domestic animals are said to be extremely prolific in Lapland. Hard living, also, retards the period at which animals conceive; for it has been found in the northern islands of Scotland that cows to bear calves before they are four or five individuals has probably much increased the number of a race. But with cats, dogs, and ferrets, we not valued for their prolificacy, selection must be played a subordinate part, and their success must be attributed to the more favourable conditions of life under which they have long existed.

— Mr. Dodd's sale at York, on the 26th, attended with considerable success. The total obtained for 27 cows and heifers was 3000 lbs., the 30 bulls brought an average of 275 lbs. The total average for the 57 animals sold being 275 lbs. No remarkably high figures were realised, but a uniform range of prices characterised the sale. Late Mr. Dawson's *Sarannah*, by THORNDALE (23,066), brought the highest bid for cows, the property of Major Stapylton, whom we have frequently seen before the public as a specimen of high bred Shorthorns, at 56 gs. *Charmers* of the origia, and descended from *Milbore* which was chased very cheaply by Mr. Wilkinson for 1000 lbs. *Ada*, another of THORNDALE LAD's heifers, secured by Major Stapylton for 41 gs. The cow of the same sire also induced Mr. Singleton to bid for *Beauty*, of the Weston Hall herd, but was bought by Mr. Betts, hence these three heifers, all by the same bull, and bred by the late Mr. C. H. Dawson, the excellent average of 177 lbs. The first lot to the company was THORNDALE LAD bred by Mr. Betts, of Preston Hall, and possessing a valuable pedigree, tracing back to the famous bridge Rose tribe, and got by Mr. Thorne's bull, THORNDALE. After some competition this sire, now 5 years old, became the property of Mr. Lamb, of Auburn, Lincoln, for 82 gs. In 1851, OXFORD, a son of Captain Gunter's EARL (15,966), a grand-son of THE DUKE OF OXFORD, great-grand-son of GIB DUKE OF OXFORD, only made 33 gs., and DUKE ROYAL, a 4-year-old, full of the best Wetherby, Towson Kirklevington blood, and also a prize-taker at Mr. Palfreyman for the low figure of 115 gs.

— Few persons who visited the Agri-Stock in the recent exhibition of fat stock, could fail to be struck by the gigantic ox shown by Mr. J. Jones, of this animal, now 5 years and 7 months old, produce of a Welsh bull and a Shorthorn cow, second cross. Although far from as large as might be, he has attained the extraordinary weight of 27 cwt. 3 qr. 19 lb., and the measuring tape the following dimensions:—Girth, immediately below the shoulder, 9 ft 1 in; length from shoulder to tip of ear, 6 ft; height from ground at shoulder, 5 ft 6 in; height of hind quarters, 5 ft 8 in; from centre of hocks (hips or pin bones), 2 ft 6 in; round bone below knee, 10 in.

SPURIOUS GUANOS.

— The attention of the Council of the Agricultural Society having been drawn to the increasing use of manures and feeding stuffs, especially guano, soda, ground bones and lime, &c., Dr. Veleky requested to submit to the monthly council in December, a report on the various samples sent him by members of the Society, so that such reports with the names of the dealers who supplied the material, should, if the Council think fit, be published in the agricultural journals.

At the monthly Council meeting held on Dec. 1st, Dr. Veleky presented a report in accordance with the resolution, and I now beg leave to forward you extracts from it, and to request that you will publish the next number of your Paper.

Analysis No. 1 represents the composition of a sample of guano which I analysed for Mr. C. C. Harlstone. This analysis was produced by Perkins & Sons, auctioneers, of Southampton, at the time of the sale. No. 2 shows the composition of material sent to me as a sample of the bulk, sold at auction by Mr. Horace Leggett, Brownwick, Hants.

Moisture	...
Organic matter and salts of ammonia	...
Phosphate of lime and magnesia (bone earth)	...
Oxide of iron and alumina (clay)	...
Sulphate of lime	...
Carbonate of lime	...
Water-soluble salts	...
Insoluble in water	...

Containing nitrogen equal to ammonia. Instead of 1 1/2 per cent. of ammonia, as in the No. 1, No. 2 barely contained 2 1/2 per cent. The latter further contained scarcely one-third the amount of phosphates which is found in genuine guano, and appeared to be principally composed of gypsum and a yellowish coloured loamy soil.

The next illustration of a spurious guano is furnished in a sample sent for analysis by Mr. Under Howden, Marston Court, Pembroke-shire, who informed me that he bought it of G. C. Dobell & Co., of Liverpool. These persons maintain that this is genuine as imported, but may be quite correct for they may have imported a spurious article; nevertheless it is not a genuine guano, but a compound resembling guano in appearance.

characters, and having but little else in common with that fertiliser.

Analysis sent by Mr. Alexander Howden, Marston Court, Pentridge, Herefordshire.

Matter, salts of ammonia, and water of	11.53
.....	0.71
.....	1.07
.....	2.05
Oxide of iron and alumina	14.54
Alkaline salts	traces
Incombustible matter (fine clay and sand)	49.29
.....	100.00
..... Nitrogen	0.73
..... Phosphoric acid	0.89
..... Phosphate of lime	28.55

These analytical results do not require any explanation.

The latest case was brought under my notice by Mr. H. Barney-Lutley, Brockhampton Court, Worcester.

Analysis of a sample of Adulterated guano marked "Feathers" sent by Mr. H. Barney-Lutley, Brockhampton Park, Sept. 21.

Matter, salts of ammonia, and water of	7.27
.....	1.07
.....	2.05
Oxide of iron and alumina	14.54
Alkaline salts	traces
Incombustible matter (fine clay and sand)	49.29
.....	100.00
..... Nitrogen	0.73
..... Phosphoric acid	0.89
..... Phosphate of lime	28.55

It will be seen that this so-called guano contained only 53 per cent of phosphate of lime in round numbers instead of 23 to 25, the percentage found in genuine Peruvian guano, and that it yielded not quite 3 per cent of ammonia, instead of 16 per cent., which is the average percentage in good guano. Adding together the worthless matters in this feathery compound, for it was nothing else but a mixture of a sample of guano with a little Peruvian guano and plenty of guano bird feathers, we have no less than 75 per cent of useless materials, and only 25 per cent of fertilizing constituents. On inquiry, I find that the "Feather Manure" was sold as Peruvian Guano at 17 a ton by a Mr. Weekes, of Bromyard, Herefordshire. Its real value cannot be put higher than 24 lbs. or 3/4 at the most. Augustus Voelcker

LAND RECLAMATION AND IMPROVEMENT.

A Paper by JOHN SCOTT, HERMON HILL FARM, RUDWICK.

IN the reclamation and improvement of the waste lands of the United Kingdom there is a work to be done of immense magnitude, involving an outlay of one of the very first importance in its bearing upon the material welfare and prosperity of the nation. It has been so customary to hear British agriculturists spoken of as an example of perfect rural economy, and the statement has been so generally accepted as true, that the real facts of the case are, by the majority, either lost sight of or totally discredited.

Of all the branches of industry which occupy the attention and absorb the capital of millions of our population, that which is the oldest, and forms the basis and staple of the whole, has been most neglected, and advanced most slowly. It has been regarded in the popular mind as the adaptation of a stereotyped practice to a pursuit which, if not exhausted, leaves little room for further development. Even in modern times, when the spirit of enterprise has permeated every section of society, when science conjoined with art has triumphed over what were not long ago considered as Nature's insuperable barriers, and the wonderfulness of human thought and effort has been to a large extent developed, the resources at command, even under such influences, the science of agriculture has to a great extent remained enveloped in the false ideas which have so long attached to it a position of inferior importance.

The means and the practice were no doubt in harmony with the previous requirements, but with the present altered conditions of a greatly increased population and the facilities afforded by the advancement of the collateral arts and sciences, it becomes imperative that agriculture should yield to their pressure in the march of progress.

Our present supply of agricultural produce is yearly becoming more incapable of satisfying the growing demand, which increasing numbers entail, and this deficiency can only be corrected by making a better use of the resources at our disposal. No one can yet affirm what the productive capabilities of the soil may be, but how wide is the assertion that within the area of the United Kingdom we have a field which, when developed and improved, will sustain in comfort and plenty a population many times exceeding its present number.

The means of deriving an increased supply are, either by the reclamation of waste lands, or by rendering more productive those already under cultivation. There is abundance of scope for effort in both directions, for it is hard to say which is most to be regretted, the pretence of cultivating so much half-improved land, or the utter neglect of so much that is capable of improvement and cultivation.

It is estimated that of the 15,500,000 acres in Great Britain and Ireland classed as occupied and improved, only 10,000,000 acres are properly drained, and only 5,000,000 acres yield a fair crop of any description. The increase to be derived from the improvement of this source alone would double of our whole trade and commerce. The total amount of uncultivated and waste land is not less than 32 millions of acres; and if we assume one-half of this portion to be

improvable for cultivation, we obtain an increase to our arable land of 16 millions of acres of virgin soil, equal to an area of 25,000 square miles, or about four-fifths of the whole extent of Scotland, while of the remaining 16 millions of acres not started for cultivation, at least 10 millions might be greatly improved in value as sheep-walks, and the climate ameliorated by judicious drainage and planting.

The slow appropriation of these waste lands to purposes of cultivation need not be wondered at when we consider the general amount of improvement required and the connection of agriculture with other divisions of science and industry. While forming the basis and support of commerce and of all the arts, it has this in common with every one of them, that it is powerless and spiritless in its action. Though there may be none which could exist so well alone, yet few are so dependent for growth and progress upon the collateral and auxiliary part of the other branches of art and science. The necessity for agricultural progress did not arise until the modern extension of the commercial and industrial arts, and it is only the recent advancement of the physical and natural sciences which has placed the means at our disposal and elucidated the true principles of the cultivation of the soil. But now that the necessity is created, the means are provided, and the principles are known, it is a great and simple matter to put the land to its most profitable and useful employment.

In all works of reclamation the conditions of soil and climate exert a powerful influence, and the correlation which subsists between them becomes a point of much interest and importance. Soils differ greatly not only in chemical constitution, but also in physical characteristics, and in our estimate of them we must be guided by their climatic and physical relations no less than by the results of chemical analysis. It is comparatively easy to adapt the plants or crops to the nature of the soil when once we know what mineral ingredients are afforded by the one and required by the other, but it demands more observation and diligent application of means to bring the physical or mechanical qualities of the soil into the state most conducive to the growth of its natural products. The necessary influence of mechanical operations here becomes obvious, for the conditions of air, moisture, and warmth which are essential to the development of the changes which occur in the process of germination, have little or nothing to do with the chemical qualities of the soil, but are all dependent upon its mechanical relations. And this influence is not confined to the first stage of vegetation, for in no period of growth or maturity can the plants avail themselves of their full amount of food unless the state of the soil admits of the free passage of air and water, and favours the extension of the roots in all directions. These requirements can only be provided by efficient drainage and judicious manuring, and judicious planting of the soil.

When there is excess of water in a soil, and no provision for withdrawing it, the interstitial canals become completely filled to the exclusion of the necessary amount of air. But when the soil is drained the superfluous water is drawn off through the air canals, and only so much moisture is retained as can be absorbed by the minuter pores which separate the small particles of earth. As there is communication through the canals between the pores and the drains, it is evident that the water will all be withdrawn from the soil except that which is held by capillary attraction. Thus the water which falls upon and is absorbed by the surface-ground, percolates towards the drainage level, flushing every crevice and canal in its descent, leaving behind it all the nutritive ingredients which it carries in suspension or in solution, and which the soil, acting as a filter, extracts and appropriates.

The moist condition of a well drained soil which occurs after a thorough wetting, is very aptly illustrated by means of the absorbent properties of the common sponge. If a piece of sponge be first immersed in water so as to bring it into a condition analogous to that of a saturated soil, and then suspended in the air without any compression, the atmosphere will fulfil the purpose of a drain and soon draw off all the water from the canals or larger pores of the substance. When the flow of water has entirely ceased even to fall in drops, we might naturally infer that, as it had been subjected to the most favourable condition for extracting the water, the sponge would be almost dry. But its powers of imbibition, and by analogy, those of the soil, are seen to perfection if we now hold it between the forefinger and thumb, and feel a screening stroke with the nail, when a large amount of water will be absorbed and held in solution.

The temperature of a soil depends very much upon its humidity. Dry land absorbs heat more quickly and loses it sooner than that which is wet; and, as the temperature of a place is chiefly dependent upon that of the superincumbent air, which again is regulated by radiation of the solar heat from the earth's surface, it follows that excess of water in a soil must render the climate colder and more backward. Consequently the summer temperature of an undrained district will be greatly lower than if it had been drained, while the winter temperature will be unnaturally high; thereby rendering the annual temperature more uniform, an effect which is not considered favourable to health and vigor in vegetation. The uniformity of annual temperature will be greater in proportion to the wetness of the soil, which, while its power of absorption will be lessened, and the loss by evaporation increased, will longer retain the heat which has acquired.

The effects of altitude upon climate are somewhat similar to those of latitude, but more marked, because the same degree of change occurs within a much smaller limit. A change of elevation of only a few feet

will alter the temperature as much as an equal number of miles of latitude. The rarity of the air, which is the chief cause of the lowering of the temperature in elevated positions, cannot be overcome but by drainage, which will render the soil better adapted to absorb and radiate the solar heat, and by providing artificial shelter where required, the climate may be considerably altered and improved.

The other causes, which regulate the condition of the climate of a place, being of a general character, and therefore more or less beyond the power of human control or alteration, do not require notice here.

The preliminary points of a more practical character, which require consideration before commencing a work of land reclamation and improvement, are chiefly those of "ways and means."

The amount of permanent outlay that may be required to complete the work will always largely determine the relative advantages to be derived from it. It is, therefore, necessary that an approximate estimate should be formed of the various expenses that may be entailed before any portion of the work is taken in hand.

The outlay will, in many cases, be much affected by the proportion of land drainage which requires to be executed, but it sometimes happens, even where the outlay may be small, that a sum far exceeding the cost of the operation has to be expended in clearing the soil, and in rendering it suitable for cultivation. Where the soil is of a heavy nature, the soil, these proceed a great distance, and even to the improvement, and with works of a similar kind, as grubbing or leveling, frequently occasion more trouble and expense in their removal than would be required to drain effectually the wotted soil. A large quantity of stone can usually, however, be utilised, since they afford lasting material for the construction of fences, and for making and keeping in a state of efficient repair the roads of the farm. But if the land has been previously subdivided and laid out in suitable divisions, it will add considerably to its present value, by obviating the necessity for any additional outlay in this respect.

Another point of great importance is the position and exterior surroundings of the land itself, and the facilities which may thereby be afforded or hindered for its improvement. In many districts where land reclamation may now be profitably carried out, labour was at one time so scarce and dear as to prevent its application, not only to inferior soils, but also to those of better quality, where much labour required to be expended before the land would admit of being cultivated. Such an objection can now scarcely be said to exist, for with the diffusion of knowledge and a general application of science to mechanical pursuits, we see a number of every kind becoming simplified and cheapened in all its parts. In cases of newly-cleared and uncultivated lands, the natural superiority in the quality of the soil, and the facility of its improvement, is a matter which reaches of even the least populous districts, and means afforded to the owner or occupier of inferior soils for the bestowal of increased care and attention upon lands formerly cultivated on a system requiring the least possible amount of labour. It is by means of labour alone that we derive every advantage afforded by the soil; and the difficulty attending its judicious application to the varied operations of agriculture becomes in a great degree surmounted when we find a horse or a steam-engine completing in the most perfect manner the equivalent toil of many hands. The rapid means of transit now enjoyed between different parts of the country tends also to regulate the price of this commodity, and renders the transmission of a few lands from one place to another a comparatively trivial affair.

The insulated position of a large extent of the reclaimable area of Great Britain, and the means of communication existing between such districts and the nearest market towns, for the disposal of farm produce and the purchase of lime and manures, is a matter for greater calculation, since these factors have a direct influence upon the result, and are themselves less within the power of individual effort. In many of our upland districts, the difficulty of obtaining the requisite supplies alone deters cultivation, and there the farmer is compelled to follow the practice of his forefathers, although often surrounded by considerable tracts of low-lying land, which, comparatively worthless in its present state, when drained, cultivated, limed, and manured, becomes a valuable acquisition by enabling him not only to maintain a greater number of live stock, but also to effect an improvement in the herbage and character of the breed. In the south of Scotland, where many spirited works of reclamation have been carried out, we could refer with pleasure to numerous instances where these satisfactory results have been attained, and where, by the conversion of a few hundred acres of poor mountain pasture, the flocks and herds of large hill-farms have become more than doubled, while the corresponding advantages resulting from the movement in other respects have necessitated a complete revolution of farm economy, and been the means of introducing into high and exposed districts a new and improved system of sheep husbandry. But even there, as in many other mountainous parts of the country, little further advancement need be looked for in this respect, until a more extended system of railway communication places the drain-pipe and lime-kiln more within the reach of every upland farmer.

It is impossible to say what distance these supplies may be profitably conveyed where the carriage has to be undertaken by the ordinary teams of the farms, or by others employed for the purpose. That will very depend upon the quantity of material to be carried, and upon the value of its application to the soil. We are aware of one case, in Wales, where extensive works of mountain reclamation are now being carried out, and for which lime and manures are carted a distance

of ten miles or upwards, from the nearest railway station. In this instance, however, the drain-pipes are manufactured upon the estate, and it is certain that the disadvantages above alluded to may be greatly lessened where the clay is suitable for the purpose, or where limestone is to be had for burning on or near to the farm, if the works are of sufficient magnitude to induce the first necessary outlay.

After inquiring how far the resources of the soil may be influenced by the foregoing considerations, some comparison should be drawn between its present worth and probable improved value. The real money value of this difference will always be found to be in proportion to the insufficiency of the lands already under cultivation to supply the ruling demand for the article of consumption which the land in question is best fitted to produce.

It thus becomes apparent that to undertake the reclamation of land which in its improved condition would only be adapted for the proper growth of Grass and root crops, and not for the production of any of the cereals, at a time when grain was at a premium and live stock at a discount, it could not, for the time being, be rendered so profitable an investment as if the demand had been contrariwise. But, notwithstanding that longer time would be required in this case before the investment yielded the expected returns, it could scarcely, on that account, be regarded as less certain. On commencing reclamation the land is taken at its unimproved value, and any outlay expended upon it and effecting what it professes, viz., "improvement," ought eventually to repay itself. Where the land has been improved, the numbers of live stock will be increased whether the prices are high or low, and this surplus should afford good interest for the money expended, until the price of provisions finds time to re-adjust itself. One point which may induce the undertaking of land-reclamation at a time when its returns may be considered as subject to such restrictions, is, that when its natural productions do increase in value, it can at once be turned to the best and fullest advantage.

A large amount of circulating capital is requisite for the proper conduct of a work of reclamation. This capital, forming as it does the motive-power of the whole concern, is exposed to the greatest risks; and much personal knowledge and experience of the different operations is necessary in order to insure its proper appliance. There is nothing simpler than to squander a large amount of capital in attempting such improvements, and that sometimes without effecting the desired result; and therefore a work of this kind should never be undertaken by any one who has not thoroughly studied the economy of the farm, and is, moreover, possessed of the necessary talent, judgment, and energy, as well as skilful administrative ability.

Next to having sufficient means at command wherewith to carry out our designs, it is essential that there be some trustworthy security for the return of the capital so invested. No prudent agriculturist will expend his own capital in the improvement of another's estate unless he has some assurance of being able to reap a profit by his outlay; and, short of absolute ownership, this contingency cannot be amply provided for otherwise than by renting the land for a certain number of years. The longer, therefore, the terms of a lease extend, the more identical do the interests of farmer and proprietor become; for the farmer soon discovers that during the currency of his lease he may bring the soil into the highest state of culture, and, after reaping a fair return for his trouble and outlay, leave the land, at its expiry, worth more to his landlord and more to himself.

CONTINENTAL AGRICULTURAL NOTES.

[FROM BRITISH CONSULS' REPORTS.]

The Cattle Trade of Denmark.—Previous to 1865, when the export from Jutland to Great Britain was set on foot, the trade in cattle was divided into four branches. All the best fat animals were sent to Hamburg, the next best to Copenhagen, and all the lean and commoner kinds were used for general home consumption. The trade to Hamburg, which was the most profitable, left the breeders but a small gain, inasmuch as the greater portion of the Jutland beasts sent to Hamburg was re-exported to England, and not only had to bear the expense of a long and wearisome transport, but also double commissions and other onerous agents charges.

The trade to Copenhagen was very uncertain and fluctuating, partly owing to the limited nature of the market, and partly from the uncertainty of the supplies from the Zealand breeders. It was likewise found that the Copenhagen consumers would not buy prime meat when inferior kinds could be had. This state of things acted very depressingly on the country cattle breeders, who often found that their fat oxen after remaining days in Copenhagen had to be transhipped to Hamburg for want of purchasers. The demand for home consumption was generally less than the supply, and only for the commoner kinds. The most important branch for Jutland was, and still is, the trade in stall-fed cattle—that is to say, in animals housed during the winter, and in the spring driven down and sold to the Sleswig and Holstein graziers, who after having fattened them on their rich pasture lands, again send them on to Hamburg or England, this trade is, however, very precarious, and, perhaps, the most uncertain of all, for changes of weather and seasons influence prices in a most arbitrary and sudden manner.

The uncertainty, therefore, of the Jutland cattle trade in general, the want of suitable markets, and of a steady demand for prime, well-fed animals, had, as may be supposed, hindered the natural development of this branch of agricultural industry, and it had long been felt that a direct trade with England would afford a

steady and remunerative market, and rapidly develop this source of national wealth. It was not, however, until 1865 that an attempt was made to open a direct steam communication with Great Britain, which was successfully effected in that year, both from Copenhagen and Aarhus, and with highly satisfactory results, not only for the breeders but for agriculture in general. The breaking out of the cattle plague in England, and the prohibitory and restrictive measures adopted by the Danish Government in consequence, was a serious blow to this new and promising trade, and the result has been that it has ceased to be remunerative, and the Jutlanders are forced to fall back on their old trading channels, to the mutual disadvantage of both countries. A statement of the extent of the exports to England in 1865, and the two subsequent years, will best show the effect of the restrictive measure above referred to. There were exported to England from Denmark:—

From April	Horned Cattle.	Sheep.	Pigs.
1865 to 1866	10,794	7,325	2071
1866 to 1867	8,937	8,723	237
1867 to 1868	6,138	2,920	37

The amount exported in 1865, it is stated, must not be taken as a normal standard, since it was only in that year the first attempt at direct trade was made. On the contrary, it is believed that the removal of the precautionary restrictions in England would have the effect of giving it a very considerable development. Denmark is eminently an agricultural country, and her farmers are in general a well-to-do set, possessing good and extensive flocks and herds, although the quality of these latter is scarcely comparable to English fed animals. A considerable improvement in this respect has of late taken place, and the Danes are endeavouring to enter into competition with the better description of English cattle, and already the Holstein beasts are a favourite breed with the London butchers. The total export of cattle, sheep, and pigs from Denmark to foreign countries has been during the last three years 141,149 head, 129,830 head, and 118,272 head respectively. About three-fourths were from Jutland, which province, under the influence of the encouragement which a steady and remunerative demand such as the English market affords, would rapidly increase its productive powers, and export, no doubt, much larger quantities.

Mr. Consul Crowe concludes this interesting portion of his report as follows:—I am informed that the home supplies are likely to be short throughout this year (1869), owing to the graziers being compelled to retain a larger number of stock to make up for the deficiency caused by the forced sales of 1868; the importance, therefore, of an increased foreign importation will be seen, as meat will probably continue scarce throughout the year. It is to be regretted, therefore, in view of the high price of animal food in England, and the importance of cheap provisions for our working classes, that the present restrictions which check the importation of Danish domestic animals into Great Britain cannot be removed. There has been no epidemic of any kind among domestic animals in Denmark proper since 1781; neither in Sleswig nor Holstein since 1813; and the Danish Government, which, by virtue of a law passed in 1857, possesses almost despotic powers for the prevention of the propagation of contagious diseases, contemplates issuing very stringent precautionary measures to guard against the possible importation of infection from the Swedish and Baltic ports. It is to be hoped, therefore, in the interest alike of the Danish exporter and the English consumer, that a freer importation of Danish cattle may soon be permitted.

Hamburg.—The cattle market of Hamburg has become of great importance, owing to the convenience of shipment to foreign countries. The exact number of cattle and sheep exported to British and other foreign ports cannot be ascertained; but the number and value of those brought to the market of Hamburg during the last year, from Holstein, Mecklenburg, Hanover, and the interior of Germany, principally by railway, were as follows:—

Oxen and cows	59,461	Pigs	232,432
Calves	32,005	Sheep and lambs	163,091

Throughout the whole of the year the cattle in this part of the country were in a healthy state; and although there were cases of sheep pox upon some farms in Mecklenburg and Hanover, there is no reason to suppose that any diseased sheep have been shipped from the port of Hamburg.

Memel Horse Breeding.—For more than a century this province of Prussia has been celebrated, more than any other part of Germany, for its horse-breeding, and at the present moment about three-fifths of the entire number of horses required annually for the use of the Prussian army, are bred in this province. Frederick William I., in founding the breeding establishment at Frakehnen (near Gumbinnen), in the year 1780, gave the first impulse to horse-breeding in Prussia; and under the reign of Frederick II. a plan was carried into execution which consisted in placing a number of the stallions bred at Frakehnen at certain stations in this province for the use of the landowners and other private persons in possession of mares. By enabling these persons to send their mares to the next stallion station without the expense attending a long journey, by charging a very low fee for the covering, and by guaranteeing comparatively pure blood, the number and the breed of horses throughout the country was raised in a short time. In the course of a few years this plan was found to have worked so successfully that the King founded three more establishments similar to that at Frakehnen in other parts of Prussia. Thus, after a few years it was found possible to mount the Prussian cavalry, which hitherto had been obliged to purchase their horses in foreign countries, on Prussian-bred horses, and a new source of gain was at the same time opened to the inhabitants of the country. The Royal establishment at Frakehnen covers an area

of 16,000 Prussian morgen (or about 16,000 English acres), and includes the chief farm and 13 smaller ones besides a large tract of land which is laid out as grazing ground, and partly for growing the kinds of grain wanted for food. At the chief farm are kept only mares of the purest blood without admixture of colour, and at the various out-farms others are arranged according to blood or colour, and are one, two, or three-year-old stallions. All of them are turned out to graze during summer (the pasture being, of course, partitioned off by fences), and are under the care of keepers, and if found necessary, are muzzled. When the stallions are three and four-year-old they are placed at one especial out-farm, where they are trained provisionally for a term of three or four years in order to be fit (on the completion of the fourth year) to be sent to the various establishments in this province of Prussia. After having passed a certain time of probation at these establishments stallions are distributed for further use to large country breeding depots, which exist in various parts of the Prussian monarchy. Those which, for some reason or other, are considered to be sent to the last-mentioned depots, together with a certain number of mares, are placed at the Royal Master of the Horse, who selects such horses as may be required for the Prussia's stud. The Master of the Horse likewise those which for some reason or other are considered by the director of the establishments to be unadapted for breeding purposes in the autumn of every year sold by the Frakehnen. The Royal Commissioners who purchase the requisite number of horses for the Prussian army either buy what they want from the landed proprietors, or make their purchases at the horse fairs. The average price paid by the Commissioners for a horse in the province is about 200 Prussian dollars (30*l*.)

WOOLSTON STEAM-PLUGHING.

I OBSERVE that Mr. Smith's men have done some jobs, and so he is at leisure to resume his correspondence. He does not, however, depart from his favourite mode of battle, he throws out a few undigested figures as the Parthians did, and thereby hopes to create. If his figures were true they might have some value, but they are mere estimates. What a pretty little estimate he gives us—balances 716*l*. against 716*l*. Dear me, what an account! Does he really suppose that men of his sense, men able to appreciate sound business accounts, put any value on such a ridiculous estimate? What have we to do with horses? He will go on bringing up these horses, although they have nothing to do with the question, and so now I will get up about the horses. He has a small farm of 112 acres of arable ground, of which he never ploughs so much as 100 acres in any one year. This is partly "heavy land" (four fields are so) and partly "light land" (six fields are so), and before he begins steam-ploughing he used six horses on that land. I can say is—"Mr. Smith you were in the habit (whatever you may be now) a desperately bad farmer. Mr. Mechi calls himself an apron string farmer, and does not even call himself so much, for I took it late in life, and I have a deal to learn; but let myself with the published opinions of the authorities, farming such a farm ought to have been done with "four" horses instead of "six," which Mr. Smith required. I have a farm in the Weald of Sussex, stiff clay as you will find, there are nearly 100 acres of arable, and it is worked with five horses. The authorities reckon 50 acres of plough to each horse if the farm be "heavy" land, or 80 acres if the farm be "light" land. Mr. Smith, during the 14 years, has used three horses on his 112 acres mixed (light and heavy) land, and a steam ploughing apparatus beside. Now, hear it, ye small farmers of England, who Mr. Smith wants to bamboozle by buying steam "smashers." Mr. Smith's own paragraph, too, about horses is really delicious. "I never hear of interest being charged on horses, tackle and implements." Indeed, Mr. Smith, then, is the meaning of the extract which you give us from Mr. Morton's paper, wherein he says "those farms employ 282 horses, and they cost for depreciation of value, and saddlers' and harness bills, 7815*l*. a-year." At the end of each year a good farmer values his live and dead stock, and depreciation is thereby brought into the account. The best book-keepers amongst them charge 5 per cent interest on the whole capital embarked in the business, reckon a single penny as "farming profit," which again strike their profits first and then deduct 5 per cent. from it. The first practice is the best. Very few men work wholly on their own capital, but work with borrowed capital, and interest on that must be paid whether the farm leaves a profit or loss. The question is the use, however, of going into those questions? let us keep to the point. Mr. Smith says that 1*s*. 6*d*. for each acre actually ploughed is sufficient to cover interest, and wear and tear, and depreciation upon a set of steam cultivating tackle on a farm of 112 acres arable, and of which more than 100 acres are ploughed each year. He asserts to be a pure fallacy, which even a child could see he were one riding a hobby-horse! (concluding through). Mr. Smith admits that a set of his apparatus (including half the price of the engine) cost him 1000*l*. while 1*s*. 6*d*. per acre in 100 acres would only amount to 7*l*. 10*s*. per annum, or exactly 2 per cent. per annum to cover interest and wear and tear and depreciation. And now about Mr. Smith trying to persuade

farmers to buy steam cultivators. He denies that he had done so, and brings up a sentence printed in 1838 (eleven years ago) in support of his denial, and yet in the very same breath he reasserts the advisability of small farmers having an apparatus exclusively for their own use—he says, "My own practice shows that it would pay to have a set on a very small farm of heavy land, and 'G. A. H.' must see that it pays well on this farm of mine, interest, wear and tear, depreciation and all being considered."

Is Mr. Smith in his senses when he makes such an assertion? The apparatus is admitted to be worth 375*l.*, and the whole yearly sum put aside to cover interest, and wear and tear, and depreciation, is less than 7*l.* 10*s.*, or less than 2 per cent per annum. Mr. Smith had better quietly give up the contest. He invented the word "smashing," and I am afraid he has got "smashed" himself. He is going to drop the word "interest," for he "will not be pulled up by it again," and so he will in future call his 1*s.* 6*d.* per acre "extras." There is an old proverb, "A rose by any other name would smell as sweet;" so Mr. Smith need not expect to alter the fact by altering the word. Let him do the honest thing by telling his brother farmers, "If a man has a farm large enough to require 800 acres to be ploughed each year, then 1*s.* 6*d.* per acre is enough to cover interest, and wear and tear, and depreciation upon a steam-ploughing apparatus, but if his farm is smaller, that charge will increase in inverse ratio to the size of the farm—that is to say, 400 acres of actual plough would require 3*s.* per acre, 200 acres of actual plough would require 6*s.* per acre, and 100 acres of actual plough would require 12*s.* per acre to cover interest, and wear and tear, and depreciation." Let him also add that "he is sorry for having misled them by saying that he had made a seed-bed for Wheat at a cost of 6*s.* 8*d.* per acre, for the real cost of it was 17*s.* 2*d.*, inasmuch as the 1*s.* 6*d.* for 'extras' ought to have been 12*s.*" Let him do this, and "G. A. H." will trouble him no more. Nevertheless, I cannot part with him without one parting shot, for he is what schoolboys call "so coxy." He is always telling me that I shall learn something from him before he is done with me. I have no doubt, sir, that Mr. Smith could teach me a good deal about farming, for he was brought up to it, while I took to it late in life. Farming, however, is not Mr. Smith's hobby, of which he has two,—one is to criticise Mr. Mechi's accounts, and the other is to vaunt his inventions in the matter of steam-ploughing. It may be a rude speech to make; but what will he say when I tell him he is neither a good accountant nor a good mechanic? When an old hen lays an egg she cackles in a most fearful way about it, as if no hen had ever laid an egg before, or ever would lay such an egg again. Mr. Smith set to work at steam-ploughing some years ago, and he has ever since been crackling in such a loud tone that he has not been able to hear what others have been doing, and he fancies himself still cook of the roost.

If Mr. Smith would undertake to teach me farming, possibly I might feel obliged, and sit at his feet, as Saul did at the feet of Gamaliel; but I should not like to pay "a five-guinea fee," unless he would undertake to show me how to work 112 acres of arable mixed light and heavy land with less than six horses. As to accounts and mechanics I really would not like to pay a fee for them, for if I may gauge his knowledge of them by his writings in your columns, I am inclined to think I knew more about both those subjects a quarter of a century ago than he knows about them now after his 14 years' experience of steamploughing, or "smashing," as he so facetiously calls it. *G. A. H.*

Home Correspondence.

Steam Cultivation by the Roundabout Tackle.—I must have a few words with Mr. Toepffer, who tells us that I contend that my tackle, the roundabout tackle, works cheaper than any other. I do; but then he tells you that my evidence has been analysed and found incorrect; yet he does not tell us where, or whom by. I know what he is driving at; it is at "G. A. H.'s" half-fought battle. Let him see it out before he talks of "incorrectness." The plain facts are these. I can make seed-beds for Wheat at 6*s.* 8*d.* an acre. Can he do so with his 14 or 20-horse power two-engine tackle. The evidence in his letter is clear that he cannot; for after telling us that he has ploughed some Scotch Fir tree land up at 3*l.* 10*s.* an acre, he says:—"On the other hand, I have performed work at 6*s.* an acre." What work? He tells you, and these are his words.—"In a large field with straight boundaries, where we get over 35 acres and more per diem, with a 14-horse power tackle." I take that to mean two 14-horse-power engines. My engine can do, on an average, 8 acres a day smashing; that is all first work. If we fix his engines to do double that quantity of work, all smashing or first work, that is quite all they can do. Then his 35 acres a day is mere scratching—2*s.* an acre work when done by horses, but then his cost is vastly over 6*s.* per acre, for we must add the coal and water found by the farmers, and when that is done his is only a scratch towards a seed-bed. The evidence brought forth by Mr. Toepffer proves that my application is the cheaper, and his telling us that a set or two of Smith's tackle has been sold at a loss does not weigh much, for the same remark would apply to many a set of direct-action tackle, to say nothing about the clip-drum, and it may be that there is a man to be found that has got a set of roundabout tackle, yet has some work done by contract. What of that? It is not every farmer who knows how to apply tackle, and what is worse, in some cases will not be guided. Mr. Toepffer may repeat his blind advice to the farmer, and crack up his "giant" as much as he likes, yet for all

that my "baby" can thrash it at seed-bed making. There are my seed-beds for Wheat at 6*s.* 8*d.* per acre to be seen by any man. Let him tell us on what farm you can find this done by the double-engine tackle. Let him do that, or give over talking. It is all very well for Mr. Toepffer to tell us that there are a lot of farmers in the locality of Seafood who will scatter a lot of money for him and other contracting men to seramble for. His lowest figure, 6*s.* an acre for scratching over 35 acres a day, gives him 10*l.* 10*s.* a day. Such figures ought to make him fat, but when coal and water are added to it, it will not make the farmers fat, neither will it give to England the big loaf. Hence the landlords in that locality arranged their lands and buildings so that the farmers can cart their corn at harvest with the fewest number of horses, and have the farmers sold off half their horses to make way for these contracting men? for if that is not done, they are scattering their money by the aid of horse and steam-power, and you must know that that will never give the big loaf, and I am quite certain that they will never find out my grand secret—how to farm the deepest, cleanest, and at the least cost. Mr. Toepffer's evidence is dead against him upon these points, for, as to depth, he says nothing; 120 acres in a week must mean scratching. As to cleanliness, he says that "many of the fields were full of weeds," and as to cost I have shown above that 6*s.* an acre, with coal and water to be added, is the cost of a mere scratching, that is what Mr. Toepffer calls "testing" the thing upon their own farms, he does not pretend that any of them have thoroughly set-to to farm regularly by steam-power upon the contract plan. *Wm. Smith, Woolston, Dec. 7*

The reply of Mr. Smith, of Woolston, to "G. A. H.," as also his letter to the *Times* a few days back, are worthy of careful perusal, and whatever charge may be laid at Mr. Smith's door of hastiness of temper or curtness of reply, is in a degree compensated for by the fulness of his communications. And when we would measure the relative value of the two modes of steam cultivation—direct or roundabout tackle—by the evidence of witnesses on both sides, the witnesses representing the former are conspicuous by their absence, at least, in replying to communications in your Journal. "Steam-ploughs. What shall we say to the reader—that there is not a steam-plough in the great Hall? No, not one" are the words in your report of the Smithfield Club Cattle Show. Also, "Mr. Smith, of Woolston, does not require a steam-plough." You then quote his remark: "The day is not distant when steam-ploughs will not be shown at our general meetings," adding, "but we never imagined that that time would be Christmas, 1869." Their absence would imply that the cultivators, even in the makers' opinion, were mere deserving of the costly space. There are one or two points on which Mr. Smith would perhaps be good enough to give an answer, or express an opinion. The first more immediately in reference to steam as a motive power on a farm, that is, the use of a traction engine for the purposes of harvesting corn, drawing out manure, and any other draught purpose to which horse-power has hitherto been applied. Secondly, has the increased fertility of his land been altogether owing to the better and deeper cultivation of the soil? or, as Baron Liebig puts it, in his "Modern Agriculture," p. 108 "As the smallest portions of food cannot of themselves leave the spot, in which they are held firmly fixed by the soil, we can understand what immense influence must be exerted on its fertility by its careful mechanical division and thorough intermixture." Or, has he stimulated it by manures; beyond that used under horse cultivation; in other words, is the average of live stock on his farm the same now, per acre, as before the introduction of steam or improved cultivation? Is hay or straw sold in any quantity? Certainly, with such payments as in Mr. Bates' case, of 4*s.* 6*d.* per acre, and a Berkshire farmer of 27*s.* 2*d.* per acre (twice over), no doubt the contract system is the best for owners of double tackle, and although steam or deeper cultivation may make the natural stores in soil and subsoil more available, still the profit will be all on one side *West Indian*.

Land-fast Stones and Steam Cultivation.—I should be much obliged if any of your numerous correspondents would give me their advice as to whether steam cultivating would answer on my farm. I hold 180 acres of arable land (mixed soil), but throughout the whole of it there are occasional land-fast stones varying in size from a few pounds up to half a ton. What would be the effect of a steam-cultivator coming in contact with one of them? Of course afterwards they could easily be removed, but it would be impossible to know beforehand where they are. Coals are cheap, and most of the fields have running water in the dykes. *H. H., Leicestershire.*

The Depth of Drains.—In my last article on draining, part of one sentence is so printed as to convey an opposite meaning from what I intended. Instead of "I have actually witnessed water standing in pools above drains which were discharging much more water than they ought to have done," read "much more feebly than they ought to have done;" my complaint being that the drains did not discharge sufficient water. It so happens that being in the field to-day to which I alluded as having been wet previous to re-draining at a depth of 3 feet, and which is now perfectly dry, I observed water standing in an adjoining field of similar character which is drained 1 foot deep, thus affording evidence that the water was unable to make its way through such tenacious soil with sufficient celerity. A correspondent of *Bell's Messenger* finds fault with Mr. Smith for using 4-inch pipes, in one of the instances which I quoted last week, and maintains that 2-inch pipes would probably have been sufficient. As the drains were placed so far apart as 60 yards, Mr. Smith had

probably a sufficient reason for what he did, and I remember seeing some hilly land in Derbyshire, on the limestone, which was effectually dried by a few deep drains at wide intervals. The evil to be remedied in this case was not principally caused by surface water, but by springs, which flow so abundantly that 2-inch pipes would certainly not have proved an adequate outlet. *H. H., Leicestershire.*

Dairy Farming.—When "G. A. H." on dairy farming does not breeding and feeding Dec. 4, takes as an example 40 cows, 40 from 2 to 3 years, 40 from 1 to 2 years, and 40 from 6 to 12 months, and assumes the last 40 to be equal to 20 cows, the others being considered equal to cows in consuming, he commits a palpable error. I beg to state a few facts which I hope may do something to correct "G. A. H." and others interested in the matter to which he has called attention. I have apportioned 24 acres to four cows—viz. 4*l.* pasture, 5 mowing—and I turn them in May 15, which in a goodish season supplies them till August. A change by this time being required, and aftergrass not being ready in the mown 5 acres they have to be supplied elsewhere till it is ready (there has been none these last two years), they then go in on aftergrass, and so on to spring pasture again. September finds them requiring a few mouthfuls of hay, mornings, and by 15th of following May these four cows, by keeping them in good profit condition, will have eaten every bent of hay grown on the 5 acres, so that this shows four cows consuming the produce of the 9*l.* acres completely. Now "G. A. H." allows 12*l.* each cow upon 140, and shows between the processes 580*l.* balance in favour of dairying over breeding and feeding. I will assume, though I don't suppose, my four cows to produce 15*l.* each all round all told, viz. 60*l.* gross receipt, on 9*l.* acres, 2*l.* 10*s.* per acre. Expenses, milking, foddering, and general attention, 5*s.* weekly=13*l.*, preparing compost, composting, beating, churning, rolling, stone-picking, &c., mowing and raking, carrying, ricking, thatching, bought straw=13*l.*—deterioration in cows annually=4*l.*, saying nothing of weather risks, dry summers, and home labour and wear of utensils; then thus it stands, 60*l.*—30=30, or 7*l.* 10*s.* each. Against it I put 8 heifers at 12*l.* the 1st of May, if Grass enough, and towards the end of October sell them on an average of 20*l.* each, labour *nil*, risks about equal, twice the profit for the same outlay, and land at liberty to May following. *C. F. Brinklow, Coventry.*

Lambs and their Disorders.—There has been here what appeared to be a very healthy fat flock of lambs up to the 25th of November, and then purging made its appearance. Five have died in four days. I was induced to examine their stomachs, and found in them all the secret of the disease, viz. tape-worms. I would persuade all flock-masters and lamb-rearers, who let their lambs run loose, to inspect for themselves. The worms can be seen by applying to *J. S. Hind, Penan Farm, Teano*.

Royal Agricultural Society's Prize Farms.—Every member of the Royal Agricultural Society must join heartily in the congratulations offered to the Council at the annual meeting, on the practical steps they are now taking, both in the Journal and the proposed prizes, to bring the best models and instances of farming before the public. And I hope that the tenant-farmers round Oxford, to whom the proposed prizes are restricted, will second the efforts of the Society, and enter for the sweepstakes. In the meantime, the Council and the judges, whom they may appoint, will have to weigh several delicate and difficult questions which they must needs encounter if they are to arrive at any satisfactory conclusion. What is to be considered "the best managed farm?" The one that looks best when the judges go over it—the one that produces the greatest amount of saleable food in corn and meat—or is it the one that pays the highest interest to the occupier? I take it all three points will be ingredients in their decision, and certainly if there are many competitors some will rest their claim on one or more of these points. Again the area round Oxford contains such varieties of soil and cultivation as to render any comparison almost impossible. There is the Thames valley, with its early spring and dry soil on the south, with the cold and backward Cotswolds on the north. There are the sheep breeding farms on the Ilsley Downs and Chiltern Hills to compare with the oilite pastures and the dairies of the Aylesbury Vale. There is some of the richest corn-producing land between Didcot and Wantage, where 6 or 7 quarters of Wheat are not uncommon, to be contrasted with poor uplands where 3 quarters is a difficult average to attain. The same with roots. One farmer with artificial aid may grow as much food on 1 acre as another can get off 10, with a considerable amount of superphosphate. The result will probably show the necessity, if these prizes are continued, of distinguishing hill from vale farms, clays from chalks, and arable from pasture. I do not write this to discourage any one from entering the lists in February next, and trying his luck. On the contrary, I hope all who have any pretensions of being in any respect better farmers than their neighbours will join in the combat. It cannot be otherwise than useful to all to have their proceedings compared and criticised, and to have the benefit of the judges' report and opinion upon their system. My only regret is that the *concourse*, as our French friends call it, is confined to tenants. I should have opened it to all comers. My opinion is that the landlords and their bailiffs, who would have entered in large numbers, if permitted, would have shown some excellent farming, some well cropped and well cultivated fields, which would command admiration, but if the three points I first mentioned are carefully required into they would fail in showing the necessary amount of profit on the capital employed. I should have been glad myself to have entered my farm without any hope of a prize, for the sake of the benefit which I

can foresee would arise from the criticism and report of my neighbours, from an inspection of the system I have often advocated in these columns and in the Society's Journal, of my heavy dressings, followed by heavy crops. The great object of the Council is to demonstrate by example what may be done in each locality; and I trust there will be no backwardness or jealousy on the part of the tenant-farmers to mar the success of the experiment. J. B. M.

Broad Clover.—When, last summer, Mr. John Ford, Mr. Henry Fookes, Mr. W. James, and other noble specimens of English yeomen came here to dine and eat Strawberries, I showed Mr. John Ford the article on Clover sent by me to the *Agricultural Gazette*. He read it, and said it was all right; and then he told me as follows:—"My experience of Wheat after broad Clovers this year is this. I fed off with sheep one-half of a field when the Clovers were full grown, skim-coultured it and ploughed it for Wheat, which was sown on a stale fallow. The other half of the field was seeded, and dunged, and ploughed up. The first gave me the best Wheat crop. When both pieces were ploughed I could see no difference in the Clover roots, but when I sowed the field the roots of the first moiety of the field had disappeared." Mr. Ford also said "cattle like broad Clovers better than Cow-grass." Now for the testimony of Stephen Rogers, my servant, clept by "D. Deal," "Steevie," who lived many years as carter with Mr. Ford and his father. His version is that "maiden Clover seed is the finest and best, but that Clover seeded after hay produces most seed; that the former is generally better harvested than the latter, and that whether maiden seed or otherwise, if it is well taken and kept in the rick unheated, and thatched up by the sides, according to his experience the seed will be good at least for three or four years." Stephen is a very accurate man, as I have reason to know. He was my clerk at Rushton, and still performs the same office. I once gave out the wrong second lesson in church, when Stephen popped up his head and said *sotto voce*, but loud enough for everybody to hear "You be wrong; it ain't 'G'latians,' its 'Fegians' to-day!" The congregation did not exactly laugh, but the muscles of their faces assumed "tetanic complications," and I looked as red as a harvest moon! W. F. Radclyffe.

Thin Seeding.—At a time when Mr. Mechi is so strongly advocating the policy of thin sowing, I think the enclosed experiment of a hundred years ago may be interesting to him, which I met with the other day in the "Gentleman's Magazine" of October, 1769:—"The following experiment was made by Mr. Wheatley, of Morden, in Cambridgeshire. He last year caused an acre of land to be planted with Wheat, leaving the distance of a foot between each grain, which took up just half a peck and a pint of seed, and this year produced 39 bushels of corn." Societies.

STAFFORDSHIRE.

On Tenant-Right.—At a late meeting of the Staffordshire Chamber of Agriculture, Mr. CARRINGTON SMITH opened a discussion by proposing—"That the recognition by the Legislature of the principle of tenant-right would promote the interests of landlord, tenant, and labourer, and also increase the prosperity of the nation at large." He argued that there was room for improvement in the condition of the three classes he had named, and the remedy he believed to be in tenant-right. By tenant-right he meant a balance of accounts between landlord and tenant at the expiration of a tenancy, whether that balance was due to the landlord for depreciation of his property by the tenant, or whether the balance was due to the tenant for unexhausted improvements made entirely at his expense. He repudiated all intention of advocating odious schemes of fixity of tenure, which would be a return on one side only to the feudal system; nor did he advocate a system of leases, which had been tried and found wanting. He proposed to apply the principle of tenant-right in the following manner:—At the expiration of every tenancy it should be compulsory, in the absence of an amicable arrangement between the landlord and tenant, for each party to appoint a duly qualified valuer, whose award (or that of an umpire, to be appointed by them in case of their being unable to agree) should be final. It would be their duty to say what was due to the landlord or to the tenant; there should be no appeal from their decision, and their award should be recoverable as a common debt by distress.

