soon be damaged and rendered unfit for use. The method of storing them is very simple: a layer of dry sand, which is perhaps the best material for keepiag them in , is put over the space allotted for them ; then a laye of roots, and afterwards one of sand and roots alternately building the whole neatiy into a firm compect mase, an finishing with a covering of sand on the top. Where sand is not easily obtained, a little dry earth will answer the parpose; or they may even be packed in a convenien place by themselves without anything else except a cover is adopted for preserving them, it is essential that the she or cellar in which they are stored should be free from damp, and as close and dark as possible.
The preceding remarks are applicable to Parsneps as well as to Carrots, both being much the same in their nature and requiring similar treatment. Should there be a larger supply of either than is wanted for the use of the family, they will be found admirably suited for pigs and poultry. The latter are very fond of them when boild and rasped up with their food. We think where the sail is suitable and of sufficient depth for the Parsnep, its cultivation ought to be recommended to those cottagers who have a cow, in preference to that of the Turnip, which al ways taints the milk; whilst the Parsnep gives to it peculiarly rich and agreeable flavour, resembling the milk from cows that are fed on the richest pasture.-M. E. \(\boldsymbol{H}\).

\section*{HOME CORRESPONDENCE.}

Run Flowers.-Dr. Horner's paper on the caumes of foulness of colour in the Carnation (which appeared in the 34th No. of the Chronicle) has no doubt been read with much interest. The opinions of so distinguished a prac the florist uld is florist would naturally claim bis consideration. I is a subject that has frequently occupied my attention and I entirely agree in opinion with Dr. Horner regarding a low degree of culture; that a greater number of rua flomers will appear from a poor hungry soil, than from compost such as be recommeads for the growth of the flower. Dr. H. further states, that "it is the opinion commonly prevalent among florists, that the cause of sporting or foulness of colour in the Carmation is to bo attributed to an over-nutritious soil," and that his opinion is the converse of this." To this statement my own ax perience is at variance. I have tried maay experiments myyself, and have witnessed the effect of a great many by first-rate amateurs, and my conviction is, that as sure es an orer-podr soil will cause a number of run flowers, certainly will an over-nutrititious one produce a greater quantity. It is probable that Dr. Horner and I differ an opinion as to what constitutes too rich a soil ; the compos recoumended by him I do not consider a rich one, nor I remember in all my experience any instance of manue from three to six years old, ameliorated by exposure sun and air, causing any fiorists' flower to ran its colon or become flushed. The following cases will show that an over-nutritious soil will produce feulness,-such so for instance as the linings of hot frames talen when rather new, and when it is of a fatty and nutritious substance It is the pratice of for their bed in state, and mised throughout the bed, that the bulbs mas come in immedrate contact with it, maintaining that it improves and heightens the culour, and that the flowers remain as free from foulness as those planted withou manure of any kind; the other method is to us the new rich manure, and place it under the soil of the bed, about a foot in thickness, from 14 to 18 inches from the top, for the purpose of keeping the roots cuol ahea bloum, and prevent their reguiring to be watered. An amateur had bloomed a neat bed of flowers for some year in the same soil, and observing them getting weaker, ap plied to \(m\) for sume manure and supposing it was for the
 juicy state, which was mixed with the top soil : the conse quence of this minole was a strong rank growth, the stems rising from three to four inches higher than in the previous year, and the fiowers throughout the bed either run or flushed ; and it was several years before some of them returned to the foulness in the Tulips was undoubtedly occasioned by using manur of an over-uutritious natare. Some jearn since, as a pro limimary atep to using oid mamure for my own hup I planted two roots of Holmes' King (that being a cow stant flower) in horse-manure four years old, and they bloomed quite as clear as those planted is puth
 Tulip: this I repeated for three successive years, wiu the same result; but on planting two buibs in the new jwa manure, they both tlustied tire first seasun. I iafe ire quently attempted to recover searlet and erimpon Bizart trous their run state, by growing them in a gezerous com post, bat not wibh the suae bappy resule as and I am Horner s experiment with the rua paple fure ane chs disposed to think, whea I tekect upoa the capricioum racter of the sporting, that it frequently proceed
Wintering Peloryonivums, \&ce-I sead with
accumt in the Chronicle of Oct. 2d of keeping half-hardy plants in a cold frame through a quanter. As out a greenhouse, I take the liberty of informing yous senders of miok pit, of 5 common-sized lights; it is 3 ft lugh at back and 18 in . in front above the surface; the inside is sunk 2 ft . deeper, as I grow Melons in summer, as I have inad to deal with, although I kept my plants in the Ihare baid health, or I should say they were so in May last. Pelargoniums, in particular, could not look or blow much better; but they require a deal of care, as a very severe frost will be likely to get through, or damp will destroy
them if not properly treated. I avoid using any kind them if not properly treated. not escape when all the covering is frozen down. I have no fue, nor do I wish for one, unless to dry off damp a little. The evil would be in making the pit warm. which would them. My system is to keep them as hardy as possible ; they stuad on open shelves, near the glass, and when it ing top and bottom, which makes a free circulation of air throughout. Sept. 18, 884 , we had a very serere and unexineted frost; my plants were in a very exposed place; when frozen to recover; I got them in the pit as soon as posable, and shat them down close, and matted the pit all them air by degrees, and in a few days they quite re-
covered, although those I left out were killed. Jan. 11, 1811, after several days' very severe frost, we had a clayge; I opened the pit, and found it in a deplorthe plants covered with frost; I shut them down close, and covered with single mats; all the next day I gave air by degrees, and in a few days they quite recovered. I them light and air suddenly, or watered them overhead, I should have lost them. I have plenty of covering; besides mats, a large old carpet, and over all a tarpaulin, that keeps everything dry, which I very much recommend. One light is Pelargomums ; another Pelargonid, Ver benas, Fuchsias, Plumbago capensis, \&ce. ; a third, Clethra arborea, Daphne indica, Nerium splendens, Azalea indica, Abutilon striatum, Salvias, Fuchsias, \&e.; a fourth, Criin summer, Morea fimbriata, Amaryllis, Cactus speciosissimus. Jenkinsoni, and Neapolitan Violets, which blow beaunfully. The other light is the winter quarter for my
Auriculas. - George Musters, Gardener fo Lady M . Finch. Baxley Abbey, near Maidstone.
New Fly catcher.-That beautiful climber, Physianthos albicans, whose rich green foliage and growth could not fail to attract notice, if more generally cultivated, as it will cover many yards of wa!! in a short time, should its remarkable property of catching moths. I send you one of many specimens which may be seen in a greenhouse under my care; they are held by the proboscis perfectiy secure, and give the flowers quite an animated ap-
pearance for many days together. 1 have had a Combretum purpureum very beautiful in Hower this year in a pot, more than 20 blossoms fully expanded, and nors
having a few seed-pods on it; can vou give me encouragement by saying, if any person to vour knowledse Mackerte ranything new from it ? - Joseph Philpot Mackett, Sittingbourne. - The moth is held fast by the which is inserted between it and the stigma. No varieties of Combretum purpnreum are in cultivation
Campanuln pyramidalis.-This plant, which I have grown with tolerable success for many years, may be styled and if grown in pots, a slight protection is desirable, especially if they are not plunged in the border or in ashes nder a wall in a well-aspected spot: this, in truth. will quenally be all that is necessary ; but the plants very fre-
quill rot at the heart, particularly if they have blown the past season.-Georgius \(\boldsymbol{R}\).
Fuchsia Normaldii.-Having seen by the Chronicle cant you do not know anything about this plant, I Wiotort of it ly of sending you a specimen with the Normald, it. Puchsia Normaldii was raised by Henry Normald, Esq., of Sawley Hall, Ripon, Yorkshire (a bighly taiented and enthusiastic amateur gardener), from from P. refiesa only flowers well under proculiat treatment. tlants it pors ought seldom to be repotted, but kept in a stuated fate, and watered sparingly, until they have formed Cower-buds; under which treatment I find them to for this note t - T. P. Elliott. [We are much obliged Plant to bete. and for the specimen, which shows the Frehora falgons a Fruit Tree.-I do not know wheaware of generality of those who cultivate this plant are rather stureb. merits of Fuchsia tuigens as a fruit tree, or Wher shrab. The fruit is not unlke a small girkis ; and Wich. Liste ripe, turns of a pile yellow, and cumes of at a - Witory at lighoelere. They are, in perfection in a conserWhe Erapes, excepting the high-tlaroured sorts of Museat. Wiocer has a conservatory or grape-bonse shoald rathe Ahait - A. Hesbert.
thatry dovelopments-I also bef to mention an extruorvis season tapten place here. A plant of Puchsial coavica
then for some yeatu plented in all obveure corner of
come languid and exhausted; in the spring of the present vear I applied an excessive stimulus to the roots, which had the effect, not of improving the general appearance of the plant. but of causing it to produce an abundance of fowers upon the old stem, where it was completely destitate of either leaves or branches, and half an inch in diameter; for the space of about eight inches it was as densely covered with flowers as the inflorescence of the Melalenca, of which it had re
T. P. Elliott, Sucinton Park.
Bees. - Will you allow me through the medium your valuable paper, to ask advice on the subject of Bees? Four years agn I had a set of bnses made after the "Con-
servative Bee-keeper's plan," and a good swarm hived in the centre one. The nest season, when they appeared ready to swarm, I let them into a side box, and they
speedily killed and dres out of the hise 3 young queens. They were very strong, filled their own habitation with beautiful large combs (which I could see through the
window), but stored no honey for me; last year they did get as far as making two combs in the side box, and this away from home a short time, when I came back, 3 th Sept., it was gone. Now, am I to go on letting them shall I proceed ? I shatd d her according to the rules in "Taylor's Bee-keeper's Manual." jear put another good swarm in a box, which Chyonicle, but as onr situation is rather damp. being in valley at the foot of the "Kentish Backbone," can 1 do it with safety ; or would it answer as well to place them in a barn where they can have plenty of air and very little gener. Weney collected by the bees in this parish is generally, beautiful, but this vear there seems to be very syrup, be as good food as beer and sugar? for the poor people here are deterred from feeding on account of the expense : and when I recommend them to avoid the cruelty of killing their bees, they almays say, "If your plan I am better, ma'am, I mar, perhaps, try ; therefor Iam doublv interested in endeavouring to make it do so.
\(-\boldsymbol{E}\). M. W. [We trust to some of our apiarian-corresponderts for an answer to this inquiry ]
Fruit Room.-In addition to what you said about the construction of a fruit-room, a smail hot-water pipe might
be laid in the hollow walls with giod effect. To make the most of the heat in such a case, the roor should be double plastered, the first coat of plaster to be laid betriceen the rafters, and then to lath and plaster over the rafters in the usual way, thus leaving a bollow space bet, twent the ratters. which should communicate with the hollow part of the of warm air between the walls and the roof, which \(n\). frost could penetrate, and if there is a roon over the fruitrooms need not be purged The celling between the fro the closet joining the fruit-room, which you intend for ripening the late fruit : a very snall apparatus would effect this; the only precaution necessary in such an arrancement would be to have a stop-valve for cutting off the cir culation from the hollow walls, so that the hot close might be used separately, when there was no frost or
danap to be excluded. Another plan, which I hare found rears, is to have small uiee rols under the fruit-shrives; on these I hang the finest spe cimens of Pears, \&c., by using a double lrook in the form of the letter S , one end of the hook to pass through the footstalk of the fruit, and the other end to hang on the wire rods ; the fruit hangs thus in its naturai position, and one third more fruit may be convenien:ly stowed in the same spice; besides, your finest specimens may be easily Beaton.

Salvia Patens.-I observe you leave the hardiness of Salvia patene doubtful, or with something like a presumption in favour of it. I should not recommend any one to depend uno it hardiness, because in this soil, perhap the best drained in England, all my plants were hed while Salvia fulgens in precisely the same soil and straa tion (within 4 feet of it) remained uninjured. The whole crown of the root of S. patens was killed, so that nothing but detached tubers remained: whether these would have formed buds I know not, but they would have been very late. I think you should caufious tbose who
Harmony of Colours.-It is stated by those who have made the colour of natural objects their study, that one colour is often made to harmonise the tirmament is given a beautifal azure tint, to the cart the blue on high sades all more ar leen of plants" This then I bhink will not be denied by any who have made the subject any part of their stady at all; but is it a general law throughout every part of vegetiction, that the blue cotour is nat to be found in the is anid they would fruits of lofty trees? for tis that cter it is wene should say not ; the Guaincum tree, the Ceanothas azuy
some arborescent Jactrandas have bine ti.rves. 1 hods for

Fuchsia coryzabifora.-Having heard it said by several Horticulturists that the Fuchaia corymbiflora had never been seen in flower in the open air in this country, and at
the same time a doubt expressed whether it ever would, perhaps it may be deemed satisfactory to those who may still feel sceptical on the subject, to be informed that, having been bold enough to have made the experiment, by planting one out the latter end of the spring, about two months ago it gave me much pleasure to find that an, even in this unpropitious season, having proved that there was not likely to be any greater difficulty in flowering this higily ornamental Fuchsia in the open air, thm any other.

Tendency of Plants to seek Light.-A eorrespondent who does not think the tendency of plants to seek the light sufficiently proved, suggests the fullowing experiment, whech, althuygh we regard it as undecessary, we recommend to some of our inquiring friends. Suppose half-a-dozeu similar seeds were suwn and similiary treated be constatity shaded hy ain inverted funnel, having an aperture for light. but uo glass, the funnets being graduso as to keep above the top of the plant. If there be any tenderry in plauts to shoot up for dhe purpose of taller than the three exposed to the light.

6. Notice of a Boanical Excarsion at Navarino. By Mr. Ed
ward Forbes. On the 28th of April, after a delightful voyage
six days, the weather beautiful and the sea calm, the Beacon
entered the bay of Navarino, whither we resorted for water, that
article being so scarce at present in Malta, that ships are no
allowed to water there. The bay of Navarino is a semicircl
is closed in by the rocky island of Sphacteria, in which Lord
Byron has laid the scene of his Corsair, Near the southern ex-
trenaity are the ewwand and fort of Navarino- the former a small
high rock on which are the ruins of the ancient Pylus. The
southern half of the bay is bounded by high cliffs of limestone

 A bare and rocky hill rises to the herght of lumen fecti mmediately
behind the town. On lauding, the first plant which strihes the behind the tiown. Of the chry ranthenumn coronarinu, the commen Basket-iliower or our gardens, which here exthibits its yellow blos-
soms in great profusion on very heap of rubbish. Ascending
from the town to the heights, the hue flowers of Psoralea bitufrom the town to the heights, the blue flowers of Psoralea bituminosa arst greeted us, asd it was pleasant to look upon the
abundance of green myitle bushes. Thickly covering the lime stone. anil gilis a clowns, with beautifol white or red fluwers. lianthema in great numbers. Some pretty species of Echium Linum hirsutum, Anemone coronaria, and some pretty Bell-
fowers were among the gayest of the lesser plants; and in grassy places there was a rich contrast between the bright red tlower
of Tetragonotohus siliquosus, and the as bright blue ones of Anagallis Monelli, a varietty of our common Anagallis. It is
singular that the two plants h have just mentioned should so ha-
bitually change colours as we adrance southwards ; for the former Situally change colours as we advance sonthwards ; for the former
in the north is almost always yellow, and the latter most frequently red. In the crevices of the rocks were little tufts of Va. aspera was emmon. Amme the m set complienom- blable- were

 merons Thistles, some Ranuncull, and a few Orchideous praint-
which were new to me, though possibly common species in the
sunth. A winit to the marsh yielded nothing remarkable, nor did ohe samt shite display many plants peculiar to itself; but the

\(\overline{\text { MISCELLANEOUS. }}\)
Swan River Poisans,-Among the evils to which the wtilo at thi phace have heem exposed, fow have loos
mure disastr us than the destruction of their stuch by sume that it was a Lobeliaceous plant, and weobere assured Brownii, to which the evil was to be ascribed. But it would appear from the Western Australich Civecrument Guzette of December 25,1840 , which has just reached us, that the mischief arises from something else. Mr. W. N. plant called Lobelia was given to the sheep on the evening of the 5th November, and on the fullowing morning it was alive and well. On the erening of the ? th November (thus allowing an interval of three days), when the animal appeared in perfect health. the plant called by Mr. Preiss
Burtonia, was throrn into the stomach ; it was then tied to a tree by a long rope, beside some fine grass, close to the sheep showed symptoms of internal disorder, by fum ning round in a circle, and by havng tremblugg fits at in tervals. Between 11 and l o'clock saliva began to run handful of the plant in its natural state lo clork, with eat it, the sheep was standing still, and saliva was still running copiously. The plan bet but it only smelt at, and would not touch it ; a gentle push ran violently round in a circle, till the rope conling round the tree checked its motions, and, while the oversetr was endearouring to untwist the rope, the animal gave a slight shudder, dropped down, and almost immedrately txpired bounded forward until its death. The body was them opened, and there was no appearance of any disease ; all the internal organs were in a liealthy state. The veins were filled with blood, but we remarked that the blood at of the first stomach was quite rough coleur. The coa other sheep that were opened, it peeled off un applying the finger. Probably they had retained the poison longer On the head being opened, a quantity of water appeared tried on another animal. On the 22d of this mionth peryerfut hoth and powerful kangaroo dog was selected. On the first trial some of the leaves were pounded and given to the dog in
slices of kangaroo, but with no orther visible effect than violent motions of the bowels. Next day the dog hunted and assisted in killing two kangaroos; on his return anand base was aumimisterea to hom in shices of kangano berries (the plant being now in seeil) was pounded together in a mortar, and swallowed about 20 ciock p.m. The dog continued sleeping in an outer house till midnight the all at once he uttered a most uonatural howl, atid ing furicusly. A light was procured, and the dog was obfro sitting on bis ha He. see sawhing his heal to an Fro in a strange manner. He then howled ayan, and fell iecked, with the legs stretcined out, the eyeballs much distended, and very heavy and choking respiration. The \(\log\) immediately, and as if in vielent pain, mace a suden
rush outside; spetdily every sleeper was awakened (ten of us in the house. neluding two matives). and the dwors and windows were bloched up to prevent her nug s ingress in his maduened state. He was heard rollugg volently on the ground ontside, and roaring with anguints, all of a tbrough the garden femee, and nuado for the bell ef the ther (now dry in that piace), where he was found de. evidently clutch-d in his arone. The bods was opened: the liver was much eniarged the pudings aere of an unnatural white colour. and distended, and the blood about the breast was very black. Thus, any lingering doubt respecting this destructuve plant is at an end, and now it is clearly ascelained to be a deady vefeme pis the plant entralls of our sheep that dhed here from eang the phan affected the very birds, for the crows were observed dead, in numbers, around the carcmses. There caunot be a more striking illustration of the evil of not having the means of determining the right names of plants, than this report affords. Here in a most dangerous plant, occurring, no doubt, in ether parts of Austraia, which has, it would seem, been found out at Swan River. It is rery inportant that settiers elsewhere should be warned of and this Goverament report is intended to convey the uarning. The ouly thing, however, that would enable a settler to know the plant is the calling it a Burcenia ; and Burtogia has not berries, as this plant is reported to have, nor is at likely to be poisonous; it bas hethe pors hike a we are as much in the dark as ever.

Mr. Ingleby's caterpillars feeding upon the upper sarface of the Chrysanthemum leaves will change to some Noctua eventually but as they are not fall-grown, it is not easy to determine the
species. They bear a strong resemblance to the larre of Ma. mestra Brassice which vary very consictor in colour in every J. M. T.'s plants are Gomphocarpus fruticosus and impitieus Mr. Ashurst Majendie's plant from Bona in Africa is Armérin terials for glazing a vinery that sheet-glass is the best of all ma. J. H. S. Ont statement about Pelargoniums is quite correct. have given them; by dried, they nean, we preamane, chemical.
dried, not in the fresh state. dried, not in the fresh state. Our Index will be perfect, as far 23 tain late Green Peas is to sow late sorts, and to keep the soil \(\boldsymbol{R}, \boldsymbol{T}\), a Young Gardener. - We have in preparation some direc tions for the cultivation of the Erica which wi.1 suit you. The
quastion is ton important to be answered in a few words. TFor
the best 24 sorts we would recommend the following:-Altoniana, eximilacea, arissata, Bowieana, colorans, depressa, echiifora eximia, fiorida, Hartnelia, infundibnliformis, Irbyana, jasmini-
fora, Linnzeana, mammosa, MMassoni, meteraletiora, mirainio,
mutabilis, Parmentieri, perspicas, splendens, tricolor, and ven. J. J. - It is not true, as your gardener informs yon, that the
large quantity of slugs in parts of your large quantits of sluss in parts of your garden orisinate from
grass cattings and refuse from the garden, half rotten, having
been dug in. Your soil beint hey ve vegetable have proved otherwise than highly beneficial. It is is the exces-
sively wet season which has been so favourable to slues: they peaterly applied. Nitrate of soda will also kill them if it touches 4 Correspondent from Cartmel. - It is not advisable to deprite Strawberry plants of their foliage, whilst fresh it is requisite for the general growth, and for the elaboration of sap to nounish the
fruit Any good rich soil is suitable for Strawberries. They suce.
ceed somet flavour is better in an open situation The ground shonld be well trenched and manured, and the plantation made from the
first-rooted rumners of the season as soon as these are fit: or if
the the ground cannot then be prepared for their recepti...n, any time
in the autumn will do, so that the plants may take fresh hold be. fore winter ; or the runners mavis erly in in nuring beds, ansposed in rows from afr. to atift. assander, and fromo 12 to 18 in.
dispart in the rows, according to the richness of the soil and apart in the rows, according to the richness of the soil and vigour
if the variety, the Pind sorts requiring more spee if the variety, the Pine sorts requiring more space than the
Scarlets. It is not necessary to dig afterwards hetween the rows, scarlets. It is not necessary to dig afterwards shetween the rows bitter. or long g prass. in the early part of summer, in order to
keep the friut clean. Wian good top-dressing of leaves or dang, or duing and loam The plants may be completely covered over withoat danger of their nor making their appearance in the spring.
C. \(D\). - Pelargoniums and Myrtles, like of
plants, requite very little water in winter, hardy greentoase ont of doors during the day at that season. If, however, the \(\boldsymbol{E} A . H_{n}^{\prime} s\) letter is very like an advertisement. We cannot in. sert encomiums upon dealers in hot-water apparatu, unless the

\section*{NEWSOF THE UF上K}

The insnorrection in Spain, which has mow assumed a serions and alarming charaeter, ennstitutes the priucipal conic of interest in our foreng intelagence. Is appears from the latest adrices that the coure of Queen Christina has been warmly adupted by the pownetes of Biscay and Navarre, and that a considerable portion of the army stationed in those districts has either openly joined or pressively sanetioned the morement. In the enpital, bowever, and in other parts of the kingdom, the authority of the Regent has hitherto effectually repressed the threntened outbrenk; and Government has adrpted the most energetic measures to defeas the attempts of the insurgents. A spirited proclamation was published by the Regent on the 7th insto, in which he announced his determination to enforce the rigid ezecution of the laws. On the evening of the same day, an attempt was made by the conspiratom supported by a detachment of the Royal Guard, to carry off the young Queen and her sister: but the resitisne they
 the amailanta were repulsed on all sides, and the leadera of the movement were compelled to fly from the capital. We learn by more recent deapatches that the Regent has since marched for Vittoria, at the head of \(14, \mathrm{mn})\) men, so placed as to fall simultaneously upon all the points occupied by the insurgents in the provinces; and hopes are entertained that by the energy of bis zuovements the phatris of the rebellion may be arrested. - In France the eretting events connected with the Spanieh insurrection appenr to occupy the public mind, to the exclation of almost every topic of domestic interest ; and it is openly asserted that the ageney of the Fremel Goverameat determined the movement at Paapeluna. The Ministerial papers evince considerable sympathy with the insurgents, and Queen Christina issues dnily proclamations from ber Court in Paris, where she is said to be in constant communication with the King and Muisters. In contrast, towever, to these rumours, the official organ of the Government announces that France villi not interfere in the internal quarrels of spain, whatever may be them \(1: 5 u s\). The question of the disarmament is said to thate eccesioned a division in the counct of Minsters, the proposed reduction of the Navy beng so warmily opposed both in the Cabrnet and in all the branches of the service as to make it necestary to poanpone the consideration of the measure. The disclosures made by the assassin Quénisset afford additional proof of the formidable nature of his attempt to assassinate the Princes Several new arrests have taken prace, and u.c j : .. The disturbed state of the provinces still gives rise to ap prehension; at Ljons the mambers of a serolutionary society have been arrested: and in numerons districts o central France the nperations of the census have given rise to renewed demonstrations of hosthlisy. From Germany wo Learn that great discontint bas been excited by the refusal of the King of Holland to smmetton the aceession of th Grand Duchy of Luzembourg to the German Custome Union, and serious consequences are hinted at if this refuma be persisted in : it is, bowever, believed that the questi in will yet be arranged by future negotiations, especially as the principal manufacturers of the Grand Duchy have addressed a petition to the King, praying bim to ratify the treaty of Benin.-Accompte from Switzerland anmounce that the Executive Council of Zurich hase decided on advocating a series of resolutions in the approncining Diet, in reference to the Converat futestivn; among which the most important is the re-estabushment of the nunneries of Argau, and the permission to suppress the monasteries, on condition that thenr revenues be applied to charitable or religions purposes. -The arrival of a packet from New York has put us in possemion of intelligence to the cath ult., two dars later than that brought by the last steamer; it contains no facts of great importance, but connints chiefly of details of the lamien proceedings on the frontier in reference to the case of Mr. Mr Leod, the resuld of whose trind will be brought by the next pacies.
At home, the recent Dissolatiou of Parliament beares little master of aufficient importance to require especial notice, if we exoept the tenaporary indisposition of He Majesty at the early part of the weeh, which naturality excited attention, in saticipation of the evenerst The recent strike of the masons at the N an Houses of Paritament, to which we alluded in previous Numbers, lus beesi followed by a sumalar demonstrat: in at the otiver public

Poas Offcc.-Natices to the following effect have been put up at the General Post-office, conformably with a sette. "On gnd after the 11 th Oct. all letters addressed to Panama, and the ports and places along the western
coast of Sonth America, and all letters from thence, will be transmitted at the rate of Is. 2d., iustead of the former charge of 2 o .3 d. , if not exceeding half-an-ornce, and 2s. 4d. if not exceeding one ounce. Letters to the States of Ecuadur, Peru. Buhvia, Chili, or any place on the westans coast of South America, will in future be formarded by therwiseagres and Panama, uniess especially directed age as those to Panama. The postage on letters for Bremen, when conveyed by the Hamburgh packets or private hips, will be reducell from the present pates of \(1 s .8 d\). and aniform rate of \(6 d\), the half-punce, 1s. the oumce, and s0 on in proportion; the postage to be puid in advapce. The latter regulation applies only to Bremen letters; all those
beyond will be subject to the present charge; if sent by way of Prance, 1s. \(4 d^{\circ}\). if by way of Holland or Belgium, portion.

The Revenue.-From the official report juat published, of Great Britain in the years ended 10th Oct., 1840 , and 10th Oct., 1841, it appeara that the total income for 1840 whowing an increase of \(248,148 \%\). In the Customs then is a diecrease upon the year of 667,5225 . ; on Stamps, Lands, \(14,500 \%\), Post-Office, 268,000. ; and on, Crown Lands, 14,5000 . ; amounting to 988,7641 . decrease of the
ordinary revenue, to whioh must be added the deorease on imprest and other moneys, \(4,29 \% /\) : re-payments of adrances, 167,2522 ; making a tutal decrease of \(1,250,343 \%\). The increase for the \(y\) rar on excise is \(9 i 2,51 i 6\). : on the
Assessed Taxes, 615,3006 ; Miscellaneoub, 10,6116 . ; naking an increase ia these branches of the ordinary revenue of \(1,498,491 \%\). By deducting from this sum the total amount of decrease, \(1,250,3431\). we have an increase on the yeur of 218,4486 - The accounta for the quurter just ended show a decrease in the taxes of 18,7131 ; in the to \(47.51 \%\) on the andmary revenue, to which must be added re-payments of udiances, \(30,125 \%\), wahing a total of 97.24 . On the other hand, there is an increase in the Custums of if.htuc: ; in the Excise, 244,6176 . and
Crown Lands. S.jull. Tutal increase on the ordinary revenue, \(324.45 \%\). to which must be added increase on imprest and other moneys, 14 , Retil., making the whole increase for the quarter 334,2633 ... from which, deducting the decrease as above, we find all increase on the quarter of \(241, \% 21 \%\).

\section*{fforetan.}

Prance.-The Paris journals are devoid of domestic fatereat, being almost entirely occupied with matter and discussions cunraccted with the insurrection in Spain ; and public opiniom openly declares that the secret agency of this Guvernment determined the muveurent at Pampeluna. The Opposition journals, each according to its particular ahade of opinian on the Spanish question, advocate or condemn the step taken by \(O^{\circ}\) Donnell; but all the Ministerial organs, withont exception in \(_{2}\) evince considerable sympathy ever, contains a declaration the Journal des Debals, howin the intestine quarrels of her neighbour, whatever may be their issue. It is stated that Señor Olozaga, Spanish Ambassador at this court, went to M. Goizot immediately
after he received bia despatches from Spain, and had a long conference with him which was far frum, satisfuctory; he is said to have explicitly raxed the Freneb Government
Tith countenancing the insarrection. M. Guizot replied

Saturday, there was a report on the Bourse that although
the usual Madrid courier had not arrived, Government the usual Madrid courier had not arrived, Government
had received a telegraphic despatch from the Spanish capital, announcing most important intelligence. Some said that Espartero had declared war against Prance, others
dat he hat duclured a republic. Little credence, however, was gisen to tiust reports; but it was generally beTo the \(G\) i, wernmeut of a nature which was hostile to its interest. The effiect produced on the Bourse by these even's bad betn serious, the funds having experienced a
dechne of more than two per cent. declue of more than two per cent.
The Disarmament. - This question, though for the time absorbed by the interestattached to the progress of events in Spain, continues th occupy some attention. The jour-
nals state that the examination in the Council of Ministers of the Naval Budget, to iee whether it can be reduced, has
of led to a thorough scbism in the Council. On one side
Messrs. Guizot, Duchate, and Martin; on the other, Marsbal Soult, Admiral Duperré, M. Teste, and M. Cunin
Gridnin. The two parties alike stand aluof froms II Humann, Mimster of Finance, who, they say, has spoiled everything by the urakilfuluess of his financial combinathich is 15.5 millisisis to the extent of 6.5 millions, was made by M. Guizot. The Minister of Finance having the receipts and the erp, enditure in 1.143 , a reduction of nineteen millions must be made in the army and nav Marshal Soult, as the head of the army, declared that he lions on the budget of his department. M. Guizot the observed that England was governed by a Ministry friendly to France, that the convention of July 13 removed al fleet could be of no use in maintaining order in the interior. He concluded, therefore, by proposing that the reductions should fall principally upon the navy. Admira Duperré threatened to withdraw if this proposition should be acted upon, and in this state the question remained for
some daya. In the interval, previously to the next Council, a resolution was adopted to reduce the naval budyet to the extent of only 36 millions ; but the Court was informed of the sensation produced by this proposed reduction, which had been communieated by the Minister of Marine to the heads of the service in order that he might concert with them the mode of reduction, and found it impossible to impose silence upon the remonstrances of the navy, and fly in the face of public opinion. At the same time, it is not to appear to give way to the opposition, the Deduto was desired to conmence a discussion with the Eryylish press on the question of disarming the fleet, and the Paris corresponden
time invited time invited to say that the King was persoually opposed
The Late Altempit to Assassinate the Princes.-Fres disclosures said to be made in the affair of Quénisset go to prove that the late attempt to assassinate one or other able as it had been represented The principal editor of the Journal du Perpple, M. Duppoty, has been arrested on a warrapt issued by the Chancellor of France, President of the Court of Peers; a measure said to be in consequence of further revelations made by the assassin. All the Liberal writers complain of this arrest; and agree in declaring that M . Dupotv, a maa of mild character and rigid principle, would be the last person to countenance such a
crime. In the mean time, the judicial proceedings in this affair are prosented ite, he judicial proceedngs been fixed for the trial, but the Chancellor has given orders that the New Hall of the Chamber of Peers should be prepared for the 15 th November
Slate of the Provinces. - The journals are filled with details of diaturbances in the provinces, from which it would appear that either disaffection is general throughout the country, or that Government has a motive for representing the conspiracy, in which the late attempt or the hres of the princes originated, as having extensive ranitications. At hyons, everal fuersons have been taken tuto custody, charged with being members of " a secret society entitled Retormed Carbonari, established for the purpose of overthrowing the Government by the assistance of re-
volt and regicide." Loaded arms, proclamatious, and other articles were seized, leaving, says a Lyons paper, no doubt upon the objects of the society. The census is proceeding towards its termination through the several departments, but net without sune demonstrations of hostility to the measure in many distrieta. At Therins, a short distanee from Lyons, another scene of revolt has been exhibited. A band of rioters assembled before the hotel in which the inspectore lodgen, and commenced singthe reiga of terror. They thea broke open the door of the hotel, but the inspectors took flight and escaped. Thus dsappointed, the mob burned the inspectors in effigy in the raarket-place. It will be recollected that in the riot at Macan a few months since, originating from the same cause, nine persons were tilled. A considerable number of prisoners captured on the eccasion were brought to rial last week, when fifteen of them were convicted, and sentenced to imprisonment for periods vary ing from a few v. urably disposeteen riaters were sent were not unfav.urably dhaposeci, for the whole of the accused were acquitted. At liom, 175 persons were arreated; and at commenced, but are not jet decided.
Treaty with Belginm.-It in ansented as a faet hy the
cornmercial negotiations with Belgium, connected with
the contemplated treaty, have been only suspended, an that verbal communications on the subject have agai quence. left for Brussels ; and that further arrangements are only postponed until their return to Paris.
Madame Laffarge. The appeal of this person to the Court of Cassation in the affair of the dianonds, which we have before noticed, came to a hearing on Monday to have subsided, anil the audience in a great measur numuerous. Thea, peal was founded was win mean grumends:--First, that the tmbunal of Tulle proverded to grounds:-First, that the report of the previous esaminations betore hearing the counst of Madame Laffiarge, who mished to muse for a postpenement of the trinl; secoldy, that aiter the
reading of the report, the tribunal reflusud to hear the counsel till after the examination of the witnesses in Court ; thirdly, that the tribunal, after having heard the counsel, refused to grant, as it ought to have done, the who deposed against Madame Laffarge, only one was swora previously to the delivery of his evidence. The appeal
was supported by M. Daverne, advocate for the appeilant, and was replied to by the Advocate-General, who, in answer to the last that all the witnesses were sworn. The arguments being
concluded, the Judges of Cassation retired, and remained concluded, the Judges of Cassation retired, and remained
two hours and a half in deliberation. On their return the two hours and a half in deliberation. On their return the grounds of appeal, but reserving its decision on the fonth until the registrar's minutes of the proceedings of the tribunal were laid before the Court, in order that it might be assured whether or not the statement in the judgment as to the oath being administered was in conformity with wha actually took place.
geria.-Telegraphic despatches from Toulon announc that Gen. Lamoricière returned on the 30 th ult. to Mas. taganem from Mascara, which he has succeeded in revic tralling. The Governor General re-entered Mostaganem on the 3rd inst., bringing back from his expedition on the Cheliff upwards of 300 prisoners, and a considerable boot taken by his cavalry. The column of Gen. Baragues d'Hilliers, which left Blidah on the 27 th, returned thither on the 3rd, after revietualling Milianah. No serious opposition was made by the enemy.
Spain.-Our intelligence this week is of a very serians character, and amply confirms the news given in our last the insnrrectionary movement which commenced Pampeluna. There seems to be now no longer a doubt that a considerable portion of the Army stationed in the north has joined, or approved of the step taken by Gen. O'Donnell; and that a renewal of civil war is inevitable. The details of the important events which have take place since our last will be read with interest; although with the exception of the telegraphic despatches, they aro chiefly derived from rumours which have reached the French eapital, and are consequently unauthentic, iacoinfar as the in some degree contused and obscure. That tho cause of the ex-Queen Regent has been adopted with warmith and apparent unanimity in the provinces of Biscay and Navarre, where it is attempted to associate it with the ancient privileges of the inhabitants; but that in other parts of Spain, including the capital, Espartero and persons holding authority under him have exerted themselve with energy, and, for the present, with success, to suppress the threatened insarrectionary movement. occurred since our last. It will be remembered that our accounts then stated that Gen. O'Donnell had, by a ousp \(\boldsymbol{d}_{e-m a i n}\), seized the citadel of Pampeluna : we have sin of learned, that on the 5th he received the reinforcemener Ribition, and summoned the cown to surrendes fire. The nois of canno , the Brigade Concha, at Tafalla (a serall town five leaguen distant), dectared for Fispartero. Gen. Ribiero had ordered all the detachments of Valcarlos, Runceraus, Lirdax, Zu garramurdi, Elisondo, and others in the tive towns, to concentrate their force on Pampeluna; and, it is adaed that he calculates, in the event of an attack, upon th solidity of the theatre in the neighbourhood of whicin has taken up his position. The citadel where Geac O' Dunnell has intrenched humself is sald to be one strongest in Europe, being situated on a ruck, and have aud five hastions of stone, with ditches, lunettes, trenalles, athe ravelins ; every ditch is rounded. In the midst ofation citadel is an arsenal, whenee by five streets commencmates may be had with the five bastions, which have casion. If to lodge 10.000 men with three months' ann munich leave is separated from the city by an esplanade, whan towards the cannon full room to play upon the cify, and which renthe opes country it is surrounded by marsbes, wo the 6th

of said, have both openly declared for Espartero. The
is and is said, have both openiy declared for Espartero. The the events at Pampeluna could not have been known tomards Cordova and Sant meetings, which were strictly watched by the anthorities, took place at Gen. Secarra's; the latter Wes formerly Commander-in-chief of the Citalonian arty murenent in Upper Catalunia, more than 40,000 men
the assocated wrkuen of the National Militia, would oppose a formidable barrier to the insurgents.- Our news
of the events at Pampeluna and the other movements of the in surrectionary partymert. The Regent immediately on the
the greatest exctement
receipt of the intelligence had adopted the most energetic mensures, and Government had taken every means of Chacon had bern sent down to sweced (ien. Ribicro in the commant of Advarre. One accome the revolt which was intended to have bilhen out on the 8th, ha.l been arrested on the fith
and sbot; but it has been since stated that their executiun is pustpuned. Queen Christina still continues at tions from her friends in spain to place herself at the head of the novernent. Pioclamatiuns, however, in her name circulated tirough the country, calling on all Spaniards to espouse her rightrul quarrel, and denouncing as trators, oppose her. The Infante Don Francisco de Paulo arrived oppose her. The Infante Don Francisco de Paulo arrived
at Bayonne on his way to Madrid on the \(\overline{7}\) th, and, it is stated, notanithstanding the correctness and regularity of arrest, but the Spanish Consul having interfered, he was spared, and returned to lodge at the house of that functionary. The mails and diligences had been intercepted, and the absence of authentic information had given rise to numerous rumoars; but the above summary appears received no authentic intelligence since the above, with the excepthon of the details of the movement at Madrid, Culuriers due at Paris had not arrived; but a telegraphic despatch, received in that capital from Bayonne on from Madrid; ard that on the Yth, Pampeluna and Bilboa contirued as stated in the last accounts. The folloming are the particulars of the unsuccessful attempt at revolt Royal on duty at the jalace first declared themselves for Queen Christina, and attempted to force their way into
the interir r in order to carm off the young Queen Isabella; but the Body Guard defenued their post too well, and after a hot shirmist,, the assailants were compelled to
retreat, boti prarties le tying a considerable number of dead. Amungst the prisunicrs is Brigadier Aurza Queray teake arms in hand. Señors Diego Leon, Concha, Aspiroz, \&rce, \(0^{\circ}\) clock in the morniug, accompranied on the Sth, at one carahiers. On the morning of the 8 th the troops of the National Guard marehed in review before the batcony of and Ministers stood. The greatest enthusiasna prevailed, and the regisent of Luchana guarded the palace. The Regent has phblished a spirited and energetle proclamapunisheatening the extreme penalty and the most rigorou penishments to such as should lead their aid to the insurQueen Curistina and Dom Caris state as positive that union between Queen Isabella and Don Carlos's eldes E. Private letters from the same capital state that the fortnien Regent was brought to bed of a boy about Pont since, and that both are doing well.
fromi Lishan.-We have, by the asual weekly mail, news suid, had at length been received from the Spanish Government notifying the absendonment of the demands with as far to the removal of deposits from its frontier towns, quired that Purtugal shall not allow either sait or tobaceo is requisit. for the surply of the districts. The finan. for puiting a tax on the home progress in the Senate; that poseding atas on the home ilisidends, which was opLagoss expected to pass by a small majority. Earon convistiva, to which it is said Government are not badly incined; but it is thonght that it will be difficult to inWards of 30 , 1000 to alter the exasting law. A bill for up-
 the correapounent of Mestyrs. Rutbschild. The director of the Lisbon customs had thought fit to promote an inand by shis axpedient to teyy a tar of 50 per cent. wid merctants had applied to Lord Howard on the subject and mould, had applied to Lord Howard on the subject, cted, get redress when the matter
noticed in our last, had proved a very serions business;
the house had been made bankrupt, and two Enghish houses had stopped in consequence. The Marquis of Sampayo, who held the post of Lord Chamberlana, bas dred, and was expected to be succeeded by the Marquis saldanha, whose journey to Madrid had been again post poned for a week.

We have received German paperz and letters of late dates, but they contain no intelliges.es of
interest. A Viemaa letter states that, on the zort uit., there was a grand review of 17,000 men by the Emperor of Austria, at which the Archuhake Charles appeared at the head of his regiment as colanel, and by his presence and Princess Metternich arrived at Alugsbry on the they proceeded direct to Munich.-Tire Prussian Stutc Gazette of the ith inst. cmtains the oftical announce ment that the hing. Whas retamen to Berlma on the Bon rua lierther tol resign ferred that office on Comnt von Maltzan, Prussian dimbassador at the court of Vienna. Barun von Werti.er is to Neufchatel and Valangin, and is at the same time salse. to the digmity of Higi Marshal. Monate adnces from
Berlin of the lot inst. say that M. de Stherff. ('ouncillor of Legation froms the Netherlands, and Emoy at Prankfort, was in the Prusian capital, in order to mateavour to
effect the regulation of the (ierman Customs' Lai question. The same accounts dssert that the greatest discontent prevails in Gerinany against Molland, on account of the late refusal of the king of the latter country ordhere to the propused union, and that serious conse quences will ensue if this course be persetered in. Hopes are entertained to the contrary, as it is rumoured that the King of Holland has only partially refused, thus leaving an opening for further negotiations. The King of Prussia the Potsdam T' eatre. The celebrated poet Tieck has undertaken the arrangement of the piece, and Mendelseohn Bartholdy is composing imusio for the choruses. The whole court is to be invited to assist at the first performance. The valuable and rare collection of works of art brought to the hammer for the benefit of his family. The collection is described to be of immense value ; and sevoral distinguished savans of Germany have undertpken to prepare the catalogue.
Switzerlavo.-Accounts from Zurich dated the 4 th inst. state that the majority of the Executive Councs or ciples of the Diet, as announced in its sitting of the 2.24 June " lst. The Enroys are to declare that, according July, 1841 , the exigencies of the Confeteration have not been satisfied. 2d. To demand, in the name of th. Canton of Zurich, the re establishment of the convents o Herm and Schwyl, besides those of Fahr, Maria Truem ing, and Gnadenthal. 3d. That, to facilitate arrange ments, the Envoys will waive their pretensions to the re establishment of the two abteys, Muri aad Velliagen, and of the two Capuchin convents of Muri and Vellungen, on cundition that article 2 of the resolution of Argau, and of tration Jujy, 1841, be observed regarding the admis lingen, the surplus thereof and of the lands, to ve emaployed for the founding of an asylum for the poor. or for an hospital. 4th. If necessary, to obtain a llajurity fo the re-establishment of the Capuchin convent of Bader, proposed by the thir The aid Enroys to propose recom mending the Grand Council of Argari to grarantee to the Catholic inhabitants of the canton the whole of their rights necessary to the re-establishment of tranquillity. In the event of adventitious circumstances the Envoys to act conformably to the present instructions. - It is said tha proposals have been made by France to this Gurermment to bring
Brigion.-Acomats from Luzembourg inform us tha on the 3 rd inst., placards were posted about that city announcing to the inhabitants that the preparatory meagares for executing the treaty for the accession or tar Cended On the lst inst, a numerous meeting was heju of the prin eipal manufacturers of the Grand Duchy; at wiseh it was resolved to address a pettion to his majesty the Grand Duke, requesting him to be pieased to ratify the treaty of Berlin of the 8th Aug. The petition was signew un the spot by all the persons present. Before breaking up, the neeeting apponied a permaneit c markeuired by circums. to ahopt suca medures as way be required eq circuas stances for the intereat of the manufautarers of Duchy.-On the 9th insto, a royal decree was pabished authorising the formation of the Belgian Colonisation Company, with the object of forming agricuitural. manufacturing, and commercial esta lishmentee ay rutes the stazutes as they apyear in an Ant executed an tire lurii Sept., as well as the regulation for the sale and un the 234 of the same wonth. Guferament yrants its approbation on certain condinions: -1 . An expedition to expluie the couniry shais be undertaseu. -r. With the exueption of an aid granted by the Guverument. which shall be the only participation of the Government in the expenses and risks of this experition, all the other charge and conse-
gyanoen falling on the compang. 3 . The seporst of the ex-
ploring commistioners, and of the Goverament commis sim, shall be published in the Momicur. 4. Relgium exported in 1839 to
the vatue of toty-etgit mil...ars of tranc: io lrance, and only twenty-one millions to Prussia, Aostha, all the states of the Customs' Union, the Hasseatic cities. Hanover. and huenburg
Holland. - Intelligence has beem received from the Hague that at the sitting of the Sormad Clamber on the the motat. a icouturtun of his Mrasty mas reat, by
 tion, appuintury the Mhaster of Finance to ditend the
 the department of Furcisin Affars The dehates on the uiget then commenced ; and several Members spoke in disapproval of it ; arguing that it did not fulfil the bopes that the nation had conceived of retrenchments in the hould be suted for one cunater only. The the hudget should be suted for one quaster only. The Mminters of Harine and Colonies, of Finance, ami of the literior, anmade, and the general disem-sim beeting closed. the Chamber tumediately ment to the sute on the different items of the budiget. Which were all passed by large majorities.
Rissia. - Papers received trom St. Petersburg to the 2d inss, contan some interesting parteulars of a progected rallroad from Warase to Virma, whands the construction of which the Russtan Ciovernment affirds the greatest encourazement, guaranteeng to the shareholders a nunimum interest of four per cemt., permitting duty free the importation of iron rails and machnes, and alliwing the company to cut down in the imperial forests whatever timber may be required. The (rown cedes the ground gratuit-usis in every case where the rallrwad passes over said to have shown a readiness to sell the required ground t less than us real value. These advainages, and he remarkably level character of the country, will, it is expected enabie the company to construct the railroed at a comparatively small expense. A portion of the profits are the form a sinking-fund, to buy up gradualiy the shares of the company, in order tuat the rallrual may eventually become public property.-An Impertal ukise was published in and Russan subjects residng arger within three years. It secme that hitherto this haw had in Rusia, but married tis furtigners previ usly th, the puby.1. the pub issued from the ministerial committee, deciding that the ukase applies likewise to Russian subjects married to foreig but declaving that in such wases the period within wirch they are bound to return to Russia shall be held to commence from the day of the publ.cation of the new instruction. - Papers received from Poiand contain an Imperial ukase, dated the 18 th ult., addressed to the Governor of the hinydom of Poland, and directing that the Council of state and Supreme Tribuual of the kingdom, hitherto esisting at Warsaw, be suppressed, and their functions transferred to two new departments in the Directing Senate of the Empire. The petinons presented to the Emperor during his late visit at Warsaw were so numerous that it was deemed expedient to appoint a commission for their examination.
Sweden.-Prisate letters from Stockholm of the 2Rth ult. state, in reference to certain charges brought by the States ayainst the late Minsters, that they have bee allowed till next January, in order that they may have time to prepare their defence, and that the king had in a cuuncil held for the purpose of deciding as to the expedienc ported or exported, decided in favour of the latter
Italt.-The Itaiian papers are full of the accounts of the recent progress of the Pone through his dominions; of his visit to Loreto, and of the entausis with which he was received by the popalntion of che cowns carough which he passed. It was on the i3th uit. that tio Houness arrived at Loreto. The rom that town from Ai cona, a distmee of about 12 English miles, was crowded whe apectators, and the owners of the cower: manifest heir joy at the arrival of his Holmess. Trump, nal arches and tornory bidings of different kinds had been erected, and were taseful: ornameated with. laurel and garlands of flowers. The houses if Lurte were hung with cloths and varregated tapestry. Affer risting the Casa, his Holiness heard mase in ceremony being performed by the Bishop of Luretw. In he evang the ctiy was spleadidy hummated, and mit reiterated discherges of our
cona announced the approaching festival. The streets ane hronged, the houses were hang with cloths, the vessels in the harboar were dressed with their flags. On the Trajan's Column at Rome. Near the Porta Pia had been placed a splendid trinmphal arch, at which the members of the delegation and the commandant touls their stand, fiemon the arrival of his Holiness, at four ocloci in the The people thened thim the Leys of the city and canc. 60 watermen drew it to the chundil of Sr. Auguxtine. Prom this church to the puince ath the housen were hong with clothes, and adounef with garimin and brameter.

On the 1Fth a banquet was held, after which the Pope re paired to the lockyard, whiere a vessel was launched, and, in
honour of the occasion. received the name of Gregorn honour of the occasion. received the name of Gregor! sailors, dressed in white, and proceedrd on board the Mahmoud, a steamer placed at his dispusal by the di rectors of the Lustrian Lloyd's. After his return from the steamer, he rivited the Loggia de' Mercanti, from whence he siewed a regatta. The festivities were closed that erening by an exeredingly beautitul illumination of cona on the fullowne morniny- The annual from An congress of Italy met this year at Florence. The opening of the congress tock place nu ti.e 15 th ult, on which day opwards of (6m\% menbers, including many foreiguers assembled in the church of Sant. Crove, where the solemnity ans opened by a grand mass. Alter the conctusion Hall of the ( inquecento, in the Palazzo Fecchio, in the presence of the Grand Duke and the greater part of the Conino Ridolytio delleered a thecourse. fifier which the assembly adjoumed to the Museum of Natural History, to choone the presclents of the sereral sections, and to ser trigonometreal survey of the states of the church by Austrian officers, it is saud. is nearly complete, and will be brought to a close before the end of the present year, with the excoption of the Pontine Marshes, the survey of which it bas been deemed expedient to postpone till the winter
months. In the ensumg year the same ufficers, it is unmonths. In the ensungy rear the same ufficers, it is un-
derstuod, will undertake the trigonometrical survey of the Grand Duchy of Tuscany.
Toreer.- Advices from Constantinople of the 1.5 th ult, receised through Germany, assure us that English engineers are tortifying St. Jean d'Acre, and that an
English division was istablished in Djouni Bay. Five English division was istablished in Djouni Bay. F dise, which had been sent on to Bagdad and Damascus. Egypt. - By the last advices from Alexandria we learn that Mehemet Ali has acceded to the proposal for the transit of merchandise across the Isthmus of Suez, on payment of one-half per cent. duty, and that all that remains to be dune is to fix the line whicl goods and caraVans are to take. It was supposed that this would pro-
duce the Pacha an annual revenue of 500,000 talaris ( \(100,000 l\) ). We likewise learn that Col. Napier has recurned from the coast of Syria to Alexandria, in consequence of labouring under a severe attack of dysentery.
Enited States.-The packet shyp Sheridun arrived yesterday from New York, bringing papers from that city
to the 28 th, from Montreal to the 26 thl , and from Quebec to the 22 d , being two days later than the dates brought by the Great Western. The lawless proceediogs on the Canadian frontier are calculated to excite mach alarm for the fate of Mr. M•Leoud, and for the maintenance of peace. The journals speak of the enrolnuent of men and the pillaging of arsenals in every dixathin. The Cummercial of Buffalo, states that the arsenal at Luckport l.as been bruken have been thhen, no traces of whel conid be tound. have been taken, no traces of which conid and Tound. hat been attacked two days before hy some indivatuals who
had secreted himselves in Nary I Ind, and fired cannon bad secreted themselves in Nasy I mad, and fired cannon,
at them. The roston papers state fout on September 19 , several volunterss crossed the line, invaded the American territory, and torcibly seized and carried into Canada Col.
Grogan. They canie by night and stealth, two miles and more into the toxnship of Aldburgh, buand him and hurried him ansy to if atral. Col. Grogan, it is said, dufficulty that ti.e rolmoers were able to uverpewer him and consummate their purpuse. The citizens of St. Alban's have siace appointed a committee to anquire into this ban's have siace appointed a committee to inquire
outrage, and to report upon the tacts of the case.

gistrateot the Cits of Lunion. ()n his retirement from office gistratent the Cits of lanition. his retirement fromi ofthe
it would be most fleasing to his Iordship to refer to the year of his maveralty, and he txpressed the unanimol happiness mightt await his I.ordishp. The health of the Lord Mayor was then drunk with enthusiasm; and after several other appropriate toasts
ing bruke up at eleven o'clock.

Nete Ilouses of Partiament.-The works at these buildings, which have been suspended for some weelis. as nur readiers are aware, in consequence of the strike of the
masons, hare again been partially resumat : and at is saict that they are lihely to be ser \(n\) in full operation.
Grday there were sisteen men at work; indid on Mu-nda the number was incleased to \(5 \%\). The original worknien. however, still continue unchanged in their determination missed; and they have put forth another address to the public, densing that the strike oricinated with the L'nion and derlaring that seven months previously to the strike a
deputation from their body waited uporn the contractors to remonstrate against the tyranoy of the foreman. Out of the new workmen at present employed on the building, the strike, and before recommencing his labuur bie ceased to be a member of the union. The rest have all come from the provinces, and it is said that it has required great
exertions on the part of the contractors to 1 revent them being either intumidated or led away by bodies of the unionists, who await the arrival of each train at every rail-
may station. As yet there is not a unionist anong the nem masons; bnt the contractorshare made it knomn that they will not refuse a man belonging to the union, but they will not allow hinn or any body of them to dictate as to what work shall be done. It is also added that the contractors have received letters from Continental firms, whw offer to obtain, and forward immediately if required,
any number of experienced workmen, from France, Belgium, and Germany, should there he a difficulty of getting together a sufficient number of native workmen. In conTuesilay to one of the police magistrates for a summons to compel the foreman to give up their tools. They said
they bad been engaped at Cheltenham by Mr. Allen, and brought to town under false pretences. Thiey were told there were \(1: 0\) masons on the job, and when they got to the work they found that to be false; and, moreover, they were unable to work the soit of stone they had got at the job. The magistrate said he felt confident that they were mended them to consider the matter well before they again applied to him, which they were at liberty to do on the following day if they thought fit. His impression mas,
that they wanted to get rid of the engagenvent thicy had made at Cheltenham without any reference to the expense the contractors had incurred in bringing them to town.forerumer the Honses or Parliament has \(\psi\) wed to be employed both at the Neison Monument, Trafalgar-square, and the new steam-docks, Woolwich (contracts undertaken tractors on Wednesday. declaratory of their intention to trike unless the terms of their brother mason, lam ployed at the new Houses of Parliament, mere conceded.
This, it seems, the contractors have some time expected, as the masons employed on each work are members of the Birminglam Limon. On Wednesday, Mr. Grissell had a long
interviess aith the masons at Trafalgar-square. They said that they had no grievance to complain of, but they be longed to the Cnion, and they rere bound to do as they were bid. Mr. Grissell, it is stated, explained to them the utter impossibnity of his acceding to their demand requiring the dismissal of M1r. Allen, as well as the folly culcy in going ont, seeli.g that they would fad ao difiplaces, and concluded by begging them not to decide to rashly, but to defer coming to a decision until this day in the mean time they could see the heads of the union in the mean time they could see the hends of the union,
and reasou with them. The result of the interviem, thow ever, was a determination of the L'nionists to quit thei employment that evening, unless their demand was ac ceded to; which, as in the case of the other strike, the contractors are resolved to resist.
Metropolitans Rouds - On Mouday a meeting of the inhabitant rate-payers of the parisi of Hammerswith wa held, pursuant to public notice, to recrive a communicatio: from the Brentiond (ins Companv, relative to discon tinung the lighting on the metronolis turnuike roads afte the 7th inst., which we have already reterted to, and to take sucir steps thereon as might be deemed advis ible.
The chairman in the course of his alliress statal, that of late years the tolls along the Kensington and Bientford consoludated roads had fallen off to the extent of \(1 i\), , mimb and that the commissionerstrad in conserthence tuken breh legal ofinions as to thenr cobigition to continke the lightmg. which opmions were decidedily that they were no compeled to doso. The expense of lightug the hensing ton and Brenterd corsoindated trust was 2, 400 . ; and the tolls on those loads were at the present moment let at 2,velt. Tess than the expense incurred in repaiving them After a great deal of discussion, it was resulied by a large majority, that it was desirable that the lights on the high rasority, should be continued, and also that other parts of the paxish where gas could with propriety be employed, should
be lighted. A motion wavalso carried fer ti, appointmen if a fucure rictir.g.
\(W^{\text {rod }}\) Paring.-At a meeting of the Marylebone restry on Saturday, the resolution, \(n\) entioned in
passed last as passed by the hoard on the prewious Sutmidy-that 600
square rards of wrond-pavement should be land down in Ostord-street, by the propritetors of a new latent expleriment for six monthe, at the cost of 16 s , per sug yart-tras trovight up for confirmation. It was strongly expense arid the stortness of the grounds of the grea irial ; and the debate was eventually aijonmed. In the course of the day a refnet was bronglit up hs the comnit tee, which was uraminomely agreed to, àd a resolution subserguently passed. direeting that the sum ot 2.2ninguinea If oud laving Company for their specimen, whine hatitan apewaids of one year on trial in !xtire!-strift.
-Meimblitan Improvements - It a Conit of Common Councul luld on Thursday for the desparch of business brought up a report for berverwing the suma of 2.5 (iontle, to enable the committe to proceed with the erest Clitr im-
provemente withont dray. The report state! that the committee had since their last refort frocteded to carry into effect the improvements in Cpper Thames-street, and
widen'ng Cateaton-s'reet and Lai-lane; and lad directed notices to be given for the purchase of property, and en tered into various tieaties \(\pi\) ith the on ziprs and occupiers pete their respectirn improvements with as litile delvy as possible. The report also stated that though the recessary sum required for tiese improvements would be more than raised by the sale of the remaining ground rents, \&c.. yet as it could not be et andarely mate available, until after the ground wo the propriety of raising the necessary sum by loan on the above security. The report was unanimonsly agreed to At the same court wes brought uin the renurt of the committee to which it was referred to draw up petitions to both Honses of Parliament. praying that measnres migh ing the dead in churchyards and waulis in the Citr. The petitions were read, and unanimously agreed to, and it was ordered that they should be presented in the ustal respecting a viaduet from Skinner-street to Holborn-bill. A model was laid before the court, and the subject was dey. In connexion with this subject, it is stated that Government a mol complere the iombement from Chariotte-street to James-street, in, lading the Gun Tavern. The White Horse livery-stables are already elosed for that purpose, and several of the houses. The
parish almshousis at the upper ent of York-street are to te removel and the Brouper ent of Iork-sireet are fon down. (llapl-street and the south side of lork-street will be removed to make room for the ners street that win pass through Emanvel Hospital into the 'aushall bridge-road, to come out nppiosite the Standard pubic-
house. The extensive gardens belonging to F.manuel Hospital aill be let to build upon. which. it is expeeted. will consiourably empich this charity, as thev cover more Mr. H. Kemble, M. I'., and Mr. Hants, M.P, have had a long interview with Sir James Graham and Lord Lincoin ar the tiome-office, on the subject of naking publie walks in the extensive borough of Lambeth. The result of this nterview has not been made known. but it is hoped shat t mill lead to the reatsation of so desirable a scheme. Billingsgate Marhet - There appears of hite to hare been a general complaint prevalent among and its environs, that fish is not so plentriul, and, cunsequiently. not so cheap as it was wont to be some two or three vears since; and the reason assigned for this falling off is, that many persons are in the habit of buying up large stoek of fish at Bullingegate daily, and of sending them into the interior of the colintry, where they meet with a ready and advantageous sale. This expedient is greatly fachitat by means of raiiway conveyance, and rans are every mo take ing regularly in attendance at this nialket, wad or the rain their supphies of fish, which are despatched of the na and districts in England
Public Meftinfs.-On Monday there was a meeting of the commuttee, atpointed to consider the most eligibla mode of applying the fund now raising by the mereliana he proprietors of the "Times," a puble teseimunivi last Number. The Secretary reported that since the last meeting several hundred pounds had breen subscribed. It was \&c." stoould be pultished in a paraphlet and circulated amenest the subsertbers; and ir was further resoived that a similar sextenent should be pustisned in Cetilighani Messenger, the most exrensuety diralated nersenamer on the Chatinent. Soue conversation then (inating with the merehants arid hinkers in India and Anserca on the same subiect, but it was deternined to postpone the consideration of the additionaldetaris to the nextcommittee diy.-A maed my of the "Tulacre Conal and Iron Company" wook place their roons in the Adelphi on Wednesddy. The chaters, to stated that out of 140 circuans
cuapony, ani to sunt up the atialrs, unly tiree ankwe
had bees recerven, the writers of wheh pleaded their in ablity to do anything towards the object consemplated. The secretary ti:en read the report of the committee appomital to mresingte the atfar, of the late board of direc-

A fe \(w\) days since, all the bricklayers, amounting to above 300
men, who have been engaged at the terminus of the railway between this town and Birmingham, struck their
work, in consequence of the company having engaged three or four men not belonging to the Bricklayers' Club. It appears that wages form no part of the dispute, but
the men refuse to work until the coboosions parties hate been dismissed. - A serious accident occurred in this tor
on Thursiay. accasionel by the hursting of the louler of steam engine, by which no less than seven workmen were Killed on the spot, and many others st severely injured that hitle ha,pes are evtertained of their recolery. The machine and tool
and the particulars appear to be as follows :- The work
men, to the number of between 30 and 40 , had assembled
lected, waiting for the remainder of their companions,
the engine-room attached to the premises. The enginee is supposed to have lighted the fire as asual, and supplied rersing with the mechanics, when suddenly the explosion
knocked several of the others down, destroyed the whole
of the machinery, and completely blew away one end of the building, besides doing much further mischief. The hood, and, it is said, created a shock like an earthquake. Many of the workmen had just entered the premises, and perceiving something wrong, hid themsel.ise in some place
of security, while the others proceeded forward and met with instent death. The boiler appears to have burst in the centre. fer whilst one half remained within the build ing, the other tock an opposite direction, and in its course plougbed up the earth in the yard to a great depth, and wall, and fell into the canal, from which it bas not yet been recovered. The cause of this serious accident has
not been discovered ; and it is hardly expected that it will ever be explained, as the engineer and those immediately near him, with the exception of a man and a boy, were
killed on the spot. The two last appear to have had an killed on the spot. The two last appear to have had an
extraordinary escape. The amount of property destroyed cannot at present be estimated; but the accident, from its citement in this tomn than anything of the kind that has

\section*{aken place for many years. \\ Minsted.-A local paper states that there are living in} the New Forest, not far from this place, in obscure cir William Rufus after bis death, and conveyed him in a cart to Winchester. They bear the name of Purkis, and it is consintered remarkable, that they hold the same plo of ground which was occupied by their progenitor, and
follore the same calling, which= is that of burning wood for follow the same calling, which is that of baruing wood for
charcoal. Soute few yeats back, it is said, part of an ancient wheel was to be seen on the premises, which local credulity regarded as belonging to th
body was conveyed to its destination !
Niurcastle-under-Lime.-A chort time simee we noticel some cases of adulteration of flour at this place, which a the time produced considerahle sensation. Another case since before the countr magistrates, from which it appeared that a new firm having sucreeded to the Cnion Mill, the hief constable here gave them an order for some four wheh made his chillren ilf, and an investigation to \(k\)
place, the renult of which was, that in all nrobability the place, the resmlt of which was, that in all probability the hour, had made a mistake, rejecting three sacks as adtullerated which were good, and retaining as good thre which were adulterated. This was explained, and the magistrates exonerated both the firms from blame
Norevich.-A meeting of the Society for the Propaza tion of the Gospel in Foreign Parts, which was advertised to take place in this city a few days since, was disturbed by the Chartists, who had been urged to attend by printed bills. Lord Wodehouse had no sooner taken the chair than the interruption began ; and finding that the Chartists would not allow the speakers to be heard, he adjourned the
meeting. The Chartists then placed one of their party, a Socialist, in the ch:ir; but he had mo sooner got posses ion of it than he was taken into custody by two police men, who remored 1 im from the hall amidst great excitement. Some angry discussions against clergymen then commenced, and the Rev. Mr. Crufts, who had been de puted hy the parent society, andertook, though the mieet ing was adjonrned, to explain the objects of the society to the rintous assemblage. He was, however, continually after a scene of great confusion aud mucla exciting debate agter a scene of great cond the Church and existing institutions, dispersed. The magistrates. before whom their chairman was taken considered that there was no case against him, and he was accordingly discharged.

Edindurgh.-Sir William Rac.
published a letter in Mrate, has as had been reportrd in the local pares that he never said. try had a bill for the settlement of the Church ouestion to proynce to Pariament. He merely expressed his hope that sufficient lime for the consideration of measures rouper to be adopted in the present critical state of the men generally, and more particularly br those to the Church question was oue of such deep interest. He considered, morenver, that it omght to le recollected that. however much the great importance of that question might be feit, it merely affected a portion of the Thited Kuginlabitants of that portion. That it had, therefore, no which concerned ther those nocre extemise measurts as a part. Further, that eme dife, embracme Scotland Church question were very great, and reguired the mont mature consideration, so much so) indeed that no one had wentured to snggest a perfect remedy for them. Sume were willing to take the Duke of Argytls bill as an instalment; but no Government, he considered, ought, and he was persuaded the present never would countenance a measure of that description. or one which showh not, it possible, operate as a complete remedy; sio that the peace was Church might not again be disturbed. All that het and impartially considered : and this prom wise he mate the more cenfidently, as he had ascertained from one of her Majesty's Government that it would mee: with such coasideration. That with this all frien arer wharch, he time requisite for that constideration ; and he would ouly add, that no efforts on his part ever had, or would on this occesion, be wanting to piomote what should appear to him to be the real interests of the Chureh of Nootand.-
At the recent m:onthly meeting of the Presbitery of this city, some excitement reading a letter he lad received frum a member of their
bodr, Mr. Marshall and which stated that tis con in the form of church government ablished country having been rery much sh:ken by recent erents. he had felt it incumbent on him anieminly to recowiker its nature and scriptaral foundation, and the result of this investigatien had heen a cenviction at vatinnee witl: the
vow he touk at orlination, "that the Preshy rise guvern ment and dieergline of this Church are foundtal na the vernment he believed to be mot only expedient. bour, being coeval with A postolic times, to have had the sanction
of those who were divinely authorised to plant and model the Christian church ; and with such sentiments lie could not reuain any longer a mumiter of the ('hurel scot land. Mr. Marshall. who was present, then addressed the merting, and explained at length the reasens which had led hum to take so serious a step; obscring that so tar was being infuenced by pecuuiary inducements, there themelves no prospect for thinself and family but to cast Ministers then addressed the Assembly, and as it wa thought that an open court was not the proper plac: for that a committee he apponinted to argue fhe qualy rescived Mr. Marshall, to endeavour to convince him that the conclusion he had come to their report on the sulject to the next ardinary meeting. tion in this city, in consequence of the arrival of Mr Feargus O'Comnor for the first time since his imprisonment in York Castle. In accorlance with previous an rangements, Mr. O'Connor arrived the previous day a Greenock. A steamer had been engaged to bring him to
this city. where, on his arrival, be was gree'ed by a great number of rersons who liad aswembled on the quat. A carriage and six licrses then coneryed bum. amid bands of music and a large concourse of people, to the Green, where known tbat a public meeting was to be held. A resolu tion to petition Parliament for the Charter was first proporel and adicpted umai priate adulress a read, to whit b that gentleman rellitd at some ingth, and shortly after the meeting quietly dispersed. It is said there were about 12,010 persons asserm on this place three comeiderable commercisl failures in this city. America ; its liabillities are extimated at 40.01 m !. the cause assigned being the want of remistances by the Britamnia. A considerable portmon of this sum. it in said. is due to the town of Pasley. The secund was a calheprinting concern, not, however, in extensive imsiness. The third, and mest impirtant, took place on Monda, and was in the shipping and commissien hasiness, ise The tailure it is stated, was mexpected. and the cause assigned, over investment in West Indm prodace. added that these falures have inereased the already existing distress and depression of trade, and have thrown an additionsl gloom over the city.

Pasisley.-A meeting of the unemployed operatives in his town he beez held for the parpow of memorializing

Ke Queen and the Prame Minister on the sthifect of the and a ghe thetres. Thie mee: ny was mumerons' \(y\) attended, wess of the workng clesses, end the the the prevent disuess of the workung clasees, and the seriously depressed

The story depends chiefly moon the adventures her aunt's rustic beauty in search of a favourite hen of her aunt's, which has, by the muek of a young lover, becas
old lady, she goes through all kinds of innocent difficulties to recover. The part of this gentle beroine, Minetle by name, was cleverly supported by Miss E. Terry, a yonn2 lady almost new to the stage, and of great promise in so far as her acring is concer ith considerable aimation anacted the part of Cocorico with cois nsual eccentricity and Mr. Paul Bedford played, with his usual eccentricity of verbiage and voice, the part of a Sergeant of Bombadiers. The few airs introduced into the burletta were not of an unpleasing character. During the progress of the piece there were a iew hisses, which had the effeet of calline Mr. Yates upon the stage, who denounced them to the audience in indignant terms, as unfair and martial in themselves, and very discouraging to the actors. The audience supported his remarks with their applause, during which Mr. Yates anoounced the piece for repetition, adding that had teen successful in a run of 80 nights in Paris.

