The Weather.-The weather during the last few days has undergone an extraordinary change, and winter has already set in with censiderable sesenty. Towards the end of last week the wind shifted to the north, accompaaied by cold rains; an.d from the time on sater. Day morniag, the weather has continued getting colder. Durh. Aunhay, a strong north.easteny wind Monday meming, the Mutropulis and its neighbourhood was risited by thre first intications of winter-a heary s it reat ibl lasted in or three wirk, batted as it reacled the ground. In the course of that day and latney commons, and the town of Brentford, taking a sountery direatin, which is regarded as an indication of au early and sesere winter. Early on Tuesday worning a sharp frost set in, which contimued during the day; the thermometer gradeally falling, until at six o'cluctio on Wednesday moming it was as low as \(20^{\circ}\) Fahr. So semorning the trust tarning he hight, that on to the differ ent contectioners and ive-wah, m the Metropoiis. In Kensingtun-jarlens the rama! pand was corered with ice and there was tis) a constlerahle ccatiry at the west end Wednesdar heacy. lat tae course of the afternoun of Wedrustay heavy doldeds bezan to sise from the scuthWest, although tice sind nas numbedst, and there has
since been anont.et init of snow. since been another hall of snow.
Athenpten Intrusion into Bureringhom Palace.-On Saturday night, isetwee. 11 and i2, a ropectably-dressed mann of midthe age n.ade wis apll canance at Buekingham adruited to ana auilience of her Majesty; and on beino refused, temanded an entrance, and tried to force himself in, st ung that he hati a box turl of diamulds for the Qucen, ard that he mas the Pramce of Wisles. He was where, on le:ry esmmed, ho sit tris the whe whe Charle Miun, wind that be iad been butier to Mr. M Millimore of Diae. s-at., Mertiordshire. He atso said Le had reinto ide 14. Windsor Castle three uisuits with the bor he carried, and that the box enoured the ining \(\begin{gathered}\text { nu } \\ \text { to the King or Queen }\end{gathered}\)
for ever; that he had sat upon the box three times, and
that making gave to England, one to Ireland, and one to Scotland, united them
taken into the Palace, it would save the Queen from future tronile; and that if i.e had not gnie to fie
nught, the Queen rould have lost Windsor Castle for ever He was then lucked up, but became so riolent soon after that it became neeessary to put a strait waistioat on Bow-street, who decided uphn hearing the evidence at the Home-oftice in the course of the afternoon, and directed Home-otice in the mean time the prisoner should be examined by that in the meanced doctors. This was done, and the medical men, after a long examination, pronouncel the prisone to be insane. In the afternorn the mawistrate attende at the Home-cfice, and heard the elifene agamst nid that he had only lately become insane. The evamination terminated by a warrant being made out
prisoner to Bedlam.
The Eachequer Bill.s Forgery.-Little of any conse quence has transpired with respect to this affair since ou
list. On Tuesday, Lord Monteagle, the Comptroller General, issued a circular, giving nutice to the holders of unsamped Exchequer
their bills by yesterday at the latest, in order that the examination and stamping might be completed, and the bills returned on or before this day, the 20th instant: when it was expected that the present rovecungs might be brong public, that up to the previous day \(25, \sigma\) ond bills, anountmg in vaiue to \(15.80 .5,30\), had been received, exanimed, standing and unstanuped. It is understood in the City that the amount of spurious Exchequer Bills now impounded at the Treasury is about \(100,1,00 l\). Of the rest, a great part, it is stated, are held by those unwilling to be deprived of the documents for which they hece wap the be thed against taking them up examined. A strong feeling appears to be still entertained among the moneyed circles, in consequeuce of the continued determination on the part of Government not \(t\), give nesday, Mr. Ernest Rapallo underwent a final examination nesday, Mr. Ernest Rapalio underwent a final examination
at the Mansion-house. No additional evidence, however at the Mansion-house. No additional evidence, however,
was brought against him, and no fresh light thrown on the transaction. The counsel for the prosecution considered it was a case that should go before a jury; and the attorney for the prisoner, admitting this necessity, made no further defence. The magistrate accordingly committed Criminal Court pallo's cuunsel that he might be permitted to remain, until his trial, in the Giltspur-street Compter ; but it was rejected by the magistrates, who said that they did not see any reason why they should depart fro:n the general practice in this case. It is stated by the Courier, that besides the parties already in custody charged with the fergery a forciguer and a lads, who i, believed to be the party who actually committed the forgery, inasmuch as she, it is said, wrote the name Monteagle to the bills. This person is at present at large, and, it is believed, has made her escape o the Continent.
The late Fire in the Tower.- The committee appointed but their proceedings being still conducted with grea secrecy, nuthing positive is yet kuown on the subject. Amo:ng those who have undergone examination are Mr Moveley, engineer of the steam-engine which supplits the tanks of the cower with water, and others, who spok there ezain such on wher hem, and the reason of there being such an insificisent supply on the night of the
fire. It is understood, alse, to be the initention of the committee to cxamine some scientific gentlemen, on the probability of the fire being the result of using such stuve as those placed in the Bowyer Tower; the opinion appear-
ing to be generally entertained that the fire originated with ing to be generally entertained that the fire origmated with these stoves, and that it is not at all improbable that other calamities of a similar nature may oceur iu other public buildings from the same cause, unless some precautions are taken. The Court, it is understood, will cuntinue the inquiry for several days longer. In the mean time active measures are takiny to remure the ruins and whateser of value remains amoug them. It seems that the amount of Doss as at first reported was exaggerated. An estimate of the value of the Ordnance storts deposited in the Armoury was completed by order of Government, the day preceding he fire, when the amount was stated to be \(186,6010 l\). O this amount \(10,000 /\). ( \(5,0,00\) percussion muskets) wa the cost of re-erecting the building, the sum total of the public loss will not exceed \(2 \cdot 26,600 \%\).
Allempt to lset Fire to the Horse Guards.-On Wedmesdey murning about one o cluck an aitempt was made to set fire to the Horse Giaards, by throwing; a combustible ball into the canteen yard. It appears to have fallen between the sentinel on duty and Mr. M.Gregur, of the canteen, who states that it "expluded with a terrific noise." No clue has beea discovered to the perpetrator which is still involved in motery.
Nezc Royal Exchuncie, -Thie Gresham Committee who coudict the restoration of this bulding, resolved at a tecent meeting, that ine mirst stone should be laid mis the usual cercmonies; and that H. R. H. Prince Alber should ve applied to, to undertake this duty. At a spe chai meetirg of the committee, held on Saturday, the chairman, Mr. R. L. Jones, reported that he lidd been
honoured by an interview with his Royal Highness, who bad condescended to accept the invitation. The archi-

 laid by Cilarles II., being the foumst sion of the af the pitlars of the walk or mazza surrounding the Nerchowts.
court. The contract and specification of ti. wew E: change hase been printud for the use oi thee carioration
 finished in ail resperts by the 2 2.th June, le:t , under penal:y of \(2 n l\). per day. The buildirg is to be fire-prow

Polish Fette at Guildhall.- Another of these fêtes, in
id of the funds for the relief of the Polish refugees, was given on Wednesday evening, got up, as on previous occa-
sions at this time of the year, by the exertions of Lord Dudley Stuart, and other nembers of the Polish commitrilliantly lighted up, all the decoratiuns having been al lowed to remain for this occasion. The attendance mas acisal of last year-a great number, it would seem, bein attracted by the fame of Miss Adelaide Kimble, who gave her services for the occasion, and sang several pieces dur ing the evening. Many other professional singers, among ings amusement. Lipwards if 1100 or 1200 persons, it is said, were present
aid to have bore being ended by the arrival of the shield at the shaf on the Wapping shore. The shield now, therefore, ha performed its werk, and henecforth the operations will be and for the general traffic. Four and a half feet of tun nelling was
Metropolitan Prisons.-There are, it is stated, at the present time about 714 persons confined in the Metropolitan prisons for debt, comprising five gaois:-in White-
cross-street prison about 300 ; in the Queen's Bench prison, 140 ; in the Fleet, 110 to 120 ; in Horsemongerlane gaol, 110 ; and in the Marshalsea, 54. About \(\mathbf{4 , 0 0 0}\) persons, including country cases, are yearly heard by the
Insolvent Delitors' Court, which, with the fiats in bankfuptey, do not form more than one-fourth of the writs ssued in one yea
Execution of Blakesley.-This criminal underwent the last sentence of the law, at the usual hour on Monday morning, at Newgate. A large crowd of persaid, waited near the scaffold during the whole night, in order to get a better view. We gave in our last some par ticulars of the culprit's conduct since his condemnation and of his violence towards some of the persons employe in watching him; but although that violence was extreme,
and his appearance betokened great excitement, still the opinion of the authorities of the gaol was, that he was onl acting an assumed madness, in the hope that it might assist the defence made for him at his trial. This violence continued up to Sunday; when, in consequence of it, the other prisoners in the chapel to hear the condemmed sermon. After the eervice the chanlam visited him, and reminding him of the near approach of his last moment, besonght bim to refrain from persevering in his present conduct, assuring him it couid have no good effect, for that competent persons were satisfied it was assumed The prisoner then admitted that he had been assuming was the hope of creventinat his only object for so doing of in the chapel on Sunday. He afterwards acknowledged that he had acted thus in the hope that his life might be saved, from the impression it would create that he was not propriety, and expresed lumself resegned to his fate. On the morning of his exccution, being ashed if he wished to say anything, he said he had only to repeat his former asdon, but only his wife. His appearance on the scafold was the signal for a loud shout of execration on the pat of the assembled mol, which continued during the whole time the prisoner was upon the scaffold, and even after the fatal bolt was drawn. Bhekestey's wife died on Thursday, at the house of Mrs. Burdon.
nected with the ine stiration into the circumstances con last, has been resurta (if Michael Aungier, noticed in our when, in addition to the facts already mate hnown, eri dence was given by sume medical men who had examined he body, and who derosed that deceased appeared to have died in a state bordering on apoplexy-the effect of exces state ining, and of being driven about, while in that ing been administeres was no appearance of druys har secutiun said l.e had no intention to suggest such a thing Mr. Hall, the magistrate, said he had made up his mine by giving ail the prisoners: Lut be would accept of bail by giving 21 hocurs' notice. The brother of the Packards suid his faller was a clergyman, residing some cistance Ir Hom then but he would indeavou: to procule sureties. Mr. Hall said the primerers ocuuritu such a station in soCety, that he woud erter them th pur in lail themselves in at the next sessions of the Centrat criminal Court.
Fircs.-Seseral very serious fires have occurred in the metromais thrs week. On Sunday morning the premises
 were discorered in Weiling on stact, Elichtriar--riach, after the first alamm was given. the factory, which occupied a large area, wres cunp petary erreloped in flames. it the iate the iate condigrahion in the Turres. Thor reut waz in fictery cumbthrowh and the mate ials used in the fotery, mil, tury eatinc. aud chee esmbustibles, were zoon nisto over to The heat \(x 23\) rety geat, and the wind blowcorched the in 2 ocs there and they aliso appeared in grea danger of being destecyed. This, lowever, the exerSons of the firemen prevented, by keering them cool with constant stream of water ; but no efforts could save the
itself out in about three hours after it commenced, and portion of the walls alone were left standing. The backs Wellingtonstrcet. and sereral small buiditirgs are damaged, but the interiors are notinjured, excelt by water from mhich the houses in Blackfriars-rond have sut fered greatly. A small brewery bethind fie factory wa brigale men by the fames. During lifes, seems that after the flames had been subdued, they entered upon the interior of the factory, each with a branch-pipe, to con the ruins, directing the water upon them, when the side walls gave way, ad buried them. They were dug out a soon as possibile, but were found to be bith dead. An in quest has been held, when the jury returned the followin rerdict:-"That the deceased Joseph Parhes and Willian Webb met with their death by the falling of a wall, but bo The incuiry ercited a is not sufficient exidence toprove. upwards of four hours. - Another serious fire occurred on Saturday at Charlton-street, somers Tomn, on the preperson Mr. Stephens, grocer. It was first and several engines sere soon on the spot, but not-ith standing every endeavour, the whole house was entirel burnt to the ground, together with the stock, furniture, \&cc. the loss amounting to between 600l. and \(\% 00 \mathrm{l}\). The houses adjoining, on either side, were also muels dix maged by fire and water.-On the same day a fire broh out in the workshops of Mr . Marshall, carpenter, Kings trade. The damage done amounts to between 2001 . and 3001.-On Monday night a fire was discovered at a hous in Great Alie-street, Whitechapel, occupied by Mr. Miert glass-manufacturef. By the speedyartival of the enginea, however, it was soon got under, with the loss of omly the -Just as the engines mereom where leare, informatio was brought that a fire had broken out in John-street, Crutched-friars and another in Catherine-street, Com mercial-road. They immediately proceeded to the differ ent places, when they fonnd that the first was in the sho of Mr. Philipps, \& wholesale tortoise-shell comb manufac turer, adjoining the Dublin steam-packet office. Ther was, fortunately, a plentiful supply of water, by which the flames were extinguished in half an hour. The cause o the from und Catherine-street, it was found that the top room of the house No. t, Which is a lodging-house, was fllames. The firemen soon succeeded in confining the fire to the room The contents of which, however, were destroyed.-1 Smithey morning, a fire breke Bedford-court, (Covent garden. It was soon extinguibled but the hes is eatimated at IVOL.-On Wednesday night, a serious fire curred on the premises of Mr. Bullock, cabinet-maker: Great Rupert-street, attended with fatal consequences to a girl, thre she sustained. It appears that the child had been place in bed, when by some accident a candle, lent in the room near the bed-curtains, fell against and forted thes, and before the fire was discorercd, the bed was burnt, and the chitd sustaired such injuries, that she shorthy afterward expired. The fire was soon extinguished after the arta of the engines.-On the same night, a fire broke out in the mansion of Col. Hope, 4, Carlton-gardens, St-James Park. It appears that some workmen had been plasterin the room, and for the purnose of drring the wills, some stoves hiad been placed in them. By some accident the floorines caught fire, but being scon discovered, it wa speedily got under, and the house saved.

\section*{Hrobimatal axems.}

The provincial papers receired from all parts of the country contain accounts of rejoicings and hearty demor strations of gladness at the happy news of the birth of Prince. The manner, however, in which these feelings hare been every where testified, are so similar in character, that their reperion would fail to interest our readers.

being atopted fur the punishment of the offenders.

Docer.-d |ublic meeting was held on Monday, to express confidence in the banking establishments of Messrs. town. The meeting was, it seems, deemed necessary in consequence if some injurious reports which had got afloat, but which turn out to be without any foundation, timidity cansed among the Kentish people by the late failure of Haiford's bawik, at Canterbury. Ikesolutions were passed at the meeting. expressinir confidence in the stability and responsibility of these banke, and a declaration to the same effect nay sigued by a larke number of
the palabunts.-Last wiek a fail of the cliff, if seweral tons weght, toon place un this coast: and, from its present appearance, it is fiared that a considerably larger
portion will also fall, as it is said to be impossible to portion will also fall, as it is sail to be impossible to
adopt any mieasures to prevent it. Sereral curicus fossils bave been exposed in the different strata, and have at tracted much altention.
Falmouth - Large shoals of pilchards have visited the coast along this neighbeuri:ood during the rast week, but the seaners, as usual, do not appear to have been fortunate in their efforts to take a about half that quantity at Guawalloe; but the other catches are not of any amount.

Glouecster.-This poit, says a local journal, presents just now a more busthng scene than has been remembered for many montis. The arrivals, as the shipping hists
show, during the last furinight have leen very numerous, show, during the last forinight have leen very numerous,
and sereral ressels are, in cirsegnence, unable to obtain dock room. No less than 12 vessels have arrived from France curing the last ferw days. The general trade of the city also has been gradually innproving for some time.

Hutheld. - For some time past extensive depredations have been mate on the property of the farmers in Essex, on the cine of land extending from Margaretting parish to that of Hattich Peverel, a line somewhat enrresponding with that of the Eastern Counties Railway. A number of fatted sikeep have been stolen in this district, making the held for the purpose of estaislishing a might patrol in these neighteurhoouls, some complaints were made by the farmers, that the rural police had been inefticient to prerent the crime of sheep-steaing, and that either their numbers should le increased, or that the expense now in-
curred is useless. It does mot appear. homerer, that any alteration in the constitution of tifis force bas yet taken place, and it is thought that the farmers themselves must rural police efficient for own security, as to render the extended to cfficient for incompatiole rith the srstem be which they are raised.

Eendal.-A daring highway robbery took place on the rlaie and Seibergh, about a mipike road between this Mr. J. Benson, who has travelled the roai atw, when up wards of thirty vears, was severely beaten and rubbed. It appears that Then Mr. Benson, who was on Lorseback, sprang out of a plantation, and atbacking him, robbed him of upwards of 1001 o , with which ther made off, leaving

Mr. Benson in a very precarions state. This, it seems, is
tive tind whery that has i,een whrateal on his rond wathin a thert the. The rubbers have \(t\) ecapedelection
 last few days in this place, in consequence of a report that that un that day tiree men in the service of G . Clarke, Marsh, after partahing of their dinnter. were suddenly the nadit, but the wher two are expected to recoser. it is said, is known to induce the belief that it will prove a melancholy case of family discord
Manchesier. - The merchants of this town are about nike steys to inpress on the new commission, noticed in ing to this and other la:ge inland towns. The chairman of the commission. Lord Granville Somerset, has, it -aid, already expresset himself in favour of the rlaims a Manchester in this respect. A deputation from the Law Ase ciation in this town has had an interview with the Lordship on the proposed removal of the assizes to this torn. The deputation was courteously received by th appour of a removal, at the same time expressing his entire readiness to promote them by every means in his power -Four men have just been apprehended here, who hav grocers. They were taken just as they were about start ing for Liverpool to embark for America, with the produce
Melksham.-On Thursday about thirty individuals of the labouring class left this place as emigrants to the before, who are doing well, being employed on the coffee plantations on the hills.
Northwich.-On Monday, the farm buildingsleased by Mrs. Leivesley, at Castle Northwich, about a quarter of a mile from this town, were wilfully set on fire. Two large hay-stacks, the stable, shippon, and barn, were discovered in a blaze ot the same moment, notwithstanding they wer detached buildings. Fortunately the wind blew in a contrary direction, or, it is thought, the farmhouse itsel must have been destroyed. The engines were son got to
work, but the supply of water was scanty, and the buildings were entirely reduced to ashes within two hours atd the alarm was given. Soon after the fire broke out, Mr John Leivesley, son of Mrs. Leivesley, a young man 2 years of age, gave himsef up to one of the constables and admitted that he had set fire to the premises. On Tues day be underwent a long examination before the county magistrates, when he repeated his statement that he had set fire to the buildings, and that he had committed the act in order to be revenged on his brother-in-law, who wanted, he said, to get his mother's property from him He did not appear to exhibit the least symptom of insanits anel was committed to take his trial for the offence.
(isford.-A fire, which there seems to be reason to think mas the act of an incendiary, has occurred in a large farm-yard lelouging to Mr. Gale, of Cuddesden, near this city. and within a short distance of the Bishop's palace.
In the course of a few hours, a great quantity of valuabie In the course of a few hours, a great quantity of valuabie property was destroyed, consisting of four wheat and hay ricks and two barns. one of which contained nearly 3.000 aacks of potatoes, and in the other was a quantity or wheat ready for the market. The fire was first seen issuing from one corner of the barn, and owing to the wind, and there cendency that a row of buildings was obliged to be pull down to stop it from igniting another large barn, in which were severat hundred pounds' worth of wool. Had the wind been in a different quarter, the parish church, it is thought, must have been destroyed. The estimated loss is about 3,000?.
Portsmouth.-It is stated that very extended naval equipments are ordered at this port. In the dockyard thirty additional shipwrights are directed to be entered, together with fifteen salmazkers, and twenty seamen of the Victory are to be uninterruptedly employed in the rigging house. In addition to this, it is directed that masts, yards, spars, ligging, sails, and boats, are to be kept in readiness for twelve sail of the line aud four frigates.
Preston.-A corn stack and horel, near the Hassocks station of the London and Brighton Railway, belonging to Mr. Stanford of this place, has been consumed by fire From the circumstance of the fire beginning in several
places at once, it is thought that it was not accidental, and a reward is offered for the apprehension of the incendiary

Radhrow.- The investigation into the cause of the incendiary fires, which have lately occurred here, has been adjourned from day to day without elciting any facts that can throw ighit on the stuject ; and the parties who had been tahen into custody laare been discharged, there being no eridence to warrant their detention. It is, howerer, thought that wioever may the incendiary, the circumstances connected with the firing of the dweling-house tend to throw suspicion of the offence on some persons connected with the premises.

Raneforth. - On Tuesday night as Mr. J. Dixun of this market in his wiel was ac costed by a aran iressed as a farmer, who azked him for a ride: Mr. Dison consented, and took him into the gig. On arriving at a cross-road leading to this place, the man told Mr. Dixon that his road lay in a different direction, upon which he got out and walked away. Mr. Dizon immediately discovered that he had lost his pocket-book containing 1391. in bank-notes and checks; and feeling
certain that the stranger had taken it, he drove after him when the man ran away across a field. Mr. Dison fol
lowed, and coming up with him, a desperate struggle en sued, in which Mr. Dixon was seserely kiched and bruised. Some men hearing his cries, then came to his
assistance, but the robber had escaped before they arrived and has not ret been apprehended. The pocket-book which had dr pped from lim in the struggle, nas found rear the place
Rowres.- -1 ferm nights siuce, an ourbuilding on the farm concumed. On the sme evinims. an futbuildur on the farm of Mr. Self was also set on fire. From the situation of these huidanes, it is thought, there can
that the fires were the work of an incendiary.

Sandhurst. - The usual half-yearly publiae examination of the ofticers and gentlemen cadets, sturying at the Roral Military College, Las taken place in the presence of H.R.H the Duhe of Cambridge. At the chowe of the examination the filhwing ethicers were presented with, the usual certiticates of qualsication:-Lhent. C. Salser, 3d Foot,
Iitut. T. K Scott. G2d Foot: Lieut. H. MI Imilton, 13th Light Dragoons. In consequence of the superior acquirement displared ty Lients. Sanyer and Scott, in the highes tion was made to theose ofticers' certificates; and their high qualifications in military surveying were also particularly noticed. The following gentlemen cadets, who had com pleted their qualifications for commissions, were recommended to the General Commanding-in-Chief for appoint Henry J. Mason; 2. Charles Hoghton ; 3. George H Cazalet ; 4. Macartney H. Oldfield; 5. Wm. D. Lord Kimbolton; 6. George Phillips; 7. Jesse Lloyd; 8. Edmund Corbett; 9. John D. M. Prior; 10. Theodore D 13. William Maycock: 14. Wyndham S. Portal. By the result of the examinations, above fifty other gentlemen ing themselses for commissions in those branches of the mathematics which are applicable to military purposes.

She ffield. - -1 meeting has been held here for the purpose of furthering the objects of the "suciety for the promotion of Free Trade." It was numerously attended by the tradesmen and manufacturers of the town; and after Shore, the president of society sereal sent Shore, the president of the society, sercral gentimen aldressed the meeting at considerable length, and the "That it is an unsacred principle to attempt. Ly legislative interference, to protect the mannfacture or the growth of anything in any national locality, because free commer
 convenit ntly grome the nations of the earth for the various atticles of manufacture and of natural production is most conducive to the liappiness of mankind generally, and is especially ad vantagenvs to a country which. Lihe England, possesses natural facilities for commerce combined mith superiur capital, industry, and shill." 3 import duties on foreign produce, we are preparcd at the same time to abolish all protective import duties on foreign manufactures; and we are anxious that the id. protecting trade or agriculture by means of import duties should be altogether abandoned, and that such dutie should be employed only as a convenient means of raising revenue for the state, and their amount be regulated with reference to that single object.
Stockport.-The trade of this borough, which has been for some time in a depressed state, does not appear to improve The distress of the working classes is said to be daily en the increase, and every week adds to the number of parpers. In the last week 38 new applications have been made for relief; and during the last two months more than 70 families, it is stated, who had no claims on the lownship, but who had been driven to the necessity of a plying for parochial relief, hare becn remored to their respective places of settlement. Hence it is calculated that 5 () more dwelings are become tenantless in this during milies; and about one-fifth of it is already to let. Mest of the mills are still working short time. Reductions have again been effected in the wages of overluokers and other hands employed at sereral mills: and the extensive manufactories of Messrs. Lane and Sons, and that of Messrs. Carr and Co which stonped a few months ago, are still closed.
St. Ives-A fem days since two fires broke nut in the Stanty of this tomn, one at Ifemingford, tue other at Fen rien-in both cases suppuset to be the aets ur incend aries. A youth, sisteen years of age, is committed to take committed for furmer ; and for examination, when, it is thoug?t, the re will appear sufficient ground for their commitment. Sulton-in-Aalytid. -Two haystacks belonging to io Mr. Tudsbury, have been attempted to be fired by incendiare, but in both instances, the fires were discorered in time to prevent the destruction of the property.

Turring. This town was on Sunday much excited by a report that an old lady, named Mould, bad bean found suffocated on the bank of a ditch in a field adjoining the churchyard. Deceased was a woman who had formerly been in better circumstances, but recenty ocesearned a precarious livelihood by working lace, On Monday, sionally, by employment as a dressmaker. den Frose
the medical evidence it appeared that there were brusses struggling, and had been dragged along the ground. The medical man attributed her death to drowning or suffocation. A man of the name with deceased on the night of her death, and to whom she was heard using high words, had been apprehended on suspicion; but the evidence not being satisthat deceased was "Found suffocated," mithout assign ing any means by which she came to her death. The said, be thoroughly investigated by the magistrates.
Irycombe. - At the recent petty sessions in this place, the magistrates were engaged some time in inrestigating the following serious outrage. It appears that during the afternoon, as the daughter of Mr. John Tripp, of the Botfom from home, a person passed her, and made a remark on the weather, howerer, passed ber, when he turned round, seized her by the neck, and, with a knife which he had in his hand, attempted to cut her throat; fortunately her neck was so
well protected with warm clothing, that in cutting through it she sustained but little injury there; in her endeavours, however, to Miss Tripp's cries alarmed the assassin, who ran away towards Bledlow-ridge, in a beer-shop at which place, in the evening, a young man named William Cooper answering the description given by Miss Tripp, was apprebended. On her examination, she declined to swear
positively to the prisoner, though she belicered him to be the person who assaulted her. Sbe was, however, mate rially supported in her evidence by a boy, who stated that
the prisoner had been sitting by him in a field before he saw Miss Tripp, and that he had seen him sharpen his knife befure he left bim ; that he afterwards heard cries, and, on looking up, saw the prisoner running away from er. The prisoner was fully committed for trial
Railzays.-A landslip has taken place on the line of he Great Western Railway, in the flung aoout half-a bave not been prevented running in consequence, and the traffic has proceeded as heretnfore. The only inconvenience has been, that in order to pass the gap caused by the slip,
the carriages are obliged to be shifted from one rail to the other. The accident is stated to have been caused by the late continued wet weather - The late fall of earth on the
Croydon and llighton Railway, between the New Cross station and sydemham, has been partislly renoved, ant the contract which had been entered into by the company with some coach proprietors for the cunveyance of pascaused a platform convey the luggage belonging to the passengers by the Brighton train. The passengers wak station, and are taken up by another train in waiting for an passengers walk over a clearance made on the line mouth Arms station and New Cross. It is expected that nome time will yet elapse ere the difficulties will be effectmally removed. On Monday a heavy fall of snow took tain an hour and a half, as, notwithstanding at some parts of the line three engines were attached, the raits were so lippery, from the \(8 n 0 w\), that they were unable to proceed fatal accident than eight miles an hour. On Tuesday Railmay to a porter employed on the line, named Martin It appears that he was accompanying a special train, which Now runs between the spot where the earthwork lately ing on one of the carriages as the train was waing ; but before he could get domn apon the braike his head struck against the arch of the New Cross Road-bridge, which caused him to fall under the archway, when he was run Guy's Hospital, where it was found that he lasd received sach severe injuries that no was entertained of hi sarviring, and he died the same erening. The accilent deceass to bave been entirely owing to the imprudence of deceased in not descending from the carriage before nearing the archway.-On Monday a labourer, named Michat Cromarthy, died in consequence of an accident which Lap pened to him a few days previously on the Lendon and the 29 th ult. he was at appears that on the morning af When oue of the trains came past, by which he was struch distance. He was conveyed to the London Hosrital, where it was discovered that his skul was fractured and one of his thighs broken, frons the Wat given which he died. It seems that the usual signal as cautioned the train approached, and that deceasen pay any attention to the admonition.- An Saturday evenIfg, as the last train on the Wrre Railmay was proceeding Hompreston to Fleetwood, an iraheeper of the name of and was so seriously place, flll from one of the carniages orer him seriousiy injured by some of the whetls passing an the Bolton he died un the following day.- The works ably; and it is said that thanway are progressing favouron the 234 Dec . The tuncel is proceeding fast, and there pleted and little doubt that the whoie line will be comtuanel and opened to the public in Sent. neyt. In the seven steam in is an undertahing of considerable magnitude, the pumps, having a power of nearly 60 herses. The last dry weather, however, has had a good effect, the quantity
of water being much diminished in consequence. The diits length about 30 yards. A portion of the permanent rails is already laid on the line from the tunnel to its junction with the North Cniwn Railuay at Euxton, -On
Thursday, the 11 th iust., the Directors of the Manchester. Ahursday, the llth iust., the Directors of the Ilanchester Ashton-under-Lyne, and Sheflite Railway made an excurshe public as far as Godby-bridge, about eisht miles from Manchester. The experiment was quite successful, ani the line will therefore now be speedily opened to the public.-The whole line of railway from London to Gos port is to be opened on the 29 th inst.

\section*{IRELAND.}

Dublin.-The weather here has been unusually incle onent; on Saturday and Sunday violent gales of wiad were experienced, and on the night of the latter day there was
a serere thunder-storn, accompanied bratheary shower of now, which was renewed on Monday, and from the 8] pearances of the weather a consideratie fail was antici pated. The mountainous range of Dublin and Wichlo. was covered to some deytho A deprutation of Thtular annual stipend for Maynooth Conlege, on wheh ecca-ion they stated that not less than 250 addutional students wil render the college efficient. The Mayor and corporation have served a protest on the revising barnisters ayainst the proclamation under ahichs they hoid the elections is not conformable to the provisions of the Munioural Reform Act. The Attorney-General, on revieaing the powers and duties of the local crown solicitors of Ireland an office created by the late Goverument, Las resolved upon abolishing them altugether. The Rer. J. D. Giregg, who was some time since imprisoned for calling a Roman Catholic magistrate an idolater, and subsequently d:scharged by the Queen's Bench, \(1 n\) the ground of the ilte gality of the committal, has brought his action against the magistrates. The latter, however, offered to pay the custs. which Mr. Gregg has accepted, considering it sathicient findication of his character, and the further proceedings freemen on Saturday, on which day he was put into pos sestion the them nere Roman Catholics; the first admitted since the jear lilh. Lord Cloneurry tas ofteren wro pes on earli for the bee prize essays on Manare and Roald-naking, in order to pronote the objects of the Agricultu:al suciety in tha country.-The usual wechly meethy of the lirpeal Asso ciation toak place on Monday. The hord Mayor san that he had nuch pleasure in announcing the ruelit morica. The activity of American zeal in their cause would, no doubt,

\section*{There was not an anti-national spirit in the country whic} would not be roused to violence when he heard of the to the lowest of the Orange faction. These persons said it was treasonable to obtain subscriptions in America: was exactly the reverse; treason would consist in creating institutions, whateas the sprit hiey wetc excining is America was one of respect for ail the principhes of she of Mr. M'Leod was chiefly owing to the better feeling aroused in America fur Ireland: and if they bad escaped a war, it was mainly attributable to that commumios of kindmess which animated the Americans, and was reponded to in the Irish heart. Mr. Sharman Crawford proposition that an Irish Parliament would lead to a sepathan 20 states in America bound together by a union created by the sentiments of the peopie. Erery one of them was separate, and had the porter of internal tasation, and of enacting their own laws. With this example before their ejes, sas he to be told that the existence of separate legislatures in Ireland and Great Britain would necessarily lead to a severance of the countries? No; he wished for the connexion of the two countries. He wished it now, when Ireland was insulted and oppressed by England, and how much more would be desire it when the protectioa of domestic legislature was extended to them by that country! After a lengthened speech, princip Goingen Mr. O'Conrell concleded by alluding to the tithe rentcharge and the nem Cornoraie Reform Bill ; against both hich measures he loudiy ipveighed, and announced his intertion of immediately furwarding petitions to Parhidment regarding them.-The Irish Temperance Luion bave made an application to the Arrisisnop requestir.g that be would authorise theni to sta erabi. that he was a tee-totalier. F ExCHERUER- - Barker, Clerk, T. The Tithe Com- misumers. - This casc, which inwred a question of considerable importance, arme before the court on demurrer, and was argmer and the Attomey-General on behait of the plaintiff. The facts involving the question of law were simply that in opposition to
this plaintiff's claim for tithes, a party in the first instance set up a modus of six shallings and eichtpence in lieu of tithes, and his maned upon by the commissioners. The same party afterwards set up a modus of -ix shillings, and referred this question to the
commi-cioners; but it was said that ther were bound not to entertain it, on the ground that they hard previously decided on the question of mudus in reference to the same land, and should hold
that decision conclusive. It was contended, nu behalf of the plaintiff, that the obyect of the act under which the commi-sioners were constitured as a tribunal for the investigation and decision
of questions of modus, would be in some degree defeated, if parties were allowed to set up one claim of modus after another had claim was an excess of jurisdiction; whilst on the ofther hand it was insinted that the legislature could not have contemplated the injustice of depriving persons of the right of setting up different properly claimed. Lord Albinger said his own experience satis-
fied him that there was often great difficulty and nieety in eatabhishing a clam of mudus, and it would be very hard it a party who had once stated his claim more imperfectly than he might more perfect form. The Legisuature provided an appeal to the tithe commissioners, as a more summary and convenient juris. dhetion than existed preciomsy for the trial of questions of this nature: that made to the courts of justice momilar quentions before the passinc of the act. The worts of the statute should inded be clear before he connd suppose the Leegislature to have menteded that a party whomad oncer set ap a chan mind wa-prechuted by the decisinn in that case from summitine a diniterent gatestion consideration, and he was therefore of opinion that the commis sioners would not exceed their furistiction liy ententaining the claim, and that they were bound to entertain it. The judgment should, therefore, be for the diffinants. Baron Parke was als colld be coustrued as a protuh tion to the commissioners to en set man separate clam asining ont of the vame land. If a part set ap a ciam reationily, ti.e comaniwnemers had power to when they should entertain any claim submitted to them, but they had wo discretion which entitied them to refuse to entertain previounis decided upon. Baron Gurney was inclined to think, when the case was first mouted, that the decision of the commis sioners on the question of monus in the first instance was connow concurred with the nther members of the court. Baror tain the claim. The act was meant to substitute a rent charot for tithe m hind ion ail time, and it would be monstrous mjustice to prevent a party who had set up a wrons claim to modus from settine up a nght one chtward, hecanse a summary juristlic tiun was given instadi the ordinary leral tribunas. Judsmen
for the defendants.
Kelly I. Soldort.-This was an action by Alierman kelly, as One of the drectors of the Argus life Assurance-company, to recover Sack 19, \(/\). 14s., paid to the defendant, who is the widon
and execntrix of Mr. Angelo solari, up a policy on his hife. The tacts, which were relerred to in our last, have already been be fact that the payment was madi under a mistake, in forgettul.
 action was brournt to reever back the amount. 'lue jury having found a verdict for the defendiant, a rule was
new triad on the urcund of mi-direction and aion
new trial on the cround of mi-direction, and ai-o that the veriic
was againat vidence. The court was of ojiuion that the gil fon had not been quite correctly le:t to the jury. It was laying down the rule rather too wheive to say, it the company had the mears of hnowng that the phicy had lapsed, they conh not recont money paid umer a miviake. छlere il was probable that tie company or their susvasts had furgutten the sact tha me policy had lapsed when the amount was paid ; but as that fir a sew trial.

\section*{sATERDAY, NOIEMBER 27 , 1841 .}

\section*{}

Now that the protection of plants from frost is a first object with all possessors of gardens, we wish to lirect attention to one fact which is seldom considered. There are many trees which will resist the effects of our frosts without any covering to their heads, provided the reots and stems are carefully guarded nol kept dry. Among this number is the Magnolia randiflora. Formerly there were trees of this species in Paris-and they may possibly still exist-whose only protection in winter was a heap of dry straw piled orer their roots, so as entirely to cover them, and thatched to the height of five or six feet, so that the heal of the trees formed the apex of a cone, the boly of which was straw. By this precaution the earth is unable to freeze, and the fluids in the interior of the tree are maintained at a temperature approaching to that of the earth. While, on the other hand, if the earth is frozen hard, the fluids in the roots are frozen also, and they thus tend to lower the temperature of he fluids and the branches.
But this is probably not the only reason why tender rees are preserved by this sort of protection. It is to be observed that the destructive effects of frost are in proportion to the succulence of the parts on which it acts; and it may be, that the contracting influence of cold gradually furces the fluids out of the unprolected branches into those luwer parts which are puarded from the action of cold. Then the branches being pro tunto emptied of fluid, or, we may say, dried, are thus deprived of a part of their susceptibility to cold.
Those who are disposed to try the effect of protecting plants by thatching or burying their roots and stems, must, however, bear in mind the necessity of the substance employed being dry, and applied in such quantity as to keep the earth really protected preserved in this way.

In an early Number of the Chroricle we published an sccount, by Professor Morren, of a new kitchengarden plant, called Oxalis Deppei, which he described as being a great delicacy. At the last meeting of the Horticultural Society in Regent-street, roots of it,
raised by Mr. Fortune, the superintendent of the hothouse department, were produced ; and it was officially stared that the root was hardy, prolific, and excellent when properly cooked, besides being entirely new to We country as an esculent.
Wenied by a writer in, that the latter statement is denied by a writer in the New Farmers' Journat, who asserts "that the plant Oxalis Deppei (or rather Creta" has been for some years grown in Cornwall by the Rererend Messrs. Hawker and Rouse, of Morwenstow," and that he himself has grown it in his garden for Rhubarb, ynd the flavour nearly resembles that of tuberg, when boiled, is opinion, quite equal to it ; the tabers, when boiled, are somewhat similar to the taste of hoiled Apples. He says he has used the stalks for tarts and pies, and that they come in about The tume green Gooseberries are going out of season. than pigeons has not yet succeeded in growing larger the pigeons' egres. And then he goes on to state that scribe the was first brought from Crete! and to describe the manner in which it shonld be cultivated.
It is very evident, from the account given by the Oxalis Deppei, to which neither his description nor manner of cookings, nor mode of cultivation at all applies. For this reason, and because we believe the real Uxalis Deppei will become an ohject of considerable attention, buth for its excelience and novelty, we meant to set the public right in the matter. What is is known to botanists, and as Crete produces nothing in a wild state that cand liave Crete produces nothing Oxalis crened. If, as seems not improbable, the from lis crenata, a plant introduced some years since add, that the acidity of that plant has driven it out of cultiration, and that it is as inferior to Oxalis Deppei as Crab ipple to a Browil Beurré Pear

\footnotetext{
We add a few more remarks upon the Hyacinth published last experienced friend whose directions we One word week
three bulbe in to Hyacinths in pots. I have grown them three bulbe in each pot-apright pots at least six inches
}
clear inside-but I forget the number. After planting, I
put them in a frame properls dranad at the bottom and put them in a frame properly dra:acd at the bottom and
slighty protected at the sides, and plunged them in rotten slightly protected at the siles, and plunged them in rotten
tan, covering the tan ofer them at least four inches. In tan, covering the tan over them at least four inches. In
very hard weather they had a mat thrown over them, otherwise no envering at all; I should not be airaid to trust them even without it. In this state they remained
until the flower-stem heared up the tan and first began to make appearance. Every pot, as this occurred, was taken to the greenhouse and put at the back of the stage, and staded by a mat until the stem and leares became greenish, when it was gradually brought to more light and air. In this state examine exch spike of flowers and cut out any decaying blossom. Water ireely and give as much omit to turn the pot dally, so as to insure that regular pyramidal shape which is so essential to the beauty and mmetry of the spikes of fluwers when is blussom.
I believe but few gardeners have any idea how harily
the bulb of a Hyacinth really is. Huwne reason to thits the bulb of a Hlyacinth really is. Hiving reason to think placed, last Norember, twelve offert thibs that I considered of little value on a beap of mould under a northeast wall ; they were not at all covered with earth, nor even placed upright, but remained on their sides. I frequently tomk thens up to examine theni after some of the last serere spring frosts, and thes appeared to be unimuared. efforts to root on the side next the earth, and seven out efforts to root on che side next the carth, and seveu vint
of the twelve produced stems of flowers, fiom tirree to seven bells on a stem, which I gathered for a nosegay as curiosity under the trying frosts they had been exposed

Had I tried my experiment on a south wall, I conude I should have lost iny buibs after the first frost.
The value of planting deep and covering the Hyacinths that are potted, I believe, consists in this :- Erelyboly must have remarked bulbs, if kept heyond their usua cime of planting, to start at the crown and assume a green appearance from their exposure to the lis hat, ©c.; if, hy the
covering of mould or tan, \&c., they are phact under fiveurable circumstances, the natural tendency will be to make strong roots hefore the stem irself is started up. wards, which is of the greatest importance for a successful exhitition.

\section*{THEORY AND PRACTICE}

Among the strange fancies generated by shallow reasoning and incomplete investigation, that of see ing theorelirejecting either, or exalting it at the expense of the other is one of the most extraordinary and injurious. Practical gardeners, or those of them who especially pride themelves in this title, are always jealous of the hints of
Cheorists, and too generally speak of their attainments atid productions in a sneering manner, pariaking largely of sarcastic derision, and necessarily tending, though perhips anmeaningly, to self-laudation. In the same way, author Whose sole pretence is to an acquaintance with written
systems, and who have never been actively engaged in the processes of horticulture, sometimes attempt to derogat from the importance of experience, by supposing a study of correct theories the great essential to successfral performance, and the latter so purely manual or mechancar igitiation, in order to render any operator an adept in the

A more profound scrutiny into the relative value of these needful auxiliaries, would convince both of the above parties that their siews are too much perverted by attention draw from each the aid it is capable of bestoring, different pinions would be entertained.
Theory can never be of the slightest use unless based upon experimental inquiry, and aurbenticated facts. can extensive practice be deemed of real advantage, if it ha been suffered to degenerate into empty empiricismo, and the gardener simply adopis a routine he kas before found satis factory, without ever examining the principies on which its success depends. In the latter instance. certain circum stances, unseen by all but thuse who search for them, may impart a temporary excellence to the plants culcivated whereas, should these be accidentally wanting, failure the asilatace or acquirements, this might probably have been artifcinily abviated
It will herein be seen that experience, unsupported by aught besides, is hable to mislead, anil to prove ineffective in its epplication. At this puint theory steps in, and gives certuinty to esery process that is not render.
The insufficiency of general sules derived from bocks happ:ly neens no entureing with the readers of this journal. Relying on such slender resources, the culturist woald be onestrat a for more mate directiolis, and rear's endearours to carry out prescribed plans wull strongly extubit the fumitity of the course. Indinidual plants, like human beings, demmad peculiar treatuent according to their constitution, ared plase : so that principles of universal applicability can never erist.

Our intention, homerer, in the foregoing observatioas is to remind the classes we have mentioned of che necessity for blending the two great instruments here braugnt beore them. Theory should be the result of thereto,-only as it mula of course, be sery general, experience stil becomes indispensable to enabie the cultivator to modify it in the degree requisite for particular plauts.
It is injudicious and unwise in the young gardener to
further proportionate extent, than he advances in experi-
menta? information. He outhe rather to studs established menta! information. He ouzhe rather to study established
priaciules as eontirming or eluciluting duly operations, than to make them the fomdation of his professional superstructure. And wion he hinacl! fails in deducing the proper inferences from crdinary octurreaces and labours, consuiting standard authors whin then be prodent and doubly proficahle. We no.lld not be unfertood to discountenance the perusal of volumes on the radments of gardening ; but without these are made subordmate to actual practice, and their ditai's commected in the mind with the familiar economy really pursued, the later are hikely to be either wholly unimproved. or, by burdemen the memory with hypotheses aith us whe. *s, decidedty detrimental. \(-\kappa^{\text {K }}\)

COTTAGE G.1RDENS-NO. XLV.
Wh now proceed to notice the methol of manaring hardy Fruit-trees, among which, the Apple and the Pear may be said to have the greatest chims on our attenton, from being the most extensively caltivated, as well as the most heful and generaly setecmed of our comman fruits. Whare aiready given a list of whe of the very best vari ties of each at rage 69 ; and in oder to grow then to

\section*{ENTOMOLOGY.-No. XX.}

Tee Currant Spune-Sphins tipuliformis.-Having lately givea the history of the various Currant and Gooseberry-motha and Saw-files, whose larva destroy the foliage, I shall now notice two caterpillars which feed upon
the wood of the Currant-trees. There are few old garden the wood of the Currant-trees. There are few old gardens do braacbes of the Currant aecme sged, especillly of those which are nailed against warm wolls; and various are the reasons assigned for this malady. The black Currants appear to me to be the nirost subject to these atrach of the Currant-sphinx caterpillar; and the first indication of its preence is the withering of the leases acd branclus, but 11 aworth gires the Rutes rubrum as iss bibitut, and 1 now find in \(m y\) garden that the larma has very mued inbranches in the sprim and opluting them open, 1 was surbranches find that although the pith was completely consumed, and the caritr quite black for a foor in leturih yet he branches inad shrowa uut ledves, and even buacies of flowering ouds. ibee the rest of the tree; su rade it is erident this pest may remain sume time at wi, ra ate re mischief to any estent is susprected. The brancu represented split open (ig. 1) had been etcatinted to a very great been cont and this uight be owng to an whech had crept down the tunael, no dutift :o dinosit its eggs in the caterpillar of the sphiat, and tius destruy it Towards the end of May and in June, we see the bean tiful little Currant-aphiax sporting in it. morning and nocnday sun, about the flowers ut the Persian Lise the females also resort to the Curiant-trees to deposit their eggs in the crevices of the iwigy, and as sowa as the larka emerges frum its tiay sheli, it penetrates to the cencre to feed upon the pith, proceeding downward until it has ar rived at its full growth; it then chaggea what pupa,
rated with transerse rown of thort pinem which nable it
to ascend to an opening previously prepared by the larva from which the Sphing escha
The caterpiliar is fleshy and whitish, with an obscure Iorsal line ; the Lead and four horny spots upon the first thoratic segment are bright brown ; it has six pectoral, eight ablumanal, and two anal feet, which are of a simila colour, and a few fine longish hairs are seattered over its body (fig. 2). The moth, which is now named Aseria
tipuliforimis, is of a br:lliant chatybeous black. inclining o parple, which is beautifully contrasted withothe golder rings encircling its body, when glittering in the sum hime one of these bands forms a collar to the neck, and there are two longitudinal stripes of the same upon the thorax there are aloo thiree similar bands upon the abdomen of the femate, but four in the male, and the little creature is able to expand the fan, or large brush of tine actles, waich ornameats the tail: che wing are tratis barent inke a house fy, with dark nervures ; thry are surrowaled by a purple margin more or less surimhled with goidens scules, and the apes of the upper wings is of the same golden colour, an uniting with a dark lunate spot on the disc, encluses transparent oval spot, Beross which four dark nervures are visible; the fringe is fuscous; the legs are blue-black blacker, are thichest in the males and slightly pectinated fig. 3 magnified, the cross lines showing the natural di mensiuns.

Tima cupitella of Linnæus, Lampronia capitella* modern writers, the small moth before alluded to, is called the "Triple-spotted Currant Tinea," the caterpilars of Which, me learn from Mr. Doubleday, have greatly injure and even destroved the Currant-trees in are lihe the foregoing in their economy, only that they feed upon the interior of the young shoots, which they attacked in such force last spring, that many of the trees were left leaftess
in Mar. Where the parent deposits her eggs remains stil in May. Where the parent deposits her eggs remains still
to be discovered, and I am not aware that the larva has to be discovered, and I am not aware that the larva has
been described or figured by any author, but the moths I have frequently seen resting, with their wings deflexed, upon garden paling in the ricinity of London, about the middle of May; and it is said frequently to occur in orchards as well as gardens, from the commencement that month until the first week in June.
The triple-spotted Currant-moth is fuscous; the head is clothed with a bright ochreous crest of hairs, from whence its specific name "caputella;" the antennæ are like bristles in both sexes; the superior wings are bronzed, being freckled sith purple and yelluw; shere is a pale yellow transverse land near the base, which tapers to the costal margin, forming an elongated triangle, and also two handsome spots of the same colour a little beyond the middle, one on the costa, the other opposite and near the posterior angle ; the inferior wings have a purple shade ; lines long.

Although the injury occasioned by these Lepidopterous larvee is not ofted estensive, it is always fatal to the trees Wh n neglected; as soon, therefore, as a branch withers, Currant-sphinx ; in which case it would be advisable to sacritice the whole tree, or as much of it as can be ascertained to be infested, and the whole of the diseased branches stoonld be burnt; but if the young shoots droop in the spring, it is pretty good evidence that the triplespotted Currant Tinea has become an inmate there; and the only remedy is to to cut off the affected shoots and
burn them. Some good, however, may be accomplished burn them. Some good, however, may be accomplished
by catching aad destroving the moths ; and those who by catching and destroying the moths ; and these who
liave a microscope would derive much pleasure in exaruining the beautiful scales with which the Currant-sphins is so monderfully arrayed. - Ruriola.

\section*{HOME CORRESPONDENCE}

\section*{Root-Pruning.-These remarks have been suggested} principally by the "Hints en Root-pruning" by Mr. Rivers, and from reading an artack on those hints by Mr. Errington in the Gardeners' Chroniele of Nov. 6, 1841. root- praning it is escellent. phet, sn far as it allides to reasoning of a man well versed in the subject he undertakes to illustrate. The only fault that I can find is, that his examples are not exceedingly more numerous, and only made to apply to few kinds of rlants: whereas it may
be made the means of indueing that condition in flowering shrubs and orber plants, in addition to frait-bearing trees, mest desirable and useful, and as a means of rendering them not only more flower-bearing. but more partable, sad at the same time more ornamental. Mr. thuggh it mary be "as old as the hills," or the mountains, Which are oiler. yet it is none the less valuable or the
addition to the facts already adduced, or, which is the
same thing, extended them to plants which had not been made the subject of aloo, that mont good gardeners have long acknowledged the principle of ront-pruning, or, as they have called it, "disronting:" the repotting of Geraniums, or more properly Pelargoniums, in autumn, is a familiar instance; or perly Pelargoniums, in autum, is a familiar instance; or better ; and those plants are invariably more stocky and dieposed to flower than others not operated upon. It is to this circumstance that the Calceolaria vi
trecume fine phents, they are usully reduced the from the dimensions of a large-sized pot to that of a 24 searcely containing an eighth of the quantity of the forme one. I would mention, ton, that it is not merely a reduction of the ball of earth by slaking it away, but an entire cutting off of the roots and earth to the size required.
is the plan also admpted with the several kinds of Fuchsin acknowledged to be grown and flowered well here; they are first brought to a considerable size, that is, to a height of seven or eight feet; the F. globosa and kindred varieties, and the contca, to a small tree; and then, at the time at the root to the size of pot most calculated to suit them ; their branches are shortened at the same time, thas secur ing a correspondence between the root and branch. In the spring these plants are shifted, and throughout the summer, till they are made to occupy the pots they occupied before, or others which may have become more suit-
able in conseguence of the increased size of the plants. It was well observed by Mr. Rivers that trees should be rootpruned at a young age, or else the power of emitting new fibres or spongioles would be considerably lessened both age and firm hold in the soil; and so it is with plants in pots, for though it is possible to do, as I shall otherwise show in another paper, yet it is preferable to do so in a young age. Moreover, it is scarcely possible to disroot the second time at precisely the same wound that was made previously; consequently, every good cultivator would take care to allow a small distance between the first
cutting and the subsequent ones, which renders it of little importance afterwards at what age they are pruned, because they become familiar to it, and the habit of the plant becomes in time, like its roots, disposed to be bushy. -John Duncan, Menbury.

The Bay Tree.-I only received No. 44 of the Gardeners' Chronicle last evening, my newsman having by mistake sent another paper; consequently, I have not before had an opportunity of repiying once more to your with this, were it not to draw attention to the facts I bave recorded respecting the Bay. I say, facts; I make no distinction of laets which afterwards turn out to be false," and not a "true fact;" I consider a fact the truth,
which cannot be false. It appears to me, if this last Whiter cannot "Pe false." is unnoticed my verity or sanctity must be questionable. I felt it necessary, in my last, to speak

> decmedut in p. 002, in consequence or posing the case overrated." I beg to ref yo readers thereto, and to assure "P. P." my attention has been several times directed to the singular fact (as it appeared to me) that the Bay, having been frosted, does not drop its leaves, as other plants. I have ofter shaken Bays have been surprised at the tenacity exhibited; they hav parted with a few, the many have been retained; yet never supposed the brown leaves would again become green, which I now unhesitatingly avow is the case with many. I am satisfied further observation will tend to increase the facts I have stated, which do not rest on my
bare assertion; they have been confirmed by the observation of others, and I have felt a little surprise that "P. P." should continue so sceptical. As he referred to where it is said, "the witness of two men is true ", in this case we have more ; here three persons note the fact of resuscitation in the Bay; each is attentive to carefully mark, and make memoranda, and watch the progress of recovery. 1 am led to doubt whether "P. P." accurately marked the leaves of his Bay in various parts of the tree, in their brown and apparently lifeless state, or made any minute of their condition. I observe he says, "I have watched the leaves of mine;" if they were not carefully marked, and in various parts of the tree, it would doubtless be insufticient. As this correspondence has been entirely maintained fith a view to elicit truth, and aid the progress of science, I shall, if spared, be most happy to interest in the subject in the nest spring, should the Bays again suffer from the frost.-Juhn Radford, Winchmor Hill.

Advertisements.-If those persons who advertise in your paper for situations as gardeners were only to name the wages they expect, there would be much greater pro bability of their applications being answered than by adopting their present system, when persons, like myself of moderate fortune, are often deterred, thinking it useless, from making further inquiries, under the idea that the price asked would be too exorbitant for rather limited means.-A Subscrite
Dahlias.-The Dahlia season for 1841 is now orer, and many parties who have been buyers to a large extent must have felt great disappointment. Perliaps for the few new fowers advertised in 1941 there never was a greater lot o rubbish sent out. As an amateur grower myself, I intend teinger season to use the atmost caution in my purchases stamped first-rate at good exbibitions. I gead you a list
of the best I bave seen, which I place in two classes. Is Church's; Euclid, Ward's; Eclipse, Catleugh's Hero Lnion; Highgate Rival, stein's; King of Roses, Tont son's ; Lady Cooper, Jackson's; Scarlet Defiance, Com sins : Tournament, Catlengh's. 2d class; uncertain, bu Kieynes'; Haidee, Wihdman's: Indispensibie, Girling's Modd of Baih, Davis': Qaeen. Widnall's ; Uxhridgess of Ereadalbane An ohd Dahliar Giourer. rorms.-If "W. D. tries the following for destreyin perms on lanns, I fiatter myself he will no longer be will fully answer the end required: I can vouch for its killing the worms, and it dops not in the least appear to
injure the Givas, and it is now tlicee weeks since 1 applited it :-To three callons of water put a guarter of an oun corrosive sublimate, and water the lawn with a mate yot in the usual manner; this, I can assure you, is ti.e I hatiective method, and attended with the least troub expect the corrosive sublimate would kill grass as well as Cottage Gardens.-Landscape gardening is generall noked upon as the highest point of the profession, and excels in that department of gardening; but I believe that many of the essential requisites of landscape gardening could be introduced into cottage gardening; and if the one department be thought worky of a place among the
tine arts, I cannot conceive, from the nature of thing why the other should be rejected. If good taste and el gance and character and diversity be necessary in layin out a certain portion of country, in order that the imag nation may be pleased with the beauty and variety of the scene, is there anything to hinder the combination a these graces from meeting in a poor man's garden as we as in a lordly domain? Encouragement is given to schools of design, in order that nur manufactured goods may be ; prizes are amarded for figures thrown opon Brussels carpet, or a Dunfermline table-cloth, or a Paisie ribbon, and for painting and gilding upon the porcelain rare of Staffordshire, and the tea-trays of Birmingham and when their designs are finished, they are often bungled representation of some department of nature ; but if greater encouragement were given for the cultivation ruits, flowers, and vegetables among the working classe of the nation (for it is from the vegetable kingdom tha many of these designs are taken) and if they were taught in a scientific way to look upon created objects, then migh we expect to see something more pleasing than the anoma lous mixtures that are often exhibited upon the manufa tured goods of the artizan. Might not the gardens of ever rural district be as schools of design? By such simp? mea British prosperity and British ingenuity brought to higher pitch of elegance than they have ever yet attained high as the British nation ranks in the estimation of a rrived at its destined altitude, for the resources of the ail nd hor hiop are not yet exhausted. A Jor or a Niobe breathe in marble, and a pencil guided by Raphael will produce designs of perenmial duration, but when all is done it is only a dead picture and a faint repils sentation of a living model; but if rules somexhat simila those which guided these men were introduced into cottage gardening, we should witness productions brought forth by means of the spade, the boe, and the rase as pleasant to look upon as those that adorn the wails of a picture-gallery. In this place prizes bave been ofired for the most tastefully laid out and neatly kept gardens, and they have not been offered in rain: much tastern by good arrangement and excellent keeping were shown those members who competed for the prizes; the unera surfaces disappeared ; the borders of Crowfoot and Cow grass vanished instantaneousiy; the patches of Chicrwed and Spurrey and Groundsel were in a short time looked for in vain; the crooked rows of vegetables striving amons thousands of noxious weeds for the pre-eminence, wer exchanged for those of geometrical exactness ; the commun vegetables were treated as if they had been favourite flowers; not a weed was allowed to annoy them, nor a dead tear remain; their Boz and Daisy edgings were kept in ant ent trim-their walks finer, and the hearth-brush was wh thought too good to sweep them-cthey receiventleman's daily cleaning as is bestowed ufon many a gens has an drawing-room. Such keeping of cottage-gardens; when influence upon those unconnected with the socr neighbours they look upon the well-kept gardens of their ne s pulied they feel ashamed of their own, and many a wee repered up that otherwise would have remained to have pe conits seed, and died a natural death. Would it by encourg erring a greater benefit upon the communis instead of the ing the increase of such delightful spots, persons of taste representation of them upon canvas: delightful to bebed the real cortage maiden culling her flowers, or the thrity houservie gathering her vegetables, or the sunburut ta bourer dressing bis garden, as any imaginary ones \(p_{t}\) er were ever

To flower Salvins,-Mr. G. Fielder, Bohemiz, near Has:ings, writes that he fiowers Salrias in small pots, by tastan off cuttings in July, striking them in a cucumber suffer:p them as they are rootas in the frame. He says tha 80 raised they will flower from September till the end o

November, and that he has now many fine young plants
of S. splendens, patens, and fulgens, in 48 pots, not more of S. splendens, patens, high, with 3 or 4 spikes of flowers on each

Potatoes.-At a recent horticultural meeting in this neighbourhood, premiums were offered for the three best tubers of the Kemp seedning Potatoe. Threre were fube competitors, collows :-1st, \(67 \frac{1}{l} \mathrm{lbs}\) o ; 2nd, \(66 \frac{1}{1} \mathrm{lbs}\). ; 3rd,
weighed as 61 lbs :

Grafled Filberts. - I mentioned that Mr. Rivers, of Sawbridgeworth, had grafted some Filberts and Cosford of which are that it grows very fast, and does not throw up any side suckers. I had a few of these grafted nuts, and though they were not planted till very late, nearily

send you, has seven branches on it, and as many nuts as leaves. The nuts are quite as large and as fine as those on some Filberts adjoining, which have been planted many vears. Those who wish to have Filberts and Nuts in early bearing, cannot do better than to have these grafted trees, which, moreover, are free from suckers; and by pruning thei
Root-pruning.-Allow me to congratulate you upon our advocacy of the roo-pruniag of fruit-trees. I had known dwarf standard Apple-trees subjected
treatment in the north of Scotland with beneficial results and likewise here I have tested its excellent effects upon a large old Pear upon a wall with a west aspect, and which I am credibly informed had not produced two dozen of
froit in one season for the preceding 20 years. In Decemfroit in one season for the preceding 20 years. In Decem-
ber of 1839 , I had it well reot-pruned and top-dressed with a little fresh light soil. The following year about three dozen of fruit were got from it, and the present year 100 fine large fruit have been pulled from the tree. It is called Cuisee Madame, the fruit something like a Colmar, and fit for use in September. However, I am glad to earn that stoned fruit-trees may be successfully treated in the same way. Gardeners would do well to take the hint, but especially those who, like myself, have the misfortune of having a strong retentive soil to operate on, close upon Gardens.
Gooseberry Cutlings.-In p. 732 there are some re marks on raising Gooseberries from cuttings ; but an insportant point when planting them seems to have been missed, viz., the application of moss. A small quantity induces roots to develop themselves abundantly, and thus \({ }^{\text {a }}\) proportionate number of fine shoots is made. I hen the plants are taken up in the autumn, the moss is removed, and the bornsman.
The Deodar.-Seeing some queries about the Deodar Cedar in the Chronicle, I have sent a few remarks on it cultare and introduction here. The seeds were sent by the late Lord William Bentiock, I believe, in 1832, and only seven vegetated. Two plants were planted out when young, in a rich sandy soil, in a high situation. One is shoots this year, the tallest, 2 feet 4 inclies. The othe five plants sere kept cramped up in pots for six years, he roots splanteu poor red sand (but well manured with decayed Teares in the pits) ; they are now tine healthy plants, from 6 to feet high, and ail made 2 feet shoots this year. It is adrantageous to prune off the lowest branches when young for cuttings, as from the natural tendency of tire braneliss to droop they soon reach the ground. The plants of which pruned the lower branches the most, are now the tallest and getting more in the tree form. The laterais ousht not to be pruned. I raised a great many cuttings in lass
off the two largest plants; they are now growing as fast off the two largest plants; they are now growing as fast 2 seedlings, and will, from their appearance, wate as ine
trees. With regard to soil, I have pianted out some in a low situation to the lase; the soil is an alluvial inuestone Fith a very wet subsoil. Tuey do not grow well in it, the foliage looks a sickiy yellowish green. I think any soil Tillery. Welbeck Gardens.
Truffes.-In a young Oak wood bere the Truffe grows in great abundance, especially this seanom. I gathered
and quite ripe. As we bave no dog to find them, we are
indebted to the squirrels, mice, and slugs: for they all seem to prey upon them as soon as they begin to get ripe. bottom of the lake many pears ago. I intend n:ahing two beds of the same description of soil, for their artiticial production. ones taken up with balls of earth without disturbing them; kitchen. I will not fail to let you know if the result is successful.-W. Tillery, Welleck Gardens.
The Tangerine Orange. - I beg to draw attention to small plation of this as a fruit for the dessert. - One it quite ripe; the fruit is most delicious, far better than any Orange I have ever tasted grown in this country. - W. Tillery, Welbeck Gardens.
Substitute for Turf Edging.-In the 12nd Number your correspondent Mr. P. Mackenzie recommends the Oxalis acetosella as a sabstitute for turf edgings under
the shade of trees. It is pretty well known to gardeners. the shade of trees. It is pretty well known to gardeners,
that the leaves of the Oxalis acetosella disappear about the end of Nor., and are not seen again till the month of April. Beautiful as our little trifoliate inhabitant of the grove is, and suitable and pleasing as it would be as an
edging under the shade and drip of trees during the summer and autumn months, it, however, must be objectionable as a permanent edging in such a situation, on account of the perishable nature of its foliage, especially in the gloomy season of winter, when the loss of its leaves as an edging would be most deplored. I think the Tinca minor preferable to the Oxalis acetosella, as an edging under trees, especially under Laurels and other broadbe always pleasing to the eye, whether in flower or not. It of course will not be so easily kept within bounds as the Oxalis. I have been pretty successful, on a smal scale, with the Saxifraga umbrosa and Claytonia virgiaica.
There should be a few stones put in among the plants this would help to prevent the hands of the careless drawing out the plants with the rake. There are some pieces of beautiful natural edging of the Polytrichum commune, by the sides of the walks in the woods here. Would the Poly trichum not be a good substitute for turf edgings under the shad
Cucumbers.-It would be well to caution gardeners against being deceived by the flaming representations of pers sate whe bur from experience that some of the pretended "new and improved" sorts which were sent out last year at high prices, are much inferior in merit to old kinds known in everybody's garden.-J. B. Whiting.
Fuchsia fulgens a Fruit-tree. - I understand that the Fuchsia I mentioned was a genuine fulgens, and not
one of the hybrid sorts. I selected a had expression in one of the hybrid sorts. I selected a had expression in
saying "pale rellow." My meaning is, that from being of a good green, the fruits turn yellowish as they ripen. remember to have eaten the ripe fruit in three different places, but not to have observed the colour sueh as Mr. Ayres describes. There are so many seedlings raised, tha sariations may occur both in colour and taste. The merit most people will agree that it offers fair promise, as a frait of the first impression, and not very far removed from its crab state. For culture merely as a flower, is, comparatively, little to the purpose. Whereahouts would the Apple and Pear be, had varieties nerer been raised, ider the el-ments combined in a generous and high-class fruit to sweetness, acidity, and flavour (the Pine-apple and Passiflora edulis being perhaps the bighest of all), and those in which sweetness entirely predominates (hike the Golden Drop Plum) to be the basest class. I think the berries of the \(F\). fulgens have a portion of those three qualities; but it is idle to discuss a matter of taste. them. - A. Herbert
Raising Ferns from Seed.-You will much oblige me by giving sure directinns for growing Ferns from seeds, of spores, as ther are called. I have tried the plan of growing the spores in a thoroughly shaded damp spot; but did not put a piece of glass over each pot (sunik in the ground) as recommended hy some persors. .. y patience extended to two years, which 1 have reasol for rather and long enough. Auother way I hare tried (or with and trying), is to sow the spores in arr-h elassan eart mixed as directed in a work upon Ferns. and moistenel with water. But after sis montus trial, bye servation, seed readits of themselres in very open parts of a garien hut it is with regard to foreign Ferns, such as Onoclea Struthiopteris, Aspidium Goldianum, \&c., that I want information. I hase struck some cuttings of Pelas war to both in sand und in chareual, but was not in ercoal stiuil the soonest the result. I think those mided difference in the the soonest, fut chere of coting, those in the charcod being .inch pore pimas-looking, and dark in colow. being much the with whast those shack trast. I tried aiso some Ald. shath close to gether coal and sonse with pow a in a sandy son, aud soth highty ma ber but nothing is a trifing degree in fand? the the bering either of them one over the other--G.B.M. [In the hot damp atmosphere of an orchidaceous bouse, we fre quently see tropical Ferns regetate by thousands, without
ripen and fall either in the cresices on the damp walls, or On the turfy peat osed in potting or hanging up the plants Here being shaded by the leaves and not covered deeply circunstances as if they were in damy trenical jungles where they grow so well. All that is necessary, therefore, to rase them is, to imitate on a small scale what nature does on a large one. If a damp house is used for the purpose, nothing farther is necessary than merely to scatter the spores on some turfy peat. or in the eneviees of the walls. Or, if a house, with a het dry atmosphere is usent, it will be necessary to cover the pots containing the spores
with a bell-glass, a glass case, or something of the kind, with a bell-glass, a glaas case, or something of the kind, in order that a damp atmosphere may be created and kept
round the spores. It very oftem happens, that even with the best treatment Pros fil the spores are not in good order, and this may have been the case with those used by our correspondent. ]
Severity of the Weather.-If you have not had any in timation of the extreme degree of cold with which this part ested in learning that the frost has heen such as is seldom experienced at this period of the year On Monday the 1 isth, snow fell heavily in the afternoon and continued folling for several hours, and during the night the therfalling for several hours, and during 16 the was moderately mometer fell the ; which was very thick on the ground. remained, and the night was excessively severe, as I found on Wednesday morning about nine o'clock the thermometer standing at \(20^{\circ}\), and thut it had been, during the night, as low as \(5^{\circ}\). This was such an extraordinary degree of cold, that I was at first inclined to doubt the correctness of my thermometer; but as I have since learnt from undoubted information, that at Bucknell, two miles distant, a friend of mine actually saw his glass down at \(1\left(0^{\circ}\right.\) early in the morning, and as it was not a register it might have been lower; that at Weston, four miles distant, the thermometer fell to \(1: 2^{\prime}\); and that at Kingham, fifteen to twenty miles to the westward, it feil to \(x^{\circ} ;-1\) have, therefore, now no reason to doubt the correctness of my om thermometer, as a more or less sheitered situation would make the difference of a few degrees. On Wednesday night, the froet was very slight, and we have since had very mild weather. The thick conting of snow with which everything exposed was coved, appears have preserved many half-hardy plants, for I find Petunias, Verbenas, and even Maurandia Barclayana, very little injured in my garden.-M Mddeton Stuney, near Bicester.
Perry.--It requires no sugar to sweeten it; it is, like beer, sweetest when it is new, but if not well made it will turn sour very soon; it is generally fit to bottle in March, hut some sorts are never fit to botlle. Your correspondent should have named the sorts of Pears that his was made from-Can any of your correspondents inform me if must, that is, the refuse left atter making cyder or perry, the way of tanners' bark, for it retains heat for a long time the way of tanners bark, tor it retaill :-C. II

Miscellanea.- You hare many inquiries whether Salvia patens is hard.- 1eft a plant out iast winter without any protection, except a little old tan over the root; it came up very strongly in spring. - Yuse if 1 mistake not, it re quires hot coals to be put into it. This, in practice, iu-
 dener. I have used the common Arnott in my greenhouse for two winters with perfect success. It requires a zinc pan of the same size as the top of the stove, with water in t, which will comstantly evapurate. It will not beat to be forced to any great heat ; and I find from experience thay mb greenhouse, which is 18 by 15 , requires two in very cold weather. This is much better than forcing one to a great heat. The Arnott stove requires hours. The cost
ance, and may be left for eight or ten hour of fuel is about ten shillings for each store for the winter. Mr stoves stand at the back of the greenhouse under tre stage. I have a second dorr, by which the gardener gets to them. I did not lose any Geraniums during the last severe winter.-Are you aware that Bigarreau Cherry will ripen perfectly on the north wall I have one, the fruit of which is very much admired. Wect n other Cherries, except Morello, do for or six fruit and can you supply nie wre ss that portion of my garden is tunt of little use to me?-A. Leslie Meirille, Branstion Haib, Lincolh,-[Where the Bigarreau succeeds, there reed be little hesitation in planting almost any other variety of Cherry ;-say the May Dake, Kentish, Eston, or Downton ; the Jargonelle and Hiscmas the Bezld'HeriPears : and if a sear abundantiy
Celers.D. R. remarks that the ustial method of earthing up Celery seldom prevents the frost from reacining the plante, on account, as he thinks, of the ridge being made firm and smooth by the spade. He recommends that the Celery should be planted at such a distore he ways admit of the earth being roughly thown up, for he says will a smooth one. The soil should not be closed on the heant of the plant, but well pressed round it with the hand, leaving room at each earthing for the growth of the Celery. He advises every gardener, and particularily oottagers, to grow Seymour's Celery, which is a dwart white kind. the leaf-stalk heing broad. solid, sud fineflavoured: and howrerer eanly it may be sown, it never mans. It requires less iatmur than the laryer varieties, and yieids an egqual quantity on the same space, as it is ot necessary to have su ereat a distance between the rows.
Forcing Rhubarb.-Mr. Watson, gardener at Norto a
dung than is required for doing it Sea-kale fashion, and with greater certainty of obtaining it at a particular time. The frame he uses is one in which Cucumbers have been grown the previous summer, built on a level of dung back and front, and hollop underneath, similar to that d of the soil in which the Cucumbers have been grown being taken out. The Rhubarb plants having been two years planted out in rich soil, from single eyes, they are dug up with the roots as entire as possible, and with all the earth about them. They are closely packed in the rame, and earthed up about an inch over their crowns, and at the same time well watered. A good lining of hot dung is between \(50^{\circ}\) and \(60^{\circ}\), which is allowed to rise to \(70^{\circ}\), with sun heat. Air is given when the weather admits, though unly seldom at this seasun. When the heat decreases, the lining is forked over, frame is well protected with mats, advantage being taken whenever it is sufficiently mild to admit a little light for an hour or two, to give the Rhubarb a green colour, which it would not have if grown in darkness. The plants are placed in the frame in the last week in November ; and Mr. Watson says he had Rhubarb fit for use on the 7th of January last year.
On that day the temperature out of doors was \(10^{\circ}\) Fahr. The Rhabarb was of excellent quality and extremely tender ; and from the frame baing hollow undemeath, was continued to produce good supply

Icehouses.-I greatly approve of Mr. Paxton's plan of an icehouse, described in your last Number; but as it is I beg to suggest that the aperture should be at, or near, then turned in with incomparably less labour. It is often observed relative to many subjects, that one fact is worth
a great many arguments; and a popular poet has well said, that

Facts are chiels that winna ding,
And downa be disputed."
Take then the following relative to ice, as it will in some degree realise Mr. Parton's idea that ice may be kept nt much less expense than is usual. Last winter-I of a small ravine or "gill" scooped out, something in the shape of a parabola, as that happened to be dictated by previous circamstances; and in the severe broken together, and piled up in the shape of a blunt irregular cone, surruunded by hurdles to keep off deer and other cattle, and covered over with old thatch and any 15 to 18 inches. This was done as an auxiliary to our icebonse, and predicted to last till Midsummer. The fact is, howerer, it held out the the ef alkhough regularly attacked daily, and often two or three
times a day. all the eummer. It was fartially shaded with times a day. all the eummer. It was partially shaded with very laree thes, bat quatc open all round. A Mr. Taybur
has fonmb faule with your correspondents for not giving their names; I think in all cases they ought to give them to you, Mr. Editor: but there may be many circumstances tending to deter others who are not such botd men as Mr, Howerer cigent the reasuns to the contrary may be in the eationation of any one, I must beg to content myself is he mean time with my old cognomen- \(Q\).
Lav of Gardens.-A person having put into his garden come Rose trees and evergreens, has he a right to take The Cedar of Lebonon.-In an artiel Nov. 6 , upon the merits of this tree, the ritued. D. \(P\). I understand him, of the adaptation of that wood to orin Mratal carved work as something new, and almost as if Mr. Wilvos of Wrarwick bad been the first to find out its good qualitien. In your note to the article, you say
that \(s\) the fact mentioned is the first that has come to your knowledfe of Cedar of Lebanon being fourd of insportant use." If I mistake not the kind of Cedar used kand am sure tcu whi correct me it am wrong), Cedar, and I presume Cedar of Lebanon, far more in teresting than that mentioned by \(D . P\). In the old Mansion-house, near Camberwell, and on the London road, belonging to Sir E. Smyth, Burt., and mow used as achool, there is a sall room (I think called the Cedar which wreaths of froit and flowers, and in one part a hawk with wingse expanded, are carved of Cedar, with ull himself. It is said that he formed his designs in this ouse for his famed carvings in the choir of St. Paul's. B. W. - [The wood here alluded to can hardily be Cedar of Lubanun, because the tree was not introduced into ia 1630 , whale libbons died in \(15: 1\).

Are Piants Light-seehers? - It is quite true that plants are not sentient beings, ard therefure cannot be seekers nor desisers of light; but they are true followers of it and in proportion to the distance they are from it, so is swiers and fruit. But this of course varies with the naiistance from the one may be removed at a much greater cistance irom the ligat then another, and still both shall be equany seaithy. but take such a plant as Alonsoa in cisifusi. and make cutting from it, and insert them in close pit oframe in the following order: -the first at 2 feet from the glass, the second at 2 feat 3 inches, and
the third at 2 feet 6 inches; the result of this is just

What micht have been naturally expected, namely, the
first in the order placed aiil be routed, and the cuttins first in the order placed niil be routed, and the cuttings rery little grown, while the second will be more elon-
gated in the tops, and only callused at the roots, and the third grown to the height of the other two, but neither rooted nor callused. This is so much in explanation of What may be expected to result from increased light near the roof of a greenho
Destruction of Thrips and Aplis.- I have read in the Chrouicle several methods recommended for ridding
plants of the former of these little pests, which, from the drier atmosphere of our stoves, is at this time apt to make its appearance. Mine, an unfailing one, is fumiga-
tion with tolacio as for aphides; and 1 find a sighter tion with tobacco as for aphndes; and will a fuice. The
dose than it takes to destroy the latter will suffice power of the different species of aphis to resist the action of nicotine varies a good deal. That of the Chinese Chrysanthemum requires a very much stronger application
thau those of the Pelargonium and Rose to kill it. This is perhaps owing to the thick skin of this squat species, and the fact that the individual insects sit so close togesmoke. As regards this species especially, I find it very vesel, into which I can dip the flower-buds which hav any insects on them, previously to the opening of the blossoms, without being obliged to fumigate the whole house. It matters not, indeed, in what way the nicotine
is applied, but it is very desirable that the insects should be destroged before the florets show themstlves; for especially into the cubular florets of the quilled varieties and a distortion of the flower is the natural consequence Indeed this species serks refirenient, and approaches in ha rather than the bare stem or leaves of the plant, hike most of solid honey-dew around it. Probably there is something peculiar in the juices of the plant which causes the secre-honey-dew of any other plant in the same greenhouse was crystallised, even at the cold season of the year, when the Chrysanthemum flowers; and yet during the summer months, I cannot remember to have detected the crystald weather and some peculiar matter is the cause.
Run Flowers.-Dr. Horner considers that I have been betrayed into error and misconception in my remarks upon his "Brief Essasy on the Causes of Foulness of Colour in the Carnation." I merely wished it to be understood that an over rich manure would cause constan of proof; for if twenty growers, in different parts of the couvtry, were to ase it in the like state, the same results would follow, Not so with manure in its reduced state, for when it is three years old and upwards, in my opinion, it will neither cause a flower to flush or run its colour ; nor winit re;
 considered as over nutritious when in that exhausted condition. Dr. Horner complains of my taking parts of two sentences of his essay; I will take the whole, and grant
to any grower the substance of it, viz., " food of the pro per quality and quantity," and favoured by kindly seaons; and then 1 do not hesitate to assert, that there wis and will so continue until it be traced to causes indepeadent of the soil. In what other way can we account for the following cases? Out of three or four pairs of plants layered from the same Carnation (a flower perfectly clean When in bloom), planted in the same soil, placed in the same situation, with every advantage of good man; and long yet half will be ru flowers and the others clean; and lung
before the time of blooming, the practised eye of the skilful cultivator enables him to detect the difference common border, planted entirely with run flowers, without any care or attention, 1 have often witnessed the return for in and purple flakes to which Dr. Horner planted the run Purple Flake in the nutritious soil (viz., cow manure sis jears old mixed with a little sand, and which, in my estimation, is a very near approach to a poor soil), his experiment falls to the ground. Few Carnation growers ever pesorted to a poorer soil than that recommended by Dr. Horner, and none, of course, ever used manure in the condition of that flllows, that the greater number of cultivators have been using soil proper, in quality and quantity, for years past, and yet every season we have a large proportion of ran flowers, which confirms me in my former expressed pendent on the suil. - Dr. Horncr considers that "a colu aral ungenial season, which cra:aps the energies of the plant and prevents the due tlaboration of its nutrient juices, will cause the flower to degenerate and its colour to rum; an untoward season being tantamount to a poor. soil in its ultimate effects upon the plant." I cannot ac knowledge this to be the case win a constalt flomer, a injuring the pe:als, and with an inconstant one it is impossible to prove that the cold and ungenial season was the cause of foulness of colour. As far as relates to soil, it is useless to try experiments, with an uncertain fiower it would take ages to prove anytuing ; my experiment would have been worthless, if, instead of Holmes's King 1 had taken Imperatrix Florum, one of the most inconstant Tulips grown, and whether planted in the best prepared
beds, loam, peat, reduced manure, or any other soil, it will
bloom two or three years foul for one clear. With sneh extremely rich state, caused foulness of colour. Dr. Hor. principles, from my having stated tnat I had bloomed twn Tulips perfectly clean in horse manure four years wh; ;
may be very goud logic on his part to make it appear so but I never asserted that the manure was the caust of their blooming clean; I mentioned the experiment in order to tushing fowane in its reduced state had lost all power of and permanency of florists' flowers depend much upon the race from which they spring, a circumstance not notice more fully allude.-James Dichson, Acre-lane. Brizine Fully allude.-James Diekson, Acre-tane. Briaton subject, for since my former notice I have received sereral communications from some of the first Carnation erower in the country, who perfectly coincide in my news urum his subject.
ronunciation, \&.c.-Sweet Sir,-Will you allow one
knows nothing about the subject to make an obserration on your little dispute abent the pronunciation of Fuchsn,
You are all wrom. You say it is derised from Lembhan Fuchs. This worthy I presume to have been Teutonic of

\section*{origin; and it so, his gatue should be pronvunced Fudals
or with a guttural which is known to Scots, Irish, Welsh,} and Spaniards (besides the Germans and Dutch), but not fore all vowels; the Scotch loch, Buchan. Welsh word having \(w w^{2}\) in them, as wchi (you); and the Tuscan
patois, wherein \(c\) is pronounced as a guttural \(h\), as hhamion for camis hime alo for caralle. give the idea of what Fuchsia should be, if it be ot Ger to change the subject. What is the vegetable the quickes made this year:3 feet or more (for I cannot stretch it into a straight line); the curls in it would give, perhaps. \(t w o\) feet more. It was very beantiful, terminating in a
bunch of flowers; a single strobile being the rery eni We have Roses planted in the spring that grew from if th to 16 inches a week all through the summer, and made 18 ft . of shoot. They are still growing with every mild day Your admirer,-Wood End.- [We do not for a mometi dispute the correctness of our correspondent's criticism but how is the sound of the guttural \(h\) before s to be made intelligible to English except by \(x\) ? which although no exact, is as near as we can make it in any Latin wot
The rapid growth of the Hop and Rose is scarcel The rapid growth of the Hop and Rose is scarcely by some Fungi, as the Giaut Puff-Ball, which bas been known to grow from a mere speck to the size of a large Gourd in one night.]
Twitchet's Don John Carnation.-This splendid scarlet bizarre when shown at the South London Floricultura Society was, early in the day, in so shrivelled a state that it was difficult to form an accurate opinion of sone of its properties: since that time our ideas of its superior qua lities have been contirmed by a florist frlend, who hal opporturities of secing it in its best state, and upon whose judgnent we place the greatest reliance. The flower in its general form is first-rate ; the porl is good, it has plenty of petals, and is well up in the crow. the stripes an clear, the colour is well distributed, the white is free from spots and of great purity, the flower is very attractive fro the extraordinary brilliapcy of the scarlet stripe, and in It is in this is superior to any Carnation we tave oce in the Florist's Guide fails to do justice; but it is proper to state that Mr. Wakeling has done all that his materials could effect its class.