Mr. J. S. NORRIS seconded the resolution. The CHAIRMAN (Lord Harrowby) thought the resolution was rather too vaguely framed, for he could not see how the Legislature could interfere. He was not opposed to the principle of tenant-right, and he had adopted the principle of arbitration with respect to his farms; but he would point out that English farmers occupied a very different position from farmers in Ireland. The English farmer generally found everything made to his hand, or if not he made a stipulation with his future landlord as to the terms on which improvements should be made, whether by landlord or tenant; but in Ireland there was no definite understanding at all between landlord and tenant, and the latter did what he pleased with the land, without consulting either the landlord or his agent. He frequently laid out a great deal of money, and then found that the law afforded him no protection. A state of things so wholly devoid of common sense was unintelligible to an English farmer. Tenant-farmers in England were quite competent to take care of themselves, and he feared that if the meeting affirmed the simple principle of tenant-right without qualifications they might lead to inferences very different from those they intended.

Mr. W. J. CARRINGTON said, if the tenant-farmers of Staffordshire were only properly protected the

grazing land of the county might very soon be increased in value 20% or 30% per acre.

Lord LICHFIELD censured the landowners of the county for their want of interest in this subject, and maintained that it was one of the first duties of a landlord to encourage his tenants to the utmost of his power to lay out their capital on the improvement of the land. He held very firmly that property ought to be protected, and he believed he was promoting that end by giving the utmost protection possible to the rights of tenants in the soil. He would like to know whether Mr. Smith meant that a tenant was to receive compensation for improvements made without the consent of the landlord.

Mr. SMITH replied that a tenant ought to receive compensation for drainage done without the consent of the landlord.

Lord LICHFIELD was prepared to support the interference of the Legislature, within certain limits, for the protection of tenants; but he could not vote for the resolution unless the phrase "tenant-right" were properly defined. With regard to the land question in Ireland, he desired to say most emphatically that if in the Irish Land Bill any principle were adopted which would be unjust to either tenant or landlord, nothing could save that principle from being eventually adopted in England. He utterly failed to see why any principle which might fairly be applied to Ireland should not be applied to England. Public opinion on the subject was ripening so rapidly that if it had been possible to avoid legislative interference things would soon have righted themselves under the pressure of that public opinion. There could be no doubt, however, that legislative interference was necessary in Ireland; that some attempt must be made to unravel the hopeless confusion there seen; but any legislation for Ireland would be far more just and efficient if they applied the same legislation to England than if they did not. He had devoted a good deal of attention to the subject of agreements between landlords and tenants, and he found that there was great difficulty in deciding on what principle to allow compensation for commercial and for permanent improvements. Varying decisions by arbitrators were highly undesirable, and therefore he would recommend that a county should be divided into districts, that the landlords of a district on one side, and the tenants on the other, should appoint a valuer, who should serve for 12 months, and before whom, in the presence of an umpire, disputes should be brought. If the valuer and the umpire were unable to agree, the dispute should be taken before some competent tribunal, whose decision should be final. As to approaching legislation on the question of the land, he would point out one or two particulars in which Ireland differed from England. In Ireland they would have to deal with existing improvements. No land bill for Ireland would be of the slightest avail which did not give compensation to tenants for improvements already effected. At the present time all those improvements were the property of the landlord, and it was melancholy and absurd to hear these who took the extreme landlord view talk about the way in which the tenant was protected. The difficulties in the way would be very great; but he thought they might be met in the following manner.—After a certain date, to be named in the Act, landlords and tenants must start afresh and upon a fair footing. The principle upon which compensation was to be given in the future must be clearly stated; but if the question of existing improvements were allowed to stand over, the subject would be as full of difficulties 30 years hence as it was now. He thought the only way of settling the compensation to be paid for existing improvements would be some such court of arbitration as he had described. Every tenant who had a disputed claim on his landlord for unexhausted improvements must register his claim by a certain day, and supposing the award were given for 20% or 30% the landlord would meet the claim either by paying the money down and starting afresh, or by giving the tenant a certain number of years' occupation in the nature of compensation, or the sum awarded should be registered against the landlord, to be paid at any future time upon the eviction of the tenant. This scheme would have the effect of bringing landlords and tenants together in Ireland, and so remove the crying evil of separation and consequent want of sympathy between the two classes. He desired to point out that in Ireland, in consequence of the absence of trade and manufactures, a person who was turned out of his holding had often no choice between the workhouse and starvation; and this brought him to the question whether compensation ought to be allowed for eviction. If he were at once to say that it ought, he would be put down as an advocate of fixity of tenure, and all that sort of thing; but he could not conceal from himself that it would be useless to pass any land bill for Ireland which did not provide against capricious ejections, made merely for the purpose of improving property. If a landlord desired to throw 10 farms of 30 acres each into one farm of 300 acres, and if he found thereon 10 or 20 tenements which had been built without his leave, he would declare that, so far from being improvements, they were injurious, and a great difficulty would arise; but it must be remembered that those houses would have been built under a system which the landlords had themselves allowed to grow up. At the present time good landlords made handsome compensation to tenants evicted under such circumstances; but there was this difficulty—if compensation were given by law for eviction, the right of the tenant to property in the soil would be recognised. Compensation under this head would have to be given, but in such a way that the rights of property must not be interfered with. After entreating the Chamber to give these subjects the fullest consideration, Lord Lichfield moved the adjournment of the discussion.

Farmers' Clubs.

LAVENHAM.

Clay Land cultivated Flat.—At the last meeting of this Club, Mr. R. EDGAR read a paper on the stages of cultivation on the flat over cultivation on stetches not less than 12 yards in width. He said:—"I mean by the flat, land where I advise a greater width where the land is of width at the ends of the field. I ought also to say that my remarks only apply to land that is well drained for then every drop of water that falls has a surface influence; instead of letting it run off by surface drains, we ought to hinder it as far as possible, and make it percolate through the soil, underdrains, to be carried off by them. The amount of soil is washed off by surface drains on hilly land, which would be avoided by ploughing the flat across the hill, and the fertilising power the rain would be left in the soil. The advantage we derive from this system is, that if the land is better ploughed, every practical man knows, making a fallow the land is ploughed on the stetch, because it can only be ploughed in that way; then why do we plough on the stetch when half the furrows are of different depths, and one-sixth useless labour is required? The result in farming heavy land is to keep the work in and how is this to be done better than by the labour that is now wasted, such as doing land every three years, throwing back the doing out water furrows, &c., to a better purpose was perhaps the best system, laying land on backed stetches, and having plenty of water before underdraining was thought of, but an exploding everywhere, and cannot long remain a district. Another advantage in favour of flat is that more land is planted by one-sixteenth, we get a more level crop, and better sample, the furrows of small stetches are planted, there is sufficient soil to bring those rows up to the other result is underlying weak straws, and small thin kernels; with more trouble to the farmer make his work look well than if it all stood up and even. The drilling is done equally well on flat, and on large farms where drills to fit the stetches have been used with six horses, a two-yard drills working the same number of will do 3 acres a day more; and land on the flat always drill a day or two sooner than the other, the furrows are the last places to dry. In all the operations an advantage is gained, such as more rolling; the roller presses more evenly than on round stetches. Then there is horse-hoeing, implement works best with the shafts in the stetch where they can be when land is level, but on small stetches, where they must be placed in a quarter-cart fashion, giving an unpleasant work both horse and man.

In fielding land with sleep I think we can do too few furrows, for in addition to losing the being cast, the manure from them is not so distributed over the surface, but is nearly all in the furrows (which in the succeeding crop is the middle of the stetch), causing the corn to be lodged, when the sides of the stetches are so strong enough. I do not know of an operation cannot be done better on the flat than on a stetch; we all know it is best for the reaping, at least those of us who have tried the flat between being jerked over furrows every 3 paces whole attention required to keep your seat, and easily along over a nice flat field. In carting also, the loads are not so likely to dip down, and stoppage sometimes of half-an-hour, which is a fine day, besides very often pitching a load and hurting him. I do not say this is avoided by farming on the flat, but I know it is likely to occur.

From what I heard the owner of the stetch lately at Lavenham say, it was better for him where there were no furrows, as it kept a depth, and there was not so much strain on the I notice that many of our best and largest heavy land never have a small stetch, and there was anything to be gained by them they have. I can see clearly the flat system is the best and if all the modern implements and machinery best on the flat, the sooner we got into that system better. I believe the land may be kept clean if furrows are great harbours of Grass and they get ploughed but once in twice ploughed other part of the stetch.

The last advantage I shall notice in this saving of a ploughing in the spring time is often done to get land level, as a risk, if the unfavourable, of losing the winter mould, which means losing three or four coombs per acre. Now, if the land had been worked on the flat it would be level enough; and I must think in the spring for a crop on heavy land is the worst pieces of farming we can do. In conclusion would say, if I have made any random statements can easily be rectified by discussion: but I have endeavoured to keep as near the truth as my experience in flat farming has gone, which, on my heaviest fields, has been 10 years. I see it at present to alter my opinion; should I do so come at once and read you a paper on the stages of farming on the flat.

DISCUSSION.

Mr. WRIGHT said the occasional advantages in the stetch were out-balanced by the advantages of a system. Once in about seven years they get a rain, and then the soil on the flat was likely to be away.

The CHAIRMAN said if they agreed with Mr. Wright

not practice accordingly, for in this neighbourhood the greater part of the land was on the small stetch

Mr. Vincent said if they wanted to see ploughing on the flat down they must go into Kent. He believed by ploughing on the flat they sometimes made deeper furrows than they did on the small stetch. He thought they would find most of the better farms had not adopted the wide stetch. He was not at all surprised if they got their work done cheaper than he could believe they got an increased crop.

Mr. Vincent said he had got most of his land in the 1840s sown with all his Wheat was drilled atwart. He liked the atwart system very much indeed, and was what Mr. Vincent said of it that it getting deeper furrows than the system of sowing if they drilled atwart they would prevent that.

Mr. Vincent said during the last few years they had had a great deal of rain, and that the atwart system, if the soil was wet, would be better than the wide stetch. He was not at all surprised if they got their work done cheaper than he could believe they got an increased crop.

Mr. Vincent said if they were all farmed enough to get their work done directly after harvest they would be able to do it better than they could not; and when they got a wet season, they had a difficulty in getting the Wheat in. In Barley sowing there would be a good deal of stamping under the new system, and Barley was a crop of which they ought not to lose account, much more an acre. Mr. Edgar might be fortunate enough to have his land well drained, but his (Mr. Vincent) was a different description of land. He thought that if this was the case, it would be a great deal better than the atwart system.

Dr. White said there could only be a matter of degree of light and air get to the crop on what ever system the land was cultivated, and as far as respects these matters he did not think one system had any advantage over the other.

The Rev. Mr. Croker said it might seem presumptuous of him, being entirely ignorant of such matters, to offer an opinion on this subject. It appeared that the use of the small stetch was for draining the land, but now that they had got deep drainage, they might do away with them, and adopt the principle advocated by Mr. Edgar. This deep drainage, as Mr. Mechi said of them, caused a better percolation of the water, and it seemed to him that as they drained their land the more, so much they widen their stetches, and do away with surface drainage.

Mr. Vincent said Mr. Mechi at first put his land upon the large stetch system, but he had now got it on the small stetch. There was a peculiarity in the Essex land which did not exist in the Suffolk way. In some parts of Essex they would find that drainage was no use whatever, for the land was so water, and it would not percolate to the drains, and they used the small stetches to carry off the surface water. When there was heavy rain, the soil did not let the water get away, and it was a great deal of trouble.

Mr. Vincent said he had very little to say, for Mr. Edgar had said every great deal in his short paper. He was one of Mr. Vincent's best friends, but at the same time, the opinions of the two gentlemen were in one direction, and their practice was the other, for they would find three-fourths of the land in that district on the small stetch. Just perhaps many of them, like him, had hardly had time to carry out the alteration completely. He quite agreed with Mr. Croker that they should be used to meet the want of drainage, but now they could drain with tiles and stetches, and they could do it with more success, but it had turned out a great success. Mr. Vincent's opinion in that neighbourhood was authorized the opinion of their grandfathers, and did not investigate them. There was a vast deal of land between Maldon and the sea that did not produce what it would do if it were under-drained. In fact there was some of the best land in England, yet all that sandy was not cultivated on the large stetch. If the furrows were of great good in wet weather, at the same time they would be a great deal of trouble to the farmer, and they were very true, one would find it was a great deal of trouble to the farmer. He did not see that it was necessary to have the water on the large stetch, but the small stetch was a great deal of trouble to Mr. Vincent, but he could not see the reason. He stated that his crop was not much when he used the large stetch system, but when the small stetch system was in use. But taking into consideration the cutting and carting, Mr. Vincent admitted that the work could be done cheaper, therefore, if the crop was not less, it must be the best. But the question was, did they grow equally as much on the one as the other, and he thought they did. It was a most material point that they should have uniform samples. They must not neglect their Barley crops, therefore they must study what would suit that best.

Mr. Vincent said the land the Chairman referred to was a very peculiar heavy land in Dengie Hundred, as just that part it was a soil that percolated more freely than in any other part of the hundred. There was a farm in Southminster where it was 14 feet deep, and he had seen the water stand about as it was in the ground.

Mr. Vincent said that this Club is of opinion that heavy land should be farmed on the flat or large stetch in this district.

The resolution was seconded by Mr. Vincent, and carried unanimously.

Reviews.

Twenty-fifth Report of the Botley and South Hants Farmers' Club, Southampton Hampshire Agriculturalist, 1880.

Thanks to very efficient and public-spirited guidance the Botley Farmers' Club has now for many years issued an annual testimony to its usefulness, in the form of a pamphlet, containing reports of its monthly meetings. The present number contains papers on pedigree in cereals—on local taxation—on the rearrangement of farm buildings—and again on the possibilities of relieving agriculturists from the burden of local taxation. Besides these topics of general interest, there are reports of the local root show and the local cattle show. The whole is a capital example of the way in which local agricultural interests can be directly promoted by a few public-spirited men. It also shows how widely an interest in general agricultural interests can be indirectly promoted, and the preface contains the following account of the way in which the Southampton meeting of the Bath and Southern Counties Agricultural Society depended to some extent on the Botley Farmers Club:—

"In recording the debates and occurrences with which our Club has been occupied during the past session, we cannot forbear to mention the very successful meeting of the Bath and West of England and

Southern Counties Association in June last, because during many months preceding the show, throughout which the preliminary measures were being carried on, by far the greater part of the practical duties of the local committee were undertaken and successfully carried out by the members of this Club, who, besides taking with others their full share in obtaining subscriptions, formed the deputation to Bath, where they carried on a most successful negotiation with the general of the Society, and having secured more satisfactory terms than were first proposed, gave their personal guarantee for the amount of contribution and other conditions long before the sum was subscribed. They also secured and arranged the site for the showyard and also the lands required for the trial of implements, on fair and moderate terms, prepared the schedule of local prizes which contributed so much to the success of the meeting, and provided the horses and the materials for machinery in motion. These duties, which (without disparaging the meritorious exertions of the mayor for 1880, and of others) their agricultural knowledge and experience of former shows enabled them to render, involved no small amount of time and trouble; and attended as they were by great self-abnegation at the time, it is but fair to record them in this place, and the more so as the services of the local committee have remained unacknowledged from the neighbourhood, nor recognition from other sources."

Farm Memoranda.

WEST SUSSEX Dec 13 We are now near the end of the year, and so far as farming operations are concerned nearly at a standstill. Light land farmers are still sowing a little Wheat in some places, but the most common work is roadmaking and threshing, and the inducement to thresh is not great so far as Wheat is concerned. The price is low, and the yield in some cases far from good, less than was expected, and the quality of some of it very inferior, and I think this has been so mostly where it was sown thickly, so that those who are called thin seeders have the best of it this year, as much of the thickly sown crops were blighted as harvest commences.

Barley has turned out pretty well, and though there are not many very superior samples yet there is a large proportion of fair quality for malting, and the price has been about 10s. per qr. Oats yield fairly and sell well, and Peas are in demand at 10s.

We have had our fat cattle show at Chichester, but it was rather a small affair, and I think upon the whole we are rather losing ground; and this is rather to be wondered at, as we have such a good market, but the foot-and-mouth disease has been rather prevalent about us, and may have kept some back from being shown. We had only some half a dozen, and six or eight pens of sheep, and two pens of pigs, while our market for beef was very small, and beef is getting rather scarce, as many fat fewer now than they used to do; and the reason is clear enough, less stock has been very dear, and feeding stuff has been dear, and some of it not at all what it ought to be, and we have come to believe that there is no such thing as pure linseed-cake in the market, and as it is not linseed-cake it may be anything, and is not likely to do much good. I do not think that fattening will be so general for some time as it has been, and there is not much chance that Australian meat will take much in our markets; people now will rather go without meat than have it of a very inferior quality, and only beef of fair quality will be in demand, and prices are sure to keep up.

We have had some very sharp frosts and sudden thaws, and upon the whole damp and uncomfortable for cattle, but have not been obliged to be hard upon the root crops, as there has been a good deal of autumn Grass, and it, with a little of the roughest hay, keeps lean stock in fair order. The Wheat plant has come up slowly, but looks regular upon the ground, and as the soil below must be still up to the average heat, the roots are no doubt striking downward, and establishing themselves well, and will be all the better in the spring. The young Clovers are good, and appear to be well rooted, and we may expect them to hold on.

SUGAR-BEET GROWING AT LAVENHAM.—Mr. James Duncan, the large sugar factor of Mincing Lane, London, with a boldness and a faith that deserve and will command success, has erected a Beet-sugar factory at Lavenham. He says so in a report, between sent me to the Editor, in which he says with every exertion he has made to get the farmers that the new matter is a great deal better than the old one, and that they should try the crop. If it paid them well, or better than any other, of course they would continue to grow it and feed his factory, but if not—well, he did not expect them to grow it at a loss, and no farmer is under any obligation to grow it at all. There is no co-partnership in the matter. Should the venture prove a failure, no farmer will be a penny the poorer. If a fortune is made out of the sugar, no grower will directly participate in the profits. Indirectly, however, the industry promises substantial benefits to the farmer. He is left free either to grow Sugar Beet or not, as his interests prompt him, but his price, both as a seller of the root and a buyer of the pulp, is guaranteed. For every ton of roots delivered at the factory he receives one sovereign; and he carries back to his farm dry pulp or Beet bread at the rate of 12s. per ton.

In these two statements we have the prices of Sugar-Beet growing concentrated, as it were, into a single figure. The feeding value of common Mangel has been assessed at about 7s. per ton. It is worth about as much for conversion into beef. Of course, in the vicinity of towns, it has a pretentious value, for the use of milch cows, &c. But the above is a fair estimate of its

average worth. Sugar-Beet, weight for weight, is worth possibly for conversion into beef 10s. per ton. The excess of sugar makes it more valuable for feeding purposes. But, assuming its superiority, here is 10s. clear profit to the farmer, minus, however, the expense of cartage, by sending it to the sugar maker.

But this by no means exhausts the farmer's advantages derived from sugar growing. It is more when a farmer converts his Mangel or his Sugar Beet into beef there is an end of it. The farmer's profit per ton exhausts its value. But it is far otherwise with the roots sent to the sugar factory. Wood of Lavenham the other day, when his beet was at its maximum and his beet was at its maximum, Beet 1000 lbs. of nearly all the parts were sent to the factory. The Beet on, in the grass at 1 was carrying most of its flesh-forming matter back in detail. It requires eight tons of Beet to form one of soap and has put in the vegetable essence of the Beet used, in the water and, perhaps, four-fifths of its sugar. The experience of last season proved beyond all controversy that the pulp is most nourishing and grateful food. Stock of all kinds, including horses, eat it greedily, and do remarkably well upon it. Bullocks were found to fatten as rapidly on a peck of pulp mixed with chaff or cut straw as they were wont to do on a bushel of roots.

By sugar growing we thus get a double profit of say 10s. on the raw roots, and a further profit on a cheap material, as food which will keep sound and good for six or eight months, is growing converted by stock, and rapidly converted by them into beef or mutton, milk, butter, or cheese.

The expense of growing Sugar Beet need not exceed that of Mangel. The culture and treatment may be identical in their main features, only the Sugar-Beet may be grown closer together—18 inches by 9 inches is a good distance, and the root should be earthed up to the leaves.

On good soils and in favourable seasons 20 tons an acre may readily be grown. At Lavenham this year the best crop, on September 20, reached 21½ tons per acre, and 9½ tons of tops, or a gross yield of 31 tons. The average would be about 16 tons. But wireworms had been very destructive among the young plants, and an unusual quantity of the crop had bolted or run to seed. These runaways and the blanks played sad havoc with the gross returns. Had there been a full plant the average would certainly have reached 20 tons to the acre. By growing 200 roots to the pole, and cultivating them up to about 6 lb. per root, 10 tons per acre might be reaped. The latter weight seems quite within the range of possibility, as the exhibition of roots in connection with the Lavenham Farmers' Club last week the Sugar Beet shown averaged 5 lb. each root. The sugar factory is now in full work night and day with three ranges of tanks in the 24 hours, and about 100 tons of roots into sugar and pulp during that period. Already it has ordered thousands of new and perforce better machines. It is reported that about the produce of 400 acres will find its way to the factory this season. Operations are vigorously commenced for next year's sugars. Two steam cultivators have been tearing through the bottom of the furrow, and making deep tilth from field to field. Workmen are becoming more scarce. "They are all off to the factory," is the cry. Wages are looking up, money is flowing in, and the quiet old place, from genteel mansion to tottering garret, seems to feel the quickening pulse of the sugar factory and to be starting forwards on the road to agricultural improvement and social progress. Without any of the risks of manufacture the farmers seem about to reap many of its advantages, one of the chief possibly being an increase of their bankers' balances at the dead season. D. T. Fish, in the "Times."

The Poultry Yard.

THE BIRMINGHAM POULTRY SHOW (continued).

THE ancients said that when Greek met Greek then came the tug of war. The modern estimate of the Hellenes would be very different, but the saying remains a proverb. The tug of war at Birmingham laid heavily in the game classes, and the most potent warrior in the black-red classes was Mr Charles Chaloner, taking no less than two silver cups and four money prizes in the four classes. Following him were Messrs. Fether, Price, Matthews, Borden, &c. Every one will be prepared to learn that Mr James Wood, of Wigan, won both the 1st prize for brown-red cocks, and a grand money will be equally surprised to learn that he did not win so far hens and pullets. He was closely run in the class and class by Mr Stetter, who shows how to win and generally wins where he shows. Brown-red hens are very handsome, and the richness and softness, we might almost say depth of their body colour, makes them very attractive. Messrs. Burgess, Brierley, and Homsfay beat Mr Wood in this class. Brown-red pullets seldom show to advantage; the darkness of their face and comb militate much against their appearance. The class at Bingley much against their appearance. The class at Bingley much against their appearance. The class at Bingley much against their appearance. The class at Bingley much against their appearance.

Mr Samuel Matthews, always and everywhere a successful exhibitor, was 1st for ducking cocks. Mr Chaloner for cockerels, the Rev. F. Watson for hens, and Mr Parke for pullets. The classes for this very beautiful variety of game fowls were well filled, and we need hardly say formed one of the great attractions of the show. The black and brass-winged, with the white and pils, are the camp followers of the grand army. The golden-faced bantams were very handsome, better than have been exhibited for some years. Mr Harrison, of Hall, took 1st, and Mr Cruwys 2d. In silvers, which were not so clear as might be wished,

New and Unadulterated Seeds. PRIZE MEDALS 1861 and 1862.

BUTLER, McCULLOCH, AND CO.'S SPRING CATALOGUE of above is in the Press, and will be ready the week of January. It contains every novelty desirable in ornamental Flower and Vegetable. South Row, Covent Garden Market, W.C. Established upwards of a Century.

New Catalogue of Dutch Bulbs, Plants, &c

ROBERT PARKER begs to announce that his NEW CATALOGUE, containing Select Descriptions and Priced Lists of Amaryllidaceae, Cycadaceae, Gadiaceae, Hyacinthaceae, Liliaceae, Narcissaceae, and other bulbs, Miscellaneous Plants, Fruit Trees, Sweet Vets, &c, is now published, and will be forwarded on application to Exotic Nursery, Tooting, Surrey, S.W.

Dutch and other Bulbs.

W.M. CUTBUSH AND SON are celebrated for HYACINTHS, TULIPS, CROCUSES, and other DUTCH BULBS. All the great Prizes, including the Two Special Prizes awarded by the Dutch Growers, awarded to their Connections again last Spring. They import only one quality, therefore Customers may rely upon having the finest Bulbs. CATALOGUES post free. Highgate Nurseries, London, N.

Chrysanthemums.

DAM FORSYTH, in answer to numerous applications, begs to offer 50 Pairs CUTTINGS, best varieties, from his great collection of Chrysanthemums, for £1, 25 Pairs ditto, from 25 Pairs POMPONS, 10s. 6d.; 12 Pairs best JAPANESE CHRYSANTHEMUMS, 6s. Any of the above forwarded post free on receipt of Post Office order or stamps for the amount. Brunswick Nursery, Stoke Newington, N.

New Geraniums.

JOHN KEYNES begs to announce that he has secured the stock of those two first-rate flowers which have excited so much admiration at the Royal Horticultural Society. First Class Certificates have been awarded them. They comprise COLESHILL (scarlet), bright scarlet Zonal, the finest of its class, and LADY EDITH, a bright purple pink Ivy-leaf. These are the two most valuable ones of the season. They will be sent out in April next, at 10s. 6d. each. Drawings may be had on receipt of 16 postage stamps. Castle Street Nursery, Salisbury.

JAMES CARTER AND CO. have a beautiful Stock of Seeds, in excellent condition, of their choicest Strains of CALCEOLARIA, CINCERARIA, and PRIMULA, in 60-pots, fit for sowing immediately for early Spring Blooming. Worthy the attention of those who have omitted to sow at proper time. Price, per 100, 3s. per dozen. JAMES CARTER AND CO., 237 and 239, High Holborn, W.C.; and Crystal Palace Nurseries, Forest Hill, S.E.

The Gardeners' Chronicle. SATURDAY, DECEMBER 25, 1869.

WHEN in 1841 the Gardeners' Chronicle was established, and when in 1844 the Agricultural Gazette was added to it, the object of the promoters was to secure to the Gardening and Agricultural world, as well as to country proprietors and residents, a Journal which, while supplying all the special wants of the classes for whom it was intended, should also give them, in a condensed form, a summary of the general events of the week. This was in the days before Penny Papers were in existence, at a time when the gardener, farmer, or bailiff, in country districts, could hardly procure without much expenditure and inconvenience, intelligence as to what was going on in the world. How much circumstances have altered this state of things every reader can judge for himself. The Proprietors, ever anxious to cater for the advantage of their subscribers, have, therefore, determined, in conformity with the expressed wishes of a very large number of their friends, to discontinue the newspaper matter at the commencement of the ensuing year. By so doing the Editors of the several departments will be enabled to devote more space to questions of Gardening and Agricultural interest and at the same time to introduce certain modifications which it is believed will meet with the general approval of their readers. Among the proposed changes, it may be mentioned that, by the adoption of an entirely new and more legible type, the appearance of the Paper will be materially improved; illustrations will be more freely supplied than has hitherto been the case; and many matters of general interest to country gentlemen, gardeners, farmers, and others interested in Horticulture or Agriculture, which have hitherto been excluded for want of space, will be introduced. The Editors believe that they may confidently refer to the past in support of their assurance that every effort will be made by them not only to maintain the high character of the Paper, but to increase its general interest and utility.

THE controversy which has been going on in our columns for some time past as to the question whether ROOT FORMATION and root

action precede LEAF DEVELOPMENT and leaf action, or vice versa, reminds us forcibly of that famous contest 'twixt eyes and nose of which COWPER sings. It seems to us that all the disputants, as was the case in that *cause celebre*, have more or less right on their side, and that if all could but be brought to see the facts of the case in the same light, there would be little room for further difference of opinion. As it is, we have fact added to fact, argument piled on argument, the facts being supposed to be antagonistic the one to the other, and the arguments in like manner to be reciprocally destructive. Now, so far as we can understand, mid the din of the contest, the facts adduced are not necessarily antagonistic, marshal them in another manner, and the apparent discrepancies disappear. For instance, these questions have been asked—Do Vines make roots without the action of leaves and branches? And, again—Do Vines make leaves and branches without the aid of roots, or of roots?—in other words, does top-action precede that in the roots, or vice versa? Each disputant has answered these questions for himself, and in some cases, at any rate, expressed his doubts as to the accuracy of his opponents' facts, without sufficiently considering the different conditions under which they were observed. For our own parts, we should be disposed to answer all the above-cited questions in the affirmative. As this statement involves a seeming paradox, we must enter into some explanations.

In the first place we would deprecate the idea of speaking dogmatically or *ex cathedra*. The present state of vegetable physiology is not yet sufficiently advanced to enable even the best-informed student or observer to assert his infallibility. An (Ecumenical Council of vegetable physiologists, we fear, would have no better claim to absolute accuracy. As within the limits of this article it would be impossible to refer at length to the facts on which our opinions are based, this caution seems the more necessary. We may, however, refer the reader to the facts as they stand recorded in our columns, and to those which may be found in any text-book. When we replied to the above questions affirmatively we should have added—provided that there be an available store of nutrient organisable matter at hand, out of which the new growths, whether of leaf, shoots, or roots, may be made. Now in a living Vine stem there is always such a store. This store is well furnished or nearly empty, according to season, temperature, state of growth and other conditions. Given a stem, a bud, a tuber, nay, even in some cases a leaf only, in which are stored up sufficient organisable materials, and given the requisite conditions, and forthwith new leaves, new shoots, new roots, one or all simultaneously, or one before, or one after the other, may be produced. In some cases under certain conditions roots will be formed; in other instances leaf action will predominate; in a third set of cases buds and tubers will be developed. We had illustrations of the latter kind this season, when many people complained that their Potatoes made no haulm, but produced small tubers in abundance. Similar occurrences happen now and then in the case of terrestrial Orchids, where years may elapse without the production of leaf and flowers, but where year after year new tubers are formed beneath ground ready when conditions alter to start into leaf and amaze the observer by their abundance where previously there had been none seen for many years.

The real difficulty is to know what are the precise conditions which determine root growth at one time, leaf growth at another. Sometimes these are obvious, but generally they are not so. For instance, when we have a Vine with its roots in an outside border, and its well ripened wood (well garnered store-house) inside, leaf growth and leaf action decidedly predominate over root action. In such a case probably root action to any great extent does not take place till the demands made on the store-house become so pressing that it is necessary to make provision for replenishing it. Many experiments have been made with Vines by passing the stems repeatedly into and out of a house, the roots being outside. In all these cases the parts of the stem inside the house push leaves, while those portions outside remain quiescent. If the growth of leaves and shoots in this case were dependent

absolutely on the outside roots, would there not be some attempt at least to form leaves on the portions of the stem outside the house as well as on those within? Of course there comes a time when the store is exhausted, or when it demands the influx of more water to make it soluble and available for growth, and then the roots are called into play to furnish what is required. Our knowledge is, unhappily, very defective upon this important point—the particular conditions which favour root growth or leaf growth respectively. Where a store exists, as we have said, we may have new leaves, new roots, or new buds formed without, in the first instance, any special demand being made on the existing roots. What we want to know more about is, as to the reasons why sometimes roots are produced, at other times leaves, at other times buds. We have some evidence on those points, but it is not enough. For instance, there is a well-ascertained relation between the degree of moisture and the formation of root-tubers—an almost equally well marked correspondence between the formation of tubers and the existence of drought. These are matters of cardinal importance to the gardener and farmer, and every fact bearing on them is important, and should be recorded. We cannot pursue the subject further in this article, but we may find occasion to revert to it in future. In the meantime, to avoid possible misapprehensions, we must not forget to state that, in order to establish and furnish such a store-house as we have above alluded to, the co-operation of root and leaf is, of course, absolutely essential, the formation of the root no less than its functional activity taking precedence of the leaf, as indeed may be seen in any germinating seed. Until the store-house is made, and filled with available material, all new growths, of whatever nature they may be, are dependent on the material absorbed by the roots, transmitted through the stem, and elaborated and rendered fit for their purpose they have to serve by passing through the leaves. In this case, then, divided action is useless, combined action, as in the nose and eyes question, all important.

THE BOTANICAL GARDENS AT GLASNEVIN are known to the majority of the visitors to Dublin; they are beautifully situated on the banks of the little river Tolka, and contain a large collection of rare plants. Some years ago the committee of botany of the Royal Dublin Society, acting on the advice of the director of the gardens, purchased a large iron shed, in which were displayed portions of a collection of plants and their products useful to man. This structure was from the first quite unfit for preserving the valuable collection placed in it; the specimens were necessarily crowded together, and any arrangement was impossible. Still, the large numbers that visited this room to study the contents of the cases, and oftentimes to take notes of the history of the specimens, as told on their labels, testified to the great and intelligent interest that was taken in the collection by the public. The special function of the Science and Art Department appears to be to provide for the improvement of the people in science and art, and they placed on the estimates for the four years between 1865 and 1869 a sum of 1000*l.* for building a museum at the Botanical Gardens, close to the front entrance gate, through which so many thousand visitors pass in the course of each year. This sum, small though it may appear, would have been sufficient to have built and cased a large plain building, which would have contained all the present collection, and the additions to it, for many years; but though the money was voted by Parliament for several years, it was never applied to this purpose and we think it but justice to the cause of science in Ireland, to call the attention of the Science and Art Department to this fact, and to urge them to have this sum inserted in the estimates for the coming year.

At a meeting of the Ashmolean Society, Oxford, Nov. 20, Prof. LAWSON read a short paper on CHLOROPHYLL. In speaking of the optical properties of chlorophyll, he called particular attention to the observations made on this branch of the subject by Professor STOKES; observations which had disproved the old theory that chlorophyll could be separated into two primary substances of a yellow and blue colour (the xanthophyll and cyanophyll of M. FRÉMY.) He dwelt also upon the fact that Mr. H. L. SMITH's careful comparison of the spectrum of the endochrome of diatoms with that of chlorophyll went far to prove the two substances to be identical. Chlorophyll had been formerly supposed to be a product of the vegetable kingdom only; but more recently a green colouring matter, closely allied to chlorophyll if not identical with it, had been detected in many of the lower forms of animal life. These discoveries illustrated in a striking manner how the supposed gaps between the two kingdoms were filled up.

At the meeting of the Royal Horticultural Society on Tuesday last, it was announced that W. E. HUBBARD, Esq., of Leonard's Lee, Horsham, offered a prize for the best Essay on the MANAGEMENT of COTTAGE GARDENS, to be printed on cards for display.

at a cheap rate to the members of Cottage Gardening Societies. The amount of the prize offered, the date upon which it is to be awarded, and the names of the judges, will be announced at a future time. Mr. BATEMAN suggested the desirability of having a similar kind of treatise on the management of Window Gardens in Towns. How much interest is felt in this subject is manifested by the large demand that still exists for that useful little book, "Paxton's Cottager's Calendar of Garden Operations."

In reference to the VEITCH MEMORIAL, it has been suggested that, as the late Mr. VEITCH was one of the most active promoters and supporters of horticultural exhibitions, both at home and abroad, the committees of the various Horticultural Societies throughout the country should be invited to further the movement now in progress for perpetuating his memory.

A new form of Entomological Society, called INSECT-DESTROYING SOCIETY, is being started in New Jersey, with a view to the more successful cultivation of Apples, Pears, Peaches, &c. The object (says *Scientific Opinion*) is to adopt a plan which will tend to clear orchards of injurious insects of every kind.

New Plants.

GODWINIA, Seem. (gen. nov. Aroidearum).

Spatha inferne convoluta, erecta, apicem versus fornicata, aperta, persistens. Spadix perigonanthus, stipitatus, spathe limbo multo superatus, cylindricus, liber, erectus, densi ac pluridulus. Florum perigonio 6 sepala, sepalis apicem versus dilatatis, fornicatis, vertice convexulis, in praefloratione irregulariter imbricatis; stamina 12, biseriata, exteriora sepalis alterna, interiora sepalis opposita, filamentis parum compressis, piceo repentino in connectivum tenue acuminatum angustata, pistillo multo brevioribus, antheris loculis suboppositis, linearis ellipticis, apice nulli praeditis, connectivum autem superantibus, rimuli apicali lateraliter dehiscentibus, extrorsum versis, pistillum elongatum, ovario ovoidico 3-loculari, in stylum longum subrepentum attenuatum, stigmatibus 3-partitis, e centro styli apicis partitionibus spathe lineari linearibus angustis pretense extensum, septis ovarii non ex toto perfectis, loculamentis 1-ovulatis, ovulis e placenta infra medium loculamenti ex axi exsertis, funiculis brevi suffultis, induratis. Fructus ignotus. — Foliis solitariis, hysteranthiis, petiolo longioribus elato aculeato maculato, vertice 3-lobato v. 3-lobis, cruribus in lamina trilocari, obtusis, partibus principalibus punctatis v. confluente punctatis, costa iterato-dichotoma. Spatha et spadix saturate violascentes, prior magis in brunneo rubrum, posterior magis in caeruleum. Species unica.

G. agas, Seem. Journ. of Bot., 1869, p. 273; Id. p. 113, tt. 97, 98. — Mountains of Chentales, Republic of Nicaragua, between the Javali Mine and the Quebrada de los Lajas (Seemann).

This is the largest Aroid of which we have any knowledge. [Dr. Welwitsch tells us of one still larger which he met with in Angola, and to which we may hereafter refer. Eps.] It was discovered in January, 1869, near to Javali Mine, in the Chontales Mountains of Nicaragua (see *Gardeners' Chronicle*, p. 220), where it grows in broken ground, near rivulets, amongst brushwood. I have never seen it in any other part of Tropical America, but I am led to believe that this, or a plant very much like it, is found in the mountains of neighbouring Central American republics.

The root-stock with its whorl of roots, turned topsyturvy, much resembles an old man's head, bald at the top; in the two specimens dug up it was 2 feet 2 inches in circumference, and weighed from 90 to 92 ounces. There are no roots whatever on the lower part of the corm, which is perfectly smooth and white; all are placed in a whorl around the top, and between them many young corms, by which the species propagates itself, are nestling. The plant has only one leaf at a time, and after that has died off the flower spathe makes its appearance, both being of gigantic dimensions. The petiole of the largest specimens measured in Nicaragua is 10 feet long, and 10 inches in circumference, covered with minute spiny projections, and with a metallic, beautifully mottled surface (brunstone-yellow, barred and striped with purple), giving it the appearance of a snake standing erect. The blade of the leaf (which is green on both sides), is 3 feet 8 inches long, so that the whole leaf is 13 feet 8 inches long (English measurement). The blade is divided into three primary sections, which are again repeatedly subdivided, the extreme divisions being ovate-acuminate. The peduncle is 3 feet long and 4 inches in circumference, mottled, and with minute spiny projections at the petiole, and furnished towards the base with several large bracts. The flower spathe is the greatest curiosity, measuring, as it does, 1 foot 11 inches in length, and 1 foot 8 inches in width. It is of a thick, leathery texture, outside of a dark bluish-brown, and inside of a dark brownish-red, with the exception of the base and those parts surrounding the spadix, which are whitish-yellow. The spadix is only 9 inches long and 9 lines across, and bears hermaphrodite flowers, the technical description of which is given above.

The plant grows with great rapidity—several inches during a single night—and the flowers emit the odour peculiar to many Aroideae and other dark-coloured flowers. The plant has nothing to do with *Amorphophallus* and kindreds with which it agrees in habit; it, however, is closely allied to *Dracontium*, both in habit and technical characters, but chiefly differs from that genus in having twice as many stamens as perigonal segments. It therefore constitutes a new genus, which I have great pleasure in dedicating to Mr. George Godwin, F.R.S., F.R.H.S., &c., a gentleman who has rendered much willing and substantial aid to literature, science, and art, and who, by his active support of window-gardening in the metropolis, has spread amongst even the humbler classes that taste and love for plants without which, after all, the race of botanists would soon become extinct.

Additional details will be found in the "Journal of Botany," vol. vii., p. 278, where also one of the specimens is described, which Mr. W. Bull, of King's Road, Chelsea (to whom the plant was consigned), exhibited at a meeting of the Royal Horticultural Society at Kensington. This specimen (leaf only) attained within a few inches the dimensions I noted in Nicaragua, and had it not begun to sprout during its passage to England, and suffered at the tip from pushing against the lid of the box in which it was planted, there can be no doubt that even this year it would have quite equalled them. Mr. W. W. Saunders having pointed out the interest attaching to the plant, the Royal Horticultural Society recorded its appreciation of it by awarding to this novelty an honorary distinction. B. Seemann, in "Journal of Botany."

FRENCH PLUMS.

THE culture of the French Plum is chiefly confined to the department of Lot-et-Garonne, and to some few portions of the adjacent departments. In 1811 the port of Bordeaux alone exported 2,709,500 francs worth of French Plums. Twenty years later (in 1861) the director of the customs at Bordeaux stated that the quantity exported had increased to about 7,200,000 francs worth. If to this quantity (forwarded by sea) be added that sent by rail, there cannot be a total of less value than 15 millions of francs. This largely increased quantity has not caused any reduction in the price. In 1806 the medium price was estimated at about 40 francs the 100 kilogrammes. In 1824 their value increased, although the quantity produced had doubled. In 1864 the value of French Plums was still greater, and it continues to increase, the medium price for the last year's being 70 francs per 100 kilogrammes.

There is no fruit tree more profitable to the cultivator, especially to those living far away from manufacturing cities, for while many kinds of fruit cannot be disposed of, on account of the distance they have to be sent, the cost of transit, &c., French Plums are always saleable. The Plums begin to ripen about the first fortnight in August, and are ready for gathering about the middle of September. Many hundred women are occupied during three or four months of the year in selecting Plums, and a great number of coopers are employed in the manufacture of the casks and barrels which are to contain the fruit, in order to ensure its safe carriage.

The trees grow very well in calcareous loam, especially when planted on an incline. They are placed in the vineyards in ranks, at a distance of from 15 to 20 metres one from the other, leaving a space of from 6 to 10 metres between each tree, and when the soil suits them it is not difficult to find shoots of from 1.5 to 2 metres in length the second year. Cultivators who pride themselves on the size of their fruit pay much attention to the trees, and every year, or at least every two years, fresh earth of good quality, or the scrapings of ditches, are placed in little hillocks round the base of the trees. It must, of course, be understood that when new earth is brought the old is taken away. These trees are pruned regularly every year, in winter, by men who attend to this department only, as the method pursued is very different to that adopted for other Plums. The trees are for the most part sent out from the nurseries, though many proprietors raise them themselves. At one time nurserymen did not graft Plums, but were content to plant suckers, to let these grow in a nursery for two years, after which time they were cut back, to induce them to throw out strong shoots about 2 yards in length, and the fourth year they were sent out. In this way it was soon discovered that there were many varieties of this Plum, and that it was very seldom one row consisted wholly of the true French Plum, or Robe de Sergeant, the remainder were of very little value. This defective system is never pursued now, cultivators having discovered that grafted trees produce much finer fruit. Many nurserymen use for stocks the common kinds of Plum, but preference is now generally given to the Myroholan, as a stock not only for the French Plum but for Greengages, Apricots, and even Almonds. They are obtained from seeds or from cuttings. One of the great advantages of this plan is that the trees never make long shoots, contrary to the habit of all other Plum trees. In order to succeed, the grafting should be done about the last fortnight in September, otherwise the result is unsatisfactory. It is not desirable that the French Plum trees should have very long stems. They are too much disturbed by the winds, and they seldom make good growth.

The production of French Plums has, however, its drawbacks, and their preparation has many difficulties. At one time all, and even now many persons engaged in this occupation, bake the Plums more than once in an oven. The oven is very slightly heated at first, and several trays covered with the fruit are placed in it. When the fruit is partially dry, the trays are withdrawn, the Plums are turned, the heat of the oven is increased, and the trays are replaced in it. This operation is repeated four, five, and sometimes six times. It is easy to understand how costly and tedious such a process is. The large proprietors possess 10, 12, or even 20 ovens, attended by a large number of women. But this is not the chief inconvenience the ovens rapidly cool; it is requisite, therefore, in order that the warmth may be maintained for a certain time, to heat them to a high degree at first, so that each time the Plums are placed in the oven they undergo a complete baking (*coupe feu*), which hardens the outer skin, and prevents the pulp from becoming converted into marmalade. The smaller fruits, too, are reduced to a stone covered with parchment, and are wholly valueless. The result of this is a great reduction in weight, and consequently in the profits of their sale, as the fruits are generally disposed of by the quintal (100 lb.). The

necessity of some other process has caused the introduction of stoves wherein the Plums are first steamed first, and afterwards dried in ovens. At present little these stoves have been brought into use. The Plum is placed in its fresh state and compressed heat, maintained by the action of a constant steam, and transformed into drying room. The Plum is then dried by means of a constant heat, maintained by the action of a constant steam, or the skin break. There is more weight. One woman can prepare 100 Plums a day, and the saving of fuel is enormous. The dimensions of the oven required will be 25 centimetres by 22). The apparatus will not cost more than 500 francs.

To sum up, the advantages of drying proved by statistics; generally, on the expense of labour and of firing, the value of the fruit. The stove dries six or eight ovens of the same diameter. They are better, and weigh heavier. *Revue Horticole.*

Home Correspondence.

Cones of the Wellingtonia.—Will correspondents kindly inform me what size of Wellingtonia ought to be when fit to take, or when they are fit for taking? Some of the men are this season producing cones here, though not from being to a standard size. Some were planted in the spring of 1863, being 2 feet high; many of them now measure 17 feet in height, and measure, within 6 inches of the ground, from 2 feet 10 inches to 3 feet 6 inches in girth. They are growing in a strong soil, which appears to suit them better than a lighter description. In other parts of the country several that I planted in 1857, they are specimens, but as yet they have not produced cones, neither are they growing so favourably situated, the soil is, however, a nature. R. Bowe *The Gardens, Chillingham*.

Removing a Greenhouse.—I have a greenhouse built next to my residence on a piece of ground back. It is entered at one end from a door formerly a window. It is built of wood, on pillars, the ground at back being lower than in front of the house. It is a span-roof, in any way supported by the house. Can I have the expiration of my lease? I have given to understand that all glass structures are entirely for the purposes of trade, and removable at tenant's option. Will any of your correspondents kindly enlighten me on the subject? M. G.