Olympic.-This theatre re-opened on Monday night for the winter season. The house was fairly attended, and with the addition of some new decorations, had an improved appearance. The company is of average talent, comprisinf some good names, and among others that of Mrs. Waylett. The season commenced with the performance of the Burletta of "First Impressions \({ }^{3}\) " after which,
"God Su"e the Queen " was sung by the streagth of the "God Sure che Queen" was sung by the streagth of the taking the leading verses. The latter lady, who was enthusiastically greeted, was also encored in ber songs of "Kate Kearney" and "Away to the Mountain's Brow which she sang with her usual effect and expression. slight Comic Ballet was next introduced, in which the performers were nearly all juveniles, but acquitted themselves with considerable credit. The dances, which were gome of them of a ludicrous character, were adapted to familiar Scotch airs, and their revelry and grotesqueness andience in good humour. A Comic Drama, called "Cousin Peter," was the next novelty. It was got up with due attention to scenery and appointments, and was perfectly successful.

\section*{eje Gatieners Cbomide.}
\$ATURDAY, OCTOBER 23, 1841
The season for planting has nearly arrived, and all who have that operation to perform should be getting ready to take advantage of the first dry weather fler trees have lost their leaves
Planters may rely upon it there is no season like the autumn for transplanting, and that if delays are dangerous in ordinary cases, they are most especially \(\therefore\) anw , wh ho man can control or even modify. Cire trese nuit trees, deciduous trees, Evergreens, We dy phan: of exty denmination, provide? they hetier it is the ground by the end of Noyember than as tuy ther prich of the year. Let there be no procratiation then, dio waiting upen delay. A wise \%an will atmit of no crelse whatever for proceeding with this work at the earliest moment, unless the land to be planted is under water, and then he must wait
till it is drained again; such flooded land is, however, unfit for bearing anything beyond Willows, Sallows, and Alder bushes. . By beginning early the bestplants aresecured from the nurseries, with the most propitious season for committing them to the ground. We are quite amare that some of cur correcponder ts
will deny the importance of early planting. One will appeal to his success in the spring; another to the system of puddle planting, which may be performed at ail times: and a third may, for anything we know, \(\therefore\) prove of the season last year selected by the planters (impleyed by Her Majesty's Woods and Forests, viz. the month of May. Indeed, if our memory does not deceive us, a writer in a contemporary publication would per ande is to take Mid ummer in preference to all other sanen! Fut we must evichely wam our readers ithains: falmang such adtice. It is certainly tree
 t' whech Mr. Darnock has skilfuli'y shown sume examples in the garden of the Botanical Seciety in the Regent's Park; but planting in the autumn must Hiceet, and we hardly need insist upon the wide liference beetween wut and wht
An drubt there are matuy planis of such harly corstitutions thet it seenis indiffrent to them whether they are removed early in the dermant seasond cr late ; such. for example, as Lilacs. Willows, and many lardy shrubs; but if the plantations of Otil thee are ibserved with care, it will dways be mond hat these succed the lest which are completed Sire chriva as
ile confess these assertions to be somewhat dogmaical, in the absence of the reasons on which they are founded. But the subject is so important that we cannot withhold them until we shall have room for a dissertation on the subject, which, for aught we know to the contrary, we may be compelled to defer till the oeson is too far advanced for our note of preparation o be worth the sounding.
We are, however, provided with reasons in plenty, which we shall lose no opportunity of producing. In the mean while the impatient reader is referred to the hapter on Transplanting, in the Theory of Horticullure.
Iv a late Number (p. (62, col. c.), was one of the most important announcements which we have yet articularly optunity to make, and to which we most If a persmy were to a lu ation his coadiness to explain mos the -ectscodht le jroueded of a rree as hardy and tat-growne as the Lath, mole : alcabie in its timber, and with the evergreen teanty of the felar of Letraxive we death not that his cromamication woukd atcrm -on is that to which we allude. Of all the ites aris that to which we allude Of all the the Mhentains, is incomparably the most important to E: ched; it has every good quality, and no bad one ; Me.wi a, ti.e present Secretary to the Court of Diheina, the brugit thome some cones on his return from toua, the weds is which grewin the garden of the Hortivartural witury There, in mancungenial silil, they their entire thenthe severe winter of lant-s, when Tary. h. in ven, they rinas spected. 0 a twe con-
 Their laruin proco withut the hoos of leaf a limh. tion of than to Enemg thus esia' ashel. the intruduccuriosity, but England lecane nolenger an oljject of ne assures were impat national importance, and proper
in conjunction with the Court of Directors and Board of Control, to effect this most desirable end. Advantage was taken of the rapid transport afforded by the overland mail, and now for many months a constant succession of the seeds has been received in England, at a very large cost to the East India Comnany. The
result of these importa: inns lase hem theusands of young plants, which are flourishing in all dia: vion-; and thus one of the noblest of purposes-that of pir-
 ountry-has been rapilly ace mori-had biy the enligl.teneal men who direet the aftu:n of Ladis. It is no longer as a solitary specimen, to be viewed in some are collection, that the Cedar of the Himulayas has reached our shores, but thousands and thousands are in the possession of many of the great landed proprietors of Great Britain, and more are daily pouring in. Even in the north of Ireland it is springing up like this noble timber-tree quoted in the Nurserymen's lists at the price of the worthless though magnificent Cedar Mount Lebanon.
Up to the present time, however, the seeds could only be obtained by application to the Court of Directors of the laat India (cmpariy. I ut from th in.twligence commumicated in the pamanhat of bo alatad to, we learn that any one who will apply to Dr. Nal-
coner, the excellent superintendent of the Hon. Company's Botanic Garden at Saharmipoor, can obtain it and other seeds gratuitowsly upon payment of the co: of the orerland conveyance: a most noble act of public
munificence, such as could ouly be expected from the splendid liberality of the East India Compmy The expense of the overland conveyance is douhthes considerable, but we learn with much satisfaction that the Indian Government has it in contemplation to allow seed-packets to be sent home charged with freight instead of postage, which will bu a wery great accom-

The san
the introduction of valuable plants from India to Fin land, have also prompted the transmission of the usefu products of other countries to India. Europe, Asia Ninor, Africa, and America are already directing thei living products to the East through the Company
officers; and when the Hindan in after ages shatl roal

 Ors, he wili bless the day whes tho karbut. phen. .t greatness of a more civilised race.

\section*{It is the excellent practice of many Horticultural} Societies to give prizes of books to cottagers. We have frequent inquiries concerning the best works tor this purpose, and should be greatly obliged to cur curre spmadents for lists of such as the? combiler well suited The books need not be on garduiniay onny, tout should be of a practical nature, and adapted to the comprehension of the peasantry. Nuch good might be done by a judicious selection of book-prizes. When our list is complete, we shall publish it for the benefit of everybody

The Hyacinth is now in demand for the decoration of sitting-rooms, and we had proposed to make some general observations upon its management. But other things prevent our doing more on the present occasion than laying down the following rules:-
Place the bulbs in the dark till roots have berun to form. 2. At the same time keep them damp, not wet. 3. As soon as the roots are forming. bring the bulbs to the window, and place them in the lightest possible place. 4. When the leaves are growing, give them more water, and inerease the quantity as the lawes grow larger. \(\therefore\) Never remove them trom the light ill :hoy are realy to Hower. 6. Atter the fi serare Past, phe the baths inte the ground art of …"* with. out if juril og the leaves, which a ust die namolls. and not be cut off. Each of these paazaph- w. .if irm the subject of a separate commentary hereafter; the six contain the leading principles of the management of bulbs of all kinds, as we shall show in future Xunibers.

\section*{GA THE PRCRAGATIOS OF CAPS MMATHS}

 V. - tate at all, or if they are excited into grow th, the stimut
 atasit seeds which are sared in this country should elthe aki an gardening subjects we are told to sow the seeds . \(s\) suon as they are ripe : but I consider this in most cases a very bad plan. It is far better to oxprse the seath tor a considerable time to the sun and air. and then rut them away in dry papers in an airy seed-room for two or three
a.onths; thus, if they are ripened any time in summer or autumn, they might then be sown the following spring. I his treatment the seeds are rendered very excitabie ar at cular
 prugress. Seeds ripen, and either hang in the seed.vesselg on the plant, or else these burst and scatter the seeds upon the surface of the ground. In both instances, not being covered with earth, they are exposed to the hot summer
 of the seeds, which now as it were enjoy a season of repose, ready to burst into life when plantel and watered with the periodical rains?
Another advantage of sowing seeds early in the jear in That the plants prodnced by them hare time to strengthen themselves befure the approach of winter. Every one who has the management of tender seedlings knows chis to be of the first importance.
Supposing then that the seeds are in readiness, and or \(: 1\) proper time for sowing has arrived, some tat potio
 soil from being washed down and destroying the drainage. The pots should then be filled to within half an inch of the ton with fine neat and this shouli be slimhele nreased
 is not atended to to make it level and more solid. If this the soiI, and are prevented from germinatiag. They should thea be sown and slightly covered with fine leat soil, after which they should be watered aud removed to the seed-hnuse.
In all large nurseries or gardens, a house, pit, or frame is set apart for raising seeds. The managemeat of a piace of this kind consists in keeping the atmosphere moist and warm, and in shading the seed-pots during bright sun\(\therefore\) ne. Seeds in the act of germinating require scarcely anything for thir assistance except warmth and moisture; highly injurions. The grents evaporating properties, is taken not to supply too much moisture, otherwise the teuder seedlings will most certainly hesp w.
It is to a place of this kind that tho pots santaining the Heath-seed should be remored; and as we suppose this to received from the sun being quite sufficient. If the seed has lieen good, and ib it has been prepared in the manner
vil.... I laze described, the young plants will soon make their appearance above ground. As they get strong, the
shading should he gradually discontinued and mure air shading should he gradually discontinued and mure ai
lose-shaded, wrame. Here they will remain for ten day or a fortnight, until their roots establish themselves in their new quarters, when more air may gradually be admitted the greculduasi us beathery.

111 the nee species or varieties are in the first instance o'itiht? from ce: A. and afterwards multiplied by cutcings. In (eriter ton be successful in their propagation, it is of the rrame: in; nrance for the amateur and young gardener to uniew in priactly the primeiples anon which sach success denends. These they Fill find fully explamed iex the former numbers of the Gardeners' Chronicle, when the Nubject of striking cuttings was brought before its reader. No particular time can be specified for striking cuti.gs of Heaths, because the plants are in a fit state for taking of the crittings at diffopent times: hnt the earlier in the season the better, although many cnitivators succeed perrectuy so late as the mobths of August and September. The plant from which the cuttings are taken must be perfectly health \(n\), otherwise the time spent upon them in the rrester number of cases will only be thrown away. The wool should be firm and nearly ripe, because if taken when very young it is almost certain to damp off. The short lateral shoots, abuut an inch or an inch and a half long. stontd ahonet hali therr lunat the lavte -triph cet of them to

 and cover cisec wik a lion the sand rith whicis the pots other sabstance, fore the silver-sind are filet Heaths, but almost any sand will answer the purpose; it
 possible. The cuttinas may then be inserted in the sand
 romst then ho -all mantowed wheh will carry down the narサ1.

 with, the cuttings should be phaced in a sit........... is moist and shaded, and then they will be \(5 . .1 \%\) i \(2:\) a 6. A. 3 !....
 much is certainly injurious. A Cucumber or Metion frame nearly exhausted, or the shaded part of canl stave. wit
 is ail that is reduireu. The care required afteradruls is to
shade during bright sunshine, taking means to remdre the shade ear! ! in the aferoonn, sn as to allow the paye, which are nor then strong enough to injure the cuttings, to heat the More, perhays, depends upon the kind of water which is used, and the regularnty with which it is given, than upon anytbing else in the operation, if we except the selfetion of proper cuttings. Rain or riser water is by far the best kind to use. I have been baffled again and again in attempting to strike Heaths with certain kinds of spring in solution.
After the cuttings have struck root, they should be gradually hardened by exposure to the air before they are potted off. Small thumb-pots are the best for the first reatest care should be taken to preserve the young root lets from injory, because if this is not attended to the plants will receive a sudden check at first, which is ver prejudicial. After potting they should be removed to a young seedlings above described. I have observed in the Clapton nursery a very good plan for striking Heaths on a large scale. In this case pots are dispensed with, a large
bed being prepared, well drained and covered with a thin stratum of sand. The cuttings are then put in, in different patches, and covered with bell-glasses. \(-~ R\)

\section*{ENTOMOLOGY, No. XVIII}

The Spotted-beff Mota, - (Bombyix lehricipeda.)Was very mueh surprised last antumn to find the plants and almost annihilated in a short space of time; having etected the source of the evil, I am convinced, that should We ever he visited hy an excess of colle hoth. not a vestige of foliage will be left to
eer lis jear, they atracted my notice by eating an Elder-bush; they then attakaed the forse-radish and finished with the Lilacs the end of September. I have this year watched their proceedings attentively; on the 3rd and towards the end of that month, the moths became abundant in the garden, depositing clusters of eggs upon the leares of varions plants: they were whitish, globose, and smooth; these were hatching during June and July and the little caterpillars when first out of the shell wer yellowish-white, with a fess long dark hairs only: the early
broods had greatly increased in size and numbers by the middle of July, when they had attained the length of hree-quarters of an inch; at this time, they made a seri ous attark urnn some Indian Corn the Maize). which the seemed to be particularly fond of, as well as of Broad beans, and 1 amp persuaded not an atom of foliage would been paid to the destruction of the caterpillars, which were pleked of two or three times a day; they were abont half-grown in the secon.l week of August. when multitudes made thenr reappearance upon the Elder-bush and some young Turnips, and the Ciarrets and Mint were not neg ected by them ; mest of those which hau eseaped the ey and hand of the gardener were full-grown before Michael beans and Rali teasting upon the leaves of the scarle beans and Radistes left hor seed; at an inch and a half long, and as thick as a large goose-quill (fig. 1): the back is dark green, and the under goose-quill (fig. 1): the back is dark green, and the under
side paler green, with a wary white line down each side from the head to the tail; the spiracles also are white the whole animal is covered with little rust-coloure cushions, which produce brushes of longish reddish-brown hairs, so that it resembles a little bear's-skin ; like the res of the Bombyciate, it has six sharp-jointed pectoral feet, eight abdominal, and two anal feet, more fleshy and not articulated.
When full-grown, they retire to the stems of plants and the chinks in walls to change to black shining chrysalides, in an oval loose cocoon, composed of silk and the hairs frow their shins (fig. 2); and so well are they concealed and protected by this dingy cloak, that although I have and to add to the diffenty. they will travel the whole length of a garden from the place where they fed, in search of a spont weil adapted fire their transformation some authors say that they often enclose thenselves in
dead leaves on tha ground, which are blown about until dead leaves on the ground, which are blown about until ecare spot, where they remain through the winter.
Bombyt Inhricipeda, Linm., has heen separated from that enos, under the name of Spilosoma*; it rests with its The \({ }^{2}\) defiexed (fig. 3), it is of a pale ochre or buff colour eyes, palpi, and legs are also black, excepting the thighs which are of an orange colour, and the hinder tibia and tarsi are varregatal wilh buff: the upper wings hare turd dots near spis upon the cons margin. With one or more oblique line of spots more or less Ginke anteriting from the tip near to the posserine ingle, where they aie fargent the near to wings hase a blach spot ueare the superiur nar gin, and snmetimes anower nearer to the anal angle : the abdomen is otten mere orange, wiria a live of back spiots under side. It is a mose gexch side, and two dow un the markings, sonie being of a deep bright-cechre, with the black -pon inerg, mit an encected as to fomm bars across of the spots obliterated.

As the maths stirk about plantre and walls often in pairs in May and June, they are easily derected, and it becowe

with the foliage; but I doubt whether shrubs and bushes suffer much, beyond their beauty being disfigured from mer; at any rate. I never saw the Elder-bush so lururiant and healtiy as it was this spring, after being robbed of almost every leaf the preceding autumn, by the hairy caterpillars. By shaking the bushes they readily fall off plants, they likewise drop down, but being of a dull colour, they are not very visible, unless the eye catches them In the same garden I find great numbers of Ichneumo osculatorius, Fab., called Exetastes \(\dagger\) by Gravenhorst, which I have always imagined must be searching for the hairy caterpillars, but I have no direct evidence of their being parasitically connected. Bouche however tates that terpillars of Bombyy lubricipeda, in societies of a hundred or more; towards the period when they are about to change to pupx. the parasitic larve come out and spin close to each other, covering the whole mass with silken threads, so that it appears like a spider's nest; and I have found them in pastures, attached to stems of grass and other plants, half a foot or more from the ground. The same author informs us, that Diplolepis albitarsis lives in the papæ of this parasite !-Ruricola

\(\dagger\) (urtis's (iuide, Genus 524, 15.

COTTAGE GARDENS.-No. XL
Continie to take advantage of fine weather, and pro ceed with the operations mentioned in our two last Num bers whenever there are time and opportunities for doin attend to neatness. Where Shallots are esteemed for culi nary purposes, like the Onion, they may now be planted in dry situations; but in gardens that are low and damp it is better to defer planting them until the spring. Some prefer puutting them in at this season, in consequence of those which are planted in spring being more liable to be attacked by insects. Tins, how ver, will seldom be the case if proper care is taken to have the grotnd in good condition, and net over-manured. In our opinion the failure which occurs in this crop more frequently arises from the routs coming in contact with dung, or being planted too deep, than from any other cause. Attend to what is stated on this subject at page 118.

The beauty of most of the plants which enlirened the Cottage (iarden during summer is now over, and all that remain at this time, perhaps, are some late-flowering Phlozes and the varieties of the Cbinese Chrysanthemum, which in a fine autumn are extremely ornamental whe neatly staked, and tied up in such a way as to exhibit their flowers to advantage. Cut down the stems of all the other plants that have done flowering, and take up the roots of any of the more tender kinds that are likely to be injured by frost. The Dahlia is always among the first to suffer, especially in its foliage, which is remarkably tender; but its roots are not so soon affected, and will sur rise our common winters it protected with a corering dry litter or fern. The flowers, however, degenerate when the roots are left in the ground; and on this account we inches of the stem attached to them, and preserved in the same way as Potatoes. This is a good time for redacing any plants that may have become too large, or removing aitogether such as are not wanted; after which the borders may be dug roughly and put in order for the winter The roots of Crocuses, Snowdrops, Ranunculuses, and Anemones, with those of other spring flowers which may have been rrocured. should nuw be planted in the patches directed to be got ready for them last menth. The firstmentioned will grow in any common garden soil, but the Rununculus and Anemone both delight in a free, rich loam, and great care must be taken not to cover the roots of either any deeper than from \(1 \frac{1}{3}\) to 2 inches under the surface-M. E. \(\boldsymbol{H}\).

\section*{HOME CORRESPONDENCE}

Run Flowers.-Your respectable correspondent Mr. Dickson, in his remarks an my brief essay on the causes of fouiness of colonr in the Carnation, \&e.,g has been betrayed into great error and misconception. By quoting and joining the part only of two sentences, a bit here and a bit there, he has made it appear that I recommend an ver-nutritious soil, to preserve flowers in a clean state After adverting to the fallacious notions of florists on this subject, and their mistaken practice of employing poor hungry soil to make flowers clean in colour, what I state in the course of the essay is, that "the cause of foulness of colour is really dependent on a deficiency of nourishment either in quality or quantity." Again, "that neglect in culture, and deficienćy of proper nutriment, are the caosed of tes degenerating and ruaning;" and again, of a full amstances, therefore, which deprive the plant
poor soil, or it be a cold and ungenial season, which cramps the energies of the plant, aud prevents the due elaboration of its nutrient juices, will cause the flower to degenerate and its colours to run-an untoward season being tantamount to a poor soil, in its nltimate effects state, I repeat, is manifestly the effect of high cultivation and the running into a foul or self state, must be cons dered a degeneration, induced by a low degree of culture, or a defective supply of suitable nutriment "" and forther to prevent all misunderstanding. I give what I consider will supply a proper and suitable food, viz., tro parts old pasture sods, and one part frame manure three yeari old with a portion of sand. Yet, notwithstanding all this,
because the Tulips became foul in colour, which Mr. Dickno because the Tulips became foul in colour, which Mr. Dickson planted in (what, gentle reader?) frame dung rather De "in a fine juf a fatty and nutritious substance ;" and again, soils, as causing foulness of colour. But surely language of Falstaff, such "a rank compost of villanous smell" could never be expected to produce any other effects ; :uch a crude, gross, undigested, unconcocted ass, could be fit for nothing but Potatoes and Jerles; stead of being considered as over-notritious food, is, in fact, downright poison-very different, at all events from the suitable food, the proper nutriment," "the of tautology, at so much pains to inculcate at the risi Dickson, in point of fact, bears the strongest testimony to the truth of my principles, and indeed goes somewhat further than I ventured to do. He states, that phant grown in manure 3 or 6 years old with bloom clean and two Tulips, which were grown for three successive years in horse manure four years old, were as pure and clean as those which were grown in the finest loam. In conclusion, I may add, that since the appearance of my short essay in the Chronicle. I have received private communicatio from several of the first practical florists, all of whom coincide in the views I have promulgated; amongst them I may now rank Mr. Dickson, for he evidently agrees with me in principle, though his ideas of what constitutes a nutritious soil are not mine. \(-F\). R. Horner, M.D., Hull, 18th Oct. 1941. P.S. Mr. Dickson will find it quite useless to attempt to restore a run Bizarre to its tri-coloured state,-though with Flakes, especially rose and purple, it may be accomplished with comparatively little difficulty.

Root-Pruning Fruit Trees.-In page 673, a correspondent anks "for information about root-pruning fruit trees," and the following system which I have successfally adopted may be useful to him. When I came here in November 1839, I found the trees on the north border (chiefly Pears and Plums) in a very bad state, crowded with large gouty wood, and the breast-wood and old wood spurs standing out in formidable array, some of the latter being from a foot to 15 inches long. The first operation was to cut out about half the shoots that were laid into the wall and thin out half the old wood spurs, shortening the others to about half of their length; after this, the remaining shoots were regulated and properly laid in. When this was done, the burder was trenched two spades deep, with the exception of about three feet, round the stem of each tree, shortening each root of the size of my finger, or larger, back to the ball; the border then had a good dressing of halt-decomposed leaf-soil spread over the top, which was forked in in the spring. The first sensom the effects were evident; the luxuriant growth being and new fruit-spars on the main shoots form This season the Plums have been loaded with frait, and he Pears have about half a crop, with as fine a suppig a young fruit-bearing wood as the most
Butter-Deu.-For some time past the renders of the Bun hat I find no fault with the manner in which it is served up, but would only add another kind of dew to your bill Transactions, "that in the sear 16i95, during a great part of the winter and spring, a fatty substance somewhat the butter was deposited by the atmosphere, instead of usual dew, in Ireland, and particulariy in the provinews Leinster and Munster. This substance is said to bave been of a dark yellow culour. and felt clammy. whence the natives called it Butterdew. It fell in the course of the uight on the moorish low grnunds, and it was found is the noorning attached to the leaves of grass, to the thatches of houses, \&c." This Butterdew is probably of called Timature as hat substan of the guderives to this called Witch's-butter; and some of the ghdery hours day beliese that after churning their milk for many bour and no butter cumes, it is bewitched; and they will that yellow substance be seen near the house. they tell you that it is part of their butter that has underg. I some transformation by the cantrips of the charge made against them ; sphere, but is likely to be some species of Fuligu, yerbap F. flava, which is found in situations similar 1 , wat tioned in Ireland, where the Butterdew made its appear ance. By giving this a place in the Chronicte, it help to dispel some of the strange opinions that exist reWpecting these

Hide-bound Trees.-I observe in your review of Mr. Selby's mort, you extract a part in which he often mentinns hide-bound trees. It is a common notion tbst diseased trees have hard bark, which prevents the tree mon swelling as the sap descends; and it is a very cummotpractice to cut through the bark from the top to the wot tom of the trunt, ase a remedy. Whether mecenem,
hether effectual, is for you to tell us. I have often seen anker produced from these woundsial in those cases. bere the dead bark on the outside the trunk of a tree is ery hard and unyielding. If it is be done, the season for performing the operation spring, and the knife should nolding its leaves in the spring, and the knife should not be allowed to pene
ternal layer of bark.]
Blue Hydrangeas.-Some weeks since I sent you two bits of Hydrangea, one blue, the other pink, from the ame Hydrangea, and you observed that it was not usual This produced a notice, that in ind that the pink would turn into blue. That the truth may be arrived at in this curious and important matter, I now enclose you a bit of the same pink bunch which I sent befure, which I hnow, because it is the only one on the plant from which a bit has been snapped off; you will see it retains its pink perfectly. I also send you pieces from the same plant, of various colours, white and pincish, white (or yellow) and bluish, and quite blue. open, others a pinkish, and they come accordingly. I do not say that the flowers do not change, as your correspondir specimens prove. There are 116 blooms on this plant. The whole plant in colour, at a little distance, resembles the wattles of a half-angry turkey-cock in colour, zaly.

Hot-waler Apparatus.- Your correspondent, Mr. Bea60 , in a recent Number of the Gardeners Chronicle, cuarks that he likes Mr. Corbett's open-trough system whether the rapour can be confined sufficiently for ripeaing frit. We are able to answer any objection on this point, as wave this summer (not one in which the sun's rays have been too liberally distributed) witnessed several in-
stances in which Pines and Grapes have been ripened in the highest perfection in bouses beated solely by Mr. Corbett's apparatus. The opinion in favour of this method which we expressed in an early Number of your alusble Paper, has most satisfactorily been confirmed in erery place where this apparatus has been erected.Lucombe, Pince, \& Co., Exeter Nursery.
The Roof of Westminster-hall. - In the article on Warren Hastings which appears in the just-published Nomber of the Edinturgh Revieu, this celebrated piece Oak. Can any of our correspondents furnish the authority or this
Paullownia imperialis.-On reading an interesting letter jost received from France, touching on gardening and botunical news, from an English gentleman now residing in
that country to Sir Wm. Middleton, Bart., I requested permistion to have the following extract chronicled, belierong it would be interesting to nuany of jour readers:and saw one small plaut in a not, for which they asked 12 francs. I went the other day to Trianon, and saw in a corner of the garden about 15 lants of it growing tegether, one of which, 14 fett high, measured ouly one fiot last May. The othersfrom cuttings of the routs, about hese small cut here from six to twelre feet high, one of since the middle of last May. The leaves of the Paullovha are of the form and size of those of the Rhubarb plant and about two feet in length; I shal! endeavour to send ou one by the first opportunity." Notwithstanding the eputed bardiness of this rare and valuable tree, Bratish gardeners would be loath to risk a shout 14 feet long, the row of six months, to the rigour of our winters without ome protection. What think you? -D. Beaton. [As this plant is from Japan, and of the same genus as the Catalpa tree, at will probably be bardy; but it would be rash to as oume such to be the case. It is a noble tree, with thyrse of purple trumpet flosers. The trees on sale in England ar, as far as we have yet seen, nothing but the common werican Catalpa.]
On the Treatment of the Pear Tree.-J. M. writes that summer, whot cut back the summer shoots of Pears at Midmost prominent fruit-buds; but only shortens them to the or four eyes. Thit-buds, but only shortens them to three a ten dars, by the swelling of those buds intended for Oit next year. They remain untouched till the first week actover, or until the growth is set, when the pruning Which they usually receive in the middle of winter is given anm the object being to further still more the derelupand the fruit-buds, which cannot be done if they have support all the sapwood they are linble to produce. As books to the full development of the blosom he geseraily has the satisfaction of secing half of them perfect ; bive, under the old system, nine tunths of the blossoms abortive, dropping off one fter another, till sometimes only one, and at otbers not one, is left on a branch. The fuult is generally attributed to the season, which, un the cender tarieties, marliare its effects, but 1:ot so frequenily the improper developaent of twe fruit-ouds. He had insect, and jery muen infested with a whitish immoveable them, well with befure the buds began to break, he sodked only appear sorong manure-water. The insects now hopes by an round the base of the large spurs, and he dicate themother application of the manure-water to eraThe Weather -

From the above it appears the the wettest month during the above period was that of July 1834 , and the driest that of April \(1840,-\boldsymbol{R}\). T.

Right of Property in Plants.-I wish to call your attention to a subject of some little delicacy, which inti-
mately affects that confidence and good understanding which ought to subsist between gentlemen and the garwho understands his business muit frecquently ra:se a larger stock of plants (in order to ensure a full supply than in required for his master's use. A spirit of hiberality and of mutual accommodation will induce a desire of exchange between one gardener and his neighbour or friend; this may extend to somewhat rare and expensive plants, in which one collection may at times be overstocked, and another be deficient. A few seeds or a culting can fre quentiy be spared, and thus by the interchange of civilitie beautified. So for, provided the consent of the employer is either expressed or impled, there seens no ground for objection. A question, however, arises upon this case. Is there any room for a dispute or doubt to whom the plants, \&C., thus obtained, beloug supa gehtiman, we will suppose, finds his garden or cunservatory enriched by new plants or choice varieties of flowers, which be did not purchase ; he enjoys the gratification, and his gardener go on smoothly all is well Butsuppose some canse or dissatisfaction to arise on one side or the other-the gardener is about to leave his situation-and he points out some fine varieties of Camellia, now grown into tine plants, as his own: this was raised from a cutling given me by neighbour A.; that from one sent me by a friend at B., and
30 on. The collection of Pelargoniums is to he thintied in virtue of a simular claim, and the beds of
Pansies are likely to lose some of their chief ornaments. Pansies are likely to lose some of their chief ornaments. tration, but it is one whicin ought to be capable of a ready and satisfactory sulution on the conmon principle of honesty and upright conduct. Anong professional gardeners there are numbers who, from a high sense of honour, would be above any mean or merceluary dealings seekiog their own interest and pruft oy an thensolves of fachi ties at their command for raising surplus proture at their employers' expense fur the purpose of sale. Many, 1 trust, would act in such matters on the hishest adres myristian integrity. It is to such med your correspund ents , aseral. hoping to elucii, by the discussom of the subject in your pacts, such an exposition of the principle of honourable and upricht conduct as will bear the light, raise the characier of the professton, and setule the ques tirn which I have ventured to moot.-Daylight. London 20th Oct., 1841 .- We have no doubt upon this subject
but before we answer the question, we shall tait to see but befure we answer th
the opinion (ff ethers.]
Manures.-The best sale-garden in my neighbourhood for common walli-fruit, and which never fails of a crop, is by pieces of dead animals bured at aty two The figs, without any protertion, have frequ. n.
Fruit Rocm.-As you requested the opinion of others upon the remark concerning a Fruit-roume contained in the Leading Artucle of Aun.ters and and 1 aducel to make a few observations, which athoush wis on the rule there laid dorn, may yet le serviceavie co sme of your readers. In the first face, 1 ciffer from youl supposing that a fruit-roons ought to ve pericuy valess it be intended to store up numg Grapes, Pluas. in other stune-fruit, for which a dry atnwephere is re.. ne. cessary, as less congexial to the production a then m.nnat Fungi by wherh these fruits are dec mprised thand anand one. But where a room is waited to preserre A.p.er thos Pears to as grest a length of time as it is puasive cool phice to beep, it ought always toen in'ts Wri. thome I to not advise a frut-room to le ainceether unter around.
 recummetd a bund atmorpinere is from darmy requen long griass. \&c., under the tiees; thus fation off they were away in the usual manner. One of the most feccessary objects is to have the fruit gatheredin as care is is a as pussibie after haring assined yourself hat is a state for so doing. and to carry it direct to where has to remain, placing it singly on the shelves with the crown up; as decay generaly takes pace frest hear
fruit on at once to beaping thens up to sweat as some do ; the less ther are handed the better. as it cannot be done without remoring some of that greasy substance which al Apples nowre or less exhate, and which I constder one of forms most essential requisites to their keeping well, as it cient to exclude all moisture, and instead of betig hurtful is congenial, by checking the too rapid perspiration of the fruit. Great care must be taken to remove all decayed fruit, which is the easier done if they he lying singly upon the shelves, and I enurely approve of the rowm benig kept in darkness, and with hitle sentrlation, exetpt in cold mindy days, when occasionally all the dwors dad windums air inside the hoose by driving the rank or stageten the out of it, an operation only requred weasion diy. Tos much ventilation is liable to cause the frust to shrivel or wither rather prematurely long before they wught to do so; it is therefore tor that reason that I reeommend fruit
to be stored away in a cool damp place; certanly at ought to be free from all noxious amett or disagreenele vapour, but Irepent that Apples to substance capable of resisting all the hmmidity by which they nay be surto ader, and mstea berma har etperience has taught me that it is benencial. Perbaps the flaveur of some Pears, and also of some of he dessert Apples, may be deteriorated by being retarded in their ripemang, but a place suitable for them might in most cases be had separately. The above remalhs are mastiy appicable to the keeping of sonse of the hitclien Apples : as a 1 proof of not abore three or four mar cent decaredr trit 1 th 1st March, although it is one of the worst keeping Apples Te have I other kinds have lept well in prophortion. and less of stone-fruit, but I shall be glad to hear the opinion of other practical men on the subjea. S. N.
Clintonia Pulchella.-I can confirm John Halliday's statements (page 325) on the hardiness of Crintonia pul tated from self-sown seeds, where I had a bed of it lat year.-Anon.
The Castletown Vine--Perhaps you may consider the following acconnt of the celebrated Black Muscadine Tine at Castletown, the seat of Col. Conolly, M.P., worth a corner in the Gardeners' Chronicle. This magnificent ine is supposed to have been planted upwards of 70 years go. it is planted onteite, and enters the house through hole the east-end \(\pi\) nil, when is immedately divides he went end of the house, which is 110 ht . It ng. These main b much house, and to gire it impice rown wh ind regure a house which are 14 ft . long; but a better plan would be to erect anuther house, the same size as the present one, at the sent howe, and turning 3 or \(t\) of the main of the prethe new one, the whole would be very well furnished with wood, and make the longest Yinery nn reand, as it would be 22 trt. long. with a single line evtending within Git. of hee entire length if it, and ocrupying about sovo square feet of yhas. There are lud benchies of crapes at pretime of thiming. If otems surpmine tow this rine has atr ineel such to enorme us stze, as it has tho birder to rom in, and Mr. Kelly tohd nes that at had get mo manure of any descrution stuce i.e has hat the charte of it, which s upwards of 31 years; indeed there io no way of giving it manure, as it is surrounded (except where the soase as the streets of Dublin. Tins yart is used for carting

 Atter the Peas bare leen mosal in the asuai why, dui regu harty coveretion, take a fuaituty of so... atil coverover the all that portion wequatio whith lie the Pas, and in :hickdess trom whe-e suth to ex-iourth of an uch, so as all the space over the Peas may be comp.etely covered. Tie deThave always and soon doue, and a remedy that is always wathin the reacit of every gentleman'il gardexer-asad being in general an articie
that is almost everywhere easily procured. It is a remedy, too in the the if no good is done, there is not the least hazander das harm. But 1 think it is not only a prorectin Itas from mice while under ground, but rising above the grotud -an enemy which, though smaller is an equaily formidable one to the gardener. But although I think the sand of use in this respect, I would notwith standing enjoin on all young gardeners to be diligent and oareful in picking op the snails by the hand as the most I cannot say, bat I almost think, that covering with sand must operate beneficially in some other way; but this I mast leave to be determined by you, or some others who : :uve ever more. But chis I know from experience that - : fre ever done. But this 1 know from experience, that on the first appearance of the Peas above ground, and for some tim? after, their appearance is peculiarly healthful, much more so, I think, thatio others which have sot been covered are without a blank. Now this object, desirable at all times, is peculiarly so for an early crop; for if the crop is injured by any cause whatever, the season is not only getting if the blasks made, fither by mice or snaila, are to be filled ap, the ground is oftes rutima seed; and these repeated sowings are frequently a ftillre and if they do succeed, the crop is not ready at the same
time with the first that was sown, and if the ground is wanted for any other crop, as it often is, they must be removed before those that were sown to fill up wacant spaces are ready; in most cases, therefore, the only object the time of their grow th, as nothing looks more unsightly than scarcely a half crop on good and well-cultivated ground; nor in a deficient crop must the gteat loss be or without a sufficient remuneration, and there is much labour, care, and anxiety to the gardener.-William Falla, Alnwick, Oct. 6
The Dunmore Pear.-I was glad to see such a good account of the Dunmore Pear; and I can confirm Mr. Knight's , boervati ns reopecuing its suitableness to the North, and its early bearing; for out of grafts of nine
varieties of Uears rained by Mr. Knight, which I had the pleasure of distributing in North Lancashire in the spring of 1838, the Dunmore is the only one 1 have heard of which has borne fruit, which it did last year, and the juality was considered very good.-J. T. L. \(P\). \(66: 2\), says, I should have stated whether the Oak I referred to assumes the same variety of foiling every year, or only this seisun. I must inform D. P. that I took notice of the difference of foliage as soon as the leaf was fully ex panded, so that the season after the Midsummer, that is apolen of by D. P., had no effect upon this tree nor any
other tree here to my observation. Not having seen the tree before this season, it is only br hearsay that I have lesrned that the ahnove qarief? hav bean olverved in former seasors.-H. S.

\section*{MISCELLANEOUS.}

Earth-bread of the Chinese.-M. Stanislas Julien has recently laid before the Institute, specimens of an earth which the Chinese eat in times of famine. The nusef which it is extracted. conies from the ntightmathond
the siti.s Lin-Kinni fou and Foutcheou-fun. Whell eato it is reduced to a tine powder and mixed wina rice, in to propotion of three to thin; with this unsture are man
 duces a weight in the stonsech, and constipaticn. E.t. may be maintaiued for two months. Ti.use ri.u inve un it without the mixture of flour, have perished. Anvery other circumstances connected with this earth, it appear that no plants will grow in it. Examined microscopically it has not been found to present any trace of organic re mains, but to be entirely mineral ; in which respect it differs from other kinds of earth-flour. It is sapposed that this sulbstance does not in fact posst is mr numtiou quality, hut that it acts by distending the digestive oga without injuring them, and thus keeps off the feeling of hunger.
The Walberton Admirable Peach.-This most excel lent new variety of the Peach has lately been raised by Mr. Andrew Morton, gardener to Richard Prime, Esq, of Walberton, near A rundel. The stone was from a fruit of the Noblesse, and the young tree has in most respeets very much the habit of the parent in point of fuliage and fruit. It is fully equal in ougality to that excelleat ofd variety, and it has the great merit of ripening at least weeks later, although a melting kind; the tree is seven years old, but owing to its redundancy of wood wall 10 borne little fruit before this season. It covers a wit. feet hy 9 . and has trits season borne ; di zen uf font of Eluas:a, hang lueen studyins the recognised aniong these foum wim prots, ktown insom beroana under the name of F . terainda. The tim F. media of Loiselear he pronounces to be the plant toun by Professor Henslow, near Euttisham, is Camenhigesth Lie and which looks like a rampant considers it a variety
Fereign Hotang.-Among the foreign memoirs

suthor and de Flotow; it is about to appear in some vo Schauer, of Breslau, his elaborate monograph of the Pringe-myrtles (Chamaslunciee); it forms a 4 to volume of 120 pages, with i excellent plates; the anthor de lume of 930 pages has appeared from the pen of M . Auguste de ST. Hilaire on egetable Molphology, which classified after the manner of Engelman, and illustrated by 24 plates. We have also received a worlk called \(T\) é
foloyie \(V\) Veyétale, by M . Moquin. Tandon, Professor Botany at Toulouse ; it proves to be a treatise upon the new names to old ones: it has no plates, and ouly consists of 400 pages. M. Spach has been revising the than has attended some of his previous efforts in this way; he has reduced a great number of garden varieties among ut ras. B. Papuhtulis, pontica. pubescens, carpation. internelu. datarin!, irticetwia, and ethens:s ; he separates from the genus Detma some of the Imdian Birches under the name of Betulister; als) the Ahnus
firilis as a genus called Alnaster; and out of two Hinahywn tres. one of which is Betula leptostachya, he forms tilrd genta, under the name of Clethropsis.
nitnte of soda has becomp a fachimalle article for mat nure, it may be of use to the farmer to hnow what is good coarseground dirty salt, that it may be often mived with it. The price of common salt is not above one-tenth of the price of the nitrate; and if it answers for manure, the farmer need not throw away his monery ulon a mixture There is a simple method of testing the nitrate, not re quiring chemical knowledge; and that is, to throw a smal quantity of the nitrate into the fire : if it contains salt, it
will produce a crackling noise; if it is pure, it will burn very rapidly with a sort of hissing noise, and no crackling st all; and in proportion to the quantity of common salt Artificial Bread. -There has lately been prepalad Paris, by-M. Lassaigne, a kind of bread composed of icial flour, consisting of the following ingredients ; viz., potatoe starch. \(3 \frac{7}{3}\) gum in powder. and \(3 \frac{3}{\frac{3}{3}}\) sugar in powsaid to hase reambies rye-areal, and to be fit for the ood of anmals; it is ren expected, when the manner of preparing it shall tee implored, to beecme fit fur the use than.

doubt appears to be entertained that the facts of the case have beea much exuggerated, althongir the occurrence how happened at an insuspeciors moment, both as aftecting the safety of Mr. M•Lead, and as seriou-ly increasmeg the dangerous exritement on the fromtier.-Our Euromeau
 cecupy the attention of the Continental journals to the exelusion of ahmost erery tupic of dumestic in'erest. Our latest intedigence from Madrad is Lighi'y favomable to the existing Government, aud may, indeed, he cunsidered as deciding the fate of the insurrectuns. (ien. Dees) Leon, the chief of the Madrid rescilt, and many of the other generals compromised in the affur, have bean condemned and shot; and the energetic measures of the Regent have re-established the tranquillity of the capital. In the prosinces the imsurrectionary movement appears to have been checked by the vigorous proceedings of the Gorernment, and by the summary justiee inflicted on the leaders of the revolt; and the pablication of a despratelh from the Ambassader at Paris, conveying a disawnal on the part of Queen Curistins of wharteipation
movement, aichough regarded w. th come distrnst, pected to faciitate the speedy suppression of the rebel ion. - From France, we learn that the controvers raised in political circles by the spanish insurrection continues to be carried on with considerable animusity, the opposition journals warmly condemning the insurrection and its abettors, while the papers more immediately connected with the Court advocate the cause of Queen Christina, and justify the late attempt. In addition to the disclosures wade by the assassin Quéniset, the existence of an extensive conspiracy, carried on by secret societies throughout Franre, having for its ohject the overthrow of the existing Government, bas just been discovered. A large mass of evidence of this fact has fallen into the hands of the police in several of the most import ant provincial citips, among which Toulouse and Ljons are mentioned.-From Germany we learn that the Dulk de Bordeaur is almost entirely recorered from the effects of his recent accident; the terms of the convention be tween Rome and Prissia, relative to the differences of Co logne, liave been publisted, and the final settlement of the question appears to give great satisfaction throughout the Rhenish provinces.
At home, public attention hat been completely abworbed daring the week by the unfavourable character of our foreign nows; and it would appear that Government has decided on mating preparations for any unforeseen emergency, aince the utmost activity prevaitsin all the Dooleyards of the Kingdom, both in preparing ships for immediate service and in proenting the necessary supply of seamen. It appars that the late proregation of Parliament was merely temporary, her Majesty in Council having determined on again proroguing it to the 21 st Dec.

The result in these parishes, the whole of those which have been brought under the operation of relief of the poor to the extent of more than \(1,600,0006\).

\section*{fforcten.}

France. - The controversy raised by the insurrection in Spain continnes to be carried on with considerable animosity by the Ministerial and on journals: in importance. The progress of events in that country is regarded by all parties with great anxiety. Thẻ Journal acs Debats, the aeknowledged organ of the Court,
tinues to advocate the cause of Queen Cbristina, an jusufy the insurrection, anticipating the downfall of Espanteroand tae present Government ; whit the Opposition papers luully condemm bath the insurrection and its
abetors. The latter journals assert that sreat intrigue cisco de Paula from going to Madrid; and the assertion receives some confirmation from the fact that his Ruyal Highness was stopped at Bayonne. They also affirm that Queen existed several projects of marmaze for the young Don Carlos; a seennd, with the Duhe d'Aumale; and a third, whus the Duke of Cadiz, the Infante's son. The first is by some asserted to be expluted. As regards the second, Don Francisco, it is said, was not averse to the mateh, althonsh to the detriment of his own son, provided the august father of the other bridegroum allowed him a certain sum as a gratuity, in which case the Duke of (adiz was to centent himeelf with Quren Isabeila's sister: hut it is added that the stm lemanded raised too great a barrier to the accomplishment of this project, and seeing no terms cond be made, Don Francizco intimated his intention of setting out fur Spain, and accordingly left for they derive some force from the comeurrence of other circunstances. In connexion with this sulject it is stated as a fact, that Government is sendine troups to the Spanish fromtier, and tiat M. Devaus, Cul. of the 5th regt. of
the tine, had recerved orders to take command of them. the line, had recepvelt orders to take comnand of them
Accounts frem Toulon also infurm us that a steamer had recersed orders tol letre thai port for Barcelona, and that her mission is conceccet with the events in Spain.
The Afficir of Quénset.-Some further arrests of persans implicatea in tiee atempt of this absa-sin have been nasde since cur last. It is slated that every one of the prisoners already in enstody p-stively declares that they kiun mothing of Quenset or his attempet; but the persists in bis assertion. It appesrs sive corspiracr exivts in France. carrifd on by secere: so Civcirs, under dfirtent utles, and, in sumer resperis, with sithen he ex:sting fismenment. A mass of documentary and other evidence of this faet has fallen into the hards of the police in rarimes ! laces, but particular'y m the inipurtant towns and ctits of Tomonse. St. Etiemhe, and Lyons.

The Mrasery. - Rumbats have been at at = no time, which appear to rain credence in the armomatic circes, that M. Sanzet, Piesideat of the Ciamber of Deputies is ahout shor F to enior the Mmatry; that the racant Presidmey wonld be offered to M. e existing Government as deciding the fate of the insurrection. General Diego Leon, the chief of the Madrid revolt, has been taken, they were all under trial on the 8 th inst. The accomats from the capital furnish us with some admonal marticuars of the movemenf at Madrid on the evening of the 7 th: a summary of which will perhaps be interesting. It seems that eleven companies of the Princess's Regt., about 1500 strong, having been gained over by the rebel chiefs, succeded in forcing an entrance into the Palace, where they burst open door after door until they reached the Queen's bedchamber. Here they were vigorously resisted by a
small body of halberdiers headed by their commandant, altogether not nombering 20, and the fight lasted from - ght in the evening butil four the inest morning. Finally the Palace was surrounded by Espartero in person. and the Elanghter became fearful. About 160) only of the insurgents remained alive, and these finding fiight or fight alike hopeless, surrendered at sumrise. The leaders of the revolt, finding themselves defeated, saddled the Queen's morning ; they were pursued by the Hussars, under command of Espartero. and hare since, as stated ahore. bren most of them captured. Niver, add the accomis, were

which city seven battalions of infantry, under Generals Which city seven battaions with three battalions and three
Ayerbe and Zurbano, whe
s, uadrons of cavalry, had been sent. The latest accounts sy uadrons of cavalry, had been sent. The latest accounts
from Pampeluna state that Gen. Ayerbe arrived there the 12 th inst., and that he immediately had a communi-
cation with Gen. O'Donnell, the result of which was that the latter, whio had been for some time bombarding the
t.wn, by which much mischief was done, ordered the firing to cease. On the evening of the same day, ODor:citadtl and joined Ortig 'sa, who had 600 armed partisans under his orders. His intention was said to be to scour ment, organise fresh forces, and return into the citadel, He left the citadel under the command of Col. Azearraga,
who bad rader his orders a crmpany of artillery, the battalion which commenced the movement, and a company of young men, natires of the town. When leaving the citadel,
it is stated that he declared to the Captain-Gen. Ayerbe, that the citadel mould not make any demonstration during
his absence if his novements were not opposed, or if the tninn did root commence hostilities; but it is not said whe her the latter asced to those conditions. It now Wecrey oi Nasane, had been thoroughle acquainted with that his ustaral i. decisiny alone presented him from joinins. in the rebedioit. The insurrection, it is said, was in-
tended to have commenced on the 1 jath insto, but bad been burried on smmerrat premoturely in consequence of the arrival of Don Francisco de Paula. With regard to Vit tori, our accounts inform us that General Aleson and that city with six battalions, destined to blockade it ; and that Aleson remained at the Pueblo of Argenson, abont Andalusia, received in Madrid on the 8 th inst., announced that there did not exist the slightest cause of alarm for Barcelona state that all was quiet there; a battalion of Nutionel Cuards remained constantly under arms; and on the 8th insto, the Constitutional Municipality published a proclamation, in which, after denouncing the Christino propagating reports favourable to the rebellion of \(O^{\prime}\) Donnell shall be regarded as a traitor to his country, and punished with all the severity of th.e laws. The Provincial
Deputation and the Municipality deereed on the same day the establishment of a junta of public safety, which was installed on the morning of the 9 th in the hall of St
George. On the same day, the Alcalde of the town and the Commanders of the National Guard determined on forming two battalims of roluntecrs, for the purpose scomins tiae neyifooning mountans and repressing all were despathel is Macimad. Inumdation of the Thames.-On Monday there accurred in the river the hichest tith kuown f.r the last forty-one yers; and so serious was the inundation caused by it, dwellings along the banks to a considerable distance. It appears to have been occasioned by the long concinuance of heavy north-west gales, by the late abuadant rains, and the freshets caused by the accumulation of the land Whiters. The extruordinary apring tide of March 5, 1828 ,
which did so much damage to the contiguous wharfs, and forced down embank ments and walls, was at least eigliteen inches hater that. We tide of Monday, and much less destrucise itu its. ffects. It was not hish water on Monday last unta a fow mintates altor four, but before that time the where of then wei ins andes in all drections, and the to New Crane.  the miniw hint dore was very extensine ; all the wharfs were seriouly cuansed tenements and sheds were swept away, leaving te :owr minantants liouseress, and occasioning a
 whete of the lower part of Westminster was inoundated, and it is soid that not less than 3,000 houta in the neigh,
bournood of Weatoinstef-hall, the Abbey and Mubunk,
have suffered in consequence; and if Parliament had Houses in boats, as Palace Yard and the adjacent streets were under water, and the floor of Westminster Hall was
overfiowed. It is recorded that the Thames rose so high at Westminster in the year 12.35 that the lawyers were brought out of the law courts in boats; and a similar oc-
currence happened in \(170 \dot{0}\). On Monday these courts happened to be closed, or the lawrers attending them rould have been put to a similar inconvenience. On the
Surrey side the flood was still more general, and a great sacrifice of property has been the result. The whole of Holland-street, Bankside, Winchester-street, and the tho roughfares leading into the interior of Southwark pre-
sented the appearance of an extensive lake; the waters flow, ng woth great velocity, in some places as deep as fiye or six feet, and boats being affoat in all directions, convey-
ing the alarmed inhabitants to other places. It is stated that in this immediate vicinity alone, damage to the and granaries in Bermondsey and Forselyduwn, in which avertlowed. and many thousands of quarters injured. The whole of the streets extending upwards of a quarter of a hithe Church were also covered, and great apprehensions which the shaft by great precautions having been taken by the engineer, who rept the steam-engine at full play, no harm was done to
be inundation appears to have been most general and alarming ; and the oldest inhabitant of the metropolis, it is stated, never remembers so rapid and destructive a rise similar inundation would be experienced the following day, but fortunately these fears were not realised. Though the water rose in the morning very high, it did not overflow thich have been found more extensive than previous day, supposed.-All apprehensions of a recurrence of the flood have now been removed, and the inhabitants in the different localities that have suffered have been busily employed in repairing the damage done to their dwellings and goods. The dislodging of the water from the cellars alovg-shore, below bridge, was carried on with vigour for poor labourers. To prevent any further encroachments of the river, the owners of water-side premises and wharfs are making preparations to increase the height of the more from the at Wapping, which, it seems, has suffere New Houses of Parliament. - The works at these buildings are again almost in full operation, though none Meser old worlsmen have yet thought proper to return Messrs. Grissell and Peto having been enabled to collec a sufficient body of new men to carry on their contract The suspension of the works at Trafalgar-square and at Woolwich Dockyard, in consequence of the strike of th The contractors forwarded a communication to the. Lord of the Admiraity, excusing themselves for the unawoidable delay thus incurred in the completion of their contracts and received an answer that their Lordships wer perfectly satisfied to leave the matter in their hands, an that they rould use every effort in their power on the occa sion. The contractors were still resolute in their determina tion not to y:eld to the wishes of the masons; and the only solution of the difticulty appear ed to be, that the work men must forego their demand, or else other men would be either for the for the fire the ficulty, however, was removed on Wednesday, by Mr Crawshay, the iron merchant, who brought up, at his own cost, from his iron mines in Wales a number of masons, by whom the works were immediately renewed.-In con nexion with this sabject the following statement as to the progress of the works up to the present time may be in teresting. It is derived from the report of Mr. Barry
the architect. sent in a short time since to the Commis sioners of Woods and Forests:-The embankment wal towards the river is entirely completed. The superstructure of the river front, and a considerable portion of the north and south fronts of the building, are carried up nearly to one seneral level, about nine feet above the line of the principal floor, or about thirty-two feet above the level of the Trinity standard of high water. The founda tions of the lower buildings, towards the internal courts are brought un to the level of the surface of the ground The excarations for the foundations of the House of Lords, the House of Commons, the central saivon, and royal staiccase, and the royal gallery, are nearly completed; and it was expected before the interruption to the progres of the works which lias recently taken place, that the walls of those portions of the buildings woatd be carried Public Meetinas.-On Wednesday, the Committee appointed to carry into effect the resolutions of the Meet ing of Merchants and Bankers relative \(t\)., the Testimonial to the Preprietors of the "Times" newspaper, assembled subscriptiuns alreads amounted the reprted that the and, after some unimportant conversation, the Committee adjourned to the lst Norember

Emigration from the Metropolis.-The present disturbed atate of our relations with the United States does not seem Wednesday, a large American packet-ship lett \(\$\) t. Katharime' Dock quifa full of joods and pawengers. The
emigrants, 215 in number, were principally from K settle in the state of New York, Mang, it is said, to the neighbourhood of Ashford, there being 70 from the Wood Pavement. -On Saturday, at a meeting of the Marylebone vestry, a letter was read from the proprietors
of Rankin's patent wood paving, offering to lay dom the material for three years, or any other period, at annual charge of \(3 s\). per yard, instead of at once charging 16s. per yard for it, as proposed at the previous meeting Mr Dakin who offered to pare all Oxford real frum a wood at 10 s. per square yard, to he paill for as completed This latter proposition was passed over. The adjourned Rankin's patent was thern opened, and ended in its rejec tion, the present cffer being considered much more favour able ; it was afterwards proved that, in proportion to the of Oxford-street, the employment of this f.rm of woodpaving, though used where there was most wear and tear, years by 60b. Under these circumstances, the proposal Covent Garden Market.-On Monday a case of assault was tried before the magistrate at Bow-street, which, to the right of the metropolitan police to act in the marset. It appears that the watchmen are appointed by the Duke of Bedford, under the authority of the act of Parliament regulating the market, but they are not 3 worn in as
constables. One of these watchmen, named England Goodson, was summoned for assaulting a policemem. turbance having taken place at the corner of Great Russellstreet, and a mob collected in consequence of two girle fighting, he proceeded to take them into custody. They retreated into the market, and on his following them there, the market and would disperse the crowd, adding that he, the policeman, had no business there; he also pushed him away. The solicitor engaged for the defendant said, that the assault alleged was a very trumpery one, and the sum mons appeared to have been procured more for the parpose of raising the question regarding the authority of the Metropolitan police and the officers appointed by the Duke of Bedford. He then read the clanse in the act of Purbis ment, empowering the Duke of Bedford to appoint watchmen for the market, and said that it was quite evident that the complainant thought he had done something wrong, for he was doubtful about his authority. He certainly would not contend that the constables had not authority in the market, but he submitted that they had a concurrent jurisdictinn only, and the present case appeared to be carried too far. He would call a witness who was present
and saw the whole of the transaction, and he would prove that no assaalt was committed. This witness having been examined, stated that no assault had been committed; nod the magistrate said that there could not be any donb about the authority of the Metropolitan police to go into the market. There was no law to prevent their doing vo forming might go there or to any other public place in ples emploged by the Duke of Bedford was very limited, and it was not desirable that it should be greater than it is. In many cases they could not act; they were only empowered without a warrant to take persons into custody who com mitted any offence against the Market Act, or the rules orders, or by-laws regulating the market. It was bece limited Hey should know that facts, and said that he saw no reason to doubt the evidence of the complainath and if he thought this would be repeated, he would be sult a heavy penalty, but a small fine, he tables of their limite authority, and prevent anything of the kind occurng again. The defendant was then fined ten shillings, which he immediately paid
The Purks.-The Commissioners of Woods and Forests have published their annual report, from which the follon ing are extracts referring to the subject of the iaprosis ments made in the metropolitan parks during the par year. The Commissioners state, that in st. James aved and Parks the remaniog brick wall walks and plan tations of trees and shrubs have been made in the intenv of St. Janses's Park : and the vacant ground on the souk side of Birdeage Walk has been inclosed with iron raing and fenced gardens, planted with shrubs: whilie the same has been dune along a great fortion of the drise on the north side of the park. A memorial from formation of new opening into Hyde Park from Knightsbriidge, har Ma been presented to, and favourably recelved jesty, and Mr. Thomas Cubitt having offered to deth this expenses that may be incurred ter engagen ter und liating with the Dean and powers given by an Act of the present session, of this improrement.  party ecaning - - o Whe were dreorneil only two of the de

 cart,
bliged to be carried to a neighbouriug pubie-bouse, where he still remains. The second accident ocenrred soone terwards, near the wall of Holland-park, where another omnibus and cart came into violeat collision, but neither Fires.-I serkus fir
ane has ccourred at the George and discovered early, ind the intminster. It was fortunately without some diffolalty. The fluere saved, though no until conshierable damage had been done. On satoday a fire broke out on the premises of Mr. Pierce, iroum \(n\). ger, Jermesn-street, Piccadilly. It was, however, sun got under, aithough the damage done is considerahle. hatham. - The busiterons wather esperieneen during the last week has done considerable damage to the shuppiner in the river here. On Saturday ond Sunday it llew is complete hurricame; and on Mcriday afternoon there was last 40 years. Water such as has no: been hnown for the last 40 years. The damage alung the coast has been ver lying under water Bislupp, lard an island betneen Sheerness and Gillingham, contauing 110 acres, and having a large house recently erected on it, was entirels covered, and the house placed in imminent danger, to. gether with the inmates. At Gialingham the tide rose into the street upwards of three feet drep, and the inhabibants were conveyed about in carts. In this twmu the flowed into sereral warehouses, doing great damage ; and the gardens and marshes adjoining the emater several feet deep; the gas-works situated near bedded inkment of the river were also completely embedded in the fluos, and the consequence was that the fowns remained in total darkness. It is stated that a farmer living in the funcret of iloo has lost upwatds of 000 sheep, and that the extent of damage dis ne in the marshes of Cliffe, Iigham, and the Hundred of Hoo cannot be known, as the land still remains covered with water. Seseral market-gardeners, it is expected, will sus tain great losees, owing to the sea-mall giving way and burying their stock-ground.
Dartford.-In consequence of the great flood of water poured down by the rivers Darent and Cray, together with tee extraordinary high tide of Munday, the whole of the extensive tract of marsh land situate berween Erith and Greenhithe was overflowed, and presented during the early part of the week the appearance of a targe lake, the water extending in some cases for upwards of a whle in many instances surrounded with water, and the roads, or manor-ways, being completriy ianndated, rende:ed the passage to the higher grounds quite impractroble. For tunately tisere was but little stock in the marsbes,
Sheerness.- In mquest has bern he!d on the bodir of James Maxwell, the sedman why was drowned in the Wedling, during a scuffe with a warrant officer of H.M.S. After s lengthened investigation the gave is our last. following verdict :-"We find that the deceased, James Maxwell, was accidentally drowned; but it is our opinion that it occurred through the sll-treatment of William II ard, carpenter of Her Majesty's ship Wellington." The primartial for drunkenness and disobedience of orders.

Birmingham.-Some excitement has been occasioned n this town by a severe contest that has taken place on the subject of raising a Chureh-rate. At a meeting held for this purpose, it was moved, that a rate of \(6 d\). in the pound be granted. An amendment was then proposed that such a rate should not be granted; which. being put to the vote, was carried by a large majority. A
poll was demanded, which gave for the rate \(1 j 25\), against it 7.81. - Twn formidable bodies of coiners bave been apprehended in this town. On Saturday some policemen, in consequence of information, proceeded to a house in Adderley-street, and captured two men and a the prem ses being searchad ang coanterfeit money. On
 were found. The same officers then proceeded to West Bromwich, five miles from the town, and there apprehesded four men, all engaged in the same occupation. I appears to have been well known for some tine past that a large quantity of aduirably-ewecuted base shilinns. of but then, were circulating. not only in this town been made to find the residence of the coiners; but up to this time they had been unsuccessful. In the latter, as in the first sezzure, the capture was complate, the moulds, shells, \(8 c c\), being all secured. The whole body, it seems, ired in this town until within the last few months, when they left in consequence of some of their parry having been apprehended, and socreced themselves in a retired spot, where thay carried on their occupation unsuspected.
Brivtal - A few days since a box. contanning 3000 dol Riga, wid had been formand stolen from the Captain's cabin of a ressel lying in King Road. The parties supposed to have committed the robbery are the mate and two seamen. who have ahsconded. and contrived to get clear off with their booty, Laving hitherto eluded the rigulance of the police. One of the parties, it is supposed, is in Loondon, where there aptueary veyed, and already melted duwn.

Cambridge. - The Ker. Dr. Wondaworth has resigned the office of Master of Trinity College, which he has

Fere named as llkely to sncceed him, Sutital gentlemen supposed that the uppoimtwent would be conferred by the Crown npon rillis: Arel deaw on Thin in \(\mathrm{I}_{1}\), fasen by the well ; it has, however, betn olictaily announced that the election has fallen on Profoseor Whewell. ments ; and for this parpose a deputation waited on Tues-
day on the Denty Lieut.-Governor of the Castle, to ascertain if any assistance could be rendered by the Harbour Commizsioners. Mr. Jenkinson, the Depaty-Governor, informed them that everything that he, as a Harbour Commissmediately commuricate with the Dulse of Wellington on the subject.
Durham. - A few exseinnen ngn thee Rural Police Act was introduced into this county, and apwards of 50 policemen
appointed, with superintendent, inspectors, \&c. Since that time a strong feeling, it appears, has prevailed a_-twot

 The chairmaia ayquared of they nisiced to we Lseuptad Trom the operation of the act. Mr. Granger replied that
 in memorials from 156 townships, which were signed by
5,730 indiat,
nated, the whole of the townships in the county, and in some
 at a pullic nieetsay of the int.abstan's
a sinqle counter memorzal was presented. The magistiates on the bench appeared surprised that so strong a feeling the chairman mmared to lay the nemanals beture the macistrates at their meemge for the itspatcin of comety machintrates at their meemeng ther there would be a mere business on Wedmatay, when shere would atendance. It seems, howerer, that no alteration can take place these sessions, as six months,
a moti, n is required before it can be entertained.
Eton.-The Duke of Buckingham bass lately made a present of a bust of the late Lord Grenville, executed by
Nollekens, to Eton College; and his Grace has signified to the Provost his earnest request that it may be placed in the upper school. Lord Canning las also presented
the College with a hust of his father, which is likewise to be placed in the upper school; and Lord Guildford has presented a bust of his uncle, Lord North.
Hereford. We noticed in previous Numbers that the tower of the Cathedral in this city bad been found in such a dangerous condition, that extensive repars had become necessary to restore its stability. It appears that in the progress of these repairs some discoreries have been made Which furnish an interesting audition to the remains we
already postess of the architecture of the 11 th century. The principat disconery made, was on taking thortis the modern Italian wainscot screen, of the Corinthian order. erected by Bishop Bliss 120 years ago, enclosing the ancient remanins of the eaat end of the choir; and which was found to have completely shut out the view of the Ledye appears originally to have possessed surpassing excellence. It consists of a Norman arch, above which are three Gothic windows, and between the windows and the arch a تidth of the east end of the choir, and is very massive; it is decorated with feliage and ziy̧zar mouldings. It is supported by four columas, the cap, sti- heing li, shly enricherl with folbase and soctpture, the latter presenting
 posed of 24 umi-homan mentans. The three windows are of the early pointed style, and appear to bave been formed since the erection of the building by cutting away the Norman groining to introduce the Gothic, which at Ladye Chapel from tite high al:ar a beausisul effect is seen to resulc irm the preance of two columns, which stamt in a twe with ine centre of the Norman arch, and supput the eary Fogasib groining wach cinneats the nurth ank ar wh trasecp:s, the cay tal of ane being of the but both erected at the shame time. This discosery is considered to be map.atmat, as add:as to the prowis anteady obtained that the treavy sem-cireular -iorama areh has

Lewres.-On Tuesday a man named General Washer underwent a lengthened examination before the Earl of
Clichester and the bench of magistrates, on suspicion of being concerned in the supposed murder of a woman at Pingmer, Susses, about three years since. It arpears that an investigation into the circumstances took place i.aliag come ic light, the prisoner was apprehended, and June, 1838 , deceased, who cbtained a livelihood by bawk nearly the whole of the day, and on the following morning lor boutect and un acha eing hand by the sine of the
 held. It presented no mark of violence, and the jury

 trampled, showing that a scvire strate land talen itace
 mula wioneresien mith the wnan at the publie-hense were
 Beathond till attry mianicit. But the strongest point of evidence against him appears to be a pair of spectacles,
which he offered in exchange some time since. These foccialos maca produced; and a man named Smith, with whom deceased lived, stated his firm belief that the spectacles belonged to her, and that they had been taken from said he could produce a person from whom le had the spectacles, and resolutely declared his innocence: but the magistrates thought that there was sufficient evidence charee of wilful murder.

Lirezpul - The storm of sunday night was severely nelt in thas city. The pliers" were orerflowed, and the
not the honses near the river filled with water The streets were covered with chimneyrots and tiles hown from the houses; but no serious damage is stated to have been done to the shipping.-Considerable excitement prevailed in this city during the early part of the from America, ler aplearance being leokfd for withgreat anxiety, both on account of the inportant inteligence tx. pected to be brought by her, and becallse she was severa days bevond ber time. Sne arriren late on Tuesday even ing, when it appeared that the cause of her detention was heary gale which she exnerienced during her passag from New York to Halitax, during nhich she carried away her fore-yard, by which the chief-mate's legs were broken, the carpenter seriously injured, and other damage done.
With this exception, however,-6he suffered no loss, and made her usual quick passage frcmo Halifax to this port. Manchester.-An inquest has been held on the L.wies of the men who were killed by the explosion of the steam. builer on the premises of Messrs. Elce and Co., noticed in our last. Another man has since died, thus making eight ives that have been sacrificed by the accident. Those Who state; and one boy, it is sajd, is not likely to recover. After a lengthened investigation, from which it appeared by the evidence of an engineer, that the boiler was not
sufficiently strengthened to bear the great pressure put upon it, and that the party having the charge of attend ing to it was a youth ouly 17 years of age, the jury re turned a verdict of "Accidental death" in each case; at not of sufficient strength for the purposes for which it was used, and the pressure to which it was subjected. The jury also deprecated the practice of employing youths in the management of steam-engines-a practice which, they said, arose from \(\varepsilon\) desire on the part of the manufacturers to save the few extra shillings they would have to pay for the serwes of an experienect and practica piobect - dir Thelwel an \(=\) cuicuned in the eatinsive rubbty commated on the premises of the former, the particulare connected with

Heirs to the Britiah Throne,-It is stated in an elabo ate article on this sulject in the last Quarterly Reviero that the heirs general of the three Roval families of Plamtagenet, Tudor, and Stuart, are at this day those of the Duchess of Orleans-viz, Prancis Ferdinand, "hereditary

 Charles I, worn \({ }^{\text {now }}\) nowe filled the tarone of these realms.
Anliquities of Westminster. - Some interesting discoveries of puintings have lately been rade by Mr. Devon at the Chapter House, Record Office, Poets' Corner.
 both these opening anment fanturs bave been fund. The draminga lase heess reanin! in frow, or : a ethoug closely resembling it, on the flat spaces between the subjects relate to the life and apocalypse of the Apostle John. In the last-discovered pictares are the Seven Churches in the architecture of a very early period. The figures of horses, dogs, rein-deer, birds, \&c. are placed along the lower part of the picture in regular curcession, and are, it is thought, intended to represent the various
animals entering the ark. These pictures are very much damaged. The orthography of the legend, as well as the style of the painting, seems to indicate that the whole was done in the reign of Henry M., about two centuries after the erection of the building. Another discovery in this interesting building has also been recently made. The present floor, which is of wood, is found to conceal a characterised by figures in gold burnt in brick. The figures on the thes are very beautifuland vatious. Among them are the arms of Eagland, as bon, lions placed back tury, when the building was erected; lions placed back their wriste; David playing on the harp, musicians playing on the ricia, warious other parterns, makng altogether a very handsome ground-worts. The whole of this building, indeed, and its valuable contents, are of high interest. It was erected in the reign of Renry III., when it was used for the meetings of the Chapter of Westminster. Afterwards it was used as the Parliament-house of the first real Parliament in England; a fact which Loes not appear to be noticed by any Sur Chepher records, and تhs erected in the reign of Charles II., by Sir Christopher Wres. It is expected that further discoveries will soon be made, and that the paintings mentioned above form bit a small part of the pictorial treasures that will be rousht tallut.
The St.... \(l\) ish. -In the recent journals arrived from India sen tith on examning the bottom of the steamer Enterprize, the horn of a Saw-fish was found to have penerrated the copper ( 28 oz .) and the bottom planks, just above the bilge keel, in a lateral direction, and then to have broken short off, remaining in the bottom, and acting as a stop-gap against the admission of war for of the thrust; and it was thought that a leak must have been eatablished, had not the horn come in contact with a stout piece of timber inside the planking, and then broken off at about \(3 \frac{2}{2}\) or 4 inches from the point. The piece of horn, and a part of the timber in which it remains, the Governor-gemeral, mho, it is espected. will send it to the Asiatic Sucety, ts be face inth a simhl or curiosity presented :o thr itastitution some time s.nce.
Seisure of slaves.-Accounts received from Jamaica inform us that a captain of a merchantman just arrived there, had reported that when his ship left St. Helena there were seven vessels, with 700 slaves, at that place, prizes to her Britannic Majesty's cruisers. The last o toard fio dead slaves in sight of St. Helena.