\section*{MISCELLANEOUS.}

Notes upon Beeeh Trees not yet introduced into Greal Britain, but uhich would probably prove Hardy.-The Fagus betuloides, Capt. King informs us, grows to a very large size : one iree, supposed to be the same as that noticed feet in diameter, at serenteen feet abore the roots, and there divides into three large branches, each of which is three feet through." -The size to which the Fagus antarctica attains, Capt. King does notstare, but form men just quoted, it would seem to constitute a tree of no smal dimensinns. "Besides the evergreen Beech (F. betuloides)
above mentioned, there are few other trees in the Strait that above mentioned, there are few other trees in the Strait that can be considered as tiluber. Such an appellation only
belongs to two other species of Beech, and the Winter' Bark."-Fagus Cunninghuii.-It has heen long known that a species of Beech imhabited Van Dieman's Land. Mirbel, who in the Mémires un Misénm enumerates all the then known species of the genus, alds." Je ne cite le Fagus qui, selon Cunningham ( King's Surrey of the Coust
of Australia, v(l. i. . \(\ddagger\) 3 ) , croit is la Terre de Dieman tuais elle n'est encore decrite ni nummée." The allusion to it in King'a Australia, by Mr. Allan Cunning lanm, is where that distinguished travilier and botanist
gives an enumeration of the sereral speries of trees that gives an enumeration of the sereral speries of trees that
grow at Pine Cove. Tan Dreman's Lind ; and when ha says, "Amentacea-Fdyus, natire Birch; height 40 feet,
diameter at the base of the trunk \(1.2-14\) inghes." ()riginal speciniens gathered by Mr. Cunningham at thi place (Pine Cove) are now before me. In 1831 and 1833 1 received specimens from the late Mr. Lawrence marked "Betula antarctica," but nithout flower o frin. Cnder this name it is allucted the "a most com mon and remarkable Indigenous Plants of Tan Dieman Land, given in the Van Dieman's Laud Alnamack fo Botanical Magazine in How.ker's Conyan:on to the that intelligent gentleman observes, "or Austrahan Myrtle is a beautiful dark green-leaved tree, growing in man
parts of the island, and forming the great ' Myrtle forest 20) miles long, in Emu Bay. It is formil on the side of Mount Wellington, but has not yet been successfully in rodaced into gardens. This tree, however, is not a specie pearing to hare been mistalen tor the male blogsoms by the English botanists." In 1837 and 1838, I had the pleasure to receive numerous specimens fioni my invaluable orrespondent Mir. Gumn, and from Dr. Milligan. Fron wese gentemen we learn that it is a tree, fur uints in ther
werts of the land is almays of the richest quality; and of so um bragenus a character are they, that Cryptinanious plants
alone can exist beneath them, or trees and slirubs of peculiar habits. Herbareous plants, as far as can be recoltimber resembles Elm in appearance measured whose trumk arr upwards of ference.-In Southern Chile grows the Fagus procera Bridges states that it is called Roble, and Pell n-timber by feet. Poeppig says, "it is a tree from 80 to \(1 C 0\) feet bigh, that it is called Rauli by the Chilenos, and that its irg. Cups and platters are wate fiom the harnt iruuks Which lie prostrate in the forests after great conflagraticns,
and are known under the name of Pellin, whence the Cbilian word Appelinar, to carbonize the outside of a tree, are remarkable for their hardness and thest Journal if Botuny. [A:I these species of Birch must be objects of great ornan.ent. These from South America inhabit a clinate ty tuite hardy. Tue Fazus Cunninghamif, fiom Yan Diematis Lath, cond riy suehowever, and the West of Ireland, it would find itself at home, and we hope either Mr. Gunn, or Mr. Valentine, or Mr. Bunce, win one of Wrocure's cases. This is the culy way in Ihants in one of thards cases. This in to reach England alive with any certainty.]
, pon the Souing of Seeds in Shouc.-For the last five
years I have pursued with great success, at the Hague estabiishment at Erfurt, a plan of planting in soow various kinds of Alpine phants, as Gentiana, Ranuaculus, A nemone \&c. In the gardens of the north of Germany the method of growing Auriculas with snow is a very well known prncedure. In the beginaing of the year the idea occurred to me termination might be extended to exoticed a parcel of New Holiand seeds, consisting mostiy of Papilionactæ and Mimosere, with some Ericaceme, Rhodoracere, Cactacew, Cucurbitacex, and seeds ont of various other families, in with a larer of snow, wa which the seeds were deposited, and orer these agaia was placed another larer of snow. The seeds thus planted were placed in a hothouse under a closed glass light, and the smow allowed to melt at
temperature of \(12^{\circ}-15^{\circ}\) Reamo. \(\left(59^{\circ}-65^{\circ} \mathrm{K}\right)\). I was not deceired in my expectations; after two days some of the Acacias germinated, as a. crerulea and Cunainghamil, and many Mammillaris, as M. ancinata, \&cc. Niot oniy expectations, quickly, and in good condition. In this
piren. In the last instance I did not crother pur I had done earlier, with a sandy earth, after the melting of the snow, but did it immediately on the aprearance of the athoot. This plan is, I believe, unirersally applicable to
the sowing of plants. If no fresh snow can be pro cured, frozen snow such as is lept in ice-houses will answer as well for use in the summer. Beuido the many ung phenomena in the phystology of germinatio that this treatment of the seeds of phats presents, it is
great practical importance, as ky this meant a number of injurious influence on gernunatios. Thas them nauny seeds, enfeciali!y of the legrminene, a thank getatinous substance is given uff, Which if excluded trom the atmo-
sphere, exerts an injurious influence on the gerninat.on of the embryo, but if exposed to hie alr is larmless opinion on ti is subject, in a letter whech 1 received a fer days smee. It af pears to me, he says, " that the hoser nature of the snow, which permits a jerfect access maters. decomposing regetable matters, and the presence of rola ile alnol (mine ma) this remarhable phenumenon." In Riboduractat, the seed must be sown uncovered on the earth, if it be wistied that from the necessity of a free accese of the aar fur the germination of these plants. There is also here a equally evident exclusion of all carbonic acid during the frst period of legetation. Mr. Lucas, apoibecary in Armstadt, a physulugist and phrioctienist, and a very
explienced amatur, to whani 1 wrote a fuw weeks ago, on my first experiments on sowing in seow, re pends on the follosinig circumstances: 1. The seed being placed in snow, the surrounding temperature cannot of reduced lower than the freezing point, so loug as show
present ; the witer, ahoo, is nit heated above this point, so that it cannot aci upun the seculs ly carying anat any of the matters nibithate necessiry to its germination. 2 As the resulting snow-water only noistens the suriace of easily taken up with the air which it contains into the interior of the seeds by means of its cellular tissue. If the seed is too moist, the equal pressure of the fluid does not termit the softening of the seed, on account of the consnow affords a water very rich in oxygen, which is thus supplied to the seed. 4. The snow, on account of its cose nature. does not prevent the influence of the oxygen of the air. and thus this ngent is suppliced from twe soluces. vital pruciple of the seed eren in A! pase rtants, a temperatare of at least \(1: 0\) Reaum. for if such seeds were treated in the cold, nothng would be produced, and the seed would run into a state of fer-snow-water is increased to double its rolume. Tue further results will be communicated in a subsequent paper.-
The Sale of Mro Bausers Draioings took place last Wednesday at tive rooms of Messrs. Cbristie und Manson. \section*{1REbitus}

The Fruil-Grourer's Instructor, being a Pracical Trentise on the Cultitation and Treatment of Fruit-lrees, Ye. \&c. By George Bliss. Second Edition. London. IT is a great pity that this book was not examined by some judicious friend before the author committed it to the press, for he might thus have been spared much discredit,
and his readers some disappointment. Judging from the title-page, of which we have only inserted a small part, it should treat of the management of all kinds of fruit-trees, both out of doors and when forced, and should also furnish descriptive accounts of all the best varieties cultivated in Great Britain. But it does no such thing. It contains a Apple-trees in the nursery, the garden, and the orchard; and the cultivation of the Pine Apple is treated of at length : these two subjects, in fact, form the most important part of the work; but upon the outdoor management of the Pear, Plum, Cherry, Peach, Nectarine, A pri-
cot, and Vine, the author is almost silent. And as for what he calls his descriptive accounts of all the best fruits, we can only say, that we can discover nothing that answers to such a denignation. We ind, indeed, some very meagre and most imperfect accounts of this sort, but so inconceirinstrne executed, that instance, are we to think of a writer on fruits, who omits all notice of the fine new Flemish and other Pears, which constitute the most valuable part of modern gardens ; who admits the uneatable Black American Walnat among the finest kinds of that fruit list of Strawberries; who includes the golden and the list of Strawberries; who includes the golden and the
silver-striped, and American Chesnuts in his fine kinds of that fruir, and omits the Devonshire and the many really valuable varieties now in our gardens from the south of Europe: or, finally, who ignorantly gives his reader, in a list of Pine Apples, all the species of Bromelia! which are not Pine Apples at all.
We confess ourselves puzzled to give a fair character of Mr. Bliss's performance. It is obvines from what we have stated that it is not to be commended in sonie respects, internal evideains a good deal of very useful matt that it is written by a man who understands some kinds of gardening extremely well. The direstions for the manageamong the instructe are excellent, as far as they go; and that a gardener will do well to attend to carefully, for in those parts of the work the real experience of a good culthose parts of the work the real experience of a gocu cul-
tivator is manifest. Perhaps the best thing we can say about the book is, that it is north the small price that it bears. We advise those who buy it, to tear out what Mr. Bliss calls his descriptive accounts of all the best fruits. to smile at the good upinien he takes care the world should know he entertains-n. \(t\) of th-but of hunself; to ship his theoretical reasoning when it gecurs, whech, fortunately, is not often; and to study carefilly the really useful matwhick remaias, when all such claff is tlown away.
dwarf Apple-trees may be taken as a favourable sprecimen of the work:-
- Par. 12.- The proning of Apple-irees is a most important thing to attend to, and to understand, both for production of fine frait, particular!s dwarfs, of which 1 slall fir-t treat: I mean pommon dyarts cailed wh some dwarf standards) and not dwarf tramed treas. tree has onit cne or two shoots, it is then nucessary tree has onis one or two shoots, it is then necessary to
cut them down to four or tive buds, to get a sufficiency of wood to form the bottom of the tree; the following sen-
-on leave abnut five of the most requ!?r =t.onts, whith win be quite sufficient, or even four, for they are hone that
better for t,emu crowhal with linhs from the tem. But
 scarceiy make any growth, they had betior stand ome sea aftir phating before thes are headed dom: but sicuan in the nursery, Lasing enough thoots to form the buttom f the tree: I shonld not leave more than six shouts a the outsice, but what you take out, take out clean, and be
sure not to lase ans blemish, nor bruise the lhark sith the knife. I here beg leave to differ from thase who recommead heading dusn dwarf Apple-trees, when they hare
wond suftichet to form the boltom of the tree: I prefer leting it remain, for, as the new wood will grow but little hie first year, the shouts will swell and get strong, and it young shoots: ti.is. perhaps, will alarm some to allom the rite to bear so young, but it must be remembered that sides, it is necessary to throw them into bearing eariy, to serp them from growing too luxuriantly. It is useless rround, while, by proper management, you can get an equal quantity of fruit off a tree half the size, and that fruit finer, and the tree kept sufficiently strong and in per the tree having stood two years without being headed down as before described, it will throw out some young hoots; thes the original shoots to grow straight up, till they get to the height you wish them, say five or six feet or higher spurred in every y year, to about two buds, nearly the same as you would a Red Currant-tree; by this means it will throw all those spurs into bloom buds, and 1 have seen, by
this process, the trees hanging from bottom to top with Apples like ropes of Onions; and by pruning away al that superfluous wood, the fruit receives the whole strength and nourishment of the tree ; and besides, by this method you not only throw your trees into bearing, and produce
more fruit, bat they have the advantage of the sun, essential both for their flavour and beanty; the trouble i no more than that of pruning your Currants and GooseWhe, and surely Apples are worth as much attention leave a clean young shoot, and the following year remove an old one, and by so doing you will keep your trees in young, healthy, bearing state. Dwarf A pples on the smal space than those described above, and by this way of proning, the trees may be, with proper management, Iep perfectly free from the canke
The Farmer's Almanac and Calendar for 1842 con tinues to merit the favourable opinion we expressed of tha and is we should think, indisnersable to all persons encage The annual circulation of a book of thi find, in whic the discoveries of art and science are con tinually made known to the large mass of cultivators inter conside the application of them, is in itself a mater considerable importance to the community. Having spoken re should call the sttention of the eathors to inaccuracy which should be avoided in future. Some of the best modern chemists are of opinion that snow-wate loes contain enriching qualities, and therefore "the old darmers "do not appear "to have been dreaming" when some omission which entirely destroys the sense of the principal part of the calendar for April; it would appear as if sabsoiling in fine powder at the rate of \(1 \frac{1}{4}\) cwt. per acre increases the produce of grain and straw; this is will puzzle simple readers. Finally accidental blunder called nitrate of soda, instead of nitrate of potash.

\section*{Price's Modern Gardening}

Mr. Patron has favoured us with the following ac count of this book:-Seeing advertised upon the wrapper of "Chambers' Edinburgh Journal," a cheap book on Modern Gardening, by J. Price, Nurseryman and Market
Gadener, published by Dean and Mundar, ThreadneedleGaidener. published by Dean and Munday, Threadneedie
street, I was induced to send for the work to see whether it contained the experience of some extensive grower, or was a suitable book for cottagers : but, on referring to its pages, it struck me very forcibly that the directions contained in the body of the work had been read by me many vears before. Upon turning to Me Phail's "Gardeners Remembrancer," I found, ul on comparison, that the noo dern book was a verbatim cops, as far as it went, of the same subjects in that old author: and to show how il suited the directions giren in this book are to small gar dens, I, at random, take the article Cabbage, of which in it there are ten ur eleven sowiligs reemmmended for a suc-
cession; and yet in August, the month every cne sows for their main spring and early summer supply. there is not a rord respecting soming, although, in September, it cer tainly recommends the Auzust-sorn to be "Iriched out."
Now the idea of ten sowir rs of Cabbage luinz necessary in aay one garden in a year is ridichous etough, when three sowings for Cab bage and two for Culemorts with form a rerfert succession; but the ragneness of the directions innaghout is as ereat an evil as this, espertally if placed in the hands of the cottager, where from its price, 1 c . fid hbraries I know it has been placed by well-meaning persons. A book of this bind is muck more calculated to
mit-lead tion to ass: t tiee uninitiated in the arranzement or space wach crap wand weut: itr in andens of the

\section*{NEWS OF THE WEEK}

We learn from France that the diplomatic relation with Spain, 世hich had been seriously complicated by the recent insurrection, lave assumed a more friendly aspect The energy displayed by the Regent in his late proceedings, and especially in his decrees against the revolutionary Junta of Barcelona, is said to have propitiated the Frencls Governmeat, and created a lively interest in his success and maintenance in power. This intelligence is regarded with the more satisfaction by the friends of Spain, as it proves that the French Goremment will not iJentify itseif with the cause of Queen Christina, and that consequentiy an armed interrention is to longer probable. The decree of the Court of Peers, in reference to the late attempt to assassinate the Princes, bas just been pubinshed; it recognises the existence of a conspiracy to overturn the fivernment, and orders Quenisset tu le tried as the principal in the attempt, and nine cthers as accomplices. An ordoncance has been issued fixing the trial for the Ist Dec., but it has been since announced that it nill not take place before the bick. The resuit is looked ir mith muct interest, as the caly means of asvertaining Low far the official report of the conspracy is a farr representation of the fresent state \(6 f\) scceety in France. The ministerial prosections of the press for aniegel attempts to bring the King and Govermment into contempt have gain failed, the jury in each instance having aecquitted the accused on all the questions of the indictment. The disputes in the Calinet, arising out of the proposed reduction of the war department, and which were expected to lead to some important changen in the

Ministry, have been amicably settled; the reduction of
the military exponsts has been conceled by Mar-hal the military expases has been conceled by Mar-hal
Soult, and the Chambers have feen convoked by Roy 1 ordonnance for the \(2 \overline{\text { or }}\) Lh Dec.- (our advices from spain announce that perfect trancinuility prevails at Madric, and that the accounts from the provinces are of a satistactory character. The Regent has taiken a decided course ng inst the revolutionary junta of Larceluna, ard has publisitied an energetic decree, which has led to tiee complete submission of the iusurgents. Gen. Van Halen enitered the city on the 15 th, and his troops occupied all the posts without opposition. The demolition (f the citactel was suspended on the 13th, and the city continues trancuul.Inteligence from Germany annotinces that the Austrian Government contemplates the possibility of attaching the Hereditary States of the Emperor to the Cieman Customs' 'nion, and that it has suggested to the other great Powers, the propriety of holding a contress on the affairs of Spain. The n.essabe of the King of Prussia to the Diet of the Rheriish Provinces has jues Ieen ! uilished; it states that all the deffenl:ats letactin Pussia and the Pope, respecting the alumistration of the dioceses of Co logne and Treves, have been adjusted; and that the late
 the renewal of agiation on the subject of reform, which begins to assume a character of noore importance than appears to be implied in the Convent question; a popular demonstration took place on the listi at Genera, hut he authorities wre prepared to resist an cutbitik, and no Holland and Prussia, reative to the Grand Duchy of Luxembourg, continue to be seriously complicated; and the embarrassment appears to be somewhat increased by the dispute respecting the narigation of the Rhine through the Dutch waters, which Prussia claims as a right under the treaty of Vienna.-The accounts from Belgium contain nothing of any interest respecting the late conspiracy; although the judicial inquiry is still in progress. Letters from Constantinogte anncunce that active operations are proceeding in the dock-yards, and that they are generally believed to refer to an impending rupture between Greece and Turkey. The Council of State has held consultations with the British, but nothing of a derinite nature (in reference to the subject) has yet transpired.
At home, an extensive Naval and Military Promotion has taken place fo honour of the birth of the Duke of Cornwall; the former includes 393 officers, extending to the rank of Mates, and the latter \(4 \pi 1\) officers, extending to the rank of Captains. By last night's Carelle
we learn that the promotion has been subsecquentiy enlarged, so as to anclude 133 efticers in the Last India Compang's service.-Oar readers mill be gratificd to learn that her Majesty and the Prince continue well, and that the illness of the Queen Dowager has assumed favourable chance-Tise proceedings in connexion with the late forgery of Exchequer Eills still continue. It is generally believed that Mr. Smith will be adwitted Queen's evidence on the part of Government; and the question of responsibility arising out of the circulation of the forged Bills, is likely to become the subject of immediate investigation in the Courts of Law.

Ogle, Bart., to Vice-Adm. Cochet; and 4 Vice-Admiral Ogle, Bart., to Vice-Adm. Cochet ; and 4 Vice-Admirals
of the White. from Sir H. Digby, K.C.B., to Vice-Admiral Alexander. To be Vice-Admirals of the Red, 14 Vice Admirals of the White, from Sir R. II. Hussey, K.C.B. to Vice-Admiral Shepard; and 5 Vice-Admirals of the
Blue, from Sir Graham Hamond, Bart., K.C.B., to Hon. Sir T. B. Capel, K.C.B. To be Tice-Admirals of the White, \(1 ;\) Vice-Adnirals of the Blue, from Lord James ()'Brien, G.C.II., to Vice-Admiral Littlehales; and 2 RearAdmirals of the Red, riz., Rear-Adms. Thompson and Dickson. To be Vice-Admirals of the Blue, 20 Rear-
Admirals of the Red, from Rear-Adn. Maling to Sir Admirals of the Red, from Rear-Adm. Maling to sh
Charles Dashwood, K.C.B. To be Rear-Admirals of the Red, 33 Rear-Admirals of the White, from Rear-Adm Curry, C.B., to Sir Samuel Pym, K.C.B. To be Rear Admirals of the White, 27 Rear-Admirals of the Blue, from Lord W. Fitz Roy, K.C.B., to Rear-Adm. Christian. 40 Captains have also been appointed Flag Officers of her Mijesty's fleet, and Rear-Admirals of the Blue; from C.Bpt. To be Captains, 50) Cummanders, from Commander H. Bangh to Commander J. S. Fureman. To be Commanders, 80 Lieutenants, fiom Lieut. Nugent to Lieut Ellicombe. To be Lieutenants, 80 Nates, from Mr. R Biunten to Mr. C. J. F. Ewart
Conamission on the pleased to appoint as ier Majesty's Cue Queen has been purpose of inymining whether advantage might not be taken of the rebuilding of the Houses of Parliament for promoting and encouraging the tine arts, H.R.H. Prince Albert, and the following noblemen and gentlemen:-Lord Lyndlurst, the Duhe of Sutherland, the Maqquis of Lansdonil 0 Earl or Lincoin, the Eall of Slrewshury, the ton, Viscount Palmerston, Viscount Melbourne, Lord Ashburten, Right Hun. C. S. Leferre; Sir R. Peel, Bart. : Sir J. Graham, Bart. ; Sir R. H. Inglis, Bart. ; H G. Knight, Esq.; B. Hawes, jun., Esq. : H. Hallam, Esq. S. Rogers. Esq. ; (c. Vivian, Esq. ; and T. Wyse, Esq. offioi appointments.-A ministerial paper states that Queen's Household (Captain of the Yeoman of the Guard) which has become racant by the death of the Marquis of Lothisn. The Queen, in her capacity of guardian of the Duke of Cornwall, has been pleased to noninate Thomas Pembertun, Esq., of the Chancery bar, Attormey-General of the Duchr.

\section*{fforcinn.}

France. - The diplomatic relations with Spain, which since the late insurrectionary movement in that country appeared for sume time in danger of being disturbed, are obriotsly becoming of a more triendily nature. Thie measures adopted at Barcelona, and the last energetic mani\(f t=\) to of the Regent against the revolutionary junta of that city, have woolsed, it is said, a marked change in the dispesition Cf the Frencil Labinet; and the Journal des sions, how states that the Government, propitiated by the firmness and sigour of the Regent, lias nut only abandoned its hosthery to him but absolately interests it-elf in Le sucees ald maintenarce in power. Private accounts atid, timat whaterer the motite for this conitision may be, the iact is nut the less certain: and it prores that the cause of the ex-Queen Regent is lost for ever, even in the estimation of those by whom, some say, she was instigated, or at least supported, in her late attempt.
The late Conspiracy. - The Court of Peers has given its judgment as to the persons to be put on their trial for the attempt of sept, 13. The decree recognises the exist-
ence of a conspiracy, and the attempt to assassinate ; and
orders Quinisset to be accused as principal, and nine
others as accoliptices in the attemar. All these are again inclucted in the indict the Fovernment ; and the riamee of M. Dur ity (the editor
of the Journal du Pengit), Puinul, Cusidere, Bazin, Fougeray, and Bouzer, are acided in the same rateazin, The Court has thus fully accepted the conclusions of the ringing to their bar the 1i names called for by the by secution. This decision appears to have been rather unexpected; and from the wording of the report it was onsidered that M. Dupoty and two or three ather pri comment with severity on the decision as to M. Dupory, comment with severity on the decision as to \(M\). Dupoty.
because there was not, they say, the slighsest evidence of complicity against him. The decree was signed by the President and 121 Peers. The Chancellor has issued an ordonnance fixing the trial at the Luxenbourg for the lst Dec. In the mean tinie the Cpposition journals contend that the whole affair is greatly exaggerated; while the ministerial organs maintain that the report is only a fair epresentan he dangers arsis fom the eret so means of establinhing what is the accurate siew to be taken of the result arrived at by the incquiries of the ex amining comn.ittue

The Press. - The jourmals contain a long report of the trial of the Marquis de Forbin des Issarts, a legitimatist, a Major-General, formerly Deputy for Vaucluse, and atter-
wards a Peer of France. M. de Fortin, it stems, wrote a strong pamphlet, cnitict, "My opinion on the Humann Census." It was an attack on Government, and the Crown lawyers prosecuted it. The speeches for the proview of the state of France, and her folicy siuce 1830 and the discussion was carried on with much talent and earnestness on both sicts. Two questions were put to the jury, first, whether. acs he samptilet was the closing of the dors against asems of the cenced and, secondly, whether the miting did not bring the King's government into hatred and contempt. The jury after a few minutes consultation, acquitted M. de Forbin caused much excitement in the southern departments.A prosincial journal, the Impartial du Nord, having asserted that the King was moraily respunsible for his personal policy, the Crown lanyers indicted it for an at tak on the Rosal idriolabitity, and offence against the King's person. The trial took place on the 1 Prininst. General, the oditor energetic speech the jury.-On Tues day the responsible titur of the National was an trie on a charge of exciting hatred and contempt of the King Government by an alticle in that paper of the 18 th Sept. commenting on the disturbances occasiontd by the clermont Fercand. The jury ant Fercand. The jury returned as ilital.
The Ministry.- Reports were for some few cays cur tween sue capital that a misu of Administration, and that sereral changes in the Ministry were likely to take place in consequence. A serious discussion, it is stated Soult and 11 , demanding that a considerable reduction should be mad din Wo Soult rentie by declaring that lie would not consent to it. Resignations, it is adcied, were offered on hota shies; but unte mately M. Humann succeeded in gethrg histiens adopte by a majority of his colleagues, and it was determined
that 12, ,00, min francs should be absiracted from the espenses of the War department. By the arrdugenent this question, the disagreement in the Cabinet appears remove and the rumoured mond changes in the Ministry are now considercd to le at end. A Royal ortommance lias been published, convohin the Chambers for the 27 th Dec

Che ard Nary. - By an order of the Ministe War, the corps of army of twenty thousand nen which was concentrating, as noticed in our last along thie Belgian frentier, between Lille and Faler ciennes, has been dissolveu, and their narch thither have been ordered to returia to their respective garrisons Generals Fleury and Lanthonuet, who Lad veen appointe to commands in that corps, had already len Paris.-At the recent counc:l of Ministers, refered urged the previous article, the assembing this Amother militar step and by the Minister of roes and involving an a called.for expense. Marshal Soult defended himself b producing an autogranis letter from the king of the Be rians to Louis-Philippe, expressing his fears that K ing of Holland was about to absorb him. The comen tration of a French corps on the north was. it is aturen the consequence of this aungrap let confined for the pre of troops in the south appears th inst. of two companie sen to the departure on the 190 Buctine and to the of Eryinters from Montjelier for Bayctune, for Orthez reported mareh of two reginients of Danding the order re ceived by it isalitary Intendant of the 10 th Division prepare quarters for 20.000 nien, the concentration or from force was not seriously contemplated.-A corsete Toulon of the 17 th inst. announces that toadiness to po had been ordered to hold themseives in to sea. These pessels, which were to sall of Marines inst., were to take on board in Toulon that four other
harbours, and that those troops were going to protect the
Prench colonists in New Zealand. Several of the jour nals comment severely on a statement which has appeared announcing that the Minister of Marine has recognised the coast of Africa, with a view to the more effectual abolition of the slave-trade.

Algeria.-Letters from Algiers of the 13 th inst. announce the return of Gen. Changornier's column from the re-rictualling of Medeah. The Arabs, 1,000 strong in
Cavalry, and 2,000 in Infantry, attacked the rear-guard of Cavalry, and 2,000 in Infantry, attacked the rear-guard of
the expedition under Gen. Bedeau, in the olive wood. The French, according to their report, charged the enemy,
killing 300 and taking 40 horses. One of their Captains however, was missing. The Gorernor-General had deThe head quarters, under Gen. La moriciere, as Cof Oran. ant-General of the province, were to be at Mascara, baving 0,001\()\) men under his command.
Spain.-The latest advices received from Madrid an-
nounce that perfect tranquillity capital, and that the accounts received from the tro rinces were of a satisfactory character. Col. Fulgosio has been shot, and Gen. Espeleta and the Duke of Castro
Toreno have been arrested. The Regent has nullified Toreno have been arrested. The Regent has nullified peluna sgainst several citizens of that town. A deputation frons the Municipality of Valencia had arrived in
Madrid, and waited on the President of the Cuuncil They assured him of the devotedness of the people in that city and endeavoured to excuse the recent excesses committed by them. It was expected in Madrid that the first act of the Regent, on reaching Barcelona, would be to dissolve the National Guard, which we know has since partially taken place. The deputies and senators of Ca-
talona, aware of the sentiments with which the Regent was animated towards the revolters of that city, had presented an address to the President of the Council, in Which they entreated Government to display clemency
towards their deluded constituents. M. Gonzales immetowards their deluded constituents. M. Gonzales imme-
diately forwarded their memorial by express to the Regent at Saragossa. The National Guards of Madrid have after expressing their unshake a spirited address, in which, to his government, they call on him to visit atth thmen most sererity of the law the revolters of Barcelona. Government was directing its attention to Biscay, where it is stated, afflicted all the siocere friends of the revolution. Emigration was general throughout the province, and great alarm everywhere prevailed. The convocation not Cortes for the 20th Dec., noticed in our last, has thought that Government will have to encounter, in the coming session, a powerful opposition in the Chambers.
Prom the disturbed prorinces, Catalonia Prom the disturbed provinces, Catalonia and Valencia, the accounts received this week are more satisfactory,
The Regent had taken a decided course with the revolut tionists of Barcelona, and had published an energetic proclamation against the liberals, which had produced a grod effect. He was still at Saragossa on the l4th inst. troops occupied all the posts withont any resistance. The city and province had been declared in a state of
siege, as announced in our last. The members of the Radical Junta, informed of the intentions of the Regent Wor respect to them, emibarked on the night of the 13th for London, intending to pass through France; but we have since learned that the French Government have refused them permission to take this route, and they were
consequently obliged to proceed to England direct. itseat number of the adherents of the Junta had followed continued tranquil city, up to the time of our last advices, been suspended since the 13 th. The disarmament of seseral battalions of the National Guard has been ordered, and a military commission has been created. Public noMilitia, or any person not in the army, who shall be found armed will be shot; and foreigners have been ordered to presert themselves with certificates from the consuls, in Mlilitia, in an adduress to the Regent, makes excuses for the demolition of the citadel. The Barcelona papers complain in energetic termss of the appearance of a French national independence. Gen. Rodil had published an order of the day, ordering the inhabitants of the Basque possess:on to give up the arms and ammunition in their Gen. Alcala was to go to Bulbao to replace Gea. Zurbano. The population of this town, it is said, was overjoved to be freed from this commander, the prisons being filled tion. It is reported to be the intention of his persecuafter the estabiishnient of the line of customs along the Pyrenean frontier, not to remore for some time longer the smugging of a large quantity of French goods latels imported inio the Basque prosinces. The military comi-
mitssion sitting ? at Vittoria had sentenced Col. José Rizo to ten ye uri, and Cummandant José Castre to six years
imprisonmern. The penalty of d ath bad been demanded Perpignan to the 21 ist inst., informinuent arcounts from who under martial law. It was expected that the persons would be arrested active in the demolition of the citadel The fete of Queen Isabella, was confmed to the troops, the
putation, the municipality, and the National Guard measures taken at Barcelona. A decree of the Intendant decisions of the Juntas of Vigilance for suppreasing differdecisions of the Juntas of Vigilance for suppreasing differ-
ent taxes. Government has taken off the blockade of the ent taxes. Government has taken off the blockade of the
coast of Cantabria. The Regent still continued at Saragossa, and was expected to return to Madrid without risiting Barcelona and Valencia.
Portegal.-By the usual meekly mail we have news from Lisbon to the 15th inst. The estimates of expendiChambers, by the Queen on the day after the packet left. Government having authority to raise 500 contos towards meeting the deficit caused by the extraordinary expendiBoard of Public Credit is charged nith prosiding for the foreign dividends, and is authorised to raise money on the new revenues assigned to it to meet the next dividend.
Fears appear to be entertained at Lisbon that a strugl Fears appear to be entertained at Lisbon that a struggle
was near at hand. Spanish support, it is said, emboldeas the revolutionists, who, according to private accounts, seem desirous of playing the same game at Liston Senhor Aguilar had demanded that the Spanish officers who had entered Portugal, among whom were Pezuela and Oribe should be given up. This the Government have refused, considering that compliance with such a demand mould have been dishonourable to the Queen. The com
mercial treaty was considered to be nearly concluded explanations had taken place, and some unfavourable interpretation put by the Portuguese on a clause with respect to the colony trade proved to be erroneous. - The firns of Roughton and Co. had stopped payment. Nume-
rous Spanish families had entered Portugal by Badajoz. genmany.-We hase receired German papers and letters of late dates, but their contents are uninteresting Vienna letters of the 14th inst. inform us that the State is occupied with the consideration of the possibility of attaching the Hereditary States of Austria to the German Customs Cnion. Private correspondence states that the Cabinet of Vienna has positively proposed to the other affairs of Spain. It is added that one of the reasons for this measure is the certainty that the late conspiracy at Aquila, in the Neapolitan territories, was in a great part
caused by the intrigues of Spanish Republicans. Subsequent accounts, however, make no mention of this pro posed conference, which must therefore be regarded as requiring confirmation.-The Sualian Mercury, under
date Vienna, 12 th inst., states that the aborigines or Mag pars of Transylisania were endeayouring to gain the ascendancy in that province, but the German part of the population were resisting strenuously. The greater par of the Transylvanian comilats, inhabited by Hlungarians had presented petitions to the Emperor, praying his Majesty to incorporate the principality with Hungary On the other hand, Transylvania, which enjoys a con ants, dops not appear willing to resign it. The opening ants, dops not appear willing to resign it. The opening
of the Transylvanian Diet was fixed for the 15th inst. Letters received in Berlin from East Prussia describe the unpleasant collisions which continue to take place on the Russian frontier between Prussian subjects and Russian subordinate officers, whose conduct is much complained of, so that the inhabitants of the Prussian frontier are greatiy incensed. Intelligence has been received of the death of Prince Lewis, of Anhait Coethen, Prince of Pless, on the Sth inst., after four weeks illness.-The Prussian State Gazetle of the 16 th inst. publishes a message, addressed by the King to the Diet of the Rhenish provincts, in between Prussia and the Court of Rome, respecting the administration of the diocese of Treves and Cologne, had been adjusted, and that the negotiations entered into on the subject with the Pope bad produced the most satisfactory result. The King, moreorer, informed the States that during his sojourn in the Rhenish provinces be would reside at Coblentz. As respected the suppression of the censorship. Which, it seems, had been demanded by the Diet, his Majesty syid that he intended to introduce such modifications in the law of the press as were not contrary to the resolutions of the Gierm nic Confederary, and that he would, i ration in enforcing the law. The King informs the Diet that be is negotiating, in concert with other states, for a reduction of the tolls exacted upon the waters le aling from latiog to the scheld; ,ikewise that he difiencesremanner that will noon be made public. The Government deelines to undertake the ereetion of harbours on the Rhine, but declares its readiness to contribute to and any Fal exertions. A prayer from the Diet that the work at the Cathedral of Cologne should be assisted to ad rance has drawn domu the warm approbation of the Sore
regn. who declares the eathedral to be an architestural monument which reflects credit on thename of (ietaiany and gives 30,000 dollars as an extrandiusary thesent for
the current year. Ti:e Gazetle aloo pubishes a cir cular from the Minister of Public Worship to the Pro testant Consistories in the Pussian duminiuns, on the erectiun of the new Protestant Bishopric at Jerusalem. in all the Protestant churcbes in aid of the funds for the new See and its dependent institutions, among which will be a church for German Protestants, an hospice for che reeeption of German travellers of all kinds, and a sary of the fentival of the Reformation was celebrated at

Wittemberg, where Luther first meditated his great refort While Professor in the once famous University which In the evening, a number of persons in the town formed hewselves into a procession, and walled to the statue of Doweger of Ravaria.  Africans.-A meeting of the shareholders of the Ham bnrgh and Bergdorf Railway Company was recently held at Hamburgh, to receive a report from the directors of the state of their works. It is expected that in April, will be ready for traffic. Its total length is about nine miles, but it forms the Hamburgh link of a railway int che interior of Germany. The original estimates of th establishment. The whole capital is about lus.0001 sterling. The approach of the railway to the citr nill, 3.001 ) feet between two large navigable canals into a station 2,100 feet in length, close to the centre of the cit and the harbour. The line is laid out entirely through a district of marsh; but the works, it is added. are perfectly firm and substantial.
Switzerland.-hetters received from Geneva, dated年 inst., state that there is still great agitation tiere sure suliject of reform, although it is hoped that the mea and will be accomplished by the force of public opinion and in a legal way. On the 13 th inst., young men were evening, the "Marseillaise" was sung at the theatre. Gendarmes were patrolling the streets the whole night, and the police were on the alert as if serious disturbances were
expected. No real tumult, bowever, had ocrurred. It is stated as certain that in the Legislative session, which is to commence the first Monday in December, the quesCouncil. It is said that the Catholic the representatise con have prepared a protest, which is to be published in the event of any modification of the constitution cf 141.4. appears that li.e drand Council is inclined to conse to ing at once to a liquidation.
Hozland.-The negotiations between this country and Prussia relative to Luxemburg have not taken a favourable turn, as we announced in our last, and the Director Lelmentaz, who was sent by the Prussian qosernment to Luxemburg, has been recalled. The Dutch lave granted
the Cologne Towing Company permission to enter their waters. the company having tiought it morc prudent to demand this permission than to tisk the delay conserquent upon a clim of right under the treaty of Vienna. The
Prussian government, it is said, frists in leannulin Prussian government, it is suid, persists in detanding the sea. On the other hand, the Dutch comulisurs Mayence has formally complained of the tone lately assumed by the fierman papers, publishied under the contro of censnrship, when speaking of this country. Tlu alleging that its powers are linited to remenstance to the navigation of the river. The first shipmeats to Strasburg under the new treaty have taken place ; the are to be made exclusire! y in Dutch or in Frem ha teseels said, are muct dissatistied. A Dutch an.l Rhenish company has bee establithed for the natigation of the Rhine and Yisel by
steamboats, whereby the communicalion betmeen Amzrerdam and the Rhine will be kept up witiont the necessity of unioading at Kampen. It is exprected that Marenc will be the =tation at wnich the Dutch and Prench vessels importance of that che jornal of Dutch Liercia says, that the King has appointed two engineers to propose as soon as possible a pl
Mrestricht to Air-la-Chapelle.
Bexgrem.-Nothing further of any consequence kas transpired with respect to the late conspiracy, but private in consequence of it state that the proceedings adopted unpopularty of his person and government. - A commer cial treaty. it is stated, has been concluded with Howam? and will shordy be laid before the Chmbers. In a r.went
sitting of the Chamber, ome of the depuacs, aitroun
 some explanation as to the state of the cumacecal nesa-
tarions with France. The Niniter, in re; iy, saiu that Cummissimers were appointed, and livetrinatit inai reaorstons on wide brees. - Tas was the rine enent of the forma
 has not uniy crestect grrat asonisinment, but has also led tatives. The Minister for Foreign Almber or Represent to a question put to him on this sulject, tiat Government had received with the greatest sstomistinent the newa of this movement, and it was tho more surarined as it had done nothing to lead to wwels stepl It would, however
hasten to lay ic before the Chamber. It is, homever, regarded as extranctinary that whitst of this corps of obser are complain on the frontier, it should be asserted, on what is considered good authority, that it was earnestly demanded by the King: that he required even a much larger force to be assembled, viz. \(-30,000\) men, and that a lo 20,000 , after a long discuswas reduced for in the Council of Ministers at Paris.-We understand that the Belgian Government has jnst purehased 100, , (0102? Forth of their territory of the Vera Paz Land Company with a view to the formation of a colony in that part of America.
Hasover. - We alluded in a previous Number to a re port which appeared in the Continental papers, thit this but, as noticed in our last, that statement proves to be in correct. It seems that those parts only of Hanover which are locked in the territory of Brunswick have been in cluded in the league : and those parts of Brunstick which are locked in the territory of this state, are still to form part of the Commereial Loion of the northed fixing the 2d Dec. for opening the session of the Asembly of the States. The question of the iron railway is said to be the reason that (iovernment hasten their meeting. Private letters received in Hanover from Brunswick, dated the l4th inst., say that the Chamber there has resolved the C
Russia.-Accounts from St. Petersburg state that the Emperor has summoned to that city several of his diplomatic agents residing abroad, for the purpose of obtainiog questions which now agitate the world. St. Petersburg papers of the 8th inst. miention the arrisal on Che preceding day of Lord Stuart de Rothesay, and Col. Minister of the Lnited States.- received announcing that the town orel has been dereceived announcing that the tred houses fell a prey to the stroyed by fire. Seven hundred houses were consumed. flames, and some important documents \(\overline{\text { thst., }}\) inform us that Letters from Warsaw, dated the ith inst., notified to the the Vice-Chancellor of the Empire has notified to the Prince Viceroy that has been recognised by his Majesty as British Consu for the kingdom of Poland.
ITalx.-P'rivate letters from Rome state that the Grand Duchess of Mecklenburg Schwerin, with the Princess be Duaghter, and the Princess of Warsaw, wife of Marshal
Paskewitseh, have arrived in that capital. It appears that there are not so many strangers and fating to go there from winter as usual , several persoents cannot be found, whereas an apprehent least 200 to let. The impression gains ground in Rome the Cardinai Mai, the learned discuverer of the Palimpsests of cicero will be the next l'ope: although it is believed by somie that C'ardinal Acton, well hnowa as the "Englisti (ardimal," is sery likely to be the successful competitur for the triple crumn. Cal be the second Englishman elected to the Papal chair.-A and Queen were, a few days before, out at sea off the Sicilian coast during a severe storm, and that their Majesties were exposed to considerable danger. Two steamers yunning between Leghorn and Civita Vecchia were in a very hazardous position. The carriages and fourgons of stopped and pillaged by a band of brigands. The same stopped ans the arrival of Lord and Lady Ponsonby letter mentions the arrival of Lord and Lady Ponsonby from Malta, who will pass the winter at faples. ide of said that his Lordship sull entertains his fen Great Britain seeing diplomatic relations restored between Great Britan and the Papal court, in whick case it is wellister appointed
has always been anxious to be the first minister appointed to that legation.-A letter from Genoa mentions the arrival in that city, where the Sardinian court is now residing, of Carlos.
Turing.-Private letters received from Constantinople inform us that on the 29th uit. the French Ambassador, the British Minister Menipotentiary, and the Russtan Charge daffaires, attended. certain propositions with respect to Greece, which had been privately communicated to the Goverament by its representatives at Athens and Paris. As set, however, these propisitions had not been formally made to the Purte. Some active operations were going on in the dockyard, but nothing has transpired as to the object, although it is
believed that an expedition to Tunis is contemplated by Government. Considerable sen=ation has been created atthe Porte by a note addressed, or sail to have heen addressed, by the Russian Charge d'Affuires to the Reis Effendi, relatire to the internal admmistration of Servia. Is is stated that the Baron de Lieven. Who has been employed upon a mission tive arrangements to the Prince, the latter referred tra question to the Porte, which refused its sanction. In consequence of this, the Russian represmeative to declare in the mist neremt tury tern:s that it considered these arrangements as esseritial to the well zonernasert of the principality, and as obtigatury
upon tie Ousman Goverament : or, in oticer wonk, that, the priceiralithes of Servia, Moldavia, and Wailachia, being placed under Russian protection, any administrative measures recommended, hy her to the prince sovereign must be regardenk as vested rights, with which the Porte is not entitled to interfere. - Several French papers have reoently declared that the Sultan's health in in a very pre-
repart. Wis Imperial Majesty, it is stated, never enjoved
better health. amal although not of a robust constitution, hetter health. and although not of a robust that can justify the supposition that he is in a declining state. We hav received subsequent intelligence from Constantinople the 7th inst., by the Rhamses Levant packet, arried at Porte and (ireece. When the Rhamses left Mata, thre English shys of the line were about to proceed to vant, in order to watch the movements of from Alexandria states, that Mehemet Ali is dismissing from his service all Turkish officers engaged therein, and that those whom he may be prevailed upon to keep will have thelukes are to form solely the staff of the Pacha's army. The men who are considered unfit for active service
and strong men engaged in their stead. letter written by a gentleman of Boston, stated to be mell informed on the subject on which he writes, which confirms the account given in a previous Number of this
Paper respecting revolutionary associations called the Paper respecting rerolutionary associacted the 31 st Oct., and says that Mr. Webster will continue in office, and his continuance is an assurance that peace will be preserved He has in bis possession evidence of an immense chain o lodges and secret associations for an invasion of Canada, extending from Cleveland, in Ohio, to Burlington, in Ter mont, bound together by secret oatis, emeir head-quarters three members Of Cer Canada. It is supposed that these lodges number 60,000 people. The new bankrupt law passed last session, will, however, it is thought, disperse then, as this will discharge people who choose to take the benefit of it from their debts, and the new patriots are said to be thriftless vagabonds, who take up legitimate business. A discharge from their debts would therefore enable them to resume their former mode of life, to which it is thought they would immediately ret

The late Fraud in Exchequer Bills.- Since our last the Comptroller-General has issued a notice, allowing another dav, yesterday the 26 th inst., for the examination and stamping of outstanding bills; and intimating that the number ing of Friday, the 19th inst., was 31,134 , and the value 14, 769,900 , learing still outstanding 701,1501 ; in this amount, however, are included "Edinburgh Exchange Bills," which, it seems, are used by the Scots bankers for settling their weekly exchanges, the amount of which to be kept in the circle for that purpose is fixed at 400,000 ; thus leaving to be accourted for as outstanding a sum of bills equal in ralue to 310,1501 . A list has been published by a morning paper (but which is not stated to be authentic) of the amount of the repudiated bills, frons which it appears that the sum at present ascertained to be forged is \(311,000 \%\). A circumstance has transpired during the week connected with these securities, which has created considerable interest, and appears to have impressed the money market with an unfavourable idea of the manner of transacting business at the Exchequer-Office. It is said that a gentleman went up with an Exchequer-bil lately for \(100 \%\)., dated so far back as the year 1825, signed by Lord Grenville, as auditor-general, and asked money or it, when payment was refused, on the ground that the counterfoils had been destroyed. It appears to be a ge neral impression that the affair will ultimately afford eai ployment for the courts of law, and that all holders of spurious bills, finding that Government refuse in any way to acknowledge them, will seek that other remedy.-The name of Lord Strangford has been brought before the public by the Observer Sunday paper in counexion with his affair ; but bis Lordship has pubhished aledige of, particimation the original fraud lutwithstandin this, however, it appears that the banking-house Messrs. Coutts and Co. have adopted legal proceeding against his L.ordship, by filing a bill of diecorery in Chan cery, in order to ascertain the degree of knowledge pussessed by his Lordship of the origin of the Exchequer bills accepted by that bouse as security, with the view of instituting proceedings, on evilence so obtained from Lord Strangford, against other parties. The Exchequer bills held by Messrs. Coutts and Co, are understood amount to 40,0000 : and there are other houses and private individuals, it is said, in similar circumstances, but it does not ajpear that any other step of that adnd inds been taken. smd it is betieved that ther are waiting fur the result of the approaching trial of Mr. Rapallo at the Crimisal Sessions, and in order to see by what kind of tidence the charge against him is supported by Government. It has been generally stated that Mr. Smith will be received as an approver or Queen's evidence; but whether the report be true or not has not yet been confirmed. In connexion with this subject, the Bank of England have given notice that they are ready, until further notice, to receive applications for loans upon the deposit of approved bills of exchange, not having more than six
months to run. Exehequer-bills, and Lait India bowds; such toaas to be repand on or befure the 14 th Jan ., with interest at the rate of , per cent. per annum, and to be
for sums of not less than 2,0000 . each. In every case of an advance, a promissory note will be required, whether
such advance be upon bills of exchange, Exchequer-bills, or India bonds. The stipulation that applicants for loans
must also give their promissory notes, is regarded as throwin some discredit on Exchequer-bills, and that the Bank is unable, by any examimation of the instruments, The lute Fore in the Touecr.- Active operati ns are still continuing by a large loudy of suldiers atud workmen of the Ordnance Department in clearing out the ruins of the Arurours, wha has heen nearly com western portions of the building, has been neary conapred. Measures bish surrounding the naval and mihtary tiophies on eithe side of the grand staircase, and the large preces of ordzance remain in their present position, as also the remaining cannon of the Waterloo trophy at the back of the staircase, for the inspection of the public, it beng the intention cleared of the mass of burnt muskets, Nc., in the centre to re-open the Tower entirely. At present the same restrictions are carried out, no person whaterer, unless on business, being permitted to enter the gates of the building. The committee appointed lo ineurestigate their report is xplected to be presented in a few days, after which, from its great importance, it is expected that it will be made public. By order of the Duke of Wellington, every cupy the late fire has been procured by Major Elrington, and added to the records of the fortress. It is understood that Lord Hill, the Commander-in-Chief, has communicated with Col. Aitcheson upon the suiject of the mintary in night of the fire. Iraving perused the exidence, his Lordship is said to have expressed his satisfaction that the charges proved wholly without foundation. It appears that it is not the intention, as at first reported, of me Ordnance authorities to sell the whol of hurnt mus ket-barrels and other weapons. The best of them are to be recast, and such of the metal as has been ascertained to be wholly unfit for that purpose is to be disposed of
Reported attempt to set five to the Horse-Guards.-The Rcumstances connected with this affair were briefly no ticed in our last ; since which, some inquiries have been made into the matter, which tend to remove the impres sion that there was any design to set fire to the buning It is, how the hand where it exploded with loud noise, which was heard at some of the public offices, and in the neighbourhood. An immediate investigation took place, which must, it is thought, have been anti pated by the party by whom it was tiow, a sequent here could have been no serious intention to set the plable on fire; at the sanse time it appears that it ras a a mis from the situation in which the missile fell, the sentinel on duty lad been near the spot at the time of its explo sion to rhom it mirht have occasioned loss of life o other injury. The general opinion now appears to be, hat it was merdy the act of some mischierous person, to frighteu the soldiers and inhabitants of the neighbournood hom the act was comimitted
Death of Sir Francis Chentrey.-This eminent sculptor died at his house in Belgrave-place on Thursday erening. He had returned from erecting his fine statue of twe ate Bishop of Nurwich the day before; he looked wel and conversed cheerfully till evening, when he became suidenly ill, sank down in his chair, and expired without a groan. He is said to have died of an affection of the bation of Darkness of the Metropultanh Ruadd.-A dep, Kensington in conformity with a resolution passed at ti.e meeting noticed Secretary on Monday, for the purpose of representing the great danger arising to the public from the recent disopolis tinuance of gas-lights along these roads by the Mird if the Road Commissioners. Sir J. Grahad taken any legal parochial authorities of Kensing. had lis Comopinion as to the liability of the atho the demissioners to continue the lighting of the foa funds out of putation stated that they had not, herly such espenses used to be defrayed out of the poor-rates, but since had beea Poor Lam come into operation such surgested that the struck out of the accounts; ana hey situation, wolld be right hon. secretary, from his offcia thie legal ofliers 3 far Crown as to whether or mint the Conmissiunes are bound to light the roads, considering that the tolls 4 , That aiong been appropriated to that and other purposesick, was the view entertained by the parish culturists, cons: dered the large toll's hey paid for their temis cuyt.: to apiropriated to that purf ose. Ahe question, Sir James Graham obserred, that he could not undertake ea the pata of Gorernment to make any promise, at the heasing or he said, was the first parish that had complained nod owie subject to the Home-Office, and he was theret remedied in ther parishes. meeting of the rate-payers should be called for the purg
of adapting the General Lighting Act to the lighting o the dark portions of the parish; and whatever might be Home-Office on the subject, stating the whole of the facts, when her Majesty's Government would, he had no doubt gee what power they had to remedy the evil.-A meeting of the rate-payers within 400 yards on each side of the
turnpike road leading from Stamford-hill to Edmonton turnpike road Leading rom Stamford-hill to Edmonton sideration the darkness of the Metropolitan roads. The chairman, Mr. Shuttleworth, briefly described the object for which they had assembled, and read the requisition, Which he had put in the form of a resolution. On a divi
sion, the numbers were- 100 for the liglting, and against it. The Chairman having produced an estimate of the probable cost of lighting the fifty-nine lamps here Roads for one year, and having also stated the probable anount of the rate for the district in question, it was be \(360 \%\), which would be produced by a rate of four-pence balfpenny in the pound upon houses, and three-halfipence in the pound upon land. The chairman stated that about and producing at the above rate about seventeen pounds per annum, would be met, he had every reason to believe the limits of the district, and which he had no doubt the inspectors would apply in discharge of those rates.
derable tritement and Altempi Mirler.-Con ants of Turnham-green and its neighbourhood, by a highway robbery and attempt at murder committed there to have been in a great measure owing to the darkness of the place, occasioned by the recent discontinuance of the and great fears are entertained in the neighbourhood that and great fears are entertained in the neighbourhood that lead to other similar attempts on life and property ; this it seems, not being the first attempt at robbery lately comserious personal violence has been used. The following are the particulars :-On the evening in question, about eight oclock, Mr. Pau, a gentleman residing on Turnhamgetting out of which he had to walk a short distance to Whenidoe When close to his bouse, he was stopped by footpads, by hind him, and a handkerchief thrust into his mouth. IIe struggled violently with the robbers, when they threw him on the ground, and stahbed hom in the side with some
sharpinstrument, which rendered him insensible for some sharp instrument, which rendered him insensible for some left him, having first robbed him of property to a considerable amount. He then contrived, though with diffisent for, who, on examination, found that he had received a serions wound in the side, apparently from a large knife. had in its progress penensiderable, and the instrument a body coat, and through the pocket of Mr. Pau's waistturned aside the was a spectacle case, which, it appears, turned aside the point of the knife, and fortunately pre-
vented the wound being instartly mortal. The police, in making strict search in the neighbouring gardens and plantations, eventually found a large knife with the blade yet been apprith blood. The robbers, howerer, have not state, and apprehended. Mr. Pau continues in a dangerous trates should yet wait on him for the purpose of taking his depositions.
Metropnlitan Improrements.-It is stated by a morning paper that "the Commissioners of Woods and Forests the kitchen-garden to Kensington Palace, and hitherto Astra-parochial to the respective parishes of St. Mary Abbot's, Kensington, and Padcington, as it stands between the two parishes, and for that purpose will apply for an Act take power to next session. By the same act they will also take power to exchange with the provost of Eton College certain land belonging to the cromn near Eton, for about hitily, three acres of ground around and including Primroseform a new road and entrance, from the Bayswater-road to Knights'bridge.'
prop posen Park at Kennington.-The necessity of a river having been long felt by the inhabitants of Walworth, formed son, and the adjacent districts, a committee was time, for the purme since, as noticed in this Paper at the time, for the purpose of carrying their wishes into execuMajesty, which was signed by a number of the inhabitants Watted on the Eari of Lineola and Sir James (rrabiam, and into, and, it is sand, from. The subject of it was entered siess, hopes are entertained that the wishes of the meme posed will be carried iato effect. The piece of land proposed for the park or piensure-grownd adjoins the Surrey and it is thought thet it miaht easily he conrected ris the piece of waste land called Kennington Common, which Would give a united space of unwards of 80 acres, and Chus furnish an esceilent promenade for the iohabitants of place to enjoy the fresh air in but the high road; Kenmington Coummon in its present state not being fit for that
purpose. The ground proposed to be converted into park is at present garden ground, and can, it is said, be to he converted at a moderate expense. to he converted at a moderate expense. A parla in this to the inhabitants, would prove the means of t yould b to the inhabitants, would prove the means of uniting, by well, and Walworth
Thames Tunnel. -On Wednesday a thoroughfare was effected in this work, and made use of for the first time by
the whole of the directors and some of the original sub scribers, who had assembled npon the occasion. The shield having been advanced to the shaft at Wapping, a considerable opening was cut in the brickwork, and it was enabled to the party, who had met at Rotherhithe, wer munication between the oposite first subterranean com interesting incident was connected with the event
bottles of wine, preserved since the dinner on the occasion when the foundation stone was laid, with the understand ung that it was to be drunk only when it could be carried health of her Majesty and the infant Prince. The shield will continue its advance until it has afforded space for the formation of the remainder of the tunnel, which is expected to be completed in about three week.
Public Meetings.-A general meeting of the shareholders of the British Iron Company has been held at the London Tavern, and was numerously attended. The report for the half-year ending 30th June was read by the chairman, Sir George Larpent, M.P., from which it appeared that the total quantity of iron raised was \(25,5 \% 8\) tons; steel, 40 tons; and that of coal, stone, \(\&(.,-9,682\) tons, on which the total profit was 7,1712 ; leaving, after various paynents, the payments for interest, law charges, Rec., absorbed the sum of 14,\(41 ; 6.12 \mathrm{~s}\). The report concluded by a decision, on the part of the directors, to enforce the payment of the calls due by the old as well as the new proprietors. After the report had been read, a Farm and angry discussion ensued between several proprietors, which was at length terminated by a motion that the Company be at once dissolved. This was met by an amendment, that an immediate dissolution would be destructive to the interests of the shareholders, but that the works be carried on till the liabilities of the company were settled, and then that the company be dissolved. The chairman was about to put the questions, when a ballot was demanded by several prowrietors for both tive motion and the amendment, which was ordered to take place in a few days. A resolution was
alno proposed by Major Richardson, for discontinuing the also proposed by Major Richardson, for discontinning the
salaries of the directors, but it was lost by a great maio staries of the directors, but it "as lost by a great majo-
rity. The chairman and Mr. Horsley Palmer then rade speeches in rindication of themselves from the charses brought against them by Major Richardson and others.At a meeting of thre Maryievone vestry on saturday, Lurd appointed one of the delegates from that vestry to the Anti-Corn-Law League. His reasons for doing so mere, that he could not take his seat as a member of a body whose proceedings he entirely disapproved of. He was as stanch as any man for a modification of the corn-laws, and was also a friend to the principles of free trade in com merce; but he had entered his protest, and would do so again, in opposition to the improper and intemperate manner in which the Anti-Corn-Law League had pursued their
asitation for a repeal, and nothing but a repeal. Ie wuld say, that had not the Anti-Corn-Law League acted with the intemperance they had done, the concliatory motion introduced in the first instance by Mr. Villiess for a modiHe also charged the Anti-Corn-Law League with nutting forth gross mis-statements ; and, therefore, lie could not consent to take his seat as the representative of the vestry. Several members of the vestry entreated his Lordship to re-consider his determination, and he ever.tually agreed to accept the appointment.-On Monday the masons the have been lately employed at the new Hoases of arlia lebrate their coming to Loniton. Mr. Allen, the foreman was thited to atend, and took the chain. After dimne the healtus of Messrs. Grissell and Peto and their fore man were proposed, and drunk enthusiastically; and the best understanding appears to exist between the men and the contractors.
the wife An inquent has been held on Mrs. Blatesk noticed in cur inst. Nothing transpired in ardition to what has already been laid before the public: and a medical man havmg deposed that deceased died from the effects of the wound - Wilin or her husband, the jury returne.t a veruct Police.-On Moaday, a man, named Joh John Ward, ans examined before the magistrate at Maryletone charced with the Wilfui Mrarder of a chidd 18 menths' old named Timothy Eastod. The eridence adiuced wat of great lingth, atd occupied too dars : the fulamag, howh.e wother of the chin, a wiow. mimed Eased, in wit hian--treet, Regent i Park, and hat sereral times before ill-reated the chid. He had come bome in the evening, and sent Mrs. Easted out for some beer. During her abl sence, it is supposed he inflicted several blows on the head of the child with a hammer, which was subseouently found in kis possession. The mother on her return found the chill in a dying state, and charged the prisener with horing murdured it. This, however, be denied, statng hat in reaching to get at a cupboard, he Lad fallen on the
mother took the child to a surgeon, but it shortly after
died. She then had the prisoner apprebended, and on his person mas found the hammer taken from the cupboard, belonging to Mrs. Easted, and with which the crime is supposed to have been eommitted. A ponst-mertem examinathe cause of death mas me, and the surgeons deposed that scull by some blunt instrument. The prisoner, tho denied the charge, was committed to take his trial. The case excited great sensation in the neighbourbood, and a large noob collected about the police-office, and violently exMortality of the Melropolis. - The following is the oumber of deaths from all causes registered in the week ending Saturday, Nor. 13, 1841 : males, 397 ; females, 417 . Limehouse.-On Wednesday a meeting of the ratepayers of St. Ann's parish was held for the purgose of assisting
to make a rate for the repairs of the parish church. It seems the parishioners were called togetherlast week to hear
a letter read from the Bishop of London on the snhect when a resolution to consider it further six menths heoce was carried by a majority of 46 to 37 . The meeting was ow more numerously attended, and great interest was mifested in the proceertings. Whe verse to the recommendation of the Bishop, he felt it hisduty o make his Lordship acquainted with the fact that the vestry had determined not to sanction the calling of a meeting to make a ra'e for the repairs of the church. On Saturday he received another letter from his Lordship, tationg that the churchwardens had misapprehended him conveng a vestry to consider if another vestry should be Conrened to make a church-rate; and that it now only remained for them to do their duty, and call a meeting to the amount required was then read, which, with incidental expeases, awounted to 7760 ., and a sirpenny rate was asked for. A long and angry discussion ensued, and several amendments were proposed in opposition to the rate, which the chairman refused to put to the vestry as illegal. The chairman finally put the original question amid great confusion, and pronounced the motion for a rate to visios by large majority, on the show of hands. A dihision was afterwards made, in consequence of a person on bein ands upainst the rate; and the number, at; ; majority, 29. A poll of the whole parish was then demanded. In the rourse of the discussion the charman announced that he liod lien imerncted by the Bishop to noke down the nemers of all who refused the rate-an annuuncerient whish cracasined considerable excitement.
 parivi--"That the now an! ! legal whe tions to the rate tical Court, equally affect the rate granted in the present year; and that if the former rate shall be pronounced bad. the peisent rate mill aiso be invalul."

Woolivich. - On saturday, a fire ocenred in the Dockvard, which at the time created consuderable alarm, and produced mach excitement in the public mind, in conse buildings. In this case bafer it appears to have bee ccidental, and was attended with little damage. The fire, which was first discovered by a policeman, broke oot brick buiditine, situated at the west erid of the yard, and used for the purplose of miving the trgerer. emis of a patent
fuel. An express was at once seat off to the police in the tomn, as wel. as to the garricon ; the drums beat, and the soldicrs wete narchel out, and great alarm suread throughout the town. The engines, hwwever, were speectly on the spot, and there being a fentiful supply of Wher, he fire was soon got under, though not before the buindig in whith it had originated was en'irety destrnyen origin of the fire, wich have created alarm the mind信 rards, and other places of national interest; but there appears to be no promud for thom. The fire is supposed to have originated from one of the iron pipes under a por tion of the wood baring become orerheated on the prerious day. It would seem, howeser, tiat the fires csed at
this work are always put out about \(\&\) o'clece in the afternoon, immediattiy after the convicts leave anor, so that
the fire, which did nut break out until near fuur the fulning. if crigituted finm them, must hat maised 12 hicurs unisecered.-Ano ficial re fort relative to the fire has swice bepn formarded to the Home (Oftice and Boand of Almirater, from whach it appears that the buhing destroyed was of grente
 premises were sturate in the most remote part of the rard and since the fire the rains inse undergome exanination and it has len ascentunes that it orignated from a large piece of timber, supportiog a portion of the brich work of

Barmaley - This town was throrn into a state of great excitexent on Monday. by a serimes aceident which oc-
 ives, and seremi ofl.ers have been so matels burnt that it is feared some ofthim will net recoser. It has not yet been ascertainect hors the accident, which has thrown a gloom orer the town, originated, nor is the extent of the luss known with certainty, but it is hoped that there will not be many more cases of a fital character. As inquet

Was held on Tuesday. In consequence of the frequent acciden's of a similar nature, although seldom to so serious an
extent, the murhin, miners and under-stewards were cl. sely examined to ascertin if any carelesentss had ex-
isted in the worhing of the mine ; bat it was stiofacturily establishad that the coal-pit was in a good state of rentilation; that the air-passaces were ope: and that the pro-Eafety-lan.ps, and eversthing that could be mosided on their part. The accident appears to have happened from the carelessness of one of the wo:kmen, in taking an oren light to a part of the mine where he had been cautioned by one of the

Buth.-A murder has been committed near this city on man named William Bancroft, of Combe Down. It ap pears that deceased had been fighting with a man named William Stennard, when the latter, finding himself beaten, drew a clasp knife, and stabbed deceased. A brother of
whereby he was killed almost immediately. Stennard, and an. ther man named Avery, were present ait the tinee; and at the inquest, which das been held, Wilo jury returned a verdict of Liam Stenzard, as pmenepal, and against Thomas Sten, whard have all buen comuntted for trial.
Bot'on -A meeting has theen held in this town. in pursuance of a summons from the mayor to the principal rate payers, for the parpose of taking into consideration a Department, stating that unless the local authorities can provide better accommodation for the troops during the requesting to lnow whether the authorities of Bolton canby railroad, as to insure communicatione peace of the town by military co-operation with the civil power. It appears from the report of the proceedings that the snmmons of the mayor
was addressed to 150 of the principal inhabitants, but that the meeting was not attended by more than about 20 persons. Sereral long speeches were made, the two principal
speakers being Mr. Naisby and Mr. Thomason; and speakers being ing. Naisby and following resolution was carried:-" That the patient and peaceful deneanour of the population of this
towa end neighbourhood, under the unesampled privations and sufferings to wimich they are at present subjected, i beyond a!l praise, and is a sufficient answer to any imputations of disorderly motives. That this meeting sees, in indication of thesir intention to bring the country under the operation of a system of estended nilitary despotism, having apparently for its object the maintenance of the
system of aunses in the government of the country, which hase reduced it to its present depressed and alaming condition. That therefore, this meeting is of opinion that it is nut desirable, under evisting circumstascee, to assist in
any arraike:ments, having for their otject the making of Bowon a mhtory station.
chachwarden and a nunority of the paisinioners, and lately contirmed by Dr. Lushneton, has been demanded of a gentleman residing in the town, named Mr. Burder, who has refuscd to pay it. The an:ount being above llle, a citation from the Ecclesiastical Court rill follow, and it Buchiondan - A body of poachers has recently been detected in this county, and several members of it hase been arrested, and committed for trial. One of the gang. a local paper states, escajed front capture in a singular Grendurs Enuernuod, be formd limg in bed, when he said that he was very ill, but would try and get up. The constable accordagly stoəd quietly by whilst he was getting
out of bed, when observing Lis budy disappear quickly, he looked under the bed just in time to see himescape through a trap-dour into the roam below, from whence he an into the wuods. and has not since been heard of.
Carvimige. - The Prucost and Fellows of King's College hase, it is said. reselved to restore, as far as possible, original splenduur. F.r tiis purpose they have engaged the serrices of Mr. Hedghad, of Londrn, who, a sisurt time since, superntended the eleaning and repairing of a
compartment of the window at the west end of the chapel. That genclemun has now tiaden down the whole of che window on the south side of the aitar, and it is expected that, should hes sueced io restoring this mindow, the restoration of the others will be committed to his care. There are 24 painted windows, exclusive of the east window, and it is computed that each window will cost about 400h., and that about 12 years will be required to conplete the work. through the Chancellor, a copy of a work by Professor Postels and Dr. Ruprecat, ") Ha the Maritime Plan's of the Northern Coastis of the Pacific Oeeas." The rolume consists of a series of itlogranise picites, beautifuly eopress in Russian or and Latin. His. Majessy is a member of
 Edoniay, mansequence of a sumnions, issued aganst Sir reilusing: pay a coll, being fixed for hearing by the city magistruts: The particulars of the case are, that in the month of Supt., on the wecasion of the Right Hon. Baroseat became racated, and the election consequent thereon was fixed for Monday the 20 th Sept. The Baronet's resiwhere the election was to take place. He left his resi-
dence on the previous Satarday, and the usual toll was
demanded of him at the turn iike-gates through which be pissed, at some of wi.heh he refused to par, and among hent sum sent summons. He claimed his esemption on defence the that he \(\pi\) as going to an election. For the defence the opinion of the Attorney-a esteemed "no day," the act o ravelling on the Saturday must be constried, under all circunstances, as that of going to the election. The ma gistrates. honever, ovatchbull of endeavouring to evade the toll, fined him in the penalty of \(2 l 2 s\). , with \(8 s .6 d\). costs. The legal adriser of
gave notice of appeal.

Theltenhum.- It is stated by a local paper, as an exi dence of the extent to which distress and poverty exist since, upwards of 450 persons were excused their poor since, upwards of
Chichester-The investigation into the affairs of the old bank, which has ensued upon the failure of that esta-
blishment, noticed in our last, has led to a result which blishment, noticed in our last, has led to a result which unexpected event had previously produced, vz., the ap prehension and committal for trial of two of the clerks of the late firm, for defrauding it of moneys to a chie clerk and Mr. Wilisiams, a junior clerk; and it is under stood that the frauds already detected amount to nearl 20,000\%. The means by which they carried on their pracices were the surreptitious re-issue of the notes Mr. G.\%odeve fraudulently obtained by such means a sum of \(5,000 \%\), and on two former occasions sums of 3,5006 and \(8,000 \%\). It is said that he always bore a high charac ter, and was universally respected; but be had, by him self and his immediate fanily comexions, largely em barked in extensive mercantile transatusio, he filled confidemed inconsistent with the situation he and Wil liams have been apprehended, and after a private examination before the magistrates, were committed for trial. Bail to a large amount was offered for Mr. Goodeve, but re to be invelse in mone mystery as although a fiat has been issued it has not been acted on, and the late partners are still in uncontrolled possession of the moneys, books, and other property of the bank. Nots.
pired as to the extent of the liabilities.
having given notice of their intention to ref this place of their hands twelve and a half per cent., the workmen resisted the reduction by "turning out." In consequence of this, with ouly one exception, the whole of the milis in the town were standing during the last week; but at the close of it, an arrangement
Duitr.-()n the night of Sunday the 14 th inst. there mas the highest tide known at this port for a great number of years ; it is supposed to have been owing to the heavy gale of \(\pi\) ind experienced here with considerable foree from the north and north-east. So gieat was the rise of water, that the quays surrounding
the harbour mere inundated. The North Pier suffered much from the pressure of the tide, the planking in some places having been washed away, and many of the boards on the South Pier also were torn up and displaced. There was also a great quantity of shingle washed over the North Pier into the harbour, and the road at the end of this pier has been to =ome extent tora up. By the scale The Lonilon terminharbour The London terminas at the end of the telegraphic communication between don-briage, of the London and this port, which we noticed in a previous opened in a fer days.

Drifield.-On Sunday niorning a hay-stack belongios to Mr. Grore, of the New-road Tarern, was discovered to be on fire; and, on account of the high state of the wind at the time, before the engine could be procured, the fir had gained such an ascendancy that the staicated to tro pletely destroyed. The fire also commafety of the ta verin; but through the exertions of some young men its progress was arrested, and the principal building was no materially injured. It appears that there are reasons to believe that it was the work of an incendiary.
Dunstuble.-On Sunday night a burglary was committed in this town at the house of Dr. Tanstall. It seems that about midnight the Doctor and his lady were alarmed by a man secreted ander their hed. Upon the discovery the calmly propused to go for a light, and were proceeding out of the room for the purpose, when the thief rushe hen fem, and the duetor's trusers, a \(3 l\). note, four sove reigns, a guld ring, chain, and eye-glass, which latter and silk han:kerchief were found dropped at the door. The hieres have nut yet been diseovered.
Hilli. -1 murder and suicide bare been committed a Wiccolmlee, by a deaf and dumb man, named Rober Hickson. It appears he had quarrelled with his wif about some domestic matter, upon which he seized poler, and struck ber a blow on the head wself, by cutting his throat. An inquest has been held, when it appeare from the evidence that a feeling of jealousy was the cause that led to the commission of the act; and after a long investigation the jury, in the case of the suicide, retarned
a verdict of "Temporary insanity," caused, in their
opinion, by the improper conduct of one of his fellow
workmen with reference to deceased's wife. In the case of the murder, the jury returned the eviraerdinary verdict Ilford.-At the recent petty sessions in this town John Harrison, an agricultural labourer, in the employ of Mr. Hunsden, farmer, in this neighbourhood, was examine before the magistrates on a chaige of cruelty for having
nearly cut a horse's tongue out. Mr. Hunstin depused that while going from his residence to his farm in the parish of Barking, he met Mr. Hart, a veterinary surgeon, who informed him that one of his horses was in a dying state. He then accompanied Mr. Haging from its mouth mal mas, and found the tongue hanging from its mouth, the cause of the injury, and he replied that the horse, which he had in the plough, had been very sluggish, an in order to enliven it he got a cord, and tied it tighty
round the tongue, and kept jerking it occasionally. This, he said, had the desired effect; but on taking off the cord he found that the jerking had caused it to sink into the tongue to a considerable depth. The injury done to the The prisoner, in reply to the charge, made the same ex cuse as before, and the bench, after reprobating his inhuman conduct, sentenced him to the payment of 5 h., the value of the horse, and 40 s. penalty, or in default to stan the moner, the prisoner was committed to the House Correction.
Liverpool.-The following is a statement of emigrant departures from this port between the Ist Jan. and 31st
Oct., 184]:-British Colonies of North America, 3,870 ; United States of America, 34,998; Sidney, New Souti Wales, 5,648 ; Port Philip, 1,139; Swan River, 117 giving a total of 46,072 .-A large house in this city in estimated as high as 50,000 lo, but it is said that they wil be able to pay about liss. in the pound. - It appears that the Post-office authorities having reason to suspect, from the quantity of letters put into the Post-offices of Halifax and boston, but pars bee received that they ater mail-bags had been received, those ports by the been put in by passengers arrived at ere ife days il steanoers, a rigid search was made Acadia start in about 60 letters, besides a bagful in possession of passenger, which were taken to the Post-office. Pro -,ffice aqainst the senders and carriers of the contraband letters for the penalties thereby incurred.
Ledbury. - The farmers and cottagers of this weighbourhood, fur several miles round, have, for a length of time, been great suferers from the depredations of a number of thieves, whe, till within the last fortnight, have managed to escape detection. Farmers ben a stantly losing their sheep-tro, sometimes three, of a night having been stclen from a single indiridual-chas farms and hen-roosts have been plundered, and have been the cottagers, whilst engaged at work, tine actively enmared in trying to detect the parties, and a few days since suspicion having follen on a man and his wife named Coldicott, they were apprehended; when they confessed that they had been concerned in the robbery of some sheep a night or two previous from a field belonging to Mr. Atwood, at Claston-farm, in the Jenkins and nington; and Coldicott acknowlettged the were Thomas, two other navigators working houts his accomplices, and said that they lived an tro connear the tunnel which is now being excavaled. In stables at once proceeded there, and succeed:d. prehending the parties, who have been commitiod gaol. Since their apprehension several other narigator numsous corfede are supposed stalers.
Manchester-A public meeting has been held in this are pormose alleviating in some measure the existing distress of the lower classes in this immediate locality. After several speeches liand been delivered, the following resol the opinion of this carried unanimossly. That, in the be made on the meeting, some public manifestalio orent to the auspicious event of the birth of an hor of the usual throne of these realms; and that, in place onesed festive demonstrations, considering the presen we are surstate of the poor of the community by which we amemorarounded, it is desirable that a luyal fund, as comended five of this jovful event, should be raised to be ernous in the purchase of warm clothing, for distriuution appointed A committee was apple sum to carry this resolution into
Newton-heath - In order to alleviate, as far as possiHe, the distress now prevailing among the working-classel in this place, particuiarly the hand-loom weavers, a hurchsition was a short time since prestenten of the town, to the co, meting, to tabiect consideration the best means of effecting the object view. In compliance with this requisition, a meeting held on Monday, which, however, was himarman, a te and consisted chiefly of operatives. The chatition of the explaining to the meeting the distr want of employment laboung ass, "That a subscription be fortham cond in that food may be provided to reliere tha suffering which personal inspection shall ascertain to pras upon the really necensitows poor of this township, ai
that the inhabitants be canvassed in aid of this object." instituted into the cause of the distress, before any steps rere taken for its removal;" and several operatives supported this proposition. It was, however, after much ried unanimously

Portsmouth.-Some strong reinforcements for China have just been embarked from this port. They consist of 8011 men taken from the 18 th , the 26 th , the 49 th , and 55 th regiments. One lieut.-col., 5 lieuts, and 6 ensigns will accompany this force, in addition to the proper complement
of medical officers. These detachments are exclusive of the 98 th regiment, the service companies of which are to
sail in H. M. S. Belleisle, from Plymouth, about the 3rd or 4th of next month, accompanied by a party of artillery, and Major-Gen. Lord Saltoun and his aide-de-camp, Capt. Conynghame, of the 60th Rifles.
Whitten, sen. of Greensnorton Pt, the stackyard of Mr W. Wh hitten, sen., of Greensnorton Park Farm, in this coun ricks, two large wheat hovels, and two ricks of hay; and the whole of the barley and one wheat rick were entirely
consumed. By the exertions of the firemen, and there consumed. By the exertions of the firemen, and there
being little wind at the time, the remaining wheat rick and hay stacks were saved, and the flames kept from the barn, which was full of wheat, and the adjoining out-offices and house. There were 14 bullocks in the next yard, tied adjoins the road, and the premises are about a quarter of and
abont two miles and a half from Towcester. The property belongs to the Duke of Grafton, who has within a fey years built a new house and barns and outbuildings therestacks were in flames in several places at the same time The property destroyed was upwards of 200 qrs. of barley in their exertions, and have made several investigations, but at present there is no clue to the pergetrator of the act. Turaday, the 16 th inst., at about ten o'clock, a severe snow-storm fell, extending over a space of ahout 4 miles rom Eramlingham to this citr, but reaching very ittie an hour. At night, during a sharp frost, there was a Reading-Bernard.
Reading.-Bernard Caranagh, the man who it will be pretending to be able to live without eating, and whose plassible and successful duplicity completely deceive has been detected in this town, where he had arrived to exhibit himself, as an impostor, and sentenced by the Mayor to imprisonment for three months, with hard labour the treadmill. It seems that a woman who had been to see himo recognised him, though greatly disguised, in a loof. Being followed by the woman, heme ham, and a house where he was stopping; and a policeman being sent for, he was taken into custody, and conveyed before him, Cavanagh was called on for his defence, when he said that it was of very liftle use his saying anything, a after what had taken place he supposed he should not be believed, and therefore, perhaps, he had better say no Lord caused him to be hungry. The Mayor then pointed ut to bim the disgraceful conduct he had been pursuing and the pubic by bis gross imposture ; and tellang aim that it was bis determination, at least fer a time put a stop to his deception, he sentenced him to three onths' imprisonment acd hard labour.
Stockport.-Our readers will perhaps remember the cher of poisoning which were tried at the last assizes for Cheahire, when Robert Sandys was found guilty of poisonThe case stood over for the oninion of the julses, ons objection raised by the counsel for the prisoner, and senonce was accordingly deferred. Tweive of the judges me ing the argua the Exchequer Chamber, and after heartion, and of the onposite side in support of the indictment, ther unanimously decided that the indictment was curder, the prison: r , therefore, now stands consicted of Sunder, and will receise sentence at the next assizes.
ied nearly the -On Monday the magistrates were oceuhas excited a great deal of interest in this neighbourhood, which Mr. Ingo, superintendent of the rural police and Mr. Maynard, coroner of Easington-ward, were the ronkenness conned. Mr. Ingo preterred a charge of latter complained of false imprisonment, having been given into the custody of two policemen by the superinHought, marched between thems soon after midnight from seven mules, and locked up for several hours; the police acting ynder Mr. Ingo's orders refusing to accept bail day. From the erinanser the ciarge on the fulowing tion had raken place betweer the parties, in the room of an inn where Mr. Maynard was staying, on the subject Maynard inest that had been held; during which Mr. latter not obeving Mr. Mavo out of the room, which the ant and a scuffle ensued, during which two policemen T. Mancard into custody: and though a friend of that
it; and he was "removed, as above stated, to the lock-aphouse. It further appeared, that Mr. Masnard was sometation, Sir H. Williamson, in the name of the other magistrates, said that the bench were of opinion a slight assault had been committed, but that Mr. Maynard had received duct of Superintendent Ingo had been harsh and unwar rantable ; but as it had been intimated by his counsel that it was the intention of Mr. Maynard to appeal to
higher tribunal, the bench determined not to adjudicate upon the case, but to bind that gentleman to appear the sessions and there answer the charge.
Farrington.-Daring the past week, great exertions have been made by the police of this town to bring the murderer of the late Miss Moulds, the circumstances of whose murder were noticed in our last, to justice, as the result of the coroner's inquest seemed to establish the the eridence against John Gill, the party suspected, was not sufficiently strong to warrant the jury in returning rerdict of wilful murder against fhim. On Tuesday he was again taken into custody, and on Saturday and Mousday a long investigation took place before the magistrate. which ended in his committal for trial.
Whickham.-On Sunday, the church in this place was ing from the stoves had become orerheated, and had set fire to the fittings of one of the pews, and the conflagra tion so far gained head that the flames burst from the roof. The clergyman of the parish endearoured to gain engines, though soon on the spot, prored of no service. being out of order. The inhabitants at length effected an entrance by breaking in the windows, and by great exern
tions the fire was, at length, subdued, but not before about eighty pews were destroyed.
Wigan.-Much carious gossip has been caused in this town by the extraordinary circamstances attending the death of a person named Mary Aspull, living at Scholes Upon the death of the old lady, a search was made, by one , two persons, who were next of kin to deceased, when house, no less the most obscure and untikely parts of the exception of about \(40 \%\). or \(50 \%\)., consisted of guineas. Decessed, it seems, was with some difficulty prevailed upon to make a will a few dars before she died; wherein she directed that all her property shall be distributed in equal shares to certain parties therein mentioned, her second cousins, and to all others who are equal, and neare degree of relationship. It is said the claimants ar
ry numerous.
Railways.-On Tuesday, another portion of the emhankment on the London and Croydon Railway fell in hearly thirty feot , oyoth. Infurmation was forwarded to the engineers of the line, and an express despatched to Brighton, to inform the directors of the circumstance, several of whom, with the engineers, at once proceeded to the spot, and two engines and trains, with about one hundred excarators, were set to work to remove the stoppage It was found that several hundred yards of the embank ment had slipped comple tely over the train-way; and that
nearly the whole of the distance from the spot where this has occurred to No. 4 bridge, presented a succession partial slips or shakes, extending foom the base to the summit of the embankment, threatening other accident of an equally serious character. The place immediatel adjoins that where the recent slip took place, and which had ony been removed and the line cleared on wunday In consequence of this event, the carriages for conveying station hare been asain resumed, although the passengers o Croycton walk np the opposite embansment to the othe side, where a train a waits them. The down-line will be cleared in a day or two but the ap-line, it is thought, will require much more time.-On Monday evenins, con siderable ansiety was manifested in the neighbeurhnod of he terminus of the London and Birmingham Railway, Euston Scuare in consecuence of the non-arrival of the train from Birmingham at its usual time, \(i\) o clock. A 9, the train not having been leard of, the superintenden of the railway proceeded on an engine down the line. row, at the cutting at Woodocik-hill, the down luggage train, which left Chalk-farm in the evenimg, was fuund 10 have broken cown a ass etther up or domn. passenger train from Birmiogham had arrived, but was unable to proceed unti! a pasage was made, which was not efriected untal two hours had elapsed. Fortunately th obstruetion was perceived in time, and no injurs was sut rearlymeeting of the Conpers.- of the sou:h Eastern Raiiway was beld at the London Tavern. It appeared from the report that the works were pregressing. a.l that contracts me:e crtered into for cumpicting the ruta ay to
Tonbridge in May, to Staplehurst-readi ia July, and to Ashford in Dec. next; tha: the tunnel at Lletchingley was completed, and tha: by Jan. 1st the line would be connected with the Brighton line near Red-hill. The late torms and heary rains had nut inipaired the works. since the declaration of fortiture of , ,3,- shares in Aus. 2,513 shares had been pail: 19,30 ini, 3s. \(4 \%\) had been advanced on account of the joint station at London-briuge. From the cash account it appeared that the receipts for the half-year up to the lst Oct. Were 188,861 l. 4s. Jd. making a total of cash of \(788,8522.2\). 9 d .; and the par

762,4901. 17s. 8d., leaving a balance in hand of
\(26,3616.5 \mathrm{~s}\). 1 d . The report was adopted. The opinion of Mr. Cubitt, the engineer in chief, was, that from the junction of the Brighton line at Red-hill to Dover, which is 66 miles, the line would cost less than 30,000 . per aile, and that the whole cost to Croydon would be about \(2,340,000 \%\). -The Railuay Times gives the fol-
loming as the receipts of the primerpal ralimars for lowing as the receipts of the prucepal raikays for

\section*{IRELAND.}

Dublin.-His Escellency Earl de Grey has been waited on by a deputation from the Assiciation for Promoting the Knowledge of the Christian Retigion. His Grace Bishops and Amate, the Archbishop of Dublin, several Bishops and \(\Delta\) rchdeacons, and a number of clergymen, comprised the deputation. The Lord Primate read the address, which stated that the objects for which they were associated were such as they, felt certain would commend themselves to his Excellency's approbation, and the means employed for their attaiument were, they trusted, worthy of his Excellency's paronage. To extend the knowledge of pure religton, to train up youth in the way they should go, and to contribute as much as possible to the moral inprovement of the community, were the objects which alone they had in view. The means which they had adopted in furtherance of these objects had been (under the sanction of the prelates of the C'burch, and with the concurrence of the parochial clergy) the circulation of Book of Comm Prayer, and of such moral and religious tracts as should be level to the capacity of plain unlettered minds, and the encouragement of catechetical instruction, by the distribution of premiuma to such children as were found, apon examination, to have made a suitable proficiency in a knowledge of the sacred Scriptures, and the formularies of their religion. They were happy in being able to state that, notwithstanding present embarrassments arising from the inadequacy o the fands placed at their disposal, their labours continued countenance, however, of the representative of her Majesty would be a most valuable advantage to such an institution the henjod the sanction of erery suecesiv Viceroy, they hoped that his Excellency would allow his name to be placed at the head of the sce:ety, and thus mart his approval of measures, the tendency of which, they were peace upon earth, good will amongst men, and glory to received thignt pruld es of their Asociation, awlting man, he thought恠 eternal welfare of the humble uninstructed members of the community, without feeling an anxious desire to aid in the promotion of them. He, therefore, had the greatest pleasure in acceding to their renuest, and he could assur them that they had his best wishes for their success, not only as the Viceroy of Ireland, but as an humbie and
sincere private individual. - His Excellencr held bis first levée last week, which was very numerously attended. The following is an analrsis of the different ranks of the parties who were present:-Peers and Lubility, 38 ; Bishops, 11 ; Roman Catholte Bistops, 3 ; Right Ho-
nourables and Honourabies, 35 : Baronets and Knights, 45; Deans, 11: Archdeacons, 11 ; Clergy, 3 39: Judges, 13 ; Sergeants, 3; Queen's Counsel, 25; Generals, 14 Colonels, 54 ; Majors, 40 ; Captains (Army and Navy),
100 ; Lieutenants, 38 ; Members of Parliament, 22 ; Depaty-Lieutenants of Counties, 140; LI.D.'s, \&; D.D.'s. If; F.T.C.D.'s, 8; M.D.'s,
6n; Aldermen, 6 . Thus mahing a total of 1.008 . This is exclusise of the Yiceregal Household, official persons, and privare individuals not classed, the tutal amounting
to fifteen hundred or sisteen hundred. Lady de Grey's first drawing-ronm will not, it is stated, be hell till the latter ead of January, or perbaps early in Febrisary, but certainly not before Christmas. It is also said to be the intention of their Excellencies to sive state dinner parties twice a week, a grand concert and bail in interand that these festivities will conatulue during the waute the winter srasen.-The simultancous collection of the Sundar; and ti.e result shows a coasiderable au-mentation as compared with the lasi: the incrense in Dublin alone heing \(3 f^{* 1}\), more than a th.rd of the entire co......n list
gear. It is thomght that there will be a

 Association of the Liberty., a arced at ate s luatriutic which Mrs. Alton presideu, and Miss (costello acted as secretary. It set furth, that an asseciation, formed exclusively of females, had becn entabiintad in the Liberty of this city, tor the encouragement of Irsis manafactare and he repeal of the Etion ; and one pound was enclosed as Maror moved that the dhy's subscr:ption. Nayor moved that the thanks of this Association be given
to the Women's Association, and that the letter commu nicating them be handsomely engrossed and ornamented.

He said, that although some people might laugh at this communication, it showed the deep interest which the Repeal question was exciting among all classes, as well as among both sexes of the populatien of this country. The motion passed with acclamation. The Secretary then read a letter from the loung Men:s R-peal Association of New York, enclosing 35. The Lord Maynr, after moving a vote of thanlis to the contributors to this fund, proceeded to address the meeting at consiuerable length. called a leree. Yes, the Lord Lieutenant had a levee; and he had a levee. The Lord Lieutenant's was held in the Castle ; but his could not be held in any castle. It was what might be called a levee en masse. The crowd at the Castle were ment opposed to the intere-ts of the
Irish people, notwithstanding which, their pressnce in this city was highly beneficial to trale, and shoutd be taken as a proof of the advantage which a repeal of the Union would be to all kiads of trade. Among that crowd were no less than 274 parsons, who were not brought there by love of country, love of their Creator, or of any created thought Lord de Grey was a man that would aid them in keeping hold of their situations-of continuing the incubus of a church upon the Irish people in which they did not believe. He then said that the committee were about to submit to the Association a petion the Queen, praying her to dismiss from the Government Lords de land. He proceeded to comment on an article in a Lonland. He proceeded to comment on an article in a London morning paper, accusing him of a Regent of Spain. He did denounce the vile and wicked Espartero, who was one of the worst enemies of civil and religions liberty-a man who established a military des. potism, and adopted the very worst principles of the early French Jacobins against religion. And as to his desire to see England weakened, he saw no reason why in power wispressing and insolcing his country. The Irish never gained any act of justice from England while she was in prosperity. He concluded a long speech by moving that he committee be directed to prepare a petition to her Majesty for the purposes stated. The week's rent was nowned the phe gile seal the Exchequer has been purloined from its strong box. The intrinsic ralue is about 290 . as old silver, but fears appear to be entertained lest some falsifications may be made by it before it is deatroyed. The Chancellor of the Exchequer has been written to on the subject, in order to have substitute provided rithout delay.

Queen's Coundy.-A man named John Gorman, of Moher, in this rounty, has been committed for the murder of a female. The hody was found, with marks of great violence on it, in a dyke, covered with large stones, to keep traced fully answered the marks left by Gorman's e. -and thus led to his apprehension and subsequent committal.

\section*{scutland.}

Glasgow. - The election of Lord Rector of the University of this city has taken place, and the Marquis of Breadalbane has been unanimously re-elected in all the foar nations.-On Tuesday a serious fire occurred in the neighbourhood of this city, in the extensive cotton-spin ning works of Messra. Bartholomew and Co., at Barrowfeld. Some time elapsed before any engines were brought pidty, and estensive mischief was done before it could be got under. The loss is estimated at nearly \(40,000 l_{\text {c, }}\) in cleding buildings, machinery. coiton, \&c., of which it thought that a large proportion mizht have been saved had the engines from this city been promptly sent out The west wing of the factory, however, about 130 feet in length and five stories high, has been sared, by which a
further loss of \(15.000 \%\) has been prevented. Tine portion further losz of 15.0001 . has been prevented. The portion of the mill which has been destroyed contained upwards of 25.0046 spindles, and upwards of 500 persons have been thrown out of emplorment.
Paisley. -The local papers inform us that not only is there no improvement in the condition of the manufacturing population of this town, but that a considerable increase has taken place in the amount of the distress and destitution. During the past week the number of working people and their families thrown out of employment has increased more than 1,000 ; and at the present moment there are not fewer than 5,836 persons in the town subsisting on charity alone.

Vice-Chancerror's Corrt.- (Before Sir L. Shadwell.) - Sid ne forgotten by our readers when it is mentioned that Sir Rober our estate, at Lamberhurst, under a sale directed by the court
or his own use, but in the name of "Mr. John King," for
um of \(670 l\), and the court directed the sale to he set aside Anderdon mentioned these circumstances, and said, that notwith purchase for Sir Robert Sidney, the equity of the case was found auequacy of the price paid by sir R. Silney, the court gave
direction that if a hetter price could not the obtaincl sir R. Sitmey
should be held to his purcliase. The entate had accordinaly bce resold, and a gentleman, named Parker, had heen declared the purchaser, at \(1,400 \%\). He had, however, by some mise tleulation days after the day required by the conditions of sale, and an ap plication was now made, with the approbation of all the other parties, who were of course desirous the estate should be sold to
Mr. Parker for 1 , \(400 /\), rather than to Sir R. Sidney for \(670 l\), to
be permitted now to pay his purchase-money into court. \(\operatorname{Sir} \mathrm{R}\) be permitted now to pay his purchase-money into court. Sir R.
Sidney, however, insisted that the conditions of sale not having been strictly complied with, the whole proceeding was mullified and that he was entitled to retain the estate on his purchase for
 dad been sct a wde on the ground that it was agains: thie rule of
the court that a jerson in Sir R. Siducy's ucaitionas wampe-
tent to make the purchase, and not on a question of value, and as sir R. Sidney would have been held to his purchase if a larger sum could not have been obtained, he was entitled to the benefit
of the rise in the price, and also the advantages which arose from of the rise in the price, and also the advantages which arose from
an ineffectual sale. - The Vice-Chancellor said Mr. Wakefield's argument was very ingenious, but the application was purely
matter nf course. What was mcant hy the resale was, that if
higher bideler than Sir R. Si ' be discharged from his purcbase, but not that he sh, uld have an
aboolute claim to the entate if an accictent of a day occurrcd in
pas ment of the purchave mnney. The party, howerer, makine
the application must of course pay the coots of it.
Rows Court.- Norburne V . Ollett. - In this case, Thomas
Norburne, since deceased, being possessed of a farm called Silk Norburne, since deceased, being possessed of a farm called Silk
Fen Farm, at Denver, near Dowwham Market, let it to Tweed
OUett; but he not being able to farm it to advantage, gave it up of the price against the rent due. About this time, James Ollett,
the defintant, intermarried with Thomas Nirturne's danchter Mary, and he managed the farm, and his name was fin-erted in the rate-book of the parish as cecupicr. Cpon the deccave of Themas James ollett denied wht an occupyin and stated that, by an agreement with Thomas Norburne, he was to farm the estate for his own benefit, without payment of any
rent, upon condition of his maintaining his father-in-law and his brother which it that the who were estate on his own behalf, and that he always considered himself as owner. Lerd Lansdale, after hearing the reply, said it wend
be necensary for him to read the an-wer before lee finally decided He did not think that there was much doubt, had not the evidence been in contradiction of the case made by the answer. It was managed the farm. The plaintiffinsisted that James Ollett farme it for his nwn henefit, but the tefendant said it was for the testa-
tor's familr, of which he was a memher. That was natural emugh. The testator had a son-in-law, who was a farmer: was sand that the defendant held himself out as the occupier the defendant had so put in his answer that there was noesidence to make ont his case, he must reject the eridence and follow the case stated in the an-wer: but if James Oilett hirned out to ho the occupier, the cecree mlint be raried accordmely. Fis focie from depesitions wheh did not meet the answer. He considered, therefore, that he must refer it to the ma-ter, to incmire upou what terms and under what circumstances the faim was occupied during the testatar's hifetime.
-This was an action bronght hy a clergyman to reenver his thes, and the nution dofendant set up a modus in answer to the

\section*{SATURDAY, DECEMBER 4, 1841. \\ M
Monday \\ Wedinody}

We would beg to call the attention of our readers to excellent communication in another column by Mr Billington, a veteran planter, whose merits have never been properly appreciated by the public, and with
whose writings we were ourselves unacquainted a few months ago. The subject is that of renovating the diseased fruit-trees in a garden stationed, as many are in a low, damp, unfavourable situation.