Growth and Sap Circulation.—The main question is the great question of connection, widened, like a good many other subjects, from its original bases until the whole field of Pomona is laid under contribution. I would again revert to the practical question adduced in reference to the Vine in its mode of growth, as opening up a field of inquiry to logists. No amount of declamation can establish facts. These facts, in so far as they appear until after leaves have been manufactured, case of deciduous or dicotyledonous plants, observers agree and others disagree as to the borne in mind that I look upon this, as the natural condition. As to certain facts that are recorded with reference to cuttings making out the evolution of buds, I cannot accept the testimony of a natural order of things, which appear in a variety of ways in the position of adventitious, secondary or abnormal, but shows the admirable provision of Nature in providing plants with the power to reproduce themselves. Because a twig of a Willow will strike root, might be called adverse circumstances, considered a good argument in favour of the presence of roots, in an established Willow, the elongation of stem or development of new presence of such dynamic forces as heat, I think not. We require to probe deeper into the mystery of fluid circulation and its elaboration at the natural history of root and branch. Hundreds of instances might be cited from a twig to a Ribes cutting, showing generally that action takes precedence of leaf formation, mere examples of adventitious root formation, no physiologist, in searching after a normal of the sap, would accept as safe evidence. I look upon all such illustrations as a mark, and only of secondary importance in the solution of the main question. Neither my testimony to the utterances of those who declare the possibility of a wide field of formation without some corresponding action, I look upon all such as either abnormal or brought about by an unnatural state of things, capable of being explained away, as in the case of bulbs and corns, which are formed, in some media, for the roots in the one instance, and its tributaries in the other, on the warmth accompanied by moisture, taking the instance, the sap is propelled with such force—as shown by Hale's and many other experiments—that it is not astonishing that it take priority of spongelets. I am, &c.

asserting that the ascending sap is manufactured in the leaves, and the descending sap into spongioles. The whole idea was that the elaborated sap did all the work. I did not mean that it did nothing else, but that its passage upwards and downwards. The organization of the vegetable fabric is so intricate, so much dependent upon the formation and congregation of the spongioles, that to go into the question satisfactorily would be beyond my means and power. Neither do I think it sufficient to say that I did not esteem it necessary to say anything about the absorbing surface of the spongioles, or the power and the metamorphosis of the fluid in its passage downwards to create new layers. It is not leaving this much I by no means wish to neglect, but the position I assumed. My observations, so far as they have gone, lead me to agree with Walker, Mohr, and Hoffman, who found the spring sap in its active state move from the root upwards, and there is no descent of sap until after the development of the leaves. But what about its after diffusion? There can be no doubt, from the various experiments which have been made, that it descends in the direction of the bark, and even when that is mutilated, finds its way through the cellular system of the stem of dicotyledonous plants, and, from its specific gravity, just travel to the root extremities. But what puzzles me most—and on this I should like to get some information—is to know what other auxiliary is present to attend root development, besides this returning sap, manufactured through the leaves, and without which vitality would become impaired. Is Siebaert's theory, "that each cell may direct the substances it holds in solution upwards, laterally, or downwards, according to the demands of the neighbouring cells?" I do not think the possibility of it, but is that its normal condition? Most probably. Eds.] That same authority further says the current of sap will be directed according to the wants and the degrees of vital activity of cells having different functions. On this leads me to comment upon the additional evidence of roots growing in autumn on deciduous trees when branch growth is at rest. The Vines I alluded to at p. 1137, as being root pruned 12 months ago, and which had given no symptom of spongiole formation a month after the buds burst into leaf, are now clad with spongioles six weeks after leaf-fall. (Of course, I ought to state that they are growing in an aerated order, protected from rain by tarred boards, and show moderate luxuriance among the plastic loam in which they have found a home. To tell the "whole truth," the roots in a 10-foot inside border were introduced at the time their outside fellows were crippled, and start new life. Nevertheless, here is an important fact, that these rootlets are only beginning to finish up the activity of the year, after the stems are as brown as nut, and the protoplasmic layers in the cells indurated and their particles impacted together by the attraction of cohesion. Does not this favour the idea of a spongiole sap being in a greater state of activity, as compared by the roots, than an ascending, as compared by the leaves? Any examples that I have met under similar demonstration of the roots of hardy trees in the dead of winter do not, it must be admitted, favour the same license of construction. I have occasionally seen young rootlets appear, but not at the extremity of the system; they were rather in a lateral position, and I looked upon their appearance more as the result of an extravagant flow of sap, than as a normal state of things. In the case of transplanting, and mutilating the roots of the Gooseberry bush, I believe what Mr. Fish calls the faculty of self-preservation will be the means of inducing new roots without corresponding elongation of tops; but it is just questionable whether new roots would have been generated if the plant or plants had remained in their growing position. It is very different, however, with evergreen plants, as I have seen over and over again with laurels, with Aucubas, and with Rhododendrons, although their roots are much more minute. The difference, however, is palpable, the leaves are always present, and exercise a mutual influence downwards and upwards on every blink of heat in an autumn or winter day. Even plants such as Ghent and other Azaleas, Tree Pæonies, and such plants as have large prominent buds to reciprocate a more active continuity of growth, have young rootlets in abundance even in the dead of winter. I have examined and seen this for myself more than once. One other fact I have to record, to show that the descending system is in a greater state of activity than the ascending system in winter. Let any one cut through large roots of almost any forest tree in a good state of health, and it will not only bleed, but to such a degree as is sometimes astonishing. This is a well-known fact, particularly commented on by Langley, who instanced the case of a Birch tree of the Hon. J. Stuart Wortley's, whose roots bled incessantly for a fortnight, and another was recorded by Mr. Spencer, of Bowood, who observed it during March and April, but any one may see it in autumn and winter, although not to the same extent. Roots will therefore bleed when stems and branches won't both at the so-called season of repose, and also during the height of growth, when, of course, the leaves compromise the fluid. More particularly have I observed this with the Ash, the Elm, and the Horse Chestnut. Times Anderson.

Sambucus racemosa.—It may be some satisfaction to your correspondent, "I. O. W.," to learn that the scarlet-berried Elder has had at least one trial in this country. About fifteen years ago I brought over to this country some of the berries, from which a healthy plant was raised. This was planted in a shrubbery a few miles from Canterbury, on a dry soil, at a moderate elevation on the chalk downs, where it grew to be a good sized bush, and produced its much-admired scarlet fruit. In reply to recent inquiries, I have been informed that it died many years ago, as is supposed, from the effects of cold. It was remarked that

nothing like it had been seen in that neighbourhood. The situation was, perhaps, as favourable as could be in this country, and it may probably be concluded that this highly ornamental shrub requires a hot summer, such as that of Germany, to ripen the wood against the cold of winter. It would surely else be as common with us as the Lilac and the Laburnum. S. S.

Salisburia adiantifolia.—We have heard lately a good deal about the large Maid-hair trees in this country, but little about their fruiting which, owing to the separation of the sexes in this genus, does not take place unless the one is grafted on the other. Indeed the only tree I have seen in fruit is that at the Botanic Gardens at Vienna, which, if I remember rightly what Dr. Penzl told me some years ago, was planted by one of the Jacquins, and began to fruit after Endlicher, when he was preparing his "Synopsis Coniferarum," published in 1847, had brought one of the sexes (I forget which from Italy. To what sex do the generality of trees in this country belong? I am sure Dr. Penzl would be only too glad to supply English gardeners with the sex they stand in need of. Berthold Seemann

Cyclamen hederifolium var. græcum.—I send flowers of *Cyclamen hederifolium* var. *græcum*—a variety well worthy of more extensive cultivation than it has yet received. It differs from the ordinary *hederifolium* in being much later and in continuing much longer in bloom. The leaves rise with the flowers, those of the ordinary variety grow up after them. The leaves are very various in shape, and beautiful in colour, the flowers are fragrant and continue very long in bloom. My orchard-house has been very gay with them for nearly three months, and at the dull season any flowers are an acquisition, they are quite hardy, and still in bloom in the open borders, though the late heavy rains have much injured their beauty. James Atkins, Painswick, Dec. 20. [Charming alike in flowers and foliage. Eds.]

Potting Liliums.—I firmly believe that these may be potted with success at any time from November till February. I have grown all the varieties of Lilium lancifolium with great success. I potted them about the end of January or in the early part of February. Much depends upon how the bulbs are kept through the winter; if in a warm place, they require earlier potting, being easily excited. When the stems of my bulbs began to turn yellow, they were placed in a cold shed; if hard frost set in I protected them by placing dry Fern or litter round the pots. In potting, I sometimes shook all the soil off, and placed the bulbs singly six or eight in a 12-inch pot. From others I shook most of the soil off, but left the bulbs in a mass, both did equally well, and were admired by every person that saw them. J. M.

The Heliotrope and Luculia.—Much as I admire the Heliotrope for decorative purposes, I think it out of place when tucked to the wall or rafter of a cold conservatory, filled with hard-wooded plants. I would advise Mr. Adis, see p. 1284, to do as I did many years ago. I tore up a Heliotrope plant that had been planted on the back wall of a conservatory here. In its place I planted two plants from the cutting-pot of *Luculia gratissima* close together. My object in planting the two together was to have a chance of keeping the strongest plant; but they grew away so rapidly that it was difficult to say which was the strongest, and they were both allowed to remain. The plants soon covered a back wall 30 feet long by 8 feet in height, and then took to the rafters, seven of which they soon covered 15 feet long, and are now sprawling about in a small half-circular dome. If room could have been given, the plants could have covered three times the space in the time. We have now given them three more rafters by removing other plants. The plants commenced to bloom in October, and will last to the end of February if all goes well. The number of heads of bloom open and coming into bloom is 700, or thereabouts, many of them measuring 4 inches across. This is a sight which no weedy Heliotrope can be compared to for a winter-blooming conservatory plant. The perfume, too, is stronger than any plant that I know grown in a cold house—equal to that of many of the Orchids. The foliage, in a healthy state, is very fine through the summer months, and is quite an ornament to any house. In the month of March the plant is spurred in just as Vines are pruned, without a leaf. It breaks into leaf in a very short time, and the shoots are thinned two or three times during summer to allow the shoots and leaves room to develop themselves. The *Luculia* is a very clean growing plant, it is seldom ever attacked by insects. William Calverley, Thorpe Perrow.

Vine Extension.—I have read with great interest your letters on Vine extension. Having some under my care, I should like to arrive at the best mode of treating them, and I therefore suggest that your correspondents should explain the summer treatment of their Vines, in regard to pinching the shoots, specifying how much foliage is left, and the mode of training during growth. I should also be glad to learn how far the Vines are apart, the time of ripening their crop, how old the rods are, and what they produce in pounds per rod per year, according to length. I am only a young hand, but I can tell of a houseful of Vines that were as bad as the Stortford Vines can be, but which were restored to produce good crops (or as good as common people grow without extending them in the least, as they had been to the back of the house for years; and these are still, I believe, in good health. I will give you the particulars, with dates, as, if you think them worth recording. If your readers would report on the matters above-named, much might be learned therefrom. Learner. [Statistics of this kind would be worth recording. Learner's other questions are reserved. Eds.]

Close Pruning.—The interesting statements made as to the Bishop Stortford Vines have set me a-thinking,

as to whether the same may not be said by and by of the trees trained on the system of Dubreuil. The same agencies seem to be at work there, and the question in my mind is, whether the unextended pinching and tearing of the shoots, or the production of frost buds may not have a similar effect on French trees. Pears, owing to the character of their roots, would not probably suffer, but might not Pears trees? None. There is this difference, that the Pear is not naturally a rampant grower like the Vine, and therefore sustains less check by a reasonable amount of stopping back. In all cases there should be as full leafage as can be through a good season under the circumstances. Eds.]

Grapes.—In the acquisition of Grapes we have certainly made considerable progress during the last few years. Moderate-minded people were well satisfied with the Muscat of Alexandria, but in size and quality it must suffer eclipse placed in opposition to the Golden Champion. The new black Grapes with Muscat flavour give us what was very desirable in that direction. That very trite truism, "Tastes vary," may here be illustrated, for however excellent the Muscat may be thought by some, others say that the Muscat is good for a *bonne bouche*, but the very intensity of sweetness and aroma it possesses tends to cloy the palate, which by a fruity freshness it should stimulate. Our Continental friends who are no bad judges of Grapes, and certainly eat more than we do, prefer as a rule these varieties, and have but little aversion, or rather a strong liking, for crisp juicy and refreshing. The Muscadine or Chasselas de Fontainebleau seems an established favourite, and when it ripens against a wall, in sunny France, and looks, as the people slyly say, as if the fox had been that way, it is a Grape that one does not soon tire of eating. It is, unfortunately, not big enough to make a show in our houses in England. If those gentlemen who are so industriously hybridising would give us a Muscadine as large and as easy to grow as the Hamburg, they would confer a boon on the world of Grape eaters. The absence of any decided flavour in the Hamburg, its juiciness and agreeable sweetness, size, and colour make it a Grape that is enjoyed by the most fastidious as well as the least discriminating consumer. But there is room here for something better, and in size our black Grapes are eclipsed by white. Let us at least match the Golden Champion with a black Grape with the flavour of Chasselas de Fontainebleau. It is not my intention to review all the Grapes grown in our hothouses, but while on the subject of new Grapes and flavour in Grapes, I am reminded of a result of successful hybridising obtained by Mr. Pearson, of Chelwell, who, employing the American Strawberry Grape as the parent on one side and the Royal Muscadine on the other, has secured a cross that combines in itself the qualities of both parents, and, what is of more importance, shows the advantages of the union in a vigorous habit, peculiar to the American Grapes. I regard this union as an immense step in the cultivation of Vines. The refusal of the vulgar of a newly cultivated perfectly healthy tree into an old, and partly exhausted stock, will, in all probability, lead to great results, both here and in the vineyards of Europe. The Grape, the produce of this union, is not of large size, and is white, or rather yellow. Those gourmands who seek after novelty will, in tasting this Grape, find a new pleasure; it has something of the Strawberry aroma of its American parent, and a little Muscadine and other flavours which I cannot describe. It has lost the peculiar pulpiness of the Grape from which it was raised. Mr. Pearson has happily called it after the great man of the day, Monsieur E. de Lesseps, who has united two seas, just as Mr. Pearson has brought together two great floods—the juicy tides of America and Europe. William Ingram, Brent.

English-made Cloches.—One Paris Cos Lettuce, grown under the French cloche (such as can be purchased early in the season in Covent Garden market) is nearly enough to fill a good sized salad bowl. These can be supplied from Paris at a price that ought to justify an attempt to cultivate them in a similar manner at home. I intend to try the cultivation of some of our best varieties of Cos Lettuce under the cloche, and have obtained some of the largest size at a moderate price from Messrs. E. Brecht & Co., Normanton Works, Yorkshire, for that purpose. I shall give them a fair trial, and I hope in due time to furnish you with a report of my success or failure. I grew some of the Grand Admiral Cabbage Lettuce, under ordinary bell-glasses last spring, which improved them in crispness very much. I believe that growing them in a confined atmosphere close to the glass, with plenty of light, is the main secret of success. J. M. [L. M. [L. M.]

French Mushroom Spawn.—Having had a consignment of this article, I was anxious to know whether any of your correspondents have given it a trial, and whether they have been more fortunate in obtaining a crop than I have been. When the French spawn came to hand I had a bed fit for spawning, composed principally of horse-droppings, with a mixture of cow dung and turfy loam. The bed was spawned in the usual manner, when the temperature declined to below 50°. The French flaky spawn was placed at one end, with English spawn, broken in small pieces, at the other. Care was taken that the temperature of the bed did not rise beyond the above with any change in the weather. Both ends of the bed were top-dressed and soiled alike. The temperature of the house ranging about 50°. At the temperature of the English end of the bed is quite a picture present the English end of the bed is quite a picture with fine fleshy Mushrooms, but upon the French with fine fleshy Mushrooms, but upon the French part there is not the slightest appearance of a Mushroom to be seen. The sample of French spawn which I received was very dry and dusty, which was probably for its being so long in showing before the English-made spawn, under the same treatment. I have no doubt but that the French spawn was good when it was first taken out of the salt-strewn quarries, although upon its arrival here it appeared to be only

composed of flaky straw and dust. Had it come to hand in a fresher condition, I believe that it would have "run" as quickly as our English spawn. The French principle of making and keeping spawn is often adopted in this country by some of our most successful Mushroom growers, by making a small bed in a corner of the Mushroom-house, and by breaking English-made Mushroom bricks into small pieces, and inserting them thickly in the bed, or mixing them promiscuously with the droppings when the temperature is not too hot. The mass shortly becomes a heap of spawn ready for immediate use. *J. M., Worktop Manor.*

Camellia Buds Dropping.—I have had under my charge for twelve months a number of sickly Camellias about 3 feet high, which drop their buds as they are about to expand. They have never been too dry since I have had them. Water was applied at a temperature of 60° during last winter, with a little weak manure-water in the spring, but there was no appearance of any improvement. I am now getting some fresh compost into the yard, not having had any before which was suitable for repotting, indeed they did not appear to be in want of it. Can you or any of your correspondents recommend any system of culture that would render such plants again worth growing? They are kept in a vinery from March 1 to the end of June, when they are placed outside until the end of September. *A. B., Strath Tay.* [We sent your letter to Mr. Pearson, of Chilwell, an able cultivator of Camellias, who kindly replies as follows:—] "If I had a lot of Camellias in the state described by your correspondent, I would get some nice turf from a good pasture, cut as thin as if it were intended to be laid down for a grass plat. I would cut such turf up by chopping it in pieces as small as nuts with a spade, and use it without any admixture, and quite fresh—unless it were from a clay or strong loam. In this case the chopped turf should be shook in a riddle to get rid of some of the soil, and the grass and grass roots mixed with as much fine white sand as will make it a sandy turf. I would then at once shake each plant free from soil, and wash its roots, removing with a knife any that were dead, and repot them in the fresh turf, in clean pots no larger in size than would comfortably contain the roots. As these unhealthy plants will require stimulating to make fresh roots, they should be kept in a warm greenhouse, not a stove, and be moistened every day with a syringe till they have made fresh roots and shoots; after which they ought to be kept in a cool house always, and never receive more heat than is necessary to prevent their roots being frozen. Of all the plants grown in our houses, none are so miserably managed as Camellias. Where, in the neighbourhood of London, can a collection of well grown plants be seen? A plant as hardy as a Laurel, or nearly so, is forced to death at one time of the year, and exposed to every change of temperature at another. It is generally potted in a mixture of loam and peat—one an acid soil, the other an alkaline one, which must in time produce a sour mixture. Forced in spring, dry or deluged by rain, as it may happen, in summer, exposed to the heavy dews and rains of autumn, and then treated to the dry and perhaps hot atmosphere of a vinery, is it any wonder the poor plants look miserable? Pot in sandy fresh turf, never give heat more than is required to keep out frost; keep them if possible in the house all the year, and if not possible, have a roof of some kind over them to preserve them from heavy rains. When they require potting, let it be done immediately they are out of bloom. When they require watering, be sure that every particle of soil is soaked. Keep the foliage as clean as a well washed face, and you will have no trouble to keep Camellias from dropping their buds. *J. B. Pearson.*

Cutting Down Strawberries.—In September last, I wrote to you about the practice of an old market gardener, in my neighbourhood, on the heights above Boulogne-sur-Mer, which was to walk into his Strawberry beds, and with a scythe remorselessly mow off the leaves of his plants; that he then threw this haulm over the plants so treated until they began to push, when he uncovered them, and that he was always rewarded with a good crop. I knew that my old friend Dr. Lindley and other good horticulturists condemned this as contrary to Nature, and in the *Gardeners' Chronicle* (p. 902) the Rev. Mr. Radclyffe denounced the practice in no measured terms—"ignorance" being among the number, if I remember right—and said the practice must have been used in dripping weather or under peculiar circumstances. I went down to my old neighbour shortly afterwards, and translated the opinion in England against him. The old man smiled, and looking shrewdly, said: "Monsieur, I have followed this practice 50 years, and have always had abundant crops of Strawberries; and as to dry weather, that would be all in their favour, as the plant would have less to support. No, I will tell you what the secret is—people cut their plants too late. Never cut them later than the second week in August, and you will find that my plan will succeed. Here is M— in the next garden, who cut his a few weeks later, and *voyez vous*!" I looked, and certainly the poor plants in October looked wretched enough, while my old friend's were in the utmost vigour. My landlord is trying in a little garden the two methods: very slight, as contrasted with wholesale pruning. In the summer it will be proved which plan is best, and if practice may not beat precept. *Querist, Boulogne-sur-Mer*

Root Action.—If you take a well-ripened branch of a Vine of the current year's growth, insert it in soil, and put it in a temperature of 80°, it will swell its buds, and put forth leaves, before it emits any roots. This shows that, under the influence of heat, a Vine can expand its leaves without the aid of roots: but how long it can continue to progress without such assistance is a problem not so easily solved. If, when pruning the Vine, you take a leading

shoot that has been allowed to extend itself during the summer, and then fasten the base of it in two or three coils, then pot it, and plunge it in a bed of fermenting materials in the open air, it will emit roots without any corresponding action in the part of the branch exposed. This shows that the Vine is capable of making roots while its branches remain dormant. Taking the latter circumstance into consideration, I thought it would be good policy to apply heat to the roots of permanent Vines during the whole of the winter months; but the only trial I ever saw did not bear out the opinion formed. We had a range of three vineries; the centre one of the three was pruned in November, and a bed of fermenting materials was put on the border, the house being kept cold for some time. When started the Vines did well. The canes in the adjacent house were pruned about a month later, with the exception of the one nearest the centre house; this bled so much (no doubt from part of its roots extending into the other border) that we were obliged to leave it, and disbud it when breaking. Now, speculating on my theory, this Vine should have grown better than the others, but I confess I could see no difference in them; this one was as good as, but no better than, the other Vines in the same house. No doubt the loss of sap helped to weaken it, as it was some time before we could succeed in stopping it. Another item against it was having to swell so many buds. No doubt if it had been pruned sooner, the sap being forced through its length would contribute something to its strength if concentrated in one bud, instead of being divided between at least a dozen. *G. B.*

Potato Grafting.—At p. 1281 Mr. Bennett states, that to raise true hybrids by this method, much more to change the colour of the tuber, is, he believes, impossible. Has he ever tried the experiment with a red or blue and white Potato? If not, I would advise him to do so next season, then perhaps he will prove for himself the fallacy of his own conviction. Last October I had dug up 14 grafted roots part were Paterson's Blue grafted in the Regent, and the others the Regent grafted in Paterson's Blue, simply to test the influence of stock on scion, and I found, on examination, at the one and same root tubers, some white, some purple, and others varying in colour between the two, i. e., of various shades from purple to white. I do not wish to enter into any discussion on the subject, as my time is too fully occupied; but what I state is a simple fact, and I feel convinced that Mr. Bennett can never have successfully tested the experiment himself. *T. C.* [Will our correspondent favour us with his name? *Eds.*]

Foreign Correspondence.

[THE subjoined extracts from a letter received in the early part of the month from our valued correspondent, M. Naudin, tell the same tale of drought in the Mediterranean district as alluded to in the communications of Mr. Hanbury and others from Mentone, p. 1258—

From Paris to Toulouse nothing but rain—soil saturated. At Castelnaudary, where the culture of the Olive begins in sheltered places, the soil was still moist, and the sky partly clouded over. At Carcassonne, a little nearer to the Mediterranean, the sky was cloudless and the drought frightful, the streams were dried up, the wheels sent up clouds of dust. Everything in the plant way was burnt by the sun; nothing remained but the remnants of herbaceous plants, and even the shrubs had their branches shrivelled and dead. *Spartium junceum* was the only shrub which had resisted this torridity. It grows on the borders of fields, and was as green as if it had been watered all the summer. The same state of things prevailed at Narbonne, Montpellier, Hyères, &c., in fact, the whole Mediterranean region has been subjected to a drought, the like of which has not been seen for the last 15 years. At Collioure (Eastern Pyrenees) not a drop of rain had fallen for six months. There, owing to the proximity to the sea and to the mountains, the drought was less injurious than it had been further to the north, the nightly dews compensating to some extent for the want of rain. At this place three plants were especially remarkable for their powers of resisting the drought—*Phillyrea angustifolia*, *Rhamnus Alaternus*, and an *Opuntia* (*O. inermis*?) which is naturalised, and grows everywhere on the rocks, propagating itself spontaneously by means of the joints of the stem when they fall on the ground. This *Opuntia* yields an abundance of fruit of the size of a medium-sized Fig, of a deep violet colour, and containing an abundance of bright purple-coloured juice. Although this plant attains a height of 3 feet, and forms large tufts, it cannot be confounded with *O. ficus indica*, which is arborescent, and the fruits of which are longer and better. In addition to these three plants, I may add the *Agave americana*, and some *Aloes*, as also preserving their succulence throughout this terrible season. I consider the *Phillyrea* and the *Alaternus* as valuable shrubs for making hedges in southern Europe.

On my way back to Paris I stopped at Bordeaux, in order to visit the public garden, directed by M. Durieu. I do not hesitate to say that this is the most interesting garden that exists in France, on account of its arrangement, its space, and especially in the variety and beauty of the trees it contains. Among these latter may be mentioned several fine specimens of *Chamaerops Fortunei* in flower and fruit. One of them last year produced 45,000 ripe seeds. This beautiful Palm is much appreciated here, and before 10 years are over it will be counted by thousands in the southern gardens. The hotter the climate the quicker is its growth. Thus at Perpignan I saw a tree five or six years old, 6 feet high, which had already produced an abundance of flowers.

I may add in conclusion that the wine made with the Grise Gris at Collioure has been recently the one of the best solvents for quinine, probably for the purpose even to Malaga. *Charles Nees.*

Societies.

ROYAL HORTICULTURAL. December 2. Saunders, Esq., F.R.S., in the chair. The business of the meeting being concluded, Mr. Dix announced the awards of the Floral Committee, and G. F. Wilson, Esq., those of the Fruit Committee. The Rev. M. J. Berkeley then stated, with reference to the species of *Abies* alluded to at the meeting under the provisional name of *A. japonica*, in comparison with specimens in the Herbarium, that he had ascertained that Mr. Standish's plant was a new form of *A. Pinsapo* as being a sterile tree, the blunt leaves being produced on a cone-bearing tree. A similar difference was observed in other Conifers, as in *Pinus*, a sterile form of which had been called *P. Berkeleyi* stated that 200 collections of *Crataegus* and allied genera had been collected for distribution among the Fellows. Attention was directed to some specimens of Maize grown in a full report upon which will be given in the Journal. The best variety was that known as Early Bronze, which was the same as that shown by Mr. Dancer at a former meeting. It was remarked that none of the trials made in the green cobs had been successful. *Williams* and *Lawn Mower*, which had been sent to the trial by the Editors of the *Gardeners' Chronicle* stated to have met with great approval from W. E. Hubbard, Esq., of Leonsart's, the prize alluded to at p. 1330, was then read by the Chairman and Mr. Bateman made a report on Mr. Bateman also alluded to specimens of a Cocoa-nut, *Lodoicea sechellarum*, and of a Palm, presented to the Society by Mr. Belsize Park, Hampstead, who also exhibited drawings of various tropical fruits grown in the garden. A few remarks were then made upon the including the beautiful white variety of *L. Dawsoni*, and a supposed new species of *Cycas*, proposed to be named after Professor Leopoldi, named after the King of the Belgians on the occasion of his recent visit to South Africa. Notice was given that the meetings in the year would be held on Wednesdays and Tuesdays, as heretofore.

Scientific Committee.—Mr. W. W. Saunders in the chair. The Secretary, Rev. M. J. Berkeley, read a paper on "Leaf of *Aerides*" "Fox-brush" with a peculiar character differing from any he had previously seen. Mr. Laxton sent specimens of *Pras* of a peculiar character, the result of a single cross particular of which will be given hereafter.

A very interesting paper on the Ferns and Grasses, from Dr R. Spruce, from which the following extracts, was communicated through the Secretary. The paper had reference to the statement of Dr. (see p. 1110), that Grasses are usually sterile while in the bud, and will be published in the Journal of the Society.

In gently flowing rivers of tropical America are found fine aquatic Grasses, species of *Luziola*, *Oryza*, &c. The following note is from my journal, under date 1840, when threading in my canoe among the mangroves of the Trombetas—"This channel was lined on both sides by a beautiful Grass—a species of *Luziola*—growing to a height of 2 or 3 feet. The large male panicle, the most delicate pink, streaked with deep purple, six long yellow stamens hanging out of them, was in a lax terminal panicle, while the slender female flowers grew on the bristle-like branches of the panicles springing from the inflated sheaths of the stem. As the Indians disturbed the panicles with the movement of their paddles, the pollen anthers in showers, and would, doubtless, cause the female flowers disposed for its reception.

A parallel case to the above is that of the *Zebrina* (*Zea Mays*, L.) where the male flowers are borne in a terminal panicle, and the female flowers are packed on spikes springing from the leaf-axis. The flowers must plainly expand before the pollen anthers can be shed on the female organs of the same or of a different plant. That there are cross marriages in Maize is evidenced by the varieties in cultivation in countries where it is not of food, as in the Andes of Ecuador, where nine of the colour of the grain (though white, yellow, or black,) in its size, consistency and flavour, are cultivated; besides many others less generally known.

In *Pharus scaber* (H. B. K.) another tall branched spikelet, and a stalked male spikelet.

In the fine forest Grasses of the genus *Olyra*, species, such as *O. mierantha* (H. B. K.), rise to a height of 10 feet, and have lanceolate leaves above 3 inches broad. The terminal panicle, with capillary branches, like *Ara-caspitosa*, it is the lower flowers that are large innate (not versatile) anthers, and the upper female, with two large stigmas, that are either divided or clad with branched hairs, thus exposing the surface to the access of the pollen. And as the panicle is pendulous, many of the male flowers, although down the axis, are actually suspended over the female flowers.

It is generally to be remarked of dichlamydeous flowers, either the male flowers are very numerous, as in *Leersia*, *Guadua*, &c., or the stigmatic apparatus of the flowers is enlarged, so as almost to ensure impregnation. *Olyra* and *Tripsacum*.

In the Bambusaceae I have gathered belonging to *Guadua*, *Merostachya*, and *Chusquea*, the flowers are less polygamous, and the stamens of the male flower are doubled. But there is scarcely a genus in the family which is not described as having some flowers neuter or male, and especially those that have large stamens, such as the *Panicum*. Some Grasses, of the pharodite genera, are not unfrequently truly

Suttons' Selected Stocks of Farm Seeds
UTTUN AND SONS are now prepared to make special ones for their selected stocks of FARM SEEDS, which give such satisfaction the past season, and which were so admired at the recent Smithfield Club Castle Show. Apply for quantities required, to
UTTUN AND SONS, Seed Growers, Reading.

UTTUN'S RINGLEADER PEA.
 The forwardest known.
 Price 2s. per quart.

UTTUN'S RACEHORSE KIDNEY.
 The earliest Potato in cultivation.
 Price 6s. per peck.
 For description, see p. 1323 of this week's Paper.

UTTUN'S BERKSHIRE KIDNEY.
 The best Potato for the main crop.
 Price 5s. per peck.
 For description, see p. 1323 of this week's Paper.

UTTUN'S RED-SKIN FLOUR-BALL.
 The best Potato for the latest crop.
 Price 7s. 6d. per peck.
 For description, see p. 1323 of this week's Paper
UTTUN AND SONS, Seedsmen to the Queen, Reading.

ELL'S JET BLACK-LEAVED BEET surpasses the Perilla as a decorative plant, and is decidedly the best Beet in cultivation, being uniform in height and colour, also fine for collary purposes.
 Price 1s. 6d. per oz. The Trade supplied. To be had of
MR. MITCHELL, Nurseries and Seedsmen, Edithurst, Kent.

LAYBIRD, CALDECOTT, BAWTREE, DOWLING, AND COMPANY (Limited),
 COAL, STEAM, MANURE, and OIL-PAKE MERCHANTS.
 Address, 25, Seed Market, Mark Lane, E.C.; or Basin, 25, Stoke Newington, N. Telephone No. 1341.
 Sole Agents for "Excellent Seed Corn and Seeds."

EVER SAND and PEAT, from Bedfordshire, in any quantity. This Sand is acknowledged by Florists to be the best obtained. Price Lists on application to **MR. JOHN BOLD, Baker, 20, Curzon Square, St. Pancras, N.W.**

FOR SALE, a quantity of **COCOA-NUT FIBRE** REFUSE, 1 1/2 bags, 1 1/2 per cwt., less by the ton. Price to Nurseries, per ton, on application.
W. P. BOFF, 131A, Holway Road, Islington, London, N.

THE LONDON MANURE COMPANY
 (ESTABLISHED 1840)
 Have now ready for delivery, in fine condition,
CORN MANURE, for Spring Use
DISSOLVED BONES, for Dressing Pasture Lands
SUPERPHOSPHATES OF LIME
PREPARED GUANO
MANGEL and POTATO MANURES.
 Genuine **PERUVIAN GUANO**, and **NITRATE OF SODA**
 Sole Warehouse; **SULPHATE OF AMMONIA, FISHERY**
E. PURSER, Secretary.
 Offices, 114, Fenchurch Street, E.C.

REES AND CO'S BIPHOSPHATED PERUVIAN GUANO (Registered Trade Mark, Flying Albatross), is now for delivery a quantity and in fine condition. It is believed the best Artificial Manure yet produced. Its base is the best Government Guano; it contains 21 per cent. of Soluble Phosphate, 6 to 7 per cent. of Ammonia with Salts of Potash. See analysis of the Guano, Dr. Anderson, Professor Way, Mr. Ogston, & others, given in 2 cwt. bags, each of which is secured with the Company's Trade Mark. The analysis of the Guano, as the seals remain unbroken, is as follows:—
 43 1/2 per cent. of Ammonia
 21 per cent. of Soluble Phosphate
 6 to 7 per cent. of Alkaline Salts (chiefly Potash).
 A full Copy of Analysis by Dr. Voelcker, Consulting Chemist, Royal Agricultural Society of England; Professor J. T. Way, & other leading Chemists.
REES AND CO'S BIPHOSPHATED PERUVIAN GUANO can be obtained of the undersigned, in any quantity, in 2 cwt. bags upwards, at the following cash prices. Remittances in company order:—
 1 Bag, containing 2 cwt. 41 4 0
 5 Bags, containing 10 cwt. 6 10 0
 10 Bags, containing 20 cwt. 10 12 6
JOHN G. BARRY,
 8, Old Jewry, London, S.E.,
 Sole Agent for "Rees & Co's Biphosphated Peruvian Guano Company, Limited."
 Biphosphated Peruvian Guano combines the stimulating properties of Peruvian Guano with the nourishing properties of Superphosphate. It is sent out in sealed bags, and each bag is guaranteed to contain—
 6 to 7 per cent. of Ammonia (fixed).
 20 to 22 per cent. of Soluble Phosphates.
 6 to 7 per cent. of Alkaline Salts (chiefly Potash).
 A full Copy of Analysis by Dr. Voelcker, Consulting Chemist, Royal Agricultural Society of England; Professor J. T. Way, & other leading Chemists.

REES AND CO'S BIPHOSPHATED PERUVIAN GUANO can be obtained of the undersigned, in any quantity, in 2 cwt. bags upwards, at the following cash prices. Remittances in company order:—
 1 Bag, containing 2 cwt. 41 4 0
 5 Bags, containing 10 cwt. 6 10 0
 10 Bags, containing 20 cwt. 10 12 6

NIGHTSOIL MANURE CONCENTRATED.
 Prepared under the direction of the Corporation of Rochdale. This Manure is in the state of a Powder, so that it can be used by Hand, Spade or Drill, and is free from the objectionable odour of Nightsoil.
 The preparation of Nightsoil is not used, and all the natural strength of Nightsoil and urine are retained. It is at least eight times stronger than the Nightsoil and ashes collected in towns; and the purpose of the Corporation, in the experiments it has made in the manufacture, not being purely a money profit, but to improve the sanitary state of the Town, and also to solve the problem of the preparation of Nightsoil so as to make it convenient and not offensive in use.
 The kinds of produce, Horticultural and Agricultural, its use is highly satisfactory. The Corporation is prepared to supply it at the Station at £1 per Ton, or to arrange for its delivery to any address.
Address: Mr. HARESCUGH, Town Hall, Rochdale.

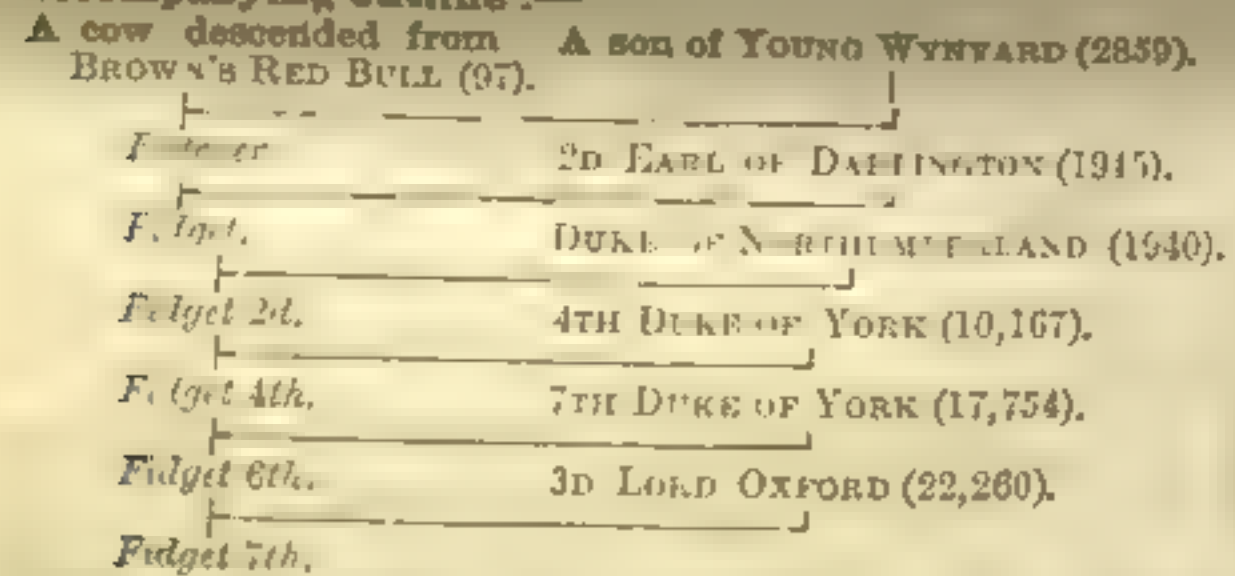

MR. ARCHER'S "FRIGI DOMO."
 Patented by Her Majesty the Queen for Windsor Castle, and by the Duke of Northumberland, Duke of Devonshire, and Earl of Devonshire, for the Crystal Palace, Royal Gardens, and for the Horticultural Society, &c.
 The best Shading is "Frigi Domo" Netting.
 It is made of prepared Hair and Wool, a perfect non-conductor of heat or cold, keeping a fixed temperature where it is used. It is adapted for Horticultural and Floricultural purposes.
DESCRIPTION OF THE GOLD WINDS and MORNING FROSTS NETTING.
 "FRIGI DOMO" CANVAS.
 1 1/2 yards wide, 2 yards long, 5d. per yard run.
 2 1/2 yards wide, 2 yards long, 6d. per yard run.
 3 1/2 yards wide, 2 yards long, 7d. per yard run.
 4 1/2 yards wide, 2 yards long, 8d. per yard run.
 5 1/2 yards wide, 2 yards long, 9d. per yard run.

necessary to a manufacturing country. Where there is a population of 30 millions on a very limited area, the home farm must necessarily be made extremely productive, if the people are to be well fed. Even assuming—though we do not believe it—that sufficient corn can always be imported, bread alone is not a liberal diet; there are other articles which ought to be abundant, and which cannot be imported. Therefore, it is essential to the prosperity of this country that its agricultural production should be progressive, like its population. It has been said, "The more fodder, the more flesh; the more flesh, the more manure; the more manure, the more grain;" and if these common agricultural maxims were true, the necessities of life would all become more plentiful, and the increasing demand for both flesh and grain would be met by the resources of our own land. But they are only partly true. Cattle increase our manure-heaps in the first instance—they bring cake, feeding corn, and guano for Turnips, on our farms—but the moment the flesh is eaten by man the good results are all lost; our stock farming has become an elaborate mode of "robbing Peter to pay Paul." Hence the retrogression in the production of corn, which we have several times pointed out in these columns; and hence the complete falsification of agricultural maxims, which would be true if what we imported to serve our stock farming were not lost by that fearful system of waste to which we are all so blind that, at present, no serious attempts have been made to prevent it.

— WHEAT of home growth has sold freely at full prices, and American and Russian have advanced 1s. per quarter. Other kinds of grain, and pulse and feeding stuffs, remain without alteration.—With only 2128 beasts on Monday, and 615 on Thursday, beasts retained previous quotations. Sheep freely made 6s. and 5s. 10d., and best calves made 6s. 4d., per 3 lb.

OUR LIVE STOCK

ON Wednesday, the 15th inst., Shobnall Grange was the scene of an attractive Shorthorn sale, long looked forward to as an event of importance among breeders of pedigree stock. The cattle, and especially the cows and heifers, were in poor and low condition, nevertheless, blood will tell, and some high prices were given, as well as a respectable average obtained over the 38 animals disposed of. The first few lots went for ordinary figures, such as might be given in open market for unpedigreed cattle of fair quality, but on the appearance of *Charming Maid*, by LORD LIVERPOOL, and of the *Charmer* by LITTLE JOHN tribe, one of the same family as *Charmer 9th*, who made so poor a price at York last week, a change took place. This heifer, although light of flesh and very poor, is exceedingly sweet-looking, and withal a good milker; and after some competition was knocked down to Mr. F. Leney's bid of 170 gs. *Purity* (lot 9), from *Purity* by ROMAN, was a bargain for Mr. Parr at 26 gs.; and *Lady Geneva*, by DUKE OF GENEVA, having attracted the attention of Lord Dunmore, would doubtless have been bought at any price. She is a well-bred heifer, two-thirds gone in calf to GRAND DUKE OF ESSEX 5TH, and was sold for 75 gs. This was followed by another succession of low prices until *Fidget 7th* appeared in the ring. In our notice of the Shobnall Grange catalogue on the 27th ult., we expressed an opinion that *Charming Maid* and *Fidget 7th*, simply on account of their lineage, would provoke considerable competition, and the result has shown the truth of our surmise. *Fidget 7th* is not a beauty, but this is not altogether an unaristocratic family. She is described by an exceedingly competent eye witness as not particularly like a Shorthorn, as unattractive in appearance, wanting in symmetry, and deficient in milking properties. She is, however, *Fidget 7th* by 8D LORD OXFORD, and she is backed by a pedigree worthy of study, and of which we give the accompanying outline:—

This representative of pure Bates blood finally became the property of Mr. F. Leney, at 210 gs. Next came *Zeal* by MOUNTBANK, daughter of lot 1, and of good old Chilton blood; she was bought by Mr. W. Fowler for 52 gs., and the same purchaser secured *Lady Geneva 2d*, by DUKE OF CUMBERLAND, and a daughter of Lord Dunmore's *Lady Geneva*, for 50 gs. The bulls met with a less ready sale. OXFORD COMET was sold as fat for 43 gs.; KING CHARMING, a son of GRAND DUKE OF ESSEX 5TH and *Charming Maid*, above spoken of, was purchased by Mr. W. Fowler for 37 gs. The 27 cows and heifers realised 1140l. 6s., or an average of 42l. 4s. 9d. each; the 11 bulls brought 272l. 9s. 6d., or an average of 24l. 15s. 5d.; while the 38 animals averaged 37l. 3s. 7d.

— The following remarks upon abortion in cows, by Mr. McCombie, of Tillyfour, are of peculiar importance at this season of the year:—When a cow is with calf she has strong sympathetic feelings. The foetus and afterbirth from a cow that has slunk are very offensive, and if left within reach the other cows will sniff at it, and bellow around it; and in a short time many more of the cows will abort. Many reasons have been given as the cause of abortion; from my own observation, frosty Turnips are one great cause, and I never allow my cows to get these. If I happen to run short of fresh Turnips from the store, I order the cows straw and water, and perhaps a little cake or corn at the same time. I have paid dearly for this experience. I believe hove to be another cause of abortion, and that particular atmospheric conditions have a good deal to do with it. The skilful veterinary surgeon should be consulted: he will, probably, recommend physic to cool the system, the foetus and placenta to be buried, the animal to be separated, and the cow-house to be disinfected. The cow should be fattened and sold, unless she be a very valuable breeding animal, as the chances are she will slunk again.

— The Rev. W. Badclyffe writes as follows:—It may be of service or interest to the readers of the *Agricultural Gazette* to know that a great many cows and heifers have gone barren this year, and a great many have slipped their calf. Mr. Stickley, dealer, of Shillingstone, told me a few days ago that, on this account, cows and calves would be scarcer and dearer, and barrenness more plentiful, than ever known. Five cows and heifers round my own door have lately slipped calf. Mr. Phillips, of this place, who buys the butter and cheese of most of the dairies for many miles round for the London market, told me that he knew of one dairy of 30 cows in which 15 only were in calf.

Sheep.—Lord Bathurst is seldom or never an exhibitor of stock out of his own county, Gloucestershire, although for size of carcass and weight of fleece his Southdowns would give way to none. At Cirencester market (6th inst.) he showed 10 very superior 6-tooth wethers, which were not considered to be sold dear at an average of 5l. 3s. 6d. each. They became the property of butchers in the neighbourhood. Some exceedingly handsome Hampshire Down sheep were disposed of at the same market. They were fed by one of the best practical farmers of the neighbourhood (Mr. Hulbert), and had been living upon cotton-cake and roots without any linseed-cake. We mention this as a good example of successful feeding with cotton-cake. As an instance of what we believe to be mere prejudice, we may mention that this substance has been accused of causing the wool to come off sheep. The coats of the animals in question were in beautiful order, but if any of our readers have really observed the wool to have been injured by the use of cotton-cake, we should be glad to know the facts of the case. We believe cotton-cake, either alone or mixed with other feeding stuffs, to be an admirable food, as was pointed out some time since by Messrs. Lawes & Gilbert.

FARM CAPITAL.

[The following paper was read on Monday evening last by Mr. J. J. Meach, before the Framlingham Farmers' Club.]

ACCEPTING the invitation given to me by your intelligent club to say a few words about agricultural capital, I approach the subject with a full appreciation of the difficulty of removing long-cherished convictions based upon the practice of our forefathers, who were, no doubt, fully entitled to our respect and confidence, but the circumstances under which they lived are now changed, and are still rapidly changing, so that we, as landlords and farmers, must deal with these altered conditions in a commercial spirit, which always adapts itself to the peculiar influences that at the time surround it. Who would have thought in my time, some 60 odd years ago, that the smoke from coal would be made to flow in underground channels, and re-appear, almost magically, in our chambers as a blazing light, sending to the shades the gloomy flickerings of the venerable oil lamp, with its contemporary dips and moulds. Again, we have no longer to beat about for three weeks within sight of Dublin harbour in the face of an adverse wind, but can now make sure our voyage with almost unerring regularity. Lovers can exchange soft words, and merchants may buy or sell cargoes at lightning speed beneath the broad Atlantic. In fact, in my early days we had no ocean steamers or railways, no gas, no telegraphs or photographs, no penny post, no cabs, omnibuses, or police; but we had to booze over our port wine because the coaches could only accommodate 20 people, who had, in many cases, to book their places a day or two previously, and then to travel at 7 or 8 miles per hour. The now broad-sheets of daily news were then puny slips, as cramped as were then our general education and literary opportunities. But mighty steam has changed all this.

And we can and must advance at modern not ancient speed. I feel sure that you will agree with me in this view of our changed position, and that both you and your landlords will gradually but surely glide into the profitable stream of steam-driven progress. It is wrong to charge agriculture alone as prejudiced and attached to old customs, for, once upon a time, even the Lord Mayor and Corporation of enterprising London petitioned the King to prevent the introduction and consumption of coal, as its smoke created such a nuisance. Now, the supply to the metropolitan district exceeds 5,000,000 of tons annually. Our principal towns once opposed the approach of railways as a nuisance, and have since repented of their folly. Even now there are people who won't believe that the safest place you can live in all your life is in a first-class railway carriage.

It is, in my opinion, too much the custom, and a

great mistake, to congratulate ourselves upon the improvements that have been made in agriculture rather than to lament over the loss of the old system, and for which there can be no compensation. That there is no lack of customers for our produce, that third of our food comes from the soil, that our population is overflowing and rapidly increasing, that we encourage foreign enterprises, instead of our own, to the increased fertilisation of our soil, that we frequently brought to public notice in the past, are mere specks upon a most extensive and fertile ground of bad and imperfect farming. We should produce more per acre in average of less than 4l. Remember that the average of Suffolk, or any particular county, is 15 millions of available acres that are not cultivated area of the United Kingdom, and that 15 millions annually to the Board of Trade.

It is not in my nature to despise the means of increasing the food of the people by a profitable and enterprising capital. I am not a believer in the system of the tenant, a farm can never be so well managed as the tenant's capital is 20l. per acre, and the landlord has effected the necessary permanent improvements.

My own small farm of 170 acres, which what should be done—for with a 16l. per acre there has been, for 10 years, an annual surplus of more than 600l. per acre and profit, after paying every outlay, and in this case the landlord (myself) has a quarter 23l. per acre, and expended nearly 1000l. on building, roads, removal of trees, and other improvements, thus raising the rent to 16l. per acre.

The time will come when a landowner will be contented, not by the number of his tenants, but by the amount of his rent-roll, the latter being a rate of rent and a well-ordered estate.

Steam-power has so multiplied the amount of employment, that we are now in a primitive pastoral period, when the land was used for sheep and the acres many. All this is being done by the use of steam-power.

	Population.
In 1820	10,000,000
" 1860	32,000,000

These thriving and hungry manufacturing districts demand more capital, and a progressive increase of practice, and a progressive increase in accordance with the rapidly-enlarging population.

A considerable area of land is now being happily, in many cases, brought to bear upon the power of intelligence and capital. It is a previous attachment to antique customs that it a disgrace to us, that wanting to be foreign Wheat annually, besides the one-half of our acreage, we remain in primitive pasturage, and employ a minimum of food, and employing a minimum of labour. I know that there is a strong feeling in favour of permanent pasture, but when I see the land so frequently, realise on my poor farms, 15l. to 26l. per acre in corn and straw, those 22,000,000 of acres of permanent pasture be starving the people by producing more than 40s. to 50s. worth of food.