WORKS WRITEX OR EDTED BY J. C. LOUDON, F.L.S.,
RC., AND PCBLSHEDON HIS OWN ACCONTT A
 Contents And ARravgement.
This Work is in thre divisions:- The Mistory of the. Introduction of Trees and Shribs into
I. The

 Mr. Portraits or Trees of from ten, all drawn to the same scale

 Arboretum Britannicum" for the first time, and it gives that
Work a decided superiority over all previous pablications on the
same subject. This division of the work ocupies Vols. V, VI, ame subject. The first four volumes of "The Arboretum" are illustrated but including also insect, fungi, eogravings of the leaves, of the natural size, of all the species of several genera, portraits
of remarkable trees or shrubs (such as Johnson's Willoww, the

 kinds of trees, when employed by the landscape-gardener, ins
combination with other trees, or with buildings; ground plans, showing the mode of laying out and planting arboretums, fruti-
setums, ericacetums, rosariums, \&c.; diagrams, showing trel.
 of forming fences of particular shrubs, of making buskets, ec., of willow-rods, of forming surface
sawing up timber for sale as practised in Norway, 2 cc . \&c. In
short, the work embraces every part of the subject of the hardy short, the work embraces
trees and shrubs of Britain.
Bayswater, near London
". We should herdly do justice to our feelings, did. duce in are tiat of thtonimal publications, and did we not refer to

 Mr. Louci n. The first viume contains the history, gengraphy,

 occupici plates of portraits of treen, and repreventations if
their lewes, and towers, and fruits. The very numerod wood-
 pant, are not confined to the representations of plants and their
ana:. but include landscapes and scenery of various kinds, witl \(\because\) ain trees form a characteristic feature: and insects and
 are recommended. In short, nothing is omitted, either in the descriptive or pictorial matter, which can tend to illustrate the his-
tory and uses of trees and shrubs; and when it is considered that thenc... include the mors vinianter maternats toro our thatps

 "A most valuable mass of information, party compiled, but
alo to a great eatent original." - Dr. Lindley, in Bot Reg.
\(n\) This book is one of solid value, worthy of a place in the itbrary oc Man mo cusut.uate Mr. Loudon on having foished his Hercuthe ernzase

nected with trees. "- Qumrterty Review
Editor of the 'Gardeners Magazine, and as the compiler of several useful Encyclopuedias. Hehas now presented us with ano-
ther work, which must have cost him far mole labour than any of
 the interest which mast prevail on the subject of planting; for no one, with Mr. Loudon's experience, would have engaged in an rahly confident of receiving something lize an adequationtum
ior couductiug, surig tour years, a publication which must have \({ }^{1}\)
required an outlay of little less, than ten thousand pounds. It为

 natural and economical history of the trees and shrabs of Great
Britain and Ireland; Mr. Loudon has, by the publication of these Britain and Ireland; Mr. Loudon has, by the publication of these
im portant, interesting, very useful, generally accurate, and heanitifurtant, ittated volumes, contributed to the literature of this
tifuly illustren
country a work not surpassed by any within the range of our
readiry a To the professional forester, the improver and embelreading. esthe profleasure-grounds, Mr. Loudon's work will
lisher of estates or pre
amen all occasions useful and accurate information, for there

The great mass of information respecting trees and shrabs collected together in these volumes, and the numerous and beau-
tifully executed wood engravings, render this work one of great interest not onty to the botanist and practical cultivator, but the
inateur and curcal reader. Mr. Loudon not only treats of the
 them; the fungi and mosses which grow on them; the diseases by wiich they are attacked; the berss which they feed, or when
makee their nests in them ; the superstitions respecting them; and their legendary

\section*{sATURDAY, OCTOBER 30, 1841.}

\section*{}

The manner in which seeds should be pacieed for convevance to distant countries is a subject upon which much speculation and no inconsiderable amount of money have been expended. But the results of expefience, although sufficiently satisfactory, are by no means generally known; so that we find the old bad plans of packing still adhered to with as much tenacity as if they were proved to be excellent. It is therefore of the first necessity that the public mind should be at length disabused on the subject, especially in these days of emisration, when the comforts of the settler depend so much upon the crops he may be able at ance to raise from the seeds he carries from his native country. The numerous inquiries addressed to us upon the subject, both in public and in private, sufficiently attest the urgent want of information.
It almost always happens, that if two methods of doing a thing are promulgated, the world will believe that which is most complicated, or most unlike a na tural process, to be the best ; although it is in all probability the worst in those cases where the functions of life are in question: for however mysterious the workings of nature may appear, they are always found to be less complicated, in pruportion as we become acquainted with their real action. It is only in this way that we can account for the directions formerly given and still observed in packing seeds: to bury them in charcoal, or in sugar, or in syrup; or to swathe them in bandages like a mummy, and then to smear the packages with melted wax ; or, finally, to enclose them in ressels of glass or metal hermetically sealed; of all whicb modes of packing it is difficult to determine which is the worst. It is not worth the space it would ocupy to discuss the separate reasons which led to these various methods of embalming seeds, because they have ail been proved experimentally to be bad; we may, however, advert to one point connected with ttis process. The great object which everybody seems to have aimed at has been the exclusion of air ; guided, no doubt, by the process which seems to be employed naturally when seeds are buried at great depths under ground. "In such instances the access of atmospheric air is cut off; therefore it has been supposed that this is the only condition which it is necessary to secure, in omer to suspend the vital energies of a seed. What bas, perhaps, tended to confirm this erroneous opinion heve been the stories current ahout seeds enclosed in mummy-cases for thousands of years, having germinetell. The newspapers abound in these tales. For erample, at an agricultural dinner the other day, a gentleman is sail to have produced a head of (orn, Wrich he affirued was the produce of grain extracted from a murnmy case 2,000 years old; and he considered its mummial origin to be indisputable, because it was Eyptian Wheat, a specles distinct from the common corn of England. The statement appears to have produved a great sensation among the assemblage, as well it might, considering that the corn deposited with the mummies was usually roasted. We have ourselves seen sevaral such instances; and the crafty Arabs, who impose upon travellers, deserve some credit for their ingeWheat purveying something different from common leat, when they sell visitors these antiques. No corbt can exist that the IW heat thus capable of germinating, if taken from mummy-cases at all, was put there first by the vendors themselves. It is, however to hese instarices that we may a-cribe the origin of Wrappings seels in wax-cloths, like the cerements of the diall, or soldering them up in metal buxes, or hermetally sealing them in glass.
grow at seeds buried at great depths under rround will and that seudreds of years is beyond all controversy; and that seems to be the only real evidence we posastested instansive semmal longevity. Other wellaitested instances are derived from seeds picked from eprections of dried plants; no case among which, howberadrefries the su-pended vitality of seeds beyond a in be other it. In the first case, air was excluded; surpose that the exclusion of air explains the power The rone seeds possess of living for many ages dis?useal causes of seminal longevity have been fuily dishussed in the Theory of Hortlculture, p. 1st, to the physiology of theader who is desirous of studying pretical facts of this question. In this place the advert to.
obvious that any contrivance which keeps out
of a packet of seeds the air of our atmosphere, will keep in the air of theirs. Now the air of our atmo sphere is dry, or if occasionally damp, soon becomes dried, if seeds are exposed to it in a room in which we
live. On the other hand, all seeds are necessarily damp, and they communicate their moisture t.) the air that surrounds them; the papers too in which they are packed are damp, as may be seen by holding such papers before a fire, when the damp will dry off in the form of vapour; and if this air which surany kind, it must always remain damp, because it can not be changed by ventilation. We may therefore as sume, that seeds in air-tight vessels are damp, but in situations frecly communicating with the atmosphere are comparatively dry.
long as seed-packages are kept at a low temperature this diference is of no moment; because seed cannot germinate, or, in other words, cannot revive from their torpor, in a low temperature: but let the temperature rise and the case is altered. What seeds require ill order to grow are moisture and warmth ; they cannot grow ill damp without heat, nor in warmth without moisture. It is the combination of these two conditions that is absolutely requisite. When they arrive in warm latitudes, or are placed in warm situations, such as the hold of a ship, the seeds in airtight cases, being surrounded with moisture, attempt to grow ; those, on the contrary, which are in ventilated packages, not being surrounded with moisture, remain unchanged.
The commencement of growth made by the seeds in air-tight cases is presently arrested, in consequence of the unfavourable circumstances under which it takes place, and the seeds not being able to return to the state in which they were before they began to germinate, immediately perish; but the seeds in ventilated packages, not having begun to grow, still remain unaltered.
The irresistible conclusion from this is, that the true mode of paching seeds for long voyages is, to put them in well-ventilated packages, and not in closed-up cases. Such dryness as seeds can acquire from expo sure to the air cannot hurt them, but will, on the con trary, tend to preserve their germinating powers.
o emigrants then, to seedsmen sending consignments to distant countries, to the lovers of flowers, whose friends in distant parts of the world remit them parcels, we recommend the strict observance of the following rules:-1. Let the seeds be thuroruthiy dried by exposure to the sun (not a fire), or in a dry cham ber ; this is of the first importance. 2. Let the papers, also, or canvas bays in which they are pacherl, be equally dried. 3. Let the smaller packages be tied up separately, and then placed lovely in canvas bags or coarse sacking, so that they can be readily disturbed by shaking up during a voyage. 4. Let arrangenents be made for these bags being keptin a dry cabin, or some well-ventilated part of the ship. To the latter, we know that captains make objections; but these are
merely on the score of expense. The payment of merely on the score of expense. The payment of secure the situation that is desired.

These statements, it is to be observed, are not made rashly, or from mere theoretical views of a very inter esting question, but from the experience of many years ; and we strongly urge our readers to follow the directions we have thus given them. We must, however, add, that there are a few sorts of seeds which require, or seem to require, a treatment ditierent from that we have recommended. To those we shall briefly advert nest week.

The only objection that can be urged to Autem planting is the liability of plants to be blown about
by the storms of winter, and that this does them more harm than if thev were exposed to the chance of dry winds in the spring. We atmit the force of the objection. But why allow plants to be blown about? If they are small, they will not be subject to this sert of injury; and if they are large and top-heavy, they should be secured to the ground by some artiticia in our columns of to-day; atwother is by fixiny three stout stakes in a triargle, the apex of which is steured to the stem with haybands; and in steny round a heap of stones piled over the roois effecually answers the purpose of keeping the tree firm aiad nteady in its
The reason why plants die after transplanting is. hat their leaves cunsume more sap than the roots can urnish: because the former are uninjures, and the a:ter are lacerated and diminished in number, by the oneration. Transplant a tree in the spring, and its leaves sprout furth sooner than the damage to the roots can be repaired. 1 ransplank forth, the damage done to the roots is repaired to a mreat extent; not indeed. except in Evergreens, by the formation of new roots, but by the formation of granulations called a callus, which act like roots, and in fact are the commencement of those organs.

SUSPENDED ANIMATION IN PLANTS. The following curious paper hav lately been puhlished by M. Pépin, superintendant of the liotanical Garden belonging to the Museum of Natural History of Paris-
The Orange. as is well known, is capable of resisting bad treatment for a long period; but there are no known examples which offer so couvincing a proof of its strength as the following. In 1833 I saw an Orange-tree in a garden in Normandy, whose trunk was if iuches in diameter at two feet from the surface of the soil, aud nearly two yards high before it branched. This plant had been neglected for a long time; water was frequently withheld during the summer, and there being no convenient shelter for it in the winter, it died back every year. The tub in and then the plant was remosed. Rediuced to aimast nothing by the successive loss of its branches, the trunk was preserved for two years in the corner of a cellar: after which the principal branches and roots were cut off nea their origin. The stem of this Orange remained in the same place for four years more, laid horizontally on the ground, to serve as a stage to set casks on; and during hese six years it showed no indication of vergetanng. A green, and in 1831 the trunk was planted with care in tub filled with rich light vegetable mould. In this stabo remained for some months, no more water being given to it than was strictly necessary; soon afterwards swelligs were seen on several parts of the bark, and a number of rootiets appeared about the sections of the old roots, from which new ones were developed. The trunk also showed some little productions of cellular tissue, from which new buds proceeded the following year. All those which were imperfect or crowded were rubbed off, and in 837 this tree had a vigorons wellformed head and fine foliage; and since that time it has continued to flower every year. I was so much struck with this recovery, especially considering the bardness of the wood of the Orange-tree, that on my return to Paris, I nade the late 1. Riché acquainted with it, and he mentioned to me a somewhat similar circumstance, that had occurred in Paris in 1762 or 1764. The Count de Charolans had a fine estate in what is now called the quartier Montmartre, the garden attached to which was magnificent, and kept with a great deal of care; and the Orangery, which was one of the finest of that age, contained 300 large Orangetrees. M. de Charolais was a great amateur, and be tere as beautiful as those saitles. . in the other royal gardens. Being exiled from Paris by tie Parliament, he, at his departure, Lharl all the doors and passages to his hotel closed, and the Orange remained immured in the Orangery without air and wate for the six years during which his exile lasted. M. Au debert, the gardener attached to the house, was ordere When M . do Charolais retureed, nor even into the garden of the Orangery were opened, and what was the despans of the gardener at findng the trees which previously had been the adhuration of everybody, changed to dry sticks dried up, and completely deprived of leaves ; in finct, to all appearance dead! Notwithstanding this, M. der harotais wished his Oranges to be placed in the sarn order that they were ber they were cat back close, cleaped, and those which were quite dead remored. A misture of good well-sifted eart was prepared, after which the trees were replanted in the same tubs; a thick stratum of potsherds being put in first Water was applied to the trees with the greatest cantion the branches which formed the head were either drawn together or cut off to within a yard of the stem, and th two or three years-old wood was cut back to the youn branches. This operation being performed, they remained for a year without exbibiting any sign of vegetation; but veloped buds. M. Riché, who saw them, aseured me that they were very vigorous, and bid fair to become fine trees.
When woody plants are placed in analogous conditions, they can, notwithstanding they are deprived of a large portion of their organs of uatrition. lise for a long time. It will be observed, that the trunk of the ()range which remained fo sereral years in the cellar, was in a more favourn ie posi tion for absorbing molisture by its bark. adala thos metically sealed. each phatedi in a spronte tulb, the earth in which, wutheat dabto was nuan drar thata the sol! and atmosplitere of the ceilar. I bave aiso mate experiments an amewhat similar situlicn as the callar of which I have sponen. I have pacent sems thete with o:
withont ronts, after bavior cut tiee brane.wes on three or four incies su length, and the routs in the samee un caner for without this precation all that I Lave that hase mot lived more thaz a year. The gituation was moist ratuer reated have developod adveastion and being afterwards replanted, tha, ! Bee grown we.
 oiner \(f\) miches in diameter. rromuced, bin:a- thar yrars in this situation, adrent.tions buds, ir ma Ni.kn youn leaves; but these young shonts were partiy destruyed during the winter by the moisture. T30 preces of Clmas ampestris, of neariy the same theckness, have grow during tive years. Two pieces of Rubinia psendo-acacia,
one \(\boldsymbol{i}\) incies in diameter, and the other \(5 \frac{3}{3}\), have both vegetated for three years, and the other \(5 \cdot 3\), have 4 inches in diameter ; so aiso the stem of a Whitethor 3 inches in diameter. Populus virginims and P. nigra

\section*{62 inch}

I have made the same experiments on some picces of Willow from I to? inches in diameter; they aso pro-
duced new buds. Mureover, there formed, every year, no duese newns. at intervals, productions which then dried down to the swod. and were sonn afterwards covered with
fungi and mouldiness; but notwithstanding this, buds fungi and mouldiness ; but notwithstanding this, buds
were dereloped on the green parts, and these continued to grow, like the preceding.
In establishments where the propagation of exotics is carried on, it often occurs in managing cuttings, that interesting physiological facts take place. Adventitions buds are developed under singular cercumstances, on the to propagate the species. In nearly all our trees there is a great number of buds which often remain stano nary roots, the stems, and at the base of the leaves; they are found in the con and points of the celluar tissue and in the medullary prolongations. These buts are pre-
served for a long time, if ever so small a vital point is left, served for a long time, if ever so small a vital point is as well in the roots and branches as in the leaves; off, they are not long in showing themselves bereat as may be seen in Willow trigs. I have frequently
observed branches taken for curtings, and placed under favourable circumstances (as on hotbeds under bellglasses), push furth adventitious buds for a year or two, abundantly in a very short time, as may be remarked with same tendency. There are others which root at once, but remain for several years without developing any buds, and yet the routs may bave filled the pot in which the cuttings
are planted. I have seen some on which the buds have not shomn themselves for 10 or 12 years after planting: of this the leaves of Hoja carnosa, and several Aloes, furnish examples. Finally, my colleague, M. Neumann, presented in 1840 some interesting facts to the Royal Horticaltaral Society, respecting the propagation of Theophrasta, by leaves cut in halves.

Among hardy trees, there are many whose cuttings are ant a sigorous buds during the year, but which do the branch dries up for some distance; the desiccation at length stops, and it is near that point that a great number rudiments of little roots destined to absorb moisture, and the juices requisite for the development of young branches
Roots have also the power of producing adventitious
uds, as I have observed with roots of woody and herba ceous plants, which have been buried siz inches to a foo deep; they remain there alive, but without regetating, for a longer or thorter time, after which they develop stems. It appeared to me important to prove this, so I made a quality ; such, for instance, as those which may have beea broken when a tree was taken up, and covered over again ample, when the trunks only were destroyed, and the reots healed over and afterwards produced fresh stems. These nist and cultivator. Pieces of roots buried at a sufficient depth, sn as not to be influenced by the air, have been able to live withont decay, and to shoot again after a safficient time without exhibiting any appearance of vegetation. is already known that roots cut into trancheons 3 inches to a foot long, and planted like cuttings in pots, whether in a hotbed or in the open ground, sometimes develop stems,
or adventitions buds, a year, 18 moonths, and often two years after being planted; but in this case the upper portion is out of the sonl, or at least on a level with it, and in contact with the air; whilst the other receives the humidity and heat which assists in the development of the first small fibres. M. Boré, in his relation journey in Exypt in 182, says "in risiting the estate of village of Kunt), a stock of a Locust tree Ceratenia siliqua), which he said had been planted abjut 300 years. The tree was cut down by the French, during their in-
rasion: its routs remained in the earth, and gare no indications of vegetation till the Pacba caused the earth to be broken up about it in 1326 , and a well to be sunk, the moisture from which inducal it to throw up three hranches, almost 12 incies in circumference ar four yaras high, and buis seemed disposed to stow themselves on the brancies. Thus thes stuck remamed buried for 30 years witnout perishns. and probatiy pathout ceasing to increase in size. This surprisinf fact may be placed by the side of that
mextioned by M. Dutrochet of a kind of Pine, whose root Year after year produced new layers of wood for 90 years, without any existence of a stem. M. Gaudichaud has also made known a remarkable instance of the duration of dried three jears in a herbarium, and even after being placed in anf oven, furnished cuttings, by which it has been propagated in the Lothouses of tire Museum of Naturai Proonies, remain eative, and do not roduce tops wher They are cut, except those belonging to the Chinese teomes. routs, uepriveci of thenr buds or eyes, as those of ijuhinas; been cut into several pieces. There are angh they have ennial grasses whose roots are preserved for more tham a year in the earth without emitting roots. The same takes place with the rhizorass of many Asters, Solidagor, Cine-
rarias, and Helianthuses, and a great num
plants which remain buried for a long time.
Analocous facts are remarked among succulent phants, and als, arnong several genteral fors years -ome shoots of with ut perwitinus, which, left in the free near new roots with at arter or earth, ronducel and were thus preserved fir a year or two before they dried up. During the firs three years the-e shomt- grew an inch or more every yeas
for two years afterwards they lived, but did not grow. have seen mans Cactus cuttings, which remation, although four sears without any appeazance of vegetation, although the its in wheh they were plated were filled with roots.
I have also preserved sioots of Cactus phyllanthoides, wiich every year formed a leaf, or rather a portion of stem, at the extremity of the old one, and on these stems I hav
exen seen two flowers blus-om. After this the old shoo began to become yellow, then dried, became tough, an those which had grown upon it gradually perished. bud sc apparent, that it oprened six months after, and it produced a truit, which ripened a year later. During this time tie same shoot produced a new one, which ived two shoots of Stapelia asterias," variegata, cæspitosa, and hirsuta, which have all produced flowers. Sereral Aloes disposed in whoris, and forming buds along their whole length.
In conclusion, M. Pépin gives a list of plants, fragments of whose roots have remained huried and torpid for Beveral years. The more remarkable are the candians canadensis, 10; Locust trees, 10 ; "'lmus campestris, 6 ; Dodartia orien:alis, 8 ; Euphorbia dulcis, 6 ; Hoffimannseggia falcata, 10 ; Solanum carolinianum, 10 ; Puimonaria vir ginica, 5 ; Urtica cannabina,

\section*{COTTAGE GARDENS.-No. XLI}

Efery one the least acquainted with a garden must be ware of the great advantages which arise from the judicious application of manure, and the adoption of a system of cropping that will admit of a certain portion of the this time, and exposed during winter to the action of the frost and rains. Where the soil is light and easily worked, this is not of so much consequence ; but where it happens to be of a strong or adhesive nature, the ridging of it now rendering it friable and mellow by the time it is required for cropping in the ensuing spring. Every part that now becomes vacant should, therefore, be w.l. thrown up in parallel ridges of about eighteen inches in width. The Carrot and Parsnep ground may be treated in this way immediately after the roots have been taken up; and, by a little management, it might be so arranged which have a small purtion of the garden riage-trenched, following manner :-From the end of the piece of ground where it is intended to begin, take out a trench two spades deep and twenty inches wide, and wheel the earth to the opposite end to fill up and finish the last ridge. Measure off the width of another trench, then stretch the line and mark it out with the spade. Proceed in this way until the whole of the ridges are outlined; after which, begin at one end and fill up the bottom of the first trench with the surface or "top spit" of the second one ; then take the "bottom spit" of the latter and throw it in such a way By this means a portion of fresh soil is annually brought on the surface to supply the place of that which the crop of the past season may have in some measure exhausted. manured, hike that which is ridge-dug; but it will require a good costing in the spring. Attend to the late-planted a good coang in the spar a litle earth to such as appear to want it. Prune Gooseberries and Currants in the manner we described at page 13:3, and reserve some of the straightest and healthiest shoots of each for cuttings.
Bees.-The method of operating on a weak hive and uniting it to a strong one, as detailed in a former Number, n. 612, is highly deserving the consideration of every one dent thed in the management of bees, and we are confihis advantage. and amply repay him for the little trouble he may take in its execution. Considering how casily it is accumplished, we are surprised that the plan should be so seldom practsed in this country, although made known in 1429 by the publication of an admirable little worh entitied "The Bee Preserver," as translated from the French of M. Jonas de Gelien; who observes, when treating on this subject, that " in doubling the population
it might naturally be expected we must also double the quantity of food ; hat, to my great astonishment, when weighed the hive again in the spring, 1 found that the united swarm had not consumed more than each would hare done singly." Repeated experiments were alway attended with the same result. Instead, therefore, of heepiner a number of weak hives, or suffocating such as are supposed inctum', of surviving the winter, we would invite attention to M. Gelien's plan, by which the honey may easily be obtained without sacrificing the bees, and the latter transfored successfully to other hives that have plenty of food. In operating on old hives for the purpose of depriving them of their honey, the same process of fumigating the bees should be resorted to, instead of the mure commua one of suffocating theme with sulphur. The latter practice, we trust, will in timee be discarded, when
it is found that the former possesses so many advantages
over the other, not the least of which being the saving of the bees to prepare for
he folluwing season. he entrance to exch is contra bee at a time. Keep them as dry as possible, as nuthing is more prejudicial to bees than wet, or a damp situation.
\(-M . E . H\).

HOME CORRESPONDENCE.
Ke eeping out the Frost-lt is one misfortune attending fact, that a picturesque image takes stronger hold of most minds than the closest train of reasoning. Thus the per sonitication of cold under the figure of the well-known hero, Jack Frost, has done more to elevate a mere negaane principle tho would ewer have bee effected by theories of positively cold emanations. Hence it happens that few truisms require to be more frequentl enforced than this: that keeping out the cold means keeping difference, is shown by every day's observation. To take only one instance for example: in the Gardeners" Chronicle of the loth inst., a correspondent of acknowledged skill poetic phantom Jack aforesaid, proposes to maintain th解 a fruit-room by placing hot-water pipes in the hollow formed by double walls, the object being, as he says, to keep the frost from penetrating. If, indeed, cold were the active insinuating power shadowed forth by its personal representative, there might be good reason, on the authority of the well-known maxim, for resisting the at the instead of in the hollow space between the walls. When coll is regarded as an exterior force, as a pressure from withont there appears, it must be admitted, a sort of propriety in placing the heat between the two walls, it looks like de-
fending the outer line of fortifications; but where the object is really not to exclude a foe, but to preserve a friend, the whole system of tactics should be different. To drop metaphors, however, which bave been shown to be misleading, why, it may be asked, should the artificia! heat employed to maintain the temperature of a fraitroom be refused the protection of the double walls and the enclosed space between them? The heat imparted to
the hollow formed between two equal and similar walls must obviously waste more than half its virtue upon ihe desert air. If we were applying a mere heat retainer, as thatch, for instance, instead of heat itself, the case would be quite different; it might be well to place the thatch should be placed under the same protection as the thirga which its influence is to be exerted; that is to By, within the double walls; and then doubtless less than hall the fuel would effect the required purpose. I am sure that Mr. Beaton will, as he can well afford to do, pardon thene remarks on his views of the economy of heat.-A.

Transplanting the Holly-On looking over some of the early Numbers of the Gardeners' Chronicle, I found it stated at page 13J, in reply to the inquiry of a constant
reader respecting the best time for removing Hollies, that "if shifted in wet weather, as, for example, at the beginniag of the July rains, or at any other period when a week on ten days of luil, damp weather can be calculated upen, they are certain to succeed. The season least exposed to risk is, perhaps, the end of autumn, in the dull, damp part (October or Noy the worst season is the sprime. Now, as this is a disputed question, I think it would be highly interesting to many readers of the Chronicle if some of your correspondents, who have had practical isperience in this matter, would communicate such of \(\mathrm{H}_{\mathrm{l}}\). they may have noted in reference to the plantig resuts, lies at different seasons of the year, and individuls interested in the subject to draw their own con al from the details that might be thus elicited. It is mit this riew I send you the following particulars of an experiment that was made at this place in the latter entions, ebruary 1840, and which, contrary to my expes clearly has been attended with the most complete proving, in this instance at least, that altworst seasor for ralla-received opinion of spring being if tak up vith planting Hollies may be correct, sill, the time abe care, they will succeed. Being engaged at the time aned mentioned in opening a part of the park wis hilerb to be intercepted by a belt of large Scots Fir andersed and among which were some fine Hollies as undernd I was directed to remove the latter to another place ad joining the approach, where a mass of Evergreens hing about to be formed as a sort of excuse for the road heing curved in its present direction. Having always undersion of there was great difficulty attending the tine, wases tremely doubrul of moving some of these, and the nore remely doubtfur or movis sore them beforebans. so as there was do time frepating my opinion, anc therefore took the liberty or stating my ap feeble chance there appeared to be of their taking root in the exp, sed situation where it was intended to plank , of nuch expense and labour were not cunsiuered that a trial showid importance, it was ultreeded or not. Accordinsty. orders rere given no: to cut down the Hollies, but to mahe wo parations inr transplantivg them. The smil in mikiculd grew was somethng of ais ahiesive luan, isirg ond the yellow dlayey subsul, into which it was stluom the nore roots had pentarated. This, or co anabled the men, by favourable for our operatione tree at a sufficient disance from the stem, and clearing away the subsoil, to get saci
aken up and removed with as large a ball of earth as it as pelerably mell. whilst in others, eysen with the sucreeded care, we had to submit to the loss of a large porgreatest care, ball by the time the trees reached their destination. The nachinery employed for their transmission was much the same as that described and figured in the "Planter's Guide," with which almost every one is familiar. As soon as the pit was prepared, a cart-load of wellrotted manure was mixed with the soll, and a layer of four eches deep. The tree was then deposited in its place, and the earth filled in and trodden firm until within about five or six inches of the top of the pit, when it was levelled and means adopted to secure the tree from being blown bout by the wind. These consisted in driving three sharp-pointed stakes, from three to three and a half feet long each, into the ground in a triangular position, and afterwards laying over plank, of a suitable length and thickness, so as to meet each other above the stakes to which

they were nailed and made fast, in the way represented in the accompanying sketch. The whole was then covered
with the remainder of the earth, and turfed over when the pit had been filled to the proper height. For several weeks after planting little or no difference was observable; but as the season advanced the leaves gradually began to change thought, about to be realised. Towards agtumn, however, fresh buds made their appearance over every part of the stems and branches, which were shortly afterwards followed by leaves; and there is now every prospect of the object for which the trees were planted being speedily attuined. Oat of forty Hollies composing one mass, many of which are from eighteen inches to two feet in circumference, and from fifteen to twenty feet high, ouly three
died. Between thirts and forty were planted in two other died. Between thirty and forty were planted in two other so that from this experiment it would appear that the average which fail, when Hollies are planted in spring, is about one in ten. The experieace of Mr. Mc Nab, of the Ediaburgh Botanic Garden, as detailed in his "Hints on the Planting and General Treatment of Hardy Evergreens, \&cc.," published some years ago, and who may be prefer "late in autumn, winter, or very early in springthat is, any time from the middle of October till the middle ground are favourable;" and further, that, unless from the middle of June to the middle of August, Evergreens of all sorts may be planted at any other season of the year with nearly equal success.-M.E. II.
On Storing Apples and Pears, aad Grouing Stratc-Chrries-(Written after reading the observations in the Chronicle upon those subjects). If you wish to mature sweat, and your object will be attained ; but should you desire to leep your fruit a long time, place it in an underor sland room, one apple or pear deep, upon shelves of flag or slate, or any other material which will rapidly conduct andy the heat generated in the fruit during its sweating, decay. Do pou aim it fermentation so as to postpone its decay. Do you aim at growing a luxuriant crop of leaves
on your Strawberry beds? then manure them without mercy as advised; but if fruit should be preferred to leaves, you may get an abundance of it by deroting a moLerately rich and rather stiff piece of ground to such gnoud bearing surts of Strawberries as Keen's seedliog, Groveend scarlet, and Elton seedling, provided you plant withOus manure, and, haviog planted, permit the ranners to macer the bed without let or hindrance. If after three Or four crops the plants should show signs of poverty, you fruit be desired, fome manure upon them. Should early begrown, with the plants 8 or 9 inches apart, on a steep aniny uank faced with rubble-stones or pieces of brick fical ane natural bank can be had ennveniently, an arthmihne would be readily made, the back part of which might be planted with the Elion seedling, which would Broiog the Strawberry season till the begmuing of August. Mratt's Brituding this subject, I wish to iuquire whether ing observed the Queen is as fruitful as Myats s pine, hav in altogether silent about its fruitfulness. - Richard berrer. Gard has all the appearance of being a great growing Strawberries without manure.] atadard and asother of the late Mr. Knight's Pears, called Moccas,
has been produced here this year on a standard grafted three springs ajo. I mention this as an additioual teresimony to those already given by others as to the menit of these varieties ; and I will add at the same time, that by these and the many other productions of the late Mr. Knight, the public are and will be greatly benefited. I ish ther would show their grati ude by dedicating to his memory a plot of land oceupied for the purpose of raising new varieties of hardy vegetables, roots, and fruits. Such an institution is much wanted, and wonld form a mode of
expressing a nation's grateful feelings towards the deceased expressing a nation s grateful feelings towards the dereased Horticultural philosopher much superior to any other
that could be devised, because the establishment would have for its object what was dear to him whilst living, and the prosecution of which gave him great delight.- Richart Tongue, Furton Cottage, near Lameaster.
Bees.-In page 197. Dr. Beran gives an interesting account of a mode and its success of heeping Bees during winter by interment. The plan is excellent, but not novel Thinking it may he interesting to many of your readers, I ake the liberty of furnishing them with a plan, and its success, though a little dissimilar from that described by Dr. Bevan in his article aiready noticed. The first experiment was made on two hives in the autunn of 1831 or 1832, the quantity of honey contained in each having been ascertained as nigh as circumstances would permit. Both hives were then placed on a stone floor in an open shed, and were envered orer with leaves to the depth of about two feet. Here theyrremained for five months, and were then stricated. On examination, the bees presented an aptaken place in the honey. The day being very fine, they were removed to a warm situation; only a few minutes elapsed before they presented the animation of a midummer swarm. One of these hives searmed on the 28th f May, and the other on the 8th of June, the same season. To test the practicability of this system of wintering bees, 26 hives were subjected the following autumn to the same reatment, and two were entirely divested of both their honey and comb before being buried. All of them existed over the winter without any provision whatever, and ever since this plan of preserving bees during winter has been practised with eminent success. Not only did these experiments determine their own economy, but estabished ing recourse to food if kept in a temperature low enough to reduce them to stupor; and puts an end to the clamour to reduce them to stupor; and puts an end to the clamour during winter.-Yeoman, Oct. 1841
The Vine, fre.-Perhaps, as a subscriber to your journal, you will allow me to puta a question or two to some
of your correspondents. In the first place, as to the maargement of the Vine. Mr. Appleby says "the best mode of pruning the Vine is undoubtedly the spur system ; now I beg leave to say that many years agn it was doubted by me, and still is. He says he will not enter into any the liberty of asking him if he has ever seen my observations on the Management of the Vine in the Horticultural Transactions or in either of my books; in each of these have stated what I conceive to be the laws of nature which govern and determine the growth and productions of the ine-can he prove that I have been mistaken? You desire a sample of Pears and the soil they grow in ; now have given it as my conclusions from a great number of experiments and observations, that the growth and pro-
ductions of plants are deternined by the food they are supductions of plants are determined by the food they are sup-
plied with : and if this be so the soil is but of secondary plied with : and if this be so the soil is but of secondary consideration, as it regards the quality or St. Germain results of experiments, I can state. that a St. Germatil Tarch, which I have, produced deliciously Vinous another year the fruit would not keep over Ducember and was without vinosity, mere sugar and water; another year was full of a stony core, and good for differences were occasioned by a difference in the nature of the food it was supplied with. Then, again, as nitrogen is a mecessary constituent in the food of plants; but it was always thought that the only certain mode of discovering what was best adapted as the food of plants, or what constituted the food of plants, was to ascertain of what they were composed; and different parts of plants wepertion of view analysed and their elements, and che proporion neluding Davy : found in any part of many plants, but in small quantity in gum. Then, if nitrogen does form an important part of the food of plants, how is it disposed of by the plant. would also beg leave to ask your chemical correspondent if he will oblige me by stating the proportion of hydrogen gus in the leaves of any phant of which the aualysis of the wood is guen : for chis does not appear in Duye nor in
 is of the utmost mportancee that chas shiction an plants.be able to sum the proces it asse. H. Whit turn to the Forks of any modern chenists, he w is found universtlly in luing vegetables, and in treat abundance wi:en grawing. The writings of Payet, Louss sinzault, Liebig, Daybeuy, and othy
Clubbing in Broccoli.-I can bear testimony to the effeact of Mr. Hislop's receipt for the clabbing of plaits of the Cablage tribe. I was applied to a terw rears ago br a neighbour, in the manth of Juir, to teil hira what to
 Broccoli : he said he had done so sereral times, frat that it had always failed, frum haring clubbed. I advised him to
lat on a goud coat of manure and have it dug deeply, and then to procure a bushl of erey line. lay it in a heap, pour some water on it, and corcr it with lifter, and the to take a large dibbier. or dihite, suct as is smmetimes used to plant lotatoes with, and mathe harge holes, and as soo as the lime was siaked to fill the hates with it the lime),
and then to plant the Broceolh. This was dune precisely, Ine conscquence was, every plant came to perfection I will just observes it is my pridico wever to water any of the Catbage tribe after planiting, not exen in tie driest seather, as it occurred insect chooses moist ground in which to depmit its tgg consequently, when a piece of ground is phated, and the plants watered in. a must convement flace is propared for the egy close to the plant which is to becon.e \(n\) s ford. When 1 first allopted this methoct in a very dir samamer
 indeed, so they appeared, but in ahout a week or tea days here and there a plant would becin to pmich un its ears and eventually they all began to exrow. I hare ach om hai the trouble of mending a crop except this season; the soil having been hept constantly moist, the masect had fre liberty to work, and instinct leads it to place its ulfspring upon or near to the plant that is to become its food. have lost only one cir

Conservatories.-In front of the conservatory at Thick thorne-bouse, near Norwich, is a curvilinear glazed verandab, supported on ornamental cast-iron pillars, round which creepers are trained. The effect is good, and as the sides are sheltered it affords a pleasant seat. As the house is primeipally used for plants in bloom, the portion of light

taken away from the front is rather advantageous to the plants in flower, and from the shelter afforded, air is conveniently admitted at the front sashes; the floor makes a onvenient stand for Geraniums and other greenbouse from heavy rains, \&c.-Dodman.
fere good Dahlias.-Having a numerous acquaintance who are subscribers to the Chronicle, I beg to forward for their guidance (as also for that of any uninitiated amaeur) the names of a few good Dahlias sent out this season, as grown by myself. There are, doubtless, other varieties quite as tine as those enumerated, but bout having cultivated them, I am unable to speak practically of their respective merits. I have also several new ones which have not bloomed enough to enable me to give any fair or decided opinion, and I therefore refrain fram mentioning them altogether.-Charles Knight, the Villas.

 ticulariy dectitini in this respect. There is obvinusly another , destion infulted in this inquiry: it is, what are the errian sifns of deatis in such cases, and ho sore such appearances to be relied on? Mr. R. speaks so decidediy
of the brown, dry, withered condition of his leaves, that one cannot doubt that they were in that condition posed leaves cannot recover. In conclusion-for I do not mean to renew the discussion-I beg to offer my his Bay-tree, but it is obvious that a personal inspection now would be nseless. Mr. R. does not need to be re minded-I seak of and danger of a suspicion of discourtesy-how fallacies creep into investigations of every sort, and that very accurate lected impressions, to-believe in facts which afterwards turn out to be false. Mr . R. believes himself to be in
possession of a true fact, and you thinls he has just grounds for so believing. Repeated observations and more similar facts are required to invalidate your concla-sions.- \(P\).

Paullownia Imperialis.-It would appear, from your last Number, that some persons are offering Catalpa for Paulloviai imperialis; they are, however, very different
foliaged plants, so much so as not to be mistaken for each foliaged plants, so much so as not to be mistaken for each
other after being once seen; but I very much question Whether Paullownia will ever prove in this country equally valuable with Catalpa as a hardy ornamental tree, and hardy. Those I saw in Paris were sheltered the last Winter; but should it prove hardy, the leaves of plants those of Catalpa; therefore the foliage will not constitute s distinct feature in our scenery. Some of the young these strong shoots had very large leaves, but I saw none two feet long. The greatest misfortune, however, is the beginning of October, the young thyrses of flowers were just discernible from the points of the shoots; these could not arrive at perfection before winter. If this, therefore, is
the plant's habit when placed in a sheltered situation in the favoured climate of France, we can hardly expect to see it flowering in our cold ancertain autumns, particularly here where we have frequently frost in August and September sufficiently severe to cheek the flowering of a softplant will, however, very shortly be known to us, when they thall be made public; but in the mean time its high price cannot long contina--it being equally easy of propagation with the Dablia by cuttings or suckers from the

On Removing Large Evergreens.-Autumn being the neason that gardeners generally prefer for removing Ever greens, I beg to offer the results of my own experience.
Having several Arbutus killed with the frost last winter in the most conspicuous parts of the garden, we waited till the latter end of April to see if they would recover, but finding they did not, my employer wished to have them replaced with some large handsome Portugal Laurels, autumen, I reinctantly comphied witio his wishes. In the first place. I caumel the holes to be made very large, then put five or sis barmetwads of ohd hut-bed manure inty arch lule, after that some leaf-mould and sand, and the poured water into it till it was a complete puddle, so tha When the ball of the plant was put into it, it sunk down was then levelled all round the plant, and the weather being very hot at the beginning of the summer, we gave them some water three or four times. They began to grow immediately, and they have made three times the progres that some we removed, three years ago, in the month of and Hollies at the same time with equal success, whil Evergreen Oaks that were transplanted three years ago in October have never properly recovered. From this I am persuaded that spriog is the best time for removing large Evergreens, as they begin to grow immediately, and get that app the whereas when planted in the autumn they are fise or sir months loose in the ground without any support at all.- Robert Towers, Tendency of Plants to seek Light. -The experiment of a correspondent, recommended at page 686, it is quite obvious, must be inconclusive unless followed out by a donble series of plants, to be treated-the one, as suggested by "A Correspondent," to be kept constantly covered by inverted (opaque) funnels, having an aperture at the top; the other, by funnels of exactly corresponding interior dimensions made of good crown glass. The form ahould be that of a pyramid in both cases; those of glass being closed at the angles with zinc, as offering in the lead. Another condition is requisite in the conduct of the experiment; that hoth series should be placed in the shade, along with the uncovered plants, as mere matter of curiority. It is quite evident that no comparison can be instituted between the covered and uncovered plants, with a riew to setting the question at rest ; for there cannot exist a doubt but that the plants, in bock instances, to be treated as here hinted, would attain to an unusual height by being so covered.-I. H. S.

Gooseberries.-The proper season for planting Gooseno time should be lost, as of planted "recommends that new roots before the frout seltain in. The best method of planting is that described in \(p\). 53. excepting that a small quantity of fine earth should be placed ong the roots, and afterwards a layer of cow-dung. In the following list
twelve varieties are named in each class which have obtained the greatest number of prizes during the last season: -Wartr-Eagle, Tally-ho, Ostrich, Freedom, Commek,

Fleur-de-Lis, Philip I., White Swan, Queen of Trumps, Thumper, Peacock. Keepsake, Providence, Green Prince, Overall, Turnout, B mksman. Invincible, Bumper, King William, and Weathercock. Yellow-Leader, Gunner Pilut. Tro-to-One, Broom Giri, Teaser, Duck-ming, Dub lin, Goldtinder, Birdlime. Catharina, and China Orange. Red-C'ompanion, Wonderful, London, Lion, Conquer ing Hero, Lion's Provider, Guido, Atlas, Briton, Twig'em, Cimmander, and Plumper. The new seedlings going out this year are, Whitz-Bayley's Fair Helen, Boydell's Bloomsbary, Cherry's Tass Parker, and Oldham's Coppice Columbia, and Livesey's Railway. Red - Kikblam's Lord Maddieton, Fishi's Peacock, Brotherton's Magnet, and Boute's Wallace.
To Destroy H'orms in Lazens and make the Grass Grow,-We were first recommended to strew soot, then ous for nitrate of soda; and, lastly, the ammoniacal liquor of the gas-works is strongly recommended. This is per II. D. [Soot, wood-ashes, and nitrate of soda will make grass grow, but will not kill worms. Lime-water will kill worms, but will not make grass grow. Ammoniacal liquor will kill worms and make the grass grow ; but it will prosequence.]

\author{
Rebiém。 \\ nambled in Neto Zealand。By J.C. Bidwill. London: Orr and Co.
}

We resume our extracts from this interesting work.
On the Arrohan mountains our author found the Iand thickly wooded, and of very gool quality. "I here first saw the great Dracophylum; it formed a small tree abc ut
gix inches in dimaeter, and 20 feet high; it is one of the six inches in dimmeter, and 20 feet high; it is one of the at the ends of the branches, just as in the Dragon-tree (Draceena', and are the same shape, but in this species
they are elegantly reflexed, like the featiners of a soldier's plume ; in this species they are a foot long and an inch broad at the base-the bunches of flowers (which I did not see, the plant being in seed) are, I believe, white, as
large as moderate bunches of (irapes, and of the same ahape. I have very little doubt that thould grow out of doors in England, bat could not sucued in getting any ripe seed. I also saw here for the first time the gigantic tree Fern (Mummuke), the young fronds of shich are
eaten by the natives, as well as the soft part of the head of the trunk, corresponding to the cabbage of the Palm. In its natural state it is very slimy, so that if you bite it you will find some difficulty in spitting it out again; but by long baking in the native ovens, it becomes of some-
What the consistency of baked Apple. which it would resemble in taste if it were at all acid. Nevertheless, it is by no means disagreeable. I weasured some 2.2 fee long, and at the base eight and a half inches in circumference; it far exceeds in beauty any other Fern-tree I than eight inches diameter. I was surprised to learn that Fern-trees are very easily transplanted; in fact, if cut off with an axe, and the trunk buried ahout a foot, it ill rarely fail of growing atter a siort time.
Of the Dracoplyllum he elsew here speaks
Of the Dracoplyllum ie elsewhere speaks as miserablelooking, and occurring upon the moors in broken patches. stunted bush. At a place called Pirato the natives brought two very extraordinary plants, one a gigantic umbelhferous plant, the leaves of which were entirely stiff spines, from spines, aboat an inch and a half diameter, which he afterwards found to belong to a plant with aa almost invisible stem, and ieares clinging closely to the ground, so that a
careless oiserver would think that the heads of flowers, Which ho sars smattered about, formed the entire plant. Fe-foknd is to be a new species of "Aerena," a genus curious plants. On the top of the mountain Tungadidu,
he fouad ceraral exceetingly carious plants; but the only pne gensralty iaterestiag was a Gautheria, perfectly reun gens, with berries two incies in circumference, in ereat thumanner and very good to eat as well as beautitul hine all tase siner Gruilherins of New Zealand, this plant plarte bearing snow-winte berries, and the others red ones, hut not diffiring in any other particular. They would
undoonbtedly grow out of doors in England. He afterwards
found a third variety, or rather a second species, with
pink berries, more beantiful than the red and white ones, pink berries, more bea

On the same mountain, Tongadido, was found a most curious little plant of the Yew family (Dacrydium); it
was not larger than a clump of Moss, and was at first mistaken for a Moss. With it grew the curious Forstera sedifolia, and many new composite plants and Veronicas, patches of a most beautiful snow-white Veronica, which he at first took for snow, were growing among the stones; the way. flowered variety of the Flax (Phormium) growing in the He thinks this sort would be more advantageous to grow in England than the large common kind. The fibre is equally strong with that of the pale-flowered sort, which
is not the case with another he found afterwards growing is not the case with another he found afterwards growing tinct species, not a mere variety, as the seed-vessels were
hanging iustead of upright. He found also a perfect Y'ew about two feet high. The only perceptible difference, ex-
cept in stature, was that the seed was not quite so much imbeuded as in the English Yew. A Dracerna was very common in some places, and grew into a tree 30 feethigh England, it would make quite a new feature in ornamental plantations. There are in ail three species which would plantations. There are in ail three species which would
grow out of doors in England; one of them, a most beautifut species, with the leaves large, and striped with red and yellow, must be very hardy, as the natives said that
the mountain was always covered with snow in the winter. the mountain was always covered with snow in the winter. barometer stood at \(25 \frac{121^{\circ}}{}\); thermometer, \(45^{\circ}\). A plant of lands near the banks of the Waikato river, occurred some of the largest Fuchsia-trees (Palmtukataka); they were at least a foot in diameter; the wood is almost as light as cork-the flowers are about the size of those of the common Fuchsia, but not so brilliant; it is a deciduous tree.

In the plains near Tawranga I saw the finest spec mens of the Flax-plant I ever met with; they were a least 12 feet high, covered miles of the plain, and were growing in all the moist places not actually bog. The
people brought large baskets full of the berries of the Kaikatara (Dacrydium excelsum) for sale. I bought them at the rate of one inch of tobacco for a bashel: these berries are very like those of the Yew, but not slimy; they are good tasted, and form a great part of the food of the natives during the season in those places where the trees are abundant; they are produced in such quantities as to give the trees a scarlet appearance

Our statement made long siace ( p .99 ) respecting the necessity of Government interposing to prevent the extir pation of the Kawri Pine (Dammara Australis) is abund antly confirmed by Mr. Bidwill. At the Thames he first
saw this Pine, whicl does not grow to the southward of that place. It is always a sign of bad land, and grows so sparingly even in those places where it is fonnd, that he is inclined to think in 10 years New Zealand planks and spars will be more scarce than they are at present. Independently of the rarity of the tree, a great drawback to its value is that it grows only on the tops and sides of steep hills, from whence it is very difficult to transport. At present the supply is obtained from the most accessible spow, the sestiture becoming nite now these ; and 20 ships a year would quite exhaust the supply in 10 years, or fewer, so far as those trees are concerned which can be got at easily. In another place he speaks thus of the Kawri :-"Until it gets 30 feet high, it is absolutely ugly. It retains the appearance of a regular coniferous tree until it becomes about 18 inches in diameter, when it begins to change, and after that period ceases to resemble the rest of its tribe in the slightest degree. It often resembles in outline an Oak, but, from the excessive paucity of its foliage, can never rie with that tree in beauty. I apprebend there is not the slightest chance of its growing in England, as it is not found more than 40 miles sonth of the Thames in New Zealand. It will be seen, from what I have said, that people have been greatly
deceived in England with regard to the supply of Kawrie deceived in England with regard to the supply of Kawrie
spars, \&sc., to be derived from New Zealand : not only is spars, \&ce., to be derived from New Zealand: not only is but the labour of getting the timber out of the forests is immense, because of the wonderfully hilly nature of the country; and in New Zealand there is no snow to assist the dragging of the weight, as in those conntries from Whence the present supply of timber is chiefly derived."
In conclusiun, Mr. Bidwill gives it as his opinion that Port Nicholson is upon the whole the most eligible spot that could have been chosen for a settlement, and that it cannot fall. with cummon prudence on the part of the settlers, to become "' of the greatest consequence."
CALENDAR OF OPERATIONS for the ensuing Week. berone the beds or terders containing herbacenus plants are
dug for winter, we would advise those who have labelled anyy plants with thir indivitual heizht and time if flowernug, coluur
of the flower, \(x=\)., as we recommended in an early sumber, to
 plants is conspicuous in mont tardens, ang this appears the more strange as oo very hutte trouble would prevent them having the
appearance of being planted wherever a vacancy happons, without reeard to any other circumstance connected witi it, which we
believe is ment of colours, if the rolues laid down at page 291 are followe as near as possible, no glaring error will be committed. With
regard to the seasou of flowering, the plants had better be dit
vided according to their months, and then planted regularig
accordingly, of height nothing ned be said, except that the
tallest shouid be furthest from the walk.
No time should now be lost in prepring coper

\section*{NEWS OF THE WEEK}

Br the arrival of the Acartia steam-ship from Boston and Halifax, which reached Liverpool last nisht, we have receired the important infelligence of the acquittal of Mr M•Leod. The trial lasted eight days; Judge Gridley in summing up the evidence, expressed himself entirely in Mr. M•Lend's favour, and the Jury without hesitation returnerl a verdict of "Sot Guilty." We learn also by this arrival that Col. Grogan was released bs order of Si Richard Jackson, the provisional Guvernor of Canada, on the demand of the Enited States authorities ; and that the excitement occasioned by his untoward arrest is happily subsiding. The deadia has brouglit adrices from New York to the lbth, and from IInitas to the 1 sth inst.: but from the late hour at which she arrived !ast night, no further particulars are yet known.-Our news from Spain conveys the satisfactory announcrment that the revnlutionary move ment has been successfully put dumn, and that the insurrection is virtually at an end. Fien. O'Donnell and the other leaders of the rebellion have been compelled by the rapid manoeuvres of the constitutional forces to abandon their positions and take refuge in France. The Regent set out for Madrid on the 19 ch inst., at the hend of an im posing force, for the purpose of suppressing the insurrection in the disaffected districts: his troups now ocaupy the whole frontier of Nirarre, and the Bascuue prosinces goain recognise his authority. The acconnts re eived in Madrad from the sonthern provinces are aiso fanarable to the Government, and no further apprehension appeirs to be entertained for the tranquillity of the country. -Our news

 Queen Chri-tina, and the deopatioh ammanming ber dis

 cise expressions of her
meaning correcty. In the mean time much sur: rise is manifested in the political circles of Paris that Queen Ciristina has not yet published an expheit deciaration of her anproval or disapproval of the late insurrection in her name. In cnnnexion with this subject, it appears that sereral regiments have been ordered to the Pyrenees, and a cordon of \(50,000 \mathrm{men}\) is abort to be established on the frontier as a corps of observation. The Ministry has sus-
tained another defeas in its prosecutions of the press; the National having been acquitted a second time for an arti-
cle containing an attack on the insiolability of the King and the Superior Court of Appeal has confirmed another verdict of acquittal in the case of several opposition papers, which had likewise been prosecuted by the Crown -By the Levant Mail we have received intrlizence from Turkey and Syria to the 10 th in \(-t\). The Briti-is troops have evacuated St. Jean d'Acre, and praparations hafe been made for the immediate eracuation of the whole of Syria by the British and Austrian troops, in fulfilment of the conditions of the treaty of the 15th July. From Egypt we learn that the extraordinary rise of the Nile hat inundated large tracts of land in the neighbourhood of Cairo ; forty villages were swept away

At home, much excitement has been occasioned during
the week by the discovery of an extencive issue of framing lent Exchequer Bills, wholh has not only materially diminished public confidence in those securities, but las affected the money market gunerally to a very setions exinstituted by (invernment : and the Treasury has issued Nutice calling in all Exchequer Bills in circulation, in order that ther may be examined and th.eir authenticity established. The chief clerk in the office of the Controliter General has been arrested as the frincipal party implicated in the transaction; and from circumstances which have come to light, there is reason to believe that it will be found to

\section*{3kome Nrems.}

Corrt. -The Queen has been slightly indisposed during the week; and her Majesty's approaching accouchement has rendered it nevessary that the medical officers and nurses should take up their residence at the Palace, to be ready for immediate attendance. With this exception. her Majesty is in the enjoyment of excellent health. His
Rogal Highness Prince Albert and the Princess Royal continue well. - The Earl of Morton and the Hon. Capt. Duncombe have succeeded the Marquis of Ormonde and Capt the Hon. A. Nelson Hood as the Lord and Groom ager, who continues at Sudbury Hall, has been indisposed during the early part of the week. It appears that her Majesty has been suffering from catarrhal affection, but on Wednesday it was announced by Sir David Davies, that the attack was gradually giving way, and that her Majesty was better
Promotions.-The following naval promotion of officers Who served in the expedttion in taking the heights at Can-last:-Lieutenant C. C. Diwkins and W. C. Metcalfe to be commanders; Lord Amelius Wentworth Beauclerk. Symons, mates, to be Lieutenants

Official Aprointments. - It appears to be generally thought in the diplomatic circles that Mr. Temple, brother of Lord Majesty at the Court of the Two Sicilies. Mr. H. Bulwer has resumed his post of Chargé ddaffaires in Paris. -It is stated that Lieutenaut-General Lord Fitzroy Somerset, Mhitary Secretary at the Horse Guards, will be shortly appointed to the government of Madras: and that Major-General Sir Williaus Gomm, K.C.B., is to return home from Janaica, to assume the command of the morthern district of South Britain, in succession to MajorGeneral Sir C J. Napier, removed to the Staff of India. Major-Gen. Sir H. Berkely, formerly Deputy AdjutantGen. in the West Indees, is appointed to succeed Sir W Gomm in command of the truops at Jamaica

Partumnntary Muvements.-It is reported that Lord Charles Wellestey will be the Conserratise candidate for the represtmation of the borougn of Lyan, in consequence of the racancy caused by the aypointment of Sir Stratford
Canning as Ambassador to Constantinople. Sir George Canning as Ambassador to Constantinople. Sir George
Seymour is also mentioned as a canddate.

\section*{fforetan.}

France.-The domestic news given in the Paris papers continues to be of a very uninteresting nature, and the affairs of Spain still occupy their attention. The accuracy of the conversation wincla Senior Oiozuga had with Queen
Christina is especially the subject of discussion. The fol lowing are stated to be the exac particulars of this trans-action:-On the day after he had the conversation with Queen Christina, which nas been maile public, M. Oiomiga wrote down the words of the Queen aud his omn from mearary, and transmitted a copy to ber Majesty, reticits, il. Olozaga at the same time statug that he intended to send the docuacent thus certitied to bis GuvernM. Olozaga considering silince as assent, sent off his and to Geen. A'cala inuportant conversation to Madrid. to say taat aer Majesty last the Queen's secretary a rote any answer, and moreover the recual it right to return any answer. and moreover the remtal which M. Olozagd M. Olozags immectately replied that aithough his memes was habitualy taturut, he had not pretented to reproduce Tord for Word the expressions of her Majesty, but he be lieved he had given their rueaning correctly. He added
tuat he was ready to receive any rectufication whick the

Queen's secretary should transmit to him. It appears dispote the correctuess of the reciial aduressed by the latter to Gen. Alcala say that the Queen, on being pressed by the Ambassador to evplain herself on the insurrection, contined herself to replying, that she had given no orders,
for the power had not been left her to give orders of any kind. Much surprise appears to be expressed in political appromal or disanproval of the late proceedings in Spai has not been publi-hed. In connexion with this subject ordered to the Pyrenees; and the Toulon papers add that Some of the journals speak of artillery being sent from along the frontier of 50,000 unen. The formation of this corps of observation, as it is termed, appears to be gene rally approved of, being regarded as absolutely requisite
under the circumstances, and as a measure by no means of an alarming nature. It is further said that Govern-
ment has aciressed a note to the great Powern of Europe on the subject of takiug the state of Spain into consideration.
cther individuals who were arrested with him, has, since our last, been interrogated by M. Hebert, who has been added to the commisston of examination of the Court of
Peers; and it is sard that some more arrests have been made in consequence of fresh disclosures. Workmen ar employed in preparing the Chamber of Peers for the ap proaching trial, and strengthening the prison and guard
room.-Accounts received from Lille announce the arrival in that town of a man named Grandrien, inculpated in the attempt on the lives of the Princes on the 13 th Sept Grandrien had been given up by the Belgian Government have also been received announcing that Quénisset's father has received from his son a very affecting letter, in which he expresses great remorse for his crime. He bitterly accuses those who armed and urged him to execute the attempt, and is greatly irritated at having been abandoned suffering him to fire plices as were with him at the moment, suffering him to fire alone-one of them even pointing out to bim the Prince he was to aim at. This letter the
examiniug committee of the Court of Peers is said to bold examiniug committee of the Court of Peers is said to hold
as important evidence, because by it they were enabled to trace out the principal culprits, some of whom were named by Quénisset, and have been takea and contronted with firm ensese men, however, are said to have shown great all still bept ing all participation with hem. They are wife and child are now and then allowed to visit him presence of the gaolers.

The Press.-The Ministry has sustained another defeat before the Cuurt of Assizes. The editor of the Nationat has been acquitted a second time, for an article prosecuted by the Attorney-general as containing an attack agains this inviolainity of the King. It will be remembered that artcle, and the present iudictirent arose from the revort it supplied the next day under the head of "Acquittal of the National. The advocate for the defence frankly admitted, as on the former occasion, that it was to the King the journalist had imputed the debasement and ruin of the country, a truth which the jury had sanctioned by its vermere summary of the debates of the first trial article was mere summary of the debates of the first trial, which the
editor had a right to puilish; and that even if he had discussed theoreticully the doctrine of Royal inviolability without rendering the person of the King responsible for any of the acts of his Government, he was fully justified
in doing so. The advocate was here interrupted by the President. who maintained that the inviolability and irre sponsibility of the King could not in any manner be called in question ; but the jury did not concur in the opinion of the President, and brought in a verdict of mavour of the Nationat. In commenting on this the ministerial papers contend that the rerdict of the jury, as National to introduce the system of the royal inviolability, was simply the result of the conviction that the prosecute article was a fair report of the trial. The Opposition prints claim, on the contrary, a great triumph.- The Appeal Chamber of the Royal Court has thrown out the bills of indictment against the Quotidienne, Commerce Frational, Echo Français, the Peuple, and Gazelle de France, for articles published in these journals on the 27th May, entuled "Affair of the Conspiracy of D.dier." These journals printed the account of the action brought nuble in 1816. agaiust the Courrier do l'I Iere, for libelling his father's memory ; and it was fi,r publishing this report that the Crown lanyers indicted the papers in question The serdct of acquittal is now confirmed by the Superior Court of Appeal

Raulroals.- The Moniteur contradicts the report given the Minster of Puthic W orks had French juurnals, that to an English compans the execution of the railroqu between Patis and L.ile, wath a brancls for Calas. II Teste, it seems. had aypraved of the propusal, but it had been submited to the approbation of the Minister or Fhance, and would onily be presented to the Chambers in in the proposed convention. It further se. ms that II Hamann has refused to give his assent to the scheme.