In former days, when the principles of gardening were not so well understood as they now are, it was by no means uncommon to select for a kitchen-garden the lowest part of a valley, instead of a slope on a hillside; the notion being, that such places are warmer. And so they no doubt are in summer. But the advantage of a somewhat higher temperature in summer is more than counterbalanced by imperfeet drainage, which keeps the earth cold when the atmosphere is warm, and which supplies the roots with so much watery sap, that the shoots of fruittrees become excessively succulent, and our damp and doudy summers are unable to ripen them. We are continually adverting to these facts in the weekly replies given to correspondents; and we giadly take adrantage of Mr. Billington's valuable letter to press the subject strongly upon our readers.

Gardens with cold, wet bottoms are not incurable : neither is their renovation difficult or expensive. All that is necessary is, to know how to set about the opezation of raising the trees above the water, when, from local circumstances, the wacer cannot be drained away from the roots. This Mr. Billington has thoroughly explained. We believe him to have been the first gardener who turned his attention to the subject; but whether this be so or not is to the public immaterial. The great point is to know that the plan he recommends is not merely useful, but absolutely indispensable in many places. It is not the spruce training of a horticultural martinet wot screens in spring and syringes in summer, and washes of all smells and complexions in winter; neither is it bone-dust, nor blood, nor loads of stable manure, nor lime-rubbish, nor brick-rubbish, nor stonerubbish, all of which have been recommended as panaceas for first one disorder of fruit-trees and then another, and which are all good things in their way-
it is not these things which will restore energy and it is not these things which will restore energy and
fruitfulness to the trees in a swampy garden. IV hile the soil is cold and damp they only increase the evil they are intended to alleviate. The reason of this is obvivus; although, perhaps, less considered than it ought to be.

With the exception of the Apple, all our finer fruits, the Pear, the Peach, the Apricot, the Plum, the Cherry, and the Vine, are natives of countries in Which the summer heat is far higher than is ever known in Great Britain. The Peach is from the hot plains of Persia; the Apricot is found on the warm hill-sides of Armenia, and other eastern countries; the Vine is Syrian; the Pear, although wild, or seemingly so, in England, is only found in perfection in countries much warmer than ours, as in France and the Channel Islands, where the summers are hot and dry; the Cherry inhabits the glowing valleys of the Crimea and Asiatic Turkey: for our sour wild Cherries are no more the same species as the Blackheart, the Circassian, and other rich varieties, than our Hoes are the same as the Plum, with itș sugary and copious fleah: the latter, too, appears to be at home in Cabul, Bokhara, and Cashmere.

All these countries, although cold in winter, have a very high summer temperature. Their climate may be understood by any gardener when he is told that the Melon arrives there at the greatest perfection in the open fields without any kind of protection.

Now it may be thought, perhaps, that a garclen in such countries apoaches more nearly to the climate of such countries than any other that can be found in this part of the world ; but such is not the fact. An oriental climate cannot be had at all in this country in the open air under any circumstances whatever; We can only obtain a distant approach to it. But
that approach is not the nearest which leads to the production of warm air without warm earth. That Well as the air. A wet boteom is precisely, as all the
Well Well as the air. A wet bottom is precisely, as all the
World knows, the place where the soil is the latest in
gaining heat from the sun during summer : it is not found, that the earth becomes permanently warmed in such places, and then the season is too much advanced for the effect of a warm soil to be of importance to the trees that are growing in it. In a wet or cloudy summer the soil is never warmed in low, damp gardens.
hut in the countries of the East, in those glorious lands where a paradise was formed for our first pa-rents-" where the flowers ever blossom, the beams ever shine"-the earth is warmed early in the year by the rays of a cloudless sun; as the season adrances, its temperature rises with that of the air ; and it is only when the fruits are gathered in, that the warmth begins to escape from the soil faster than it is absorbed.
How unlike this is to what is experienced in a low, wet garden, we need not say; it is equally apparent that a far greater similarity exists in a garden on a warm hill-side
The only thing that we can do in this cold country is to take care that the soil in which Oriental trees are planted is maintained permanently during summer at a higher average temperature than that of the air, and that this elevation of temperature takes place at as
early a period as possible in each season. Where the soil is undrained, the constant evaporation from the surface will itself cause a diminution of temperature even during the day, and eonsequently no heat can be absorbed until this supertluity of moisture is removed. Even if the soil is dry and well dramed, yet if the roots, whether permitted by negligence, or compelled by constantly destroying those near the surface in the operation of digging, are forced downwards beyond the influence of the surface-warmth of the soil, they will always be colder than the stem, torpid, and unable to maintain the leaves in a healthy condition, and equally incapable of nourishing the young fruit when set, supposing that the branches bear any. Hence abundant crops of flowers, may appear, and never be succeeded by fruit; a very common occurrence, as is too well known.

Gardeners may rely upon it, the temperature of the soil in which roots grow is at least of as much importance as that of the atmosphere that surrounds their stems. This subject is fully discussed in the Theory of Horticulture, whereit is proved that although the mean temperature of the soil in which plants grow is universally something higher than that of the air, yet that it is requisite for it to be considerably higher than is generally imagined in all cases where plants are natives of countries enjoying an extreme summer temperature: in short, that natural bottom-heat is as necessary to most hardy fruit-trees as artificial bottomheat is to Pine-apples.

Were we maitted into our columns, a few weeks since, a short discussion concerning a claim on the part of some gardeners to their masters' property, and showed that no such right existed, either morally or legally, there was one point to which we did not advert. A correspondent, in another column, having
called our attention to the subject. we will at once called our attention to the subject, we will at once alludes.

We are aware that some gardeners are allowed by their employers to sell for their own benefit any new seedlings which they may succeed in raising, and we have reason to believe that in a few inotances this has been productive of considerable pecusiary advantage to the gardener. To an arrangement of this kind no one has a right to object. it being a simple bargain between the master and his servant; and it may be regarded either as a particular mode of assigning wages, or as a mere inlucement to exertion. \or can we at all condemn the principle of such an arrange ment, as some do. On the contrary, it is in our eyes just that sort of encouragement which a wise master would gladly hold out to a gardener, and advantageous to both parties: to the one, becuuse it stimulates his servant to renewed exertion, and is sure to call into activily whatever ability he may possess : and to the other, because he sees some prospect of increasing his wages by the successful direction of his professional skill. It is also a practıee which leads to objects of public utility without the necessity of any private outlay ; for no persons are so likely to improve the quality of fruits of esculents. or of flowers. as those whose lives are spent among them, and who must necessarily be mast familiar with their separate pecaliarities, more especially as knowing in what direction improvement is most needed

The only objection that can be fairly taken to the system of allowing a gardener to sell his seedling varieties if he can, is, that if such a permission is given. a man will direct his attention exclusively to the raising seedlings, and will neglect the ordinary routine of his duties. This may certainly happen, but it does not in our mind form any real objection to the granting a gardener the permission in question. We may as well say that a gardener shall not be permitted to
any other thing which may lead to excess. In all such cases, the remedy on the part of a master is the same-to discharge the :ervant.
But if a master does not think proper to concede his gardener this privilege, which we think may be granted with equal advantage to both parties, has a gardener a right to cxercise it notwithstanding? Certainly not. The grain which is sown in the master's
soil, the plants that are reared, the cuttings that are struck, and the seeds that are saved, are all the shsohate property of the master: they are part of the re. turn to be made by the gardener for the wages he receines; and on no pretence can he be justufed in using them as his nwn. The mere accident of a seedling plant being different in colour, or some other property from others, camiot possilly give a gardener any right to it which he would not have prossessed had that colour or other property been absent ; and no one would be absurd enough to contend for a right in the latter case. Would a farming bailff have a claim to
an improved breed of horses, or sheep, or cattle, which he might, by his ingenuity, be the cause of producing on his master's estate?-But the argument need not be carried further.

BOUCHERIE'S EXPERIMENTS ON PRESERT, ING WOOD.
kindly fund who has lately returned from Paris has miny farnished us with the following memoranda conjects solid timber with chemical which Dr. Boucherie in has already been stated by us at p. 147 .
The principal kinds of wood that have heen subjected to Dr. Boucherie's process are the Oak, Poplar, Birch and various species of Pine. A tree baving been sawed near the root is placed in a horizontal position, and a cap of leather or waterproof cloih is tied firmly over the lower end, leaving a sufficient vacuity for the liquid to be injected. This is introduced by a Aezible tube futed oo the leathern cap, and communicating with a barrel placed at some height above the timber, so as to give the pressure of a column of 6 or 8 feet. The liquid being prepared, is put into the barrel, and the operation proceeds. In this way 20 to 40 gallons of the solation of acetate of lead, and other re-agents, may be made to ther through the pores of the woud, leaving a deposit os the fibres, and altering their colour ; nor dues the vegeta tion appear to be suspended by the introduction of these beterogeneous fluids, for the leaves that may remain on igorous. In 15 or 20 days the process is completed. The re-agents hitherto employed are-1. Pyrolignite of lead, and after the wood is cut and paned, sulphuret of
soda, to bring out the colour; 2 . Pyrolignita of iron; 3. Prussiate of potass, and afterwards sulphate of iron 4. Iodine, with much-diluted bydrochloric amid; 5. Bichloride of Mercury ; 6. Ammoniaret of Copper ; 7. Pyrolignic acid.
Another process for staining and hardening woods is by mmersing ti.em in certain regetable oils or resins, either in their sumple state. or atrer they bave bren stanaed by mineral re-agents. Thus Oak, after its fibres have been shaded by sulphare of 1 rom . may be further stained by being steeped in drying inseed onl, at a temperature of
\(1: 30^{\circ}\) to \(150^{\circ}\) (Cent. Th.); and t1.e operatiun may be assisted by the epplication of atmospleric pressure. A mall cube of Poplar was shown to me into which 150 per cent. of its weight of resin had been injected, and the specific gravity of whieh was proportionally increased Of the several specimens of wood thus impregnated the Oak and Birch seemed to have succeeded best; the latter having acquired a redutsh brown colvur and glistening appeatance, on the pulisied surface, by immersion in inseed oil at the temperature of \(151^{\circ}\); and the former deep rellow coluur, in th se portions which had not beea stained by the sulphate of iron. Common tar, as well at coal tar. spicit of turpentine with resin, and linseed oil, re the materials uned for this process. With respect, however, to the effects produced by immersiou a olutions, resins, as mell as by the infiltration of aqueous snlutions,
it may be remarked that the operation is not always uniit may be remariked that the operation is not ainays uni pecies, especially the Oak and Poplar, the outer circles of fistes c.nly are stained; though in one specimen of Poplar the reverse was the case. This seems to depend un the greater visour of the vessels gear the surface, or on the curbess and rigility of those in the materior of the

The length of the trees which I saw subjected to the rocoss of injertion with aquevus filids raried from \(\ddagger\) to 12 metres.-H.

\section*{PORTABLE GREENHOLSES}

I AM one of these wha hated with delight the introluction ef wiat are ealied Wari's 'thes, I dist mot, indeed, regard thema as izumatime anytins it rarimee with the known laws of regetation, as some thet, whon fancied the plants in them eres wishout mommunication with the air ; but I thought ther wound prose usefal to those na hapyy twellens in cities who, lesti-ure of even a greenLouse "on the bads, sha rain tur the frest flowers
 a green leaf or the ziaplest tiewer, if it is but aemly gathered, has more attraction that all the ginter of a
drawing-room. Like the captive who narsed the wred in his prison-yard, I, under like axemmetances, should liberty. When, therefore, Mr. Wand brought his portable
greenhouses into notice, \(\mathbf{I}\), for one, anticipated a revolu-
tion in the decorations of London houses, and espected nothing less than a tiny conservatory in every inhabite The portable greentouses that are usually seen in sitting rooms seldom contain anything more than a few Ferns, which, however beautiful, want variety; and I find many plaything or leaving their plants to die.

There are two reasons at least why this so often happens. In the first place, the glass of these little houses possible to see the plants which they contain; and in the next place, there is no means of raising their temperature in winter if, as usually is the case, they contain planta impatient of cold. A third reason is that the atmosphere, when it becomes too damp, as is almost sure to be the case except in very skilful hands, cannot be readily dried; oper them.

Some ladies of my acquaintance, who, I presume, had themselves experienced these inconveniences, have hit up their perenious plan by which they are obviated, and by their permission 1 am enabled

The following cut gives a view of one of these little greenhouses, which are readily taken to pieces, can always
be ventilated, and may be heated like an ordinary hotbe ventilated, and may be heated like an ordinary hot-
house. The apparatus consists of a stout mahogany box, the upper half of which has panes of glass let into its sides, on which a moveable glass roof, like a hand-glass, is placed, and in the bottom of which slides a copper box or drawer, which may contain hot water; an open shelf is fixed over the latter, upon which pots may be placed. In the ghass roof are doors to enable you to get at the inside, to wipe the glasses, or for any other purpose. cold weather it is filled with hot water night and morning. By this contrivance tender plants have been preserved upon landing-place in perfect health all through the winte

Such a contrivance may be used as a covering under तhich to preserve plants in a drawing-room; or it may be
employed advantageously by those who possess a greenemployed advantageously by those who possess a green-
house, as the place in which seeds are to be raised or cuttings struck when bottom-heat is required.
It has been suggested that its-appearance would be much improved if it were furnished with two wings lower than the middle, into which seedlings and newly-rooted cuttings might be transferred; bat these are matters o aste, which hardly require explamation.-T. T.

ROOT-PRUNING, SHALLOW-PLANTING, AND KEEPING THE ROOTS OF FRUIT-TREES NEAR THE SURFACE.
I HAve seen several eulogiums on root-pruning in the Mr. Errington states that it is called Mr. Rivers, where tem, but himself claims to be the first to have recommended it in the Gardeners' Magasine in the year 1830 . Now I think I may claim a little priority in this matter as to the time of inventing it, if it may be termed an in
vention; for it was the result of my own reflection when very young, having never heard or read of anything similar before, nor since, till within these few last years

In the year 1800,41 years since, 1 practised it upon very extensive scale, with all the succebs that Mr. Rivers, ished aceome it in \(\mathbf{i 8 2 5}\)-five rears rrevimens'y to Mr. Errington-in a work on the managemen: of poung plantations, entitled is Facts, Hints, \&e. Ec. by Wi. BilTherefore if there it is fuipy described and 1 , Bay share of it. At least it appears to me probable that the mace, face, ayse poen derired fom my publication, 28 the principte as ef efts are the same as those puolished by but raiser: the cots near to the surface.
may still what Iformerly pub-

In 'hap, 11. "Esperments on Fruit-trees," will be found
the following statement:-About the middle of June 1800, I arrived at Brochle-by, Lincolnshire, as gardener to the
late Lorl Yarborough. At that adranced season I found the Peach-trees in a deplorable state, with scarcely any leares upon them, few branches, and rery little fruit; the few leaves that remained were all curled or diseased, and
soon after shrivelled up and fell off. The trees were not very old-about 30 years, but had extended over a fine wall without flues. The site of the garden was very unfavourable, a worse could not have been found nelar the being made into a garden, the water used to stagnate and cover a great part of it through the winter; but it had brought in for the fruit-tree borders, \&ch. But after all brought in for the fruit-cree borders, But after al ill effects upon vegetables and tender fruit-trees entirely averted in an atmosphere so damp from the exhalation that arise in such places in the autumn and spring months, hen sunny days and frosty nights are so prevalent.
Ne fril-tree borders had been well made and well rained; the trees had grown luxuriantly and covered the walls : but no fruit was produced of any consequence, elsewhere. The Peaches and Apricots on walls would make efforts in the spring of each year to produce wood and leaves, but when the cold weather prevailed, in April, May, and June, with easterly winds and frost, the leaves became diseased and curled, and were either pulled off o came inactive for want of healthy leaves, at the time came inactive for want of healthy leaves, at the time
when they should bave been making and perfecting the wood for the next year's crop. But towards the end of summer, when the earth had become dry and warm to a great depth, the trees would make fresh efforts and throw out plenty of strong luxuriant shoots. Then the early autumnal frosts would set in before such late wood was half matured, so that during the winter and spring the greater part of these strong shoots was killed, and the remainder had no time to make strong flower buds. And thus, season after season, there was nothing an immense pense : the walls were bare, the trees naked and unsightly without fruit, or with lusuriant or cankered wool
Instead of rooting out these sickly trees and planting foung ones in their places that 1 might have the pleasur of planting and training my own trees under my own management, knowing it would be several years befor consider be fruit from young trees, I was induced to bear a little fruit till young trees could arrive at a bearing tate between the yo in for nearly art the old Peache and Nectarines were destitute of young wood half the height of the wall.
Early in the autumn of the year 1800 I began with what I termed raising the roots (not "root-proning of some Peaches and Apricots, for fater wer in as unfruitful a state as the others from the same
cause. The method I devised was as follows:-First, by digging out a trench at from 4 to 5 feet from the stem of the tree, and about 2 feet wide, till I found the root which were at the bottom of the good soil near 3 fee below the surface. This had been cansed by planting too deep at first, and always digging the borders deep, whic forced the roots still lower beneath the surface; but I must remark I found all the roots healthy, which showed that the disease in the branches and leaves had not affected the roots, nor been derived from diseased or cankered roots, even in that damp situation.
After the earth was thrown out of the trench, we began to fork out the soil with a three-pronged fork into the open trench, throwing it out till we got all the roots bare to within 18 or 20 inches of the stem (of course this w root-pruning, for I cut them all off to that distance) when we lifted them up and bent them backwards, if no too strong, or held them up while the soil thrown out in the operation of clearing the roots was returned into the it , to within 9 iaches or a foot of the sarface, treadin deeper roots upon the soil, covering them with the remainder, without adding either fresh soil or manure of any kind When finished, the roots lay from abont nine to twelv aches from the surface, instead of three feet, as before But as the trees had been planted very deep at first, or the soil had been raised in the course of years, the extremities of the shortened raised roots were mueh nearer he surfac after the operation than where they issued from the collar of the root; for we could not raise that part so high. My reason for doing themi this way was to prevent too great cireck by an entire removal or lifting them up, and ser undisturbed tensen a good ball at the bollom it well under so as to get to every root that went perpendicular from the stem, so as to raise them up, and lay them in a horizontal position. If too strong to bend upwards, as some of them were, I cut them entireiy off, but I preferred raising them ap, if possibie, with their extremities pointing to the sur face, to prevent their making fresh roots cownwards; my surface as I could, conceiving it more beneficial to the trees and fruit. Atterwards I never suffered the borders so cuig atore balf a spit deep, my main design being to bave fruit as soon as possible, and of good quality. I beg
to ren.ark I did onis half a tree at once, in order to prevent its subsidng in the operation.
I prosuat the shan with all the Peaches and Apricots, I was trying. Some of the trees done in this manner were very large. particularly the A pricots, and some Pears.

The first year after the operation I had the secre pleasure of seeing my trees make healthy shoots, from nime first shoots and leaves that were made were net injured as presiously, but continued healthy all through the entrin and summer, ripening their wood early in the autumn, and
forming fine blossom-buds for the ensuing season ; and what fruit appeared was earlier than usual by three weeles
The excellent flaveur, equal to any on a hot wall
The succeeding year after the operation we had plenty much of finely-trained trees pruned, and nailed think so to the rules of the art, as of seeing a wall well covered in the season, when the proprietor espects to find something more substantial than a smart appearance, 1 trained the young shoots in any direction I could lay them in, 80 a
to cover the bare spaces; for when the trees are in full to cover the bare spaces; for when the trees are in full seldom inquires how the trees are trained

After the first years I had more Peaches and Apricot large and well-flavoured than could be well consumed by
the family, including the steward's room, which was often acknomledged by his lordship and some of the old servants, who had been in the family ever since the garden was first made, who all said they never had such plenty of I tried the same experiment upon other kinds of friit trees, especially Pears, with the same success; and I also of young fruit-trees of kinds on "prepared bottoms," to prevent the roots gettin too deep in such an unfavourable situation, where nearl were irst-planted trees had failed, be fienikered, an were rooted out, having never produced fruit fit to send to
table. Had I continued in his lordship's service, I intended, after the roots bottoms, and struck down into the damp ungenial subsoil to have shortened and raised them again to the outsides these prepared bottoms, which were from four to five fee in diameter for the dwarf trees in the borders by the side of the main walks, and about the same diameter for the trees against the walls. I prepared my young trees for such planting by having them for a year or two in the garden, so as to have long roots to spread horizontally when I finally planted them out on the prepared bottoms, taking especial care afterwards not to dig deepover the roots.

The materials of which the prepared bottoms wer formed consisted chiefly of broken bricks, tiles, cinder: and slags from the hothouse furnaces or fire-places, with
lime crops or riddlings over all, firmly raramed down hard lime crops or riddlings over anl, firmly ratumed down yard from 18 to 24 inches thick, with about a foot of good slan them on.

This method was conceived by me 41 years ago, when the science of hortaculture was very different from what is at the present period, so that I could not have derive it from any writer or practitioner previously to that time 16 do not find any notice of it hefore my pubication of 16 years since. How far it may have spread by the youn gardeners who assisted at the operation, or by my pubicathe essence of root-pruning, shallow planting, and keepin the roots of fruit-trees near the surface of the ground which has been so much praised lately. I think I ma leare to the unbiassed indement of the numerous reader of the Chronicle to determine how far I am entitied to an merit; at least it will corroborate four opinion, and ma encourage others is similar situations and circumstances to adopt it, unless, indeed, it should be doomed to suffer the same fate as my system of pruning forest-treeerie which, although practised and explained, and its superin to other methods proved by numerous experiments, same work with this, the merit has siace beer ascribed that. Cres, who has written about it sinco time of life that is of little consequence to menow, and facts of both only 1 think it but just
cases should be known.
How the trees continued to answer at Brocklesby sinc 1806, the year I left, I never heard till last spring, when was induced, after seeing so much in the Garaent gardene nicle about root-pruning, to write to the prese Peaches and Apr, be informs me that nuost of he presen there, 1800 , ets are in the same state as which he supposes are some of two or three very oldosed and planted on the prepared bottoms. He adds that he will adopt my system in the antumn of this year, should he continue there. He could give no information about the other trees, as in in pears there have been several gardeners,

COTTAGE GARDENS.-NO. NLVI
The weather at this season is usually too unsettled and winterly for doing much in the garlen; but when it dappers to be farourable, advantage should be takeil of to be done ward any operations that were recowmended to be fialig last month, and could not then be attended to ; especis it is the manuring and dirging leted as early as possibie, ilistead of deferring it until spring. Contioue aiso to prurs and train fruit-trees as already directed; or in the \(\pi\) ras we are now about to describe, which is the niode so saccessfully followed by the French and Dutch, and is. Tr haps, better suited for Dwarf Pears than Apples. Ins: of cutting out the central stem, it is tho be tran to suit a and shortened at the end of the first selson to forms length as may appear necessary, with the new on and the stem. The following autumn thee rones shect the tiot to be shortened to two or three buds, as before. This

\section*{Dec. 4.]}

THE GARDENERS' CHRONICLE.
process is to be repeated every year until the tree attains the height required. In cuting back the side shoots, the spurs at the base are annually to be allowed to protrude a to a greater distance from the main stem on one side than on the other, nor must they be suffered to become so
crowded as to exclude the free admission of air and light from the body of the tree. When trained in this way for some years, the tree will present the appearance of a cone, and be furnished with fruit spurs from top to bottom. ing; but in our opinion there is none so well adapted for a Cottage-garden as the Espalier. It occupies little room, and being equally suitable for Apples and Pears, we should on this account recommend its adoption in preference to any other. The manner of forming Espaliers is so simple that any Cottager may soon acquire it, and by a littie
practice be able to train his trees with as much nicety as a gardener. The object is to encourage only a certain
number of shoots, and train them in a horizontal direction to the right and left of the central stem. To do this, the young plant is cut down to within about a foot of the ground, and only three shoots permitted to spring from form the first or lower tier of bearing branches, which are to be secured to small stakes, so as to keep them in their proper places. The folluwing season the upright leader must be shortened to nine inches or a foot above the two
horizontal branches, and deprived of all its shoots excepting the three uppermost, which are to be treated the same as before. In this way the leading shoot is to be stopped
at the requisite distance above the horizontal ones, until at the requisite distance above the horizontal ones, until
it has reached the height of 5 feet. It is then cut off and it has reached the height of 5 feet. It is then cut off and
no more allowed to grow upright, the whole strength of no more allowed to grow upright, the whole strength of
the tree being directed to the fruiting branches, which are to be supported by small prunings of any hard-wooded tree, and encouraged to throw out froit spurs by shorten-
M. E. H.

\section*{HOME CORRESPONDENCE.}

The Nilre of Scripture.-In reference to some critical remurks of yours, touching a work purporting to be ex-
planatory of the natural history of the Bible, permit me planatory of the natural history of the Bible, permit me
to remark that while I cannot but think the cause of sacred truth may be, and has been injured by an unskilful advo cace, of which I could mention too many instances, we should, on the other hand, be careful not to trifle or tamper with records which I, with numbers, consider as in question, is translated "Nitre ;" the Hebrew word is Neter," and the Septuagint has it "Nitron." To suppose natron, an impure carbonate of soda) seemed to me ridicnlous; and not being able, on this supposition, to comprehend the meaning of the proverb, in the true spirit of
induction, I made the experiment, and examined the result. On plunging my thermometer into a mixture of vinegar and nitre, it suddenly fell \(13{ }^{\circ}\) of Fahrenheit. The
fact is in itself curious, and the solution is easy. It has a reference to the cold produced. To "sing songs to a heavy heart" has a chilling effect, and it is altogether un-seasonable.- J. Murray. [The answer to these remarks of our ingenious correspondent is, that the neter or natron that it effervesces we are to believe Hasselquist, who says dough rise, and in washing, in which latter circumstance he is confirmed by Forskahl; see the Iter Palestinum of the ne, and the Flora Egrpt. Aral. of the other.]
Cehouses.-In p. 78 is an article on icehouses; \(\mathbf{I}\) refer to the subject, at present, simply to mention a singular phenomenon connected with one of these, and involving a
serions contingency which must be provided for; and in the mean time allow me to say that I entirely repudiste the use of either straw or reeds interposed to insulate the ice, because these, when wet, cease to be non-conductors of
caloric. Mr. Parker, of Sweeny, Shropshire, constructed in his grounds an icehouse which was entered from abore One of the serrants, in endeavouring to obtain ice, had Mr. Parker to ascertim of asphysia. I was requested by from the presence of carbonic acid gas, produced by the decomposition of the straw used as packing. If straw, \&c., is to be used, and the icehouse is entered from above, central pipe must be provided for the descent of the gas, lation of an icehouse is never dreamit of; to be hermetically sealed up is all that is thought of ; insulation by non-conductors of heat is almost entirely, neglected.-J. Muriray. tual mode of getting rid of those minute snails which in fest our Orchidaceous plants. I find that by plunging the plants in a cistern till the fots or baskets are covered, quarter of an hour take refuge on the leaves and stems the plante in, where they are easily destroyed. By leaving sume that those which do not escape ate drowned, having foend many dead in the water. The garlick snail is not dislodged quite so speedily as the smaller kind ; but this this will be an effectual remedy I cannot jet say; but its Efieet is so obvions, that if once or (wice repested, the eneany would, I think, be extirpated. The only cantion which appears necessary is to tale care that the dislodged snails exaploy it, except very cautiously, to plants having young \(100^{\circ}\), it wrould be more efficacions, but most not then be continued so long. The plants to which I have priaci-
pally applied
Nitrate of Soda on Onions.-I observe a paragraph in ticting, " most decisively," as the writer says, my former statement, that nitrate of soda was injurious to Onions With regard to the first fact he advances, I have no
doubt whatever that that portion of his crop which was doubt whatever that that portion of his crop which was totally destroyed" by the maggot; but as my observation was directed to the effect of nitrate of soda upon Onions, and not upon maggots, I do not see that this fact bears much upon the question. His observation is, never theless, a valuable one. In opposition to his second fact I beg to quote the authority upon which I made the assertion, viz., the experience of an intelligent farmer in fois neighbourhood, who tried it upon half his crop. He found the produce from the momanured land both larger been prepared in both cases in the ordinary way, but to one
was superadded the nitrate of soda. In conclusion, I was superadded the nitrate of soda. In conclusion, beg your correspondent to believe that such assertions are not put forward without having some ground to res upon, and that |a "decisive contradiction" is no proo Harris, M.D.

Transplantation of Hollies.-I am able by my own experience to parallel the history of a Holly-hedge, as ber. About five and twenty years agn, being strongly ecommended by an old nursen an in April, in preference to any other month in the jear, moved a small Holly-hedge of about one hundred plants of six or seven years growth, and not one of them died.
And yet I do not remember that the season was particularly wet ; and the plants were certainly not watered afterwards. The soil though was particularly kindiy, being light sandy loam. About four years after, wishing to ge a thicker set of stems at bottom and a neater clip, I cu hem down; and that the crown might not be suatered, surface smoothed with the knife. To my great mortification, more than half my hedge never shot again. As quantities of Hollies are yearly cut in our coppices along with other brushwood, at all times, from November till the en of March, without any such result as the accident in my garden, I was led to inquire into the cause of it. forester knows that this is nonsense; I did not than I know it is safe to do with the Hantiorn and the ordinary evergreen shrubs; but I am quite assured that cutting low was the cause of failure. The woodman bill-hook seldom gues nearer the cromn the pant tha be safe with your Hollies, you nust allow more stem to remain when you crop them, than you need \({ }^{2} 0\) to most other underwoods. I an not certain when my hedge was season for that operation; for athough I said that our woodcutters begin cutting in November, it is to be observed that in coppices there is always a good deal of long grass, moss, and dead leaves, to pith regard to the trans plantation of evergreens, I think we may take it for general rule that that season is best which is most favonrable to immediate vegetation in the roots of the plan moved, its immediate radication, if I may use such a word. Deciduous trees having parted to the but and being in great part at rest, can allands on its roots to supply the evaporation constantly going on from its leaves (which it cannot part with even in its moulting season) and soon declines if the supply be long cut off. Now, to ensure an immediate strike, it is not only requisut it is also necessary that there should be the proper tempera ture; and to ensure both these conditions, we mast mak choice of the early autumn or the late spring seasons. the summer be advanced, there is too much warmth and not enough moisture; late in the autumn there is enoug moistore, but the ground is too cold; and have observe that Hollies moved in the winter time (say even no late than November) more invariably die than when moved in the driest summer season. The commencement of the heavy rains of October, or the latter end of september then ogh beresolved on. But under the most favourable circumatances, plants so moved have ret a great deal to do to get up their vitality, so as to resist the nozious influences of a hard winter, if such a one ensue. I, therefore, prefer the spring season, and think with my Dorking gardene that April is the best month for the purpose; a strike immediately takes place, root and branch; and if the summer prove a particularly dry one, a littue water cor rects the fault ; the evil of a hard frost coming on the plant when still weak in regetative plse, why one moul be induced, theoretically, to prefer the spring, which is the accumulated excitability of the plant at that season, coming in aid of the desired strike of its andition of an diction to the
tuman. \(P\). \(P\).
Introduction of the Houlletia.- We are requented by Mr. J. Aitchison, gardener at Crumpsall House, near Manchester, to state that the Houlletia Brocklehurstiana was undoubtedly introduced by J. H. Wankign, Esq., as was originally mentioned in the "Scrtum Orchidaceum. Mr. Aitchison goes into considerable detail to prove to us that it was so, and he anserts that he has proof of the
plant which flowered at the Fence being the same as that which he gave to Mr. Appleby. Having given insertion Mr Aitchison's Mr. Aitchison's contradiction; but here the matter most rest, so far as we are concerned. We cannot reconcile
discordant assertions, and although our columns are open to discussion, they are closed against disputes.
Right of Property in Plants-Although an old gardener, and not for some time employed in the profession, I love still to know what is geing on in the horticultural world; and though I cannot range through houses and pits as I used to do, I still feel a lively interest in all that concerns the profession. It was with great pleasure I met with the Gardeners' Chronich of Nor. fith, in which is a discussion as to the right of gardeners to the plants the have propagated. How any gardener of respectability could for a moment think that he had a claim. I cannot imagine. I have filled three situations in my time, two of which were decidedly first-rate, and it may fairly be presumed I have had no small share of experience, both of my profession and of men engaged in it, and I am not aware that I ever met with a man who held such opinions. , im on seedlinges rised by the principles of cross fecundation, and I cannot bat think there is some slight difference, after all, between such produce and that raised by cuttings from plants purchased by an employer. "It is hard to work in the vineyard and not taste of the Yine." However, let it not be under stood that I should have the impudence to recommend a positive claim for such. On the contrary, were I genrequest him to obtain another situation more congenial to his feelings. Still I think gentlemen would do well to allow their gardeners a benefit of the kind, as a stimulus to furtber exertions, but understood as totally civested of all possible claim. In support of such argument I reason thus :-Gardeners (good ones I mean) are perhaps less remunerated for their services, in proportion to their acquirements, and the time and expenses required in their preparation for their post, than any other servant in a nobleman or gentleman's establishment, not excepting the steward himself. They are, as I before urged, generally speaking, men of considerable moral character, as well a of much general information ; and in your own admission "Notices to Correspondents")-"Gentlemen should re collect that gardeners are not overburdened with money," I fully agree, as it is, generally apearing, a notorious fect Whether I reason to the public tante 1 know not, but I am happy to have borne the testimony of long experience to much conceive to be the justice of the calace and I make no doubt ed by your giving myleter of the whole discussion will be that a more definite line will be drawn in thuse matters, and I shall have done my professicn no harm, but perhaps good.-Fair play.

Gardeners' Duties.-I wish very much you would impress on gardeners the decessity of their learning, with other things, the simple art of puttiog a square of glass in their hor ticultural houses, pits, Nc., fur nothing can be more vexa tions when an ecident happene at a critical sesson to the glass of a Vinery, Cucumber Pit, or other such place, to be told by one's gardener that meither he nor any of his men can repair the fracture, and that the nearest glazier, probably three or four miles off, must be sent for, at the sion serious detrime hatf an harrs work.-H. li [H'e agree with our correspondent. All gardenets ought to know enough of glazing to be abie to repar accidens glazier's diamiond, and tools, for the use of the gardener o art is more easy to acquire, and it is inescusable in gardener to be repair all his glass himself; we only speak of accidents repair those petty repairs which it is extremely inconvenient and those petty repairs whichetched from a distance.

Salvia Patens.-It will be gratifying to the admirers o Salvia patens to know that from seeds sown here in Aus the following May, and thowered freely in Juls, August, and Septembet: the difference between them and patat obtained from cuttings was remarkably great. The seedlings maintained an abundant head of flowers ; the others were comparatively bare; in pots ifcre litlle green Moss was strewed on the surface, and the plants in beds were surrounded by Pelargoniams, Verbenas, \&c., the Salvia Laleham.

Root-Pruning. - With reference to the method of root proning with a knife suggested by Mr. Crace, allow me to observe that the first operation maybe easily performed earth immediately round the tree is interlaced with fibrons roots, the ball of earth shoutd not on aay account be his roots, so as to be able to shorten them with a knife, would seriously derange the fibrous mass. I commenced with the knife, but soon adopted the spade, for I have inrariably feand that the wounds made by a sharp steel-edged spade beal over very quickly, and emit abundance of fibres; it never can "cut clean." I mean these observations to apply to trees "en quenonille," or dwarfe or standards planted gingly, so as to be able to dig a trench round thems with facinty, and "beare down" the tree with itt accompanying would be a serious hindrace to the Well-doing of the tree
to lay its roots bare, so as to be able to use a knife. -T
Rivers, jun. Rivers, jun.

Roses. - The season for forcing Roies is now coning on. Sume recommend not shortenug any of the shoots tolerably good if we force the same plants every year, but Where we have (or at least should have) time sets of Roses in pots, to force one set this year and a fresh set next year cutting back to two, three, or four eyes, under such cirCumstances, may safely, I think, be put in practice. thint is too.?

Greenhouse-ronfs, Hyacinths \(\delta c=\) With respect to the directions given by Mr. Fortune (p. \(; 63\) ) tor the construction of a greenhouse, (I speak from experience,) the first consideration should be the proper angle of the roof Mine is so flat that the wet does uot run raptdly off, and the wind has longer time to drive it betwren the laps. know others in the same predicament. With respect to making a bed for Hyacinths, Tulips, Picotees, Pansies, a half or two feet deep, and layng a foundation of coal ashes, and then filling it up with the required compost. have never suffered from worme or grabs. Thave a match Tesmine, cus off, and at your service, having other shoo from the same plant nearly of the same length. I find Passiffora edulis will strike and grow and bear fruit in a large flower-pot filled with moss, as indeed will most plants, more vigorously than in earth.- Senew.
Soil for Hyacinths.-Being a great admirer of the jour Paper on its cultivation. They have, however, greatly perplexed me, by their contradictory nature on one the Dutch method of cultivation by a Haarlem grower, in Which we are told that "they require a sandy soil, not mired withany vegetable matter; While your correaponden eonsulted, tell as that a very considerable quantity of vege table moald is used by the Dutch growers. Now as this a quemtion of fact which muat be known to you and many of your correspondents, perhaps you will be kind
enough to describe it. Let me put the question. then, in enough to describe ir. Let me put the question. then, in a
direct form. What is the practice of the Dutch growers of Hyacinths, with regard to the use of regetable mould These contradictory statements also suggest another ques tion, which ought to be deeided by the result of numerous and carefully-conducted experiments. It is this: Is it inths, or not? Perhaps some of your readers who have not yet planted their Hyacinths will try both methods and state the resalt. The experiment may be made in beds or pots ; but to have a useful result, the bolbs shonld in all rience, I ano inclined to decide against the use of vegetable mould; bat my experiaento ha turate.-Fylde. [In the last edition
cyclopredia of Gardening," the following is stated to the woil used by the Dutch for Hyacinths. The compos used at Haarlem is suid to be rotten cow-dang, rotten
leaves, and fine sand. The leaves of Elm, Lime, and Birch are preferred to those of Oak, Chestnat, Walnut, Beech, Plane, \&c., which do not rot so quickly. The dry food, without any misture of straw or other litter The leaves when decayed and fit for use are thus mixed
with the other materials :-" "Pirst, they place a layer of being eight or ten laches thick. These layers are repeated till the heap is six or seven fept bigh, a layer of dung being uppermost, sprinkled over with a little sand to pre tent the too powerful action of the sun apon it. After thrown up afresh, in which mate it mains some weels to settle before it is carried into the flower-beds. This compost retains its qualities about six or aeven years; successively; in the alternate years they plant Tulips Jonquils, Narcissuses, Crocuses, Irises, \&e., in the same beds; nor do they venture to set Hyacinths in the compost the first season when the fresh manure might be injurious to them."-(Herl.rt in Hort. Trans., vol, iv., p. 163.)] To Destroy Earroigs.-Perhaps many of your reader are not aware of the extent to) which this insect is found
in some places; in some very sundr solls we bave seen it as plentiful as to destroy almost everything in the garden Caultfower, Cabbage, and regetables in general suffered Ereatly, even the wall trees were in great part destroyod the bottom of old stubs or paling, and should be lilled by boiling-water poured on them.-R. Lymburn
The Leafing of Plants :-Spring Veyelation.-I have read with no hette surprise at tue present day, a statement at p. 767 , in which an experiment made of gratting a to whow the groundlessness of the common (old?) opinion that the commencement of spring regetation is hy the rise of the sap from the roots, through the trunk and on a late stock, will be in leaf while the stoek is torpid. Looking to the tenacity with which the baman mind ad to fore the impressions imbibed in eariy youth, it is eas to foresee that it wontd require little ingenuity on the part of the seeptic to found upor the above experiment an hy-
pothesis that should harmomise with what is there stated be the vulgar error. Something, then, more eanclusive In wanted to set the queation at rest, and that, I think, I am awle to supply. About 30 years since I felled with my
specimens of the Lombardy Poplar, which had attained to and top I cut the tranks into baulks of trom 8 feet eet in length, when they were thonn aside in the wood yart. In the following spring my attention was drawn to some small eyes or buds upon the rougheark, which appeared to be on the ere of unfolding themsilves, and considerable diameter, pushed torth vigorous shoots from 2 feet to 31 feet in length, having the foliage fully developed, and of the same healthy hue as on the trees near which they formerly stood. I may observe that the bauiks were all lying in a horizontal position. Nine were of large dimensions, and alt cut abore the fall of the lea with precision, but \(I\) well recal the leaves withering unde the influence of great heat near Midsummer. The thre everal stumps and roots were left to decay in the ground Hence it may safely be inferred that the all-wise Creato
has endued the sap of trees, at all events in those which hed the leaf, with an onward ascending motion, subjec to check at certain periodical seasons, when, as in some nay be said to be in the torpid state during the winte months: snd, on the return of more genial weather in the spring, again the fluids are set in motion by the influence of the increasing heat, which is always observed to bave more immediate action upon the buds or eyes on the sequent thereon successively the whole of the fluids are presumed to get into activity. This is further confirmed by the well-known accidental fact that a fortnight's warn weather at the approach of winter, or even during mid winter, invariably gives rise to a premature unfording he buds, and often of the blossoms of trees likewise, an which few will be hardy enough now to maintain can onl be done by "the rise of the sap from the roots throug the trunk and branches to the twigs, since, I apprehend, upon investigation it will be found that the temperature of the soil, on these occasions, beneath the mere surfac will have experienced no change. What is here stated, is trusted, will prove to be in accordance with other known facts in the physiology of plants.-I. H. S.
lazing.-In looking over my article on glazing in the Chronicle, p . Tfit, 1 find there are one or two mis takes. In p. Tifit, in line 13 and 14 from the top, "an many of the panes are split up the middle," add, "entire owing to being put in too tight when glazed." In line 42 and 43 from the top, "for pits 4 and \({ }^{4}\), by 3 inches deep," should be 61, by 3 inches deep. Line 43, "fo frames 4 by \(2 \frac{1}{\frac{1}{2} \text { inches deep," should be } 5 \frac{1}{2} \text {, by } 2 \frac{1}{2} \text { or }}\). \({ }^{\text {Panches deep. }}\) Panes 6 inches by 3 inches deep will like wise be found a very useful size for all horticultural pur poses. N.B. Always tlaze with the bent side downwards (as the glaziers term it), as it will fit more level in the middle.-James Seymour. Frithsden Gardens.
Hydrangeas, Chrysanthemums.-In the last Number you state that Mydrangeas should be protected by stuffin the branches with straw and matting very carefully. No drangea is perfectly hardy, having stood the winter quit aninjured, and that too in rather an exposed situation, without any protection. That lovely plant the Chrysan themum, which is now cheering the gloom of dull November, I have grown for some years; and as far as my ex perience goes, I decidedly prefer propagating them by
division of the roots, to increasing them by cuttings. the former mode a much handsomer head of bloom is secured, whereas by the latter yon are not always sure of a well-bloomed plant, especially if the eve has been pinched out during the summer, to make the plant bushy - Carnareon

To Make Tulip.beds.-In making a Tulip-bed, I first determine its dimensions, and then dig out the earth to
the depth of two feet. If the bottom is wet, I contrive to drain it; if not, it remains as it is. I then put in \(m\) y compost, prepared as follows :-Good turfy loam from a pasture-some very oid cow-dung, say two years oldand some road-scrapings, in the proportions of three or four barrowfuls of the loam to one of the others. If put on a layer of sand about two inches thick all over the bed, and on this I place my bulbs about 6 inches apart, the tallest-growing varieties in the middle of the bed. This done, I fill up the bed to the top with the compost as before. Should very severe frosts come during the winter I cover the bed all over a few inches thick with saw-dust,
which if dry the frost never penetrates. When the frost is over, I take away the saw-dust and sift a little fresh soil over the surface of the bed. By this treatment I have always been able to give satisfacion. I have had
the Duchess of Wellington 11 inches in circumference, and as true in its colours as possible.-Robert Towers, Gr. to D. Waterhouse, Esq., Aigburth, Liverpool.

The Bay Tree.-In Mr. Rad'ord's letter, at p. 780, were two typographical errors, whieh require correction. For sanctity, read sanity. For net a "Irue faet" read
a "true fact.?
Glased Flower-Pots.-About the time when Mr. Forsyth's letter, advocating the advantages of glazed flowerpots over those of ruder manufacture which are in general
use, appeared in the Gardener's Chronicle, I had occasion to repor some plants of Ageratum coelestinum, one of which, by way of experiment, was put into an ornamental pot made of white, hard-baked earthenware. All these plants were afterwards subjected to the same treatrent, and no difference whatever could at any time be perceived in their health. After flowering, they were tarned round the ghand pot, just lille those which had the sup-
rosed advantage of being in communication with the "po t least ace of the unglazed. If is cle and if future experiments which, no douht. will be made prove that the objections in force against ornamental pot are without foundation, Mr. Forsyth will be eatitled the credit of introducing a much-needed reform into thi neglected branch of an important art. But even if hard
burnt ware should be found as objectionable in practica it now is in theory, and we should be compelled to retai the more porous material now in use, still Mr. F.'s other
suggestions for the improvement of flower-pots in form and smoothness of surface deserve attention; for it would un doubtedly be of great advantage to have pots of one uniform shape, increasing in size in regular gradation; thus, a thirty-two ought to be a clear shift. and no mure, large thirty a forty-eight; a twenty-four, a shift larger than thirty-two, and so on. So little attention is now paid \(b\) nanafacture this matter, that in a cast of any give size we get pots of widely different dimensions, and of The evil of this is seen in shifting a plant, when in some The evil of this is seen in shifting a plant, when in some
parts there is room enough between the ball and the pot act. The rim and numerous holes in the bot tom are not of Mr. Forsyth's invention. I hare seen fo those the (French, I believe) made in that way, but in form, such as we see in common glass bottles epposit more efficacious in the way of drainage. On this point Mr. Forsyth's notions are at variance with the practice of very free use of the vilifie proportion of an equally barren material-silver mand with their compost for the more delicate-rooted specief Perfect drainage is unquestionably essential to good culti not , the method generally adopted to efich dak mal no practical man will substitute that of Mr. Forsyth But however effectually we might provide for the escap. the supply is not properly regulated; for "of all the ill that plants are heir to there is scarcely a greater (t those, at least, which have not constitutions like an Oak than over-watering. Of what use is it to furnish a plant with the most suitable nutriment in the way of compost we so paralyse the roots (which are its mouths) by exces sive wet that they cannot feed? The answer is obvious and yet solittle consideration is bestowed apon this im portant matter by many young men who have the charg of houses, that instead of observing the state of the soil, and carefully apportioning the quantity of water to the want of the plant, they begin at one end of a house and wate discriming pouring it like a mill-stream up has been sacrifice to this pernieious habit; which, however, with most young men orises rather from want of thought than from wanto interest in the well-doing of the plants under thair charge Whaing.

Horms.-In reference to "A Cottager's" commanieation as to the destruction of worms, it expect the corrosive sublimate would krass as well as worms." I think it due to "A Cottager and of the (Cromicle generally to state, that \(I\) use on stantly brought the sume, they would have died if they had not been removed but it had no effect whatever in injuring the grass. cannot speak positively as to the proportions I used, bu should have no hesitation in adopting those mentioned by sublimate to three gallons of water. - Samuel Borly, Gloweester.
Icehouses.-On the subject of icehouses I beg to in the old principle, that is to say, an inverted cone in the side of a hill, entered by a long passage, which was kep filled with straw, to exclude the air; from this we could never get ice above five times in the season; butan. He my employer was recommended to try 2 frese pop the first removed the thatch, earth, \&ce, frow-ound: the wall were then carried up four feet above the level, roofed and thatched the same as a cart-shed or stable, the thateh pro jecting enough to shade the malle a door was left in the north side, and a window, or smaller door, in the sont side. The house was filled as usual, though with much hot trouble; to every cart-load of jee we pat it straw was put round the sides as usual, but not on the top; the iont and window were opened every night, or every other at most, ercept in wet weather, 50 that a free cichen the of air passed continually over it in the night whice the doors were open. The result was that we hade in moring quantity of ice the first year. There is no trou, there is the iee before you. Where it took two men an hour before they could get ice for use, ten minutes are sufficient. The old entrance is level with the top of the ground, in sbady passage has been filled up, and the whole to be bricked, if
situation. It does not require the sides they are walled that is sufficient. A dry situation is required. An icehouse on this plath may

Thermo-Electricity. - The plan suggested by you for the application of Mr. Solly's apparatus would the ash-

gardener could by means of it increase or diminish the
passage of air without leaving his house. These arrangements for saving the night-work of the gardener will,
however, never be complete until sume reaily practicable method be discovered of causing the change in the temperature, either of the heating body or of the air of the house, to regulate the fire without the interference of any
one. I am sure such a contrivance would be the greatest boon, not only to the head gardener, but especially to the pore lad who looks after the fires, and would save the the foundation of pulmonary complaints from which they never recover. Surely your ingenious correspondents Mr. Ainger or Mr. Rogers could devise something that

Upon the Cullivation of Camellia japonica, var. Har-risonis.-The peculiar shy blooming character of this is well rican collections ; but it is rarely seen in bloom. I have had several plante 7 years, some of which are now 4 or 5 feet high, and in fine growing condition, but I have never had more than three thowers, all of which were on one
plant. None of the others lhave opened a bloom. I therefore came to the determioation to inarch the flants with other more free blooming varieties. This variety is later than others in commencing its spring growth, and consequently, the inarching was not made until early in June. made cine, the new woad. Wa a that part of the stem where the branches divide, and as the stock was somenhat larger than the scion, it was necessary to bind the mattiuy tighter than for smaller atocks. After the operation was finished, very little notice was taken of the plants for some time. Judge, then, of my astonishment, wien I came to imspect the plants a few wish, some of the branches having two buds each. The only reason I can offer for this is, that the binding of the plants, in that stage of their growth when they were in arched, checked the flow of the sap (hed the formation fower-buds. So far as I have had any information, ordinary treatment has not been attended with any success and although I may be in crror as to the cause buiding of my plants, still I think the information wort communicating. It is one of the niost beautiful kinds The flower is small, but as fall as the double white--Dr Grunneil, in Hovey's Mag. of Horticulture.
Medal presentent to a Gardener.-We learn from Scotch Pafer that a siirer medal has been presented to Mr. James Killock, by the Horticultural Society of the Upper Ward of Anuardale, as a testimonial of esteem and of the serrices he has remdered the \(S\), ciety
The Misoburi if theter Syuash.-This is a new rariety of the Squash, which criginated in the mest. We have befere us a letter fr m Joshal Lonzstreth, Esc., of Ph Iadiphia, addressed to S. The Eastern Arboretum, \&c. By James Grigor. Longman and Co. 8 so
We formerly spoke in terms of much praise of this work when it was publishing in numbers. Now that it is completed, it is only justice to the anthor that we should add that he has worthily brought it to a close; the matter at the and is still more entertaining than that at the commencement ; and the etchings by Mr. Ninham have continued to be excellent pictures, with the single exception of the Kimberley Ash, which is too heavy and massive for that graceful species. To all who are interested in the tim er trees of England, this is a most acceptable offering, aries of the same nature. When the shelves of our libraries groan beneath the records of ruined mansions, tombs, ries groan beneath the records of rumed mand brasses. surely it is time that some attenand monumental brasses. surely it is time that some attenby the will of the Creator, which are so glorious in their youth, so magnificent in their old age, and so venerable When they lie before as a ruin stricken by the hand of me alone.
We cannot resist the desire of making the following quotations from Mr. Grigor's preface with reference to this ublject:-
"I am fond," ways Washington Irving, "of listening to the conversation of Eaglish gentlemen on rural conand what strong unafected interest they will discus and what strong, unaflected interest, they will discus to pies, which in otber countries are abandoned to mere eari descant on park and forest scenery, with the science and feeling of a painter. He dwelt on the shape and benuty of particular trees on his estate, with as much pride and technical precision, as though he had been discussing the merite of atatues in his collection. I found that he had gone conaiderable distances to examine trees which were celebrated among rural amateurs; for it seems that trees, like horses, have their established points of escel lence, and that there are some in England which enjoy very extensive celebrity from being perfect in their kind.

There is something nobly simply and pure in such a
tase. It argues, I think, a sweet and generous nature, this friendahip for the hardy and glorioes sons of the forest There is a grandeur of thought connected with this part of rural economy. It is, if I may be allowed the figure, the heroic line of husbandry. It is northy of liberal, and freeborn, and aspiring men. He who plants an Oak, looks forward to future ages, and plants for posterity. Nothing can be less selfish than this. He cannot expect to sit in its shade, nor enjoy its shelter; but he exults in the idea that the Acom which he has buried in the earth, shall grow up into a lofty pile, and shall keep on flourishing and increasing, and benefiting mankind, loog after he all have ceased to tread his paternal fields.

Indeed, it is the nature of such occupations to lift the thought above mere worduliness. As the leaves of trees are said to absorb all noxious qualities of the air, and breathe forth a purer atmosphere, so it seems to me as if they drew from us all sordid and angry passions, and breathed forth peace and philamthropy. There is a serent and settled majesty in woodland scenery that enters into the soul, and dilates and elevates it, and fills it with noble inclinations. The ancient and hereditary groves, too, that embower this island, are most of them full of story. They are haunted by the recollections of the great spirits of past ages, who have sought for relaration among them, from the tumult of arms, of the toils of state, or have mooed the muse beneath their shade.

It is becoming, then, for the high and generous spirits
of am ancient nation, to cherish these sacred groves that sumound their ancestral mansions, and to perpetuate them to their descendants. Brought up, as I have been, in repebliens habits and primeiples, I can feel nothing of the gervile reverence for titled rank merely because it is titled. see and feel how hereditary nor bigot in my creed. I do lot of a generows mereditary distinction, when it falls to the nobility. It is one of may elerate that mind into true it falls thus happily, the effects of hereditary rank, wheu it falls thus happify, that it multiplies the duties, and, as it were, extends the existence of the possessor. He dues not feel himself a mere individual link in creation, responsible only for his own brief term of beng. He carries back his existence in proud recollection, and he extends it formard is honourable anticipation. He lives with his ancestr and he lives with his posterity. To both does he conside himelf involved in deep responsibilities? As he has re-
ceived much from those that have gone before, so be
feels bound to transmit much to those who are to come after him

His domestic undertakings seem to imply a longer existence than those of ordinary men. None are so apt to who have received their heritages from foregoing ages.

I can easily imagine, therefore, the fondness and pride ith which I have noticed English gentlemen, of generous temperaments, but high aristocratic feelings, contemplating chose magnificent trees, which rise hike towers and pyra mids from the midst of their paterate and inanimate. The affinity between sll natures, animate and inanimate. The to take its range with the lion and the eagle, and to as similate, in the grandeur of its attributes, to heroic and intellectual man.
But still greater things have been said of treesa Landor, in his "Conversations," has the following remaricable passages:-"Ah, Don Pepino! old trees in their livin Rivers leave their beds, run into cities, and traverse moun tains for it ; obelisks and arches, palaces and temples, mphitheatres and pyramids, rise up like exhalations a its bidding; even the free spirit of man, the only thing great on earth, crouches and cowers in its presence it passes away and vanishes before venerable trees. What a sweet odour is there! Whence comes it? Sweeter imagine, said he, from the Linden; yes, certainly. that a Linden? It is the largest, and, I should imagine, the oldest upon earth, if I could perceive that it had lost iny of its branches. Pity, aaid he, that it hides half the with of jon houses from the palace

O Don Pepino, cried I, the French, who abhor whatever is old and whatever is great, have spared it; the Austrians, who sell their fortresses and their armies, nay sometimes their daughters, have not sold it.... Must fall! Shall the Cypress of Soma be without a rival? I
hope to have left the neighbourhood before it happens; for, events which you will tell me ought never to intere me at all, not only do interest me, but make me (I confess it) sorrowful.

O, who upon earth could ever cut down a Linden! I should not dare to break a twig from off one. How many ond and how many lively thoughts have been nurtured under this tree! how many kind hearts have beaten here Its branches are not so numerous as the couples they have invited to sit beside it, nor its blossoms and leaves together as the expressions of tenderness it has witnessed. What appeals to the pure all-seeing heavens! what similitudes to the everlasting mountains! What protestations of eter nal truth and constancy...... from those who are now earth . . . . they, and their shrouds, and their coffins. To ree this Linden was worth a journey of five hundred miles. It looked directly ap the lake in the centre of its extremity, and facing the boundary mountains of the ValTellina.

The Cypress of Soma, where the first battle was fought betweeen Hannibal and Scipio, is probably the oldest tree apon earth, with one exception, and in my opinion the object must worthy seeing in Italy, unless it be the statue the base of which fell Csesar
Surely these are noble sentiments nobly uttered.
CALENDAR OF OPERATIONS for the ensuing Week. of wet land, either for Gardening, Foresting, or Agriculture; and entitles it, either from an apprehensiontances as its importance is very trifling to the advantages it confers when well done, or from not understanding its principles or value. But being the
most important step in the improvement and working of wet most important step in the improvement and working of wet great \&e., may be most readily ascerteined, as well as the work be pertormed, planters and cthers will do well to bear this in mind. The first thing to ascertain is, whether the land
wet by the imperviousness of the surface wet by the imperviousness of the surface not allowing and thereby causing of the subsous springs near the surface deeper having ascertained the canse, then where the water originates atter this the most proper outlet for the main drain can be se lected, to which auxiliary ones must be 50 disposed as most effectually to carry off the super fuons water to that poin
cording to the nature of the soil, through the lowest parts, an the man outlet left open, if the body of water is considerable;
but this principle is often adopted to drain land, without refe but this prinelple is niten adopted to drain land, without refe-
gence to the origin of its wetness, and by so doing the most sence to the origin of th wetness, and by so doing the most egre-
gious blunders have been committed. In draining springs on gious blunders have been committed. In draining springs on circums zround, caused by an impervious under strata, various
cirquire to be considered and ascertained-such as whether the springs emanate from one or different levels, what the intermediate strata is composed of, \&cc. : and when these are ascertained, the drains must be made near the origin of the
springs, so as to cut them off from the land below them, in lunes, as the outlet or other circumstances may dictate. One low ; and where land is drained hy tile drains a gond depth below the suriace, the filling
instead of using broken stone or some other pornus material, to within a hort distance of the surface. Ihave known considerable sums expended in drains, which from this cause were ren-
dered comparatively useless. Drains made in woods tiens, where they are very essential, are much better left open they are then readdy cleared if chriked by roots or herbage. 1.-KITCHEN-GAKDEN AND ORCHARD.

Pivary-- Continue as before, allowing your management to be the bouses dry, and in dry clear weather syringe the surtace ei the bouses dry, and in dry clear weatier syringe the surtace el

slugs. Where there is no means of planting Parsley in a Peachhouse or similar situation, some should be protected out.doors from severe weather. Continue to ridge, trench, \&e., in favourable weather. Celery may be earthed up when dry, if the tops are not already injured by frost. Examine Onions and stored rocts: lay down Briccoli stemi- with their heads northwards; cover Sea-kale in the open ground with pots and litter, or hot dung, according to when it is required. \\
Orchard. - Continue to forward the pruning and nailing of walltrees in open weather ; examine the finit-lorm and bich out thecaying fruit. Planting may be perfurmedin ary solls; muleth the roots of Vines on open walls.
\end{tabular} \\
\hline
\end{tabular}
 Greeniouse.-Destroy insects; clean the leaves of Camellins
and Citrui; remove dead leaves and flowers. Suckers of Cling santhemums should have their points pinched off; water very-
sparingly, and give abuntance of air when practicable PITs ANin Frame, - Forced Rowes and other plants will require
particular attention in cleanliness and keeping the tumperature
as regular as possible. Watch the openine bust particular attention to cleanliness and keeping the tumperature
as regular as possible. Watch the opening buds of Roses: if the
leaves appear curled, it indicates the pre-cuce of a grub, which
must be destroyed itake in sel
dent dendrons, Camellias, Rc. Give all the air possible to yoong
seedlings, and water very sparingly; if Camellias are subjected to a greater heat than \(55^{\circ}\) at first, there is danger of casting their Mulch China Roses, Hydrangeas, Fuchsias, and such plants in
the open border; protect choice bolbs from heary rains the open border; protect choice bulbs from heavy rains or severe dig shirubberies, and continue any alterations or improvements. Nurserf.-Turn over rot-heaps of Haws and other seeds,
adding some fresh dry sand, if necessary; protect young ever-
greens; dig, trench, \&ce, vacant Forest and Coppice Woods.-Prepare ground for planting, mulated dead leaves or herbage, this is important in all planta.
tions. Copse woods may be thinned, and all work relating to fences may be carried on.-Joseph Paxton, Chatsworth.

NOTES FOR SMALL GARDENS
Whe late rains have not rendered it impracticable all alte where in the laying out of the garder should now be immediately made. The removal of any shrublyy or hardy herbaceous plants should not whose roots require mulching, and if the litter or coal-ashes carctully swept up. Attend to plants in frames and air at every opportunity; go frequently over them, and remove
dead leaves or blossoms. Bring into the greenlunse or a warm room a few bulbs or other plants every week or ten days, for house is an excellent situation for flowering bulbs. In the greenhouse the only plants that will require much water are chry an-
themums, and these must now be frequently gone over and have
the dead leaves aud blossoms piched oft. While this damp weat:ier lasts, a gentle fire now and then will be found beneficial; but it to.l
often applied, it will excite the plants to growth, which must be avoided if possible

ENTOMOLOGICAL NOTICES.
Auove insects that occasionally do considerable injury to the small, shining, bluish or greenish beetles; but as their habitts are
very similar, we shall here This kind is not more than one-sixth of an inch in length, blue or green in colour, and of an oblong oval form. It is found plenti-
fully under the loose barl of Willows which are growing in damp situations. We have this antumn taken upward- of en spcarment the larye feed in small companiec, arrangevil mows, the hans
of the second row touching the tails of the fir - . Tivy priced in this way till they have destroyed the parenchy ma of the lat
after which they attack the nest one, and -o on till they are full
grown, when they descend into the earth and bucome pupre in a short time after this the perrece insects appear, and are to be Perhaps the best way to prevent the spread of these insects would be to employ boys or women to collect the perfeet beetles: and 11 gregations of them night be readily crushed by the thumb.
State of the Weather at Chiswick during the Iast 15 years for the ensuing Week ending

The highest temperature during the above period occarred on the 11th, in 1835-thermometer \(19^{\circ}\)
State of the Weather tor the Week ending December 2, 1811,

28. Hazy and damp ; overcast; rain commenced at noon;
sbowery; ver, heary rain during the night.
29. Heary ram; overcast; heary rain at night.
30. Boisterous, with showers; clear at night.
Dec. 1. Slightylyocercat and mild, evening fine.
2. Cloudy and damp; fine, with sunshine occasionally; over-
cast ; rain at night.

\section*{NEWS OF THE WEEK.}

Ocr intelligence from France conveys the gratifying assurance that the arrangement of the recent difference with Spain has at length assumed a definite character, and that the Frencb Ambassador Las taken bis departure fit Madrid. The Paris rapers are occupied with the bill of indictment against Quccisset and h.s accomplices in the late conspiracy, but it contuics no facts whid a ere aut fully roticed in the report ahhressed to the Hiouse of Pcers bly tie recent Cummissicn of Irquiry. The gafers also announce the existence of most seriocs distress among the working classes of Paris, the result of which is af parent not only in the failure of their ordinary laces of amusemenr, but in the general emburrasment of ti.e retal races. - Our news from sfan cuntinus sotista tuiy

 evidences of fopalanity, atd by sweh demerreatiuns of puidic opuinion as carnot fall to sipput and corsolidate his authority. The afleial darse com: \& +hat Cortes for
 gent adretts to tive luaing soicrois inkity to engaye atien tion in the ensuing sessin, urd announces that several new ans and other impurtart netisures will be submitted to the Chambers. No duvot arpears to be eatertained that the majority will contirm the decrees of the Regent suspend ing the allowance to Queen Christina, suppressing the Basque fueros, and estublishing custom-houses along the
frontiers of France. As another sign of the times, it is
stated that the Minister of Justice has commanded the suppression of all religious confraternities which have not obtained the sanction of Government. celona has been released from its state of siege, and the inhabitants of Bilbao have thrown themselves on the clemency of the Regent.-Despatches from Lisbon inform 28 that the Cortes were prorogued by the Queen in permon on the 18th ult. Her Majesty adverted to the the whole anount of the extraotdinary expenditure for the present year is appropriatud to the payment of British claims an! of other foreizn creditors. The Purtuguese Government persists in its resolution to refuse the surrender of the Spanish officers who took refuge in Portugal after the recent insurrection.-From Germany we learn that the negotiations for the accession of Austria to the German Customs' Union are so far advanced as to leave no doubt of a successful result.
Accounts from Hanover mention that the Dukes of Cambridge and Sussex have presented a protest against the succession of Prince George of Cumberland to the Crown, and again-t the aypmisiment of a commission to attest the signatare of the Prince, whom the protest assumes to be disqualitied by reason of his blindness.-We learn from Switzerland that the revolutionary movement at Geneva has been succeseful in the accomplishment of its object; the Council of State having acceded to the demands of the people by ordering a constituent assembly, elected by the citizens, to revise the constitution. This national manifestation is said to have cccurred without bloodshed or violonee of any hind; tle popular agitation ceased on the promulgation of the ciecree, and the crowds, which had collected before the town-house during the deliberations of the Councii, immediately dispersed. -The Levant Mail has put us in possession of advices from Turkey, Greece, and Egrpt; in Girece, active exertions are making to estabiris a National Bank for the purpose of issuing papler money, and as the means of preventing future applications for loans to the protecting Powers. The relations betmeen Greeca and Turkey are daily becominy home compluted, and the Ottoman Guvernment has presentel to the itepresentatives of the Great Pumers an (ficial note chtinerativg various causes of grievance by whicis its aniteale relations with Greece are seriously affected. The Porte appeals to the good offices of the Allied Powers for the settlement of these differ-
ences. King ()tho if redtess be not inmeeliately obtained. The cession \& Theant! to Frecce is said to be one of the
 matter renams for the present in abeyance, and all hos-
tile preparations are snopended until the answer of the Great Powers be received.-The arrival of three packets from the [nited states has supplied us with American news t. a rerent date. A new candidate for the Presidency, in rpposition to Mr. Clay, has appeared in the persun of Cril. Scott, the Commander-in-Chief; and, from the statenents of the Nem York papers, there appears to be littie cult of his success. The approaching meeting of cor-res cires rise to much speculation on the varinus ulpects which are expected to engage attention among whiti tiee right of search for slaves, clamed by the British (iutermanert, is one of the leading topies of discussion. The unisn of Tesas with the Cnited States is also spcken of as a bighly probable event. We learn from Camada that the trial of the parties concerned in the lase uizare of ( \(C\). Grogan has terminated in the conviction of Mr. Johmeen, an officer in her Majesty's service; he did riot deny his participation in the affair, and was sentenced by the court-mart it t nhe immediately cashiered.

of Honour to the Queen. The IIon. Col. Grey has re-
lieved Col. Arbuthnot in the duties of Equerry in Waiting on her Majesty, and Major.-Gen. Sir E. Bowater has suc-
ceeded Col. It the as the Equ.ery in Hating wa Pimee ceeded Col. II the as the Fqpery in Wians on Piance
Albert. ()rurs were ssaded for the Cuurt to go into mournirg on Thursiny fur her late Majesty the Dowager Quen of Bavaria. A miniteria! paper states that the until Febraary, immediately after Parliament assembles, and that the cur muny will te fatormed in tomn.

The Queen Dowager.-The health of the Queen Dowager continues to improve, and the more urgent symptoms be gratifying to our readers to learn that her Majesty is reason to houe that the reensely for this august lady will nos) be spedy and uninterruptad. The bulletin issued on Monday was that "The Quecn Dowager has made satisfactory progress since the issuing of the last bulletin, and there is this morning a continued improvement in her publish any further bulletin until Thursday, when the fol lowing was issued:-"The improvement of the Queen Dowager's health announced in the last bulletin has continued up to the present time, and there is every proppect ance of the present favourable symptoms no further bulletins will be issued
Official Appointments.-Sir Edmund Walker Head, Buth has appointed One of the Poor-law Commers Leftre, Esy, resigned. Her Majesty has appointed the four officers under-named to be Naval Aides-de-Camp to her Majesty:-Commodore Sir C. Napier, K.C.B. ; Capt.
Sir A. J. Willoughby, C.B.K.C.II.; Capyt. Sir T. Fellowes, C.Bo, and Capt. E. H. A'Court, vice Capt. the Hon. G. Poulett; Capt. the Hon. Sir A. Maitland and Capt. the Right Hon. Lord Radstoch, C.B., promoted to the rank of Rear-Admirals. A ministerial paper states that Major-Gen. John Grey, C.B., has been ap same paper also says that the Duhe of Buccleuch is to be the Lord-Lieutenait of Roxburghshire, in the place of the Marcuuis of Lothian, demeased, and that the Lord-President, Lord Wharneliffe, will be the Lord-Lieutenant and Custos Rotulorum of the West Riding of the county o Tork, in the place of the Earl of Harewood, deceased Eastlake, R.A., as Secritary to the Fine Arts Commission

\section*{\(\$\) Foreígn.}

France. - The Paris joumals are this week untusually destitute of intelligence either of fortign or domestie in terest. The near approach to a perfect arrangement of has now assumed a definite character: friendly intercours has been resumed between M. Guizot and 11. Olozaga the Spanish Ambassador, and M. De Salvandy, the newly appointed Minister to the court of Madrid, took his de parture for that capital on Monday. With respect to the formation of a large corps of observation on the Spanish frontier, which we have before noticed, the Moniteur,
official journal, explains it by stating that the proceedings of the ultra-radicals of Barcelona had caused fears for the consequences, and induced the Government to provide,
by a corps of observation, against any contingencies that might arise ; but it was never contemplated to carry the number of troops to be employed in it beyond 25,000 men. The late Conspiracy.- The journals contain the acte d'accusation, or bill of indictment, against Quénisset and his alleged accomplices; but it is no more than the echo in a previous Number. The following passage in it, however, is commented on by some of the papers as deserving special notice:-" The shot, which was levelled too low struck Gen. Schneider and Col.'Levaillant's horses. A ball was found in the wound inflicted on one of the horses, and the report of the veterinary surgeon who extracted
this ball says that it was directed against the Princes, and that it was owing to the interposition of Providence they were not strack." The trial, which was stated in our last to have been definitively fixed for the 5th, was which day the Cnaccellor of the Court of Peers bad issued

\section*{he usual notice.}

The Capital.-Various statements have appeared in the journals during some months, stating that the population of Paris is fast falling into the most serious state o diatress. Almost the whore of the petty wine and lemon-
ade shops where the working classes hitherto sought re pose is ramsement have become bankrar: of iasulvent

 trade was carried to the greatest extent, numerons filuile oceur daily ; and even at this seas.on, when the trade of the capitai, in conseguence of the approath of the ness year, is generally most prosperons, several shops are seen closed every day, in the richest and most populuts neigibourhoods. As a further siga of the times, it is stated alarming numbers.- On Friulay a conference was Leld Which was expected to induce the metal-founders, who some time since "struek," as ncticed in a former Num ber, to retarn to their employment. This, himerer, was not the case. Groups of eight, ten, and firteen operatives continue to risit the manufactories still at work, and to withdraw those whe would willingly continue their labours.

Cay, by the announcement of the failure of the eminen This filal house of Balguerie and Co . of Bordeaux This failure is recarded as being the more serious, as that but gave a considerable impulse to all speculations, such, wiach hase re.dered great sersice to the de Teartment of the Giroad.
The Diarmament.-Letters from Tuulon, which bave appeared in the opposition prints, represent the disarmasent to Brest, others, it is said, are sent into dock. But the necessity of sending fresh tronns to Algiers, and bringing sick the back, employs all the vessels, and obliges some vessel brings home 200 sick. These letters add that \(G\) Bugeaud, the Commander in Clief in Africa, is to hare \(80,10: 1)\) men complete for spring.

Lower Rhine Council General of the department of would be he has been coavoked, to consider whethe line from Paris to Strashurg by Nancy, or whether the line from the capital to Strasburg might go round by ang but one line fron Debas dectare for the Journal des only extend by four hours the time betacen Paris"and Strasburg. M. Berryer, son:e sessiuns back, opposed the railroad from Paris to belgium, because, he said, it would make Antwerp and Rotterdam the ports for supplying disace, instead of Havre. The Journal des Détats en Havre to Strasburg was but 4000 g quintals in 1840 . This argument, howerer, is regarded as fallacious, inasmuch a the great transit of cotton and other commodities from Harre to Alsace does not go to Strasburg altogether, but rather from Naney straight to Mulhausen, and is very much greater than the amount represented.
Posi Office. - The number of letters which passed throush the French Post-office has more than doubled during the last twenty years. In 1821, it amounted to
 \(83.318,0188\); in \(18: 38\), to \(85,425.551\); and in 1841, the number will be very near \(100,000,000\).
Algeria.-The Moniteur publishes a long report, ad-
dressed by Gen. Bugeaud to Marstal Soult, under date 11th Oct., in which he gives an account of his last ex pedition against Abd-el-Kader, in the province of Oran. praiza were contined to two renconties on the 8 th and \(25 t_{1}\) Oct. with the cavalry of Abl-el-Kiader, who, it appears, fought with great resolution. On the hirst da
 routed, rallied as many times, and bravely returned to the charce, Lut were ultimately dispersed. The General then made a successful incursion on the territority of th Hachems, the most powerful tribe of the province, en tered and destroyed the fort and town Kesailnas, Zeda mas, Douitabet, and Hazar Garabas, revictualled Mascara where he left a force of 6,000 men, under the command of Gen. Lamoriciere, for the protection of his new allies, and returned to Mostaganem on the 5th Oct., after an killed on the field, and 11 who died of illness, besides number of wounded.

Span:- We have received Madrid and provincial inteligence to a recent date. Their contents are favourable to the belief that tranquillity is about to be permanenaly
estalushed in this country. The Regent was expected to established in this country. The Regent was expected to
enter Madrid on the 23 d ult., having slept the previous night at Guadalazara. Sereral battalions of infantry and squadrons of Hussars, forming the advanced-guard of the troops which compose his escort, had slready entered tha capital. A triumphal arch and other popuar demenficial tions were preparing to celebrate his entry. The adstio of the Cortes In the preamble of the decree the Regent observes, that hitherto the budget had not been discussed, but that this pariol of the session, that the same inconvenience was not to be apprehended. He next announces that sereral orgnic laws and other important measures would be submitted to the deliberation of the next tegi:lature. doubt was entertained that a majori:y woult conimm the decrees of the Regent relative to the supplino Ex-Queen Christina's marriage allowance, to the suppres sion of the fueros, and the establishment of the custons house lines on the French frontiers. Justice, eajoining the presidents of the different courts in the kingdom to suppress, within their respective jurisdictions, all confra ternities and associations formed under the invocation of some saint, or for pious objects generally, without havisg presi.nets ardined the sanction of Gormment. The Duke de San Curios end other Grandees imphicated in the Oeto:er attempt, and who bave ded an hen, ar trials Thened hy the Gazette to appear and take try 12 officers The Council of War met on tie 20th ult. to try although the fiscal had demanded the penalty of deat against 11 of them, it was hoped that none of then . be capitally convicted. Government now appears incinae to adopt lenient measures towards the persons imprisone
for the recent insurrection; and it was even believed that Perez lento, Salcedo, dce, who had been arrested for their participation in that affair. The wife of Gen. Coneha had obtained passports for France, where it was understood ber husband had safely arrived. Queen Isabella's fête day was celebrated in Madrid on the 19th uit.
with much enthusiasm. The young Queen and her sister with much enthusiasm. The young Queen and her sister
went to the theatre in the evening; when there was also a general illumination. An extraordinary courier had been despatched with an autograph letter of Queen Isabel for Queen Victoria, congratulating her Majesty on the birth of the Duke of Cornwall. Passports have been forwarded for the Infanta Louisa Carlota, authorising her to return to this country. - From Barcelona we learn that that city continued quiet, and no further disturbances
were apprehended. A military tribunal had been constituted for the trial of the Imembers of the Junta of Vigi lance; and on the total amount of funds in the public treasury being verified, 45,000 piastres were found wanting. The civil engiveers appointed for the purpose have athrmed that the expense of re-establishing the parts of \(9,000,000\) reals. The formal siege of the city would it wis expected, be raised on the 21 st or 22 nd. One of the precautionary measures adopted by the new CaptainGeneral has been, requiring the presence, within 48 hours, of all Frenchmen and foreigners in the city, and order-
ing that such as were not liprovided with the necessary papers should be conducted to the frontiers. The battalions of National Guards disarmed by Gen. Van Haten, referred to in our last, were not to be reorganised; and the remaining battalions were undergoing the process of purification:" the municipal officers dismissed by the Radical Juntas were to be reinstated in their functions. to the Regent, in which. referring to the late disturbances in that town, they dischaim all participation "in the liberticide plans got up and executed by four foreigners and a laand fol of ungrateful wretches," and demand the punishment of the real traitors. They then remind the Regent of the ties of affection which once united them in the camp and in the hour of danger, and conclude their address by saying, that if he will ' display clemency towards them, Bilbao will transmit to future ages, written on a stone of infamy, the names of the dozen men who attempted to solly her fame." - As an agreeable variety to the political exeitement of the country, the Madrid journals describe city, and speak with enthusiasm of the reception given by all classes to the King of Tenors. counts inform us of the arrival of the Regent in the
capital on the 23 rd. His entry, which formed a triumphal pageant, was made with every attendant circumstance of pomp and display; and the immense crowds which filled astic checrs. The demonstration of popular feeling in his farour is represented as very decided, and in the evening the city was brilliantly illuminated in honour of the event and the surcessful termination of his campaign through the disaffected provinces
portugal.-We have intelligence from Lisbon to the person on the 18 th alt. The Royal speech Queen in the important financial measures which had occupied their attention; thanled them for the supplies voted, and regretted that the necessities of the state had compelled them to impose some new taxes ; butexpressed confidence that the people would cheerfully submit to the sacrifices requisite to sustain the national honour and credit. The to 2 of the junta of public credit, which now amounts among the bome and foreign creditors. The extraordinary expenditure of the present year amounts to 693 contos of reis, 550 contos of which are appropriated for the payment of various British claims, and the remainder to the claims, and of parties interested in French and Brazilian It is stated that the contracted by the consul at Moroceo.
It minister still persists in requiring the Government to give up Generals Pezuela, Oribe, and the other Spanish officers who had taken refoge in Portagal in consequence of the failure of the late The clubs But this the Government persists in refusing. The clubs are described as being exceedingly active in the capital, and attempts, it is said, are maling by the revofactures press to stir up the classes concerned in ranuuwith England by inence of the treaty under negotiarion thrown nut of empior.- The safe delivery of her Majesty, and birth of the Duke of Cornwall, had causalgreat de Walden, our ambassador in that capital. was about to give a diplomatic dinner on the cecasion, and all the ressels of war in the Tagns had been dressed out, and fred royal salntes in honour of the heir-apparent tis the British insular Company announced by the agents of the Peninsular Comprany, that atter the 1 tth inst. the werikly
steamers will, under ordinary circumitances, leave Gibraltar on the Taesday instead of Thursdav, and Lisbon for Fhmouth on Saturday instead of Monday afternoens. The ters without delar parties in England to answer their let-GErmant.-The jouruals this week are destitute of news of any inierest to an Enclish reader. Adriees from still muath the 15 th alt. state that the political circles were quent accounts to the 20th also announce the arrival there of Count de Plat eonference witt Prince Metternich, which lasted two hours, aad the subject of whick is asserted to have related
exclusively to the same questio
inform us that the reduction in the army was proceedin and leare of absence given on a large scale to the infaniry and cavalry. Private letters state dind dirng the lat visit of Prince Metternich to Johanniniorg negotiatiom dor set on foot between him and the Prussim AmbnesaCustoms' Union. These negotiations, it is added, are now sufficiently advanced to allow of a farourable result beng anticipated. This approzeh to a mare intimat alliance between Austria and the other States of the Comederation is attributed to the necessity of union ammen while the rumours of war were prevalent during the later part of last sean announce that the health of the Duke of Bordeatus daily improving. The Duke of Cadiz, elidest som of
the Infante Don Francisco de Paulo, arrived in Vienn on the 21 st Octoberbe followed by the railroad from that capital to the banks of the Rhine has been definitively settled by the Prussian and other Gorernments interested in the question. It will commence at Halle, a place already in communication with Berlin by a railroed; from thence it will pass by Merseburg, Nauemherg. Weimar, and Erfurth, to Eise ach and Prustian Saxony. At this point three branche will start off, oue to Cassel and Frankfort, another to Co\(\operatorname{logne}\), and the third towards Bavaria. A trea:y was signed on the bth ult. at Berlin, betw mark, and Mecklenburg, for settliry all matters connected with the railroad from Berlin to Maniburg, aiong the right bank of the Elbe, by Boizenburg and Bergedorff. The contracting parties stipulate to give up all the state lands required for the line, and it is espected that the communal lands along the line will also be ceded on moderate terms. - The reports from the German fairs are rather interesting. At Frankfort-on-the-Oder the business done had not been very brisk, taking the result of the whole; but the supply of goods received, in aldition to those al eady in the warehouses, which domestic manufactures and commodities formed th great bulk. Cotton and silk goods did not go off very
well. At Pesth, in Hungaiy, also, the grand autumn fair well. At Pesth, in Hungaiy, also, the grand autumn fair had been held, the supply of raw wool amounting to \(60,000 \mathrm{cwt}\)., all of which sold rapidily at advanced rates. dull of sale. At Frankfort hardware was in moderate demand.
Hanover.-Advicer, dated the 16 th ulto, inform is that a protest has been received here from the Dukes of Susses and Cambrilge, aganint the succession to the 12 members who are to certify the signature of the (rown Prince. It is said that the protest wis reveived thoret befure the 12 members took the cath. It does not appear, howeve
Hoeland.-Accounts received from the Hague, datel the 2 oth ult., give some details of the operations for draining the Lake of Haarlem, whick have been going on for two years. Everything has fully succeeded according to expectation, and it is thought that in the fifth year from the commencement of the andertaking the proposed object drained. -The Ministerz of Finance and of the Interior visited Maestricht on the 2isd ult, for the purpose o adopting the necessary measures for carrying int., effect the railway to Aix-la-Chapelle, and the road from Maes tricht to Nimeguen.
Bexgiva. - We have no fresh intelligence respecting the late revolution, but the judicial inquiry is stil pro-ceeding.-At the meeting of the Chamber of Represen tatives on the 25th nit., the Minister for Foreign Afairs confirmed the news, announced in our last, of the with drawal of the French troops assembled on the frontier to the number of 20,000 men. The Deputy of Ghent called on Government to declare whether it was true, as had been asserted by the French Papers, that these troops, contrary to what the Minister for Foreign Affirs had declared in another sitting, had assembied only at the reguest of the Belgian Ministry. The Minister refused to comply with this request. and was warmly applauded by the majority of the Chamber.
Switzerland.-The revolutionary proceedines at Ge neva. referred to in our last, have soniewnar suloshited. Tha Council of State, accelling to the demands of the crewdes assembled before the town-hoose, decited he citizens ult. that a Constituent Assemble, The foilowing is the tert of the decree :- cons. The present constitution shan be revised by a Constituent Assembir, appointed by the citizens. 2. The Council of State mill propose tost project of law relative to the mode of apmenetiog the ( masubuent A-sembir. Til? preveet mill be ielated and roted in the A-sembiy. This pryect of The Conetituent Assemidy shall be conroked within the 15 dars fullowing the adoption of that law. 4. The constutuon agreed t. by the Constituent Assembly sball be referred to tie sametion of the citizens. No disturbance of the prace of the city had taken place; and on hearing the promugation gitation immediately subsided. It rould be impossible, says the Jurrnal de Geneve of the 23 d , to descrive the joy and entbusiasm at the resuit of this movement, achicred without viulence by a national manifestation. The Council of State had calied a meeting of the Grand Councll to investizate the demands of the "Society of the 3d of March" (the Rovolutionists). The arilitia hand been called under
arms in the exigency, but only 300 or 400 out of

 men-of-war whi be staitench Minister at thas court may be instructed to make. In the mean tiane. it is sa.d, the French are doing all in their power to excite troubles again in the Levant: it is asserted that the Candioo Cona mittee have recently received a leter M. Guizot's patronage, in which Greeks are called upon, not only and other parts of Turkey. It is slso affirmed that the

 capital on the Letia Oct... it a.................... It is a
 question of the pryperty fliais is ficace, su ch has been many years pending between the Porte and the
latter country, it enumerates several causes of grievance, and adds that "it has now become urgent to terminate this affair, as all the world knows that the Porte is anxious to preserve unshaken the relations of friendship between happy ismer cuarts, to faciliste, so for in that it is especialiy desirous of maintaining and multiplying amicabie
relations with Greece. Desiring this, on account of thei
near neighbourhood, it hoped that the Greel Governmen near neighbourhood, it hoped that the Greek Government
would evince similar sentiments ; but in this it has been disappointed." It proceeds to say that "various acts com mitted by the Greek Government are contrary to international rights and amity, to the duties of a good neighbour, while they threaten the interests of the Porte, as rell as the tranquillity of its subjects. The Porte, in coninvite the Greek Government to devise means of putting an end to this state of suspense, and to terminate pending ifferences; to permit no longer perturbators to foment rebellion in this country, and to pursue a line of conduct befitting a friendly government. If the employment of
good offices by the powers for the settlement of these affairs should produce a satisfactory result, this is all that can be desired; but if not, it is decided that all Greek interests, and commerce, and affairs requiring the support and treated with little favour." It was this note, it seems, here, referred to in previous Numbers, and at one of Which, it is said, a proposal was made to put an end. to also added that at these Councils, after the representatives of the Powers had advised the fifaat Pacha gave his adhesion to this pacific advice. Tahir Pacha, however, de-
clared energeticaily fir warlike mensures; but in the Conncil of the bth with we learn the latter had remainet silent, and Rifaat's council of awaiting the answer
of the Piwers prevailed.-Accounts received from Beyrout, dated Oct. 29th, describe the state of Syria as very unsettled, and mention that serious misunderstandings continue between the Druses and Maronites.
Egypt.-Our intelligence from Alexandria, brought by the Levant mail, comes dowa to the 6th ult., but is not English, French, Russian, and Prussian Consuls were there. Cairo letters of the lst alt. state, that between the Sultan and Mehemet Ali there exists the greatest intimacy, and that the Porte latterly consulted the Pacha as to the means of re establisbing the credit of the Ottoman
monetary system, which is fallen into dangerous disrepute. Their Highnesses are also busied, it is stated, in the amelioration of the administratise system for the benefit of the people, by affording them tixe means of profiting by the surplus advantages of agriculture. The schools are abont to be reformed in consonance with the wants of the counmerce, and to guarantee the peasantry against the avidity their harvest. The climate is represented as being very unhealthy, and a bad fever was raging, carrying off three times the usual average of persons. Some
had appeared in the Delta and Alexandria.
United States.-We have three arrivals this weelthe packet-8hip Oxford, on Saturday night; the Patrick
Henry, on Monday night; nnd the mail-steamer Britannia, on II culuz = day. by the P'atrick Ifonry, which made the alt. Gen. Scott, Commander-in-Chief of the Army, had tahen the field as a cancidate for the Presidency. Mr.
(lay, who had also been =t.cken of in connesion with the Presidetcy, would not, it was thought, hare any chance, now that the (ieneral had arured hmself a cancirdate democratic party: the popular voice has thus spoken in farour of Gen. Tyler's opinion respecting the Bank question. The jellow fever was on the decline at New Orleans. There was frost on the 23 d ult., and this, it was hoped, mould abate the ravages of the fever, which had been more even in 1837. -A Mr. Johnson, one of the parties implicated in the late seizure of Col. Grogan, had been tried by court-martial. He did not deny having participated in
flie affair, and was in consecquence immediateiy cashiered. - layse nater state. Mexico.-By the Britanniu, we have received recent
and important intelligence from this country, from which and important intelligence from this country, from which Anma has succafter a prolonged struggle, Gen. Santa that Bustamente is in overturning the Govermment, and conqueror. Sinetin Anna had been deciared Componaderdeclared Supreme Dictator, as Congress was to be disclare, who was to govervo. No details are given respeet-
ing this restletion, but it is thought thar Mexico ha- suthred greatly, as the intestine war comamenced withm its precincts, and has been there decided alter a contest of severd weeks. By these adrices we
also learn that Mr . Rutierfurd, the English Vice-Consul at Matamoras, had fallen a victim to a fever which wes raging as that place.