How much is the Capital of the Kingdom? I mean the landowners' and tenants' capital, the average of the kingdom, the amount returned to the Board of Trade, the amount would probably be 33l. per acre, besides the value of timber, possibly 10l. The average rent is probably 10l. 5s. 000,000l. annually.

The Farmers' Capital can hardly be estimated at 27,000,000l.—I have taken the Board of Trade returns, which would show that the farmers' capital may appear low, but we must not forget that 22,500,000 acres are in permanent pasture, much of which are employing little labour or no labour, and producing I estimate as under 4s. per acre, probably 3l. 12s. would be nearer the mark.

Additional landowners' capital is required in the matter of town and country land it must ultimately go. It is with (when landowners can agree) the great Pen drainage, by Acts of Parliament, commissioners. The London sewerage is a great affair, for it takes the annual amount of 20,000 acres, landlord's measure, of London for only one day, and is not fit to feed the horses of London.

One can judge from this how great is the manurial power and value of the soil. Farmers will then have sewer meters, and have water meters, and take the water to their requirements. If I am asked where the capital is to come from, I point to the unused capital, seeking for employment in a natural channel that remains, as the covered yards, cottages, and other buildings, &c., may be all effected even to 30l. per acre, without any outlay on the owner, and at a moderate annual

able proportions between landowner and tenant, both of whom it must prove a source of profit, as well as a boon to the nation.

When I purchased my poor land in 1841, it cost me per acre I invested nearly that sum in drainage, and buildings, clearances, and machinery, so I have to pay myself 40s per acre annual rent. In 1858, I sold one field of white Wheat for per acre, and the straw for an additional 3/ 10s. My farm capital is 16l. per acre, invested as follows on 31st of last December (see p. 35 of my book, published by Reutledge & Co., Ludgate Hill, London) —

Live stock	25 10
Farm buildings	1 1
Tillage, &c., &c.	1 1
Implement and machinery	2 1
Hay, &c., &c.	5
Per acre	418 1 7

This may appear to you a large sum, especially for stock and tilages, but I want you to believe that considerable amount invested in live stock, fed on purchased food, is the very key to my profit, to those large and frequent crops which many will hardly credit until they see them. The crops arise from very deep cultivation, and a larger dose of rich cake and corn manure than generally administered. It is thus that I grow 10 tons of Mangel per acre, as I have done this year. This, too, accounts for my frequently growing 6 to 8 quarters of Wheat per acre, and on high manured Clover less two heavy crops of Wheat in succession (the second crop Rivett Wheat). Some of you have on various occasions seen my crops, and can form your own opinions. Although this is a good season, my best two fields of white Wheat yielded 6 quarters per acre, and my Barley (grown on 6 quarters of white Wheat) was threshed last week, and yielded over 6 1/2 quarters per acre, sold at 38s 1/2 per quarter. The quantity of seed Wheat drilled was 1 bushel per acre, and of Barley 6 pecks per acre. This has not been a good year for arable land farmers, for the crops vary a good deal, and the price of Wheat is now very low. Stock breeders have the best of it this year, as the abundant crops of roots and hay have caused a large demand for their store stock at higher prices. My Barley, however, suffered severely in 1868 from the drought, while the arable farmers prospered, especially on heavy lands.

My experience has taught me that on such farms as will pay a much better profit on one acre on two. Poor farms require more manure, and consequently more live stock than rich farms, and, of course, much food must be provided that did not grow on the farm, thus adding to its fertility. Many Norfolk and Lincolnshire farmers have from 20l. to 30l. per acre capital. They are thus enabled to hold their corn proper time, keep plenty of stock, and purchase food at a low price. I should do better than I do now had I 20l. to 30l. per acre capital; 16l. is not enough. I presume, from my knowledge of Suffolk, that its general tenants' capital does not exceed 7l. to 8l. per acre, and that there is ample room for investment of landlords' capital in drainage, buildings, and other necessary improvements. It is true that you have more grass-land than I have, but I predict that the introduction of steam cultivation will annually diminish the amount of pasture, especially of poor pasture in heavy lands. Steam cultivation will place land in a more favourable position than it has hitherto had. The advantages of ample capital are obvious. You can buy when other people are obliged to sell, and sell when other people are compelled to buy, and can maintain ample stock and machinery. Ample capital sometimes leads farmers to hold their corn when they ought to sell it. As a safe maxim, I would say, always sell Wheat at 10s. per quarter, but sell when it is at 12s. I have known of a good deal of money lost by farmers who always hold their corn for a higher price than buyers are willing to give. We see, in consequence, old corn stacks riddled by rats and mice, and, when threshed, minus the grain. Capital with judgment is an immense power, and only fails when it is untrained.

If I am asked how I would employ additional capital, I reply that our subsoil, immediately below the ploughed soil, is now a mass of undisturbed poverty, unmanured, and unfit for the roots of our plants, we dare not, in its present unwholesome state, bring it to the surface and bury our top soil. We would, therefore, uncover the subsoil by ridging or ploughing together the top soil, and incorporate with the subsoil an immense quantity of rich manure. To obtain this additional manure, a large capital must be invested in live stock and purchased food. In fact, to farm to the greatest advantage, the soil and subsoil, to a depth of 3 feet, should be well manured; now, we only manure the top 5 or 6 inches. Our root and other crops can never be over manured, for they feed the deep subsoil when in a fit condition. Market gardeners understand this well, and around the metropolis they easily grow 70 tons of Mangel per acre, and other crops in proportion. This system of large capital and highly manuring has an immediate bearing upon the growth of Beet-roots, either for sugar or for distilling. In times to come, factories for both purposes will be greatly multiplied. Landowners are very anxious on this point. They say to me, "It is all very well for our tenants to pull off their roots, but how about the restoration of the soil?" My reply is, let them farm as they like, provided they invest a capital of 15l. to 20l. per acre, one-half of it invested in cake-fed live stock. The frequent growth of Red Clover and Swedes is rendered possible by the absence of manure in the subsoil. Baron Liebig, and the late Rev. Samuel Smith, of Lois Weedon, well understood this. Before

free trade, "Down corn, down horn" was the motto. Since then bread, milk, butter, and cheese have increased in price, and are free from the fluctuations that occasionally, as at present, depress the price of Wheat. Let us, therefore, go in for more live stock and more capital. The return of the Beet pulp to the soil restores most of its inorganic elements, and they to some extent prevent exhaustion.

Live stock purchased cheaply in July, when feed is scarce, pays well for carrying on with a little cut straw, cake, &c., until the root season commences. Poor land may be almost immediately made fertile by heavily folding with sheep, consuming 10l. or 15l. worth per acre of cake, corn, hay, roots, &c., not the produce of the land on which the sheep are placed — supposing that there should be a loss even of 3/ to 5/ per acre — great will be the after gain. This system requires capital, but where there is capital, it is by far cheaper than guano or other artificial manures. Where my 40 tons of Mangel per acre grew this year, the land was autumn-manured with shed manure at the rate of 20l. worth of cake, &c., consumed for every acre manured, and some guano in addition. This is what I call capital farming, as well as farming with sufficient capital. It is the true way to make land pay. The land of England is generally not one-third manured. One can never over-manure or over-manure, for a root crop especially when, like mine, it follows two Wheat crops, and is followed by another Wheat crop. There is no need for landowners to tie down tenants who farm with a capital of 20l. to 30l. per acre. Their land must improve.

Your Sugar-Beet land should be all richly manured and very deeply cultivated before Christmas, and only scarified and guanoed before sowing in April. This I find is the best plan for Mangel.

My farm is all arable except 14 acres of permanent pasture. I have no fences except an external one, and I am very glad to hear that some of your distinguished landowners have realised the propriety of removing many of those fences and pollard trees that disfigure the country and prevent the farmer from deriving the full benefit of his land, for you know he has to pay rent for the ground occupied by fences, trees, and their roots, besides suffering a diminution in his crops. A farmer of 600 acres told me the other day that he offered his landlord an extra 100l. per annum rent, provided he might clear the ground of those obnoxious and unprofitable obstructions to good tillage. Yet his offer was declined, although the growth of the timber did not come to one-fourth of the proffered annual increase of rent.

Now that 30-horse power steam-engines are cultivating 36 acres per day, we shall soon see such a clearance as at one time was never anticipated. Said an implement maker to me at the show last week, "A farmer declined to buy one of the great traction-engines because his gateways were too narrow." The implement maker wondered, smiled sarcastically, and thought many things — some of which he told me.

Remember, that while I advocate ample fields untimbered, I strongly urge the formation of plantations or belts at intervals, not only as shelter, but as breeding places for birds — the farmer's friends. We must remember that as we clear and drain the country, we not only produce a drier and warmer climate, but our buildings should be strong enough to resist the gales that will sweep less interruptedly over the country.

By the way, speaking of tillage, my trustworthy friend, the Rev. Mr. C., plumbed the depth of the cultivation at Buscot, near Farringdon, the other day, and found it to be 30 inches. It was done by two of Fowler's 30-horse power engines, and when the land is cross cultivated the depth is to be 3 feet — in preparation for Sugar-Beet. My shallow-drainage friends may as well take a hint, and consider whether even 4 feet will be deep enough when the 50-horse engines are put to work.

We are on the eve of many great changes — your middle-class college, so creditable to Suffolk, is doing much to enlighten the rising generation of agriculturists. The Royal Agricultural College at Cirencester, in which I, many years ago, took a great interest, has now become an established institution, granting diplomas for agricultural efficiency, and sending forth men learned in the theory as well as practice of agriculture. I begin therefore to hope that the peroration to a lecture which I delivered at Chelmsford in 1852 (17 years ago) may soon be in some degree realised. I therefore give it as a conclusion to this long paper, which you have heard so patiently, trusting that I may ultimately be found a true prophet.

"I see in perspective a railway activity pervading agriculture. The time is coming when farms will be squared, trees removed, and game moderated, when tramways will intersect estates, and one horse will draw to market the load of four; when the sewage of our towns will ebb back to its original source, when the waters of our rivers and drains will be applied to the irrigation of fields, when our millers will use steam instead of water, when our farmers and their children will be better educated and rank higher in the social scale, when our labourers will be better housed, taught, and fed. Then will the blundering rudeness and clumsiness of ignorance be exchanged for the watchfulness and thought of an enlightened intelligence, then will the fractional calculations of profit outweigh the fears of cost, then will antiquated territorial legalities be superseded by personal responsibility, identity, and possession.

"I see all this in the distance, it is a mere question of time. I see mighty engines on railwayed open fields, tearing up furrows a yard deep, making the land look like a sea. I see those hungry earthy masses saturated and immediately fertilised with the sewage of towns. I see ample evaporation and facile percolation. Tottering and dilapidated

farmeries will give way to permanent and convenient homesteads, the pinching enemy of a penurious and pernicious system will be exchanged for liberal views and large operations, capital will develop its giant strength, unfettered by seigniorial restrictions, agriculture, commerce, and manufactures will unite by the ties of a great common interest and common intelligence for the good of our people and for the honour of this great nation."

CONTINENTAL AGRICULTURAL NOTES. FROM BRITISH CONSULS' REPORTS.

Trebizond, Turkey — This province being mostly mountainous, the stock of horned cattle is neither large nor fine, nor is any attempt made by the peasants to improve the breed, but the sheep and goat stock is very abundant. A rough computation, based on the quota furnished by the yearly sheep-tax, gives about 1,500,000 head for the entire province. The wool is much esteemed and largely exported; it approaches that of Angora in quality. Cattle plague breaks out here from time to time, but, thanks to quarantine regulations, and still more perhaps to the difficulties and infrequency of local communication, seldom spreads.

France — The increased value of the imports of cattle during the year 1868 over previous years is worthy of remark, because of the stringent measures in force against the importation of cattle supposed to be infected with the prevalent disease. It is a singular fact also that the Government, while taking precautions against the introduction of a disease from foreign countries, is actually investigating the nature of an indigenous one, which has for many years caused great ravages amongst the live stock in some parts of France. As the Commission appointed for this purpose has not yet published its report, I can only state some general facts concerning it. This disease is peculiar to the Departments of the Cantal and Puy de Dôme in the centre of France, and is known by the name of "Mal de Montagne." It infects the cattle fed upon the highlands of these departments, which form a vast volcanic plateau about 3500 feet above the level of the sea. The Southern and Western Departments are supplied with cattle from these pastures, and almost all the young beasts which are fattened in Normandy are bred here. Large quantities of cheese are also made in these districts. It seems to be established that the malady consists in an affection of the viscera of the animals, caused by the presence in the blood of an undue quantity of carbon, whether produced by the peculiar properties of the flora or water remains doubtful. Although it does not extend to the neighbouring districts, and has not hitherto been considered contagious, it is, I think, questionable, whether cattle infected with it, and removed to the other pastures, may not reproduce it, under different conditions, in a more virulent and even contagious form.

Uruguay — With regard to the trade in fresh beef and mutton, and in Extractum Carnis, in Uruguay, the report says: — A new branch of exportation, which, if reduced to a certainty of success in the means applied to render it marketable in Europe, would soon become very extensive, is that of the preserved fresh beef and mutton; but as yet, of the many methods for its preservation of which experiments have been made, none appears to have effected the result desired, that of producing for European consumption an acceptable article. The meat of this country is without fat and comparatively insipid. Of the Extractum Carnis, or essence of meat, prepared on Baron Liebig's system, at the very complete works of the company at Fray Bentos, the exportation is on a large scale, 50,000 lb a month of the extract being the calculated amount to be shipped in 1869. With regard to the crops grown in the republic of Uruguay, Wheat and Maize are the only corn crops raised, for both of which the soil and climate are highly favourable. There is, however, compared with the amount of corn consumed, a very small extent of land in the republic under cultivation, though during the last few years Wheat growing has become more followed as a regular means of income than formerly. The introduction of American ploughs and other implements of husbandry having made the labour lighter, and the rapid increase of population in the towns requiring a supply far beyond the production of the country.

Harvest in Morocco — The prospects of the year were cheering, the rains having fallen at opportune intervals; crops of all kinds promise well, and there is great hope of an abundant harvest. The prices of Wheat and Barley are consequently unusually low. The pasturage is also very fine, and cattle are in an exceptionally fine condition.

Memel — The state of this part of the province of Prussia with respect to agriculture is by no means flourishing, and it is, therefore, not wonderful that the unprecedented distress which prevailed amongst most classes of the inhabitants, in consequence of the total failure of the harvest of 1867, has completely ruined a large number of landed proprietors.

Spain — The state of agriculture is said to be improving in Majorca, and cultivation increasing, and with few exceptions, the quantity of produce has increased, and the quality improved in this island. The climate of Minorca, although the island is exposed to strong and blasting winds from the north, is healthy and mild, its soil, full of rocks and with little vegetable earth, is dry and arid, yet in the years of sufficient rainfall it yields abundant crops, as in the case of the present year, when the prospect of an unusually good harvest has already tended to lower prices generally. The principal agricultural produce of Minorca consists of Wheat of excellent quality, and cattle. The Wheat is far superior to that imported, and commands a much higher price. It seems to retain its good qualities in other soils, a sample which was recently sent to the United States gave a most satisfactory result, and

an order now exists on the island for 1000 bushels to be sent to the States for seed. The pastures which this island naturally yield hitherto constituted almost the exclusive food of the cattle, which in the years of drought were left to perish of hunger, particularly in the northern part of the island, where this calamity is more frequent. This state of things occasioned considerable losses to the landowners, and has induced them of late to take new measures for the necessary feeding of the animals. Stalls have now been built on many farms, where the cattle are protected from the rigours of the winter or the heat of the summer, and the culture of a new plant has been introduced, which is likely to produce important beneficial changes. This plant, said to be a native of Spain, is named "Mover," or "Zulla," and appears to have been imported from England, where it is also cultivated, and known by the names of Spanish Trefoil and Clover-grass. It has proved on the island an excellent food for the cattle, and, as a proof of the good results of its culture, it will be sufficient to mention that on one farm it yielded 85 quintals of dry forage per acre.

The division of land into small lots by stone walls, which is so striking to the eye of the foreigner, is explained as a necessary employment of the rock in which the earth abounds; while serving to protect the crops from the effect of wind, it also renders unnecessary the employment of cattle-keepers.

The labour, care, and attention bestowed by the inhabitants of this island on the cultivation of its rocky soil are beyond all praise. It is hardly an exaggeration to say that every yard of land is highly cultivated and made the most of, while it is a matter of surprise that so much can be produced on ground which is in many parts rock hardly covered by an inch of earth. The farms in nearly all cases are cultivated by the peasantry, who live upon them, and who provide seed, &c., and pay the working expenses, dividing the profits with the landowners. This system, while it stimulates the energy of the farmer, seems to conduce to the apparent inactivity of the upper classes, who are the chief landowners, who, relieved of the cares of their estates, having no commercial pursuits, and removed from the active scenes in politics, which engross the attention of the continent, seem almost to rest in a prolonged "siesta," leaving the country people, with whom they share the profits of their estates, the fatigue almost of thought as well as of labour. But the number of proprietors in proportion to the population is extraordinary. At Mahon, for instance, with a population of 15,000 inhabitants, there are nearly 2000 landowners. The land is consequently divided into very small estates, which are in great demand, although not producing, as an investment, on an average above 3 per cent. on the capital. J. R. J.

STALL FEEDING.

To enter fully into the details connected with stall-feeding requires much knowledge, both theoretical and practical; but having last season successfully tried a system little used on this side of the water, I conceive I am only doing my duty towards those around me by making it generally known. In one of my out-buildings I had fixed two 60-gallon iron boilers; these were set in brickwork, with flues around them, and leading to the same chimney. In the same house were placed two large wooden tanks, 9 feet long by 3½ at the top and 2½ at the bottom; one had a lid to it; their height is about 3 feet. The above named are for the preparation of the night feed, which consists of a bushel of oaten straw mixed with from ½ lb. Locust beans and 1 lb. rape-cake to 1¼ of the former and 1 of the latter. It is cooked as follows.—About half a gallon per head of cattle is placed in one of the boilers, and when boiling, the cake and beans, previously broken into moderately-sized pieces, are added, and formed into soup; a foot deep of the chaff is then put into the tank, with a lid to it, and a portion of the soup ladled over it. The whole is stirred up and pressed down with an ordinary fork, another foot of the straw and more of the liquid poured over it, &c., till the bushel per head and the boiler's contents are mixed together; the lid is then closed till an hour before feeding time, and when the food is taken out it has a pleasant smell, and appears as if it had been steamed. At the morning and mid-day feeds each beast consumes 35 lb. pulped roots and a bushel of oaten straw chaffed. My feeding hours are 6 A.M. and 6 P.M., punctually. The other boiler and tank are for boiling pig's food. Labour is thus economized, for the same man and boy who attend my 20 stall-feeders look after an equal number of swine. The cost is, per 30-day month:—

8 lb. rape-cake a-day, or 6½ stones in 30 days, at 7½ 10s per ton	20 6 4
1 lb. Locust beans a-day, or 2 1-7th stones, in 30 days, at 8s. a ton	0 2 4
12 lb. oaten straw a-day or 3¼ cwt in 30 days, at 35s. a ton	0 5 8
5 stones roots a-day, or nearly a ton in 30 days, at 13s. 4d. a ton	0 13 4
Labour, each beast	0 3 0
Firing	0 1 0
	£11 8

You will perceive I have charged oaten straw at 35s., Turnips at 13s. 4d. a ton, and labour at full rate, thus obtaining that for the pigs gratis. The cake, firing, &c., is at cost price. I mix chaffed hay with the oaten straw during the last three weeks. This I have not charged in the above, but in the total, subsequently given, I debit myself with 2s. per head. The 20 beasts put into the stalls by me on November 3 were valued by a good practical farmer at 12l. 10s. each. On January 6 I sold the four smallest at 16l. 10s. each nett. Deduct 2 1-10th month's feeding at 1l. 11s. 8d., together with 2s. extra for hay, or 3l. 8s. 6d., and I had a profit of 11s. 6d. a head, or 2l. 6s. on the four.

On January 8 six more were disposed of at 20l. These were 2 1-16th months in the stalls—3l. 8s. 7d., and 2s. for difference between hay and oaten straw—3l. 10s. 7d. This left a balance in my favour of 4l. 1s. 5d. each, or 24l. 8s. 6d. on the lot. On March 11 five more realized in Dublin, clear of all expenses, 22l. 2s. 4d. each, four and a half months as before, and hay amounted to 6l. 14s. 7d., leaving me 2l. 17s. 9d. each, or 14l. 8s. 9d. on the five. The remaining five I kept till May 2, when they fetched only 21l. 6s. each clear, or 8l. 16s. more than cost price. Their feeding for six months was 9l. 12s., I therefore lost 16s. a head on these, or 4l. On January 21 I bought five heifers at 15l. 5s. These on May 2 made 21l. 6s., or a profit, after deducting 3 2-5ths months' keep, &c. (5l. 7s. 3d.), of 11s. 9d. a head, or 2l. 18s. 9d. Thus it will be seen that on the season I cleared over 40l., besides having all the manure for nothing, and this after using my roots at 19l. 17s. 6d., and my oaten straw at 2l. 12s. 6d. per acre. If we count the value of the dung as estimated by Lawes, viz:—

3 tons of rape-cake, at 4l. 18s.	£14 14 0
1 ton of Locust beans, at 2l. 2s. 6d.	2 2 6
108 tons of Swedes, at 4s. 3d.	22 19 0
15 tons of oaten straw, at 13s. 6d.	10 2 6
1 ton of hay, at 30s.	1 10 0

It amounts to £51 8 0

I had 30 tons of Swedes to the acre. Thus, in round numbers, three and a-half acres gave me the profit of over 91l. I believe the usual custom in Ireland is to give from 10 to 12 stones of roots a day to each stall-feeder. If so, only half the number can be fattened. I contend, therefore, that if I can, with the addition of artificial foods, turn out fat double the number of cattle, off an equal extent of Turnips, than is done by the generality of my neighbours, and thus (for the sake of argument) with the same money profit, I am farming more successfully than they are. We all know that the manure formed from animals fed with rape-cake, &c., must be of a better quality than that obtained from roots and hay only. My land is receiving the benefit, and my subsequent crops must eventually be heavier. I use the word eventually advisedly, as there may be some around me who, in the course of discussion, and to prove the goodness of their own system, may challenge me to show an equal amount of grain off an acre of my lands to that grown by them last season; and, in all probability, I should be unable to do so. Their lands may be rank; mine is not, but will be, I hope, in the course of time. We should, therefore, not meet on equal terms. It may be urged that the system I am now advocating is troublesome. I will grant that it is for the first day or two, but when the men get into the regular routine all goes smoothly, and there is little difficulty in pulping and chaffing if you do it by intermediate motion affixed to your horse-power threshing-machine. Mr. O'Neill fixed mine at a slight expense, and one horse will cut and pulp enough for 20 beasts and 4 cows in about an hour. In England, where stall-feeding is carried out to a greater extent, the practice of the above system is, I am informed, yearly on the increase. Mechi, one of the most distinguished farmers of the day, speaks most strongly in favour of rape over linseed-cake. He says it has more fattening qualities, and the manure from a ton of the former is valued at 1l. 18s., while that from an equal quantity of the latter is only estimated at 4l. 12s. If such is the case, and one is 50 per cent. cheaper than the other, it is quite evident which is the most profitable to the farmer. Locust beans are mixed with the rape-cake to take away the flavour, which otherwise at first is distasteful. I found only two cases out of 25 where the beast did not take to the prepared food at once. A few gentlemen have inspected my mode of preparing food for cattle—I believe approving of it; and it will always give me great pleasure to demonstrate the working, or lay my accounts before anyone who will favour me with a visit at Raheenberry. [Captain Morgan, before the Athy Farmers' Club.]

Home Correspondence.

Draining.—I rent this place (about five acres and a house) of Lord Rivers. The field did not want draining, but the three gardens and lawn—about two acres—were a swamp. My residence and gardens are on the highest ground on Okeford Fitzpaine, which was so wet, that it was in vain to think of gardening till the land was drained. So I consulted Mr. Todd, yeoman, and tenant of Lord Rivers, of this place, and he and his men drained it thoroughly for me. The general depth of the drains is 3 feet 6 inches. In some places the drains are 6 feet deep. The materials used are tiles. The gardens are now healthy, and the lawn is full of Dutch Clover and Hop, of which, before draining, there was no sign. The lawn is now firm instead of being swampy. I elicited from him and his men the following.—"The head of the water is usually round the crown of the highest ground, where it is hard enough to thresh corn; the swampy part of a field is the subsidence the head of the water must be cut off; there is no settled depth for draining, at whatever depth the water lies, there you must put the drain; the under-water being carried off by the drain, the top-water subsides into its place, and is thus carried off. The distance at which drains are placed depends on the nature of the soil; swampy light lands will not bear such severe drainage as heavy lands, as they will "bleed" too much; after draining, all grass-land should be top-dressed; our forefathers cut the drains athwart the slope of the field, but experienced drainers cut the drains with the slope; if strong land is deeply broken up by steam-ploughing, the drains need not be so near as when the land is ploughed by horses. If land is very wet and very heavy, the drains should be 8 (or 18) feet apart; after the drain-tiles are put in, brushwood should be put over them, or the

clod reversed should be placed over them, to prevent the soil from running into the drains."
W. F. Radclyffe, Ross Hill House, Okeford Fitzpaine, Dorset.

Scientific Book-keeping.—In Morton's "Handbook of Agriculture," also Professor Wainman's "Farm Crops," tables are given showing the several crops grown by the farmer extract from the soil. Having, according to the instructions in the strong recommendation with which it is put up, made up an account against my constituents drawn from the soil, I am now showing what I have returned to the land, and a standstill for want of corresponding tables for the analysis of manures. I purchased Johnson's new work, "How Crops Grow," get the information I am in search of, and the preface I am doomed to disappointment.—"The modes in which plants absorb their food but partially discussed in the present work, the subject would, in fact, have involved the soil and manures, and consequently an entire new idea of the work." I hope the learned author send out another volume, containing what has of space, been crowded out. In the "Handbook," p. 144, it is shown that a crop of Wheat, 25 bushels, at 60 lb. the bushel, that is 1500 lb. the straw is generally twice the weight of the grain, its produce will be 3000 lb. On this the grain of Wheat containing 1.67 of straw, there will be carried away in 1500 lb. of the grain, 25 lb. of straw, or 3000 lb. of straw 153 lb.; total, 178 lb. For the sake of round numbers, the mineral matter in the straw may be taken as 10 per cent. Then, on the average of the analyses, the soil will be composed as follows:—

Potash	25.00
Soda	1.00
Magnesia	3.87
Lime	0.85
Phosphoric acid	11.47
Sulphuric acid	0.05
Silica	0.84
Peroxide of iron and loss	0.20
Chloride of sodium	0.03
		52.31

Now, how much of these several constituents equivalent, do I return to the soil in 3 cwt. of average manure, or 3 cwt. of superphosphate and 2 cwt. guano, in mustard and other crops ploughed in, &c.? Such information may be already published, but any aid will lighten the one who has not had the advantages of Training.

Societies.

CIRENCESTER.

"The Landowners."—At the annual meeting of the Cirencester Agricultural Society the health of Lord Bathurst and the address given by Sir CRECIL BEADON, who addressed myself particularly to the tenants, and venture confidently to think that there are amongst us who does not regard the landed property, as it exists in these times, as the very foundation of agricultural progress and prosperity, the only system in which, by the application of science and capital to the soil, it can be made to yield all that the soil and labour can extract from it, and to contribute adequately towards the support of our increasing population. Perhaps it is the accumulation of land in the hands of a few, which may be carried to such an extent as to be injurious to the interests of the state. In my hand there can be no doubt it is perfectly possible, without large properties there would be no agriculture, and without such large farms as are possible, the existing system any considerable development of the productive powers of the land by means of steam cultivation would be practically impossible. We have only to look to France, where a deplorable extent the agriculture of the country is crippled and ruined by the subdivision of land, and we may draw from the spectacle a salutary conclusion. It may also, gentlemen, be remembered that if the rights of the greater landowners should under any circumstances be assailed, the position of the smaller tenant-farmers would be by no means what we should like to see. There are men in Ireland not only fixity of tenure, but a parliamentary grant of a property interest in the soil, where the position of a landowner would be reduced to every cottage and a plot of ground with perhaps a few acres of work at the cost of the State. This may appear to us chimerical and extravagant, but certainly are people who entertain them, and I think it is to be remembered that the whole of the United Kingdom is altogether inseparably connected, and its sustenance for its teeming population must be for the interests of all that the State be so disposed as to make it capable of the greatest possible return; and this is the effect of the present system. It seems to me, agriculturists or as taxpayers, is seen to concern us to protect the rights of the tenant, and I cannot for myself desire that the Parliament comes to deal with the Irish land, that, while it is ready to offer every facility

the tenant, it will peremptorily reject any measure which is calculated to disturb the rights of property, and which tends to the ruin of scientific agriculture, and the maintenance of proletarian peasantry by the general taxes of the country.

Mr. MASTER proposed "The Tenant's Bill." I may claim for the tenantry of this country the reciprocal feeling, that the land is a trust, and the interest for the welfare of the country which we consider very valuable in itself as well as for the land. I am not one of the standard-bearers of the bill, but I have considerable doubts whether the views of the proprietors or occupiers are prepared to endorse those views we read of continually, I may call them those views, advocated by a certain school in this country. With reference to the management and cultivation of our estates we must all rejoice, I think, at the increased interest manifested throughout the country in the agricultural labourer. Very much remains to be done. First and foremost, I believe, is the improvement in their dwellings. I can speak as a landowner, and I am sure every landowner will agree with me that this is a slow process. I wish it could get through it quicker, and perhaps we have somewhat disappointed others that we don't seem to progress more hastily. Then we have the question of education pressing upon us. I hope and trust that the present will set their faces against the godless education advocated by a certain school in this country. I don't see how we can make head against it if we give education without religion. How are you to make head against vice if you give no sound religious foundation to work upon? I know these remarks are somewhat stale, but nevertheless I think they cannot be too often repeated. I will now give "The Tenants," and I venture to express a hope that not only tenants but landlords will prove themselves fully equal to their increasing responsibilities.

Mr. RUCK said I beg to return you our best thanks for the honour you have done us in drinking our good health as tenants. There is an old saying that landlord, tenant, and labourer must sink or swim in the same boat. I am almost afraid that the old saying is so long forgotten that it is not always now adhered to; and the rule of life now seems to be everybody to take care of himself. Now, it so happens that word or two has been said about the agricultural labourer. This morning I looked over some of my books, and I find I have men living rent free, and taking wages from me of from 70% to 80% per annum. We just now a remark that the Irish were going to have a plot of land and a cottage to live in. Compare that with what the labourer takes from me. He takes from me five acres of the best Wheat I have grown in the county of Gloucester on eight acres a year, what I take from those little occupiers. They may chafe enough to keep their families, but what we do with those who don't live in a cottage at all? I can say I do wish the landlords would sweep away many of their restrictions from their statute books. I feel convinced that if the tenant had what property it is desirable he should have, he would not only improve his own estate but he would improve the land and the labourer and the country generally. On behalf of the tenants, I beg to thank you for your remarks.

"The Labourer"—Mr. BAZLEY gave this toast, the condition of the agricultural labourer, he said, is employment and subsistence for the great body of the people. Our population increases rapidly, and the opportunities for employment do not appear to increase in the same proportion. In passing through the country one can hardly be struck with the magnitude of the farms and the size of the farms. Now I am not going to say anything in contradiction of large farms, but here capital is available there is no doubt that large farms can be managed more profitably than small ones. I know more than one estate where the largest farm is managed on practically the best, but like the manufacture, like the railway, they must be conducted on commercial principles; and I venture to suggest whether it would not sometimes pay better for the farmer to be content with a less amount of acreage, to pay a less rent for that quantity, to cultivate it more fully, and to employ more labour and to pay more wages. But there are two kinds of capital required for the efficient cultivation. There is the man's capital, but there is also the landlord's capital, which is necessary for the erection of suitable buildings, and very often this latter capital is not forthcoming. I will venture to place my Lord Bathurst in a witness box on this occasion. You have heard his speech deplore that many landlords who are called upon to make improvements are really unable. But should this be so? The wealth of the country increases in a rapid ratio. The English people are able to invest their savings in all sorts of schemes, at home and abroad, limited and unlimited, but as a rule the spare capital of the country does not find its way to the land. For the existing laws with respect to the transfer of land are such that in their operation, in many instances, the legal difficulties are insurmountable in the way of investing money upon the land. I do not hesitate to avow my conviction that the laws of strict settlement and entail are those which have kept the land in an uncultivated state, which lend a shadow to the substance has gone which keeps the land in a state of stagnation and prevent an increase in the employment of the people. There is another point upon which I have a strong objection to the operation of the Game Laws. Generally, the gentlemen who object to the Game Laws are not themselves. I have myself a strong objection to them as they now stand, but then I am no sports-

man; and it is, therefore, no credit to me to say to Mr. Edmonds, when he complains of the great damage done by the rabbits, to tell him to shoot, ferret, or kill them to his heart's content. I am happy to see so eminent an agriculturist upon such reasonable terms.

"The Experimental Committee of the Cirencester Chamber of Agriculture."—In acknowledging this toast, Professor WILKINSON said I will not detain you with anything like a speech, but I may mention that between 110 and 120 experiments have been planned and treated in various ways by various gentlemen connected with the Chamber of Agriculture, at the suggestion of the Experimental Committee. I do not think there is any one in this room who will doubt the advantage of accurate experiments. Whenever we meet with farmers we hear them speak of various experiments which they have been undertaking, one has tried a certain method, another another, but those who have tried agricultural experiments in a more exact way find that little dependence can be placed upon results which are only judged by the eye, the crop may appear better, and the scales and balances may prove that it is really worse. On the other hand, in the Chamber experiments, the exact amount of manure has been known, its chemical constituents, and the exact weight of its produce ascertained. That has been the object of the gentlemen who have carried on the work of the experiments, and I may say that the results have been of a very interesting character, without troubling you with figures. We have tried experiments upon various kinds of tillage, we have had our Wheat drilled at various depths. The manures which had been used have been taken from the same sample, and subjected to analysis in the college laboratory. In trying experiments we make the conditions as simple as possible, and I believe that is a great point in trying agricultural experiments. Cirencester has been spoken of as the metropolis of the Cotswolds, and I should like to find co-operation with the sub-committee of this Chamber over the whole of the Cotswold hills, and farmers undertaking experiments in connection with the Cirencester Chamber of Agriculture. I think I may very briefly recount the system upon which we go. We endeavour to obtain as many practical farmers as possible to try the experiment—seven or eight—I should like to see 20 farmers—and the results are all the produce of one season. The experiments made in one season cannot be taken as an index of what would be the produce of the next, and this is the cause of the unreliability of many of the experiments made by solitary experimentalists. We are therefore careful to get the results all in one season, and if you have numerous experiments all accurately made in one season I think you have very good data to go upon.

"The Royal Agricultural College."—In returning thanks, Mr. HOLLAND said I remember when there were no Chambers. We had our own county agricultural meetings, but they were in the open air or under tents, and a strange history I could tell you of what had passed in the quarter of a century in which I have been connected with it. During that time many faces have disappeared, many faces have grown old, and in addition to that many faces are so covered with beards and moustaches that I do not recognise them. I have seen many curious things in this room. Twenty years ago no gentleman would sit in his chair without having his pipe and his brandy and water. I remember one gentleman—I won't say whom—making a speech about science and the march of intellect, and characterising the man of science as one who would walk after a cow with a teaspoon, and when the cow had a natural occasion would carefully taste the results with his teaspoon. On one memorable occasion the noble lord who now sits on the right of the chairman really was obliged to leave the room immediately. In that five and twenty years we have made many advances, and I do for myself feel proud of being one of the humble individuals who have been connected with that advance. Allusion has been made to the old saying that the landlord and tenant must sink or swim in the same boat, but the difference is that in those days the landlord was the sifter and the tenant the puller, and now they are working together for their mutual interest. The manufacturer has a great advantage over the agriculturist in one respect. He calls to his scientific man and orders him to prepare a certain dye—the dye is made, the pot is put on, but it boils over and the dye is lost. Well, he has only to call his scientific man and leave the pot fixed again, but the farmer if he has his crop must wait for another season, and therefore more than in any other branch of industry the farmer requires such knowledge as will prevent him from making any mistakes, which shows that he ought to have some knowledge of science. Since our land is limited we must make it as productive as we can, and I believe a great deal is to be done by deep cultivation.

Reviews.

"The Farmers' Almanac, 1870." By Cuthbert W. Johnson and W. Ridgway, 169, Piccadilly.
"Morton's New Farmers' Almanac, 1870." Edited by J. C. Morton. London and New York: Cassell, Petter & Galpin.
"The Illustrated Farmers' and Gardeners' Almanac, 1870." Fleet Street, London.
"The Rural Almanac and Sportsman's Illustrated Calendar, 1870." The Field Office, 336, Strand, W.C.
We name them in the order of their seniority. Johnson and Shaw's Almanac, now in its 30th year, is a tall and various, readable and sprightly, as ever. Mr. Cuthbert Johnson confers a real agricultural benefit on his generation by his annual publication. The "New Farmers' Almanac," already in its 15th year,

is a closely packed, but heavier-looking compilation, containing, however, a quantity of useful reading, some of which is provided expressly for this publication. We extract paragraphs on food for invalids, and on art milk, both of which are certain to do good by this publication of them.

"Food for Invalids."—In the preparation of a nutritive diet for invalids, the great object in view is the production of a material which shall contain all the constituents requisite for the support of life. It is not necessary that the diet should be composed of any particular food, with the exception of the indispensable elements of life, such as oxygen, hydrogen, carbon, and nitrogen. The diet should be such as to contain all the elements of life, and to be such as to be easily assimilated. It is absolutely necessary that a fresh quantity should be prepared every 12 hours, and it is scarcely necessary to add that the strictest cleanliness in all the vessels is indispensable. Many an infant at the point of death from prolonged diarrhoea has been saved by the use of this artificial milk.

"Food for Invalids."—In the preparation of a nutritive diet for invalids, the great object in view is the production of a material which shall contain all the constituents requisite for the support of life. It is not necessary that the diet should be composed of any particular food, with the exception of the indispensable elements of life, such as oxygen, hydrogen, carbon, and nitrogen. The diet should be such as to contain all the elements of life, and to be such as to be easily assimilated. It is absolutely necessary that a fresh quantity should be prepared every 12 hours, and it is scarcely necessary to add that the strictest cleanliness in all the vessels is indispensable. Many an infant at the point of death from prolonged diarrhoea has been saved by the use of this artificial milk.

The "Illustrated Farmers' and Gardeners Almanac" contains 104 large quarto pages, of which pp 25-82 are republished from year to year, and sadly want re-editing. What kind of instruction is conveyed by telling the reader that "Wheat straw contains 70 lb." and "Barley-meal 84 lb. of real food in every 100 lb."? The remaining pages of this Almanac are fully illustrated with drawings of cattle, implements, and plants.

The "Rural Almanac" is a beautifully illustrated quarto, full of information and interest to the sportsman and naturalist, also serviceable often to the agriculturist. The following paragraph is the last bit of its last page—

"Cattle Rest."—A pole 7 inches square is sawed from corner to corner, thus forming two triangular pieces, with a base of nearly 7 inches each. These pieces are joined at one edge by common iron butt hinges, the number varying with the length of the poles, which have a handle at each end to open them. When open, with the angles downwards, there is a safe and easy foot bridge about 14 inches wide; but when shut, with the one flat surface on the top of the other, there is presented only the sharp angular projection, over which neither cattle nor sheep can pass, and which, moreover, throws off the wet, and protects the under run from the effects of the weather.

Farm Memoranda.

MR. ALLAN POLLOK'S ESTATES IN GALWAY.—Mr. Pollok's two estates comprise an area of some 32,000 acres, of which 25,000 are arable, and they were purchased some 15 years ago at a cost—I do not here pretend to accuracy—of not less than 500,000£. The lands when they came into Mr. Pollok's hands were in the condition of most Galway estates; that is, they were for the most part held by a peasantry of small farmers and cottiers, they had been much exhausted after the famine, and their resources had never been developed. It is easy to imagine what their look then was—rude tracts broken into narrow fields, ill-drained and divided by unsightly fences, with scanty crops and inferior cattle, and covered over with small dwellings inhabited by a dense population. Mr. Pollok's first care was to buy out almost every one of these petty holders, to convert some into farm-labourers, and to induce others to emigrate to the west, and having by a process, not ungentle indeed, yet rather painful, made a *tabula rasa* of this enormous area, he applied himself to improving the lands, to bringing them under thorough cultivation, and farming them upon the best Scotch system. It is unnecessary to say how dikes were levelled and fields squared into vast breadths, what miles upon miles of drains were opened; how, in the place of the Irish village, the huge solitary standing rose at wide distances; what

thousands of tons of artificial manures were lavished upon the hungry soil; what sheets of Turnips and masses of corn were grown where the plough had never been before; how the hills were covered with the finest kine and sheep; how, in a word, capital and science transformed these great tracts by degrees, as if by magic. The carrying out this social revolution cost not less certainly than the fee-simple of the soil, and the results have really been wonderful. I walked over a part of one of the estates, and admired the magnificent farm buildings, the huge mills with their lofty chimneys, as though husbandry had become a manufacture, the steam engines and perfect appliances of tillage, the vast spaces of corn that reached the horizon, the thoroughbred sheep in the immense pastures—the spectacle, in a word, of agriculture on the largest scale in the highest development. Yet the whole scene had a look of desolation in spite of the monotony of its splendour. I missed the smoke of the frequent house-top; and as my eye rested on the scanty cottages which here and there only dotted the rich expanse, I could not help thinking that this form of society had, like all human things, its imperfect side.

How opposite to this state of things is the condition of the village communities, which have reclaimed parts of the flats of the Shannon! How different is their primitive husbandry, how completely distinct the types of their life! In one case a lavish outlay of capital has suddenly raised a noble monument of cultivation of the most perfect kind, and has produced a splendid model of extensive farming. Yet you feel that this is an exotic growth, and that it anticipates the natural march of society; and you see that it is not without its drawbacks in its severance of the population from the soil. In the other case, the slow industry of ages, advancing with gradual but beneficent steps, has changed the barren waste into fruitfulness, has, with difficulty almost incredible, subdued the worthless swamp to fertility, has, too, not grandly or quickly, but quietly and peacefully, transformed the character of the landscape.

The circumstances of Mr. Pollok's experiment suggest considerations of great interest with reference to the Irish Land Question. First, perhaps, in importance is the inquiry whether this wonderful attempt to introduce Scottish agriculture on the largest scale into a district where it had been unknown before is remunerative, or is likely to be so; for, if it be, it can be hardly doubted that its author's example will be extensively followed. From all that I have heard, and my own calculations, this question must be answered in the negative. *Times.*

Miscellaneous.

Waterproof Packing Paper is thus made by some manufacturers:—The paper must first be covered with a resinous liquid, then painted over with a solution of glue and soot, as, without this, the paper will later show blotches. After this is dried, the actual waterproof coat is applied. This is prepared with 2 oz of powdered shellac, dissolved in two pints of water, which is gradually brought to boil, and stirred until the substance is perfectly dissolved and softened, when gradually one-third of an ounce of powdered borax is added, until an intimate union of the substances takes place. The liquid is then left to cool, and, while still hot, any mineral colour may be added, such as lamp-black, yellow ochre, red ochre, iron blue, or burnt umber, whereupon it is left to get entirely cold. It is then ready for use. The operation can be so quickly performed with a brush that two women can prepare 3000 feet in ten hours. *The Stationer.*

Calendar of Operations.

DECEMBER.—*Water Meadows:* Attend to these in southern counties as in November, in the north frost and snow frequently interfere with the operation. But in open weather it may be carried on successfully by carefully watching the weather, and an extra flow of water, where there is a command of it, will carry the waterman safely through a slight frost, when otherwise his labour would be locked up under ice. Not a little depends upon the natural temperature of the water used for irrigation and the mode of applying it, and also upon the temperature of the land over which, or through which, it flows in the carriers, and upon that of the meadows to which it is applied. Were the temperature of river water and the temperature of the earth to remain as high at Christmas as in the summer time, it would take a sharp frost of some days' duration to freeze the meadow. But the reverse of this is true, for both the water and the meadow are colder than they were in November; and with this fact watermen are familiar, and hence watch the changes in the weather accordingly, and the times of flooding. When the water has far to flow in open carriers and gutters, it will be colder when it reaches the meadow than when it left the river. If conveyed in underground stone or brick conduits, wooden or iron pipes, the reverse may be the case. In the summer time, however, the water in the open carriers acquires generally an increase of temperature, while that conveyed belowground loses heat. Of the importance of these facts in regulating the labours of the waterman at this fickle season nothing requires to be said, and with regard to the actual temperatures of the water and of the meadow, these should always be ascertained by a wet-bulb thermometer.

Irrigation Works.—Rivers are now sufficiently high to determine "the feed and tail levels," also "influx and efflux levels." Springs are likewise open, so that the season is favourable for laying out new works, more especially those where river or spring water only is to be applied to grass-land, whether lying in permanent meadow or underalternate husbandry. No doubt

there still exists much prejudice to the irrigation of land only lying one, two, or three years in Grass, but the thorough under-drainage of the land, with subsoiling to break moorland and let down the water to the drains, &c., has removed the practical objections of the olden time, so that this prejudice is fast dying out. River and spring water can be successfully applied to land only lying one year in Grass; but if several successive cuttings of Italian Rye-grass can be taken in one season, two years in Grass may be more profitable than one; and once so applied, it is only a question of time whether it cannot with equal success be applied to the corn and other crops of the rotation. As to the nature of the works, the water levels and surface of the land must be the rule in each case. Where the water can be applied to a plain sloping surface of permanent meadow on the ridge-and-furrow plan, or catch-water plan, at 1s. or so per acre, the gutters and drains being opened by a plough, the rule is plain.

Farm horses keep in active working order. There is something in the dulness of the season that is peculiarly depressing upon their physical energies which, if not counteracted, will lower them in condition. Tied up to the manger in a narrow sloping stall in a dark and badly ventilated stable during the long nights of winter is not in accordance with the natural requirements of this noble animal. In point of fact, the day is not far distant when a loose box will be considered as absolutely necessary for a farm horse, as for any of his race. Something more, too, is needed than the common prescription of a soft laxative diet to keep nerve and muscle in mettle. Feed and groom early and late, as the artificial habits of the horse require it.

Sheep, whether folded on the Turnips or housed in pens, or at large in the pastures in our midland and northern counties, require special attention during the whole of the month, more especially our improved breeds, whose constitutions, naturally and artificially, are severely tried by the peculiarities of the season. In the Turnip field or yard, dry frosty weather will not hurt them, but frozen Turnips are injurious; while rotten roots and tops, when the thaw comes, are many degrees worse. Turnips, therefore, should be stored and given clean and fresh daily, with corn and chaff. The sudden changes from wet to frost do much harm when their coats are soaked to the skin, and when their skins are thus wet they should be moved about gently when the rain ceases and the frost sets in until the wool next the skin becomes dry. On no account give frosty Turnips to the in-lamb ewes in the pastures, although lambing time may be March. If the old "faggage" is scanty, give hay-chaff with a little meal. The chaff should be slightly damped, so as to make the meal adhere to it. But an abundance of roots should always be in store for the ewe flocks of our midland and northern counties, and they should have a shed or hovel to go into during night and in rainy weather, of a size sufficient to permit of the whole flock being fed indoors without crowding. Small hovels with open strawyards in front are objectionable, as the weaker ewes will go outside in close wet nights and in frost and snow rather than breathe the polluted atmosphere within. And it is better to divide the interior of the hovel into pens, and to place so many ewes in each pen, than to allow the flock to run about promiscuously through the whole. The pens, or subdivisions, may be equal in size, but it may not always be advisable to put an equal number of ewes in each pen. The pens should open into each other, and the shepherd will know best how to separate his flock, both for feeding and rest. And we need hardly add, they both feed and rest better when thus subdivided than when flocking together. Thus kept during the winter months, fewer casualties occur at lambing time in spring. In Highland sheepwalks the rams are taken from their ewes during this month. When flocks remain on the hills they require corn and hay during snowstorms, and so do those sent to the lowlands.