The Fleel.-Accouncs from Toulun of the 21 st inst announce that ddmiral Casy had been ordered to hold
the 20th the Admiral hoisted his flag, and was expected which formed part of the division, would fullow the Ad miral immediately on the return of one of them which was to leave Tunis on the 13 th for France. The destination of this armament gave rise to much speculation. Some reports staten that it was intended for the coast of Spain ;
and others, that it will firs: proceed to Brest, and thence to the United States, in anticipation of difficalties between new Maritime Prefect of Toulon, arrived in that harbour
on the 19th inst., to be at take an 19th inst., to be at hand, says a Toulon letter, to The samue accounts add that Admiral Hugon bas at length received ministerial orders concerning the fleet which be but before the reduction of its effective, they will begin to but before the reduction of its effective, they will begin to
break it up into small detached squadrons. Algeria.-A telegraphic despatch received at Toulon
on the 25th inst. announces that the garrison of Algiers has successfully accomphisherl its seecond re-nctualling of
Mulianal. It beat the emeny at (haabel Goles ing to the confersimis of the At Alabs them Gotlases, Accord more than 2 any killed and a great number wounded. The wounded.
Spars.-The revolutiomary movement has been successfully put down, and the insurrestion is now virtually at an end. A telegraphic despatch, dated Bayome the 23 ri previous day of Gen. O'Donnell at Urdax, with about 2,500 men. He was accompanied by (ienerals Ortegosa
and Jaureguy, and was expected to enter Frunce on Sgarand Jaurequy, and was expected to enter Frunce on Satur-
day, to save himself from the pursuit of the Constitutional forces. Count Monteron, and a few members of the Provincial Deputation, had already crossed the frontier for the same purpose.- Our accounts from Madrid are to the 17th inst. At that date the capital enjoyed the most per quently to that of Gen. Diego Leon ; the other persons ar rested lad not yet been tried. The journals are filled with long details of the trial and execution of Gen. Leon. Though his fate appears to be generally lamented as young and brave officer, it is regarded as a necessary mea sure of severity on the part of Government; all the en-
treaties made to the Recent by the Generals and most treaties made to the Resent by the Generals and most
influential citizens in his favour were in rain. The National Guard, it is said, demanded the head of the cap tive, and held him their prisoner. Espartero gielded to their demand, and the order for his execution was given The Regent set out from Madrid on the afternoon of the 19th, having first issued a proclamation, stating that he confided to the National Guards the safety of the Queen of the canital, and of the country. On the \(22 d\) he reached Bleviesca, and nas expected the same day at Vittoria The troops in Alava and Guipuseoa, officers and soldiers suddenly made their submisson to the Regent on the
night of the 19th, and the populations threatened by Zurnight of the 19th, ant the pophations threatened by
bano and Rodil have also again recognised the govern ment. The chiefs of the movement had taken to tight and several of them had already eutered France, an among them the Marquis d'Alameda. Gen. Rudil entered been arrested at Bergara and shot. Montes de Oca th Bilbo also sent to Gen. Rudi] to make its submission. The troops of the Regent occupied the whole frontier of Navarre, and the insurrection in the Basque province was regarded as entirely at an end.-The latest account
from Barcelona state that cunsiderable agitation still pre railed in that city, but tranquillity had not The Junta of Vigilance had issued a decree suppressing the feudal duty called cops, levied on bread, and which wa abolished by the law of the 3d June, 1822. By another decree, of which the object was to insure the payment of the forced loan, the Junta ordered, under the penalty the confiscation of their property, that all the inbabitaat absent from Barcelona should return to their homes in districts were allowed four days, and those who had re tired to other parts of the province, or had left it altogether had eight days to obey the decree. Several arrests had taken place in Barcelona, and among others that of lieutenant of the ?d Regiment of the Ruyal Guards, whic had revolted at Saragossa, to whom Gen. Ayerbe had de livered a passport for France.-Advices from Saragoss men, taking 100000 fron the class of 1811 , and the re mainder from that of \(18 \pm U\), and that preparations for raising part of this force were making in Aragon. The effervescence against the French is stated to be very great in Saragossa. Where the French residents were in consider able apurehension. The accounts received in the capita from all the southern prorinces were favourable to the Goverament, and little further apprehension appears no to be entertained on the subject, the general repose This spedy suppression of the insurrection erred in a great measure to the step adopted by Olozaga, Spanish Ambassader at Paris, in forwarding th irow rament and Cen. Alcala the despatich annont.cms Queen Carstimas disavowal of the morement at MI drid had dend and and and had delmanded an exp.an hol received an answer irom notel noticed in ourlast, and Loal of misnnderstand ing. The Duchess de la Victoria arrived in the capital on the 18 ih inst. Guvernment had sent a courier estraordinary with an order to the Infante, Dun Francesco de Pabe suspend his entrance into Spain. - We have received sup
quent intelligence, by telegraphic despatch, informing
that Geo. O'Domell, Pequero, Jaureguy, Urbistondo, and Iriarte, have entered France. The number of refugees is Regent is said to be expueted at Irun, which is within 2 ,
moles of the French frontier; and four battalions hase moles of the entered that tomn. It is added, that they are about to move in echelon from-houses. The bridge of Bethe establishment of custom-houses. The bridge of Be France, separates the two cuuntries; and it is said, that the commerce of Bordeaux aud Bayonne, by the establishment of a custom-house, whereby French goods are to be prevented from crossing the Ebro under protection of the perfectly tranquil. The Regent was much cheered when pereft the capital, and was warmly embraced, according Mo private letters, by Mr. Aston, the British Minister continued to dismiss all diasaffected persons. The In-
fante Don Francisco de Paula was stopping in Saragossa till he had further orders from the Regent. He protested to the National Guards that he was ready to shed his
blood for Queen Isabella, the constitution, and the Regent Portugal.-We have intelligence from Lisbon to the
8th inst. Public attention was mainly taken up with the revolt at Madrid and other parts of Spain. Sevieral new failures had taken place, and credit was in a very low conSpanish trade in consequence of the removal of some of Spanish trade in consequence of the removal of some of guese frontiers. Marshal Saldanha left for Cadiz on the had circulated and gained some credence, that Government had any sort of connivance with the Spanish rebel lion. They also add that there is a revolutionary party in this country working to bring on a crisis, and, in coits doctrines of the necessity of a federative union, or even of the incorporation of both countries, the first step cowards which is to be to expel the Queen and proclaim The Senate has passed the Bill for the abolition Pedso differential duties, and the remaining finance questions were to be settled in the course of a few days. The Cortes Gere expected to be prorogued on the 25 th inst.
tion this week. Letters have been gence of any descrip anouncing the departure of Prince Nicholas Esterhany, on the IOth inst.-The journals state that one of the most important pronsions of the new Hessian code, is the abo-
litron of death accessary to civil penalties. The operatiou of the code is made to extend in this respect to per sons who have been condemned under the old or Fren h code. - The projected railroad from Dresden to Breslau has been surveyed, and the preliminary works have already whence a branch line to Prazue, it is said, is in contempla-tion.-Accounts received from Berlin of the llth inst. inform us that the King was about to set out on the 1 bith for Tegernsee. It was not certain how long his Majesty
would be absent, but it was supposed not beyond the beginning of next month. Count Malizalan, Mnister for Foreign Affairs, had entered on his office. Baron Brockbausen, Mimster at the court of Sitcchbolm, has been recalled at his own request, and was expected at Berlim in a few days, when it was said he would be appointed to thought that Count Seckendorf, Charge d'A tidires at Brus sels, would be his successor at Stuchhulm. The Duke of Cadiz, eliest son of Dou Francisco de Puula, was at de Moratella. - The annual session of the States of Wurtemberg was opened at Stuttgardt on the 23d inst. The King, in his speech on this occasion, expresses his gratitude to Providence for the protection granted to himself that his son, having attained his majority, has taken the oath prescribed by the cunstrution. The speech anmounces the intention of proposing several ameliorations of the existing lays, and adds, that as the finances are in ation, the King will be ahle to turn his attention to the important question of railroads.
tate that--Accounts from Warsaw of the 12 th inst. Sept., it is ordered dhat fromis Majesty, dated the 15th the mint at Warsaw shall make use of the Russian weight gilver ruble is of guld, silver, and copper. The Russian circulating in the be taken as the stabdard for all coins to coin guld pieces by the name of half-imperials of the halue of five rubles, and silver coins of the value of rubles, a prescribed and \(25,20,111\), and 5 ctupecs, conformably to a prescribed model. From the same day all the accuunts those bovernment and the local authorities, and likewise coin. The accounts of the Pulish banks relative to the loan in \(18+1\) are to be kept in florins as hitherto; but in years the racoupuns which may be issued in subsequent rubles. The words be stated both in floms and sliver murds in the water-mark, are the price, as well as the Polish languaces, mark, are to be in the Russidn and Poirsh bankuages. By an ukase of the same date the
issue bank-notes of \(1,5,10.25,50\), and 100 silver rubles, for which preparations are making. in figares of these notes is to be expressed in print, both gugeres and in words in the Russian and Polish lan-
said the German, French, and English langaages.-It is order to announce there the intended changes in the kingdom of Poland. It is likewise said that the prince
will go to St. Petersburg, and make a long stay there -Letters received from Trehisond, dated the luth Sept. the Russian authorities. The insurgents, it is added, had burned the quarantine establishment at Achalsich. counts from St. Petersburg inform us that Count Strogo-
noff had resigned the post he held of Minister of the Interior ad interim; and that Count Perowski had succeeded him.
Iraly. - Private letters from Rome state that the congregation of the Propaganda has intimated, through be Right Rev. Dr. Wiseman, that it is the intention o the Pope to appoint the Res. W. Riduef, of lo be Bishop of Corfu. The same accounts add, that Paganini's son had arrised there with a lawner to obtain from the Pope lie reristom of the jucignent by dicted. -Intelligence has been received from Pulermo dated the th inst., stating that the company of Geneva had
suced in raising the Pollux steamer, which, as nuticel succeted in raising the Pollux steamer, piombino clannel. An inventory of all the effects recovered has been tahtil and the casket of diamond jewels of the Russian Princess, who was on board at the time of the accident, is stated to the death of the Duke of Cannizzaro, well known in the London fashionable circles. He died almost suddenly in consequence of taking an over-dose of medicine.
SWITRERLAND.-The papers are still taken up with reports on the state of public opinion connected with the
Convent question; and the New Zurich Gasefle give Convent question, and the New Zurich Gaxetle gives the following list of the cantons which at the next Diet
will vote for their re-establishment:-Lacerne, Uri, will vote for their re-establishment. - Lacerne, Uri, Neufchatel, Friburg, Basiltown, St. Gall, Schaffhausen, the Grisons, and the Valais. The foilowing, it is suid, may possibly vote for the adoption of the propositions of Argau:-Berne, Soleure, Basid, Compiegne, Appenzall, Rode (exterior), Argau, Thurgovia, Tessin, Vaud, Schafi-re-establishment of the convent of Hermetschwyl; Glaris and the Grison will probubly vote the same, as also St. Gall. To obtain a majority for the re-establishment of all the convents, it appears that Schaffhansen, the Grisons, and the Valais are wanted.-The Geneva journals state that an assemblage of 4,000 people has been held on the Place des Arquebusiers, in that city, at which resolutions were come to in farour of the constitution of Argan.
Tureey and Symin.-By the arrival of the Levan mail, we have recersed intelligence from Constantinopl to the loth inst. Private letters are occupied with the other circumstances attendiog has departure from that canital The Porte had distributed rich presents among: the ladies of the diplomatists representing the treaty of the lith July, Nothing certain us as noll respectin the expediti, a against \(\mathrm{T} u\) nis, which was to be commanded by Tahir Pacha: the fleet under his orders mas still lying at the mouth of the Dardanelles. The inhabitants of Con stantinople were alarmed on the night of the shor were dethe shoch of an earthquake. and lives lost, in aduition to senous accidents. There were two shocks, one at two A. M.. on the 6th, and anuther at three A. M., lastSyrian ruler, and his suite, arrived at Cinstantino ple on the 4th. Said Pacha, Mehemet Als son, and steamer, on their return to Egypt, atter recewing great at tention from the Sultan, - Accounts received from Bryrou tate that Hafiz Kapoulan, commanding a Turkish squadron composed of one frigate, two cutters, and two briss was Iving off that piace, and that two British ships of war were likewise there. In the mean time three French ships of war and two frigates arrived, and tieir presence, it was said, caused serious excitement at Mount Lebaron. The mountaineers, who had expressed themseives 350 purses, the reduction of their tribute by the Sultan to 3,500 parses, were said to be influenced by the repeated communications of the French Consul, and now refused to pay any tribute at all. The same accounts adisturbed state. notwith tricts of Syria sull eontinued in a English and Tarbsh authorities to restore tranquillity. Serious disorders having taken place at Naplooz, the Cbelk Cassemons, and suc marched against the revolters wion On the I, thait., an cetded in repressing the rebelion. Egyptian frisate and a brig, escorted byded about 1,100 the line, arrised at bervout, and lice of Mehemet Ais. Eyrians who bad bione Britioh troops hare tyacuated It is further stated that the Brition truops St. Jean ditcre, and that by the nere and and orces in fulfinent the conditions of the treaty of the 15th July - The acounts receved fom Canda intorm us that it remains perfeerly tranqual; but that apprebenwions were entertained that the conduct of the anised Turks would provoke another insurrection. Hagi Ahmed Patax was cruising off Suda, to guard against any hosule move meat. An the Albanians and uther tion were retaind there ander the cummand of Redschid and Manmond Pachas, whose bead-पuarters were at Cianea.
EGTPT.-Our intelligence from Alexandria, received by he Lavart Mail, is to the 6th inst Meberoet Ali, after having visited several provimen of Lower Egypt and Man-
soura, returned to Cairo on the \(18 t\) inst. The Nile, whic had risen to the height of \(2313-23\) cubits, had fallen to
23.24 cubits. On the 29 ch Sept. it rose to 241.24 cubits, by which Rhoda I Alad was en'rely inumdated In the province of Belera fo whages nere swo phe away by kinds being carried of by the torrent. In the Delta Where the Pacha's farms are situated, the infurs done did not amount to one-tenth of that incurred last year, beceuse embankments were mate agmonst the siver. ant "0.000 soldiers were cantoned so as to preserve those embunkments from the effect of the water. Two Arabs, who were pipprebended in the canal of Damietta, endeavouring with on the spot. All the materials necessary for forming a Kafroa, five leagues in length, between Kafrasheh and When completed ween conveyed to the groand ; this road the Delta. The Syrian troops, to the number of 5,500 men, had left Alezandria for Beyrout, on board vessels stantinnple, was wainng at Aleamblat the wi irn of and and samy Pachas, in order so sthe the asmallt of the arrear of pay due to the Syrians. The forct: cations of Alexandsia wert whll beng strengthened, and \(1: 7\) Haixhan mortars had been ordered at the foundry of livge to replace the old guns.
Perar.i. - By the Levant Mail we hate also received M'N from Persia, from which we learn that Sir John weli recuised. The mansion was exurcited in a few days set out for Teheran, where preparsions had already been made for its arrival. The mercantile clanes were in the reatest distress in consequence of the fall in Europe in he value of silk in which most of them were more or leas interested. They could not fulfil their eagagements and were asking time frons their creditorb as the only shall in future recaive regular advices from Persia, as the mian has made arrangacats for a neck.j communica tion with Trebisond. The Rusaian Plenipotentiary hed had a discussion with the Prime Minister of the Shuh, who exacted the reimbursement of the sums due to his Government. His Excellency answered that he had receired instruetions to factitate arrangements with England but the mantier of the reconciliation would not obtain the (zar's sanction.
United States.-The packetoship George Washing on arrived at Liverpool on Sunday night. She sailed from New Yark on the foh inet.. and hrought news six days ater than that recemed by the Celeciomas, gren in onr
 chedhangs during the firat flate days. A series of very strict regulations had been presiously established for the preservation of order, and the consequence was a much greater degree of decarum than had been antieipated. The excitement, however, on the subject aphears io bave been greatly exaggerated; for so far from there having been any rush, the Courthouse was but thinly attended. Mr. touk his seat by the side of his counsel. He looked cheerful, and it is stated that his appearance indscated anything rather thata anxiety or depressed spirits. The Attorney-gentral opened the case agminst the prisuner. In a speech of consuterable length lue detaled the principal circumstances of the attack on the Coroibat, and of the videace which would be adduced; occasıonally lasing before the jury what he dermed to be the law applicable to the case. The frst wituess called was Whiam hells of Buffalu. Owner of the Caroline. Whose testary before the public. He was rery clustir cross-exammed by Mr. Spencer, the principal counsel for Mr. M Leod. At the close of his examination the Court adjourned to the following day, when the trial was again resumed at half-past seven in the morning. In the course of this day several witnesses were examined for the prosecution. Though the evidence pressed somewhat against the prisoner, the general impression appeared to be that its efiect had been greatly weakened by the cross-esamination. So far as the estimony bad then reached, the prosacution had only atrempted to show that the Cisroline was actually destroyed within the waters of the Enited States; that ste was private property, emgaged in lawful transactions, not wned by or connected with the iasurgent party un Nary slaud or she was destroyed by an armed force from he Canadian shore: and that a nan named Durfee wa killed by this farty, or some one of them. In that stage of the evidence the verdict could not he anticipaten: but the general opinon appeated io se that of Coll. Grugan was stil a quited. The atiair of the States, ant had been made the subject of a communicats on by the fnerican Gurernment to the British Mintser at IV shington. Fraudulent Issue of Exchequer Bills.-Considerable excitement has been created for some days past among nouncement that a frawdulent issue of Exchequer-bills to a very large amount has been discovered; and it is said that ever siure the first issue of those bills in 1696 , there never has existed so much alarm respecting that security as at the present moment.
mitted, it seems, through the agency of Mr. E. B. Smith, the chief clerk in the Exchequer-bill Office ; and duplicate and triplicate bills, bearing the same mark and number,
have been put in circulation, to the amount of about 200.0006 : but whether these bills are forgeries, or whe ther, having been regularly signed, they have been fraudulently obtained, appears as yet to be uncertain. Mr. Smith, Who has admitted his participation in the fraudulent transaction, has been taken into custody; and others are regarded as an extensive confederacy. It has been ascertained that the bils, however procured, were applied to speculations in foreisn funds, chiefly spanish stuck; and
there has been a prevailing idea that the property would prove to be that of Prince Louis Napoleon, at present
confined a state prisoner in the fortress of Ham. A strict confined a state prisoner in the fortress of Ham. A strict Home Offiee during the week, at which Sir R. Peel, Sir J Graham, Mr. Goulburn, and Lord Monteagle have been present. Nuthing. bowever, has yet transpired tending to stili involved. It has become an important question how the Treasury will deal with those parties who are the innocent holders of these securities: and doubts appear to it seems to be believed that the safe course on the part Government will be to draw in the whole of the bills of the present issues, and at once issue ner ones, to remove the complication now existing. The late unexpected de-
cline of nearly 2 per cent. in the Consol market is now cline of nearly 2 per cent. in the Consol market is now
supposed to have been brought on principally, if not entirely, through the influence of these spurivus issues; an the system is known to have been in operation for a very long time, it is said for at least four years. In the mean time Exchequer-bills are scarce'y saleable; the public mind is left in the greatest state of alarm; and the result of the inquiry instituted at the Treasury is looked to with to this atfair has since been priblished:- "In order as far as pussible to relieve the puolic from the anxiety orcasionet. br the recent disclosures as to the forgery of Ex Chamellor of the Exchequer think it right to announce that there is no reasion to believe that any Exchequer-bills issued in March or June last by the paymaster of Ex-chequer-bils from their oftice. in regular exchange for bills
of an antceecient date, are cther than genuine. They think it right further to give nutice. that all Exchequer-bills brought to the office of the comptroller-general of the Exchequer will be examinied and compared with the cyuncounterf ith sucia as correspond with the cordingly. The First Ioric of the Treasury stamped ace cellor of the Eschergeer have eauod this notification to be made at the carlicst period at which it wis possible to make it, comsistrntly wry a due examination into the circumstances of the case "-It is thought that this notice, and the conrse mencioned as about to he alopted, wul bave
the effect of purving an ent at once to erery difficultr in the Exchequer-bit! marke: whech has arsen from the fraudulent isua, and be immednateiy followed by a dimi. nution, if not total extinction. of the commercial and money-market exeitement apon tia subject. New Houses of Purliament. - The full number of masons are now at work at these buildings; and the number required by Messrs. Grissell and Peto, in Trafalgarsquare and at Woolwich, are also nearly filled up. The latter place to the masons lately in their employ, provided they make an early application; but if they do not, and will refuse admission to every unionist.-A meeting of delegates from the several trades has been held for the purpose of giving full intormation relative to the strike of cessful, and also to adopt measures to retaliate upon the presif for having condemned the strike. The chairman prested that the meeting represented the collective wisdom of the trades, and truly demonstrated the sympathy which existed amongst the working classes. A detailed account was then read to the meeting, of the quarrel between the men and Mr. Allen, stating the several grievances of the
former, which have already been laid before the public, former, which have already been laid before the public,
and denied by the contractors. Several persons addressed the meeting, animadverting on the press for not having supported the masons, and also condemning the Commissioners of Woods and Forests and the Admiralty for having joined and supported Mesirs. Grissell and Peto. resolution was then moved and carried unanimously. approving of the strike, and attributing it to the tyranny of
the foreman. Twenty pounds were handed in by a delegate from the carpenters, towards the support of the masons, whose funds were said to be nearly exhausted. It was stated that 400 men had left work; and after several other delegates had spoken on their behalf, resolutions pledging the meeting and the trades generally to similar nature was held on Wednesday. There was a long and warm discussion on the subject of the course which the press had taken throughout the affair, which several delegates considered had been very unfair, more particularly the con of the Times, which, they sald, had mislead the public mind as to the proceedings of the masons, and cast odium upon their motives and policy. They suggested the discontinuance of the support of the work ing classes to any paper which took a part against them as well as to every house of entertainment which took in that paper. The press, they considered, was the greatest enemy to the interests of the working classes. A motion was then carried reprobating in the strongest terms the conduct which had been pursued in reference to this affair both by the Murning Advertiser and the Weekly Dispatch, and pledging the
Public Meetings.-On Saturday, a public meeting was held at the Londun Tavern, for the purpose of taking into consideration the distress at present existing among the operatives of Paisley, and other manufacturing districts in Renfrewshire. A deputation was present from the localities where the distress prevails; and several Members o Parliament attended the meeting. The chairman, Mr Sheriff Rosers, briefly opened the business of the day, by observing that the situation of the Scotch manutacturer was greatiy aggravated by the circumstance that Ene Pond but that they dealt with esery mau who was able to work, and did not, as a vagrant ; and only provided for the relie of the aged and maimed ; it having never been contem lated by the framers uf those laws that under an enlight ened Gove nment, and in a Christian country, the people able and whlling to work would be unable to find employ-
ment. The meeting was then addressed, at great length, ment. The meeting was then addressed, at great length,
by the Res. Dr. Burns, one of the deputation from Paisley. He entered into detalls descriptive of the extreme povert and destitution of the operatives in that town; and stareu the absolute necessity there was that some relief should be afforded to keep, them from starvation: that their exhaussed done ather nower, but wes an to tie benvelence of the cutizens of Lunton. In the course of bis address he stated that of tighty manulceturing house fitty had become bankrupt within the last three wonths that there were 4,200 persons receiving charity before he left Paisley, and that that number had since been increased
by 1, +100 . Lord Kinnaird then addressed the meeting, and propused the first resolution, which embodied the facts of the existing distress : and this having been car ried, a resolution on the necessity of an appeal to the
public was adopted ananimoualy. A list of the subscrip-
tions already raised was read; among which was 5 mi. with
an accorrpusing letter frums Sir R. Peel. and \(2.2 l\). from an accomplusing letter frum sir R. Peel. and 2.2. from
Sir J. (iraham, A committee was then app,inted to solicit and promote subscriptions. The chairman has since re-
ceived another communication from Sir R. Peel, stating the deep regret with which the Queen had heard of the necessity of such a fund, and inclosing a cheque for 10016 , as her Majesty's subscription.-A special meeting of the suppmrters of the . New wospital for the nondde classes, of the meeting were to receise the report of the provisional committee, and to decide as to the expediency of iome-
diately opening thie Iustitution diately opening the Iustitution. The report was read by since the plan of the future institution was laid before the since the plan of the future institution was laid before the
public; that it was intended for the reception, not gratuiTously, of invalids of the middle and edncated classes, both miale and female, but at a charge loner than they could live and be properly attended to in private lodsings. The public having considered the plan, pronounced itself formed, it was at first intended not to commence been subscriptions had been received to the amount of 3,0001 and untll fisty patients could be properly accommodated. Though the sum as yet received amounted to only 1 , 50.5 than they premisey at first contemplated. They whe to take premises, and recommended that the institution should be
opened with at first twelve patients. The sum in hand, without calculating what patients would pay, would be quite sufficient for such a commencement ; and the house larger number than twelve persons. (On the motion that the report be adopted, Dr. Arnott urged that it was premature, and that it would prove injurious to open the iningly moved an amendment embodring that opinion Considerable discussion ensued, which terminated in the withdrawal of the amendment. The report was then received, and a resolution agreed to, that the committee be empowered to open the institution forthwith, or as soon Metropolitan
Metropolitan Improcements.-The committee for conducting the City improvements, and the approaches to
London Bridge, have directed the immedite sale of several houses in Lad-lane, to widen the place and join Cat-eaton-street, which has been within the last few days again thrown open from King-street, the main approach to Guildhall, to the Bank and Mansion-house, so that where the coachway was only open for one carriage, it is now spen or view with the Chancellor of the Exchequer on Wednesday, but it is not known what was the result. -A petition is in course of eignature from the inhabitants of the great south-western suburb, for widening Piccadilly, when the ranger's lodge is taken down, which is stated to be in coatemplation. This improvement would, it is expected, materially increase the comfort of foot-passengers.- The Commissioners of Wouds and Forests are proceeding with the arrangements to carry into effect the Act of Pariament for the improvement of the western portion of the Metropolis, by the formation of a new street from Coventry-street to Long acre. In consequence of a report that Government could committee appointed to watch the Metropolis Improrements Bill for that district waited on Mr. Pennethorn, surveyor to the Woods and Forests, to ascertain if the ras the noney was positively raised and placed in the hands of the commissioners. Compensation has been awarded to the freehold proprietors of the land, of whom the Marquis of Salisbury pussessed the largest area of ground, his property extending all along the proposed new line. in wed course of the next week notices, it is said, wil-well, ocerpants of houses and tenements a ong the intended new street, for them to send in their claims. The new street however, will not be commenced till the ensuing spring.
Improvements on the Thames. - The delay and danger experienced in consequence of the crowdedge have suggested the expediency of providing some convenient pase of landing fur passengers by the large steamers ; and w. this view a steam-boat pier and landing whinf are Esses progress at the sillage of Grays Thurrock, Puffeet, au within a short distance of the Blackwall and Easter Counties line of Ranimay, to buth of which it is intende there shall be suitable modes of conreyance at all times The project has been taken up by a company of share country of Esser. The pier, which is nearly ninished, is 40) feet long and eight feet wide: and from the iudenta tion of the coast at this pont, offers no obstruction to the navigation of the river, being approachable wid It s.afety at low water, even by vesseis of heary burden is built on piles, twenty feet apart, to which the patrance is unted by substantial wowd containing waiting-roomsu either side of the roadway and a spacious satoon atiache of for the accommodation of passengers. The nillize等, which is contiquous to the pier, will be approaten by an ornamental road, now in progress of forma is From the present forward state of the works, it whe peeted that the whole will be comple upened to the pubitic.
IV pron Posed that the pier shall Wed Parins Com pany have just completed about 4,000 or 5,000 çarda pavement in Regent-street, by direction of the Commis
sioners of Woods and Forests. The pavement is laid upon metallic sand concrete, and the grooves in the wood are Saturday, at the meeting of the Marylebone vestry, a long and warm discussion in our last, agreeing to accept the profirnation, noticed in our fast, of the proprietors of Rankin's patent, to lay down 600 yards of their specimen in Oxford-street, between South Molton-street and Duke-street, without subjecting
the vestry to any outlay, but at an annual charge of 3 . the vestry to and. After some opposition the vote was paken, when the

Fles.-On Monday a fire broke out at the King's Arms public-house, Castle-street, Long Acre, but was got under premises. It is supposed to have been caused by a heated coal flying out of the grate, in which the fire had been left burning; or as other accounts state,
tobaceo falling unobserved anongst the sasdust in the tap-room.-On Saturday a fire occurred in the tan-yard of Mr. Harper, Bermondsey-stree
house where a quantity of casks of tallow and oil were deposited, but was fortunately subdued before any very exbroke out at the Cock public house, Tothill-street, Westminster. The inmates were with difficulty rescued through the windows, and much injury was done before the flames were got under. It was occasioned, it is said, by the serrant girl hasiug fallen aslerp, while reathing in bed.-manufacturer, named Clitherow, St. John-street, Whitechapel. On inquiry, it appeared that Mr. Clitherow, his a large quantity of fireworks, and had sat down to supper, leaving a large portion of the fireworks on the table, amongst which were several of what are called pound and so quickly communicated to the rockets and other freworks on the floor, that the frontage of the house was n flames. Mrs. Clitherow and her brother escaped, but her husband was missed ; in the course of some minutes, however, he was seen to jump out of a back window mith his clothes on fire. On being taken up and the flames extinguished, it was found that he was so seriously burnt, prumpt arrival of sereral engines the fire was confined to he premises, nhich, however, were totally destroyed.
Depifford. - The effects of the late heavy raius have
eea seriously feit in this neighbourhood. On Thursday been seriously feit in this neighbourhood. On Thursday
the Rasensbourne was observed to rise with great rapidity; and the sluices not being deemed sufficient the torrent, the flood-gates of the Kent water-works were openeü; but to no purpose, for, in the course of an hour, the river oserflowed its banks, and upwards of 1000 acres of pasture and garden grounds, belonging to Mr. IT yatt, a market-gardener, were speedily under water. The path leading from this town to Lewisham was stopped by the
flood, and a pleasure-boat was sailing about in the fields. The lower part of Lerisham-road was, for a considerable distance, completely inundated, and the houses on either side some depth in water. The tide in the Thames rose o a great height, being within two steps of the landing place at Greenwich-pier, and it was apprehended that last week.

Bedford,-During the past week several destructive fires, which there is reason to believe have been the work rinces, and occasioned considerable excitement and alarm. Mr. Joseph Berrill, were ricks of barley, at the farm of Mr. Joseph Berrill, were observed to be on fire, in the
rick-yard close to the side of the road leading from this town to Ampthill. The supply of water was deficient, and the flames were consequently not extinguished for many hours. Fortunately the wind, though strong, was blowing so as to drive the flames away from the other stacks and ricks where the fire origimated. -On Sunday nisht, another fire occurred at a farm in Heath and Reach, in this agricuitural was attended with the destruction of much Chichal produce and of several buildings.
man named Simmons was tried for setting fire to a wheat-rick at Lymins er. About forty loads of sheaves Were destroved, and the prisoner hall attempted, by his hess of the evening prevented the lucifer natches from isniting the strans. The prisoner, in his defence, said that hopes of pardon had been held out to him if he would confess, but this the witnesses positively denied. He was
transported for life.
serious domestic trageunday this piaee was the scene of particulars:-1 young man of whed Wilson, a blachsmith at young toman named Middleton; andig ha ayreement to be mang wiman named Middeteon; and an agreement to be hare been fultiled ontered inito, which, it is said. was to
a real hat it appears, luwerer, that a real hat waice a successful suit, and tiee giri refiused to

 having struck agaunst her rib, the fatal purpose was not effected. The assassin then ran off, and was discovered
dead. The young woman walked home after the blow, quite was unconscious of having been stabbed, until, feeling a pain in her side and examining her cluthes, she found dressed the wound, and stated that no immediate danger was to be apprehended, but that if the wound had been inflicted a little lower, fatal consequences would hare ensued. An inquest has been held on
of "Temporary Insanity" returned.
Lancuster.-At the recent quarter sessions in this city, was an appeal by the Lancaster and Preston Junction Railway Complany against a rate of \(7.001 .11^{2}\) s. 37 . laid by the overseers of the tomnship of Ellel upon the portion of the line situated in that township, being after the rate of 2.30. per mile, which was deemed too high. The ehief
quest on of dispute was, whether the toll account directed to be kept by the Railway Company should be taken as the basis upon which the rate was to be estimated; and secondly, what deductions ought to be made from such
amount of toll. After a long and minute investigation into all the merits of the case, the magistrates came to the conclusion to reduce the rate from \(780 \% .19 \mathrm{~s}\). \(3 \mathrm{~J}_{\text {. . to }}\)
\(436 \%\). 16 s . 6 d ., which is a fraction under \(140 \%\) per mile. The case lasted upwards of eight hours, and our correspondent informs us that it excited much interest in the here of some interest, as deciding the question of the right of catching salmnn after the 29 th Sept. Mr. W. Coulthard was examined before the bench of magistrates charged with taking a salmon, in the river Lune, on the st Oct. The original acts of Parliament having first been read, which fenced the Lune among other rivers, and
also the act passed in the reign of George \(I I\). for altering the style, a witness was examined at some length, who deposed that ahout four \(0^{\circ} \mathrm{clc} \mathrm{c}\) in the moming of the day
in question, he saw the delend nt proceed to une of the Scotch baiks on the river and take out a salmun. For the defence it was urged that the mitnes's estlence was not such asive. as at the distance he aumitted he ras, and at identify any person ; and secondly, that the act altering the style lad not altered the fence-time as originally fixed in the reign of Richard II., which ordained that the rivers named in it should be in fence from Michaelmas to the Purification. This time had been fixed because the seasons were suitable, and was not to be altered by a statute enacted for purposes entirely different, as was that aitering the style. If this view were correct, then no nffence hau been committed, because the river mas oppen untlitali-
chaelmas day, the 10 th Oct. The bench here intertered, chaelmas day, the 10 th Oct. The bench here interieren, the new style was to be obeerv. d. After deliberating for some tume on other points, thie Chairman squid, thie Bench had come to the determination to convict Couthard in the might consider whether or not he should appeal against the decision. The defendant's attorney said his client would not appeal, but would take another remedy.
Ludgershall. - A local paper states, that the village labourers in several parishes in this neighbourhood have suffered rery much of late from having been robbed of their upon by poor families in this locality as a certain security for the payment of their rent, from the honey and wax they will produce, and the loss of them, therefore, becomes
a serions consideration. It is during the dark and windy nights that these depredations are committed by parties who, it is said, travel the country for the express purpose. They are in the habit of removing the some field adjacent, and after digging holes in the earth, cause a quantity of brimstone to be burned under the hives, which effectually destroys the bees ; they then possess themselves

Manchester.-The state of trade in this town is still rerepresented as in a very depressed state, with little prospect of amendment. Two failures hare been announced within the hst fem days-one of a
house in Mosley-street, the engarements of which are house in Mnsley-street, the engazemelest Bolten,
statel to be \(21,000 l\) : the other of a bleacher at which is said to be of snaller importance. Accounts also have been revived tere of some failures at Hamburgh; but it is not jet known whether they are lines to have an

Mansfield.-A few days since the mhabrants of chis place and neighbourhond were alarmed by a fire bre thing out in the stack- - yard of Mr. Carhe, of Kirh, Mrdwien. The Corwich thin engine was quthiy disere fire: and it arriven not more than aireadr. The flumes continurd to increse in spire of all the effurts inate to subdue
 them, ands and ans in was one of the yards long, the most extensive stacrach land. Fears were at one tin:e protertained that the he:se and premises andid become a prey to the flames, but tbis was formatery prasented. The loss is estimet at shoat 3 , med. or then ar aran
 wer. . g ma seed-stacks destr yed. the mee cerna to be this sllishicion was sreagrieneli br a statement, that the yard hatist intu frame at eq, h and alarest at the same no of the stact-yard.

A cucrotle.-A depntation from the workmen who left
present visiting the towns in this neighbourhood, and ineetings have been held for the purpese of taking meatnwn and adso in sunderland and sonth Shelds.-A pub inforetiog has been held in thas tumn fur the purpose of informing the shipowners and others of the cppression of remoring the \(c\) al- \(\pi\) hippers of London now labeur, and created against them. The steretary of the Coal Whep pers' Society went into a derail of the present degraded condition of this class of men. and shmered. by extracts from a report of the comimnttee of tie Huase of \(C\) mamens, the system of monopoly exereised against them by the pub'icans of Wappins, A.c., whereby the better part of their earnings was sacrificed fir chimk, and ti.emselres and families ruduced to the greatest indsence and dastress. Two men, deputed hy their fellow-washizen in London to attend the meeting. then spohe, and descnized the eppressive system adopted by the puble hou-t heefer, who, haxing the power in their own bands of engaging the men for the
ships, by making interest with the captins, \&c, comships, by making interest with the captains, \&c., com-
pelled every gang of whippers to espend fall two-thirds of their carnings at the respuctive howats at which they were hired, and the whppers now sought to destroy this undue influence by the estathishment of a coal-office for the transaction of their affairs, by which the nen moull he enabled wages. Resolutions were then the full amule the present system, and pledging the meetmg to give their their support, to emable the ceal-whing Norzich.-A meeting of the Clartists of this city has heen held at St. Andrew's Hall, ahich was eqanted by the mayor for the uccasion, for the purpose of conordering the oest means of remedying the distrens existing among the
operatives in this city and the country at large. There operatives in this city and the country at large. There ers, after drawing very s: mrting pictures of the distress and destitution eristing amons the fower clawes. priposed that an application should be made to froservment fur a grant of twe nty minions. with whita to locte the for on the
waste lands; and a resolua in to that effect was carried unanimously:- At the recent citr stesions here, the following unuanal vecurrence tonk pace:-On the grand jury being about to be sworn, Mr, Macro, woullen-draper, London-street, presented a leter the the comet adtrewsed to appeared that Mr. Macro did net thank it ryhit th take the oatia required by a crimd juryum, and has nojection was, that he read in the B.ble. "Swear not at an. Above nay:" and that if he hissed the booh contaming those senwrong. The Recerder toh Mr M1 wro thit he wan-idered his seripture anmotams totidy mosapy hed, and hat Mr. Macro, however, could not be convinced, and was consequently fined 506 .
Portmonth-Orders Lave been sent by the Lords Commissioners of the Admiralty to the Chief Surveyor General of the Navy, and the Governors of this ish Sheer ness, Chatham, Plymouth, and Pembroke, to send in immediately to the Board a enrrect statement of the present efficient state or sea-worthines: of all the ships within their respective dockyards, after undergoing a careful surver as to their fitness for active service. It is stated to be the intention of the Lords of the Admiralty to reduce great mur small line-of-battle ships amd it.gun ships to 50-gun fricates, similar to the Prewlrnt, Iernun. \& \({ }^{2}\)., so as to compete mith those of the Cnited states, France Austria, and Russia. whels are all of Larye dimensions.
The greatest activity prevails in consernence of these or ders in all the naval departments. - A fatal acrident took place in the dockyard on Sunday n!ght. Ens'zn Rushbrooke, attended by a corporal named thinmms, of the \(3: 2 \mathrm{~d}\) regiment, to which they both belonged, were un the derached guard, and in going the nightrounds, owing to the darkness of the night, they fell into the dock and were both drowned. Eu-i n Rusthbroke was the son of Col. Rushbrooke, M.P. fer West suffilk, and had been only a short time in the army. An inquest has been hefd, and a verdict of "Accidentally Drowned" returned ; the jury at the same time expressing very strongly their regret that the hives, not unis of the m:ilirirg, but the pollee, shoald be risked for the want ut some protecti a round the differen ducks and wharfe in the yard.-Dering the mpertuons on the wreek of the Rowh (rewrge, sance mar hat nertice of

Mingmer.-This village has been in a state of great exitement since the examination and committal of the man General Wher, charged, as stated in our last, with the murder of a woman named Hannah Devonshire
cerned in the murder. and that more than one was conman, Pockney, and Briggs, have since been apprehended They were all seen in the public-house with the woman on the evening of the murder, and it is reported that Steadman has made a confession of the whole affair this camnot be positively known until the nest examinatinn of the prisoners, which is shortly to take place.

Southmollon.-We noticed in our last the serious fire that had occurred at this place, and the damage done by pears that during the inundation a commercial gentleman,
 a gig, redebed the cestre of the hringe, when, has of hed to remain there twelve hours with lis horse and gis, no ote daring to render him assistance. Another peran in the road by the side of the river, near the same yrot, gnt so his horse, cut the harness, and thus escaped. The houses destroyed by the late conflagration are 105 ; and the whole property destroyed amounts to 3,000 . A subscripticn in tributed.

Southampton. -The report on the Hampshire Rural Constabulary states that some proof of the tendency of the new force to lessen crime may be found in the great
reduction which has taken place since its establishment in the expenses of prosecutions. The cost of prosecutions
for the quarter ending Michaelmas, 1839 , was \(1,7501.14 \mathrm{~s}\). \(7 d\)., while in the quarter ending 1840 , it was 1,2487 . 11 s , and for the quarter just ended only \(710 \%\), 13s. \(8 d\), being had not been establisbed. The number of comnittal's t the county 1 rison shows the same results. The ragrants who used to intest the county are now driven out of it ; and a proof of the efficiency of the police force the clearty County of ragrants is statur, where an application had been made for a Carmarthen, where an application had been made fur a
similar force to clear it from the begrars who were similar force to clear it from the begrars who were
driven out fother count \(i t s\) by the establisument of pure, and sougit reture in that.
Sunderland.- A special sessions has been held in this town for the purpose of adjudicating on a claim brought by Mr. Torbock, suryeon, the owner of the Reform Tavern in Whitburn-street, for damage done to his property
by a mob on the 1 ith Sept. It will be in the recollection of our readers that Edward Liddle, the occupant of the house, was brought before the magistrates and charged with shouting at Lord Howick; and it was during the riot which took place on this occasion that the house was damaged in the manner alleged. The magistrates, atier
hearing evidence, awarded \(30 \ell\)., the curount of compensation cluimed. It is aaid that the great injury done to the tion cluimed. It is said that the great injury done to the
property of the tenant, Mr. Liddle, will have to be recoproperty of the tenant, Mr. Liddle, will have to be reco-
rered by an action at law, as the statute only allows magistrates to award damage done to property by riotous mobs to the extent of 301 .
Tiverton. The heavy rains during the preceding week produced a flood here on Saturday, the 24th inst., higher than any which has been seen since 1809. About the middle of the Lay the Lowman overflowed the road opposite the Grammar School, entering into the adjacent houses and causing much inconsenience, but without attaining any extraordinary height. In the afternoon, however. it was perceived that the Exe was rising very rapidly, and the whole of the meadows aujoining jts course were under water. Considerable quantities of timber, gates, \&ic., were borne along by the stream, and at some of the turns
a good deal of wood was secured; at about fire \(0^{\circ}\) clock it attained its greatest height, and soon began to subside. The gas-works being under water for some time, no light could be supplied to the town. No very serious maschief has been done in the neighbourhood. but the suspension-bridge at Oakford has lont one of its piers, and several other minor instantes of damace are mentioned.
ITindsor.-His Royal Highness Prince Albert having taken the rhole of the sto. \(k\) and croys of the Norfolk. Flemish, and Honne Purms, which bave liely been salued to bis Ruyal Higliness, as notied in a previuus Number, by order of the Comminsoners of Wouds and Furesis, is sale of a large purton of the surples he he and dead sto sik, selected trows the three farms, has taken place at Norfolk Farm. The st ck disposect of, which is said to have beod in hish condition, reaised wod pricits, and coasisted of 38 Scoteh tulluchs, : Durham cows. 5 Herefordshire uxen, 297 Southdown rethers and ewes, 5 nilith cums, a fine
 there was a quantity of waggens, carts, bamess, ploughs, harrows, rollers, and variucs otier agricultural impicbetween 2, rionl. and the proceeds of which anzounted to frow sations rants of the kinatete a anumber of persens quently grent compention coroughout the day, csperialiy for the Herciondsiire oxen, the Sooth bullocks. and the superier tat rethrrs. The Scotch cattle. which were forward in conditus. realised, spon an average, upwards of 206. per heid: wale a fers luts of the same description,
in very bigh concition, fetched 261 , and ci\%. Fife fat in very bign concition, fetched 266 , and 2 .i. Five fat tiful and well-bred Durham bull, perfectly white, sold for
only 188. 6s. The Southdown wethers realised 40s. a head 46 Flemshis Farm, which is in the parish of New Wird Eor, is of the extent or about 300 acres ; and Norfolk Farm sor. They are both in the Great Park, and are distant from each other about two miles and a half. superintencuce of Mr. Kendan, appointed by the Woods and Cuiests; Lut that gentleman Las now retired to make hay bren appointed by Prince Albert to the sole management of the farms now taken into occupation by his Royal Highness. A portion of Cumberland Lodge is now under Wemyse, wio will thus ju-sess a conrenient residence in farme impediate neighosuitioul of his Royal Mighness Frogmore, would have been also taken by Prince Albert but his Royal Highness having determined not to twhe and Forests have hat it on leasc to Mr. Wathins. This arm contaise abut 260 acres, and is in a very high state of cultivation. It has been rumoured that it is not at al inprobable that, for the future, there will be a sufficient
quantity of stock bred and kept upon these farms to supply the Rosal table, as well as the whole of her Majesty's houst hink.
Wrexham.-The inhabitants of this place have lately been alarmed by a fire which broke out at midnight in three large stacks of corn in the cattle-market, part being Jones. The fire-engines were quickly upon the spot, and vain. A fortnight previously, a fire broke out in the tithe carn, adjoining tating stacks, In owing to prompt assistfire, it seems, was not confined to any one part of the stacks, but the whole was enveloped in flames at the same incendiary.
York.-A few days since, 18 stacks, consisting of wheat barley, oats, straw, hay, and beans, the property of Mr.
John Wilson, of Grimstun, farmer, were set on fire by an incendiary. Assistance was obtained from this city as soon as the flames were discorered, but they had obtained too great an ascendancy to be extinguished. The amount of property destroyed is \(300 \%\). Suspicions that it was the
work of an incendiary having been excited, the Superintendent of the Police in this city repaired to the spot and from the inquiries he made, orderel? the apprehension fore the magistrates, but alter examination was discharged, it appearing that he had only been heard to say that he would fire Mr. Wilson's stacks, because, as poor-law also proved that be was at another place on the night in question. A reward of 2ut b. has been offered for the apPrennion of the party or parties by whoto it was done aplears that the populative of this city and the townships comprised in the union, as returned by the census enumerators, is as follows:-The city district, 27,558 ; out-town ships or country district, 13,946; parishes and townships not represented in the union, 4,573 ; total in the whole
union, 46,077 . The Duke of Sussex, accompanied by the Earl of Zetland, has paid a visit to this city for the purpose of holding a lodge of Freemasons. Shortly after his Royal Highness's arrival, he was waited upon by the Lord Mayor, and a deputation who presented a congratulatory address, which had been agreed upon at a meeting of the and in reply spoke at some leng graciously received them a grand lodge was held in the state-room of the Mansionhouse, which had been lent fur the occasion, the Earl of Zetland, as Provincial Grand Master, in the chair; and in the evening, a dinner, at which near two hundred mason were present, was prepared in the Guildhall. The proceed ings were quite private. On the following morning, his Royal Highness, accompanied by the Earl of Zetland, left th:e city for Aake, near Richmond, the seat of his Lordship. Raluays.-A fatal arcicent has happened on the liue apears that estern Ralway near the Box tunnel. It th:s flace, where it is ustral to have the assistance of a second engine to purh the train up. The train had gone forward, and the engine was apprewching from the station for this lurpose, when tro latourers on the line attempting to cross between them were both kowned down, and
cale of them killed on the spot; the other escaping aith ane of them killed on the spot; the other escaping aith ornehus Stone, a labourer employed on the Birmingham Ruilmay. It seems he nas encared at the Wolverton station, carrying uaterials trom one side of the line to the uther, when i.e was krocked duwn, in attempting to cross the ralls, by the engine of an up-traia, his attention at the time being directed to a down-train which was approach ing. The engine passed over his legs, fracturing them, and causing other serious injuries, from the effects of which he died. The jury returned a verdiut of 'Accidental death wah a decdand of one shalis: g in : cunsilised the com pany to blame is a.ioning their havourers to or ass the line When the trains were so near at hand, particularly as it
appeared in this cave that the p licentes wul dury had a appeared in this case that the p licenten ond duy had an,
orders to probibit them from \(=0\) doing.-A facai accident has Lappened on the Miuland Counties Ratiway near Beeston. It apyears from the satement of the engineer that while procteding with the mail-train from Derbs to Nottingham, and when about a quarter of a mile from the Beeston station, he perceived something a-head rumning
across the line; but the morning being dark, he could not distinguish what it was. The train was moving at the rate from the object when he first saw it, it was quite impos.
sible to ston in time, and the engine, striking the knocked it down, and all the carriages raned object The train was immediately stopped, when it was found that it had fassed over a mann who mas quite dead. On mimire, l.e was discurered to be a resident at Arnold, ifitm Hofton: he had been seen at a neighbour ng public-house late on the previons night, in a state of intosication: but it was not known tow he came upon the line. An inquest has been held, and a verdict re happened on the London and Black wall Railway to a ma that while engaged with some other labourers in turning the carriages at the Blackwall terminns, an iron block fell veral of his rihs were fractured, and he was otheraise seri. ously injured. He was taken to the London Hospital, where he lits in a dangerous state. At a neeting of the intabitants of Leanington, it has been decided to take active measures for the construction of a branch railway to connect that pace aith the London and Birmingbam
Railway, On Thursday, the non-arival at Brighton of he night-train from London at its usual hour produced onsiderable sensation in that town; an hour and a hall elapsed, and great alarm began to be felt, when at length the train arrived with the mail, and it was ascertained that slip of earth had taken place in the vicinity of Mertham, which stopped the progress of the train, but which fortunately was discovered in time to prevent accidents. The day, and an engineer left London for the purpose of in. spection. - Intelligence has been received in town that Mr. T. Phallips, the lecturer on music, and formerly Theatres, met with his death on Wednesday, as he was proceeding by the Liverpool railroad. It is said that his foot slipped, either in going in or coming out of a car-
riage, when he fell, and both his legs were severely crushed, from the effects of which he died in a very short time.-The following are the receipts of the principal mingham and Gloucester, 2,0191. ©Great North of Engtand, 1,451\%.; Eastern Counties, \(815 \%\); Manchester an
 Fouth Western, 5.311; Birmingham and Derby, 1.129/. Midland Counties, 2,980; North Midland, 4.520l.;
Grand Junction, \(9,475 l\); York and North Midland, 1,6041.; and Hull and Selby, 1,055\%.

\section*{IRELAND}

Dublin.-His Excellency the Lord Lieutenant has recrived from the Lord Mayor and Corporation of the city, and from the Proost, Fellow, and chours n:ent and on his arrival in the metropolis. His Excellencs, who was accompanied by the Countess de Grey and a addresses thus jresented, and said, that anxious as he was to merit a continuance of their good opinion, he felt that he could only effect that object by a perfect abstinence from all party feelings, and by the strictest impartiality in the adminstration of the law. It would afford him much gratification to contribute to the encouragement of the fin arts, and to the maintenance of the institutions connected with them; for he knew no means which have a more effectual tendency to promote industry, to foster talent and to bring together those who may conscientiously differ upon other subjects. He would do his utmost to maintai animpaired the legislative union between this country an Great Britain, and he relied with confidence upon thas who then welcomed him for support in carrying his effort nto effect He conscientionsly believed that union to be for the interest of both parts of the Empire, and he fell convinced that irreparable injury would be inflicted upo Ireland by the repeal of it. In conclusion, he begged to thank them for the expression of their feelings toward Latiy de Grey. On returning to her native country, atter many years of absence, it would, he said, be a source unmixed satisfaction to her to think that she was include in the good opimion which they entertained of her family and be could yenture, on her behalf, to assure them that she would endeavour to slow her gratitude, by fulfilling to ber utuust the duties of the station in which she wa placed, and by contributing to reliere the wants and neces dius of those around her. On Saturday bis Excellency recrived a Deputation from the Ruyal Dublin Society in order to hear a statement of the present condrtion of the suciety, in consequence of the mithdrawal of the grant by the late Government, which we have before referred to His Excellency entered warmly into the subject, and promised to give an early and attentive consideration to in order to render the Society as beneficial as possib. The the purposes for which it was originally founded. Tuesday. On Mr. O'Connell's appearance he was loudly Chestay. ss the new Lord Mayer of the citr, to whic office he is expected to be chasen on Muadsy, as the reandion of the numicipal elec clowing severdl letters, rea closing subseriptions to the amount of Mr. O'Connell frum the Lhted states and Canada. mored the insertion on the minutes of the document Cathe latter country, and expressed his delight that associanadıans could be admitted to membership in tir \& mericar
friends, although not admissible as members, could cooperate with Ireland lic symion in their favour. As a British legislator he had always voted against every oppression so. zht to be inflicted on Canada, and in favour of any her mishbitants had the folly and wichedness to resort to arme. hee ceased to interest himself in their behalf. Had they kept within the limits of the law, ther must have found the British too powertul with bayonet and cannon, and were put down as they deserved to be. His secret and were put down in the right, and never to siolate the lam. He was, therefore, glad of the opportunity of making a marked distmetion betuseen the ulamac strugges of and the peaceful agtation in which he was engaged. Mr. ()'Comell proceeded to address the meeting at consideable length, principally in relation to 1 merica, and expresury the thankfultess they oned to that country subject of repeal, some excitement has been occasioned by the secession from its ranks of two of its leading supporters, Mr. Sharman (rawford and Mr. reasons for taking this step. He refutes the argument, in favour of the Repeal of the Cnion, founded on the assertion that an experiment had been made, and that
England had refused equality of rights to Ireland, by mantaining that a fair experiment has not been made. He appeals to the adiocates of the measure, those, he
sars, who have their country's good at heart, whether after sars, who have their country's good at heart, whether after
11 years, during which the question has been kept before the country, it is pot now time that they should demand to have sone distinct cuurse of action explained to them, which would show a probability of its attainment, or else that they should discontinue an agitation productive of so many evilis. He concludes by calling upon Mr. O'Con him, if he can remove the objections he has raised ; adding that if he can show that the repeal of the Union can be obtained, and the independence of Ireland preserved by moral power, he is then welcome to derive all those ad-
vantazes to the cause which he seems to contemplate frcm discussion; but if he cannot, be hopes he will be induced to desist from sio injurious a course, and to apply to more beneficial objects. Mr. O'Brien justifies his withdrawal from the association on the same grounds, viz. eealto impracticability of repeal, or if practicable the evil nion of Mr. Burke, that the closest connezion between Great Britain and Ireland is essential to the well-being of both, he concludes as follows:- "Suppose for an instant
the repeal carried, what class of men would occupy the Irish House of Commons? The men of property, the bitter epponents of the measure, could not expect to be preeerred to its warm advocates: tl.e Exchange would adjourn to College-green, with this fatal aciompaniment-
the influence of the only man of responsibility amongst them would have ceased. In her best days, the best Parliament Ireland could form was corrupt, seditious, turbulent. Whert will Mr. O'Connell get the 'moral elements telligenceament created, not by the virtue, property, in hare introduced a new political feature into your association; you are seeking for foreiga sympathy, you are ing beggar, at every door in Europe. Look to Scotland, the happy contented sister of glorinus England, while Ireland makes herself a second Poland-a rallying spot for the disaffected of the earth.

\section*{SCOTLAND.}

Edinburgh.-On the subject of the recent disputes that it is winfid the Scotch Church, a local paper states that it is confidently reported that three of the leaders of ningham-intrusion party (Rev. Messrs. Candlish and Cunthree of the leaders of the) recently met in this city Ciark, Dr. Cook, and Dr. Muir), and in the presence of occasion Sinclair, who acted as moderator or umpire on the on the following basiv, viz., that patronage should remain parish a line, hat hat patma shomu present to the of mhom to be shatitates, t.ee people's chuice of one whale question morolute. It is further added, that the reason to believe that \(\operatorname{Sir} \boldsymbol{R}\). Peel, if allowed, is prepared Inverness religious treaty into effec R.N. Inverness.-It is reported that Capt. Sir Edward Parry, quiries, by a personal tone by Government to male inof ascertaining whether, if the improvements suggested on the Caledonian Canal be executed, the trade of the country will derive any corresponding advantage. Sir Edward proceed to shortly to arrive in this town, when he will entrautes frum the Moray Frithe canal the Limaie Locis, munication he will proceed south to hold personal comin Liserpool, Glasgow, Aberdeen, Leith, and Hell, as to would arain essent that vessels sailing from those purts prosements were cors of the canal, if the projected imtained tents were carricu into effect. Hopes are enterthe comat ti.e resuit of this inquiry may be in favoar of Possletion and improvement of the canal.
fintingey. - We fiave alreauy referred to the grea distress existing among the !abouring classes of this town; and public meatis given in another part of this Paper, at a public meeting held in \(L\) andon for the purpose of affording
them some relief, will explain in a great measure the ment, however, may be interesting, as affording additional particulars with regard to the number of operatives at present ont of work; it is said to be the result of a minute osu from actual swarer br contidential commotters speciaily appointed by the authorities atad relicf com mitters. The number of lonm-steads aleogethor in the The num. ber of looms unemployed was 1.51 s . atad the num ber of shops without 'ooms it ali, the poseessors has ine been compelled to ell their lowns and matertals for subsistence was cil. By an exact calcuiation which had been made nearly 6.000 persons, men, wone n, and chndren. were
thrown destitute upon public charity by the standing-still of those 1.517 looms. The number of tradesmen's h useat present unoccunied was 110 ; the number of retanl shops shut up was not less than 100. There were a short time since 4,200 persons receiving charitr, and that number had now increased to 5 , binl, so chat distress would appear to be making rapid progress.

sATURDAY, NOVEMBER 6, 1841.
MEETINGS IN THE ENSUING WEBK.
A short time since a correspondent, signing himself "Daylight," introduced into our columns a question as to the right of property in plants between a gar dener and his master. That he did so we rejoice, for two reasons; firstly, because he has given us the opportunity of expressing our own opinion upon the subject ; and secondly, because he has enabled us to ascertain the prevailing feeling of gardeners - It so happens, that we have known cases of disputes arising out of this very question, or we should no bave thought that any one could be wrongheaded enough to raise it, or blind enough not to see that it is impossible for any honest and right-minded man to answer it in more ways than one

We rejoice, for the honour of gardeners, that of the many letters on the subject now before us, there is but one writer who ventures to claim for a gardener a right in what is inorally, legally, and equitably the property of his master. As we cannot print so long a correspondence as that which "Daylight's" question has produced, we shall select a part only for publication from the heap before us.
The person to whom we have just alluded, as forming an exception to every other correspondent, writes in these words:-
"1 went to a sale of plants some time ago, and parpaid for them out of my own pocket; I grew them; they
bloomed; they were taken down to the flower-stands in bloomed; they were taken down to the flower-stands in
the parlour and drawing-room. They were very much admirei by my employers. Would there be any injustice in me, were I to leave, to take these with me? I say not.
If you adait that this would be in accordance with right principle-well, then, A. and B. make a present to me of sume cioice cuttings; I propagate; they flourish. By thing of my master's in ornament of the place; I gave no mine as those I purchased with my own money? But I suppose that you will say, that my master's time and materials were spent in the propagation; I admit it; but is it not sufficient remuneration for him to have his place or
namented with them? Suppose one of the London nurserymen were to adiertise in your Paper that he would serrmen were to adiertise in your Paper that he would
aupply any gentleman's gardens with the choicest plants; on condition the right of the property should be his, Would there not be thousands who would respond to it?
Again, I will state another case in connexion with my own history. I went to a place where there was nothing worth growing; I have started off by breal of day to places worth having ; I have returned jaded, at a late bour of night. During my begging tour I have spent five or ten deners liave a kind of social and hospitable feeling about ns ; and I, being the receiver, of course had to stand treat. Now, sir, you wiil see that I was out of pocker. Of
course my employers were pieased to see the store increascourse my employers were pleased to see the store increas-
ing. without any tax from their pocket, and no broad hims could elicit anything from them. Now, sir, do you really think that I had any claim upon any of these ! If my master bad paid my expenses, I shuuld have none; but as be did unt, I consider that I had a proportionate right.
Some mould sar, I wouha bave rone without plants if he Would not be at any expense in procuring." True, that would have been sober reasoning ; but you have little sympathy with a gardener who likes to see his place similar

A very sensible letter from Mr. Mack, of Chelsea, furnishes so full an answer to the false reasoning of this writer, that we have little to add to it:-
Suppose a gardener obtains cuttings from his friends, such enttings are not in themselves worth threepence each; but they are struck and grown, until they become handsome growth valuable plants. Is not every espense attending their growth paid by the gardener's master? The gardener is not required to purchase loam, peat, or sand; he does not pay for the building of the greenhouse or conservatory, nor is be called upon for coals to keep these plants from by bis master frosty winters ; labour-everyching is found rant astoster. How, then, can any gardener be so ignois only the footish or possesses a riglit in such plants? It tain so preposterous a nution gardener who could entertimes preposterous a nution. I hnow gardeners someweil knowing that Theis done to please cheir own fancy, baving nowing that their master never buys plants, be condemned in that way. Sucis practice I have often moight as weit buy pictures or carpets to ornament his his gardener haveroom. No gentleman will consent to let den. The gave a property in plants that are in his garracter than to let it appear to his masaster, or the men under
plants on his master's estate. If gentlemen do in any plants, they surely do not expect their gardeners to do so. Again, Mr. Cooper, of Battersea-fields, has the fol lowing good remarks :-
"On entering a situation, of which I have had several, I have always looked upon the property entrusted to my careas my own. Masters too often think, when they have onc purchased a plant, that the gardener is bound to preserve it under any circumstances ; but the season, or a variety of casualties may arise, by which the plant is destroyed.
Anxious to appease bis emplorer, the gardener obtains slips (not one, but many) from his brother gardeners nurses and raises perhaps twenty for the one lost. Ever honest man in the profession, of whom I know many, considers those plants the property of his master, they having been raised in his master's time and at his expense. Every gardener, fond of his trade, will study to increase the changing duplicates with some other gardened by ex changing duplicates with some other gardener for plants Which are nut in the collection, by which means the stock The same may be said with respect to seeds, all of which become the property of the master, unless by permissinn of the owner the gardener is allowed to raise, as a perquigrounds, \&c. Such has been my invariable practice, and such I believe to be the custom with every man who ra-
Another correspondent, who callis himself "A Young Gardener," justly says, that no one who possesses the least spark of proper pride would think of putting in a claim for plants when leaving his situation, or boast of what he had done in increasing the collection.

All these extracts are purposely taken from the let ters of practical gardeners; for we hold it to be ouly an act of justice to the professime to show that they entertain, as a body, a strietly moral feeling as to the meaning of meum and tuant.

For the satisfaction of those few who agree with the correspondent first quoted, we now proceed to give from a legal friend the view which would be taken of the question in a court of justice:-

The legal question of ' Daylight' aplears to resolve itself into a very narrow compass, and to be easily solved, and in my humble opinion no individual after mature consideration can entertain the slightest doubt uphn the subject. For the sake of argument, however, we will assume the case as put by your correspondent, and that a gardener about leaving his situation claims certain plants as hi master refuses or declines to give them up. Well, what is the servant's remedy? Why, lee must bring an action of trover to recover the plants, which will throw upon him the onus of proving his legal titie to them. But how is
this to be done? Either he must admit that he had the this to be done? Either he must admit that he had the
authority of his employer expressed or implied for exchanging bis cuttings or other produce for those of his neighbour or acquaintance, or that he (the gardeuer: had done so fraudulently and without the knowledge or sanction of his master. In the first instance, then, be arted as his employer's agent (for every servant is, in executing the duties required from him by his contract of service, his master's agent), and obtained the plants by bartering or exchanging his principal's produce for them, and they thus became as nuch the property of the employer as though they had been actually purchased with his money; or the the ange being made by himself in propria persond the gardener interest or property in them, he haring merely acted vested interestor property is master's authorised agent in the tramsfer. In the second instance the gardener has committed a felony, and rendered bimself amenable to the law, and obtains no law ful right to the cuttings so received in lieu or exchange for his master's, and therefore would be unable to maintain any action for their recovery. This doctrine was fully established in a case of Sir Thomas Plumer's, the name of wbich I cannot at this moment call to mind, where was laid down that if property has been stolen or surrep. titiously obtained, the identical proceeds (no matter how changed the form or character) may be recorered by the original owner ; or, to speak more plainit-suppose 1 am robbed of a 201. Bank of England note by B., who immediately goes and purchases a Lorse with it; B, subsequentiy exchanges the horse for a cow ; this latter animal I am entitled to recover as the identical proceeds of my note This is a much stronger case than the one put of 'Dayighi of an authorised agent making an exchange of his prin cipal's property, and is, I humb.y conceire, a complete an most satisfactory answer to \(1 t\).

We have said that in exed-paciing the grea points to oharve are the drying seeds thoroughty be fore packing, and the preserving them in that state afterwards by means of ventilation; but we added that there are a few exceptions to this general and most important rule.
If Acorns or sweet Chestnuts are preserved dry, they soon lose their vitality; the same is apparenty true of the Mango, of Magnolias, the Chilian Araucaria and some other piants. The reason of this has never been satisfactorily explained, and is the more obvious when it is considered that some of these seeds are oily others resinous, and others astringent; so that there is no obvious resemblance between them in their chemical qualifics \(\mathrm{On}_{\mathrm{m}}\) this scevint the treatment of
how in a long voyage is merely empinical. it is veying them is to place them in a situation where they are unable either to absorb moisture or to lose it The best manner of effecting this is to pack them in dry sand or nearly dry loam. Having ehic siven this advice to a traveller, we were surprised to receise from him, a few months afterwards, some smali paper nat cels of Acorns mixed with sand; and the A corus were of course in the same state as if the sand hat not been added. It did not occur to us that any nise wouli suppose sand to have the effect of some rare drug in preserving the life of seeds, or that so great an erro as that just noticed would have been committed. Since, however, it happened once, it may happen again, in the absence of precise directions for iss use We must, therefore, explain that the manner of using sand or loam as a packing material is this:-Take box, of wrod sufficiently stout to resist some pressure from within : strew three inches of sand on the boittom ; upon this place a thin layer of the sted, tahing care that the outside seeds are not neafer than three inches to the side of the box; then cover this laver with an imeh and a half or two inches of sand, according to the size of the seeds. and go on placing the seed and sand in alternate layers, till the box is full : place three inches more sand on the upper hayer of seed, and fasten down the lid. With these precautions, all those seeds which we have mentioned, and others of a similar kind, will trarel for some months rithout injury. It is, however, necessary to observe, that the cand, or earth, must be pressed down very firmly, so that it may not be able to settle away from the sidea of the box after the lid is fastened down.
This is also the best way to pack balbs for a long voyage, provided they are ripe when they are collected.

In a recent Number, when speaking of the Droman Cedar, we inadvertentiy assigned its first successful introduction to Mr. Melville, now Secretary of the India House, instead of the Hon. W. Leviie Ifeiville a brother of Lord Lieven. It is also necesary to ex plain that, alchough seeds may be obtaineal from In falenner, by direct application to him, the imprortation if Indian seeds by the East India Cumpary will not be in any degree relaxed on that account. - We had written thus, when we had the honour to receive the following letter upon the subject fram Mr. Melville himself.

\section*{Melville, Fifeshire, N. B}

With referense to an article in the Gardoners Chronich of the 23 : inst, I beg leave to informs you that the Mr Melville who brought honse some cones of the Deodar Cedar (or Pine) from India, and supp
Itorticultural Society, was not the prent serrary to
the Court of Directors of the East Indiah Comprat., but the Court of Directors of the East ndiad Cmpra,y, but you. Having taken some pans to intrutuce the tree, from a strong conviction of i's salue, and beltering the first alants known in Europe grew from the seed I imported, plants known in Europe grew from the seed iceported? I am mawiling that by mistake, bowerer uonitentionaur any little credit to which my efforts may be etutted stould distinctions. I supplied seeds, among others, to the gar dens at Chiswick, at Dropmore, to Mr. Lambert s, and here; and if you will take the trouble to inquire, you will easily ascestain the fact
Mr. Paxton, in his list, I believe, antedates the intro duction of this tree; at least, it was in April 1831 that landed with my seeds, and if any older plant can be shown I hase no chim to it
It may not be uninteresting to add, that the trees a Chiswick, Dropmore, and here, now upwards of nine year old, and which I hare visited this year, are about 10 or 1 feet high, and very vigorous and healthy, while in other oile loey not appear to thrive. As observed by you they were not at all affected by the severe winter 18.st-3n, aud they seem equaily to discogard twe flusts in spring, which, on their being transferred from acitule 8,011 to \(14,0 \cup 0\) and 3 L" (though at an elevation of from s,0in therm. I anner a few queries about them which have sugzested themselves to me.
1 may add that my success in bringing home these seeds aruse, I believe, from my keeping them in my cabin and not alowing them to encounter the heat of the holu of the ship, and from :weir being in a tox sut and air during up , and occasionally ex

We have answered a part of these queries, and shall be obliged to our carrespoments for replies to the remainder.

Tue Wingless Gall Insect 'Cynifs aptera.)-There is no family of Hymenoptera whose economy 15 more iemarkable than the Cyninidx : from the species which formgle the Oak-leaves of Britain : their operations seem to be confined to a small portion of the vegetable kingdom in this country at least, a circumstance which might afford curious speculation to the philosophic mind ; it is no leremarkable that their tastes are not directed to any parti-
cular class of plants. We find tine Carrot and the Rose, cular class of plants. We find tie Carrot and the Rose, as well as timber-trees, infested by them, and of these ally the nidus of miny species; some forming the Apples upon the twigs, others the little spangles upon the leaves beneath; the male catkins are converted into bunches of currant-hike galls by a peculiar species, and at the base of the trunk another forms its habitations. This subject therefore, although not immoediately connected with gar dening, cannot fardeners, love to explore the arcana of the creation; and having recently noticed the singular galls represented in the cut, we shall proceed to their history, after giving a
sketch of the general economy of the family containing the insects which produced them.

The curious method the female adopts for depositing her eggg, and the singular effect it has upon the plant selected for the nidus, renue? the The orpositor that of the Saw-flies; the oviduct is slender and curred, being received into a channel under the abdomen, emerging from a sheath below, and resting between two large clavare lamine above ; \(^{*}\) with this instrument, which is sharp and serrated, the female pierces a nervure of a leaf, or a bud, and an eagg is then conveved through the oviduct into the wounded part, together with a certain fluid, pos ibly an acid, which acts upon the lacerated vessels, and causes an extravasation of the sap; and thus the excrescences or galis are created which we have enumerated, as sell as the Prickly Oak-galls of the Levant, the Gallæ tincorise, which are an article of commerce, being used by yers, and as an important ingredient in good ink, \&c It is said that the interior of these galls presents no or anisation ; they assume, however, a typical form and character so constant that from their external appearance, any one who has paid attention to this subject can at once determine what species has caused any particular gall. When the egg hatches, the young maggot finds itselt in the midst of abundance; and as it feeds and increases in size, so does the gall in which it lives; and when the period arrives for the fatty-whitish larsa to become a pupa, it undergoes its taansformation in the celi ; the Cynips or ly afterwards hatches, and emerges through a hole in the gall, and being generally prowided with wings, it flies at once into the tree which gave it birth, and commences the same operations which bad been pursued by its parents.
Both sexe, however, of the Cynips aptera are destitute of winys, and very simher; the male is a little the smallest and darkest, sumewhat chesnut-coloured ; the antenme are moderately long, filiform. I4-joined, and fitcher, the base castaneous; the head is broad and minutely punetured and pitchy; the thurax is narrower than the head, and oblong, minutely punctured, and clothed with yellow pubescences excepting a shining space on the disk; the abdo men is attached by a very short petiole-it is half the length of the insect, brown, rery glosey and smooth, somewhat oval. with six compressed segments; the legs are very pubescent, rather long. and stoutish, especially the hinder pair, in which the trochanters are long; the thighs are moderately stout; the tibix are armed with short spears at the ajex; the tarsi are long and 5 -jointed, ter minited by strung claws, and a pulvillus between them the female has a larger abdomen, is more rust-coloured with a strong curved and acute oriduct, received into Fig. Fig. .. natural size of female; fig. t, magnified
Whichi had buen infested by this Crnips, was abous, foot long, and the gails varied from the size of a pea to that of wathut, and uniting together formed a large and everal smaller masses; ther were rough outside, being granulated and reticulated hike truffes. On opening the galls, 1 fornd they contained from 2 to 5 cells each (fig

 onily in. i.a. wete nlled mith coarse dust. Which pronsects thinad becorad un theta is rather singular ; but the galls had

Curtio's Bito kat, fol, and ph, 688, erge A

Skely that the number of dead Cynipes found in them arose from drought hardening the galls, or from the feebleness out. A great portion of the galls had holes in them of various sizes, showing that many of the Cynipes had
hatched, but from the smainess of mint of theme pect that parasites had found their way to the cells; and this is extremely probable, when we remember that protected as the Cynips Rosse is within the mossy gall of the custion "s it is called, under a tumbler, it will manifest that it has been pierced from the vast quantity of Ichneumonidæ and splendid Diplolepidæ, especially of the genus Callimome,* which will daily emerge from the gall.
The cralls now figured were found near Upton-on-Severn, in a bank of red marl, on the road-side; and some years since similar clusters were dug up in the Zoological Gar de Cy thent's Park, fom wich many specimens o whether they had been attached to the roots of the Elm, Beech, or Birch.-Ruricola.

QUERIES FROM SIR FRANCIS MACKENZIE
REGARDNG AN INJIGENOUS WILLOW IN THE HIGHLANDS OF SCOTLAND.
abore the altitude where the Scotch Fir thrives, will be found on Sir Francis Mackenzie's estate of Gairloch, banks of Loch Maree, a Willow of the most valuable kind, and indigenous to the Highlands. It may also be seen in the pass of Killiecranky, Perthshire ; at Beaufort, the seat of Lord Lovat, and, Sir F. doubts not, in many other situations, but is not abundant anywhere. The bark and timber of this Willom are quite as valuable as that of the Oak In favourable situations it grows to a large size, and it is capable of resisting the bretzes of our Western Ocean in the most exposed situations without the slightest appear ance of suffering. This can be seen on Sir F.'s estate close to the parish chureh of Gairloch, where, in a shel
tered spot, and good soil, at the bottom of a wooded bank an old willow good sonl, at the bottone ast 30 solid cubi feet of timber; whilst not above 300 yards distant from this tree stands another, within 10 yards of the public road, growing on a rock of granite, having not more than a few inches of gravel covering it, and exposed to every ing what comes from the Atlantic Ocean, nowithstand constantly injured by cattle passing along the road, it is vigorous in its growth, and the branches next the sea ar as strong in their shoots and as little harmed by the wind on one of the most exposed situations imaginable, as if it were in a perfeetiy sheltered valley. Sir F. much regrets that though he has ever felt an anxiety to propagate this most valuable of our trees for certain situations, it is only now that he comes before the pullic to ask the best means of propagating it successfully; for his own trials for the last 20 years have almost wholly failed. With cattings in the ordinary way not 2 in 100 succeed, and collecting the seed, least the remains of its flowers, for no seed abortive - vet Sir \(F\) served, and sowing it, has almays prove small seeding trees of this Willow together in his hazel copses at Flowerdale, at a distance from any parent tree and in one copse troud he has 4 or 5 young trees about 10 years old, about 20 feet high, anil making the most vigorous shoots during the last few seasons from 1 to 3 feet long; these trees are on a sheltered bank, and in a rich gravelly loamy soil. Sir \(F\). hopes he will be excused for making the above lengthy statement, from his desire to procare some information from the pablic, which may faciltate the propacation of this most valuable whlew having failed in all his applications to private acquaint ances; and he begs not only as a favour to himself, but as a boon to the nation we inhabit, that if any readers of the foregoing statement can advise the means of increasing
our indigenous Highland Willow, he may communicate it to Sir F inenous Highland Willow, he may consmunicate it to Sir F. and the public, either privately or through the widely-circulated Gardc
shive, 29 th Oct., 1841 .

\section*{COTTAGE GARDENS.-NO. XLII}

Having last week suggested that some of the Currant and Gooseberry prunings should be reserved for cuttings, we noss proceed to notice the way in which ther are to be treated, so as to form young plants for the purpose of exchange, or to make guold any vacancy that may occur in the forders, either hy the natural decay of some of the
bushes, or from their becoming old and unfruifful. To provide aganst these contingercics is not only highly desirable, but neeessiry, in every garden. whitever may be shouhd recommelai a few cuttings to be put in every season, or every two years, to keep up a supply of nicelyare only to be ot onined trom =owint the berries bat the farourite hinds already in cultivation, as we.l as those of the Red, White, and Black C'urrant, are to be continued br cuttingz, whiteh strike er.et rery freely when taken from the 'han:'s any time in treent t: s and spring. The best had ar of latiog are those that are colly ripene
 the shonts. Then, witi, a sharp haife, divest each shon of the chole of ite buls, excepting tiree or four nearest the top of the cutting, which must be lett to form the sufficient ; they regnire to Re pubising off the buds is not sufficient ; they require to be picked out, or pared very

號 materially affect the growth of the plants, and rob the displaced in proper time. The small buds tomards the this respect, and great care should be taken to remore hem effectually before the cutting is inserted in the ground Immediately underneath the part which the lowest bad ny portion of the bark, and the cutting is then displacing small spo and if it can be obtained in a situation that is rather shaded than otherwise, so much the better. The cutting are then to be inserted in rows a foot apart, six or eight inches asunder, and two or three inches deep, and the earth firmly pressed around them, either with the handor y placing one foot on each side of the row and treading from one end to the other, levelling the whole neatly fterwards and finist
acant ground. In digging near any bushes that were affected with caterpillar, we should advise the careful re moval of the earth from around their stems, without going so deep as to injure the roots, and the substituting in its place some fresh earth from another part of the bor-

\section*{HOME CORRESPONDENCE.}

American Grapes.-By the Royal mail steamer Caledonia, which sailed from Boston, October 2d, but in consequence of bad weather put back on the 7 th, and after a rough passage arrived at Liverpool on the 19th, I have eceived a basket of Grapes from Blookline, the seat F. H. Perkins, Esq., near the above city, whe grows the Grape more extensively than any other person in A merica They were sent without any packing, save a layer of cotton radding beneath them, upon which they were loosely laid. Notwithstanding this, the rough royage by sea, and the land carriage in this country, they arrived at Chatsworth in such a state as to enable us to test their qualities, agains the same kinds grown here: the latter proved yery much superior to the American fruit in flavour, but the bunches and berries were equal in size to any hothouse Grapes we have seen this season. The kinds were Muscat of Alex andria, Syrian, St. Peter's, Nice, and Grizzly, Black and White Frontignan. The Syrian, Muscat, and Frontignan were little injared considering the journey; but the latter kinds possessed none of the aroma for which they are
prized in this country-the White Frontignan tasting like weet water. Although there is little probability of Grapes being often sent across the Atlantic, yet this experiment shows how easily, by proper mangement in packing, the more delicate fruits may be sent to immense distances.-

Effect of Charcoal on Plants. - Several notices bare ppeared in the Chronicle stating, that plants may be propagated and grown in charcoal. The following circumstance will, perhaps, be new to some of your readers :About two years ago, a considerable quantity of Larch rrees were cut in this neighbourhood, the bracked were collected and burned. One of the fires happened to be near the stump of one of the trees that was cut; when the
fire was extinguished, the stump was in a charred state. It is now neariy covered with Cryptogamic plants, that are generally found in moist situations, such as the Polyrichum commune, several species of Tortula, and Marchantia polymorpha. There are several deep cracks in the stump, which will serve as reserroirs for retaining the rain-water that falls upon it, and the plants will, perhaps, be supplied with moisture by means of capillary attraction. have sometimes tried to crow cellular plants, especially those of the order Jungermannia, but never succeeded oo well as I should have liked with these interesting but hittle cared-for productions of our native country. I intend to try them upon moist charcoal ; if I succeed I mill let you know, for it is probable that some of your reade.