Money Market, Friday. - Consols for Money were quoted, prior to the closing, \(89 \frac{1}{2}\) to \(\frac{1}{4}\); for the Account, India Stock, 245 ; Three per Cents. Reduced, \(88 \frac{3}{3}\); Three-and-a-Half per Cents. Reduced, \(97 \frac{7}{8}\);
\(\mathrm{a}-\mathrm{Half}\) per Cents., \(98 \frac{1}{4}\).

Steropolis and its Fírímitp.
The Weather.-During the early part of the week the Sundar night it blew a burricane from the west, accomparied by heavy rains, which continued the following day and parts of Tuesday, wherehy all the low grounds in the neighbourhood of the Metropolis were extensively flooded At Camberwell, Peckham, and Brixton, the roads were depth of water on parts of the carriage-road was two feet as the torrents rushing down from the neighbouring hills could not find a passage through the ordinary drains. In
Battersea-fields most of the meadows were flooded, as was also the case about Hanwell; while in the neighbourhood of Greenford, Northolt, Perivale, and the surrounding parts below Harrow, the roads were in many places danfields, as well as public thoroughfares, adjacent to the river Ravensbonrne, were covered with water; and an extent of nearly 30 acres of meadow land at the back of Black-heath-road presented the appearance of a lake. At
Lewisham the high road was overflown for several hundred yards, and foot passengers were conveyed over in carts. At Lee, Southend, Mottingham, and various other places, the same effects were experienced. The high winds have likewise been productive of extensive damage in the subshippiog on the River with loss of life. In Hyde Park, St. James's Park, and Kensington Gardens, considerable injury has been done a number of fine large trees have been torn up by the roots; the ground was strewed with the limbs and branches of others ; and numerous shrabs were levelled to the ground. Nearly opposite the Kensington-gate of Hyde Park a house newly erected had the roof completely carried away. In the Dulse of Devonshire's park at Chiswick much damage was done; and also in Sion Park, the seat of
the Dulse of Northumberland, in Osterley Park, the seat of the Earl of Jersey, and in Hanworth Park, the seat of Mr. H. Perkins, several valuable trees have been torn up by the roots. During the height of the storm, a high stack of chimneys fell en the roof of a cottage in Blana and cariode-yard, in the they were, however, extricated after some time by the police, without sustaining any serious injury. At the same time, a high chimney, belonging to an unoccupied house in Bermondse \(y\)-street, fell, and did considerable damage to the roof of the house. In St. George's-road, Lambeth, a stack of chnmeys on the house of Mr. Wheelton rruiterer, fell, driving in a large portion of the roof with
it ; fortunately no person was in the attic at the time, or the occurrence would have been attended with fatal results
The late Five in the Tower. -The committee of in quiry into the origin of the late fire in the Tower having completed their report, the whole evidence has been published; and though given in a condensed form, it is very voluminous. Few tacts, in addition to those already before the public, सere mentioned by the witnesses following abs tract of the report:-From the concurrent testimony of nearly 50 witnesses, it appears that the fire broke out in the Bowyer Tower, and that it was at first confined to it With regard, however, to the exact spot of its arigin, th evidence is so various that it is impossitle to say whether
it originated in the Round Table room, the View-room, or the staircase leading from the View-room to the back staircase. These two rooms were both provided with stoves on Arnott's principle, but there is no reason to believe that they were improperly placed, unless it be considered that they should have been placed opon a plate of metal, which was not the case. Some witnesses describe the fire as having broken out before any light was perceptible either in the Round Table or the View room. Two persons describe the smoke as first proceeding from the upper or Round Table room, while others state that although the upper room was full of smoke there was no fire there when the lower or View room was in flames. A the only way of reconciling these various statements, and
of accounting for the fire having occurred accidentaily, the committee suppose that some ignited substance had fallen from the stove in the Round Table or upper room between the double floor, there producing a smouldering fire, which broke out partial.y at nise o clock, occasioning the light described as seen at that time by two witnesses, and afterwards the smoke seen in the upper room by two to buinesses, at a quarter before ten ; that it continued from the Vienly into flames, and from the Bowyer Tower it was distinctly seen to commmicate with the roof of the Armoury, ex tending east and west, and gaining ground so rapidly as to account for the impression on the minds of some that the baildings were on fire at distant parts at the same moment. Vanous reports reached the committee which, if true, would prove that the fire was the act of an incendiary; but upon the mest diligent inquiry and strict examination of the persons giving information, it has been impossible for the committee to trace the slightest foundation for them. It is added, however, that from the situation of the workshopes and the easy accens to them from the limewally mich on ast might eaily have heen accom-
plished. It appeared to the committee that no blame attaches to any of the parties to whom the duties of inspec they consider the system of watching very deficient, and that had the buildings in the rear of the Grand Armour been properly watched and guarded, the fire must have mittee are of opinion that the workshops, which have been ased as such from a remote period, ought not to have larly as the use of stoves cannot but be attended with some degree of danger. With respect to the surpiy of water it is stated that there are five underground tanks, capable of containing 36,662 gallons of water. On the night of the fire there were 18 engines in operation; and if these bad been full, with respect to which there was a good deal of conflicting evidence, the whole supply would have been , and probilding within the ower defences would in all probability have been derrangements in case of fire are imperfect, and auggest that measures be adopted for a more plentiful supply of the control of the officer commanding the detachment of Royal Artillery stationed in the Tower, whose duty it should be to instruct his men as to the means of obtaining a supply of water, and see the engines practised at lenat month
Late Forgery of Exchequer Bills.-The second notica issued by the Bank of England, given in our last Number equiring that parties applying there for temporary accommodation on the deposit of Exchegner-bille, 8cc., should accompany their applications with a promissory note for the amount, has given rise to some discussion among bill-brokers, capitalists, and others; and though it ha been endeavoured to show that the measure is not one to which great importance should be attached, as furthe affecting the character of these securities, still it appeas to be regarded generally with suspicion, and is found fault with by many as an innovation calculated to give needless trouble. Great anxiety, it is stated, has bee shown on the part of Government to obtain those gennine Exchequer-bills to which the spurious ones correspond, in order that they may be used as evidence in the approach: ing trial for forger be ater anie ties who might be presumed to be holders of the bills, transpired that the bills were already in the possession of the Treasury, having been sent in some time ago for the funding. This incident, as illastrative of the mangge ment of business in the Exchequer-bill department, has it is said, afforded some amusement among the moneyed circles in the city. There have been rumours also durin the week, that the funds arising out of the negotiation of the Exchequer counterfeits have been traced to the Ban of France, where they are held in deposit, and it is adde that a messenger has been sent over to Paris to attach in the hands of the Bank. It is further stated that Go vernment having a clue to the agent here employed in the transmission of the property, still further measure have been taken for its recovery. At the Central Crimi nal Court, on Thursday, the grand jury came into court
with three separate bills of felony against Mr. Smith. with three separate bills of felony against Mr. Smild, secution couversalion chief Justice as to the day whe the tria and the Lord Cbief Jastice as to the das. this day, the 4th inst. ; but Lord Denman stated that be did not like to fix this day, as he should himself be unable to be present. No day was consequently appointed, and the impression prevails that the trial will uitimately put off till the next session, which will commence on Tues day the 14th inst
Fracas at Buckingham Palace.-On Tuesday a lovg investigation took place at the Board of Green Cloth
before the Lord Steward of the Household, when nearly before the Lord Steward of the Household, when examined respecting an affray between Mr. Norton, the deput comptroller of her Majesty's housthold, and Mr. Franc telli, chief cook of the royal kitchen. It appears th broils and ill-feeling to a great estent have been for som time existing in the royal establishment ; and on Monda Mr. Francatelli took an opportunity of insulting Norton in the presence of all the pages and about fort others, when high words ensued, which ended in a policeman being sent for to take Mr. Prancatelli into custods, but he arrived. The suspension of Mr. Francatelli until the matter shall be land before her aije Prince Abert, when it thoughte her majesty a be adopted to prevent a recurrence of such proceedings.

The Royal Exchange.-On Saturday the Lord Maye waited lipon Prince Albert, for the purpose of requesting that his Royal Highness will do the crizens the day be appointed foring at he Mansion-ho stone of the Roy Exchange formed by his Royal Highnens on the 19th of Januar Prince Albert stated in reply to this request that he shoul feel much plengure in being his lordshin's guest on that day. His Royal Highness begged at the same time to asik tia favour that the entertainment might be appointed to tai place immediately after the ceremony, as be should red anxiety to get back to Windsor at as early an hour as by sible. The Bishop of London has been applied for the the Gresham Committee to write the inscription The occasion, which his lordship has consented to do. nusual elegance and splendoni
Death of Dr. Birkbect,-OA Wednesday, the-Int insth
this well-known physician, celebrated as the founder of
Mechanics Institutes, died at his house in Finsbury-square, Mechanics Institutes, died at his house in age. Dr. Birkbeck was the son of a merchant and banker
of considerable eninence at Settle, in Yorkshire, where he of considerable eninence at Settle, in 1orkshire, where he
was born in the year 1776. After receiving the usual rudiments of education at a village in the neighbourhood, during which he displayed a strong inclination for those mechanical pursuits to which he afterwards became so deembrace the medical profession. Before the 22d year of his age te was appointed Professor of Natural Philosophy in this situation that Dr. Birk beck laid the basis of those mechanics institutions in association with which his name Las chiefly attracted present notice, and will engage future remembrance. With ciberality rarely evinced, he invited his lectures; and it was in consequence of their grateful practice, that he was induced, on his removal to London, to project the foundation of mechanics institutions in the Metropolis and throughout the country. Nor was it his time alone that was devoted to this laudable object,--his purse was not less freely bestowed. He is said to have lent and, by a singular coincidence, the members of that body कere to meet for the purpose of celebrating its 18th anni-
versary within a fer hours of the period when its founder had ceased to exist. As a medical man, Dr. Birkbeck en-
jored a larger practice than is generally bestowed on those joyed a larger practice than is generall
given to scientific or literary pursuits.
Metropolitan Improvements.-It is stated that in addition to the projected insprovernents on the Crown-lands at Kensington, it is intended to remove that pertion at the rear "Roukery," now inlabited by the lower order of Irish, Which bas been for years an annoyance to the town and class. Actions of ejectment have already been commenced class. Actions of ejectment have already been commenced
against the occupiers of the houses. -The contemplated improvements in the neighbourhood of Buckingham Palace, by the removal of the White Horse Tavern, will
not, it is said, commence until spring.-The new Albert gate, to be erected opposite Wilton-place, is to be constructed at the sole expenge of Mr. Cubitt.-The improvements on the north side of St. James's Park, by the contowards Spring-gardens, have been suspended, in consequence of its having been found impossible to obtain other stabling in the neighbourhood equally well adapted for her Majesty the Queen Dowager's stables, which interto Kensington, through the late royal kitchen-gardens, is in contemplation.-In addition to other exteusive improvements in the London Docks a large piece of ground, about two acres in extent, on the east side of Old Gravel-lane,
and adjoining the eastern basin, has been lately enclosed, and nearly 200 men are now employed excavating the ground, and executing other works previously to the erection of an extensive range of warehouses, and vaults beneath; the former being destined for sugar-warehouses, and the latter for wines. The boundary wall enclosing tween the wall and the buildings there will be a space of 33 feet, for the convenience of waggons. The expense of these additions will, it is said, amount to nearly \(20,000 l\). Slaughter's Coffee-bouse, St. Martin's-lane, announcing that it has been purchased, under Act of Parlament, by
the Commissioners of Woods and Forests, in furtherance the Commissioners of Woods and Forests, in furtherance of the projected improvements of that part of Westminster.
Emigrulion Meeting. the City during theeting.- I rumow the intention of the Lord liayor, in pursuance of a requisition from the merchants, bankers, and other citizens of the Metropolis, to take an early opportunity of calling a public meeting to take into consideration the necessity of applying to gration. It appears, however, that this report was without foundation; that no requisition for this purpose has been presented to his Lordship, but that a private intimation was given to him about a fortnight since that such a requisition was in course of preparation, when he replied that he did not feel himself at liberty to comply with it. His that the whole subject is now under the consideration of Government, and his Lordship is of opinion that it would Not be wise to attempt to anlicipate the intentions of London ject; and the remalt of its deliberation was a resolution appointing a committee to wait on the Lord Mayor, in the hope of inducing him to reconsider his refusal to convene a public meeting, or, if not, to adopt such meas
Public Meetings.-OI Tuesday was held the first anSteam Neneral meeting of the Peninsular and Oriental Steam Navigation Company. The report was read by peared that the profits of the Lompany for the first year peared that the profits of the Company for the first year \(13,262 \mu\). 18s. 5 d . was paid for insuring the ships and flozting property of the company, and the last lividend of 30th Sept cent. leaving a surplus of \(26,585 \%\). 1ss. On the cont. for the half-year ending the 30 th Sept. Was recom9,0 seven per cent. per annum; and after the payment of
would still remain of \(15,3577.145\). 6 d . The directors had There were 6,092 shares of \(50 \%\). paid up, amounting to There were 6,021 shares have since been taken in Eng304,6001. ' 3,241 shares have since been taken in Eng-
land and Ireland, and 1,315 in India, making 10,648 shares, and the amount paid thereon 357,2406 . The East India Company had, with a view of promoting a rapid and
frequent communication between the Presidencies and frequent communication between the Presidencies and 100,000 in addition to their grant to this company of Government that sufficient time should be allowed to the passengers from E'ogland to reach the steam-pachet carrying the mails from Suez to Bombay, which has been agreed to, and now forms an essential feature in the comifurt of passengers in their transit through Vgypt. His
Highness Mehemet Ali had afforded the greatest facilities Highness Mehemet Ali had afforted the greatest facilities
to a transit through \(\mathbf{E g y p}\), and had also offered to render practicable for carriage travelling, at his own cost, the routes between Suez and Cairo, and between Cosseir and
Ghenneh. and to afford such escorts as might be necessary for protection. The report having been adopted, several one, conveying to his Highness Mehemet Ali the thanks of the Company for his efforts in promoting the peared that the Company have four steamers for India by the Mediterranean, six for the Peninsula, one for the Ionian Isles, and two iron steamers for the Nile, and others are contemplated.- On Wednesday a public meeting of the inhabitants of the parish of Marylemone was held, for the purpose of taking into consideration the best mode of procuring a repeal of the mindow duties. Atter
several speeches had been made, condemnatory of the present Gorernment, and alluding to the great increase of distress throughout the collntry, the following resolution was proposed and carried: "That the window-tax, from its cortinuance after -6 years of peace, is most obnoxious from its partiality most unjust, and from the recent surcharge (amounting in many instances from 30 to 11.0 per cent.) bas become intolerable." Several other reselucarried, to the effect that in the present de pressed state of trade, added to the increasing demands of the poor, a great portion of the tradesmen of this pa-
rish are no longer able to pay the tax; and that if the commissioners are determined to enforce it, it is quite evident that numbers must seek shelter in the already over cromded workhouse; and that this meeting call upon all the Metropolitan parishes to co-operate for the abolition of the window-daties. One of the speakers, in alluding to the distress of the country, seid that there were 2,000 more applicants for relief in the parish than had erer been St. Pancras.
 provide a remedy for the present deficiency of church ac commodation in Kentich-town, in this parish, either by
the erection of a new church in the lower part of the district, or by the rebuilding of the ckapel upon a much larger scale. It appears that one chapel, with accommodation for not more than 750, is the only place of worship belonging to the established church in a population of nearly 10,000 . A committee of sereral of the resicent gentlemen has been formed, and a subscription commenced, for the purpose of carrying this ohject into effect.

The IIFest India Stzam Fleet.-There are now four steam ships of great magnitade land power fitting out in the East India dock, each of 1,400 tons burden, which are intended to join other steamers of a similar size, buit in Scotland and Liverpool, for the Royal west
India Mail Steam-packet Company. We noticed in a previous Number at some length the object which this establishment is intended to accomplish. The whole fieet, twelve in number, fare appointed to meet in the Southampton river before the expiration of the present year ; the first four will leave on the loth inst,, andm regular intercourse by steam will then be kept up betrieen this country and the Wrest India colonies. Wibe fulowng is the destination of the steamers which dadeira, and proceeding to Grenada, Trinidad, La Guayra, Porto Cabello, and Curaçoa, returning by the same rocte to drenada. One for Jamaica, calling at St. Thomas, Porto Rico, Hayti, St. Jago de Cuba, and proceeding to Cartbagena, Chagres, and returning to Jamaica by the same route,
One for Havamnah, calling at St. Thomas, Porto Rico, and proceeding to Honduras, returning to the Havannah. And one for Havannak, calling at Bermuda and Crassan, and proceeding to New.
thence to the Havannah.

Attempted Suicides.-A short time since, Sir Peter Laurie, and the other magistrates, determined, in consein the Metronolis, a stop to it: and a man and woman who were brougit up for the offence, instead of being dismissed or summarity punished, as before, were committed to Newgate for trial during the present sessions. It is stated, as
the beneficial effect resulting from this measure, that thougi within the ino months frevious io the comulitar of these parties no less than a persuns the kind has sinee a similar offence, not a eingle attempt of clapsed.
Robberies.-Several daring ontrages have lately been committed in the neightourhood of slington, which are attributed to the small number of police assigned to that residence of Mr. Harrup, Highbury-place, a few nights ago. It seems that in the middle of the night that gentleman was awakened by footstepr near his bed-room; and on risiag and proceeaces blackened, each carrying a dark
lantern and some weapon. The sudden surprise alarmed frund that the bouse lad been ransacked, and nearly 5001 . worth of goods packed up; besides which they had regaled themselves from his larder and cellar, having laid the cloth in his dining-room. Search was immediately made for the police, and from the time it happened, about four o clock, till eight, not one, it is stated. 1 mad the house. upwards of a week bull t lave leen barcharged into a number of housen in (iomhtrieg-square; amd in one, mhite a lady was taking l.er brakfast. a tall pasead tlrough her cap, but, frrtunately, withent ining her bly ingury. Ur. 1.Cree, in the sance siptare, and many inlabitants, have upwards of 30 buhicts having been picked up. A few days since, a Mr. Dowe was knocked down, near his resi-
dence, in Cummin's-place, Pentonville, by two men, who dence, in Cummin's-place, Pentonville, by two men, who
robbed him of considerable property.
Fires.-On Saturday exemus. :on.e alam was ocra-
coned in the neighbourlood of Lomelis. Inn. Fieds, by the discovery of a fire in the R yal Colle ze of surgeons. Though it at first threatened to be serinus, fy the speety soon got ungler. The place where the fire occurred was under the Museum, and it is suppesed to have been oceasioned by the orerheating of the flues nlach passed through the varinus rooms, and whieh were fixed in a stere near the spot where the nie bruhe out. Sunie norn neen had
been engaged there a fers hurrs previotsiy, atad had left iff work at dusk. The damige did mot eseal 20.-Op Wednesday night a fire brohe out in the premises of Mr. Reeves, bcotmaher. Princer-stret. Haymathet, whieh for a time threatened the entire destroction of the building,
and was not extinguished bo the consiuerable damage had bten done.-On the same day, the house of Mr. Palmer, Great (ambridge-place, Huchitey-rowd, was neatly destroyed by fire. It afpears that whast Mr. Palmer was asleep, Mrs. Palmer, whe it zetms mas at the time in a curtains on fire, jumped out of the winwom. Mr. Palmer was awakened by the flames, and proupt asosistance being rendered, the house was saved, though not before it was muver damaged. Mrs. Palmer was foual thits she is not pavement, so seriously injured by the fall that she is not fore he conld escape from the roon.

Accidents and Inquests.-Intelligence bas been received las Esterhazy, at present on a visit to the Earl of Jersey, at Middileton Park, Ozon. It appears that on Tuesday, while his Highness was out hunting, he met with an accident, which caused the death of the horse on which be without injury.-An innuest has been held on Sir Francis Chantrey, whose suddendeath was noticed in ,ur !ast. From the eridence of Dr. Lright, whostated tiwat he had attended deceased tor some monthis rast for a complaint arising from indigestion, mith a under.cy of from a spasm of the heart, consequtat, Ur. Brisht consiternh, oa the com:plaint from which deceassd lad heen suffiering. The jury returned a verdet accordine. Sir Francis xas in his anth year. On Saturday her Majesty and Prince Albert was reported to be as we. as conh be erpected. - 1 n inquest has been bed at In de Pate syare, (n) Sir (f. H. Majesty's Custums, who was found dead by \(\mathrm{L}, \mathrm{s}\) servant in his sleeping apartment on Tueslay moning. A surgeen, who bad been in attendarce un decceased some tinie, stated that the Baronet's health had been such as to leave ro some further evidence, the jury returned a verdict. "That some further eridence, the jury returned a verdict, 1 wat
the deceased Sir G. H. Frecling was found icac, a.. that the cause of his death

Arendel. -The bank of Messrs. Hopinins and Con, of nion seems to exist as to the causes that have led to this event but it is generally understood that the liabilities are not to any considerable extent.
s articles for the con veyance of which the present spstem of postage affords
facilities mar be now clased a Wodden of facilities may be now rissed a wadder of gas, which mas to the post-cffice, to be conveyed to philosophical society at Eliturgh. Although of capacious dimensions, measuring two feet in length and eight inches in diameter, and of course, according to the present rezulations, onght master, however, refused to take the packet, on the ground that its safe delivery could not be insured, and that its Chellenham. A lengthened examination of the postmaster of this town, Mr. G. Wall, has taken place, on a charge of embezzlement. It appears from the evidence of detected in altering the numbers of the paid letters reanthorities in' anthorities in London for a smaller number than had been
actually paid for. The examination commenced on Monday, and was renewed on Tuesday, when the magistrates decided on committing the prisoner, but agreed to take
beil for his appearance if he could find two sureties to the
amount of \(250 \%\). each.
Chillon.-A few nights since, the inhabitants of this village and the surrounding country were thrown into a ings and corn-ricks of Mr. Goddard, an extensive farmer and sheep-dealer, were on fire. Prompt measures were immediately adopted to arrest the progress of the flames, but in spite of every exertion three barns, one of which taining a quantity of barley, two large wheat-ricks, a stable, and out-buildings, were totally consumed. The fire is supposed to be the act of an inceadiary, for whose apprewithout abec... I apyears that this village and its im medrate neinhturic. I were about three years ago the seme of mairer atmand that the farmers were in
 the London police, some of whom, in aadution to mivare parties. Five or six were then captured and tried for the offence, and three having been found guilty, were sentenced to transportation.
the premices of Mr days since, a serious fire bro stack adjoining the barn appeared to have been first fired, filled with corn in the straw, which was totally consumed. Two granaries and a stable were aloo consumed, as were twenty-six sacks of peas and several aqricultural iny leciuns are entertuined that the fire was the act of an incendiary, \(a^{2}\) it was an offihand form, and, consequently, no since been apprehended on suspicion.
Hereford.-A highway robbery was committed a few days aince on a gentleman, named Palmer, residing at Bromyard, in this county. It appears that as he was proceeding along the read on foot, within a short distance
of his dwelling, he was stopped by three men, one of whom grasped him violently by the throat, while the others robbed him of a considerable sum of money and other articles. They then made their escape with their booty.
A reward has since been offered for their apprehension.
Hertford.-A ferr nights since, as Mr. Field, who holds a large farm in the vi.inity of this town, Was returning home from market, be was met by two or three men near
the park of the Hon. Mr. Ryder, between Hemelhemstead and Birkhamstead; who knocked him down, and while he was senseleas rehbeat tim of a larce sum of money, his Wrech, and other asticiss. A wargoner passic; hy, picked Where he was fornd to be - verely ingured. Information
was immediately given to the police, wi.o ronceded in search of the robbbres. but it is supposed that they went away by a crnss rad, as no trita of then. could lie ionnd
Lewes. In conseq:- nce of the late heavy rains, all the lowlands adjoining the rivers in this county are flooded to
an extent scarcely erer before witnessed, rendering thy roads in many places nearly impassable. The water on
the Ouse levels has risen to a great extent: and, in addition to a large quantity of timber being washed down the river, a report has been current that Isfield-bridge has been carried away, but the rumour does not appear to Ouse are out to a greater depth than in 1814, when the floods were higher than was ever before remembered; the basements of several bouses in the lower part of the town edjoining the river, are flooded, and considerable damage was held in this towa on Tuesday, the Earl of Chichester in the chair, for the purpose of taking into consideration the propriety of increasing the number of the constabulary force, which the magistrates deemed essential, owing to
the increase of crime. After some discnssion, it was agreed to add six to the force.
Llangollen.-A serioas affray has recently taken place with some poachers in Wynnstay Park, the seat of Sir W.
W. Wynn. From what has transpired, it appears that few evenings since, information had been forwarded to seren poactors were at a paticthouse at Ruabty of six or posed visiting Sir Watkin's preserves that night. Accorlangly he and five or six of his men were on the watch
and, in the ennree of the niebs, they met at a cate of the and, in the comree nf the night, they met at a gate of the
preserves, whereupon one of the poachers shot at the foremost lieeper, and wounded him in the leg, fellivg him to the ground. Un recovering he levelled his piece at the
poacher, and wounded him in the stomach so severely poacher, and wounded him in the stomach so severely the one wounded, has since been captured, and the police are in pursuit of the other fugitives, who are supposed to persons from the neighbour bood of Wresham.
Manehester - Considerable excitement has been cansed death of there persinn, wid io have been occasioned by family of the name of Jones, consisting of the parents and thrce children, had partalsen of some bacon and boiled

 rozen state, and had been pat into warma water before water; the consequence was, that they became putrid through decomposition; and to the eating them whilst in this state, the illness of the parties was ritered. Medienl
children and the father bave since died. An inquest has
been held, when, after the examination of several witnesses and the medical attendant of the family, the jury
returned a verdict, "That deceased died from cshaustion produced by violent sickness and purging, caused, it is ill, and is not exppeted to survive. - Several fires occurred in this town in the ccurse of last week. One on Wednesda afternoon occasioned damage to the amount of 3006 . in Messrs. Knight's oilecloth manufactory; a second thes dey es ining, on the premises of Messrs. Wood timber-merchants, and destroyed the saw-mill and other buildings, with timber and machinery, valued at more than \(10 . G \%\). and a third, more destructive in its resuit
than either of the former, took place on Friday evening on the premises of Mr. Bancroft, straw-bonnet manufac
turer, destroying the whole building and stock, and seri ously iniurins seperal adiacent honses.
Wirucich - lin Tuesday morning the house of Mrs Starr, an aged widow, residing at Mandesley, in this who, after regaling themselves with spirits, \&c.., in the keeping-room, proceeded up stairs, and demanded of the receiving them, however, so promptly as they wished, they beat her very severely, and left her covered with with some plate and a watch, they departed, threatening a little girl, who slept in the same room, with death if she made any alarm. As, however, there was a candle burning
in the room at the time, the girl was enabled to see the robbers distinctly, and fully to describe one of them. Some constables at once proceeded to North Walsham on this information, where, with the aid of the police, they
apprehended the men, and upon them found the watch and part of the money. On bringing them back to Mundesley, their shoes were taken of and found to corresponi exactly with the footmarks traced near the ho
Petersfield.-The bank of Messrs. Hector and Co., of this place, stopped payment on Saturday. The liabilities 30,000 . Many of their notes are in circulation in the neighbourhood, and, associated with other fuilures which have recently taken place, the stoppage, though of small moment, has produced a considerable sensation.
Plymouth.-In pursuance of a resolution, passed at recent public meeting in this town, for the purpose of pre senting a complimentary address to Lord Joln Russell, other gentlement, have waited on his Lordslip at Endsleigh Cottage. The address having been presented, his Lordship replied that he was deeply sensible of the kinduess and confidence thus shown to him by the inhabitants of this town. In reference to recent events, his lordship entered an length into the policy of the late Government and revicued the present prospects of the Whig party, aid his Lordsin. endeatoured to relieve he country from those taxes which are paid to the Landowners, to the West of the community at large. They attempted, above all o subject the admission of Foreign corn to known an moderate dnty, in place of a scale so curiously adjusted, that it baulks the farmer at one moment and starves the people at another, while it defrauds the revenue at all times. The whole strength of monopoly, however, joined with the compact forces of an adverse party, defeated thei efforts, and have placed a new ministry in power. Stil!, ties will share the fate of civil dions and prohibitory duties will share the fate of civil disabilities on religious
grounds, the slavery of our negro fellow. suhiects. and other works of darkness. Nor is it necessary for this purno-e that the late ministry should be restored to power-th men who surrendered what they deemed the essential bulwarks of the church and the constitution to the menaces of the Roman Catholic Assuciation of Ireland, will be sure to gield the fortresses of commercial restriction when they shall be summoned to do so by the peaceful, but powerful, voice of the people of England and Scotland. Those who have resigned office, have the satisfaction of thinking, that xith the exception of the obstacles which self-interest op poses to the measures necessary for restoring our trade to sound condition, and thereby invigorating our finances, they hare left their successors an easy tark. The suppres-
sion of sedition at home, without suspending the constitution, or the odicus employment of spies ; the rule of Ire land in conforanty with the wishes of the great majority of its inhabitants ; the establishment of just principles of government in our Colonien, together with a firm but pacific policy abroad, have made the empire so strong that none but the grossest incapacity can endanger its fortunes or impair its repatation.?
Portsmouth.-Information has been received at this dock-yard, announcing that her Majesty, wishing to show an act of royal clemency on the Prince, has been pleased to notify to the Secretary of Piate for the Home Department, that those convicts who ane behared themadves well shall have their punishment commuted ; and that those who seem deserving of such a the hulks at this place, as well as at Deptford, Woolwich Sheerness, Pembroke, Cork, and other prisons, shall have their liberty granted to them.
Reading.-We noticed in eur last the apprehension and cummiten to the prison in this town of Bernard Caexcited, rasting Man. His case appears to have by some as to the juatice of his imprisonment. The folby some as to the justice of his imprisonment. The fol-
drawn up by MrBull sy, the surgeun of the prison, an
dated the 26th ulto -- Bernard Cavanagh, at this date completed his ninth day of entire abstinence from food and drink. After the closest watching and the stricten care on the part of myself and the turnkeys of the priso to prevent the possibility of his clandestinely taking food hard Cavanagh has not tasted food or drink during th nine days he has teen an immate of the ganl. He re mains, notwithstanding the privations he has voluntarily endured, in a state of perfect bodily health, and I cannot detect the slightest alteration in his appearance or spirit He is extremely anzious to undergo any trial I may think fot to make of his powers of abstinence, without regard to son until such fair trial has been made."-Mr. Bullej that he has been imposed on by Cavanagh, and the he has discovered that he took every day small por-
tions of gruel which had been left in his cell, substi tuting for the quantity he consumed by adding some water or ather tluid. What he took, however, it seems his confinement hie was ohserved to have become of weak, and to falter in his gait as he waiked from the cell to the chapel. His pulse, which during the first days of tinued at about \(\tilde{i}\), was found to have fallen to fit, and to tinued at about in. Was found to have falien to fin, and to
have hecome exceedingly languid and weak. He looked haggard and worn, and a-ked anxiously when the medical gentleman would be satisfied with his poxers of abstain Ing. On the tenth day the appearance of his having taken the food which had been left in the cell was obvious; his pulse was at 80 . and scarcely perceptible at the wrists; his hands cold and clammy ; and in walking across the room he fell down and was unable to rise. He was taken back to his cell and supplied with a quantity of gruel and port wine, and some bread, of which be partoo that thouch Cavanash is certainly able to abstain from food for a limited period, the result probably of gradual food for a limited period, the result probably of gradual
habituation, there can be now no doubt of his being an impostor.
Sevenoaks. - An important investigation connected With the internal arrangement and management of the
Union Workhouse at Sevenoaks has taken place, in the progress of which some interesting facts have been deveoped. The examination of witnesses, which occupied sedays, and did not conclude until yesterday, extend moreat length; but the following is an abstract of the inquiry important facts which have been elicited during the modation provided for lying-in-tome men it apperel that there were two rooms only in the workhouse, and those of very small dimensions, appropriated for this pur pose. In each of these rooms were two small beds, and in each of these were at one time two women at the least, either expecting labour or recently delivered. It further appeared that the state in which they lay, and the treat ment which they received, was lighly objectionable, and by no means suited for persons in such a situation. The next subject of inquiry was, how the other inmates of the workhouse, especially the children, were lodged. It ap peared that there are two boys' rooms, attics ; the one rooms, 15 feet by 29 each. That in March there were 91 boys in one room and in the rirls \({ }^{3}\) room there were ap wards of 80 . There were \(1 / 6\) heds and a half in the boys' two ronms, and 18 beds and a half in the girls' two roome They lay 15 children in two beds, feet to feet, and 18 children in three beds: the remainder of the beds had four each. The ages of the children varied from 5 to years. In April the medical officer of the establishmen reported to the board dat were were then 8oboys in 10 beds, 75 girls in 16 beds, 57 mert in 31 beds, and 4 women in 20 beds; that of the boys, 88 lad enlargemen of the neck, and 42 had likewise goitren; that of the girl and infants, 91 had enlarged glands at the back of the neck, and 63 also goitres. It appeared that the utmost capacity of the worlhouse, upon the calculation of the Board of Guardians themselves. is to contain 300 persons and the number of children's beds lias never exceeden 35. In Dec. 18:38, there were 162 boys and girls in these 35 beds. In 1839 there were 325 , taking adults with chil dren, at one time in the workbouse. In March 1810 there were 298 inmates in one week: and in February the present year there were at one time 34 , persons, heing 4i above the estimated maxinum. On saturday las there were 815 inmates, an increase of 62 having take place within ten days, after the master had reported the Board of Guardians that the house was full ; the board still continuing, ander these circumstances, to en force the workhouse test. There are now seven boy sleeping in one bed, five in another, and 61 boys in beds distributed into fours and threes, each bed being fou feet six inches wide
Stafford-A few nights since, as Mr. Prince, an exten sive coal-merchant, of Tipton, in this county, was return ing bome, he was met near bis residence birmingham, with whom he had had some money transactions, who pre sented a pistol at him. Mr. Prince struck him on the arm, and the fistol fell upon the ground. Bridgewala then drew anctier pistol and fired it at Mr. Prince. wiob happily did not zake effect ; after which be mace been escape, and retumed to Birmingham. He has antil ex apprebended, and will be kept in confine has since utur dergone an the magistrates.-bridgeyistrates. The cas excited much interest in the town and throughout the dis-
trict, as the parties were both well known. From the evi-
dence it appeared that they had been very intimate friends for some time past, untul Bridgewater berame a bankrupt, Mr. Prince being his petitioning creditor. Bridgewater, in consequence of some circumstance connected mith bis himself aggrieved, and, in a state of great excitement brought on by distress, mate the attempt on int. Prince hife relate.

Southamptun. - The Artesian well in this forn whicl we have before referwed to, is fast progressing thwards
completion. The shaft is nors sunk to the death of \(5(11\) feet, being 40 feet in the chalk, and within bio feet of the estreme depth required by the contract. The briek steining was discontinued at the depth of 465 feet, as the chalk was found to be sufficiently firm and solid to be capable work therefore became unnecessary. Showld no unioreseen difficulty arise to retard the progress of the work, seen difficulty arise to retard the progress of the nork,
it is thought that the well will be complet atout Christmas.
Torrington.-On Fiday the 2lith ult, as the Lonilon
and Exeter mail, on the road from this rlace to Bideford, and Exeter mail. on the road from this place to Bideford,
was descendiug the hill ntar the inclined plane at the end of Lord Rolle's canal, and turning a sharp corner at the foot of the hill, it came in contact with a covered cart and so violent was the collision, that the mail upset, and the outside passengers were thrown against a wall ad-
joining the road. (One geitleman, named ('hurch, was sererely injured, and tahen up in an insensible state; another passenger, Lieut. H. Glynn, sen of Admiral
Glynn, receised a scvere fracture in the head, and other injuries about his body, and was also taken up in a senseless state. They were both conveyed to a neighbonring inn, where metical assistance was soon obtained. The other passengers excaped with only a few bruises. We
have been since informed that both the gentlemen are doing well, and are considered to be out of danger.
York,-Some sensation was created in this county, a Sew days since, by the report of the sudden death of the
Earl of Harewood. His lordshin had been out with his hounds at Bramham, and having ruin a for to earth, remained for some time while the process of unearthing was going on. Finding it, however, more tedions than he had the huntsman and whips, while tahing the loounds back to kennel, found his lordship's horse, grazing in a line,
wrthout his rider. At a few paces' distarce they disWithout his rider. At a few paces' distance they dis-
covered the noble Earl himself lying on his side quite covered the noble Earl himself lying on his side quite
dead. As there were no appearances of his having been thrown, the most probable conjecture is, that his lerdship feeling himself attacked by an internal complant, to Which he is known to have been subject, had dismounted and died from the rupture of a blood-lessel.
Railecays.-On Saturday the Gosport braneb of the London and South-Western Rallway was opened by a party of the 'rrectors, accoun panicul by the gorernn.ent
inspector, Sir C. Smoith. They examined the line at rarious stations, particularly the tunnel at Fareham, where they alighted and inspected the work minutely, and it is
stated that the result was satisfactery. They then proceeded through Goupnrt, over the floating-bridge, and through Portsmouth. returning to dinner at (iosport, r here a large party were assembled to commemorate the event. On Monday the line \(\begin{aligned} & \text { Was opened to the pullic. - An acci- } \\ & \text { dent happened on Monday on the Dorthern and Eastern }\end{aligned}\) dent happened on Monday on the Northern and Eastern
Railway, near Hoddeston, to a labourer. «ho uras knocked down by one of the carriages of a trais, and so sererely injured that he was immedsately conreyed to the The Northern and Eastern Railway is now opened to Spelbrooke. The last returns stake the number of passengers for \(4 d .-U n\) have been \(6,3,31\), and the total receipts 1878.17 s . on the Bristol and Exeter Railway, was hrokien open, and a large sum of noney stolen. It bas since been discosered bailding in two were made at the same time to fire the bailding in two places. No trace, howerer, has yet heen ward of \(20 \%\), bas been offered. -On Sunday night an accident occurred on the London and Brighton Railway. As the last train frem London was on iis way down, on arriving near the Hassocks-gate statiou the engineer obfrom the engine. He did all in his pawer to ot. p the train, but without effent, arid the man was knockcil cosen going to his assis'ance, it was found that the tender only passed over without touching him. He was, however, of his recovery. by the blow, but hopes are entertained the sharecortders - On Thursday a special meeting of way Company took place at the London Tavern, for the The chair was taken an additional 240,0002 . upon interest. some discursion it was moved that the sum of 240,000 or. the third-class carriages was on aceount of so many gentlemen getting into them who could atiford to travel by the thers. He admitted it acted prejudicially to the poore classes, but it was only an experinient.

\section*{IRELAND.}

Dulin.- Congratulatory addresses still continue to be In reply to one recently preotnted by the Sessions Grand Jury, after the usual form of answer, his Excelleney con-
cluded \(\pi\) ith these words:- "It has hwen said that Sir R. Peel will find Irelund the great diffewity of his Go:ern ment, but in this opiuion 1 do not conear ; and the gene ral expression of approval of the principle of his Govern meut, which I have already received here., convinces me that Ireland will be no difficulty at all." -The weeniy The Losd Mayor declared bis determmation to ofpose with all his power the desire nhiel, a larse portion of the corpration expressed, to intredue the principle of vote
by ballut in their procecdings. That, sall he, was but a by ballut in their procecdings. That, sal. he, was but a ballot than Members of Parliament had to vote in that form in the House of Commons. By nitans of the vote
by ballot the old corporation practised the most outrageous system of corruption and peculation that ever was committed by any public hody. and it would not be his fault if it mere introduced into the new corparation. After some further remarks, Mr. O'Cinnell observed that be as he hoped to have that body in good worhing order before his tear of nffice would be out. The moment he got it into that condition. he would resign, and put in nomination some other gentleman, who would enjoy equat public con fidence. After several communications bad been read and members admitted, the Lord Mayor proceeded at great length to call the attention of the Association to some paper upon his denunciation of the Regent of Spain, noticed in our last. Mr. O'Connell said, he desired again to repeat the strong language he had then ased with re spect to that usurper ; and if he had any apology to make o the public, it was for not using harsher ternas. if wer possible to find them. After diseussing at length the career and aets of Espartero, MP. O'Connell concluded by saying that he regardeathm as one of the worst eriemies
to civil and religious liberty existing ; that he stepped into mower by treachery, and sought Enghsh support by Ca dinlic rersecntion. He would, however, tell him, that in
Government permitted it and promoted the design, in Government permitted it and promoted the design, in tyrant, that a legion of 20, ,ino Irishmen would be raised within three months, who would go firth to drive lim from the power of per-ecuting
rent was announced at \(3 \because l .4 \mathrm{~s}\).
rork--It will perhaps be recollected, that during the last sess on of Parliament a bill mas introduced and read a second time, heving for ity object the construction, by means of private capital, of a railroad frem Dublin to the alarm, lest hy Linierick being the terminus of the proposed somthern railway, this dity shonld altogether lose its
position in the country, and dwindle domn to a town of third or fourth-rate importance. A meeting of the landed proprietors and me reantie interests of this city and count has accordingly been held for the purpose of preparing a memomial to the Logd fieutenant, whech was unanimously allopted. The memorialists complain that the construction of partial lines would tend rather to mare than serre employment, industry, and commerce of the country; and add that the report of the Railway Commissioners points ont this city as the place best suited for the estatlishment of an American preket stafion. and in consequence gives the preference, in a national point of view, Dublin line of railway; that the late Govervment conDablin line of railway; that the late Goverbment contemplated carrying out these suggestions, and directed
their attention at once to that line. The memorialists their attention at once to that line. The memorion Frither urge, that the contemplated extenuion of the Great of England, within eleven hours' sail of this port, would be the means of opening an extenaive intercourse between the sister country and the whole sonth of Irelind, provided this city be made the terminus of railway lines ; but that if it be permitted to private individuals to select what lines of railway they please, Cork will undoubtedly be excladed, because the shorter and chenper lines will be preferred, and thus the ondertaking, which, in a national point of view, would be of the first advantage, will be alpoint or view, woulde onlese Goveroment make such procogether throm asice. antese Gnveromen make such niro rinion as wi.l yruect the cuntru from solicitipg his Excellency to take the sabject into conside pleased to advise that in any arrangement to be made for the constraction of any one line, care be taken that nothing should be done to prevent the erecution of the comprehenoive plan recommended in the Railwny Renurt.
Limerick.- The bark Amanda, which sailed frota this port with emigrants bound for Canada in September, was rence. It appears that she met with a dense fog, which The fong bont that to the whin. during wizel she struct. the long-bont was iowerth, it ( xisy to the eagerneas of it perished. The erriain, four of the crew, and five passengers, who clung to the wreck, were the oniy persons sared. Most of the emigrants belonged to this city, which

Count or Quign's Rencr- -(Sittings after Term in Banco.)Hearne Y. Stowell. Clert, - This was an action or
alleged libel imputed to the plaintiff that he, as a Roman Catholic alleged libel imputed to the plaintiff that he, as a Roman catho
priest, had imposed a horribly severe and ridiculous penance priest had imposed a hornily severe anch. The case was tried
upon a poor man, a member of his church.
before Mr. Baron Rolfe at Liverpool, when a verdict was given
 arrest the judgment on this verdict, on the ground that the paper
ermplaind of dif not contain anythine which was in itself linetlowe as resarted plainta, lam anythne wan said that th Chary wachat yof ofmen that the rule fir arresting the july. ment in this case must be made absolute. In a very early period
of the dlscussion the Coart had felt much doubt whether there was any sufficient allegation on the face of the declaration of The only allegati,n of the sort related to something which mitht arfect the plaintiff in his character or a Roman cathore pir im-
and in his performance of the duties which that character
posed upon him. The supposed charge related to the imposition posed upon him. The supposed charge related to the imposition Roman Catholic church until that penance had been performed. Ruat were the duties properly belonging to the character of a
Riman Catholic puret was a nater of which this Court could mot take juncial hotice, and as to which the Court hat nut been was soljected an the part of the defendant, that the declaration tha in-nticient in thi- re-pect, that it chil nont allege what were way the plaminft had neglectedi or violated those duties. But then it was alleged on the part of the phantiff that this deficienc was cair-et by the evnemee which han teen athuced at the trial and which chowed that had the plaintiff acted in the way rep. his euperiors, and would lave lost his advancement in the Roman Catholic church. But it was properly cbserved that this evidence was in law inalmis-ible, inasmuch as the point to which it rethis defect was caused by the verdiet. But the same answer was arain ayplicable here; for if the evidence was inarmissible, supported. It was not suticient to allege a mere malicious intention on the part of the defendant, or to show that an injury words themselves must be show in a proper manner to be libeldens; injurinerwise the moot mocent words, beoring by acc Iibel, or worlls published with the most malicious intent, and deacri ing to ueur responsibility, might excape it, the malice being divappointed by the result. The Court thought that the rule for arrestang the juigment nust he madte ans
 action to rece yer compensation in damages for in jury done to a horse which plaintiff lent to defendant, a pablican at Woolwich. It appeared that defendant had returned plaintiff's horse with bis knees injured, and a smail cut in the fetiock. On the 1, th aug. maintirim gave nouce talue should bell the horse iss defend purposes, in consequence of the injuries he had recelved. The horse was sent to Dixon's-Repository, and ordered to be sold pursuant to the notice for \(8 .\), , but was afterwards exchanged by phaintiff frr a mare, plaintiff paying 42. with his own coh. The
value of the horse, and the expenses convequent on the inquiry, were estimated by plaintirf at \(21 /\). The defendant paid 50 damares Contradictory evidence was called to prove the value of the cob and the extent of the injury. The Jury found a verdict for plaintif-damages 5i., in addition to the si. paid into Court. BAarl Cowrt. - (Sittings at Nisi Prius, before Mr. Justice Patin this case was an attoruey, and the derendaut an ironmonger The action was brought to recover damages against defendant for having sold him a horse which tarned out to be unsound. On behalf of plaintiff witnesses were called, who proved that he
bought the horse in May 1840 for 25 . He then proceeded to ride bought the horse in May 1840 for \(25 \%\). He then proceeded to ride him to his residence at Hampstead; but upon going up Haver-
stock-hill, the horse made so much noise that it was evident he was a "roarer." Plaintiff, finding this, sold the horse to a Mr Yeuman tor is \(\%\), and this gentleman drove him down to Epsom race, and then he wa pronumaced to be a "roarer, piper, and
whitiler." There was no proof, howerer, of a warranty having been given with the horse. On the part of defendant it was conended, that atter plaintift hat purchaved the herse and taken him away, he had his w necessary bad a warranty been given, and that in point of fact
defendant had rcfused to warrant the horse sound. Thiese facts having been proved, the learned Judge summed up the case, and the Jury returned a verdict for defendant.
was tried for the murder of Timothy Easthead Job John War year and nine months, whom he was accused of having killed by inticting everal severe bluws on the head with a hammer. The circumstances of this case were given ill our Number of the 20th verdict of Guilty. Lord Denman, after an impressive address, passed sentence of death apon the prisoner. William Henry Mence, aged 27, who held a situation as mes senger in the Post-ofice, was indicted for stealing a general-post
letter, containing a penny-piece, the property of the PostmasterGeneral. It appeared from the evidence that a letter was put into a post-office receiving-house in Drury-lane on the evening the office was closed, and being, consequently, unable to pay the postage, placed the peuny intended for that parpose inside the letter, and having fastened it with a pin dropped it into the letteranx. On the following morning the letters were in due course
conveged to the General-ofice, where the prisoner was on duty.
 of having taken it, and was accordingly instantly seized by constable, when, after a severe struggle, the letter was force jury on behalf of the prisoner, called several witnesses, who gave jury on behaif of the prisoner, Called several witnesses, whogeve
 been convicted on the clearest evidence of a very infatious offence and one which called for the utmost severity of the law. The racters that persons were enabled to commit such offences: the better a man's character, the less likely was he to be suspected
Tieee ctitences, he rayretted to :ay, were ineomins more tre quent, and therefore it was imperative that the severest sent cuc allowed hy law should be passed. The sentence therefore was risoner fainted on hearing the sentence, and was ruriover from The traal of the two brothers Packard, surgeons, in Drury-lane the death of Michael Anngier, a sheriff's officer, while in charg yesterday. The facts of this case were so fully given in our Number of the 13th rit, and subsequently during the progresso
the police inquiry, that it is unnecessary to repeat them bere Several witresses were examined in conimmation of these facts,
and the jury returned a verdict of Gailty. The prisouers were

\section*{sATURDAY, DEC'EMBER 11,1841. \\  \\ }

If the Rose is the fairest of all flowers, the Double Yellow is the fairest of all Roses, in the opinion of many. Although we do not agree in this estimate of
the Double Yellow Rose, believing that much of its attraction consists in its rarity and the difficulty of making it flower, yet we have always regarded this very difficulty as something which gives the plant strong claims to the attention of all lovers of flowers: months ago begged our correspondents to favour us with the result of their experience upon its cultivation, We hoped by this means to arrive at some positive conclusion as to the circumstances which are most favourable to the blossoming of this universal favour ite; and although we have not, perhaps, succeeded so fully as we anticipated, yet, thanks to the intelligence of our correspondents, we have collected together considerable amount of valuable information, the substance of which we now proceed to place before our readers.
One of the most common statements is, that the Double Yellow Rose is impatient of low, confined, or moky situations. This. it may be presumed. is true for in all cases open situations, often exposed to violent winds, are spoken of, and we have not a single lette from towns or cities.
In what aspect it most flourishes may perhaps be gatherel from this, that in ten cases success is connected with an east aspect, in eight with a north, in seven with a west, in six with full exposure all round,
and in only one case is the south spoken of: this, however, is by W. Leveson Gower, Esq., whose Roses, at Titsey, near Godstone, are well known for their beauty; and this gentleman finds them do better there than on a north or west wall. (On the other hand some writers assert that a south wall should never be chosen. It is, however, to be observer that many cases of success are connecterl with a south west aspect and Mr. Hivers, in his Rose Catalogue, states that he has this year seen it blooming freely in Suffolk, in northern, eastern, and southern aspects.
Nothing can be more conflicting than the evidence hout soil. The majority of cases of success occur in light land, gravelly, sandy, loamy, and even marly; and Mr. Rivers speaks of the sandy and gravelly disaricts of Norfolk and Suffolk as being generally favourable to the blossoming. But, on the other hand, we have sorne instances of suecess in the stiffest land Mr. Bowers. of Laiebam, grew it in Northamptonshire in cold clay, 20 inches deep; an anonymous correspondent asserts that he has had it in the greatest perfection in the blue clay of Essex, ant that he has never known it to fail when it was put into clay in a north aspect; and another writer testifies to success in strong wet, undrained clay in the same county. We confess, however, that upon carefully examining the statements last adrerted to, they do not appear to be so satisfactory as the others. and that the flowering in heavy land seems to be rather of occasional than general occurrence. Upon attempting to colinect the soil with particular aspects, as, for example, stiff land with the east or west, and light land with the north, Te have met with no success.
Manure appears to be always necessary. Mrs Lawrence mentions a case in Buckinghamshire, at sucker, against an east wall almost entirely shaded from the south; the soil was a rich loam. and her father (who was a great sportsman) buried a fox at the routs of it when about three years old; an old woman, who worked in the garden. used to dash large basins of soap-suds against it during the months of A pril and March, two or three times Week." Mr. Rivers mentions the advantage of wa before th.wering with liquid manure a week of two and even peat, are named very generally as substances employed to enrich the soil.
In regard to pruning there seems to be no agreement whatcver: in some places success is attended With cluse pruning and laying in the shouts like those seieral stateree; others say, prume not at all; and possible state that if they do prune, it is in the smailest possible degree, and only for the sake of thinning the of Farnham, near Cavan; of Mr. Cowie, gardener to S. Forster, Esq, of Southend, near Sydenham, and The ry others.
The only conclusion we can draw fromin all this, is
that it is climate much more than anything else that determines the blooming of the Double Yellow Rose ; an opinion which is strengthened by several considerations. It is evident that it is neither aspect. nor soil, nor pruning. to which we must look for success ; upon all these points the evidence is more or less conflicting. It is also plain that the circumstance concerning which there is least dispute, is the necessity for the situation being expoed, and neither chose nor low. We also remark that none of our letters are from places more to the north than Cheshire, with the solitary exception of Biel, in East Luthian, where, in a warm dry soil, inclined to be gravelly, against the
parapet of an old fashioned terraced garden, the rose is represented as being healthy, but not vigorous. Ireland and the southern counties of England have produced the principal part of nur correspondence. A hedge of bushes is statel to flower near Arundel every year in the market of Boulogne you may always purchase in the seasen, large bunches of the flowers for a few pence; and, finally, in Italy these Roses appear in far greater profusion than elsewhere. In this opinion we find the most intelligent of our correspondents agreeing with us. A case named by a clergyman in Wilt shire illustrates this: he says," "In my own parish, situate on the verge of Salisbury Plain, there are two Double Yellow Roses, which proluce a profusion of blossoms annually : one is trained acainst a cottage in the sreer a suge to no peculitern aspect; soil -sandy loam : subject to no peculiar treatment; the village in a valley. The other is against a wall, in an open high situation : eastern aspect, sheltered from the north ; the soil rather stiff upon cha.k; it has no care taken of it in the way of manure. But though the bloom on each plant is abundant every year, the one on the hill is more subject to burst when opening than the other."
Another correspondent, whose interesting commu nications under the signature of " S ." have doubt less beeh remarked on other occasions, has sent us the following remarks, which express our ideas much better than any language of our own.

The gardens in which the finest and most perfect Tellow Roses are produced, are those of the villas on the hills around Florence; while in the gardens in the tow the flowers of this Rose are not more certain or more per fect than in England. The reason appears to depend on the following circumstances :-The valley of the Arno, which Florence lies, is a deep trough, bounded on eithe
hand by continuous ranges of lofty lills, of sather abrup ascent and of a dry ond or part of the valley is subject, at most seasons, to be loaded with a perceptible and heavy mist in the mornings and evenings, which envelops the town and rises to a considerable height on the sides of the hills, where it suddenly ceases, being bounded by a strongly-defined line above which the atmosphere is perfectly clear. The height of this mass of vapour, locally termed "Ia nebbia," may vary, the temperature and other circamstances may vary but the most important point in represented by the Flo rentines to be constant, aud that is, that the gardens, placed at such a height above the Arno as to be generaly free dance hile those helow its influence do not. The writer has seen bushes covered with Double Yellow Roses on the bills, every flower perfect, while in the town they wer neither worse nor better than in tue gardens of England. This seems to point to damp and heavy air as the probable cause of the imperfection of these flowers, which not on bud in a hundred has sufficient strength of vegetation to overcome in its development.

This species, Rosa sulphurea, is said to be a native o Persia, where the single varietr, not yet in European gar dens, is reported to exist. The climate of Persia is, per haps, the driest in the world, not absolutely desert. Ye he plant lives, though. as we see, not in a state of perfec tion, mo the north of Germany.

It would the an interesting experiment were some on iving in the valley of the Sesern or Aven, at Malsern or chan, or any parts to affurd hilis rismg above the usual mists of their refpective rivers. to try a few plants should those un the the bigh ground ace mand any better Roses than those on the low, we sball bave advance a step in ear bnowleige of the cause.
" It must be understuod that aivsolute or selative height does not affect the case ; the pont is. to be aoore or herow the rapol:. The general dumpress of cur soll and eh mate, the different tenperature, and other calses. will mak or Persid, but st:! something maş be learn.d wi.ere any h:ag is tred.
That the Double Yellow Rose is of Eastern origin is certain: and that it is Persian is proballe, for sir Henry Willock found. in that country, it, or a variet of it, which is now growing in the Garden of the Hor ticultural Society. The first notice we bad of it in Europe is thus stated by Clusius, who eventually introduced it to Austria, through a lady residing in that country

I also learn," he says, "that there are such things as Yellow Roses with many rows of petals for
lately a noble lady has written to me from Vienna lately a moble lady has written to me from Vienna
that she and others expect to receive some. Iremem.
ber, indeed, to have seen somewhere little paper gardens, brought from Constantinople. which were adorned with many kinds of plants. These were admirable for the skill with which they were cut, and for each plant being painted in ite natural colours, wo that they excited the delight of the beholders. Ainong these plants were Double Yellow Roses, and many other rare and beautiful plants." It was imported into England direct from Constantinople, having, as was reported, been brought thither out of Syria. No doubt, therefore, can exist of its being a native of a country hot and dry during summer, but cold like England in winter. Phillips. indeed, the author of the "Sylva Florifers," ignoranuly supposes it was brought by the Turks from Calicut, in Malabar, because one Ludovico Berthems tells us he saw great quantities of Yellow Ruses there; but it is not necessary seriously to refute this absurdity. There is no doubt that the plant is. as we have already stated, from some Eastern country, cold in winter, and hot and dry in summer. If so, it must be obious that low situations. where the soil is cold, cannot be well suited to it; and that if it succeeds in low valleys, it will only be where the soil is light and warm.

ON THE SEASON FOR TRANSPLANTING.
A oreat diversity of opinions appears to exist amongat gardeners as to which is the best cime of year for transgrepns at particular seasons have already appeared in the Chroniele, and if others of your correspondents entertaining opposite opinions as to the best time of year for transplanting dectuncus trees and shrubs, as well as Evergreens, could be induced to send jon a statement of the facts and principles on thict their cpinions are founded, much good might be the result, as it would tend to remore the prejudices or hasty conclusions of some, by showing more clearly the causes on which suecess or failure depends at different seasons, and it might stimulate others to make further inquiries and more eecurate observations. Under tio impression, and as ay experience and taeoretical netions do not exactly agree with the chapter on Trasspiantdeciduous trees and shrubs, I venture to lay before you my reasons for dissent. The season which is cunsidered in the "Theory of Horticulture" as the most favourable for transplanting, is during the months of November and December, pelween for the the an the earliest part of spriag, abd chichars Because the roots of a plent are necesorily wore lew support the ptem than they were before the mutilation support the stem than they were before the wawest demand upun them, owing to the perspiration of the folliage, the roots are most essmisil ; but in water. When the leaves have fallen, they are complaratively unimportant, as is evident from a very commor case. Let a limb of a tree be fellied in full leaf in June, its foliage with presently wither, the bark will dry up, and the whole will speedily perish; but \(f\) a a similar limb be lopped vember, when its foliage has naturally fallem off, it will exhibit no signs of death during winter, nor till the return of spring, when its efforts to recover by the emiasion on leaves only accelerates its end, and thess two proprsitions theory of transplantation.
If the trees to be transplanted had to be carried a considerable distance, or were likely through any cause to remain outplanted several days, then 1 base no doubt that a greater number of plants would be found satisfactory if they were transplanted in woulder, when the leares had fallen, than if they were transplanted at any other had from year of a parden to mother, or from a norsery
 within a day s journey, as will general. I think, I bave good reasons for conclad Horticulture" viding the precautigns in the Theory or horticalur respecting the preservation of the roats an sele of a suitable day he attended to, those plants will be found to succeed the merst periechy w...h are thans phanted early in autumn soon after the leaves begin to fall, but rinle a constderable quantity yet remann in a mature and efficient state. Tlefe is cridently a whe it is tul beatifeed in autume In the former case threre would be so many alrerse causes In che enten os th, that a cress would he wers doubttal . there
 a comparatively dry atmorplieve, wuih uary ened wo d,
 hie latior cave the rbjections on the suore ot star and at-
 mus be a \(c\) rrespowiry dantuat on ia the -urpiy of sap
 will nut, it is reasomb - to concide, te fe:: t: minjurious estent by the glant, and hy tue setich of the mature sustained will be speedly reparra, new roots will be immediately produced, and the plant will then become estan blished before winter, and be prepared to grow with neariy, if not quite, its usual righ ur in the following spring. their existence at least, and all other parts of a plant, are composed of, and supported by, matter which has been
previously elaborated and prepared by mature leaves. Every plant then contains within itself, during winter or
its season of rest, a fund of eiaborated sap, by which its its season of rest, a fund of eiaborated sap, by which it first-enitted leaves, \&cc. are supported. It is not, how-
ever, stored up in a fluid, but in an inspissated or concrete state, and before it can be made arailable for the support of leaves, \&cc. it must be dissolved by aqueous sap, abin spring ; and whatever cause contributes to increase or diminish the quantity of aqueous sap absorbed by the roots at this period, increases or diminishes the vigour of the plant; for in proportion to the quantity of sap thus
prepared which a plant contains previously to the r-newal prepared which a plant contains previously to the r-newal the size and vigour of the first-emitted leaves and shoots. The roots of plants, then, are obviously of great importance to them during winter as well as summer, and that season must, therefore, I think, be the best for transplant ing, which, with little risk of loss or injury from atmo spheric intluences, insures the speediest renoration of the ronts.
In my earliest gardening days I had been led to pay particular attention to the culture of the Gooseberry by read any work on Vegetable Physiology, so that my read any work on legetable Physiology, so that my had arrived at the conclusions that if I transplanted a tree soon after the leaves began to fall, I should have a vigor ous growth of wood and a good crop of fruit in the follow ing year: if I transplanted in winter, when the leaves
had fallen, I should have a feeble growth of wood, and a comparatively puny crop of fruit; and if I transplanted in spring, when the buds were about to burst into leaf, should have a vigorous growth of wood, but little or no fruit. And from my subsequent experience, which has not, however, been very extensive, and confined, moreover, to the A pple, Pear, Gooseberry, and such-like garden trees and shrubs, I have had no reasons for differing from the abore conclusions. I will mention one remarkable intance of the perfect success of transplanting at the time recommend. Several trees of the Lancashire Prize Gooseberries were presented to me, but being then young, and a novice in gardening, I planted my trees too near each other, and one of these, a vigorous plant of the White Eagle variety, I was obliged to remove, owing to its branches interfering with the trees on each side of it; this I transplanted soon after the leares commenced fallingthe remaining leaves flagged for a day or so, but then soon recovered, and the plant continued to grow till late in autumn. In the summer following I obtained a prize Society for the second-best plate of twenty white Gooseberries, which were solely the produce of this tree, and berries, which were solely the produce of this tree, and
they were not only the largest of that variety there, but they were not only the largest of that variety there, but
they were larger than any other white variety exhibited at that show ; but to this and another plate of very large red ones second prizes were awarded, while to two other plates much smaller, and smaller also than others of my taken into consideration, as well as size, by the judge at that time.
It will hardly, Tthink, be believed, but it is certainly true, that I never either before or since had twenty Gooseberries from that tree equal in size to those which it produced in the summer next after the antuma in which it was transold ; and it must be very evident, I think, that it had entirely recovered from the effects of transplanting before winter. Now if this tree had been transplanted after the leaves bad fallen, I do think it would have been almost impossible, however much care had been taken in the ope ration, to have lad so vigorous a growth of wood and so fine a crop of fruit in the following summer. There would doubtless have been little or no difference in the amount of true or elaborated sap which the tree would contain during winter, whether it was transplanted before or after the leaves had fallen, or if it had not been transplanted at all. The whole difference in the vigour of the tree in the following spring, under these different circamstances would be entirely owing to the comparative activity or efficient state of the roots before the leares unfolded in the spring.-John Tounley.

\section*{(To be continued}

ENTOMOLOGY.-No. XXI
The Winier Moth, Phalena (Hybernia*) brumata in every gardien, hedge, and plantation, but from their sombre colouring, and the little temptation this cheeriess season offers to be out in the evening, there are few persons who have noticed them. The males begin to flutter about soon after sunset, and
continue their excursions long after it is dark, resting during the day with their wings closed in the form of triangle ; fig. 3); but when walking or alighting at night, they carry them erect like a butterff. The females are tluggish animals, having only rudimentary wings (fig. 4.), but can run very fast when they are exposed to heat o anything that annoys them, and either speedily get into the shade, or fall down and feign death. In repose both sexes turn back their anteanæ close to their sides.
The malea have ampie silky wiags, which are extremely delicate : the superior, expanding to \(1 \frac{1}{2} \mathrm{inch}\), are of an ash colour, with various wavy transverse lines more or
less distiuct, and forming a delicate fascia; the inferior less distiact, and forming a delicate fascia; the inferior
are narrow, oval, and of a greyish-white colour, sometimes with a denticulated line across the middle. The antenna are hairy onity in the males. The females are so nulike their partners that nutining but the most satisfactory eqi dence would lead one to believe that they were of the
same species: this sex is not a quarter of an inch long the length of the body, often baving a black fascia across them. The abdomen is stoatish, ovate-conic, brown on the back, with a donble line of black spots down the cen

The legs are spotted with black
The males first make their appearance at the end o October, and the females about a week later; but they are sometimes found untiber, upon the trunks of trees paling \&ce. After pairing, the females ascend to the top of the trees, and deposit their eggs on the frait and leat buds, likewise upon the twigs, and even upon the few leaves which may still be adhering to the branches ; these eggs are minute, oval, and green at first, but soon change will often lay 200 and upwards.

Unaffected by the storms and frosts of winter, thes eggs rest uninjured, antil the genial warmth of spring calls forth the little caterpillars, which are then not thicker than horse-hairs, and of a grey tint ; but as they cast their skins, they change their appearance, and finally are shining yellowish-green, with a blue line down the back and two yellowish-white lines on each side; these are a little wavy, and between them is another broken line of dots of the same colour. They have a very few short hairs scattered over them, and the head is never darker than the back ; they vary, however, greatly in colour, are about half an inch long when full-grown, with six pectoral, two abdominal, and two anal feet, and are perfect loopers (fig. :)
Köllar says, the most injurious insect to fruit-trees i Germany is undoubtedly the green-looper caterpillar, which is produced by the Winter-moth; and last spring they proved very destructive in some orchards in this week in My notice was first attracted by them the first the extremity of the shoots, drawn together by a few threads; they had eaten out some of the expanding leaves, and consumed so much of the outer ones that portions were completely separated and only hung by the threads: others were eating out the germen and anthers of the unex panded buds (fig. 1). I also detected them amongst Limetree leaves, which they matted together or folded up; at the same time the Hornbeans were greatly disfigured by them, the smaller leaves being drawn together, and the larger ones eaten full of holes. About the middle of the same month the Apple-shoots in Suffolle were destroyed by the same kind of caterpillars; but many of these had a slatecoloured stripe down the back: and near Exeter they made great havoe in the orchards. Towards the end of May I observed the Elm-trees very much defoliated by them and a variety of other larva. The hedges now exhibited a blighted appearance, for the terminal and scattered leaves on the new shoots of the Hawthorns were withered and quite brown from their attacks. At this period they also became abundant on Rose-trees; and Ifound a few feeding upon the Hazel and broad-leaved Willow. Shorty after this they deserted the trees and were seen descending by a thread to the ground, in order to bury themselves two or three inches beneath the surface, where they changed to puper.
Nature seems to have limited the action of the females by depriving them of the organs of flight, and has thus assisted man in checking the mischievous operations of this widely-spread enemy (which spares few of the deciduous trees, either in the orchard or plantation); for the females being incapable of flight, they may be prevented from depositing their eggs upon our fruit-trees, when they stand clear of walls and bushes, by a simple method which will either destroy or drive them to other stations of less consequence; and this is a most important precaution, as it is utteriy impossible to get rid of them after the larva are quartered upon a tree, althougb burning straw under the branches may afford some relief. The plan alluded to is, on the first appearance of the male moths, to fasten a broad strip of brown paper or leather round the trunk of each tree, and then paint it over with thick linseed-oil, bird-lime, or tar; this must, however, be repeated every two or three days, by which means incredible numbers of the females will be entangled in the viscid coating of the band in their endeavours to ascend the trunk. Much benefit will also be derived by hoeing or digging round the base of the trees, and then ramming the earth well down, which will destroy the pupæ; but this operation should be performed in July, August, and September. And let us not forget the services of Tomtits, Starlings, \&c. which collect the caterpillars to feed their young at an earlier season of the year; for without such assistance our fairest prospects would often be blighted, notwithstanding our most active exertions to check the ravages of the insect world.-Ruricola.

\section*{BRITISH OAKS.}

In the very beginning of our Paper we endeavoured to call attention to the importance of our wild sessile-fruited, compe we then called it, Red Oak. Other matters have

Mr. Billington
I well recollect, when I was superintending the plant ing of the Forest of Dean, the Q. sessiliflora was designated " knot-acorn Oak," from the acorns growing in clusters or knots close to the stalk, without petioles, and as being could tell, as soon as they applied their axe to it, wheth it was the knot-acorn Oak or not, as it was by far the the opinion of practical men confirming then yuu have ccustomed to observe While their encomiums of its superiority and my own feelinga on the importance of the subject, that I could recognise the trees, if of a large size, at a considerable distance, from Q. sessiliflora are remarkably different from the other the leaves have a darker hue and more glossy appearance with more numerous branches, subdivided into a greate number of smaller ones, tangled as it were in all directions the main ones diverging from the stem in a more horiznntal
direction; whereas the branches of the other species, \(Q\) pedirection; Whereas the branches of the other species, Q. pe-
dunculata, diverge with more acute angles in a more uprizht position, and do not produce so many small lateral branches nor such close heads.
banks of the river Derwent, in the timber groming on the
 Chopwell woods, belonging to Her Majesty, of which I hrad the charge, is, I think, of this species, and is noted br the wood-mongers (dealers in timber) for its toughness, hardness, and superior quality

COTTAGE GARDENS.-No. XLVII
Before concluding our remarks on the treatment of fruit-trees, we would particularly direct the cottager's atof great utility and importance. Wee mean the occasional root-pruning of such as are of a luxuriant habit, so as to check their growth, and thereby induce them to become fruitful. The practice is a very old one, and is generally known to professional men; although it is only of late years that its usefulness has been exemplified to the pah lic, and the operation made to form part of a system of management which is admirably suited for gardens of limited extent, and which our experience enables us to re commend as the only one by which fruit-trees can be adRivers, of Sawbridged ath tept given some excellent prac tical details on the subject in a paper he communicated to the Horticultural Society in April 1840, and of which short extract will be found at page 39 of the Gardeners' Chronicle. The mode of operating may be thus described Supposing a young tree to be planted this season, it ma remain for two or three years, perhaps, before root-prun ing will be necessary. This, however, will entirely depend produce strong and vigorous shoots the second seam after planting, the operation may even then be performed In November, or at this time, when the ground is bein dug for winter, take out a trench all round the tree 1 inches deep, and the same distance from the stem ; then with a knife, or a sharp spade, cut every root that is sible, and afterwards direct the spade underneath the hay tak to intercept and cut the maia foots two years again taken a perpendicular direction. Also when it begins to acquire its former lusuriant habit, repeat the operation in the same way as before, butat such a distance from the stem, say two feet, as not to injure the fibrous roots that have grown since the former cutting. In all se to
prunings this will be found a proper distance to prunings this will be found a proper distance cor thin these and for the purpose of contining the roots left round the
limits, a slight depression in the soil is to be let tree, as Mr. Rivers recommends; and this circular furrow is to be filled with liquid manure, or common dun may be laid round each tree in the autum, adoption of this washed in by the rains of early fruitfulness, and in a great measure will obviate the necessity of much branchpruning being required; but on old trees, or in expused situations, the operation must be done with caution. have tested its efficacy on most of our hardy fruits siner
 ago ; and, unless on the Cherry, we are enabled to conr. M.E. \(\boldsymbol{H}\).

HOME CORRESPONDENCE
Run Flowers - As the observations which nade on the causes of foulness of colour in the Carnation were the sively allow them to be nibbled and frittered amdy. nowes correspondent Mr. Dickson, in the first instance, nake his own difficulties; he amuses himseif with buidise fins a man of straw that he may have the pleasde orror that hie may have the gratification of proving it to be one : thus he starts the position that an over-nutrinious of flowers, mental to the proper admisture of the colous satisfuati:y to himself, at least; but in what part of my essay hare recommended over-nutritious solls An over-nutritiou: soil is but another term for an unsuitable, and thereture deleterious one; the ill effects of which whin. in foliage, or plants, soon be developed Were a Cape Heatia to se plat ted in manure, its certain death could not bs attrijusei. I
can assure your correspondent that he has still much to
learn on the subject of soils and manures. Fresh frame manure, such as described by him, so far from being an orer-nutritious soil for the Carnation or Tulip, is nothing less than a poisonous compound; hence, instead of the
flushing of the Holmes's King Tulip, in his experiment, being dependent on over-nutrition, it was really caused by the crude, unsuitable, and deleterious stuff absorbed from the manure. I beg he will ponder well this explanation; o-called over-nutritious soils, as a canse of foulness of colour. The proper juices of the Tulip, I repeat, were polsoned and deteriorated, not over-nourished. So unposed manure, on the Ranunculus, that if it be mixed in serviceable to the cultivator of this beautiful flower, as being one common cause of its failure. I maintain the fact that manure is not really a nutritious soil for the Carnation or Tulip, until it is two or three years old-that dients has taken place; and so far from its being in "a exhausted condition" at three or four years old, and rery near approach to a por
will, for an almost indefinite number of years, preserve its nutritious qualities, if kept in a dry and sheltered situarespondent's strictures, since he is so very unsparing eve on what he has himself advanced. Thus in his first communication he said, that as sure as an over-poor soil over-nutritious one produce a greater quantity;" and in the last one he observes, that "an over-rich manure would cause constant florists' flowers to flush their colour: yet he afterwards declares in the same letter,
"that there will be as many run flowers as there have been for gears past, and will so continue, till it be traced to causes independent of the soil." Again, "that it is
his expressed opinion that the cause of foulness of colour is not dependent on the soil." Utrum horum magis accipe. I bave cited, however, another grand cause of foulness of colour, viz., atmospherical influence, ungenial
seasons, dc. and have explained their mode of action; but these, your correspondent says, hare also nothing to do with it. 1 pointedly appeal, however, to the experience they have not observed that in certain years, or seasons, an unusually large portion of their flowers have been Alshed or full of colour, viz., in cold, gloomy, wet, and
angenial ones; while in certain other years, in bright, sonny, warm ones, they have been as clean and fine. He
thus involves himself in the monstrous conclusion, that notwithstanding the fact that plants receive the whole of their nourlshment from the soil and the atmosphere, and the colours of flowers are formed, yet neither the one nor aovwal all reasoning must be vain and I shall, therefore, at once forbear further comment on other of his assertions, which are as amusingly gratuitous and untenable. In my estay on this subject, as I came to no conclusions without mowilling to admit of their denial, without proof. In finally leaving the subject, I beg most seriously to warn your readers, as they value the continued health of their
plants, against using any stimulating stuff in the Carnation compost. Notwithstanding Mr. Dickson's denial, maintain that mellow sods from a rich old pasture, replete as they are with the decaying fibrous roots of the grass, to old, is really a most invigorating and nutritious soil. The stimulating and highly-esciting compost may cause, for one season, luxuriant growth; yet it may be depended apon as a fact, that the next year, or year following, the phants will suffer and die; as the pampered gourmand be-
comes gouty and diseased. In reply to the observations of Mr. Chadwick of Leeds, in a former Number of the Chronicle, I beg to explain, that it is when a Bizarre Car.
nation ru ns into the dark chocolate and white, that it will not, I believe, return to its tricoloured state. I am unable \(t o\) give a reason why these colours should remain permanent, but such is the fact according to my own observagrowers who noticed the circumstance at my request. Trom rose and white, and from rose and chocolate, \&c. its reture is somelimes seen, especially in some sorts, as M.D., Hull, Nov. 29, 1841.

Evergreens.-Your correspondents have of hate treated you with a vast number of remarks on the sabject of transplanting Evergreens. Some have recommended
spring, some autuma, some midsummer, as the most safe and Froper seasons for so dong. Now, I think I may tionare, from long experience, to add my humble suggesat all seasons of the year; care only being taken to give seld food, good rici food, at the time. In spring they will any; in winter much water; in antumn scarcely, if ever, When, how, or wheresoever planted, an old practitioner (and such 1 am) will take good care to deposit them in new, and rich, and weil-manured ground, and he will be greens, nure success. I have myself transplanted everthonsands af the Hollies, Portugal Laureis, and many Heyear, and have scarcely ever lost any. The largest Holties, 12,15 , and 20 feet high, I ever moved, were planted on the lat of July, now about six years ago. thete of it buyly not diestivg bolus for them, bat placing
them on the bank, composed of new and very rich earth; staked them firmly, and of course supplied them for some days with abundance of rain water. Not one of them from that time to this has appeared the least sensible of removal. I wish all your evergreen correspondents could see them now.-C.A.F. A., E.H., Nor. \(30,13 \not 11\)
Edgings for Shady Walks.-I differ from your two correspondents; the one who recommends Oxalis acetosella, and the other Vinea minor, for edgings, for I think that if either of them were to plant Omphalodes verna, they would find it much superior to either. It remains and in the early spring the green foliage cannot be surpassed. Its beautiful little blue blossoms are also among the first harbingers of spring:
it forms a dense carpet, and is easily kept neat. We bare grown it here for years in shady situations, where it has been the admiration of every observer.-Philip Frost, Dropmore
Lily of the Valley. - In p. 881 a correspondent recommended this delightfully fragrant little plant to be grown ent situations, and in rarious parts of the woods, in which we are constantly planting it as opportunities offer; but a border. I have shown many people the plants when in bloom, who also agree they never saw any so fine. The only treatment it gets is to keep it free from weeds, and erery winter to add three or four inches of hal-rotten
leaves from trees. This, I think, is one cause of giving the plants strength: but I find they bloom most abun dantly, and much more freely than plants in the sun. have seen scapes a foot high or more.-Philip Frost,
Ice Stack.-The following method of preserving ice was adopted by the late Mr ade seen in Italy. The spot chosen for the ice-stack was the head of a pool, quite exposed; the ground sloped towards the pool and was some feet above it. A circle of about eight yards wide was marked out and surrounded by a shallow trench, from which several shits were cait upon the turf, broken and beaten, and formed into a stack about ten feet high, and forming a cone. It was covered with fag gots, then with stubble, both at top and on all the sides. Posts were then driven into the ground all round the ice, about four feet high, and a regular roof erected upon them the stubble and faggots lay between the ice and the roo and sides, and the roof was thoroughly thatched, the with stubble, and a door left to get out the ice; but were employed for two days to make the stack. There wa ice remaining the following Christmas. The stubole might be worth \(2 l\). The thatched roof and the post stubble might have served a second year
Mr. Forsyth's Mode of Heating.-On opening the Gar dener's Magazine for October last, my attention was structures, by Alexander Forsyth;" the object of which is stated to be the generation of "bottom heat and to heat, moist or dry, without pipes or flues, dung, ho water, or steam, or any other fermenting material, by the agency of fire only, in its cheapest and simplest form. Desirous of ascertaining how this was effected bo economical a method, I was naturally induced to read the article through. I find the description of the structur onthout aid a sect binning with the foun datiolain it as closely is to be first made to the depth four feet or thereabouts, with sloping sides, the wider and length varying of course according to circumstances; im the centre of this excavation, on the ground, is a heart for burning "weeds, turves, roots, coals, cinders, immediately above the hearth "is the radiator of old iron hoops plaited like a sieve, for the obvious purpose of persing and regulating a number of several wooden suspended from one of a numet above the ground line sleepers (which are about twi, at the back, and one in front:, and which suph layers of turf and sand are to be successively placed. The walls, to save expense, are to be made of turves, with lights resting on them ; at the back, between the ground we and the wooden sleepers, is "a drain for the smoke, regulated its draught by a stone on the top of the can chimney. Those that wish for further information, " are referred to the nearest malt-kiln or corn-kiln. I pass over the numerons advantages which ith with referring you to th this methol, con these points. but I cannot so easily pape the PS... The soot that may impregnate the superincumbent soil will act as a manure if properts ma naperin. no mor inded any other creature that breathes the breath of iffe choose it for an abode or even endure its atmosphere for a night. No more tullk of Melon planfer running all to leaf, and not fraiting by getting down in the duag of the bed below: the land-mank is net; that far and no far ther dare root of Melon or foot of woodionse come, ac. I give the writer full credit for being truly impressed with the practicability of his plans, although 1 thiuk it is sufficiently apparent that he has allowed his imagination to get the betrer of his judgment. That he has not reduced his theories to practice will strike any one who reads the foregoing extracta. I cannot coneeive how the fuel in to be phoed upon the bearth withoat disturbing the wall of turven. I will exppose that there is some contrivance
for admitting sufficient air to keep the fire alight, although no mention is made of any such thing; it may he, that al omitted particulars are made up by the reference to the
brick-kiln. That woodlice will never enter such a cham-brick-kiln. That woedlice will never enter such a cham
ber of smoke is very probable, but will the plants endure their abode any more than the woodlice: The unfurtunate Melon plants. if they survire the smoke, and send forth their roots down wards in an almost dried cnntact with the flame, will certainly experience a check sufficient to prevent their running too fant to leaf. I am sorry that our attention, b beginners being nipped in the bud by so untoward a method; and leaving Mr. Forsyth in the undisturbed possession of "the honour of being the first in England tha ver raised the heat for a hot-bed used in horticulture right over an open fire."-A Florist.- [ We were aware
of the existence of this paper in the Gardencr's Magazine: but we confess that in our simplicity we touk it for a hoax. However, if such a mode of heating has ever been practised, we shall be happes to publish an account o must, however, decline filling our columns with speculations upon the subject.]
Gardeners' Prizes. - Seeiog in a late Number of the Chronicle a request that some of your correspondents would furnish lists of books adapted for cottagers' prizes am induced to offer some remarks on the subject of horticultural prizes in general, as I think that prizes of generally given. It may seem presumptuous in a journey man gion opposed to the aimos universal practice of societies; but at least I am intluence by no interested motive, for though the "flatterer, Hope, sometimes tells me that the time may possibly come when even I may be in a situation to compete for sume of thes
 dim vista of future years. It is the practice of most of the provincial societies to give prizes of money o prizes (as testimonials of merit) must always bear the highest value of any, has thought proper to give medals low although there are few gardeners to whom a sum of money is not at all times acceptable, yet I think as a prize it fails in its object; it is soon spent, and then what re-
maing to show? Medals and pieces of plate are both better than money, and I think plate the better of the two inasmuch as it may be shown with less appearance of ration tan mecam consist of such articles as might be not only an incentive to fresh exertions, but also an assistance to the attainment of future success? Sueh prizes mizht easily be found. To
mention a few out of the many which readily suzgest them-selves-a pair of glohes or "Loudon's Arboretum" might be substituted for some of the higher prizes; then might follow "Loudon's Encyclopedias," "Murray's Encyclopredia of Geography, The Theory of Horti ulture, "Botanical Pocket Dictionary, mathematical instru
mente, messuring lines, \&c. \&cc, down to the very lowest Many of these are helpa which are almost necessary to th gardener who would rise to eminence in his profession, While at the same time they are out of the powerery gained would render the futore progress easier, and might tend to render unnecessary guch remarks as those some What satirical ones of your correspondent "P. P., page money, as generally given, to books would be equally great. The benefit of a small sum of money, such as cot tagers' prizes generally consist of, is at best but very tren sient; and smell sums coming in that way as windfalls are
sometimes speat at the nearest public-house: in which case they may be not only of little benefit, but a positiv injury. The man who has gained a book as a reward for his industry and skill would not be satisfied without reading be acquired for some bigher gratification than the pipe, which now, with too many of our roral popalation, forme almost the sole resource for whiling away the long evening of winter. I fear the race of men and women who can neither read nor write will by no means be extioct with the present generation of old people. With the means of instruction placed within the reach of every one, the aum of reading, and consequently with the chief arenues knowledge closed to them, would be quite incredible, not daily observation abundaintly felt by the cenemait value of eduction is not sumicientyise country. Its value, of the agricaltural population of this in countiy. indeed, in general terma, wake any sacrifice to secure ir very few will consent to make any sacrencol to work in the fields, or go with the team, beture they have acquired taste for reading ; the book is, in consequence, laid aside, and what little has been learned is soon forgotien. a judic:ous distribution of prize bouhs, buiticuitural su cieties should be the meanis of remenyiog this state of for intellectual enjoyments, and of awakening (especially in the young a spirit of inquiry, they will intieed be congood service."-W. H. M., Tremtham.
Ioehorses.-I think the first thing to be sought for is the primciples on which they should be constracted, which appear to me to be the three fullowing:- First, the aitaation should be shaded and dry, as recommended by your cor be those which are known to be the wornt conductors of heat, wood for instance, unless of lavge size; and thirdy, which if the montimportant of all, the entruyce should be to
placed as to exclude entirely, and at all timen, the admission of air from the surrounding atmosphere. If 1 am
not grently mistaken, the entrance to most icehouses is not grently mistaken, the entrance to most icehouses is
placed either in the top, or somewhere in the side, but placed either in the top, or somewhere in the side, but
always abore the level of the ice in the house. Now here lies the error, at least so it appears to me, of the present mode of constructing icehouses: when the door is placed above the ice, the probability is, that it is never so secured as to be perfectly air-tight ; and unless it is so, a change in the air above the ice must be constantly going on-the dense air in the honse gravitating towards the outside through the door, and the warmer, and consequently lighter air, passing in to supply its place. The introduc tion of air into the house at a higher temperature than \(32^{\circ}\) must have the effect of dissolving the ice immediately in contact with 1t, and it takes place more rapidly as the season advances ; it is this circumstance, more than any other, which causes the dissolving of the ice. In order to prevent this taking place, I would recommend some such plan as the following, which will, in my humble judgment. go far to effect the object in view; and as you wish to bave plans of icehouses that will be very economical in their construction, that object also will be attained principal novelty in my plan. which for anything I know to the contrary has never been apptied before to any icehouse, is to place the entrance at the bottom, under the ice; the glass fountans in bird-cages will be a very good illustration of the plan, which consists of a wooden
trunk, about 9 mehes square, and from \(2 \frac{1}{2}\) to 3 feet long, secared to the side and close to the bottom of a porterbutt, wine-pipe, or any other description of cask; the end of the trunk is corered by a door secured in any way, so as to be air-light, and then protected from atmospheric influence, by means of atraw with turf over it, or by any other suitable materials. In the top of the cask there is a hole of the same area as the trunk, so that any sized piece of ice which will go in at one aperture will come ont at the at a time), standing half or three quarters of an inch from it; this space should be filled up with Roman cement; the intention of this covering is to prevent the oxidation of the hoops by any moisture that might otherwise come in contact with them. The cover over the opening in the head of the cask should be made air-tight by a little packing between it and the hear, and secured by a couple of ataples and wedges; the whule should then be covered with chalk or other stones, six inches thick; over this a coating of concrete, and over all, earth and sods, in sufficient quantity to give the whole the appearance of a moond. In large iceliouses, and small ones too, this mound might be conserted into a rockery, with eave-like the icethonse wnuld form an ornamental ot,ject, and might be placed within a convenient distance of any bouse. It will be seen by a reference to my plan that no air can enter any honse so constructed, except hy passing upward through the whole mass of ice: if this pranciple in the constructur: be udwatted to be correct, then the equiltbriam of the air ahure the can take place. The form for correspondent " is undoubtedly the best that could be devised; the opening for the admisriun of the ice should be placed on the top, and a store-trunk at the bottom for the ice to fall into the ice to be got out by a rake, if out of the reach of the hand.

be built over the opening in the top, which would rende was filled; the cone only would have to be filled up and covered over with a slab of stone.- H. L., Hull.
Cynoglossum glochidiatum.-A correspondent asks us what the merits are of this new annual. In the "Botanical Register," as quoted at p. 198 of the Chronicle, it is said to be a biennial, and though the flowers are very pretty, yet "the plant itself is a straggling dull green entangled erb, so that it can only be grown in the borders of a shrubhery, or in

Oranges.-In your Chroniole of Saturday Mr. Tillery informs your readers of the excellent quality of the little Tangerine Orange. I recently returned from Italy, and in Mottaro's nursery at Nervi, I see I sent home fou plants of the Aurantia tangerina, noting at the time making my selection "small fruit and curious-scented leaves." I would ask Mr. Thlery if his trees have also the which Mr. Tillery can horticulturise I wish he would re quest his employer to get some plants of the Aurantia nobilis, or Mandarin Orange, from Malta; all who have aten Oranges in Malta know that its excellence surpasse Phers. Tbought a plant of it at the late Mons. Limon's at Paris, five years ago; with cultivators there it is con-
sidered a curiosity; but I cannot get its fruit to stand : as soon as the embryo Orange gets the size of a Knight' Pea, it shrivels and falls; yet meantime the tree is large
and vigorous, and ought to have, like Mr. Tillery's, its six or seven dozen fruit upon it. His skill, perhaps, migh suggest an improvement upon the mode of culture, and I should feel obliged by a notice from him in your Paper The following are some of the sorts of the Aurantia that for their curiosity or excellent qualities I sent to England and beg to recommend to the cultivators of this tree serving pet or dry. 2. Do., myrtifolio; hardiest pre all, and bears exposure on terraces, \&c. 3. Portogall commune; sale Orange-great bearer. 4. Do., di Malt (not blood) ; fine quality of fruit. 5. Tangerina; curiouscented leaves. 6. Otaeite; most beautiful, elegant looking fruit. 7. Peretta di S. Domingo; exquisite for preserving 8. Pomarosa, high-fiavoured, to make lisupplying food to Pear-trees, for making the fruit de licious and vinous; surely he does not make use of the columns of your excellent Paper to tantalise the public rith letting them know what he can do, without telling them the how, which is the only important fact with which our readers have anything to do ; perbaps this notice of desired effect.-W'm. Mason, Necton II Iall. Col. Mason's note having been sent by mistake to Lynn, did not reac Mr.Hayward until this morning (the 30th Nov.). If Col Mason will perforate the soil in which the roots of his Pear-trees are imbedded with a Potatoe-fork, giving it a gentie heaving, at distances of about 18 inches, all over the surface under which the roots may be supposed to spread-and this will be as wide as the branches extend on the wall-and pour into the openings a mixture of two garts of cider to three gallons of water, Mr. H. has abt but the desired effect will be produced.-Dec. 2 Cucumbers und Melons.- I beg to call attention to an
rticle in a late Number by Mr. Whiting, containing a caution to gardeners, how they purchase the seeds of Cucumbers and Melons. If the writer has been the dupe of flaming representations, it is unfair thus to attack al he respectable persons who advertise, and thas to make the innocent suffer with and for the guilty. I am an advertiser, and am desirous that the readers of the Gardeners not affect the reputation of Mr. Stow's Cucumber or my own Black Spine Cucumber, Early Melon, and other seeds hey having stood the test of many years, and obtained he judgment of the first scientific men at Chiswiek an elsewhere. I trust that Mr. Whiting will see that hi observations as they stand are calculated to do an injur to many persons, and that in justice he will name those advertised Cucumber and Melon seeds that do not deserve the patronage of the public.-James Cuthill, Lowe-uralk, Camberwell.
Cedar of Lebanon.-If \(R\). W. Will take the trouble of referring again to the article of D.P. of the 6th Nov., he will see that it is not pretended that carving in the wood of Cedar of Lebanon is a new invention, but new to the wick pretends to be the first who ever applied that wood to the purpose; though a great enthusiast in his line he seems far too modest to make any unfounded preten-
sions. It wis by mere acrident he becawe possessed of the wood, in consequence of one of the many fine Cedars growing in the grounds of Warwick Castle baving been blown duwa; when being alsays anxious to extecd his knowledge in the art in which he so much excels, he triee Lis hand on the wood of this tree, and found it capable of being earred into the boid festoons of foliage already and even of insects. \(D . P\). is indined to agree room at C miverwell deserived by \(\boldsymbol{R}\). W is protabl not the Cedar of Lebanuli - certainly not of natur grostil. Cedar parlours were not uncommon in forme days. The admirers of Riciardson nust feel quite a
home in the Cedar parlour in uncle Selbr's house. One Cedar parluur is known to D. P in an old house in Kent hat wood is certaminy not Cedar of Lebanon-different in colour and smell, more like the Red Cedar used by cabi-
coarse kind of Cedar common at Bermuda, that is some
times brought to this country who may have visited Abbotsford, may recollect the bookcases in the library are made of this wood. This may give it an interest which it hardly deserves for ita \({ }^{\text {own merits.-D. }}\) P
Potaloes.-Is there no mistake in a paragraph in the
last Chironicle, signed "A Townsman," (Mr. Sant I pose, ) respe, igne "A Townsman," (Mr. Saul, I sup said to have been shown at Garstung, three of which weighed fit \(\frac{1}{2} \mathrm{lbs}\) ? The sort I have known in Lancashire by that name is not a very late nor a very large variety and I think a tuber weighing 110 . Tould be considere very large. 3 doz. instead of 3 tubers; but if it is correct should be glad to see an account of the mode of culture by which they had been grown to such an enormous size. There is a very interestug fact conneeted with this Pota
toe. A gentleman happened to be cousersing toe. A gentleman happened to be conversing with a per
son who was dagging up sume Potatues of this varien when a plant was dug up laving two white tubers, the co lour of the variety, and two others which were red. Con sidering this to be something ont of the conamon way, he took the plant, with the tubers still attached to it, to Mr Mr . Taylor wisely preserved them, and planted them the following spring, when he found that the produce was red on comparative trials found different colour, but they wer if anything, superior in quality be more productive, and they sported. This variety is now well known whic out the kingdom, I believe, under the name of "Taylur" Forty-fold." Spors of fruits and flowers are not uncombranch, I suppose we need sporting occasionaliy also.-John Townley. [The following extract from the proceedings of the Leyland, near Preston, Agricultural and Horticultural Association, of Oct. 26 th 1841, is our authority for the statement we made. The articles of garden produce were extremely fine. Beside Mangel Wurzel Ces, Savor, Broccoli, Potatoes, Turnips Mangel Wurzel, Celery, Onions, and other vegetables
which it is no byperbole to describe as truly n, The visitors were numerous and highty reapectable, an the display of roots excited manilest surprise and pleasure. One basket contained \(6 ; \frac{1}{2}\) pounds of Potatoes from only three roots. Premiums for Potatoes-the competitors to produce three roots of Kemp's seedling. 1, to Mr. Rose, un., for producing \(67 \frac{1}{2}\) lbs. of Potatoes, a copper teakettle do Mr. J. Lovett, jun., Leyland, for producing \(66 \frac{1}{2} 16 s\) do., do., do. ; 3, to Mr. J. Asheroft, Leyland, fur pro
ducing 6 llbs do., a teapot ; 4, to Mr. T. Rose, sen, Ley land, tor producing 60 lbs . do., a garden-spade; 5 , to Mr H. Eastham, of Legland, for producing 381bs. do.. potato-fork. Red Cubbage: To T. Nelson, \(34 \frac{1}{4}\) bs. : to Mr. Farington, \(27 \frac{3}{4}\) lbs. ; to Thos. Rose, \(23 \frac{1}{4} \mathrm{lbs}\) Seoteh
Cabbages: H. Barlow, \(353^{3} \mathrm{lbs}\); J. Toauliuson, \(33_{4}^{3} 1 \mathrm{bs}\). E. Baston, \(33 \frac{1}{2}\) ilbs. Savoys: Mr. Farington. l8 181 l bs. ; Nelson, 18ibs.; Mr. W. Boardman, 15ibs, Curle Duckworth, l.2lbs. Mangel Jos.; Mr. W. Buardman, l4lbs.; J. Cocker, 13lbs. Swedish Turnips: Mr. Livesey, 19\#1bs. ; H. Baker, 191bs.; Mr. Snell, \(17\left[1 \mathrm{bs}\right.\). Yellors Turnips: 'Mr. Farington, \(2+\frac{3}{3} \mathrm{lbs}\). Mr , 21 lbs Mr. Livesey, 18lbs. White Turnips Mr. Farington, \(29 \frac{3}{3} \mathrm{bs}\); R. Banister, \(22 \frac{1}{2} 10 \mathrm{~s}\). ; Mr.
Boardman, \(1 i+1 \mathrm{bs}\). Celery : Mr. W. Boardman, 91 lbs , Mr. Farington, \(6 \frac{\mathrm{x}}{4} \mathrm{lbs}\). ; H. Baker, \(5 \frac{1}{4}\) ibs. The above is the weight of one each.]