Milch cows timed to calve during December require great attention, both as to dietary and household management. If fattening cattle should be housed in loose boxes, milch cows stand tenfold more in need of them; and if our milch cows were thus housed and fed on wholesome food, we should hear of fewer mishaps than we now do when they are tied up to a stake in a narrow sloping stall, and fed occasionally on frosty Turnips, rotten Turnips, dirty Turnips, mouldy hay and straw, with bad water! We should prefer cow-boxes to be cleaned out daily the same as horse-boxes, and kept every bit as clean. Fresh clean roots, steamed or pulped, with chaff and a little bean-meal, form an excellent dietary for newly-calved cows, and for all cows giving milk at this season; and if properly cooked it will produce rich milk, that will yield butter and cheese, provided always that the cowhouse and dairy are kept at the proper temperature, which at Christmas means artificial heat in the latter, and for the most part in the former. If we find it impossible to keep our farmhouses and labourers' cottages at a proper temperature and free from damp and a polluted atmosphere without artificial heat, how can it be otherwise with cowhouses and dairies in northern climates, where success depends upon a pure atmosphere, of a proper temperature? and in both these respects, purity and temperature, a milch cow is as sensitive and easily affected as is her milk. And from experience it has been found that cows and their milk pay handsomely for all the firing they require, at this season, when it is economically used. *W. B.*

Notices to Correspondents.

KOHL BABI: J. L. We think not. Fuller next week.
ROYAL AGRICULTURAL SOCIETY: Leicester. Get any member to propose you for membership, or write to the Secretary, and he will at once remove any difficulty.

GENUINE TOBACCO PAPER
 10d. per lb.
WILLIAM RUSHFORTH, Nurseryman, &c.
T O B A C C O
 For Fumigating Greenhouses. Will not injure the Plants, and Burns without Price 3s. 6d. per lb., carriage free in quantities.

F. & G. ROSHER—Address as above.
 N.B. Orders promptly executed by post. A liberal discount to the Trade.

ROYAL HORTICULTURAL SOCIETY, 1868.

SCHEDULES FOR THE SPRING AND SUMMER EXHIBITIONS, TO BE HELD AT THE GARDENS, SOUTH KENSINGTON, W.

REGULATIONS FOR THE EXHIBITIONS.

I. The Prizes offered in the accompanying Schedules are open to all competitors complying with these Regulations.

II. Exhibitors must give at least five clear days' notice in writing of the Class or Classes in which they intend to compete, and of the average diameter of the plants to be exhibited.

This is to be done by filling up and forwarding to the Superintendent at South Kensington the printed forms provided for the purpose.

III. Cards corresponding with the entries will be furnished on the morning of the Exhibition at the Superintendent's office.

Exhibitors will be responsible for the proper placing of these cards, and they are requested to satisfy themselves that the cards correctly describe the objects exhibited.

The Society cannot correct, or be responsible for, mistakes arising from the non-observance of this or any other Regulation.

IV. No specimens will be received after half-past 8 o'clock on the morning of the Exhibition.

The Superintendent has instructions to refuse all Exhibitions which he considers unworthy of being shown.

V. Officers of the Society will direct the placing of all specimens.

It is necessary that all Flowers or Plants be carefully labelled with their scientific names, and, where practicable, with the name of the country whence introduced. Florists' Flowers must bear their customary names.

Seedling Flowers exhibited as novelties must be named.

VI. Only bona fide exhibitors, and such assistants as may be absolutely required for the arrangement of their specimens, will be admitted before the doors are closed at half-past 8 A.M., after this hour no person will be allowed to enter, and all persons must retire before 10 A.M., except such as may be officially retained by the Society.

VII. A clear passage-way to the stands and tables must be preserved during the hours of arrangement, and all persons obstructing it will be subject to immediate removal from the Garden.

The Judges will proceed to make their awards at 10 A.M., before which hour the exhibitors' arrangements must be completed.

VIII. One prize only can be awarded to an exhibitor in any class, except in the Miscellaneous Class, and in the case of Certificates granted to New Plants and Seedlings.

The Judges have the right of withholding the prize where specimens may be

considered unworthy of it, in order to prevent an inferior collection receiving an award.

The Judges will be at liberty to add to the number of prizes in cases of very decided merit, so long as they do not exceed the total in each class.

IX. All specimens must be the bona fide property of the exhibitor or they will not be eligible to compete for the prizes. At least one year's possession will be considered requisite to constitute ownership, except in ascertained cases of plants newly imported.

X. The decision of the Judges is final. Any prize fraudulently obtained is forfeited, and will be awarded to the competitor immediately succeeding in class; and the exhibitor proved, before a Committee of Exhibitors on Council, to have acted fraudulently, will be excluded from future Shows.

XI. For the Spring Exhibitions, exhibitors' pass-tickets will be as follows:—

For collections of 9 plants and upwards, 2 passes for 1st collection, each additional collection.

For collections of 6 plants and upwards, 1 pass for 1st collection, each additional collection.

But no exhibitor can have more than 4 passes.

For the Summer Exhibitions, including the Special Show —

Classes containing 9 plants and upwards, for 1st collection, 3 passes, each additional collection.

Classes containing 6 plants and upwards; for 1st collection, 3 passes, each additional collection.

No ticket will be given for a single Specimen Plant, or a single lot. No exhibitor can take more than 8 passes.

Breakfast tickets will be issued in equal numbers with the passes. Exhibition to be held on June 2d, for the first day only.

XII. The Exhibition on the 14th of March will close at 5, and on the 18th of April at 6 P.M., and the other Exhibitions will close at 6.30 P.M. All specimens will be given up to their owners, or to such persons authorized to receive them.

XIII. In awarding the prizes the Judges will be influenced by correct opinion. The Council will not be responsible for damage done to plants during the Exhibition, but all ordinary care will be taken of them.

Show of Hyacinths and Spring Flowers. SATURDAY, MARCH 14, 1868.

- CLASS. LIST OF PRIZES. 1. 18 Hyacinths, distinct (Nurserymen), £3, £2, £1. 2. 12 Hyacinths, 6 kinds (Open), £2, £1 10s., £1. 3. 6 Hyacinths, distinct (Amateurs), £1, 15s., 10s. 4. 6 Hyacinths, distinct, grown in windows in pots (Amateurs), £1, 15s., 10s. 5. 6 Hyacinths, new kinds, never before exhibited (Open), £1, 15s., 10s. 6. 6 Hyacinths, new kinds, introduced since 1865 (Open), £1, 15s., 10s. 7. 12 Pots of Tulips, distinct (Nurserymen), £1 15s., £1, 10s. 8. 12 Pots of Tulips, distinct (Amateurs), £1 15s., £1, 10s. 9. 12 Pots of Tulips, distinct (Amateurs), £1 15s., £1, 10s. Note.—Hyacinths and Narcissus in the above classes must have one bulb in each pot, Tulips, 3 bulbs in each pot. 10. Crocuses, collection of (Nurserymen), 15s., 10s. 11. Crocuses, 12 pots of (Amateurs), 15s., 10s. 12. 4 Forced Shrubs in flower (Open), £3, £2, £1. 13. 6 Pots of Lily of the Valley (Open), £1, 15s., 10s. 14. Collections of Cyclamens (Open), £1 15s., £1, 10s. 15. 6 Chinese Primulas, various colours (Open), £1, 15s., 10s.

Show of Roses and Spring Flowers. SATURDAY, APRIL 18, 1868.

- LIST OF PRIZES. 1. 9 Roses in pots, distinct (Nurserymen), £2, £1 10s., £1. 2. 6 Roses in pots, distinct (Amateurs), £2, £1 10s., £1. 3. 12 New Roses of 1866 or 1867, in pots, distinct (Open), £2, £1 10s., £1. 4. Rose, single specimen, in pot (Open), 15s., 10s. Note.—Roses to be grown and exhibited in Pots not exceeding 10 inches in diameter. New Roses are to date from the time when first put in commerce. 5. 6 Nectarines, distinct (Open), £1 10s., £1, 15s. 6. 6 Apricots, distinct (Open), £1, 15s., 10s. 7. 6 Amaryllids, distinct (Open), £1, 15s., 10s. 8. 12 Camellias, cut blooms, 6 kinds (Open), £1 10s., £1, 15s. 9. 6 Camellias in flower, distinct (Open), £2, £1 10s., £1. 10. 3 Camellias in flower, distinct (Amateurs), £1 10s., £1, 15s. 11. 6 Cyclamens in flower (Amateurs), 15s., 10s., 5s. 12. 6 Violets in flower, not fewer than 3 kinds (Open), 15s., 10s., 5s. 13. Miscellaneous Collection of Plants in flower (Open), £1 10s., £1, 15s.

Show of Early Azaleas and Spring Flowers. SATURDAY, MAY 9, 1868.

- LIST OF PRIZES. 1. 9 Azaleas, distinct (Nurserymen), £2, £1 10s., £1. 2. 6 Azaleas, distinct (Amateurs), £2, £1 10s., £1. 3. 6 Azaleas, distinct (Nurserymen), £1 10s., £1, 15s. 4. Azalea, single specimen (Open), 15s., 10s. 5. 6 Roses, distinct (Open), £2, £1 10s., £1. 6. 12 Auriculas, 3 grey-edged, 3 white-edged, 3 green-edged, and 3 self, distinct (Nurserymen), £1 10s., £1, 15s. 7. 8 Apricots, 2 of each class, distinct (Amateurs), £1 15s., £1, 10s. 8. 6 Apple Azaleas, distinct (Open), £1, 15s., 10s. 9. 12 Apple Azaleas, £1 15s., £1, 10s. 10. 6 Pansies, distinct (Open), £1, 15s., 10s. 11. 6 Rhododendrons, 3 kinds (Open), £2, £1 10s., £1. 12. Rhododendron, single specimen (Open), 15s., 10s. 13. 6 Pansies in Pots, distinct (Open), 15s., 10s., 5s. 14. 6 Pots of Lily of the Valley, £1 10s., £1, 15s. 15. Miscellaneous Collection of Plants in flower (Open), £1 10s., £1, 15s.

Grand Summer Flower Show. TUESDAY, JUNE 2, AND THREE FOLLOWING DAYS.

The Tender Plants at this Show will, if necessary, be placed in the Conservatory, and may be removed from the Exhibition after the second day.

- PLANTS SHOWN FOR THEIR FLOWERS. 1. 9 Greenhouse Azaleas, distinct (Open), £1, £10, £5. 2. 6 Greenhouse Azaleas, distinct (Nurserymen), £9, £4, £3. 3. 6 Greenhouse Azaleas, distinct (Amateurs), £9, £4, £3. 4. 15 Greenhouse Azaleas, in pots not more than 12 inches in diameter, not fewer than 5 varieties (Open), £7, £5, £3. 5. 9 Roses, distinct, in pots not more than 13 inches in diameter (Open), £12, £7, £5. 6. 6 Roses, distinct, in pots not more than 13 inches in diameter (Open for Exhibitors not showing in Class 6), £8, £5, £2.

- 7. 6 New Roses, not sent out previous to 1865, or 1866, in any sized lot (Open), £3, £2, £1. 8. 12 Roses, distinct, in pots not larger than 10 inches in diameter, (Open), £6, £4, £3. Note.—New Roses are to date from the time when first put in commerce. 9. 9 Show Pelargoniums, distinct, in pots not larger than 8 inches in diameter (Open), £10, £6, £4. 10. 6 Show Pelargoniums, distinct, in pots not larger than 8 inches in diameter (Nurserymen), £6, £4, £2. 11. 6 Show Pelargoniums, distinct, in pots not larger than 8 inches in diameter (Amateurs), £4, £3, £2. 12. 6 Fancy Pelargoniums, distinct, in pots not larger than 8 inches in diameter (Nurserymen), £4, £3, £2. 13. 6 Fancy Pelargoniums, distinct, in pots not larger than 8 inches in diameter (Amateurs), £4, £3, £2. 14. 6 Zonal Pelargoniums, distinct, Nosegays and Variegated sorts excepted (Amateurs), £6, £4, £2. 15. 6 Zonal Pelargoniums, distinct, Nosegays and Variegated sorts excepted (Nurserymen), £6, £4, £2. 16. 6 Nosegays or Hybrid Nosegay Pelargoniums, distinct (Open), £6, £4, £2. 17. Specimen Pelargonium, of any kind (Open), £1, £1 10s., £1. 18. 1 Fuchsia, distinct, in pots not larger than 13 inches in diameter (Nurserymen), £4, £3, £2. 19. 4 Fuchsias, distinct, in pots not larger than 13 inches in diameter (Amateurs), £4, £3, £2. 20. Specimen Standard Fuchsia (Open), £2, £1 10s., £1. 21. 6 Herbaceous Calceolarias (Open), £3, £2, £1. 22. 3 Pots of Lilium auratum, in pots not more than 10 inches in diameter (Open), £1, £2, £1. 23. 12 Early Pinks, in pots, three or more varieties (Open), £2, £1 10s., £1. 24. 12 Exotic Orchids, distinct (Open), £15, £12, £8. 25. 10 Exotic Orchids, distinct (Nurserymen), £12, £8, £6. 26. 6 Exotic Orchids, distinct (Amateurs), £9, £6, £4. 27. 6 Exotic Orchids, distinct (Nurserymen, not showing in Class 24), £9, £7, £5. 28. Specimen Exotic Orchid (Open), £3, £2, £1. 29. 12 Stove or Greenhouse Plants, distinct (Open), £15, £12, £10. 30. 6 Stove or Greenhouse Plants, distinct (Nurserymen), £7, £5, £4. 31. 6 Stove or Greenhouse Plants, distinct (Amateurs), £7, £5, £4. 32. Specimen Stove or Greenhouse Plant (Open), £3, £2, £1. 33. 6 Greenhouse Liriodendrons, distinct (Open), £6, £5, £4. 34. Specimen Standard Hardy Rhododendron (Open), £3, £2, £1. 35. 12 Amaryllids, distinct (Open), £4, £3, £2.

PLANTS SHOWN FOR THEIR FOLIAGE.

- 36. 9 Fine-foliated Stove or Greenhouse Plants, distinct, including Variegated Plants (Open), £10, £7, £5, £3. 37. 6 Fine-foliated Stove or Greenhouse Plants, distinct, including Variegated Plants (Amateurs), £7, £5, £3, £2. 38. 6 Caladiums, distinct (Open), £5, £3, £2. 39. 3 Anthuriums, distinct (Open), £3, £2, £1. 40. 1 Pair of Greenhouse Yuccas or Beaucarneas, &c. (Open), £4. 41. 1 Pair of Droseras or Cordylinas (Open), £4, £3, £2. £3, £2. 42. 6 Agaves, distinct (Open), £4, £3, £2. 43. 6 Variegated Zonal Pelargoniums, not fewer than 3 varieties (Open), £6, £4, £3. 44. 12 Stove or Greenhouse Ferns, distinct (Open), £10, £7, £5. 45. 6 Stove or Greenhouse Ferns, distinct (Amateurs), £7, £5, £4. 46. 6 Stove or Greenhouse Ferns, distinct (Nurserymen), £7, £5, £4. 47. 12 Hardy Ferns, peculiar varieties, distinct (Open), £3, £2, £1. 48. 12 Hardy Ferns, peculiar varieties, distinct (Amateurs), £2, £1, £2. 49. 12 Hardy Ferns, peculiar varieties, distinct (Nurserymen), £2, £1, £2.

NEW PLANTS AND SEEDLINGS.

- 50. 6 New Plants, of any description, in or out of flower, distinct (Open). Silver Flora Medal—Bronze Flora Medal—Certificate. 51. 1 New Plant, shown for the first time in flower (Open) Silver Flora Medal—Bronze Flora Medal—Certificate. 52. 1 New Plant, in or out of flower, not found in commerce (Open) Silver Flora Medal—Bronze Flora Medal—Certificate. 53. Seedling Florists' Flower, of any kind named (Open), Certificate. 54. New Garden Variety, named (Open), Certificate. Note.—The Certificate in the Cases of New Plants will be awarded by a Sub-Committee of the Floral Committee.

MISCELLANEOUS OBJECTS.

- 55. Miscellaneous Plants or Flowers, not specially invited in the preceding sections (Open), £4, £3, £2, £1 10s., £1, 10s.

- E. Nectarines, single dish, £3, £2, £1. F. Apricots, single dish, £4, £3, £2, £1. G. Figs, single dish, £1 10s., £1, 10s. H. Cherries, single dish, £1 10s., £1, 10s. I. Strawberries, single dish, £1 10s., £1, 10s. J. Melon, Green-fleshed, £1 10s., £1. K. Melon, Scarlet-fleshed, £1 10s., £1. L. Miscellaneous, for Fruit not mentioned in Schedule. Note.—A Dish of Grapes to consist of 5 lbs. Nectarines, Apricots, and Figs of 6 lbs. each, or 1 lb. each of 6 fruits each. The Classes are to open at 10 o'clock.

Special Prize Show. TUESDAY, JUNE 16, AND FOLLOWING DAYS.

- PRIZES OFFERED BY HIS GRACE THE DUKE OF BUCKLEUCH, PRESIDENT OF THE SOCIETY. The Society Prizes in Classes 1 to 7 are as follows: 1. The best cultivated Greenhouse Azalea, £10, £5. 2. The best cultivated Rose in Pots, in bloom, £10, £5. 3. The best cultivated Zonal Pelargonium, £7, £5.

- PRIZES OFFERED BY MR. W. WILSON SAUNDERS, MEMBER OF COUNCIL AND VICE-PRESIDENT. 4. The 1st best cultivated Orchids, in bloom (Open), £10, £5. 5. The 2d best Herbaceous Plants, in flower, 12 pots, £10, £5. 6. The best display of Bedding Plants, in square, 10 inches in 15 inches deep, £3, £1 10s.

- PRIZES OFFERED BY MR. G. F. WILSON, F.R.S. OF COUNCIL. 7. The best collection of plants, in pots (Open), £10, £5.

- PRIZES GIVEN BY THE SOCIETY. 8. The best 6 New Plants sent out in 1868 of 1st Class, Silver Flora Medal; Bronze Flora Medal. 9. The best 6 New Plants sent out in 1868 of 2d Class, Silver Flora Medal; Bronze Flora Medal. 10. The best New Plant shown for the first time in Britain (Open), Silver Flora Medal; Bronze Flora Medal. 11. The best New Pot Plant shown for the first time in Britain (Open), Silver Flora Medal; Bronze Flora Medal. 12. The best New Garden Seedling, of any kind, Silver Flora Medal; Bronze Flora Medal. Note.—Two Certificates of the Floral Committee awarded in Classes 1, 2, and 3, should the best lot prove worthy thereof. 13. The best Mixed Group of Foliage and Flowering Plants (Open), £10, £5. 14. The best 12 Stove and Greenhouse Plants, distinct, 13-inch pots (Open), £1, £1.

SUBSCRIPTION PRIZES FOR VARIETAL PELARGONIUMS.

- 15. 1 Golden Variegated Zonal Pelargonium, not in commerce (Open), £1, 15s., 10s., 5s. 16. 1 Silver Variegated Zonal Pelargonium, not in commerce (Open), £1, 10s., 5s. 17. 1 Golden or Bronze Zonal Pelargonium, not in commerce (Open), £1, 10s., 5s. 18. 1 Golden or Silver Pelargonium, not in commerce (Open), £1, 10s., 5s. 19. 1 Silver edged Pelargonium, not in commerce (Open), £1, 10s., 5s. 20. 3 Golden Variegated Zonal Pelargoniums, distinct (Open), £1 10s., £1, 10s. 21. 3 Silver Variegated Zonal Pelargoniums, distinct (Open), £1 10s., £1, 10s. 22. 3 Golden and Bronze Zonal Pelargoniums, distinct (Open), £1 10s., £1, 10s. Note.—In Classes 15 to 22 two plants of each variety to be shown, and the plants must be in pots not more than 9 inches in diameter. 23. 1 Zonal Pelargonium, distinct, in commerce (Open)—Variegated Zonal Gold and Bronze (Open), £4, £3, £2. 24. 2 Zonal Pelargoniums, distinct, in commerce (Open)—Nosegay (Open), £1, 10s., £1. (Nurserymen), £2, £1 10s., £1. 25. 6 Zonal Pelargoniums, distinct, in commerce (Open)—class unknown, in pots not exceeding 6 inches in diameter (Amateurs), £3, £1 10s., £1. 26. 6 Golden or Silver Variegated Zonal Pelargoniums, in commerce, in pots not exceeding 6 inches in diameter (Open), £4, £1 10s., £1. 27. 6 Gold and Bronze Zonal Pelargoniums, distinct (Open), £2, £1 10s., £1.

WHEELERS' LITTLE BOOK for 1868, "The Queen of Seed Lists," will be published on the 11th inst., price 6d.; gratis to customers.

WHEELERS' LITTLE BOOK for 1868, "The Queen of Seed Lists." published by Messrs. WHEELER & SON, of Gloucester, has become a favourite with all who take an interest in their gardens, and it is truly, as set forth in the title, a 'Select Seed List.' The object of Messrs. WHEELER has always been to confine their attention to what is really good, so as to secure their customers against disappointments and failures; and the extracts they are enabled to quote from communications addressed to them show how satisfactorily this has been accomplished.—*Midland Counties' Herald.*

J. C. WHEELER & SON, Seed Growers, Gloucester.

GLENNY'S GARDEN ALMANAC for 1868, Thirty-first Year, price 1s., post free for 13 stamps, contains Directions for the Management of Gardens throughout the Year, also a List of all the New Flowers.

T. T. LEMAN, Ivy Lane, Paternoster Row, E.C.

TAUNTON COLLEGE SCHOOL. Founded A. D. 1523, by Bishop Fox
President.—The Right Hon. Lord TAUNTON.
Head Master.—Rev. W. TREKELL, M.A., late Fellow of New College, Oxford

Boys prepared for the Universities, for Woolwich, for the Indian and Civil Service examinations.
The Course includes the Classics, the Mathematics, English and the Modern Languages, and Physical Science.
In addition to annual local Exhibitions, two Scholarships are offered to general competition by the College.

An ELECTION to TWO SCHOLARSHIPS of £30 a year each, tenable by BOARDERS who shall not at the time of Election be more than 16 years old, will be held at the College School on the 30th January, 1868. For Particulars apply to the Head Master.

The School is situated in the Vale of Taunton Dean, well known for its salubrity, and is one mile from a central station on the Bristol and Exeter Railway.
Terms and Prospectus forwarded on application to the Head Master.

EVENING LECTURES — ROYAL SCHOOL OF MINES, JERMYN STREET.

PROFESSOR RAMSAY, LL.D., F.R.S., will commence a COURSE of TEN LECTURES on GEOLOGY, on TUESDAY NEXT, January 7, at 8 o'clock, to be continued on each succeeding FRIDAY and TUESDAY, at the same hour. Tickets for the whole Course, price 5s.

TRENHAM REEKS, Registrar

FREE EMIGRATION to BRAZIL.—FREE and ASSISTED GOVERNMENT PASSAGES, with guaranteed employment at fair wages, are now offered to Men of good character (married or single), Mechanics, Farm Labourers, Shepherds, and others desirous of settling in this highly favoured country. Capitalists can purchase, at very cheap rates, TRACTS of superior LAND suitable for Agricultural and Pastoral purposes, and Passages secured for them at low rates in the ordinary Emigrant Ships.—Apply to Le Chevalier JOAQUIM DE ALMEIDA, Portugal Temporary Offices, 7, Westminster Chambers, Victoria Street, London, S.W.

Home News.

THE COURT.—The Queen and Royal family continue at Osborne. On Friday morning the Queen drove out with Princess Christian and Princess Henriette. Prince Arthur and Prince Christian went out shooting. In the afternoon the Queen drove in the grounds, accompanied by Princess Louise. On Saturday morning her Majesty walked out with Prince Arthur and Princess Beatrice, and in the afternoon drove out in the grounds, accompanied by Princess Christian. On Sunday the Queen and Royal family attended Divine service at Whippingham. The Rev. George Prothero officiated and administered the Sacrament. In the afternoon her Majesty drove out, accompanied by Princess Christian and Princess Henriette. On Monday morning the Queen walked and drove in the grounds with the Princesses and Prince Leopold. Prince Arthur and Prince Christian went out shooting. On Tuesday morning the Queen drove out with Princess Christian and Princess Henriette, and in the afternoon drove in the grounds with Princess Christian. On Wednesday morning the Queen drove out with Princess Louise, Prince Arthur, and Prince Leopold, and in the afternoon walked and drove in the grounds with Princess Christian. On Thursday morning the Queen, accompanied by Prince and Princess Christian and Prince Arthur, drove to Parkhurst, and inspected the troops under the command of Colonel Jeffreys.

THE PRINCE AND PRINCESS OF WALES.—The Princess has so far recovered her health that she was able on Christmas Day to attend Divine service in the church in the park, for the first time since her illness. On Monday the Prince and Princess left Sandringham for Holkham, on a visit to the Earl and Countess of Leicester, and have remained there during the week. On Tuesday the Prince had a day's battue shooting in the preserves of the park next to Lord Nelson's birth-place. On Wednesday his Royal Highness had a good day's partridge shooting on the Warham fields and marshes. The Princess and several other ladies from the hall drove out in the afternoon and witnessed the shooting. In the evening the Earl and Countess of Leicester gave a dance, at which the company staying at the hall and several of the neighbouring gentry and clergy were present. On Thursday morning the Prince went out in a snow-storm, and shot through the park preserves next the town of Wells.

ROYAL VISITORS TO KNOWSLEY AND LIVERPOOL.—Prince Arthur and Prince Christian will visit Lord Derby at Knowsley next week, and have accepted an invitation from the Mayor to visit Liverpool during their stay. A grand ball is to be given in that town in honour of their visit on the 9th inst.

THE ARMY.—Major General Balfour, C.B., at the request of the Secretary of State for War, has accepted the office of assistant to Sir Henry Storks, the newly-appointed Comptroller in Chief. In consequence of the retirement of Colonel Pipon from the office of Inspector General of Militia, and the transfer of Colonel Erskine from the Volunteer branch to the command of the Military Train, Sir John Pakington has determined to combine the whole of our local troops—the Militia, Yeomanry, Volunteers, and Enrolled Pensioners in one department, and under one head. It is understood that Major General the Hon. James Lindsay has accepted this office, with the title of Inspector General of the Reserve Forces.

THE DUTIES ON PORTUGUESE WINES.—The

Chancellor of the Exchequer has notified "that her Majesty's Government have, after full deliberation and inquiry, felt it their duty to decline the proposals for reducing the duty on Portuguese wines imported into Great Britain which have been submitted by the Portuguese Government as a basis for the negotiation of a commercial treaty between this country and Portugal."

THE REVENUE.—The Revenue returns for the year, nine months, and quarter, ended December 31, show a decrease of 806,955*l.* on the quarter, a decrease of 771,053 on the nine months, and a decrease of 122,116*l.* on the year. The Quarter's Account shows an increase in the Customs of 138,000*l.*; Post Office, 10,000*l.*; Crown Lands, 5,000*l.*; and a decrease in the Excise of 379,000; Stamps, 12,000*l.*; Taxes, 41,000*l.*; Property Tax, 429,000; Miscellaneous, 128,955. The Nine Months' Account shows an increase in the Customs of 327,000*l.*; Stamps, 177,000*l.*; Taxes, 16,000*l.*; Post Office, 160,000*l.*; Crown Lands, 7,000*l.*; and a decrease in the Excise of 715,000*l.*; Property Tax, 434,000*l.*; Miscellaneous, 309,052*l.* The Year's Account shows an increase in the Customs of 715,000*l.*; Stamps, 306,000*l.*; Taxes, 21,000*l.*; Post Office, 255,000*l.*; Crown Lands, 10,000*l.*; and a decrease in the Excise of 661,000; Property Tax, 192,000*l.*; Miscellaneous, 576,146*l.*

Foreign.

FRANCE.—The Emperor on Wednesday held the usual New Year's Day receptions at the Tuileries, when addresses were presented from the Senate and the Corps Législatif, the Corps Diplomatique, the clergy, and other bodies. The only replies of the Emperor of which any report has been published are those to the Papal Nuncio, who represented the diplomatic body, and to the Archbishop of Paris. In reply to the Nuncio the Emperor said:—

"I am happy to begin the new year as usual surrounded by the representatives of all the Powers. I am able to affirm once more my constant desire to maintain the best relations with them. I thank you for the wishes you have been good enough to express in their name for France, my family, and myself."

In answer to the Archbishop of Paris the Emperor said:—

"The prayers you address to Heaven for the Empress, the Prince Imperial, and myself, affect me deeply. They spring from a noble heart. I know that you do not separate religious interests from those of the country and of civilisation."

Count Von der Goltz, the newly accredited representative of the North German Confederation, had an audience of the Emperor on Tuesday, and spoke as follows:—

"Called upon by the Federal Constitution to represent the Confederation in its international relations, the King of Prussia eagerly desires to maintain and develop more and more the relations of good feeling and confidence between France and the Confederate States. This desire is at the same time conformable to the sentiments entertained towards your Majesty, and the orders of the King prescribe to me to fulfil my functions in that spirit."

The Emperor replied in these terms:—

"In fulfilling the same functions with which you are invested as the representative of the Confederation of the North, you renew the assurances of the friendship of the King of Prussia. I thank you for it. On my part I embrace the opportunity with pleasure to confirm the good understanding existing between the two Governments. I beg of you to be the interpreter of my sentiments to the King. Having been able to appreciate the high qualities which distinguish you, I do not doubt that you will continue as heretofore to exert all your efforts to maintain between the two countries that friendly understanding which is the pledge of their prosperity, and a guarantee for the peace of Europe."

In the sitting of the Corps Législatif on Friday the debate on the Army Bill was resumed as follows:—

"M. Rouher spoke against the amendment of M. Louvet, which, if adopted, would deprive the naval reserve of 24,000 men and the army of 60,000 men, in consequence of the clause permitting the marriage of men during the last two years of their belonging to the reserve. If the restrictions of the amendment were adopted, the effective strength of the army would not exceed that of the present moment—namely, 600,000 men, but France wanted 900,000 men. The experience of the Crimean and of the Italian wars had sufficiently proved that the present effective strength of the army was not sufficient. A comparison of the respective strength of the armies of Italy, of Austria, of Russia, and of the North German Confederation with that of France would demonstrate the imperious necessity of reorganising the military resources of France. Entering into the details of the amendment, he said that one year's more service in the reserve would be less onerous to the population than an additional contingent of 10,000 men, which would be the consequence of the adoption of the amendment. He concluded by asking the Chamber to reject the amendment. M. Buffet supported the amendment, and said that France was not willing to be implicated in a war contrary to her inclinations. M. Calvet Rogniat withdrew his amendment. On being put to the vote M. Louvet's amendment was rejected by 177 votes against 81.

In the sitting of Saturday M. Rouher, in reply to a question put by M. Pelletan, said that the new official list for the electoral districts would be published on the 31st of December. The discussion on the Army Reorganisation Bill was then resumed as follows:—

"The amendment of M. Parnaud permitting the marriage of the reserve was rejected. M. Calvet Rogniat moved an amendment to the effect that men on furlough might be allowed to marry after the expiration of the sixth year of their service. Marshal Niel opposed the amendment. He claimed the right of the Government to suspend permission for soldiers to marry. The Chamber, by 237 votes against 11, adopted the amendment of the Commission, asking that legal facilities to contract marriage might be granted to soldiers during the last three years of their service in the reserve force. M. Picard's amendment, which proposed that the daily sum of 1 franc should be allotted as an indemnity to the wives of soldiers of the reserve while on active service, was rejected by 188 votes against 31."

In the sitting of Monday the discussion commenced on the Bill respecting the Garde Nationale Mobile. The following is a summary of the debate:—

Article 1 was adopted without discussion. M. Desrotours moved an amendment on the 2d Article, demanding that the

sons of foreigners born in France should be subject to conscription. After a reply from General Fiala, who were adopted. M. Berger opposed the system of substitutes. He proposed to send back the question to the Committee to be reconsidered. M. Grévy, who was the committee, agreed to this proposal. M. Rouher replied that this question was a solution of the question of substitutes. The question was sent back to the Committee.

In the sitting of Tuesday M. Thiers proposed the organisation of the Garde Nationale Mobile. Marshal Niel, in reply, said that persons were costly, and that the National Guard of the future. Article 5 was adopted by 210 against 44. In the sitting of Thursday M. Rouher said that 10 or 12 newspapers had been ordered by the Juge d'Instruction for contravening a decree as to summaries of debates in the journals. The journals could estimate the debates, they to estimate public opinion without making it known? M. Rouher replied that the matter had been made an object of judicial inquiry. The question could not come before the Chamber. The Government rejected the suggestion to prevent free discussion. An opportunity naturally arise for the House to discuss the debate upon the Army Bill was then as follows:—

"On Art. 6 M. Javal brought forward an amendment that substitutes in the Garde Nationale Mobile be permitted. After a long debate the Chamber adopted 144 to 103 votes that the amendment should be in consideration. Art 7 of the Bill was adopted. Art 8, stipulating that the army should not interfere with the liberty of citizens to work, was accepted by the Government, and adopted. The remaining clauses of the Bill were passed."

The *Epoque* contradicts the rumour that a standing exists between Russia and France. It states that the relations between the two countries have been for some time past cool rather than warm. The *Patrie* contradicts the report that the alliance has been abandoned, and says that "the negotiations are already so far advanced that a decision is expected within a given period."

SPAIN.—The Cortes were opened on Friday by the Queen in person. In the Speech from the Throne Majesty said that the Spanish Government would endeavour to France both moral and material assistance it should be necessary to defend the interests of the Pope. The Government had requested the Chamber of Deputies in its sitting of Thursday to take part in the European Conference held for the purpose of guaranteeing the moral power in a firm and legal manner. The Chamber of Deputies in its sitting of Thursday the address in reply to the Royal speech was against 3. A Bill has been brought in to make education obligatory.

PORTUGAL.—Some disturbances have taken place in the provinces in consequence of the recent administrative reforms.

BELGIUM.—It is announced semi-officially that a Ministerial crisis will soon be at an end. M. Frere-Orban, the Minister of Finance, is charged with the formation of a new Cabinet.

HOLLAND.—The Session of the States-General closed on Friday by the Ministers of the Department of Finance in the name of the King. The King stated that his Majesty was about to convene the States-General, and order fresh elections in consequence of the rejection of the foreign loan.

PRUSSIA.—The *Provincial Correspondent* in an article reviewing the present position of the Monarchy, says that the year 1868 left behind it success, and a solution of a great and difficult problem. The first care of the Government was to settle internal disagreement. The restoration of peace between the Government and the Chamber of Deputies, lasting, since it had not proceeded from the nation of victory, but from a recognition of the interests of the country. No political difficulty now exists in the administrative provinces, and the new and enlarged Prussian every respect firmly united and fully developed. The same journal of Thursday says that the Germans feel themselves more united and powerful than have ever been before, that the separation between North and South is in fact overcome by the commercial alliances; that Germany's strength can throw the weight of her power into the scale; and that the spirit of the nation and the strength of the Government are of new strength, and serve above all for the maintenance of peace.

AUSTRIA.—According to reliable accounts the formation of a new Cabinet is now complete. The Emperor has made the respective appointments. The list of the new Ministry is believed to be as follows:—Prince Auersperg, President of the Council; Taaffe, Deputy-President; Herr von Plener, Minister of Commerce; Herr von Hasner, Minister of Agriculture and Public Worship; Count Potocki, Minister of Agriculture; Dr. Giskra, Minister of Agriculture; Dr. Herbst, Minister of Justice; Herr von Spreti, Minister of Finance; and Dr. Berger, Minister of Finance. A special train arrived at Vienna on Friday with the silver plate, relics, and other valuables belonging to the ex-King of Hanover. The frigate has arrived at Cadiz with the body of the Emperor Maximilian. The *Debatte* of Wednesday states that no enlistments for the Papal army will be made in Austria, as such proceedings would be in conflict with the home and foreign policy of the Government.

gated with a view of ascertaining whether such refusal arises from disloyalty and sympathy with the Fenian movement. An opinion is entertained that the Fenians have accomplices in the arsenal who have furnished information on the position, contents, and assailable of the different stores, and which influenced the Fenians in their recent intended attack.

PROTECTION OF HAMPTON COURT.—In consequence of the alarm of last week the military guard at Hampton Court has been increased by a full company of the 56th Foot from Portland, the detachment of Hussars from the head-quarters at Hounslow not being sufficiently strong in numbers to provide the number of sentries required. The cavalry keep to their old posts, the 56th doing the extra duty. The "specials," whose employment was noticed last week, are still kept on; the men being all armed with a stout cudgel at night, and changed every two hours. The day watching is principally left to the civilians, but at night sentries are placed all round the Palace, and in all the approaches. After dark no one is allowed to pass without giving the sign, and if not known is not allowed to proceed without a guard. Even in Frog Walk, facing the green, passengers are challenged, and have to come forward to the light so that they may be seen. That part of the Palace which faces the river is carefully guarded, and heavy iron gratings have been placed over the mouths of the sewers. The watchmen and sentries are so arranged that there is a complete cordon round the whole place, and no one is left unsupported.

ALARM AT THE CITY GAS WORKS.—Great alarm was caused on Wednesday among the men at the gas-works in Worship Street, by the discovery of a small parcel of gunpowder near the gasometer. A number of policemen were on duty at the works all night, and were relieved on Thursday morning by another batch of constables, fully armed with revolvers and outlasses. Ample precautions have been taken by the authorities to protect these, and all the other gasworks in the city.

THE CASE OF BURKE, CASEY, AND SHAW.—On Saturday Burke and Casey were again brought up on remand at Bow Street, when a third prisoner, who gave the name of Shaw, but is known also as Mullany or Mulledy, was placed at the bar with them. This was the man whom several of the witnesses from Birmingham described as being with Burke when the latter, who was passing under the name of Winslow, ordered revolvers, percussion caps, and other similar matters, to be used in the Irish rising last spring. The prisoners were again remanded for a week.

ATTEMPT TO FIRE A LETTER BOX.—On Sunday evening a woman gave information that she had seen three men putting something into the letter-box in the Commercial Road, St. George's-in-the-East, and that on putting her hand into the box it was burnt. On the box being examined, several lucifer matches were found, and the 31 letters in the box were spotted with vitriol or some other corrosive liquid, the addresses on two of them being completely obliterated.

THE SPECIAL CONSTABLES.—It is said that the number of special constables already sworn in in London and the suburbs, amounted up to Saturday last to 30,000. Of this number 5,120 were enrolled for the City alone, including 700 clerks of the Bank of England, 800 officers and servants of the General Post Office, and several of the City clergymen. Several of the more respectable Irishmen resident in the metropolis are also among those who have enrolled themselves. This large body of special constables are drilled regularly every evening in each district in the preliminary drill taught in the army and Volunteer force, such as facing, forming fours, right, left, deep, and about, and forming and marching in quarter-distance column; the Volunteers who have joined the ranks of the specials being formed into a separate company for the purpose of serving as a practical example to the others.

MR. GLADSTONE ON APPRENTICES AND TRADES' UNIONS.—The following letter has been addressed by Mr. Gladstone to Mr. W. Darragh, of Manchester, in reply to some objections he had made to a passage in the right hon. gentleman's speech at Oldham, condemning the restrictions imposed by workmen on employers, as to the number of apprentices they may employ:—

"Hawarden, December 28, 1867.
 "Dear Sir,—It is difficult for me to correspond individually with those who may notice anything said by me in public; but I fear you might misunderstand my silence. I therefore write to say my proposition is that all limitations on the number of apprentices are a direct attack upon the property of the working class, by diminishing the amount paid for their labour. Apprentices would be employed only when their labour was more efficient; the employer getting (relatively to cost) more efficient labour, would employ more of it, and pay more for it. If we consider them as paid in instruction, a larger number of skilled labourers would be reared, and the labour of adults would be more effective from having combined with it that amount of apprentice labour which fractions of a penny would dictate. I have seen what I consider a depressed class in this country, that is, the children kept in school, and not put to work at the expense of the community, all closely connected with this system of limiting, by arbitrary rule, the labour of the young. I apprehend there are also, in some of our trades, rules against piece-work, and rules preventing the best men from doing all the work they can in a given time. Such rules are utterly fatal as far as they go to the welfare of the labouring class, who indubitably in these matters sin much more against themselves than against the rest of the community.—I am, dear sir, yours obediently,
 W. E. GLADSTONE."

CRYSTAL PALACE.—At the recent meeting of the Crystal Palace Company an amendment was moved by Mr. Lidward that no free admissions be granted to admit non-shareholders to the Palace and grounds on Sundays. A ballot was demanded and was taken at the Palace on Tuesday. The result was as follows:—In favour of the amendment, 289 voters, 20,037 votes; against the amendment, 255 voters, 453 votes; majority for the amendment, 34 voters, and 15,234 votes.

FLOGGING OF GAROTTERS.—The punishment of the

cat was inflicted on Friday morning in Newgate on three prisoners, who were convicted at the recent session of the Central Criminal Court of street robberies, accompanied with violence. The culprits were William Turner, who was sentenced to 10 years' penal servitude with 39 lashes, and William Osborn and Michael Denwen, who were sentenced to five years' penal servitude with 20 lashes. The culprits were all young men, and had bad characters. The punishment was inflicted by Calcraft, in the presence of Alderman and Sheriff Stone, the Governor of Newgate, and the surgeon of the prison. The culprits bellowed lustily during the infliction.

RESPIRE OF THE HAMMERSMITH MURDERER.—The sentence of death passed upon John Thompson for the murder of George Frederick James, at the last sessions of the Central Criminal Court, has been respited. It is supposed that it will be commuted to penal servitude for life.

THE PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, December 28, 3679 births and 3130 deaths were registered in London and in 12 other large towns of the United Kingdom. The annual rate of mortality was 26 per 1000 persons living, being 24 per 1000 in London, 30 in Edinburgh, 23 in Dublin, 21 in Bristol, 29 in Birmingham, 32 in Liverpool, 32 in Manchester, 23 in Salford, 29 in Sheffield, 25 in Leeds, 26 in Hull, 27 in Newcastle-upon-Tyne, and 32 in Glasgow. In London the births of 837 boys and 814 girls, in all 1701 children, were registered in the week. In the corresponding weeks of 10 years 1857-66, the average number, corrected for increase of population, was 1918. The deaths registered in London during the week were 1433. It was the 52nd week of the year, and the average number of deaths for that week, corrected for increase of population, was 1595. The present return is therefore less, by 162, than the estimated number.

Provincial.

ABERDARE.—A fatal accident occurred on Friday afternoon at the Bwlfa Steam Colliery, in the Aberdare Valley, by which six persons were killed, and four others narrowly escaped suffocation. It appears that a wooden ventilation pipe took fire and thus destroyed the means by which the atmospheric current was kept in motion.

AYLESBURY.—The two workmen, Meehan and Connerly, from the Wolverton works, who had been apprehended on a charge of Fenianism, were again brought up for examination on Saturday, when the magistrates, after taking some further evidence in their private room, were unanimously of opinion that the evidence was not sufficient to justify them in committing the prisoners for trial. They were, therefore, discharged, and on their departure by rail were cheered by the people who had assembled at the station.

BARNESLEY.—About noon on Saturday one of the boilers of the steam engine mill belonging to the executors of the late Mr. G. Jackson, situated almost in the centre of this town, exploded, killing the engineer and injuring more or less about 30 other persons, as well as doing a great deal of damage to the property in the neighbourhood. The boiler itself was blown 60 or 70 yards, and fell on the roofs of two shops in the main street, carrying away in its progress the roof of a cottage and demolishing an inn. All the windows throughout the neighbourhood were broken.

COWES.—The chairman of the West Cowes Local Board of Health last week addressed a letter to General Grey, expressing the regret of the inhabitants that the necessity had arisen to take more than ordinary measures to insure the safety of the Queen, and stating that nothing would be more gratifying to them than to join in any act or demonstration, either as special constables or otherwise, which should be the means of evincing their determination to secure her Majesty's personal safety. To this letter, General Grey replied as follows:—

"Osborne, December 22, 1867.—Sir, I have had the honor of receiving and submitting to the Queen the letter written by you to the chairman of the Local Board of Health in the name of the inhabitants of West Cowes, expressing their regret that any necessity should have arisen for the adoption of extra precautions to insure her Majesty's safety while resident at Osborne, an offering of their services, either as special constables or in any other way that may best prove their loyalty to her Majesty's person and family. Her Majesty commands me to say that she is deeply touched by these loyal assurances on the part of her subjects at Cowes, and very grateful for them. She has herself never entertained the slightest apprehension of her personal safety, though she has thought it right to yield to the representations of her Government by giving her sanction to the precautionary measures which they thought it prudent to adopt. It will be for the Government to consider whether anything more is necessary than has been already done, and I have, therefore, by her Majesty's command, forwarded your letter to the Home Secretary, who will judge how far it may be desirable to take advantage of the offer of their services by the loyal inhabitants of Cowes.—I have the honour to be, &c., C. GREY."

DEVONPORT.—James Lisk, one of the labourers employed in the engine department of Keyham Dockyard, was discharged last week on account of his Fenian proclivities. On the previous Saturday he was employed with a gang of labourers in putting machinery on board the Lapwing gun-vessel. In the course of conversation with his fellow-workmen he expressed strong Fenian sentiments, and said that it would have given him great pleasure to have been one of the number engaged in the Clerkenwell outrage, and would join any party to blow up all the churches in England. These remarks caused great indignation among the other labourers, who called upon him to retract them, and on his refusing to do so they all declined to work with him while he held such views. The circumstances were reported to the foreman, when Lisk expressed similar sentiments. The case was then

referred to the admiral superintendent of the dockyard. Lisk is an Englishman of age, who formerly worked at the Saltash during the building of the vessel, previously came from Sleernea, a Catholic, and has been about 15 months in the factory.

DROYLESDEN.—On Saturday afternoon the body of Mary Hammer, who was killed by an Irishman named Flaherty, the woman, about 35 years of age, employed at Droylesden, wished to pay, as a token of respect, she declined to have anything to do with the account of his drunken habits. On Flaherty called at her lodging to tell her of going to Ireland. Shortly afterwards he felled her to the ground, and killed her with the poker, and when she ran she was felled her to the ground, and killed her with blows before any one could come to her aid. She was committed for trial on the charge of murder.

ETON.—On Tuesday, after more than a week's sitting, the meeting of the Provost and Fellows of Eton assembled for the purpose of electing a new Headmaster of the Rev. Dr. Balston, resigned. The candidates were the Rev. James John Hornby, of St. John's College, Oxford, and Second Master of the same College; the Rev. H. Snow, of the Rev. A. F. Birch, and the Rev. W. W. Chester, was declared to be elected.

FEVERSHAM. On Saturday morning, at 11, an explosion took place at Messrs. G. & Co.'s mills near this town. The cause was a press-house, although separated by iron traverses which were intended as a means to communication, were destroyed, and including the best in point of skill and strength on the works, were blown to atoms. The thickness were blown down, elm trees in the fields torn up by the roots, and driven into the water. The houses in Feversham, at a distance, were rocked and shaken as by a wind. Windows were broken, and persons there, at Canterbury, eight miles off, the noise of the explosion alarmed the whole city. A thousand people were gathered to witness the explosion. Fenianism had been current for some time in these mills, the proprietors, Messrs. G. & Co., have written to say that they have a suspicion of anything felonious in the matter, and though, like others engaged in the trade, they have had hints and warnings of mischief, endeavoured by extra precautions and wide against it, they hope that, as a coincidence of this explosion with the anxieties and fears will prove to be nothing more. The inquest was held on Monday, and the jury returned the following special verdict:—

"It is the opinion of the jury that the explosion has been caused by accident; and they believe that no precaution had been taken by the proprietors, the management of their factory, and the careful oversight, and supervision to do the work."

GATESHEAD.—On Friday, in accordance with a recommendation of the Gateshead magistracy of nitro-glycerine, found at Tyneside, was destroyed. The liquor, which was contained in a wicker-covered canister, was conveyed in order of the colliery viewer, and a lighted candle was placed in the bung. The spot chosen was from any human habitation. When the canister was fired, a light blue smoke rose into the air, and a report like the roar of artillery. The explosion took place in the main street, while the top of an adjoining house was clipped. Seven pounds of the composition were found on Friday stored in the pantry at Chester Moor colliery, and were destroyed at Walbridge Fell. The canister was placed on a peaty character, and was not appraised, and an explosion at once took place, and a report was distinctly heard at a distance of six miles, and the effect of the explosion was to form a hole in the earth to the depth of five feet, six and a half feet in diameter.

HAWARDEN.—Mr. Gladstone, who has been at Christmas at Hawarden Castle, met with an accident on Monday week while watching the cutting of a tree in the grounds. A splinter flew and struck one of the eyes. The pain was very severe, and the accident having caused contusion and abrasion of the cornea. For a time the state of the eye was for alarm to Mr. Gladstone and his friends, but his medical attendant, Dr. Moffat, of Hawarden, not without doubt as to the consequences, on Monday last the right hon. gentleman returned to London, and it is understood that the functions of the eye are now as usual, and that the eye is now as usual.