The Rusinered such things. Per Mo "H. inquired about this plant, under the name of Tuber ferrugineum; and we answered that it was not known to
 covered. This distinguished mycologist has favoured us with the following letter upon the subject :-" The Tume bout which you inquire was found by the Rer. J. Tit Leefe, at Audley End. It is the Tuber ferrugineum of No adin's Monographia Tuberacearum, one of the best hiteragical works. There is, uuforcunately, rery whe ithe course between scientific Italians and the botanists of Forth ; the species, therefure. of Fries and others are determined with sufficient precision. Tuber ferrugineum raries very much as to external appearance. \(1 t\) is scmetimes perfectly swooth, sometimes distinctly warty. Am, he specimens I bave seen bare been of a rich rat at the In very young specimens there is a curious carity at base, which leads one at first to suppose it Tuber ex. so am. The smell is peculiarly strong and penetrang specithat I can at once, on recerving it contains. I am very axious to get specimens of the white Truffle, and of the mooth blaci Trufle, firured by Sowerby. Should your corresponicnts ever chance to hear or see anthing of carres
them?
fou.:

Introdurtion of the Houlledia.- I have just seen the ninth Number of the "Sertum Orchidaceam," in Which iis asserted that Mr. Wank 1 yn first introd has, no donbt, introduced many excellent plants from the Brazils, but beg to state that the plant which flowered at the Fence
was not introduced by him, and that the plants judged be it in his collection hare not yet flowered anywhere. to Mr. Winklyn, standing near our own plant, and there are some distinctive marks on each, which plainly indicate twn species. The plant I fluwered was procured from the
Brazils by Tod Naylor, Esq., of Liverpool, who presented Brazils by Tod Naylor, Esq., of Liverpoo, who presented whom I purchased it long before Mr. Wanklyn's lot reached this country. I think Mr. . ansther species of the same genus, but that will be proved he same species, or very like it, collected nearly at the same time, as I find them in several collections. One Birmingham. In all this I do not wish by any means to detract from the merits of Mr. Wanklyn or my respected friend Mr. Aitchison; I am only desirous that truth should prevail, even in apparently such a slight thing as the in-fcis.-[We readily give insertion to this letter, but mast add that the information upon wade, came to us from what re conceived to be the best authority. We regret to find that we were misinformed.]
Iincries.-Several questions having been raised by our correspondents in connexion with Mr. Appleby's papers
on this subject, we have referred them to him, and have now to give his answers:- "The air in a forcing-house will become unfit for vegetation if kept close shut up for admitting pure atmospheric air as frequently as possible. The principal difficulty in effecting this occurs during early forcing in the dark, cold weather of winter and early every opportunity when the sun breaks out, and to take adrantage of the circumstance. I always, however, take care never to give too much air at once; I would rather
give air pretty early in the morning, in small quantities, and give more as the heat of the day increases, reducing it gradually as the meridian is past, and shutting up before the heat of the sun is quite gone. The quantity to be given depends upon the different stages of forcing. Until
the Vines break out the buds, too much can hardly be given. To make the Vines break equally, slow-forcing best. As seon as the Vines are fairly broke, I give rather less air, the thermometer being my guide. When in flower I am more careful about admitting air. In windy weather may be given more abundantly. Close, hot, dry air cannot be congenial to cause the fruit to set. If the air is sometimes mist and sometimes dry, it will, by contraction and expansion, cause the calyxes and anthers to open more freely than if it is kent equally moist or equally dry. To heating material early in the morning, to moisten the air, and by giving air I dry it during the day; I moisten it again in the erening, and find it evaporated by the mornso, air should be given as abundantly as before the buds a little mould the weather be damp or rainy, I recommen? moulding. This is my practice respecting giving air, and however, impossihle to give directions to meet every case; much depends upon the construction of the house, the mode of heating, and the occupants (where any) in the house. There is always sufficient left to exercise the
forethought, daily care, and ingenuity of the cultivator of his most excellent fruit. A correspondent signing "B." has asked other questions, which I proceed to answer. The second season 'the two bottom eyes I stop at the third or fourth joint;' eyes shonld be shoots. Col. Bd. ever sboot, or if it did I should remove it. Query. To effect this I train up a young shoot from the buttom, and the year after cut off the old shoot; is that the main bearing stem? Ans. Yes.-Qy. If this were left a year or it injure the crupg shoot came into a bearing state, would it iifure the crop borne on the main Vine (qy. sten) and
the same root? Ans. Decidedy.-Qy. Or would its prozess to a strong state, for abundant bearing, be restate while Ans. It would hardly ever get into a strong state while the old shoot was left to draw amay must of forcing at - Qy. If there be no object in commencing as late a periol given time, is it nut expedient to defer it till eariy nor smmmercrops of Grapes are required the process of forcing need not commence until the heat of the spring months has set the Vines in motion; very little forcing will then be required, but a little artificial heat will be required in in autuans to rij en the mood.-Qy. While the lines are Ahs. The reason why I ifothis is explained above.-hy. Is it not the amount of ninsisture arising from aboenhonse phants kept with the Vines, which frevents the latter froms sctting plants nught to be out-of-dours befure the Titses blossom. togethe and Greentouse plant do not agree vers well ment and May be grown with the Vine very well, but Heatus and New Holland plants are more dimiente. in foct they regart be well grown if the Vines are dune justice to with regard to heat and air.
The Tettenhali Pear.-This Pear. suvpinsed only to though a very profuse Tettenhall, near Wulverhampton, but as a forest tree it is remarer, has fruit almost worthless; paniog in nine, shape, and masmen of deep grean foliage
the Tettenhall Pear is worthless. The tree. which grows and bears very wel, may be seen among the species of Pyrus in the garden of the Horticultural Suciety.

Woodlice.-A correspondent spoke uf Cabbage-stalks as a good trap for Woodlice. I have tried various expemornings since I caught no less than 23 of these geatry on one slice!' So much for insect life as developed in hot ouses.-S. Buckland, M.A
Mr.-Ainger's Plant Stage.-This stage, though decidedly superior to those in general use, is yet capable of
improsement. In addition to the plant-shelves increasing hree inches in height as they recede from the front, they should also increase in width in the same propurtion; because as the largest plants are placed on the bach part of the stage, it is obrious that they will require more room than those at the front, and hence the necessity for wider shelves. I had a stage erected on this graduated system dmirably adapted for the place last spring, and find it the days of old," when plants wsid to dras out their (too frequently unnatioral) lives in 32 and til-wizel pots, the old-fashioned stage did well enough, because the plants required to be placed close together to hide each other's
nakedness; but in these times, when Geranumes are arown 12 and 16 feet in circumference before they flower, they equire a little more space to stand upon.-W. P. Ayres, Place Gardens, Soham, Cambridgeshire.
- Fuchsia fulgens a Fruib-tree.-I think the Fuchsia fulgens noticed at Highclere by Mr. A. Herbert must he different variety to that in general cultivation, or otherwise there mast have been something peculiar in its I gathered upwards of a quarter of a peck of fruit from one plant this season; and though I willingly atmit they were eatable, I cannot say they "mere better than any
grapes," unless, by the bre, the grapes were ereen ones grapes," unless, by the bre, the grapes were green ones
Iy fruits, when ripe, were of a light purnle culour on the sunny side, and of light green on the reverse; but M Herbert describes that at Highclere as of " pale yellow, from which I infer it is a variety not generally known. It and therefore I hope VIr. H. or the gardener at High clere will favour us with some further information respect ing it. While on the subject of Fuchsia fulgens, permit me to say, I cannot subscribe to the doctrine promulgated in an early Number of the Chronicle by (if my memory being rather stinted in growth. To test the merits of his system I allowed five plants, one in a number 8 and the others in 2t-sized pots, to bloom they flowered in da-t sear; but insted of proincing a
profusion of flowers as I cupected, they on ly montuic very mearre s,ikes, with from six to twelve flowers on a niserable p'isht, I romoved theta early in June into pots four sizes larger, using a compost consisting of leaf-mo ild, quantities. I also had them watered twice or thrice a wuat with str) ng manure-witer, such as I use for Cucumbers (Vide Ayres on the Cucumber, 1 . 6 . and the result was description. The large plant in July had upwards of 100 spikes of flowers out at one time, and mas ti:en allowed by every one who saw it to be tha finest specrmen from IF. fulgens I have one which is a decided improve ment on the old species. the flower-spikes stand out in bold relief above the folidge, and the flowers, when full blown, instead of hanging in a compact lurch, as in the spihe an belliferous and rerv elecsnt ap pearance. Ir
Rivers saw it when in bloom. and considered it a superior and very desirable variety.-W. W.Ayres, Pluce Gardens, Sylciu prtens a IIart
 much is being said respecting this riant hems capabie of resisting the rigour of our winters unproected, to stand question worth asking whether (even alownoted plint. it would not be better, and be making "assurance duuisl sure," to remore it from the beds in antuma, and sujuch it to the same treatnient danng the dormant season, as protect it from the weather in a dry shed, cellar, or ather andiogois situation = The s miy risi wa holbo. the tuen witier ; but this migit be aroiked by freserving the eartit about the roots, and placing then in a siuati is frec fom damp or frost, curenizg the inta or sis inches then the Tould survive the winter unijured, an! may be returned to the beds in April or May atier the sererit? of the weathe is over. The adruanes of th is sstem nound

 through the winter. putted afi in March, and protected in a frume, a The rxceilut piants for pianting in the borlers Gridgedire.

Cineraricus. - Few pints nde mare to the stitactions tise conserratury or frawing-reum in the dull mantias an Cineraria; and thouzh tiaer require intle more care than a caboage plant, there is perasis no trice io miomanaged is as follows:-About the first week in June the plants,
being removed from the greenhouse, are turned out of their pots, the old earth shaken from their roots, planted rather deeply, and about 18 inches apart, in light rich soil in the opea garden; and watered as often as they seem to
require it. By the end of July they will throw up myriade of suckers; they are then taken up and parted, preserving the smailest atom that has a root to it. The largest plants are potted in pots propartionate to their sise in a compoat loam, in about equal ouantities, and and strong turfy. situation. These will fluwer in september ami Oefuber and will do well either for tise huse, or for fibluz up beds or vacancies in the fower-garden. The other plants are replanted in the open garien, watered and s.aded until established, tahen un wita bills an! putted sout the end pit through the winter. In this imanoer, and liy keepung plants of various sizes, I obtain a regu'ar supply of fowers from September to the end of June. It I want a few specimens particularly large, I place tires or four pints of the same size and and in a pot, repot them as often manure ; but for all ordinary purpests, indee nit or 24 -sized pots are large enough. No plants suffer 80 much from heing crowded together ; indeed, when short of room, it is better to throw away a few plants than have the whole cramped for mom. In raising plants from sced, I sow it in May in the nuen borter, than (uxt the plant where they are crowded, and tran-plant them when they have three enon leares, and mot them in O.rahe I would particularly invite the attention of culturists to the bobridi zation of this tribe of plants; there is yet abundance of room for improvement. Cambrito

Rust-Prenting. - I am glad to find that root-pruning is and then Elosing soute puffs of smoke in. It was some just beginainer to be appreciated; and as the author has done me the honour to couple my name with the subject nis heory furticulure, a few remarks on the exacceptable. I find it is now called Mr. Rivers's system; acceptable. Was Mr. R. the inventor of it? By no means. I understand that Mr. R. has published a pamphict on the subject; and I am glad to bear it: but whether he claims the honour of the insention, or of the earliest systematic application of the invention, I cannot say, not having seen the pamphlet in question. As to the invention itself, if such it may be called, it is, I should fancy, as old as the strongly suspect, belongs to myself. In London's Magazine for Feb. 1830 , page 51, will be found an article by me on this subjeet in strong reconumendation of the
practice. I was then a tyro, but since then I have practice. I was then a tyro, but since then never to paactise it on a variety of subjects, and sometimes, I assure you, with a very heary hand. I long since fict shamed by the superior success of the
farmer or coittagrer's Pear on the gable end of his buiding farmer or contlager's Pear on the gable end of his building
with tive tone favement over its roots ; and of course I Wondered that such a perpetual round of digging and ma-
nuring : that still be practised in the gardens of the nuring . l , uhd still be practised in the gardens of the ceiving, as 1 thought, tie foundation of the evil, I began to retrace my strpo by cautious, or I may say timid, degrees, before meyes ; however, after persevering in this way for eleven ytars at least, I can strongly recommend the practice to these whose trees are subject to vegetable plethora.
Who that has ever been in the habit of removing large Who that has ever been in the habit of removing large
trees of the Thorn, the Holly, or the Yew, could fail to observe the consecquent production of blossoms: The Chinese method of crampiug the tors of their fruit-trees
(not to name the tues of their laties) is well known. (not to name the tues of their lauies) is well known.
The vast acetssion within these twcaty years of such a rariety of fruits, many of high cousideration, would serve in itself to lead to both econon, yof space and aspect. Besides, a tree on a wall, all thiugs considered, is in a highly artificial state; where the borders are regularly cropped abundance of manure originally inter.ded for Caulifowere, Letuces, \&c.. \&c., whiist :he tree must be stublied and pruned once a--rear to a complete skeleton. I think I have proved autumn to be the most proper time for the
operation, in fact immediately the fruit is gathered; as operation, in faet immediately the fruit is gathered, as
the tree has time to make a new series of filres immediately, and is not taken tuo much by surprise, as it would inevitably be by spring rout-pruning, if the months
of A pril and May of the succeeding spring should prove dry and sumny, which is often the case; the consequence of which is, that: the tree recently operated on beconies in the first sunimer a prey to red spiders, scale,
\&e. \&\%. as I have often pruved, owing, as I suppose, to the inspi....at chanacter of the tluids throught lack of adrancing He Were wall-trees planted wh shallow table or andinal manure, there would be little becessity for
tampering with the roots of trees. I am well sorare tampering with the roots of trees. I am well sware that entively, a litde mere gromed would be required, but it
would amphis te the the denand in the end. would amphs te, y the denand in the end. Howeter, a that case there will always be a necessity for ront-pruning in some degree. Another fault, in my opinion, is the
strict adlarelue to the cha spurring system on walls. Everyhody kmoss the haportance of light on all parts of the tree in ase nonthern climate. I have, within these respect; and intead of depmydug on the old spurring system, I bave adopted the plan or laping in the main leaders of nyy lears, \&ce. \&c., further apart; they were
only two bricks apart, and are nuw four ; and on these main leaders 1 tie dunna regular sprinking of young wood every summer, or, in fact, wherever a vacancy occurs. The constquence is, that the sun shines on almost every ins of the tree equally, and there is a dis-
tinct line of mall between every pair of leaders exposed to the ful! pher of tise sun. The reasous which apply to drill-croppus in improved modes of agriculture apply equally tu th; seosk of training.-Robert Errington.
ation of \(\mathrm{D} \%\). H ..in is in the Chroricle the to an obser' nitrate of soda improves grass and ruipe Onions,'. I beg to call rour attemtion to the following focts, which appear to contratiict mont decisi:eiy the latter part of that state-
ment. In June last, during the great drought, having obsersed that some bews of Onivns, in a light, sandy, alluvial soli, haci heen attacined by the maggut, or Onion grub, and (wn); er three stiluare rards entirely destroyed, 1 Watered limen ary a sulation of nitrate of seda, dissolving one pound of suvinuty \(3 t\) gallons of soft water, and using was most satisiactory, the beis which wiere thus watered producing an escentent crup, and the maggot was completely exterminated: wialst in another maggot whas comwere tatioy destroyed by the maggot. 3.10
time before the snoohe stupified them, though it ap peared to hurt them, and ultinately generally caused death. My plan of joining two hives, i- in the evening, when all the hives , the others with a little honey, and then put them tugether When this is done, I place a piece of board or zinc ove the bottom of the hive, then turn up and of the hive place ; and when the bees are all at he top of the the bees
remuve the buard or zinc. The fungus renders to all aprearance dead for about twenty minutes, time enough to find the Queen, though the more eges that are employed to lwok after ber the better, as if she is not taken way a fight ensues, in which both Queens are sometiues killed; and should this occur it is death to both hives pear to injure the bees. It is easily procured, and this year there is an unusual quantity of large gronth; las cumference, which I believe is a larger one than I ever saw before.- W. I'. \({ }^{\text {. }}\). [We presume the puff-ball of
our corvesp ondent speaks is the Bovista gigantea.]
Masagement of Saluius.-I observe onte of your cor respondents making incuiries as to the flowering of Salvi spleudens; I, therefore, beg to send you a few remark
on the growth of Salvias. This year, in the end of May 1 obtained cuttings of Salvia splendens, \(S\). coccinea, an
fulgens; I struck them in a small frame, and then had previed them into a bed on a west border, which Salvias grew with the greatest rapidity, and in a shor time beat, in strength and general vigour, the parent plants; the whole thrte varieties are now in flower, and are each fally thrce feet high ; and although we have had a very severe frost which has blackened Dablias, they still exhubit the same robustness of growth, and have been
whully free from the attacks of red spider and other insects. I anm persuaded that all the Salviay nay be grown and Huwered in the open air, if the ground they are planted in is well limed and wanured.-A Raaburgh Gardener. tific corre:pondent A. for putting me right about the economy of beat as I proposed it to be applied to a Fruitmem, and gran the truis, "ith kell mears keeping in the heat. inquiry Mr. A. has the best side of the question, but
practically speaking, Mro \(\mathbb{B}\). has his advantages also. The practically speaking, Mr. B. has his advantages also. The
fascinating sound of the word economy leads us often to misapply it more that any other word in the dictionary nith a garcener at least it should always mean, good although the application of heat to the inside of a fruit room may be less expensive than the way I suggested, it is wot goud management to a alply fire-heat inside a fruit nine-tenths of our best gardeners act on this conviction The quantity of heat icquisite for a well constructed truit vom is so small, that it is very difficult to apply the necossary degree with rertainty, and a few degrees too much are found to be more injurious to fruit than a sligh
frost. Rathier than trusing to my lest attention with a gor.d apparatus, I have sometimes had Apples as hard as camon-bails with frost, and by keeping the room quite cluse for a tinie after thee return of fresh weather they did not stem much affected by it; but if my apparatus had Leen so tasily manuged as 1 think it a culd be of placed rithin hollow walls, I would thdeavour either to keep in the heat or heep, out the fost.-D. Beaton.
Ants.-1 saw in jour paper of last betk a lads wishing to know how to destroy Ants. I once had a large Pelargonium in a put, which was infested rith Ants, so wuch oo, that it was in a dying state; I frequently watered it,
thinking that would drive thens akay, but it was of no arail; at last I wus induced to try caniphor, which I broke rery small, and placed on the top of the mould, and watered it as usual, when they soon quitted their abode after which I potted the plant, and it grew as well as evtr. - 1 Foung Gardene

The Niger Expedition.-Among letters received from Cape Coast Castle, dated the 29th July, were some from the naturalists attached to this expedition, from which we learn that Dr. Vogel had been very actire and very sue portunity of examining Madeira, Cape St. Vincent, sierra Leone, Grand Bassa, Cape Palmas, and Cape Coast, a hich will enable him to compare the plants of the interior with those of the coast. He hat collected 100 spegenus, closely allied to Napoleova !better Belvisia), the beautiful blue tlower, said to be the boast of Africa, both at Grand Bassa and Cape Palmas. He found both blossoms and fruit, and his specimens, therefore, will doubt less be sufficient to show what botanists want to know about these plants. Dr. Vogel lonked forward with the greatest interest to the ascent of the river, and to exploring the hitherto unknown botanicn treasures of the exrior. Mr. Roscher, the minalion, had in the pursuit of his science. From St. Vincent he has sent hume a map of ine istand, geologically coloured; furreunding country; and from Sierra Leone some valuable remarks on the soil of the colony. He is of opinion that the cultivation there has been carried on upon a wrong plan, neglecting he productiens mest fitted to the soil, and striving after those which could not repay the haoour. On another occasion, we hope to find room for an outint of Mr.
Ruscher's remarks on the colony; anu will only add here, that this disposition to examine into the nature of the soil with a view to its capibilities for snpplying the wants of the natives, and affording them procucts for barue, for the most useful line that Fowell Buston has fully shown, that the true source of the wealth of Afriaa lies below the srface ; or, to use the mords of a distinguistied statesman (Pranee Metternich). "It is the hible and the piough that must work

An Account of the Setllements of the Ner Zeuland Company, from personat oborviations during a ressudence Elicer, and \(\mathrm{C}_{0}\). Eli.er, and
We have so lately oceup,ied our columus with iuformation concerning New Zealand, that we are ural le to spare ruom for any leugthened observations upun this work. Ic is, bowever, but just to the auther tu syy, tiat it is writuen impartially and dispassionately, in the tome of a gentleman, and of a right-mioded, sensible observer; and to the New
Zealand Cumpanies to add, that it fuly bears vit the statements they have made of the weat supanits - thes islands to the other South sea sulicanctis. is prurpuses of eniigration. It is, in fact, as has heen weil observed hy a leading literary jutrnal, in .in 2eatand hat we The misrepresentations of some of the Nira sumth. Wales newspapers are exposed in every pace of hio h.... rathe;
and so, we regret to adti, in the matnathagemen of the British Ciove presentative, Captain Hubsum, iown to tion present hme. It we ever entered mito party questions in thas journal,
we should certainly devote somas siace to an examation of the extraordinary proceedings of this gentleman; but we are persuaded that no secretary for the colonies will senture to pass over the conduct of such a functomary without strict investigation.
All persons enigrating to New Zealand will do well to peruse Mr. Petre's work with attention. The stasencents with iroplicit confidence.
Die Getretde.arten und Wiesengridser in botanischer und ockonomiseher Hinsicht. V:u J. Me:zger. Heidelberg, 1541. The Cereal and Meadow Grasses Botanically and Economically Considered. By J. Meizger.
The author of this work intorns us in tis preface that this rolume is only a portion of a lager wafn of economical botany which he is about to puivish, but as che fansily Grasses is of such special interest, he bas been incuicel to produce this part of the volume first. The Cereaha in this werk are also the substance of a 1 rimer rotume pub Sished by the author on the European Cereana in to this Sinee that period he has given great attention to this
department, and has been exabled to add the result of a reat number of experinamt:
In cur nolice of the volume we shall contine our remarks more particular!y to the Cerealia. which, in fact, foum by far the largest proportion of its contents. The first genus considered by var author is that of Lolium. Tue onily two species of which he speaky are the L . Exciuxively cultiran in E. latese li, leave angthing new for a forcigher to con mancate hyon saems. As and ornanimal limass in parlis and gardens, lie recummends
 gible feasons ripe seeds may be oibtaneu twice ill tue year The nest geness mpoken of is Hordeom, the species of Barleys (Hurdea polysticha): 2, the two-rowed Barteys

 ducrives. The forner, he says, is oftem cunfuraded with the 1. vuijare bybernum, a mistake that was made by Thaer i: sume of his admirable porks on agriculture. The ing raris'y is seidion seen but in gardems, and planted was
rxicriuent. The experata. of the Gexman firmer with

render it not only less profitable as grain, hut renders it quite unit for the malrster. In a number of experiments of the secd raried from 140 to 170 pounds, whilst that of of the sech raried from themon barley weighed from 210 to 240 pounds in the comunon Barley
the same quantity.
The second species. Hordeum vulgare, is divided into five rarieties : -1 , Hordeum vulgare hybernum (Common Barley) ; 2, H. v. æstivum (Spring or Rath-ripe Barley)
3, H. v. coerulescens ; 4, H. v. Digrum (Rusian Barley) 3. H. v. coerulescens ; 4, H. v. nigrum
5, H. nudum (Naked or French Bartey).

The first variety is adapted, according to Schwerz, to well-drained marsh and lowlands, where Wheat would be exposed to disease. It also prospers on all rich, dry soils, and especially on good sandy soils. The best crops to precede it are Rape-seed, Clover, or a fallow. soils it may follow Wheat, Oats, or eren itself. As it
ripens some weeks earlier than other Cereali ats ripens some weeks earlier than other Cerealia, and + shansts
the soil less than Summer Barley, it mar be followed by Rye; Wheat can only follow in marshy grounds. In the low countries the Winter Bariey is never followed by anything else but Rye. The rotation most common in the fow countries is Rape, Barley, Rye; there is no better crop to precede Barlej than Rape-seed. The climate which suits summers endanger the crop considerably. In the lowlands, two to three hectolitres are put upon a hectare of ground. According to the Agricultural Union of Hesse, the advan-
tages to be gained by the cultivation of this corn are, that tsges to be gained by the cultivation of this corn are, that
it becomes ripe three weeks earlier than Rye, and that it gives a greater produce than the summer Barley. During
ascarcity of food, in some districts of Hesse, it was fonnd ancarcity of food, in some districts of Hesse, it was found the beginning of June, when other corn had scarcely blopThe Hordeum rulgare cestivum does not differ botanically from the last variety, but through culture is become a ammer corn, and may also in the course of time become Barley, Rath-ripe Barley, small four-rowed Barley, \&cc. This variety is universally cultivated in the south of Germany, with the exception of a district or two in the Black
Forest. There is much difference of opinion with regard Forest. There is much difference of opinion with regard
to the value of this Barley. Metzger says, that on good, well-worked lands, it is preferable to the two-rowed, or any other; but that on badly-cultivated grounds the preceding variety or the two-rowed is best. Schwerz says, that the most commonly cultivated Barless are, the great two-rowed and the small four-rowed Barley. The latter, on indiferent ground, he observes, yields its seed later, withstands the dry weather better, and yields a larger produce than the former. In the north-west of Germany it is wore frequently caltivated
Barley, is not much cultivated. It has a strong conlm, Barley, is not much cultivated. It has a strong culm,
short, thick, upright ears, and large seeds. It is a winter short, thick, upright ears, and large seeds. It is a winter
corn, but will not bear cold well, unless the ground is covered with snow. Our author strongly recommends this beaatiful barley to the attention of his southern countrymen.
The fourth variety, black or Russian Barley, seems to have nothing to recommend it; and its colour muat ever The fifth variets is the
Linneus. It is known in this country by the names of naked. French and Wheat-Barley. It differs from the common Barley in possessing naked seeds, longer and broader awns, and a stronger stem. Metzger, however, says, that stantly degenerate and becoments, lie the common Barley. Its peculiar character is, that it loses its glumes and awns. at an early period of its growth. These, however, remain on as it degenerates. It appears to be little known in this country now, and has probably been lost through cultivation. It requires a nutritive, dry, well-prepared soil for profitable growth; on indifferent soils the common varithe results of our author's experiments on this Barley near Heildeberg

This Barley is not disposed to lay, not subject to smut, The country peosia, and the straw makes good fodder. it to degenerate, ur plant the care little for it, and allow stead. Mixed with Wheat and Rye, it makes good bread. When malted and brewed, it makes strong beer, but not clear. It is much songht after for making beer, but not The second section on Barley includes the two-rowed Barleys (Hordea disticha), of which the Hordewo-rowed zeocriton, Sprat, Battledore, Patney or Fulham Barley, is first the Far candidam of the Romanas. It is grown in
great quantities in Denmark, in Holstein, and Schleswig,
and was at one time more cultivated in England than at and was at one time more cultivated in England than at
present. Above all other Barleys it rectuires a strong wellprepared soil, and on account of its tillering freely, it should
be soisn thin. It stands the wind and the rain well, and its strong awns protect it from the attacks of birds. It makes beautiful meal and groats, and is rery good for
malting; but it requires to be malted alone. It seems well adapted for cold and mountainous districts if attention be given to the circumstances in which it prospers.
Burger prefers it to the next species. The Hordeum distichon, two-rowed Barley, has three varieties:-
Barley. distichon nutavs; long-eared, or long two-rowed Barley. - 2. H. distichon erectum ; short two-rowed
Barley.-3. H. nudum; Haliday Barley. The first is much cultivated in Europe, and is everywhere driving the common Barley out of cultivation, which
is undoubtedly its highest recommendation. It flourishes most in well-worked soils, partly of clay and partly of sand. It withstands well the influence of frost, and may be somn safely in the beginning of March; on this account
it is called in Germany March Barley. This barley is considered the best for making beer. In Weimar they conup their best land for growing Barley, and 13arley-land and good land are synonymous terms; whilstland that is said to be only good enough for Wheatand Oats is less esteemed. The second variety, the short two-rowed Barley, is not by Wagini. It does best in heavy moist soils, andinended by Wagini. It does best in heavy moist soils, and in other freely than any other kind of Barley, and on this account requires a fourth less seed to be sown. It completes its vegetation in an unusually short period. If sown, says
Wagini, in the end of June, it will be ripe as soon as other sorts that are sown in April.
The third variety, known in England as Haliday Barley, spoken of favourably; but its cultivation has not been persevered in.
Rye, Secale cereale, is much more cultivated in Germany tban in this country, and its culture and uses occupy "forms able space in the work. Rye," says Schwer manys a principal article of diet in all the north of Gernot so white or so nourishing as that of Wheat, but it is useful for all kinds of cookery, and makes a sound tastetul bread, which keeps longer fresil than that made from Wheat, The seed-coats of the Rye are known to possess an aromatic substance, which produces a refreshing action upon the animal frame, which the nerve-strengthening fragrance of new-baked black bread bespeaks. Baked with the finely powdered husks, this bread possesses the sovereign pecuspirits which they so often need. This action should, to shirits which they so often need. This action should, to bread, as the English, for example, make an appeal to tbeir liberality in its favour." This is a strong inducement; but we question whether our sedentary friends could reconcile themselves to black bread, with all this in its favour. But this is not all to be said in favour of Rye; Schwerz continues, "Its produce of seed is always as great as that of Wheat, and iṫ̇ straw is decidedly better; it is less subject to diseases and accidents than Wheat; it leaves the soil cleaner and exhausts it less; it suffers less from weeds, and will grow on worse lands and flourishes as well on heath as moor land." He thinks it only wants to be better known in England to be more cultivated. He evidently knows but little of the strong prejudices that exist in the minds of our greatest bread-consumers against eating anything but the finest wheaten bread. Kye is grown to a great extent in Germany as fodder for cattle. It is also roasted and used with great advantage as a substitute for s used in the Black Forest and other regions the stra for plaiting, and made into hats and bonnets.

A Short Treatise on Root-Pruning, by Mr. Rivers, is a useful pamphlet on a subject to which we bave frequently adverted as one of great importance to gardeners. It was
originally published in the Transactions of the Horticultural Society, and has now been reprinted with numerous important additions. Mr. Rivers justly states the advantages of root-pruning to be-" Ist, The facility of thinning, and in some of setting the blussoms of shy-bearing sorts, and of thinning and gathering the fruit. 2d, It will mak as a few barrowsful of rich mould will support a tree for a long period, thus placing bad solls nearly on a level with the most favourable. 3d, The capability of removing trees or 20 years growth with as much facility as furaiture. To tenants this will indeed be a boon: for one of
the greatest annoyances a temant is subject to is that of the greatest annoyances a tematit is subject to is that of
being obiged to leave behma him trees that he has aurtured with care. th, The possibility of netting over a complete miniature orchard, so as to protect it from the nipping frosts of spring, and the depredations of birds in summer." To these many more might be added; but a perusal of Mr. Rivers's pamphlet and a little experience will prove the best of all guides. The pamplet on rootpruning is accompanied by a very useful descriptive cataNursery the fruit-trees fur sale in the Sawbridgeworth Nursery.

CALENDAR OF OPERATIONS for the ensuing Week. Aantageon of the the ground has beconne somewhat drier, take adsecmrirs the latels to them with metallic wire; ;o not knock the earth of that may adhere to the roots, but allo, it to dry zradu-
ally with thern in an opens shed, or wherever ther may be taced

NEWS OF THE WEEK

By an extraordinary express from Marseilles in anticipation of the Overland Mail, we have received newa from India and China to a recent date; the intelligence from China coming down to the 24th August, and that from Bumbay to the l-t Octiher. From China we learn that sir Henry Puttirger ard Acmirai Sir Whllam Parker arrived on the ?hin Aught. The tirst act of the new Pleniputentiary was to issue a notifica-ion, declaring that he wcald derote his undivided energles to secure a speedy and satisfactory concinsion of the war, and that he had
intimated to the Chinese Governmant his wilinguest to
reapect the enisting truce, wnless it were infringed by the merchants agoinst endangering themselves or their property by confiding too securely in the continuance of the truce, as no reliance could be placed on the agreen.ents and promises of the provincial offcers at Canton. The expedition for Amoy sailed on the olst August. The ransom promised to Captain Ellict, as the price of the evacuation of Canton, bad been duiy fuid, but a large proportion of it was exacted from the Heng urerebants. From India we learn that Cummodure Sir Gurdon Bremer and Captain Ethot, the late Commissioner, arrived a Bombay on the 26th Scpt., and immediately started fur England. Tranquility prevailed threnghout India, with the exception of some disturbances excited by the unruly Arab soldiers in the service of the Nizam. The only intelligence of importance from Scinde is, that the commanding position of Shkarpure has been ceded to Great Britain. In Affghanistan several encounters have taken place between the British troops and the rebels, in which our forees have been again rictorious.-By the same express we have received advices from Constantinople announcing the birth of a Princess, the fourth daughter of the Sultan. The news from syria continues to be unfavourable; the mountaineers are again in a state of revolt, and a conflict las taken place between the Druses and the Maronites, during aluch many lives were lost, and the Turkish cavalry sent against the combatants were defeated.-In France the inquiry into the late attempt on the lives of the King's sons assurnes additional importance; and no doubt appears to be entertained that an insurrection on an extensive scale was prepared to break out if that conspiracy had been successful. Accounts from Toulon announce that the disarmament of the fleet is on the point of commencing, and that Government has resolved on this measure in order that the resources of the recent loan may be expended on objects of internal improvement.-Our intelligence from Spain confirms the advices of last week, and shows that the insurrection is completely at an end. Letters from Madrid state that tranquillity is re-established in the capital, although numerous arrests and tilals continue to take place. From the provinces we learn that several deputations had waited upon the Regent during his march to the disaffected districts, for the purpose of making their submismion, or of declaring their attachment to his anthority. In contrast to these announcements, intelligence is said to have been received from Rome stating that the Pope has excommunicated the Regent for his decree in reply to the late allocution of his Holineas. Advices from Barcelona inform as of the entire demolition of the fortifications of that city by the National Guard, in the presence of the Junta and the Mruiciparity:-We learn from Bel gium that a treasonable conspiracy, supposed to have for its objeet the deposition of the King and the recall of the King of Holland, was discovered in Brussels on the 29th vilt. Several persons have been arrested, and large quantities of ammanition have been seized. It appears that the 30 th was the day fixed for the execution of the plot which is said to have bad extensive ramifications in the large proviscial cities.

At honse, public attention has been occupied by the calamitous fire in the Tower of London, and by the proceedings connected with the late forgery of Exchequer Bills. The disclosures already made in relation to the fraudulent issue of these securities have led to additional arrests: and it is expected in commercial circles that more important discoveries will yet be made-The fire at the Tower, which terminated in the destruction of the armoury, will be regarded in all parts of the empire as a national calamity. The store-house and its contents, comprising no less than 280,000 stand of arms for the supply of the troops, the value of which was eatimated at many thousands of pounds, have been totally deatroyed; be side whieh, the collections of trophies, cannon, and other military relics preserved in that celebrated arsenal as memorials of British valour, which no money can replace, have all been loat. An investigation into the origin of the fire has beem institnted by Government, but as the inquiry is private, add is still in progress, the nature of the evidence has not transpired.

\section*{Fgome Netos.}

Cornt. - Her Majesty continues well, and, as far as the weather has permitted, has taken her necustomed exercise the Princess Roval are also well. Her Majesty held a court at Buckingham Palace on Wednesday. Col. Arbuthduties of Eqea Lord C. Weilesley (Clerk Marshal) in the Wyld has Equerry in Waiting on her Majesty, and Col. ing on Priace Albert. Her Majesty the Queen in Waitatill continues indisposal as Sudbury-hall, and Lawager fered much during the meek from exhaustion consequent on catarrhal inflammation. The latest accounts infurm us that Dr. Chambers has again been semt for, and that her Majesty is still much harassed by her cough.
Offcial Appointments. It is ansouncal
Humbley mooseds Sir C. Fitaroy in the gowernt Capt:

Prince Edward's Island. It is currently reported in the
best-informedd circles that in consequence of continued
indisposition, Mr. Justice Bosanquet will resign his seat indisposition, Mr. Justice Bosanquet will resign his seat
in the Court of Common. Pleas before the expiration of the present term. Mr. Sergt. Geulburn, the Hon. Mr. Law. Recorder of Loncon, and Mr. Seret. Mere her when a vacancy eccurs. The Right Hon. Thomas Leticy M.P bas ancented the vacant Irish Judgeship, caused by the resignation of the Hon. Justice Juhnson. Earon Foster puisne Baroncy. This creates a vacancy in the representation of the Cniversity, and two candidates are
already named-Mr. (i. A. Hamilton, late M.P. for Dublin, and Dr. Longfield, of Trinity College.
Churele Preferment.-The Rev. Dr. Wood, chaplain to the Quecn Duwager, has been formally installed in the canonry of Worcester cathedral, to which he has succeeded by tie death of the Rev. Dr. Furester. The Bishop of Juhn Bowsteal, to the racant prebendal stall in the cathe dral church of Lichfirld.

\section*{Iforstan.}

Francf.-The Disalmament.-The termination of the Spanish insurrection has allowed the Paris Journals to re-
turn to the consideration of domestic subjects. question of disarmament forms the most proninent topic of discussion. The intention of Government to disarm secms to be universally admitted. The opposition papers, however, still declaim against the measure, and complain a new coalition of the Four Powers, that M. Guizot has consented to reduce the French army, and withdraw six sail-of-the-line from the Mediterranean; while they con-
trast the conduct of their own with that of the British Government, which, they assert, is making immense preparations for war. In the mean time the Government appears to be resolved un speading the resources of the loan lately effected on objects of internal improvement ; and these views, it is expected, will meet with the concurrence and support of the Chambers. Accounts received from Toulon inform us that the disarmament of the fleet was on the point of commencing, and that an order to dismiss not only all the seamen who have completed their four years' service, but also those who have only served three rom Gorernment. We are further told that the sailors who have scarcely been on board 42 months will also be sent home at no distant period. The furloughs are not delivered to all at the same time. They are divided into small detachments, in order that their numbers may not be remarked on their way to their families. The certificates delivered to them anthorise them to engage in the meirchant service. The men belonging to the northers de partments are to be embarked in a man-of-war, which above to sail for Brest, so that they may not have to cros the whole of France. Those seamen are to be replaced by conscripts, and shortly afterwards the ships will be laid ap in ordinary, because their creas will be unable to work them, and be ultimately disarmed.
The Affair of Quénisset. - The late attempt on the lives of the King's sons having occasioned rigid inquiries respecting the seditions societies known to be in existence several individuals, as we have mentioned from time to time have been arrested. Strict search into their papers and connexions having been made, a mass of documentary and other evidence is said to have fallen into the hands of the police, folly confirmatory of the reports that an insurrec ion on a large scale was prepared to burst forth, had one of the Royal Dukes fallen. Since our last, another person implicated in this affair has been conveyed in custody from Melun to Paris, and has been lodged at the Conciergerie. It is stated that the Committee of the Court of Peers held a meeting on Saturday, at which the Prefect of Police was examined, and it would appear that some very important disclosures were made relative to this affair, which have in duced the Prefect of Police to take extraordinary precautions, and that he is to be seen every day between 8 and 12 ocluck, attended by an orderly, visiting the different military posts of the capital and suburbs. Private letters mention that the troops forming the numerons garrison of Paris were held ready to act at a moment's notice, altheugh no outbreak of the disaffected was apprehended for trial of Quénisset will commence towards the end of this month, and that the act of accasation will be read in court about the 15 th or 16 th inst.
Inundation in the Provinces. - The weather for some time past has been very bad in the south, and indeed in coost parts of France ; and distressing accounts of the demanges done by inundations have been received by the
Government. Telegraphic despatches had reached Paris annonncing that the Rhone rose on the evening of the 25th nit., and Bwept away the bank of Montfaucon, and, in Beaneaire. The plain of that town to the sea Denis, at
Beas innn dated as it mas last year at the same periud. The Prefect of the Gard immediately proceeded to Beaucaire, he had taken all necessary precautions to resist the inundation and preserve the embankments yet uninjured. At Avignon the Rhone rose on the 25 th th to sir metres above the usual water-mark, and half of the town had been inum lo. All necessary measures of relief have been resorted was Aceording to the despatches from Lyons, the Rhome Whe San the 26th very high, and had overflowed its banks. The suone was algo very high, but a subsequent despatch monounces that the khone has returned to its bed, and hyons the rine of the Sione is no Jonger alarming. -The
the rising of the Rhone, and other rivers in that neigh
bourhood. The town of Bourg is said to have suffered much; but at Lyons no serious damage beyond the breakfloods and bad weather the Marseilles mailshad be these delaved on the road, and for sereral mays had been much in Paris till considerably after therir time.
Seigneurgens, on a charge of having been the of a M. Seigueuryens, on a charge of havig been the prinerpal which appeared in 18,39 . and for which offence five per-
sons had already been condemued to five years' imprisonment. The accused admitted that he was a member of the "Society of the Rights of Man," and said that "he gloritd in being so." He denied, however, haring been and repudiated the regicide of the Monuteur Républicain, print. The jury, after consulting for three-guarters that hour, returned a verdict of "Not Guilty," and the prisoner was discharged. - The Chambre des Mises en Ac rusation has found a true" bill against the Peuple for a seditions article in its number of the 19th Sept. The
same Chamber has ignored the bill against the Mode for

Inports and Exports of Grain.-An official statement has been published of the returns of the prices of wheat in the principal markets, to regulate the duties of import
and export of grain and flour. The highest average price per hectolitre is in the second section of the second class, comprising Jura, Doubs, Ain, Isiere, L"pper and Lower Alps, being 22f. 37 c . The lowest is 16 f . Ite, in the Loire Inférieure, Vendée, and Charente Inféieure.It also appears that the grain imported during the first viz. wheat 90,590 , and other grain 7,940 . The imporviz. Wheat 90,590 , and other grain 7,940 . The impor-
tation of flour did not exceed 524 . The quantity of corm exported in the same interval rose to 334,585 metrical quintals: "viz. wheat, 237,059, and other grain 97,526 . The exports of the month of September in these returns show as follows : viz. wheat 123,507 metrical quiatals, other grain 26,640 , and flour 55,896 ; the quantity of this last article exported in the eight preceding months was 51,241 . There remained in the entrepots on the lst Oct. 96,393 metrical quintals of wheat, 18,851 of other grain, and 17,496 of flowr. The Moniteur also publishes a Royal Ordonnance of the 29 ch ult., founded on a report of the Minister of Commerce convoking the Councils Generale of Agriculture, Commerce, and Manufactares, for the 10th Dec. These councils bave not met since 1838, and are now summoned, as the report says, to take into consideration important questions connected with agriculture, industry and commerce, and affecting international relations and navigation.

The C'apital.—Some serious affrays have recently taken place among the workmen employed on the fortifications; and several lives have been lost. On Sunday a quarre arose among the masons, which terminated ive
four of them, who were stabbed with inives. The Commissary of Police, who took their depositions on their death-bed, caused five labourers to be arrested, charged with being engaged in the affray. It would appear that the vigilance of the police is exercised unceasingly in the capital at present. M. Lagrange, one of the persons con* demned hy the Court of Peers to imprisonment in 1834, and afterwards amnestied, had been arrested lately, and appeared before the Court of Correctional Police, on a charge of having removed from the place of residence assigned him. M. Perrot presided. M. Lagrange was deing been interrupted by the President, wished to resume his pleading, but the President declared that the cause was heard. The usual custom in courts of justice when a deacquitted. To the astonishment of the auditery, the Courh in this instance, sentenced the prisoner to 15 days' imprisonment. M. Favre then observed that his client was sentenced contrary to all law, inasmuch as his defence had not been concluded. The President commanded 'siteace' "I protest," said M. Favre. "Well," replied the Pre sident, "I will have you tarned out, and atterwards we will hear you from the dock." This case, from its singularity, appears to have created much excitement, and to have oce Spain.-The intelligence received this weel is, on the whole, re-assuring to the friends of the existing Government, as it demonstrates that the insurrection is completey at an end. Our latest intelligence from the capital satad been felt at thued tranquil there, though some ala Vigilance, and at the news of the demolition of the citadel account of which will be found Guard on the 26 th utto , of Madrid was still be found below. The political chie th ult. Two ladies the Royal Household had been arrested, as well as severa servants, and numerous other suspected parties. Alincha tempts, howerer, to discover the retreat of rea. Conght and Brigadier Pezuela had failed, though they are thougtier Gen Quiromaning concealed in the capital. Bhe 33 r . Gen. Quiroga and Cunat Requena were tried on that the
Four carters apmeared as witnesses, who declared that Four carters appeared as witnesses, who decareuder bags
prisoners had entreated thenn to conceal them und prisoners had entreated them to conceal them under badies
of eral: but tie other evidence produced againat Brigut of cral: but tie other eridence produced against
Quiroga was not conclusive as to his having taken an sctive part in the movement. There was one charge, against him, namely his having remained during the greater part of the night of the 7th in the Royal Palace
Very fittle evidence was adduced againat Count de Bee
to death. The officers of the National Guards had rethe failure of the attempt of the 7 th ult. It is said that her Majesty complimented the officers of the staff in
affecting terms. The Municipality of Madrid had enter affecting terms. The Municipality of Madrid had enterthe Palace on the 7 th, and to which the officers of the National Guard had been invited. Advices are said to bave been received in Madrid, that the Pope had excomounicated the Regent, for his decree in reply to the late that the Regent was at Vittoria on the 24th ult., and numerous deputations from the provinces had waited upon of declaring their devorednss It these interviews. The Regent, it is said, promised to maintain all the municipal and other laws which could be exempt the inhabitants from the conscription, to which the people of those provinces seem to have an insurmount blished along the frontier of the Pyrenees, agreeably to which was to have been adopted before the insurrection, hould, it was
believed, simplify considerably the commercial relations of the country. The Regent had issued orders to shoot Gen. O'Donoell, Piquero, Galiano, and others, the moment they were taken; but these insurgent leaders, we learn, here all arrived safely in France. Important intelligence has been received by telegraphic despatch from Barcelona nuouncing the entire demolition of the fortifications of presence of the Junta of Vigilance and the municipality, afterwards defiled on the square of the Constitation, beafterwards defiled on the square of the Constitation, beastone of the citadel. Gen. Zabala and the Political Chief alone protested against the measure. It seems that the few troops of the line which remaised in Barcelona were marched on the previous day towards the frontier, wen the National Militia took possession of the citadel, and thus hall the opportunity of effecting their purpose it appears that the destruction of these fortifications has long been a favourite project of the revolutionary popula. Madrid Executive had been addressed for that purpose: out eren the Regent had refused to sanction the demolition. The Barcelona Republicans seem to have had the samae antipathy to the citadel as the Parisians had for their Bastile in by-gone days, and for their fortifications now eling. The same reasons for this distike are alleged, we the population than to be employed against a foreign foe. It is not jet known what steps the Regent will think proper to take in consequence of this act of vioance In the mean time, it appears that the Junta had placed a million of reals at his disposal, and had co-opemurrection. -The news from the Basque Provinces and Navarre states that Gen. Rodil was advancing from contrib into Navarre, at the head of 10,0100 men. A contribution of two millions of reals had been laid on that cown. Preparations were making at St . Sebastian for the was said that eighteen battalions would be cantuned in the different Basque provinces, and ten in Navarre. The surrender of the citadel of Panipeluna is stated to be cerRodil, dated Burgos, 18 th published by the Marquis de amnesty to all rebels, who should surrender within twelve days. Several arreste and executiona have taken place at Bublo. The guerilla band of the well-known Cara of by this chief have returned to their homes. Gen. O'DonGenhad arrived in Paris. Don Enrique O' Donnell, the General's brother, for whose fate much anxiety was felt chief, E1 Pastor, had arrived at Bayonne. The celebrated proceeded to Pau, where be was to fix his residence. The Christing's Lauz and his partisans, who had espoused fugees were disarmed as they arsived at the frontier, exefpt the officera, who were permitted to retain their arms tion barione. The Bordeaux and Bayonne papers menPyrences. Brigadier Oribe French troops towards the genicy of Queen Cidier Oribe, who had proclaimed the ReMellades in the regiment of the Remna Giubernadora, to Heetiones, in Portugal, on thearing of the fate of the insurinto custody northern provinces, and has been taken Portcgat the Portuguese authorities.
25 th alt. The accounts brought by from Lisbon to the South of Spain represent all as tranquil there, although it fapears that had not the Madrid attempt so completely Seville, preparatrons for a rise had been made at Cadiz, Stoop., and Malaga. A body of the insurgent Spanish
tron 200 in number, bad sought refuge ia Portugal, erosing the northernaer, had sought refuge in Portugal, Which by our spanish news we know to have been the eompany of Brigadier Oribe. They were to be sent into formaterior and disarmed. The accounts from Lisbon inthreaten another state of things in that city appears to Queen's authority, had been formed in the army in opposition to some revolutionary clubs, and it seemed to be ated fanikely that a collivion would take place. The hopes
clusion yet about the tax on the home dividends. The other projects have passed and received the royal sanction in the tariff them have been published. The altera and as an increased duty on Brazilian produce will then take place, a good deal of sugars and other goods have comes into operation in three months in Europe and sis months out of Europe, dated from the day of publication, the 19 th ult. The proceedings of the other chamber have not been of interest; the speedy close of the bession is rogation will take place.

Germany. - We have received German papers and letters of late dates, but their contents are not of great that the disarmament of France, unless prosecuted on much larger scale, is in Germany considered perfectly ilusory, and that in consequence neither the 3 d battal ion of the Austrian Landwelor, nor the Artillery, would the deaths in the Austrian dominions during 1840. They amount to 659.840 , being 9,501 more that in the preced ing year. The births exceeded the deaths by \(1: \pi, 2(0)\)
A mong the causes of death we find 861 suicides, 53 cases of hydrophobia, 473 murders, 5,369 fatal accidents, and 28 executions.- Whe German papers state that an engineer of Vienna, named Klein, has invented a method oi preventing sparks and ashes from the fires of the locomotive engines of railroads from falling on the passengers in open waggons, without, however, diminishing the current of ir necessary for the fire. The experiments made on the ienna railway have been so satisfactory, esolved to adopt his apparatus, and to burn wood instead of coke. M. Klein has taken out a patent for bis dis-covery.-The celebrated danscuse, Fanny Cerito, who has gathered such laurels in Italy, particularly at the theatres of San Carlo, at Naples, and La Scala, at Milan, has jus arrived at Viema, where she has entered into an engage ment at the Grand Opera, for the winter season. The sum she is to receive is 50,000 francs and four benefite he highest sum ever paid there to any dahseuse. The Duke of Bordeaux was expected in that capital on the 25 th the, where he plat The effects of his late accidena. It was announced a Vienna that Baron Neumann, who replaces Prince Esterhazy in London, if about to be married to Miss Johnson. -The Journal of Frankfors publishes an Ordonnance of the King of Prussia, giving a sum of \(15,000 \mathrm{~h}\), of which the interest is to go to defray haif the stipend of a Protestant bishop, to be established at Jer hishops of Canterbury and York and the Bishop of Lon don; but if lands can be bought in Palestine to establish de dotation, then the capital will be paid to these prelates The decree is dated Nolbnietz, Sept. 6, 1841.-Berli papers of the 20th inst. announce the destruction by fire of the grane tobacco manufactory of Brunsiaw; and that, in consequence of a serions collision between the soldiery Prive crowd, a grear number of arrests had been effer finall sttled the marrige of the Prince Rojal of Bavaria. A difficulty had arisen on the part of the Protestant interest, bich demanded as a guarantee that the future Queen should be of the Lutheran faith, as are the reigning Queen and the Queen Dowager. The intended bride is reported Ther Princess tizabeth Maria Frederica, born June 8, 1820, and daughter of the Grand Duke of Ohlenburg. It also sppears cettain that the band of the Princess Aldegonde will not be conferred upon the Duke of Bordeaus, but upon the Hereditary Prince of Modena.-A remarkable performance was about to take place at Berlin, at the Royal Opera-house, in celebration of the hundredth anniversary of its erection. A series of musical compositions produced in the course he century were to be executed in character, ati the performance was to be divided into tea parts, each part representing a decennium. A scene from an opera of Meses were to follow from the works of Handel, Hasse, Gluck, Mozart, Beethoven, Spohr, Weber, Meyerbeer, Mendelseohn, \&e None but German compositions isere to be performed. The King is gaid to have given 30,000 dollars for the drawings and plans left by the late distinguisked architect Schinkel. His Majesty is supposed to have been induced to make the purchase, partly by a wish to make some provision for the family of the deceased artist.- Che Cologne papers mention a disturbance which occurred in ofe of birthday of Deutz on the loth ail., on occasion of celebrating the event, asd were singiog a patriotic song, when sume young men of the city interrupted them by singing a parody of it; a violent altercation ensued, and the poifee had to interfere: several of the persons who had Grand Dule of Hesse and the Rhine orders the future execution of criminals by the guillotine. The hing of Wurtemberg opened his Parliament in person on the :3d ult. His speech is remarkable on account of the contidence expressed that several German States, not yet included in the Customs Cuion, will in a short time join it and also on account of the marked manner in which he directs the attention of his Chambers to the subject of railroads. His Majesty dwells with pleasure on the financial condition of his Goversment, which, notwithstanding several reductions of taxes, has been enabled, it dered neceseary by the late threuming supect of the
the liquidation of the public debs.
Swizerland. - The latest accounts from Berne states that so nicely balanced is party opinion in the Diet, with respeet to the Argatu-Convent geption matter of great doubt whether its settlement will not be he Finty postponed. Adrices from Baden state, that Switzerland with the intention of offering the mediation of France in the aftir
Brleivm- - Intelligence has beem received from Brusspiracy against the Government, on the 29th alt. The official account given of the affair states that two new six pounders and two field-piteces, with horses and ammunition, had been seized in one of the suburbs. Several persons to have fled, were found concealed in the house of a paiuter and seized. The place where the cannon-balls were cas has been discovered, as also the person who inade the cartridges. Attempts had been made to seduce some subaltern officers of the garrison, who however denounce them. The 30 i h, it appears, was the day fixed for the ex ecution of the \(\mathrm{p}^{\text {tot, which had ramitications at Ghent }}\) Antwerp, and Liege, among the discontented. It is thougb as the officers living in the sub bruken out in the night before they could get to their barracks; on this a it seems, an order had been given to all the officera the garrison to return to the city. From what transpired, the authorities pretend to have the clue to an extensiv counter-resolutionary conspiracy, which had been con triving for several months. It is said that the Ministry rinces. A council has beea beld, and deapatches were immediately forwarded to the King, who had gone to Ar deanes. The Brussels journals subsequently receive contain details of this strange affair, the real nature of Which has not yet transpired, though it is stated it bad for its object to deprose the King, and set up the King of Holland in his place. The capital continued tranquil hough ranks. The King had not returned from Ardennes on Sunday, but was hourly expected.-A Namur paper saya that the conntry people affirm that the unusual quantity
of rain which fell during the last month has caused so great a number of snails, as to create considerable fears for the barleys, and that many of the farmers will, in conse quence, be compelled to replough their lands.
Holiand.-Letters from Amsterdam of the 28th ult. announce that the refusal of the King, as Grand Duke of Luxemburg, to ratify the treaty of commerce betwee Lusembury and tue German Custums Cnion was offcially some stnsation in the diplomatic corps, as it was know that the King had received from Berlin an energetic note respecting this refusal of latification. It was adder
that Austria and England had manifested their appre s to the consequences of this refual.-By the same letters we learn that the Dutch and Belgian commissioners who are at Antwerp to regulate the impor ant question of the mavigation of the Scheldt, had agree upon an essential point which had taken two years to Holl namely, the right of fisling in the eastern Scheld Belgium, the latter had abandoned the right she had claimed.-Accounts from the Hague of the 28 th ult. stat that the debates on the address, in reply to the royal speech and on the budget for foreign affairs, had been very animated. The Ministry had obtained the advantage The reduction of the estimates for 1842 was 34,280 florins, and for 40,000 in 1843 . This saving was obtained by rarious reductions and changes in the diplomatic servic of Holand in foreign countrie
Russia.-Advices from Sh Petersburg announce the accouchement of the Duchess of Leuchtenberg, Grand daughter. Russia, who has been safely delivered of issued in September, for modifying the powers of the Counct of States, and the directing Senate of Poland The principal provisions are to the following effect :-Two to be called the 9th and 10th. The General Assembly of the Senate is to take cognizance of all the affairs bithert submitted to the Connci of State, ercept the anmaal budget, which is to be submitted to the Emperor by the Council of the Empire for the affairs of Puland. The Heraldic Chanber of the kingdom of Poland is still to retain its special power. The 9 th department is to be The loth is to take cognizance of criminal affairs. The General Assembly is to consiot of the functiouaries of the Grst three classes, named by the emer Governur-General as President; togetter with the mem Governor of Warsaw. Other minur provisions concerning he forms of deliteration, the drawing up of reports, ace. are appended to the above.
Traly.-Accrunts received from Rome inform us that the fugitives concerned in the late abortive revolutionary attempt at Aquila, and who had crossed the frontier. The Papal government is said to lave been induced to this breach of hospitality by the discovery that the couspiracy hat not been without its ramiticativas in the states of the charch, where numerous arrests bave, in consequence, taken place.- Private letters inform us that the tablea to slabaster column sent by the Pacha for the church of St.
Pand, are to be circular, of loge dinnetur, amd wrought in

Mossic by the first masters. One will be covered with
flowers of the most brilliant colours, and others with re presentations of the faccades of all the principal edifices in Row be supported on pedestals of bronze, ilt in they of truaks of trees, resting on lion's paws. In addition to these, his Holiness, collection of all the coins and medals struck daring the ongravings by the first Italian, French, German, and English masters; and two copies on vellam of the work lately published by the celebrated orientalist Chevalier Michael Angelo di Lanci on the Tumular inserptions, in Cufic and Arabic characters, found in diferent parts of count of a serious inundation that occurred in that city on the 6 th ult. In consequence of a violent scirocco wind of unusually long duation, the Adriatic rose to such a height that the whole of St. Mark's Place was several feet under water, and upwards of 100 gondolas were ensbled to cirNaples announce the death of the well-known theatrical director Barbaja. He is said, under a rude manner, to have displayed so much kindness of heart that he was
familiarly known as the Bourru Bienfaisant. The disorder of which he died is not mentioned, but his death was rather sudden. He was in his 61 st year, and has left a fortune of 60,000 . to bis children, a son and daughter. It is announced that the naturali
Toresy.-Intelligence has been received from Constantinople to the 13 th ult., bat it is almost entirely confined to the unfavourable news which had been received in that capital from syria. The mountaineers were in revolt, and in a contlict between the Druses and Maronites 43 persons had been billed, and the Turkish cavalry sent against them defeated. One of the Sultanas gave birth to a Princess on the l2th ult. This, it appears, is the forrth daughter of the Sultan, who is yet without a Prince proving to be incorrect.

India.-The Overland Mail from India and China artived yesterday morning, by extraordinary express from Marseiltes. By it te have received intelligence from Bombay to the lst October. Tranquillity still prevails throughout India, with the exceptiou of some disturbances excited by parties of the unruly Arab soldiers employed in the service of the Nizam. The only intelligence of importance from scinde is that the unportant position of Shikarpore has been ceded to the British. Majur Outram has taken possession of his charge as successor to the decontinue wical agent, Mr. Ross will, it is hogoal soo produce favourable results. In Affighanistan the contlicts continue between Schan Soojah's troops and the unruly continue between Schinh Soojah's troops and the unruly mountain tribes. Several encounters took place last our forces were again victorious. In Thibet there is fighting gonty forware between sume of the shbis under
Zorawar singh and tise inhabitants. The former is sand to have gained sereral victorres; and it is thought that some of the Nepaulese, who are also maraudng in China, may soon come into contact with the sikhs there. From Persala or Herat there has been no late intelligence of interest. It is rumoured that hamram is intriguing strongly against his craity and powertul Minater, for whose re-
moval he is anxions. Letters from Aden, dated the 10 th Oct., state that a furce of fill) men and a gun had proceeded eight mies inland and attacked two of the strong-
holds of the Arabs and returned with only one officer and holds of the Arabs and returned with only one officer and
four men nounded. The enemy were perfectiy astonshed, as they bad not the least notice of suen an attack, and the consequence resulting was an offer of concession from the Sultan on the morning of the above date. Tharawaddie is described as still making preparations for war, but the proximity of the seat of the British Government at Calcutta will, it is hoped, contribute to nentralise his inwas expected to arrive there in December. The steanier Atalanta, which arrived at Bombay on the 26th Sept., conveying the intelligence frona China, brought among her passengers Commodore Sir G. Bremer and the late Commisioner Capt. Ellint, who leit for Engiaud in the
steamer which brines the present mail. steamer which brings the present mail.
Chisi. - By the arrisal of the overland mail we hate received ittelisentee from Canton to the Ith Aug., from
which we learn that Sir 11 . Potringer, the new Plenipotentiary, and Sir W. Parker, the new Admaral, arrived there on the 9as Aug. The truce entereu into by Capt. baving been duy prid. The first act of the new Whenipo-
tentiary, was to issue a nutifuation, tugether with a copy
 the latter it nouid aprear that sor Hemry Potinger is
sole Pleaipotemiary and altogether independent of aisy
control on the part of the Indian Guseramint. The control on the part of the Indian Guserument. The notincation deciaps that कar subsiots betacen the British
and Chinese, and warns ai foreigners against piacing themselves or their properties in dauger, as there migitt be to derote his "anderiued energhes and thoughtis to the primang object of securng a speedy and satustatctory cluse of
 interiere w: A the stru:g neasures which he may find it necessary th antio lise atad widugt towards the governanent and subjeets of Cisthd, with a view to conspelling an by asying that no relance can be placed on the agree-
ments and promises of the Proviacial Government of
Canton: and that he has intimated to that Government that he is willing for the present to respect the existing truce, but that the slightest infraction of its terms will
lead to an instant renewal of active hostilities in that province; and that therefore it is to be borne in mind that
such an event is not only highly probable, from the well such an event is not ond bad faith of the provincial officers themselves, but also because they may be compelied, at any momernt. by orders from the Imperial Cabinet, to set
aside and disavow their own acts. The expeditioa for Amoy sailed on the 24th Aug. With respect to the pay ment of the ransom, it appears that the Government only paid four million dollars, the remainder being contributed
by the Hong Merchants. On the 21 st and 26 th July there were violent typhoons on the coast of China, which did much damage. During one of them a curter, having on
board the Commodore and Capt. Elliot, was wrecked on board the Commodore and chapt. Eliot, was wrecked on were roughly treated; but after some parleying they were Kong is to be retained until her Majesty's decision is known
United States. - In our last we briefiy announced the substance of the important intelligence brought by the Col. Grogan. It may not, however, be uninteresting to our readers to be furnished with some of the details con-
nected with these events. The papers received by this packet contain at great length the report of the evidence given at Utica during the trial, together with the speeches The evidence is very voluminous, and the addresses delivered by the several advocates extend to so great a length and include the discussion of so many irrelevant topics,
that they embrace little interest after public anxiety has been relieved as to the main point,--the date of the ac-
cused. The testimony of the witnesses for the defence and the prosecution was of the most conflicting character it being positively sworn to by several that they saw Mr \(\mathbf{M}\)-Leod at the burning of the Caroline; while on the other hand, it was established by the evidence of most respectable witnesses that he was not near the place at the time, and slept at the house of a friend daring the whole of the night in question. The counsel for the defence expressed himself strongly as to the character of the evidence on the part of the prosecution: he stated it to be "throughout untrue; and he was sorry to say that he believed it to be not
only untrue, which inaplied mistake and misapprehension, but it was evidently false, and was sought to be upheld by the rankest perjury that was ever brougnt into a court of justice since the sun shone on Christentom. He believen a base and wicked purpose. He believed it was only necessary for those men to put forth their order and it would be obeyed; and it was his solemn conriction that that dangerous combination along the frontiers (which has been referred to by us in a forn paper) men for any purpose, be it eren to hang M•Leod. But if the British and American Governments would only see these things in their proper light, there would be no neces-
sity to go to war, for that combination consisted but of the scum of the earth." The learned gentleman minutely examined the evidence for the prosecution, and the charaeter of those who gave it ; and expressed his surprise that the law officer of government who conducted the prosecution had not abandoned the case without asking a conviction on such testimuny. Judge Gritley, in summing up, laid before the jury an exposition of the la:r, and said that the only point they had to consider was, whether Mr. Mueod was present at the burning of the Curoline; the
question of his responsibility was not one for their conquestion of his responsibility was not one for their con-
sideration;' and if they were satisfied of his being one of the party concerned in that transaction, they would bring him in guilty of marder. His charge contained a fair epitome of the amount of testimony on either side, while it seemed to throw some doubt on the credibility of the witnesses for the prosecution, and was, indeed, throughout decidedly in favour of Mr. M'Leod. The jury retired for favour of the prisoner. The trial lasted eight days, but did not produce anything like the excitement that had been anticipated, and very fers persons were present as spectators in the court until the last two days. After his acquittal Mr. M'Leod left the court in company with
some Canadian friends, and dined at a neighbouring hotel ; but not the slightest attempt at any disturbance took place. In reference to the release of Col. Girogan, the acenunts state that he was released by order of his Exeellency Sir R. Jackson, administrator of the Government, on application of the United States authorities. This favourable termination of two subjects which threatene between the two countries, was hailed in New York with general satisfaction; the excitement caused by them was fast subsidivs, and a better feeling, it is said, was spring ing up on both sides of tae border. - We hare since
had another arrival from New York. The Rochester packet reached Liverpool on Wednesday, bringing papers one day later than the last arrival ; but they contain no news of interest in addition to that brought by our pre-

Stetropolis and íts GYicinity.
Fire , \(n\) the Tower.-On Saturday night, a fire broke
out in the Tower of London, which, at one period, ened that ancient edifice with entire destruction, snd the result of which will be regarded, not merely by the inhabitants of the Metropolis, but by the whole country, as a national calamity. The Grand Storehouse, with the Suall Armoury, was entirely destroyed, together with its cont.
tenis, which compined, in addition to a considerable guantity of trophies and other exidences of British glory no less a number than 280,000 stand of arms. The fol lowing is a summary of the particulars of this melancholy event, which have filled, at very great length, the columns
of the morning papers, and produced an unusual degree of the morning papers, and produced an unusual degree
of excitement among all classes in the Metropolis:- The first discovery was made about half past ten, and was communicated to the garrison 'and inmates of the Tower by the sentry on duty at the Jewel Office firing his musket pel was beaten, and under the directions of Major Elring. were immediately adonted to subdue the fire, which, how ever, was found to have already gained a fearful ascend-
ancy. It commenced in the Round Table Tower, and
and from thence had mode its way to the centre of the Grand
Armoury, where it was seen bursting forth from several windows with great fury, and rapidly extending in ever direction. Numerous engines, as well those in the Tower as others from different parts of the Metropolis, were soon tire gates in consequence of the sentinel refusing to open them withou orders. Unfortunately, the greatest dificulty was experiencod in procuring water, it being low tide and the ditcin dry ; the flames thus gained so much head, that it was soon found there was no chauce of sav-
ing the Grand Armoury, and every exertion was directed ing the Grand irnoury, and every exertion was directed
to preserve the adjuinng buildings. The White Tower was for some time in imminent danger, and the greatest apprehensions were entertained in cousequence of its containing no less than 200 barrels of gunpowder, the explosion of which would have been attended by the most serious results. The greater portion of it, however, was safely removed to the corner tower and adjacent cellars
of the Devil's Battery, and about fifty barrels were thrown into the moat. Fortunately, however, when there appeared little chance of longer preventing the White Tower from aking fire, the wind, which had been blowing in that direction, and so set the flames from the Armoury against it, suddenly changed and dropped altogether; to which cause mainly is reierred the preservation, not only of this,
but of all the other buiflings in the Tower. At this crisis, great fears were also entertained for the safety of the Crown jewels in the Regalaa Office, which closely adjoins the Grand Armoury, and they were consequently, though at great risk and with much difficulty, removed to the Governor's house by lse Yeomen or Guard, ander arcection of the proper authorities, and have since been
reported to be quite safe without any loss or injury. The fire, however, was preventel from extending to the Jewel O) fice, and about four 0 clock was so far subdued, that no
fears of its spreading further were entertained. At this time, an express announcing the event was sent off to the Duke of Wellington, as Constable of the Tower, by whom the infurmation was forwarded to her Majesty, who expressed her deep concern and regret at the event, requesting to be made acquainted with all the circumstances hour, the alarm soon spread thwugh the Metropolis; and Tower-hill and its neightoonrhood were densely thronged by thousands of persons anxions to mitness the conflagration, nhich is desenved as one of the grandest eser seen greatly surpassing even those of the Houses of Parliament
and Royal Exchange. The extent of the damage done cannot yet be accurately known; the whole Grand Armoury and its contents, with the exception only of 5000 stand of arms, and the sword and sash of the Dule of York, have been entirely destroyed, and nothing is left Bow yer but the bare walls. In addition to this, the been wholly consumed. The Butler's Tower, at the east end of the Armoury, and which is larger than the Bowyer Tower, is completely gutted, as are also two estensive stores on either side of the Bowyer Tower, containing haval stores, arms, cutiasses, boarding pikes, dc. The entire loss to the country has been roughly estimated at
oue m:llion sterling; but the luss sustaned by residents connected with the edrince is sapposed not to exceed lowi I multiphicity of rumours have been in circulation as to the supposed oricin of the fire, but nothing on which coted indence can be flaced is at pesent knoma. Overheatel canse of the disaster, bat an active inquiry has been instituted by the Government authorities into the matter. Up a late hour on Monday night, and even during Tuesday, the roins of the Armoury were still burning, and thousand
of pers ,ns visited the neighiourhood to witness the sight; none, however, though great numbers apphed, were adt mitted into the Cower without the proper authority Lord Mayor and Sheriff, with many of the noblity, sited the scene of the costiagration, and the Lord Cham berlain, by command of her Majesty, was also sent down to collect all authentic particulars connected with the event. The fire unfortunately has not been unattenuad with loss of life. One of the fire brigade, named Ris; and un Tue-day an inquest was beld, when a verdtet was re turned of "Aceidental death." Some surprise wasion a fested that no inquiry was instituted on the origin of the fire; but it was understood that Go-
to

Fersment reserved to itself this investigation, which was Tower, though with great secrecy, the reporters of the press not being allowed to be present.-The Duke of loog interview on the subject of the fire with Majnr Et ington. The inquiry by the Board of Ortrance contiwitness being permitted to be present at a time, and inetructions being given to them not to divulge the nature
of the information they have afforded. This course of proceeding appears to have produced some dissatisfaction, it having been anticipated that the details of the inquiry that, after bemg laid before Government, the entise pro ceedings aill he pull lished as an official document.
Fraudulent Issue of Exchequer Bills.-No new facts any great consequence have transpired in relation to the Exchequer-bill fraud noticed in our last, beyond the risits there of the holders of the bills to have their secu-
rties tested and marked. The market for this description \(m\) ties tested and marked. The market for this descriphion
of security remains in the same paralysed state. There have been rumours as to the amount of the spurious bills
being much greater than has been supposed, but they are too vague to be noticed. It appears, however, although the examination of them at the Bill Office is being carried on with all possible despatch, that in consequence of the large number to be tested, the examination will occupy issued a notice to the holders of these bills, stating that receipts will be given by the Comptroller Gieneral for such as prose to be genuine, but that the instruments purport-
ing to be the bills which do not cuincide with the counterfoils would be retained to wait the directions of the Treasury; but for these also a receipt would be given. with the forged hills arpears to have created consitlerable dissatisfaction among the monied circles: and many indiTiduals of great wealth are said to have been so extremely indignant at the course pursued at the Treasury, that they sond in all the Exchequer-bills they hold to be exchanged, not for new bills, but for money, and that they will never again place their capital in that description of security. persons have come to the resolution not to send up their bills to be examined at all, but rather keep them mntil the day when all Exchequer-bills come to maturity, and then demand payment of them at the Exchequer. On Tuesday, at the notice from the Conptroller-General was posted the requlations that would be adopted in the examinution of the bills, the time between eight and ten in the morning would be appropriated to the duty of delivering to the rhich should be examined and stamped; and after that time, this duty would cease, and the receipt and examination of the bills deposited be begun and continued till dusk.- On Wednesday, the affair acquired a new interest, posed to be implicated in it. An another of the parties supgaged in stuck jobbing transactions. of the name of which, was exanimed at the Mansion House, the result until brought up again for further examination. It apactions with Mr. Smith in Exchequer-hills. that thans in which he was concerned, was about a fortnight previousty to the discovery being made; and that Mr. Smith called one thousand pound bills. He denied, however, all knowledge of their being forged or fraudalently obtained. Bow Thursday, Mr. B. Smith was finally examined at Bow-street. Mr. Maule, Sulicitor to the Treasury, at tended for the prosecution. He stated at \}eigth the prisoner's confestion as to his participation in this tranzacWas concerned in it but himself ; and that he alcne was the author of all the misclief. In answer to a question put the be had forged the bills, he had replied that he had could not disclose, had put the name. He was askel if he knew for what amount he had issued bills, and he said he could not tell, but it was for a large amount, and that phed that ie tad a numiner of bills over and ahove the

The Lord Mayor Elect.-On Tuesdar Mr. Alderman Pirie, the Lord Mayor elect. accomparied by the Recorder. Sheriffs, several of the Aldermen, and the other principal officers of the Corporation, waited on the Lord Chancellor, on the nceasion of the presentation of the Lord address presented the Lord Mayor elect, the Lord Chancellor replied, and said that he had receired the commands of her Majesty to express her gracious approbation of the choice made by the citizens of the gentleman elected to fill the office of Lord Mayor of that great city. The high public estimation in which the character of Mr. Alderman irie was held led him to profier his personal congratula the important duties of his station in a manner nhich would to honour to the selection of his Pellow-cetizens, ind merit the approbation which it was her Majesty s pleasure cellor then shook hands with the Lord Mayor elect, the Recorder, the Sberifis, \&cc, and the loving cup was sent round, after which the party retired.
Public Meetings. - On Monday the Committee for managing the Times Testimonial, assembled at the 421l. 2\%. having been received since the last meating of the ommittee, the subscriptions now amounted to fol hsi It was then resolved that a copy of the trail should he sent to each subscriber of five guineas and upwards. The l.ord
Mavor moved that after the sith inst., Mr. Ade man Pirie, the Lord Mayor elect. shonid act as treasurer, and the proposition was unanimonsly agreed to.-The first general meeting of a new Society, called the Masical Antiquarian Soclety, was held on Monday in the (nmmen-room idene Royal society of Musicians, ,ir fi. mant, Preof the eminent professors of music in the Metropolis, and by several distinguished amateurs. A series of resolutions were passed, defining the objects of the society to be the republication of the works of early English composers, or and progress of music. A council of twelve members was then appointed, and a resolution passed limiting the number of members to 950 . It was also amnounced that the present number of members was 730, and that the different offices would be filled gratnitously.-On Wed nesday another meeting of the Talacre Coal and Iron
Company was held at their nftices, Adrlphi, whith, howof the meeting appeared to be consumed in mutual crimination. The Dublin director had sent over the books by a gentleman, who refused, however, to give them up to the
committee, but would only allow copies, or an inspection of them at his delivery of the printed copies of the reports, had enabled the directors to announce nothing fresh, except that 3,000 . had been subscribed by the shareholders since the last meeting, 1,000 l of which were by the chairman. The reports were asreed to be referred
Dinuer to the new Governor-General of India.-On Wednestay the Directorsnf the East India Company gave a sumptuous entertairment to I.ord Fllerborough, to cele brate his inaururation as (iovernor-General of India mon of Chert whe were many of the nobility, and the company was altogether very select. After the usual toasts, the chairman, Mr. Ellenborough ; and after eulogising his character, said that he felt confident that his lordship would be found fully adequate to the high duties which he wousd have to discha:se, and that the great interests entrusted to brs charge would be satisfactorily nerformed. Lurd Filte:horongh returned thanks at some length; during which be said that his object would be to give confidence and strength to the Government of India. He should fail in the great objects he had in view if he had not the confidence of those who had delegated him to the trust. The noble lord allmeded to the comnexion which he had had with the India Board under the Governments of the Duke of Welpiacet in \(h, m\) in beinc apminted to the high duties he had to perform.  Fines-ots abits is to the alarmint fre in the Tower,

 Within five minutes after it appeared, engines were on

 the same day a fire occurred in Fish-street-hil, wear the and steam-boat agent. Whem firnt discorered, it was
found to be ragiog in the workshops, which rere extensive, and occupied the whole of the upper part of the premises. After baif an hours exertions the flames were prevented from descending the workshops, together with the roof, were cousumed. The loss is estimated at near 800\%. and the canse is unknown.-On Monday a fire broke out in the tavern called "The Green Man and Still," Ox-ford-street. The inmatee the fre On the arrival of the engines the fre was soon got under, lar and its contents. The fire is supposed to have arisen from the spark of a candle dropping among the saw-dust. -A fire, attended with loss of life, has alson necurred at Hereford Terracc, Mite-end-rond. It was occasioned by a woman, 25 years of age, reading in bed, by candlelight. The fire was soon subdued, bat the woman was so seriounly burnt that she only lived a few hours. - ()n Monday a fire street, Soho, which destruyed the whole stock. The firemen succeeded in contirung the tiames to the premises of Mr. Warren, who, with his family, narrowly effected their escape.-On Weduesday a fire broke out at Mill-wall, on the prempes of the Parisian intumen compich is destroved was in the occupation of Mr. portion which is destroyed was in the occupation of Ar. posed to have been orcasioned by the friction of some of the machinery.
the stock, the whole of the buidirg was speedly con sumed; bat fortanately the fire was prevented from ex tending to the adjoining building.- On the same morning a fire occurred in Newton-street, Holborn, in the upper floor of the house of Mr. Spencer, and was occasioned by which it was fised being heated to a very high temperature, set fire to the floor of the room. The timely arrival of the engines fortunately prevented the flames from spreading further than the ronm in which they originatens.--0a Thursday night, an alarm of fire was given at the Guilanall, which neighbourhood. From the nfficial report that las been addressed to the Lord Miyor on the subject, it appears that it originated from the escape of gas in the roof of a room adjoining. which was slightly injured; but by prompt attention the danger was soon removed,
Brentford. - At the recent Petty Sessions in this tow Thomas Bullpit, the man who simce the 28 th of August has been several times remanded on a charge of seriously wounding Ms. Peto, the son of a farmer residing at Sutton, gistrates for final examinatiou. It was then suggested that if the magistrates would commit the prisoner for trial at the Censul Criminal Court, the counsed for the prosecation conld apply to the jadges to postpone the not Mr. Peto would survive ; that eentleman still continuiag in a very precarious state. The prisoner, who has before been guilty of several acts of violent outrage, and who conducted himself throughout the examination with great indifference and effrontery, said he should be glad to take bis trial at the present sessions of the Central Criminal Court. as the thought he had been remanded long enough. He was then fully committed to Newgate for trial.
Wobrech.-A serere contest has taken place here on terminated on Saturday, when the result was as follows For a rate of 2 d , in the pound 486 -against it \(14 \%\). Majority for the rate 339.- It has been repnrted to be the
intention of the present goverument to establish the new intention of the present goverument to establish the new
police in the Royal Arsenal liere, but the rumour has been offimially contradicted.-Upwards of 70 fresh men are now at work at the Dock yard, where the macons lately juined the strike against Messrs. Grissell and Peto. It seems that the number that struck was 101 , and thus there are now bat few wanted th complete the original complement.