\section*{PROCEEDINGS OF SOCIETIES.}

Dee. 7 th.- HORTICLLTt Ril SOCICTY. Barchard, Easi, in the Chair. Earl Fortescue
was elected. Mr. GTeen, was elected. Mr. Green, gro to Sir E. Antrobus,
a handome specimen of Lucuia gratisinina,
which was terminated hy
Which was terminated by a large head of lovely ink blosscma deliciously fragrant: With this these was a plant of Chorozema
corcatum elegantly trained round feur -ticks; two beaufur grafted plants of Epipsilhum truncatum: a specmen of tha cris varicitilis, Corraa Lengitlora, and Erica h. mhe: and
flowers of the handsome Leonotis Leonurns. For the three tis mentioned specimens a Bauksian medal was awarded. M ber, a smooth variety, growni in pots as described in p. Gerdeners' Chronicle. From Mrs. Lawrence were specimens Zygopetaium intermédium and crinitum, the former behz un fection: Vanda Roxburghii unicolor, a pretty variety with olire

 scribear as being better habited, nore protise in th wering. as ha

\section*{MISCELLANEOUS.}

Destruction of the Pea Bug (Bruchus Pisi). -The same Drespondent states that he has succeeded in ridding his Peas of the bug, in the following manner:-Immediatel after gathering the seed, he sub ects them to the action of builing water one minute: by this means he destroys the ittle grubs or larra, which at this time are just below the integuments of the Pea, withont destroving the vitality of the seeds. If the Peas remain in the boilng water four minutes, most of them will be killed, but not all ; of abou forty Peas thus heated last year, three regetated, and are now growing.- Hoceys Magazine of Murbethure
Ritey's New Burdock Spinaih.- This is said to be a rery superior sort. It otiginated to P Butler Eey near Philadelphia; when properly cultivated it resembles in appearance the Saroy, with the exception of the size, which is several times larger, and the quaity far sul erner. The leaf is perfectly smooth, and the whule p! int is quite hardy, standing out the severtst muters mithout injury drulls, on rich, refi-matioured ground, and the flants thinned out to one foot apart ; each plant is full the size of half a bushel, if properly cultivated. This variety has taken the prize every time it has been shown at the Penn sylrania Horticultural Society. It will be notiord that this new variety possesses one most excellent furlicy, viz. ts hardiness, which enables the plants to stand utr severe and trying winter without danger. This alone will give it a high value, inderenient of its superior size, great product. and better quality. It must be cons lered a great acquisition.-Hr, Hey" Mog. of \(H_{w}\) bicubbure.
Renoratirg Orange Tries.-wizer, in his "FruitGardener," says-" A gentleman of great curnsity, and who by the late wars (previonsly to 1720 , has had och when any of their Orange-trees are languishmg or in decay, they kill any dog they can see, and by throwing him at the root of their sick tree, recover it again: and this I mention for the curious to try on frmit-trees, not having bad time to make ant experiment of it since 1 iedoubtles good; the mode of obtaining it is another tfis.-R. \(T\)
Silh Manufacture is the Deccan-We have been fa roured with the following particulars of the progress of silk culture in the Deccan:-During the month of July, 8548 Mulberry trees and 13,500 feet of hedges have been planted there by 71 ryots, principally of the Halee and Koombee castes, and a few Brahmins and Banyans. They are watered chiefly by wells, some by buads, and a few by running streamg. Last Eebruary, Mr. Andit procure some silk-wrms \({ }^{2}\) eggs from Egypt, whith co not appear to have succeeded; but the expenimes. of a cross usted between these Egyptian motio ant these of this connatry ceems to have answered admirdols: and they promise, in apore respects thanone, to beof greatadrantage to thiscounsatisfaction to see hatching on the ninth day, the wornos to spin on the 28th day, and the cocoons, such as be had never seen equalled in this country, weighing seven to tola. Pive daya afterwards, the cocoons were spun; and on the ninth day the moth pierced the cocoon and issue forth. Mr. Mutti then crossedthe nale n.. af of the new Egyptian erons breed with his original femate, and the egg also the worm began to apin, with the original wurna, these bac. me minthly ones. Mr Mutti says, in his " Guade." that jimi) of his best cocoons veigh one Pacea seer: Whertas. on he Egyphen emsa oreed, only 2.jCll or 3.206 are sufficient to bilatece tha weight. The worms two are a thrify race; instead uf re quiring to be lifted on the bundles placed within the eir emmitrence and eeatre at the hadintan they of their own accord apin on them; thro string Figes of people, and

Oher expenses and inconvensences mentioned in the \({ }^{4}\) Gaide." They do not consume more leaves than the Others, and change their skin four times. Mutti counted the eggs of 30 moths separately, and found that each of glos than the others; in recling, the thread does not coons and egge to Bombay, Mahim, Poona, Nuggur Kunneir, Kaira, Madras, and Bengal.-Bombay Times.

\section*{Retbieto.}

Proceedings of the Horticultural Society of London, 1840 No. X11I.
Fsow this we extract the following matters :-
September 7, 1840.-Mr. Thompson reported that Poit evin's Disinfected Manure has been applied for the growth of Tumips at the rate of 64 bushels per acre. There has been abundance of rain to dilute it, yet between the rows so manured, and others contiguous which had no manure, the difference in growth, as may be now seen, is not such as is likely to balance the expense; nor does it seem probable that a beneficial result will be obtained. It seems to answer best in the form of manure-water, but in tai nure.-Mr. Fortnne reported that the same manure had been tried with Pelargoniums and Calceolarias in pots, and also in the open ground with various other plants, it effects in all cases have not proved it of more striking In the open ground, where it was tried upon nine square In the oplen ground, where it was the nine adjoining yards were planted with the same kinds, and scarcely any difference of growth could be de-tected.-Mr. Gordon reported that he had obtained the following results with Poittevin's manure:-For annuals it was mixed with the soil in which they were potted in the following proportions : \(-\frac{1}{18}, \frac{\frac{1}{2}}{\frac{1}{2}, \frac{1}{6}, \frac{1}{1} \text {, and } \text { it was used }}\) signis, Impatiens glandulifera and other sorts of Balsams, and Sweet Peas. The plants of Nemophila and Sweet Peas all became sickly for the first ten days, but began to those recorering first which were in soil with the smallest portion of manure; somae of those planted in manure alone after becoming very sickly, upon being several times watered, recoreren, and finally became more vigorous than any of the others, and of a much darker green. The pots were found to be free from worms for a long time. Imtions of \(\frac{1}{13}, \frac{1}{3}, \frac{1}{1}\), and in manure alone. The plants (there were two of each) potted in \(\frac{1}{2}\) became perceptibly hanguid ; those in \(\frac{1}{2}\) very sickly, and were evidently much affected by the overdose, but they began to recover in about ten days, and finally grew vigorously. Those in diainfected manare alone, after lingering for about two months, eventually died, or rather rottse tried as above stated, viz. - Verbens sororia, Verbena teucrioides, Hybrid Petunia, and Statice tatarica. The manure had, as nearly ss possible, the same effects as on the annuals, with this likety to kill the plants. With respect to Shrubs hardly any effect on their growth was observed, except when they Were planted in manure alone, when in most cases they were killed, particalarly species of the Pinus; probably
trees and hard-wonded shruhs require one or even two zears before the effects of the manure are conspicuous. Nenuophula insignis, Impatiens glanduligera, and Sireet Peas were also putted in the same soil as before, but they They were also potted wi-h half-an-inch of manure at the bottom of the pots; in all cases the growth was in favour of those with the manure on the surface. The perenuials Verbena sororia, Verbena teucrioides, and Hybrid Petunia with half-an-inch of disinfected manure at the top of the pot, grew remarkably well, without any symptoms of in
jury; with half-an inch of the manure at the buttom of the pot, they also grew very well, but it was evident that those top-dressed were more vigorous and robust than either those with the manure at the bottom, or those in the soil without any disinfected manare. The following were tried
with the manuuc in a hiquid state, viz.- Impatiens tricornis, glandulgera, and candila, all very strong-growing plants, and well adapted for tryitg the strengtio of the substance. Various other plants have also been watered with the higuld, and in all cases witi much benefit, more particularly those kinds which naturaily grow with great vigour After various trials it was found that only 1 part in 60 , or about one pint of disinfected manure to eigat gallons o only be watered with it once a week, or, if very slow-growing sorts, once in two weeks. The manure is very power ful, and taking the small portion required, and the price
(about 1s. \&d. per bushel) into consideration, it has merit. and deerves trying in the open ground on a much large scale. The princepal objection to its general introduction is, that it may be used too strong, and so destroy regetain a drystate it seams in or make plants sict sudden death to some plants, acting in the same way as duy salt : therefore shoulat only be used in a Fiquid state. It may be mixed with the water and used in ten minutes afterwardis just as well as if it had been mixed ten bours ; thea scems to lose the deleterious effects so destructive to
Oegetation. Oltober \(^{2}, 1340\). - Mr. Thompsitn reported that a fruit of the new Pear an Mons Leon te Clere had been obinferred that it is suited to this climate. A seedling raised
by Mr. Knighty and called the Dummore Perr, prownd rery
large from a standard, and from its size and period of
ripening was considered excellent. The Suffolk Thorn Pear had also fruited for the first time in the Garden; was raised by Andrew Arcedeckne, Esq., from the Ganqel's Bergamot, bears as a standard, and is of excellen quality.
October 20, 1810. - The following paper was read by Mr. A. Scott, gr. to Sir George T. Staunton, Bart., of
Leigh Park, on the cultivation of the Nelumbium specio-sum:-"This season our plants have been treated as folluws: they were kept dry during the winter in a cool part of the plant stove at about \(\overline{\text { E }} 0^{\circ}\) Fahr. In February
the roots were divided and potted separately in turfy loam; the pots were set in pans of water, the temperature of the house being \(6.5^{\circ}\) to \(811^{\circ}\). As they began to grow they were set in the water just deep enough to allow their leaves to toas. April they were removed to a small stove devoted to the cutsivat where the temperature varied from \(65^{\circ}\) to stove plants, where the temperature varied reing about
In May the strongest specimen was pla tight box, \(3 \frac{1}{2}\) feet long, \(1 \frac{1}{2}\) foot wide, and 16 inches deep. filled with loamy soil, having a little gravel on the top to give it solidity, and allowing room for about two inches o water over the surface of the soil. The box was plunged soil and water in the boz to \(80^{\circ}\). This bottom-heat was maintained during the summer, the temperature of the house varying from \(63^{\circ}\) to \(95^{\circ}\). The plant continued to grow rapidly, sending up leaves three feet out of the and on the return of fine clear weather in August the firs and on the return of fine clear weather ined to be the red variety ; its flumers when fully expanded increased \(10 \frac{1}{2}\) inches in diameter, and remained several days in perfec tion. It is much larger and more beautiful than the flowe of Nelumbium luteum, the only other variety I have seen in fower. Another season I intend trying the effects of
higher temperature at the roots. The plant which flowered now occupies a space of more than 12 feet in cir-cumference."-Mr. Thompson reported that the Van Mons Léon le Clerc Pear was found to be quite as melting as the Marie Louise, and was considered as rich as that sort would have been in a similar situation.

December 1, 1840.-Mr. Henry Crace, of Lennardplace, S. Johns Woa, ex Marie Louise Pear, from standards, with the following note:-"I beg to offer to the Horticultural Society a few
Marie Lonise Pears, which I have been enabled to keep to this late period by a system of treatment, a short account of which I here annex. I selected a tree trained down wards in the balloon style, and in the winter, as is my usual custom, I cut round the roots, about three feet from the stem, extending each year the length of cutting (in consequence of having only nine inches ane I corered the ground round the tree with rotten manure, and occasion ally watered it through the manure until the month of October. In August I cot of the whole of the upright strong shoots of this year's growth, by which plan it ap pears to me that I throw the wiole strength of the tre into the fruit. At the same time, being much annoyed by the birds. I netted the tree, with some very fine fruit on it. About the 1st of October I matted up the south and west side of the tree, leaving it open to the north-east The tree was ther in full foliage, and contiaued so nearl three weeks later than the other trees of the same kind The fruit continued on it until the 20th of November when, from the continued hurricanes which prevailed, was compelled to gather them, as they were more than half destroyed by being whipped by the branches, in defiance of my training, netting, and matting. Had it not bee for this tempestuous weather, I have no doubt some spe cimens would have been on the tree until this present time. Some of the Pears were as fine as any I have ever seen grown on walls, and the smaller ones I have no doub will enable me to have Marie Louise Pears on my table on Christmas Day. To some it may appear strange that on a clay soil I should water my trees, but having in the making of my garden (the refuse corner of a brickfield
when I took it placed brick-drains within 20 feet of each each other, directly across the garden, I have no stagnan water, but am perfectly dry, and in the summer months invariably cover with manure the roots of all trees which have a full crop, and water through it, for which trouble am abundantly repaid, both in the size and quality of my fruit.

December 7,1840 .-Mr. Thompson reported that the packing of fruit in baskets lined with kiln-dried straw ha been found to answer well with such varieties as bad kept up to the present period. The straw so dried, that it will scarcely bend without breaking, does not communicate that musty flavour which is perceised when hay or straw retaining their natural juices are employed.

CALENDAR OF OPERATIONS for the ensuing Week.
Tan principal things requiring particular attention, are the preparation of coverings for protection, where not completed, aud the regular examination of stored fruits, roots, and seeds. straw or reeds, to revemuile thatui, they will ce found much more
effectual come in immetiate contact with the glass, radiation is prevented, Which is not the case where mats are used; adopting tiem a \(=\) co-
verings for the bottom lights of
very

 Musbrooms. - Admit air for a short time occasionally when steam by pouring water on the flues. Keep the temperiture to Turn and prepare dung; soil for various purposes; protect the In case the earliest-sown Mazagan Beans should perish, a few more had better be suwn, and of early Frame Peas, in simiar
situations to the last; this need scarcely be done where there are situations fo the last; this need scarcely be done where there ar manure, ridge, \&c., but do not work on the ground when wet,
Clean between and gather off dead leaves from Brussels Sprouts and other winter crops. Urehtrd.- Continue to forward the pruning and haing of wall mulched, if necessary, with rotten dung; or if they are growing
strong, use long litter; we believe the loss of crops to be often attributable to injury sustained by the roots during intense frosts pruned trees with the mixture ot hme, ※c, an weims.
II.-FLOWER-GARIM AND SIIRLBBERY

\section*{STove.-Many young growthy of Orchidacere are extremely} liahle to damp off if great caution is not tahen in the waterng,
or the steam arsing tom wet fluec or pipes when hot will readily
scall them. Thome who have dried their Denulrobums as we recommented will probably now perccisct the fiowers protrudng
the temperature may then be increased five degrees; give all when posible, and destroy insects, as letiore.
Girexinot on, Preserve a dry atmosphere, using very little
water to the plants, except clear frosty weather render fire necessary; then more water will be required, which should te
given in the morning. Remove Heaths and New Holland plants given in the morning. Remove fre-heat will be least felt; keep
to situations where the effects of fire-heal
the soil in the pots loosened up, and allow neither dead leaves nos invect to temain
PITS AND FRAMES.-Keep up a succession of forcing-plants,
Roses, Pinks, and Carnations had better be forwarded first in Romes, Pinks, and Camations hanging them in heat; but lilacs Rhododendrons, Azaleas, \&c., whose fowers are previnusly
formed, and only require developing, need not have this pre caution. Give general treatment as before.
Ont-door Department.

NEWS OF THE WEEK TME Overland Mail from India, which arrived in town
Monday, has supplied us with intelligence from Boman Monday, has supplied us with intelligence from Bom-
bay to the list ult., but has brought no news from China. The Indian advices are of considerable interest. The arrival of the King of Burmah at Rangoon, with 20
army of nearly 200,000 men, had excited some alarm for the safety of Moulmein; and various opinions were curthese circumstances, the Supreme Government hał adopted energetic measures to prerent a surprise, and to defend that important position.
is said to have been consluded between Great Britain and Shere Singh. The affuire of Affganistan have assumed a new aspect. in consequence of the dangerous illness of Shah Soojah, whose death is thought likely to have const derable influence in prol cann a better fouling in some of ficient importonce to returd tho deparnare of the British envoy, Sir W. M Niriten, who has bean appointed governor of Bombyy: It isiper Khom has at length been placed on the throne of his father in Kinelat, and has signed a treaty of allince with tia Inlint government. The accounts from Peraiz simply annownce the arrival of Sir John M. Neill at Tehoran oathe 1 teh Oet. ; he had not jet been receired by the Shah, who was suffering from afer their congratulations on his return. -Oar European gews is also interesting. The Preach journals are fully accupied with the trial of Quénisset and his accomplices. The Court of Peers have completed their examination of the prisoners, but no new facts have been elicited, and the evidence has only entablished a case against Quealsset. broken off, in consequence of some misunderstanding in the Cabiaet. Letters from Toulon mention that orders have been received to despatch a squadron of five sail of the line to the Lerant, in consequence of the unsettled state of Greece and Syria ; it is, insleed, rumoured that the Admiral has been ordered to place himself at the mouth of the Dardanelles, and prevent the Turkish fleat from sailing out of the Straits. The Paris papers are much oceapied with romours of intrigues for the nrerthrow of the present Ministrp, and with the probable tactics of opposed parties during the approwhing session. Nothing, howover, appears to have been decidel on, although the joursals in the interest of M. Thiers speculate on his retuin to office. It is stated in the diplomatic circles that (iu)venment has resolvel on making an important addition to the peerage ; the dignity, however, dinstend of heing conferred on Vembers of the Chamber of Derputies, as a reward for policiol suppart, is to he comin? 1 t diplomastists, literner men. and artits of the first celehrity. - We learn from Spain that in consaquence of the reconciliation of the two Gavernments, the French force which mas on its march to the Pyrenees has been recalled. The accounts from the Provinces are satisfactory: Barcelons is completely released from its state of siege. Catalonia is tranquil ; ant Custom-houses. in accordance with the late derree of the Rewent. have heen established at several points on the Frenth frontier.-In Portugal, the Governmentic arain emburasse lin its fin ancial operation=, arising. it is said, froms the resent en.an nercial crisis. An association, ariginating with the Duke de Palmelh, has been formed for the construction of lines of rond throughaut the country, anounting in extent to no less than 600 ing, which anpears to be a private suaculation, guaranteed on the part of Government by means of an increased tax on property.-The Session of the States of Hanover was opened on the 2nd invt. by commission, the King not at tending on aeerunt of the recent death of the Queen. The speech of the Commissioner stated that the reason for their parly ennvocation, is the necessity of a new law respecting indirect taxes, and the adoption of mensures regarding Brunswick, which is shortly to secede from the German Customs' Union; and concluiles by assuring the Chambers that no addition il taxes shall be imposed. -Our Belzium nexs mentions the discosery of an extensive forgery of Bank Notes, - monosed to liave been \(f\) dbricatea in England for Continental circulation.- By the Levant Mail we learn that the Gireek Curernment ha: made conciliatory adrances to the Turkish Amhissator, and that little doubt exists that the iiliterene-s between the two countries will be amicably settled. Politicn mitters appear to have given way, both in Constantinaple and in Egvpt, to the religious solemnities of the feasts of the Bairam.
At broce, the leading event of the week has been the removal of the Court to Windsor, and the announcement that her Majesty has conferred the title and dignity of
Prince of Willes on the Duke of Cormall. - The Queen held a Pray Comnil yesterday at Windsor Castle, at which the name of the Prince was ordered to be inserted in the prayers of the Lirurgy, after that of Prince Albert. It was also determined at the same Courcil that Parlia-
ment be summoned to meet on Thursday, Peb. 3 , for the despatch of public busizess.

in the park and gardens of the Castle. The Earl of War-
wick and Gen. Sir W. Lumley have succeeded Viscount
Hawarden and Mr. Ormsby Gore as the Lord and Groonn
Hawarden and Mr. Ormsby Gore as the Lord and Cirootn
in waiting. It is officially announced that the Royal christening will not take place before the meeting of Parliament, in February.- The warrant, creating the Roya
infant Prince of Wales and Earl of Chester, received the
Queen's sign mannal on Mondav, and the creation was announced in Tuesday's Gazeftle. Besides being Prince of Wales, the infant Prince is Duke of Cornwall and Rothe-
say, and Duke of Saxony.- The report given in our last, on the authority of the morning papers, that the Duke of
Sussex is about to resign the Grand Mastership of the order of Freemasons, has been contradicted.
The Queen Dorvager.-No bulletin of the health of the Queen Dowager has been published since our last, and
is generally understood that her Majesty is in a satisfac tory state of convalesence.
Official Appointments.-It is announced by a minizterial paper that Lord Hill has made known his intention
of withdrawing from the command of the Forces, and that Sir George Murray, the present Master-general of the Ordnance, will be the new Commander of the Forces. most prohably be the new Master-(ieneral of the Ord-nance.-The Duke of Buccleugh has been appointed Lieutenant of the shire of Roxburgh, in the room of the
Marquis of Lothian, deceased; and Mr. Albert William Woods has been appointed Gentleman Usher of the Scar let Rod of the Bath, woid by the decease of Mr. Beltz.
Church Preferment. - The Rev. Edward Bankes, and Chaplain in ordinary to the Queen, has been appointed to the office of official of the peculiar and esempt jurisand diocese of Salisbury, void by the resignation of Mr. W. J. Bankes.

\section*{fforeigu.}

France. - The Trial of Quinisset. - The journals are principally occupied with the preceedings of the trial of Quenisset, and his aecomplices The exa mination of the pri-
soners adds nothing material to what was already known. soners adds nothing material to what was already known.
Immediatels before the conclusion of the proceedings on Immediately before the conclusion of the proceedings on
Friday, Quenisset, who conduets bimself rather violently requested to be lieard, and saik, that Auruste had treated
hima a coward and an informer, becaune he would not him as a coward and an informer, becaune he would not
do as Darmes did, who carried his secret with him, and after whose death chey went and drank and danced and sung at the barrieres. But he would not so act with these hrig ands, who led him into the scrape and then deserted him. He declared to the Court that there were among them men who had been discharged from the hulks, and had been more than once in the hands of justice-men who would not act in any morement unless it were to end in plunder. The interrogatories of Mallet, Martin, and Fongeray concluded the eecond day's portion of the trial. There tien remaine \({ }^{\lambda}\) two moee prisoners to be interrogated, Consi-
dère and Bazin. after which the examination of witnesses dère and Bazin. after which the examination of witnesses would commence. The trial does not appear to have excited
the slightest interest in Paris. except as regards M. Dupoty the editor of the Journal du Pruple, for whom there seems to be general srmpathy. All the journals, except the Débats and the Presse, protest strongly against the doctrine of constructive treason laid down in his case ond Liberal organs alike unite in condemning the prosecution of this gentleman. against whom, they maintain, there is mot a titule of evidence. The only case made out against
him is, that one of the prisoners had addressed a letfer to him, calling upon him to defend the accused against the revelations of Quénisset. Launois, the prisoner in question, stated that he had not the slimhtest personal knowledge of Duphty, and the latter solemmly declared that he did not knnw, directly or indirectly, any one of the prisoners at the bar. M. Dupoty's protest to the Peers that he was on trial for the "teadency" of articles in his juurmal,
and not for anr share in the conspiracy, appeared to produce a strong impression on the Peers. - Subsequent intelligence informs us that the Court have terminated the which twenty-seven witnesses were esamined as to the general facts of the attempt. This examination presented nothing of interest, the eridence establishing a case against Quénssef, but not against his alleged accomplices, the other filteen prismers.
Treatu with Beisium.-The papers announce that the purpose of effecting a conumercial nnion are again at an end. From these accounts it would appear that M. Guizat, without consultang the President of the Council or the Ministers of Einance and Commerse, had instituted a commitree in the Foreign-office, under the presidency of M. Rossi, which was to have derised means of accelerating the conclusion of the treaty, so that it might be roted in the course of next session. The appointment of this
committee, however, when known to his colleagues, be
came the subject of warm debates in the Council. The
opponents objected that such a treaty was calculated to
epstrange from the Ministry the majority in the Chambern,
and M. Guizot, yielding to that powerful consideration
and M. Guizot, yielding to that powerful consideration Political Trials. - Besides the above, two other criminal prosecutions for political offences are now simultaneoos! appear, any more than that of Quenisset, to create the
slightest sensation, so accustomed have the people beco to trials of this aature: their number, since 1830 , being
estimated by one of the papers at no less than 14,000 . The Royal Ccurt of Pau has already deroted sereral days to the Opposition journals of Toulouse and other persons charged the enforcement of M. Humann's fiscal measures ; and conspial is proceeding before the assizes of Aix, of the Republic, occasioned in March last the serious disturb. Neither of these trials, however, had yet been decided, and the details of them add nothing to what is already known has been tried for libel, and condemned to six months' imprisonment. The libel in question consisted in having engaged in the conspiracy of Grenoble in 1816 .
The Miniscry.-The papers are much oceupied with
rumours of intrigues for the overthrow of the Ministr with the tactics of the approaching Parliamentary cumpaign, and the plans of different parties; but their conclu-
sions are vague, nothing, it would seem, having been desions are vague, nothing, it would seem, having been de.
cided on as to the future course of action. The journals in M. Thiers' interest speculate upon the return of that statesman to office; but there does not appear to be any
foundation for this report. M. de Lamartune's rame has been put forward by a portion of the press as a candidate for the President's chair of the Chamber of Deputies; and this nomination appears to be regarded as the resuit of an intrigue to divide the Conservative party and cause the fall of the present Cabinet. The proposal, however, has self; who, it seems, never supposed that there was any se rious intention of proposing him for the office, and who has writen a letter to M. Sauzet, the present President, in which he discldims ever having entertained the idea of entering into any contest with him. It is stated that \(M\) Thiers and several of his most particular friends attende the Duke of Orleans' soiree a few days since, when it wa observed that the best uoderstanding appeared to prevall
between that statesman and Count Mole, It is runioured in the diplomatic circles, that Government contemplate appointing a number of Peers, but that no deputy will be raised to that dignity, for fear of displeasing the numerous apphcants for a seat in the Upher Chamber. The promo tion will be confined to a few diplomatic persondeges, hite finished a fine allegorical picture for the great hall of the School of Fine Arts, is to be one of the new Peers. The Royal Ortunnance erecting Cambray into an archiepiscopal see has received the sanction of the Council of State.
The Army and Nary.-Intelligence has been received from Toulon, dated the \(2 d\) inst., stating that orders had just been received in that port for five sanl-of-the-line, several light vessols, and a steamer, to pat to sea immediately. Victuals and stores were sendug on board these ships with rapidity, and it was rumoured thit they were that General de Rumigns, one of the King's andes-dethat General de Rumigny, one of the to assume the camp, was to leare shortly for Algiers, of General Bugovernment of that colony, in the absence of Pans fur the
geaud, who had been authorised to return to Pan approaching session of the Chambers.-Subsequent aicounts received from Toulon state that the great activity which has been observable in the naval arsenal at that port is positively connected with the last intelligence from Greece and Syria, and that the Maritime Prefect had been ordered to fit out, with all possible speed, a squadrotant. five ships of the line, which waling in six months' prorisions, and were to sail on the ith or 8th inst. The sions, and were These accounts add that the Rear-Admiral has been instructed to place himself at the entrance of the Dardsnelles, and prevent the Turhish fleet either from sailing out of the Channel, or from attacking (ireece or Tunis.
 the fortifications, although scarcely
ready produced the moost disastrous results: and that the consequences of these works are now so weil appreced no tiroughout the country. that it is conndent the (hambers ferther grant of mo
to complete them.

Spais.-Our inteligence from Madrid is to the 2Gth ult. On the \(\% 5\) th, the officers and sub-officers of the Nd tional Guard of Madrid waited on the Regent to congretulate him on his arriva!, and offer hym a cross com. The morative of the events of the night of the \(\operatorname{ith}\) oct. Regent replied to the adidress at some length; but the only remarkable passage in his speech is that in "the enealludes to fureign intervention. If, sala Le The ene mies of our repose and liberty siould dare to attack Niswould huist the standard of Castile carried uy the ther tional Milttia of Madrid. I would place myself at the head, and I would show them the road to glory. And as , in the midst of danger, the brave National 1 di , litia may rely on the efforts of the citizes solaier,
who has no other interest but the glory of his country, so
in the same manner I rely upon them to sustain this same ghory, our mbertyand Queen." - Private letters assert that gome flatterers of the Regent entertain the project, at the opening of the Cortes, of the move Branch shall be granted to him. A Minis. terial paper announces that the French Government, on receipt of reassurng notes from M1. Oloziga, the Ambassador of Spain in Paris, Lad recalled a portion of the
troops who were marching to the Pyrenean frontier. The troops who were marching to the Pyrenean frontier.
garr \(s, n\) of Nadrid had been reinforced by the regiment of Hussars of the Piincess, that of Luehana, and another of Provincial Militia. The papers state, in contradiction of a rumour that a treaty of conmerce had been concluded between Enfounded, but that no negotiation to that effect had been opened between the two countries since the accession to power of the present Ministry. The Duke de IInfantado died in and gence received from the provinces is satisfactory. Acatate of siege had been raised in Barcelona, and that Gen. room of Valdes, had resigned that post. Catalonia was tranquil. According to news from Bayonne of the 1st blished at Irun on the morning of the same day; and Spanish custom-house officers were placed at the foot of being in France, and the other half in Spain.- The amount of the proceeds of the national property sold in the month of September was \(21.854,02 t\) reals. produced \(1,649,724,157\) reals. The military commission assembled on the 30 th ult., in order to try M. Sanchez Torres, formerly nobleman of the ex-Regent's household, The accused is, it is stated, contumacious. The Duke of Alagoa died at Madrid, at an advanced age, on the 29 th ult.

Portugal.-By the usual weekly mail we have received Lisbon news to the 29th ult. Government still sustained difficulties in its financial operations from a concurrence of the commercial crisis, and shock to general credit, the lower price of the home funded debt, in consequence of the 10 per cent. tax on the dividends, and the uncertain state of of Palmella at its head, was devising the means of making roads throughout the country, which, if carried out, would tend very greatly to promote the prosperity of the country. It is caleulated that 601 leagues are required, and the tutal expense is estimated at a milion and a half sterling. An increasing decima or property tax was considered the best adrance their money in this speculation.-A law, re-es tablishing military cadets, or privileged candidates for military offiers, in the artillerv, cavalry, infantry, and
caçadores, passed the Cortes just before its close. This class of candudates was suppressed after the September revolution. The practice of promating from the ranks does not seem to have tended to promote discipline.- An attempt had been made by the prisoners under sentence or 700 in number), to escape from prison, but it was suppressed. Baron Marechal, the Austrian. Minister, was the Pope's Sed at Lisbon; as also Monsigaor Capucini, The Spanish officer, Brigadier Oribe, had escaped from Peniche. It was said that Brig. Pezuela was at St. Ube's. Germany.-The juurnals of this week contain nothing of interest. A Vienna letter says that the reductions in the Austrian army will be carried to such an extent that
30,000 horses will be able to be offered for sale, Government has decided that the sum arising from this source shall be devoted to works or public utility, especally railroads. The contractors for several liues, it adds, Goverbment had promised to grant it. The Transylvanian States opened on the ljth ult. with the usual ceremonies, and the Royal Commissioner was well received. The Crown began the next day. Three propositions from the President of Government, the nomination of Councillors, and finally the reply to the representations of the Diet o 1837. The German papers announce the death of the musical composer, Cheralier Morlacechi He bad resided in Dresten since the year 1816, when he was appointed chapel-master to the King of Saxony. Norlacchi com ras perfirmed operas, one of Sid Bergicm.-The Brussels papers intorm us that in. Chobert, ismerly a captain of the 5 th regiment of the line in the 23 regisbeng, foruerly a non-commissicned office imprisoned in that city on a charge of high treason in connexion with the late conspiracy. It appears that tho mothesses have been alreauiy exumined in this affoir, but ject, has yett-anspired. It seems, horever. that a circumstance is muych tallied of at Arion, winch is thought to be connected with this plot. It is said that a paper has been ahowing that there was a scheme on fuot for raising an ermed force in a village called Eischen, situated withia Duague of Arlon, on the extreme fromtier of the Grand 1,000 kilogram that a certaia number of men had atready been enolled It is added tiat it has always ieen the case thut when the province of Lasemburg has been destitute of troope,
troubles have been excited in this place, where there are
not 200 soldiers ready for action.- Intelligence has been received that a number of notes of the Sociéré Générale, of 1,000f, have been forged, probably in England, and sent frem London into Belgium, where they arrived on the 4th inst. The forgery being detecled at conce when
they were presented for cash, the direction suppose th't few, if any, of the notes are in circulation in Belgium. The direction, however, feeling it a duty to informs the
public of the fact, and how the forged notes may be easily public of the fact, and
known, hare pablished the follorging particulars stamps are badly imitated; those of the Socićté (ićmerale in particular. The Société Génerale stamp the back and that the impression of one note never resembles that another. On the forged notes the part of the impression Which accompanies them is alike on each note, and the nuine ones. The paper employed in the forged notes is badly imitated; it is much more opaque, and slighty green. The transparent and opaque figures are heavier, fication, and that which the public can at once detect by placing the notes on the table, consists in this--that the impression on the whole of the reverse side of the false presents visibly the impression of the printed characters. All the figures, the numbers, the signatures, and all that Which is written is badly imitated. The false notes as yet detected have impressed on the back of them, by means
of an oval stamp, the words. James Bulston and Comp., money-changers and dealers in bullion, 85 and 86 , Cheapside, London. Those who, notrithstanding these indica their possession, may be so on application to the Treasury of the societe Generale, where an embossed stamp, a well as the signatures of the caskiers, will be at once placed on them, unless the bearers prefer them to be cashed.
Holland.-Accounts received from the Hapue of the rat inst. state that Baron Van Kessel, Member of the Coun cil of State, died there on the presious day, atter a long sick statesman, and filled many important offices in the time of Napoleon and under the King of the Netherlands, both before and since the separation of this country and Bel gium. He was also the anthor of numerous popular works
Hannver.-It is stated that the British Governmen has opposed the accession of this country to the German Customs' Union, and has lodged a protest against it with Encland would wieness with regret the projected juuction of Hulstein and Scnleswick with the Énion. The Sescion of the States was opened on the 2 nd inst., by the Ki commissioner, Plaje Beid being stil plunged in ls. and that the recent loss of the Queen had resolved no to appear at any public solemnity whilst he continued in to appear at any pubuld save opened the States in person. The commissioner then inforned the assembly that the King's motive for calling them together at an earlic period than usual was, because it was necessary that the
should frame a new law respecting indirect taxes, an should frame a new law respecting indirect taxes, an odopt measures regarding the Customs' Čuion un thie ls Jan. He afterwards recapitulated a number of other bills of local interest, to which he directed, in the King's name, the particular attention of the States, and concuded by by any additional taxes.
Surtzerland.-Accounts from Geaera to the 30th ult. inform us that everything continues quiet in that city and canton. and that no one unacquainted with the cir cumstance could suppose, from the appearance of things that a revolutionary movement had so recently taken place. A letter from Berne, 2 d inst., states that the grand council of that canton has just elected M. Ischarne as president of the counct of state, and therefore presi dent of the Helvetic Diet, in the room of M. Aeuhans, whose time of office had expired. The former is a Conservative, the latter a Radical. Baron Mortier, tie French Ambassador, had set out for Paris. The journals mention the discosery of a cosi-mine near the ubundant and highly benefical to the country.
Ressia.- Private correspondence from St. Petersburg dated the 16thult., states that since the commencement of the differences between Great Britain and Chana, the commercial relations between Russia and the (elestal Emplire. through Kiakhta, have increased considerably and that the manner in whicia tiis chado canied on has given increased contidence to the (hasese. It is atded that the religious mission. sent from Russia last hinter had met wath the nost favarable receprius a: Pekm The same accounts report that the Po!ish aathoricies have received orders to msert in an their (thinai Acs the same of the fussian calestar, as achi 23 thinse of tue entenc. hatherto orunarily Lase in Poliud, adir adid uatimately supposed the use the otrer altogetier.-T Tigini las be made to supersede the otrer and base ben we.cisuied nith returued to She appeared in a ballet entitied Le Brigand de transport. Ste appeared Rotheser the new British Ambati-Mer.-Lord Stuart de Rothesay, tiee new Brisk Audent sador, was received on the 2 uth uito, in a prisare auded oredentials.
Italy.-The winter has set ia with considerable rigour in this country, and tue accoums recerved chis wetk confirm the statement given in our last, that the banks of the Adige, which had hirherto resisted the violence of the in-
consequence- It appears that it is by a lettes from Cardinal Lambruschini, and not by a Papal Breve, as had been Cathedral of Limburg, that their election of Dean Mohr Niederwalluff, as bishop of the diocese, has been retecoll in. In that loter the fecto-instic who had been dected, is deseritad as on indstinual desersing of the
 Ond come to the bands of the chapter at the beglaning of
Octuem. They are directed, with:s three micitis after the rectipt of the later. to frocted to a beew enction election they should again commit such violations of person not endowed with the requisite spiriitual attributes, already devolved upon him, of nominating a successor to the vacant see. The Papal Government, by a decree inder. A mong the works thus marked, are Rankes History of the Popes, the novels of Balzac, and varions Belgian, Spanislx, and German works, mostly of a religious
or historical character. No English book is included in the list, nor, with the exception of Balzac s movels, any French.-A letter from Rome relates, that a short time since, a young farmer at Vetralla, a village near Viterbo,
in a fit of frenzy seized a hatchet, and with it killed his own father and four other persons, and wonaded twelve pthers. Thie fatier of another family sased lis chuld rom the same fae be shooting the madman atcount from Leghurn, daied the wed uit., inforas us that the failed, and that the enterprise is now given up. The ex pense incurred by the attempt is estimated at not leas
than 200,000 francs. It falls entirely on the Steam Navigation Company, as the owners of the money and effects on hoard the vessel would not, it seems, consent to contribute towards it. The number of personis travelling southwards is very great. The steamers to Civita lecroyages are frequent at this season of the year, travellers prefer them to the road.-Intelligence has been received in London of the unexpected desth of the Countess of Ladyship, who was in her 45 th year, left England about the middle of October, in possession of more than usually good health; but on her arrival at Genon was seized with an attack of a feverish nature, which in said to have originated in a cold, but of which ulcerated su.e-hanat was
the fatal symptom. Accounts which reached her fumily from time to time represented her as alternatc! y better and worse ; but the last received up to Sunday represented her as so far recovered that all uneasiness was removed. It appears that it was only two days before her death that
the first really alarming symptoms extibited themselves. Greece.-Accomuts receired from Athens state that immediately after the retyurn of the King to that capital, the Government sent to the Ottoman Ambassadiur a note drawn out in the most concilistory terme, atid would be amicably settled. The question of territory and all others are to Le repulated; and the Turkish propritors are to receive indemnity
Tcreey.-We have intelligence from Constantinople this week to a recent date. Weth by the arrival of the
overl nd nail from Imia, on Mlin day, and by the subsequent arrival of the ordinary Levant mail. Sar accuunt come down to the lith wits. The preceding neek Lad been_entirely occupied with the religioas cerenoliles per of the Baïlam. The cereniony of the Kadirgtiedjeesi, shich precedes the latter by four days, was celebated with the usual pomp in the mosque of Toptane, daring the night of the 11th ult Pions Mussulanas bellese that it is on that boly night the Propher fecres of ProFidence for the ensuing year. The Sultan repaired thither oy water, in grent siate, escorted by the whole court and a number of the priccipal functionaries of the vartobs administrations. On bls landing lie was saluted by rounds of artilery, and nrework hlium: of the procession to the mosque. During the prayers the square of Tophane, on which a great crowd cad assem uled, was aisu highted in a bulliant mamner. On his defarture from the mosque the suitan was conveycu back

\section*{fletetropolis and its Vicimitn.}

Re-opening of the Totcer.-On Monday the Tower was again opened to the public for the first time since the fire, every visitur however being under the necessity of pur chasing a ticket at the Armoury Iicket-office, at the west ern or principal entrance. It was last week announced by
the Board of Ordnance that the new Jewel-office would alvo be opened to the public on the same day; but being still in an unfinished state, it remained closed. It wil howerer be opened on Monday next. In the mean time the crown, with the rest of the regalia, remains in the pos session of Messrs. Rundell and Bridge, jewellers to he Majesty, Ludgate-hill. Within the wooden hoarding, on Armoury, in front of the white \&c. have been piled up in several places, as have also been many of the trophies taken at Waterloo, and at other engagements. The whole are inclosed with small wooden railings; but the view to visitors is unobstructed. The Grand Storehouse, attended by the warders, in the same way as in the armouries, whence a good view of the whole of the ruins is obtained. Various specimens saved from the rains, showing the effects of the fire on the different metals, and other substances destroyed by it, are expose for sale at fixed prices. The number of visitors on Mon day did not exceed 200 , owing, it is supposed, to the un propitious state of the weather; but on the following day the weather being fine, the nunber was greatly increased Althingh large bodies of soldiers and labourers have been emploved for the last three weehs in clearing out the base ment of the ruins, their task is not yet completed, a con siderable quantity of fused gun-barrels, metal, \&c. being still remaining in them. The western wall of the Armoury has been condemned as unsafe by the surveyor-general of the Ordrance, and a scaffold has been erected at that end of the ruins for the purpose of pulling it dowa. The
Board of Ordnance have peremptorily refused all applicia hoard of Ordnance have peremptorily retused all applicia even to the officers of the garison and warders who rendered their services during the fire. The sale of the different articles alluded to above is conducted under two marquees, erected in the small-arm survey-room between the Bpwyer and Brick Towers. Sixpence is charged fur half-a-duzen old gun-tints, scarcely injured by the fire, and the same charge is made fur a small quantity of burnt percussion caps. Pieces of fused iron and other metal vary from 1 s.
to 211 s., which latter is the maximum price. The beautiful Maltese brass gun, saved during the fire by Capt. Davis, is exhibited to the visiturs in the Queen Elizabeth's armoury the prison of Sir Walter Raleigh. The whole of the large cannon forming the "train of artillery" are also placed in prominent positions in the rains, for the inspection of the public.
The !ate Forgery of Exchequer Bills.-The abrupt termination of the proceedings at the trial of Mr. Beaumont Smith on Saturday, given under our Law intelligence, and the release of Mr. Rapallo, appear to have created some to openly in court by the important disclusures alluded to openly in Court by the lawfers, previously to the committai of the latter gentleman for trial, will now, it is eods of justice may be defeated. The trial had been woked forward to with deep interest; and there seems to have been a prevalent expectation that other and more impportant names than those of Mr. Smati or Mr. Rapailo woild have been brouglit befure the public in connexion with the proceedings. It is bowever thought that further investigations must take place, and fresh parties be brought to thal, tu relieve the public ansiety wih respect \(t\), this
affir. In the mean trme, thas trial being at an end the aftir. In the mean thase, this trial being at an end, the
nesi step lochici to is the decision of the Icurds of the Trelsury with the impounded bills, detained by the Comp-trolier-General. There is one circumstance which appear to be regrarded as favourable to the innocent holders of these bills, which is, that a considerable amount was paid in spuriuus paper by subseribers to the funding who have sold their scrip. These parties were called upon to replace the spurious bills with genuine paper, or to return
with either demand. and it thus falis upon the offier- as the Crown to compel these parties to do as thay have bee required. or othersise, it is thought, they mint lase di-

Darkines of the Metr, pulitan Roarls.-On siturday a meeting was beld at Kensington on the suiject of the ingit-
ing of the roads in that parish. No resolutions of coning of the roads in that parish. No resolutions of con-
sequence were adopted, but daring the meeting a letter was read from the Secretary of the Metropolis Roads Comthe lighting by that commission, and dectining a confer: rence with the vestry on that subject wheh had been asked. The statement of the Secretary was that 6 montis ago the commissioners gave notice to the parish of Kensington, that the great diminution of the toll revenues occasioned by the tratfic on the railways remdered it impracticable for the commissioners to contmue the lignoun2 of the roads, and that they must cease to light so sown is the parishes had time to make such arratgements for lighting as they night deem expedient; that atter a lay et of nearly four months, no notice being taken of this letter, the commissioners gave a further notice that tivey must cease to light on the 2?th sept, when their emtrat with the gas company would expire; but that they would render every facility to the parishes, anu would leave \(t h, r\) amps and fittings for their use, without requirnis diby stances similar to Kensington, have exercised the fowers for that purpose vested in ali parishes, and huse tahen measures for lighting and thanked the commisstoners thet their liberality; and that until now no request fur an in. terview has been made on the part of kensingtun. cessity alone caused the resolution of the cond and same necessity still exists. The com missioners have no power to ralse funds for lightung Which the parish has; they are therefore conprodet in abide by their resolution, and fee that a cons result.
Metrupalitan Improveme'sts.-The Commis-ivars of Wo.sds and Furests have given notice of ther intention the waterculy to Parliament for leare tons from the Serpertime River to the Thames. This alteration is to be made it order to form the proposed road from Kaightsorsure to Bayswater, which will pass over what is termed the green of Kensington Palace, and which, it is though, wh green of Kensington Palace, and which, the thation are also expected to take place in the Patace-gardens it consequence of these improvements.-At a meeting of the
Court of Common Cuuncil on Thursday, Ir. R. L. Jones, the chairman of the London Bridge Committee brought up the report on the plan by Mr. Galloway, for the construction of and for avoiding a joint-stock company, the means of carrying it into effiecr The report stated that the committee had examiued nit comes, but as they were of opinion that objectionable in principle, they lidnct examined the plan. They, bowes, the report of a committee of the House of com. 1828 , as to the paramount importance of improving the access between Holborn and Nerrgate-street, the them to open a communication with Guvernment, as to the be: means of giving effect to the reconmeanh imrrove committee in respect of this and other publio arred to mr a dailed in their report. The report was reco Mr. Anderton moved the adoption of the Houses of Parla mending that petitions be sent to bor the prevention if ment, praying or some increasing in the Metrop his, is consequence of the gren increase of steam in 山йвut tories. He urged the necessity of gaining the co op er tion of all the great mannfacturing town the \(1^{\text {rip }}\) r:t: ? tran extensibely used, of in London. The report was agreed to unanimously, as want the suzcestion of Mr. Anderton emboctie: in a resom: Rizht of Wruy throuth St. John's II an lemen it port of the Cummitce was brought up for cemainata recommending that the gates leadiag tu a fort the phivithe cemetery should be forthine service, in consequence except during the hours of to the minister of st . Jehn Wond Chapel and Cemetery. Mr. Cuchrane and Mr Biers stated that the closing of the path was the foopat ceasary, owing to great damage being done to the fond from
the ladies' pattens, and owing to the misconduct of persors jassing through in covering the graves with oyster-shells,
asiaes, and other rubbish. It was urged by other gentlemen that the vestry had no power to shut up the footpath, or to interfere in any way with the privileges of the public. It was suggested that persons with barrows, or other loads, motion being put, the confircation was declared to be carried; and on a disision, which was called for, there appeared for the confirmation of the report, 22 ; for its rejection 14 : majority for closing the path. hidum in Suhtrark, for the purpose of taking into considievation the chatess prevaing in the country, and the proprit' y of idulressing her Majesty on the subject, when attendul. The High Balltf took the chair, and, the requiSinum cailing the natetius hasing been read, Mr. B. Wood, to ise present there that day as one of the representatives of the bcoutugh in Parlament ; but having to ar tend a meeting in the City for the support of a charitable institution, dress to her Majesty be determiued on, he, as one of the members, would perform the duty of presenting it. At the
same time, he understood that a petition to the House of Commons was also to be proposed. If requested to present that, he should be most happy to do so: but as he did not Know the nature of the petition, he could not at that mon:ent engage to support it if called upon to do so. A me-
chanic, of the name of Blackmore, then addressed the meeting at some length, and concluded by proposing the following resolution:-"That it is the opinion of this meeting, that the distress under which this country labours to be attributed to class legislation, as evinced in the restrictive laws which make food dear and employment scarce. This resolution was carried unanimously ; after finally an Address to her Majesty was read and carried and it was resolved that the High Bailiff be requested to sentation to her Majesty. A petition to Parliament on tiee same subject was then proposed, which it was moved that the members fur the borough be requested to supnot support the petition in his place in Parliament, and wished to give his reasons for so refusing bis mediately assailed with loud cries of disapprobation, and a
scene of much confusion ensued. The muti n bowever was ultimately withdrawn.-On Tuesday was held the halfCenrly neeting of the proprietors of the Grand Junction Callal Company. Trom the report of the Managing Comnet tonnages for the half-year ending the 30th June amounted to \(56,9271.13 \mathrm{~s} .11 \mathrm{~d}\), being 711 l .16 s . 10d. less than the previous six months: this denciency was occadecreasi the serere frost last Jan. and Feb. Which, besides ine-brenhins of nearly \(1,00 c l\). Last Aug. the London and Eirminglam Rallway Company completed their experitism at Tring into the canal summit lesel, the result of Wheh is to be brought before the arbitrator. The Comin fficordinary expenses of the canal by the discharge of number of the Cons, and by substituting as lock-keepers a still mork as mechanics, without extru wages; and by an alteration in the system of dredging, the annual payments for labour, lock heepers, and dredging have diminished to the workhops and sturehouses at fourteen different parts making on the expected to tffect a saving of \(\dot{s}_{s}, 000\). a-year, nary expenses of about 10,000 o. annually. Under these prospects a dividend of \(3 \%\). 10 s . per share was recommended. 13s. \(1 \mathrm{ld} . ;\) single boats, 7041 . 4 s ; \(;\) wharfage, \& \(\mathrm{cc}, 2251\). 1s. \(3 \mathrm{a}_{0}\); rents to Midsummer, 5,806 . 8 s . 4 d . ; casua receipts, \(869 \% .0 \mathrm{~s} .2 \mathrm{~d}\). ; making a total of \(64,5321.19 \mathrm{~s} .10 \mathrm{~d}\). 14s. 5 d . leaving a balance of \(41,045 \mathrm{l}\). 5 s . 5 d . Fires.-On Monday night the andience in the Surrey building wase thrown into great alarm by a report that the mainated in a kind of "rubbish well," belonging to the theatre, which is situate immediately above the top of the gallery, aad in which a number of painters had been enmazat in conipleting a diutama for the Chistmas panto\(\tau 3\) the gatcors auditory, was on fre, and the flames were ratidy decending to the rouf. Engines were at once sent Caqu! fut fircunately before their arrival the fire bas subpers n ia the gallery throwing a lighted cigar among the first iarm being gisias; but it does not appear that ans 3) the thestre. - On Tuesdy a fire brotise out in Tume sputee-i, whane. Corahll. The engines were soon on the nut until considerable damage had been done to the build ing.-A serious fire has occurred at the saw-mills of

Messrs. Crampon and Coo, situate in New North-street,
Finsbury. It was first discovered in the machine Finsbury. It was first discovered in the machine-room,
sparks having been observed to issue through the roof. The flames extended rapidly, and fears were at one time enter tained for the adjacent buildings; but ultimately the fire had taken place estimated at between 2,0001 , and 3.0001 .- On Tuesday night a fire broke out in the steam saw-mills belonging to Messrs. Greenwood and Company, in Chapel street, Curtain-road. The engines were immediately sent
but, in consequence of the combustible nature of the property on the premises, the flames gained a rapid ascend ency, and were not got under for several hours, by which
time great damage had been sustained. A serious accident accuried durng the fire, by which a man who was assisting the tiremen had both his arms severely fractured, and was emoved in a danyerous atate to the I.ondon Hospital.
Mortality in the Metrunolis.-The following is the number of deaths from all canses registered in the wee ending Saturday, Nor. \(27:\) Males, 451 ; Females, 442 Rich average 1 a3-9-4, -Males, 10 ; Femates, ment that it is in conene for some bee from this park. It appears however that there is no foundation for them; that the regulations of the park ar he same, and are intended to remain the same, as hereto fore; and that there is nothing to justify any report to th contrary. With respect, however, to recent complaints that some of the gates leading into the park are no thrown open to the public, the cause for this restriction is private property, over which the Crown has no control.

\section*{誏robincial Nebs}

The weather still continues unpromising, and from all parts of the provinces accounts have been received of the serious effects arising from the floods. All field labours appear to be generally suspended; and in Hertfordshire
Essex, Norfolk, Lincolnshire Berkshire, Yorkshire, and the lowland counties, entire villages are under water from two to four feet deep. Numerous haystacks, corn-ricks, and even cottages have been washed down, and severa fiocks of sheep have been swept away. In many parts, the lands have the appearance of a large lake, as the hedge or embankments are either washed down or covered with water The villages on the banks of the Thames are com pletely inundated, particularly near Maidenhead, Eton Windsor, Chertsey, Staines, \&c., where many of th dwellings are from two feet to three feet under water
The overflow of the Grand Junction Canal, near Watford The overflow of the Grand Junction Canal, near Watford sive lake ; and in the vicinity of Maldon, Ware, and Berk hamstead, the country is also overflowed. Considerable damage from the same canse has likewise been done in the levels and lowlands of Susser. At Carshalton, Surrey, and the immediate neighbourhood, the kitchens and cellar: of the houses are under water. About Putney, Batternea, and 17 andsworth, whole tracks of land are inundated; in the neighbourhood of Weybridge, and other more western parts of Surrey, the floods have been equally, Greenford
From Brook-green, towards Acton, Ealing. Grent Perrivale, and on to Cabridge and the eastern parts o Buckinghamshire, whole fields are under mater. In cunsequence of the inundated state of the country, the mail in the early part of the week were se:eral hours later than usual. Several deaths from drowning have also cocurred in consequence. Two men lust their lives at Caversham, Reading ir Maidenheadr; and a nian was mbanknuen near that town, unconscious that a purtion had been washed away. Several other similar cases are reported from different parts of the country.

Berucick-upor-Tuecd.-The banking-house of Messrs. Batson, Berry, and Co., of this town, suspended payment on Monday. This failare is regarded as one of great im portance in this part of the conntry; an extensive bana II essrs. Batson and Co having been the only one in the place, with the exception of the branch of a joint-stoc. concern recently established. It is generally feared that most persons here, engaged in business pursuits, will suffer loss by it
Bridyenorth.-Anaddress has been presented to Lord Palmerston, who has been staying a short time at Loord Leveson's in this neighbourhood, expressing the obligations which the inhabitants of this town feel themselves under to his Lordship and his late colleagues "for thei efforts in support of civil and religious doerty, and ins
their late arduous but unsuccessfal attempt to ext nd the commerce and improve the resources of this nation by commerce and improve into effect, would hare laid the foundation for commercial freedum, and brought into ope ration those elements of wealth, prusperity, and happi ness, wbich are at present oppressed by monopoly. A the sama time, they expressed a hope that the time may speedry arrive when it may please her hajesty wor whic they felt satisfied wouil 1 ever, in their hands, be exercised for the beneft of the conmunity, and for the prumisiua in rentr erpressed his gratification at the hu:our cione hima and thinked them for so flattering an expression of tieir approjation and confidence. "It had," he said, atways ractical applicstion those primetiples of civil and re agious liberty whoh are fomded upun natural justice and which are eminently corntreive to the happiness and well-being of mankind, and he trusted that their endea-
voars in this respect had not been fruitless, although, for a time, a combination of monopolists had prevailed, and
private interests triumphed over public good. The vic
tory so achieved would, however, be short-lived. Reason would in the end prove stronger than prejudice, and the treat interests of the community must finally overrule the resistance of the few. "No Administration or Pariement," concluded the noble Lord, "would long be able to maintain in force a system of commercial legislation which has long been exploded in theory, and which has been found deeply injarious in practice.?
Brighton.-An inquest has been held in this town on the Hon. Anve Luey Fortescue, a maiden lady, aged 77 Who was barnt to death. It appeared, from the evidence of deceased's maid, that on the morning of the 23 d ult. there was a fire, when shurily atere si.e uro atrmed by a noise. and on going to wer mo-tses- sive fount her in the middle os the room enselopad in flame Ti.ree of the other sers onts came the her asstarece, and they at lensth
 after in consequence. There was a ward in the romm but not betore the fire. ner ation we.n what rlaced gomn to warm. The jury returned a berdhet of \({ }^{\circ}\) Accidertal death,"- Miss Adeldude hemble mate her first apHall was crowded, and numbers were unable to gain ad missicn. Mics Kemble's performance appened to be general natisfaction. End she was loudly applauded by very fashionable audience. Miss kemble, it is slated, is engaged with Miss Rainfurth to sing at another concert at the Town-hall on Monday
Bury.-An oat-stack belonging to Mr. George Baldry, of Lidgate, was set on fire on Sunday erenirg, and entirel destroyed. A man named Lamprell has been committe Comination on saspicion of being the incendiar Chine gales of win blown down which had been phanted in Pembrele College garden by Fishop Ridley more than \(3 y^{-1}\) years ago. Great quantitics of rain fell during the early part of the week Which caused the Cam to be much 8 wollen; and the accounts from the Fens, owing to the continued wet, are of a cheerless description.
Chelmsford.-A few nights since a serious fire broke Fut in a barn belonging to Mr. Salmon, it Great Clacton Farm, in this county, which soon comminieated to the after angs ; and thouga the - - 15 arr.id barm, which was full of wheat, the stables, and onthouses, together with a whent a harles, and a clorer stack, were destroyed. The damage amounts to about 400\%. It is supposed to have been the act of an incendiary, as soon after the fire the superintendent of police discovered the believed to be those of the suspected party, and having dur up the earth mnnening tham, he spectren he impres
sions in a bax. A w.man nan. wards apprehended, whin it wis fond ter stin corre sponded with the marks, and other :trang critenne being addlaced against her. slee was remanded fors fartber exami nation. She is, however, supyosed to be meane.-A sinwlich bave preaniled in this enmeng. A mhent-stack, of about Lithe potin l-? . which ha! been placed on a nine stone frame, was lifted up by the wind, and carried a disa shenf being misplacid; it nuw statis as yerpendicular as when 1 laced on the stwn:
Chal enham.-We noticed in our last some particalars postmaster cf this toxn. It arpears that the day after the
 ment, thas found to be missing ; and fears being enterdespatched had destroyed hood was dragged, and a bill describing his persou wa issured the fullowing morning. Hie has since, however, returned home, but the canse of his sudden disqppearance does not anfear to be known. as no charge of a criminal hatare exin's acainst hisa. The amcunt of embezzlement altogether a:rributed to Mr. Wall, the postaraster, is se renteen shillings.
Deal.-A mongst the deposits made with the clerk , the peace for this county, it conformity with the standing
orders of Parliament, is one of the 30 th ult., consisting of a series of plans for the construction of a harbour of re tuge up in the (inodsin-sinds theratelves, tronat to be has been astert ined, by sumathes at bow water to vary
 rav," in minch the aver. ze del th of rater is about tmenty fre feet. The pro, coed lighthouse, as determined upo the north Cae? er-hend of the Goodwin, in a direct line
 harbous of rekze. The \(1: 0\) when brycher in series of caissons upon the same princinle as the propose
foundation of the lighthouse, to which we have before ferred, and for which, in connexion generally with the formation of foundations under wator. a patent has been
 that it will be among the most use ti! vani na! momuxue t in the country; the proposed size bengrantita as tee of weather on the sjuthern and eastem conss. Tte caisson for the linethouse, which the late equinoctial gales
and heary weather prevented from being placed on the
destined site, is now on a slip in the Admiralty-yard in destined site
permit, it will be launcled and convesed to the north commenced. The delay that has taken place is looked apon, under all c'reumstances, as fortunate, because the minter weather has been avoided, and the whole of the date and settle before it be exposed to the force of the atumnal gales.
Derby. -A few tights since the fine mansion of Hatherfire. Mr. Shattleworth, the proprietor, was from bome, and the servants had retired to rest, when they were
aroused, shortly after midnight, by cries of fire. The discovery was made by a neighbo
who saw a blaze in the servants' hall; and an alarm being given, prompt assistance was afforded, and the fire was apartment. It is thought that but for this early discovery the whole mansion would bave been destroyed, and than of the hall being built of oak, which,

\section*{ome time resisted the fiames.}

Decizes.-On Saturday the village of Urchfort, near his town, was much excited by a report that a young man, named Daniel New, the :on of a respectable pei:on actimg as deputy-steward to the trastees of the late Mr. Watson Taylor, and renting about 100 acres of the estate. Stokes belonged to the gipsy tribe, and bad only lately been dis on the dar in question bad heen present at sparrow shooting match in the neighbourhood, atter which they visited several public-houses and drank a guantity of beer It does not appear that they had quarrell-d, bat on Ners' proposing to go to some other public-house and have more
beer, Stokes refused, saying they had better so bome, and eulted the latter said if he did not return he would shoot him, and immediately presented his gun at him, not being above sir or seven yards distant, and shot him in the site as he was turning round. The arm received a large part of the charge, and this, it is thought, prevented the wound sud bise since been committed to prison, where he wil and has since been committed to prison, where he will Exeter.-The recent weather has caused a general rising of the waters in all parts of this county. A melancholy accident, arising from this cause, took place a few rights since at Coleford, near Crediton, the particulars of Which are as follows :-The Rev. H. A. Hughes, of Zeal Monachorum, with his wife, son, and servant, were proceeding home in an open carriage, bat the rising of the swept away by the force of the torrent, and the whole party, with the exception of the gentleman himself, were spaired of, in consequenee of the strock he has received Henley.-On Saturday a fatal accident, resulting from thie frequent and reprehensible practice of playing with fire-arms, occurred in this town. A young man, in the employment of Mr. Young, surgeon, Bell-street, had a double-barrelled gun given him by his master, who had previnusly discharged one barrel, leaving the other loaded. The young man, imagining that it was not loaded, went into the kitchen, and proposed to the cook to frighten the honsemaid when she came in by discharging a percussion
cap which he obtained there. He accordingly did so, and as the girl entered the room he levelled the gun at her, and the whole of the contents entered the back part of her head. She expired in about 20 minutes. A coroner's inquest was held, when a verdict of "Accidental death" was retarned.

Hull.-On Monday, a public meeting, convened by the mayor, on a requisition signed by about 200 electors of of laking into consideration The propriets the purpuse Parliament a.. the present defective state of of petitioning ation of this hinghim in the How-e of Conmons, with a ation ef th:s hinghas in the llowe of Conmons, with a
view to it- amendment. The hall was dersely crowded. A Mr. Jachsun thaving be en corled to the chair, as a :ub-

 he cou'd mot fadd worts selergis.te to expross the teeinge Which tie entertamed howards the :a aypror for the pushimio
 After a hong a.d excomg aniriss, whidh mas thantitu maiy. applauded throughout, the rpe tker concluded by propusing two reswhtons to the effeet, first, ." That in conse-
quence of the entire :dibure of the si-eall d Feform Bull. and the defective itare of the representation in the Como mons Hoase of Parliantat, an urghicic ciange became ne-
cessary. or the ccuntry au-i uhamater be it

 ayed ill and upards, a is the viles of all mate subiscts perty, ather in the roters or in the mewbers." These ssid te a prored cordially of the rrinempes embodied in the revolution, trincipes which must have been long since carried into efirct in ths country, if it had not been for the wicked olstinacy, The speaker was here called to of the Chartist of great uproar and confusion ensued, which landed some time. When order had been restored, a petition was sead,
frunded on the abince resolutions, and beiog put together with the resolutions to the me eling, they were understood
to be carried, but the tumult was so great that the latter part of the proceedings nas conducted in dumb shom.
Lancasler.-A burglary was committed on Saturda
off. Four parties were apprehended on suspicion, who are who have long infested the neighbourhood, and been imprisoned repeatedly for various terms. An inquest was evering. im the hamse of Mr. J. Cottam, of Fence Foot, in
li.e fombinp if Myercongh, which mas broken into and entered by six or seven men, who proceeded to use great violnice to Mr. Cottam and his family, and tied them fast and making off with money to the amount of 1001 ., viz.,
and distress at pre pevails a p por and that this is proved by the large and rapidly-into the destitute. The following are the amounts paid in morey and kind in the month of November of each year
from 1839 to 1841 :-Payments in the month of November \(1839,938 l\). 8s.; ditto \(1840,1,015 l .14 s\). \(4 d\). ; ditto per cent. in the present year bey"nd the relief given in the
corresponding month of 1839 . It is added, that during the past month the applications for relief have been more numerous and urgent than at almost any former period sod that the pressure bas been gradually increasing for daring the snmmer, that the overseers had to give employment to fonr times the usual number of able-bodied poor Many of the working-classes are now out of employ, and great number are only partially engaged ; and this having continued for a long time, their resources and credit, to meet the severity of the winter

Oxford.-The approaching election of a Poetry Professor at this University is likely to be severely contested, and has given rise to some conty excited considerable interest, both in.the colleges and with the public generally. The following is the state of the
case:- The candidates for the vacant chair are two, Mr Williams, of Trinity College the author of a Latin prize peem, and two volumes of poetry, chiefly of a religious cast ; the otber is Mr. Garbett, of Brazenose, a gentleman stated by the head of his college, who brings him forward to be deeply versed in the poetry of all ayes and countries, and whose vouchers are a first class, his having filled the office of examining master at the University, and his being appointed to preach the Bampton Lectures. It seems, however, that the former of these gentlemen is a friend of to liave been the author of a celebrated tract on Reserve in the Communication of Religious Knowledge, which ap peared in the "Tracts for the Times," and is charged with the same tendencies as the writings of that divine. Hence a strong opposition has been raised against bis return, and the election, which is looked forward to with considerable interest, is expected to be vigorously and

Reading.-A fatal accident occorred a few days ago during the heavy floods to Mr. Shepherd, pound-keeper at Whitchurch pound-lock. It appears be left his house in a small punt to go as far as the water reached up the road near the Ferry-bost public-house, where he landed, and after obtaining what he wanted again retarned, but on passing some trees a little above the bridge, his boat, in consequence of the strength of the stream, struck against one of them, and immediately turned over and went down. He was carried down below the bridge, and grasped a bough of a tree overhanging the river, but it broke with his weight, and he was drowned. His wife, it is said, witnessed the accident, which was also seen by several persons on the bridge, but, from the perilous state of the stream and no other boat being at hand, it was impossible to render him any assistance.

Rochester.-A competition took place last week for the situation of organist of the cathedral in this city, vacant by the demise of Mr. Ralph Banks. Professor Walmisley, of Cambridge, was chosen by the dean and chapter to determine the merits of the various candidates; and after a rigid contest, before a numerous audience. Mr. Hopkins, of Westminster Aubey, was the successful competitor. Serenoaks.-Mr. Buoth, the vestry-clerk of Sundridge, had an andience on Wecmesday, by appointment, with the Puor-law Commissiuners, when he strongly insisted upon the mquary being resumed relative to the Sevenoaks union, noticed in our last, on the gr und of the abrupt termination of the investigation, and the partal manner in which the ingury had been conducted. In reply the commis siwners stated that they had oot yet received Mr. Tuffnell's rejort, ami therefure they could not be expected to give an answer at present. but they would lose no time, when once they received that renort, in taking the subject into cuasde:ation.
s. Heteri's.-A murder, which has produced great es eitement in this ! lace and neighbourhood, was committed on Suncay on a respectable farmer, Mr. Henry Gravson who resided at Raintord, about two miles from this town It seems that on Saturdar, it being market-day, he had come here it is thow het, Ead a considerabie sum of money on his per sen when be set out for bome. He wa= obserred after mid niztit applying for admittance at the King's Head public. huse, but was not seen after, until found at a place called Denton's Green by a man who saw him lging in the highWay, and supposed him to be asleep or intoxicated. Liftisg him up, however, be found that he was dead, with marks of greit violence on lis body. No money was found uponhid person, and his trousers' pocket was cut
held on Tuesday, when, after a lengthened inquiry, the best answered by an adjournment, and be accordingly ad journed the inquest until Tuesdar neat.
Suttor.-About three weehs aqo we mentioned two at. tempts to set five to some farm buildngs at SuttoninAslitieli. A fex rights suce it was discravered that the
 gines were soon on the spot, and rendered effectual assistance ; notwithstanding which, however, three valuable Wheat stacks, one oat and one straw stack, were con-
sumed, and a seed stack much damaged. The loss is entimated at about 300l. This, it seems, is the third time Walsall. An Mr. Chambers's stacks have been fired. named Adams, residing near the Windmill, was murdered by a party of burglars a ferm nights since. Deceased, it supposed the attempt on his lite was induced by the tis cumstance of his laving collected his rents a day or two before. The robbers effected an entrance to his houso made having disturbed him, he made a determined resistance. A woman living in the adjoining premises beard the noise and saw the men, and by calling out to them,
caused them to run off, leaving deceased so much injured by their violence that he died the following day. They were, it appears, disappointed of the expected buoty, dethe previous day. A person named Johns has been taken into custody on suspicion, having upon his person or fremises a pistol correspon
ers had left behind them

York.-At the last weekly meeting of the board of guardians of the Poor-law union in this city, the attendance was much more numerous than usual, owing to its
being generally known that the question respecting the erection of a new workhouse would come under consideration. After some preliminary business, Mr. Tuke mored the adoption of the report of the committee appointed to that the consideration of the best means tur carrsing it into effect be deferred till the 24th Feb . to altom the board an opportunity of knowing the intentions of Goernment in regard to the New Poorlaw. Mr. Bell the proposition for building a new workhouse until the board of guardians should have secured to them by law the right of administering relief 'at their own discretion, without the interference of the Poor-law Commissioners. After an animated discussion the amendment was carricd by a large majority.
Railecays.-Many of the railroads have suffered greatly rom the inundations, particularly in the Eastern and Weat ern counties, the embatikments in some places being The inhabitants of Corsham were alarmed on Monday evening by a report that the Great Western Railway station in th but on inquiry this was found to be incorrect. It seems, however, that on that evening, in consequence of the
quantity of rain, the water began to rise in the cutting, and belore many hours the line presented one sheet of water extending nearly a mile in length, and more resembling a canal than a railway. Every precaution was taken to ensure the safety of the trains. When the waters had abated, men were employed to remove the timber which the stream had carried down, while an engine continned to ply till a late hour, to leep the rails clear,-and fortunately no accident of any kind resulted. - On Monday a slip of earth occurred on the line of the Gosport Branch Railway, which detained the trains some time, and in consequence of the wetness of the season, and the dangerous state of the soil, the directors have resolna in wise the running of the trans from Gosport to Brangstoke for the present. -The f.llowing is a calculation of the last weekly returns of 34 rallways, 1,232 males in length, gisen in the Raturay Magazine:-Number of pisengers on \(21)\) railways, \(160,97 \mathrm{i}\), consequently the total for the week must be abore f(u0,000. The accerprs for passengers on 34 railways, \(47,514 l\). \(1 s\). Ild.; ditto or goods on to rall

 a year, and carryn.g \(15,600.604)^{\text {a-seng }}\) -

\section*{IRELAND.}

Dublin.-Addresses of congratulation continue to be forwarded from all parts of the country to his Excellency the Lord Lieutenant. Two have be in preserted fromp tan counties of Wicklow and Armagh shice cher ast: and in Saturday the feryied a number dignitary. accompanitd a number of the gethetr address. His Excellency lating reptied to it in the u-ut terms, concluded by sasing: "When I am aduressed in terms so encouraging as thuse wirch you hase presented to naio when I find mien of every different c.azs and persuaserauniting in offering me assurances of their bearrs of policy which shall be, as you have expressed it, just, imparial conciliating, set firm, may be attended with a triumphiath result." - It is said to be the inteution of Goveramen of for regard to the stipendiary magistrates to bave . The num"
ber of paymasters of the constabulary will be reduced，as
well as the staff of the stipendiaries；and when consolida－ tion in paymasterelups can take place，such as in Cork， stood to be the intention of Government to reform the entire system of the administration of the Poor－law：in
tbis country，and that lienceformard the business will be transacted in Somerset－house under the direct control of the Royal Dublin Society，through Lord Eliot，that the been restored，and will，as usual，form part of the Irish was held on Monday．A letter was received from the mate a gross sum of 2841 ．subscribed by the Repealers in Lord Mayor said that the repeal wardens of Lirerpool were entitled to the thanks of this association，particulariy as many of the Irish wardens had neglected their duty． in this city，and gave a melancholy account of the distress be witnessed．He said all that was under the manage－ ment of the guardians was welt managed，but anythrog
that was under the control of the Poor－law Commissioners that was under the control of the Poor－law Commissioners
was as ill conducted as all their business has been since their estabiishment．He also drew attention to the designs of What he termed a body of schemers who were trying to induce the people to emigrate to Jamaica and Texas，and
advised those who wished to seek for relitf by emigrating not to think of going to Texas．Mr．O＇Connell then said， that an ill－conditioned and ill－tempered article appeared in the Morning Chronicle of Saturday，Which would not
recommend that paper to the Catholic people of Ireland． It neered at what is called popery，which that paper
charged him with a desire to refive．He confessed that， charged him with a desire to rerive．He confessed that，
as a sincere Catholic，he wished for the extension of that as a sincere Catholic，he wished for the extension of that
religion which he believed to be right．He then proceeded to read the article at length，commenting on each passage as he went along．As to that which referred to the Ca－ Reformation was established in England，in Sweden，in Denmark，and other countries，by the vilest and most sanguinary persecutions．Three times since the Reforma－ never persecuted any religion，and it displayed gross igno－ rance on the part of the Morning Chronicle to signify that they did．His Lordship concluded a long speech on
the subject of the Regent of Spain and the Morning Chronicle，by calling that personage a villain and a mon－ ster，and declaring that，if the Chronicle put it forward as a Whig doctrine that the state should lave dominion over
the Charch，it would do anything but excite sympathy for that party in Ireland．He did not want the Church to gent to have it subject to the State．His Lurdship also spoke at sorne length，and with considerable energy，in
condemnation of the present pulicy pursued in this coun－ try；and，when he concluded，announced the week＇s rent for the past week to be \(10 \%\) ．15s．8d．－The Court of Queen＇s Bench on Tuesday，in giving judgment
in a registry case which had been argued the previous day， decided that no person was legally entitled to his freedom unless at the time of the claimant＇s birth his father had been a freeman．This decision，it appears，is fatal men．
Down．－A serious outrage has recently taken place in this county；involving an attempt to assassinate the pro－
prietors of a town－land，their agent，and the police that were called to their protection－the burning of property minder seizure for rent－the driving off live stock，also
distrained－and the sounding an alarm，by firing musketry and blowing horns to rouse the inhabitants of the neigh－ bourhood．These lawless proceedings took place on the 2 2th alt．in the town－land of Shanrod，and parish of Gar－ raghy，on the farm of a man named Brown，whose goods had been distrained for rent．\(A\) meeting of the land－ holders of the county has been held in Downpatrick，the Marquis of Downshire presiding，when resolutions were adopted denouncing the spirit of lawlessness thus exbi－ of the and offering rewards of 300\％．for the apprehension great excitement，as it was apprehended that a general spirit of resistance prevailed amongst the peasantry， Wacked meath．－On Saturday night a number of men at tacked a farm－house at Rahenose，in the barony of Far－ charge of the premises．A scu⿴囗十⺝刂 ensued，and one of the robbers received some wounds from a dagger，with which poiice being made aequainted with the circumstance，pur－ surd，and succeeded in cal turing six of them．－four of Whom were identified，and ha．e been committed to take
their trial．－On the 22.1 ult．a man namped \(O\) wen Martin， of Glascorn，was committed to jail for burning bis own hwearing the act to have been it withe the determination of some tinae hefore served him with notice to quit．From plare， place，and，atter investigating the matter，sufficient evi－ both Martin and his wife to jail to take their trial．
Tipperary．－A murder has been committed by some whanunn assassins on a man named Michael Fennelly， Who resided in the parish of Ballygriffen，in the upper part of this counity．Government hive oftered a reward of 1000 ．for the appreficuivion of the memberem．

Edinburgh．－On Sunday one of those large blocks of period from Salishury Craigs arid fived themselves on the sloping bank under the＂Radical Road，＂was loosened valley immediately opposite Brown－street．The quantity of rock detached was about four yards square，and broke
into several parts in its progress．Two or three indivi－ duals walking on the margin of the meadow saved them－ seives by running；but a sheep grazing on the bank was
cut in two by it．As there are many such boulders in the same dangerous situation，it has been suggested that arti－
ficial means should be emploved to ren．ose them． Glasgov．－There is at present a strike amongst the shoemakers of this city，which has continued for the last number ofth；the consequence of which is，that a great of want and distress．
Pentland Frith．－A few days since three of the Stroma pilots and one of their sons lost their lives in the Frith，in Sheriff＇s warvant，to appear at Buswick，South Ronaldshay， to give evidence in an investigation at present going on
before the Sheriff of Orkney．They left Stroma early in before the Sheriff of Orkney．They left Stroma early in
the morning，the weather at the time being favourable，but a good deal of sea running in the Frith，although it could not be perceived from the island．When near South Ro about a mile from the shore，a sea filled the boat，which immediately swamped，and the forr men were drowned The accident was ritnessed by persons on the shore，but it was impossible to render them assistance．

\section*{stiserllaneous．}

The Niger Expedition．－By the Horatio transport arrived from St．Helena and the coast of Africa，we have Ist Oct．The Horatio has brought home several officers who had been invalided，and had come down the river in the Soudan steamer；and from their accounts the morta he expedition are represe oflicers and men composing ready died，and almost all were ill and unable to do duty． On board the \(W^{\text {rillherforce，out of the European portion of }}\) the crew of about in men，not more than four or five wer able to attend to their duty；the others were all laid up；and they，were nearly in the same state on board the Allert． the confluence of the Niger and Tchadda，about 270 miles op the river；but it was feared that，from the reduced condition of the force in consequence of the sickness and increasing mortality among the officers and men，it would slow progress in sycending the river．The current of the speed of the steamers is six miles；consequently their pro－ gress is not more than two milles and a hall per hour．The Albert was to proceed up the Niger，and the 1 ＇ilberforce
up the Tchadda，while the Amelia schooner was to remuin at Mount Stirling，where a farm is to be established，and where the tent lately used at the Eglintoun tournament has already been pitched．The natives are described ds being very friendly．At Eboe，a town containing 3,000 or the natives crowding to see then offers we Queen＇s palace they were receired by her sable Majesty，who whs seated on the ground at the door，surrounded by ber ladies，the principal of whom were decorated with hears ivory anklets， weighing from eight to ten pounds each．They seemed much pleased with the risit，and laughed immon the and in return for some little trinkets given them by the
officers，ber Majesty presented them with a fowl and some Gooza nuts，the bestowal of which，it seems，is considered bighly complimentary there．The King of Eboe weat on board the Wilberforce，accompanied by his son and the in－ terpreter，and others of his suite．A bottle of port wine was placed before him，which he did not pass round to any of his attendants，but drank it all h：mself，and then gave a broad bint．which however was not taken，for some grog． The King of Attah was more dignified，and upon the Com－ missioners waiting upon him he told them that be was per－ fectly aware that they were the subjects of a sovereign to whom they paid every respect，and he should expect the same respect paid to him．He should not go on board，
because be considered he was entilled to as much attention as their own sovereizn．He sid they night have the com－ mand of the water．but he had trie comarnac of tue land． He looked witls perfect indifference on the valnabse pre－ struck with the spectacies word by the chaplain，and glady accepted several pairs that were given hmm．He，as well as the King of Euoe，entered whing！y into all te， that their subucts thould he instructed．Fie sold them the land at Mount Stiring，where they interd to establish the settlement，which he said，was just within the extent of his deminions．
iie Prince of Wales．－Our Home Nems contains the announcement of tae Gazette that the in＂ant Prince has been created Priace of Waks．Fourscore years having eidpsed since a similar creation，several accounts have
goue forth，and have been read with interest，respecting the honours，dignities，and privileges which belong by law， or are usually conferred by pateut，ufon the heir－apparent
to the British Throne；and amongst otbers，it bas been said that His Royal Highness is from his birth a consti－ tuent part of the Order of the Garter．Wis statement appears to be well founded，for the Black Prince having been one of its founders，was as much o constituent part
tatute each successive Prince of Wales has been ing lo manner a constituent part of the institution．From the institution of the order，however，to a comparatively recent period，the Princes of Wales have been usuall elected like other Companions ；some of the statutes con templating their election，and making provision for that ceremony．The difficulty which at present therefore ap－
pears to exist，is in reconciling the Prince＇s position with the existing state of the Order，as there is no vacant Garter． Scotch Tilles of the Prince of Wales．－As the de scendant of our imalortal patriot．King Rubert the Brace， of Rothesay，Ee is Prince and Stemarit of Scotland，Duke of Renfrew，and，as such，stands at the head of the roll of the peers of scotland，entitled to exercise all the functions thereto belonging．The title of Duke of Roshesay wat first conferred by Rohert III．upon David，Earl of Car rick，Prince and Steward of Scotland，his eident son， Scone，on the 28 th of April，1：393．This was the first in David fell a rictim to the ambilious riexs of his uncle the Duke of Albany，leaving no issue，his honours were conferred upon James，hing Roberts only surviving son， afterwards James I．of Scotland．From that period the above litles have been vested in the frrt－born son and heir－apparent of the reigning Sovereign，who，from the moment of his birth，or his parent＇s accession to the Throne，b

 of pubilic attention, and been much commented on by the dains a speech which occupied four hours. The plaineif was the When, becoming unfortunate in the trade, she gave it up. The about 401 . a year, to be enjoyed by her upon her attaining the
nge of 25 years. That vent occarred in 1835 , th which time i
was necewary to settl account with the executors ofthe
father. father. Mr. Rosser, being the solicitor of the executors, and hav-
ing previously known the family of the plaintiff, became thence
forth their man Forth their man of business, doing for the family the whole of
what was necessary, without putting them to any expense. At this period Mr. Rosser was married, and 79 years old. In Jan.
1836 he caused an advertisement to be put into the Morning Herald, in whicha a ted by young person. This person was th
 in the nest month the defendant having received some moen mpon the part of the plaintiff, wrote to request that she would call upon him at his house in Red Lion-spuare. Upon her wririval he made a declaratiox to her of ardent passion, and akied is she expostulated with him upon making such 2 proposal so soon after the death of his wife. But he said that hi, the posseosish if her, alie =ins that it he watted untiit the pemad Which "decency" required to elapse between his second marDarbon might form some other connexion or engagement. She answerted that she was not engaged, and received his propossal as
 and attachment for the plaiutifr. In one of these he stated, that
 within the year, he had transfirred 660!. to her name in the \(3 \ddagger\) per cent. Consols, in order that she might be provided for in the
event of his dying before marriage. The letters continued to be of the same character, with one or two exceptions, up to the 15 th
April, when he wrote her one admitting that the claims wlich ahe had on hime were suffient to oblige himn to consummate the uni on, and he accordingly bought a ring and procured a license.
But, although the ring and the license had been procured, the mater called
impropriety of her any logers continuiay to. wrees him to marry settue \(\sigma 0\), a y ear apon her as a conpensation, or \(40 r\), , without a retransfer of the stock; and concluded by saying that he conld
not and would not marry, and that no threats should have any efiect upoun hime He complained of the plaintiffs conduct with sponded and lept catapany; but the learned counsel said, that all
these cliar we were utterly fititious. Having gone through all these particulars, he concladed by calling upon the jury to give
lis client suck compensation as she ceserved for the injury Whict bad been done to her feelings, hersprved for the ind and her happiness. A namber of
case for the plain:
Mr. Thesiger addressed the jury on the part of the defendant,
and began by observing, that a studied endearour had been rade to raise this case to importance in the public estimation. It had the public ruewspapers. Such a case, between such parties, and under such circumstances, had, as be believed, never occurred
before; and he hoped, for the honour of human nature, that it wrourd conthue to be withoor a parallel. On the one side a
foolish, vain old man, thinking that at lis time of life he was
 taushtir - it an \(r\), yormg womgan wishing to take advantage of the weakness of that old gentleman to accomplish her diesigns, had aftected to feel an attachment which it was im-
possible she should feel. The learned counsel then proceeded to exp se what 1.
which , whe

Smith was brought up for trial charged with being implicated in the late forgery of Exchequer-bills. It had becn generally unof a trial, but had resolved to plead guilty; and the rumour apprevious evening the grand jury had heen diseharged, withont aly birs re-pecting Mr. Rapallo having been sent before them
The prisner, who is about 44 years of age, beng placed at the bar, the indictment was read; and being asked by the clerk of
arraigns whether he was guilty or not guilty, he replied, "I arraigns whether he was guilty or not gualy, he reptied a few words. He then, from a written document which he had plaining the circumstances by which he had been led to the perpetration of the crime. This he did not desire, he said, to excuse rencergempes ef that crime, and had not sompht to screenh himself by the atdition of duplicity, or meames- Pecuniary difficulties,
ari-1ur from mi- laeed contidence, and hahihties to a very limited extent, hent mocetht a few humired prunds, although beyond wi.n tempted him to obtain a teml orary relief by the fraudulent
fairicaticn of Excheuner and then to be redeemed and canchlied for ever. He yidded to the temptation, bat wathout obtainue the prumized relief; and, retreat had been prevented. Allured and beguiled by plausibitay, plew bery and c-cape; and, whule Exchec पeri-bill. were obtained to the mall extent hecessary to rulieve him frum his comparatively trifing embarrassments, and he was at that moment in debt
for money actually borrowed from sources unconnected with Exchequer-bills to pay ofr his original cncumbrances. A sordid sacrificed to the objects of others.
Mr. Maron Parke, in passing sentence, "aid,-Edward Beaumont smith, the coarse yon have new pursued in publicly ac-

 deed ; but it is less painful than if I had been conyulled to pas sentence upon you for the same uffence a few years ago; for
then, indeed, it would have been my duty, notwitistandink anystaisur ain an tort mention of your guilt, and notwith-
 tul, but more particn:arly son sin the present occeasion, in having tin pait sentence upon a person of your education, one who has ain ays moved in a respectable station in society, one holding a
situatuon of great trust and confidence; but still more so on the
 which rust arive from it, I feel bound to pronounce uporn you the everest sentence of the law--that or fransportand or life cean only gather from the dethent berctions, hut it is impor sible at once to ascertain the dreadful injuries that have resulted, or must eventually result, from your yielding to a wicked im palse. The general injury which has resutud to commercial transactions-che alarm which has been excited in the puablic
 stances into consideration, I feel that I cannot hold ont the slightest hope of any commutation of the sentence I feel bound to pass upon you. Sentence of transportation for life was then passed on the prisoner. The ieamed counsel retained in the case ther on the one side or the other.
On Tuesday an application was made to the court for the dis Carge of Emest Rapallo, on the groand that no indictreent had Mr. Phillips, the prisoner's counsel, sad that it was very wed understood that there was no intentinn to prosecute Mr. Rapally was quite ata loss to understand apon what ground he was still detained in custody. The recoruer said he must have some
oficial notication beforc he could take apon himself to order the prisoner to be discharged. In strictness the application shoul soner, under the statate, to his discharge. Mr. Manle, solicito to the Treasury, was afterwards sent for into conrt, when he said dictrent or charge azainst Mr. Rapallo. The Recorder asked Crown, Maule said he had no such instructions. Some conversation fol lowed between the Recorder, Mr. Phillins, and the Common Ser geant, as to whether the kecorder wouid be justifed in orderimg consorlted forpeared to have strong donbts. The court having
 made for his detention. This not baviug been made, Mr. Rapallo would be liable to be called upon as a witness should his evi

mendry

All persons who visited last week the exhibition of agricuitural produce under the direction of the Royal Agricultural society mense importance of these gatherings under such immense importance or these gants were perfect; no disorder or confusion was to be remarked among the thousands who jostled each other in the galleries arid pens; nor any inconvenience which skill and foresight could guard against.
It is not, however, for the sake of praising that
which requires no praise from anybody, nor for the sake of criticising the stock, which is out of our province, that we make these observations, but in the hope of drawing attention to the exhibition of vegetable produce, with a siew to its improvement hereafter. 'there were, doubtless, some fine specimens produced on this occasion; for example, long Mangel Wurzel from Mr. Gibbs, of Ampthill, mea*ured \(2 \frac{1}{\mathrm{f} f t}\). in length and \(2^{2} \mathrm{in}\). in circumference; and some Red Glohe Mangel Wurzel, from the same grower. was 3 ft . in circumference. Mr -kirving's improved Swedish Turnip was in one case nearly as large; and there Were specimens from others of a Globe Turnip, weighing 231 bs . ; of (ireen-topped White Carrot (from Lord Ducie) weighing I \(1 \frac{3}{4}\) lbs. ; of Drumhead Cabbage, weighing 25lbs.; of Swedish Turnip (from Mr. Gibbs) weighing 281 bs. ; not to mention other cases. Yitwe were disappointed. There were very few ex-
hibitors, and the majority of these were seedsmen, personally interested in selling the seeds of the roots they produced. There was little variety among the hinds of preduce, Turnips, Mangel Wurzel, and Carro's occupying almost exclusively the few stands that were thus filled. We remarked only one exhibition of Potatoes, by Mr. Chatwin, a salesman from Hunkerford Market; but one Drumhead Cabbage; few Parsneps ; only one sample of Wheat, and but little else among vegetables. Now, upon turning to our last Number, p. ilt, it will at once be seen how inferior this was to the exhibition of agricultural produce of
the little Ley land Agricultural Association in October the little Levland Agricultural Association in October
last, and that is what we regret. The Agricultural Society of England is the greatest and most important assuciation of the hind that has ever been formed; its ma agement is admirable ; and we could wish to see all that it does superior to anything of the same kind done by other agricultural associations.