MERTHYR.—A clever capture of a Fenian was made on Christmas-day. Superintendent having received information that the Fenian had been administered to a man at Dowling, he went and found the man, William Casey, who had been administered to him by Patrick O'Haggerty, a timman, with whom he lodged. He was then absent, but the house was watched, and at night, about half-past 10, the superintendent went up to the window, and looking through the window, in the midst of whom was a Fenian song in the chorus of which the words were "In a few minutes Casey ceased singing, and with his hand under the table drew forth a heavy hammer, then said he stood there demant of every one, any "peeler" had the temerity to lay hands on him would brain him on the spot. At that moment the superintendent burst into the room, and

in Mexico, directing him to express the sympathies of Switzerland with the Mexican Republic.

PRUSSIA—The Prussian Chambers re-assembled on Tuesday. In the sitting of the Chamber of Deputies on Wednesday, Deputy Lasker's motion, securing to the members liberty of speech during debate, was carried by 174 to 144. Count Arnim-Boitzenburg, formerly Prussian Minister of State, died on Wednesday evening at Boitzenburg, after a lengthened illness. The result of the Government investigation into the state of the population in East Prussia, confirms the fact that distress and the diseases arising therefrom prevail there, but no cases of famine typhus have yet appeared.

AUSTRIA—The Austrian frigate *Novara*, with the remains of the late Emperor Maximilian on board, arrived off Corfu on Tuesday. Dr. Giskra, the new Minister of the Interior, has received the heads of departments and addressed to them a speech, in which he laid stress upon the necessity of a spirit of conformity with the Constitution and fidelity to its stipulations being introduced into the administration, stating that he expected and required that the officials should support the new system. Herr von Hasner, the Minister of Education, in his reception of the chief officials in his department, said that it was his intention to grapple with the solution of the public questions falling within his province in the spirit of the Constitution, and expected that all his subordinates would be ready to fulfil their duties in a similar spirit. The *Debatte* states that Prussia has associated herself with the recommendations lately addressed to the Porte by Austria, France, and England for the extension to other provinces of the concessions made to the Cretans, while Italy and Russia have held themselves aloof. The *Debatte* considers the fact of Prussia having joined in these recommendations an important occurrence. The *Presse* of Wednesday states that the relations at present existing between Austria and Italy, and between Austria and France, are of the most friendly nature.

RUSSIA—An Imperial ukase has been published annulling the ukase of the 26th of May, 1857, whereby those inhabitants of the Western Governments of the kingdom of Poland, belonging to the lower classes, who had been compromised in the late rebellion or exiled, were permitted to emigrate. It is said that there is a crisis at the Court of St. Petersburg with regard to the future policy of Russia in the Turkish question. One party, called the moderate party, headed by Prince Gortschakoff, is in favour of a sympathetic neutrality on behalf of the Christians in the East, while the party of action, headed by General Ignatieff, is said to be in favour of an open war on behalf of the Christian subjects of the Porte. The *Vienna Presse* of yesterday, however, says that during his recent stay in that capital General Ignatieff took the opportunity of expressing himself to several diplomatists in a peaceful sense as to the policy of Russia in the Eastern question.

ITALY—The new Cabinet was formed on Saturday as follows—

General Menabrea, President, and Minister of Foreign Affairs; Senator Cardona, Minister of the Interior; Count Cavour, Minister of Finance; General Bissolati, Minister of War; Deputy de Filippo, Minister of Justice; Signor Braglia, Minister of Public Instruction and Cult; Count Cantelli, Minister of Public Works; Admiral Robotti, Minister of Marine.

The three new Ministers—Cardona, De Filippo, and Ribotti—took the oath of allegiance to the King on Sunday evening. Count von Usedom, the Prussian Ambassador, had a special audience of the King on Sunday morning, when he presented his credentials as Ambassador of the North German Confederation. The Count, in addressing the King, said—

"The King of Prussia believed that he was acting agreeably to his Majesty's wishes in following the same course with Italy as with the other great Powers in this matter. His Prussian Majesty trusted that King Victor Emmanuel would extend to the North German Confederation the same good will and friendly relations which the King of Prussia had always cultivated with Italy."

King Victor Emmanuel, in reply, expressed his satisfaction at the cordial sentiments conveyed by Count von Usedom, and declared his wish to continue on the same friendly footing with the North German Confederation as previously existed between Italy and Prussia. Count von Hompesch, the Bavarian Minister, afterwards presented his letters of recall, having been appointed Bavarian Minister to London. The Minister of War has issued orders to send to their homes on the 15th inst. all the soldiers of the class of 1841, called out shortly after the accession of General Menabrea to office. The Committee on the Budget met on Wednesday. It was resolved that the discussion on the Budget should be placed first on the order of the day upon the re-assembly of Parliament. A splendid banquet was given at Naples on the 2d inst. in honour of Signor Rattazzi. Several senators, many deputies, magistrates, distinguished citizens, and a few representatives of the Italian and English Press were present. Speeches were delivered by Senator Adrian Ombriani, Signor Rattazzi and others. Toasts were proposed in honour of the King, of Signor Rattazzi, of Piedmont, and of Naples respectively. The trial of the 62 Catholics of Barletta, for their outrages on the Protestants, has just been terminated before the Court of Assize of Bari. 24 were acquitted, 12 condemned to 18 years in irons, among whom were the Canon Postiglione and the Capuchin Father Vito Marie, 10 to 16 years in irons, and the rest to minor punishments. The eruption of Mount Vesuvius on Friday assumed alarming proportions. An immense current of lava overflowed the central cone, and skirting the hill on the west and north-west, descended towards the valley of Cercola. On Saturday the lava, following the same direction as during the eruptions of 1858, 1859, 1860, separated into two branches. The

northern branch passed close to the Observatory, approaching Resina; the southern branch took the direction of Torre del Greco. Great panic prevails in the villages on the slopes of the mountain.

PAPAL STATES—Two hundred fresh recruits for the *Autibes Legion* arrived at Rome on Tuesday, thus raising its strength to 1835 men. The *Papal States* number above 5000. The official journal of Tuesday publishes the retraction of Cardinal Andrea, dated the 26th December. The Cardinal asks pardon for having gone to Naples, notwithstanding the prohibition of the Pope; deplors the scandal he has caused, and his connexion with the *Examinatore* newspaper at Florence, the heretical doctrines of which he disapproves. He adheres to the address of the bishops assembled at Rome in June, 1867; withdraws his protest against the Pontifical brief of the 12th June, 1865, and asks pardon of the Pope and all those whom he has offended. In spite of this retraction the Cardinal has not yet been restored to favour with the Pope, nor has he been permitted to resume his benefices.

THE PRINCIPALITIES—The Government has obtained a great majority at the elections, 82 deputies being supporters of the Ministry, and 57 of the Opposition.

TURKEY—It is reported at Constantinople that although Russia has no intention of immediately attacking Turkey, a Christian rising will shortly take place under her auspices throughout the Ottoman empire. The Turkish Ambassador at Vienna, Haider Effendi, in compliance with an order from Constantinople, has left for London, on a mission connected with the present relations of the Russian and Turkish Cabinets. Her Majesty's ship *Terrible* has passed the Dardanelles, carrying two Armstrong guns as a present to the Sultan.

CANDIA—Letters from Canea state that the Turkish admiral has surprised a Russian corvette landing provisions at Arnino, and violating the blockade. The commander of the corvette proposed to suspend the landing till the decision of the Russian consul could be obtained, to which the Turkish admiral assented.

CHINA—The China mail brings details of the great fire at Hong Kong. It occurred principally among the Chinese Hong. Several "godowns" were burnt. The total loss is estimated at 800,000 dollars, of which only 100,000 dollars' worth was insured.

JAPAN—A political revolution has taken place in Japan. The Tycoon has resigned. It is supposed that the foreign relations of Japan will not be prejudiced by the change. An adjournment of the opening of the new ports for a few months is, however, considered probable. A line of steamers has been started by the Japanese, between Yokohama and Osaka. One of the Japanese *Daimios* is erecting at Yokohama a steam power-loom factory, for the manufacture of cotton piece goods. One hundred looms are to be started as a commencement. Six experienced Lancashire operatives are to superintend operations, and to train the Japanese. It is expected that the factory will commence business within a couple of months.

MALTA—A great boon has been conferred by Lord Carence Paget, the commander-in-chief, on the seamen of British men-of-war in the Mediterranean. His lordship having obtained the requisite authority from the Lords of the Admiralty, has organised a canteen for the use of English seamen, which was opened on New Year's Day, on Coradino Hill, a site admirably adapted for that purpose. The establishment is provided with rooms for reading and refreshment, where good liquors and refreshments may be had at a moderate cost, under certain regulations which provide for the comfort and convenience of the sailor, and at the same time secure the preservation of good order.

ABYSSINIA—The following telegram was received in London on Wednesday night from Senafe—

"The natives are very friendly towards us, and supplies are arriving. The troops are healthy. Letters have been received from the captives at Magdala, dated November 11, stating that they were then all well. The King of Sennaar and Waag shan Gidrya are reported to be near Magdala. There is still in an embarrassed position."

The establishment of a line of telegraph between Kosseir and Annesley Bay is contemplated. Advice received at Aden from Massowah state that the Egyptians appear determined to send a mission to King Theodore, notwithstanding the remonstrances of the British.

AUSTRALIA—His Royal Highness the Duke of Edinburgh, who arrived at Melbourne on the 23d November, has met with a most enthusiastic reception. The entire city was decorated, and upon the entrance of the Royal procession the road was strewn with flowers. Eleven thousand children sang the National Anthem. At Adelaide one thousand colonists were presented to his Royal Highness at a levee held in that city. The red rust has appeared in the growing wheat crops. A short harvest and much damage are anticipated.

NEW ZEALAND—Mrs Bunbury, a lady who arrived from Great Britain in the *William Davie*, has presented to the Acclimatisation Society a collection of skylarks, thrushes, blackbirds, starlings, goldfinches, and hawks, all of which were landed in excellent condition. Captain Logan also brought out 70 song birds, but only 10 or 12 survived.

UNITED STATES—President Johnson, after a Cabinet consultation, has determined to remove General Pope from the command of the Third Military District. General Canby has ordered the South Carolina Convention to assemble on the 24th of January. General Ord has sent General Gillem to Washington to represent to the authorities the starving and discontented condition of the freedmen in Mississippi, and the necessity for some national measure to feed them and avert a war of races. General Ord has

ordered the arrest as vagrants of all freedmen refusing to work. It is reported that around the negroes are committing excesses in the interior of Carolina. It is reported that disturbances occurred at Christmas at Greenville, Demopolis, and in Alabama, and troops were sent to them. No details have as yet been received from Virginia are committing depredations and robbery property of the whites, who are arming themselves. Great destitution is said to prevail in the States. The correspondents of several papers state that 3,000,000 of persons, mostly from Mississippi had occurred in Louisiana, and Hancock had asked permission to employ starving negroes to repair the levees at national expense. Mr Jefferson Davis wife have arrived at Havana, en route for Orleans. The Secretary of the Treasury his usual monthly statement of the Treasury and the cash in the Treasury of the United States. The total amount of debt on the 1st of December last, showing an increase of 3,000,000 dollars. The cash in the Treasury same date was 134,000,000 dollars, against 2 dollars at the corresponding period last year, being a decrease of 4,000,000 dollars. The Senate passed a Bill exempting from tax the cotton crop in 1868, and abolishing the importation of foreign cotton grown during the year ending April, 1869. The Military Commission has presented a report, recommending the Senate should not concur in the removal of the Secretary of War. The House of Representatives has passed a resolution authorising of 54 surplus naval ironclads. The Ohio and Western-Virginia Democratic State Conventions passed resolutions in favour of the nomination of Pendleton for the Presidency, and the ratification of the Five-Twenty United States' Bonds.

CANADA—The Canadian Parliament has adjourned to March 12. The authorities have apprehended a Fenian rising at Christmas. Troops were held in readiness to act in case of a revolt had occurred at Quebec, and Santa Anna, who was expected soon to arrive at Havana, had been proclaimed dictator by the hands of the insurgents, and was blockading the harbours of Juarez. It is reported that the Fenians intending to return to Mexico.

MEXICO—Juarez was to be inaugurated on the 1st of December. Advice from Sisal to the effect that a revolt had occurred at Yucatan, and Santa Anna, who was expected soon to arrive at Havana, had been proclaimed dictator by the hands of the insurgents, and was blockading the harbours of Juarez. It is reported that the Fenians intending to return to Mexico.

THE BRAZILS—Advice from the seat of the belligerents in Paraguay were that the president Lopez was disarming his order allies were strengthening their cordons round the blockade was perfect. Cholera was prevalent. The mission of Columbus to the Brazils has been postponed. Verela had retired where he was disarmed by the Bolivian General Arredondo was in revolt at Rio Grande. Fire has destroyed the workings of the Santa Rey mines. Eighteen lives were lost supposed to have been the work of an insurrection. The Princess Leopoldine gave birth to a son on the 6th inst.

City Intelligence.

MONEY MARKET, FRIDAY—British Consols closed at 92½ to 92½ both for Account; New and Reduced Three per Cent. at 92½; India Five per Cent. at 111 to 112; Stock, 240 to 242; Exchequer Bills, 2½ to 2½; FOREIGN. Spanish, 31½ to 31½; Mexican, 12 to 12½; Italian, 41½ to 41½; Greek, 12 to 12½; Brazilian 1865, 75 to 76. United States Bonds, 71½ to 71½; Erie Railway, 49 to 49 88 to 89.

Metropolis and its Environs.

REPORTED CAPTURE OF DEASEY—It is reported on Monday that there was reason to believe that Captain Deasey, the Fenian chief, whom that of Colonel Kelly, from the police, had captured on the 18th of September, had fallen into the hands of the police. It appears that a party of the attack on the police-van the person supposed to be Deasey engaged himself as a seaman on board an alteration with the captain, who had been wholly ignorant of the duties of a seaman, and being then in a vessel at Ladbarn, and being then in a vessel applied to the English Consul at that place, procured him a passage to London, under the name of Oriana, as a distressed seaman, under the name of Lionel Granville. The Oriana, after leaving Gibraltar, the last port she touched at prior to her arrival in London. Shortly after her arrival was noticed by the crew that the stranger was very peculiar in the case of one who reported himself to be an able seaman, and who was on board the vessel. The circumstances stated, being curious, the crew then became suspicious, and resolved to inquire into the matter. When they found that Lionel Granville was more than a landsman. As soon as this was ascertained Granville's manner changed, and he assumed a bravado, and became communicative. He spoke of piracy by sea, and of deeds of daring on the American continent. On being

facture in Leeds everything is stiffened into tradition and routine; old-fashioned forms are adhered to, and even when an enterprising wool-spinner introduces improved machinery into his factory he finds that his "hands" will not or cannot work it to the utmost advantage. "One result is that the spinners and manufacturers of Belgium are exporting woollen yarns and cloths valued at nearly two millions annually to this country, produced from wools, a great portion of which are first imported from our colonies into London and shipped thence to Antwerp." At Bradford the woollen manufacture is carried on with the newest appliances, by energetic masters and unprejudiced workpeople, and is consequently a most thriving branch of industry, which has nothing to fear from continental competition. Nottingham has suffered quite as much as Leeds; but in this case the chief cause has been the differences between masters and workmen. The trade here, in everything except cotton lace and net, is rapidly being transferred to France, and unemployed English lace machines of 100% to 800% in value have been bought by manufacturers from Calais, and are now in full operation in that town. In the hosiery and carpet trades of the Nottingham district, and in the steam coal trade of the north of England, "Boards of Conciliation" for the settlement of differences between masters and men have been established, and are working with the happiest effects, so that the hosiers of Nottingham compete successfully with the extremely low-paid labour of Saxony. In lace curtains there has been no decline at Nottingham; in fact, quite the reverse. The success in this branch is due to the excellent local school of art. Mr. Samuelson saw beautiful designs by pupils of the school, which were being executed in one of the factories, and he was informed that the English patterns in this branch are preferred to those of France. The thriving lace factories of St. Pierre les Calais contrast most favourably with the decaying establishments of Nottingham. One of the most successful Calais manufacturers said to Mr. Samuelson that the Nottingham lace-makers had relied too much on their acquired position, and had ceased to give that close attention to details without which the lace manufacture cannot be carried on. The manufacture of iron of the highest class, fit for the construction of British engines, is still almost a monopoly in England, but in France it can be obtained from a great variety of workshops, and at prices considerably below ours. "For instance," says Mr. Samuelson, "I found that the iron tires or hoops for the wheels of locomotive engines made at the great Yorkshire works ranged in price from 11*l.* 5*s.* to 19*l.* 16*s.*, while iron tires of equal quality and of corresponding weight and size, but made in France, cost only from 6*l.* 3*s.* to 13*l.* 4*s.*; and I have good reason for stating that the routine and prejudices of our railway superintendents alone prevent the latter from being more extensively introduced than they have yet been on our railways." At the great ironworks of Creuzot the coal and ores are raised on the spot, manufactured into iron, and this again into the most powerful and elaborate machinery. The works cover 300 acres, the workshops and forges 50 acres; the mines yield annually 250,000 tons of coal, and 300,000 tons of iron ore. The ironworks produce more than 100,000 tons of iron, machinery, locomotive, and marine iron bridges and viaducts; and even iron gunboats and river steamers, of an average yearly value of 600,000*l.*; 9950 workpeople are employed at the works of Creuzot, and receive in wages the sum, in all, of 370,000*l.* a year. The steam engines worked are equal to a duty of 10,000-horse power. The machinery in use is made after the best English designs; but no appliances for producing perfect work, or for economising the cost of production, have been omitted, and the great forge is "probably unequalled in the world." Excellent schools—both primary and special or technical—have been established in connection with the works, and, by means of these, unfailing supplies of skilled, scientifically-trained workmen are obtained. Mr. Samuelson went over the works of the Terre Noire Company, and saw the process of manufacturing Bessemer steel from the iron—a simplification of the Bessemer process, as compared with the practice in England—which involves such economy, that the Terre Noire Company are supplying one of the great French railway companies with 20,000 tons of steel rails at a price below their prime cost in England, in spite of comparatively dear fuel and ores. At these works no precaution is omitted that success may be insured, and measurement and qualities are looked upon with as much anxiety as if the great iron works was a chemical laboratory. "The most careful chemical daily analysis of all the raw material and products is one of the conditions of the success of Terre Noire in their manufacture. At the steel works of Firminy, near St. Etienne, another modification of the making of steel is followed, and steel rails are manufactured at an extraordinarily cheap rate. The ingots run from the furnace are simply rolled, and the rails produced are of so excellent a quality that the waste ends are used in the works for turning tools and chisels, without being re-melted or subjected to any other process except that of "tilting" or hammering. The works of Terre Noire and Firminy are unsurpassed in the world for economy in the production of ordinary steel. But the most marvellous steel works in the world are those of Krupp and Essen in the Wupper Valley, Westphalia. They consume 800 or 1000 tons of coal per day, raised from pits within the walls of the works or immediately adjoining, the cost of the coals being less than 5*s.* per ton. "The machinery of every department is as perfect as the magnificent products of the works would lead one to expect. The range of crucible furnaces is a sight of its kind unparalleled in the world, except, perhaps, at the neighbouring works of Bockum. At the time of Mr. Samuelson's visit, a steel 1000-pounder breech-

loading gun was nearly completed for Russia, and several 200 and 300 steel breech-loading guns, hooped and rifled for the German navy. Thousands of steel breech-loading guns were in course of manufacture for all nations." Besides these, Mr. Samuelson noted a number of cast-steel cranked axles—one of them of enormous size, for a transatlantic steamer then being built at Greenock by the Messrs. Caird. Eight thousand men are employed in these works, and 60,000 tons of steel—more than twice the entire export of steel from the United Kingdom—are produced annually. While the Continental workmen are better educated than the workmen of Britain, they are also apparently more peaceable in disposition. "Nowhere in France are the hindrances felt which the abuse of Trades' Unions is placing in the way of several trades in England; and this for the simple reason that Unions such as we have here do not exist. There are no Trades' Unions in the north of Germany." The workmen save their wages, buy a piece of land, which they and their families cultivate. Thus they become attached to localities, and are interested supremely in the preservation of amicable relations between them and their employers. Strikes do not enter into their heads, though it is undoubtedly true that, while as a rule they are better educated than British workmen, they work longer hours for considerably less pay.

THE MEMORIAL TO LORD PALMERSTON.—The committee of subscribers for the erection of a statue of Lord Palmerston in Palace Yard have commissioned Mr. Thomas Woolner to execute the work. The site fixed upon is at the corner of the new enclosure in Palace Yard, immediately opposite the Peel monument. The work is to be a single colossal figure, 8 feet high.

THE CORONERSHIP FOR WEST MIDDLESEX.—There are already four candidates for this office, vacant by the death of Mr. Bird. Mr. F. Hand, the deputy-coroner of the division; Mr. John F. Isaacson, the Conservative agent for the last Westminster election; Dr. Hardwick, the present deputy-coroner of the West Central Division; and Dr. Holt Dunn.

REBUILDING OF HER MAJESTY'S THEATRE.—The reconstruction of Her Majesty's Theatre has already commenced on a scale of grandeur which is intended to eclipse every other opera-house in Europe. The estimated cost of the new building is very nearly 250,000*l.* The houses fronting Pall Mall, the whole of the avenue formed by the Opera Arcade in the west, and the site, in Charles Street, of the United Hotel and Club to the north will, according to this design, be absorbed in the new opera-house. So complete are the plans and contracts under discussion that, according to the arrangements promised, the new theatre will be finished and ready for Mr. Mapleson's occupancy by Lady-day, 1869.

ANTI-RITUALISTIC DISTURBANCES.—On Saturday Mr. Charles Pembroke Langston, resident at Dalston, was summoned before the Lord Mayor for "violent and indecent behaviour" in the parish church of St. Ethelburga, Bishopsgate, during Divine service, on the 29th of December, by which he "molested, disturbed, and vexed" the Rev. J. M. Rodwell, the rector, and the preacher on that occasion. The case was proved by the testimony of the rector, who said that the behaviour of the accused during the reading of the communion service and the sermon was grossly irreverent and disgusting. Evidence was also given of similar conduct at St. Matthias Church, Stoke Newington, on the part of the defendant, who appeared to have adopted this mode of showing his dislike to ritualistic development. The Lord Mayor sentenced the accused to a month's imprisonment, and to pay the costs of complainant. Eventually, on being appealed to for the sake of defendant's wife and children, the appeal being warmly seconded by the counsel for the rector, the Lord Mayor reduced the sentence to a fine of 5*l.* and 5*s.* costs. The fine was paid.

ROMAN CATHOLICISM IN GREAT BRITAIN.—The "Catholic Directory" for 1868, just issued *permissu superiorum*, gives some details in reference to the present position of the Roman Catholic Church in Great Britain. There appears to be a considerable increase in the Catholic clergy, churches, chapels, convents, and monasteries since last year. The total number of Catholic bishops is the same—namely, one archbishop and 12 bishops (besides three retired bishops) in England, and four bishops in Scotland. The number of priests in Great Britain amounts to 1639, against 1608 last year; the number of churches and chapels is 1283, against 1207 when the last "Directory" was published. The convents of women are now 227 in number, whereas last year they were 220, and the monasteries number 67 against 63 last year. Total increase, 31 priests, 76 churches and chapels, seven convents of women, and four monasteries of men. Of the 76 churches and chapels, which are more this year than last, about a dozen are private chapels of convents and of various individuals. Of the four new monasteries, three are merely houses in which two or three of the regular clergy dwell together for missionary work; the fourth is the new Dominican priory at Haverstock Hill. In the convents, or religious houses of women, the increase has been very great during the last few years, but it has been altogether, or with very few exceptions, among the non-cloistered or active orders, such as Sisters of Charity, Sisters of Mercy, and the like. The cloistered orders hardly seem to increase at all, or very slightly, in this country. The number of colleges and large preparatory schools is 21. Of the 227 convents upwards of 200 are for the education of girls, either rich, poor, or middle class.

STORM WARNINGS.—It is understood that the Board of Trade and the meteorological committee appointed by the Royal Society at the request of the Government have decided on issuing cautionary signals to the ten following places.—Hayle, Grimsby, More-

cambe, Fleetwood, Aberystwith, Carnarvon, Liverpool, Goole, and Leith. These places are to be in applications to receive telegraphic signals respecting the weather, and have undertaken to have also applied whose applications are under consideration, and it is considered probable that applications will soon follow.

THE THAMES EMBANKMENT AND METROPOLITAN RAILWAY.—At the meeting of the Metropolitan Board of Works on Friday, Mr. Baxter, chief engineer, presented his report on the Thames Embankment. The report stated that between Westminster and Waterloo the portions thereof had already been removed on the face of the work, while between Waterloo and the Temple Gardens, a length of 1000 feet of parapet was complete, and there remained to be formed to complete the entire length a wall comprised in the contract. The report called the attention of the Board to a letter from Mr. Baxter, solicitor to the Metropolitan Board of Works, respecting the delay which had occurred in the construction of the Thames Embankment between the east end of the Temple Gardens and Cannon Street Bridge. In that letter Mr. Baxter stated that the fault did not rest with the company but with that Board, and that the Embankment works would take a longer time to complete, while those of the railway would be executed from end to end in six months. Mr. Baxter made an erroneous statement, for there was no delay on the railway company should not at once be taken into their works. Mr. Bazalgette, the engineer, made this statement, and said that there was no power ever to prevent the railway company from proceeding with their railway from Cannon Street Bridge to Blackfriars Bridge, and they could do so conveniently as at the present time. The Embankment to be more advanced than the railway would have to be done by the railway company now was the proper time when the railway works could go on without any injury to the Embankment. As to the work of making the Westminister Bridge to Cannon Street, Mr. Baxter believed that the shortest time that it would be 18 months, and if it was done in that time it would progress more rapidly than any other similar description. It was ultimately decided that the committee should publish their report on the whole facts of the case.

PURIFICATION OF THE THAMES.—The Metropolitan Board of Works are able to report that the requisite 13 months' notice for the removal of the sewers above Staines which emptied themselves into the river, or into any tributary stream, has been given. The notice was given 13 miles of the river, and at a later period of 10 miles they gave like notice with regard to the river above London. They have also served notice on the proprietors of paper mills, requiring the removal of the flow of sewage or other offensive matter into the water supply, the Conservators employing the water to pass up and down the river, for the purpose of removing all dead animals and other nuisances. The lock-keepers have also been required to remove all such nuisances.

SEWAGE IN THE THAMES.—Some reports have been published as a Parliamentary Commission to the large shoals forming in the Thames in the neighbourhood of the main drainage outfall at Cannon Creek and Crossness. The engineer of the Metropolitan Board of Works reports that the character of the water of the river shows clearly enough whence it has come, and that it is in a state of active putrefaction. He describes it as consisting of a mixture of sewage matter, with the remains of myriads of animalcules, and a large quantity of carbonate of lime in a partly crystalline state, together with the siliceous clay of the lower water of the Thames. He found the very large proportion of 14.8 per cent. of organic matter in the well dried mud, and states that "by undergoing putrefactive changes, this mud, which is accumulating in such quantities at the sewer outfalls, may be a cause of alarm, especially as it there meets with sulphates of which may, by their chemical action, occasion the evolution of a large quantity of much sulphuretted hydrogen, and set up a very offensive change which is characterized by the action of sewage upon sea water." Near Cannon Creek outfall the greatest accumulation is found in the stream, showing that the sewage is not so managed as to carry it down the stream. The survey made in June showed that the southern outfall a space of more than 100 acres of river covered by a deposit varying in depth from 7 feet; the deposit has been traced for 10 miles, and might be followed further down the river in decreasing amount. The surveyor of the Metropolitan Board of Works does not advise that accumulations are due to their works, and in a letter of the 11th of November, 1867, the Board of Works requested the Metropolitan Board of Works to cast all the sewage into the lower part of the river, and that the Metropolitan Board of Works should be required to take it out again if it is too much for the river.

THE FINSBURY ESTATE.—This estate, the rental of about 55,000*l.* per annum, passed on the 10th day to the Ecclesiastical Commissioners, and has previously been in the receipt of one of the Commissioners, the death of the late Bishop of Carlisle, who was the same in right of the Finsbury prebendary of Paul's Cathedral. The estate had been in the

Corporation of the City of London for upwards of 300 years, under successive leases from the prebendaries for time being, granted according to ecclesiastical custom, the lease now expired, which was granted in 1767, under an arrangement enabling the Corporation to grant new leases with the sanction of Parliament, for 99 years. As the time for the renewal of the lease was approaching to a large sum, one-sixth of the rents was reserved for the future prebendaries, and was given to Dr. Wilson, the prebendary of 1768, for his own share in the renewal fine. This fine was afterwards purchased by Dr. Wilson by the Corporation, who raised the purchase-money by bonds, which he repaid on Christmas day. This is the estate which during the last few years has had so much attention directed to it. The representatives of the locality have exerted in their endeavours to obtain a recognition of the principle that the districts from whence the rents have proceeded should largely benefit on a concession by the Commissioners, and a deputa- tion waited upon Mr. Gladstone, when Chancellor of the Exchequer, to ask his influence in furtherance of it. Other parties have also at times called atten- tion to the matter on several special occasions. The Bishop of London referred to it several times in his House of Lords. He described the rental as likely to be "fabulous in amount," and expressed his opinion that it would afford a pretext so dangerous to the funds, for an increased staff to manage it. The Corporation every description of house property, on the professional residence in Finsbury Square to the smallest tenements in the courts and alleys in St. Martin's Lane. The late Bishop Percy attended once every year at the Chamberlain's office to receive his one- fourth share of the rents, and spent several hours in carefully examining the accounts and vouchers show- ing the actual rents and disbursements.

PROPOSED NEW STREET.—It is proposed to make a new street from the New Kent Road, across the Dover Road, Kent Street, through St. George's New Town, to the Tower Street. This will break up a colony of the most desperate thieves in Southwark at a cost of nearly £100,000, to be borne by the parishes of St. George the Martyr, St. Mary Bermondsey, and St. Mary Abchurch.

NEW FIELDS BURIAL GROUND.—On New Year's Day Bunhill Fields Burial Ground fell into the possession of the Corporation by an Act of last year. The Corporation will now proceed to plan the ground, lay out walks, and preserve the tomb- stones, after which the ground will be thrown open to the public under proper regulations.

NOTH KENSINGTON MUSEUM.—The widow of the late Dr. Woolaston has presented to the Art Library of the Museum a valuable series of drawings of Greek and Roman inscriptions to be found in Spain, Prussia, Upper Prussia, Hibernia, Switzerland, Rome, Italy, Germany, Constantine, Carthage, and also in various parts of England, which had been executed by Dr. Woolaston.

ALMON FOR NEW ZEALAND.—At the request of the New Zealand Government, the Board of Conserva- tion of the Severn Fishery District recently gave per- mission to the agents of that Government to take from the river or its tributaries salmon ova for artificial propagation and transmission to New Zealand, with a view, if possible, of stocking the rivers in that country with salmon, which is at present unknown there. The operation of taking the ova was performed on Friday and Saturday last at Bransford and Powick on the river Teme, a tributary of the Severn, within two miles of Worcester. An abundant supply of spawning fish was found, and at one time there were more than twenty salmon in the net together. It was ascertained, however, that the greater portion of them had been duly spawned. The few unspawned fish were skil- fully operated upon, and then returned to the river. Thousands of spawn were secured and impreg- nated with milt from the male fish. Ova have also been obtained from Scotland and Ireland, and to-day a ship Celestial Queen will sail from London with 10,000 ova from British salmon for her destination.

UNJUST WEIGHTS AND MEASURES.—During the year 740 South London shopkeepers were fined for using or having in their possession unjust weights, or measures. The black list is made up as follows:—100 licensed victuallers and beer-retailers, 100 bakers, 100 chandlers, 83 butchers, 76 greengrocers, 100 coal-dealers, 100 grocers and cheesemongers, 11 oil- merchants, 4 confectioners, 10 fishmongers and poulterers, 100 druggists, 100 housekeepers, 5 corn chandlers, 13 marine- dealers, 1 furrier, 2 carriers, 2 glue and size makers, 2 ironmongers, 3 ham and beef dealers, 21 leather merchants, 2 iron merchants, 1 flock dealer, 4 glass merchants, 1 coal merchant, 1 soapmaker, and 1 general merchant. The total amount in fines was 10,707 15s. 6d. In the year 1846 there were 808 shopkeepers fined, which shows a decrease for the past year of 68.

PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, January 3, 4722 births and 3468 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 28 per 1000 persons living, being 27 in London, 23 in Edinburgh, 32 in Dublin, 1000 in Bristol, 90 in Birmingham, 22 in Liverpool, in Manchester 33 in Salford, 22 in Sheffield, 27 in Bradford, 27 in Leeds, 27 in Hull, 29 in Newcastle-upon-Tyne, and 27 in Glasgow. The annual rate in Vienna was 30 per 1000 during the week ending the 28th ult. In London the births numbered 4190 boys and 1124 girls, in all 2318 children, were registered in the week. In the corresponding weeks of the years 1858-67, the average number, corrected for increase of population, was 2187. The deaths registered in London during the week were 1624. It was the first week of the year, and the average

number of deaths for that week, corrected for increase of population, was 1648. The present return is there- fore less, by 24, than the estimated number.

Provincial.

BARNSEY.—On Friday and Saturday two of the men implicated in the charge of murdering George Thirkell, head gamekeeper to Lord Wharncliffe, on the 11th ult., were taken into custody. Joseph English, who is said to be the man who fired the fatal shot, and who is a joiner, was apprehended in the neighbour- hood of Staveley on Friday evening. Joseph Beardshaw, or Beecher, a furniture-man, was appre- hended on the same night in the neighbourhood of Bradford. He and the deceased were well known to each other, and had met on several occasions in the characters of poacher and keeper. About two years ago Beardshaw, with others, was tried at the Leeds Assizes for night poaching, when the judge made some very strong remarks on the undue severity used by the keepers, and let the men off, in consequence, with a very short imprisonment. In connection with the same affair the deceased gamekeeper was charged with assaulting Beardshaw's father, whose house he searched for the same night for poaching implements. This case was tried in the County Court at Barnsey, when a verdict with 30/- damages was given against him. A third man, called Matthew Cutts, has also been taken into custody, and the police are in search of a fourth, called Joseph Gregory, a table fork maker. The three prisoners in custody were brought before the magistrates on Monday, and remanded for a week. Lord Wharncliffe has made ample provision for the family of the deceased keeper.

BOSTON.—An important anti-Fenian meeting was held in this town on Sunday evening. One thousand Irishmen and Roman Catholics were present, and resolutions were unanimously passed strongly denouncing all the recent Fenian outrages, and expressing the utmost loyalty to the Throne.

CHICHESTER.—Viscount Sydney, M.P., the Lord-Lieutenant of Kent, and several magistrates and other gentlemen, have forwarded the following memorial to the Archbishop of Canterbury:—

"We whose names are subscribed, being parishioners and owners of property in this diocese, to your diocese feel it to be our duty to bring under your notice the extent to which the teaching of doctrine of a Roman character and dogmas in the Ritual have been carried on in our parish of St. Andrew, and to appeal to your Grace to exercise, if it be possible, your episcopal authority to restore the services of our Church and the teaching of theology of this parish to that scriptural standard which is maintained in the Articles and Liturgy. The Ritualism to which we refer arises in our parish, from the views of our rector the Rev. F. H. Murray with regard to the Eucharist, the presence and the manner of the Sacrament which Mr. Murray has endeavoured to be in- dicated from a letter which was published in this diocese in 1856, and which was reprinted in the diocesan paper, and which has since been distributed in the parish, and recently distributed to young persons who received confirma- tion at your Grace's hands in a service held in November last, copies of which are transmitted herewith. In this letter and manual we submit to your Grace there is abundant evidence of doctrinal sentiments at variance with the standards of our Church. The Sacrament of the Lord's Supper is thereupon described as 'a sacrifice offered up to God the Father by the minister. The Lord's table is represented as an altar on which a sacrifice is offered, and the priest is assumed to have the office of a sacrificing priest. The doctrine of the real presence of the body and blood of Christ in the elements of bread and wine is also asserted, and the whole spirit and tone of the book and letter are in our judgment in close affinity to the doctrines of the Church of Rome, and calculated to undermine those principles for which the great Reformers of the Church shed their blood. Your Grace will, we believe, feel with us the great hardship of either having to listen to such teaching or to withdraw from our parish church. The latter course has been forced on this parish, who feel that our Reformed Church is a witness and bulwark for pure Scriptural truth against the errors of the Church of Rome, and who cannot consent to do just themselves and their families to teaching so injurious. We feel somewhat way that differences of opinion on matters of such vital importance tend to dishonour and a want of cooperation in those matters which affect the wellbeing of the parish, and many of those who desire to cooperate with their clergy on are prohibited from acting with our rector, and are compelled to withdraw from our various institutions, educational and otherwise, because we cannot lend our aid to the teaching or advancing of such principles as those referred to in our Protestant Church. We place these facts before your Grace, hoping that some means may be devised to relieve this parish from the grievous evils which at present prevail in it, and restore to us the invaluable blessings of our Reformed Church, both as to worship and instruction, of which we are now deprived.

The Archbishop of Canterbury, in acknowledging the address, says he has received a memorial from 24 other influential gentlemen in the parish, stating that Mr. Murray does not hold doctrines consistent with the teaching of the Church of England, and speaking in grateful terms of the privileges they enjoy through his ministry. He has, therefore, he says, no reason to think that the bulk of the congregation are dissatisfied with the existing order of the services. With regard to the Eucharistic Manual given by Mr. Murray to his parishioners, his Grace considers that it does not reflect the doctrines of the Church of England, and very strongly objects to its circulation in his diocese. His Grace refers to the doctrinal points mentioned by the memorialists, on which he thus remains:

"That the doctrine of the Real Presence in one way or another is the doctrine of the Church of England it would be impossible to deny. For her language clearly attests this. But it is a spiritual presence—a presence to be realised by faith, not a corporal presence of Christ's natural body and blood, Christ's body being eaten at the Holy Supper only after a heavenly and spiritual manner. It is, nevertheless, a real presence in the sense of its being effectual for all those intents and purposes for which Christ's body was broken, and his blood shed, just as the sun, though its bodily presence be in the heavens, is present on earth effectual for all the purposes of light and heat for which it was created. But in order to guard against any suppositions which might be drawn from the words which are used in the Eucharistic prayer, our Church warns us that 'no adoration should be offered either unto the

elements used, and wine or to any corporal presence of Christ's natural body or blood. And as to any local presence, except in the heart of the believer, she pronounces nothing. It became, therefore, necessary to avoid in his teaching any expressions which gave ground for the teachings and usage of the Church of England, and to regard of that nature which would avoid any imputation of idolatry or superstition of any formulae."

DAWLEY.—The report on Mr. Benjamin Zisman, the Barnetshire agricultural trader, who was murdered recently in Shropshire, on Wednesday night, when the jury returned a verdict of Wilful Murder against some person or persons unknown, at the same time censuring the Government for not offering a reward after the representations made at the last adjournment.

DOVER.—Lieut. Colonel Childs, commanding the Royal Artillery stationed at Dover Castle, was killed on Christmas night by falling into the area below the barracks while passing from the officers' mess room to his quarters. The gaslights had been extinguished for the night and the railing in front of the barrack was too low to be an effectual protection on a dark night. The jury returned a verdict of Accidental Death.

ERON.—Great alterations and improvements are being effected at the Cuckoo Weir bathing place of the Etonians near Long Bridge and Upper Hope. The ground and the stream have been excavated to a great width, and on the one side the stream, and with the earth thus obtained by embankment is being thrown up, which will support the battens from the passers-by on the footpath, and in the neighbouring lane piles and planking will be placed along the water's edge to prevent the action of the current on the land in flood time. The College watermen have been employed in executing this work.

FARNHAM.—A testimonial is about to be presented to Mr. S. Nicholson, chairman of the Farnham board of guardians, with an address to the members of the body, expressing the entire confidence of the rate- payers, their satisfaction at the manner in which the guardians have performed the duties of their office, and their extreme regret that they should have been sub- jected to the serious charges recently made against them.

HARTLEPOOL.—On Friday the screw-steamer *Gitana* arrived in this port from Hamburg, having among her passengers several Americans, who had come from New York, via Hamburg. It was currently reported that these Americans had come over to take part in the Fenian movement in England, and it appeared that they had conducted themselves disgracefully whilst on the passage across. As soon as the steamer reached West Hartlepool quay they all sprang ashore, two of them without paying their passage-money. Information was given to the police, and in a short time one of them was apprehended. He gave his name as David Steer, and was an Irish American of military appearance, wearing his beard after the fashion of "General Kelly," in whom he bore a great resemblance. He could give no satisfactory reason for coming to England, and was charged before the magis- trates on Saturday with defrauding the Company by not paying his passage. The bench fined the prisoner 20*l.* and costs, or in default one month's imprisonment in Durham Gaol, to which he was removed. It is supposed that the rest of the confederates have gone to Sunderland or Newcastle.

KNUTSFORD.—A report was circulated in this town on Sunday that a party of Fenians were coming in by the night train to attack the town and take it by storm. The people armed themselves with thick sticks and whips, intending to give the invaders a warm recep- tion, but their services were not required, and the night passed without disturbance. On Monday and Tuesday about 100 special constables were sworn in, to be ready for service if required.

LEEDS. The magistrates of this town have resolved to appoint a Roman Catholic chaplain for the borough gaol, at a salary of 100*l.* per year.

LICHFIELD.—After the ceremony of enthroning Dr. Selwyn, the new Bishop of Lichfield, at the cathedral on Thursday, the mayor and corporation of the city went in procession to the episcopal palace, and pre- sented the bishop with an address of welcome, specially expressing their satisfaction that his lordship had deter- mined to live at Lichfield. The mayor, in present- ing the address, observed that the palace had never been inhabited by a Bishop of Lichfield since the time of Bishop Wood, who built it 100 years ago. The bishop, in reply, said the reference was rather a bad omen, for Bishop Wood lived at Hackney, was cited by Archbishop Sancroft for neglecting his diocese, and fined, the fine being levied to the creation of the house.

LIVERPOOL.—Some weeks since a man named Chambers was arrested in this town, on suspicion of being concerned in the murder of Sergeant Brett, at Manchester. The arrest was regarded by the police as one of an important character, as Chambers was looked upon as one of the most dangerous men the police had to contend with in connection with Fenianism. After his arrest he was conveyed to Manchester, and, with others, was brought before the magistrate, but the evidence against him being incomplete he was discharged from custody, and returned to Liverpool. Finding, however, that he was closely watched by the police, he left Liverpool a few days since for America.

MERTHYR.—The 14 prisoners, the particulars of whose arrest were given last week, were brought up for examination before the magistrates at the Merthyr Police Court on Monday morning. The measures taken by the police were kept in the strictest secrecy up to the last moment, and the consequence was that up to the public, from whom, in the present excited state of this district, it was desirable to protect the prisoners, were completely thrown off their guard and knew literally nothing. The prisoners were brought from Cardiff by a special train, which left that town about half-past 3 o'clock, and arrived at Merthyr about 5 in

the morning. They were in custody of the Chief Constable, Colonel Lindsay, and a strong body of police, well armed, which was augmented *en route* by another detachment of county police. At Merthyr the whole available force of the district had been called in, and marched to the station to receive the prisoners. There were hardly a dozen people about the streets, and the prisoners were, therefore, conveyed to the station as quietly as ordinary prisoners. About half-past 9 o'clock, the time of the arrival of the first ordinary train, crowds of people went to the station, and were greatly disappointed to find that the prisoners were already in court. As if apprehensive of an attack, the Irish people, as a rule, kept out of sight. Coffey, the informer, arrived by the first train from Swansea, and was guarded by six policemen to the court. His examination occupied four hours, and at its close David Bury, Thomas M'Mahon, and David Cochlin were discharged, as there was no evidence to justify their detention, and the remaining prisoners, 11 in all, were then remanded till the 14th inst. The greatest excitement was manifested to see the prisoners as they were taken back to the train on their return to Cardiff. On Sunday, after morning service, a public meeting was held in the Roman Catholic Church, the Rev. Patrick M'Lea in the chair, at which resolutions, expressing abhorrence of the outrages at Clerkenwell and elsewhere, loyal attachment to the Queen and her throne, and disapproval of Fenianism and all other secret societies, were unanimously carried. There were about 700 Irishmen present at the meeting, which has already had a good effect, as showing that the great bulk of the Irish population had not become tainted with Fenianism. Information has reached the police of a character which leaves no doubt that had the Dowdais Circle been allowed to have its own way a few weeks longer, something of a desperate character would have been attempted in a Welsh country town not very far off.

MIDDLESBOROUGH.—On Friday night, as a man was posting a letter at the Post Office in this town, he observed something burning at his feet, which he picked up, and found it have the appearance of powder cartridges. He flung them down, trampled out the fire, and took them into the Post Office. The postmaster sent for the police; when the material that had been burning was found to consist of three firm paper tubes, 4 or 5 inches long, rammed hard down with powder, a fusee being attached to each, and all tied hard together. Letters of warning had previously been sent to the superintendent of police and to the postmaster, stating that an attempt to blow up the post-office was to be made. Had the rockets been thrown into the box, not only would the letters in it have been destroyed, but the box would have been blown to pieces, and the clerks in the office probably injured, if not killed, by the effects of the explosion. The police have got certain information, which they are making use of to trace the perpetrators of the outrage.

PLYMOUTH.—On Thursday afternoon an officer arrived in a ship's cutter, *Mant Wise*, to announce that the troopship *Himalaya*, which left the Sound on the previous afternoon with 300 artillerymen and 150 marines, for Dublin, had broken down off the Dodman through defects in her machinery. The Port-Admiral immediately despatched the iron paddlewheel steam-vessel *Bann* to lay by her during the night. The paddlewheel steam-sloop *Buzzard* followed in the evening; and the steam tug *Trusty*, and paddlewheel steam yacht *Black Eagle*, were to have left yesterday morning with a supply of provisions for the use of the troops. It appears, however, that their services were not required, for the Commander-in-Chief at this port received a telegram from the Lords of the Admiralty yesterday announcing the safe arrival of the *Himalaya* at Cork. Two seamen belonging to the receiving ship *Canopus*, in *Hamoaze*, are under arrest on board the flagship *Royal Adelaide* on a charge of Fenianism.

PORTSMOUTH.—A court-martial, under the presidency of Capt. Seymour, was held on Monday on board the *Victory*, for the trial of William Read, ordinary seaman, serving on board her Majesty's ship *Irresistible*, stationed in Cowes Roads. The prisoner was one of the crew of the captain's galley, and on being ordered to join the boat and arm himself with one of the revolvers which had previously been loaded and issued for the use of the crew, and proceed in the boat to row along the shore off Osborne at 10 o'clock at night, he refused to obey the order, declining to give a reason; but on the following day, on the quarter-deck, he stated that "he would not take up arms against the Fenians." The charge was fully proved, and the prisoner was sentenced to five years' penal servitude, which also involves his dismissal, at the expiration of that period, from her Majesty's service with disgrace. It is generally believed that the prisoner is insane.

SUNDERLAND.—It is stated that the Prince of Wales will honour Sunderland with a visit next month, to open the Hendon new locks, and will be the guest during his stay of Earl Vane, at Wynyard Castle.

TAUNTON.—A slight shock of earthquake was felt shortly after 5 o'clock on Saturday morning in that part of Somersetshire which lies between Langport and Ham Hill. At Martock a low rumbling noise was heard, which lasted for a few seconds, and beds and windows shook. At Tintinhull and Stoke-sub-Hamdon the shock resembled something flying rapidly past the windows. At East Lumbrook the houses appeared to shake, and people were awake by the rattling of the windows and the furniture in their bedrooms. Similar noises were heard at Machelney and Kingsbury. At Seavington the postman distinctly felt the shock, the noise of which resembled a train passing the house at full speed. At Compton, South Petherton, people were disturbed in their beds. At Curry Rival one gentleman describes it as being raised twice in his bed, the shock passing away with a whistling sound; another

as if the church tower had fallen down. One gentleman had various articles on his toilet table thrown down; the doctor's watch stopped at 5 10; several people had their curtains shaken, and another his bedroom door burst open; another his bells set ringing. The shock was also felt at Langport, Taunton, Bridgewater, and in various parts of West Somerset.

WIDNESBURY.—The coroner's inquest on Esther Buggott, who was murdered at Moxley on the night of the 22nd of November, whilst returning from taking her husband's supper, was concluded on Thursday. The evidence given related chiefly to the "whereabouts" on the night of the murder of Edward Caudwell, a boat builder, with whom the deceased was intimate, who, according to the evidence of the mother of deceased, called to see her just after she left to take the supper on the night of her death. The testimony of the man himself and several other witnesses, however, proved that he was in a public-house near his home during the evening up to a little before ten. The evidence threw no suspicion upon any one, and a verdict of Wilful Murder against some person or persons unknown was returned; and the jury recommended that the Secretary of State should be memorialised to offer a reward for information that would lead to the conviction of the murderer.