\section*{Flobincial Telos.}

Brighton.-A restry meeting has been held at the Town Hall, for the purpose of auditing and passing the accounts of the churchwardens for the year eading in July, and of making a new rate of Id. in the pound for the repair of the parish church of St. Nicholas, and the chapel of St.
Peter. The accounts of the churchwardens were prePeter. The accounts of the churchwardens were pre-
neated to the vestry in July, when a committee was appointed to investigate them, and the meeting then adjourned for the purpose of receiving a report. About 500 persons were present; and after an account had been given of the proceedings connected with the accounts, it was moved that, as they were mow under the investigation of committee appointed by the last vestry, which stands dient to pass the accounts, nor to make any church-rate, dentil after such meeting. This resolution having been seconded, an amendment was moved, that the accounts be passed. On the question being put to a show of hands, Thich a poll was demanded by the church party. The question of raising a rate of ld. in the pound was then proceeded with. On the motion that such a rate be mate, 3 long and angry course of proceedings took place, which poll was demanded beng lost by a sarge majoing. when which was as folthws :- Against the rate, lnito; for it \(2 i 1\); being 3 majority aginst the rate of 339.
ace, by which 10 lives base been sacrifecarred at this place, by which 10 lives have been sacrificed. \& ship behigh the life-boat was launcled for the purpose of come
municating with her. The owner of the vessel and another gentlemang, we thed embarked in the a heavy sea and upset. Four of those on beard succeeded in regaining the boat, and clung to her until she drifted ashore ; all the rest were immediately drowned, and of the above four only two have sorvived. strophe, which has thrown a gloom over the place and strophe, Which
Cambridge.-An inquest was held in this town on TuesColle on M. A. Harrison, an under-graduate of Queen in the river near Jesus-green-sluice. It appears that deceased was rowing in a "funny," and owing to the strong current caused by the flood his boat became unmanage able; he jumped out, and was carried over the waterfall.
A labourer, called Robinson, who witnessed the accident, A labourer, called Robinson, who witnessed the accident,
jumped into the stream, and succeded in reaching deceased, with whom he swam some distance, but finding the current too strong, and himself in danger of sinking,
he was obliged to let deceased go. The inquiry listed some time, and at its close the jury returned a verdict of "Accilental Death; " deodand on the boat, 40 s.; at the more cautious in letting their boats when the state of the river rendered its nevigation perilous. They also expressed their admiration
hey gue ther fee
nlerbury.-On Monday the first public meeting of time sisce stopped payment, took place at the Guildhall tavern. The room was so densely thronged that it was difficult to move, and the crush so great round the table at which the commissioners were seated, that a policeman Dehts to and after the necessary forms of business had been through, the assignees and solicitors were appointed. It is stated that the whole liabolities of the bants amount to about 120,0002

Derby.-In a former Number we noticed the serious fire by which the Town-hall in this city was destroyed. From the inquiries which have since been instituted, it appears to have originated in the committee-room, in which there had been a fire on the previous evening. The town-clerk's with a light until half-past eight \(0^{\prime}\) clock ; but the place where the fire was first perceived was exactly noder the hearth of the fire-place in the committee-room. It seems to have been quite accidental, and no blame is imputed to any one. It is supposed that the loss to the town will be nearly one thousand pounds. The Ionic pillars which supported the portico, valued at one thousand pounds, are but little damaged, and the foundations, it is expected will be available for the new building. These sums and the insurance, it is supposed, will sumce to cover all loss.
Dover.-On Sunday an accident, which might have been attended with serious consequences, occurred nea some newly-erected cottages at Marine-terrace, imme diately under the Castle Cliff. A large quantity of chalk at the front part of a shelf of the rock suddenly fell down and destroyed some outhouses and sties. The cottages, which are only a fers yards apart from the base of the cliff, fortunately resisted the shock, or serious loss of life must have occurred. It was fortunate, too, that the fal ccurred when the inmates were all in bed, 88 , had it been of which are corered to the height of from three to six feet of which are covered to the height of from three to six feet
with the ruins. The fall, it is supposed, was occasioned by the late long-continued and beasy rains having got into the fissures and loosened the chalk. The rains have com pletely inundated the low lands of East Kent, many of which presented for several days an entire sheet of water in some places several feet deep. In this town. Hythe and elsewhere, the cellars and kitchens of the inhabitants have been inundated. The roads between Canterbury and Ashford, and between Canterbury and the Isle of Thanet, have been covered with water to the depth of several feet so that no traces of them could be seen, and the coaches had to be piloted by a man on horseback going before and pointing out the way. These inundations, however appear to have occurred at a period of the year which renders them less mischievous to the busbandman, as, in this quarter, with the exception of turnips and potatoes, the fields are pr-tty well clear. and it is not apprehended that mach injury will accrue to these crops by their baving been a day or two under water. In previous Numbers we have noticed the projected lighthouse on the Goodwin Sands, which was to have been fixed in its place some ime since. It now appears that in consequence of the recent boisterous weather and the advanced period of the eason, it has been determined to postpone the sinking of the great caisson till the spring.
Exeter.-From the long-continued heary falls of rain wish have lately taken place, the waters of the Exe be came on Saturday much swollen, and towards night had isen to a height which is but rarely witnessed in this city The water was at some depth in the Oketampton and A1uhington roads, and the strents were also muc! flooded t, however, gradually receded on Sunday, without causing any material damage. At Thorverton the high floods swept away the weir near that town, and in several places heep have een lost.
Ingatest cne- - Lpwards of 300 railway labourers in this reighourhod have, in consequence of the bad weather, been for some time past out of work and in great distress. Fears have in consequence been excited, lest it might give rise to some disturbances, but hitherto the men have be-
haved very well. Some of the Rssex magistrates have
written to the Eastern Counties Railway Company, calling on them, as they had brought the men here, to do some thing to prevent them from starviog, and to add to their police force, which the company declined to do, alleging that the mell belonged to the contractors, and that, as re arded the police, their scale of expenditure was mor ample than that of any other railway. The matter was lately brought before the quarter sessions, and excited some dis cussion, whicb, however, endedin no useful result, and no measure of relief has yet been adopted
Leicestor. The state of trade in this town is repre little profitable business doing. Some of the leading houses are narrowing their manufacture, and dismissing many of their workmen; and the stocks of insolvent which have been recently sold, and sacrificed, have tended o depress the market. The prospects for the coming解 tained that there will be great distress and suffering among the working classes
as passing through Gosberton, the mail from this place he rettection of the moon from the woodwork of Chain bridge, and although the ceachman did all in his power to wheelers and coach afier them into the channel. There were fire passengers on the coach, and fortunately but one wheelers falling upon bim. The letter-bags, together with the passengers, were forwarded to Spalding in gigs, and from thence to Peterborough in an omnibus. The coach was but little injured, and the horses received no hurt.
Manchester.-A local paper states, in proof of the great increase of crime and moral degradation of the lower
classes in this town, that no less than 35 cases of felons, and 142 charges of drunkenness and disorderty conduct came before the borongh magistrates on Monday. A considerable number of app
Ringmer.-Another examination of the parties suposed to be concerned in the murder of Hannah Devon hire, referred to in our last and previous Numbers, has taken plaee, when, after a very long inrestigation, the three prisoners, Stedman, Briggs, and lockney, were fully committed to take their tria. They have eacis made separate statements as to their connesion with the transaction, *hich they all admit having been wi!a the woman on the evening of the murder, and of having assaulted and robbed her of her property. There are some discrepancies murdered the woman, or that they know how she came by her death.
St. Alsans.-On Saturday the 23d ult, Jabez Kirk, the soldier charged with having attempted to murder Jane Pearce, the particulars of which have already appeared in
this paper, was broucht up before the magistrates for rethis paper, was brought up before the magistrates for rebe some time before the girl was not in a fit state to he examined, the magistrates deferred the earminatien fir a few days. This has since taken place. and the woman, though appearing
very weak and ill, has given her evidence in person before the magistrates, the substance of which has al ready been before the public. The clerk of the court then read over the whole of the depositions to the by way of defence. He wat that period stating anything his trial. The whole affair as yet remains a mystery, the prisoner throughout having preserved a perfect silence, assigning no reason whatever for the commital of the Southampton.-The Hampsbire papers announce that is at length definitively settled that the West India Mai Packet Company will make this port their rendezroas Everything, it is said, is finally arranged; the Company intend to commence building their warehouses, dock, immediately ; and the sum of 50,000 l
Railucays.-An inquest has been held on Mr. T. Pbillips, who, as noticed in our last, lost his life by an accident on the Grand Junction Railway From the evidence of surgeon, it appeared that the injuries received by deceased trere not of an extensire nature, being eonnmed a wion made by the step of one of the carriages on the leg, whic was also broken; he considered that mis apedy fith caused principally by great nervous irritation and frigat Deceased was of advanced age, and the powers of life were consequently feeble. The jury returned a rer railway carriage." No deodand was given.-Another fatal acci dent has happened on the same line, arising, as in the fur mer instance, from want of proper precaution on the par of the individual himself. It appears that a Mr. Lowe an attorney of Cantwich, on arriving af heed, and was within half-a-dozen yards of the stopping place, opened the carriage door and made a jump towards the parapet. He missed his distance, and fell with his back across the rails. and the whecls passing over him killed him on the spo It is thourht that he quitted the train thus hastily to sreure a seat in an omnibus running from the stit not to Aantwick ; but it is also stated that it was his habimport, an in the train until it was in motion, and the speed was as in tie present instance, the moment the Cumpany have have agreed to unite Ma- Kork and Leeds, the Mid-
 land Counties, the Great Aortm Junction Railway Com. panies, in taking a lease of a railway which prion 3 to make from Darlingtor to joia the Darham Juuction,
distance of 22 miles, and thus complete a continuance line of railmay from London to Newcastle-upon-Tyne. The several Railway Companies alluded to are to guarantee to
the shareholders of the proposed company sis per cent. per annum upon the estimated capital for ten years after the line is finsied. The trains were stopped on Wednes day on the London and Croydon Railway, between the Ver-cross and Dartmouth stations, in consequence of a serious slip of earth, to the extent of twenty thousand ards, having taken place on Tuesday night. It occurred from the banks of a deep cutting, about a quarter of a mile south of the New-cross station, on the first inclined
plane towards Croydon, and has slipped in from Luth sides of the embankment on the rails, covering them to a considerable depth. As the half-past eight o'clock train passed, a partial giving way was obserred, and information tation, the trains were stopped for the night. The directors were immediately apprised of the circumstance, when they determined upon contracting with some coach proprietors, for conveyance of passengers to and from London on the Brighton. Croydon, and London lines, on that part of it between New-cross and the Dartnouth Arms station Active exertions are making to clear the obstruction, 500
men being at work, and it is hoped that in the course of week the rails will be again clear. The cause of this fresh accident is said to be the very great quantity of rain
which has recently fallen on the embankments. The Brighton Company are now only running five down-trains and four up-trains in consequence of this accident, but will, it is said, increase them to seven each way when the line is again clear. The Croydon Company have also dis continued nine trains a day. The train from Croydon, it seems, upon arriving at the place, was stopped by a signal slopes or top of the embankment to the other side, where train was in readiness to take them to London; and so near was the Brighton up-train, that it caught the end of the fall of earth, but escaped.

\section*{IRELAND.}

Dublin.-The first meeting of the new corporation took place on Monday, for the purpose of electing the Lord joining the Assembly-house were filled with crowds of persons anxious to witness the proceedings, and a large however, was not disturbed. As soon as the meeting had assembled, and the prescribed preliminaries had been gone Lord Mayor by the Liberal party, and Sir E. Borough, Bart,, by the Conservatives. The latter gentleman stated that he came forward merely to uphold the political corrnexions of the party with which he was connected, and to show that they did not agree in Alderman O'Commell' election. He adnuitted that the Conservatives were in the minority, and that it would be neeless to go to a batlot A gentleman present said, that before the question wa put from the chair, he wished to ask . Idderman ก'Connell if elected, What course he would pursue during his year of
office regarding the repeal question? Mr. O'Connell his opinions were in his caupacity of chnief magistrate ; but apart from that office he would be a repealer, and adso ate that measure. Which he thonght the oniy substantial Lord Mayorting this country. But in hus character of Lord Mayor he should totally repudiate politics, for in chairman then put the question, when there appeared abont forty rotes for Mr. O'Connell, and about seven or requisite declaration, and O' Connell then subscribed the loud and prolonged cheering his seat in the chair, amids te feared he was cheering. He then rose and said that permitting such a demonstration of feeling. It was his rst fault, and he boped it would be his last, for he hould endeavour by his conduct as Lord Mayor to pal and if he could not justify, the eulogium of his friends, and would eavour to show that voting against him was mistake. He thanked Alderman Butt, who bad proposed his opponent, for the inoffensive manner in which he had conducted his opposition; and assured him it would be his pride to imitate his conduct whilst in that chair. After some further observations, Mr. O'Connell concluded amid boud cheering; and on his return from ans who had house was greeted by many thousand per shas who bad collected for the purpose. -The streets of ing and confusicn, which at one time sore a of some rious aspect. About nine, licn, which at one time bore a serious aspect. eighbowho, large crowds began to gatier about we apposed, of holding a turehlight meeting, which had signal for a stron to take place. This assemblage mas the sallied out a strong muster of the University stulents, who ing ensued in a body from the college, and some shirnisththe arrival of a large body of police. [p to 11 coclock the town resnmed itsid!ly disturbed, but after that period appears, were aware that some disturbance was contemplated, as, from an early hour in the everines, a treop of house in the Lower to cont, was stationed in the ridingup to an the Lower Casile-vard, and parolled the city his reture placed at the Castle the following Liay. Atter
Mr. O Cumnell addressed from the balsany of his house a numerous assemblage of persons. He Jears agreater revolution than this nerer occurred. Fify
May wor? would venture to say that be would be Lord
of that great metropolis. Let them tell him if they dare, who was now the Catholic Lord Masor Union, and that he by the preople, should not have the still being elected to serve them in the Irish House of Com mons. Yes, he should yet address the Speaher of the Irish Parliament in College Green. This was a great day or Ireland. They wanted to be superior to none. They we now their equals in everything, and it was not for them to seek for more; they never wanted more; they were satisfied with equality, and they had now carried it into prar
tice. This was a blessed tice. This was a blessed day-their church had set apart in honour of the congregated saints. Was it not a -The usual weekly meeting of the Repeal Association was held on Tuesday. The Lord Mayor attended, and was received with loud cheering. The Secretary read a number of communications, among which was one enclosing 100l. from Montreal. The Lord Mayor annoanced that, for the future, the Assocition intended adding ot to every 11. contributed to the Counties League Fund The hon. gentleman baving directed the secretary to rea the paragraph in Mr. S. Cranford's letter, which we no ticed in our last, and in which he states that emancipa-
tion was granted in order to cement the Enion, proceeried to comment on the passage at great length, and to combat the position taken by Mr. Crawford. The hon. gentleman then announced that it was his intention to attend the consecration of the Roman Catholic chapel in Francis street on Monday, having been invited in his official capa city as Lord Mayor.-The amount of the rent for the week was 29 til. 15 s . \(8 \frac{1}{2} \mathrm{~d}\).
Derry.-The Archbishop of Armagh having recentl received an address from the bishop and clergy of thi diocese, praving his Grace's adrice respecting the course that should be adopted on thee long-disputed Eystem of
national education, the Primate, in reply, states that with reference to the suhject of national education, ana the duty of the clergy with regard to it, he wollt earnestly recommend that, under the circumstances in which the Government of the country is placed, the clergy shoula not come forward to surgest any scheme for the improvement of national education ; but that they should leave i Majesty's Ministers to consider the presunt state of popular instruction in Ireland, and to devise such means for the ellucation of the penple as they slatl deem best fitted to promote that mest important obje
Limerick. - The corporation of this town, in commo with several others, have presented an address to Earl de Grey, congratulating his Excelleney on his appoutatent and humbly thanking her Majesty for the st lection mide the important functurns of his oftice. Indèr seven years of age，presenting a horrifying specta－ cle to the eyes of the Fantome＇s men when they took pos－ session of the pirate．After detailing the fearful particu－ claimed，＂If I could send my prize to England，I should make \(m y\) fortune in a month by publicly exhibiting her．＂ H．M．B．Watervitch，dated off Benguela，4th Aug． 1841 －＂We have just taken another prize，the Portuguese bri－ gantine Corisco，with 392 slaves．She was taken by our hoats last night，after a hard pull of six hours．The slaves pox had already broken out．I certainly never beheld such a scene of complicated misery as our prize presents； 392 tons，nearly all children！ 12 cases of small－pos，and about 50 casus of itch；it will prose a blessing，if that spread rapidly，for it will save them from taking the small－pox．Most of them are living skeletons，mere skin and bone； 10 or 12 of the women have chirdren at the latter should survive the passare scarcely possible Helen the dread sending away an officer and men in such a floating pest－house

Crime in the Provinces．－It appears that in Berkshire， as in most of the agricultural counties，there has lately been a great decrease of crime．The number of prisoners in the jail of Reading for the last month was 138，whilst in the corresponding quarter of last year there were 209 ， and of this number but a small proportion could read and write，and one－third could not read at all．In contrast with this statement，it seems that in the mining and manu－ facturing connty of Stafford，the number of prisoners in the county jal the last month was greater than has ever been known．the jail being ouly built to accommolate 320 and ret it had at that time no less than 534 ．In Mon－ mouthshire，also，crime appears to be lareely on the in crease；the number of prisoners at the new House of Cor rection at Usk，up to Oetober in this year，exceeding that of the preceding year by 119
Chancery Accomts．－Some idea of the magnitude and importance of the operations of the Court of Chancery may be formed from the following detail ：－According ti a statement just completed，it appears that the balance of cash and serurities placed to the credit of the various ac－ counts in Chancery amounts to the extrandinary sum of 42,1000, nen 2 ．and upsards．At present the actual number of these accounts is about 12，000；but Parliament has recently determined that all the accounts belonging to the Court of Exchequer，amounting to about 1，600，shall be added to them，thus forming an aggregate of 13,600 ．Fo facilitating the business incidental to this great mass o accounts，such as the payment of the quarterly dividends \＆cc．，it seems that the officers have bitherto been divided into three departments，arranged according to the letters of the plaintiffs＇names；but it is said to be now deter mined to subdiside these departments into four，and the offices in Ciancert－lane are undergoing material altera－ tions in order to afford accommodation for the carrying on the great increase of business
Mechanics＇Institutes．－From a statement that has recently been published，it appears that there are 216 Mechanics＇Institutions in England，comprising 26，651 members and subscribers，of whom about half belong to the class of workmen；and that the number of lectures delivered yearly is about 1，I98．The three great means of usefulness which appear to be proposed by these in stitutions are－Classes for regular instruction，Lectures， and Libraries．The Liverpool Mechanics＇Institution cost， it seems，no less than 15,01002 ，contains upwards of 3,300 nembers－8．50 pupils in three day schaols－600 pupils in 15 or 16 evening classes－has 50 teachers stgularly em ployed，whose salaries amount to 5 ．nu0l．a vear－a librar bution of 200 volumes－and public lectures twice a week， bution of 200 volumes－and public lectures twice
attended by audiences varying from 600 to 1,300 ．

HORTICULTURAL SOCIETY OF LONDON.
NOTICE is hereby given, that only one Meeting of thiN SOCITY will be held in each month d

\section*{cye fateneners Cebonitle.}

SATLRDAY, NOYEMBER 13, 1841.

Tefefirst report of the Flonicclteral Society of London was read at the last meeting, and has since cannot as vet be aware of the objects of this Association, we take the present opportunity of stating briefly for what purpose it was instituted

It is well known that the Horticultural Society of London. although they grant rewards for first-rate florist's flowers, yet make no profession of offering an official opinion upon them, except at their Garden meetings, when Juiges are specially appointed for the purpose. Those, therefore who attach themselves more particularly to these beautiful productions have been necessarily led to form a society for themselves; one of the first duties of which should be to decide upon the merits of the seedlings annually produced for sale, For some, years the florists assembled under the
name of the Metropolitan Society; but, for reasons too well known to require mentioning here, that Society was broken up; all the respecta le persons belonging to it seceled, and formed themselves into the Floricultural society, in order to preserve the advantages which had been derived from the old society in its best days. By establishing an impartial tribunal to which all new productions may be submitted for a fair and uniform opinion-by encuuraging exhibitions of florists flowers, and thus fostering the taste for these charming objects-and by offering rewards for their suceessful cultivation, it was innpossible but, un. der honest management, great public advantage would be gained. It also appeared desirable that a central institution should exist, to which provincial societies might have recourse upon occasions when an appeal to Horal arbitration became advisable.
Now that the sale of florists' flowers has become a very considerable branch of trade, the public requires protection against the over-statements and exaggerations of interested individuals, anxious to furce a market for their productions; and that protection would be afforded by such a Society better than by any other menns, because it offers a guarantee, to which no reasonable person can object, that the true properties of new florists' flowers will be made known by fair Judges, competent to perform their task.

In such a matter as this, skill. without known honesty, would only be another name for fraud. About the skill of the members of the Society no man can doubt, when he knows that it comprehends all the leading florists of London. For their honourable conduct, the perfect respectability of every member of the committee is the best security. We know that in giving their decisions, the greatest care is taken to close
every avenue by which favouritism or influence can gain admis-ion. The Judges never know who may have raised or exhibited the subjects submitted to their inspection, until a delibera:e investigation has taken place, and the certificate of the qualities of the flower is finally settled. By this means a judgment is
recorded, the fairness and justice of which it is imposrecorded, the fairness and justice of which it is impos-
sible to doubt. By thus declaring the true properties of a flower, confutence is given to the distant purchased to and an advantageous recommendation is secome before the pubtic It may be alleged that the decisiuns of
cieties are often as fair as ans that can te had in London; and this is doubiless true. But we do not think it possible in the country, where every torist's flowers arefamiliar to his neighbours, that there can be the necessary absence of personal bias, on the part of it is obvich is secured in a great metropulis: and decisiovious, that usiformity of principles, in giving decisions. can only be secured by the whole of the judgments emanating from one source. We are, for stood the corvinced that, if it were generally underbe subminghout the councry that all seedins soneuld would be attemded with the happiest results; for it Would render that certain which is now doubiful, it Would gire confudence where there is now distrust; and it would relieve the fair dealer from embarrassment and reproach. Sor can we conceive any objecductions cannoxcept on the part of those whose protinising cannot with safety be submitted to so scruWe an examination.
We regard it as the paramount interest of all amaestablishment of such a Solers to contribute to the tirm, in return for which,
the published result of its proceedings will afford a mass of valuable and authentic information.

In another column, we have urinted a brief abstract of part of the report of the Committee. Epon the whole, we regard the document as one of much interest for the present, and of excellent promise for the future. [pon looking over that part which we have
not printed, we find it recommended, that the annual subscription should be rained from (1). to 1/.-a proposition not only reasonable, but indispen-a is neces sary, if the society is to effict all the swod of which it is capable. It would have been, we think, advantageous to invite private prizes for particular objects which prizes would, of course, be exclusive of any subscription that the givers might make. The socley however, is hardly, perhaps, in a position to take the initiative in dongy this: we therefore trust that its friends will adopt our sugurestion before the next season arrives. We happen to know that a proposal to do this has been made by one genteman. who. although no florist, wishes well to floriculture; and it is to be hoped that his example will be followed by Thers.
The season just past has been one of much prosperity - every meeting adding to the numbers of subscribers to the society. Let us hope that its career will be as successful as its objects are praisemorthy-a cm summation which can scarcely fail to occur, while its affairs are conducted with the zeal and good sense of so intelligent a secretary as Mr. Wildman.

We would, however, suggest to the (ommittee, that they should never give an opinion upon any seedling flowers that may be brount hefore them. uillew such seedlinys are named. It is only by their tame, that they can be sold; and the affixing a name to a flower before it is judged is a security to the public, that when it is sold, it will be that particular variety upon which the Society has given its opiniun.

In the last number of the Philosophical Magazine Mr. Edward Solly has published a desuription of a thermometrical instrument he has invented, which promises to be of considerable importance to girdeners.

The want of an instrument to measure and regulate temperature in situations where the e mmon thermometer cannot be used, has long been felt, and many contrivances have at different times been proposed, all of which, however good in theory, have been more or
less unsuccesful in practice. Thermo-electricity seems less unsuccessful in practice. Thermo-electricity seem. to supply the means of measuring temperatures in a
very perfect and convenient manner, and is applicable in those situations in which the common thermometer is useless, as it enables us to know at any time the temperature of a flue. fire, stove, or hot pipe, at any reasonable distance, and shows us with great delicacy the changes taking place in the source of heat. It will, therefore, be valuable in regulating the heat of flues, or other arrangements used for heating public and private buildings, conservatories, and manufactories; and by giving an accurate indicaino of the changes taking place in them, will enable us to prevent, to a great extent, the consequences too frequently attendant on over-lieating them.
The common mercurial thermometer, hung in a room or conservatory, gives us the temperature of the air of the place, but does not indicare the changes tak ing place in the source of heat; whilst the thermoelectric thermometer, by showing the increase or decrease of the source of heat, shows whech
All that is required in furming this thermu-electric All that is required in furning this wire sufficiently long to reach from the source of heat to the place where it is desired to know the temperature; and a galvanometer, which is an instrument consisting of a small coil of copper wire, containing two littie magnefic needles nicely suspended by a fine silk thread. This instrument is a very delicate indicator of any current of electricity, showing by the deflexion of the tricity passed through it; and the furce if the ca: rent of electricity is entirely depemdam: on the diturence in temperature latween the two termination of the wires We understand the cont of an aporathe to midicate the ten.perature of a stove. say the price of a sis th rrometer-that is to say, 2 . or 34 To gardeners, who - eon-tantly hare cecasion to knos how their tires are noiny ona at uight. thas

Is another column will be found some good observa tions upon Ics-houses by one of our correspondents The ques ion is however, by no means exhausted. We shoutid like whear rom others what they fint the mes. economical plan for a small ice-huuse. It is diar that in this country we are not very succese oround, as re commended by Cobbett, and others who have been in America? Will it be sufficient as was roposed by Cobbett, to build up a square shell or box with slabs, drailing it with a trapulrain, so as to pievent
the entrance of air and then covering the building thatkly whin a tha ehing of furze? Oue of the best repisitories of ice which we rencmber to have seen was at (dassubury, where the ice was merely heaped up in the midst of a plantation sloping to a neighbouring stream and covered over thickly with straw. This has alwass appeared to us the cimplest of all contrivances where there in \(r\) om and comenience for

We have steral frimd whith howses large and small. and we oiserve that almost every oher season there is a tailure. Wheme capense is not rewarded, there is no difficulty in presersi:g ice; the great desi leratum is to do it efferinall! and rery comonacaliy.

\section*{- ENTOMOLOMI}

Genus Cinara. (Curtis) - We may venture to point out the difference between this and the preceding genus in the words of Mr. Cartis, with whom it originated :- The Cinaree have antenne shorter than the body, proboscis as long as the body, at least in the males, and projecting immediately from the clypeus; with the collar short in the males. The A phides have antenne longer than the body ruincis min oh horter, especially in the winged males, and armag betwen the anterior coste ; with the collar long in the males." But this distinction is not to be
made without some degree of limitation, for there are some species of genuine Aphides which have antenne as shor is thone of ' indrix, and there are come Cimare with setaconve antime very smmar in furm to Hime of Aphades. The themertes, I think, afford a mere sathactery pont of difference between these two genera than either the length or form of the antenna ; they are not only much smaller, int pheed farther apart, and uetrer to the sities of the abdomen in (:nrae than in 1 phates. The sape of the abdomen also differs; that of the twrmer being in etieral less elongated than that of the latter. The hewt is bratier in Cinarex, and the antennse not inserted chos to the miner
margin of the eyes, as they are in Aphuma, tut removed it a siurt diintance from them. Some if ectes ineluded in this genus by Mr. Courth bave bo tubertes and offfer in the weuration of tise witho, and in hating more or less of woolly covering; these we shall take the liberty of rethe Eriosomata; whilst other species agree with genuine Cinarex in other respects, but emit from the segments of the atdometn a pertsun of white cotton-like threads; these. as it appears to us, ought to form a separate genus, or at least a subdivision of this, arrange them. The Cinara may be considerea, uphies and whole, a transit
1st Subdivision: Cinare uchich emit no cotson-like threads
from their body.
Of all mdigennus trees, perhaps our far-famed British O.ak alfonds noursiment to a greater rarieey of Aphidex than any other ; not onty tworerad umm its lears: and it is not improhable that others of cisese remarindile itwec:s occasionally inhabit different parts of the saune tree. II e shall begin our list of Cinarz with those already discovered upon the Oak, and then uroceed to the description of such eilers as have fallen under our own immediute inspection. lat species. Cinara Roboris, which Mr. Curtis has enus. His description is so accurate, and his representa tion of the male insect so beautifally correct, that it would be impertinent in us to make any addition to the remarks with which he has there favoured us.
d species, Cinara Quercus, is found during the sum mer and autumal months on the under side of the leaves of the Oak, not in very dense masses, but occasionally con gregated near the midrib; the antennse are long and seta cous, differing in this respect from those of the forme pecies, arid an bern and white joints: the colour of the junager farats is dirty-green, that of the elder inclinsag ablomen ; tho ax puryitish and ratherpubescent ; wings transparent and iridescent.
3d species, Cinara Rumicis; colour a sooty black tudded on the apper side of the abdomen with irregula spots of a lighter shade: abdomen acuminate, hat nithuat at style; tubercles very short; antennse ubont half the length of the body, with the extreme joint seaceous; legs leaves of the common Dock, which curl up in consequence f their punctures. We have not been able to discover any

\section*{tugcis hums: .uals among them.}

4th spectes, Cinara Jacese; colour bronze ; segments of the body sery strongly defined by transverse ridges across the back; astennze and in ith ion part of the leme of a light culour, with the joints and tarsi female, but he has transparent winge, of which the cust

6ith species, Cinara Caprex, a small spacies found under the leares of the sallow or Withy salis caprea). It is of a bright cullow colour, and covered all over, although not very thichiy, with fine transparert hair:- The eyes are darh-brown; the antenore alont half the lenath of the bods. setaceous, and of a darker colour at the extremity tabercles very short, scarcely perceptible. Both sexe- of this singular species are aprerous ; the malk io much less than the female, and of a darker culour, often - tripeed of

\section*{OBSERTATIONS RELATIVE TO ICE-HOUSES}

Is many sttuations the gardener finds himselt called apon, at such a feriod of the season as the fresent, to tions on the subject may therefiore be deemed seas momable It is hoped that those here submutted will be found in It is hoped that those here submitted will be found in some degree condueise toward, a more perfeet innowledge
of the principles by which a maso of ice may be lungest of the principhes by which a mass of ice may be longest
and munt ecomomictly preserved; for the ice-honse is not only in all cases paced under the gardener's charge, but it concerns his professional business in all large places, inasmuch as the irchouse affords him the best means of retardins the vegetation of wany hardy ormamental plants intended to be forced.
Ice-honees are generally constructed of an obovato form, or like a truncated inverted cone, sunk for the most part beneath the surfuce of the earth, and domed over so as to support a covering of turf, or thateh, as a protection not only from the introduction of rain, but also from the rays of the sun. But as ice-houses constructed in nearly the same monner have proved rery different in their power of preverving ice, which has been known to keep uprards of two years in some, and lens than one year in others, it will be necessary to advert to the causes which tend to the dissolution of a body of ice; or, in other Words, to the average amount of heat, terrestrial and atmospheric, to which it is exposed, and the media by which this heat is communicated in a more or less rapid degree.
The temperature of the earth in Britain, so far as the excaration of an ice-house is concerned, may be stated to average between 45 and \(52^{\prime \prime}\) Fah.; and the atmospheric temperature about 5()\(^{\circ}\). The earth parts with its heat, and communicates the same to bodies in contact with it, much quicker than the air. Hence it becomes lesirable to prevent the immeulate contact of the ice with other substances, by interposing some slower conductors of heat. On observing the comparative effects of water and air, both of the same temperature, in lowering a thermo meter as much as 510 , it was found that the depression was accomplished by the water in one-twentieth of the time required by the air. Hence the contact of ice with water should be prevented by proper drainage. Indeed, too much attention cannot be paid to this mast essential operation. That the rain should be excluded directly from the roof, it is scarcely mecessary to mention; but its approach to the siles by percolation through the earth should also be guarded against, otherwise it will occasion ally introduce a temperature of more than \(60^{\circ}\)
As air is a very much slower conductor of heat than either earth or water, it might be concluded that if the the were sarrounded by air at the sides, and partially at in the cavity is gradualiy formed at the sides in consequence of the meltung of the ice; and if the air in the cavity of furmed were to remain perfectly at rest, it is probable that no substance would cecasion less thuming, taking noto consideration the fact that sulstanoes pessessing non-conducting properties in a higher dagree than air, when they are dry. Lise them to a couler ibe extent whien exposed to wet or damp. It impt, however, ho a comstant, thourh slem cavity, betwet, the ice erd mall, a comathent thongh slons, circulation of air mill take plane ie is aliecind y y a femperarure of \(3 y^{-1}\), the next the earth or \(च 4\) is haral iy beci:g in contact wext sub-

 the splister yet ti.s.atie tir shat will be found to take place in a Leare bounded by still less concentric lines than
the cube : thus, from a flat piece of ice six inches square than \(6_{10}\) cubic inches will be dissolved in the same time than \(f_{1 \prime \prime}\) cubic inches will be dissolved in the same time
and temperature that are required to dissolve only four cubie ineles when these are in the form of a sphere Although from this it is evident that the most spherica firm is that which is best adayted for preserving a body of Which render it necesary to dances, not withstanding, con-ructien of ice-heuses. The mans of ice, by solidify ing, and by partly melting at bottom and top, where also a fortion may be suppored to be taken a way for use, would reduce the sphere ta a flattened oblate spheroid; whereas the furm of an oblong spheroid, or that of an eqge, the widest part being uppermost, would approach the form of a plucre as the ruluction of its length, from the above mentioned causes, was being effected; and by the time that the heat of the summer becomes most trying, the we wonk be in a form more nearly spherical than if it hat may perfectly s) mhen first stored in. Another advantage that it itroned as belonging to a circular building, and are straberng compared with one of which the wall pressure of the surrounding soil
The situation of an ice-house shonld he, if possible, in some elevated synt, in order that a perfect drainage may exposure should be only torrards the excavation. The rays should he completely obstructed by a plantation of such binds of trees as are best adapted for that purpose. Land-springs should be prevented from coming in conimperion the walls; the latter, of course, ought to be placed on a wooden grating, beneath which the bottom should be grooved, the grooves converging towards a small collects, by means of a pipe. The external termination of his pipe should dip in a cistern of water to prevent the ingress of air Which would otherwise take place. Instead of a pipe being laid in a uniformly-declined plane, the syphon principle may be found in some cases of more convenient application. It may be frequently the case that Where the construction of an ice-house would be desirable, there is no such declivity for drainage as is here recommended at command, in consequence of the flatness of the situation. The building must then either be constructed or the most part above ground, and a mound of earth or tery thick cals rate and not over it, then a very thick corering of thatch must be applied. Or, if this mode cannot be conveniently adopted, the building may be sunk, if the surrounding wall be made to spring from an inverted dome at bottom, and the whole laid in cement: so that no water can be formed in the interior, except that derived from the melting of the ice. Some pump out this water directly from the bottom; but an external tank from which it could be occasionally pumped, would be pre ferable. Hollow wails would also be of great advantage.

Por lining between the wall and ice clean straw is gen raltr used. Reeds are preterable, if they can be obtained

\section*{COTTAGE GARDENS.-No. XLIII.}

The pruning of the Vine and other fruit-trees, although universally ackriowledged to be of the utmost importance in promoting their fruitfulness, appears to be very little understood by the generality of cottagers, and is conse quently seldom (r never performed in the manner in which it ought to be done at this season of the year, which is of all others the best suited for the purpose. Under these circamstances, we think we cannot do better than offer have previously the subject. Respecting the Vine, we in spring, and given some directions for its management ponier , and thering it sut sur.mer; but as this is the prunins. we whe ion the folnming undergo a seneral greatest error that is the folnwing ouservations. The wemt of tiaer, arives columonly committed in the treatfrom the retaining of a iarger nue want of pruning, of shocts than the tices are camalle of supplying wither rishment. In too ruany instances this is do enth nou impressinin that the wore bearinz-rrood there is left on a Vine, the greater will be the quantity of fruit that it wil protuce ; vut the result is often the very reverse of what mor-abmatat or or if it hape chis to motiserwise, and an the rinant er, is matned in one season, the growth rokbil:ty ti.e formation seriously injured, and in all rolabitry the formation of good fraiting-wood for ancheck upon the other; and therefore soct the one acts as is ary to amourarary into either extreme, and to regnite val or rugtio of the piant itself \(\Rightarrow\) has 6 m alreaty pointed out ; and where nur snemes ci.mas were attended to in summe:, the mwine at this

 happened, s; cculation be mested in facts which have no reai existence. Infurtherunce of the oif ce it \(\pi\) ail be well to record exatily the fewe atan to witich the upper and lower protiona of the and mental ylants are subjected, beeause it is not imposiol that the drawing up of plants towarus the rout of a gromhouse may have been the consequence of exposing thei
heads to a warmer climate than their stems and root
This is an effect peculisrly likely to take place in airheated houses, and in all houses where the air is liable to
absorb much of the heating power. If the supposed tendency of plants can be traced to an undue excitement giren by heat to the upper part of the plant, unaccomroots, we shall have at least an intelligible explanation of the weakness, or spindling, ascribed to the search after the weakress, or spinding, ascribed to the search after
light. If it has not been already done, it might be interlight. If it has not been already done, it might be inter-
esting to observe the effect of stimulating, by heat, one or m.re lranches of ant otherwise exposed plant.- \(A\).
Mice-Mr. W. Taylor of Streatham criticises a

Mire-Mr. W. Taylor of Streatham criticises a paper, by
Mr. W. Failla, at p. TM, upon preventing the attacks of mice upon Peas, by burying the latter in sand. He is surprised
that Mr. F. should labour under "so strange an idea" as to suppose that white sand will do any such thing; and cept near London, where gardeners have to pay for it Tints correspoudent erfually denies that sand will keep off slufs. As to mice, they can be best destroyed by traps
an! tonstel cheese. Such is the substance of Mr. TayWr setter; our answer is, that we know Mr. Falla to be
an excellent practical gardener, and that his statements are the results of experience. Our correspondent should lherefore try the plan before he condemns it. If he will
low is nothing said about white sand.
The Coiling Syotem for Grapes in Puts. - In p. 611 Mr . Appleby gives an account of his method of cultivating system, which I intend publishing as soon as my business will permit, is very different; and therefore 1 am not surprised that Mr. Appleby did not succeed so well with long shoots as with a sugle ege. A coiled shoot will make as
rigorous, as lasting, and as fruitful a Viue as one from a single eye. This I have proved, but it is not material in pot culture-the object being to bring the Vine into bearing in the least possible time. By attention, I can make
any of the choicer Tines produce fine shoots the first season, and fruit the following, or even the some if first seawhich I think Mr. Appleby cannot accomplish till the third or fourth season by his method. I prefer the coiling system to all others for expedition and success; for if I have branches of ny own trainiug or selecting, I can as
easily produce a crop of Grapes upon them the first season as miny can upon a Vine the third or fourth year, and by as many can upon a line the third or fourth year, and by F.II.S., Lecelds Zoological and Botanical Gardens.Should Mr. Appleby's description of the coiling system he that practised hy himself and others, it would, indeed, well as the ingenious discoverer expected. Having lived at Welbeck some time with Mr. Mearns as foreman, up to the time of his leaving, I may be allowed to know something of his practice, the leading points of which were the gooll bearing wood at the axtremity sufficient length, with fuily removed from that extremity : all buds to be carefuily removed from that part to be coiled into the pot, say
eerin or eig't feet in length, leaving about three feet of been or eig' t feet in length, leaving about three feet of
bearing wood; in size the pot from 12 inches to 14 inche bearing wood; in size the pot from 12 inches to 14 inches
in diumeter and well drained; the soil fresh turfy loam direct from an old shieep-walk close upon the limestone, With, a little of a mure sandy nature added, well chopped up and uixed together, some of the roughest turfs put the pot the suil to be well pressed dow in when filling uy the cuil ; when finished, and the stem tied to a stake, the pot to be sunk into a dry border and protected from the house, when the weather, until introduced to the forcingbark bed ranging from sio to plunged up to the rim in a temperature must be kept from \(40^{\circ}\) to \(: 7^{\circ}\), to prevent evakoration; the stem to be covered luosely with moss, this process a little assistance to the with cool water ; by by absorpsion little assistance to the stem may be derived into which the coil is plunged the vital energy is strongly ercited, and the speedy emission of vigorous roots is the lational consequence ; the more slow and gradual the evopoint of the buds, the better : and here is rather a critica long, too great a super time for disbiudding; if delayed too enposed for the yet limited absorbing powers of the soung roots, and if performed two soon the action of the system is paralysed. Upon esamining the pots. sh uld abundance rised by be found, the atmospheric temperature must be must not be removers with established Vines. The moss Mr. Aptieb removed is until the fruit is set. When all is safe. Welbeck to they U.e first year; in 1836 I took a phint from upon it, of the Stueffeld exhibition with nine good banches observeas shuch admired, and as Mr. Apmleby truly least eacellent bearint not be procared the first year, at is Mr, Mtent bearing wool will for the second; however, it atrare wost, by which fine strong rods are ubtained for fraiting the secoud year, from short coiled cottinjs, and
to his reung understurn system of stopping, which when pruperly as well as to be great advantage to the nurseryman that of to the gardener. The whole process, as well as necers the above, of which from its shortness I have doabr, be given but an imperfect sketch, will, I have no frout, be ably explained in that respected horticnlturist's C. Elaint. Rud wpon the pot-culture of Fines. - Thos. Prominciation
oouerration last Numbers, you have made some startling naions on the pronumciation of the word Fuchsia, a
prised, I think, at being told that in following the nrac tice of the world in general, for so many years, in the prosunciation of a word so much in the public mouth as which they were guilty of "slip-slop;" an imputation the practice of well-elucated and well-informed people, a perversion of a well-known and established usage.
too late to enter into a discussion of the inesae making the Latin language the conventional one of all t branches of natural history, or of loading their nomenclature with the latinized barbarisms of wodern names persons and places: the practice js too inseterate, I fear.
to be amended. But if Latin be the latware of betany and any mord be coined. or forged, into it on the Latin model, and, like Fuchsia, for instance, associated with such words as fulgens, splendens, \&c., it necessarily follows that its pronunciation assimilates to the Latin model ; and it would be worse than pedantry to attempt to assinn it to
any other rule. Now if cla in Latin is k , it is true that your Fousia is not far from the true sound; though it were more properly Fuksia. But if yun contend for your pronunciation on the score of its origidinavian derination to difier from you, and to maintain that there can be no true guide for the Eug lish speaker, but tire estabhshed Latin analogies.
bad enongh to be called upon to call graun-grown, an very like Gunter; and wonld you have us gise German gutturals to the Strelitzias, Hedwigias, and scheuchzernas ect foreigners to call our Chomondelys, Chumleys; and lootherhithe, Redriff. I hare another ground of chbjection against this disturbance of established usage in the pro nunciation of the word in quastion, or any over-mee cor.ee
tion of such modes of speech; and that is the encourage ment it affords to the besetting sin of the generality o gardeners, of the underbred surt at least, ( and what better can we predicate of the great mass of all the other professions ?) of conceit.

\section*{}

It is quite enough if he disports and only moderately de the Greek names in necessary use; make him critical in quite intolerable. Slip-slop is bad enough, but enxcombry is worse.-P.P.-[If there is one currespondent to whose opinion we are disposed to pay more defercuce himself P. P. ; and we do agree with him entirely on thas occasion in all that lee say surely a distinction between sounding words, to which no national sound has been utherwise given, accurding to their orthography and with reierence to their meaning, and an affectation of singularity for no intelligible purpose. If we are to call the Anemone an Anemmony, we may as well admit false concords because they are custumFushis and in like manner, ir we are to sound Fuchsia, may be at liberty to make any other arbisary changts in pronunciation, according to indrudual fance, and the jarring sounds of botanical nomenclature wothe become sill more discordant. We cannut admit that doe mutern Latino-barbarous language is neessarily resulated by Augustan rules, even if we knew what they were; on t..e
contrary, each nation will sound it in accurdance witi its own rules. But even if we were to adncit the necessity we deny, still in the case of Fuchsia we constider ourselves right. For what is ch, but \(x\) in another furm: Abd
Fuxia would bear the same Latin sound as neria, which our doubt is
boot, or as the \(u\) in useful, that is a point which is hardly worth discussing We wonld wish to preserve the menory of Leonhard Fuchs, oue of the ureatest resturers of botany from being lust in a sound which bears no resemblance to his name. With respect to Dablia, to be sounded as we say, Darlea, will vur correspondent te.! us how it is to be pronounced distinctiy from Dalea, which is quite a different plant, unless by making the \(a h\) briod as we do Would it be any improvement t, call it Dallea. With the as in Nanny? Those who give uathas t.) Pants s uuld en ar to adapt modern applay has give Guourenis and Strailstars stranvesia: but where \(1 / 2\) rents have nestected this rule, we see no means of cscaping from the necessity of sou
Effects of Nitrate of Soda on Fir Trees. - I send some Spruce Firs as specimens of what nitrate of soda io likely to do when applied as a manure to Conifera.-No. 1 ar phants from a cold loamy sort, growing then in the rows and in consequence of the exhaustria of the son, hey
are yeliow and sickiy.-Nu. 2 are Firs of the same age. gre yeliow in the same bed, manured witia airrate of sota at the rate of lio. to the scquare rod, applied ia the beginning of last June ; in a fortnight they began to change colour; in a monti they were of the healdy darti-green chey now have, and their growth, as you will see, has been, by comparisor with No. 1, much increased.-N. 3 are two-years old seedling spruce, growing thick in the bed, growing pichin siz inches of No. 3 ; these were dressed with nitrate of soda early in June; their increased vizour is remarkable. You will observe that their buda
are sery prominent, as if ready to make another growth. Caution is recquired in not letting it come in contact with
the fuliaze in damp, weather. Some of these, as you will see, are brown and dead; this was owing to the nitrate lodging on their leases. As a top-dresming for specimens of Pines I have no doubt that nitrate of nola may be He surface of most beneticial effeet; in Heither case was I should recommend it wuched aitcr applying the nitrate season than in these experiments; or rather, I showh recommend tro dressings, one in Mareh, the chlar in June. As a stimulant for spocimens of Plates, it wall prove a

have shown that different animals and plants are, with few exceptions, restricted found in similar climates. Many of exceptions are only found in similar climates. Many the products mentioned in the Bible we know are only found in the countries described, or could be procured from others, with which it can be
relations were early established.
Several publications exist in which these subjects are discussed; but few to which we can refer in which eorrectnow is combined with popularity of manner. In one of acutifolia, one of the plants vielding the Senna of commerce, adduced as the Cassia of Scripture, in the expression-" "all thy garments smell of Myrm, and Aloes, and Cassia;" While the lofty Pinus Deodara is figured for the Algum trees which were brought with gold and precious stones from Ophir: though the Deodar is found only on
the lofty and almost inaccessible Himalayas, and is able to exist only in a cold or cemperate climate.

There is certainly considerable difficulty in the successful investigation of this subject, in consequence of the rare combination it requires-l st, of "Biblical knowledge and an acquaintance with the Hebrew and cognate languages, so that an author may be able to trace the names by Which the same things are deaignated in different languages; 2dly, of the sciences in which alone these thing thing for another, or fancy he recognises an ancient plant or drug, merely because naturalists have given to some modern one a similar name. That these opposite qualififind so few scientific men who are qualified to give a decided opinion, in any other than the science which they immediatelycultivate. The present times, however, afford greater facilities than heretofore ; because Oriental languages have been more extensively studied, and the names of animals plants, and minerals in them more accurately ascer-
tained, while the natural history of Eastern countries has also been more minntely examined

The author of the work before us, Dr. Rosenmifler, well known for his great erudition, hastaken pains to ascertain the truth, by referring to the best solurces for intormation respecting this diftcuit part of sacred philology. The schichte," being the first half of the fourth volume of his "Handbuch der Biblischen Alterthumskunde," a portion of which has also been translated for the Biblical Cabinet, of which has also been translated for the title of "Biblical Geography of Central Asia." Biblical Zoology forms another portion of the same work. The present volume contains the Mineralogy and Botany. The present volume contains the Muneratogy to state that The former we need not notice further than to state that Precious Stones, and Metals. The advantage of attending to the original meaning of the namea used is conspicuous in the term Nitre being applied to Nitrate of Potash or Saltpetre in the present day, while formerly it was restricted se can untersiand the kypression of "wash thyself in Nitre," and are struck by the unsuitabieness of adding "Vinegar on Nitre" when we know effervescence would necessarily ensue from the escape of the carbonic acid gas of the Natron. The utility of Oriental languages is exemplifed in Sulphur being Gophrith in Hebrew, and artars it is agtly translated Amber-as in the mentators, as it is ustally translated Amber-as in the ont of the midst of the fire," when amber would necessarily ont of the midst of the fire," When amber would necessarily
be burnt and destroyed. Why may it not indicate Glass, Which was no doubt known in the East and to the Eyyptians in very early times? Chashm signifies the eye in Arabic.
The Botany is not better arranged than the Mineralogy, being treated of under the heals-1, of plants in general ; 2 grain, or leguminous piants; 3 , kitchen vegetables and garden plants: 4, lamts growing wild, finwers and shrubs; plants; 3, Thums and Tulstles; 9, the Vine: IO, trees; 11, Mama. Withm var limats it is unnecessary to dwell on the onjections to \(i\) is armangement; it is evident that it lthes in treating of the sembect hat in fact adis to the dithiculties, by niten sepmatiog things which are naturally allied, and which onight therot re to be treated of togrether. The shortest way in which ne can give an indos of the The shortest way in thed ne can give an hata of the
principal plants treatel of, is to view them with regard to principal plants treatel uf, is to view them with regard to used, at the present day in the very countries where they are said to hire heen so in former times.

Thus among the cultivated grains we find Wheat and Barley, as in Egypt, the principal crops, while Cussameth is supposed to be Spelt and Dochon, Millet. The latter (Panicum miliaceum) is still called Dochun by the Arabs. Here we find no notice of Rye, a Northern Grain, nor of Rice, which was only introdnced into Foppt by the Arabs. in sound between Cuittah and the Futicat If heat, and tins similarity is observed throughout the Teutonic and Scandinavian nations, while there is no resemblance between them and the Greek, Latim. or Slavonic names of Wheat. used as rengtuples, Cueninbers, Melons, Leeks, Garlic, Ouions; while bitn Cuenmbers, Melons, Leeks, Garlic, there are Cumen, fioriander, Lisise, nnd Dill : the two last,
most likeiy.

 while npratughrias and cretes we have the Myrtie and

Tamarisk, the Acacia probably, the Plane-tree, and wild
Fig-tree or true Sycamore. Lad is probably Gum Ladanum; and Basam, translated Balm, may be the Balsam of Gilead tree, though it has also been supposed by some principal article
was also known.
Besides these
Besides these there were numerous articles which were arowedly obtained by commerce from distant countries, For these we must look in Persiz and Arabia, or to the countries from whence the latter obtained the spices,
for which it was so long famous, but which modern naturalists have ascertained that country does not now pro duce, and could never have produced. Thus Gaibanum (Chalbaneh) may have been obtained from to persia; but in Arabia, is no doubt principally obtained from the opposite coast of Africa, where it is brought indeed, procee
lees for export. Some of the traders, inder thence direct, instead of to Arabia, to purchase this longfamed Gum Resin. Loban or Olibanum is also produced kind is also produced in India. From either, therefore, both Olibanum and Ebony (Hobnim) might have been imported.
The spices which are so frequently mentioned, are no so easily determined, because they are not always speci-
fically named; but that the spices of the East formed articles of commerce, we have proofs in their being known to the Egyptians, and likewise to the early Greek physicians, as Hippocrates. Hence there is nothing remarkaIndia is celebrated at the present day for their agreeable odour, or aromatic qualities, may be the very same things where ralued by anciece did exist and it is not to be supposed that merchants would trade into distant countries for that which might have been obtained nearer home, or which was not possessed of remartable
properties. Therefore, if it be denied that the substances properties. Therefore, if it be denied that the substances
now considered to be these which formed articles of ancient commerce, it will be incumbent on those who make the denial, to find some other natural products possessed of equally remarkable properties. But these, if found, will at all events be without the confirmatory proofs of similarity of names through a long series responding with such as are given to certain substances in the Hebrew Bible. Thus in India Loban for Olibanum, and Abnoos for Ebony, indicate similarity that cannot be accidental. So Cassia, named Kiddah, is mentioned, Ezek. Ixvii. 19, as one of the articles brought by Arab tribes to the merchants of Tyre. The same word occurs first in Exodas 1xY. 24, and is in the oldest Chaldee, Sy-
riac, and the Latin translation, rendered by Cassia. This was known to Hippocrates, and several kinds are described by Dioscorides. So one kind is even in the present day called by the Cingalese, Kasse Koronde; and Cinnamon, nicians, is called Cacyn-namea in Ceylon, and by the Malays Kaimanis. The Aloe wood is probably the Agila or Eacle wood, as celebrated now as formerly. The SpikeJatamansi; and Dr. Royle is of opinion that Sweet Cane is the fragrant grass of Central India, which is excelled by none in the delicacy and strength of its perfume, and which he has called Andropogon Calamus aromaticus. Almug trees and wood remain undetermined, but have been thought with some reason to be the Sandal wood also found on the Malabar coast. A strictly Indian product is Cotton, which it is curious to find mentioned by
its very Sanscrit name. The terms Shesh and Buz are those usually employed and translated Byssus by the Greek Alexandrian translators, and denote Esyptian Coton; but Carpas, in Esther i. 6., is used in the description of the hangings of the inner court of the palace of Susa. The Greeks also used Carpasus to designate a kind Sanscrit name of the Cotton what while Kupas is known even in the cotton market to some as the common Indian name of Cotton with the seed. Rosenmuiller, however, conceives that, as in the above passage of Esther, the word Carpas is placed between two other words signifying it may (viz. White, purple, and blue), that therefore h may probaily also denote a colour, forgetting that the bangings must have been composed of some naterials of which the colours are given. This very juxta-position with the identity of the name, connirms us in the opinion that Cotton is intended. Every Indian knows the universal practice of hanging up purdais as suistitutes for duors, winduws, and even for wails and partitions; and also that these are formed of padded Cotton cloth, always in stripes, either white and blue, red and white, or blue and red ; the former dyed with Iudigo, and the latter with Morinda roots. Such are the unly walls of the celebrated dewan-i-khas in the palace of Delai, where immense curtains, padded with Cotton and formed of Cotton cloth of red and white, may be seen, hung all round and between the outer pillars of this celebrated Hall of Audience, within which are written the words signifying "If there is a heaven upon earth, it is this, it is this. For
such purposes appear to bave been intended the rows of pillars which mark the ruins of Persepolis, and which have puzzied so many authors and reviewers. Having already exceeded our limits, we must conclude with stating that the work of which we have treated, though brief, is full of information which in most instances, as far as it goes, is correet: but, like other similar works, requires the scientific information to be supplied by a naturalist qualified for the task.

\section*{NEWS OF THE WEEK.}

Tre acconchement of Her Majesty and the birth of an heir apparent to the throne is not only the great event of the week, but is one which all classes of our readers and all classes of the community will hail with the most lively satisfaction. The direct transmission of the Sovereignty in the line of the House of Brunswick, and the recurity thereby given for the exemption of this country from the consequences of a disputed succession, are among the chief causes of congratmlation to which this auspicious event will give rise in every portion of the empire. The details of this interesting intelligence will be found under our Home News, and the only addition to be made to them is the acceptable announcement, in the lates: bulletins, that her Majesty and the infant Prince are going on most favouratly. The joy created by this happy event is clended homerer by the unfavourable tidings respecting the Queen Dowager; Her Majesty's attach has assumed a more serious character than was at first anticipated, and we regret to add that slight hopes appear to bo entertained for her nitimate ecovery.
We learn from Frgace that the disarmament and reduction of the navy are proceeding with great activity, although both measures are still condemned by the Opposition journals. The Court of Peers will mert on Monday to hear the preliminary report of the Commissioners on the late attempt to assassinate the Princes: between 30 and 40 persons have been arrested in connexion with the conspiracy, but it is not expected that more than eight will be brought to trial. - The last adrices from Madrid announce that tranquillity continues to prevail, and that there are no longer any fears of further disturbances. General Quiroga has been executed, and the authorities are still ac-ively engaged in searching for the other leaders of the insurrection. The allowance to Queen Christina has been suspended by the Government until the Cortes, which are expected to re-assemble in December, have come to sonse resolution on the subject. The Regent has issued an important decree, surpressing all the juntas formed after the late outbreak, and at the same time arranging the question of the fueras, which has so long agitated the Easque provinces. Our accuunts from Barcelone are contradictory; the Frenci papers assert that the destruction of the citadel proceeds with great rapidaty, that some sanguinary scenes have occurred, during which the bishop of the diocese was arrested, and that the French squadron off the port has been suddenly increased in order to be ready for any emergency. Letters from Madrid, however, state that Gen. Van H alen, who had been crderet by the Regent to promed to that mity
 town without resistance, and that tranquillity appoars to be again restored. A decree has been issued by the Regent, and officially commumeated to the Spmoh Minister in London, declaring the whole cuns: of (antainsa in a state of hiockade. Whe learn from the (ierman P’yers, that the reportad accession of Hanuver and the Duthy of Oldenburg to the Customs' Cuion is not without foundation, and that a treaty has bea a conciabed as Derln for the incorpuration of the Duarig of Brunsulity with the same confederation. -Tbe swiss convent question again gives rise to some andiets; at the recent sitting of the Diet, the number of cantons which roted for the re-esteblishment of the convents was an insufficient majority according to thie tederal compact. As there was no possibility of an accort, the indefinite adjournament of the question was proposed and carried, and it is feared that thas result, which leaves the question more unsettled than before, may ultimately lead to foreign intervention--Advices from Brow
- contain further parnculan in is proceeding with acti Belgium. The judicial inses igation is proceeding sith acti vity, but it appears that the oumber of \(f\) ersons against who there are any serious charges is very small. The Chambe were opened on Tuesday last by the King in person, who reviewed the present state of the coantry in a speech of considerable length, and appeared to attach little importance to the recent outbreak. - Intelligence from the Levant announces that the Turkish Envoy has arrived a Alezandria, and delivered a letter from the Sultan to the Pacha of Egypt thanking him for his frank and loyal submission. - The arrival of a packet from New Yorb supplies us with recent advices from the Lnited Stares they contain, howeser, no news of importance, excep the continued assurances of peace. Mr. M•Leod had been suffered to depart quietly, and had left, it was apposed, for Canada ; but in strange contrast to the late excitement, his movements appear to be unknown, and to be regarded with the utmost indifference.