It may \(b\)-urged, that as the exhibition just closed is the sinithtield club Stow, it is intended only for the exhibition of stock, and that vegetable produce is foreign to its objects. If that be really so, we would take the liberty of suggesting to the council that on a future occasion vegetable produce should be specially included, and that prizes should be offered for it. Were that done, we are persuaded that a very different collection of specimens would be produced.
It cannot be denied, that if it is important to encourage improvement in the breeds of cattle, it is also most desirable to foster all attempts at increasing the quality of their food; this can be done as efficiently in the one case as in the other by the offer of prizes, prorided they are judiciously proposell, distinguishing quality and weight from mere size, and attaching their true value to form and cleanness of growth. In our minds, the best Swedish Turnips exhibited last Week were those from the Duke of Bedford, smallnecked, round-shouldered, even-sided, rat-tailed, true. and regular; and yet they were very far from the largest; but they would have produced 35 tons an acre, and have stood our hardest frosts. Would the new kinds have done more, or as much
At the meeting of the British Association at Plymouth last summer, a paper was circulated enticled Suggestions for experiments on the preservation of Vegetative Flowers in Seeds,' a copy of which we published at \(\left.p j_{1}\right)\). . The subject is in itself of great interest, and acquires some additional claim upon our it. We are glad to state that a committee has been formed who have established a depot of seeds at the Botanic Garden, Oxf. rd, with the view of ascertaining the best methods of preserving seeds, and the different durations of vitality in various species; and a carefu! register will be hept of the results, as well as of any of the experiments which may be made in pursuance
on A inceary.
A great service will, therefore, be couferred by
| sending packets of varions seeds in sufficient quantity for experiment (not less than a pint measure of the Oxford. If these seeds be of old date, the year when gathered, and the circumstances in which they have been preserved, should be stated. Also statements of any retrospective experiments, if carefully made and accurately recorded, will be very acceptable to the committee, and may be sent to the care of Dr. Daubeny. We trust some of our readers will have the means of assisting in this curious investigation.

ON THE SEASON FOR TRANSPLANTING
It is the apinion of most eminent physiologists, with the exception, I believe, of Mr. Knight, that it is by the spongioles, or extreme points of the youngest roots, that ture of these organs, and their liability to injury, it is hardly possible to preserve any considerable quanity of them, even hy the greatest attention and care; and as roots are only produced by the agency of leaves, it fol lows that if the tree had been transplanted after the leaves had fallen, no fresh roots could be formed to supply the place of those destroyed till the buds began to regetate in spring; and consequently a scanty and deficient supply of aqueous sap nould be absorbed by the plant during win ter, a less quantity of the true or elaborated sap would be
dissolved, the buds would be imperfectly nourshed, and would not arquire that size and plumpness in spring, so ure a sign of heaith and vigour. The first emitted leave would be comparatively small; a less breadth of foliage rould be thus exposed to the light, and a less quantity ut sap would therefore be elaborated in spring and tarly summer; and hence the puny growth of the fruit and young wood, and the crippled state of the tree, for that year at east. It would, in fact, have had the appearance which is so mell understood by the phrase, a "transplanted tree."
With respect to transplanting in spring, when the buds
re about to burst into leat, I do not think it is advisable to defer transplanting till then if it can be avoided; al though the growth of several trees which I have remored at that time has been very satisfactory, and seemed to me to be much more vigorous than it should have been if they had been transplanted any time during winter. But autumn isevery way preferable. A plant, I believe, will be found much more susceptible of injury from adverse weather in spring than it is in autumn ; and by a reference to Mr . ThompDaniel's Meteorological Essays, it will be found that the deather, on an average of years. is mure favourable at the time I would transplant in autumn, viz. about the two last weeks of September and the two first weeks of Octo old. The dry, withering east winds which so frequentl prevail in the early part of spring, form the greatest ob jection to transplanting at that time: if this sort of wea ther should happen immediately after planting, it is pro bable that the plant would be exhausted of its sap, a could be formed; and if death was not the result, it would evidently be in a much worse plight than if it had been trans planted any tume during wiuter ; but if, on the contrary few cloudy and otherwise favourable days should occu immediately after planting-as the buds mill then be fully
developed, and the plant will contain a greater quantity developed, and the plant will contain a greater quantity
of sap than at any other time of year-roots would be im of sap than at any oner the success rould be complete It appears, then, to be in a great measure a question of robability or calculation as to which is the most adrantageous season for transplanting, and the conclusion I have arrived at may be summed up in a few words. In the arly part of autumn, it is possible, and I think only possible, that the weather may prove so unfavourable as to ajure the newly-planted tree ; while, on the other hand is rienced, it would grow with greater vigour the bewing year than if it had been planted at any otwer time. is not probable that a tree transplamedmost sure to Iive but it is, I believe, equally certain that its growth the following year, under the most favourable circumstances will be comparatively feeble.
If the weather should prove favourable in spring, a tree planted then would be sure to grow vigorously. But it is probable that the weathe best season for transplanting vas beens; and almost every peried of the year from vergreens, andidwinter, has its adrocates. The objecions which I bave to transplanting deciduoustrees in winter do not seem to me to ayply to evergreens. At the time I would transplant a cecha rees to counterbalance the luss of routs, although there may be a considerable difference between the perspiratory powers of the leaves at that tume and in summer. The eaves of evergreens, moreover, perform their functions durng winter, as is evident from many species ripening their truit during the winter months ; arid they have therefore the power of immediately repand M. Nab in hi Treatise says, that they do form roots before spring when ransplanted in minter. My objections, then, to planting deciduous trees in winter on account of the evils drising fom the want of the power of immediately forming fresh roots, do not evidently apply to evergreens. And there can be little or no doubt, I think, that the conclusion which M'Nab has arrived of, from his extensive practice, will be foumd to be correot; he bas planted tar months
out of the twelve with nearly equal success, but he prefers the winter months, because in spring, summer, or autumn It is probable that the plant will be injured by the sun or dry winds; but in winter the weather is almost aniformly
damp, and any sunshine we may be favoured with, if I damp, and any sunshine we may be favoured with, if I may judge from the present month, would, 1 think, prove cess of winter-planting evergreens evidently depends in a great measure on the presence and action of leaves; for at page 26, M*Nab says, that " if evergreens are tied close tugether at the top, and have been long in the package, there is a great risk of many of them losing their leave解 ment it will be long before the plants recover."
It will be seen from this remark why it is more advisable to remove deciduous trees in winter than in autumn
or spring, if they have to be packed and sent a considerable distance.
It may be well to observe, in conclusion, that I have never made any direct comparative experiment with a view to ascertain which is the best season for transplanting though from the minute daily observations I have been my trees, every tree I planted might be considered in the light of an experiment. I intend, however, to try the fol lowing the first opportunity I have, and I mention it as a suggestion to others. The Gooseberry I consuder one o the most eligible plants in many respects; and of one
given rariety \& would prepare a lot of plants, and whien these were two years old. I would stlect eight as nearl alike in every respect as possible ; tro I would transplant when the leares began to fall, two in Norember immediately after they had fallen, two about Christmas, and tro as the leaves were about to untold m spring : all to be taken up and replanted annually for three or four years at the respective tumes at which they were first planted and as the spring-planted trees would probab.y produce no fruit, in order gada eno accuratey. inic surcess all the other trees of their fruit throughent the experiment. If deciduous trees of other species could he conveniently transplanted at the same time as the (imosenerries, the results would of course be more satisfactory and decisire because it may be objected-though I do nut thma the objection would be well fonnded-that the seas \(n\) whech was the best for planting the Guosebery maghe a at in quiny tival about the advantages of planting soon ather the leates begin to fall will pat the above experiment to the test, think at the end of three or four years he will iee thorenghly convinced of the advantages of tramsplanting it that ture. -John Tounley.

ENTOMOLOGY.
Aphides.-Gesi
\(2 d\) subdirision, or such as emit coiton-like threads from their body
salicis?-In the month of October great numbers of these insects, which, from the pocularity of their appearance. cuald not fail to excite at entron. Their antennæ were fihform, or rather, if anything. breatle at the extremity than at the base, in lengrt not guite hal that of the body, and of a reddish-grey cotour; their head and abdomen were of a relvety biack, betng civisen wint very minute silky pile of that colour, but apon the ab, men appeared several milk-white spots or in the centre testure; the tubercles \(\pi\) ere short, sholien in the centre, whilst their colour of dusky oranre harmented well whith the dark ground of the body. Tie cotton-like substance emitted by this species is trifling in cravitity, and entirely confined to the white spots above mentioned ; the extremity of the abdomen was pointed and hair. bat none of this substance was emited com hilly disapprared, but although we watched them with great attention we could nerer detect any winged individuals among them.
2d apecies. Cinara Brassica.-Very common on the under side of C ibbage-leaves near the midribs; their antenne are filifiom. and nearly as long as the boly, wlich at first of a greenish yellow, afterwards shanging to light brown colour. The males have transparent and
iridescent wings; their antennse, legs, and tubercles are of iridescent wings; their antennse, legs, and tubercles are of appen the females, are covered with a short cotton Hke ple, which appears to be emitted from extry part o the body; the form of the tubercles resembies swat of the species before mentioned.
3d species. Cinara Sambuci, In this specirs the antennse arp setaceous, and about hali as long the the horis: its foll growth, is that of a muddy green, and short hairg grow npon its extremity, as well as upen the lers, the of the abdumen, so as to give the appear tan el ictag wollen around them, and a winise cutern. .... . plentifully emitted from the whule of the oczituth of the body.

Gencs Eriosma (Lewh
The insects comprehended in th:s genus differ from the proper Aphides, and from the (inaree, in being desntute of tubercles: ther naturaily follow the second subdivision of the latter. becalise, like them, they emit a cotton-like substance from their bodies. but in most instances the quantity is greater, and the threads. if se may ase the expression, are longer than what any of the genus Cinara emit. Their antenns, in every species with which we are acquainted, ase short and filiform, and their wing
iffer from those of the preceding genera in the neuration being straighter and less forked; their abdomen is browier and flatter, and the segments and spiracles in genera more distinct. The various species of this genus dither consilerably from each other in thurir luabits-son..ee nest ling together, like the Aphites and Cinare, on the under side of leaves, some dweling in crasices of the bark, others forning for themolves a uidus on the st alks or leaves, smmewtat after the mamer of the Cynipidze. or Gatl-fies, n!ilst others, again, pass the a hole period of heir existence unler gromd, and feed upon the roots o plants. In the suhioined description instances of these arious locahties will be noticed, in which insects of this genus are to be found
1st specie. Lr usoma Fagi.-As early as the month of Mar, if the meather is not firy cold, young insects of this kind noay be discovered on the under side of the leaves of the Beech-tree; they som increase in numbers, and are covered with masses of a siscid cuttun-like sulstatice The collour of the body is of a dir! green, that of thei eves bright oronge. The nale is winmed, and of a darke colour ; but in the other sis there is also an indication of wings : the proboscis in both sexes is short and strong.
2 d species. Eriosoma Quercus.-These insects are als found oo the under side of the leaves of Oaks; they are o considerable size, and of a peach colour, having their whole body covered aith long threads of cottony matter The male is winere!, and of a darker colour ; but they are eldom found in dense masses, a fem individuals being cattered over a space comparatively extensive.
3d specise. Erionma Mali - This species has attracted more notice than any other of the genus, in consequence of its depredations upon the Apple-trees of our gardens and orchards. They attark the batk on the under part of the branches, which contracts when wounded by their punctures, and in contracting splits; they then conceal themselves in the clefts thus produced. where they rapidl increase, and snon become enveloped in a glutinous mass of cotton-like threads; in these recesses they feed upon the alburnum, or sap-wood, and cause tarious excrescences to rise therefrom, which are imperfectly covered with a thin film of bark. The colour of the full-grown insects approaches that of a purplish slate, and of the young that of dull amber; the antennes are filiform, and diverging from the head: the abdomen ovate and acuminate, with the transverse segments and spiracles strongly defined When bruised these insects stain the hand of a crimson or dark blond enlour. There is no appearance of imperfect wings upon any of this species, and indiriduals with per fect win2s are very vare an: ng them ; their size is muct smaller, and colone darker than that of the wingless insects. Their probosecis dies not appear to be a more powerful instrument than that possessed by other species, and yet they effect much more mischief with it.

4th species. Erinsoma Ulmi.- Frequents the broadleaved and other kinds of Elm, where it forms protube rances upon the footstalks and midrib of the feaves, some What resembling galls, but differing from them in the putposes for which they are intended; the Gall-fiy raising its excrescences for the protection of its egg, and the nourishment of its larve, whilst this Eriosoma, by wound ing the leaf or stem around itself, causes a vegetable habita tion to enshromd itself, in which it safely produces its young and lires with its numerous progeny until they are old enough to tahe cire of themselves and to mahe similar settlements elsexthere some of both seres hare wing but in the majority of the females they are incomplete The colour of the latter is light fink. with imperfect wing of a dirte green ; the wing-d insects are nearly black, with wings tran-parent and suractes of a winte colour.
oth spectes. Erimon:a Popali-Is found in similar excrescences nn the leaf-stalks of the white Poplar; this insect is smaller than the preceding, and of a green colour with imperfect wings of a light yellowish hue; the per fectly winged insect is nearly black, nith whitish spiracles and antennex and legs dark brown
6th speries. Erinsoma Lactuce.-Is often found in great abudance at the ronts of the Lettuce, upon which it cens, causng varions contertions in the fibres, and somethenes a sckly afreatance in the seaves of the plant. The head of this insect is prominent; the thurax lunger than fourth and the sene short, filiform, and seven-jointed, the fourth and the list joint: betug the longest; legs very short; eyes dirk: antenme grey, and body of a light green, with the em"ry? wrass brownish. The thoras of the male is brown; the ablomen of a colour similar to that of the female, but a slimede darker; the wings are onl semi-transparent, in consequence of their berng covered with trausverse roxs of grey scalcs; the winged individuals are more numerous in the month of Octolyer than at an other season ; each sex throws off from the posterior seg ments of the abdomes fwhich is rounded and not acum nate at the extremity quantities of viscid cottony thread and render it insermus whe whe soil around the roots
7th species. Erios omale Laricis - thpears to begables. ition species betwren this family - And the Coars to be a trans taking of the flat bodiss of the Iitter, but haring six shore legs and two antennae, tike the former; ther hewe neithe tub-rcis rar depresems i: :hatr place. Their colant purphon, ond they prodece a reddsh s"ain wheo crushed. thons worton: sionst nete. and we coverel with a glusects are active, but they become very tort young inWe have ne. bee til any minged indiviluals among them. At thes ! , 2te the branches of the Larch are fre quentiy co,fered with: thes mealy whiteness, and there are
 their repeated attacks : after tisat period the Larch with us grows mare slowly than befure, and appears less able to

The last month of the year reminds us that these ob servations must be brought to a close; and although we bave only meticerl a few of the species of this numerous race, we have regson to believe that there are hone in exist ence that may not be bronght within the limits of some of the genera here described. It has been our object tn draw the attention of entomoloyists to the more accurate investigation of the nature and habits of the minute insects. whose power orer vegetation is so great; and if we are so fortmate as to arouse their latent energies. we trust that we shall be excused for having occupied so much of your valuable pages. Before we conciude, however, we must remind your readers that Nature has peculiarly provided this period of the year as most elizible for getting rid of the little pests to which these remarks refer. Those sprcies which infest our hothouses and conservatories may be destroyed whenever the gardener thinks fit, but the exil can only be remedied in the out-door department, when trees and shrubs bave lost their foliage. Various kinds of applications, such as oil, tar, a misture of putash and lime, and other ingredients, have been prescribed for the destruction of the Eriosoma Mali; we believe that all these applications may be effectual, if used with proper caution and perseverance ; but constant watchfulness is requisite, since
their increase is rapid, and their habits of concealment
dificult detection. The best mode of restraining the depredations of the Rose Aphis, which is perhaps the most troublesome species which the horticulturist has t ontend with, is to prune off the younzer shonst of in Rose-tree upon which the insect has depmested it: toge during some of the winter months, and t) remove then basket, instead of letting them fill umon thee ground for in the latter casc. if ti.ere shou'd he any live invent pon them, they will certainly crawl unen the tree agan By this close pruning the health of the trees will not on'y be improved, but the bloom of the succeeding stasoun be considerably increased. It is providentially noi..... nat various others of the insect race derivetesin 0.enne if not their sole suppart. from the destruction of finmal to numerous small birds we are aloo indebted f,r t.en diminution. By these r.eans, and by the effect of atmon spheric changes, they are kept within due bounds; ani only requires the vigilant attention of mam, in adduiun t the orther check; upon their increase, to keey nur sarden sufficiently exempt from them. Their abundance or sarat ffords even to the casual ohserver a tulerably just cri terion of the degree of activity exerted by the jer ch whose care each garden is consigned.-O. Muley, \(R, l\) leston Hall.

\section*{THE LOVER'S TREE.} In viridi naper quæ cortice fagi
Carmina descripsi.- - irgit, Ecl. v. 13 .
From the earliest times, the bark of trees, in the recesses of a forest, has been selected as the fittest receptacle for the tenderest sentiments of the heart. The seclusion of the place, often chosen as the scene of reciprocal vows,
and the readiness with which a rude inscription can be carved upon the cielding surface, have offered to overs an was an obvious propriety in selecting a tender and growing tablet for inscribing a memorial of an undying and increasins attachment.
Shakspeare, the great master of the language of the heart, has not failed to notice this circumstance. When Orlando, in "As You Like It," is enamoured of Rosalind, he soliloquizes thus:And in their barks my thoughts l'll character That every eye, which in this forest looks, Shall see thy virtues whisper'd everywhere Run, ran, Orlando; carre on every tree, The fair, the chaste, the unexpressive she.

In like manner, Tasso represents Erminia as confiding to the bark of trees the name of Tancredi, and the unhappy course of her love

Sovente allor, che su gli estivi ardori
Giacean le pecorelle all ombra assise
Giacean le pecorelle all' ombra assis
Negno l'amato nome in mille guise
E de' suoi strani ed infelici amori
Gli aspri successi in raille piante incise
E in rileggendo poi le proprie note
Rigò di belle lagrime le gote.
Mig di bene lagrime pe gote.
Poscia dicea piangendo: "In voi serbate
Questa dolente istoria, amiche piante.
Giammai soggiorni alcun fedele amante
Senta sregliarsi al cor dolce pietate Delle sventure mie si varie e tante, E dica: Ah troppo ingiusta empia mercede Diè Fortuna ed amore is il gran fede

Of when her flocks, from summer's noontide rays
Lhey inver
Her Tancred's name, and left the mossy
With sad insciptions flourish'd, silent signs
Of the unhappy flame her faner fed:
And when again she saw her own fond lines,
As she the melancholy fragments read,
Fresh tears of grief uncheck 'd ber luvely
And weeping she wrould say, "For ever be,
That when two taithful lovers rent like me
In the conl shade your verdant boughs bestow
Their hearts with generous sympathy may glow
Aul as this volume of my griets they view,
Say to themselves, 'Ah never may wa know
Her pangs, poor maid! 'tis hard a love so tru
Should be so ill repaid by lore and fortune too
Withn's Translation, vii., 19, 20.
A very singalar discovery of such an inscrintion ras made many jears since, at Cownold near Thirsk, in York shire. The country was formerly, as its name implies, a forest; but as cultivation has advanced, the trees bare by degrees been cleared away. An Ash was thus felled and split for fire-wood. Tpon being riven asunder, the outer part of the tree was cleft in two, like a case, leaving the inner portion of the trunk entire: and the following rade inscription was discovered, distinctly legible, both upon the inner part of the trunk, and, with the letters in verted, upon the outer casing.

The accompanying woodcut represents the two portions of the outer case, and one side of the inner part of the tree The inscription can, without difficulty, be thus read:-

> TEIS TRRE
> LOVNG
> WINES
> WITNES
> OF TOW
> TOVRS W
> WAATE CICEA
> RE

"This tree long time witness bear
There is no date to the inscription, but the period at which it was made may be ascertained, with much probl bility, from the following considerations
The tree is deposited in the musenm of the Hospital at Kirk Leatham, between Stockton-apon-Tees and Redear The porter of the bospital, now living, can rouch for its haring been there mpwards of seventy years fand the tradition respepting the tree is, that it was given by Lord Falkenhurg, from his manor at Coxwo to to in. C. ifis hurver, who died on the 9 th of May,
 been about fors old when the inscripion was mote, and to have subsequently grown for ararly \(2 \omega 0\) yen... an an closeness of the ring near the circumference prevents this estimation of the dite from betig regardei as turee centu approxim

\section*{ries ago.}

The inscription itself fully agrees with this, or even with a higher degree of antiquity. The language, thoug simple, breathes a spirit of true poetical feeling, which seems characteristic of the Elizabethan age.
* Note by J. S. H. - I would suggest the followisg as the true reading:-

This tree long time fiathful) wituess bar
of two lovers' (rows, that did walk here,

The words employed, it will be observed, are all of Saxon origin. The term " walk," used to imply associating during the time of courtship, is still colloquially emploged in many parts of Eugland, although it may never have during introduced into the written language.
The word "two," written in the same manner as in this inscription "tow," occurs upon a monument of the family of Dase, in the church of Little Bradley, near Haverhill, in Suffolk, of the date 158 t .
of Daye, in the church of is of the rudest kind. The first letter in the word "lovers" is inverted, and the first and The form of the wort "did" are arranged from right to left. The abbreviation in the seventh line may have been last letters in the word "s that," repeated at length in the following line. The word in the second line has been considered to be "loving," but it seems rather to have been meant for "long." The letters are between 5 and 6 iaches in length, and their size is pretty uniform. The letters in the fifth line are nearly seven inches lung.
The height of the fragment of the tree is 5 ft .4 in . The circumterence of the inner block measures, at the upper part, 2 ft . I. j in.; and at the lower part, 2 ft .10 .75 inches: that of the upper block measures \(\& \mathrm{ft}\). 8.5 inches at the upper mart, and 6 ft .4 .5 in . at the lower part.
The manner in which this inscription has been preserved and brought to light is in every respect most interesting. The letters were cut through the bark into the alburnum, or white wood, below; and some melancholy Jaques might have expostulated with the lovers, who are now known only by their initials, \(C, L\), engraved in each heart
pray you mar no more trees with writing love-songs in their barks."-As Yos Like It, Act ili, se.
Bu: this rery marring of the bark becime the means of perpetuating and discosering the inscription. As the tree continued to grow, new wood would be formed between the inscription and the bark; and thus the record of true lore became buried for centuries in the beart of the tree. Had the mood been applied to ordinary purposes, the expressed wish of the lovers would hare been frustrated. Bat, as if some Hamadryad had presided over the memolial entrunted to the tree in its infancy, the ancient trunk was divided by the wedge, and the part on which the inscription was made having been rendered weaker than the rest, was, in conseguence, caused to split in such a
The tree is now kept with great care, and is thus likely to transmit to many succeeding years the artless tribute of affection long since impressed opon its surface.-T. Cog Aug. 24, 1841 .

Miss Uilison, del.

\section*{COTTAGE GARDENS.-No. XEVIII}

W'e regret to find from the letter of \(A n\) Original Sub. seriber, that our description of the method of pruning Gooseberries, as publislied at page 132 of the Gurdeners' Chronicle, is not sufficiently clear for him to understand, as it leads us to suppose that the persons for whom our directions were intended fur a guide will also be at a 1 ss to compiehend them. On this account, therefcre, we are
glai of the opportunity which the inquiries of An Original Subscrifer afford us of recurring to the subject, as it enabies us to enter nore fully into details, which, we hope, wini render the plin we have recommended intelligible to eiry ice. We have neser seen the book by Mr. Knill
wl...h In Orminal Suhacriber nentions, but, we believe, the mole of prouing he describes is practised by many exchlient eqrdetiers, who miould, probably, prefer a moderate thinning, so as to keep the branches free of each other and promote a suecession of young wood, rather than to herp the orat ojen in the centre and cut out so niuch An 0 .inginal wine in the habit of doing. Howerer, as hein platinal wo loperiter at a future time be will communicate tias rals, wh hope at a future time be will communicate Hecres" Chrovicle. With regard to his questions, perbaps, as chact do better than answer them in the same order
as they are fut-1. Supposing he has a Gooseberry tree
 in the form of a ctp, as shom \(n\) in the acrenpa-
nyi. 5 shetc' , is he to expeet the principal bearing on
spurs, 1 , or ct re naters of spurs, 1, or clusters of
buds fortaed in the old woud itself. 2, and not from auy staots spurred
back on the whit wood, back on the whif wood,
and alisu on the young and alsu on the young
shoots shertened to one shoots shertened to one
third of their length, and left on the extremities of
the old branches, 3,3? We reply, yes, on all of them, for
such is the nature of the Gooseberry, that if the shoots are shortened close to the main branches, buds will immediately be formed all round the shoots so sppurred back, and abundance of fruit produced, not only fron tiuese spurs, but also from the buds along the main brancies fr mine stem to the point of the shouts of hast summer, when shortened as described.-2. As to what is meant by the external shoot, which is the only one directed to be left: We intended it to apply to the shoot at the extremity of each of the nain branches. 3 , which may be cut back for about a third of its length, or cut out altogether, provided a well-placed shoot, as at 4 , can be found on it. or on either of the adjoining branches, to fill up the va-cancy.-3. From what has been already stated. as well az frum the subjuined sketch, An Originai Subscriber will perceive tbat all shoots on the main branches, even those of an inch or two in length, are to be taken off. and that none but the natural frnit-buds on the ohd wood. and on the spurs, are to be suffered to remain.--4. Witir rezpect to supplying the place of any of the main branches, thas, as suppiying the place, is to be done whenever they become aid and unfruitiul, or when chey extend to a greater lewşih old and unfruitul, or when tueyrahe. The d.cased bianich, from the stem than may be desirabic. 5, being eitner whily removed, or cut well back to shoot, as at 2, that is iisely to supply its place-ductive from being prumel in this ruy than in the more usual form? We critainly tuink in Ortgual Subscriber will find, by parsuiny the plan we iave recommended, the busbes will be agatily productive in propustun to the numier of main larser wal falar than un tiose pruned, or rather thinned in tire conaion way. - 6 . When Gooseberries are intemuded for being usul in a green state, the mode of prung is nut, ferthaps, of so wuch conser cuente as when the fruit is intended for the tahe, where size and flasu.r are desirable; but eren in the former case, we belleve, the fruit will sooner attain a fit state for using when the bushes are well pruaed, tian when nuch wood is ieft on thew, although there is not so great a necessity for clearing out in in the ofther. - M. .R. \(\boldsymbol{H}\).

HOME CORRESPONDENCE.
Property in Plants.-The interest and excitement created by the discussion of this question in your pages, Number, induce me to beg the attention of jour readers Number, induce ane it, which bas come under my own ob to another side of it, which has come under my own ob-
servation. It is this: A gardener lived many years with a gentleman, A. who indulged him in experiments in crossing or hybridising plants. Several cross seedlings oblained throush these exparments mot hawng flowerent
 widow. and were hept by her orders thi he, D , sh. uld succeed to a suitable ituation. As som as D ent:red his next situation. he twhe his nex master, B, that he bad these plants. and that hee wished t) have thein under his own care till the? fiowere. . T: this 13 assented, with a proviso that if these seedings shomilitumont well, a plan the first of these plants thomered, a uursern man. C. offered the gardener, in the presence of las emplover, 13, 1.51. for it, which mas accepsel; but at the suggestion of \(B\) this bargain was turned into an exchanze, and there other smaller plants of the same variety, valued by the nursery. man, \(C\), at \(5 l\). each, were, with the mother or specimen
plant, given in exchange for 316 . worth of pew plants from C, which plants were added to the cullection of B. The gardener still hept oice or two plants for himself, and one for his master, B's, collection, acemetmy to their agreement. When the girdener came to ass the rasue or his plants, he was told he had no legal claim, i sramtaning respecting these plants, they were legally lis property as soon as they eutered his premises, and he would dispute the question. D left the ploce in diggust, and soting under legal advice, carried his plants with him, and loft the reserve ones, bat has not yet cakea proceedigg to conpel payment of the value of those supplied by the nurseryman, C , as he is advised he masy. How has this gardener D, acted? Has he violated any rule of trust or bonour upon this subject ; but so far as tomerns the lass which should regulate persons in their ista icumree wish ....th other, we are under no doubt. The case is this: A bequeathy ing with him \(x\), his property in which is admitted by \(B\), Then \(\mathbf{D}\) sells a part of \(x\) to \(\mathbf{C}\) for 31 ., aud at the instance of B receives plants instead of money, which planis are so purchased for the use of B . Uader these circumastance B is clearly indebted tories the remsinder of \(x\) with him. If B originaliy recognised the right of D to the whole of \(x, \mathrm{~B}\) canrirt afterwards deny the ryglt of D to a part of .2 ;
and consequently D was jastitied in remoting \(x\), or what remained of aty \(D\) was jastivied of \(D\) 's property as an abstraction, \(x\), for the salue of simpliffing the subject. suppose D had exchanged a table valued at 5 l. for a mow-ing-machine for the use of B. In sach \(a\) case no one could doubt that B would owe D St., and that the right of D to his chairs would continue aotwifhstanding the exchange of the table.]
Laves of Gardens.-"A. B. C. cannot remove bis Rose-trees and evergreens uniess be is a nurseryman, and then only if they are planted for the purposes of his trade. and not for the sake of ornament to his grounds, without

 this circumstance led me to inquire what tree it couid be that so captivated his sellses. It seems that this species of France and Italy as in the warmer parts of America It forms a tree of small strture, from 30 to 40 feet at inost, asd with feaves ouly on the upper part of the
branches, much divided, or doubly pinaze. Tase lour, and in gemeral appearance are not unike our Lifac tree; although it must be seuremsered there is not the oval drupes of considerable size ond when ripe they as sume a yellow tint. A differeace of ipinion isists as to the quality of the pulp, some aberting it to ve raw minn, whilst others pronounce it parfectly harmless. Leiniog
this point to be setulud hereafter, I will merely meation, that in Italy it is common to plant them near monasteries: for the unt being disested of its pulp, after it has been
boret, is used as beads for rosaries; and many a devotee, both at home and abroad, may be seen adorned with a
string of these jet-like ornaments. This tree has been knosn as: stecahonse plant in this country for nearly plants of large dimensions. For several years past I have and trees that usually enjoy the conservatory; the past vimang that but one amoagst the few remaining that endured "the thews and flaws, proved to blosomiss in June and July last. - W. Masters. Exobe Nursery, Canterbury. \(M\). N. has also favoured us with
imilar information, and has pointed ont the following passiae in Suart's "Three Years in North America": -The followitis is from rol. ii., P. 262. "The Pride of India
tiee. Mrelia dzedartoh, shadigg the streets of Natchez, was in hlowom, and the ofour charmins. The top of thas the Ialar than to any other of the fluwering shrubs. The tufts are inger. and it remains in thower for a long time. Its leaves are long and sphed. The growth of these trees is so rapud, that in a few years they completely embower a The protu-ion of reddish berries with which the tree is covered is such, that the robins immigrate to this region
in the end of winter, settle on the trees, and feed on the in the end of winter, settle on the trees, and feed on the the robins, sitting on the trees in a state of stupefaction, may be easily killed with a stick." [This is not a bad il. lustration of the inconvenience of giving plants other names than those known in science. As the Melia sempervirens, or M. Azedarach, which are probably mere Irediately; but that of Pride of India had escaped our recollection, because the plant is nsually called in English the Bead-tree, Hoop-tree, West India Lilac, or Italiau Lilac.] Root-pruning.- Observing that the subject of rootpruning is likely to become one of contest amongst several
of your correspondents, who respectively lay claim to priority of invention, allow me to refer them to "The Practical Fruit-Gardener," by Stephen Switzer, published about 120 years ago, a perusal of which will doubtless find room for the following extract:- "Barrenness prolarge roots, and therefore those roots ought to be taken off; yet becanse I have found by experience that there is some might not be an unuseful tryal to begin firston young ones, even by taking them clear up once in two or three years ally do what I desired, and it has answered accordingiy having always in riew that precept of the ever-memorable

\section*{Ziumpson.}

Primula sinensis.- Plants of Primula sinensis now require smme attention as resards air and water, as a preseason, particulariy if watered on the tops of the pots An excelient plan is to place feeders of water under the pots; these should be liberally supplied with water, as the scarcely ever bear it oser the tops of the pots. If the flower-buds have been previously pinched off, they will now be pushing up three or four heads of llowers, which will amply repay any tronble bestowed upoa them. \(-T\).
Dowell, Grmion. Mice.-Mr. Scott, of Farnhem, near Cavan, agrees with Mr. Falla, p. 701, that sand is a good means to prevent the
attacks of mice. But he sars that to lay some oatmeal mized with arsenic, or some pieces of cold boiled lean meat, on which arsenic is spread, where the mice can get them, will destroy more in one month than toasted cheese and traps will in twelve.

Timber affected by Soil, fec.-I believe most kinds of cuade and latitude, cold min their quality by climate, altivery slow growth. I have been lately conversing with a person of experience in the conversion of timber to
various purpuses, particularly that mueh-deeried timber the Scotch Fir, grown in England. There is a large clump Wales, near miv aresent residence; It io borders of North Wales, near my present residence; I do not know their age ; probably 100 years, more or lens. He told me he ing, and fonad them equal to the red Deal from Norway and he mentioned a beam from that clump that had been in a builaing ajout 60 years, and was re-applied to the Sime purpose upon rebulding or altering it, being very Fir. But it is to be observed that the situation is light, c.dd, and exposed to all winds upon a gravelly soil. o
course it must nave had a much slower growth there than course it must nave had a much slower growth there than
in a lower and warmer climate, or on better land. - W Billineton.
Hyacinthe. - I have never seen described a method I practise with success, of growing the Hyacinth, and, thereronts. I seleet my roots straight to within a quarter of an inch of the crown, and suffictently large to quarter of to adm: the mult half its depth in the orlarge enough the Beet root ia two pieces of copper wire, and suspend it anvely puts fort:a its beautful purple lesvesto It immedi ately puts fort: its betutful purple leaves downwards, and Hyacinth, create a novel and beautiful appearance, hang ing amongst the Oranges and other treea. From the way
of the plant it is grown in, I have no doubt that a great portion of nourishment is derived from the Beet-root.
may add that the colour and size of the flowers are supe rior to any
Banbury

Run Flowers.-With all the deference due to men of scientific attainments and practical knowledge I venture Th ofier some obserpations on the subject of run fowers the Chronicle, have induced me so to do ; not so much from a desire to prolong the discussion, as to express my
disappointment at the conclusions to which they severall arrived. The whole gist of the argument advanced by
Dr. H. is precisely in amount the same as that of Mr. D. namely, that there have been run flowers in every localit and under every mode of treatment to which the Carna
tion has been subjected. I submit that this conclusion, tion has been subjected. I subme that this conclusion
a hich I hink is quite just, proves beyond a doubt that
the ingredients used in the cultivation of this particula flower are not the primary or only cause of their sport ing. It is an established axiom in science, that like causes will produce like consequences; and in conformity
with this axiom, when applied to run Carnations, we are led to the unaroidable conclusion, that all Carnations grown in a compound of the same ingredients must be eithe wholly run flowers or wholly variegated. hour corretance is not recorded in the history of floriculture. That pursuit of knowledge we must exercise patience and per severance. Far be it from me to offer an offensive obser vation to your able correspondents; but if those gentle men will refresh their memories by a review of the phyterminate in the concurrent conclusion that run flowers are referable to other canses than the soil in which they row. A knowledge of the physic nables us to know that every part and parcel of the forth coming inflorescence, although at rest, is now residiug in
its parent plant, and waiting only for a series of events to bring about their nltimate development. Whateve appliances distarb their natural repose, an injury is inflicted on the individual plant, which is eventually made manifest by the state of its iniforescence. The warning Dr . H. puts forward against nsing stimulating stuff, refers reflecting minds to the matter as one of repletion, which he ultimately confirms by the simile of a pampered gourmand. All these observations, apparently valuable in themselves, if applied without re ference to the physical construction of plants, are com paratively valueless. The constitutions of plants are a arious as the constitutions of mankind, and yet the floris reats them all alike; the robust and the delicate-habite Carnation receive the same ingredients for support, ar sheltered in the same or similar depositories, and are finally espected to produce the same results. Nuthing I conceive, can be more irrational. The florist hitherto has not considered that, independently of constitutional strength, there is also an aptitude in some flowers to become easily excited, and I humbly submit that if excitement is produced at an improper seasun, a disarrangement of the tissue will result; and the colouring flud, instead of concentrating in a variegated figure is thereby enabled to flow unrestrained tbroughout the whole of the inflorencence, and assume the character of a run flower. With due deference to all authority, humbly submit that the phenomena of run Carnations is in the premature state, superinduced by unseasonable er citement. In conclusion and corroboration of this theory I beg to direct the attention of your correspondents to the fact that Cartwright's Rainbow Carnation is one of the flowers most subject to this defect, and it is also most readily excited ; and if your said correspondents will refer dere stocks, they will now find that indivi dual flower making considerable enlargement, while their
other sorts are comparatively dormant.-M. W. Grapes in Pols.-Now that the pot Vine mania has partly subsided, having growa them extensively, I beg to offer a few remarks. The only utitity of growing Grapes in pots, where there is plenty of hothouses, is to have a few to ripen in March and Apri. West 5 st. Peter's, if properly managed, will hang in good condition till the end of February, or, in some seasons, till March; and where there is an early Vinery, good grapes may be ripened in the beginning of May, where the border is protected from frost and snow; so that a regular succession can be had all the year round. I have put a dozen pots in on the Inth of October, and cut on the 2nd of March; another When in the beginning of - November, and cut in April. Where Grapes can be grown on the rafters, and proper
attention pard to the borders, it is so much time thrown away to artempt growing them in pots. To the amateur, and gardener with, perhaps, only a hothouse or two, the case is different. for they are worthy of all his care and attention, as I know of no plant to be compared to a Vine well managed in a pot. To this class Mr. Mearns's forthcoming treatise on the subject will be a great acquisition, as no one understands how to manage them better.-W \({ }^{n}\) Tillery, Welveck Grardens.

Signatures.-Some of your correspondents find fault with the practice of putting fictitious signatures or initials to communications, and seem to consider that this arises from shame or fear, or other less worthy motives and on the otber hand, if the name is attached to any remarks, a desire to see the name in print, an itch for scribbling, and such-like silly motives, will be found. Writing for a paper is atteuded by some danger, more particularly for a provincial paper; for although an individual may
fit others, people do not distinguish between him and the busy-bodies who have nothing useful to communicate; and
they are moreover suspected to be the writers of with which they have nothing to do, and of which in many
cases they would be heartily ashamed. I consider, how. ever, that it is a very dificrent thing to write fur a paper
like the cheronicle: the subscribers to it mar he cuon as a society united together fors to it mar be considered the Paper as the medium by miutual instruction, ad their thoughts and discoveries to each other-therefon pot my name to my letters, if you print them.-Joh Toronley.
Country Shows.-During the recess, as we may call of the different horticultural societies now happily scat tered over the land, to the great advantages which would tance of each other. It is well known what struggling work many have to get up a single show in the year, and
how very small the prizes they are able to uffer as inducement to amateurs or their garderers to exinbit entrance-money on such occasiuns. Whount they tahe ay or four neighbouring socketies to unite and hold their seetings at a central place, the very reverse in every reevery disidvantage to coistend with; and I have often gretted to see the most praiseworthy efforts of a commit in a small school-room from the exhibition taking place from want of space and light, the beauty of the plant has been completely lost, and both visitors and contribu tors disappointed, which would not have been the case had the funds allowed the hiring a suitable room, or the erection of a commodious tent with well-arranged tables, familiar to the majority of your readers, and I hope many will agree with me in the remedy I propose. It may be exhibit, and I agree with the sentiment, as far as the pro prietor is concerned; but a gardener who has valuable plants under his care, and whose unremitting attention is crowned by their beauty in their season, feels (not unnaturally) disappointed when he receives as a prize the ingenuity of man could have made it so thin and light or when he has seen how small a company have witnesse the beauty of his favourites, and how few of the number could appreciate his successful labours. General remark like these are usually thought to be intended for every body but ourselves: I will conclude, therefore, by respert fully recommending the committees of the timusor,
Staines, and Sunbury Horticultural Societies to open cor respondence on the subject, and see if by therr union they cannot, instead of three weak institutious, make on of a superior character. Staines, as a central toinh very circumstance of bringing a large number of florist and horticulturists together from an extended would be beneficially felt in the interchange of experience and information which ought to be one of the principal objects of these associations.-Educard Beck, Slateworks, Isleworth
Substitutes for Turf and Bor Edyings.-The substitution of rarious plants for edgings of turf and Box is subject of interest. It is true there is that difficulty to contend with, pointed out by your correspondent, that winter, from the leaves dying off; still the number plants adapted for such a purpose is great, and from whill e have dune a decided improvement is effected, especial who has studied gardening must have been impressed witi the has studied gardening must have been imselves, when distributed about a flower garden in the spring months, produce a good effect. The following are kinds which will be found useful for such a purpose:-Corýdalis lútea and capnoides, Fumária formosa and speciosa, Polýgala Chamæbuxus, Achillea tomentosa, A'sarum europæum Cerástium tomentosum, Alyssum sazátile and montanum Vesicaria utriculata, Aubriétia purpurea, Cardámine tir folia, Arabis alpina and preecox, Cheiranthus alpinus and ochrolencus, Hésperis repanda, Iberis saxatiis mex sempervirens, Myosotis arvensis alba, Pole
icanum, Campanula carpatica--
Cider.-Being told how the Herefordshire ciler mas preserved sweet, a few years back I tested the plan. bought 100 gallons from the mill; 50 gallons puting out cask in the usual way, in the cellar, leaving the be 1 then and keeping it hissing for nearly three munths. Thie bunged it up, but it drank ary rash-tub with a tap in it, placed it on a tram in an open shed, protected only from the wet ; there it remained without any further cancost This, I observed, never hissed at all, and there was there and suow during its esposure in the tub. Tbelieve much can be no fixed time for its remaining in the tub, as nut depends on the strength and quantity put tugetber. only criterion to go by is to watch and observe he turn ing; it will form a fine head, and when it begios draw is dark, or drop, or sink, that is the proper time ciean cush off carefully from the tap, and put it into a cleas fiat ds and bring it down. Be not alarmed; it will taste will have ditch-water; but by the following March you gallons beautiful sweet, clear cider.
sharp cider or beer put 3 lbs. of calcined or week you
rhea cold, in lumps, bung and pleasant.- \(\boldsymbol{R}\). Arnatt
The Deodar and Douglas Fir. - We have here
of the Deodar which I raised from seed sent
clay, Esq. by A. B. Lambert, Esq. about May or June in 1s31. Which of course would be some of those introduced
by Mr. Leslie Melville. It is now within an inch of 12 feet in he ght, and 11 feet 4 inches in extent of branches. At 6 iuche fromi the ground it is 17 inches in circumference of the stem: and at 2 feet from the ground, I font sand, mived with a good deal of what we term here iren sandstone. It is near the fonttom of a hill on both sides of which all tie species of Fir grow very freely. I have frluch are planted on the top and sixes of the hill before nentioned: others in a low situarion, where the whecuil is a aff clay, which are alsn growing very fieely I have strulk a gred many from cutings. hut have ony fot ahere the Decelar is planted, ave two fine specimen of Atries Domslann, ptatied in April \(18: 33\), from smal 6 b-pots, lieing at that time ahout 1 foot in height: one of
which is now 26 fee in beight, and has 19 teet extent of bramehes, with a circumterace of 2 feet 3 inches The other meatures 21 feet in height (having lad it leader broken last seasoin), and 17 feet 7 inches extent of branches: cincumference, at 6 inches from the ground half. The length of the leadıng shoot made this season 4 feet.- Wrm. Scoth. Bury-hill.
The Doulte Yellow Rose.-In a garden in Fifeshire old plant of the Double Yellow Rose that was planted against a south wall in a cold stiff soil used to flower regularly every season. It received searcely any pruning \({ }_{0}\) expand: a large basm of earth was formed round it roots, by which a copious supply of water was given once in the season. At Bury Hill Garden, in a light sand
sil, the Double Yellow Rose in the open border fre quently formed a few flower-buds, but not above two or three perlect flowers were produced in as many years, the buds as they advanced to maturity being found to have been entirely eaten through by a large caterpillar on one
side. The most likely means of preventing the depredaions of the caterpillars always appeared to me to be the watering the plant in winter with the drainings from the cowhoust, and in summer with a strong decoction of tobacco-water or some other ingredients, so as either to prevent the deposit of the cgys or to destroy the caterpillars before they commenced their depre
Pronumeciation of Fuchsia.- I think your correspondent "Wrod End' is at all events wrong in assigning a gu Oblendorff, 2d ed. p. 11. "Clı, which is named teé-hâ, is pronounced as \(k\); lst, at the begiming of a word-es Chor, Chronik, Clirist; 2, ily. when this double consonan

Spirils uf Tar and Nitrate of Sodin on' Carrots.- J. H. S. siys, that he has tried spirits of tar and nitrate of soda on Carrots. and he finds that those to which the former were applird succeeded best. The seed was sown
in the last week in April, and the roots were taken up in October; some of them weighed 16 oz ., and measured 16 in . in length.

FOREIGN CORRESPONDENCE Grand Bassa, West Coast of Africa, July 11.-We fortunate as to meet nith Mr. Whittield, with whom I took a trip into the Bush for a fer hours. Tbis gentleman Don, a number of en well as a splend:d collection of otlier plants. At the market there is an abundance of fruit, as Pine-apples, Bananas, Plantains, Mangoes, Soursop, \&c. The next place the expedition topped at was Cape Messurada; as
this station \(I\) sam more of the indige:ous regetation of Africa than at Sierra Lenne. I find the Sareocephatus very common here ; there are tro ranteties, the one the same as the specimen in the Musemm of the Horticultural Sccietr, the orlier wath a fruit ab eut the size of an Apricot; neither of them setms to be manch repute with the natives. A Onophawes f:nt is a Girdenin, wieh large whate fl.wers. upon the b:anches of very large trees, so tinat I could not out \(f\) en enumerate all the plants many in tiower. They cultibere Pine-apples, though they also grow ins rent plenty in the Bush ; in some places shey are arown on the tay s of walls which part thie dirisiens of land. Banamas and Plantaius are pientirul. There is a
Coffee decidediy oistinct fiom the Culfea arabica, which is found in the interior, zad thas been brought to the settlement for cuituvatiom. The Guava las been introduced and has frund its way inte the Bush, where it grows in great ahundanes: it finds the rlace so suitable to it, that it corers whil young at:ex.- every spot of groand in which it is allawed to ex ent. There are :ew Oranges or Lemons. Bassa), the vegetation is sixcilur to the hast, except that
Perms are in a greater proportion, and the beautiful Gloriosa equerba is found.

Aun Branch of the Nmer, Any 12.- We mate the same as at (ape Palmas, and the other places at whinh We have called: at Cape Coast (astle they Lave a very
spiny spec es of Cactus growne in sundance, hut from ts being so very rough \(\tilde{I}\) think it whi be of no use for reding the Cochineals: this is the unly species of Cactus farm at some distance from the settlement, but I had not tome to wisit it. The variety of plants is great, but the Gramineæ form a promivent feature. Indian Corn is culirated in great quantity. This season Rice is very scarce in the settitment, oning to the ravames of the tocusts A species of Ficus is plentithl near the town, bearny out roots from the bramelies, a yard or more in lemgth The sides of the streets are ornamerted with a Malv, ceens tree bearing large yellow and rell thoners at the sathe thme, rosea, which produce a protusion of bleseoms. I did not meet with ny Parme, bur one they wet the onf from and the Cocoa Niut A striking plant is the Semsitive, whet over: erery spot of ground for a great exten: near capy
Coast; I have not found it in such protusion on any other part of the coast of Africa. The nest piace is
Accra : this part of the coast is destutute of the threk forest, which is replaced by large plains of ratk grass, in terspersed with suall thickets of beautiful sirubs, and very large species of succulent Euphorbia, with an angula stem ; this would be a splendid fitld for a Botanical col lector to reside at for sume time, as the fachity for tra velling into the interior from Cape Coast and Accra very great. I have to regret that the collection which made at both these places is destroyed, as also the payer containing them, by the wet weather and a riugh se Which we had between Accra and the mouth of the red by The Tamanind is abundant at Accra, but not esteemed by the natives ; they have also the other kinds that are grow at the other settlements. They have the Sugar-cane nid Cotton, but do not cultivate either as an article of com merce.-John Ansell.

of 10,000 feet allove the sea. The berry in the wrild ate one to one inch and a half long, and pleasant to the taste. The from Guatemalese call it Melocotoncito, and apparently eate. it. The
bush itself is said to he five or sir feet high. It reciuirejust the
san etreatment as others of the genus. We showd expent

\section*{MISCELLANEOUS.}

able accuracy from the periods of vegetation; for in look
ing over a long list of recorded experiments, he finds great degree of uniformity in the process of germination in ordinary circumstances.- (Silliman's Journal.) [These experiments teach the Horticulturist a useful lesson It is well known that the Lima Bean is one of the most uncertain varieties to vegetate, when sown at the same time and under the same circumstances as the
others. Cultivaturs often have the trouble of planting twice, and frequently three times, before they procur good plants. The experiments alluded to explain the cause. Suwn about the middle of May, as they generaliy are, unless the weather is very warm, the seeds will not vegetate under from ten to twenty days weather should be accompanied with much rain, the seed
will rot in the ground. If, on the contrary, the Beans are not sown till the latter part of the monta, when the tem perature of the atmosphere is higher, they will come up in
the course of five or sir days, and will make a vigorou growth. Nothing is gained by too early planting. Peas sown about the middle of April often overtake those sown about the first of the month.-Hovey's Mayazine of Hor ticulture
oue on Preserving Valismeria.-It is very generally known to those observers who keep Valisneria for micro whole plant becomes covered with a very delicate Corferva or some nearly allied genn, to remove which, it has bee recommended to place a few fresh-water snails, such as the
species of Limneus, Planorbis, Physa, so in plenty in almost every stagnant pool or ditch. We ar informed by Mr. George Busk, that gold and silver fish placed in the water with the Valisneria are an effectual means of keeping under the growth of the Conferva besides having a more elegant appearance than pond snails. -Editor of Microscopical Journal.
Cotson Cultivation in India.-From the Madras papers we learn that the caltivation of cotton progresses steadil in the East Indies. In Coimbatoor good progress is being made, and the undertaking promises at length to "go ahead. The American cotton-planters are located on three farms, having each 100 acres allotted. The land at Coimbatoor is pronounced by the planters to be most ex cellent; it is a fine rich black soil, which the American plough turns up with great effect; not only is the climate considered very congenial to the growth and staple of this product, but the soil itself is stated nearly to resemble the rich alluvial mould of the valley of the Mississippi. The mative come in numbers to watch the agricultural operations going forward. They acknowledge the cultivation now pursued superior to their own, considering however the expense of it beyond their means, forgetting that all new experiments, especially when managed by the Government, must necessarily be costly at the commencement ; and secondly, that if the produce is greater, the outlay must keep pace with it. From the now ascertained congeniality of soil and climate to the American staple, the interest taken by the natives in the experiment, and the speedy success of a mode of operation new to their hands, we are induced to bope for the best results from this experiment, which, if it succeeds in apening the Home warket to this important product of our soil. and producing a large export of East India cotton to England, will prove one of the greatent benefits to India which has been extended to it under the English sway.

White Carrots.-On 14 perches of land, 18 tons 15 cwt t. of white Carrots were grown by Major Willard, of EastThe land was dug two spit deep, and at the same time some fresh sea sand was mixed with it.-Abstractod from the Brighton Gasette.

\section*{Zarbíéns.}

Arboretum et Fruticetum Britannicum, abridged. By T. C. Loudon. London: Longman and Co. Part I.

THE original of this work, in eight 8vo volumes, was one of the many extraordinary instances of industry which Mr. Loudon's career as an author has produced, and Which bave given him great claims to the gratitude of gardeners. The mass of information gathered from all manner of places, original and compiled, domestic and foreign, is quite extraordinary, and has no parallel except among the ponderous tomes of ancient commentators Geographers, botanists, poets, mythologists, foresters, traveriers, chroniclers, herbaliste, antiquaries, utilitarias gardeners, farmers, entomologists, ornithots ist logists, muscologists, statisticians, political economists, chemists, geologists, and heaven knows how many more frie classes of writers upon natural science, have con ributed the immense farrago out of which a consistent Whole was produced, -amusing, instructing, and most asefu!
But the price of the book placed it beyond the means of ordinary buyers. Ten pounds for a single book is a sum not to be thought of by the mass of garden-lovers, and therefore the original, with gill its merit, could only be seen in the libraries of the wealthy, in all which, however, it ought to be found. The multitude of wood cuts with which it was illustrated, contribated much to render the discrimination of the species of trees and shrubs facile, bui also caused the expense of the work to be excessively augmented beyond what would have been otherwise necessary
We therefore announce with satisfaction the appearmee of an abridgment of this valuable work, not costing more than a quarter the price of the original, and containing all the most valuable of the woodents, with illustra-
reach of thousands who could not before hope to obtain if and we strongly recommend it to universal patronage. how said, that we regard the wos ased was ing perfection, or which can be referred to as a standard of nomenclature from which there is no appeal. Let no one entertain this notion, or fancy that the botany of Mr. Loudon's book will always bear the test of critical ezamination. On the contrary, it is not the production of professed botanist, and pats forth no pretensions to bein anything more than a popular illustration of the specie and varieties of hardy trees and shrubs. In some respect separating the genus Mahonia from; as in the instance of dividing the enture-leaved Ash from the pinnated specied The real merits of the work are, that it is much the be account, in any language, of the subject to which it refates, and that it is of the greatest use to all persons ha,
ing the care of parks and pleasure-grounds. sible for such persons to lay out their money better than in the purchase of it.

The Microscopical Journal continues to appear, and e are happy to find its contents increase in importance as it proceeds. We have now before us No. 9, for November containing an interesting memoir on the minute anatomy Farre; a continuation of Mr. Bowerbank's carious re searches into the nature of the silicious bodies of the chalk, greensand, and oolitic rocks, with several othe papers and eztracts well deserving the attention of the microscopical observer. We only regret not to see more matter relating to vegetable anatomy

\section*{NEWS OF THE WEEK.}

Our Foreign news contains the announcement of the Royal ordonnance for the reduction of the French army to the peace establishment-a measure which will be regarded throughout Europe, not only as one of the micst is.purtant acts of the present Government of France, but as the best guarantee for the maintenance of peace. By the provisions of this ordonnance the army will be raduct! to the extent of one fifth of its present force, an amount re:riv equal to the whole standing army of Gireat Britain ; and the result of the measure, in a finatuid sense. will be the immediate saving of about 3) mitious of francs. The policy of this reduction is generally approved by the Pazis papers, with the exception of those which are the organs of the extreme parties in opposition; whule it is received in diplomatic circles as a proof of good faith on the part of the French Gocernment towards the nither Errevean Powers. The trial of Quénisset and his accomplices is not yet concluded, and the facts developed during the ecent proceedings appuear to have thrnwa on addirional light on the conspiraly. The manner in whin the tral has ueen ernductel, and the evident attenpt of the friwninw yers to
 hal., have led to the impression that tise whele prowercing is rabler a Gotemmeret attach on the Imese thas a thal of conspirators. Mucia coubt is enteruainel as tos is e vo
 dimped to death, but it is surfoond in inat y ithiters that ao executions will take place. - The intril gence from spirs, received throwet the Paris payers, announces that the Bratish Government has offictasty naxie is nown to the Regent that Great Britain will neiber suffer an armed intervention, nor taike part in any congress or other measure tending to interfere with the rights of Spain as an independen nation. If this announcement be confirmed, it is believed that it will have great iwhinence in strengthening the authority of the Spanish Ministry: Our news for Madrid statem that the appronching maion
is expected to be one of unusual interest; the municipal elections, both in the capical and in the prosinces, are likely to be carned by the demorratic party; and several nitasurts of a hoeral character are sand to ive under the consideration of the Cabinet.-From Portugal we learn that Lord Aberdeen has represented to the Spanish Government, through the Ambassador at Madrid, that the British Government will resist any attempt, from whatever quarter, to interfere with Portuguese independence. The same accounts mention the existence of a conspiracy, having for its objects the compulsory ab-
dication of the Queen, and the formation of a Regency under Spanish influence; the scheme appears to have been long known to the (iusemmert. but has never as sumed a character of murbs mportance.- Our news from Germany is alm.ost entirely of domestic interes: The projected uniun of Trans!vania «ith Hungary, and the Congress of Plenipoteritiaries from the States cempersing the Custons' Luron, now assembled at Berlin, exute in uth
attention in political circles. The States of Brunswick have adopted, by a large majority, the proposition of the Comarittee to agree to the accession of the Grand Duchy to the Prussian Union; but the measure is not to be car ried into effect before 1813.-Letters from Holland state that the King will not persevere in his refasal to ratify the Treaty concluded between Luxembourg and the German Customs' 'inion; but the report is considered to require contirmation.-Advices from Warsaw announce that the Emperor has determined on effecting a complete union between Russia and Poland; that the Russian systen of customs, legislation, and municipal government is to be introduced iuto Poland, and that the Russian language alone is to be used in schools and in public acts.- We learn from the Levant that Lord Aberdeen has notified to the Porte that no expedition against Tunis will be permitted; and that a combined French and English feet will prevent the sailing of any Turkish force with such an object from the Dardanelles. The report that the Greek Government has addressed a conciliatory note to the Sultan on the subject of the late disturbances in Thessaly, is confirmed ; and there is no longer any doubt that the disputes between the two countries will be amicably settled.- We have had two arrivals thin week from the Cnited States, but they have brought no inielingence of political interest.

At bome, the accounts from various parts of the country, more especially from the \(n\) anufacturing districts, represent the working population to be in a condition of extreme distress, which is aggravated by the approach of winter, and by the continued failures of the great mercantile estabhshments. Our provincial ners cuntains reports of numerous meetings in connezion with this subject, at ing among the operative classes have been made known, and petitions adopted, praying for a Parliamentary inquiry into the causes of this distress.

\section*{frorelan.}

Frasice, - Reduction of the Army. -The Moniteur of Monday cuntans animportant ordonnance relative to the orgausation of the army un ibe peace iooting. It is pre-
 the Marsial discuarts varaus plans for the redaction of
the army, and finally dectares in favour of the syatem, in time of peace, of reducing one company in each battalion of infantry, as the only mode of diminishing the expenses
without impaing the fffective service. Activz upon thi-
recommentation, the King, by a royal ordommen dated
 the effective voted in 1842, to 344,000 , whereby a saving is teahsed of abont hiity million- of frams (l,2formin)
Non redneti,n is thus made in the cavalry, artilery, and engineers ; the diminution being solely in the infantry, to niore tiran ene-nfilh of the present force of the arins. The niore than ene-hth of the present farce of ine arvy. The and above the to half-yearly, reviews, and can raise the number of the effective army immediately to \(500,000 \mathrm{men}\).
Th.e Marshai's report condutes by stating tiat his task had been a difficuit and delwate cree. amd thet he had in the reduction of the army. He had thought of sup. pressing altogether
hoth Chambers, but as the accomplishment of this wish would have con,promised the Royal , rerogatue as to the army, he ho daired from Rion the cour roceedings in this trial, a man named Dufaure, one of the 16 individuals accused as being accomplices of Quénisset and who had preriously eluded the researches of the
to Fontaineblear. He was brought before the Court on the same dav, and having accepted the counsel assigned nying, port, where he is mentioned as the principal agent in the attempt, having supplied the conspirators with arms, am munition, \&cc. Quenisset and one of the other prisoners being called upon, identified him as having been presen at the meeting prior to the attempt. The hearing of evi-
dence being concluded, the Attorney-general presented his requisitoire, consisting of a recapitulation of the evidence aguinst the accused, and a demand for the conviction of
all of them, with the exception of Prioul. He particularly insisted on the condemnation of M. Dupoty ; as the writings in his paper, the Journal du Peuple, had, he said, provoked the crime. M. Paillet, celebrated as Madame Laffarge's counsel, then addressed the Court in favour of Quénisset, admitting bis guilt, but making powerful appeal for mercy, on the ground of his repentance and revelations. Their several counsel then spoke
in defence of the other prisoners, their chief argument being that Quenisset was a person whose statement was not to defence of M. Dapoty, in a clever and powerful speech He declared that his client was in no way connected with the conspiracy; that he was far removed, in his opinions, from those of the Communists, or the parties with which the accusation confounded him; and concluded by in treating the Chamber not to verify the prophecy of M Rover Col'and, who, when the laws of September were passing, deelared that Government wanted to make the Chamber of Peers the court-martial of the press.-Th trial is not expected to terminate till the end of the week but the general belief appears to be that Quénisset, Co-
lombier, and Just Brazier will be condemned to death, and lombier, and Just Brazier will be condemned to death, and
some executed; and that the others will be condemned to different terms of imprisonment. The Peers, it is added are determined to punish M. Dupoty, though the charges quent accounts inform us that during the sitting of Tues day, while the counsel for Dufaure was speaking in reply to the evidence on the part of the prosecution, the pro nounced that new additinnal evidence against that prisoner had been discovered, and that the witnesses to prove it were in attendance. Contrary to all precedent this evidence was rectived. although, by law, the witnesses could not be sworn, and it is thought that their testimony, con-
firming as it did that of Quenisset, will, if any are exe cuted, bring Dufaure to the scaffold, This affair has called forth journals. The defence of the several prisoners being concluded, the Attorney-General on Wednesday replied, particularly dwelling on M. Dupoty's case, whose conviction he called for, not for an offence of the press, but as the writer of theories and pernicious doctrines blach were the direct, prositive, and immeriate provecation for the
ur setting of fiovernment by the Qiénisset conspiracy. This, argued the Attorney-General, was M. Dupoty's complicity, and article 60 of the Penal Code applied to this offience. He again went throngh the leading arricles the letter of the pemple, and dwelt at great lerigth on poty. He then aduressed :o the latter personatly some severe observations, and concluded by saying that hever was there an epoch in which greater courage and firmoness in public men were required. His speech produced a great sensation, and was received with explessions of ap-
probation from some of the Prers probation from some of the Peers.

The Prorinces.-Accounts reetived ficm the prorinces annownee that the mischicf produced by the late tloods is very general and semolas. The Mmitenr puhlishes a re-
port aulressed to the King by the Minister of Commerce, in whict hie describes the ravages commitred in fourteen departments by the overflcwing of ti.e Rhone and sacne, and propuses to bis Majesty to apply to the relief of the ouffers by the inuadation, a sum of is0.intef. sthin remaining in the Trezeury, out of the fund is 5,400, , mion.. voted last year for the same purpose. This report tias been folnister, a a royal ordinance granting the request of the Mi -
of the Far, en the road to Nice from Toulon, bas been again carrich aray by the floods. A slight shock of earthquale
was 'tit at Lyous on the 2 d insto, at a little before eight in the crining; and at the same time a siock has experteterd at Vienne on the Rhone. No damage was done, the the
nioremient was stronger at the latter former.-The crop of olires in the southem forpartnents has heen very aburdant, so as to canse a hirge fall in the price of oil-We learn from Sedan, in the Ardennes, that ,000.000f., for extending the fornfications, and render ing the town one of the strongest in France. Gercy, it in
said, will be united to Sedan, forming a large and popu. lous city, and works are to be constructed, by which the necessary. - The receipts of the customs of Marseillea txceectil thuse of the comreapombing momh if 1845 by a the habour in the same month was 841 ; cleared, 658 . \(P^{\prime}\) 'ecursenu' de l'Ouest states that bands of Chouans con tinue to raise contributions in various parts of La Vendée
and the west of France. At Chalais, Loiret, and other points they have extorted money and articles of food The Ministry. - There are still rumours afloat in the
diplomatic circles that disunion exists in the cabinet, and that a ministerial modification or change is probable. The opposition journals also argue confidently on the instabiupon which VI. Guizot and constend that the maja rity pletely disorganised. The probability or claim of M. Le martine to be President of the Chamber still occupies considerable attention, and is regarded by many as likely
seriously to embarrass the ministry. It now appears, notwithstanding the assurance given in his letter, neticed that M. Lamartine, though professing to support the ministry, and anxious not to throm serious obstrictions in gainsay his friends, or proclaim that he will not consent to his election as President, should they determinie on choosing him. The ministerial prints, however, represent the cabinet as by no means alarmed by the resolution of portion of the Conservative party to support M. Lamar its attention is the prospect of a general election. in. avoid entertaining any incidental questions tending to di-
aroid vide the Conservatives, and compromise their success a the throne will allude to the probability of a dissolution The opposition journals affect to be much amused with the alleged intention of the cabinet to create new batch of peers. According to the reports in circulation, Marthe dignity of dukes, but their titles to be raised to Marshal Gerard was to assume the title of Duke of Antwerp, and a similar distinction is said to have been offerel honourable witbout a title, and refused to accept it Political Trials.-The Court of Assizes of the Lower Pyrenees held at Pau bas acquitted all the accused in the affair of the Toulouse riots, with the exception of one named Rouzil, wl.o was senterced to three ronths' imprisonment. At the Aix Court of Assizes the Crewn has the Marseilles republican conspiracy in have buen con demned and sentenced: 11 to 5 , 6 , and 7 years' detention for conspiracy; 17 to 5 years' imprisonment for conspiracy, and 23 to confinement of perieds of 1 rear and stated that after the Quénisset trial is over there will be prosecution of several Paris papers befcre a jury, fo articles attacking the report of the examining con mintter
read before the Court of Peers.-The Journal del \(l^{\prime}\) Eure has been acquitted by the jury of the Ewreus Court If Assizes, for tro seditious articles on the troubles of Clermont Ferrand and the Quénisset affair. M. Julea Favre defended the editor and publisher, and the Adro cate-General, from the Ronen bar, conducted the prosecution. The speeches were a complete political discussion papers hase conglatulatory articles on the itsith
The Furtifications.-The Paris journils stare that the greater flart of the persons lately employed at the fortifications lave formed themselves into bands for the pur that they yundering in the nelighucurhoot of the cot ordered to , bectre their movenonts. Tiee Commane of Bercy Lave demanded and ebtained pemission to niancan tack from these marauders, of which they were apprehes-

The same accoants state that a protest, 20,000 dissements of the capital, against the fortifications, tred already received 3,000 signatures

The Nrty.-Aeconts received from Toulon of the 4 tin mss. inform us that the five ships of the line, about to suil, as noticed in cur last, for the Levant. will first procred to 'tunis, againt mitith the Guvernment. It is cave still appreaend that the suitan is abu ut to send an expedition. A steamer, whels left on tle e preceding day, was inelieved to have been desplatiched to appuise the bey of the monves of the visit ot that =quadrom. It was referent in-Brest, wouid be shurtis recalied into the Mediterranean, and that three other ships would be re-armed, so that France should have a force of twenty-three sail of the
line in that sea. Private letters from Toulon state that a
revolt had taken place on board the French ship of the
line Infexible, in the roads of Smyrna, and that the reline Inflexible, in the roads of Smyrna, and that the re-
volters had fired into a house where their officers were voltershled. The Toulonnais of the 7th inst. states that such a rumour had actually prevailed, and that it was even reported that Admiral Lasusse had been killed. The editor of that journal, however, adds that he bad seen a packet, and, consequently, pronounces the report to be packet, and.
Spain.- We are informed, through the medium of the
Paris prints, that the British Cabinet has officially made known to the Guvernment of the Regent,-1. That Great Britain not only would not suffer an armud intersention in Spain, hut that she would mot even permit any consinean frontier. 2. That she would not oppose any arrangement for the marriage of Queen Isabella II., provided her
intended husband should not be a French Prince. 3. That she was determined to take no part in any European Congress convoked for the adjustment of the Spanish
question; and that if such an assembly should be held without her co-operation, she would oppose the enforcement of all coercive measures, and of all other resolations to interfere with the rights and digaity of Spain as a free and independent nation. Intelligence from Madrłd of the 7th inst. informs us that by a decree of that date, the
Regent had suppressed the whole of the infantry and cavalry of the Royal Guard, the officers of which all belonged to noble families. Those corps are to be replaced by two regiments of infantry and two of cavalry, to which very
significant names had been given. The first were called the regiments of the Constitution and España, and the others of Sagunto and Pavia. It had been resolved that, hereatter, the guard of the Palace be intrusted in turn to the different corps of the garrison. The Regent is to take
up his residence in the Palace of Buena Tista, about the beginning of January. A partments were preparing for the reception of the Infante Don Francisco and his family. His agent had claimed the furniture of the apartment which he formerly occupied in the Palace, but M. Ar-
guelles, the guardian of the Queen, had declined acceding to this request, because it had been purchased by her Majesty. It was expected that the municipal elections, both in Madrid and in the provinces. would be carried by the cipal Bill, which was said Ministry had prepared a Muniwould, no doubt, meet the approbation of the Cortes. point of receiving the sanction of the Cabinet, and amongst others, one relative to the cottons of Catalonian manufacture, and the other regulating the corn trade. The ap-
proaching Session was expected to be a stormy one. The Moderados, who had concealed themselves after the events of the \(\overline{\text { th }}\) ( Octuber, were beginning to quit their hidng-
places. Guvernment was adopting efficient measures for the security of the roads, which have been infested with robbers ever since the last insurrection. Col. Ramon Mackenna had left Madrid to take the command of the districts of Rosas, Guadarrama, Escorial, Navalcarnero, and Samosierra, and to adopt the nectssary measures for the destruction of the banditti, who, during the last two
months, have spread terror in that country. On the 2nd inst., the military commission had acquitred Col. Pernando Fernandez Cordora of the charge of participation in the revolt of the 7th Oct. M. de Salvandy, the new French Ambassador, was expected in Madrid on the 11 th inst., and Señor Gonzalez, Minister for Foreign Affairs, had ordered every honour to be paid him on his arrival. It drawn up in rery satisfactory language, and was calculated to restore a good understanding between the two moted by Th. Salvandy's mission. Pricate letters state that an additional sum of \(15,000 \mathrm{l}\). Was forwarded on the night of the 4th inst. to this country, to pay off the claims Mar British legion. The French mail, which reached
Madrid on the 6 th inst., was robbed within a short disMadrid on the 6 th inst., was robbed within a short dis-
tance of the capital. The correspondence, however, was spared. Mr. Hindley, M.P., one of the travellers, was among the persons who were plundered. From the pro-
Finces we learn, that the Regent has sent orders to raise Finces we learn, that the Regent has sent orders to raise
the siege of Bilbao. The Barcelona journal; bring no news of importance. They publish a letter, addressed by denying that any French citizen had been either attacked or murdered in Catalon'a, togetber with a reply of the Consul in confirmation of that statement. Barcelona
the rest of the province were then perfectly tranquil. the Portcgal.- We have reecived news from Lisbon to the Thinstant. Baron Marechai, the Austrian Minister, pital on the Gell inst. The report of the arrival of the Pope's nuncio, mentioned in cur last, was premature. Private letters state, that great satisfaction had been felt by the Queen's party, in consequence of the receipt of a commanication from Lord Huwrd de Walden, conveying a declaration made to the Spanish Government by Loru While stating it to be the wish of the British Government to pronote harniony between the Gorernmeuts of Spain proceedings on the part of the former, tending to disturb that harinoay, and adds, that although discrediring these Teports, he deems it necessary to remand the Spanish Gg-
verment of the treaty engagements subsisting between England and Portugal, and to declare that the British Gorermonent will resist any attempt, from whatever quarter,
to interfere with Portuguese independence. These accounts
add, that there had been a plan formed to force the Qneen to abdicate, and appoint a Regency under Spanish influence which would proceed to negotiate a marriage between the Prince Reyal (a child four rears old), and the Queen
of Spain; and that although the scheme would probably have come to nothing, the result of such a revolution would certainly have been, that for many years the Government would have remauned in the hands of the Spanish Minister and his friends; so that Portugal, although nominally governed by an independent Regency of its own would in fact have become a province of Spain. The Corthe general fact of a conspiracy of the kind was matter of conmon report in the capital and over the kingdom; and that M. Passos had openly declared his sentinients in favour of a union with spain, and was thought to have a fair chance of the Regency in case of success. An active correspondence is still carrying on between the Spanish Envoy
at this court, and the Foreign Secretary, relatise to the Spanish emigrants: who, in consequence of the suppression of the Christina movement, have taken refuge in Portugal. The Spanish Goverument has offered an amnesty to the privates, but requires that the officers be kept in the Carlists, whom the Chartist Ministers detained in on Castle of St. George, Fort St. Julian, and on board the bulks, for nearly five years. The payment of the third instalment of the British civil claims on this Government, amounting to \(37,7181.12 \mathrm{~s} .6 \mathrm{~d}\). sterling, became due on the lst instant, when the agents for the different claimants
attended at the Treasury to receive their respective amounts, and where checks on the Lisbon Bank were in readiness for them.

Germany.-The news contained in the journals of this week is unimportant. Accounts from lienna, of the 2 d sador to the Ottoman Porte, had, on the preceding day, a long conference with Prince Metternich. It was believed that his Excellencr had been instructed by his Government to come to an anderstanding with the Austrinn Cabinet on all measures it might be deemed expedient to adopt relative to Eastern affarrs. M. de Flahault, the French Ambassador, had also frequent interviews with Priñce Metternich; and it is added, that the result of these conferences affords satisfactory assurances of the good understanding existing betmeen the Courts of Cienna, Paris, and London, on all foreign questions. was daily expected in Vienna. Prisate letters state that the numerous re ports circulated in the French and German papers of an approaching Congress concerning the affairs of Spain, Bordeaus is represented as going on favourably. It is Bordeaur is represented as going on favourably.
stated that all swelling of his thigh has subsided, that the ossification of the fracture is rapidly progressing, and that
his Rovai Highness is expected to resume bis levees about the middle of the present month. It was nor thought however, that the Prince would be able to walk before March. The Austrian Guvernment has announced its intention to encourage the plan of a railroad from Prague to Dresden, across the ralley of the Elbe, by guaranteeing 4 per cent. to the subscribers of a company to be constituted for that purpose. Two accidents have recently occurred in the fashionable world at wienna. The Counfess by indisposition, when her taper caught the curtains, set the bed in flames, and the unfortunate lady was seriously burnt, that she died the next morning. On the
same day the Count Laganskr, of the Curassiers, was thrown from his horse and killed. The journals state that Senor Forti, the tenor singer of Vienna, has just gained in the lottery there a prize of 80.000 forins, or \(200,0041 f\). According to advices of the 6 th uit. from Transylvamia, the question of its mion with Hungary was excitiny much attention. The German party, it is said, was opposed to this re-union.-The Prussian State Gazette of the 8th inst. announces that the newly-appointed Brinish Amoassador, Lord Burghersh, had a private audience of the King on the Tie Congress of Pienipoteatiaris posing the C'ion of Custous, assembled since the list instant at Berlin, had been exclusively engaged with the sugar question. It was believed that the agricultural and national interests would prevail, and that beet-ront or native manufacture would be encouraged, to the exclusion of foreign sugar.- Private letters insorm us ime ago from the unrivailed Egyptian Museum of Berlin have been recovered. I reward of anio crowns and pardon to any one of the thieves who should cunfess the robbery, and restore the srticles. had been prochaimed. On the 30th ult, when all hopes had been given up, a man came forward and avowed bimself the sole criminal, with the exception of the receiver. He pointed out a spot behind a hedge, close to the Prenzlaw Gate, where, at a small depth below the surface, everything had been buried and lain untouched The King is said to bave been highly gratifed at their re storation, as they had heen the private property of the
late Sovereign. The informer, it is added, will receive his pardun, with the 500 crowns; but his associate, who denies his complicity, will, it is thought, suffer the penalties of the law. - The Grand Duke of Hesse Darmstadt opened his States on the fith inst., with the usual ceremonies and speech. In the latter document he congratulates the Duchy on the preservation of eace, but dwellis on the necessity of completing the defensive system of Germany; and says that the Grand Duchy must participate ia the oustion of tares would be necemsary. The Cologne

Gazelte of the 19th inst states, that a person holdine bigh situation in the department of the Exchequer at Munich had disappeared, leaving a deficit in his accourts to the amount of 100,000 florins
Hanofer and Beunswick. - Accounts received of of Deputies 66 only were admitted to take the chaths without any reason having been assigned tor the fxcluainn of their colleagues. M. Meyer de Lunenburg (President of and M. Budenberg of Osnabruck, had been Hameln, whilst the election of the President was proceediug. The Deputy Brensing protested against this exclusion, together riti 15 other members. The same accounts add, that the Minister of the Interior had ordered the second edition of the "Songs of a Coamopolite Citizen" to be seized.Contrary to general expectation, the States of Brunswick tion of the committee to agree to the aciessum of the
Grand Duchy to the Prussian Customs Unicus. I: is however, to take place before Jan. 1. 184.3. Many of :he arst functionaries voted against Government, although the Ministry had declared that even
Homband. - Intelligence of the llth inut. has been re eived, announcing that the King would not persevere in his refusal to ratify the treaty conchuded between Luxemurghand the German C'ustoms' Uuion. An accun Assen of the 8th inst. says, that a market-buat frum Peiz o Groningen, which left the former place on the preced ing day, was npset and sunk, and 10 persons not being able to get on deck in time, lost their lives. A letter from Batavia states, that the Dutch Government intends to occapy the two small ishands of St. Panl and Amsterdam, about 700 miles on the line frem that port to the Cape of Good Hope, and to mee them as depots of coul for the ateamers which run between Holland and its East Indian possessions.