WHITBURN.—A great deal of angry feeling has been excited in Durham with regard to alleged false lights being exhibited on the coast near Whitburn. Masters of vessels bound for the Tyne, who found their vessels suddenly cast upon the rocks of that iron-bound coast, maintained that they had been decoyed there by lights which they mistook for Tynemouth, and the inhabitants as angrily denied that anything of the sort could have happened. Three or four vessels having been stranded on Whitburn rocks this winter, instead of reaching Shields harbour, to which their masters thought they were being guided by the lights, and the masters having alleged, as the others had done, that they were decoyed there by lights which they mistook for Tynemouth, Captain Kirby, of London, being on a visit to his friends in the north, determined to explore the coast, and try to solve the mystery of the lights. In the course of his wanderings he came upon a solitary hut in Freshwater Bay, near Souter Point, and though then uninhabited, he discovered traces that it had recently been occupied by some one, and upon looking up the chimney he found a piece of wreck timber about two and a half feet in length, but evidently broken off a piece of much greater length. On one end of it was a mass of rope yarn, pitch and tar, similar to a pitch mop used on board ship, but it had no appearance of having been in the water. He took it to Shields and gave it up to the secretary of the Tyne Pilotage Commission. The subject was brought before the Board at its meeting on Friday last, when it was unanimously resolved "that the attention of the Commander of the Coastguard, and the authorities of the county police, be drawn to the discovery of a torch of a suspicious character in a round hut near Souter Point, and to the fact that vessels have been misled by certain lights in that neighbourhood, and that a vigilant watch be maintained in the locality."

WORCESTER.—On Monday evening a public meeting, convened by the Roman Catholics of this city, was held in the school-room belonging to the Catholic Church, the Rev. H. Mahon in the chair, at which resolutions denouncing Fenianism as a secret society, protesting against the outrages recently perpetrated in London and elsewhere, and declaring devoted allegiance and faithful attachment to the Sovereign and constitution of these realms, were unanimously agreed to.

Ireland.

REINFORCEMENTS FOR IRELAND.—Two batteries of Royal Artillery from Plymouth, the 2nd Battery of the 13th Brigade of the Royal Artillery from Woolwich, with 150 marines from the Plymouth division, left Plymouth on Wednesday for Dublin in the steam transport *Himalaya*.

ROBBERY OF POWDER AT CORK.—The late Fenian robbery of revolvers was followed on Saturday night by a robbery of powder. The magazine of Mr. Murray, agent for Messrs. Curtis and Harvey, gunpowder manufacturers, situated a short distance outside the city, was broken into, and the entire stock, consisting of 10 cwt. of blasting powder, was carried off. Several persons must have taken part in the robbery and removal of the powder, for the store was strongly secured, and three doors, one of iron, one of wood, and one of copper, had to be forced open. Besides these, several bolts had to be wrenched or broken before the contents of the magazine could be reached. No clue whatever has been obtained to the perpetrators of the robbery, but two half casks of the stolen gunpowder were discovered on Sunday buried in a market garden adjacent to the magazine.

THE SUPPOSED FENIAN PRIVATEER.—The reports current last week respecting the alleged Fenian privateer which had been seen off the Irish coast are supposed to have arisen from the appearance of the southern coast of an exceedingly rakish-looking American-built barque, called the *Alaska*, 700 tons, bound from San Francisco to Cork. She was overhauled three or four times last week by different ships of the Royal navy, in consequence of her great speed and suspicious appearance; and while in chase of her the other day, the steam ram *Research* ran upon the Daunt Rock, and sustained some damage to her hull. Her powerful steam-pumps were immediately set in motion to keep her afloat, and she continued the pursuit until the barque had gained so much upon her that it became useless. She then returned to Haulbowline, where her damages, which are said to be slight, will be repaired. On Saturday night, a launch from her

Majesty's ship *Mersey*, with its crew, went alongside a collier which had been taken to Monkstown, county Cork, when the boat discharged a pistol which entered the captain's hoot and the officer and marines with drawn vessels and examined the papers. They left after a short time.

ALARM AT THE DUBLIN BARRACKS.—On Saturday morning a severe alarm was given at the Barracks, near Dublin, gave an alarm to the guard when it turned out that a man on the wall next the canteen. The man was taken to the place, observed a number of men on searching found Fenian documents given to have sentries posted round the barracks in future.

ATTACKS ON PRIVATE HOUSES.—The 2nd inst. a murderous attack was made on Forbes, a magistrate of the county of Wick, at Rusheen, Carna, a very remote part of the county, about 50 miles from Galway. His face blackened. Colonel Forbes is a very old man. His housekeeper was the perpetrator of the outrage made on Saturday night to blow up the house. Captain Otway, of Castle Otway, a quantity of gunpowder was placed in the walls, and an explosion took place, causing considerable damage. Mr. Otway is a very popular landlord. No cause can be assigned for the attack.

A SENTRY AT LIMERICK BARRACKS.—It is reported that on Thursday night a sentry of the 52d Regiment, on duty at the Barracks, was fired at from Thomas Street at 7 and 8 o'clock. There was a man where the soldier was walking, and he was enabled to see the assassin since been removed. Strict precautions taken in the barracks, which have been to be the object of suspicious attention on the side.

ARRESTS AT CORK.—Some arrests were made at Cork, but no importance is attached to them. The police have hitherto failed to detect many Americans known to be near the city. The four men committed from Cork for treason-felony are described as Colonel Kelly, Edward Finn, and John Baker.

IMPORTANT ARREST IN DUBLIN.—An important arrest in connection with the Fenian cause was made on Thursday night in Dublin. The prisoner is Lennon, and the police are investigating circumstances which will be of great importance. The capture is of importance as Colonel Kelly, the prisoner has been a leader of the 'Fallaunt rising, and a man to be indicted for high treason.

PROSECUTION OF THE "IRISH LIBEL."—A writ was issued on Wednesday, at the instance of the General, calling on Mr. Pigott, of the *Standard* newspaper, to appear on Friday before the magistrate, to show cause why a criminal prosecution should not be filed against him, for publishing that paper of certain seditious libels. The paper sets forth extracts from the recently published book headed "The Holocost," from the proceedings of the Manchester executions, &c., which were copied from American papers. The writ was issued yesterday before the magistrate, who has committed the prisoner for trial on the charge of publishing libels.

FENIAN SALES OF IRISH PROPERTY.—A Cork paper states, on the authority of a man who has recently returned from New York, that extensive transactions were being carried on the other side of the Atlantic in "the purchase of the Republic," and that its informant had been at an auction in New York where property was sold to an enterprising Yankee in lots of its one day falling into the hands of the Fenians.

STATE VISIT OF THE LORD MAYOR OF DUBLIN.—On Monday the Lord Mayor of Dublin, Dr. Carroll, proceeded to the Catholic Cathedral, Marlborough Street, in a carriage, attended by the officers of the Corporation and accompanied by several other members of the council in their robes. A procession of the Cardinal Cullen, who preached on the occasion, to the fact that it was the first time since the Revolution of 1688 on which the Lord Mayor had attended a session of the Council. This last relic of religious disability has been abolished by a Roman Catholic Lord Mayor, and how such rights had been obtained by secret societies and assassinations, or by the seizure of houses, not by violence or rebellion, but by able and constitutional conduct.

ATTEMPTED MURDER AT THE RED ABBEY.—William Butler, 15 years of age, was committed to the Cork magistrates a few days ago for attempting to murder Honora Harter at the Red Abbey, in that city, on the 22nd inst. Hurley had taxed the prisoner with having entrusted to him to put in the wall of the Red Abbey the money which he had earned. He then dug a grave in the Abbey and committed the prosecutrix to go down with him as a witness. She agreed to do so, and descended into the grave the prisoner with a hatchet, inflicting upon her several dreadful injuries, from which she is recovering. The prisoner was committed for trial.

Quotations are difficult to give, as buyers who want specially choice lots have to pay full rates, whilst any one wanting to clear the same on a day when there were no particular orders on the market might have to take 1d. or 1 1/2d.

Table with columns: CURRENT PRICES OF ENGLISH WOOL, per lb., s. d., and various types of fleeces and sorts.

METROPOLITAN CATTLE MARKET. MONDAY, Jan. 6.

The number of Beasts is small, but the average quality is good, and prices are scarcely as high as on Monday last; a fair clearance is, however, effected. We have a good supply of Sheep for the time of year; trade is heavy, and prices are lower, especially for ewes and middling qualities.

Table with columns: Best Scots, Herefords, etc., and Best Long-wools, Do. Shorn, etc., with prices in s. d. s. d.

THURSDAY, Jan. 9.

Although the number of Beasts is not very large it exceeds the demand. Trade is exceedingly dull, and only in choice qualities are our top quotations realised. Sheep are plentiful for the time of year, and there is scarcely any demand for them.

Table with columns: Best Scots, Herefords, etc., and Best Long-wools, Do. Shorn, etc., with prices in s. d. s. d.

MARK LANE.—MONDAY, Jan. 6.

There was a small supply of Wheat from Essex and Kent to this morning's market, which was disposed of at an improvement of 3s. to 4s. per qr. on the prices of this day se'nnight. There was a good attendance, and a fair amount of business transacted in foreign Wheat, at an advance of 3s. to 3s. per qr., the demand being chiefly upon red qualities.

Table with columns: PRICE PER IMPERIAL QUARTER, WHEAT, BARLEY, OATS, RYE, BEANS, PEAS, MAIZE, FLOUR, and various sub-categories with prices in s. s.

FRIDAY, Jan. 10.

Excepting a few dull days with sleet and snow, the weather during the past week has been frosty, with N. and N.E. winds; since yesterday the frost slightly increased. The upward movement of prices has made some further progress, and we have to report a total advance of 3s. to 5s. per qr. in the value of Wheat since Christmas.

ARRIVALS THIS WEEK.

Table with columns: Wheat, Barley, Oats, Flour, and various types of arrivals with prices in s. d.

LIVERPOOL, Tuesday, Jan. 7.—To-day's market was very well attended by both town and country millers and dealers, and there was a moderate demand for both Wheat, Flour, and Indian Corn at Friday's prices.

without change in price. Barley scarce, and 1d. per bushel higher.

FRIDAY, Jan. 10.—The market was moderately attended. Wheat a slow sale, and prices are irregular, in some cases 3d. to 4d. per cental lower than Tuesday. Flour dull, and 6d. cheaper, Beans rather lower. Peas steady. Oats and Oatmeal nominally unchanged. Indian Corn dull and 6d. per qr. lower; mixed, 4 1/2s. 6d.

AVERAGES.

Sold by Chemists and Perfumers. Ask for Dr. DINNERFORD'S FLUID.

DINNERFORD'S FLUID.—The best remedy for Acidity of the Stomach, Headache, Gout, and Indigestion; and the best for delicate constitutions, especially adapted for Children and Infants. DINNERFORD & Co., 12, New Bond Street, and of all Chemists throughout the Kingdom.

ELECTRICITY IS SELF-ADJUSTING CURATIVE AND PAIN-REMOVING.—Sufferers from nervous debility, indigestion, and all the ailments of the system, may now cure themselves by the only "Genuine" medicine protected by Her Majesty's Great Seal. Free for One Stamp, by H. James, Esq., 10, The London Hospital, Percy House, Bedford Square, N. B.—Medicine and fees separate.

FREEDOM from COUGHS in TEN DAYS.—Use, as instructed by DR. LOCKOCK'S REMEDY. From J. W. F. COLLIER, Bookseller, Pall Mall, highly spoken of by those who use them. Sold in all the best Pharmacies. If you are afflicted with Coughs, Croup, Asthma, Consumption, Whooping Cough, Sore Throat, and Lungs, these are the best for strengthening the voice, and have a pleasant taste, and 2s. 6d. per box. Sold by all Chemists.

DR. DE JONGH'S LIGHT-BROWN OIL.—A special, 1 spongy, and pure medicinal oil, innumerable cases in which DR. DE JONGH'S OIL has cured principles which no other medicine ministered with the happiest results in the Chest. No remedy so rapidly improves the system, produces a more marked and favourable effect.

DR. DE JONGH'S LIGHT-BROWN OIL.—From Dr. PERRINA, F.R.S.—It can be better, and few so well, acquainted with the properties of this medicine as yourself, who are authority on the subject. From Dr. GARDNER, who is preferable in many respects to Oils and other such an authority as De Jongh.

DR. DE JONGH'S LIGHT-BROWN OIL.—From Dr. JOHNSON, F.R.S.—It is many persons who were unable to use the white Cod Liver Oil on its sickly and delicate. EDGAR SHEPPARD.—"It has the rare excellence of an oil, and is not rejected by the stomach, as is the case with the other oils."

CAUTION DR. DE JONGH'S OIL.—Firmly resist unscrupulous dealers, when DR. DE JONGH'S OIL is recommended, always with a view to an increase of profit. Cod Liver Oil, under the false name of EDGAR SHEPPARD'S OIL, is sold by all pure and efficacious. Capsuled IMPERIAL pints, 4s. 6d., quarts, 2s. 6d. Sold by all respectable Dealers, ANSAR, HARROLD, & Co., 77, Strand, London, W.C.

Oil Paint no longer Necessary.

HILL AND SMITH'S PATENT BLACK VARNISH
For preserving Iron Work, Wood, or Stone. This Varnish is an excellent substitute for oil paint, and is fully as durable, and is fully two-thirds cheaper. It may be applied by an ordinary labourer, requires no mixing or thinning, and is used in the most difficult situations, such as on the roofs of many churches, and on the iron work of bridges, and at the most distressing heights of the nobles and gentry, from whom the most flattering testimonials have been received, which bear a heavy weight in our favour.
Apply to Hill & Smith, 11, Old Bailey, London, E.C.

GRAY'S OVAL TUBULAR BOILER.

INTERNATIONAL EXHIBITION, CLASS IX, No. 2119.

MR GRAY begs to call the attention of the Nobility, Gentry, Nurserymen, Gardeners, &c., to his

NEW OVAL TUBULAR BOILER,

acknowledged by practical judges to be a great improvement on every form of Tubular Boiler yet introduced. It has proved itself superior to all other Boilers for quickness of action and economy of Fuel, doing its work with one-third less the amount required by any other.

Extract from Report in GARDENERS' CHRONICLE of International Exhibition, May 24, 1862, page 476.
"The upright form of Boiler is usually made on a circular plan, rather than a square, it seems feasible that the Boilers on the oval plan should bring the tubes more completely within range of the burning fuel; and this being so, the change, though a slight one, is no doubt an improvement."
The usual form of a furnace being a parallelogram

They are made of all sizes, which, with prices, may be had on application.

JAMES GRAY, HORTICULTURAL WORKS,
DANVERS STREET, PAULTON'S SQUARE, KING'S ROAD, CHELSEA, S.W.

PORTABLE AND FIXED HOT-WATER APPARATUS,

FOR HEATING CONSERVATORIES, HOTHOUSES, CHURCHES, PUBLIC BUILDINGS, PRIVATE RESIDENCES, ETC., WITH

Home News.

THE COURT.—The Queen and Royal family continue at Osborne. On Thursday, the 23rd ult., the Queen drove out with Princess Louise and Princess Henriette of Schleswig-Holstein. The Right Hon. Benjamin Disraeli, Chancellor of the Exchequer, arrived from London on a visit. On Friday morning the Queen walked in the grounds with the Duke of Roxburghe, and drove out in the afternoon with Princess Christian, Princess Beatrice, and Princess Henriette of Schleswig-Holstein. On Saturday morning the Queen walked in the grounds with Princess Christian, and in the afternoon drove out with Prince Leopold and Princess Beatrice. Prince Arthur and Prince Christian went out shooting in Parkhurst Forest. The Chancellor of the Exchequer left Osborne for London. On Sunday the Queen and Royal family attended Divine Service at Osborne. The Rev. R. D. Webb officiated. On Monday morning the Queen walked in the grounds with the Duchess of Roxburghe, and drove out in the afternoon with Prince Arthur. On Tuesday morning the Queen walked in the grounds with Princess Louise, and drove out in the afternoon with Princess Christian and Princess Beatrice. Prince Arthur and Prince Christian went out shooting. Viscount and Viscountess Sydney arrived at Osborne on a visit. On Wednesday the Queen drove out with Princess Christian and Princess Louise. On Thursday the Queen walked in the grounds with the Duke of Marlborough, the Earl of Bradford, Lord John Manners, and Mr. Cave.

THE PRINCE and PRINCESS OF WALES.—The Prince and Princess of Wales arrived at Sandringham House, from visiting General Hall, at Six-mile Bottom. On Sunday the Prince and Princess attended Divine service in the church of St. Mary Magdalen, at Sandringham. During the week their Royal Highnesses have been entertaining a large and distinguished number of guests. On Tuesday the Prince, with his guests, went out shooting.

PRINCE LEOPOLD.—Since Monday last Prince Leopold has been confined to his room by severe indisposition. His Royal Highness was better on Thursday, and is progressing satisfactorily.

THE CABINET.—A Cabinet Council was held on Tuesday at the official residence of the First Lord of the Treasury, in Downing Street. Another Council was held yesterday. All the Ministers were present at these meetings except the Earl of Derby, who is still detained at Knowsley by the gout which attacked him last week. His lordship, however, is rapidly recovering, and is expected to be able to come up to town for the opening of Parliament.

PARLIAMENTARY MOVEMENTS.—Mr. W. H. Maxwell was elected for Kirkcubrightshire, in the room of the late Mr. Mackie, without opposition. The Conservative party in Bristol have selected for their candidate, when Sir S. Morton Peto resigns his seat, Mr. J. W. Miles, a local banker, and one of the directors of the Great Western Railway.

LORD LIEUTENANCY OF CHESHIRE.—Lord Egerton of Tatton has been appointed Lord Lieutenant of Cheshire, in the room of the Marquis of Westminster.

THE BISHOPRIC OF NATAL.—The consecration of Mr. Macrorie, as the new Bishop of the Church in Natal, which was announced for Saturday last, did not take place, and the Bishop of Grahamstown has been the Bishop of London an assurance that the intention of consecrating a new Bishop for Natal in England is abandoned. The Archbishop of York last week, following the example of the Bishop of London, addressed a letter to the Bishop of Capetown on the proposed consecration, from which the following are extracts:—

"As this step involves some important questions of English law, I venture to express a hope that some delay may be interposed to allow the best legal opinion to be taken upon the two questions—whether the Bishop of Natal was rightly and canonically consecrated, and whether such consecration can lawfully take place."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop of Natal is not lawful, and that the Bishop of London is not bound to consecrate him."

"The Archbishop of York has also expressed his opinion that the consecration of the Bishop

school, issued prohibitions against the consecration in their dioceses; and three clergymen of the chief Episcopalian Church in Edinburgh, Dean Ramsay, the Rev. D. S. Sandford, and the Rev. H. M. Oswald, published a formal protest against the consecration in Scotland. On Thursday a meeting of the Bishops of the Scottish Episcopal Church was held at the residence of the Bishop of St Andrew's, at Perth, when the Primus announced that he had received a telegram from the Bishop of Capetown and the Archbishop of Canterbury recommending delay. The Bishops, thereupon, agreed that there was no immediate necessity for coming to a decision on the subject.

Foreign.

FRANCE.—The *Moniteur* of Monday publishes M. Magne's report upon the financial condition of France. According to this statement, on the 1st of December, 1867, the floating debt amounted to 936,000,000 francs. In consequence of events beyond control, the receipts of the Budget of 1867 show a deficit of 26,000,000 francs as compared with the estimates. Adding to this the extraordinary credit voted by the Corps Legislatif on the 31st May, 1867, of 158,000,000 francs, and the cost of the expedition to Rome, there is a total of 189,000,000 francs necessary to cover the outlay for 1867. The report details various augmentations of expense which will be felt by the Budgets of 1868 and 1869, and concludes that supplementary resources to the amount of 82,000,000 francs will be required to be shared between those two years. The report points out that it is necessary to reform the war *matériel* and the fleet in the interest of the defence of the country and of the national honour. From reports submitted by the Ministries of War and Marine a sum of 187,000,000f. ought to be devoted to that object. It would, however, be illusory to suppose that these resources would suffice to cover every requirement, but as regards the war *matériel* every essential would be therewith met. The details of less urgent importance would be completed in proportion to the annual resources. The report concludes by proposing a loan of 440,000,000f., which would meet all exigencies. The funds in the army dotation chest are not disposable. The loan will be negotiated by public subscription. The report proposes to divide the monthly payments of the loan into 20 instalments. In the Senate on Monday the debate on the Army Bill was resumed. M. Brenier said that he did not think the Bill sufficient to assure the independence and influence of France in Europe. General de la Rue supported the Bill exclusively on military grounds. M. Rouland insisted that the Bill when it had become law would not weigh so heavily upon the population as the newspapers asserted. In the sitting of Tuesday the debate on the Army Bill was continued by Admiral Willaumez, who delivered a patriotic speech which was received with applause. M. Michel Chevalier spoke in favour of universal peace, which he considered probable in the future. The Minister of War pointed out the advantages of the Bill, stating that it would place France in a position in which she would be secured from all eventualities. The Bill was then passed by 128 votes to 1, the solitary dissentient being M. Michel Chevalier. In the sitting of the Corps Legislatif on Monday, M. Lanjuinais brought forward his motion in opposition to Baron Hausmann's scheme of carrying a new boulevard through the cemetery of Montmartre. M. Genteur, in reply, said the cemeteries were by no means threatened with expropriation. In the sitting of Tuesday the order of the day was adopted, on M. Lanjuinais' motion, by 103 votes to 100. In the sitting of Wednesday the discussion of the Bill on the Press was commenced by M. Pelletan. In the sitting of Thursday M. Thiers said that there existed many subjects which ought to be prohibited from discussion by the public Press, for instance, the bases of society and matters of private life, and in constitutional countries the Sovereign was shielded by the responsibility of the Ministers. But beyond those limits all acts of the public authorities were open to discussion. It was impossible to define exactly the offences of the Press. Notwithstanding the improvements proposed by the present Bill, the liberty of the Press would still remain in the hands of the Government. He concluded that it was advisable to grant full liberty to the Press, and not to lose so decisive an opportunity for effecting that object. M. Pinard, the Minister of the Interior, replied as follows:—

"The Press is a power acclimatised in France. Its influence is good and evil at the same time. Its present tendency is towards violence, and a defence is, therefore, necessary, which must be placed under the guardianship, not of individuals, but of the law. The character of the Bill was liberal in principle, notwithstanding the caution money required, which was a necessary guarantee, and the stamp, which was merely a tax upon the circulation. The Bill was not stringent in the penalties it imposed, but vigilant in the course of procedure it laid down. It realised the promises of the 19th of January, 1867, which were not desired by the Conservatives, and had not been hoped for by the Liberals. These promises formed part of the logical consequences of a Constitution capable of improvement, and reconciled the natural movement towards progress with the instinct of preservation and with the Constitution of 1852. It was power which led to liberty. The Bill extended and did not restrict the promises of the 19th of January, but against violent attacks the Conservative party would find the Government entrenched behind the law."

This speech was received with cheers by the Chamber. The *Moniteur du Soir* in its bulletin of Wednesday says:—

"In the general attitude of the Powers there is a concurrence of conciliatory dispositions and pacific symptoms. Lord Stanley's speech at the Bristol banquet, the discussions in the Italian Parliament, and the good understanding now existing between Prussia and Austria all confirm this view. The more Governments and peoples reflect, the more will they guard against exaggerated ambition, and by wisely giving pledges of general security will see that in the present state

of European civilisation peace is for them at once their interest and their duty."

The workmen of Roubaix have petitioned the Emperor to abolish the treaty of commerce with England, on the ground that it is bringing on them distress and ruin. The responsible editors of the ten Paris newspapers which were prosecuted last week for having published illegal reports of the debates in the Corps Legislatif, have been sentenced each to a fine of 1000f., or six months' imprisonment, in case of non-payment of the fine. They are also condemned to pay the costs of the trial. The editors have resolved to appeal against the judgment. In the suit brought against the *Courrier Français* and M. Leon Mires by Captain Perrin, M. La Page has been sentenced to 1000f. fine, and M. Mirés to two months' imprisonment, and a fine of 500f. M. Dubuisson has been sentenced to a fine of 300f. In a second suit M. Vermorel has been sentenced, by default, to two months' imprisonment and 1000f. fine, and M. Mirés to one month's imprisonment and 1000f. fine. The second sentence of imprisonment against M. Mires will be added to the first. The brigands Coda, Quaranta, and Nardi were executed at Marseilles on Monday. Nardi and Coda asked pardon for their offences from Heaven and man, and died courageously. Quaranta maintained silence. The sentence on Mulatiero is reported to have been commuted. An immense crowd witnessed the execution, but no manifestation of popular feeling took place.

SPAIN.—In the sitting of the Senate on Friday, the Government presented a Bill proposing several reforms of the existing laws relative to concessions granted to companies for the execution of public works. The discussion of the Bill modifying the law relating to mines commenced on Friday. In the sitting of the Chamber of Deputies on Thursday the Minister of Finance brought in the Budget, which shows the expenditure to be 263,005,296 crowns, and the revenue 258,200,479. The Minister asks authority to effect reductions in several branches of the expenditure. A decree has been issued, granting the Royal pardon to all persons under sentence for participation in the insurrection under General Prim, except military men who have not surrendered for trial. Letters from Aragon and Catalonia are unanimous in considering probable a speedy Carlist rising in those provinces in favour of the eldest son of Don Juan. They also state that the widow of Don Carlos has forwarded 40,000,000 reals to promote the movement.

DENMARK.—The treaty with the United States, relative to the sale of the Danish West Indies, was finally passed by the Landsting on Thursday. Both Chambers of the Diet have, therefore, definitely given their assent to the project.

PRUSSIA.—The treaty between Prussia and France for releasing Mecklenburg from the special treaty with France was concluded at Berlin on the 26th ult. In the sitting of the Upper House on Wednesday, the Bill for the railway loan of 10 millions of thalers was adopted as passed by the Lower House. The treaties with Oldenburg respecting the admission of the Oldenburg Principality of Lubeck to the Customs' system of the Duchy of Holstein and the admission of Oldenburg to the Customs' treaty of the 28th of June, 1854, were also adopted, as well as the Bill on the treatment of the public debts of the new provinces and the issue of Treasury bonds to the amount of 2,407,653 thalers—all being agreed to in the form in which they came up from the Lower House. In the sitting of the Chamber of Deputies on Thursday Herr von Vincke's motion for the abolition of the taxes upon grinding and slaughtering was adopted almost unanimously; the Minister of Finance offering no opposition to the proposal upon financial grounds. Herr Bassenge moved that the newspaper stamp-tax should be abolished after 1869, and the Chamber adopted the motion by 166 votes to 150. All Prussian Ministers at Foreign Courts are now in possession of their credentials as representatives of the North German Confederation, and most of the Foreign Ministers at Berlin are accredited to the Confederation. The King recently received a deputation of Roman Catholics from Rhenish Prussia. In reply to their address his Majesty said:—

"It is well known that my forefathers and myself have carefully respected religious equality, and this fact has been openly acknowledged by the head of the Catholic Church. In the policy pursued by my Government I shall continue to watch over the interests of my Catholic subjects and the dignity and independence of the Pope."

According to telegraphic news from the provinces the subscriptions for the 12 million thalers 4½ per cent. loan amount to 22½ millions.

AUSTRIA.—The Emperor has appointed the Archduke Albrecht commander of the Austrian army and imposed upon him the duty of inspecting the army, of organising it in a manner fit to take the field, and of submitting the requisite proposals on the subject to the Minister of War, in whom the absolute responsibility is vested by the constitution. A special commission under the presidency of the Minister of War has been appointed to discuss reforms of the military organisation. The members of the Commission are Lieutenant-Field-Marshal Ramming, Harburg, Saint-Quentin, Gablenz, Chelippovich, Maroitrich, and Moring. A circular, in which the following is a summary, was despatched on Monday by the Minister of the Interior to the chief officials in the provinces:—

"As in future all members of the Administration are bound to swear to inviolably observe the fundamental laws of the Empire, so also must those who have already been sworn now make a fresh declaration swearing identity to the new Constitution. No body is to be forced to make this declaration. It is not a mere formality, but a political act of national importance. Besides inviolable fidelity to the Emperor, there will be required from all functionaries an unconditional observance of the Constitution and fundamental laws. The Minister the more emphatically requires sincere devotion and stainless fidelity to the Constitution since he is responsible

for all acts of the internal administration. He must be quite as grave a dereliction of duty as an act of the official oath. Mere indifference or neglect of the official strict punctuality, the conscientiousness, a thorough emancipation from all partiality, and the maintenance of an irreproachable private life then will be the most efficient interpreters of the Constitution."

HUNGARY.—The sum of 25,000,000 francs has already been subscribed in Hungary towards the construction of Hungarian railways. It is expected that 16,000,000 more will be subscribed in the country. It is thought probable that the Government will take up about a fourth of the entire sum. Subscriptions to a considerable amount have been received in Vienna from Galicia, Bosnia, and Trieste. The latest accounts from the quarters from Paris state that a large amount has been subscribed towards the loan in that country.

CROATIA.—The Croatian Diet has decided to send a deputation to Pesth, for the purpose of concluding an agreement with Hungary.

RUSSIA.—All the St. Petersburg papers contain articles extremely favourable to the maintenance of peace. The *Borsen Zeitung* and the *Russian Government*, as a strong supporter of peace, take the initiative in a general discussion. The *Journal de St. Petersbourg* of Friday contains an article in some French papers, says:—

"Russia is great and strong and is not to be freed from any desire of aggression. Her position of her frontiers, but which a severe peace is necessary for the maintenance of internal prosperity. Her progress and furtherance of industry, commerce and art throughout Europe. She has no interests which does not claim a preponderance of power. At the same time, will not suffer the arrogant attitude of a victor. Whoever renders war inevitable assumes responsibility, and will earn the execration of her people. At the present time would entail great misery."

An Imperial decree published on Tuesday, relative to the naturalisation laws hitherto in force, shall be superseded by the Russian laws on the subject. The Governor of Poland has been appointed to St. Petersburg. The new Minister of the Interior announces that all the Russian men of letters for service are being equipped for a foreign tour. It is understood that the Grand Duke will accompany this squadron to the Bosphorus to visit to his daughter, the newly-married Greek. Rear-Admiral Popoff has been appointed to the command of the Russian squadron in the waters, in place of Admiral Boutakof.

ITALY.—The betrothal of Prince Humbert, Prince of Italy, with the Princess Maria Theresa of the Duchess of Genoa, has been officiated. The object of the King's recent visit to Genoa was to demand the hand of the Princess. The following is a summary of the debates of the Chamber of Deputies during the past week:—

"On Friday Signor Cadorna, the Minister of War, replied to an interpellation made by Signor Cavour, the day respecting the appointment of the Minister of the post of Minister of the Royal Household. The Ministry could not accept the interpellation. Article 76 of the Constitution, it is asserted, places the King, beyond the control of the Chamber of Deputies. He therefore has the right to withdraw his interpellation. The Minister of War was countersigned by me of the Ministry. The example of England, where the Chamber has the right of controlling all the branches of the Government, Signor Cadorna maintained the right of the King, and after a stormy debate, he expressed a motion for closing the discussion. He withdrew his motion, in order to leave the Chamber to discuss the Revenue Budget for 1868. Signor Cavour's committee returned. Court Chamberlain, the Minister of Finance, gave some explanations, and had some questions were under contemplation, and had some questions very advantageous for Italian finance. It was necessary that confidence should be maintained at home and abroad. He should not wish to see the vote withdrawing the Government's responsibility for the proposed Budget of 1868. It is to be noted that the debate on the Budget of expenditure for 1868, the first 15 articles were passed. General Cavour's Bill for a Postal Convention between Italy and Austria, authorising the Government to conclude a Postal Convention with Austria, was discussed, and was rejected. The Revenue Budget of 1868 until the Budget of 1869 was approved by 241 votes against 117. The discussion of the Budget of 1868 continued. The proposed Budget for 1868, proposed by Signor Martinielli presented the Chamber of Deputies on the provisional exercise of the Budget for February proposed by the Minister of Finance. In the sitting of Tuesday the Chamber forward various financial Bills. The Chamber advised the conduct of a general election office notwithstanding the vote of the Chamber censured the foreign policy of the Government. The Chamber should grant a period of three months, so as to allow time for a general election, and for general elections. The Chamber should accept a three months' provisional exercise of the Budget for the next month. The Chamber should not be bound to swear to inviolably observe the fundamental laws of Italy, which recent events have shown Italy could not and would not do. Cavour declared that Signor Medama's account only. The party of the Chamber Ministerial crisis they were ready to accept the provisional exercise of the Budget. The Chamber should already condemned by the financial Ministers forward, but the Left would await the provisional exercise of the Budget for 1868."

In the sitting of Wednesday the discussion Budget was concluded, and an increase of 100,000 for the relief of the Roman tax...

An Abyssinian Ambassador arrived at Addis Ababa on Tuesday, and is reported to be in the city of the Aboona, lately deceased. Prince Kassa is reported to be in the city of the Aboona, lately deceased.

The Imperial troops under the Pantar, or Pantar, have sustained a severe defeat at the battle of the Nank, near Y. H. Chen Foc in the province of Szechwan, with the loss of many guns and officers.

Two red-buttoned mandarins—Cheng and Wang, the one a Manchu and the other a Chinese—have been appointed ambassadors to accompany the Chinese Minister at Peking, has been appointed.

Mr. Stanton resumed possession of the War Department on the 13th ult., General Grant surrendering the keys on receipt of the Senate not concurring in the nomination of Mr. Stanton.

It is reported that Mr. Johnson has received notice of the action of the Senate in removing Mr. Stanton, and that he will issue all military orders in the name of General Grant.

Earl Granville expressed his great pleasure at finding that Lord Stanley had stated the readiness of the Government to bring forward "a wise, a large, and well-considered measure for the education of the people;" and he trusted that the Government would be kept up to that programme, especially as far as a "large" measure was concerned. After some remarks by Professor Thorold Rogers, Professor Livey, Professor Grace Calvert, Mr. Peel, chairman of the Birmingham Chamber of Commerce, and other gentlemen, the debate was adjourned. On Saturday Mr. Harry Chester spoke in favour of the resolutions, and was followed by Mr. T. D. Acland, M.P., Mr. Ayrton, M.P., the Hon. A. Herbert, Mr. Hyde Clark, Mr. Brocklehard, of Manchester. Professor Huxley objected to the resolution as putting science in an inferior position to other studies. Professor F. Jenkin, of University College, London, insisted on the necessity of improved primary education. The Rev. Arthur Rigg, principal of Chester College, said that every attempt to popularise science had been a failure. Mr. Clarke, North Cheshire Chamber of Agriculture, said that his experience led him to believe that workshops were advantageous as a means of education. Mr. Lucraft moved as an amendment the addition of words to the resolution providing for the establishment of museums of art manufactures in the great centres. Mr. G. Godwin, F.R.S., seconded the amendment, and it was at once agreed that it should be incorporated with the resolution. After some remarks by M. Meyer, of Hanover, in relation to the system of education adopted in the schools of Germany, and by Mr. Ayrton, M.P. in favour of science schools, the resolution, embodying Mr. Lucraft's amendment was carried, with two dissentients. Mr. H. Chester moved the next resolution.

"That in such measures as may be desirable for the general provision of the means of efficient primary education, it would be right to consolidate and improve rather than overthrow what has already been done, but that the voluntary principle requires to be supplemented by local rates for education."

The Right Hon. W. Cowper seconded the resolution, which was carried, with five dissentients. The Rev. W. C. Lake moved the next resolution:

"That while this conference acknowledges the benefits which have ensued from the educational clauses of the Factory Acts, it is of opinion that the Legislature ought now to declare that all children between certain ages, employed in remunerative labour of a certain character, should receive education during at least a minimum number of hours in each year, security being taken that the education be conducted in efficient schools."

Mr. Antonio Brady seconded the resolution. Mr. Harry Chester moved as an amendment that after the words "certain ages" in the resolution, the words "and not only those" should be inserted, making it compulsory to provide education for all children. Professor Thorold Rogers seconded the amendment. Mr. Bruce, M.P., said that he was not opposed to compulsion, but he wanted to have it adopted with the free consent of the people. Those in Parliament would have great difficulties in dealing with the local rating question, and he thought it would be unwise to press upon willing horses a load which might be too great for their strength. Mr. Dixon, M.P., thought that the conference ought to express itself strongly in favour of the amendment, and then to leave members of the Legislature to deal with it as they pleased. Sir J. Kay Shuttleworth suggested that in the resolution the word "now" should be struck out, and the words "as soon as practicable" substituted. The Rev. W. C. Lake, Mr. Chester, Mr. Bruce, and other gentlemen agreed to the alteration, and the amended resolution was submitted by the chairman as a substantive motion. Mr. Chester's addition also having been incorporated with it. Mr. Connolly, a well-known working man connected with agitation, then addressed the meeting in a speech which was received with vociferous applause. He said the working men were willing to submit to any fair arrangement that would secure education for their children, and contended that no man was entitled to the labour of a child to the injury of the moral and physical condition of that child. At the close of his speech several gentlemen cordially shook hands with him, and congratulated him on his success. The resolution, as amended, was then carried unanimously. Mr. Samuelson moved the next resolution:

"That the Council of the Society of Arts be requested to appoint a standing committee to take such steps as may give effect to the foregoing resolutions, to support all such well-adviced schemes for technical education as may be brought before it, to send such deputations to the Government as may seem expedient, and to re-assemble the conference when desirable."

He said he intended to move for a committee of the House of Commons on the subject when Parliament re-assembled, and the Committee of the Society of Arts would be of great assistance to it. The Rev. H. Solly seconded the resolution, which was adopted. On the motion of Mr. Bruce, M.P., seconded by Alderman Salomons, M.P., a cordial vote of thanks was accorded to Mr. W. Hawes for the manner in which he had presided over the conference.

ST ALBAN'S, HOLBORN.—The Rev. Dr. Hugh M'Neile, referring to the statement which appeared in the *Guardian* last week, that "he was present and communicated on Sunday at the high celebration at St. Alban's, Holborn," has written a letter to the *Record* (the Evangelical organ), contradicting the entire story. He says:—

"The most charitable supposition is that some contributor to the *Guardian* has published a mistake, and if I hope that this unfounded falsehood will put the *Record* on his guard for the future. I am a naturalist of Mr. O'Connell's maxim for defamation in this case. 'Throw mud enough and some of it will stick.' I am not a mid-proof. I have not been in London since November. You will oblige me by adding to this that I am so conscientiously persuaded that what is called the high celebration

at St. Alban's, Holborn, is idolatry, that I could no more consent to share in it than I could to be wilfully guilty of Sabbath-breaking, adultery, or theft."

THE PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, January 25, 1819 births and 3724 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 27 per 1000 persons living, being 23 per 1000 in London, 31 in Edinburgh, 37 in Dublin, 27 in Bristol, 21 in Birmingham, 32 in Liverpool, 38 in Manchester, 28 in Salford, 26 in Sheffield, 31 in Bradford, 23 in Leeds, 23 in Hull, 27 in Newcastle-upon-Tyne, and 31 in Glasgow. The rate in Vienna was 30 per 1000 during the week ending the 18th inst. In London the births of 1157 boys and 1166 girls, in all 2323 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2205. The deaths registered in London during the week were 1325. It was the fourth week of the year, and the average number for that week, corrected for increase of population, was 1716. The present return is, therefore, less by 321 than the estimated number.

Provincial.

ALDERNEY.—A charge of Fenianism was brought last week against Mr. Thomas Simon, the sheriff of this island, arising out of a very trumpety affair, which has made all concerned in it look very ridiculous. It appears that Mr. Simon was in a shop in Alderney, where there happened to be at the same time 10 women, natives of the island. A newspaper on the counter led the conversation to Fenianism and the Manchester executions, when Mr. Simon said in French that "the Government would do well not to hang any more, as England would suffer from these hangings, and it would serve her right," adding, "If the Fenians should come to Alderney, I'll show them the way." These words being repeated to the magistrates as they sat in court, they communicated with the Lieutenant-Governor, and asked his advice in the emergency. His Excellency declined giving any, and told the Court they might do as they pleased. They adopted the suggestion, and suspended Mr. Simon from his office, admitting him to bail, and referred the case to the consideration of the Royal Court of Guernsey. This tribunal, seeing the ridiculousness of the charge, at once quashed the proceedings, and ordered the liberation of Mr. Simon.

LEMINSTER.—The London police have now issued bills offering 500l. reward for the discovery of the Rev. Benjamin Speke, rector of Dowlish Wake, who disappeared so mysteriously while on a visit to town in the early part of last month. The bills state that the old hat which Mr. Speke had been wearing before he bought the new one in Warwick Street, Bimlico, was found on the morning of the 8th ult. in Birdcage Walk, but that appears to be the only clue that has been discovered.

LLANELLY.—On Wednesday evening the 22d ult. 19 vessels, chiefly brigs, brigantines, and schooners engaged in the coasting trade, left Llanelly with the hope of beating down channel. The sea was running very high over the bar, and as there was not sufficient water to float the vessels over it, they all took the ground and became partial or total wrecks, only six riding out the violence of the breakers. Of the crews of the vessels lost 42 were saved, but 52 were drowned. The jury at the inquest returned a verdict of Found Drowned, with a strong expression of opinion as to the necessity of signals and a lifeboat.

SHEFFIELD.—The report of Mr. Overend, Q.C., Mr. Barstow, and Mr. Chance, the examiners appointed under the Trades' Unions Commission Act of 1867, to inquire into the outrages asserted to have taken place at Sheffield and elsewhere with the support and connivance of associations of workmen, has just been issued, together with the evidence taken at Sheffield. The report is addressed by the examiners to the Commissioners appointed under the Act, and consists of a complete history of their inquiry, the facts of which received so much attention during its progress. The accompanying evidence, filling 450 folio pages, contains nothing of importance that has not already been published.

Ireland.

ANOTHER ATTACK ON A MARTELLO TOWER.—A martello tower, near Duncannon Fort, in Waterford Harbour, was attacked on Monday night between 9 and 10 o'clock. One of the guns of the fort had been spiked on the previous night by some person or persons unknown, and some of the other guns showed that they had been tampered with. When the attack was made on Monday night the alarm signals were fired, and a reinforcement of military sent from the fort. The marauders waited in regular array until the soldiery came within 70 yards of them, when they fired first, and wounded a soldier. Their leader called on them to stand firm, but on a volley from the soldiers, which it is believed shot two persons, they scattered and ran, carrying off the wounded men. Blood was seen on the ground. No arrests have yet been made. The sergeant of the guard and the sentry on duty on that part of the ramparts where the injured gun was mounted are suspected of having connived at the outrage, and are to be brought before a military court of inquiry.

PROSECUTION OF THE "WEEKLY NEWS" AND "IRISHMAN."—On Monday Mr. A. M. Sullivan appeared before Mr. O'Donnell, at Capel Street Police-office, to answer the summons for seditious libels in the *Weekly News*. Informations were taken against him, and the

case sent for trial. Bail was accepted. A committal order was granted on Monday by the Court of Criminal Bench to Mr. Richard Pigott, the proprietor of the *Irishman* newspaper, to remove any indictments may be found against him at the Commission of the Peace and Terminus into that Court, the ground for the committal being that he will not get a fair trial at the Commission. On Wednesday the Attorney-General moved for the discharge of the provisional order, and on Thursday the Court gave judgment on the motion. Mr. Justice Fitzgerald and Mr. Justice O'Brien were of opinion that the case was a special one, which ought to be tried by a jury of more than ordinary intelligence. On this ground they were for granting the application. Mr. Justice George and the Lord Chief Justice thought that no sufficient grounds had been shown, and that the *certiorari* should be refused. The being divided, the judgment was, no rule in the matter.

FURTHER ARRESTS.—Jonathan Allen, a schoolmaster, cousin of the convict of the same name who was executed at Manchester for the murder of Serjeant Brett, was arrested on Monday at a public house in county Limerick, for Fenianism. Others were vainly searched for, some of them Irish American. A supposed Fenian Head Centre was arrested at a public house last week and brought to Dublin under a Lord Lieutenant's warrant, and lodged in a military goal. The arrest is considered of much importance. A man who gave his name as John Whelan, and who arrived by the Minnesota from America, was arrested in Passage, on Friday, on suspicion of Fenianism. He had been behaving in a very swaggering way through the town, and, on being brought before the magistrates, refused to state where he had last seen or what was his business in Passage. He was retained for a week. An attorney's clerk named W. H. Head Centre, was arrested on Saturday evening at Waterford. At Skibbereen a soldier of the 10th Regiment is under arrest, awaiting a trial by court-martial for declaring himself a Fenian, and saying that in future he would serve, not the Queen, but the Republic. On Wednesday Marcus Adams, a Fenian, was allowed to stand out on bail for treatment since the Cork special commission, was retained at his residence, in North Main Street. A large party attempted to rescue him, but the armed police prevented them from doing so. He is known to hold a high position in the Fenian conspiracy. Other arrests are expected.

PASTORAL FROM CARDINAL CULLEN.—On the morning a new pastoral from Cardinal Cullen in commemoration of the festival of St. Brigid, was issued with St. Patrick the tutelage of Ireland, was read in all the Catholic churches of Dublin. After a eulogium upon the saint, the cardinal proceeded to consider the state of Ireland, of which he draws a gloomy picture. In no country in the world is misery to be witnessed comparable to that which prevails in Ireland. He describes the towns as filled with half-starved poor, destitute of shoes, stockings, and shivering in the winter blast for proper clothing. More squalid poverty of this kind to be seen, he says, in Dublin alone than in all the great cities of France, Austria, or Spain. Alluding to the compulsory emigration of the Irish people to seek food in foreign lands, he says that 100,000 cottages of the poor have been abandoned, the ground lest they should again afford shelter to their former inmates. He says that the aristocracy, the small Orange faction, the source of innumerable evils to Ireland and of weakness to the empire, is not maintained, and refers to recent articles in the *Quarterly Review* as a proof that no existing evils is to be expected. He then proceeds to condemn Fenianism. "To fill the cup of our misery," he says, "some misguided men, deceived by designing knaves, are endeavouring to excite the people to resistance to the laws and to the authority; to alienate them from the Protestant religion, and to initiate them in Fenian secret societies, where they are at the mercy of spies and subjected to the same spiritual penalties as the *Freemasons* and cut off as rotten branches from the tree of God, whether they be *Freemasons*, or *Orange* or *Ribbon* men." In conclusion he exhorts the people to seek redress of their grievances by constitutional means, and, with that view, members of Parliament who will demand from the Legislature the "disendowment of the Church Establishment," freedom of education, and readjustment of the relations between landlord and tenant as will secure to the agricultural labourer the fruits of their capital and labour.

FENIAN MEMORIAL CROSSES.—The last of the desecrated churchyards by the erection of crosses in honour of the men executed at Malinbeg has been promptly put down by the constabulary. A cross was put up last week in the graveyard at Rathowen; but it was immediately pulled down and cut to pieces by a constable, while an officer and members of the force stood by to protect him.

Scotland.

DESTRUCTIVE GALE IN EDINBURGH.—On the forenoon till 6 in the evening a terrific gale raged in Edinburgh, from 11 o'clock a block of chimneys in Duke Street was blown down, and fell through five flats of dwelling-houses in the upper storey, two clerks on the street below were killed, and a lady in the second floor was killed. Several persons were buried; one escaped unhurt, but was severely injured. Many minor accidents were reported. In proof of the violence of the storm the *Daily Review* states that on the following day 60 and 70 tons of lime, fragments of chimney-slates, and tiles were collected from the street.

Obituary.

THE COUNTESS OF TYRCONNEL died at Kiplin Park, near York, Yorkshire, on the 23rd ult., in her 67th year, from cancer of the breast. Her ladyship was the only child and heiress of the late Earl of Tyrconnel...

wards he was elected a Fellow of Exeter. He became M.A. in 1802 and D.C.L. in 1812, when he succeeded the famous Mr. Justice Blackstone as Assessor of the Chancellor's Court. In 1813 he was appointed by Lord Grenville, at that time Chancellor of the University, to the Principality of Magdalen...

Dr. JOHN DAVY, M.D., F.R.S., the brother and biographer of Sir Humphrey Davy, and an eminent chemist, geologist, and physiologist, died on the 24th ult. at his residence, Lesketh How, near Ambleside. He was born at Penzance, in 1790. He studied medicine in Edinburgh, and took his M.D. degree in that University in 1814.