\section*{\(320 m e ~ N e b s\).}

Accouchemint of Her Majestr.-On Tuesday a general feeling of joy was caused among the inhabitants of the Metroppins, by the announcement that her Majesty was affely delivered of a Prince. The public have for some time been looking forward to this event with some anxiety, and the general anticipation that the illustrious infant would be a Prince, and thus give to the country an
heir apparent to the throne, has been happily realised The following are such particulars relating to this auspicious event as our readers will. no doubt, be anxious to learn. Her Majesty, who had taken her accustomed walk in the Palace-garden on Monday afternuon, was taken unwell about seven o chock on Tuesday unorning ; information was immediately sent to the Home-nffice, and instructions were given to require the attendance of the A rchbishop of Canterbary, the Bishop of London, Sir Rubert Peel, the Lard Chancellor, the Dake of Wellington, and other great offers of state, who lost no time in repairing to the Palace. It dwes not appear, however, that her Majesty's accouchement was ti.en considered to be so near at hand, but every prepraation fur the event had been made, and zotice sent to the Duchess of Kent and the other branches of the Ropal Family. The Duchess arrived at the Palace at 9 , and immediately repaired to the room of her Majenty, who was at that time attended by Prince Albert, Dr. Locock, and the nurse. Sir James Clark was also in attendauce in the room adjuiuing, where the great officers minutes to 11 her Majusty was safely delivered of a Prince. and immediately on its hirth the riyal infant was carried by the nurse, Mrs Driscoll, and shown to the officers of state In the adjounng apartment, when a declarat:on was rigneet by those pircseat ds to the birth of an heir tow the Brituah
Thane. The important news wis immuedualy Throne. The important news wis immuedutely made nown to the town by the firing of the Tower and Park Whitehall, it was ordered that a form of thanksgising fur the Queen's safe delwery be prepared by the Archbishop of Canterbury, to be used in all churches and chapels on Sunday the lith Nor., or the Sunday after the respecture ministers shall reeeive the same. A bulletin was soon after issued, a copv of which was sent to the Lord Mayor and affised to the walls of the Mansion-honse. stating that her Majesty and the infant Prince were as well as possible In the course of the day. guvernment messengers were ence, and at the en desire of her Mortant intelligenger was despatched to Sudbury-hall to announce the lappy event to thie Queen Dowager. The bells of the Metropolitan churches rang merry peals during the day and in the evening there was a partial illumination.- Pur muant to the order of the Privy Council, the fullowing form of prayer has been prepared by his Grace the Archbishop whese - - mercirul Lord and heavenly Father, humbly offer unt. Thee our hearts thanks for The most goodness whelsafed to Thy people, in delivering Tiy mervant our Surereimn Lady the Queen from the perils of childbirth, and giving her the blessing of a son. Contin of we beseech Thee. Thy fatherly care over her; support and comfort her in the bours of weakness, and day by day whatever is hurtful eitizer to body or soul. endue from he adrances in years, with true wistom; and make him in due time, a blessed instrament of Thy goodness to this Church and nattor:, and to the whole world. Regard with Thine especial favour our Queen and ther Royal Consort that they maylang live wogether in the enjovement of all earthly liapyiness, and mas rinally be made partakers of everlasting glory. Implint in the hearts of Thy people a deep sense of Thy manituld mercies, and give us grace to show furtib our thandituness by dutiful inffection to our Sovereign, by brotherly love one towards another, and by constant obedience to Thy commandments; so that pase ligg tarnugh this life in Thy fath and fear. we may in througis the be recersed into Thy beavenly kingdom, Jesus Charist our Lord meliation of Tuy Blessed son and Lady Mayoress, the Sherifts, and other City Officers were received in state at Buckingham Paiace, in accord ance with ancient cusiom. Many of the Foreign Ambas caudle had been werred witness the ceremony; and after and has 1 . and shown to all the tisiors. Oar readers will be gratified to learn that her Majesty and the Prince are doung The following bulietin was issued yeaterday:-
"The Queen has slept perfectly well. Her Majesty and
be infint Prince are guingun mo- \(f_{\text {trourably." }}\)
Thr Qurrn Davenger.- Our readers sill learn with re gret that the lllness of ber Majesty the Queen Dowager which we noticed in our last, continues
vars as to the result. The private accounts which have reached toma, wherein reference is made to the paintal and it is feared hopeless, condition of her Majesty, speal and the lighest terms of the patient and resigned manner ohich her Majesty bears up against the distressing and irritating disease with whicis she is amicted. -a visitation to which her Majesty has of late years been - aliect, but in a much milder form. The latest adrices uldject, but in a mach Majesty's symptoms have undergone arm slight alleviation. The following are the last official bumeting: "The Queen Dowager remains in a sta e of great feebleness, but her Majesty is suffering less from irritation and ferer than during the last two days."-" The Quee Dowager has ,had some sleep during the night, and has coughed less." -The arrisal of the messenger conveying the intelligence of the birth of the young Prince, and that the R it is stated, elicited lively demonstrations of joy in Qut Dol should be given to the party bringing the information. It has also been said that her Majesty was roppea-up in bed, and alion the erit pencil o Prince Albert, the other to the Duchess of Kent.
Ntu Commissions.-Her Majesty has been pleased to appoint Lord Granville Somerset, W. E. Gladstone, W. B Baring, J. M. Gaskell. and A. Pringle, Esqrs., to be her Majesty's Commissioners for conducting and inquiring into the detalls of the establishments of the several Departments of Customs, Exci-e, awd Stamps and Taxes, Wh view of ascertaining whether the existing establish ments are more than adequate to the efficient discharge of their several duties; and whether arrangements can be safely made, consistently with the due collection of the
revenue, for diminishing the expense of them, for facilitating the despatch of business, and to relieve the trade and commerce of the country from an incoavenient delay. -Preparations also have been made for the institution of nother Commission, the object of which is to examine into the forms and modes of proceeding in the Courts of and the progress of a suit less tedious and expensive. It is understood that Lord Langdale, Mr. Pemberton, and Mr. Wigram, one of the new Vice-Chancellors, have undertaken to lend their services for the conduct of this in restigation. Both these commissions will be carried on without any charge to the public.
Official Appointments. - Major-Gen. Lord Saltoun G.C.H., is about to proceed to Coina as second in com Gand to Lient.-Gen. Sir Hugh Gough, G.C.B. Mr. PenBench, and Mr. Jackson Solicitor-General for Ireland The Lord-Chancellor of Ireland has appointed ivr. War promotion of Mr. Jackson. Mr. Athill., a gentleman of African descent, has been appointed Cbief Baron of the Exchequer in the Island of Aotigua. The Archbishop of Advocate) Master of the Faculties, in the room of Dr Advocate) Master of the Facuities, in the room of Dr
Nicholl, who has accepted the bfice of Judge AdvocateGeneral.
Church Preferment.-On Sunday, the 7th inst., the Rev. Michael Solomon Alexander was consecrated Bishop of England and Ireland in Jerusalem, by the Archbishop of Canterbury, assisted by the Bishops of London, Rochester, and Netr Zealund. The Queen's license assigns Syria, Chaldea, Egypt, and Abyssinia, as the limits within which the Bishop is to exercise jurisdiction. It is stated that the new Bishop was originally of the Jewish persuasion, but has been conserted to Christianity. - The Bishop of Lichfield has appointed the Rev. R. B. Baker, A M of Hilderstone-Hall, and iacumbent of Hilderstone, to be rural dean of the deanery of Stone, Staffordshire, in the place of the Rev. T. Batt, neceased.-The Deanery of Cort has been conferred upon the son-in-law of Chief-Justice
Pennefather, the Rev. Dr. O'Brien, Fellow of Trinity College.
Master Cbancell mananuel College, has been appointed Vicetun Acade Cambridge for the ensuing year.-The Sena Aberdeen, has of the University and King 8 College, Lord Francis Egerton, M.P., to be Lord Rector fo University for the ensuing year; and at the same time Sir . Bannerman, of Elsick, Bart. J John Garioch, Esq., of Heathcot ; Robert Grant, Esq., of Tillyfour ; and Thomas Abercromby Duff, Esq., of Haddo, were re-elected to be his lordship's Assessors during the same period.

\section*{froreian.}

Prance.-The Disarmament.-The jourmals still contain long articles on the question of disarming and on the reduction of the navy; a measure, however, whicin appears to give no satisfaction to the opposition prints. The discharg of seamen has commenced, and about 6000 men, formang one quarter of the effective force of the ships to be disarmed, have already been sent to their homes. The Moniteur announces the departure of two ships of the hae from Touion to Brest, which will complete the number of six despatched to the latter port for disarmament Four ships of the line are also to leave Toulon abont the 15th inst., for Algiers and Mostaganem or Oran, to take on board two regiments, which are to return to France
after the autumnal campaign. Two of these ships will
then go to Philippeville to fetch another regiment. When then go to Philippeville to fetch another regiment. When
these three regimen's shall have left, and the discharge of these three requthe class of 1834 bas been effected, the
the soldiers of the
 each expeditiun. - Subseyuent accounts inform us that a
letter from Toulon, which has appeared in the Ministerial Journals, gives the answer of the Government to the accaing the fleet. Government, it says, has given siz months' leare, with permission to serve on board commervial vessels, to such sailors as have served between three and will leave his ship till another of the class of 1840 arrives The Affair of Quenisset.-The Court of Peers will read, on the attempt committed on the 13th Sept., against the lives of the Duke of Orleans and his two brothers. Between thirty and orry persons have been arresters in nisset, but it is not expected that more than tight mull be placed with him on trial. Among these will be the indinisset, and it is believed, M. Dupety also, the editor of he Journal du Peuple, against whom, however, it is said, him by one of the principal parties accused, containing these words-" "Quénisset has ruined us," and then en-
treating M. Dapotr to take up their cause warmly in his aper, and to request the priters of the whal to do the same, is the criminating document protuced agans him. The preparatiuns at the prison of the Luxenbourg
were completed on Fnday for the reception of tue priwoners.
French Tratle,-The Customs lave published the report gress which it marks is gradual and satisfactory. The mass of imports and exports taken together, valued at ,126 millions of francs in 1826, is upwards of \(2,000 \mathrm{mil}\) ons of francs in 1840, thas doublirg in about fifteen years. But of this increase the imports Ereater proportion call special commerce; the importation and conumption the twice as rat pidly as the exportation of manufactured articles or natural produce. The most remarkable increase is that of the mportation of cotco wool from and in 1840, 7y0,000. The imports from England have doubled in six years, Thread and coal are the principal articles which cause the increase. Of these there were only 13,000 quintals of English thread imported into France in 18 , The importation of English coal, which amounted to 71,000 tons in 1835, attaned \(32.5,000\) tons in 1840. The exports to the United
have diminished one-third in 1840 ; those to England diminished in the trifling proportion of one per cent. Com merce aith Spain is yearly and progressively inecteasing, both in imports and exports, which is rezartued as one
proof of the prosperity of the Peninsula. W iun Belgum, however, it is stationary; while with Germany it has dil minished rather than increased. The expurtation of silk goods is stationary; that of wines is also statio years the exportation of the former has increased sixty per cent., and of the latter seventy-four per cent. The exportaion of watches, clocks, and jewellery

The Capital. - The journals inform us that sereral police visits have been prid in certain parts of the capical to take into custody persons implicated in the late Beigua Considerable sensation has been created in the poluca circles, by the sudden departure of Count de Pablen, the Russian Ambassador. Some journals assert that the Cout had dewanded permission from his Court to retire. O de pretend that the Emperor Nicholas wished to Mear him scription of the French Ministry from Count Pahlea the sell. But it appears to be the most general opi distike the real cause of his departure is the Count Appony, th thee Czar to the dsnasty of July. As Cois this winter, Austrian Ambassador, will not be in Count Pablen to hare spoken the customary address to the King from the Diplomatic Corps on Nes Year`s-day, the responsibine of wheh compliment the Emperar, it is said, was reaga, the Suanish Amberator in vernment a sum of \(150,0001 .(6,0001\).), to pay a purto. the arrears due to the officers and soldiers of Cur Cis Auxiliary Legion. It is stated that the Ex-Quen Rue de tina is seriously indisposed at her hoithe Montenr \(P\) Courcelles.-A report is current, says in the linen and calico trade has stopped payment for sereral millions of francs. A great number of workmen were empligyards the nul honone pended from bis rank by Royat ordonnance. sume time ago, for a political demunstration. - The Mipniteur ar nonntes that Mr. Lytion Buiwer, Minister Pleniputered of her Majesty the Queen of Great Britain, presta so the King, in a private andience granted to hios at Cloud, on Mo
Alyeria. - The Moniteur contains a royal ordomance
promulgating in Algeria the laws of the mother country
respecting registry and office fees, mortgage duties, \&c.
which are fixed at only one half of the amount required in France. SPAIN.-Our latest intelligence from Madrid announces that all continues any fears of disturbances. Several military promotions had taken place, and the police continued rection, who were supposed to be still concealed in the capital. Gen. Concha was expected to be taken, as also
Gen. Rezuela. The Regent has confirmed the sentence of death on Gen. Quiroga-y-Frias, noticed in our last. The
Fiscal in the Court-Martial on the officers of the Princessa Regiment has called for the punishment of death on the degradation of the Lieutenants and sub-Lieutenants. The arrest of Don Louis de Garcia Gatierrez, the stex ard of the Countess del Montijo, which has taken place since our
last, was considered important, as it was expected to throw light on the late insurrection. Private letters mention concluded, and that the re-assembling of the Cortes was ised for December. The same accounts add that the British Ambassador had delivered to Queen Isabella an autograph letter of Queen Victoria, congratulating her
Majesty on her escape from the riolence of lier enemies. It was expected that the allowance to Queen Christina would be stopped by Government until the Curtes have come to cived in Madrid from Andalusia was satisfactory positive was yet known respectung the return of the Regent. On the 3rd inst. he arrised at St. Sebastian, from Vitturid where he was enthusiastically received, and atter assisting on the following day at the fète prepared tor him by the Ayuntamiente, he eet out in the afternoon for Tolosa and Pampeluna. Gen. Lorenzo was at Vittoria, with the Gen. Rodil had established his head-quarters at Pampeluna, while Gen. Zurbano remained at Bilbao. A special
cross is a a arded to the soldiers and patriots of Pan, peluna who retused to join O'Donuell's movements; and the National Guards of Bilbao and Tittoria are dissolved for having participated in the insurrection. The Regent has ssued an mpportant dectee suppressing all the Juntas anges the long-disputed question of the fueros. By he orders that those provinces shall be hetceforward kingdom, with one important, and une or two triting exceptions : the important one being that "the quata of provinces shall be raised accurding to the mode hitherto practised in that respect." Our accounts from Barcelona banded the city of Vigilance, desiruus to complete the optration with all possible speed, decreed, on the 23 ch, that one-half of the repair forthwith to the citadel and assist in razing its ramparts. The French papers report that some sanguinary chates thave occurred in that city during these proceedings; Iso added authorities of the cown and the commanders of the French hips of war lying off that port ; that the French officers manicipality: righ of search claimed by the Barcelona gainst the French ships, consisting, it is said, of two brigs and a steauner. It is also asserted, on the same ethority, that two Frenchmen had been assassinated in the town ; but this appears to require confirmation. It been directed by the French Government to join the quadron off this port in all haste from the nearest naval Wepot of France, to be ready, it is said, for any emergency. we bave suce learned that Gen. Van Halen, who had oppose the demolition of the citadel, had entered the town hout any resatance, though serivus fears were enterlained that the Junta would refuse the entrance of his in their opposition. It is now satd that the Junta had no intention of demulishing the outer works of the citadel but merely that «all, or certain purtions of it, which faced the town and the public promienade. The tranquillity of ions were making to expecied there, taking Valencia on his return to Madrid. that the Rentengence has oten recelved announcing peluna, Regent left St. Sebastian on the thin for Pampeluna, where as well as at Bilbao the anthorities were
adupting aecive proceedings against all persons supposed o be inpleated in the ron Madrid inform us that Brigadter Gen. Quiroga-yrias was shot un the 3 d inst. The Gazelle of the same ment of the a deeree of the Regent supp, tesing the paywiduw of Ferdinand ViI., unt:l some fresh legislative enactouent shall be passed by the Coftes on the subject. Gazette also contains a decree fur substituting prorincial for the forai deputations of the Basque Provinces, and rethe Regent, daied Vittoria the zith ult., orders that all absent emsl and mustary functionaries wio participated direcly, shail tortitit their offices, temoluments, honours,

隹 proceed thence to Saragossa. Shouid Gen. Van Halen not have succeeded in restoring order at Barcelona, the Regent would repair in person from Saragossa to that Government being determined on putting down the finte and repressing sedition. The reports in circulation re specting insults supposed to have been offered to French Government and the French Embassy, are stated in Madrid letters to be devoid of foundation. It was believed that Gen. Concha, the leader in the re
Portugal.-We have recensed Lisbon nems to the lat inst. The suppression of the insurrection in Spain was known in that capital, and appeared to be generally considered a matter of congratulation. It was hoped that the mission of Miarshal Saldanha would have the effect of bringing about a good understanding betmeen the goveriments of both countries. The tax of 10 per cent, on the home dividenis had passed by a majori'y of 23 to 12 The Senate was discussing a bill for making temporary provision for the parochal clergy. In the Deputies, measure for imposing a tax on half-pay, pensions, \&c.
had been much reduced by Government, in compiance with the general wish, and was still under discusshen. -onsequence of the tions made since the last was brought in ; and that a dot of credit for raising money on the revenues due would be asked by Senhor Avila.-It is affirmed that there is no truth in a statement which it setnis had been made by the Spanish papers, that a treaty had been concluded be tween this country and Portugal, by which the daties o the descriptions of English goods nont to be sniuggled into Spain had been greatly diminished. The treaty, is said, had not been concluded, nor did it contain any and was said to intend proceeding to Paris, by way Marseilles.
Germayy.-The journals contain no intelligence of any interest. The Duke of Bordeaus arrived at Vienna on the 26th ult., bat was too much fatigued by the journey to be able to leave his apartments duing the two ollowing days. His recovery it is said is far from c. m plete, and his foot much too weak to allow of his taking
continued exercise. The young Prince having sent an apology for his inability to wait upon the Emperor, hi Majesty honoured him with a visit. The Duke intended to proceed to Güritz as soon as his meuteat adrisers cun ney ham sumienty form that the Rew jour ney.- Private letters morm as hat he her Jore and extracts of the mannscripts of the Imperial Library a Vienna. They felate noustly to history, especially Aus trian history. Amongst them are the results of miming pperations in the Tyrol from 1480 to 1535 ; also son rare sporting intelligence of the same periou, as, fur in-
stance, a description of the fishing waters in the Tyrol interesting sporting diaries from Duke (ieorge of Saseny addressed to the Eimperor Mathiar; and a description of the pleasure-grounds of Mazimilian 11. - Accounts from Berlin inform us that the King was toave that capital on the 6th inst., whither he is to return on the 10th. was reported that the Puke and Prizate letters of the 3 ri inst inform is that the Evangelical Synod which meet at Berlin from time to time, is clostly connected with the ecclesiastical commission sent to this country with a vie oo the improvement of religion in Prussia, the the Roma Ca Eichish Episcopal Church of a Protestant bishop rie in Jeruslem, in whing the Kine mneh interest, appears to excite much sensation in Berlin, as it is con sidered as a mark of the religious spint of the King, who it is said, has at heart the welfare oflow his own religton. In eral spirit leaves every one to follow about his Majesty In proof of this it is stated that there are about Col. Ra dord Cory slace ic Count Sedretzki, forn Prime Betrict Catholic, and Coung the rersons ficncure when his conficence. It is stated that both Hationer and the Duchy of Oldenburgh have at lenghn joned the Cui toms' Cnion ; and it appears from the Aug thany rate telle of the ith inst., that from the ist Jan. Com deration atreaty be forect haring been concluced at Berlin.-The financidl affairs of Bavaria are represented as being in a bad state. The Minister of Finance bad declared that he could not guarantee the arrangement proposed by the house of Erich and Ruedaerter to their areditors. The hesitation of the same minister to place the railroads under the direetion Government had caused another mistortune by the falluie of M. de Mayer director of the railroad from Munich to Augsbarg. One of the last undertakings of this person. wimo las ised frum splendid Hotel de Basiere, in apened on the 15 th uit.-An account from Berlin, of the 30 th Oct.. communicated by the Suabian Altrcury, say that the second part of the puems of the well-knowa Hottmann Ftilermaier had been prohbited, on account of the dangerous tendency of some of thens. Al the she poet and it was thought ner unlikely that he would be ceprived of the office of professor, as was the case of 31. Bauer, protessor at Bonn. The latter was suspended from his uffice on account of the work on the Guspel, and the question was submitted to all the faculties of rheology in Prussia

Whether clergymen of such principles as Baner should be tolerated in a Prussian University. -The Frankfort Ga selte, under date Halle. the 3d inst., states that on the day Reformation two great grandsons of Luther assisted at the ceremony. A flag used by Gustavus Adolphas figured on
this cration. this creasion.

\section*{inst., ten and a half cantons voted for the re-establioh} ment of all the convents suppressed in the canton of Argan; but although this w merns compact ; and the third Diet mas, consequently, convoked nate than its rredecessors. In its sitting of the 4th inst the deputy of Zurich propesed the indefinite adjournment of the question,- there keing no possibility of an accord; and thrten states voted tor the nootion. The president nsequently deeciared the Diet to be adjourned sine die Thus this dispute appears to remain in a worse situation than it did betore, as the Diet has not consented to satisfy the complaints of the Papal and Austrian Governments;
and the danger of intervention becomts imminent, if the language used by M. de Bumbelles, hie Austrian ambassadur, in his official commurications with the Vorort be not enfty threats. The Fope, it steo.s, in this question Roman Cathulic Chusch; and Austrid protests against the aet of the caute \(n\) of Argau in suppressing the convents, on account of the rights of the House of Hapsburgh founder If some of these censents, which, in tatt, held in their possestion the archits of the reigniug family in Austria. A more direct interest of the latter country will, it is thought, be found in the fear that she entertains of Swiss revolutionary designs extending bevond theircantons, and upon this ground, it is stated, it is that the Prussian and French Cabinets hater gir
the Austrian ambassador.
Holland.-Intelligence from the Hague of the 4 th
 erepters of the budget of \(18+2\) and \(18+3\), , by which Refornied Clurch are fixed at \(2,4 \dot{2} 2,1+1\) florins for each of the two years, and those of the Ronian Catbolic Church at \(0=0,000\) florins. - A circular addressed by the Minister of War to the Governors of the provinces, the ouject of anter is coll into actual torce the militiamen of the autum leries, had callsed some sensania ia the capital The uneasiness, however, proved to be unfounded, as it of Intantry, as declucil by the late organisatiun, to its manmam, beob whit it has faien, in consequence of uit. theie mas cast in the Allas Foundry of Messrs. Dizon and Cu., at Ansterdan? the main piere of the iron swing bridge, which is to le thrown orer the Spaarre, to allow of the Anveterdam and Rotterdam raiiroad traversing tha it is said, the largest meece of iron trer made in this mas in a sinude puuld. The length is is feet 8 inches wa the weight nerar! 1 t tons. The melting of the metal began at nine in the morning, and the furnace was tapped at three in the afternoon.
Belgium. - The Brussels papers contain nothing new Sereral additional arrests had taken place, and M. Del court, the examining judge, has been appointed to inves-
tigate the charges agannt the persons arrested. The insestigation mas procetding witil all possible diligence but it is believed that among the persons arrested there charg for 10 at most against whom there are any serious pressed great surprise at the facility with which the con spirators succeeded in introducing two field-pieces into the city. They were not mounted, it seems, but all that wis aecessary for mounting them was in separate two bales containng the cannon were brought in a wag An:werp. How and where the conspirators obtained these pieces, of whom they purchased them, how they arrived at Antwer, and how, on their amival here, th parties contrived to conceal them from the ufficers of th the capital was to ve reviewed by his Majesty un I liesday n nheh day the Chambers were opentd iv his Ma ecsty person. - En ti,e 2wth uit, says a Brussels aper, the churib if and tmbraced Callohcism, were baptised in new railway from Tubise to Solghess was opened on Sunda Iraly.-The Pupe, it is sard, decimes to aanction the recent exctiva of a bishop tor the diveese of Breslaur, in Prussia, on the ground that the Gurerniment had exercise too great an induence over the election. H.s Huhntss, it appears, bas linted that a fresia titevien mwet take place Letters frem Fatermon), dated the 17 th 1.1 t., mention the arrival of therr sichian Majez:its in tbat uny on the pre exding evening, atter a tour thrutgh the island, during
which they Lad visited Syracuse, Catania, and Girgenti Wheh they Lad nisited syracust, Catania, and Girgenti. at Paiermo; ar.d it was eren said that the Queen would remain there tull atter ber continement. The wintage in Steliy was tnied, and lad tumed uut iess productive than had been expecteci, but the quaity of the wine was exceltnt. The olive barvest Lad commenced, and the weather being tavourabie, a productre season was anticipated. The late disturbances at Aquala are represented as of wore serious chanacter than the Government is disposed

Sicily ; and several persons of distinction hare deemed
prudent to secure their safety by flight. The directin prudent to secure their safety by fight. The directing sittings at Marseilles and Barcelona. The last accounts
from Naples state that 80 individuals had already been arrested.

Russia.-We leam from St. Petersburg that the failure of the corn crops laving occasioned a considerable rise in the price of bread in various parts of Russia, the Emperor
prescribed, throughout the empire, the cultivation of potatoes. The peasantry, however, could not be prevailed
upon to comply with this injunction, and Government has been obliged to resort to measures of coercion in order to the imperial ukase issued on the occasion:-"In case of dimbedierces no the 1 art of the peasants of the Crown. of vation of putatoes, the delinquents shall be employed the reilitury sersice, and those who should Carry arms siall be sentenced to lab, ur, during an inde nite period, on the fortuications of Bobruisk. "

Greece. - Advices from Athens of the 20th ult, inform us that his Majesty was pursuing a course calculated to
increase his unpopularity, and that he bad openly expressed his satisfaction at his late victory over England in the dismissal of his Minister, Mavrocordato, and the substitution
in his stead of Christides. The people, however, evinced their gratitude to their distinguished countryman Mavro-
cordato, and their utssatisfaction at the manner in which he had twen treated, by opening a subscription for the necessary funds for erecting a house to be presented to scribers to be prosecated, but suddenly suspended the proceeding lest it should open the door for the Turkish in aid of the late insurrection in Candia and elsewhere, able contribntors. His Majesty had also invited to at the palace the Minark Trinos, though he was then actually on his trial for various misdemeanours committed victed, he was subsequently sentenced to 40 days \({ }^{8}\) imprisonment. It was reported that the Turkish Govermment had prohibited the entry of Greek newspapers into the dominions of the Sultan.
Turkex. - Private Ietters from Constantinople of the 16 th ult. infirm us that the new British Minister, Mr. Bankhead, had been presented to the Sultan, and met with a gracius reception. On the evening of the 16 th, the
Ramazan commenced, during the continuance of which, throughout the remainder of the month, no business would be transacted at the Porte. M. de Pontois, the French Ambassador, was expected to leave by the next pachet for Marseilles ; when the only Ambassador or the dphlomatic tratisactions of the last few eventful years wouth the Barma Sturaer, the Austrian Internuncio, who wappened to Munssa Pachri, Minister of Finance, who whle taking a drive in a chariot be had received from Viemna, was. in consequence of the horses running away,
thrown out. and the niseels hanging passed over him, both his legs and one © his arms were severely fractured. Gien. Joctmus, or Jochmus Pacha, as he is now styled, had re-
ceived a damond-hilted sword from the sultan, in acknowledgment of the services rendered by him in Syria. Tahir Pacha's squadron entered the Bosphorus on the 15th ult. Accounts had been received of the re-appearance, to a serious estent, of piratts in the Archipelago. much interest; the Nile has been four inctus is not of year than it was last, hut owing to embankments which had been erecten all along the course of the river, it has not done so much damage as had been anticipatet? It is
generally expected that the crops thins year will be very generally expected that the crops tins year will be very that not much more than one-fourth of the arable land in the country is under cultivation, in consequence, it is
said, of the defective system of Government, and the want of population; and yet even in its present, state, it is cal-
culated that on an average the quantity annually exported is between 500,000 and 600,000 ardebs ( 313,000 to 380,000 imperial quarters) of wheat, and 200,000 to barley. Private letters of the 21st ult. state that nothing had transpired as to the ultimate arrangements between the East India (Company and Mehemet Ali. relative to the nowned i: : Perans Sum' er of this Paper, the Pacha has yeldent to the princyper of the measure on payment of a certain duts. The faitan s mecretary, what had been retura to Constantinmple, having necomplished his mission, it is said, th the mutual satisfuction of the Sultan and hris
 that Said and Snmy Pachas arrived there on ti.e loth, as well as the Envoy of the Porte, Tesfik Pacha. The Pacha gave them a solemn reception at the citadel, and the Envoy presented a sabre of hunour to the Pacha with a superb orter in liriliants. The Ottoman Envoy delivered at the Ai t.r lis framk and lopal submission thanking Mehemet Frencawat. had given Clot bey a beating, for which he has been semer.ced to 40 days imprisonment and a fine of about il. lorakm Pacha was in Lower Egypt repairing the damazes calsed oy the Nile.
nited States.-By the packet-ship Emgland, which Yovit paperit to the 20 th ulto being thee daye later than
 go his way, no one knew whither; at least such is the only lated. It appears probable,
into Canada by way of Boston. that be had gone

\section*{ftetropolis and its Vícinitu.} The Lord Mayor's Day.-The preparations made to
elebrate the accession of Alderman Pirie to the Civic chair, on Tuesday, were on an unusually extensive scale and by the auspicious announcement, at an early part of the day, of the safe accouchement of her Majesty. The were greater than have been seen in the City since the visit of the Queen to the Guildhall. The procession, which was much of the same character as usual on these occasions,
moved from Guildhall at 12 o'clock, and passed through Cheapside, Cornhill, G racechurch-street, and King Williamstreet, to London-bridge ; thence by water to \(W\) estminster; and returned from Westaninster to Blackfriars-bridge, passing through New Bridge-street, Ludgate-hill, St. Pauls Church-yard, and Cheapside, to Guildhall. At the Obelisk in Bridge-street, the procession, on its return, was joined Judges, Members of Parliament, and other persons of distinction invited to the usual Civic banquet which took place in the evening at Guildhall. The decorations and other accessories of the feast were on a scale of great magsisted of a gallery erected at the lower end of the hall for sisted of a gallery erected at the lower end of the hall for
the accommodation of the band of the \(72 d\) Highlanders, Whose performances contributed greatly to the interest of the oreasion. Immediately under a stack of armour
placed over the Lord Mayor's chair was a scroll containing placed over thie Lord Mayor's chair, was a scroll containing
the words " (iod bless the Queen," while along the front of the gallery at the lower end of the hall was emblazoned "God bless the Prince of Wales," with the Prince of Wales's plume at either extremity. After the removal of the cloth her Majesty's health was proposed, and drunk with great enthusiasm, after which the Lord Mayor gave "The infant Prince, the heir apparent to the British Throne," which was welcomed with enthusiastic cheering. After the usual toasts had been given to the Army and
Navy; and also to the Foreign Ministers, for which the French Ambassador returned thanks; the Lord Mayor proposed the health of Sir R. Peel and her Majesty's Ministers. Sir R. Peel returned thanks, and said that he begged, in the first place, in behalf of her Majesty's Government, to express their cordial satisfaction at being allowed to join with their fellow-subjects in that ancient hall in expressing their feelings of exultation at the auspicious event, which would make that day memorable in the annals piness of her ; which would increase the domestic hapheir apparent to the British Throne, and which must fill with joy the universal people of this great country. He rejoiced that they had the opportunity of manifesting these feelings of loyalty in the presence of distinguished orators, the reg resentatives of powerful and friendly states, and that they had an opporturity of witnessing that, whatever
might be the political differences that divided them-whatever might be the provocations of party-prorocations inseparable from the working of a free and popular government, still they were united as one man in the sentiment of attachment to the monarchy of these realms, and in one feeling of devition to the person of their sovereign. Ther would, he was sure, look forward with hope and jor to the succession, in the fuiness of time, to the throne of the Prince born that day, and who, ther conridently trusted, formed by the tender care, and instructed by the example of bis illustrious parents, would at some future, but as high destiny to which it has pleased Providence to call him-worthy of filling the throne of this imperial, this united kingdom, and of protecting and defending the liberties and happiness of a free and generous people. The right Lon. Baronet then proceeded, on behalf of her Majesty's Ministers, to return thanks for the manner in which the toast had been received, and expressed how sensible the Government were of the importance to them of the favourable opinion of the City of London; how
anxious they were to testify on every ncension their resprct
for the authorities of the Ciry, and their entnest dewin to co-operate with them in promoting the public tranupility,
and in defending the liberties and welfare of the inhabitants of this city. Sir R. Peel concluded by propositants health of the Lord Mayor, in whom he said he had every confidence, from his high character, his indefatisuble infulfil, in the discharge of his bigh otfice, their lighlity expectations. - The Lord Mayor returned thanks in a brief
speech. He was most grateful for the high compliment which had been paid him by so distinguished an indiridual, and, above all, for the manner in which it had been re-
ceived by those present. He would endeavour to do his ceived by those present. He would endeavour to do his
duty fearlessly and honestly, and if on the folloming anniversary they considered him entitled to the meed of their
approbation, it was all he sought for-all that he desired After the usual rontine of toasts had been disposed of, the couchement of her Majesty, and the birth of a Prince occurring on this day, only a few hours after Mr. Alderman Pirie had been sworn into office, that gentleman becomes
in consequence entitled to a baronetcy. It appears, how-
ever, to be generally supposed that that honour will be ever, to be generally supposed that that honour will be
conferred both on the present Lord Mayor and on his
predecessor Mr. Alderman Johnson. predecessor Mr. Alderman Johnson.
The late Fire in the Tower.
tuted at the Ordnance Department into the causes of the late fire is still proceeding, but from the secrecy with which it is conducted, nothing positive is yet known on
the subject: it is stated, however, that as the particulars connected with the unfortunate event become more developed, they disclose in a striking manner not merely the imminent danger in which the whole of this ancient fortress was placed, but its almost miraculous escape from and workmen have been busily engaged in removing the mass of rubbish from the central ruin, and conveying the
least damaged portions of the arms to the Ordnance stores, - every article of value being found in a very mutilated state. the Fire Brigade examined the rains, and found fire still
remaining in some parts, but not of sufficient importance to require any longer the presence of the brigade engines, which were then consequently removed for the first time since the fire. A regimental order had been received hy quence of a communication from the Duke of Wellington, expressing the Commander-in-Chief's high approbation of the conduct of the soldiers during the fire ; in consequence of which a free pardon has been granted to all the men in the garrison undergoing punishment. A communication her Majesty's her Majesty's approval of all that had been done on the
occasion. It appears that charges had been brought against the soldiers of having forcibly obtained spirituous liquors from the residents of the Tower on the night of the fre, and of having otherwise misconducted themselves. An inquiry, however, has been gone into by the military
authorities, and from the evidence adduced the charges are proved to be wholly without foundation. On Monday the decision of a Court of Inquiry was made knomn, which had been appointed to investigate the complaint of a reporter of the Sunlay Times, against one of the soldiers, who, while on duty at the outer gate on the night of the fire, had struck him on the head with the butt-end Tower. Col. Aitchison, in behalf of the Court, read over the evidence, in the presence of the reporter, the Serjeant and soldier who were on duty on the night in question, and also the decision of the Court; which was, that it had
been proved the soldier had struck the reporter, but that when he did so he was acting under the orders of the Serjeant, who had been instructed to let no one enter the Tower except on business; and that, under the circumstances, neither the Seijeant nor soldier exceeded his duty. Fraudulent Issue of Exchequer Bills.-Nothing of imce our last. The circumstances brought to light by the examination of Messrs. Smith and Rapallo, at Bow-street and the Mansion House, referred to in our last Number. are regarded as proving very completely that the whole orthe Exchequer-bills, issued by the states that he gave out the printed forms for the purpase of being filled up by another hand; and this fact is regarded as very alarming by the holders of these bills, inasmuch as it appears doubtful, as far as they are cuncersed, the Government, never having been regularly issued across the counter, but only acquiring the puwer of circulation added the signa the party out of bills, it is said, that two further sums. of \(20,000 \mathrm{l}\). each, have been discovered among the securities of two London banking firms, one in the west end of the town, the other in the City; , mont additions increasing the frauds detected Sock Exchange have continued their inquiries from day to day into the circumstances of the fraud, and the transactions of those members of the house who are understood to be directly oraly, whose name is not mentioned, has been examined at some length, being suspected of having participated in the late criminal transactions, aud having been on terms of intimacy with Mr. Rapallo. It does not appear, howerng that any facts have come to light immediately implieating the Paris Bourse bas just disappeared, and that he is strongly uuspected of having been concerned in thil affirs a sup-
position which is somewhat confirmed by the fact，that French capital，and it is assumed，as probable，that the suspected jobber may have absconded to aroid the conse－
quences of the late disclosures，as there appears to be little doubt that the frequenters of the Bourse must be more less affected by them．In the mean time，the inquiry is still procec⿱ing at the Treasury；public confidence in the suspension of the quotation of the price of Exchequ：er biils on the Stuck Exchange having ceased，and thece se－ as heretofore．
The lute Strike of the whasors． 1 meeting has been masons in the recent strike against Messrs．Grissell and Peto．After the business of the meeting had been opened， opinion of the meeting the masons now on strike in Lon－ don and Woolwich merit the gratitude and support of the empire，for having so manfully taken a stand against cruel pledges itself，both individually and meeting further every possible exertion to render that support to them．＂ that the motive of the masons was misunderstood．They did not strike for an increase of wages，but in consequence wished to prevent them from paying the last rites to their deceased relatives，and absolutely locked up the pump from men who were known to be teetotallers for the pur－
pose of compelling them to deal with favoured houses Complaints on this score were made to Messrs．Grissell and Peto，who only answered that they would not degrade he hoped the inquiring into them．This being the case， themselves into one strong phalanx，as it was clear that the upper classes took no interest in their welfare，and they selves．Resolutions were then proposed condemnatory－ the conduct of those individuals who bad been masons whe Peto．Mr．Wabley the employ of Messrs．Grissell and Pcto．Mr．Wakley，M．P．，then addressed the meeting at some length，and said that he had attended the meeting in order to learn really and truly what was the case between the masons and their employers．He had had some ex perience of what was the feeling of Parliament towards th Korking classes．Six years ago he brought formard his labourers onvinced and he believed after much perseverance he had body，though the press had designated the a most ill－used and incendiaries．He had been led to believe that this strike was founded on some dispute with regard to that it was founded on highly moral grounds－on the highest and noblest grounds，in fact，on which a strike had ever taken place．To meet all the calumnies creat deal of union．If their 6．Messrs．Grissell and Peir grievances had been proved miss their foreman，to look for redress from such dis ployers was useless；the only thing that could help them ras willicg to sompathy and public support，and he，for one， made at the to contribute his mite．A collection was then is said，was raised．Mr．Allen the foreman，against whom the above complaints were made，has since published a itnial of the morning papers，containing a most distinct turther that the charges brought against him，and stating striki，and then not to Messre．Grissell and Peto，bur to Lord Lineoln；that，though indirect，they were not neglected by these gentlemen，but，being made the sul，ject momediate and searching inquiry，were ascertained to fur the cless．－On Wednesday another meeting mas held， nernt of the of receiving from the secretary the state－ strike，to the accomints since the commencerient of the resoiutions relatise reports from trades unions，to adopt minswes of replies of Mr．Allen，lately put forth．The tie secreatary read the meeting having been confrmed， Mainons，whichead the balance－sheet of the southe of ymcediags stince the cuanuencemont of thei．strike．The
 tiesurer Gissl．leawng a balance in the hands of the M．P．，in．；the anney，M．P．，107．；and Capr．Ackerlcy， cisers．The adoption of the remort \(\begin{aligned} & \text { as } \\ & \text { race meveli and car－}\end{aligned}\) Fenos，The sprerat delegates present then mace their re－ trades，specifying the sums forwarded by the different preared to support tiie their assurances that they were號 1\％as；and that if funds came in．they should rase it to Iz forth by Mresent then rose to answer the statement che sal，Were aware that since their last meeting，the Linding mate agsinss Mr．Adien had been dented by hmm lenge th has，cat ing on inmo to cone terward and stimit yan atsmer from ；and that wadence had been me． Anem，merely giring the charges a that demial，but shrink－ Was them antempt to prove their denial．A resolution when passed，that，in the opinion of the meeting，

Messrs，Grissell and Peto refusing to submit their fore statements of the masons are true．Mr．Wakley after wards addressed the meeting at some length，on the same passed，that another meeting be held on Wednesday next Metropolitun Improcements．－The Comnittee on the Metropolitan Improvements have recommended that se vernl huses in Millbank－street，in a line with Abinglon app roach to the Hoases of Harliament．The front of the Penitentiary is to l，e caclosed with iron railing，and planted with ornamental shrubs．Mr．Cubitt，it is said，has tahen
pose of erecting houses of a superior kind tion of the Ranger＇s lodge in the Green－park，the residence of the late Lady Gordon，has been decided on by the Com－ missioners of Woods and Forests，and the whole of the
site，with the shrubberies，will be thrown into the park． －On Monday，the Earl of Lincoln，Chief Commissionset Mawes，M．P．，and Mr．Walker，the conimeer，inspeeted the Surrey side of the river from Nine Elms to Battersea－ bridge，to ascertain the expense of embanking the rive in a bill to enable them to purchase Government to bring park，to be called Lancaster－park．Balis also said or the intention of the Crown to construct a carriage－road alongside the water，to correspond with the intended road is statshat－briage to Battersea－bridge．This park，it paid for out of the revenues of the Duchy of Lancaster Pubtic Meetings．－A meeting of the residents in the parish of Tottenham has been held，for the purpose of turnpike－road as hereto had seen the secretary of the Imperial Gas Company with mould light the 50 lamps which the road－commissioners hould light the 59 lamps which the road－commissioners that the charge，until the 1．5th Mar，would be about 4 per lamp．Mr．Fowler thell read extracts from the Metropolis Turnpike－road Act，to show that，as regarded lighting，it was an enabling，and not a compulsory statute and observed thatlit was impossible to doubt that the com missioners would have continued the lighting had thei discontinuing of the lighting was not a matter of choice but of necessity．Several gentlemen having expressed their opinions on the racious forms anted to the meeting，it was moved and resolred unanimously，that the churchwardens be requested to call a general meeting
of the rate－pavers resident on each side of the turnpike． road leading through the parish of Tuttenham，to the ex－ tent of 400 yards on each side of the same，and a reguisi－ tion to that effect was signed by all present．－On Wednes day a meeting of thie Committee for carrying into effect ＂The Times Testimonial＂took place at the Mansion Ronse，preparatory to the meetiny for the discussion of the details upon the subject of the various matters submitted from time to time to the Committec．The minutes of the Mayor meeting having been read and conirmed，the Lord teriog upon the duties of the masoralty，in being ap poinged chairman and treasurer to \(\cdots\) The Times Testimo－ pointed chairman and treasurer to＂The Times Testimo－
nial．＂He felt convinced that he should have the happi－ ness to announce that the subscriptions which hai commenced so auspiciously at the conclusion of the mayoralty of his excellent predecessor had been kept up With spirit adaptell to the eccasiun，and that a testimonial

Falmusth. - It is stated by a correspondent of a morning paper, that this port will, in future, be selected, from
its favourable position at the entrance of the Channel, as the point of starting for the Goverument steamers to the Dutch colonies.
cloucester. - During the last fortnight a naral party has been recruiting in this city, and masen, the late dearth of business at the docks and quays having thrown many watermen, labourers, and others out of empluyment. La-t watermen, labourers, and otherr out of empluyment. La-t
week two detachments of recruits, 35 and 10 each, were sent off to Bristol. to be thence conveyed by steamer to Portsmouth; and this week another detachment has let
this city for the same destination. The medical inspection is very strict, and several of these recruits, not obtaining certificates of healrh, have been refused.
\(I_{l}\) suich.-A fesw days since, the church of the village of Bawdsey was burned to the ground. The arcident was cused by two men going on the stepart of it falling on the thateh of the church it immediately ignited. All exartions to put out the fire were fruitless. The men were taken on going a long examination were liberated, on condition that going a lung examinatio Weodbrilge Petty Sessions when called fur.
Lewes.-It seems it has been the practice in this town for many years to celebrate the Jth Nov., by making a
bonfire opposite the Town-hall, and letting off fireworks in the streets. Numerous accidents having taken place, and in snme instances houses having been set fire to, several of the inhabients applied to the police to put an end to the practice. Handbills were issued, coutioning parties agaiust it, anc a number of yperial comstables were sworn in to asmeasures, a large mob assembied opposite the Town-hall, most of them armed with bludgeons; and in a short time a quantity of faggots, straw, and tar-barrels, were brought into the middile of the street, and set fire to. The police, proceedings, wheu the mob) made an attack on them, knocking nust of them down with their bludgeons, and the superintendent was so severely injured that he was
obliged to be led away. The mob then obtained complete obliged to be led away. The mob then obtained complete possessinn of the street, and continued their violent prothe time the thoroughfare was completely stopped, and the coaches and other vehicles had to take a circuitous been since apprehended, and have undergone an examination before the magistrates.

Leeds.-It is stated by the Globe that the committees of the West Riding have waited upon Sir R. Peel, Sir J. Graham, an 1 other leading members of the Government, respecting the introduction, in the ensulng session, of a
simple ard efficient "Ten Hours" Bill." The members ormple and eflicient "Ten Hours Binl." The members tion the merits of the question, and expressed their winingoess to give the proposed measure every support; at the same time admiting that be dismem demanded a close and searehn: 5 inquiry, so that they might be enabled to ascertain its origin.

Manenerter - On Saturday ereaing some exritement was creaied in thit town by the rumour that a factory was on fire, and that there was reasun to suppose it was the attempt is combine the members of the rarious trades' uniuns in the tewn in support of the masons who joined in the srike asaint the contractors for the erection of the nete Holses of Parliament. Both these rep or's, however, apper to ke without any foucdation. The fire wecurred
on the premists of Messes. Cockler. Barrow, and M Kinon the perises of Messrs. Cockley, Barrow, and M1 Kin
ley, exteatise cotton-spmers in Jersy-street, rithin a fi se yards of the namitheory of Messrs. Elce and Co. winere our read-rs whil remember a serious accident and greate-duiler. Rauicays.-An inquest has been held on a man named Edmond Greening, a porter at the terminus of the Great
Western Railway, Paidingtom, who lost his life under the fullowing curcumstances. A fellosw labourer deposed that he was aith deceased engaged at work near the shed used fur carriages, when a heanly-laten waggon approached but it had been set in morion by a horse which hadt pre viously been detached. Wituess was desired to take care, and succeeded in getting out of the way; but deceased was knocked down, and the spot. Verdict, "Accidental death."一On Monday, a serious accident happened to a labouring man of the name of Samuel John on emplyed at the works of
the London and Burghton Railway, near Bletchingly. It a.pears that he, with some other libourers, had just made preparations for gettiny down what is called a fall of slipped and thrust him against several ballast-waggons, by which his collar bone was broken, and he recelved other serious injuries, He was immediately conveyed in a van to St. Thumas state. The accident is said to have arisen entirely from want of caution on hs part; and had it not
been foi the contiguity of the waggons, he would, it is been for the contiguity of the waggons, he wonld, it is
thought, have been buried alive. - The extension of the Great North of England Railway to Newcastle has at length been finally determised on; and the works, it is
said, will be cominenced as soon as practicable. A meeting of shareholders, which was numerously attended, has been held at Darlington, when resolutions were unanimously agreed to, approving of the proposed plan of
uniting with other railway companies in taking a lease of the intended uew railway, and transferring the requisite powers and provisions to a new company

\section*{IRELAND}

Dublin,-On Monday a deputation from the Royal Hiberutan Academy waited on his Excellency the Lord Lieu-
tenant, for the purpose of presenting an address of congratulation on his arrival in this country; to which his
Excellency replied, that he was sure he expressed the feelings of her Majesty when be returned thanks as her repre sentative for the declaration of their loyal attachment ; and he had no hesitation in assuring the members of the Academy of his best wishes for their advancement and prosperity, and of his willingness to take every opportu
nity of showing his zealous anxiety on their behalf.-On Sunday, Mr. O'Connell went in state, as Lord Mayor, to bear mass at Marlborough-street chapel. He was numerclasses, who accompanied him to and from the chapel, but no disturbance of any kind took place. - The bar have presented an address to the Ex-Lord Chief Justice Bushe,
on his retirement from the bench, expressing the warmest attachment to hum personally, and tieir admuration of his character and acquirements as a Judge. -The usual week!y meeting of the Repeal Association was held on Tuesday The Lord Mayor in the course of the proceedings rerepeal agitation, already noticed in this paper; and after animadrerting in strong terms on the sentiments conthe insinuations in Mr. Sharman Crawford's letter' respecting the danger of cur struggle resulting in blood, deserve and receive our contemptuous indifference; and that his plan of agitation for public liberty is the most silly and
delusive ever brought forward by any man having the delusive ever brought forward by any man having the
gravity of a statesman or the heart of a patriot." This resolution, being seconded, was carried by acclamation. After some letters had been read and contributions handed in, the Lord Mayor apologised to the Association for not petition "pared for that day's meeting the dragland," of W:ich he had given notice, and promsed that by Mone wisi would have it ready. As he was on this subject, Lieutenant's levees in his official eapacity of chref magis. trate of the cits, and the reasen for such a step on bis part was quite palpable. Lord de Grey was the repre-
sentatise of their belored Queen, and as such should be respected; but as for any peesonal respect for the man, he inad nene. Ile neither respected nor disrespected

lordsbip was connected, was a de'ud:ng, paltry, leypocritical Admanstratomen, and tieerefore denerving of the con iempt if the Irish peaple. Next to Mr. Sharman Craw-
ford's attempt at intersing was that of Lord Eliot, whu Edd the politieal audaing was at the Cornwall elecrica that he "intended to gissern freland tor the proule, and oot for or by a faction." Mr. O Cinneil then proceeded sent Gorernment all the legal appointments made by the preoaly way of ubtaining complete justive for Ireland was by the wreek was announced to to pe 23 . The - During tiene past week a considerible number the Irish Romin Catholic bishops have been assembied in this city at their annual conference, and it is understond that they have determined meapply to Government for an increase of the parlia-
mentary grant to the College of Marnooth. A deputation
the Lord-Lieutenant on the subject on Wednesday, and it is added that a general feeling prevails amongst the Roman Catholic clergy and laity that the grant should be
altogether abandoned if Sir R. Peel refuse to increase it altogether a bandoned if
to an adequate amount.
of this - A paragraph has recently appeared in the papers of this city, stating that Lord and Lady Holiand had been converted to the Ruman Catholic fath while in Rome in September last. It is now announceri, by Caluinamaz Messenger, on authority, that the sta:ement is wholly R me since 1835.

Belfast - In experimental trip on the Clister Railway has been made by a number of the Directors and their friends in a spectal train, from this town as far as abont two miles beyond Lurgan; the distance is altogether 20
miles, and was traversed, omitting stoppages, in forty-two minutes. On Monday, the exteuded line is espected to be opened to ti.e public.
Waterfurd.-Mr. Walsh, a magistrate of this county, beaten to death on Saturday, on his return from Dungarvon Petty Sessons. The notice of his servants hating proceeded in search of him, when they found his dead wody about a mile from the house, exhbuting marks of extreme nothing, however, transpired throwing any light on the nothing, however, transpired throwing any hight and the jury returned a verdict of "Wiliul murder against some person or persons unknown." A proclamation, signed by Lord Eliot. appears in the Dublin
Guzette of Tuesday, offering a reward of \(\because 00 l\) for the discovery and conviction of the murderers, and 807. for such information as may lead to the conviction of any person hreir eacape from justice.- In the sane Guzelle there is another proclanation, offering a reward of 150 . for the apprehension of the perpetrators of a murder committed in the adjoining county of Wexford. The proclamation states that on the evening of the 5 th inst., as Mr. Joseph Bolton, of. Ballybrega, parish of Castle Ellis, in that by some person anknown through a windor near to where he sat, which wounded him so severely on the bead that he immediately expired. No further particulars are given of this murder. Mr. Bolton, it is said, was emplojed as a land-agent.

\section*{SCOTLAND}

Edinburgh. -It is said that there is a scheme on foo for establishing a new college or educational institution in this country. The project is thus briefly described :has been proposed to establish in some central situation large town to secure internal discipline, a collegiate insti, tution; and of this institution the objects are to ke the training of young men designed for holy orders in the Scottish Episcopal Communion, and the supply of the laity with means of education analogous to those which a reduced rate, and with the advantage of a more strict domestic discipline.
meeting of the sub-committees appointed for carrying into effect the Wellington testimonial in this city, has been held, apon a requisition of subscribers and
members of the general committee, on the understanding, members of the general committee, on the uprecured froun Signor part, that the model and bertain members of the subthe person, features, and expression of the Duke of Wel lington in the prime of life." and that, therefore, the subcommittee have not acted in terms of a res, lution identifgeneral committee in which it is stated that such to to be erected in the res of phestrity. The following resolution was then moved:- "That in so far as the model and bust furnished by Marochetti represents the Duke at an adsanced are, they are in direct contratertion of the re solutions of the general committee and of the instructions given to the aitist ; While the numeromitiee, ard plainly implied in the of the sub-commattee and individual menabers therenf. at fird palpabie eritunce of a want of sall the the arshe in redent long discussion ensued, after whic.a an amendment was moved, approving of the proceedings of thee sub-cinmmittee, and empowering them to conclude arrangements with Baron Marochetti as early as possible. The amendment havin teen seconded, was carried by a maj rrty of \(2 \neq 10\) 10. The minority then entered a protest agamst few days since as the lumane train on the railway betweter this citr and Greennck was proceeding to the latter place, the enginter descried the boulv of a nian lying across the rails. The signal was immed areiv given, and cue traid gone over the body. The breaisman then aighted. any piched up the man, and bronght him into Paster, when it had fillen ont of one of the third-class carriages. The guard in front of the engice lasd. it seems, pitched the body of the rail, and thereng irevanted his death.-Accounts received from this cery inform us that during the last week a number of failures hare taken place amony some important houses, and which, it is feared, will add greatiy to the existing apprebensions in this important co: cial mart.-It is stated that Lord Stanity, in an-
swer to a depuration from this country, assured the gentiemen who wasted on him that the subject of emigration was under the serious consideration of her Majesty's Ministers. Aberdeen.-A local paper contains a letter received from the commander of the emigrant thip Mathesis, of taken fire while out at sea nn her worsee to Svdner, in lat. 2649 S ., and long. 2120 W . It adds, towtser, that the fire was ultimately got under without giving rise to any Sto Janeiro, where she was obliced to put in for repairs.

\section*{THE ITRICALS.}

Coven-Gatlen.-In Satuday, after the opera of Norma, in mhich Miss Kenble continues to be very fa out in the a new farce in two acts was brought being an aduptation of a French vaudeville. The plot is as follows:-Sir Bryan Beanser (Mr. Bartley), a middleaged coscomb, prond of his conquests, is deteated, first in a design against a lady's-mand. and secondly in the project of marrying his cousin, whose wealth is the main source of attraction to him, by a dear young fiiend (Mr. C. Mathews), who manages to keep the appointurent with the maid, and to marry the cousin Mr. Bartley reatised very well the character of the old beau; but the humour of tise piece depended mainly on Mr. Harleys exhibition of jealousy ns Simon Tack, the lover of the maid Shortly before the fall of the curtain, some symptoms of disapprobation were manffested, which became wore decided at the clese of the prece; the expressions of approval, however, appeared to predominate, and it was aunounced for repention.

\section*{ftiserlaneous.}

The Niger Expedition.- By the arrival at Liverpool of the Do rulus, from the codat of Africa, we learn that this expedtion entered the N'ua bratuch of the Niger between the 13 th and 1 th Aug., the Sondan leading. Up to that date, the expectition bad lost six and lowiog are additional particulars derived. have been received from persons engaged in the expedition. A letter from a gentleman, dated on board the Alore, the 19th Augo, says, "Wo entered this river on the 14th. The bealth of the whole expedition has been all alon good, considering the number engaged in it, and any exclusively confined to the black men. In the Albert we have unfortuntely lost two men: one named Johnston, a white, fell from the foreyard-arm during our passage from Sierra Leone and Cape Coast, and died two hours after the accident, from injury to the brain; the other was Mr. Back, the mathematical instrument maker, who was at tacked on the 9 th inst. With symptoms of fever for some time from dyspepsia, and this attack supervening upon a constitution previously delinhtateds proved fatal on the 15 th; there evidently was nothing local in the came of his death." From letters received up to the date of the 2uth Aug., the whule of the losses sustained appear to have been three from casualties during the sogage, which, with two coloured men and one European-the latter not from African fever-comprise the entire loss of iffe sur tained by the expedition from the time of its quirting England to the 2uth Aug. The total number employed in the expedition is about 300 persons. We learn from the Canterbury papers that Lord Albert Conyngham has enty Barrows on Breach Downs, when all the remaining unopened ones were explored. A large party were present on the occasion, and several interesting relics, differing from those previously found, were discovered. Among these were three neatiy-finished silver ringe, found in the grave ofull the with some beads; the bunch of white hair. In another grave, at the neck of the skeleton. Were discovered two silver pins, attached to eachs other by a small silver chain, and whell were exactly in the siyle of cham pins now commonly in use for fastening scarfs. One ctst contained a great quantity of the bones of mice and small birds. From the discoveries made during the operfing of apwards of 60 of these tumnii, here carving-plare.
Brearh Downs wae an earily Brish - The Marrlitse Me! chiori, at Rome, has lately published a newly-discovered sonnet, stated to be the production of this areat poet. It was written abut 135 at Furrara. and darlhe on the soif of Cerarch in chame It wa meautr. Whuse namown that the poet bad ever been at Ferrara. The sonnet is derived from a MS. of the \(14 i \mathrm{i}\)
Library.
Blair-Drummond Mos:-The remarkable undertaking of remoring the peat-moss, which was commenced by few acres being left to serve for fuel to the setters. 1,500 acres of fine carse clay soil have thus been added to the Blar-Drummond estate; but gising to tire =y-1em of lettied the moss in small patches, the retura to the propnetor wim

ninc. as it cislitto have l,een preented on the 11 th. Tl.e jury, un der these circumstances, found a verdict for the defendant, an
pare wa- reerrvell to move the court to cet the verdite anife and

 ime after it had been given. If such a custom did not exist, the greatest injury would result. In this instance the defendant had M, ple funds at the hankers, ant if it had been presented on the
ith, it would have been honnoured, and nome of the consequences of which the plaistuif comprad fal
nurt be a difinite pericd fixed
entation, othei wise the time would be so uncertain that it migh
extend to a very long date. Mr. Sergeant Wilde supported the ule, and urged that the plaintiff had adopted the custom whic was unirersally practised, of writing the name of his hankers
across the cleck, ainl payinc it into the house, and the lankers had presentud it for payment the day atter tive received it. The custom of the city of London recconised it as within reasnnabl was paid into his hands. The plaintiff must be considered in the
came posituon with reviect to his baukers as if he hail hander the ame positum withreapecto nis bankers as if he hall handerd the check over to a thirt party y payment of a dient, anh in hech vayment of thic mioney. He trusted, however, that the court rait hin a new tran moract to put in eritence to meet a ques hon which was raised at the trial as to the time of the paymen of the check, and which he was not aware was material, and in the question was of importance, and it would take time to consider its jullyment.
Cular urn ques's Bench. - Clurk and another v. Burnett. -The plaintiffs in this case are eminent ironmongers at Woiver for warmins houres and dpartunents, hy meeans of hot wate transmittent thromgh pipes. The defenidant was employed to se up tiex heatuy apparatus in the premises of the plaintifts, and the ma murey wa- mund anwer wet conouth for a hort time. submpunty, hwever, turited out that the machinery becam which it hai been erected; and as the defendant refusedto refund the money which he had received in payment for the apparatus the present action was bronght to recover it back. The case caro in for trial at the last assizes for the county of Staniord. and erdict was returned for the plaiutifi Gr. (rodson, Queen plaintiff to show caure why the verdict should not be set awite and a new trial tad. The gromud tipun whish the learned colluse supportent bis motion was, that the machrnery in question, how coniplete oi cachlent -ou at the the oht erection, counduo continue in that condition without the application or care and at The Leame. rentleman further contenuted that the evitence at the trial hat cimwn that the neces-ary care hald met ieen used im re ference to the -ubject by the servauts of the pianten, ann that
was. in fact, from the waiz of such carc that the sutivequent de

 stemord, an what they hai, umom the exidenie ieforra rimem, at on attempted to suppo the court upon thi cronnd refused to interfere, and the rule was therefore refused.

 :or the county of Nortilk, when it appeared tsat the plaintif hau
cut his hedges, but it was stated hefore the Justices in session and air in the

 of this order: and further, that the order itself was bad, bein

\section*{Cbe Gatmeners Cbuonicle}

\section*{gATURDAY, NOVEMBER 20, 1841.}

\section*{ \\ baturday}

AT the last meeting of the Horticultural Society in an ingenious practical paper by Mr. Henry Crace, that
gendeman incilentally made an observation which, galthough, perhaps, unnoticed at the time, deserved serious consideration. Hestated that in root-pruning bis fruit-trees he does not leave the roots as chopped through with a spade, but that he cuts all the larger roots obliquely with a sharp knife, so as to leave a
clean slanting wound three or four inches long, with its face downwards. The effect of this, he said, is. to cause the wound to send forth' a fan of fine fibres from the whole circumference of the wound. It is to be regretted that this plan should not be more
generally adopted. The ragged wounds inflicted by generally adopted. The ragged wounds inflicted by
spades and mattocks in the operation of transplanting, are of litte importance indeed to some kinds of trees, such, for instance, as the more hardy forest-trees, and many common shrubs; but to all of a more delicate nature, and especially to those whicll produce new rools with difffculty, such as oll Thorns, the precaul Bion mentionet by Mr. Crace is of great importance.
tioe remember injeedd, an old sentleman, whose whole We remember, indeed, an old gentleman, whose whole life had been spent in gardening, and who was one of the best transplanters we ever knew, who would never allow a tree of any kind to be removed without re ducing the wounds on the roots to a clean face. We never heard him assign any reason for doing so, except
that he krew by experience that it ought to be done that he knew by experience that it ought to be done and, as we have just stated his experience was of sorme
importance, for it was that of a long life, and his trees eren the largest and worst rooted, scarcely ever died. There is, however, a reason for this precaution The young fibrous rots of a plant proceed in all cases from the sarface of the wood and not from the bark
they only pierce the bark when they seem to grow from it. When the root is crushed by the blow of a blunt tool, all the part exposed to the blow is killed, and soon decays. That decay may either proceed no further than the vicinity of the injury, or, as will happen more commonly than we suppose, it will spread and infect the sound parts in contact with it. In either case the production of young fibrous roots can only take place by forcing them through the bark Which lies over the wood from which they have to spring. But when a wound at the end of a root is clean, decay will not take place, and the surface of
the wood will produce fibres from that part which is in contact with the earth. No resistance is offered to this process ; on the contrary, from the moment that the fibre begins to form, it finds itself in contact with the earthl, where its food resides, and there, imbibing
tient vigur firm the soil, it immediately contributes to the general systen something of that organizable matter out of which more fibres are to be produced.
\(W_{\mathrm{E}}\) all know that it is a universal practice among gardeners to sweep up and carry away the dead leaves grouund in all directions. The neatness which must be maiutained in a garden seems to render this labour neeessary, and the prractice of ages sanctions it. In the eyes of nine-tenths of the world, the man who permitted the dead leaves to accumulate among his And yet that man down as a sloven.
he who is tererman would be a better gardener than he who is ternally exercising the broom and the rake and treating his garden as a housemaid treats her cham. bers. When nature causes the tree to shed its leaves, it is not merely because they are deal and useless to pose--that because they are required for a further pur pose - that of restoring to the soil the principal portion
of what of what had been abstracted from it duriny the season of growth, and thus of rendering the soil able to main-
tain the tain the veepeation of \(a\) succeeling year. Ever particle that is found in a dead leat is capable, when decayed, of entering into new combininations, and of to thin tising into a tree for the purpose of contributing fruit. If the den of more leares, and flowers and Yruit. If the dead leares, which nature employs, are remored, the soil will doultiess, upon the return of
spriog, furmish spring. furnish more organizizbble matter without their andistance; because its fertility is difficult to exhaust steriliny. But years must elapse before it is reduced to members of the less we rob the soil of the perishing annuars of vegetation which furrish the means of annually renewing it fervility, the more will wur trees
the organic elements out of which the leaves of sum mer are to be restored in the mysterious laboratory of
vegetation. They contain the carbon or humus, and the alkaline substances essential to the support of growing plants; and although such substances can be obtained from the soil, even if leaves are abstracted, yet they can never be so well obtained as through the decay of those organs. The dead leaves of autumn then should not be removed from the soil on which they fall.

Neatness, no doubt, must be observed ; and this, we think, will be sufficiently consulted if leaves are swept from walks and lawns, where they do no good, and cast upon the borders in heaps, where they will lie and decay till the time for digging has arrived, when they can be spread upon the earth like so much manure. Or, when planting is going forward, a quanity of them cast into the hole in which the young trees are to be stationed, and mixed with the soil, will be found to have a beneficial effect. We have for merly insisted upon the importance of these considerations (see p. 143 ), and we now repeat the advice thus seasonably, in the persuasion that the practice ought to be, and may be universally aclopted.

The Hyacinth is a plant about whose managenent everyborly wishes to know something on which he may rely with confidence; for although seen every where, it is not often seen in all the beauty which i really possesses. We had, therefore, intended to bring forward, from time to time, as the season proceeds some observations of our own upon the subject. Fortunately, however, for our readers, a friend, of whose skill in the management of this favourite plant we cannot say too much, has given us the result of his experience; and we are now able to state what his practice is at the commencement of the season, when the bulbs are first committed to earth or water. Here after we shall point out what further care is necessary n the more advanced stages of growth

In the choice of the bulbs, take care that they are firm in substance, smooth in their coat, and clean at the bot om, with a good nipple rising at the top.
Any free, loamy soil, with well-decayed vegetable inat er. suits them well. I put no manure to them; but I work up well-rotted dung for Geraniums and Verbenas in the summer, and the remains of this in the same borders where I plant my Hyacinths and Tulips give them ample assistance in the Spring. After I hare planted the Hyacinths and Tulips, which I endeavour to do as early in No rember as the season will admit, I cover the border to the depth of two inches at least, with the vegetable refuse of the garden of the preceding year, decomposed by the am-
moniacal liquor from the gas-works; and I have much moniacal hiquor from the gas-works; has materinlly added to the abundance and beauty of the flowers, and the strength of the bulbs themselyes.
One essential point, as with all flowers, is trenching the ground as deep as circumstances will admit; but few gardeners liase any ileat of the importance of this to the success of their operations. That which most of them unnecessary for flowers, and they fail in many cases for want of this necessary work
My Hyacinths and Tulips are planted at least fou inches behow the surface of the ground. I always place intle coarse river-sand below the bulbs, and cover the out side and top. He advantage of the make their firs prugress rapidly through the sand until the bulb gains power to support its growth, but that it is of ralue also when the bulb is taken up after flowering in preserving the coat clean and in a healthy state. which it mould not be if any tenacious soil even partially adhered to its side. As to distance of planting the bulbs, I am inclined to thinle that the old books give much more gpace than is ne cessary. I always pat mine in patches in the fiower borders to rary the gaiety of the border; and I vary my number of bulbs from six to twelre, as the size of the bulb or convenience suits me.

Hyacinths that are grown in water are essentially im proved by a little water poured upon the crown of the bulb after it begins to grow, increasing in quantity when the buds begin to opea. The dry air of rooms deprises ther of that moisture which nature affords the a, erner in rain or der, \(t\). enable tle flowers to expand freely; and if anybody tries the experiment in a room with a flower that disappoints his daily observation of its pro
find out the ralue of this simple application.
The compost used by the Datch growers is leaf-mould Firyin eath, weil-rutted cow-dung, and sea or river sand, in equal parts ; to tiais they add a duuble-handful of salt to each busliel of the compost.

I hase tried the additan of salt in two or three instances, but without any apparent gow result, My means, however are so limited in a London garden, that I should like the experiment to be tried by persons with greater local ad vantages, and more
rience, than I possers.

DOUESTIC GREENHOLSES.-NO. I. Is compliance mith the wishes of alpha, and some other correspondents and readers of che construct onve prepared some short direchiuss for the crames, such as management of small greenhouses and frames, such as are commonly attached to dwelmg-honses, and managed
great deal of pleasure from engaging in occupations of this kind; and if the taste was more generally difused
In building a greenhouse, the fret thiog to be attended to is the choice of a proper situation : south is the best aspect, or as near that as possilite; south-west or south east will do. or eren east or West; hut on no account
should it ever face the north. As hy fur the greater aum ber of these structures are built in the vicinity of largo cowns, surrounded with a dull smoky atmosphere, it is the more necessary that a light situation should be chosen and as the plants upon which dependence is placed to render the greenhouse gay with flowers, are for the most Chinatives of the Cape of crom Hope. Stir Hobsand sky for months together during thrir fonernas seisins, it will at once be seen how much dereni.s upan a command of light daring our dull winter months. Wi contmually hear people, and gardeners too, tahiag abuut grecuhouses
admitting too much light; but this is perfectly absurd when applied to plants which grow in exposed situations in those countries already mentioned. Their evident
meaning is too much heat, or, what is the same thing, too little ventilation. Of course I do not allude to those plants which grow naturally in the shade, because they are formed to live and flourish in the shade, and we must place them as nearly as possible in natural circumstances to be successful in their culcivation. Greenhouses of this kind should be fixed in situations where they will not be ohaded from the sun by any part of the dwelling-house, or other high buildiags, and should also be quite free from large trees. They should not be placed near trees for an other reason than being shaded by them, namely, the glans in the roof being apt to be broken by the rotten branches which are sent down during high winds.
Next to a proper aspect and an open situation, a perfec system of rentilation is of the greatest importance. In building a greenhouse, it should always be recollected that it is just as easy and as cheap to have it properly ventilated as not; but that it is a very dificult and expensive thing to have this to alter, and to do afterwards. This seems a rery simple observation, and what ercry one knows, or may know, and yet I suppose it on.y proves tice country, their only fault being want of anficient ventilation.

The next thing which those who build small greenhouses hould attend to, is to make arrangements for a constant supply of rain-water. This, like ventilation, is very easily done wh. the house is building; gutters are wanted, anyto lead it away from the surface of the eroumd ; and in stend of taking it into this drain, he it Je broustit into a tank in the house, and used for watering the plass. Siate lanks may be used for this purpose, or they math a brick and cemented over in the insile. This will be economy in the end, and the water c llected in this way is much to be preferred to many hinds which are ortained from springe. A drain should be made to enable the tank o be emptied at pleasure, and into which the water used in washing out the house can be fwept, without running into the tank.-R. Fortume, Horticullural Sue. Garden.