Switzerland.-Letters from Geneva inform us that with the exception of a few transitory alarnis. that city has been quiet since the evening of the 22 d ult. Several rities by the neighbourmg sates, have been expelled; and atrict watch is kept upon a body of Mutuatrots, most of them foreigners, who hare formed themselves hitu an association in the city. The aex lan for regulating the election of the Constituent Assemnly has been read a se cond time in the Representative Cumbll, when the thind reading was fixed for the 3 inst. Should it fass, as wãs expected, the Constituent Assembly it was th.ught, migit be elected, and begin to act on the 19 th inst. The papers announce that the Zurich and Basle Railroad is dishotsed
Russla.-The St. Petersburg paper state, that an important discovery has been made by some expeditions containing gold. It consists of a bed of sand, near the source of the Nadejoni, not far from the wasiing station, called Pesaskoi Tersinski. It is estimated to contain 100,000 pounds of sand, and to produce three pouds aine punds and sixteen zols of gold. In the assays already noade, lour punds sisty zols of metal, rich in qualliy, hare been extracted. The poud is rather more than foriv puuncis Cnglish.-We are informed, by letters from Warsaw of the lst insto, that the umion between Russia and Poland to be complete. The line of customs between the two countries is to be abolished, the Code Napoleon replaced Russian poll-tax. The military commanders and officers Russian poll-taz. The military commanders atad officers justices of peace, hitberto held by lauded proprittors. The Russian tongue is to be alone taught at schovis, aud used in public acts. Jews and all others to be sujject to the conseription. All confiscated goods are made over to th.e bank to be sold, the profits of the bank going intu the imperial treasury. Sibylle, the mansion of Prmee Czartoemigrant French officers hare receised comaands in the Russian Army, such as St. Simon, Duroc, st. Aldegonde. From the same accounts we learn, that the inauguration of the monument erected at Warsaw in the square of Saxony, in memory of the Poles who died in 183 fur "their legitimate Sovereign," took place with zieat sclemnity on the 29th uit., in presence of an umpong milit tary force. - The winter has set in at St. Pe craburg ili an unusually capricious manner. During the night letween meter falling to 10 degrees below ictr, of Resinumr's scale. The folloning day it thawed, but dosing the night there was a sligit frost arain, and ti.e ue on the Nesa redegree below the freezing point. On t.e Livi it thamed again, and continued tido so till the 2-th. when a goud deal of rain fell ; the ice though thin, huwever, ren-aning tav. A. this time it had been iospossible to recomotrber tha ji:jurs of pontoons. so that the different the from all communication witio each litur. blu:ng at night than during the diy. On tie -ind. i.e thermometer fell again to the freazing poin, whi - chat hime:y to go down lower. The weather was tamam! and the readstead at Cronstade quite open
Iract- Letters from Rome inform ns, that the two younger sons of Don Carlos have arrived in that capital.
Their Royal Highnesses are the bearers of an andigraph lecter from their father to the Pope, and, after reluamisg there a month, are io proceed to Naples. It is stated that the Pope has the some difliculties with the Anstrians ant as maneatrated, and contincd at Troppary, and a geand Viour hat beva appointed; hat
the Pope will not sanction his administration. - Private accounts from Naples of the 1st inst. amnounce the Majesty has adopted no resolution respecting the free export of earnestness, that the King has been afraid to withdraw the troops sent to that island, when he expected to be attacked by Great Britain

The Forgery of Exchequer Bills.-The following is said to be the course which Government intende to adopt with respect to the forged Exchequer bills: No definite answer will be given upon the subject to any applicants at the Exchequer office, but a message will be sent, soon after the assemblug of Parlament, from the (romn to the House of Commons, requesting them to take the subject into their serious consideration, with the riew, if they think fit, of elief being granted to the parties who have advanced their money bunat fide upon forgerd bills in the ordinary and regular course of business. The only document bearing an official character which has been promulgated siuce our
last is a letter written by order of the Coniptrolier-Genslast is a letter written by order of the Conptrolier-Gene-
ral, in reply to one from a holder of bills claiming inspection subsequent to the date at which the examination closed. This letter states that the application cannot be admitted, the examination of bills having finally closed on the 2 ith uilt., and adds that the number of bilis which have been pronounced good amount to \(18,910,01(0)\). In the mean trme it seems to be the opinion in the City that the conviction of Mr. Beaumont Snith, as the sole and orly criminal, tends to strengthen the case of the holders, because it restricts the fabrication and issue of the spurious documents to a paid officer of the Crown, holding a situation of high trust and contidence. In connesion with this affair, it may be stated that the recent proceedings are expected to lead to a transter of the business connected aith the issue and payment of Exchequer-bills to the Bank of England. Ministers, it is said, are already in possession of the terms upon which the governors of that establishment will undertake the management and risk of this mportant security ; but no arranirement can be definitively entered into until the meeting of Parliament.
Haswell Lunatic Asylum.-At a meeting of the Middlesex Magistrates, on Thursday, Mr. Lausie requested that the magistrates would proceed to the consideration of the report of the visiting justices of the Councy Lunatic Asyuna at hansell, and also the report of the resicent phy sician, which were laid befire the court on the last count day. He said that, from the le:gth of time that had elapsed since the system of non-coercion mentioned in the report had been adopted at the asylum, the magistrates had had ample opportunities of j lging of its effects, and were now fully competent to decide whether it should be continued or not. He was about to propose a resolution to the effect that the magistrates aparoved of the present system. He confessed that he felit considerabie anxiety as cuthe result of his motion, convinced as be was that the question was one of the most important that had ever been brought under the notice of that court, and that the esult was luoked forward to with considerable annety by the people of France, Belgium, Germaty, and America and in the present system were sanctioned by the court, there could be no doubt that it mould have a considerable effect in those conntries. After some farther observations
concluded by moving 1
or a full consideration of the reports of the visiting justice tic Asylum at Hanwell, presented on the cunty arathe last Michaelmas Quarter Sessions, this conrt is of opinion that the system of management pursned therein
for the last two years has iten attenited rith beneficial results, and aluords strong e:idence in s.ang may be safely abolished, by the substitution of patiente kindness, efficient superintendence, and concter unifor and also that such system tends greatly to the amselioration of the condition and the increase of the comforts of the patients; and on these considerations this court now ex of the continuance of the system of non-restraint, as n. practised in the Hanwell Asylum." After sotme tiscus-
sion an amendment was proposed by Mr. Serg. Halcombe that the further consideration of the repost i, pusturad until the neat court day. After a loxy and someniat
angry cibate the amendment \(\pi\) as negatived of 32 , there being only 7 for it and 4 ) aqainat it. Court then conshered the onigmal motion, whea Mr Serg. Adans supported in a peccil confutug ait the ay After some further discussion the mution in favour of :... ystem of non-restraint was aln.ost unamimasiy conreu Darkness if the Met,on restry-meeting was beld at Hammersmith, for the purpose of taking into consideration the subject or lightug the Me trupolis roads passing through that parish, and the other vicar, was called to the chair. Dr. Bowling said it seriously behoved theno, both in consequence of the dangers from accidents by the public conveyances, and especially afte Turuham Green, to adopt some measure for lighting the roads, which he thought the shopkeepers of the distric would have no purchaseis at their shops after da.k. He eluded by moving "that the provisions of the General Lighting Act be adopted within the district above named and also that the meelag proceed to elect inspecters uud the Act and fix the amount of rate to be granted fur tion ensuing year." The Rev. T. T. Haversfield seconded the motion. He said that it was not on the high roads alone evenings ago a servant girl, while proceeding alng Han mersmith-terrace, had been severely beaten, het tead cul and ber pocket, in which she had some muney, torn uff after which the robbers dragged her along, it is supposed with the intention of throwing her into the water, but her cries forced them to relense her. She had however re ceived such serious injuries, that she still continued und
the care of a surgeon. Mr. Wadden felt it to be a duty he owed himself and his fellow-parishiuners to oppose tint motion. After commenting in strong terms on the repor of the committee appuinted by the vestry to consider the the meeting, and the purposes for which it had been caited be adjourned until that day six months." This being seconded a warm discussion ensued, after which the Chairman put the amendment, when a great number of hands were held up for it, and against it but a comparatively small number ; when, amidst loud cries of "Ten to one, he declared the amendment carried. A poll under the prorisions of the General Lighting Act was then demanded of which ten days notice must be given.-On Weduesday a mary Abbott's kensingtun was keld, fursuant to pimbil notice, to take into further consiatraich tio aiscurna ance of gas-lamps on the Metiopolitan roads, arid to thike the opinion of the parishioners on the aluptten or mon adopion of the General Ligising ict. The hicar. .n. deacon Pott, was called ts the chair. Atter a geat it the cussion, it was moved bine tiast ti, Act should not be aloted by the whole parish "Mr. Hutchins secanded the mon there were a great number of han!'s beld up, while on the coutrary these appared only three dissentients
Metropolitan Inprorements.-The Marquis of Wes minster has opened a road from the foot of Vaux hall-bridg to Knightsinridge, through the streets and squares erter parochial authorities of it George, it is suid, ale aisut to erect a new chutch in Eerlestor-street. for the arconm dation of the parishioners who reside in that locality
Vauxhall Gardens.-Mr, Fowler, the recent purchases of this property, intends, it is said, to let off six acres on buildiny leass, reserving the residue, upwards of fre aeres, for pubie gardens. The portion proposed to le capital insested. and consequently the gardeus whl be hat
 to the Pince of Wals, who is nuw the eromber retse Las been renewed by the uasistiales i.s quarici ses:ivus.
Smethiteld Annual Catlle-market.-Monday was the tay appointed for this annual cattle-fair ; and it having been understood that a greater number of beasts civas usual would be brought into the market, estha The morning mat ine weather being wet and rtormy, in consequence of which the market was bat thin. ittended Towardson, however, the weather cleare up - little, when the merous. The cattle, it is said, were cever exceeded quality or in number, the supply mounting to pearif

5,000, chiefly of the Hereford, Durham, and Scotch breeds but althenuaned hreel appeared to bear the palm. There firs-merer 20 Durhams, the property of Sir C. Knight-
mere. M.P., which were greatly admired. There was also an dey, M.P., "hich were greatly admired. 200 stome, the property of Mr. Kingston, farmer, of Huntingdon. The beasts averaged from 4 s , to 5 s. per stone. The supply of
sheep was good and plentiful, amounting in number to up mards of 24,000 , and consisting chiefly of Leicester and Dumns. There was also a small lot of half-bred Leicester ainut for their beanty created general admiration, and were eagerly boughe 4 s . per stone. There was also a large supply of pigs, of a superior quality, which fetched good prices. At
the conclusion of the market there were but few animals left unsolds and in consequence of the good arrangements
of the market police, great satisfaction was evinced by the rarious buyers and sellers, and no accident occurred
Tower, for the purpose of viewing the ruins, and the other objects of interest in this fortress, contimes to increase, of the opportunity since it was re-opened to the public. . smis viened the ruins: on the Tuesday they increased to Ttursday, 390; en Friday, 285 : on Saturday, 513 ; on M nday, 4.33 ; on Tuesday, upwards of tiou; and equally large numbers have been admitted during the subsequent
days of this week. The dtsire of obtairing relics of the late fire, notwithstanding a high price is now asked for the specimens, appears aiso to be on the increase. Several bundred pounds, it is said, have already been realised by ur, the nuarquees fitted up for their sate are lought from the stores with uthers. The specimens extubited for sale during the last few days are superior to those at first produced, the Ordnance authorities appearing to have The day appointed for the intended sale by auction of the large nasses of gun-barrels, swords, \&ic., phled up in stacks within the loarding of the armoury, has not yet been decilled on, and it is feared that the majonty of the large
pieees of ordnance composing the train of artullery are to be disposed of in the shape of old metal. Much inconvenierice it appears, has been felt by the public in consequence of an order issued to the police a few days after the ruins Tere partially opened, to apprephend any one found with Tower; and, this order not having been conntermanded sin.ce the sale has been opened, people are daily beng apprehended and taken back to the Tuwer to see if the
Putic Meetings.-On Saturday the Royal Agricultural Society of England, under the presidency of H.R.H. the Doke of Cambridge, held ite half-yearly meeting at the
rooms in Cavendish-square. The Dute of Richmond, rooms in Cavendish-square. The Duke of Richmond, The report stated that Prince Albert had become a member of the society, which now included \(5,33 \cdot 2\) members. The intended meeting at Bristol on the 14 th July neat, and the hrmitation of the dinner tickets on that occasion to 2,400 , were announced. The society, it was stated, had applied to seum, library Forests for a site whereon to erect a mubers. Tharks to Professors Henslow and Daubeny were woted for their lectures, and several interesting spjeeches mere delivered.-()n Saturday a numerous meeting of dis-
tressed Spitalfields meavers was held at Bethnal-green, to receive the rejort of a deputation which had waited upon the Lord Mayor for the purpose of hearing from hits Lurdsin, his intentions as to the appropriation of the funds in his hands for their relief. Mr. For, on the that tbere conimittee, said that, having been informed the relte? of the Spitaifield's weavers to the support of all pleroons in di-tress, of whaterer trade, they had thought preper to wait on the L rd Mayor on the subject, when an attenpt to appuropriate money in any other war than the donors intended. They observed, that they called to express their desire that the money should not be prarted Tith by the Lord Mayor until a proper committer hat wis hipponted. His Lordship, said that such certainly Was his intention, and recommended the deputation to get awd consmittee, to whond appoint a responsible chairman in bis pussession. He state i that he kad about l, honey., but which tie knew was not nearly sufficient to supply their neressities. The committee had since waited on ifr. R Hanburs, who had dectared his willinguess to become their chairman at the district meeting. The secretary to ohrain sog glad to fixd that they were now in a course to an alarming tastent. Siuce the distress was increasing mpeling the com. milice had hail above Soly personal apolicatinns. He had leane it frim the sestry cierki that there were 1 , nivo persons relief. Sereral menters nearly 3.fite receiving cut-dour relief. Sereral wearers then addressed the chasir, atter
 Miesty. on the erent of tige birth of the Prince of Waies. phaning the object of the meetiog, addresses mere read to Ir. Mood, after professing his attachment to thowe ither-
trious individuals, and bis participation in the loval feelings gii amendment that sonve words should be inserted expressive of a hope that her Majesty would canse some measures to be taken on behalf of the distressed portion of the community. A warm discussion took place, and the chairman admitted that such an appeal to ber Majesty might be requisite, but could not agree that this was a fitting occasion, but professed his willingness to comply
with a requisition to call a meeting to consider the matter and it was ultimately agreed that such a course should be taken, and the addresses were agreed to

The Convict Ward.-On Wednesday an application on behalf of this criminal, who is under sentence of death in Newgate, for the murder of a chuld in Willam Street Regent's Park, was made to the Secretary for the Home Department. The result of this appeal has not transpired,
but it is thought that the sentence will be carried into but it is thought that the sentence will be carried into
effect. The sheriffs visit the criminal every day, and, it is said, are earnest in their entreaties that he will unburden his mind, by divalging the truth respecting the crime for which he is condemned to suffer. He still, howerer, continues to assert that he is not guilty of murder, and that the child was hurt by his accidentally falling on him.

Accidents at Sea.-During the week the underwriters at Lloyd's have received intelligence of four vessels having been run down during the late serious gales, unfortunately attended with loss of life. The vessels in question are the schooner E.iza, belonging to Ipswich; the Defiance, of Greenwich; the schooner Nancy, belonging to larmouth and the brig Queen, of Newcastle. From the s'atements night of the 5th inst., near Harwich, by a brig calied the Contudon, of Stockton; and it is thought extraordinary that the crew, many of whom were asleep in their berths, were not carried down with the vessel, for she sank in a few minutes after the collision. Fortunately they got on board tine brigo but were nanale to save any property. The Nuncy was lost on the same night. The accuunt niaking for Iarmouth, when the Jean and \(M(b) y\), of Whitby, came across lier bows with so mucls violence that she almost immediately sank, and it was with great diffi culty that the other ressel was prevented from sinking, her starboard quarter being completely driven in. The master and the crew saved themselves by jumping in to the long-boat, and landed the following morbing at Yaraouth much exhausted. The Jcan und Mary has since been run ashore to save tier. The Defiance was lost on the 1 thth inst., off Cromer Lighthouse. she was at anchor at the time, and was run down by the schooner Alert, of Whitby On the morning of the llth inst., the Queent, on her voyage to London from Shields, Laden deeply witis coals, when off Scarborough, was rum down by ark, name un known, and three of the crew sank with the ship. The remaining portion of the crew jumped into the jolly-boat just as she was sinking, and were picked up about four Fires.-On Saturday night a seritous fire broke out in the wadding manufactory of Mr. Millingham, Churchstreet, Shoreditch. The building, which is of considerable extent, stands in the midst of a number of small houses, several of them rooden ones, and inhabited by persons in indigent circumstances. The fire was first discovered in what is termed the "skin department." which adjoised the machine-room. An unusual body of light being noticed there by a female living in the court, she informed the constable on dutr, who discovered that the building was in flames ; but a considerable supply of water being obtained, the fire was contined to the lower part of the
premises. The loss is eatimated at abcut 200 l . The fire premises. The loss is estimated at about 200\%. The fire is supposed to have been occasioned by spontaneous combustion, as at the time the place was closed every light had this timely discarery, it is thonght that the entire factory, as well as the surrounding neighbourhood, must have been destroved - Ou Sunday a fire occurred at Pithield-street, Hoston, in some buldines used as stables by Mr. Stanbridge, silk-dresser. It appears to have criginated in the bay-lufts on the first floor over the stabling, and had reac discore, the the discovers, the flames burst forth from the roof and the different wirdows of the bulding, threatening serious mischief th the property in the immed ate neighomurhinoud
By the timely arryal of the engines the fire was contined to the bulding where it commenced, whith was almoth entirely destroyed. - On the same cay, a tire occurred in the shop of a shoemaker, named Thompsen, in Great Leonard-street, Shored.teh, whith was atiended rith considerable lamaze. - A nother fire took place on the same evening cal the premises of Mr. Biker, Exmouth-street, Commercial-read es \(t\); and considerahle property, consituing of cabinets. ab and bedstequs, was hurnt.-()n Saturdar, Crockford o wub-house, in St. James"s-street. was in danger of being destruyed by fire. Itseems that the stemard. who sleeps in the upper part if the house, was adarmed early in the nuraing by a sme!l of fire, ade on proceeding to the landing of the second floor, he ciscivered tlames issuing from behind the shirting-heard. He howeser suceveded un teari: d doma the mainscoting, and erentwaing in estinguishing the fi.e nithout alarming the neightow is the flue of the enmmittefronos cininney, where a dryosit of smot had accumulated in a sort of poeket or canity, Lasd cunced the brichs to become red-tot.
Brautord - At the pery sessianso on Saturdat Mr
Lionel Rodwell was summoned, under the General Fighwhy Act, for havisg been guilty of a pound-breach, by
which he hod made himserf liable to a penalty of 201 , or
three monthe' imprisonment. The defendant's horse was found by Mr. May, one of the surveyors of the highway
at large, and grazing in the parish highwas. Mr. May desired his man to take the borse to the pound. The de fendant overtook the man, and offered directly to pay for
What damage had been done, and for the pound fees, but What damage had been done, and for the pound fees, but this being refused by the nian, Mr. Rodwell managed to break the withe by wi.ich the horse was held, and got it free. The chairman said he ought to have waited sil t:C penalty of 20\%. by rescuing the borse on the way to the pound. It was, therefore, the duty of the bench to con or seven days imprisonme nit

from trade, but that the frames were unsaleabie at auy price. In formes times it had been the practice, when
men withdrew from business, to let their frames, and
sereral individuals had no other means of subsistence than what they derived from this source. But no rent could now be obtained, and men who retired on what they con-
ceived a competence had been driven to the workhouse. The meeting lasted from eleven till four o'clock. Several resolutions, in favour of free trade and the abolition of
the Corn-laws, were adopted; and, finally, it was resolved "That a petition to the House of Commons, founded upon these resolutions, be prepared by the executive cons of the manufacturers of the Midland Counties thereto.
Devises.-A public meeting has been held in this town Prince Albert on the birth of the Prince of Wales ; and secondly, to consider the best means of alleviating the
urgent distress at Bradford and the other seats of manufactures in this county. There were about 300 persons present, amys whom were thie Marquis of Lamedowne Bouverie, M.P., Sir J. C. Hobhouse, and other members
of Parliament. The address to the Queen was mored by the Marquis of Lansdowne, who, in his speech, alluded to the prevailing disiress on the manuficturing districts of the country. White, however, he expressed her anything of her Majesty's feelings, he believed she would be pleased that any address to her shond he counled with an attempt to alleviate distress, sion to it. The address having been seconded, the Earl of Radnor proposed an addition in the way of an acknowledgment of the esisting distress; but the proposal was
rejected, and the orivinal address passed. The meeting then proceeded to the consideration of the distress at Bradfond, when some serious statements \(\pi\) ere made. It appeared that if six thousand persons nho, some tine noge were num fuly en ployed; from four to five thousand were livis on their satings, on the produce of their gardens, or hy pawning thell turnule andloyment. The inumediare recon an of tho dhetress, which, it was added, Wha borne in a very esemplary manner, was stated to be theefold: the faiare of a house in London, of a bank in the thwn, and of three houses in the town and neighbourhow whinh engluyed the workmen of the parish. Several
persom at reated the meering in speeches of considerable persom andice-ved the mering in speeches of considerable sented to Parlament, praying for an inquiry monto the ex isting cause of dratress.

Deconpert. - A public meeting has been held in this town by regui-ition, for the purpose of considering the propriety of miemoriahsing foverument on the contem-

 paid by the stace. Mr. Little, after animalserting on the manner in which justree is now administered by the unpaid masistraty, moved a petitou to the House of Cumment of stipendary magistrates, to be paid by the state. An ameaniment was muved rejecting the proposal, on ac count of the expeuse, and was carried by a laige majority,
Durhum.-It appears that a conviction of the expedieney of discontinding the new rural constabulary is
spreading in ditferent uliectums throughout the country. The magistates of Derbystare hare retusta their sauction to the foree by a iarge majority; in Notunghmshre the system has been sbown to have entrrey tanled; in Gloucestershire several meetings have been held for the purpose of avolishing the force; and a smilar movement is it is place in many other counties, wholly irrespective, meethro of the rate-payers from the parishes and shyps in tis comenty was held in this city, to take the same subyect inlo collsideration. A long discussion took place, and the following was the resolution adopted at the
close of their dehberatons :the rural fulive furee in the rural districts of this county s unnectssary, and entanls a serious burden upon the agriculturai districts: and that a committee of agricuitursts be appointed to draw up a general form of a memonal for the ataption of eacin township seeking to free be transmitted by post to the proper anthorities for the adoption and signature of the rated inhabitants thereof, and that such memorial, when signed, be presented by
E.reter. - Ti.e local papers give the following summa of the damage dose by the late floods in Devonshire: - It was at one time faved that the whole viliuge of Crediton would have been destroyed. The bridge over the Creedy on the Tiverton roat, has been partially swept awar, and that the ferpie were prevented going to or returning foom Exyer. The roads have been impassable between Sand nate ithen wich adjuns a smail brock, Courtenay awar. Hereford. - local paper states, that at a ball which
hook place in this city a few days since, some individua company arrived, which had so serious an effect that it as they entered, so that the company appeared to be all suffering under a severe attack of influenza at the same it is added, that the injurious effects were experienced by many for several diys after. The perpetrator of the trick which has just been issued, that the cost of restoring the cathed:al in this city, to which subject we have referred in previous Nurabers, is estimated at 20,0006. The Dean 2,0006. from their own resources ; the bishop of the
added, that since the year J831, the Dean and
have expended on the fabric, besides the proceeds of the fabric's estates, and a voluntary sacrinice of \(5 l\). per cent. private means. It further appears that there is a debt nearly \(9,000 l\). upon the fabric fund.
Leeds.-On Monday a numerous meeting of deputies rom the various Anti-Corn-law Associations of the West Riding was held in this town. Delegates attended from
all the towns and villages, and reports were given of the past and present state of trade in the various localities this extensive manufacturing district. From statement made by different speakers, it appeared that from the year
1838 to 1841 , twenty-nine houses engaged in the wonllen 1538 to 1841 , twenty-nine houses engaged in the woollen trade in the township of Leeds alone, and not inchuding the out-townships, became insolvent, whose united ianing trade there had failed eighteen firms, whose liabilities were supposed to exceed \(217,800 \%\). Of the machinemakers, sixteen firms had falled, with capital amounting three houses had failed, and three bouses gone nut of the trade; and from 1838 to 1811 , sixteen houses had failed. and sixteen gone out of the trade. The liabiluies of chese parties amounted to \(1,5,200 \%\). Of the stuff honses and worsted-spinmers nine houses had failed, whose habilities amounted to 45\%,800. The total of bad debts during this period in these different branches of trade amounted to no less a sum than \(, 451,0017\). The dividends on the estates had not averased \(68,8 \pi\). in the pound: and adding the insolrency in the clenno dist apart from this town, during the four years, the total were also made, slowing that the present faling off i the employment of workmen exceeded one-third ased to be. With respect to unorcupied houses, the number for the whole riding in 18331 was 12,147 ; and in 1541, the number was \(18.88^{\circ}\), or about 55 per cent. more. The increase in the number of houses since \(\$ 831\) was only habited honses was 5.5 per cent. Tarious details wer then entered into, showing the sta* of destitution to which the opera ives in these districts were reduced after which resulutions were adopted, pledging the par ties present to use every constitutional means in their nower to effect a change "in the corn and provision laws, as being the main cause of the existing distress : and ras finally resolved that a petition, embodying the opi nions of the meeting, should be laid before the Legislature, immediately on the reassembling of Parliament.
Leicester.-On Saturday the Rev. Mr. Sibthorp, the late minister of Ryde, in the Isle of Wight, and two other persons, who have lately withdrawn from the Established Church, were ordained at the Roman Catholic chapel at Gracedieu, in this county, by the Vicar Apostolic. Alter the ceremony Mr. Sibthorp preached two
Liverpool.-Mr. Philip Courtenay, barrister-at-law and late member for Bridgewater, has died suddenly in this cate member for Bridgewater, has died suddeny in thillowing circumstances:- From the evidence adduced at the inquest, it appears that he had con tracted the dangerous habit of taking medicines |without consulting a professional adviser, and twat some prepara cion of opium was his favourite dose. He had lately re curned from Ireland, and was staying in this city a few days prior to his retara to Loadon. He had purchased erpent saops two bottles of colution of acetate of towed during the night, for some pains under which it is upposed he laboured at the time: the consequence was that death ensued on the following erening. Deceased was in his 3bit or 3 ith year. Ifter hearing this evidence he jury returned the fullowing verdict:-"r That deceanett intending to tike a certain quantity of the medicine, toul an overdose, which caused his death."-A meeting was keld in this city on Wednesday, at which it was agreed to enter on a public subscription with a view to erect some public testimonial to the memory of the late Mr. Egerton smith.

Daford.-The election for the Poetry Professorship of this University will take place early in February. The resident members in the University are supposed to be agitating the place :- For Mr. Williams (heads of colleges

Mr. Garbett (ditto)-St. John's, Wadham, New College,
Oriel, Worcester, University, Balliol, Pembroke, Corpas, Alban-hall, Merton, Lincolid. Neutral-Jesus, Queen's, Edmund hall, Christ Church. The whole of the resident Fellows of Excter, Queen's. Trinity. Oriel, and Christ Church, with a fext exceptions. are said to be in favour of Mr. Wihiams; Mr. Garbett's strength lying chatfy in and halls are nearly divided. Portsmouth.- In a previous Number we stated, on the authority of the Morning papers, that it was ber Majesty' the birth of the Prince of Wales. A Ministerial paper states that this report is erroneous; that there is \(n 0\) precedent for the extension of the Royal mercy to criminals in any simila instance, and that there is no intention occasion. - We learn from the Isle of Wight that the clifis at Freshwater have fallen seaward so much, that the great destroyed. Headon hill is also said to be a mass of ruins. effects of railroads, that at the toll-letting on the Wake. field turnpike-road, a few days ago, there was not a single pelled to take the tolls themselves. It adds, that there has been a similar scarcity of contractors at the letting
of the iron-bridge tolls on the Wakefield and Denbydad St. Helen's.-The adjourned inquest on Mr. Grayson was resumed on Tuesday, and after the examination of the inquest was adjourned on the previous 'Tuesday, six persons, whose names are Isaac Jacques, Robert Woods, Charles Woods, William Jacques, Thomas Meadowcroft, and Thomas volyneux, have been kept in custody on s charge of being impl:cated in the marder. In addition to
the \(50 \%\). rentard offered by the relatives of the deceased, the Home-office has offered a similar sum, and it has been stated that the Earl of Derby, whose tenant Mr. Grayson had been for many years, has also offered \(50 \%\).

Wralsull.-An inquest has been held on Matthew Adams, who was murdered on the morning of the lst transpired we gave in our last At the inguest four sons uamed Joseph Wilkes, James IVilkes. Thomas Boswell, and Gourge Giles, were charred with the commisainn of the crine It was proved by a lucksmith that the pistol found on the premises lad been repaired by him for the prioner Boswell: and a contession of that prisoner himself was alser put in evidence. From this it appearen that the four prisoners were all concerned in the robbery; but that the murder was committed by Joseph Wilkes alone, by striking deceased on the head with a hammer. The latter admitted that he struck deceased, but without any intention of hilhag him. Against the prisoner Giles there appeared but a comparatively trifing case, but ke was in pliated by the evidence of Boswell ceased bad come to returned a verdict. That dewas principully implicated in the murder, and that the other prisoners were principals in the second degree." The prisoners were then committed to take their trial, Government has offered 100l. reward for the conviction of the offenders, and ber Majesty's pardon will be extended to any one, save the actual murderer, who will imneach his accomplices.
indsor.-On Monday three zebus, or Indian buffaloes. a male and two females, which had been purchased for her Majesty, were brought from London to this town quadrangle, where they were inspected by her Majesty and Prince much. They were aftersards placed in a paudock in the Great Park; and it is said to be intended to enclose a portion of the park for them.-The Marquis of Breada bane has presented Prince Albert with twelve roebucks from his Highland estates. They were brought. from from Pertls, and landed at London on Tuesday, fro whence they were soon afterwards conveyed to this place. Railucays.-The "Railway Magazine" informs us that in consequence of the recent promotions in the army Sir F. Smith gives up the appomtment of Jaspector General of Railways, and assumes an important command at Chatham. The new Inspector-General is Major-General Pasley of the Royal Eegineers, better known in connexion with the orerations on the Royal George at Spito heat is (M) Palatats of Kelredon are the road leadin armed bern Count Rang t) Coggesisall, on the 15 morkmen lies Rallway. It seems that the time when it gave way were employed on the arch at the time when on the way, fa ling with a loud crash. Ien of hose seriousiv. work were more ur less injured, buinone of the conIt ene loss will be sustained by the in struction account of their not compr-A accident, which quences, ocenred on the Grand Junction Railway, \& few nights since. It appears engine was deapatched from the Warrington station, ab Bank-quay, for the purpose of fetching the luggage-train from the Dallam-lane station; and on the and and tenjuaction, the points were turned, and the enoe daty it der went on that branch. The policeman whose dal few was to turn the foints accompanied the engineer fols yards down the line without reversing them, and bad ontr gone a short distance when be heard the Banchester luggage-train coming up, it being nearly a quarter of an
o turn the points, and hoist the signal for the latter train the Dallan line. The driver perceiving that he was going on the wrong line, inmediately turned off the steam, and did all in his power to stop) the engine ; but notwithstand ing his efforts, it ran into the tender of the Eagle, which iowever, fortunately escaped without injury, though the Manchester engine had nearly its full power of steum on the thme, in cmirquence of haring a heavy train be hind it. After a delay of about an hour and a half, another engine was iprocured from the Warrington station, -On Tueaday a farmer's man, named shoosmith, was Chared betore the matistrates at Brentord sessions, One of the ralway fulice diposed, that on the afternoun of Welne day the oth inst. he was on duty at the Hanserved the defendant come scramblirg up the embankment, immechately in irent of the tiain. Defendant wa bearly under the train; but on rumning up to him, expenting to find him crushed to death, be was surprised to find that he was tot hurt, having fortunately managed to here, detendant said he hau ds much business there as witness lad, and he was at last taken away by force. The embankment up which defendant had climbed was
nearly 60 feet in height. He was not employed on the line, neither bad he rectived leave to go on the railway Defendant said he worked for Mr. Rogers, of Cuckou Fara, Hanwell, whose grounts abuted on the hishome The Bench told him that his escape had been most pro but they would mitigate it to 108 . or seven days' jmpri sonment.

\section*{IRELAND}

Dublin.-A treasury minute has issued appointing M Serg. Greene, Mr. O'Farrall, Mr. Howley. Q.C., Mr.
Maitley, Q.C., and another not yet named as commis the anoant of sulatics paial to the several officers having perform. the practicabitity of abolishing or consolidating them, and pensioning off those deemed useless by pay or assimilate the Irish Courts to those of Weviminster, to appoint four musters to each Court, and to do away with an unpaid one, will, it is thought, rire general satisfaction to the profession. - An investigation is in progress into the infant children, which it appears is at the rate of ong in the poor-lisw commissioners not allowing any publication to take piace until it be concluded.-The monnt acknow-
ledged as havikg been received in Ireland for the Propaledged as having been received in Irelaud for the Propa-
gandaduring the month ending the 6 th Dec. is \(724 l .6\). - At a late meeting of the Corporation, a long and warm disMr. Callaghan to take into consideration the propriety of roting by ballot, on certain oceasions. Alderman Purcell, after some remarks liaving reference to the Lord Mayor, econded the mution. The Lord Mayor then said that the into pur given t,y hot l: these gentlemen resolved them-elves dation. power over the people, and dictation. "He had sat." he said, "too long in that chair-he had prepared a notice for the election of atother Lord Mayor, and he hoped his services were of so much value to Ireland, that he must not have his acts subject to imputation. What was, he asked, the origin of his influence? He could not promote any man-he could not give him porrer-he could not give him titles-but his influence arose from his community of sentiment with those he represented. Siace he had sat in that chair, he had aroided giving offence to any. He bad conceded his own private pulitical opinions; but if this mition were carried, it implied that he had not succeeded in his object, and the sooner he retired the aloo the corparation." Ahterman Purcell said some ter words in explanation, He alluded to the great intluence of the Repeal Association over which his lordship pre
sided, and the welght it gave to hro. It was with sin Sided, and the welght it gave to horm. It was with sincenty he spohe of the great services rendered by his lordshap to his coluiry. After some further discussion, an poned to that day six menthe. The Lord Mayor baid that he should emphatically declare roting by balint in that asaembly wr uhl we the jaremt of jublinis. Mr. Callughan
 orginal opmom, becausp he sum that he majnmty in tiee that the Lord Maysr should withdow his intended resigpation. The motion being srcorided amd carrid, the Lord Mayor sald i.e mouid do =o, and aecordiegiy truk bank frem the town clerk his writen resignation. - The weekly The Secretary Repeal Associat:on was held on Tuestay. Ameriectary read a lengthy dicuntat written by an Ameriean Roman Catholic Bishop, and aduresoed to the Cecutionati Re: ent Assomarion, n?wirg a detal of the perpeal hans, and denuuncing the meanal by wich the unto was earried. It wis urdered to be insertedinn the minutes. Addresses were read from the Repealers of London and Glasgow, complimenting Mr. O'Connell for bis exertions to the cause of repeal. It was also anmonnced that a
peal Nayor then adserted to a discussion mhich had taken place in the new corporation, resarding the use of the ballot in their proceedings, which is reported above. He expressed himself strongly in favour of the balot in original roting, but entirelp opposed to its use by those wh. after election br that plan hare appointments to sub ydinate oftices at thear dinposal. After some observationio from Mr. Keilly and Mr. Steele, censuring the conduct
of Messis I'urcell and Callag' an on that occasion, and during which Mr. Steele denounced Mr. I'urcell on account of his having made this and a former attack dropped. The Lord Mayor intimated that an association, unconnected with the Repeal Society, was in existence mention on that occasion, that the sulbject sholsal be kept induced to pledge hmself to use nothing but Jrich mannfacture, woud be griving employment to an Irish trules man, and fo d to his famly, by just giving him a preter-
ence above foreigners. His lordship read a list of marts which were openti for the excluate sale of Irish mant. facture and prosuce, aud called umon all who desired to lessen the distress of his frllow comatrymen, to supply themselves with articles of home mandfacture. Mr. Rian speech on the necessity of repeal of the union. Several of repeat rent for the weets was amounced to be \(110 \%\). It is stated to be the intention of Goverament to reduce the constabulary force in this country, as nearly as present mission de lunatico inquirendo sat on Monday on the Right Rev. Robert Fowler, D.D., Lord Bishop of Ossory, when the jury found his Lordship to be of unsound mind. His property in ready money and the funds was proved to 8,000l. a-year, the income of his Lordship's see being 5,000l. per annum
Cord 1 cender secretary of the Cork Railway Committee, relative to the presentation of a memorial connected with the establish-
ment of railway communication in this country, from Which it appears that rovernment ever of taking up the project of rail ways \(1 m\) Ireland as a great public measure.
Kerry.-A local paper states, that great and general distuss at present prewails amons the lower clasess in this and the conseguent deficience and deteriorated suilion every description of crops; this being particularly the case with regard to potatoes and tarf, the poor man's chie
means of sustaming existence. Peter Dolan, living in this town, has been murdered by some person or persons as jet unknown, the object, it would seem, being to secure arew pounds, the savings of many years industy. An course of the investigation suspicion was thrown upon a man named Hamill, who had been seen going into deceased's house the eveming preceding the murder. The rerdict of the ury nas: quence of wounds inflicted on his head by some person or Lave trasspured during the investigation, the jury are of opinion that Patrick Hamill was concerned in the transaction" Haniil was then committed to prison. A rewatd of \(1001 \%\) has been offered by Government for the ap prehension of the aurderer or musderers.

Cexpale Criminal Count. Befure the Rerorder and a Com-
mon Jury.? Ou Monday Thomas Bulpet, a labourer, was in mon Jury.) On Monday Thomas Bulpet, a labourer, was in-
dieted fior floniou-i) cuttung and wounding Mr. James Peto with reaping-hook, with intent to do him some grievous bodily harm Number. Tie prosecutror, who wan oblized to be carred into he had received, stated that he was a farmer at Heston, Middle sex. On the 27th Aug. the prisoner and a person of the name of
Andrews were employed by him as reapcrs; they had been cut. tiuy some corn, but had not done their work to his satisfaction. He complained to the prisoner, and told him to do his work in a perper mammer: but lisianwer was, that if he did not like it, he pay him antil he had done it properly. This occurred in the
morulng. In the evening the prisoner and Andrews called at his house ald demanded their money; but he again told them that he would not pay them till they had finished the work as he re-
quired it. Some words ensued, and as they were leaving thi prosecutor followed them uut to the gate, when the prisone cirned round on him, and, after applyimg to him some threaten-
ing language, struck at him with a hoe which he had in his hand the hoe from him, he received a severe wound in the leg from as he suriposed, a reaping hown, whi h was after wards found near the spot. Mr. Peto's lire was some time in danger in consequence, and he liad been totally unable to get ahout since the
currence. Evidence was adduced to establish the stateme the prosecutor, and the yloient conduct of the prisoner. The enter, in defence, endeavoured to show that he had been very
harshly treated by Mr. Peto. The Recorder summed np, and told the jury that if they belreved the prisonser intended either to naim be thound to find wim yuilty of the felony ont, on the other hand ficted without any such mintention, then they were at liberty find him guilty of tie misdemeentivir ouly. The jury found th
prisoner guily of an aggravated assault. Mr. Clarkson, the prisoner guily of an aggravated assadne the prosecution, then informed the Court that some ime since the prisoner bit off part of a man's cheet who was a committed some retty offence. On another occasion he hit off man's ear during a quarrel, and in the course of the previou summer be struck at athird man with his reaping-hook, and cut
a great portion of his hat from his head. The Recorder told the prisoner that the jury had taken a very. merciful view of the case and had acquitted him of the the country. As it was, the offence was of a most serious cha racter, and the sentence consequenty was, that he be lept to Cord labour in the Hoase of Correction for 18 months.
Court of Bansauprcy. - Thomas Saunders Caze's Bank teresi from some extraordinary diclosures to considerable in rise. \section*{The fratieners ebronitle.}

SATURDAY, DEC'EMBER 25, 1841.
mebting in the ensuing week.
Is consequence of Christmas-day falling on a Saturday, we have been obliged to publish a day earlier than usual, which compels us to defer the INDEX of the Number.

Havivg now arrived at the end of the first period of our labours, we cannot conclude it better than, mas and a happy New Year to all our friends. That, in the course of the year which has passed away, we have kept the best iriterests of gardening steadily in view, is sufficiently shown by our cons'antly-increasing sale - the best testimony that the public can offer of their approval. That, in the years before us, we shall pursue the same course, we trust that our beginning is a guarantee. We may, however, be permitted to say a few words upon that subject.

One of the most useful. if not the most entertaining, parts of our C/hromicle has been the weekly Calendars, which we may safely affirm have never been equalled for sound practical information, as is indirectly attested by the unblushing manner in which they, together with many other things, have been continually pirated, without acknowledgment, by other papers. Those calendars will be maintained with no less diligence than heretofore, hut not entirely by the same writers. Mr. Paxton's department will, for the ensuing year, be taken by Mr. Whiting, of the Deepdene, another excellent practical gardener. The Cottage Gardens will remain in the hands of their pre-sentauthor-intelligent, in no common degree, as all will admit ; but they will be transferred to small type; and we shall produce weekly, in their place, the most exact details as to the management of those small gardens in which a greenhouse or two are alone maintained. In this manner, every one who has anything to do with practical gardening will find all explained that it is possible to comprehend in a calendarial form.

We may assert, without fear of contradiction, thiat in 20 gardening publication has there been, in the same space of time, so large an amount of real information concerning the general details of cultivation. Our table is still coverel with multitudes of excellent communications upon similar subjects, which we shall produce as opportunity may offer. There will, moreover, be provided for each week at least one original essay upon some suhject of cultivation of general interest: not that we intend to confine the papers we may insert to mere matters of cultivation; gardening, like all other pursuits, is the better for a little variation; and we shall continue to provide topics of a lighter kind, although always connected with the great subject of rural economy

The Entomological articles will be continued upon their present plan, and will form in time the most perfect account of insects injurious to the cultivator which has yet appeared; while the woodcuts, prepared from the admirable drawings of the author, will continue to be furnished as heretofore.
Our Rural Chemistry is ended in its form of continuous papers. That they are an excellent elementary exposition of the seience of chemistry in its relation to cultivation, is admitted on all hands. The subject, which is of the first importance, is, however, only begun. We shall continue it, with the assistance of our talented colleague, whenever and wherever opportunities arise.

Foresting has often occupied our attention. We have already had the satisfaction of laying before our readers several excellent practical papers, and many more are in hand. Had we done nu more than dispel the important error of supposing that the woud of our Doble sessile-fruited Oak is inferior to that of the pedunculate kind, we should have felt that one great end of our Journal had been accomplished.

Among Floricultural papers, we need only point to the admirable communications by Dr. Horner, and those of Messrs. Catleugh, Cock, Dickson. Green, Groom, and others, to show that here. too, we have provided largely for the real interests uf florists. While discussions relating to floral matters have uniformly found a place, we have not permitted our readers' time to be occupied by disputes which can interest no one but the parties concerned.
The Proceedings of Societies connected with Horticulture and Agriculture have been given at a length before unknown. Even the Societies of India, Ger-
sufficiently interesting could be found on which to report. Uur arrangements under this head having now become more perfect than thev were at first. we trust to introluce some improvements, especiall, as regards often but ill reported in the provincial papers, from which our intelligence must generally be derived. We are more especially desirous of giving, in all cases, the names of the varieties for which prizes are awarded but whether or not we can do this will depend upon he local secretaries, and not upon ourselves.
The valuable papers by Mr. Ainger, now concluded. will be found to contain a clear exposition of he true principles which must regulate the warming and ventilating of garden buildings; and we do trust that all gardeners will study them, so as to render themselves thoroughly masters of their contents.
In the department of Reviews, our first care has been to give a true account of the value of the books that have come under notice. If it has occasionally been necessary to speak of authors iu terms of dispraise, it has always been with regret that our duty to the public should compel us to hurt the feelings of thers. It is, however, by books of bad quality that the greatest amount of error finds its way into the world; and it is only by a vigilant superintendence that such an evil may be corrected.
Preparations have been made for illustratiing with woodcuts the medicinal and poisonous plants found wild in England, and for introducing elementary botanv in a series of popular essays. We also contemplate giving cuts of the more remarkable Appies and Pears which may be of interest to our realers.
Beyond this we have no professions to make. Our future course will be the same as that which has been pursued up to the present time ; improving where improvement is practicable, and relaxing in no degree our etlorts to render our Chronicle a rich storehouse of valuable information in all departments of rural economy.

In the midst of frost it will not be unseasonable to warn all our readers of the great importance of preventing their moze tender plants that may have been frozen from being thawed suddenly by the sun. II. shall not detain them by any attempt to explain the cause of death being produced in frozen branches by thawing, but the effect is ceriain. All gardeners know now often Peas frozen below a suuth wall are killed. and that if any contrivaace to prevent their heing suddenly thawed is made use of, they recover. What is true of Peas, is, to a great extent, true of other things. A few weeks ago we had a severe frost- \(16^{\circ}\) It that time young Araucarias expoed! to the south died, while oihers within a few yards, but sereened by stones from the sun, did not suffer at all. This cannot be too much attended to. We may remark, cannot be too much attended to. We malte roofing forms a
by the way, that most excellent material for such screens.

\section*{RURAL CHEMISTRY-No. XXII.}

Ters existence of most plants may be divided into four periods-firstly, germination, or the deve:opment of the young plant from the embryo-secondly, the growth of the plant to maturity-thirdly, blossoming, and the formation of seed or reproductive particles-and fourthly, decay. or a cessation of vitality, and consequent decomposition of the organic structure. In each of these four periods different chemical changes are going on, and consequently different conditions are requisite for the production of these various processes. In the commencement, water, air, a certain degree of warmith. aul the aosence of light, appear nearly all that is required for the growth of the embryo, which obtains food from the matters stored up in the seed, unthi it has so far increased in size as to hare arquired roots and young leaves, and in cther respeets have become fitted to devive nourishoment from external sources. During the gruwth of the perfect plant, it is observed, that in adduion to water and a certain degree of warment, carbonic acid, ammonia, and certain earthy and saline substances, are required ; whilst light, which in tie firs: stage of its gr.uth anpears prejudiai, is now required to assist in thove complicated chemical changes which are golug on when the coappount ory me stauces, such as woody thre, gum, antl starch, are formed in the organs of the plant by the combination of the elements of water, carounic acid, and ammona. Hence daring the day, or wbilst plants ara exphsed to the iaflueace of lint. the carbonic aci a assurbed by them ie decomposed. the carbon atone hetag recamed in their strueture, winles the oxysen is given off. During the night, or when light is mithurawn, this process of decompasi.g carbone acd and accuiring carion eanst \(g_{3}\) on, and acicorvingly the carbonic acid then absorbed by t.ee ruots is given off again unchanged, by other parts of the surface of the plants, in piace of undergoing decomposition ; for plants are at all times receiving from the soil carbanic acid, which must necessarily enter diasolved in the water they absorb from the su: through their routs ; but they can oniy derive nourishneent frum it when, in consequence of the influence of light, they are aule to effect its decompotition, and so, by retaining the carbon, increase the quantity of organic matter which they contain.
In the third atage of the existence of a plant, or daring the formation of seed, the name general conditions are
required which are necessary daring the second; for the formation of seeds and fruit is governed by very nearly and same laws whict regutate the production of leave taining the health grow of the leares, such si tempera ture. a due supply of \(f\) wh, and in gars. Wise the most important in the growth and perfection of the formation of the organic substances existing in plants, which they do by exposing the crude juices to the action of light, and thus causing those peculiar changes degen, and oxyzen, under the influence of light, on which the growth and increase of plants depend The organic substances thus formed in the leaves are either stored up its increase and perfection: and in most cases but little of them reasins in the leaves. The functions of the frui or seed-vensel are different; for though, like the leaves, it is able to \(n=s i s t\) in the prainue ions of urnmic nat:t, the self, and the fouth oi seed-rissel hut only retarts thithing to the plant on which it grows, but in addition absorbs a hrge pertian of the sezetabie matter formed. or, to speat

 of the plant: and hase the practice of pramang trut -arees gets an ald tital suptr of crude sap, aboulnate all tiat which molll othernise have gone to the leaves lad they not been removed
In the last stage of the existence of a plant, or when, either from excessive cold, disease, or merely old ame. the by mhich orzanic materes are senerdecti untier :he mint ence of light in the celis of plant;, ceaters ; deany commences, the orgame components of the phat been to simpler forms; the greater part of the hydrogen combines with oxygen, and is gradually given off in the state of water; the nitrogen and hydrogen combine, and form mmonis, whilst the carbon is slowly dissiputed in the ir in the state of carbonic acid, and at lant little remains besides charcoal in combination with a very little hydroghet, and the small quantity of ins
The action of manures on plants is of course various, as tiumher nf smbstancee added to thes snil with tha nheect tion various. There are many points connected with the ase of manures which are as yet very imperfertly undertood; these can only be cle: ed up by experiments, selected with judgment, and made with care and attention. It is in the prosecution of these experiments that chemistry
can be of the greatest use, for without the aid of this scince experiments are usually uncertain and rery often aseless, bunts made at hazard and without any method or arransement, and flue comelu-ioms are ont inato drawn aures act are overl. hat or anh:omn.
We know that growing plants require carbonic acid, water, and ammonia, the elements of which, by combining together, form lignin, gum, sugar, starch, and the other organic matters which compose their structure. It easy to explain the mode of antinn of theee manureo which supply these elements to plants, becanse their decay, and he consequent formation of ammonia, carbonic acia, and water, is governed by simple chemicanges, or phenomena. The office performed by the earthy and saline substances yielded by the soil and manures, and on the jresane.
 ent, cannct be sis readily expluned, herau-a we A) not yet rully know all the causes which govern their absorp-
tion by plants, or the effects which they are capable of produ Cers, or in the formation of the pecoliar products which assiscterise the rarious species of plants. The mode of action and exaet value of the firat clisis of manures can oaly be rell materstand mixel we are arghantel with their chemical comprotion, and the shene wat they undergo; whilst we can oaly hope to make out the mode of action of the latter class of ma

 mhinst, at the same ume, it wil prepare tham the tie stuly of the writangs of scienthe mon, ur, it icast, realer the subject m re simple ind conderturtable.

ON THE PRODLLTION. HHTRIBUTION, AND PRESERVATION OFHEAT, WITH REFERENCE PaRTICLLARLY TOTHE IMITATIOS OF
MATE IN CONBERVTOREES-NO. VII.
is a previous paper, the elewtentary sources of the circulating power in hor-water pipes hare teen shortly explained. The application of the principles there given might have been left to the common sense of the public,
had not the works already extant on this subject been pervadel by important and very danarenus errors. It may 5 und the the whe, as briety as fomble, to explann the apse, ani fant ont the promipal consideratioms in each on winch suceess mist depent?
Since the monng torce arises from the different specife gravitu:s of the dscindumzand descending columns, it is best plin mould he to take an ascending pipe from the top of the builer at once to the high st pasoble level, then to apply anch a lenith of hor:z sital pupe at that hish level as womid eximits a lirge quantity of the heat, and finality to descend at onve from that level to the bottom of the boiler. The only modrtication which this requires. arises from the necussisy for getting rid of the air, which is lidble
to be misted with the whter, and for which reawon it is to be mited with the water, and for which reavon it is
desirahle to place the pipes not quite level, but with a desirable to place the pipes not quite level, but with a
slight inclination; sis that there may be one highest point slight inclimation: so that there may be one highest point
at which all the air will tecape. If this be not practicalle, there mist be two or more high points, earls being the highest, with reference to a certain portion of the apparatus, and each furnished with a pipe for the escape of air; all which pipes must evidently rise higher than any part of the water pipes, and higher also than the feeding istern.
The annexed figure will represent the principal features of such an arrangement. From the top of the boiler \(b\), ascends a pipe marked with an upward arrow, called the flow pipe, and at diesumimit is the air-pipe a. The course of the circulating pipes, and their return the the beed no further description; the feeding cistern \(c\) is made to apply itself to the top of the descend

ing pipe. so that all the cold water supplied to make good evaporation and leakare acts with the greatest possible effeet in increasing the density of the descending column. a pase required to discontinue the line of pipes in order to pass a donirway, or ocher obstacle, it is best done by an pipes be kept close at the bend, so as to form a syphon, may rise higher than the feedng-cistern and arr-pipe; but mis concrurtion is unverous, inasmuen as air may accumulate in the bend, and stop the circulation. It is
better, therefore, to make the cistern \(c\), and air-pipe \(a\), higher than ans required elecation in the water-pipes, as \(m\), and furni-h the latter with a suall pipe to carry off the air. Every such ascent and descent evidently creates a force of some amount in favour of the movement; not produced by the bends, because the the inereaserf friction ascending and descending columns cannot differ much.
When, however, it is necessary to make a descent, as \(n\), the difference of temperature in the two columns is adverse to the movement : and as this acts in addition to the retardaiion produced by the changes of direction, such descents should be cautionsly made, and only when ther is an obvious preponderance of power to carry the water
through them. through them.
In such a system as that described in the figure, where the vertical pipes may be called from five to ten feet, and Where there are no descending bends like \(n\), it is surprising tarough wiat an immense length of nearly horizontal Pipe the cs rewlation may he carried. I believe indeed that hunded feet not kee must he considerabletion of many less than is frequently supposed, the effect seems to require some more pows rful cause than the dufferent weights made with the vew of accomnting for tois, but I am not aware of any that is quice satisfuctory, and the following may perhaps be as little conclusive. It appears to me, however, that the continual cooling of the miater furnishes a materint facility towards its movement. Referring to the last tigure, if \(x\) be supposed to represent the bull of a cert un portion of water at that place, and \(y\) the smaller its loss or heat in the interval, it is clear that there mef be a rusn to find up the soid thus created and as thet rowh would take place with thie greatest faechity in the direction of the moving mass, there would exist at every part of the circulation an impeling force, dependent on fee Is indepenmint of the differing weights of the per-

 ce- \(1 \cdots-1 /\) to-diameter of the pipes, where the water would be costwn \(y\) mosing into a lurger and larger space, and Where o. arnemene it must move much more fieely than Where that stan is is constant in reference to the bulk of water, I mean, o course, its dimination relarively to the pipes, which are hikewise smaller in the cool parta, but not

Anone the brpotheses adranced to erplain the ease with which circulation may be maintained, there is one against wheh I must enter a protest. It has been supas the pipe is smaller, in consequence of the larger proportion of cuoling surface presented by small pipes in
relation to the quantity of water they contain. This, however, is a notion which requires only to be pushed to an exsreme, to furnish its own refutation. If the circulation wih, as is said, be more easy and rapid in a two would be still more easy and rapid in a pipe of one-hal or one-tenth of an inch in diameter; unless indeed there be a point at whieh the effect becomes a masimum, diminishing on etther side, which it would be difficult to prove. The idea which also exists, that the circulation will be more energetic as the pipes are longer, must evidently share the same fate as the last.
Trere is another prevalent heresy in regard to the size of pipes also in favour of small diameters, because it is
said that a small quantity of water is sooner beated than said that a small quantity of water is sooner heated than
a large quantity. This is quite true, and any persun who requires merely boiling water, does well to heat exactly as much as he wants, and no more. But in our case we want not to heat water, but to heat a building; and to say that this object is promoted by heating the smallest possible quantity of water is absurd. Like the other notion, it requires only to be carried to extremes to show its absurdity. If the pipes are very small, containing rery little water, they will doubtless be very quickly heated; but they will also furnish a very small stock of heating power on which the conservatory can draw, and
the effect will be correspondingly feeble. In short, the whole of the prevailing notions in favour of small pipes are founded on fallacies. It is said that since they have so much surface in proportion to the water, and that since, therefore, they cool so much more quickiy and cir upon the plants. But this is descending to conjectures below the surface, when the gardener requires facts at the surface. If, as is alleged, the large pipes have a sluggish circulation because they lose heat slowly, it follows that they remain hot from one end to the other; and if so, the gardener will have the pleasure of seeing his plants, at what he wants. He does not care whether there is a slow or a rapid circulation, or even if there be none at all, so that the pipes are hot ; because it will not be denied that the larye pipes will radiate quite as well as small pipes if they have the same sort of surface.
If it should be replied that the sluggish circulation produced by large pipes causes the heat to be dissipated without gues to ; the beat must be equally received on the first instance by the boiler, and must cause an ascent in the boiler and the vertical part of the flow pipe. If the circulation be supposed to take place up and down the boiler and How pipe, as slown in the former figure at \(d\), preferring two jostling currents of nearly equal temperature in a small space to the easy passage round the pipes, the hot be a very remarkable effect of large pipes. the pipes, as there can be no doubt it would, however slowly it mar be alleged to do so, it must inake the pipes hot; and if, as is also alleged, it lose heat very slowiy, it must also keep them hot to the end of the system. In tact, the opinion in favour of smali pipes will not bear examination; while the larger reservoir of water, fur nished by large pipes, has the unquestionable advantage of maintaining the temperature through intervals of slackness in the fires, acting in this respect something like a flywheel on an irregalar or intermitting mechanical force.
A similar prejudice in favour of getting quickly rid of the heat has led to making the pipes with oval and oblong sections, none of which have any advantage to balance against the strength and simplicity of the circular section. The same false reasoning in favour of small pipes has been extended to small boilers, and it has been made a boast that the boiler for so many hundred feet of pipe has contained only so many gallons of water. The consequence has been, in many cases, that the boiler has been insufficient to abstract the heat from the furnace, and the surplus has gone into the fiues and the atmosphere.
It will not be necessary here to notice all the schemes which have been promulgated on this subject, but it may be usefur to caution all persons against adopting the recom mendation to place strirtures in the pipes, with the view of increasing the circulating power, and also against making the vertical part of the flow pipe smaller than the remainder. If cocks or valves are introduced in any part of the pipes, let them, if possible, preserve the full waterway, that the space for the moving finid may be equal and uninterrupted from ona end to the other. It is true that dirculation will frequently take place in spite of defects like those just mentioned, but they may become important where the power is from any canse feeble.
The colour and texture of the pipe surfaces, with reference to radiating power, has been sornetimes insisted on, but these are reminemerts of litt'd value. The differences in radiating pouser are very triting till we arrive at polished metallic surfaces, and these are not likely to be adopted. Pipes are usually covered with black paint. but almost any mate:ial and any colour will do equally we!l.

There is one other point to notice, in reference to the application of hot-water pies \(t\), the heating of an they must piss throurh the without bending the pipes, a liabii pass through the walls of the tank, and create a labin they descend into the water and again ascend out of it, the effect will be a retardation
hecause the ascent will take place after the nipes har been subjected to a rapid abstraction of heat during their therefore, this is done, an adequate circuldting foren nums. be prepared by the general arrangements of the system It may be taken probably as a sufficient rule that descent into an aquarium should be greater than one-third of the vertical dimensions of the system, and not so mucb where the pipes in the tanks form more than one-sixth of the whole.

It seems hardly possible to quit this subject withnut noticing the system of high-pressure circulation invented by Mr. Perkins. This however has been, and is, a matter of so much angry controversy, that it had better perhar, be ieft to the arena which it has now chosen, namely, the olumns of the Times newspaper.-A. Ainger

THE CiLCEOLARIA.
Among those flowers to which the scientific cultivator has more particularly directed his attention of late years rial a to improve tbeir floral beauties, the Calceolastan become a great favourite, and affords a signal in from culture and cross hybridisation are observable in the improved form, colour, and size of the flowers, and in the general character of the plant. Indeed this now pepular genus forms one of the principal ornaments of the green house; the splendid specimens we have witnessed at the different exhibitions, proves it worthy the high estimation in which it is held; and the free manner in which it throws up its curiously-formed blossoms, with the tendit has to sport into enuless varieties, will no doubt long continue to make it a favourite with the florist,

It was in 1823 that C . corymbosa was raised from im ported seed, and soon after, C. arachnoidea was introduced: these were the original parents of Mr. Green's hybrids. It is useful and instructive to take a retrospective glance at the apparently unpropitious sources from which our pro sent: splendid greenhouse varieties were derived; and for this purpose we introduce figures of the original fl. wers contrasted with one of Mr. Green's latest novelties, whic exemplifies the properties it is desirable the flower of the Calceolaria should possess
C pon this subject Mr. Green has fasoured us with the following note :--" The original parents of my hybrids were C. corymbosa and C. arachnoidea, which produced many beautiful varieties of the herbaceous kind. Alter several years' improvement, I selected some of the strongest, largest, and most distinct blooms, and crossed them with viscosissima, from which most of my shrubby kinds have been raised, specimens of which have been fre quently exhibited at the Gardens of the Hlorticultural Society, Chiswick. For greater convenience in describing the different sorts, I think it would be desirable to arrange them in four classes, viz.

White or yellow ground, with a large spot of rarious shades.
2. The same grounds, with scarlet or other stripes.
3. Spotted on all grounds.

The properties which constitute perfection in the Cal. ceolaria consist in the lip forming a pertect circle, even round the edges, not ffit, but well raised in the centre, presenting a bold, convex surface. with the cases the cors laving a rich, velvety appearance; the petals and calys having a rich, velvety appearance; fle petals and caly
ought to be large and full, with the flower-stems short and strong.
The shrubby kinds are much the best; the flowers are quite as large and as beautiful as the herbaceous sorts: being made much finer specimen plants.

The following list, arranged according to Mr. Green's singgestion, contains most of the splendid kinds in culti-vation:-
1. White or yellow ground, with large spots of various colours. Sbrubby. - Speciosa, Grandis, Mrrabis, lora grandifiora, Royal Standard, Sultan, Crierion, Abert ciosissima, Climax (Green 's). Haif Sh.-Prisce Mabel, Sylph, Adonis, King (Barnes'), Cremona.
Splp, Adonis, King (Barnes ), Cremona.
2. White or yellow ground, with scariet or other stripes; Lady Anne, choculate stripe on a bright gelihw ground; the Queen of Stripes, pale yellow with stariet stripe.
3. Spotted on all grounds. Sh.-Aurea grandifiors. Alstoni superha, Ophelia, Dusty Miller, Juba. Hali Sh. - Model of Perfectiun, Delight, Vieturia. Herb.-E®a chantress, Eva, Formosa, Lydia, Picta, Pilot,
4. Selfs of , Dellicata, Indescribable.

Ring, Maria, Lady of the Lake, Magnum bonum, Gem, Fire-king. Cuirassier, Denholmii. Half Sh.- Violace
superbs, Mrs. Chas. Hope, Diomede, Incomparable. Herb. superbs, Mrs. Chas. Hope, Diomede, Incompa
- Madonna, Hero, Bride of Abydos, Eximia.

\section*{COTTAGE GARDENS.-No. XLIX}

We have bitherto imagined the cottager to be in possesNo of a garden of suitable extent to produce an ample supply rated, and we have accordingly endeavoured, during the past eason, to furnish him with some plain directions for its ge neral management, and the treatment of those thing which we think likely to be of the greatest service to himare followed in the manner we have pointed out, the cottager cannot fail of success in obtaining from the spot he culticates the fullest return it is capable of producing; and hat too. with less labour when a regular system of cultur s pursued, than when it is managed in the ordinary wa ever, who are only about to undertake the care of a gar den, and who may be unacquainted with the mode of a rangement it is desirable to follow, so as to lay of o adrantage, the few observations we have now to offer on posing the piece of ground to be newly enclosed, the first hing to be done after it has been fenced, is to trench it 18 inches or 2 feet deep, provided such a depth of soil can ately recommend its being thrown up in ridges so as to expose it as much as possible to the laction of the weather On the approach of spring the ridges are to be levelled and after the whole has been cleared of all roots, stones and whatever rubbish there may be, the ground is then to for the convenience of cropping. One principal walk, from three to four feet wide, may be carried along the centre, from which narrow foot-paths may branch where needful but, as the latter will be so much waste ground, there ought to be no more of them introduced than are absolutely necessary. On no account should any trees or bushes be allowed to occupy the ground set apart for vegetables, when by a little management it can be so arranged that both may be cultivated without the one interfering berries and contain a either side of the principal walk, as formerly suggested, to e planted at about two and a half feet from the edge, and four feet distant from one another in the row. Raspberries may form a division between two compartments, or they may occupy any corner of the garden that is a little shaded and unfit for other things. It has been stated that they require to be moved every four years to produce good fruit produced on plants that had been more than a dozen years in the same situation. Apple and Pear trees, whether dwarfs or espaliers, may be planted in the borders at 16 or 18 feet apart, and the space hetween them filled with sthe same distance and grown as Dwarf Standards, but they are better adapted for training against a wall, and should be treated in the same way as directed for espaliers. With
jespect to the planting of fruit-trees and bushes, a very great error is often committed by inserting them too deep into the ground, and thrusting a mass of unprepared manare about their roots. Instead of continuing the practice, we would recommend the cottager to adopt the mode which we shall here briefly describe. When the place a hole be made of sufficient depth to receive the roots, but it should not be deeper than it appears the tree was formerly planted. inches of well-rotted mer this hole a lajer of about three gether; then set the tree in its place, and spread out the roots and fibres as evenly as possible around the stem ; mix some more rotted dung with the soil taken out of the it, and fill up the latter very carefully, so as not to displace or injure any of the roots, and gently tread the whole. A little manure may afterwards be spread round the plant on the surface, which will materially assist in keeping the ground mosst until it has taken root and become able to support itself.
As regards manure, we believe there are few cottagers Whe are not aware of its importance, and that it is to a judicious application of it, the farmer and gardener are
both indebted for their success. Duing the few weeks both indebted for their success. Dating the few weeks
that must elapse ere the return of spring iaduces the cottager to resume operations in his garden for another season, he cannot employ his leisure hours more profitably than in collecting and preparing all substances that be thinks likely to produce manure, or which may be calcu-
lated, in other respects to be beneficial, either in adding to the natural depth of his soil, or in increasing its fertility. For this purpose the waste earth from ditches or road-sides, as weil as the scrapings of roads and laties, cannot found extren eily useful ; and even where these procured, whech, by being mixed with the dung from the pig-sty, as formerly suggested, will become as vainable as may be afterwards applied. Some kinds of manure, stuch as that from pireons or pouitry, are apt to produce wire as that from pigeons or pouitry, are apt to produce wireworm in suils that are of a free sandy rature, when ap-
plied by themselses: but this will not tappen if a little plied by themselres: but this will not tappen if a little
pains be taken to incorporate them with other substances pains be taken to incorporate them with other substances
before anplying them to the soil. This shows the neces sity for preparing and mixing manure well before using bour in the cultivation of his little garden, will find it greatly to his adreatags if he will adopt this suggestion

Where it can be done, we should recommend the dang pile to be placed in such a situation as to receive all the
drainings from the cottage and pig-sty, which may be drainings trom the cottage and pig-sty, which may be
considered as the sery essence of manure, and which, considered as the very essence of manure, and which, in
too many instances, is allowed to run to waste. A hole or catch-pit should be made at the lower end of the dung pile to receive its drainings, which should be emptied esery week and thrown over it again to assist decomposition. great deal may be done in this way, and we are sure the be amply repaid by the improved nature and quality of the articles produced.

Our feeble attempt to increase the comforts of the cot tager may probably be viewed by some as having a ten dency to render them more improvident and unhappy
but we think it will have the very opposite effect, being o but we think it will have the very opposite effect, being of
opinion that the more a man's bappivess is nereased \(m\) any way it is possible to be done, whether it be in assist ing him to decorate his cottage or in teaching him to cultivate his garden, the more likely is he to become a think feeling of attacbment to his home and his cottage, with解 hope that our anticipations mar be realised to the fullest extent, we conclud

\section*{HOME CORRESPONDENCE}

Tce-house.-Having observed of late a good deal of discussion in the Chronicle respecting the best method of short account of a simple method that has been successfully adopted here for the last three years. A dry situatrees, is a chosen. npon the surface of this a conical beap is made of such dimensions as are thought necessary ours is about twenty-four feet in diameter, and made as high as the ice will lie, and by placing bundles of stram is then thatched with straw a foot or foarteen inches thick; over this a steep roof is made, with tall drawn-up trees, and to these ratters are nailed, which are closely thatched with spruce branches; a small open ditch is then made to carry off the water, which finishes the operation. By this simple method, the family have an ample supply till the return of frost-George Aicken, Gardener to Thomas Brown, Esq., Lanfine House, Ayrshire.

Pruning Gooseberries.-In jour answer to Simon are some directions for pruning Gooseberries from which I beg leave to differ. Haynes of Sthe prry, Rasuberry and Gooseberry, and in a second edition of the same work he added the Currant; but this edition I have not
 getting full crops of fruit. In pruning the Gooseberry he fresh leader short. By stopping shoots Simon will get wood instead of fruit; but if the shoots of 1841 are left their full length, they will be full of fruit in 1842. In pruning the Currant, red and white, not black, every stoot nuast be shortemed ate the base of each shoor to cut off. Let me recommend in this atter pruning-scissors instead of the knife. I cannot now lay my hand on C'obbett's directions in pruning Currants ; but they are clear and accurate, in sepgutions of Mawe and many others. Haynes writes like a muddybeaded man, who knows more than he can write, but obas in other branches of knowledge, the good books are son counted; the number of worthless ones is very great -a sad waste of paper. In the tirst class stands oll the progress which gardening has made. Compare, amongst other things, his directions for pruning the fig with those given in any common work of the kind. A mongst the best I should place G. Lindley's Guide, and should like to see a second edition, with additions and some few corrections. Knight's Papers are adninabie, and, what is sery rare oripinal.-S. W.. Norcech. Dec. Mr. Protecting Fruidrees.-After the able letter of-tres Billington on the management of the roots of Frut-trees no mention is made of profecting the branches. I would strongly advise in such situations, particuar.y in such season as this, to lise no time in covering peach and apricot-trees with large yew or bine brathehes, fised firmig to the wall, so that they do not bluw about with the wnd, but not so thick is to exclude the air; in place of the too pre ralent custom of locseaing the brancher, or at ledst ail the young wol just in my union to eiver get it billed or young wool jor the autume of 18.59 was, like muetinge and corsequently in low situatioos the youns rood did not ripen enthir of A pricots er Peavh-trees aod the consequence was, a great part ot it was very much wjured. As a proof that the s.tunticn of many trees of
bad here, I purchased that autuma a goud mater bad here, I purchased that autumas a goud mayy trees un the above sorts in the geighboarthood of hondon, wes planted thems within a few yards of sume of no oher treat ment than beiug new planted, and having there roots wel mulched. Last autumn I had recourse to the protection I recommend; and though the thern:onteter feni in January j' below zero. Fahr.. the lowest I ever sisw it, hember tre young trees I had planted the presiuus year, nor yet the old trees, were in the beast injured. Those who are abiiged to do without Datch reed mats, \&ce, will find yew branches a good substitute; for after being on all the year they get aluost as light aad airy as driea fern, without the
day under them: for the folliage of the yew when withered adheres firmly to the branches.-D. Ferouson, Gordener the Duke of Buctin Oranges.-According to Col. Mason's description, in p. 814, his Tangerine Orange is correct, as the leaves and skin of the frnit are imbued with a strong atomatic scent,
very disagreeaule to some. The skin is very thin, and the fruit, whels ripe. of a golden yellow, and it will part into many dusisions by metely lettung it fall on the fioor. We base the true Mandarin, but too yrung a plant to fruit yet. We keep our Oranges much warwer hete than they are in many places, espectally when they are seltus their fruit; and I would recommend (ol. Maoon to give has Mandarin a rest in a preenhouse till Pebruary, aud then to take it into the stove or a house, where the cempersture never falls below i.s at n:git, amd is as hath at and heat. I set ti.e fruit of the Tangerme in buttom lieat and find that they never drop off when so treated; indeed
we have always to thin them, they set so thichy. \(W m\). Tillery, We llects.
On Prescreing an Inemgnito amd Preserving PiantsAetters as mere the strictures on partues forwaruing initial bucked by editorial authority, at p. 73.3 . I was ittle prepared who signs himself P.P."-(ED., 1 theref.re Take leave to suggest toat every correspondent should privately commusicate his real hame and address to the editor as a sto gua non to his obtaining a place for his communication in e Gardeners' (hmonicle, whatever may be the subjectmatter or it ; a rule, I believe to be imperatively enforced by the conductors of every respectable jouraa. Was thie that on all pructical subjects the public were not likely to be imposed upon. The tollowing is an excellent and often tested (by myself for 12 years) mode of restoring plants to health and vigour, after baving had their roots more or less exposed to the withering effects of the atmosphere week stccesairely, consequent upon their trensport from the own premisea, however cautioualy packed. Iam therefore indmeed suent its republication both on cecount its cheapness and the facility with which it can be resorred to by every amateur and professional gardener in every district where the Gandenin large phial, fill it one-third with spirits of wine) and saturate it with gmphor, adding it by degrees, broken small; and from time to tme shak ing the bottle, to facilitate the taking up of the camphor in soludays by small portions of the camphor remaining insoluble when the bottle will probably be filled to the top. To every gatlon of water required add four drops of the above solution, taking care to briskiy beat the surface of the water whilst dropping it in ; if this be neglected, an undue propurtion are that. alld the trength. When it can be done, inmerse the whule plat in the water so prepared for from two to three hours, and in no case longer than tour, should the subjeet be a shrub or tree with woody fibrous routs, in whick case aivae the liquid may be employed in watering it at the itwe of
plantung. It is to be observed that the above propurtions ard times are not to be departed from, as an uver-stimulating dose is found to be injurious.-1. Wh. S. .1he answer to these strictures is very simple. Where persons understod the fom, and or we should not publist it. But where questions are only discuased or where maters of thate or literary enquiries are brought forward, they carry their own value with them, and no name is required to xupport them. It is both in convenient and unplensant to many persons to have sheir names used publicty, or even to communicate them to the conductor of a pubuce jou
tioned it is unnecessary.]
Prises for Seeding Florists' Flowers. - The leading article of No. 46, on the subject of the fioricultural somciety, is entirely in unison with my own view ons it imperalive that the floricuiturists throwhout the country shou.d endeavour to pratect themseives aganist an parition aud disappointment, by uniting in the support of an 1 m partid and unforal tribunal, by which tue metit or every dew vanety of hower slivula be julgea, Lord of the dectslons of such a trosunal, publisined every year in a cheat Form, would doubiless ubtan an estensive sale; it would be apperiled to with conthence and salise woy the re speetabie and tontest nufsergmen, nheus mass of rucbish ader the eneciols mame if \(\cdot\) sted lugs." But tins is not ail ; the amateur flumbts in ti.
 to improre, ky sariation, liear oan stochs, and haty or three new plants of a favoarite fiower, wh., are wow completely discouraged from venturing two or thrergu:neas that they hate ssen the plast in oin vian theaselives, or thil ite price is so iar reduced as to be watch the ctance of hang the eitublishluent of a trebunal which wound deciue the merite of his flowers more satispetorily than he could decide for himself, assisted, perkepu, by the parial opi nion of his gardener, or the interested decision of socme tver, not only by money contributions, but by a determination
on the part of ali lovers of fiowers nut to purchase any mination and decision of the society in question. Whilst
an chicctual check would thus be given to flowers of little for the production of such as are of first-rate character ; of 1 , would offer such prizes as would afford some sort of compensetion for the expense incurred in bringing them offer a premium of 301 for the best seedling and 201 , for the second best. To accomplish this I would suggest that a subscription list should be opened for specific flowers, for there are many, I believe, who would rather give a sovereign towards encouraging the growth
their favourite flower than give it to a general fund. make my theory as practical as I can, I am willing two seedling Pelargoniums ; and surely amongst the bin dreds of cultivators of this beautiful flower, there are forty each for the same purpose. Neat year I might probably put my name io the Calmonaria lise, whilst my neighbour What han w gtwabouste, nightit fit

Liberly Days for Gardeners.-Permit a gardener to} themselves, by giving their servants the opportunity of Ny mantei's plan hiv been to send me with a respectful or manarethent, isking permionon for me to see his gar or manatethent, aning permionon for me to see his gat
dener and walk round, which has given nie a great deal of deater and walk rount, which has given ne a great deal of
information, wheh I hope I am ready to impart under imblar circumstances, in addition to the result of my ow expricuce. I have often sid in return for civilities re and it will gratify my employer to return the civility ;" bu Thave generaliy had for anstrer. "I should lihe to come but you are sof far off, and I cannot get a day or afford the assist their gardeners more by an occasional turn-out of this hind, ti,na by giving them books of a very superticial diaracter. Such opportunities, it may be said, would be bused: I am sony there should be ground for such a re mark, and I hope the spread of education and of right principles amonst us is daily leading us away from the
erroneons notions that have too much obtained, that friendly feeling consists in pressing each other to tak what neither requires, and that too often to excess. Drink ing customs are happily fast giving way, and I shall be glad when it will be thought as ridiculous for a gardener to propuee to his friend to adjourn to the pot-house as to the tor? of his dunghill. No, in our cottages I hope we siall entertan ewh other with true hospitality, not wit excess of beer, but with the result of each other's experi-
ence, and thus help to build each other up in those qualiies which make us as valuable to our employers as they, our emphoyers, are to us, strengthening our self respect

We agree with onr correspondent in all he sig. except that in our opinion a wise master, who has a guod servant and wishes to encourage him, should not give him liberty-days by withbolding little presents of books, but shonld give him both the one and the other-

Cucumicrs ani Melous.- When 1 cautioned gardeners against putting implicit coufidence in the high encomiums passed upon Cucumbers and Melons by persons interested on the sale of them, I purposely aroided mentioning names, and I certainl: dill rite expect to be accused of unfaimes whan to ingare any lair dealer further form my intention han to injare any lair dealer in the way of trade: in fact my onsy arotive in whltus was to expone hombug. T. in this businese, it is andymaty is extensirsiy employe re now in the market nearly twenty matenon that ther cambets and Melon-, eaci prossessing, according to the sellar s ace.ant, superlative werit when makes it indis pensable to every gurderer. As a matter of course, th prices are proluatimately high, ranging from half-a crown a packict up to a gunea, which last sum \(I\) am told
a dealer has the con-cience to demend fur two cucumber A dealer has the con-cience to demand for turo cucumber verts ! Sow, although there are, no doubt, some ver gond sorts amongst the great number advertised, they can hot all be "the best in Enyland," Which the tlamiag ft presentations of the adrertisers would lead us to believe consequently, these representations are in many cases mere deceptions. Last geason there were perhaps halfduzen new sorts "brougit out;" this season ther are three times the number, and at increased prices 0 that in a short time, uniess checked by timely exposur We are likely enough to be daped by a Cucimber and Ielon mania, rivalling in discreditable practices the now decining Dihlia rage. On general grounds. therefore, my caution was perfectly justifiabie; but as Mr. Cuthill demande a specification, I have no hesitation in saying that a Melan solit last spring at a high price under the name if I rightiy remember) of "Cuthill's Improved Earl least two scarlet eated suts whiti are commonly grown in this neighbou coown the Meak trom experience on this point, baving rown the Melon last season; and my opinion is furibe good juiges and good growers of Mardeners. Who are both a hardy and comparatively early variety ; and in place There Mel ins are not grown to be eaten it noight be useful but it wal nut do in this part of the country.-J. B.
Whang, The Deerdene. Whing, Thee Deepdene.

FOREIGN CORRESPONDENCE
Paris, Vor. 5. -The elerenth puolic exhibition of the paris Horticultural Society towh place on the 29 th Sept. and continued till the \(3 d\) October, at the Orangery of the Palais du Luxembourg, at which were offered 10 sulver and 10 brazze medals, for the best specimens of fraita
regetables, plants, and flowers. Although the number of
prizes was below that of many provincial societies room, which is large and well adapted for shech an exhibi-
tion, was well filled, and the show alforether better many preceding ones; indeed, most of the Paris floriss
bezin to find that other conndries bezin to find that other connatries have left them belturni in some of the good things from their neighbours. Noo gec went to both England and Belgium for subjects for thit regirds the number of new plunts marked difference ns
 and giving suffient puinte notice to its ment bers, and th Horeicultaral world, to renter it worthy the patvonase it
reecives as the Metropoliten Society of Framce. The fruit deppartment was hot su well furnisted as in former
years, but this was in consequence of the wet searsen nevertheless there were some fine specimens of Pears and Arapes. Monsieur Jamin had a large collection, contuin-
ing upwards of 100 varieties of the best Pears were the following new kinds: - Beurré moaré Tardif do
Fougires, Gens, dy Dusal. de Louvan. Belle Athance, Belle Henriette, Belie Henuse, beza veitlan, Cutanar. Xelis, Delice Yan Mons Poires, Fendante des bois, Fréticis de Wurtemberg, Fer. dinand de Meester. Piitipye de I'ause, Peire Sentin Louis de Eoutoone, Girand Salonan, Melon de Namur,
Reine des Pars Bas, Triomphe de Lauvan, Soureraine de Printemps, Hésètle and Rucheiluse. The cullewem of Mons. Malot was swaller, but centaited finer specimens or Melvile dhiser, Serte longue, Tresor d'amour, Beurr d'biver, Bewré gris, Eelie de Buas. Saiut A Angleterre Double fleur panachée, Décuré, Prince Charles d'Autriche Napoleon, Beurrés magnifique. Blanche Certé: Orange naclue, Doyenne dinver, Berganot natomue pa naché, Rovale dhiver, Marquise, Beurre Rose, Parfun
d'fiver, Cailebasse Bosc d'hiver, Calebasse Bose. Besi Lamotte, Rousselet d'hiver
Passe Colmar, Beurré Clhaptal, Duehesse, (Euf de ( ygne Anbrette d'inver, Sucrin rert, Boune Louise d'Avraiches Bergamote S.lvange, Beile de Bruxelles, Giosse Bergamotte d'té, Boan Chretien d laver, Crassare. and Saint Gier main. Muns. Barbot had the following varieties of Grapes, many of them large and fine:-Gromier Duhental (very large), Grosse perle, Cassis, Muscat d'Alexandrie musque, de Fontainebleau, Frankentlual, Maseitiene noire Melier, Classelas panaché, Cornichon blanc, Madelene Melier, Chasselas panache, Cornichonn blanc, Madelelue
blanc, Gros Ribier de Maroc (very large), Chasselas noir musqué, Muscat blanc, Muscat noir, Muscat aronya Chasselas rose and violet. Mons. Tiluorin exposed up-
wards of 10 varieties of vegetalles, among then Chou Palmier, ift. hysh, and Chou rave it feuille d'artulaut Messrs. Cels, a good coliection of stove and srethath plants, in whicl were 60 varietivs of Eclingecactus and Maumillisria, wiib tiue speciucns of Corni ierus and Pito Calanthe densififora, Galeandra Baueri, Maxillária Roilis sónii, Oncídium cochleatum, and Trichopilis tortilis. In other collections were seen ※.schynanthus granditforus. Diubentónia Tripetiana. Glos onflora, racemitura, cordirolia, and affinis ; Paukśsia in petialis, Pancrátium carbæaum, Crówea saligua, Ciivi notilis, Sát ia tubuiera and confertithorn, Geenéria zebrina
 Stephanntis tloribunda, and Diviécin physedes. Mons
Paillet seut fil varieties of China Reses in pats ; tlis we by far the most atteactire collection in the room, the plants beng healthy, well grown, and in splendad fowe the former (as all the varieties ane well hown in Egyland I do not jun their names). There were also some well. grown Dathiss in p.ts, by MM. Chansiere and Roblin, and numerous stands of cut Dahilias andid Roses, also truit
 sheceseful cardidates: :-lst, silver medal, Mons. Marme. for Crósea saligna ; 2, bronze medal, M. Mabire, for and eapreum ; 3, gilver medal, M. Me, Chanviere, for do and other plants; 4, silver medal, M. Paillet, for China Roses in potes ronze medal. M. Verdier, for do., do. ; 8, silver meaal M. Tripe Leblanc, for Da medal, M. Jacquin, for Eschynandes grandinoras; silver medal, MM. Cels, for store and greenhuouse plants
11, siver medal . 31. silver medal, M. Mariot, for do.; 13, silver medtal, M. ( rous, for fruittrees in pots 14, bronzo medal, M. Ulerhart io the Dablias ; 15. bronze medal, M. Soutit, for do.: 16, silire medal, M. Crochat. for collection of greenhouse plants Mr, bronze medal, M. Terdevoye, for do. Ao prizecer not beang eget:bles and some jury to be sufficiently nore or good to merit the distinction.

\section*{MISCELLANEOUS}

\section*{Antiquities of Gardening. - We extract some very}

\section*{Turner's "oManners and Household Expenses of England} in the Tnirteenth and Fifteenth Centuries," as givent in
the Athencum. Breud.-"It would appear that bread of different degrees of fineness was used; thus there is - bread purchased for the Countess,' and 'bread for the - boletella,' are twice mentioned, as well as 'gasielli;', calkes or wastels, perhaps biscuits; on one occesion half a
quarter of flour is set down for pastry. It is reasnnathe quarter of flour is set down for pastry. it is reasonathe made of the grain called mystelon, a term yet in use at the beginning of the sisteenth centary, and applied to a miz-
ture of wheat and rye. As the dogs were fed with corn, ture of wheat and rye. As the dogs were fed with corn,
it may be concluded that the servants fared no worse; at any rate, there is no distinct notice of bread made of barley, oats, or the more inferior grain which were commonly their bread was leavened with yeas
bat once, and then in connexion with malt. The price of oats, from 28 . to \(28.4 d\).; twenty-five quarters, however were hought at Sandwich, at 18 . 10 d . When grain was were rather below the average. The bailiff of Chalton was allowed 5. the quarter for wheat, 45 . for barley, and 2s. \(4 d\). for cats, the balliff of Braborne had 4 s. . \(d\). for
wheat, and 1 c .34 , fur oats. Little information is given as to the price of wine; we find that the sum of \(9 \mathrm{~s} .2 d\) Was paid for twenty-two gailons, and that two tuns cost 3. ©s. \(8 \%\)." Beer.-" It may be remarked that in the
thirteenth century, the Enghish had no certain principle as to the grain best suited for brewing. The roll shows that beer was made indiscriminately of barley, wheat, and oats, and sometimes of a mixture of all. As the hop was not used, we may conjecture that the prodnce of their
brewiny was rather insipid, and not calculated for long brewing was rather insipid, and not calculated for long keeping: it was drunk as soon as made. To remore the
mawkish flutness of such beer, it was castomary to flavour it with spices and other strong ingredients; long pepper continued to be used for this purpose some time after the introduction of hops. Hops.-The period at which this plant became an ingredient of English beer is not precisely hnuwa. It was cultivated from a very early date in Flanders and Belgium, where it was both employed in brewing, and eaten in salads, hop-grounds was incunsiderable. It would appear, however, that hopls were used in this country for threwing, in the beginning of the fifteenth century, as Gilbert \(\mathrm{K}_{\mathrm{y}}\) mer, in his 'Dietary,' pronounces beer brewed from barley, well hopped (bene lupulata), of middling strength, thio and elrar, well fined, well boiled, and neither too new nor
too old, to be a sound and wholesume beverage. It is pretty certain, nevertheless, that in his time the hop was nut grown in Eagland. In ancient days brewing was titteenth century the greater part of the beer houses in London were kept iy females, who brewed what they sold." Cider is mentioned only once, and in such a manner as to convey the impression that it was not in much estimation, the Countess baving given one tun maong eight hundred paupers. Vegetables and Horbs.-"10
the roll very few esculent plants are mentioned. Dried peas and beans, parsley, femnel, onions, green peas and
new beans, are she onil species new beans, are the only species named. Pot-herbs, of Which the names are not specified, but which served eleven days, cost \(6 d\). If any utier regetables were in general
use at the time, they were, perhaus, comprised under the terns patatium. There is, however, nuch uncertanty apon the subject of the cultivation of vegetables, in this country, during the thirteenth and fourteenth centuries. leeks, redidive, lettuce, beets, parsnips, carrots, cabbages, ing the reign of Charlemagne; but it is doubtful whether ainany of these vurieties had penetrated into England at modder ines acte ene most skiful horticulturises of the the gariems of monatenics many vegetables were reared which were not in common use among the laity. Even in sitchen-garden was contemptible when compared Eith ish of the Low Countries, France. and Italy. Gilbert Kymer can enumerate only, besides a few wild and forgotten sorts, cabbage, lettuce, spinach, beetroot, trefoil, bugloss, barage, celery, parslane, fennel, smallage, thyme, hysop, parsley, mint, a spectes of turnip, and small whte onions. Ac corung to lam, ali these plants were boiled with meat. and sumaner, with olive oul and spices, but questions the and sumuler, with olive onl and spices, but questions the
propnety or the custom. This is, perhaps, the eariiest notice extant of custom. This ise of salids in Enchaps, the earliest -The on:y itads numed are appies and pears : three hunfrom of the latter werdeas of plure mased at Canks.  Tubre kegienties, cherries, plums, and all shell-fruits, the comman itice ved. Walnuts, andill perhaps chesnuts tivomand chesmuta sur Lon King's use ordered to buy two Buwn of the Ityuts if Edivart the First before Wardrobe find the bith of Nitionolas, the royal fruiterer, in whoted, we nad the bith af Ninaoias, the royal fruiterer, in which the

November, cost \(21 \%\). 14s. \(1 \frac{1}{2} d\). This apparent scarcity of
foreign kinds besides those included in the term spicery. such as almonds, dates, figs, and raisins, were importen time of John and of Henry the Third, Rochelle was cele brated for its pears and conger eels; the sheriffs of London purchased a handred of the former for Henry, in 1223 .
In the 18 ch of Edward the First, a large Spanish ship came to Portsmouth; out of the cargo of which the Queen buought one frail of Seville figs, one frail of raisins or grapes, one bale of dates, and two hundred and thirty pomegranates, fifteen citrons, and seven oranges. The last item is important, as Le Grand d'Aussy could not here we find it known in England in 1290; and it is pro table that this was not its first appearance. The marriage of Edward with Eleanor of Castile naturally led to a greater intercnurse with Spain, and, consequently, to the introduction of other articles of Spanish produce than the
ously been the principal imports from that fertile country, Bordeaus. It is to be regretted that the series of Ward robe Books is incomplete, as much additional information on this point might have been derived from them. At al Arab conquerors of Spain for the introduction of the orange, and not to the Portuguese, who are said to have brought it from China. An English dessert in the thir chiefly of dried and preserved fruits; dates, figs, apples pears, nuts, and the still common dish of almonds and raisins." Spices.-We have not space for Mr. Turner's in the Countese and thimer othenents, mentione in Countess's accuunts, viz., anise, cinnamon, galingal, ginger, pepper, cloves, cummin, dried fennel, saffron sugar, liquorice, mustard, verjuice, and vinegar, the prices of which were very low, apon which fact the editor observes, -"It must not be supposed from the 16 w prices of
some of these articles, that they were generally used in the country; the arrival of 2 ship laden with spices was an event of such icaportance, and perhaps rarity, that the King usually hastened to satisfy his wants before the cargo was landed. Thus in the 10th of Henry the Third, the bailiffs of Sandwich were commanded to detain, upon their coming to port, two great ships, laden with spices and precious merchandises, which were expected from Bayonne; and not to allow anything to be sold until the King had had his choice of their contents." Money It appears that one shilling at this period would purchase as mach as fifteen now

\section*{nebirm}

A Popular Trealise on Agricultural Chemistry, intended for the use of the Practicnl Farmer. By C. Squarey, Chemist. London: J. Ridgway. 8vo, pp. 156. A boor on this subject should be plain, concise, and clear in all its details; it should be so simple that every one who would read it should be able to understand it ; and on no account should any matters be introduced at all foreign to the subject, or scientific and abstruse inquiries discussed without proper explanations. When first we took up Mr. Squarey's book, we were much pleased with its appearance, because we felt that such a hook was much needed, ard we thought it promised well. It is at all times pleasanter to praise than to find fault, but we should not be doing justice to our readers if we did not say that we closed the book greatly disappointed, as regards style, There are many passages in the of treating the subject. There are nany passages in the book whech are so worded that an ordmary, unsceentific person wnuld have very great ditficulty in understanding them; and if he did understaud them, be would most probably draw false conclusions as to their meating. With the idea of simplifying the subagis, telling us that most vegetable substances consist of tour gases-oxygen, hydrogen, nitrogen, and carbon; and when describing the properties of carbou, he constanty speaks of carbonie acid gas as being gaseous carboa, and
places he rightly says that it is a compound of carbon end dea of simplicity, in fart renders the subject ser with the is also to be found under other heads than carbon. Thus tains no oxvgen to support vital functions; whilst in trath, quarters of its weight of osygen. The same kind of blonmixed up with nitric acid, being frequently substiruted for hat acid. Thus, lime is said to have a great affinity for nitrogen ; and in coany other cases the names of dissimular
substances are used indifferently. CALENDAR OF OPERATIONS for the ensuing Weok
\begin{tabular}{|c|}

 NEWSOF THE WEEK
The trial of Qucnisset and his acemmpece, which may now be regarded as corelucied, eensitures atmose the why
 Court of Feers bave conweted ten if the priwnis ir. ti.ese, Quériveet has been condern:cu to cieaition ite Chluers, so far as ne ase in feseersion of t............ have teen senteried to tamous terms of in : ..ont.i.t.... Of
 spracy to overturn the Covermm ent. M. Dupoty, the editor of a weli-knownoprgstwos intial, has atone been convicted; ail the others havin; been acquitted. This result is considered io corfirm tee inpression shlutad so in our last, that it bas been the cbject of the Cuteranient to connect the escrerice of the secret societ.es, and even the attenift upun the Princes, with the untrines incuicated ty the Liberal Jumrbals; and that the trial of M. Dupoty is intended to ourate as a warming to the press. The discloures made daring the progrem of
the trial have led to fresh arrests, and have developert a more estersise system of disaffection than was at first anticipated. -From Spain we learn that the Regent has promulgated a decree, granting an amnesty to all the soldiers who took part in the late revolt, and permitting their readmissien into the army. The municipal clections have terminated favourably to the democratic party, both in Madrid and in the provinces ; and the objects of the opposition in the approathing session are stated to be the prolongation of the period fixed for the Queen's majority the appointment of additional guardiar.s for her Majesty and the dissolution of the Senate.-We learn from Viemn. that the Austrian Court is endeavouring to bring about an amicable settiement of the differences between the Holy See and the Spanish Government; and an animated correspundence is aid to be carried on between the Courts of Londen and Tienna on the affairs of the East. Letters from Hanover state that the report that the Duhes of Sussex and of Cambridge had protested against the regulation for the sighature of the Crown Prince was unfounded, and that they hare given their adhesion to it.Accounts from Brussels annource that the inquiry into the late conspiracy is still in progress, and that the persons implicated in it were connected both with the no other facts of public interest have transpired. From Switzeriand we learn that the rumoured accession of Austria to the German Customs' Cnion has produced a great sensation thoughout the confederation ; and that is order to prevent the mensure from operatitg as
blockade of the ports east of Switzerland, the accession of the Confederation itzelf to the German Union has been seriously proposed. This suggestion, it is said, is strongly arged by Prussia, as a meature calculated to confer insportant benefits on Switzerland; and as another sign of the tinues, a plan has been publiehed for uniting Germany with Northern Italy by rnilronds running across Switzer land through the Grisons to Coire. The elections of Deputies to the constituent assembly of Geneva have been concluded, by the return, with few exceptions, of the candidates of the Democratic party. The Grand Counci of Argan continues to dispose of the property of the suppressed convents, without regarding the decision of the Diet condemnatory of their suppression. - The French Papers announce that the Pope has been attacked by apoplexy, but letters from Rome make no mention of the occurremee, and the report may be considered to require confirmation. -The levant mail has brought advices to a recent date; we learn from Athens that the Ambassadors of the Great Powers begin to exhibit cold ness in their relations with the present Cabinet, and that the formal note of the Porte, alluded to in our last, has not yet been answered. In Constantinople, the military and naval preparations are proceeding with activity; and the effective force already assembled in the neighbourhood of the capital amounts to \(45,000 \mathrm{men}\). The Freach paperis state that a conference has been held in London for the purpose of adjusting the differences between Greece and Turikey; and that the Anibassadors of the Five Powers have agreed to oppose the separation of Thessaly from the Ottoman empire. The accounts from Syria are mfasourable ; the civil war between the Druses and the Chnstian tribes still continues. The Droses are said to have decidedly the advantage; and the attempts of the British Consul to arrest the struggle have been wholly unanccessful.
At home, the ceremony of proroguing Parliament for a further period took place on Tuesday; the Lords Commissioners simply announced her Majesty's pleasure that both Houses be froregued until Thursday, the 3d of Feb., on which day Pariament will meet for the despaich of business. A treaty for the more effectual suppression of the Slave Trade was signed at the Foreign Office on Tuesday, by the representatives of the five great Powers; and a Commission bus been appointed to inquire into the management of the Exchequer, with the view of preventing the occurrence of future forgeries.