COTTAGE GARDENS.-No. XLIV.
Braring in mind the essential points mentioned in our last Namber relative to the pruning of the Vine, the next thing to be considered is the selection of the proper which is desirable to cut back with the view of produ cing a succession of mood for the following season. This requires some discrimination and forethought ; but a little practice, and the experience of a yar or two in the mabagemest of Vines, will render it a matter of no great difficulty to those who will only take the trounle to apply hemselres to the subject. The luest shootior re situated as bearers should be chosen from those wh weil rinened nearest to the stem, and apt-jomted lame prominent of a moderate size and jominent buds. Such as answer dis destip be selected in preference to any that are more vigorous growth, and long-jointed. The latter when retained often prore , ruitful, ofing, no coubt, to the buds hemg selt dom ma.ared so well as on shoots of a kess robnst hab by Those intendeu to be reserved most the lateral shouts, whit \(=\) be be the base or the othe. The main shoot is then to be shortened back for about a thirt of its longth, varying, howerer. in this respers scoording to its relative size and situation, and the number of huds Which it is supposed to be able to nouri-in prispery. When the requisite number of these bearing-hons har are obtained, at suitable distances from une diented, the rest of the branches are to be cut away, with the exception of of the branches are to be core alluded to, whimh hatien to be farourably situated for producins tutare bearinr-rond and which, instead of being cut Eins + , thman atem on each Tive loose outer baris is then to ber rooved from such parts of the tree as are renderad :anaion by ir and the branches treined and nalled as mina. \(\%\) as possible over the portion of the cottage-wail ahutted fir them. To be able to do all this in the manner we have stated, would seem to require considerable skil: but suchs is really not the case, if the principles on which the operations are to be performed be carefuily kept in riew. namely, to endea vour by pruning to cbtain the greatest quantity of frait on the late number of shoots, and to sufrer no more of
in some may or other to the production of fru:t, ant the gencral prowne ity of the tree.

We lare entered mose fuing iato detail oas this matect than usmal, in what quene of the present antern of pros
 tremely defectie. Ome cinject has been to atemp: to remedy this, by exphiniag the best method of treatment that can possibly be adopted, and in such a insmer, we hope, as wili render the management of the Vine familiar to every cottager.-M.E. \(H\).

\section*{HOME CORRESPUNDENCE}

The Treatment and Management of Bees.-Many gardeners, who have no experience, are required by their employers to undertake the management of Bees, and to them the following method, which has been successfuly standing the prejudice in favour of straw hives, I, as well as a friend of mine, apon whose extensive and successful practice I ground these remarks, have found that wooden boxes answer quite as well. The boxes we use are made of well-seasoned deals about three quarters of an inch thick, measuring ouside about a cubic foot, and within, 10 in . square ; they are painted black, and their tops have four or five holes, which are stofped with wine-corks. When the bees require more room to worh in, these co ks are taken out, and another box half the depth, and the sanie length and breadth, is placed over the holes, and if necessary, a second or a third box on the top of this. A small square of glass is put in the back of each box, and a piece of thed made to fit over it, by which meansthe proceran can ascertan by certan sounds from the Queen Bee, and her Roysl descemdant or descendants, when he may expect a swarm. This assertion may appear incredible to some, but I appeal to the practical apiarians if it is not so. If a filed appare stories of the hive are again, which is done by first allowing it to settle; and if again, which is done by first allowing it ithe on a branch of a tree that can be taken off, carry it to it be on a branch of a tree that can be taken off, carry it to
the mouth of the hive, and shake the bees off on the board in front of it ; or if there is no board, erect a temporary one for the purpose, and with a small twig gently more, or rather drive, them to the mouth of the pareat hire. The benumbed condition of young strarming bees renders such an operation less dangerous than is generally supposed, and the sting of a young bee is not so painful as of an old one; and if a piece of dirt be immediately apphed to the place, and held there for a minute or two, pain or swarm if the part rarely follows. After in it a placed as near the spot where it aighe as pesible; and when the bees are all settled in the evening, it may then be remored to its final stand; or if a more suitable place in the neighbourhood can be had, it lad better be taken there at once, and not when the hive is half filled with comb, at which time there is a chance of breaking the comb There is, however, mo danger in removing a hive filled with comb; and if an opportunity offers of placing it among Heath coming into bloom, Furze, or Broom, or in field of Peas, Beans, or in any other place where there is Honey made enticly from the hloom of the Heath is generally lihed, and if fine weather occurs when it is in fluwer, the bues will make more honey in three weeks upon it than in as many months in a garden. The mode re adopt of obtaining the honcy is, after having ascer ained that the main box and its two upper compartments re filled with what is called ripe h:oney, which is known by the ends of the cells Eeing sealed, to take off one o the upper boses in the mildle of a fine day, and the bee that are in it are beaten out with a small twig. They fly back to the hive, or rather box, and another empty hos is placel between thee main one and the remaining small one that is fuil, so that the bees, which are only allowed to enter by a small aperture at the bottom of the main box will have to pass threw, tl.e empty one to their com partment abore it. This encourages them to begin work ing in it, and as soon as they have half filled it with comb the tup one may be taicenaway and another ernpty one again placed in the centre. A greater number than two may be worked at once; but I have always found a box of the bove-mentioned size, with two smaller ones, amply suff leat, and have known 180 lbs of honey the abore-mentiuned muthed, wila a person protecting his face ande-mantisunel mathed, nil a person protecting his
ficrapplian it mithout peril. -S. N. \(V\). [A correspondent, J. D., has favoured us with the fol owing description and drawings of his hives, one of which fig. 1, resembling that of \(S . N\). \(V\)., except in the bores weing all of one size, renders it a suitable accompanimen to the foregoing paper. ] Fig. 1.-a represents the box; \(b\), the frame-work which fits on the top of the hive before the sliding lid is put on; \(c\), the whole three bores in use Fig. 2, represents the straw hives, which may be used in the same way the worden …ies are.  rect, and wiil sethom start for sumbth before Mawh, at which time it wil. resuire a goul Lot molkent of at beas: sio, either in a Bar'- pit of Cucumberived. The eriatest error commited with regard to its treatment is learins tie root to start in the same pot, \&ic., it grew in the presious cear. is it makes its shout from the lomer end of ti.e nes tuber, mhich is consequently at the bottom of the pot, it is not taken out and that end placed upwards, it has o struggle through the whole mass of mould to reach the surface, which it often fails in doing. It should be potted (which sometimes happens) is too long, a bulb-pot may be used; it should be well drained, and planted in pure light peat or heath mould, with the end of the root just above the surface; when it makes a shoot it also forms fresh roots from the base of the new shoot, and will grow rapidly if kept in a stove or vinery, at a temperature ake a six using nothing but light peat-soil. It may then be trained in any form most convenient. After it has flowered and the leaves are decayed, withhold water entirely to ripen the tubers, which may be kept in the dry mould till the spring, or taken out and kept in dry sand till the season for potting them.-W. Scolt, Bury Hill.
Large Pines.-I offer a few remarks on the extraordinary size to which Pines have been grown at F. A. Philips, Esq., Thornfield, near Stockport, Lancashire. On my first visit, my attention was drawn to three Enville Pines of enormous size, one of which was nearly ripe. The
gardener, Mr. Hamilton, measured it round the middle, and found it to be 21 inches in circumference, and 14 inches long from the stem to the bottom of the crown, or 16 pips deep. My second visit was in March 1840, when I noticed two Ripley Queens, the riper of the two being evidently upward of \(4 \frac{1}{2} \mathrm{lbs}\). in weight, which I considered very extraordinary for the season. My nest visit was in in the pit, 8 or 9 of which were nearly full grown, and I am persuaded would not weigh less than from 5 to 7 lbs .each. My method of calculating weight is, that a well-grown Pine measuring \(16 \frac{1}{2}\) inches round and \(10 \frac{1}{2}\) long, will be 51 lbs in weight. I visited these gardens again in September, and found the Pines as well grown as they were the previons jear ; I saw 7 or 8 Black Jamaicas and Montserrats that were nearly full grown, one of which measured 17 finches in circumference and \(11 \frac{1}{2}\) inches long, although quite green, and to all appearance had much to swell. In order to give your readers a right conception of the size that the sorts grown there are all Montserrats and Black Jamaicas, with the exception of a few Black Antiguas, Envilles, Queens, and a Der Providence or t .ro, the last of which has been grown to 21 inches round; and although the small sorts are preferred, yet the enornous Weight of 200 lbs . has been cut out of one pit during
last twelve months ; the tan bed measuring -20 feet by 7 feet 6 inches, is heated with hot water. The succession plants are grown in a pit of the same size in the hothouse, under the Vines. I noticed several large suckers on the plants whese fruit had been cut during the summer, and I was informed that most of them would ripen their fruit again in twelve months from the time the fruit was taken from the parent plant, and some of them even ia ses I have frequently heard recommended, in order to strengthen the suckers; the practice here being to preserve all the leares as much as possible until the suckers are perfected.-A Manchester Gardener.

Coal-shale a Manure.-There is in a field here an old coal-pit that has not been in use for many years, and part of the ground near the pit and the road that led to it have been broken up and ploughed. This season the field wais in hay, but the crop of Clover has been very deficient had cept in those parts near the pit and where hee road sinking it is a common thing to lay the shaie and sand stone alung the sides of the road leading to the pit, and often part of the shale is spread about the pit-mouth. In the Chronicle of Octuber 2nd, it is stated tbat Messis: Boussingault and Payen have late!y produced an eladorac memvir apon the comparative value of different therear uanare. It is also stated that hese cheme cratest nitrogen as the element whose presence is of the grile ef impurtance in manwre; amd every substance ent rien, procided it beconies ramathe can extricate azotised products in Foshli that subtable state. If, however, the nitro et is ine ; aldic of chtering into putrid fermentati n, and of a furnishing ammoniacal salts and other azotsed conb for tions. the substance centainmg it can he or no measures, manute as is prowed by the thate of the erimen. asal get whin coatams cohsidrable quantitis, of mith the citu stance of the clover erowing retl wh. re the stale akno.s stance of the clover eromins the ab*e statemen chrmbote or contratict the

 (p. 716) that it woul if those who have had practica readerience in this matter would communicate such facts

At Proligious Briar:- (Ine-rear old shoots are now growing in a wood near - Aateby Hall, in the partsh Garstanc, of a most surprising size. I was this mornin passing by the abure-named place, whon my attention win
 of a Briar growing just from the top of the ground. It
 Were five other shoots from the same part, of the following
 length of tase whole shoots was \(114 f t\) o, froma the same rout this season.-A Townsman.

Gloriosa superba. Als the Gloriosa superba is not so
they may have noted in reference to the planting of IIol-
lies at different seasons of the year." 1 have had consilies at different seasons of the year." Hollies, having raised derahle experience in the planting of day. The shrub sucand planted a great number in mact, is one of the weeds of the district. I regret that I kept no memoranda as to the particular times of the year in which the different plantangs toost all seasons, and with success. In one instance, however, I well remember that I planted a Holly hedge, of about 120 yards in length, early in A pril; I recollect that it was Easter week, and, what is equally to the purpose, that it rained lard all the time, so that I got thocould thrive better than my Holly hedse did, which I consider one of my most successful efforts in this department of arboriculture. Now, I am far from maintaining that April is the best time for transplantin:o Hollies; but if the season prove wet (as in the instance abose stated) and the
yonng plants selected for the purpose be such as are suityoble for the purpose, they will unquestionably succeed to one's heart's content at that period of the year. The ther after planting the Hollies, (for even if you water, you cannot water like nature herself,) and perhaps there may or winter than in spring. The cold dry weather so 1 revalent in spring, acomp nied, as it usually is, by harsh cutting wind, which the proverb says in "reither good
for man nor beast," is alike prejudicial to all vegetatum, and especially to newly-planted IIollies. I may tille the present opportunity of warning thie cultivatore of this beantiful evergreen to be careful how they cut down their young Hollies to the ground, with a rier to wake them
throw up a more vigorous shoot. Having often observed the luxuriant growth of young quicksets after having bertion of my Holly hedge; accordingly, for the space of about 20 yards, I headed down to the ground every young Holly after the 2 d or 3 d year, expecting this portion of the hedge would in a few years far outstrip the remainder, in which the trees were left entire. Hollies that were headed down died; others barely retained life; none made a strong healthy shoot. In short, I found it expedient almost entirely to re-plunt this portion of the hedge with fresh trees. I was the more surprised at this unfarourable result, knowing from experience that Holiies which are periodically cut down in woods, time after time, renew themselves from the old shoots, and tirow up most vigorous shoots the following season-- Wr. Bree cut down his Hollies :]
The Weasel.-I had an example of the ferocity of this ittle animal in an attack on my watch-dog. It seized on the dog chained to its kennel, and he had to be unchained Murray.
The Cranlerry Bean. - I bnught some at Chariwood's last spring, and fcund them excellent. The seed is eaten, not the pod, and they mere dressed either like the White Haricot, or stewed in grary; the taste somethiny between
the Haricot and the Lentil. There was another kind larger, equally good, but I have lost the name. The Lima Pole-bean did not bear. Pray give us some account of the different Beans of this kind ; and those of which the pod, and those of which the seed is eaten. - Tolty.
Hyacinth \(V\) ases.-A \(=\) the : ason for planting Hyameth is rapidly adrancing, I lose no time in mentioning what I consider a prettier way of growing them than that com-
monly practised. The common glasses turn the roots in an unnatural direction, expose them to light, and, to say the least of thecm, are not onmamental. I prefer a vase made of glass roughened by grinding oas the outside, and large enough to hold six buibs in the narrowest part. one in the centre aurl five roumd it; they may tither be supported above water by a vay upen wite grating, or the
vase may be entirely filled with fresh moss. the builbs pase may be entirely filled with fresh moss. the builbs and round them. In this latter case it is better not to Water them till the points of tle green leaves appear ; they siould then, howerer, be watired frequently with a fine rose with fresh rain-water. This will not ouly be appropriate treatment of the bulbs at that stage of their growth, them, to assume a pleasant fresh greaine.green culuar. Of conrse the bulhs should be arranged with due regard the compensation of colour, so that the whole shall have the effect of a well-arranged bouquet, any number of really ornamenting it. The curres on which the vase is Henry Barham Harris.

Ice-houses. - Your correspondent \(N_{0}\), in his observa-
ions relative to tions relative to ice-houses hat week, recommends thean
to be buit on an clevaied spot, and to be piduied at. at

in this respect, I will state what I have fund the most switable and economical plo efor: ar terherse. When I situation in the park, with trees alnout it as deseribed by A.; from the situation of this house and its d.stance from the supply of ice, the expense of filing it yearly was
enormous; and the ice kint badly, which I attributed to the close and confined atmosphere about it. caused by the trees. I therefore determined to build a new one, and of a long pon I in the pleasura-garden, a chort distance from the house, where the gromed around it, except on the pond side, was sufficiently lox to admit of frofect drainage. It is built the shape of an era, standing on its smaller end, with double walls, larins aur caritis between the outer wall rext the earth and the imner one ; and the dome is cavered by groming Heath, with so little appatance of a roof about it, that by stangers its seal use io wever suspected. When the season for filling it arrives, the earth from the side next the pond is removed, and a strong door
which is fisel in it is nuered: a communication, or shoot, between this and the edge of the pond is formed by strone boards fixed together, with sides widening towards the pond, upon which the ice, as fast as it can be brouglat to the side, is placed. and darted into the house without furfilled. the door is closed, and the gromed made good as before. The passage for getting ont the ice is on the ourposite side from the pond, tumeeled in the bat, and hide perfectly by evergreens, In this honse thete has never
yet heen a seanaily of iec, sand its migna! cuas has hown
 is filled, usually being done in a diy, aldhoush it hohls 30 tons. I cain-ider the proximity of trees, or any confined situation, the worst possible for an ice-house, and hollow walls indispensthie to its long kecping. I have commenced some expriments by putting ive together in various sites in chcap forms, and will send you an account of ny success hereafter; for I belite this luxury may be kept far more simply, so as to the fid in great ahtuJoseph Paxton. Chatsworth.
Cedar of Levianon.-With reference to the note by the Editor to a former commumication on the ahove tree, 'D P.' begs to obwerse that the timber sent by Hiram King of Tyre to Solomon, towards the builling of the temple distinctly is said to have been cut in Lebanon, and not from Mount Atlas- Tide lst Kinfs, chrpe. V., and \(2 d\) Chronicles, chay, ii. : and that the main object of Solomen in sending to Haram, was to ubtain the services of Hiram's wood-cutters-" for," sitys Solomun, "Thou knowest there is not amonr us any that has slill to hew timber like unto the Sidunians." Besiles Cedir-tres, asks for fir-trees, Lebanus, specifying Cedir-trees as distinct from Fir-trees in general. This is uet a proper place to enter into a ciscussiun of this question, but it am:y scribe the tree sent by Hiram nuder that name in our translution from the Septuacint, yet as we know surch a tree still groms on I. bamon, it it fuir to suppose that that tree was one of the kinds azked for by summon. It may be worthy of notice, that ac:ording to Wichaelis, the name given by the present inlarbiants of Lobamen to a
tree which has the bot:mical charactir of the Cedar, is the same as the llebrew nomo given in suepture, and translated by us Cedar. As t.) the timber foum with the Elgin marbles, it was certainly anic, at the time they were first br.ughtit over, to be the Cedar of Lebanon; if it aftermat phe cient size to be made use of for suchi a purpose, and cercient size to be made use of as imperishable as the Cedar; the writer of this article having in lis possession a piece of a thick branch of an Olive-tree, cut five or six years ago, in the garden of Gethsamene, which appeared perfectly sound when it artived in England, but though kept in a dry place has been lately found to be perforated with worm holes, the oil being probably attractive to those ammals, nor can it be supposed that the Olive-tree h.rntiuncd in the building of the Temple can have been the cultivated Olive-tree,-it is not probable that the trees grew to a larger size then than now, or that it comld have afforded timber of a sufficient scantling to have made the figures of the cherubim 10 cubits high, and of course wide in proportion. "Trees of oil" are also mentioned in scripture (see 1st Book of It appears that with the gold from Ophir came Almugtrees; these have been interpreted by the Rabbins, the Red Sandal wood; but if they came from India, a word might be put in for a mure useful timber-tree in the construction of so 1 nee a grideng as the Tempte if amon-" The
 we \(d\), sot doubt, bot it does not a co.. to on cear this: the naine was not also apphisd t, cher ...ent of a simbin
kian. It is to be observed that

 to full which \(83 ; 600\) wood-cutters were to be supplied by the Jewish monareh. So thas it would appear that two sprs of Cedars were intended, viz. Cedars, and cedars the Lebanor. Ins, or Ers, seems the a narre give Niebubr East to Fir-womt is gearral, and Mr. Drummond Hay lras clearly shomathet'he Moorich and Al-erce, mistranslated Lareh by the Spaniards, is the Hitis. of the CaHiteis ymadriwaluis of Atlas; aed that chis
hard, durable and fragrant wood is commonly employed is the ancient religious huilduss of the Edst. Xus is it not rrobable that Solomon would empliny the soft and fragrant Ers of Lebanon for the tecorations and fittingsup of the temple, asd the hard and more durable Ers of amother kind for the main timbers: and that the Tyrian
hing wound be emplovel to firnish ti.e late:, while the 80,000 wood-cutters of Solomon would level the forests of Lebanos, which Hirum was to 1hat dowa to Joppa? We are persunded that there is some confusion about this Ers ; for in Rosenminter we find it spoken of at ome time as not harder than the mood of white lir, wish corresponds with what we have seen, and what is universally stated of Cedar of Iebamon, as far as we can discover ; and at another as harll: riference being at the same time made to the palsee of Persepolis, whose timbers are said to have been constructed of it. The authority for the latter appears to be (quintus Curtine, who(1. г. c. i) sive, Cedrus had no definite meaning any more than Ers. For the \(\boldsymbol{\kappa} \delta \delta \rho o s\) of the Greeks was certainly either a Juniper, rapady фépoura puppoy, or a large tree producing re§pia, curadiof resin used cinal resin, and having fruit like a cypress, described moreover as a large tree, does not answer to the Cedar of
Lumon, hut apulies well enoval is the Calitris, which rields the sandarach of montera pharmacy. It is true that Mmy ( wini. c. .j) suys the (edrus main was a syrian tree but tian he alsio adds niti. c. 1.i) that the fine (char wood rame from Aths: white Diosenrides says mothong aimat
 As regarils the Olive, our authonty for what we satil upon that sthject was not only comnon remast, but a block of "nod given us hy the late Mr. W. Athinson, who recerred it, as we were informed, from Lord Elyin; and that block was certainly of the olise. Whethr \(r\) or nit the cherubim were carred out of ()live wond or oily wood is not a subject for discussion on the present measion. We may, however. olserve, that Bove fouid Olive tres in the province fayoum, whese stumps were more than wo yards the trees of this kind on the Mount of ()lives are at least sir yards in circumfermee and num or ten yards high s, large, imdeed, that he estimates their age at 2,000 years. -We trust uar correspondents will exeuse this lenig discussion, and arree with us in thinking that the samject is full of interest. It all even's we wisil to shaw that our Diswers are not given hastur and monvit due consideratwon, whether we are richit ur wrong in our cpizmons.]
Pincs.- The following result, have been obtained from young Pine Plants, potted in different complosts, as a means of ascertaining which is the nosst sultathe

These sonts were potted last August, an! riee resnit is that in all peat the Globe and Queen gruw well, but in sandy peat the Queen grows better; in rich loam the Queen is as good as it is in sandy peat, but there is not the sane quantity of roots produced. When their fruit is perfected, Hall.

Shre Mamures.-A correspondent has sent us the following extract from a paper by Sir H. Depy, in connexion
with this sabject :-"I made a number of experima:.s in May and Jume, \(1 \times 00^{-}\), on the effects of differest saline su' stances on Barler, and on Grass growing in the game zarden, the soil of which was a limht sand. The soletions of the saline substances were Eved twion at setk. in the quantity of two ounces, on spots of Grass w.l Cim, suef ficiently rumote from each other to prevent any interference of results. The substances tried were super-earbonate, sulphate, acetate, nitrate, and muriate of potassa; suiphate of soda, sulphate, nitrate, muriate, and carbonate of sult equalled \(x\) part of the weight of the water, the effects were injurious, but least so in the instances of the carbonate, sulphate, and muriate of ammoniz. When the quantity of the salts were soo part of the solution, the
 routs wateresh with rain-wite. Thase acted on is the solution of nitre, acetate, sad super-comhnate of ; arssa, and muriate of ammonia, grew rather better. Those most fuxuriantly of all. This last result is what might be expeced, for carbonate of ammonia consists of carbon hydrogen, azote (nitrogen), and osygen. Tlow is in huwplants watered with the Eolution of .......... ammersia did not grow better than those watered with rain-water The sotation reddened litmus paper, and probably the whe arid avarted a prejudicial effect, and interfered with the out as - Criese experincut our curvespondent points nitrate of ammonia.
Glazing Hothouses and Pits.-The glazing of hethouses and pits is well worth discussing among gardeners,
as there are few subjects on which so many different opi-
nions exist. In some old gardens. there are several kinds of glazing, uiffering both as to the shape and size of the panes of glass. Some gardeners are advocates for large panee, as giving more light by not having so many laps reasons. In the first place, they are more likely to be reasons. In the first place, they are more likely to be
broken, when moving the lights to give air, by hail storms and frost, and when one is broken it lets in so much cold air, and costs more to replace than a smaller one.
pose a Vinery or Peach-house to be glazed with panes ten inches deep by six and three-quarters wide, it will be found, after a severe winter, that many of the \(\frac{1}{}\) anes are split up the middle; and when taken out they are only fit for mending with. which, at all times and in every structure, scription under my charge, and know the inconsenience of large panes. I have frequently thought that there ought to be three or four sizes of panes used lactures: suppose, for example, the largest size for Vineries, Peach, and Fir-houses; the next for pits for for Vineries, Peach, and Fix-houses; the next for pits for
growing Pines. Melons, and Cucumbers; a third size for growing Pines. Wclons, and Cucumbers; a third size for
frames; and the smallest for handglasses. If the sizes are \(s o\) arranged, they will be found economical by the saving of glass. In many gardens the Vineries and pits are
glazed with the same sized panes, so that when any of the glazed with the same sized panes, so that when any of the ensure the house being dry; and when they are taken out they cannot be used in the pits on account of their being the same size; but had the panes in the pits been of a smaller size than those in the Vinery, in all probability they would have come in without muel loss. Suppose on of the regularly over one of the lineries a grat remain these will still be large enough for the pits and frames, and thus little loss will occur. When there is a general repair going on with the bothouses, the glazier ought to begin with that in which the largest sized panes are first, the ease, cut a large piece of glass away to replace a small one. In my opinion, there are no better sized panes for hothouses than seven inches wide by four and a half deep; for pits four and three-quarters by three inches deep; for frames four by two and a half inches deep, \&e., with a lap of one-eighth of an inch. The glass should be clear, stout, and selected as flat as possible, so that the panes may lie perfectly level one upon the other, and so cat that they may not fit too tightly against the ribs (which is frequently practised by some glaziers), but room should be slazed all tibs to swell and expand. Before a light is glazed, all the panes should be laid in loose, to see that the fit easy and are quite level, as well as range one with out and tome well worked putt lnid in the rebete ; panes must then be replaced and preszed firmly down, and the bottom frame bedded in the putty, so as not to save a vacancy. In the spring of 1838, we had occasio to rebvild two old metallic Vineries; they were rebuilt used were four and three-quarters by three inches deep selected and perfectly level; they came dircet from the glasshonse, packed in boxes, that contained about 500 panes each. and were put in in the manner I have described. These houses are heated by flat bot-water pipes. There are three lights in a range upon the roof; the two bottom ranges and the corner ones of the top range are secured with pins and putty; all the other top lights are moveable and managed by a windlass; the front sashes are hung upon Linges; and all open outwards. We can give what air we wish by a rod of iron with holes in it attached to the sash. and in the sill there is a pin on which the rod is fixed. Orie corner of each sash is used for the parpose of taking in or out Vines when required; there is a piece of castiron to fit the comer of ench, which is fastened by two screm nuts, to keep the stem of the Fine in its place. The doors are made of wood, as they are better kept in order than iron ones, and easier aud lighter to open. The roof of these two houses contains about 9,216 panes ; the two ends and partition 1,579; and the front sashes 1.929 ; with three doors that contain each twenty panes, tife inches wide by seven inches deep-making a total of 12,775 panes. Frome the spring of 1838 to the present time, October 1841, there have only been ten panes broken in the roof by the frost, de., and twelve in other parts by accidents; this house requires shading in hot clear weather. In Nuvember, 1838, having several of our lights blown off a Pine-pit by a strong gale of wind, many panes were broken, and one light was so much injured, that it was reglazed with panes seven inches wide
by four and a half deep, the lap being one-eighth of an inch. The light is elgitit feet lung by four feet wide, contains 132 panes, and is in constant use, being a bottom light, as there are puts of Kidney-beans placed upon the fue all the autumn, winter, and spring, so that the lights are frequently moved. There have oniy beth two panes aplit by the frost and one by accident up to the present time. The size of the panes with which it was glazed before was seven inches wide by eight and a half inches deep, and an open space left between the panes; and the by froe a quarter of an inch deep. The sacritice of glas able; but whell as the cold in whe was replaced by two. There used to be a great. I dave broan the there used to be a great many panes were a. leit were a.. lelt cuen, with a steam that ruas cown the ribs. I have had the wnole of the bottom: fanes then out, cut in two, and bedded in putty, so that now I rarely have one broken by the frost, as there is no water to congeal. By this method I find it
of glazing I would direct the attention of your readers to
a practical and useful paper in p. \(6 \not 14\), the facts mention in which I can fully corroborate, as I have frequently observed them daring my practice. I should like to see in the Chrothcle some remarks on the handles and fastenings of hothouse lights, as almost all gardeners have their own Comntess of Bridyewater, Ashridge Park, Great Berkhampitenul.

Beєs.-In answer to E. M. W. in p. 645, B. Evans, of Perrey Barr. near Birningham, mrites, that he prefers straw hives, keeping by him several different sizes, which he
uses according to the strength of the swarms. He anoints uses according to the strength of the swarms. He anoints
each live with about a pint of syrup made of sugar or honey, mixed with vinegar, old ale, or \(\pi\) ine, which he rubs over the hise with a bunch of fennel and hazel, and afterwards hives the bees in the usual manner; and although he has taken from I- to 23 swarns in one season, he has swarms, in order that he may know their age he puts, thea down in September, he weighs them, and if the weight of the young swarms is about 30 lbs ., they will stand the winter without feeding; but if much under, he mixed with beer, vinegar, or wine; and when lie has no boney, he places small pieces of loaf-sugar in the hives which he has found better than anything else, as he can
give them enough for a week at one time. The subject of give them enough for a week at one time. The subject
killing Bees he leares to the judgment of every proprictor but he says that he never keeps them beyond three years and, indeed, kills more at two years old than at any other age, as he has always found that the younger the Bees the better the honey. He remarks, that old Bees in fancy boxes are to the young Bees as paupers on a parish. He with plenty of lump sugar, carefully avoiding treacle. He condemns boxes, and says, that with straw hives in a pro they will repay all the trouble.

Ice-Houses.-The little experience I have had on this subject has long since led me to the conclusion that fo most persons and purposes ice-houses above ground, nearly so, are the best. In a deeply-sunk well we have to contend with a constant and inexhaustible source of heat at \(44^{\circ}\) or thereabouts, while the surface temperature in radiation have, therefore, as clear gain, all the facility of drainage and access, and, what is of still more importance, the power of keeping the insulating materials dry. In a well, ice and the earth, is almost necessarily wet, and therefore rapidly introduces heat. In making an ice-house above ground (or it may be sunk a few feet, provided it some height above the land springs and the surface drain age), one of the principal requisites is, a hollow space beneath the ice container, to prevent the conduction heat upwards from the earth; and this space, if it could furze, or sume similar substance. For the walls and roof nothing is recuired but a rery ample thickness of any earthy materias, Double walls filled in with ashes, sawdust, shavings, or brick rubbish thatched wigwam, as recommended by Cobbett, and per haps tiled with some of the asphalte slabs recently invented any of these, made two or three feet thick and kept dry win answer the purpose. There should be a door at each between the two doors, before the second is closed. The door may as well open to the north, and be kept open as little as possible. These, however, are trifles; the main reliance is upon the walls, floor, and roof, made of vege-
table or earthy matter, very loose, very dry, and very thick. \(A\).

The Renovation of L'nhealthy Pear-trees.-I have stored the foarth time, and in diferent situations, refrom almost a barren state to fruitfulnes:, by the follow ing method:-The trees being crowded with long projecting spurs, I took each alternate leading branch, sawing the spurs close to the stem. I do not smooth the cut, for I find invariably the wood cracks by the influence of the sun more after the knife than the saw ; this is done in the autumn. Next summer the trees will sead forth young shoots with vigour and regularity, so as to enable me to lay them in at a distance of four feet apart, similar Seymour's mode of training the Peach; cutting back the surplus wood to a single eye in the winter pruning. The second autumn \& saw the other part the same as the preceding, and by this treatment I retain a moderate supply of froit, and in the space of two years have renovated and furnished my trees with a double supply of bearing wood, on the spur and young wood system. I differ from Mr Errington in following the young wnod system, as I prefer the spur system, when practically and judiciously perautumn, in November, I prune and nail my trees, trenching the border to its original depth, pruning the rcots of the trees as I proced tree being regulated by its age, health, and size.-D. R.
Mice-Seeing, in p. 749 , that Mr. W. Taylor criticises the paper of Mr. Falla, at p. 701, upon preventing the I beg to say that I can confirm his statement. Last autumn I planted upwards of 2,000 Crocuses in patches: half of them I put in holes, which were filled up with sand from the sea, while the others were filled with the common earth. Those planted in the sand came up and flowered beautifully, but the others were three parts carried away by the mice. I always protect my winter

Lettuces by covering the earth where they are plantel
with sea-saud, as I believe the slugs cannot well craw upon any kind of sand, and the saltness of the sea-san Esq., Bohemia, Hastings.
doubtless - [p. 70.1 -Athough your correspondent will tions from the best sources of infurmation, it may ques altogether useless or uninteresting to him to know what means our Continental neighbours adopt to bring about th.e desired ends. 1 should state, however, first. that the
Germans generally consider that Pears are, of themselres sufficiently sweet: and hence that the perry renuites addition of surar; but, in sunce crses, they do sweeten pound of white sugar to eresy three gallons of the nust added ; then when fernentation has totally subsided, and the perry sends up no more yeast, the casks are hunge may be commenced. In order to impart to tlis beveras a fuller and richer flavour, and to improve its qualits some persons pour in. With the sugar, one pint of ruma to anticipatory smile and a retrospective rub of the hands, that by means of this last-named ingredient be gare his perry a "gut geschmack." Thus much on yerry from a irencester.
Salvia patens.-.Much has been said ubout the hardi ness of Salvia patens, and as I hase tested its hardiness
and tenacity of life, I will give you the result. In the begimning of May 1840 , I had two beds filled with it nine roots in each bed, and planted three feet apart every the stems only being supported with stakes. They grew very quick, and about the beginning of August the two beds were one entire mass; but in their flowering was disappointed, for, with the exception of a few day dropping their flowers, and that, too, in different stage and a growth. have grown them in a greenhous and a stove, and they were alike subject to that, more or
less. About the beginning of October, I had three of these taken up and put into large pots, and taken to th greenhouse, Thad two more taken up-these I had cu down and prepared similar to Dahlias hefore bousin them; these two I had tied together and taken to a she and lung on a nail ; they remamed in this state for four mospleere of the shed that heats a plant store. About the beginning of February I had these taken down; they were much shrivelled, and, to all appearance quite dead; howare potted the eyes much swelled was agreeably surprized, findin some plants, from which I had many good cuttings Those which I left to their fate in the open ground with a covering of peat soil of three inches depth,
examined about the middle of March, and found they had pushed more than half way through the peat sol that was laid down to protect them; as I wanted the had them wey growiug upon for another purpose, had I left them to remain, they would have grown unusuany strong, as to surprise many; each bearing above a dozent strong
spread.-J. S .

prize in this society: and that the following arrangement prize in this society: and that the following arrangement grower of the best brace, the cup ; 2nd best do., plate or No exhibitor to be plate or \(2 l .2 s\). ; ; th do., plate or 1l. \(1 s\). The Leafing of Plants.-At the meeting of the Royal rish Academy, on the 8th of last February, his Grace ions "On the of Dablin communicated some observa thens "On the Leafing of Plants." It is well known
that there is a diversity in the times of leafing and hedding in individnal trees of the same apecies; e.g. Hawthorn, Sycamore, Horse-Cbesmut, Beech, scc., sometimes as much as a fortmight; and the earliest in leaf are
also the earliest shed the same individuals keeping their time every year. Hence the question, whether this diversity arises from the "separable accidents" of soil, hich constitnte whether from "inseparable accidents, experiment was tried by grafting an early Hawthorn on late, and vice versa. The scions kept their times about a fortnight's difference) as if on their own stocks; Many other such varieties are known, not only of ip ipples, Peaches, \&cc., but of wild trees also, differing in abape of leaf, form of growth, colour and size of fruit, expected and also time of ripening. It was, therefore, to be expected that there should be the like, in respect of question respecting "acclimating." It may be, that species may be brought to bear climates originally ill aited,-not by any especial virtue in the seeds ripened in any particular ctimate, but-by multiplying seedlings. a few of which, out of multitudes, may hare qualities drought, tosmang to vegetate later may secure fit from spring frostu, which woula destroy a precocious variety; it a a cimate in which a later woule a tree to ripen fruit ther, the experiment shows that be useless, \&ce. Fur reopecting the cormmencement that the conmon opiniou ise of the commencement of spring vegetation,-the branches to sap from the roots, through the trunt and ranches to the twigs,--is groundless; since a scion of an early varietr, on a late stock, will be in leaf while the Candatur in
Condahar Fruiso 二-We inderntand that the East Indin Company have lately presented to the Horticultaral Society provisee, which may be regarded as one of the mothers of

polonicum Whed Wheat.

The first, or common Wheat, includes the rarieties or species known in this country as Summer Wheat (T. estivam), and in hammas in hat (1. hyberand the eapecial culure and There are probably many of them known in this country, but we are not aware of any work by which our auld identify his own with British varieties: 80 that in the want of synonymes, we wust refer to some of them in the nomenclature which he has adopted.
()f winter Wheats, a varicty strongly recummended is The common brown Wheat. or Fox Wheat. It is easily distingnished by its dark-brown ears and beards. It is less subject to brand, and the attacks of birds, than other varieties. It is much cuttivaterl in Nassan and Baderi. It weighs heavier than other Wheats, flomrishes on almost every Wheat soil, and stands the winter well.

The white winter Wheat, known in England as Kentish Wheat and Lammas Wheat, is strongly recommended on account of its large produce. It is, however, more subject to brand than the last; and our anthor observes that he bas generally found the white and lighter coloured Wheats more favourabie to the production of brand than the dark-coloured sarieties
The yellow-seeded or Talavera Wheat was brought from Spain to England, and thence found its way to Germany. It was at first much cultivated, and promised much, bat in the course of a fem years it degenerated, and was constantly attacked by brand, so that it is now seldom to be found. It also suffers more than most Wheats from the attacks of birds. If seed could be brought from F.ngland every two years, he thinks it might be gruwn more profit-

\section*{ably in Germany}

Another white variety of winter Wheat is the Bohemian or Velvet Wheat. It is remarkable for a very thick covering of short hairs all over its ears, givitit a
character. It is often mixed with the Triticum turgidum. Herr Yon Witten calls it Triticum pilosum, and says that its woolly covering acts as an absorbent of the dew, and hence in dry seasons and on dry lands it is very profitably cultivated. For the same reason it is enabled to withand the influence of frost better than any other variety.
The red winter Wheat is considered a very valuable Wheat. It is extensively cultivated in Breisgau, in the Wetteran, in Alsace, and most districts of the South of Germany, and is the most common Wheat in the markets of Strasburg, Freiburg, Durlach, and Mannheim. The following is the result of the author's experiments on this Wheat:-

Mr. Metzger conclades from this table, that ae plant this Wheat too late, as the experiments in which it was planted eariest vielded by far the largest proke. Wo, but must appeal against their being considerell conclusive. We believe, however, that it is only by numencal statements like those above that the farmer will eler be able to ascertain the value of the crops he cularites; but a great
many more circamatances shouid be taken tero ingsideramany more circurmstances shouid be hh:
to the particulars referred to in them. a ri.emical analysis of the soils and the manures was given, the nature and value of the previous crop state \({ }^{\text {i }}\), and a numerical state-
ment of the degrees of heat and culd. and the amourat of rain, sunshine, and wiad to we should then have elements by winici to judge accurately of the value of any variety of corm. Such coliections of facts would be valuable with regard to my kive of facte or gardea produce.
Oor author speaks very favorrably of a winter Wheat which is a variety of a group that, on tccount of its short thick ears, with short, projecting swns, in called Hedgehog
of the Neckar, especially at Hassmersheim. It is frequently used for making soup. It grows especially free from bran,
and is not easily laid. The other Hedgehog Wheats are summer Wheats.
Several varieties of summer Wheats are produced by the Triticum vulgare. One of these, called by Metzger common white-beard Wheat, is grown very extensively in Italy for the purpose of plaiting. Our author has tried to thinks that it might be profitably introduced on poor lands in districts where the plaiting of straw fornis a branch of industry. We do nut knom suffeient of the nature of this branch of trade in England to give a de-
cided opinion, but we should think that the obtaining a cided opinion, but we should think that the obtaining a
fine white straw would be an object of sufficient importfine white straw would be an object of sufficient importWheat in this country, especially as our author's experiments rere so favourable.

A variety known in (iermany as white summer Wheat, and much cultivated in La mubsheim and Rhenish Buaria, and recommended by the Agricultural Union of Baaton, promises much. It srows weil on damp sandy soils, threshes easily, is lithle suiject to brame, and mahes ex. some distriuts of Germany

Two other varieties, the yellow hedgehog Wheat, and the red club Wheat, are recommended as summer Wheats, from a knowledge of their worth as cultirated in various parts of Germany.
Of the Triticum turgidum, English Wheat, there are ten rarieties recorded. Five of these are winter Wheats, and five summer Wheats. Of the latter our author does not speak favourably, and says that the varieties known in
England as white Wheat and Revet Wheat require a warmer climate than that of the north of Germany. These vameties, he says, flourish most in Spain, Italy, and the sonth of Erance.
One of the winter rarieties, the red velvety English Wheat. known in England as clock Wireat, great Wheat, Reret theat, dic. he thus speaks or strong soil, or procorn tillers so freely as this in a strong soil, or pro-
duces so long straw and such large ears. It is a true pleasure to look over a field of it just hefore harvest. It ears the areatest cold, never perishes in the winter, has n lng stiff tubular straw, and gives an abundant produce of seed : but it must have good soil to procure all these advantages." The flour does not make such white bread as Spelt Wheat, and its cultivation makes only slow progress in Germany on account of the prejudice in favour of Spelt. A variety called the blue English Wheat and Russian from Russia to that country during the scarcity of 1816 and \(1 \%\) is strongly recommended by our author. The turgidam is, that this and other varieties of the Triticum ing of turnip-seed. The following table gives us a very favourable idea of this Wheat.

The third species, Triticum darum, or true beard Wheat, has several rarieties, all summer Wheats. Tables of experiments on several of these are given, but the author is of opinion that none of them are adapted for the climate of Germany. They are mostly cultirated in Italy,
Sicily, and =pain
The virieties of the furth species are also summer Thea's. ard require warmer climates than our own or cultisation.
Speakiry if summer W"ears, Bruger says, "They may be soma in thosa districts where the winter Wheat will not bear the long-remaining snow, or where it will not thrive on account of the too littie warmita of summer. In those
regions in which minter Wheat will grow, summer Wheat
only prospers if there be frequent and sufficient rain; in only prospers if there be frequent and sufficient rain,
dry and hot climates and seasons it will not succeed. It
recquires the same soil as winter Wheat, but with mor regnires the same soil as winter wheat, but with more
manure, or at least a larger quantity of humus. It must h. s, in as carly as possible in spring, so that it may have
time to tiller before the heat of summer ; it must be sown time to tiller before the heat of summer; it must be sown than that of winter Wheat, and it is more exposed to smut and rust." The corn in Germany seems to be as much exposed to smut as in this country. We subjoin a few of pest. Metzger himself employs lime that has been slacked with suds or soapy water. The Wheat is mized with this nate days bays if the Wheat is planted earlier after mixing with the lime it will be still liable to smut. He has emploved this plan 22 years, and found only one single injured ear in all his crops. A farmer at Reinbach, near Bonn, uses the following:-To a sackful of seed in a tub he stirs in a spadetul of slacked lime. With a little water; he then
arlds suds or soapy water, with about two landfuls of salt; stir them well together, and let them stand for 10 or 12 hours, when they will come ont a compact mass, which must be broken up and rubbed has had no smut. A farmer at Oberwesel chooses the best piece of Wheat in his feld for seed, lets it ripen perfectly, and thrashes it immediately; he then mixes four are constantly turned over for a fortnight, and when used for sowing, the mood-ashes are sifted from the Wheat. Herr Scimitz, at Düren, adds to 500 lbs of Wheat 1 lb . of alum, 1 lb . of green vitriol, \(\frac{1}{4} \mathrm{lb}\). of saltpetre, and \(\frac{1}{4} \mathrm{lb}\). of verdigris. These ingredients are pounded and dissolved
in water, and when cold are mised with enough in water, and when cold are mised with enough water to
cover the Wheat; it is then sown \(2 \pm\) hours after. Herr Schmitz bâs never seen the ducat to any man who will point him out a single ear with smut in his fields.

The second section on Wheat includes the spelts (spelte), or those Wheats in which the seed does not separate from the chafi. It includes three species, of which 14 varieties them given. The the result of many experiments apon Germany, and there is so strong a prejudice in their favour in the markets of the south of Germany that other kinds of corn are with difficulty got rid of. Their great advan tage appears to be that they accommodate themselves to alnost any kind of soil, yielding good crops in the extreme of heariness and lightness, moistness and dryness. They possess a firm, stiff straw, which is not easily laid; they are not exposed to the attacks of birds, and are less liable to smut. The seed yields, when ground, a much finer tlour than Wheat, and hence is used in all the fancy kinds of baked cookery. The species are-Triticum spelta, cominon spelt ; Triticum anyleum, Rice Wheat; Triticum mouncocceum, one-grained Wheat, or Peter's Corn.
But we must draw this notice to a close. The cultivation of Oats and Maize are treated in the same manner as that of Barley and Wheat, and we have no hesitation saying that this work contrins more information on the varieties and cultivation of European Cerealia than has hitherto been published; such a book is much wanted in the English language, and we think that some of our practical agriculturists could not do better than adapt it to our usages, with the addition of all that is known on the subject in our own country.
CALENDAR OF OPERATIONS for the ensuing Week. Tir advantage of deep digging does not seem to be considered of so much importance in gentemen's gardens as by market gar
deners. or at leact is much seldomer resorted to in one than hy the nthier; we cannot account for this, but we do know it to be advise its adoytion now that such operations are proceeding For the main crops of Onions, Carruts, Parcmeps, \&c., the ground showld always be prepared in autumn or winter: and the advan
tage thev derive, as well as most other kitchen- garden crops, tage the derive, as well as most other sitchen-garden crops, by
laving the oil broken up two spits deep, is very great over commondigsing, and rily requires experiencing to be appreciated. The cheaper and moit expeditious manner of accomplishing this
is by what is termed by commercial gardeners about London, is by what is termed hy commercial yardeners about London,
"bastard trenching," which is performed as follows: open a trench two feet and a balf or a yard wide, one foll spit and the
slovellings deep, and wheel the soil from it to where it is intended to finish the piece : then putin the dung from the surface of the adinining treuch, and dig it in with the bottom spit in the trench;
of tirst dig the bottom spit in the trench, and afterwards shovel in the dung, leaving it in the middle, according to the habit of the crop intended to be grown: then fil up this tranch with the top
sit. \&e., of the seomnd. treating it in like manner, and so on.
The advantages of this plan of work ins the soil are, the good soil is retained at top, an important comideration where the snbsoil
is poor or tad. the bottom soil is enriched and loosened, for the nonetration and nourishment of the ronts, and allowing them to iescend deeper, they are not so liable to suffer from dronght in
summer itrong soil is rendered capable of absorbing more passing hwn more readily th the subsoil: and it ensures a tho-
rough shifting of the soil: these are snme of the advantages, and we hope sufficient to revive ts practice.

\section*{1. - KITCUEN-GARDEN AND ORCHARD.}

Pingry.-Continue, as rcommended last week, to give the pots, or the tan, becomes rery dry, as they will do, frem tire-heat or the sun in clear weather: they should he mistened lightly

 weather, as well as moderate waterings at the root, to assist their sweiling Gifl.
ViskRT. - The earliest house, if heated by tilues, may have a
ridge wellridge of well-prepared ducs and tree-leaves mixed, built in the
pit; or it may se flled with new tan-the latter is the cleanest
material; dang, when very hot, will discolour the paint in the
sotten the stems and bring the buds forward more gradually
than all fire-heat, which should be used as sparingly Grapes are hanging; do not employ fires at night from where late unless the weather is very severe, but heat the flues sufficient, in the afterncon, to maintain the requisite heat during the night. rains. Leare nothing undone in the shape of cleaning, until the previously. attend very attend very regwlary to watering, stopping, one perfect on a plant at a time, Asparagus.- Water the roots, if the soil has become dry within
the frames. Rhubarb, - If any roots have been potted for forcing, they
may be taken into the mushroom-house, and placed may be taken into the mushroom-house, and placed at the
warmest end; or some may be lifted and treated similarly to
Sea-kale on a dung-bed. Musuroons.-Beds which have been made for spring-bearing may now be earthed.
\(\qquad\) Any forcing plants in pot, or tubs, and hothouse borders, should Duringediately mulched, if not already done.
During the present weather little can be done, except getting frost. Take up a supply of (celery, or cover it with hitter in the
ridgoc. Prepare coverings of every kind, and keep the walks, Orchadr. - Mulch mewly -lanted trees; tie in cspalicrs. Con-
tinue mailing in the midde of the day. Prepare stakes, boil shreds, clean nails, \&c.
II.-FLOWER-GARDFN NDD SHRTBBERY.

Stnve. - Continue to pot Orchidiaceæ, as directed last week;
the buds of many kinds are in a forward state. Preserve a low dry temperature, and give air freely during the early part of the day. Retard any indication to carly growth as much as possible. Keep
the foliage clean, and destroy insects. the fonage clean, and destr.
during the day. Sponge the leaves of such plants as Camelliy Rhododendron, \&c. Give Chrysanthemums plenty of water; the flowers will soon tecay if they are kept warm. Relabel plants and remove dead leaves or decayed thowers.
Pits and Frames. - Cold will not be so hurtf
frames if kept dry. Take in weekly a few plants to to plants in cession, as bulbs, Lilacs, Rhododendrons, Roses, \&c. Fumigate with tobacco any forced plants, upon the first appearance of green fly.
Wheel and spread well-rotted dung and soil upon any beds or borders requiring it. Fill the ice-house the first opportunity. NLRSERY.-The cperations here will at present he at a stand-
atill, except manuring any still, except manuring any vacant quarters for spring planting. Forest and Cuppice Woons.- Continue to plash hedges,
and to drain: or any of the operations before recommended, when and to drain: or any of the op
practicable.- Jusep) Puxton

NOTES FOR SMALL GARDENS.
be done out of doors beyond looking
Lirtle can be done of and keeping up an air after the protection of tender plants, and keeping ap an air of neatness by aceous plants. Within doors many things may be done, as, for instance, flower-sticks may be prepared, and labels written. Seeds that have been saved must be occasionally looked to, to see that they are not damp; those still left in their pods or cap-
sules may be taken out and dried for a day or two, on a hotsules may be taken out and itricd for a day or two, on a hot-
house flue, or in a moderately warm room. Plants in frames
must be constantly attenfed to, and every symptom of mould must be constantly attenied to, and every symptom of mould
removed, as well as all dead leaves. If the plants in the greenhouse are too damp, light a gentle fire now and then: but this should be avoided as much as possible, as it is sure to induce
some to grow. Any, such as Camellias and Olanges, that are in sested with scale should be well brushed with a stiff brush, to detach them, and then washed, this will be found a good time to do it, in consequence of the insects being nearly torpid. Cy-
clamens as they come into bloom should be brought into the clamens as they come into bloom should be br
house, and have a little more water allowed them

\section*{ENTOMOLOGICAL NOTICES.}

Fir wond insects which the cons juvencus, one of the to Pine and Fir woods is the Crocerus jutencon, ore about an inch long thick, with an oripositor at the end, and they are of a fine shining blue-black colour; the males are much smalicr, but of the same colour. The perfect insects appear from Angust to the end of the present month. The larve are long, eylindrical grubs, ha form mall, horny heads without eyes. When fully grown which they become pupæ. The pupe bear consideralle resemblance to the periect insects, having their legs land along the bory and thorax. Rad in the larva state that these insects are Bewdley Frrest, so much injured as to be only fit for firewood. Twenty feet of this ree, he says, were intersected by the burrows the near Canter bury in August and september. The best way to lessen the ravages of this insect is to cut down the infested trees, and take them away and burn them; for if placed onsecto will escape. The Queen and the Infant Prince. - Her Majesty' recovery has been guing on most favourably daring th peem, either in the state of the Queen's health or that of the Infant Prince, rendered the publication of a bulletin on Wednesday mnecessary. The bulletin issued on Thursday announced that-"The Queen is convalescent the Infant Prince is as well as possible, her Majesty' recovery is so far advanced that no more balletins will be
issued." Un Monday, the birth of his Royal Highness issued." Un Monday, the birth of his Royal Highness
the Duke of Cornwall was registered at Buckinglam the Duke of Cornwal was registertd ant, Secretary for the Home Department, and the parochial anthorities Daring the week, numerous parties of the nobility and gentry have visited the palace to make inquiries after the health of her Majesty and the Infant Prince; the greate number of whom, after having had caudle served to them, were conducted to the apartments in the north wing of the palace, and gratified with a sight of his Royal Highness. her Majestr's complaint have hap pily undergone some slight alleriation fince cor hat, but the bulletins issae in the course of the week, although stating that her Majesty has had some houris' sleep every night, convey no assurance that any additional improvement in her condition has resulted, nor have they had any great effect in allaying the anxiety which still prevails throughout the country on the subject of her Majesty's illness. The following is the bulletin issued yesterday :-"The Queen Dowager has four huars, and her Majesty is somewhat stronger this morning.
Parliamentary Movements. - In consequence of the appointment of Mr. Wigram to the office of Vice Chancellor, a vacancy occurs in the representation of Leominster. ress eorge Arkwright, Conservative, has here is likely to be an opposition on the Laberal interest.-Mr. George Hamilton and Dr. Longfield have both resigned their views on the representation of Dublin University; and Mr Jackson, Conservative, the only other candidate, will, it is said, be elected without a contest.
Unversity Inteiligence.- The Rev. A. M'Caul, D.D. has been appointed to the Prufessurship of Hebrew and Rabbinieal Literature in King's College. London, vacant by the resignation of Profeseor Alexander, who was re-
cently consecrated Bishop of the C-nited Church of Engcently consecrated Bishop of the Land Ireland in Jerusalem. His Grace the Archbishon of Canterbary has appeinted Dr. Jobn Dodson, D.C.L., of Oriel College, Master of the Faculties, in the room of Dr. Nicholl, now Judge Advocate General.
The Census.-An orticial account of the returns of the late census has just been publistred, from which we learn that the total population of England is \(7,3: 1,875\) males : 447,533 males : 463.29 it females total, 911.321 : that of Scotland. \(1,246.422^{\prime}\) males ; \(1.382,530\) females-totai, 2,628,95; and that of the Islands of Jersey, Guernsey, Alderney, Sark, Herm, Jethon, and Man. \(3 \bar{i}, 598\) males 66,481 lemales - total, \(1,24.0-9\). These numbers, includ ing 4,003 males and 393 females, ascertained to bave been traveling by railwars and canals on the night of June 6 . make the grand tutals \(9.07,437 \mathrm{males}\), and \(9,583,32\),
females. The population, therefore, of Great Britain amounts to \(18,664, \% 61\) persons. The returns include only such part of the army, navy, and merchant seamen, as were at the time of the census within the kingilom on shore. The increase of the popuation, as compared with the reurns of 1831 , is at the rate of 14.5 per cent. for the isiands in the British Seas, 19.6 ; making the increase fhan whole of frear Britain 14 per cent., being less cent. In 1811, the increase during the previons 10 years on England was 14 in per cent. ; in Wales, 13 per cent.;
and in Scotiand, 14 per cent. In 1821 , the inomene for
 Pris Soutland, \(166^{2}\) per cent. In 18.31 , the increase 及as fo
Enstand, 16 per cent.; for Wales, 12 per cent.; for Scotand. 13 per cent. : and tor the slands in the British Seas,
15.8 per cent. The number of bouses in Englaid is, in\(15 \cdot 8\) per cent. The number of houses in Englaid is, in

France. -The affairs of Spain again form in the Paris ournals the prominent topic of discussion. The Oppo Basque fusce whe the other hand the Minist rial prints devounce the act in very strong terms, not only on the groundes of internal policy in Spain, but because the measure is fatal to commerce in the South of France, which had hitherto entirely sapplied the northern provinces of Spain with goods duty free. The Spanish Go vernment is also denounced for cruelty, in allowing the executions that have taken place since the suppression the late insurrection. A strong opinion is expressed that the tranquillity of the country is far from being restored and that some serious events, to disturb the establishe Government, may yet be expected to take place. In the semblin e appears at erenen Governme at Ba onne, with a strong force at Toulouse, which, it is stated is to answer the doable parpose of reserve for a Spanish intervention, and police to keep the Toulorsians quiet. This formidable armay, to be collected at the foot of the Pyrenees, is said to be required in consequence of fears entertained by the French of Spanish machinations. It is reported among the diplomatic circles, that the King is son of Don Carlos, and that the co-operation of the exQueen Christina has been secured to this scheme. - Gen O'Donnell and his lady passed through Tours on the 10th instant, on their way to Orleans, whither he was ordered Generals Iriarte, Lardizabal, Jauregoi, La Rocha, Pi quero, \&s.
The affair of Quénisset.-The committee appointed by the Court of Peers to report as to how many of the prisoners, detained on a charge of having been associated with Quénisset in his attempt to assassinate the Roval Dukes, chould be discharged for want of sofficient evidence against them, met on Saturday, when they ordered fourteen to be liberated, and the remainder, twenty-one in number, to stand over for forther consideration. The Débats states, that only from ten to twelve win be altimately brought to the bair with Quenisset ; whilst other journals estinate the number at sixteen. The Court of Peers met on Mon-
day, when a portion of the Report on the Act of Accusation against Quénisset was read. It thas expected that it would 611400 pages, and that the reading would occupy deep interest. are known; and it is said among the Peers who have beard the evidence, that this is the most serious affair which has occurred since 1830; that, in fact, it will be a very important trial, in comparison with which, the fa mous trial of A pril 1834, and Fiesch's attempt on th life of the King, will prove to have been of much less con sequence
Progress of Schools and Education -An official report of the Minister of Public Instruction has been published on the progress of schools and education throughout the country. The following are the principal facts it contains -In 1837 the number of those schools in the 37,293 communes of the hingdom was 29,613 . In 1840 it had rrosided to 33,099 , and there remained \(n!. y\), 1,0 to quented them had likewise augmented in a similar propor tion. The central departments and those of Brittany are monst in arrear, as well as the department of the Eure, one of the realthiest and monst manufactaring derartmentis on the hith road between Rouen - nd Paris, and near to botl The report explains the back wardiness of a department so avonrably situated by the circumstance of its being di tided into extremely small communes. Which have no been able to combine their efforts. Of \(\mathbf{5 1}\) commanes in the Eure. 125 are without schools. The demand for schootmasters has been supplied by the normal schoots at

Abe the towns are not increasing. In 1840 there schools in Catholic schools. 677 Protestant schools, 31 Israelite schools, and 2,059 mized schools. Adalt classes of it struction have nearly doubled in four years. In 1840
there were 3,403 classes of this kind in 3,090 communes there were 3,403 classes of this sind in 3,090 communes, schools, of which six are in ecclesiastical hands; and there are three devoted to students of non-Catholic persuasions The normal schools cost 60,0001 . a-year.
The Capital.-The King held a court at the Tuileriet on Mondas, for the reception this country Two newlyriages. drawn by eight horses. with nutriders, waited on his Excellency at Meurice's Hotel, as the preparations for his reception at the embassy are not yet completed, for the purnese of convering him to the palace. Lord Comler, on leing presented to bis Majesty, handied his credentials and riade the customary speecs, to whither which the ambassudn withdrew to the Royal arartments to be introduced to the Queen and Royal Family. In the evering there was a grand dinner at the pa-
lace, to ahich all the members of the Engli-h Finhassy were iusited. - On Saturdar, the 6ith inst., Mr. and Mrs Standish, from whose family, it will be remembered, King L.ouis-Philiple some time shle received a handsome le Royal Family at the palace of St. Cloud. After the repast the King cinducted them into the Gallery of Diana, where his Majesty showed them himself the rich presents that he designs for them. These presents filled, not onl this gallery, bat also the apartment which leads to the chape, and were of a very costly character. were pleased to invite Mr. and Mrs. Standish to dine at the palace a Versailles.-In order to give some idea of the number of the poor in the capital, the journals state that the chari tabe committep of the sth arrondissement has pabirshe an appeal to the inhabitants of the city and saburbs in fa poor, which are said to include \(4,37 \mathrm{mo}\) 679 families, composed of 12,444 individuals, of who fell in Paris and its vicinity on Monday night and Tues day ; but the weather was not sufficiently cold for it to remain on the ground
The Army and Navy.-In addition to the large force mentioned above as assembling at the foot of the Pyre mees, the Echo dub Nord of Lille says, that an order ha corps of observation of 20,000 men, infantry, cavalry, and artillery, to be concentrated between Lille and Valen cienues. A battalion which has just left Lille is to retura The discovery of the conspiracy in Belgium is given as one of the causes of this concentration of troops on the Belgian frontier.-The following are the remaining Marshat of France, with their respective ages :-Marshal Moncey, who is in his 89th year ; Marsbal Soult, in his 13d; Duk 75 th Coun Me Megio, in his 70th. Marshal Gronchy, in his 76th; Marshal Se bastiani, in his 7uth. The two youngest are Marshal Géard and Marshal Tole who however, are both in their 69th year. The juint age of all the Marshals is 73 i years, the average age being 72 7-10.-The Moniteur annonnces the arrival at Brest from Toulon, on the 12th instant. of the squadron under the orders of Rear-Admiral Cass, consisting of five ships-of-the-line. Letters from Toulon, of the 9th instant, inform us of the sailing of a steamer, sail-of-the-line, aud a frigate, the destination of which is said to be Algiers and Barcelona
Algeria.-Late advices from Algiers state that the rains have commenced in the North of Africa with unasual riotown of Algiers has been comple deluged. The number of invalids is so great that the been pitals are entirely filled, and numerous patients have bee refused admission. The Arabs continued isolated farms and posts round Algiers, carried off cattle or been or men nearly every day.-A teleggapich inst, announ-
 had rhat the division which left oran on inst. The sanawas good. It had twice bed the cavalry of the Emir, and had been successfuily engaged in several combats. It had destroyed the town and fort of Saida, formed an alliance with six tribes of the dethe. tribe of Abd-el-Kader
Spain.-We have intelligence from Madrid to the 9th inst., up to which date the capital continued tranquil. The Regent, it is said, had semt orders to suspend ando had execations; but Lieutenants Boria and not expected in Madrid before the 15 th, and it was the general belief that the Curtes would be convohed for the loth Dec. Ti Government had conferred on M. Olozaga, the Spanist ambassador in Paris, the grand cordon of the Order Charles II., for his services during the late oritten to the He ple to torate no the portcal coct linary authority.-The inselligence re ceived from the provinces is of greater importance; more particularly from Catalonia and Valencin. From Barca Inna we learn that on the night of the ben thus obey Tigilance liad met and resolved to dissolve, ane same time the order of the Madrid Executive; but at the citadel. it determined to continue the demolition of in our last Gen. Van Halen, who was incorrectly reported in our on the authority of the Freach papern, to have cater

Barcelona, was still at Surria on the 7th, one league from that city, and was waiting for fresh instructions from Government before taking any further proceedings. Barce-
lona was tranquil on the \(\overline{7}\) th, and nearly 3,000 persons. men and women of all classes, were working at the destruction of the citadel. General Van Halen, when he celona, tad a long correspondence with the Junta of Vigilance, but the latter persisted in refusing to allow the General to enter with pros the tome it was of no avail. The menaced issued a proclamation to the population of the tornn, calling uyon them to take up arms, and for their banner Halen replied to this proclatation by a counter one, ex pressing his surprise at the proclamation of the Junta, terming it a provocation to He callecl upon the poppulation not to plunge the city into the horrors of anarchy; and depended solely for solution on the Gorernmient. Wlich ought to decide it after an examination of all the docuthat effect of varinus municipalities. The Captain-General concluded by hoping that he would not be obliged to have
recourse to arms, but in that case he relied on the loyalty of the population. On the 10 th inst. an aide-de-camp of the Regent arrived from stopping, and announced his arrival in Barcelona for the
15 th or 16 th inst., accompanied by 18 battalions. Gen. Van Halen has with him, it seems, 12,000 men, and this of that city from offering any further opposition to the will of the Regent. It is also stated, that the Regent injored for many years. The report, circulated in the French journals, of the assassination of some Frenchmen in Barcelona, is contradicted. From Valencia we learn, that on lona, elected a Junta of Vigilance, caused several citizens lona, elected a Junta of Iigilance, caused several citizens
to be arrested, and commenced the demolition of the citadet. A similar outbreak has also taken place at Alicant. On the 31 st ult. a large body of the people went to the
residence of the rolitical chief, and insisted upon his immediately convoking the Ayuntamiento. The cbiefs of the National Guard were called to meet and elect a Junta. This was actually done, and seren persons formed into a supreme Janta of igilance. Its motto was "The con-
stitution of \(183 \%\), Isabella II., and the Regency of the Dake de la Vitoria." In the evening of the installation of the Junta, all the stones raised by that of the Constitution, and which were in honour of the Government of the Queen-mother, were thrown down and broken. The people afterwards rushed to the citadel, and commenced
the work of its demolition. Brigadier O'Daly, accused of having acted contrary to kis daty in the affair of the English cruiser at Carthagena and the Spanish felucca
Delfin, has been tried before a court-martial, and acquitted. We since learn, however, that, like the Junta of Vigilance at Barcelona, the juntas of Valencia, Badajoz, and Alicant Regent.
Portugal. - By the usual weekly steamer, we have ting, but experted to close as soon as the business before them could be despatched. The accounts presented by the Minister of Finance, and approved by the special tore for 1840.1841 , of 10,185 contos, while the revenue is estimated at 10,332 , leaving a deficit on the year of 652 contos in round numbers. A sums of 500 contos was to making up this deficiency. The principle of this new budget had been adopted by 60 votes against 17 . A mea-half-par, capitalising a portion of the arrears of pensions, committee. Bulls to regulate the sale of national property in the Azores, \&c., and in the colonies, had also passed. The treaty with England, which had been returned by deration by the Government. British privileges were to be abandened as long as Portugal was under a constitutional system, and our colonies to be opened, with some limitations, to Portuguese commerce. It appears to be cisely a general treaty of reciprocity, without any pre-
cisulations as to the tariff of the two countries, which would become the subject of fucure negotiation. -The Puto war steamer bad arrived at Lisbon with despatches, and it was expected that two British and two French lineof battle shirs wruld soon be stationed there. tefirigencemy. The journals this week contain little infinst. state, that the Dulke of Bordeana letters of the 5 th the fatigue of his journey ; but private correspondence of conth, received by the Royalists in Paris, aumms, on the experienced no ill effects from his removal to the Austriam capital from Kirchberg. The Suabiavi Mercury of the is no politiol its Vienna correspondence, states that there is no potitical meaning in the treaty of cormmerce negotiop prace Austrian and Belgian vessels on terms of reciprosome time respective ports. The difference which arose Montene since between the Austrian Gorernment and Montenegro has been settled. as on the 2 th ult. the family of that tow only nime years chd. of a distinguished two other children with arsenic, which he contrived to

formallr acceded to the German Customs Inion tiant Bremen is abert to join it ; and that a confere: ce of the

The suppression of the consi iracy in Belgium had been witnessed with much pleasure in the Prussinn capital with respect to which the journals add, that if it had mo-
mentarily succeeded, the Prussian Govemment would have the Treaty of London to be respected. The idea of bringing the tragedies of the (ireek dramatists on the stare.
which we noticed in our last, has been carried into ffteet, and with complete success. After many careful preparations and rehearsals, ditigme, thatalated into (ierman, dam. The effect produced is described as se:p pasing all expectation ; the more so as M. Mendelssonn has introduced between the acts some inue choruses, which, being
in perfect keeping with the simple grandenr of the Greek in perfect keeping with the simple grandear of the Greek
poet. produced a remarkable effect. A letter from. Hoenigsbery of the 31 st ult. sars, that collisions nith the Russian Custom-house authorities on the frontier become more and more frequent. Lately, at Nerienburgh, a frontier town, sisty Catholics were going to a Catholio church on the Russian side of the border, when they were
surrounded by Russian police-officers and soldiers, and confined in a stable. Thirty-three, however, escaped and made their way back into Prussia. The Prossian antholetter from Weimar states, that a marriage between the Heredstary Grand Dulke of Saxe Weimar and the Grand Duchess Olga of Russia may be considered as decided.
Belgiem.-A few arrests still continue to be made. Connected with the late plot against the safety of the state; and several individuals have been interrogated by the ex amining judge: but no new facts connected with the conspiracy have been brought to light, at least none have heen made public. The vigilance exercised with respect to the persons accused extends even to the frovisions brought for them, which are cut into pieces, in order that no letter may be concealed in them. The senare has from the throne, which is for the most part an echo of his Majesty's speech. It commences by saying that, "The unanimous acclamations which welcomed your Majesty in he Hall of the People's Representatives manifest the sen the exterior how senseless are the culpable plots of those who vainly strive to compromise the security and trouble Who vainly strive to compromise the security and truble the repose of a free nation, cahon and comident in the you, Sire, that Belgium owes the advancement she has made during the ten years of great difficulty that your Majesty has been linked to our destinies. Faithful to a dynasty which is the firmest bulwark of our nationality, jealous to preserve those moral and religinus feelings hich, joined to respect for our fundamental institutions. piness of the guarantees of the social order and furure hapin the career of moderation and impartiality which your Majestr has ever followed, and to sustain your effiorts for the development of all the elements of prosperity that our country contains." -By the conrention concluded between the Government and the Council of Commerce. the city of Brussels cedes to Government its museum, library, and other property, for which the State secures to it an annual income of 400.000 francs in inscriptions ind grom Brussels informs us that it is certan that M. Lebon has received instructions to conclude a commercial treaty with France, for three years, upon the following hasis. France is to reduce her import duties on irole aive Belgian woollen cloths at an ad calorem duty of 25 per cent., and admit all other Belgian produce at \(2 n\) per cent. below the present tariff. In return, this country will receive French w:nes duty free, and preserve them from all taxes and cbarges greater than those they are luale to excent that The same farour is to be granted to braber of escept that they are to be subjected to a customs dusty of arif is to be reduced 50 per cent
Holland.-Accounts received from the Eague, of the th inst., state that there is a decided coorness between the Prussian Government and the King, when Merlin for the express purpose to remove, thoughtiator has, in fact, re thend without accomplishing anything. This misunder standing is said to have arisen in conseruence :f the part taken by the King in preventing the accession of the Duchy of Luxembourg to the German Custans Chin -The annual interest of the natinali deat irs Cham-
 ber of the States General has agreed Ministry of Foreign budget firing the expense of the Ministry of phich bave Ariars for 1.12 and 134 N - Of the English coast, 14 have gone to the herring-fishery on the englast cargo b.ought retumed.