\section*{}

Count. - Her Majesty, Prince Albert, the Prince of Wales, and the Priness Ropal, are aif well, and continue at Windsor Castle. The Qucen has tahen her accustomed ice in a during the week. and oa Weunesday went upon the Viscount Sydney thas succeeded thion, in the Home Park. the lord in wating on the Queen the Earl of Warwick as succeeded Gen. he Hou. Sir W. Lumiey as the groum in waiting un ber Majesty. Tire Countess of Sandwich has sucrecded the Countess of Gainsborcugh as the lady in Tis un .uer Majesty.
The \(Q \cdots\) D surager. - Her Mojesty the Queen Dowager contrnues :0, :n, Fove, and is so far recovered from leave Sudbary Hail if tow during the week. Her waid jesty, however, by the advice of her physicians, has now postponed, until the we-is after arest, her departare for mainder of the winter.
Arew Treaty. -a

Austria. France, Great Britain, Pruseia, and Rusia, by
athin tie slase trate in dechawal piracy, and additional efferency gisen to the notrual right of search alreads eslethig anivig those five Powers. This important dornment man slaned on Tuesday, inire, the Earl of Aberdeen, Earon Fifhler, and Baron Brunow, the representatives of the five great Powers
New C'ommission.-. Her Majesty las appointed Lord Ashburton; Dr. Nicholl, Judye-dds ocate General ; George ( arr Glyn, and John Shaw Leferre, Esqrss, to be Commisascertain in what mamer Exchequer Bills tave been made out and issuect since the rewodeling of the Exclequer by Act of Pariament, in the reign of his late Majesty, and in the existing system, and what additional checks regulations can be established, with a view to guard in
future against the forgery of Exchequer Bills, or against the fraudulent or nnateryorised issue of them.

Official Appointments.-A Ministerial paper states that the dignity of Lord-Lieutenant of Northampton has been states that the vacancy in the order of the Garter, wceawill not be filled up for some time, although the Duke of Beaufort has been mentioned as likely to receive that digCoast Guard, in succession to Rear-Admiral Bowles, has been conferred on Capt. Phipps Hurnby, C.B. Capt Superintendent of Woolwich Dockyard. Rear-Admiral the Hon. J. Percy is appointed to the Cape of Good Hope
Yard; Capt. P. Fisher is appointed to Sherness DockYard; Capt. P. Fisher is appointed to Sherness Dock Diplnmatic Movements. - We learn from the German Prussion Envoy to this Court; and that Baron Werther, First Secretary of the Prussian Legation at Paris, suc ceeds him at Berne

Parliamentary Movements.-Lord Walpole, eldest son of the Earl of Orford, and Lord Charles Wellesley, one of the Duke of Wellington's sons, are both announced as the probable candidate in the Conservative interest for the representation of Lynn, vacant by the Right Hon. Sir
Stratford Canning's appointment as ambassador to Constantinople.

\section*{fforrian.}

France. - The Trial of Quénimet.-The journals are still almost exclusively occupied with the proceedings of this trial, which are not yet brought to a close. The Court of Peers, in Thursday and Friday's secret sitting, pronounced Quenisset, Boucheron, the attempt, Quenisset as principal, and the remainder as accomplices. Private accounts state that a confessor was that two of them, Dufaur and Colombier, made an unreserved confession, which, it is said, not only throws light on the whole conspiracy, and on the movements of the secret societies, but implicates a great number of persons hitherto unsuspected, many of whom have since bee arrested. On Friday two carriages full of new prisoners,
with municipal guards, were brought from the Faubourg St. Antoine. It is said that they are all of the operative classes. The journals also state that Dufaur and Colombier have declared that they received the cartridges which were found in their possession from six soldiers of the garrison of Paris, who have been arrested in consequence, that important information has been disclosed by then relative to attempts to seduce the Lancers in garrison at St. Germain from their allegiance, by one of their coaccused. In the secret sittings of Saturday and Sunday the Court took the list of prisoners charged with the conspiracy to overturn the Government, commencing with M. Dupoty's case. The latter took up two entire days, dually 0 S dually. On Sunday evening the final iote as to the guit
of the Editor of the Journal du Peuple was taken, when the division was as tollows: fur declaring M. Dupoty guilty. 138 ; for his arqnittal, 27. There were 160 Peers present, but M. Persil was called away suddenly by the death of his son. All M. Thiers' friends soted for M. Duputy's acquittal, with the exception of Baron Roussin, formerly Arainassador at Constantmople, and Minister of Marine in the Thiers Cabinet. On Munday the Court was to pronounce as to the guilt of the remaining five prisoners, anerward 1 is anipated ten for the attempt will have sentence of death recorded against them, Latumis and Mallet being the two exceptions ; but tuat he royal clemsency wil save the eight from the seaffuld, and consign them for life to a fortress. Tue most imporiant question, however, appears to be what sentence will be passed upon M. Dupory. It is repurted that there will be three medes of punishment proposed:-1, Déportation or transportativn, a penal punisimisent involing, as there are no Frencin colonies for criminals, continement fur hife in a tortress; 2dly, réchusion for ten years, also a pena panishment entaling infamy; and 3dly, imprisonmert for five years. Count Molé, it is satd, supports the minimum but as the masimun has many supporters, it is thought that the middle sentence, or the réclusion, will be pro-
nounced. The final sentence was expeeted to be publicly nounced. The final sentence was expeeted to be publicly morning papers subsequently rectived intorms us that the Court of Peers in Monday' secret nitting met at noon,
five remaining prisoners inclnded with M. Dupoty in the
cliarge of the concpirary to overturn the (i,vernment were then gone through, and they were all decoared "Not Perpile, is the only person among six in the categors of the conspirary who has been consicted. The Peers then, according to custom, began to deliberate on the sentences of the ten prisoness found guilty of the attempt. The Court beqan in the order of the requistinire of the ProenBoucheron, who had been recommended by the Attorney General to the meretifui consideration of the (ourt, wa sentenced to déportatcia, or impri-onment for hife in a furtress. The Peers then took the case of Coamber, the ern.pitices met, but had not decoded (in his pumishment The Ministry. - A variety of rumours, from which itis d:fficult to arrive at any satisfactory conclusion, continne to be in circulation as to the stability of the present Ad-
ministration. It is now stated as certein that Minine will not make the presidency of the Chamber of Deputies cabinet question; that they intend to support M. Lauzet,
but will accept M. de Lamartine, if the later should obtrain the majority. Several leaders of the Opposition,
however, are still confident in their hopes of coming into power; and a rumour appears to be gaining credit that a ing of the approaching cession, and that the Ductring rians, namely, Mesiss. Guizot, Martin du Nurd, and Duchatel, will be excluded from it. The Ministerial papers, on the other hand, report that the King has given to Marshal Soult and M. Guizot a carte tlanche for a disso ution, should they find such a measure necessar rench Commerce.-On Thursday the 16 th instant, Councils General of Agriculture, Manufactures, and Commerce. In his address to that assembly he reimportant subjects, which took place in 1840; but dwelt more at length on those referring to the general trade of the country. "At no former period," said he, " has our in 1840 was \(2,063,000,000\) f., the largest it has ever before reached, and which exceeded by \(518,000,0013\) or \(33 \frac{1}{3}\) per cent., the average of the 10 years from 1831 to 18.39. In the \(2,063,000,000 \mathrm{f}\)., comprising the commerce of entrepent, the foreign products sold for consumption, and those of
the soil and industry which have been exported, figure for \(1,142,000,000\) of francs, viz. :-imports, \(697,000,000\). of natural productions and materials necessary for indostry, \(184.000,0000\). of natural productions, and \(511,000,000\) ? of manufactured objects. He then stated that the value of the articles carried by sea amounted to \(1.481,000,000 \mathrm{f}\)., or 71 per cent. above the average, and the
tonnage to \(2,896,000\) tons. Trade with the colonies has, tonnage to \(2,896,000\) tons. Trade with the colonies has, ratively with 1831,13 per cent. as compared with 18.36 , and 20 per cent. as compared with 1838. There was also a falling off in the trade with North A merica. Egypt, Portugal, and the other countries washed by the Chinese Seas The Minister also directed attention to a modification of the tariff in gereral connected with the projected trenty with Belgium, and from the whole tenour of the adress the effect.- The three Councils-General of Commerce, Agriculture, and Manufactures assembled separately on Monday at the hotel of the Minister of Commerce. The Coun cil of Agriculture, after a long discussion, decided upen appointing five commissions-the first on the catle ques tariff of duties: the third on the sugar question; the fourth on replanting waste lands, on embankments, and on a general revision of the rural code; and the fifth on general miscellaneous questions. The members of the diture On commissions are to be nominated by the Prestde onsiterTuesday the sugar question was to be tatle. Wlen all the subjects are discussed, the three Councls, it is said, will subjects are discussed, the three Cidency of the Minister, assemble together under the presidency of
and make reports of the results of their inquias appointed M. Jubelin, former Guvernor of Guadaloupe a miember of the committee charged by M. Thiers witn the framing of a bill for the abolition of slavery in the colmies. Jubelin is a Creole, and erinced, during his administration strong opposition to the measure. The oppos not prints infer from this choice that M. Gia he gave two years ago, at a meeting held under the presidency of the Duke of Sussex. - The papers remark with some severity on the circumstance of a French brig having recently been captured on leaving Babia by an English brig of war. It seems she had some planks on board, and was hence that as a slater, and seut to Cayeune; but in is asu to antes she was mertly intended to brimg palm-oil bark to annd in -A letter from Bourbon of the Jth Sept.. puhnishecited the papers, says that the Collunial Councrmau just in the on resisting the intruduction of slave emancipatopted by mos: energettc manuer. The
The Fleet.- Despatches from Toulon state, that on the 12th inst., four ships of the line sailed for Tunis, where they would remain a short time, before proceeding to latrer Levant. A ship of 100 guns will procerd to the anmal sation when her repairs are complemand of the l'rince de Joinville, will also join the Levant squadrun, it is said

Algerra. - Intelligence has been received from Algiers
to the 6 th inst, \(\begin{aligned} & \text { ahich is favourable to the French. TTh } \\ & \text { Governor, Gien. Bugeaud, announces the submission of }\end{aligned}\) Governor, Gen. Bugeaud, announces the submission of
seven more tribes residing on the banks of the Tafina, and the defeat of the Calphat of Tlemcen, who had retreated to the frontiers of Morocco with about 250 cavalry. H Kabyles, who composed a part of it, had returned to their
tribes. All the baggage of the Caliphat had been pillaged tribes. All the baggage of the Caliphat had been pillaged
by the Arabs, as well as Tlenacen, which was completely
ovacuated by the troops of Abd-el-Kader and the Hedars oracuated by the troops of Abd-el-Kader and the Hadars
or Moors. Gen. Bugeaud further states, that he learns by a despatch from Gen. Bedeau, that the tribes of Beni not fac, from its mouth, were in full revolt against the into effect, Abd-el-Kader's fall must follow. Tranquillity reigned in Algeria, and the enemy did not appear in the
Sahel or in the plains. Refugees continued to arrive in Algiers, and it was stated by one of them that Ben Salem, Who had received a reinforcement from Berham, had been tenant of Mokrami, the French caliphat of the Medjana mentions the return of Lieut. Pelle, who had been sent whose cavalry had fired on the Prench tronps of the Arrach whereby one was killed. He fell in with a part of the tribe, and took 2,600 cattle. These operations,
had put a stop to the petty incursions of the Arabs.
SpAIN.- We have little intelligence of any importance this week. The Gazelte publishes a decree of the Regent, granting an amnesty to all the soldiers who took part in the
late rerolt of October, and permitting their re-admission into the ranks of the Army. M. de Salvandy, and the persons composing the new French embassy in Madrid, having been well received through the whole of their Madrid ; and the Alcaldes had returned all belonging the party of "legal progress." The accounts from the provinces also describe the democratic party as triumpliant met at a banquet to celebrate their victory, and the toasts proposed on the occasion were, it is said, by no means
favourable to the existence of the monarchical government. The Minister of Justice has addressed a circular to the judicial authorities throughout the kingdom, enjoining them, in the name of the Regent, " to treat with the conagents of the foreign Powers, in order not to afford them the slightest ground of complaint, and thereby debar the enemies of the nation and of its institutions of all prete
for provoking or exciting civil war." It is stated th M. Guizot is preparing a circular for all the represent Which he declares that France never had any intention interfere in the affuirs of Spain, or to throw any obstacles in the way of the present Regency. It is added, that to their respective ambassadors. Don Prancisco de Paulo and his family were expected to arrive shortly in ing session will be, it is said, to prolong the perind for the majority of the Queen, to obtain co-guardians with A guelles fur her Majesty, and to have the dissolution of the
Senate. It is expected that Señor Arguelles will not be re-elected President of the Chamber of Deputies. A decree has been issued erjoing the various bishops of the dioceses to supply returns of the parishes, in order that
their number may be harmonised with the amount of the population.-Despatches from Cuba, received in Madrid, emanclpation amongst the Spanish slaves in that island Germany.-We learn fiom Vienna that the Anstrian Court is endearouring to bring ahout an amicable settleSpanish Governnient.-Accounts received from Frankfort of the 10 th inst. assert that the exchange of despatches between the Courts of London and Yienna proves that an animated correspondence is carried on between those powers, and that it is rumoured in the highest circles displayed. Spanish a fiairs likemples, it is said, occupy the attention of those powers, although there is no longer Vienud the aspect of affairs is represented question. At no apprehension appears to be entertained relative to those of the Edst. - We learn from Berlin, that on the ith inst, as the Prince of Prussia was returning from an inspection of the barrack of the Cuirassiers of the Guard,
attended by Col. \(d \in\) Stockhausen, the borses ran away with atended oy Col. \(d^{2} \in\) Stockhausen, the borses ran away with
his carriage, drove it against the town wail, broke the pole, and threw the coachman from his hor. At the moment the horses were checked by the shock, the pince and the colonel jumped from the carriage, and received no injury ; out the coachman, bemy entangied in the reins, could nut be released in time before the frightened animals got mach Luain, dragging Lim with them; whereby he was gardt, announcing the death of the celebrated sculptor He was \(S+\) witich took place in that city on the 8th inst. trarellers as the of age, and was best known to Engiish in Mre Bethis the sculp or of the famous statue of Ariadne, \({ }_{80}\) Mr. Betiman"s gaiden at Frankfort. - The new theatre 8 lurg in process of erection at Dresden has just heen the plan of attaching a saloon the Renaissance style, and pany to wail in between the acts, and which is new to Germany, has been adopted. A handrome new theatre,

French style, has also been npened at Brestau, thie capital of Sulesid.-The Augvinug Gazette of the loth instme thites that one of the mast cen-iderable commercial houses in Strasburg had received a cemmuniaation from ment had the intention of negotiating with the German States in order to modify the Custom Tariffs at present existing between the two countries; that it is proporsed to reduce the duties on wine; and that, in return, the French overnment had agreed to reduce the duty on cattle.
permitted to take their seats in the Second Chamber of the States, referred to in our last, had withdrawn from the capital, and other deputies, it was said, would be sum moned to replace them. Dr. Westrem's election, it was Dr. Buddenberg's rejection was not known, as his election, it is said, was regular ; and. being a lawyer, he was obliged to ubtain permission from Governmient to take his seat. Accuunts of the 10th inst. inform us that the
First answer to the speech from the throne, and invited the ress into consideration. The opposition members en deavoured to carry an amendment, but were defeated. The majority on the division is not stated. - The Privy Councillor, Von Lutcken, was attacked on the evening of the 8 th inst. by an tuknown person, and severely wounded Lutcken, though who was stopped by a servant of Count Hardenburg, but contrived to escape. M. Lutcken was conveyed to the
Royal Palace, and immediately attended by two surgeons; but his wound was found to be not dangerous, his hat hav sensation from the circumstances under whech it place, and the public character of the person attacked The assault was made in the most frequented part of the city (the Leinstrasse), about one hundied steps from the Royal Palace, near to several of the principal coffee-houses, clubs, \&c., where there are many sentinels and numerous lamps, and at a time when that part of the city is particularly crowded. M. Lutcken is besides a tall, powerful
man, in the vigour of life. From bis political situation the crime is, by some, attribated to political motives; but there do not appear to be any grounds for this supposition. The party has since been arrested, and proves to , ajourneyman tinman, who some time since did som formed against by a female with whom he was connected, and who was the confidant of his intention. Nothing to have is staled espector her bed to have intimated that he had been seduced to the crime of 200 dollars offered for his apprehension seems to have contributed to his being discovered ; bat it is thought that he and the informer agreed to divide it between them. Government has made a communication to the States on the subject of railroads, encouraging the Legislature to promote undertakings of this nature, and decaring its in and a half per cent. on certain lines. It is said that the eport that the Dukes of Suser and Cambridge had dis. approved of the regulation for the signature of the Prince Royal was unfounded, and that they bare given their ad-

Belgitar.-Accounts received from Brassels state that
 with the Orangeists, but also with the French Republicans. The 1 fith inst. being the kings birih-dar, was celebrated with the usual state ceremonies and public demonstrations of respect. Sir George Seymour, British Minister at this Court, had a prisate audience of their Majesties on the 5th inst to deliver the leters announcing the birth of the Prince of Wales. Their Majesties were to set out on the 18 th from Mons to be present at the ceremiony of the opening of the railway to the frontier of France, which
was to take place on Monday last. On the 17 th inst. the Chamber of Representatives connsenced the debate on the budget of the department of the Interior: whien M. Rogier attacked the pulitical spint of the Cabinet, which, he said, was entirely persotirited by
Holland.-Accounts from the Hague, dated the 1.5th inst., state that 53 Scheveningen b, ats, which went out to the herring fishery, have num all returned sqfe, and that the fishery las been rery farourable. Not one of the 450 fishermen composing the crems has died, or eren been attacked witt illaess. His Majesty has lately resolved that the colonial navy in India be aboished; ail
the serviceable vessels t.) be henceforth a part of the the servicenble tessels to be hancement and expenses to be assimilated to that service. The naral force in lacia is to cuns.at of ? frigates, 2 ourettes, 4 briges, of scommers, 2 large steam-boats, 2 smaller steam-boass, and \({ }^{2}\) gunnot to escecd 2.200 Eurcpean seamen. This resolution is to be carriedinto tifect as sour as possible, and not later than July 1, 1842.-Intelligence Las been receired from Jara, statng that a proposal whath had been made to improse the means of land carriage in that island by the importa ina of camels has so far succeeded that 40 of those anmais were impursed in Apral from Teneritie. A crial of them being made, it appreared that they couid easilg carry a burden of 650 to .j0 lbs. The drivers, who came with them from Teneriffe, affirmed that when

A seyage they wruld be able to carry a burden of 1.000 lbs Duchy uf Luxembourg. A public dianer was given there in celt bratien of the birth-d.y of the Kins of ffolland and a marm disewesion mas enterel into bo the gutest on the proposed acrestion of the (irand I)why to the fierman Customs [nions. One of the persons presemp, a
functionary, it is said, high in the aduinstration of the Grand Ducal domains, became on exched agmest a m,ediral man sitting next hinn, that he planged his hafe into his opponent's heart, and killed him on the spot. He wasmediately arrested. This is one of the sccount given: another states that it was the
dent in openirg a bottle of champagne.
SWITziselasm.-The journals inform us that the remoured accession of Austria to the German union produces a great sensation in Switzorland. They say that blockaded, and, as an esmape. the union of swor surani itself to the German union is seriously proposed. The cantons of Argau and Thurgav, it is stated, are beginning to entertain these sentiments. Prusea is said m bre la Beyse has published his plan for uniting Germany with North Italy, by railroads romning across Switzerthme, es pecially through the Grisons to Cuire.-The electuns of Depuites to the Constituent Assembly of the cinton of Geneva are finished. Out of 11,396 electors inscribed on the list, 7,220 hase exerclised their right, making an ave rage of 63 oat of 1010 . There was but little difference be tween the numbers of voters in the city of Geneva and the country districts of colleges, those in the city being in the proportion of 63 to 100 a and those in the country 64 A letter from Genera of the 16 th inat. amonaces that the candidates of the democratic party for the Constituent Assembly had been generally returned. The Grand Council of the canton of Tieino had been convoked for 3d Jun. in order to revise the constitution of the canton. The Grand Council of Argau, on the other hand, continued to couvents, without heeding the decision of the Diet, condemnatory of their sappression
Italy.-The Gazette de Dauphine announces that the Pope has been attacked with apoplesy, in which atate he remained daring four hours withont shaming any signs of last received , however. from Rome of the ?.M inst., the occurrence. A Neapolitan refugee, Count Falconi, who was enodemned to death as one of the principal leaders in the distorbances of Aquila, had been arrested at Civita Vecchia, and brought a prisoner to Rome. M. Falconi sas provided with the passport of one of bis friends, and had secured a passage for France in the next Marseilles packet, when he was apprehended. According to treaties existing between-Rome and Naples, the Pope is bound to it is thought that his foliness will previousily obtain from the king a commutation of his sentence. Acconats received from Monaco state that the people bave required and obtained the abolition of the bread monopoly, and, not content with thifs concession, have further demanded the banishment of the Prince's farmer, M. Chapon. Florestan I. having hesitated to accede to the wishes of his subjects, the laiter tumultuuusly congregated before the bouse of M. Chapon, denouncing death against him, and rompllied him to seek refuge in the port. The Prince, it appears, subsequetis ryatined this decree of the mob, and inteaded appointing M. Parhis place. The King of Sardinia, apprehending that this petty revolution migl.t cunse some ferment in the districts has reinforced the corps of Carabineers stationed on its Greece. - Private acrounts from Athens, dated the 30th wit., state that France hac conserted to pay the Ambassadors of Austria and Russia, it is added, are almost ppenly at war with the present Ministry, and ve with one another in their attention to M. Marricurciato and his
friends. The Augaurg Gacelfe affirms thar t.e Government, un to the 3 ith wht., had not answerrd he furmal
note of the Porte, stinnugh twents dav- had elap-ed since its delisery a and adds that the ambnsiador- were therefore beginaing to extibit cond ness in their relations with the Cabinet. The French papers announce that a co:ference has been held in I ontion fine the purpase of adyasting the differences between Greece and Turkey, and thes the Amb.ssadors of the fire Powers had agreed to annex Thessaly to the Ottoman empire. There prevails. it is said, in t.e Hinsery, some difference of opinion relative to the question, whether the subjects of the Forte, or the Perte in tracts cime. land, waich are ti.e property if the Ta-cis. and acknorsledged so) to be, to thrse who possers :arm rable Guvernment shall take upon itaelf the sian of those estates. and furnisii indemaitications to the original Turkish possessors.
Trbest. - By the arrival of the Lerant mail we have inteligence from Constantinoli.e to the 25 th alt. The news thus brought is not of great :mportance. The military and naval preparat.ani,, which we bave already rey men ia the dock-yardo are busily engrged in preparing five two-deckers and five frigntes ordered to be equipped with the commandi of the five frigates, and that they will wister in one of the hallours on the Albunian conet Whilst
the five line-of-battle ships, under a Turkish admiral, will be stationed at Volo, after landing a brigade of infantry at round Larissa. The effective force now assembled in the immediate vicinity of the capital amounts to 45,000 men, exclusive of several strong detachments that have already to form the army of observation, and act as circumstances may require in Thessaly, will be commanded by Zachariah Pacha, who served with the allied furces in the late Syrian campaigns. Chekib Effendi, Iate ambassadur to the Court
of St. Jaumes, arrived by the French steaner on the \(2+4 \mathrm{l}\) of St. James, arrived by the French steanur on the 2 th
ult. His Excellercy was accompanied by his secretary and surprised his comntrṣnen by including in his suite three K.ng Charlas's yoniels and a lively parrot Which whistled "God save the Queen," and screamed the Armeuian esnafs, and of the bankers, has been held at generally satisfactory to both parties. The bankers have promised to refund a stm of 250.000 piastres to the nation The present obnoxinus Patriarch ane the choice of the people, to appointed. The exiled depaties and Patriarch are to be reculled, and the mation is to select a certain number of deputies, to be ent of the bankers and Patriarch, and the accounts of all funds subsribed for charitable parposes, vested in the hands of the bankerg, are to be open to inspection for the
future. This affair, which has occupied public attention for some weeks, and caused great agitation and discontent among the whole Armenian nation, has thus been brought bis sanction to the erection of a Protestant church at Jern salem, but this statement requires confirmation. The lates that province. Civil war continues to rage, and the strug le between the Christians and Druses is carried on with equal determination but not with equal success on both sides, as the advantage is said to be decidediy upon that o the latter, who have ravaged the whole country surround ing Deir-el-Kamr, committing great excesses. The Turk ish authorities, it seems, do not choose to interpose; and is even said that Nezib Pacha supplies the Druses with the Christian tribes. The British Consul-General at Bey rout, whose exequatur has been forwarded from the Porte hes, it is seid displazed srent zeal in his endeasonrs to put an end to this state of things, but without success.

Egypr. - By the Levant mail we have intelligence from Alexandria to the 26 th alt., which is of some interest. An order from Mebemet Ali, dated Siont, the 16th nuto, for-
warding the English and French tartifs agreed on at Constantinple according to the treaty of the lGth Aug., 1838, had been received at Alexandria cormurding that those tariffs shonld be carried into force at Cairo and Alessndria. The Russitrts, according
exempt from the operation of these new larifis, and would to pay only 3 per cent. or lesp, for the order says that Russia not having accepted the new tariff and treaty at Constantinople, its execution with respect to that country is aujourned. This order having been formarded by the Pasha, first to Cairo, and subsequently to Alexandria, without any previous communication to the consuls, the custom-hatise ufficers at the tormer city seized the European nerchandise which had paid 3 per cent., demanding a further dutr of \(\because 2\) per cent. This being the period at wade laice purchases of Eurupean moods at Cairo, on Which. contrary to usual custom, a dufy of 12 per cent. was demanded, although the merchandise had already paid duty on being shipped at Alexandria for Cairo. These proceedings had pue a stop to all business between the traders from Yemen and the European merchants. Much injury, it is also said, has been sustained by persons who but which Boghos Bey refowed to which they purchased, that it might be wanted for home consumption. The cus-tom-house at Alexandria was closed on the 25th ulf. and would continue so until the 29 th , in order to make arrangemens for bringing the treaty of the 16th Aug., 18:38, into
operation. The British Consul, Mr. Stoddart, was waiting orders from Col. Barrett, in order to protest against the new reculations. Letters frum Caro announce that Mehemet ith had conturued his journey from Siout to Assuan, Ibrahin Pachas was travelling in Lower Egypt. The same accotints add that Soliman Pacha and Col. Gallui hare g ne to sutz, for ti.e purpose of planning and settling the tor: ficathens of that place
PER*iA - intelligence has been received from Teheran late Sir Walter, and one of the clerks in the Foreignoffice, attuched to Sir J. MNetl's embassy. The fatigues of aloug and irksome land juurney, combined with pre rions indisposition, bruught on a tever, which terminated fatally soon anter the arrival of the missiun at Teheran. in's event. and the indi-position of the Schah, had retarded the fuantic reception of Sir Jolim M' Nenl.
mande: by Capte Wilson, from New York, which arrived at Liverg, al ons Thursday, we bave received a paper of the day lve.,." than the previous amival by the steamer Caledinesis. It cues int, however, contain any news of political or commercial traportance. The paper containa a report of a thisd pubsic unner, at which Lord Morpeth had been a guest, in New York, on the consecutive even
ings. Thia last was the anniversary of the St. Andrem Societr, as which the metiven of Old §cotia, zeviding
the cities of New York and Philadelphia, met to celebrate hem in his happiest manner, expressing his delight to see them, though far from their native country, thus meetiog round the festive board to cherish the feelings of friendship native land. His lordship was to quit New York on the following day

Money Market, Friday- - Consols for the Account per Cents. Reduced, 89 to \(\frac{1}{8}\); Three-and-a-Half per Cents. Reduced, \(983_{3}\) to \(\frac{7}{1}\); Long Annuities (expiring Jan. 5, 1860), 12 7-16ths.
fetetropolis and its wirinitn.
The Weather--A favourable change took place in the weather in the early part of the week, and instead of the late long-continued heavy rains and high winds, a sharp to Friday. the 17 th inst., the weather had for weeks been most unpleasant, bat during the previous night there were symptoms of frost, and by daybreak on the morning of the 17th the ponds and pools round town were covered wind shifted from the south to north-west, the temperature becoming colder every hour, until the thermometer had sunk to six degrees below freezing point. The frost contianed to increase in intensity, and at 6 o'clock on Satur-
day morning, the thermometer had fallen to fourteen deday morning, the thermometer had fallen to fourteen de-
grees below freezing point, and ice nearly an inch thick had formed. The day was fine, but about mid-day, a
dense fog suddenly enveloped the Metropolis in almost complete darkness, extending for seven or eight miles out of town. On the following evening, the frost continued mith undiminished severity, and on Sunday large numbers of skaters ventared on the ice in the different Parks, al though it was thin and insecure. Several accidents in consequence occurred on that day, but by the prompt ex-
ertions of the men belonging to the Humane Society, no ertions of the men belonging to the Humane Society, no
lives were lost. The frost continuing to last, and the weather being very fine, the Parks were crowded in the beginning of this week, and as the ice became firmer the number of skaters increased. On Wednesday night, however, another change occurred, attended by rain, and since that ture a general thaw has taken place

Neur Royal Exchange.-The Lord Mayor has issued cards of iuritation to all the Cabinet Ministers to a dinner at the Mansion-house on the 17th Jan., to meet Prince Albert, in order to celebrate the laying of the foundation stone of the New Ruyal Exchange. At a recent meeting of the Society of Antiquaries, an interesting paper was
read on the recent discoveries of Roman antiquities in read on the recent discoreries of Roman antiquities in
London, particularly with reference to the foundations of this new building. The completion of the foundation was mach retarded by the excavators finding an extensive gravel-pit, which it required many loads of concrete to 6ilt, on the part opposite to the entrance of the Bank of England. It appears to have been employed to receive the rubbish and refuse from the shops and houses of the City; and, amongst the débris removed, were large quantities of bones and other remains of animal and vegetabl matter, with a quantity of articles of domestic hife, as
shoes and sandals, knives and cutting instruments, on some of which were engraved the names of the makers and some weaving instruments, in whieb part of the woul
remained entwined, and which seemed to show the antiquity of this branch of stapie manufacture. There wer also found coins of Vespasian, Domitian, and Severus, but in the rubbish at top were coins of much later dates, from which it is inferred that this part of the City is of comparatively recent formation. From the discovery within the last few years of tesselæ in the Bank of England Comblul and the site of the French Church, in Thread needle-street, where, it is thought, Roman rillas once stood, the results of the present discoveries are considere 3 showing that Roman London was continually entrench ing on the tields which surrounded it, and that the excaration alluded to was sitaate in fields, and was employed o turnish materiais for the use of the Roman citizens.
The Tourer.-Ou Monday, the eastern gate of the Tower, wurch has been kept shut since the destruction of
the Armoury by the late fre, was again opened, thereby
the Armoury by the late fre, was again opened, thereby
purchasing a ticket to view the ruins of the Armonry, at still not permitted to go on the parade. The Jewel-office manifested by visitors that they cannot view the regalia, The public thoroughfare of the Tower is kept open from six in the morning till four in the afternoon, from the 1 st
Nov. to the lst March, and till seven in the evening (Sund days excepted) during the remaining months
Metrop witan Post.-The following is the statement of compared with the corresponding period in the yen 1839-40:-Through the general post-Four weeks ending \(4,408.127\); ditto, as nearly as can be given, of 1839 \(1,682,912\) : increase since 1840 on the four weeks' letters,
\(1.072,793\); increase since 1839 on the four weeks \({ }^{\prime}\) letters 3,798,01. Through the district post- Four weeks ending \(1,582,006\); ditto, as nearly as can be given, of 1839
\(1,021,386\) : increase since 1840 on the four weeks 788,796. - A fers days since, a deputation from the Londo Mercantile Committee on Postage had an interview wis his lordship the desirability, as well for the interests of the revenue as for those of the public, of perfecting Mr brought before his lordship were, those of increased facilithes for posting aud delivering letters in the Metropoli and the suburbs, similar measures in the chief proviucia country districts at present destitute of them. The state ments of the deputation, it said, received every atten tion from the Postmaster-General, who expressed his de sire to give them his best consideration, and assured them predecessor to carry out Mr. Hill's plan

Wood Pavement.-On Saturday, the Marylebone veatr were again occupied for several hours with the question of called to the chair, Mr. Cochrane moved that the whele Oxford-street be paved, at the earliest possible conveni ence, with wood. Lord Nugent seconded the motion.
Mr. Biers condemned the system of wood-paving, and said that they had upwards of sixty miles of paviug in the parish, and if they carried it out in Oxford-street every would be about \(15,000 \mathrm{l}\). a mile, and to pave the parish would cost the sum of 900,000 . He concluded by moro ing as an amendment, "That upwards of \(3,000 \%\). having already been expended in experiments in Oxford-street, it ras inexpedient for the vestry to entertain the farther in cease of wood-paving until that already down had stood a seconded the amendment. Lord Nugent and others sererally addressed the vestry, after which Mr. Joseph moved the adjournment of the debate, which being seconded, Mr. Harbut moved as an amendment the adjournment of the and ultimately a division took place, when there appeared,

\section*{for the motion, 18 ; for the amendment, 10}
rublic Meetings.-On Monday, a meeting of the Eastern Coast of Central America Commercial and Agricultural Company was held for the purpose of the general business Esq., when a report was read from Captain Bingham, hich gave a favourable account of the sond genera state of the company's territories at Vera Taz and other
places. Several other reports and accounts were read and places. Several other reports and accounts ef early general meeting of the proprietors of the Poiburn 1 in and Copper Mining Company has been held at their offices in Finsbury Square, for the purpase of considering of the propriety either abandoning or prosecuting the objects of tha re pany. The chair was taken by W . Cliford, of the mine in Cornwall, giving farourable accounts of its prospects. A report was also read from the committee, containing proposals for the future management of the concern mall was Stainsby stated, in reply to inquiries, pataid. The only paid upon 1,725 shares, leaving 4,000 unpaid. Twe on in expense recently incurred was for stoppiag the witites stood at 300 h . and the balance in the banker hands was son A further subscription of 2,000 \%. was required to carry ous the mine, which was at present suspended, and be calcusary expenditure for the next six months migu aban don at 1,0006. Capt. Rowe said, if the milful waste doned in its present state, it would be a whether effect might be about \(1,600 \%\)., which would be sufficient to pay the last instalment back again. After a long discussion between the proprietors as to the prospects of the cond pany, a resulution was carried that a furtur sue in cas be paid on the shares, to be replaid to the part, a n.eetiog of sharehor held, for the purpose of adopting nueasures for the protec tion of the sharetholders from the threareneac cuasequill, who of litigation. The chair was taken by Mr. Parnowed at explained the objects of the meeting, and was follow, who considerable lenyth by Mr. A brahanis, a sharebo the dree tory, whetrospective niew of the managenent interests of the proprietary. The respective finaucial statements wer described oy Mr. Abrahans, one being fred from each another from an accountant. other, and their variation was considered to erince a desire to conceal. He concuded by to evince a desire to conceal. He concuded ay nociaty
and fond, to be applied in liquidation of public creditors,
and in the defence of actions which might be brought against individual proprietors," \&c.. It was then determined that the directors should make arrangements for the meeting adjourned to Tuesday, Jan. 11.-On Wednesday, the annual meeting of the members of the Spitalfields and Bethnal Green School Society was held, the Rt. Hon. S. Lushington, V.P., in the chair. The meet-
ing was numerously attended, and a great number of ladies were present. The Society's superintendent read the report, from which it appeared that, notwithstand-
ing great exertions had been made, and several new schools had been opened, there were upwards of 6.000 During the past year no addition was made to the number of schools, although the last census proved that the popugreen contained 74,087 inhabitants, of whom 9,250 re quired education, for which \(2,000 \%\). per annum was requisite, while the children paid twopence a week each. The
model school continued to prosper, and there were admitted during the past year-boys, 392 ; girls, 175-making a total since the opening of the school of-boys, 1,380
girls, 687 . There were on the books-boys, \(485 ;\) girls 170. The ages of the children varied from six to sisteen
years, being the children of weavers and other artisans The receipts for the past year amounted to 281l. 9 s .9 d . and the disburseme
Execution of the Convict Ward.-On Monday this criminal underwent the last sentence of the law, in front tertained, by the friends of the convict, that the sentence might be commuted; but on Saturday an timation was received from the secretary of the Home Department,
that the law must take its course. Up to a recent period the prisoner persisted in declaring that the death of the child was the result of accident, but on Sunday he admitted that this was not true, although he at the same quently admitted that being intoxicated, he struck the child with his fist, and so caused the mortal injury ; and he persisted in this statement to the last. The sherif the time, to which he replied that he was, and that his love of spirit had been the means of placing him in his present situation. He asserted that at the time he had not that, as those blows justly charged with the murder, and was therefore liable to the punishment he was about to suffer. At the usual hour the culprit was led to the scaffold with the castomary procession, and his appearance was the signal for a burst cheers, mingled with groans, from the assembled crowd have been committed at the workhouse at Walworth. It appeared, from a statement made by Mr. Herring, the
relieving officer, that having received about \(16 l\). in copper money, he paid away some for the relief of the out-doo poor, and having lucked the gold and silver in an iron
chest, put the remainder of the copper in a small tub near his desk. He then carefully fastened and bolted all the theors, and left by the general entrance. On his return in them; but on entering his own office the tub with about 122. in money was gone. An inspector of police was sent for, and made a careful examination of the place, but no appearance of violence was discoverable on any part of the premises. It appears that a short time since a simila robbery was effected at Lambeth workhouse, but to a much
larger a mount.-On Monday, a gentleman named Wells was on his way from Westminster to the City, and in pass ing through the crowd assembled in Newgate-street to
witness the execution of the convict Ward, was robbed o his pocket-book. Not baving missed it at the time, he was surprised on his arrival at his office in Bucklersbury to find a boy inquiring for him, who presented it to him It seems he trad picked the pocket-book up in Newgatestreet, and finding its contents to be valuable, sought for Mr . Wells rewarded the lad for his honesty, and found the contents of his pocket-book quite safe, amounting, it days, several of the public charities in the Metropolis have been robbed in the following manner: A person, repre senting himself to be the steward to sonte nobleman, or institutions, and country, has called at the offices of the Written and signed by the party represented, stating the Tish of the writer to become an annual subscriber to it, and inclosing a check for sixteen shillings more than the amount mentioned as the subscription. The party deliin obtaini letter has ben, out to be forgeries. The party by whom this fraud has and \(h a m\) mited is a man between 40 and 50 years of age, checks are written in a fasbionable hand, apparently that of a fenale, and are all similar, with the exception that they are drawn on different bankers, and at some distance froma the charities imposed on.
belonging - On Monday a serious fire broke out in a ropery mable nature of the materials spread with great rapidity, and in a short time the whole of the buildings were on fire. The dwelling-house shortly arrival of ignited, and burnt for some time before the their arrinal proggines. A good supply of water was on their arrival procured, but notwithstmeding every exertion,

The fire continued for nearly two hours, and was not go The property consumed is ralued at about two thousan pounds. The fire, it is supposed, originated by the boilger of the tar-kettle.
Accidents and Inquests.-On Tuesday morning, Mr John Miller, Queen's Counsel, was found dead in his bed Miller, it seems, was in perfect health the previous even ing, having returned to bis chambers about 9 o'clock, whe his servant, having placed his coffee on his table, left him him on his bed, with his clothes on, quite dead. It is supposed that the cause of his death was apoplexy. An inquest has been held, and a verdict returned of "Natural aged 65, a public notary of Besançon, who, it seems, has been for some time in this country prosecuting a claim for large "succession" due to him from the East India Company, to the amount of between \(3,000,000 \%\). and lasted two days. Nothing, however lengthened one, and merits of the claim in question. From the evidence it appeared, that he was found dead in his room on Sunday and a French medical man, a friend of deceased, stated that he had been with him shortly before, when deceased being seized with an attack of vomiting of blood, he lef him to procure additional aid, but on his return found him dead. He was of opinion that he hald died from aneurism of the heart. A post-mortem examination was made a the desire of the jury, when it was found that deceased of death was the bursting of the aorta into the back part of the lungs. The jury returned a verdict accordingly.
Mortality of the Metropolis.-From the weekly stat ment. of the number of deaths from all causes, registered
in the week ending Saturday, the 11th inst., it appears that there were-males, 366 ; females, 404. Weekly verage 1838-9-40-males, 475 ; females, 451.
Hackney.-This parish has again been the scene of contest on the question of Church-rates. The parishioners net at the school-room on Friday, the 17 th inst., the Rev, H. H. Norris in the chair. The churchwarden having read his estimate, and asked for a fourpenny rate to meet it, Mr. Offer moved that the estimate should be referred back to the churchwardens, and the proposed rate not be granted; but on a show of hands, this amendment wa negatived by a majority of 85 against 65 . A poll was then demanded, which continued during that and the fol lowing day, when the result was declared to be, for the rate, 250 votes, from 167 persons; against it, 173 votes, from 132 persons. In July, after a two days' poll, a rate was negatived by a majority of 1 ; but on this occasion it has been carried by a majority of 77
Croydon.-On Monday three men, named Alder, Bailey, and Scott, were brought before the magistrates at Croy-
don, charged with felony, under the following circumstances. The charge against the defendants was, that they bad unlawfully rooted up and destroyed a quantity of shrubs and trees, to an amount exceeding \(5 l\).; and whic by act of parliament was declared to be felony. Mr Penfold, who supported the charge against the prisoners, stated that a gentleman named Rogers had let a house a Croydon, and there being some dispute between him and the tenant, the latter threatened that be would do some injury to the property; and accordingly, having remove outside of the employed the defendants to root up and destroy every tree and shrub in the garden; the premises were then deserted, and Mr. Rogers was unable to obtain posseasio of them until it was given to him by two magistrates in due form. Having discovered that defendants were the parties who destroyed the shrubs and trees, Mr. Rogen their share in the ta Mr. Penfold hating read the clause in the act of parliament making the offence felony said he should show that the prisoners had destroyed properts much greater than the amount specified in the act, and he should then call upon the magistrates to commit them to take their trials. One of the magistrates inquired whether at the time the alleged ffence ras committed the tenancy of the party in possession had determined. Mr. Penfold said it had not, and the tenant was at the time in legal possession of the premises. The Bench said, that as that was the case, the id not think the present charge could be sustained, an although the tenant himself might be civilly liable for the damage, yet they did not think the parties who abeyed his orders could be brought within the seope of the aot question. In answer to questions from the Bench, defend ants said they were employed by the tenant to destroy all the things in the garden, and were told that it was to be hid out afresh, and they did not know they were doing wrong. They also said that they were employed to tar the outside of the honse. Mr. Penfold said, the work of ischief was not begun until after 100 oclock at night, an ther must have known they were doing wrong. The Benc aid that it was a scandalous proceeding, but as they did ot think the charge could in law be made out against the resent defendants, they could not proceed any further in the matter. The defendants were then discharged

Frobmial Netos.
Ambleside-A fer nights since, the family of Mr Herd, farmer, of High Close, Longhrigg near this place, was alarmed by a person who called at the house to inform them that the barn, situated about half a mile from he dwelling, was in flames. Mr. Herd with his servant hastened to the spot, and fortunately arrived in time to
rescue ten head of cattle. The flames, howerer, had gained so great a height that all attempts to save the building and its contents were unavailing. Suspicion has attached to a person who was seen in the neigbbourhood during the time of the fire; but though diligent inquirie have been set on foot after him, he has not since been heard of.

Barking.-We learn by the Essex Papers that a few days ago, a discovery of a singular kind was made in the interior of the parish church, at thi place. The interior of
the building aff rding scarcely room for the increasing population of the town and its vicinity, the rector, the Hon . and Rer. Mr. Liddell, has recently prove the chancel so as to afford additional accommodation. port portion of the pillars by which the gatleries are suprted crust of plaster in which one of the pillars was encased and which had been put on upwards of 70 years ago to gir them the appearance of stone, they discovered a nest of 5 loads, two of which were large, and the others smaller. On being released from their place of confinement, ti, ey jumpe about, seeming perfectly healthy, and were picked up an put in a place of security. In removing some wooden also found which in near the same spot, a live woned a the same time as the toads. These singular curiositie attracted much attention, and various applications have been made to the rector for them ; but they are all, it is said, to be replaced as nearly as possible as they were found. Th bat has already been placed behind the new skirting, and the tuads will be deposited in the pillar when the necessar preparations have been made

Chichester.-A meeting has been held in this city of the creditors of Messrs. Ridge and Co., bankers, wh), it will be remembered, stopped payment a short time since It was a preliminary meeting for the choice of assignee and proof of debts, and it appeared from a rough state ment made to the commissioners that the engagements of the bank were about 150,0001 . to meet which there were \(54,000 l\). assets, made up of items, including cash and short bills in the house, securities, and surplus for separate estates.

Doncaster. -The local papers inform us that a Pear tree, which his been known by the name of King Charles's Pear-tree, and has fong been an object of curiosity in the town, has lately been cut down. It stood in the garde behind the banking-house of Messrs. Leatham, in High street, from whence, in consequence of some building alterations, it was found necessary to have it removed The property formerly constituted part of the site of the Priory of Carmelites or White Friars, one of the many religious houses that were suppressed at the Reformation, and which was sarrendered in the year 1538. In the yea 1641-2 Charles the First paid a visit to this town, when it related that he dined at the Lady Carlingtord's, to whom the house then belonged, and upon this cccasion his Majesty is supposed to have left this memorial of his risit. Most of the wood, as well as a drawing of the tree has been preserved

Gloucester.-We noticed in our last the movements taking place in different parts of the country, to get rid of the present establishment of the sural police. On Satur day, at a meeting of the rate-payers of the parish of Chip ping Sodbury, in this county, to consider the propriety of petitioning for the discontinuance of this body, it was re Toat the continuance of the raral police force that parish is useless, and entails not only upon the rate-payers, but subjects them to continual oppres sion and tyranny, and that a petition be forthwith prepare to be presented at the next Christmas Quarter Sessions, praying the magistrates to discontinue the said force. At a vestry meeting held at Frampton-on-Severn on the 9th inst. it was also unanimously resolved that the police for that happened a few days since at the Park Ead Iron Works, in the Forest of Dean. It seems that the furnace being out of repair, some sulphuretted hydrogen gas escaped from the side, and passed into a bouse adjoining, occuple by a man named Conroy, his wife, and two longers, who were all asleep in bed. They were found in the moroing pparently dead, but apoa being removed into the air three of them revived. One of the lodgers, however, was found to be quite dead, and Conroy surv
Isle of Wight.-A local paper states that the report which has been going the round of the papers, and which ras copied into our inst Number, that the celebrated natural curiosity, the Cave at Freshwater, had entirely dis appeared through the late rains, is not correct. It add stone the Alum Bay side has slipped into the sea torminus on theseral acres; but that the cave stil exists and presents a greater faclity of entrance than before, some parts of the grand archway at the entrance of it having been destroyed during the late storns, which, appearance

Knaresborough.-A local paper relates the following circumstance as a singular instance of the power of conscience. A prepaid letter, containing half-a-cromn, was a few days since received by a tradesmaa in this caws, passed a bad half-crown in his shop, in the place of which be had thought it his duty now to remit him a good one.
Lincoln.-At a dinner given by the constituents of this city, on Monday, to the connty member, Mr. R. A. Cbristopher, that gentleman delivered a speech on the subjec of the Corn-laws, which has excited considerable interest,
subsisting between himself and the Duke of Buckingham, and from the fact that he quoted the information given by him on this subject as coming to him from "a gentleman who is in communication with Government;" and the distinet tone of his proposals was regarded as affording clear indications of what may be expected from the Conservative Ministry, and from the agricultural interest. Mr . Christopher considered that the law should aim at fixing the price of wheat as nearly as possible between
56 s . and 65 s . the quarter. This he pronounced to be 56 . and \(65 s\). the quarter. This he pronounced to be
the extent of protection which may be justly claimed as necessary to the farmer's well-being, and conceded without unfairness to the rest of the community. And this, or something like this, he proposed to secure, by affixing a minimum duty of 5 s. per quarter on wheat, when the averages amount to or exceed the sum of \(65 s\).; and then, as prices decrease, increasing the duty (at what rate, mum of at least \(20 s\). , or at most 30 s . Mr. Christopher, however, proposed to preserve intact the principle of a sliding scale, and declared himself decidedly "opposed to any alteration of the principle of the Corndaws, to which he considered that the important fact was to be referred, in England than in any other country except Sweden, and very considerably less than in any of those countries and cities which he quoted, except St. Petersburgh and perhaps Trieste.
Liverpool.- Daring the last week, a fraud to the extent means of forged ehecks upon a Belgian Bank. The fact that such forged checks were in circulatios we announced in our last. The guilty party is a foreigner named Ranyier, between 35 and 40 years of age. He is supposed to have arrived in this city since the lst inst., in order to embark for America. A confederate of Ranyier's was supposed
to have gone to Leeds on Friday the 10th inst., and the to have gone to Leeds on Priday the 10 th inst., and the
police-officers were on the alert to secure him : their police-officers were on the alert to secure him : their
efforts, howerer, were unsuccessful. -The local papers state that the workhonse in this city contains at the present moment a larger number of inmates than it ever held before; there being nearly 2,000 paupers in the house. The new and spacious workhouse of the adjoining union of West Derby is also said to be so full that the sleeping rooms are inadequate to the proper accommodaaccounts add that the Poor Lav Guardians have purchased six acres of land in the adjoining to \(n\) nship of Kirkdale, on which they intend to erect a building for the exclasive use of pauper boys and girls ; and that when exclasive use of pauper boys and girls; and that when
this building shall be complete, the children, two thirds of whom are orphan or illegitimate, will be removed to Kirkdale from the present workhouse, which has become too small for the proper accommodation of paupers who crowd into it.-On Saturday, the wind having changed to the south-east, abont 200 vessels which had been wind-bound foreign ports, loaded with British manufactures for nearly every commercial depot in the world. It is reported Company have purchased the Acteon and City of Glasgow steamers, which are intended to ply between stations in the West Indies, in connexion with their other steam-ships.-A few days since, at St. Jude's church in this city, five persons, all of mature aqe, publicly renounced, in the presence of a crowded congregation, their
adhesion to the Church of Rome.-Lord Graville Soadhesion to the Church of Rome.-Lord Granville So-
merset, and the other commissioners for inquiring into the resenue, have arrived in this town, and have for several days been engaged in their inquiries, and in receiving depetations from the various associations in the port. The mode of conducting the business of the Customs and Exeise, which, without endangering the collection of the reverue, will facilitate trade, particularly in the landing of vessels' cargoes. - There have been several failures in South Lanceashire since last week, of various degrees of
importance, and among them that of Gardner and Co., in this city, to a serious extent.
Maidstone.-The rectory-house at Ruckinge, together with nearly all the furniture, has been destroyed by fire. The rector, the Rev. A. Smith, had, it seems, left for London only an hour previonsly to the fire breaking out, the canse of which has not yet been ascertained.

Manehester.-A meeting of deputies from the various towns, comprised within the great cotton district, of which this place is the centre, has been held at the Corn Exchange, at which upwards of one thousand persons were together an authentic statement of facts bearing upon the together an authentic statement of facts bearing upon the
state of each trade; the condition of the popuiation of the district, both employer and operative; the past and present state of wages; the numbers of unemployed; the extent of pauperism; and any other facts connected with the trade of the neighbourhood, and the circumstances of its inhatitants. The meeting commenced soon after ten
o clock, \(^{\text {cclo }}\), with the adjournment of an hour only for dimner, sat uattif eight in the evening. The attendance of deputies was large, and the chair was taken by Mr. R. H. Greg, who opened the business of the meeting by giving and other survey of the state of the cotton trade in this and other countries. Tbe meeting was then successively Hollasd, the Rev. Mr. Smith, the Rev. Mr. Waddington, asd the Mayor of Stockport. Thene gentlemen, who
spoke at coasiderable length, made some startling disspoke at coasiderable length, made some startling dis-
elosures of facts relative to the present condition of this manufacturing district, both as affecting the operatives and the masters. All the manufacturers agreed that for the last five years they had been carrying on their business
without profit. Mr. Greg said that, with the exception of or provided any fund for the depreciation of machinery. Mr. Alderman Brooks, however, stated that he made no exception, for he could say that he had lost money during
every year since 1836. After the several other deputies had made their statements, resolutions were adopted which were of the usual character at similar meetings. The first affirmed the general existence of distress, and stated "that the extensive district, of which this town is the centre, engaged in the various branches of the cotcon trade and its dependencies, is sumfering the duration of which has norallel in the history of Lancashire. That it is in evidence before this meeting that the condition of the surrounding population both employer and operative, is greatly deteriorated ; that
fixed capital, such as buildings, machinery, \&c, has depre ciated in value nearly one half since 1836 ; that capitalists, as a body, have long ceased to obtain a profitable return have alarmingly increased that the shopkeepers have suffered corresponding reverses ; that the reward of labou has been generally dimininished; that great numbers of
skilful and deserving workmen are either wholly or partially unemployed; that pauperism has been rapidly augmented, and disease, crime, and mortality have mad fearful inroads amongst the poorer classes of the com
munity. That all these evils are experienced at the premunity. That all these evils are experienced at the pre-
sent moment with unmitigated severity, and that there is no visible prospect of any amelioration of the distresses o this great commanity." The subsequent resolutions ex pressed the opinion of the meeting, "that the provision and Corn-laws are the principal sources of this distress; of just government any law which gives to a privileged class a monopoly of supply in any article, but especially in the first necessaries of life." A petition, embodying these resolutions, was adopted for presentation to Parlia-
ment, praying that the subject may be taken into serious ment, praying that the subject may be taken into serious
consideration.-A destructive fire occurred in this town on Monday, which in a short time destroyed property estimated at the value of \(30,000 \mathrm{l}\). The building where it broke out was a warehouse situated in Piccadilly, near the
centre of the town, and was occupied by Messrs. Patchett centre of the town, and was occupied by Messrs. Patchet
and Jones, canal-carriers. The warehouse, which was originally built by them, but had been sold to Lord F. Egerton for 11,000l. was erected, for the convenience of their busioess, over the Rochdale Canal. The fire was first discovered by some persons passing, and the alarm being given, several engines were soon on the spot, and a plentiful supply of water was procured. The progress of the faceses, howgoods in the warehouse, which were of a very inflammable nature, principally cotton, and exceeded 20,0001 . in value. In a few hours the whole of the buildings were reduced to property. The origin of the fire is not known with certainty, but it is thought to bave commenced in a boat-load was erected, the boat being discovered on fire at the time the alarm was given. The captain of the boat, his wife, and son, were all sleeping on board, but on being made sensible of their danger, jumped into the canal, and were got ashore. The captain was severely burnt while in the water, by a quantity of floating wool, which was on fire and remains in a dangerous state at the infirmary. The ruins of the warehouse have choked up the canal, and its
navigation will, it is expected, be impeded by it for several days.-Some excitement has been caused in this town by the announcement of the failure of the house of Taylor, Boggs, and Co., of London (Gardner, Boggs, and Co., at Liverpool), who were largely engaged in the trade to the East Indies. It is stated that the engagements of this firm amount to upwards of 150,0001 ., of which considerable proportion is owing to parties in this town The failure is ascribed to the unprofitable state of the trade with the East, and the loss on produce imported, especially East India cotton, of which it seems that house
were holders to the extent of 20,000 bales. The stoppage were holders to the extent of 20,000 bales. The stoppage
of this firm has caused one failure in this town, namely, that of Messrs. J. Hobone fail Who, it is said, are creditors of Messrs. Taylor, Boggs, and \(C 0\)., to the extent of 6,000 .; and their engagements, it is reported, amount to about \(24,000 \mathrm{l}\). It is, however added, that their assets are considerable, and that there is not likely to be much eventual loss from their failure.

Noruich.-On Saturday the house of Mr. Aldridge, tradesman of Lakenham, near this city, was broken open and entered by two men. It seems that they entered the premises by cutting away part of the wash-house door and
forcing it open with a crow-bar. Mr. Aldridge hearing a noise went down stairs, and on opening the door leading to the shop found two men in it packing up goods. A severe scuffe ensued, during which Mr. Aldridge was knocked down and beaten; he, however, succeeded in defending himself, until his cries brought the police to his assistance, by whom the thieves were secured. They were examined before the magistrates the following day, but made no defence, and were cominitted to take their trial. Reading.-Notwithstanding the frost, which has set within the last two or three days, and the gradual sub siding of the waters, several hundreds of acres of wheat, winter barley, and winter oats, are still overflowed in Berkshire, and in many parts to a considerable depth.
The effects of the floods upon the land and crops thus The effects of the floods upon the land and crops thus sown will, it is feared, be very injurious to the interests of the respective owners. A large breadth of wheat was sown during the preceding month upon the high lands but upon all those farms not so farourably situated,
swampy state they are now in, arising from the length possible to get in the seed until the ensuing spring. Upo many of those lands which have escaped the floods, th slugs, which this year are very abundant, have committed
great devastation. Large breadths of wheats, it is stated are in so sickly a state, from the destruction caused by these insects, and promise such thin crops, that many
farmers have determined to plough up the land and resow in the spring.
Ripon.-As Mr. Gowland, of Pond House, near Bedale was returaing home from Leyburn fair, a few evenings lage of Haraby, by four men, two of whom seized his then gagged him to prevent his raising an alarm, and rifled his pockets of 121 . with which they made off. The
spot where this robbery took place is only a few yards from the village, and at the same time several persons were
in the adjacent fieids milking, one of whom seeing Mr. Gowland's horse running loose down the road, ran after
and caught it, supposing the rider to have fallen by accident, and that the persons about him were rendering
him assistance. No clue has yet been discovered to tho pprehension of the robbers. excitement in the neighbourhood, has been committed on an elderly woman, named Emma Evans, residing in the village of Chirk, five miles from Oswestry, in this
county. Deceased, it seems, kept a small shop, and her house was removed some distance from any other dwelling. She was supposed to have saved a considerable sum of
money, and this is thought to have led to her murder. She had be seen by some customers whom she served as late as five in the evening, but about seven was found in her kitchen dead, with her throat cut, and the premises robbed of everything valuable. Suspicion attached to two
men, named John Williams and Joseph Lawson, who had been observed in the neighbourhood, and after the murder had visited a neighbouring public-house, where it was they had quitted the house, they were pursued, and the bundle being demanded of them, they threw it down, and made their escape. The bundle on being examined wa St. Helens.-The parties who were taken into custod on suspicion of having been concerned in the late murder Mr. Grayson of this place have undergone another ex
amination before the magistrates. Some additional evidence taken by the coroner since their last meeting was read over, and a man named Colquitt, who gave evidence amined, and confirmed what he had then stated, viz. that a stick, found near the spot where the murder was committed, covered with blood, was the same he had seen in the possession of the prisoner Isaac Jacques, the night before the murder. The magistrates after a long delibe - namely, Charles Woods, Thomas Meadowcroft, and William Jacques, on entering into their own recognizances Isaac Jacques, Robert Woods, and Thomas Molyneux, were remanded until the decision of the jury was made known. This has since been determined, the verdict being " Wilful murder" against Isaac Jacques, Robert Woods, and Thomas Molyneus. The prisoners all denied any participation in the crime, but were committed to tak
Windsor.- For some days past workmen have been employed in forming a new private drive from Frogmore
Lodge to Windsor Great Park, which, it is said, will be finished in the spring. The object of it is stated to be to enable her Majesty and the Court, whenever they desire it, to drive into the park without being suilding known pue Old Hospital, and through the fields, entering th Great Park through the double gates.-It having been communicated to the Mayor that her Majesty would receive the corporation of this borough at the Castle on Wednesday, for the purpose of presenting an address of congratulation on the birth of a Prince of Wa corpora Mayor, accompanied by several members of the Castle, tion, proceeded on the afternoon of that day to the Cat the and on being introduced into the Royal presence, the address, which had been prepared for the occasion, whe read by the Town-clerk; to which her Majesty made following reply: "I thank you for this loyal and dutiful address. It pleases me to think that the eariest recien lections of my son will be associated with the ancien residence of the sovereigns of this country, and 1 recelv with cordial satisfaction the assurance of your attachmen to my throne and to my family." Addresses were after wards presented to Prince Abbert and severally replied Kent, to which their Royal Highnesses severally the The Dean and Canons of Windsor also stenilar congraCastle on the same day, and presenajesty replied: " tulatory addresses, to whi the expression of your gratitude to Almighty God for the birth of the Prince, my son. Be assured that it is my io tention to educate him in the principles of Cbristian pare and moral virtue, and to inculcate on his mind the sations duty of transmitting to posterity these realms."

Railways.-The Railway Times gives the following the receipts of the principal railways 111 ; Great Western Blackwall, 5401 ; Birmingham, 13,411.; 3,6641 . ; Bi ningham and Derby, 884l.; Midland Counties, \(2,2292 h ;\)

Birmingham and Gloucester, 1,325\%. © Manchester and Birmingham, 3521. : Great North of Englan, 101 - On Saturday an accideut, which terminated with fatal consequences, occurred on the line of the London and Bir mingham Railway, at a place called Chat when the thirdmiles from Aylesbury. It seems that when the thirda plate-layer, who was supposed to have joined the train at Leighton, attempted to quit the carriage on which he and many of the passengers, but replied that he would not keep his seat any longer, and jumped out. He had scarcely reached the ground, when the engine of a downtrain, then approaching, struck him on the back, throwing over him. He was'taken to the station, where he died shortly afterwards. The servants of the company, it is stated, experience great diffeculties in preventing passenWhen the trains are in motion; and the directors desire
strongly to impress upon all parties travelling by railway that such attempts are attended with the greatest danger branch of the London and Brighton Railway. It appears that a labourer named Kelley was engaged repairing the line near the Kingston station, when a slip of earth sud it was found that, in addition to other injuries, his les was broken; and he was conveyed to the hospital at Brighton, where he continues in a precarious state -On
Saturday Mr. Rallett, chief superintendent of the Brigh ton Railway, preferred a charge at the Greenwich police office against Charles Goldsmith, an engine-driver, of
having, when in a state of intoxication, caused a serious accident on the Brighton Railway. Mr. Rallet deposed that a spare engine in charge of the prisoner at the bar and started from the Sydenham station. The train, consisting degrees, and eight passengers were more or less injured. The prisoner bore a general good character, and had been promoted in consequence; but on the present occasion sidered was the only person to blame : he had no business to follow the train, and ought to have been at Croydon Railway Company said, that as he was strapping up the train at Sydenham, the driver called out that there was no red light behind. A red light ought to have been visible intoxicated. The prisoner, in his defence, denied that he was tipsy, and said that he saw no red light. He saw the Brighton train on his right,
being a red light. The magistrates decided on remanding answer the charge when called on.-On Saturday, as a man, named Shipley, one of the plate-layers on the Great North of England Railway at Northallerton, was shifting one of the iron slips near the station-house at that place, passed got fast in the iron rail, and some of the waggons extricated until some of the heavy rails were taken up. He has since died from the effects of the accilen City on Monday, by a report that an accident had happened during the night to the np-mail train on the Soath western Ruilway, and which was the more generally believed nearly 11 o'clock office letters not being delivered until proved to be unfounded, having originated from the fact that the train did not arrive at Vaushall till ten minutes before nine, whereas it commonly arrives a few minutes after six. The delay was occasioned by a heavy fall of snow, which had fallen so thickly upon the railway in the was impeded, and could not proceed on its journey until a number of labourers had cleared away the snow.

\section*{IRELAND}

Dublin.-His Excellency the Lord Lieutenant has addressed a short reply through the Earl of Bandon, acon the subject of a railway between Cork and Number The Earl observes, "that without entering at the prethe question at large, his Excellency begs that he (Lord bandon) will inform the gentlemen who took an interest that he will bear in mind their sued their memorial, and occasion may arise." - A long document has appeared in the papers, in reference to the establishment of provincial giving "industrial education" to the sons of the landed Wentry, in order the better to work out the objects for which so many agricultural societies have been recently From the pen of Mr. Thomas Wyse, late member for his proposal had received the sanction of the Whig Goverament, Pariand that the question would have been brought Ministry had not been obliged to resign." Mr. Wyse moitted the that Lord Morpeth has ex-oficially transto his sue documents connected with these proceedings now successor, Lord Eliot, in whose possession they our last, have new Law Courts \({ }^{3}\) Commission, noticed in
sary, it is reported, according to the wording of the commission, that the inquiry should terminate before the examined respecting the duties of the various officers, one of the objects being to ascertain the extent of saving that can be effected in the way of salaries paid out of the law fud. Patent officers, whose salaries are fixed, cannot be some of the judges respecting the increase of the small salaries of subordinate officers are to be inquired into The commissioners are also directed to make such in quiries as will enable them to suggest any changes in the present system which may be considered advisable.-A of the Treasury department in this country will be handed over to the Bank of Ireland; and that the Irish estimates are to be paid by order direct from the London Treasury on the Bank of lreland, so as to reduce the Irish Treaas the number of its officials, and lead the way to its removal altogether to Downing-street. The Irish Crown material changes, so as to save the country from 25 to 30,0000 . a year. The Stamp-office is to be reduced to one
distributor and the Chief Secretary's office will be less ened by two or three clerks.-Active measures, it is said, are in progress for the recovery of tithe composition due by defaulting landlords for the years 1834, 1835, 1836 of the Court of Chancery on Saturday, the Attorney General obtained an order that the several petitions already presented to the Lord Chancellor should be set down for hearing. A great number of the cases are expected to be disposed of in the next term.-The Countess de Gre and the Lady Jemima Eliot have expressed their dete mination to encourage, by their own esample, the wear of Irish tabinets and poplins by ladies attending court.-The Tuesdy meeting of the Repeal Association was hertion, one of which was an address to Mr. O'Connell from the Repeal Association of Lockport, in the state of New York, enclosing 26l. towards the repeal fund. It prayed that he sould continue his present career of agitation until crowned with the laurels of victory, and until he should behold the legislative halls of College-green thrown open to a domes tic Parliament. The Lord Mayor, in moving that an answer, couched in the warmest terms of respect and gralitude, be returned to this address, observed that whe they had been struggling for Catholic emarcipation simiar communications and support had been received from America, without giving rise to those denunciations whic had of late issued from the press against such a proceeding. They owed a deep debt of gratitude to the Americans, and they were bound to express it in language suitable to both parties. He should therefore take care that the people A. 1 . nication of a similar character was then read from Potsrile, Pennsyivama, enclosing 50\%. The Lord Mayor said he wished to correct a mistake which had appeared in the American papers, namely, that there was a delegate from that association in America. They had ne delegare in America, and never would. He wished it to be under stood that they did not assume to themselves the charac er of an independent society. They did not disconnec themselves from their allegiance to the Crown, and their connexion with Great Britain. All they wanted was the ight to legislate for themselves, and that right they should ave whe blesing of God. The Secretary then read letter, dated the lst inst., from the President of the Boston Association, stating that no acknowledgment ha een received for two golden eagles and a letter of credit for 1002., which had been directed to Mr. O'Connell on the 16 th Sept. They therefore sent another letter of credit for the same amount. The Lord Mayor suid that the packages had never reached him, and he had no doubt tha it was the eagles which had led to the robbery. They had now, however, received the 100\%., which was the thir 1001. transmitted from Boston. Various other sabscripions were then announced, after which the Lord Mayo addressed the meeting as usual at great length. The opics, however, were of the ordinary character, on the subject of repeal, interspersed with some severe animad ing that a petition be presented to Parliament, praying for more radical measure of corporate reform for Ireland
Limeriek-The elected Town Council of this aity have refused, on a division of 26 to 7 , to vote th usual address of congratulation to her Majesty's repre sentative, Earl de Grey, on assuming the government of this country.

Waterford.-Lord Ingestre and Mr. T. Wyse attended meeting in this city a few days since, to receive a deputo from Bristol, whose ebject was to solicit co-opera ion for making Bristol the Government packet-station dis city being the port of communication at this side o the chaznel : and no port in the south of Ireland," Lord Ingestre contended, was better itted proposed visiting purpose." The dep

SCOTLAND.
Edinburgh.-At a meeting of the Town Council in this ity, Baillie Johnston mored, "That it be remitted to the Lord Provost's committee to consider and devise the best neans of counteracting the demoralising practice of selbing spirits and other intoxicating drimks on the Sabbath day throughout the city." Several of the councillors said legidate on matters relating to the Sabbath ; that they did ; that
the Sabbath was much better observed now than it was twenty years ago ; and some seemed to think that the in quiry would only end where it began. Ultimately, after good deal of discussion, the motion was agreed to. Ht currently reported that the negotiations for some tim pending for the adjustment of the differences in the Chure of Scotland have been brought to a termination, and that Sir R. Peel will consent to the introduction of a bill by the Doke of Argyle. As a prelininary it is added, all the proceedings in the General Assembly against the Strathbogie ministers are to be rescinded.
Dundee.-On Thursday night, the 16th inst., the inhabitants of this town were thrown into a state of alarm by the explosion of the gasometer connected with the ges works, situate at the east end of the town, near the terminus of the Arbroath Railway. It is not known how the ignition took place, bat the consequences were very serions. The shock was felt notonly at Nemport, on the opposite sid of theTay, but at Ceres, in the vicinity of Cupar, which is 1 miles distant. The gas-works were reduced to ruins, while a bone-mill belonging to Mr . Andetson, in th vicinity, was materially damaged, as well as a neighbouring church in Wallace Pews. Several bouses were als much injured; and numerous windows were shattered to pieces. Two young men who were in the retort-house a the time were killed on the spot; and seven workmen employed there, escaped without any serious injury. Shortly after this explosion, a detached house, belonging to the spinning mill of Messrs. Wyllie and Johnson, took fire but by the exertions of the firemen and police the flame were got
premises.
Glasgors,-A ferr days since, Burnbrae Printwort, it vicinity of Milngavie, was completely destroyed bi fire Light is said to hare been whserred shont six 0'clock in the morning in the lower part of the premises; but thi caused no alarm, as it was supposed that the workers ha come early to their employment. Shortiy after, however, the fire had gained the second story, and was 80 rapid in隹 interior of the building was reduced to ruins, and nothing remained but the walls. The estublishment is not an ex tensive one, but a good deal of property has been destroyed It is not known how the fire originated, but it is supposed to houses licensed in this city and its suburbs to sell ardent spirits is considerably less this year than last. In 1840 the number of licenses granted for the royalty was 1214 for the suburbs, 1060. In 1841 the number in the royalt is 1026 ; and in the suburbs 1040 ; showing a decreas upon the whole of 208

\section*{THEATRICALS.}

ADILPHi.-The story of "Baraaby Rudge" was dra matised at this theatre on Mondey, with fidelity to the feanes illusterg leblertys. well known, it will only be necessary to indicate the order of characters, and the way in which the moat prominent features of the story were put upon the stage. Mr. Wright sustained the part of Tappertif. The versatility of Mr Yates excited much spplause; in the first instance he took the part of Miggs, the madid, and in the next that of Sir John Chester, the dandy of the olden time; the latte being the finest, though not the most bin sonation of the two. Mrs. Yates performed the part of Mrs. Rudge with spirit and snceess; and Barnaby, th idiot boy, became in the hands of Miss Chaplin an inter esting performance. John Willett was well given by for Old Varden. The part of the Stranger by Mr Lyon) was also effectively rendered. The riots of Lord George Gordon were introduced with activity of incident, but appeared to give little aid to the effect of the prece. The scenery was well got up: Westminster-bridge, the pleasare-grounds of the Warren, the Warren on fire, and Newgate in liames, were da clevery represented, ansisted materially in work ing out its action. The reception of the piece, Lowever was partly doubtful ; and when, at itf conclusion, Mr Yates announced its repetition for every night during the holidays, he was met with some opposition, a

\section*{fliscellancous.}

The Chantrey Bequest.-A bequest, made by the late Sir F. Chantrey towards the encouragement of the fine artsin this country, has been the subject of generey is left do not appear to be correctly known; and the following account, derived from the will of the great sculptor, may not therefore be uninteresting to our readers. The bequest, it seems, will not take place till after the death of Lad Chantrey, but the bulk of the fund may be made available long before that event, viz., on her marriage; and whenso ever such marriage should onci,' shes at her in death of Lady Chantrey, the yearly sum of about 2,5002 . will be at the disposal of the President and Council, no the fall body of the Academy. This sum is to be laid out, not in prizes, but in the purchase of pictures and statues, executed within the shores of Great Britain. The dead are admitted to contend with the living; and the Council while they are allowed to purchase the works of a sculptor like Roubiliac, who had his studio in London, are prohibited from purchasing the works of an English sculptor reiding at Rome, and sending his works, as Gibson does, for exhibition in this country. The admiration that Sit 7. Chantrey had at all times for both Roubiliac aud Gib
quest．Sir Francis＇8 attachment to the Royal Academy i strongly evinced by his will，not il alone，but by the para－ raph immediately following，from which it appears，tha bould the time ever come when the Academy is stripped of its word Royal，and driven from its present building， or greatly reảuced in its present numbers，the President and the Council are，notwithstanding，still to have the con trol of the Chantrey Fund，and to continue to purchase with the prodnce of it pictures and statues，so long as the Acadermicians continue to exist as a body．Should， owever，a self－overthrow occur，the power of nominating vernment then in being．It farther appears that tho \(t\) tees are prohibited from spending any part of the fús the erection of any building beyond a temporary one for
the reception of the works of art already published ；and this protibition is made in the hope，as the will expresse it，that the Government of his country will erect a building worthy of the works which his money bas procured，and is every year procuring．The President is to have a cast－ ing vote ；and no recommendati

Vegetable Self－Combustion．－An Indian correspondent of the Times siates that－\({ }^{6}\) ．It is not by any means an unusual circumstance for persons travelling by cawk during the night，in the vicinity of the northern Circars， Rhoordah，in the province of Bengal，to behold vast con－ flagrations，extending for a considerable distance，on the tops of the hills which range along the interior of the In－ dian peninsula．The above eminences are enveloped in forests of thick jungle，and are quite uninhabited，and it was some time before it could be ascertained with certainty how these instances of incendiarism could so frequently occur，which is for the most part the case during the hot months of April and May．It has since been discovered that these igneous outbreaks are occasioned by the long boos and other oos and other arundinaceous timber，which abound in the and which，when once ignited， occasions descend into the ploins beneath basts on these mischief among the berdsmen，by carrying away their cattle，and not unfrequently the former．The wood of the bamboo is cased with a silicious coating，and in the dry weather is easily ignited by triction．These brilliant co－ ruscations，in a dark night，produce a very imposing effect on the eye of the beholder，and were for a long time ettributed by the native peasantry to a supernatural agency．＂

American Railroads．－We learn from an American paper，received last week by the Roscius，that only eight and Buffalo，which with the Boaton road，will conaplete a conding from Boston to Buffalo， 600 miles，the longest in the world．

Christmas Day in India．－A correspondent of the Times，writing on this subject，says，that＂although the na－ tives of Hindostan adhere rigidly to the religious prejudices are derived from and founded upon the ancient authority of the Shastrés，yet they never fail to look upon and re－ gard Christmas day as one great Christian holiday．At this sesson of the year there is scarcely a native officer， civil or military，or a domestic，hoxever servile in his me－ nisl capacity，that does not take the earliest opportunity of presenting，after having previously clothed himself in his yery best apparel，his＂nuzzur，＂or free－gift offering，to consits er or mistress of the mins fruits，or some other token of respectful congratulation， This offering，it is always expected by the parties bringing it，will be graciously received，as a proof that the services of the donors have met with the approbation of their em－ ployers；and，unless under extraordinary circumstances， it is neverrefused．The＂malee＂（gardener）invariably，on the morning of Christmas－day，festoons the whole of the porticoes of the avenues leading to the mankions or houses with garlands of the choicest flowers，and the domestics generally，by every means in their power，strive to render great occasion，At the＂Doorgah poojah＂，which is the most important annual festival of the Hindoos，and which lasts for several days together，sumptuons banquets are provided by the more wealthy class of natives，to which Europeans are cordialy hibited，and dancing is iept a costly description are exhibited，and dancing is kept up to
allate hour．The hosts on these occasions feel highly pleased when they are honoured with the company of the European civil and military authorities，and the greatest order and harmony prevail throughout the entertain－ ments．Owing to this social interchange of feeling within the last few years，the prejudice of native caste in India， it is added，has rapidly declined

Covent－garden，purchased in France 216 baskets of greengages， which，according to the contract，were to be shipped at Havre， and forwarded oy rawway from Southampton to London，the
plaintiff paying on delivery the sum of \(12 l\) ． 10 ，including all
charges of carriage．On the ffin Aug，the fruit arrived at South－ ampton，and was immediately forwarded by the slipip－agent，aMr． Priaulx，to the railway terminus，with stirections to forward it by
the goods train，which was advertised to start at sin the evening and gave instractions in the first instance that the frait sho goodd be delivered to the plaintiff in London upon payment of 121 ， 10 s．and accuracy of those instructions，he returned to Mr．Primula＇s office
and ascertained that the sum of \(12 L .10 s\) ．was to include the rail－
way carriage．He then again proceeded to the railway ofiae and explained that his former instructions were given under a mistake，and stated in writing that Prod to the plaintif，Mr．Priaulx undertaking to pay the clerk，however，Neilison did not arivive with his amended instruc－
tions until between fire and ten minutes after eight，when the clerk had delivered the way－bill to the guard of the goods train，
and believed，as he swore，that the train had started，although he aften wards ascertained，as he admitted，that the train did not
actaualy start on that evening until 17 minutes after 8 ．The
amended instructions were not forwarded，therefore，by the train which took the fruit，but by the mail train which left Sonthamp－
ton at two，and arrived in London at half－past five．The fruit
was sent out by the company＇s carter early in the morning，with
 his agreement．The carter，thereupon，declined to deliver the
fruit，and it was taken back．About nine，one of the chief clerks at the Nine Elms station received the ameded should be taken
the other train，and he then directed that the fruit shour
to the fruit did not arrive the second time at Covent－garden until one，
when it was said it was ton late for the market，and was of so perishable a nature that it would not keep until next morning．
Witnesses were produced who swore that if the fruit had been exposed for seree at eight in the morre ing it would have fetched \(5 s\) ．
a basket all round，whilst the plaintiff was compelled to sell about 100 baskets at \(1 s\) ，and the residue at a very reduced d price．The
loss on the whole was estimated at \(32 /\) ． \(4 s\) ．，and the question was whether the railway company was liable to make good that
loss．On the part of defendants it was urged that they were not liable，as the delay in the delivery was the consequence of the company．The counsel also contended，upon technical grounds， that the action of trover did not lie，as no conversion had been proved．Baron Rolfe thought the detention of the goods upon a claim that a larger sum was payable for them than was or right
due，was a clear conversion．He also thought the railway com－ pany liable，upon the ground that they might have sent what were
called the goods．If a parcel was sent to an inn to be taken by the coach
and arrived ten minates before the coach started，it would be an insufficient excuse that the coaclman had his way－bill：and he（Baron Rolfe did not see that railroad companies were to be created differently from other carriers． cautious，however，not to award larger damages to the plaintiff than they conscientiously felt he had suffered by the detention of the baskets from eight in the morning until one in the afternoon．
The jury returned a verdict for the plaintiff，for \(3 \% / 4 s\) ．，the full amount of camage proved
daile v ．Hunter and others＂，－The verdict in the case of＂Borro Morning Papers，proves to be incorrect．The jury found for the defendants，not tor the plaintiff，and the damages were assessed con－
ditionally at \(1,177 L\) i．，in order to avoid the necessity of another trial， in case the Court should order the verdict to be entered for the
phaintiff． plaintiff
－This action was sbought by．－Craushay V．Thompson and Others Thompson and Co．，also iron－mastears，for having fraudulently imi－ tated his private mark on cer ain iron shipped for the constantinople market．The damages were aid at a
house of Mr．Crawshay had，for the last twenty years，been in the habit of expor
iron stamped oval．Both the house of the plaintiff and of the defendants had wharfs on the side of the Glamorganshire Canal，at Cardiff，and in the year
1837 a party connected with the works of Mr．Crawshay saw some 1837 a party connected with the workk of Mr．Crawshay saw some
iron lying ont he wharf of the defendants，on which were stamped the letters＂W．O＂in an oval．The similarity to the mark of Mr
Crawshay at once attracted the attention of the party，and he men－ tiowed the eircumstance to Mr．Crawshan，whe subsequently wrote to
Mr．Alderman Thompson，complaining that the sumilarity in the mr．Aderinan Thompson，complaining that the similarty in the
mark had a great tendency to injure the sale of his iron in Constanti－
nople and the markets in Asia Minor，where，in consequence of tie attention he had paid to the manufacture of his iron，it had acquired a high character，and his private mark was known and appreceiated．
The defendants alleged that they had no intention to imitate the letters＂W．C．；＂and that，in point of fact，the marks were easily
distinguishable，and that they were in the habit of sending out iron distinguishable，and that they were in the habit of sending
of as good a quality as the plaintift＇s，and that their mark， was well known，and the iron appreciated for its goodness．The particular letters was to induce a supposition that the mark was
＂W． 1 ．＂the difference between the letters being merely the line connecting the two ends of the C for the purpose of forng the \(O\) guish between the two marks，unless there was a ciose examination， and that persons not accustomed to examine iron，and particularly in a foreign market，where they were unacquainted with the English
character，could not very easily distinguish the one from the other， character，could not very easily distinguish the one firtin this oblier All，however，admitted that there was a durierence droved that the two at first the letters＂W． O ．＂were mistaken for＂W．C．，＂yet the difference was afterwards seen，and iron bearing the former mark was
very much approved of and easily sold in the market，but there were very much approved of and easily sold in the market，but there were
many merchants who preferced the latter mark，and were in the habit of giving a higher price for the iron which bore it．The Lord Chie Justice told the jury they must consider first whether there was an parties ，and such a one as would have a tendency to mislead should，however，be of opinion that there was no imitation at all，but that the marks were pertectly distinct，then，of course，the imputation
would fall to the ground，as the defendants had as much righit to use their own private mark as the plaintiff had to use his private mark． But should they think that the letters W． O ．were intended to，and did imitate the mark w．C．．then they would next inave do consider the phaintiff，The jury returned a verdict for the defendants．
Pisaniv，Lnuwan This was an action of libel brought Pisani v．Lausson．This was an action of IIbel brought by the
chief drasoman to the British embassy at Constantinople，to recover damanges from the defendant，the publisher of the Times newspaper
for the publication of a libel on his character．It appeared that tw articles，which were alleged to be libellous，appeared in the Times in
February and March 1037 ， February and March 1os7，and were in the form of communications
from a correspondent at Constantinople．The writer of them ent interests of England to employ dragomans，generally inhabitants of Pera，and always foreigners，as the means of offticial communication between the English embassy at Constantinople and the Porte． 1
the first article，the writer，atter stating the nature of the office dragoman，went on to say that the public might thus form an idea as so much responivibity，and it wowld be much better for the interest
of England that persons of English birth，and interested in the con cerns of England，should be made the immediate means of commun stated that the Perotes，the for some time among them，belonged so degraded a race that he must take care how he spoke of them
truth looked so much like slander that it might be mistaken for it and that Commodore Porter，the American Charge d＇Affaires a Constantinople，who had had an opportunity of putting them to the
test，had said they belonged to a distinet race，uniting gross immo－
 subject，and was wirten with reference to the former letter；the
writer concluding by mentioving some facts，where diplomaticic secrets

Tattersall＇s．－The announcement of the sale of Ballin－
keele to Mr．Dixon did not in the least improve his position in the betting， 23 and 25 to 1 having been laid against him，and the
lower of the two offered currently throughout the afternion． 25 to 1 was taken to about \(100 /\) ．about Robert de Gorham，and some
small bets about William de Fortibus，and three outside Oaks
fill filines，but the general betting was so that as scarcely to merit the
sm smail space devoted to it．