Markets.

COVENT GARDEN.—Feb. 1. Foreign imports continue heavy. A good demand still exists for Cucumbers, but other forced produce remains at former quotations. French goods include Lettuce, Endive, Asparagus, and Artichokes.

FRUIT. Apples, per bushel, 4s to 8s. Pears, per doz., 3s to 9s. Pine-apples, per lb., 6s to 8s. Chestnuts, per bushel, 10s to 12s.

VEGETABLES. Artichokes, per doz., 2s to 3s. Asparagus, per bundle, 8s to 20s. Beans, per doz., 3s to 4s. Parsnips, per doz., 2d to 1s.

NEWGATE.—Jan. 31. Best Fresh Butter 18s per dozen lb. Second do. 16s. Small Pork, 8s. 6d. to 4s. 2d., Large Pork, 3s. 0d. to 3s. 6d. per 8 lb.

HAY.—Per Load of 36 Trusses. SMITHFIELD, Thursday, Jan. 30. Best Green Hay 95s to 105s. Prime Meadow Hay 75s to 84s.

CUMBERLAND MARKET, Thursday, Jan. 30. Sup. Meadow Hay 84s to 90s. Inferior do. 65 74. New do. 30 36. Superior Clover 97 105.

LEADENHALL AND NEWGATE POULTRY, &c. THURSDAY, Jan. 30. A very small supply and scarcely any demand. Turkeys, cock, each 6 0-12 0. Turkey hens 5 0-10 0.

COALS.—Jan. 29. Buddle's West Hartley, 15s. 6d.; Hollywell Main 15s. 6d.; Lambert's West Hartley, 15s. 9d.; West Hartley, 15s. 6d.

POTATOS.—SOUTHWARK, Monday, Jan. 27. During the past week the arrivals both coastwise and by rail have been moderate, but more liberal from abroad. The trade steady for best samples.

Fife Regents, 110s. to 130s.; ditto Rocks, 110s. to 130s.; French and Belgian Whites, 90s. to 100s.

ENGLISH WOOL.

There has been a decidedly better tone in the wool market, and prices are, if anything, a shade stiffer. The business also is on a more extensive scale; and altogether, if we have no untoward political news for the next few weeks, we may fairly expect a slight improvement.

Table with columns: CURRENT PRICES OF ENGLISH WOOL, per lb.—s. d. s. d. Rows include: Southdown hoggets, Half-bred ditto, Kent Fleeces, Southdown ewes and wethers, Leicester ditto, Clothing, Combing.

METROPOLITAN CATTLE MARKET.

MONDAY, JAN. 27.

We have a large supply of Beasts, there is, however a fair demand, and late quotations are nearly realised; some inferior qualities remain unsold. The number of Sheep is large, but they are nearly all sold at about late rates.

Table with columns: s. d. s. d. Rows include: Best Scots, Herefords, Best Shorthorns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Best Long-wools, Do. Shorn, Ewes & 2d quality, Do. Shorn, Lambs, Calves, Pigs.

THURSDAY, JAN. 30.

Our supply of Beasts is rather larger than on Thursday last. Trade is by no means brisk, yet the favourable weather enables us to dispose of them at about Monday's quotations.

Table with columns: s. d. s. d. Rows include: Best Scots, Herefords, Best Shorthorns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Best Long-wools, Do. Shorn, Ewes & 2d quality, Do. Shorn, Lambs, Calves, Pigs.

MARK LANE.—MONDAY, JAN. 27.

The supply of Wheat from Essex and Kent to this morning's market was small, the condition very miserable, it was nevertheless disposed of at the extreme rates of this day's market.

Table with columns: s. s. s. Rows include: WHEAT, Essex, Kent, Suffolk, White, Red, fine selected rings, Talavera, Norfolk, Foreign, Barley, grind. & dist., Foreign grinding and distilling, OATS, Essex and Suffolk, Scotch and Lincolnshire, Irish, Foreign, RYE, Foreign, RYE-MEAL, Foreign, BEANS, Mazagan, Pigeon, Foreign, PEAS, White, Essex, and Kent, Maple, MAIZE, Foreign, FLOUR, best marks delivered, 2d ditto, Foreign.

FRIDAY, JAN. 31.

The weather in the early part of the week was very stormy and wet; we have since had some night frosts, followed by a milder temperature and frequent showers; yesterday fine. The advance in the value of Wheat which we reported last Friday has been well maintained throughout the week, and in many of our leading markets on the east coast and in the agricultural districts best samples have further improved 1s. to 2s. per qr., but the Scotch markets, Liverpool, and Birmingham were not dearer.

Table with columns: Wheat, Barley, Oats, Flour. Rows include: English, Irish, Foreign.

LIVERPOOL, Tuesday, Jan. 28.—At to-day's market we had a very moderate attendance, and in Wheat a tolerably business.

Earl Granville expressed his great pleasure at finding that Lord Stanley had stated the readiness of the Government to bring forward "a wise, a large, and well-considered measure for the education of the people;" and he trusted that the Government would be kept up to that programme, especially as far as a "large" measure was concerned. After some remarks by Professor Thorold Rogers, Professor Livey, Professor Crace Calvert, Mr. Peel, chairman of the Birmingham Chamber of Commerce, and other gentlemen, the debate was adjourned. On Saturday Mr. Harry Chester spoke in favour of the resolutions, and was followed by Mr. T. D. Acland, M.P., Mr. Ayrton, M.P., the Hon. A. Herbert, Mr. Hyde Clark, Mr. Brocklehard, of Manchester. Professor Huxley objected to the resolution as putting science in an inferior position to other studies. Professor F. Jenkin, of University College, London, insisted on the necessity of improved primary education. The Rev. Arthur Rigg, principal of Chester College, said that every attempt to popularise science had been a failure. Mr. Clarke, North Cheshire Chamber of Agriculture, said that his experience led him to believe that workshops were advantageous as a means of education. Mr. Lucraft moved as an amendment the addition of words to the resolution providing for the establishment of museums of art manufactures in the great centres. Mr. G. Godwin, F.R.S., seconded the amendment, and it was at once agreed that it should be incorporated with the resolution. After some remarks by M. Meyer, of Hanover, in relation to the system of education adopted in the schools of Germany, and by Mr. Ayrton, M.P., in favour of science schools, the resolution, embodying Mr. Lucraft's amendment was carried, with two dissentients. Mr. H. Chester moved the next resolution.

"That in such measures as may be desirable for the general provision of the means of efficient primary education, it would be right to consolidate and improve rather than overthrow what has already been done, but that the voluntary principle requires to be supplemented by local rates for education."

The Right Hon. W. Cowper seconded the resolution, which was carried, with five dissentients. The Rev. W. C. Lake moved the next resolution:-

"That while this conference acknowledges the benefits which have resulted from the education of the Factory Acts, it is of opinion that the Legislature ought now to declare that all children between certain ages, employed in remunerative labour of a certain character, should receive education during at least a minimum number of hours in each year, security being taken that the education be conducted in efficient schools."

Mr. Antonio Brady seconded the resolution. Mr. Harry Chester moved as an amendment that after the words "certain ages" in the resolution, the words "and not only those" should be inserted, making it compulsory to provide education for all children. Professor Thorold Rogers seconded the amendment. Mr. Bruce, M.P., said that he was not opposed to compulsion, but he wanted to have it adopted with the free consent of the people. Those in Parliament would have great difficulties in dealing with the local rating question, and he thought it would be unwise to press upon willing horses a load which might be too great for their strength. Mr. Dixon, M.P., thought that the conference ought to express itself strongly in favour of the amendment, and then to leave members of the Legislature to deal with it as they pleased. Sir J. Kay Shuttleworth suggested that in the resolution the word "now" should be struck out, and the words "as soon as practicable" substituted. The Rev. W. C. Lake, Mr. Chester, Mr. Bruce, and other gentlemen agreed to the alteration, and the amended resolution was submitted by the chairman as a substantive motion. Mr. Chester's addition also having been incorporated with it. Mr. Connolly, a well-known working man connected with agitation, then addressed the meeting in a speech which was received with vociferous applause. He said the working men were willing to submit to any fair arrangement that would secure education for their children, and contended that no man was entitled to the labour of a child to the injury of the moral and physical condition of that child. At the close of his speech several gentlemen cordially shook hands with him, and congratulated him on his success. The resolution, as amended, was then carried unanimously. Mr. Samuelson moved the next resolution:-

"That the Council of the Society of Arts be requested to appoint a standing committee to take such steps as may give effect to the foregoing resolutions, to support all such well-considered schemes for technical education as may be brought before it, to send such deputations to the Government as may seem expedient, and to recommend the conference when desirable."

He said he intended to move for a committee of the House of Commons on the subject when Parliament re-assembled, and the Committee of the Society of Arts would be of great assistance to it. The Rev. H. Solly seconded the resolution, which was adopted. On the motion of Mr. Bruce, M.P., seconded by Alderman Salomons, M.P., a cordial vote of thanks was accorded to Mr. W. Hawes for the manner in which he had presided over the conference.

ST. ALBAN'S, HOLBORN.—The Rev. Dr. Hugh M'Neile, referring to the statement which appeared in the *Guardian* last week, that "he was present and communicated on Sunday at the high celebration at St. Alban's, Holborn," has written a letter to the *Record* (the Evangelical organ), contradicting the entire story. He says:-

"The most charitable supposition is that some contributor to the *Guardian* was misinformed or mistaken, and if so I hope that this unfounded falsehood will put the editor of that paper on his guard for the future. I am not afraid of Mr. O'Connell's maxim for defamation in this case. 'Draw and enough and some of it will stick,' said the agitator. I am thankful to think that against a charge of Romanism I am mud-proof. It has not been in London since November. You will oblige me by adding to this that I am so contentiously persuaded that what is called the high celebration

at St. Alban's, Holborn, is idolatry, that I could no more consent to share in it than I could to be wilfully guilty of Sabbath-breaking, adultery, or theft."

THE PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, January 25, 4819 births and 3724 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 27 per 1000 persons living, being 23 per 1000 in London, 31 in Edinburgh, 37 in Dublin, 37 in Bristol, 24 in Birmingham, 32 in Liverpool, 38 in Manchester, 28 in Salford, 26 in Sheffield, 31 in Bradford, 23 in Leeds, 23 in Hull, 27 in Newcastle-upon-Tyne, and 31 in Glasgow. The rate in Vienna was 30 per 1000 during the week ending the 18th inst. In London the births of 1157 boys and 1166 girls, in all 2323 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2205. The deaths registered in London during the week were 1395. It was the fourth week of the year, and the average number for that week, corrected for increase of population, was 1716. The present return is, therefore, less by 321 than the estimated number.

ALDERNEY.—A charge of Fenianism was brought last week against Mr. Thomas Simon, the sheriff of this island, arising out of a very trumpety affair, which has made all concerned in it look very ridiculous. It appears that Mr. Simon was in a shop in Alderney, where there happened to be at the same time 10 women, natives of the island. A newspaper on the counter led the conversation to Fenianism and the Manchester executions, when Mr. Simon said in French that "the Government would do well not to hang any more, as England would suffer from these hangings, and it would serve her right." adding, "If the Fenians should come to Alderney, I'll show them the way." These words being repeated to the magistrates as they sat in court, they communicated with the Lieutenant-Governor, and asked his advice in the emergency. His Excellency declined giving any, and told the Court they might do as they pleased. They adopted the suggestion, and suspended Mr. Simon from his office, admitting him to bail, and referred the case to the consideration of the Royal Court of Guernsey. This tribunal, seeing the ridiculousness of the charge, at once quashed the proceedings, and ordered the liberation of Mr. Simon.

ILMINSTER.—The London police have now issued bills offering 500£ reward for the discovery of the Rev. Benjamin Speke, rector of Dowlish Wake, who disappeared so mysteriously while on a visit to town in the early part of last month. The bills state that the old hat which Mr. Speke had been wearing before he bought the new one in Warwick Street, Piccadilly, was found on the morning of the 8th ult. in Birdcage Walk, but that appears to be the only clue that has been discovered.

LLANELLY.—On Wednesday evening the 22d ult. 19 vessels, chiefly brigs, brigantines, and schooners engaged in the coasting trade, left Llanelly with the hope of beating down channel. The sea was running very high over the bar, and as there was not sufficient water to float the vessels over it, they all took the ground and became partial or total wrecks, only six riding out the violence of the breakers. Of the crews of the vessels lost 12 were saved, but 52 were drowned. The jury at the inquest returned a verdict of Found Drowned, with a strong expression of opinion as to the necessity of signals and a lifeboat.

SHEFFIELD.—The report of Mr. Overend, Q.C., Mr. Barstow, and Mr. Chance, the examiners appointed under the Trades' Unions Commission Act of 1867, to inquire into the outrages asserted to have taken place at Sheffield and elsewhere with the support and connivance of associations of workmen, has just been issued, together with the evidence taken at Sheffield. The report is addressed by the examiners to the Commissioners appointed under the Act, and consists of a complete history of their inquiry, the facts of which received so much attention during its progress. The accompanying evidence, filling 150 folio pages, contains nothing of importance that has not already been published.

Ireland.

ANOTHER ATTACK ON A MARTELLO TOWER.—A martello tower, near Duncannon Fort, in Waterford Harbour, was attacked on Monday night between 9 and 10 o'clock. One of the guns of the fort had been spiked on the previous night by some person or persons unknown, and some of the other guns showed that they had been tampered with. When the attack was made on Monday night the alarm signals were fired, and a reinforcement of military sent from the fort. The marauders waited in regular array until the soldiery came within 70 yards of them, when they fired first, and wounded a soldier. Their leader called on them to stand firm, but on a volley from the soldiers, which it is believed shot two persons, they scattered and ran, carrying off the wounded man. Blood was seen on the ground. No arrests have yet been made. The sergeant of the guard and the sentry on duty on that part of the ramparts where the injured gun was mounted are suspected of having connived at the outrage, and are to be brought before a military court of inquiry.

PROSECUTION OF THE "WEEKLY NEWS" AND "IRISHMAN."—On Monday Mr. A. M. Sullivan appeared before Mr. O'Donnell, at Capel Street Police-office, to answer the summons for seditious libels in the *Weekly News*. Informations were taken against him, and the

case sent for trial. Bail was accepted. A committal order was granted on Monday by the Court of Criminal Bench to Mr. Richard Pigott, the proprietor of the *Irishman* newspaper, to remove any indictments which may be found against him at the Commission of the Peace and Terminer into that Court, the ground for the committal being that he will not get a fair trial at the Commission. On Wednesday the Attorney-General moved for the discharge of the provisional order, and on Thursday the Court gave judgment on the motion. Mr. Pigott, Fitzgerald and Mr. Justice O'Brien were of opinion that the case was a special one, which should be tried by a jury of more than ordinary competence. Mr. Justice George and the Lord Chief Justice thought that no sufficient grounds had been shown, and that the *certiorari* should be refused. The committal order, being divided, the judgment was, no rule in the premises.

FURTHER ARRESTS.—Jonathan Allen, lately a schoolmaster, cousin of the convict of the same name, who was executed at Manchester for the murder of Sergeant Brett, was arrested on Monday at Ballyvaughan, county Limerick, for Fenianism. He had been vainly searched for, some of the Irish Army, supposed Fenian Head Centre was arrested at Ballyvaughan last week and brought to Dublin. A Lord Lieutenant's warrant, and lodged in the County Jail. The arrest is considered of much importance. A man who gave his name as John W. Lee, arrived by the Minnetota from America, was arrested in Passage, on Friday, on suspicion of Fenianism. He had been behaving in a very swaggering manner through the town, and, on being brought before the magistrates, refused to state where he had been for a week. An attorney's clerk named W. Lee, Head Centre, was arrested on Saturday at Waterford. At Skibbereen a soldier of the 10th Regiment is under arrest, awaiting a trial by court-martial for declaring himself a Fenian, and saying in the future he would serve, not the Queen, but the Republic. On Wednesday Marcus Adams, who has been allowed to stand out on bail for treason since the Cork special commission was re-arrested his residence, in North Main Street. An attempt was made to rescue him, but the armed police prevented him from doing so. He is known to hold a part in the Fenian conspiracy. Other arrests are expected.

PASTORAL FROM CARDINAL CULLEN.—On the morning a new pastoral from Cardinal Cullen, in commemoration of the festival of St. Brigid, was issued with St. Patrick the tutelage of Ireland, and all the Catholic churches of Dublin. After a glowing eulogium upon the saint, the cardinal proceeds to consider the state of Ireland, of which he presents a gloomy picture. In no country in the world is misery to be witnessed comparable to that which prevails in Ireland. He describes the towns as filled with half-starved poor, destitute of stockings, and shivering in the winter blast for proper clothing. More squalid poverty is to be seen, he says, in Dublin alone than in the great cities of France, Austria, or Spain. Allowing to the compulsory emigration of the Irish to seek food in foreign lands, he estimates 400,000 cottages of the poor have been abandoned, the ground lest they should again afford shelter to their former inmates. He says that the small Orange faction, the source of innumerable evils to Ireland and of weakness to the empire, is maintained, and refers to recent articles in the *Quarterly Review* as a proof that the existing evils are to be expected. He then condemns Fenianism. "To fill the cup of our misery," he says, "some misguided men, led by designing knaves, are endeavouring to excite the people to resistance to the laws and to the authority, to alienate them from the Protestant religion, and to initiate them in Fenianism, where they are at the mercy of spies and subjected to the same spirit of penal laws, and cut off as rotten branches from the Christian societies which are all alike condemned by the will of God, whether they be Freemasons, Orangemen or Ribbonmen." In conclusion, he says, "the people to seek redress of their grievances by constitutional means, and, with that view, members of Parliament who will demand of the Legislature the 'disendowment of the Protestant Establishment,' freedom of education, and readjustment of the relations between landlord and tenant as will secure to the agricultural labourer the fruits of their capital and labour."

FENIAN MEMORIAL CROSSES.—The first of the desecrate churchyards by the erecting of crosses in honour of the men executed at Manchester has been promptly put down by the constable. A cross was put up last week in the graveyard at Rathowen; but it was immediately pulled down and cut to pieces by a constable, while an officer and members of the force stood by to protect him.

Scotland.

DESTRUCTIVE GALE IN EDINBURGH.—A terrific gale raged in Edinburgh, from 11 o'clock in the forenoon till 6 in the evening. At 11 o'clock a block of chimneys in Duke Street was blown down, and fell through five flats of dwelling-houses. In the upper storey, two clerks on the street, and a lady in the second floor were killed. Several persons were buried; one escaped unhurt, but was severely injured. Many minor casualties were reported. In proof of the violence of the gale, the *Daily Review* states that on the following day 60 and 70 tons of lime, fragments of chimneys, and tiles were collected from the streets.

wards he was elected a Fellow of Exeter. He became M.A. in 1802 and D.C.L. in 1812, when he succeeded the famous Mr. Justice Blackstone as Assessor of the Chancellor's Court. In 1813 he was appointed by Lord Granville, at that time Chancellor of the University, to the Principality of Magdalen, and in the same year he was nominated by the Lord Almoner of the time to the Readership in Arabic. These two offices he held till his death. He was most successful in raising the Hall of which he was head to a position surpassing that of many colleges. He had considerable reputation as a writer, having published a "Diatesseron" or "Harmony of the Gospels," which was at one time largely used as a text-book in the University, and also a work on Mahomedanism. In religious opinion he belonged to the Evangelical School, while in politics he was a moderate Conservative. In private life he was universally respected, while to those who knew him well he was greatly endeared by his kindness, sincerity, and warmth of heart. The poor Oxford rose in him a most liberal almoner, his high judicious and successful head, and the University one of the few links which still connected it with the manners, the scholarship, and the tone of thought that characterised the last century.

DR. JOHN DAVY, M.D., F.R.S., the brother and biographer of Sir Humphrey Davy, and an eminent chemist, geologist, and physiologist, died on the 24th ult. at his residence, Lesketh How, near Ambleside. He was born at Penzance, in 1790. He studied medicine in Edinburgh, and took his M.D. degree in that University in 1814. He entered the army as a surgeon, and at the time of his death held the rank of Inspector-general of Army Hospitals. He was a most copious writer, having been the author of several volumes on general subjects, and of a large number of papers ranging over the whole field of natural science. His physiological researches were principally published in the "Philosophical Transactions," the "Transactions" of the Royal Society of Edinburgh, and the Royal Medical-Chirurgical Society. He also wrote largely on meteorology, geology, and chemistry. One of his most recent works was a series of "Lectures on Chemistry," in which that science was regarded in its relations to the atmosphere, the earth, the ocean, and the art of agriculture. He was a Fellow of the Royal Societies of London and Edinburgh, author of "Life of Sir Humphrey Davy," and editor of his collected works.

Markets.

COVENT GARDEN.—FRUIT. Foreign imports continue heavy. A good demand still exists for Cucumbers, but other forced produce remains at former quotations. French goods include Lettuces, Endive, Asparagus, and Artichokes. Pears comprise Ne Plus Meuris, Easter Beurre, and Jean de Witte. St. Michael Oranges are still arriving in fine condition. The supply of Chestnuts is but limited. Spanish Chestnuts for planting are now at their best, and realise about 19s. per bushel. Spanish Hazel Nuts for planting fetch 16s. per bushel. Potatoes have not altered in price since our last report. Flowers chiefly consist of Orchids, Cyclamens, Chinese Primulas, Pelargoniums, Mignonette, Early Tulips, Hyacinths, Poinsettia pulcherrima, and Rosas.

FRUIT. Apples, per bushel, 4s to 8s; Cobnuts, per lb., 1s; Grapes, per lb., 4s to 8s; Lemons, per 100, 4s to 10s; Oranges, new, per 100, 2s to 7s.

VEGETABLES. Mint, per bunch, 1s; Mushrooms, p. bott., 1s 6d to 2s; Onions, per bushel, 2s to 4s; Parsnips, per doz., 2d to 1s; Parsley, per bunch, 2d to 4d; Potatoes, York Regents, p. ton, 130s to 160s; Rocks, do., 100s to 120s; Flukes, 110s to 160s; Other sorts, 75s to 80s; Seakale, p. pound, 1s 6d to 2s; Spinach, per bushel, 2s to 4s; Tomatoes, per doz., 2s to 3s; Turnips, per bunch, 4d to 6d.

NEWGATE.—Jan. 31. Best Fresh Butter .. 18s per dozen lb. Second do. do. .. 16s. Small Pork, 8s. 8d. to 4s. 2d.; Large Pork, 3s. 6d. to 3s. 6d. per 8 lb.

HAY.—Per Load of 36 Trusses. SMITHFIELD, Thursday, Jan. 30. Best Green Hay .. 75s to 84s; Prime Meadow Hay .. 55 to 70; Inferior do. .. 30 to 36; Straw .. 30 to 36.

CLIMBERLAND MARKET, Thursday, Jan. 30. Sup. Meadow Hay .. 84s to 90s; Inferior do. .. 65 to 74; New do. .. 30 to 36; Superior Clover .. 97 to 105.

LEADENHALL AND NEWGATE POULTRY, &c. THURSDAY, Jan. 30. A very small supply and scarcely any demand. Turkeys, cock, each .. 6 0-12 0; Turkey hens .. 5 0-10 0; Geese .. 6 0-7 6; Ducks .. 3 0-3 6; Ducklings .. 1 6-2 0; Wild Ducks .. 1 4-2 6; Tame Rabbits .. 0 9-1 0; Wild do. .. 8 0-10 0; Do Chickens .. 5 6-7 0; Barn-door Fowls .. 5 0-7 0.

COALS.—Jan. 29. Buddle's West Hartley, 15s. 6d.; Hollywell Main 15s. 6d.; Lambert's West Hartley, 15s. 3d.; West Hartley, 15s. 6d.; Wylam, 15s. 6d.; Eden Main, 16s. 6d.; Walls End Haswell, 18s. 6d.; Walls End Hetton, 18s. 6d.; Walls End Hetton Lyons, 15s. 6d.; Walls End Tunstall, 15s. 6d.; Walls End Hartlepool, 16s. 9d.; Walls End Kelloe, 16s. 9d.; Walls End East Hartlepool, 18s.—Ships at market, 33; sold, 23.

POTATOS.—SOUTHWARK, Monday, Jan. 27. During the past week the arrivals both coastwise and by rail have been moderate, but more liberal from abroad. The trade steady for best samples. The quotations as follow:—Yorkshire Flukes, per ton, 130s. to 170s.; do. Regents, 140s. to 150s.; do. Rocks, 110s. to 130s.; Kent and Essex Regents, 140s. to 160s.; Lincolnshire Regents, 130s. to 140s.; Dunbar and East Lothian Regents, 130s. to 150s.; Perth, Forfar and

Fife Regents, 110s. to 130s.; ditto Rocks, 110s. to 120s.; French and Belgian Whites, 90s. to 100s.

ENGLISH WOOL.

There has been a decidedly better tone in the wool market, and prices are, if anything, a shade stiffer. The business also is on a more extensive scale; and altogether, if we have no untoward political news for the next few weeks, we may fairly expect a slight improvement.

Table with columns: CURRENT PRICES OF ENGLISH WOOL, per lb.—s. d. s. d. FLEECES—Southdown hoggets, Half-bred ditto, Kent Fleeces, Southdown ewes and wethers, Leicester ditto, SORTS—Clothing, Combing.

METROPOLITAN CATTLE MARKET.

MONDAY, Jan. 27. We have a large supply of Beasts, there is, however a fair demand, and late quotations are nearly realised, some inferior qualities remain unsold. The number of Sheep is large, but they are nearly all sold at about late rates. Choice Calves are still scarce and dear. Our foreign supply consists of 715 Beasts, 2010 Sheep, 84 Calves, and 15 Pigs; from Scotland there are 390 Beasts; from Ireland, 50; from Norfolk and Suffolk, 1600; and 1175 from the Northern and Midland Counties.

Table with columns: s. d. s. d. Best Scots, Herefords, &c., Best Short-horns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Best Long-wools, Do. Shorn, Ewes & 2d quality, Do. Shorn, Lambs, Calves, Pigs.

THURSDAY, Jan. 30.

Our supply of Beasts is rather larger than on Thursday last. Trade is by no means brisk, yet the favourable weather enables us to dispose of them at about Monday's quotations. The number of Sheep is very small, the demand is also limited. Late prices are well maintained for all kinds. Choice Calves continue to be very dear. Our foreign supply consists of 190 Beasts, 420 Sheep, and 55 Pigs.

Table with columns: s. d. s. d. Best Scots, Herefords, &c., Best Short-horns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Best Long-wools, Do. Shorn, Ewes & 2d quality, Do. Shorn, Lambs, Calves, Pigs.

MARK LANE.—MONDAY, Jan. 27.

The supply of Wheat from Essex and Kent to this morning's market was small, the condition very miserable, it was nevertheless disposed of at the extreme rates of this day so far. The market was well attended, and foreign Wheat being held for an advance of 1s per qr., in some instances more, checked business the few sales made were only in retail. Barley and Peas were unchanged in value. Beans were 1s. dearer. The Oat trade was slow at about the prices of this day week. There was no alteration in the top price of Flour, but country marks brought 1s. per qr. more money, American 6d. per barrel.

Table with columns: PRICE PER IMPERIAL QUARTER, WHEAT, Essex, Kent, Suffolk, White, Red, fine selected runs, Talavera, Norfolk, Foreign, BARLEY, grind & dist, Scotch and Lincolnshire, OATS, Essex and Suffolk, Scotch and Lincolnshire, Irish, Foreign, RYE, RYE-MEAL, Foreign, BEANS, Mazagan, Pigeon, Foreign, PEAS, White, Essex, and Kent, Maple, MAIZE, FLOUR, best marks delivered, 2d ditto, Foreign.

FRIDAY, Jan. 31.

The weather in the early part of the week was very stormy and wet, we have since had some light frosts, followed by a milder temperature and frequent showers; yesterday fine. The advance in the value of Wheat which we reported last Friday has been well maintained throughout the week, and in many of our leading markets on the east coast and in the agricultural districts best samples have further improved 1s. to 2s. per qr., but the Scotch markets, Liverpool, and Birmingham were not dearer. Spring Corn of all descriptions was saleable at full rates, and in some instances a small advance was established on Oats and Beans. We observed no alteration in the value of Flour in the markets of the interior. The arrivals of grain and seed-laden vessels off the coast this week consisted of 14 cargoes, of which, with those left over from last week, there remained for sale last night 11 cargoes. Arrived Wheat was firmly held at late extreme rates, and Egyptian, which meets with favour, was 1s per qr. dearer. Barley commanded likewise 1s. per qr. more money. Of other articles the coast is entirely cleared, and prices nominal. For Wheat on passage and for forward shipment there was little demand; prices were without alteration. Paris, Jan. 30.—The Wheat and Flour markets show an improving tendency. The six marks are quoted at equal to 57s. 9d. per 280 lb. The stock at the Halls is estimated at 23,520 cwt. The arrivals of foreign Wheat this week have been to a fair extent, of all other foreign and English grain very limited. The attendance at this morning's market was small. Dry samples of English Wheat continue in request at Monday's prices, but other descriptions are very unsaleable; and the inquiry for foreign was of a very retail character, and its value unaltered. Our quotations for Spring Corn remain unchanged.

ARRIVALS THIS WEEK.

Table with columns: Wheat, Barley, Oats, Flour. English, Irish, Foreign.

LIVERPOOL, Tuesday, Jan. 28.—At today's market we had a very moderate attendance, and in Wheat a tolerable business.

Earl Granville expressed his great pleasure at finding that Lord Stanley had stated the readiness of the Government to bring forward "a wise, a large, and well-considered measure for the education of the people;" and he trusted that the Government would be kept up to that programme, especially as far as a "large" measure was concerned. After some remarks by Professor Thorold Rogers, Professor Lacey, Professor Craze Calvert, Mr. Peel, chairman of the Birmingham Chamber of Commerce, and other gentlemen, the debate was adjourned. On Saturday Mr. Harry Chester spoke in favour of the resolutions, and was followed by Mr. T. D. Acland, M.P., Mr. Ayrton, M.P., the Hon. A. Herbert, Mr. Hyde Clark, Mr. Brocklehard, of Manchester. Professor Huxley objected to the resolution as putting science in an inferior position to other studies. Professor F. Jenkin, of University College, London, insisted on the necessity of improved primary education. The Rev. Arthur Rigg, principal of Chester College, said that every attempt to popularise science had been a failure. Mr. Clarke, North Cheshire Chamber of Agriculture, said that his experience led him to believe that workshops were advantageous as a means of education. Mr. Lucraft moved as an amendment the addition of words to the resolution providing for the establishment of museums of art manufactures in the great centres. Mr. G. Godwin, E.R.S., seconded the amendment, and it was at once agreed that it should be incorporated with the resolution. After some remarks by M. Meyer, of Hanover, in relation to the system of education adopted in the schools of Germany, and by Mr. Ayrton, M.P., in favour of science schools, the resolution, embodying Mr. Lucraft's amendment was carried, with two dissentients. Mr. H. Chester moved the next resolution.

"That in such measures as may be desirable for the general provision of the means of efficient primary education, it would be right to consolidate and improve rather than overthrow what has already been done, and that the voluntary principle requires to be supplemented by local rates for education."

The Right Hon. W. Cowper seconded the resolution, which was carried, with five dissentients. The Rev. W. C. Lake moved the next resolution.

"That while this conference acknowledges the benefits which have ensued from the educational clauses of the Factory Acts, it is of opinion that the Legislature ought now to declare that all children between certain ages employed in remunerative labour of a certain character, should receive education during at least a minimum number of hours in each year, security being taken that the education be conducted in efficient schools."

Mr. Antonio Brady seconded the resolution. Mr. Harry Chester moved as an amendment that after the words "certain ages" in the resolution, the words "and not only those" should be inserted, making it compulsory to provide education for all children. Professor Thorold Rogers seconded the amendment. Mr. Bruce, M.P., said that he was not opposed to compulsion, but he wanted to have it adopted with the free consent of the people. Those in Parliament would have great difficulties in dealing with the local rating question, and he thought it would be unwise to press upon willing horses a load which might be too great for their strength. Mr. Dixon, M.P., thought that the conference ought to express itself strongly in favour of the amendment, and then to leave members of the Legislature to deal with it as they pleased. Sir J. Kay Shuttleworth suggested that in the resolution the word "now" should be struck out, and the words "as soon as practicable" substituted. The Rev. W. C. Lake, Mr. Chester, Mr. Bruce, and other gentlemen agreed to the alteration, and the amended resolution was submitted by the chairman as a substantive motion. Mr. Chester's addition also having been incorporated with it. Mr. Connolly, a well-known working man connected with agitation, then addressed the meeting in a speech which was received with vociferous applause. He said the working men were willing to submit to any fair arrangement that would secure education for their children, and contended that no man was entitled to the labour of a child to the injury of the moral and physical condition of that child. At the close of his speech several gentlemen cordially shook hands with him, and congratulated him on his success. The resolution, as amended, was then carried unanimously. Mr. Samuelson moved the next resolution.

"That the Council of the Society of Arts be requested to appoint a standing committee to take such steps as may give effect to the foregoing resolutions, to support all such well-advised schemes for technical education as may be brought before it, to send such deputations to the Government as may seem expedient, and to reassemble the conference when desirable."

He said he intended to move for a committee of the House of Commons on the subject when Parliament re-assembled, and the Committee of the Society of Arts would be of great assistance to it. The Rev. H. Solly seconded the resolution, which was adopted. On the motion of Mr. Bruce, M.P., seconded by Alderman Salomons, M.P., a cordial vote of thanks was accorded to Mr. W. Hawes for the manner in which he had presided over the conference.

ST. ALBAN'S, HOLBORN.—The Rev. Dr. Hugh M'Neile, referring to the statement which appeared in the *Guardian* last week, that "he was present and communicated on Sunday at the high celebration at St. Alban's, Holborn," has written a letter to the *Record* (the Evangelical organ), contradicting the entire story. He says—

"The most horrible supposition is that some contributor to the *Guardian* was misinformed or mistaken, and if I hope that this unfounded falsehood will put the editor of that paper on his guard for the future. I am not afraid of Mr. O'Connell's maxim for defamation in this case. 'Throw mud enough and some of it will stick,' said the agitator. I am thankful to think that against a charge of Romanising I am proof. I have not been in London since November. You will oblige me by adding to this that I am so conscientiously persuaded that what is called the high celebration

at St. Alban's, Holborn, is idolatry, that I could no more consent to share in it than I could to be wilfully guilty of Sabbath-breaking, adultery, or theft."

THE PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, January 25, 1819 births and 3724 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 27 per 1000 persons living, being 23 per 1000 in London, 31 in Edinburgh, 37 in Dublin, 27 in Bristol, 24 in Birmingham, 33 in Liverpool, 38 in Manchester, 28 in Salford, 26 in Sheffield, 31 in Bradford, 23 in Leeds, 23 in Hull, 27 in Newcastle-upon-Tyne, and 31 in Glasgow. The rate in Vienna was 30 per 1000 during the week ending the 18th inst. In London the births of 1157 boys and 1106 girls, in all 2323 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2205. The deaths registered in London during the week were 1375. It was the fourth week of the year, and the average number for that week, corrected for increase of population, was 1716. The present return is, therefore, less by 321 than the estimated number.

Provincial.

ALDERNEY.—A charge of Fenianism was brought last week against Mr. Thomas Simon, the sheriff of this island, arising out of a very trumpery affair, which has made all concerned in it look very ridiculous. It appears that Mr. Simon was in a shop in Alderney, where there happened to be at the same time 10 women, natives of the island. A newspaper on the counter led the conversation to Fenianism and the Manchester executions, when Mr. Simon said in French that "the Government would do well not to hang any more, as England would suffer from these hangings, and it would serve her right," adding, "If the Fenians should come to Alderney, I'll show them the way." These words being repeated to the magistrates as they sat in court, they communicated with the Lieutenant-Governor, and asked his advice in the emergency. His Excellency declined giving any, and told the Court they might do as they pleased. They adopted the suggestion, and suspended Mr. Simon from his office, admitting him to bail, and referred the case to the consideration of the Royal Court of Guernsey. This tribunal, seeing the ridiculousness of the charge, at once quashed the proceedings, and ordered the liberation of Mr. Simon.

ILMSTER.—The London police have now issued bills offering 500l. reward for the discovery of the Rev. Benjamin Speke, rector of Dowlish Wake, who disappeared so mysteriously while on a visit to town in the early part of last month. The bills state that the old hat which Mr. Speke had been wearing before he bought the new one in Warwick Street, Piccadilly, was found on the morning of the 8th ult. in Birdcage Walk, but that appears to be the only clue that has been discovered.

LLANELLY.—On Wednesday evening the 22d ult. 19 vessels, chiefly brigs, brigantines, and schooners engaged in the coasting trade, left Llanelly with the hope of beating down channel. The sea was running very high over the bar, and as there was not sufficient water to float the vessels over it, they all took the ground and became partial or total wrecks, only six riding out the violence of the breakers. Of the crews of the vessels lost 42 were saved, but 52 were drowned. The jury at the inquest returned a verdict of Found Drowned, with a strong expression of opinion as to the necessity of signals and a lifeboat.

SHEFFIELD.—The report of Mr. Overend, Q.C., Mr. Barstow, and Mr. Chance, the examiners appointed under the Trades' Unions Commission Act of 1867, to inquire into the outrages asserted to have taken place at Sheffield and elsewhere with the support and connivance of associations of workmen, has just been issued, together with the evidence taken at Sheffield. The report is addressed by the examiners to the Commissioners appointed under the Act, and consists of a complete history of their inquiry, the facts of which received so much attention during its progress. The accompanying evidence, filling 456 folio pages, contains nothing of importance that has not already been published.

Ireland.

ANOTHER ATTACK ON A MARTELLO TOWER.—A martello tower, near Duncannon Fort, in Waterford Harbour, was attacked on Monday night between 9 and 10 o'clock. One of the guns of the fort had been spiked on the previous night by some person or persons unknown, and some of the other guns showed that they had been tampered with. When the attack was made on Monday night the alarm signals were fired, and a reinforcement of military sent from the fort. The marauders waited in regular array until the soldiery came within 70 yards of them, when they fired first, and wounded a soldier. Their leader called on them to stand firm, but on a volley from the soldiers, which it is believed shot two persons, they scattered and ran, carrying off the wounded men. Blood was seen on the ground. No arrests have yet been made. The sergeant of the guard and the sentry on duty on that part of the ramparts where the injured gun was mounted are suspected of having connived at the outrage, and are to be brought before a military court of inquiry.

PROSECUTION OF THE "WEEKLY NEWS" AND "IRISHMAN."—On Monday Mr. A.M. Sullivan appeared before Mr. O'Donnell, at Capel Street Police-office, to answer the summons for seditious libels in the *Weekly News*. Informations were taken against him, and the

case sent for trial. Bail was accepted. An order was granted on Monday by the Court of Criminal Bench to Mr. Richard Pigott, the proprietor of the *Irishman* newspaper, to remove any inducements which may be found against him at the Commission of the Peace and Terminer into that Court, the ground for the order being that he will not get a fair trial at the Commission. On Wednesday the Attorney-General moved for the discharge of the provisional order, and on Thursday the Court gave judgment on the motion. Mr. Justice Fitzgerald and Mr. Justice O'Brien were of opinion that the case was a special one, which ought to be tried by a jury of more than ordinary intelligence, and that the *certiorari* should be refused. The order being divided, the judgment was, no rule to be made.

FURTHER ARRESTS.—Jonathan Allen lately a schoolmaster, cousin of the convict of the same name who was executed at Manchester for the murder of Sergeant Brett, was arrested on Monday at Bandon county Limerick, for Fenianism. Others were subsequently searched for, some of them Irish Army-supposed Fenian Head Centre was arrested in the derry last week and brought to Dublin. A Lord Lieutenant's warrant, and lodged in K. M. goal. The arrest is considered of much importance. A man who gave his name as John Whean arrived by the Minnesota from America, was arrested in Passage, on Friday, on suspicion of Fenianism. He had been behaving in a very swaggering manner through the town, and, on being brought before the magistrates, refused to state where he had last resided or what was his business in Passage. He was retained for a week. An attorney's clerk named W. H. Head Centre, was arrested on Saturday evening at Waterford. At Skibbereen a soldier of the 1st Regiment is under arrest, awaiting a trial by court-martial for declaring himself a Fenian, and saying that in future he would serve, not the Queen, but the Republic. On Wednesday Marcus Adams, who had been allowed to stand out on bail for treason since the Cork special commission was re-arrested his residence, in North Main Street. A large attempt to rescue him, but the armed police prevented him to go. He is known to hold a high position in the Fenian conspiracy. Other arrests are expected.

PASTORAL FROM CARDINAL CULLEN.—On the morning a new pastoral from Cardinal Cullen in commemoration of the festival of St. Brigid, with St. Patrick the tutelage of Ireland, was read in all the Catholic churches of Dublin. After a eulogium upon the saint, the cardinal proceeded to consider the state of Ireland, of which he drew a gloomy picture. In no country in the world is misery to be witnessed comparable to that which prevails in Ireland. He describes the towns as filled with half-starved poor, destitute of shoes, stockings, and shivering in the winter blast for proper clothing. More squalid poverty of this kind to be seen, he says, in Dublin alone than in all the great cities of France, Austria, or Spain. Alluding to the compulsory emigration of the Irish to seek food in foreign lands, he says that 400,000 cottages of the poor have been left the ground lest they should again afford shelter to their former inmates. He says that the small Orange faction, the source of innumerable evils to Ireland and of weakness to the empire, is maintained, and refers to recent articles in the *Standard* and "Quarterly Review" as a proof that no other existing evils is to be expected. He then proceeds to condemn Fenianism. "To fill the cup of our misery," he says, "some misguided men, devoted by designing knaves, are endeavouring to excite the people to resistance to the laws and to the authority; to alienate them from the Protestant religion, and to initiate them in Fenian secret societies where they are at the mercy of spies and subjected to the same spiritual penalties as the Free Societies which are all alike condemned by the God, whether they be Freemasons or Ribbonmen." In conclusion he exhorts the people to seek redress of their grievances by constitutional means, and, with that view, to support the members of Parliament who will defend the Legislature the "dis-endowment of the Church Establishment," freedom of education, and readjustment of the relations between landlord and tenant as will secure to the agricultural labourer the fruits of their capital and labour.

FENIAN MEMORIAL CROSSES.—The first of these desecrate churchyards by the erection of crosses in honour of the men executed at Malinbeg has been promptly put down by the constable. A cross was put up last week in the graveyard at Rathoven, but it was immediately pulled up and cut to pieces by a constable, while an officer and members of the force stood by to protect him.

Scotland.

DESTRUCTIVE GALE IN EDINBURGH.—On the 11th a terrific gale raged in Edinburgh, from 11 o'clock in the forenoon till 6 in the evening. At 1 o'clock a block of chimneys in Duke Street was blown down, and fell through five flats of dwelling-houses. In the upper storey, two clerks on the street were killed, and a lady in the second floor were killed. Several persons were buried; one escaped without injury, but was severely injured. Many minor casualties were reported. In proof of the violence of the storm the *Daily Review* states that on the following day 60 and 70 tons of lime, fragments of chimneys, slates, and tiles were collected from the streets.

COALS.—Jan. 29. Biddle's West Hartley, 15s. 6d.; Hollywell Main 15s. 6d.; Lambert's West Hartley, 15s. 3d.; West Hartley, 15s. 6d.; Wylam, 15s. 6d.; Eden Main, 16s. 6d.; Walls End Haswell, 18s. 6d.; Walls End Hatton, 18s. 6d.; Walls End Hutton Lyons, 15s. 6d.; Walls End Tunstall, 15s. 6d.; Walls End Hartlepool, 16s. 9d.; Walls End Kease, 16s. 9d.; Walls End East Hartlepool, 18s.—Slips at market, 38, sold, 23.

POTATOS.—SOUTHWARD, Monday, Jan. 27. During the past week the arrivals both coastwise and by rail have been moderate, but more liberal from abroad. The trade steady for best samples. The quotations as follow—Yorkshire Flukes, per ton, 130s. to 170s.; io. Regents, 130s. to 150s.; do. Rocks, 110s. to 130s.; Kent and Essex Regents, 140s. to 160s.; Lincolnshire Regents, 130s. to 140s.; Dunbar and East Lothian Regents, 130s. to 150s.; Perth, Forfar and

Fife Regents, 110s. to 130s.; ditto Rocks, 110s. to 120s.; French and Belgian Whites, 90s. to 100s.

ENGLISH WOOL. There has been a decidedly better tone in the wool market, and prices are, if anything, a shade stiffer. The business also is on a more extensive scale; and altogether, if we have not untoward political news for the next few weeks, we may fairly expect a slight improvement. CURRENT PRICES OF ENGLISH WOOL, per lb.—s. d. s. d. FLEECES—Southdown hoggets 1 1 to 1 3; Half-bred ditto 1 2 to 1 3; Kent Fleeces 1 1 1/2 to 1 3 1/2; Southdown ewes and wethers 1 0 1/2 to 1 2 1/2; Leicester ditto 1 1 to 1 2; SORTS—Clothing 1 0 to 1 6; Combing 1 0 to 1 6.

METROPOLITAN CATTLE MARKET.

MONDAY, Jan. 27. We have a large supply of Beasts, there is, however a fair demand, and late quotations are nearly realised; some inferior qualities remain unsold. The number of Sheep is large, but they are nearly all sold at about late rates. Choice Calves are still scarce and dear. Our foreign supply consists of 715 Beasts, 1010 Sheep, 84 Calves, and 15 Pigs; from Scotland there are 390 Beasts; from Ireland, 50; from Norfolk and Suffolk, 1600; and 1175 from the Northern and Midland Counties.

Best Scots, Hereford, &c. 4 8 to 5 0; Best Shorthorns 4 6 to 4 8; 2d quality Beasts 2 8 to 3 6; Best Downs and Half-breds 4 10 to 5 2; Do. Shorn 4 4 to 4 6; Do. Shorn 3 4 to 4 0; Lambs 4 0 to 5 0; Calves 4 0 to 6 0; Pigs 3 4 to 4 8.

Beasts, 3930; Sheep & Lambs, 18,890; Calves, 102; Pigs, 310.

THURSDAY, Jan. 30. Our supply of Beasts is rather larger than on Thursday last. Trade is by no means brisk, yet the favourable weather enables us to dispose of them at about Monday's quotations. The number of Sheep is very small, the demand is also limited. Late prices are well maintained for all kinds. Choice Calves continue to be very dear. Our foreign supply consists of 190 Beasts, 420 Sheep, and 55 Pigs.

Best Scots, Hereford, &c. 4 8 to 5 0; Best Shorthorns 4 6 to 4 8; 2d quality Beasts 2 8 to 3 6; Best Downs and Half-breds 4 10 to 5 2; Do. Shorn 4 4 to 4 6; Do. Shorn 3 4 to 4 0; Lambs 4 0 to 5 0; Calves 4 0 to 6 0; Pigs 3 4 to 4 8.

Beasts, 810; Sheep and Lambs, 2990; Calves, 60; Pigs, 130.

MARK LANE.—MONDAY, Jan. 27.

The supply of Wheat from Essex and Kent to this morning's market was small, the condition very miserable, it was nevertheless disposed of at the extreme rates of this day's market. The market was well attended, and foreign Wheat being held for an advance of 1s. per qr. in some instances more, checked business the few sales made were only in retail. Barley and Peas were unchanged in value. Beans were 1s. dearer. The Oat trade was slow at about the prices of this day week. There was no alteration in the top price of Flour, but country marks brought 1s. per qr. more money, American 6d. per barrel.

PRICE PER IMPERIAL QUARTER. WHEAT, Essex, Kent, Suffolk, White 76-78 Red 68-76; fine selected rungs do. 73-84 Red 72-74; Talavera 80-84; Norfolk Red 65-87; Foreign 65-87; BARLEY, grind & dist. 37s to 40s Chey. 42-47 Malting 40-48; Foreign grinding and distilling 35-39 Malting 41-46; OATS, Essex and Suffolk 23-20; Scotch and Lincolnshire Potato 25-33 Feed 26-30; Irish 30-33 Feed 26-30; Foreign Poland and Brew 25-32 Feed 23-30; RYE 41-42; RYE MEAL, Foreign 41-42; BEANS, Mazagan 39s to 45s Tuck 41-42 Harrow 41-42; Pigeon 45s to 50s Winds Longpod 42-44; Foreign Small 45-48 Egyptian 42-44; PEAS, White, Essex, and Kent, Boilers 46-48 Suffolk 50-52; Maple, 41s to 43s Grey 44-47 Foreign 39-45; MAIZE 36-40; FLOUR, best marks delivered per sack 59-64; 2d ditto ditto 54-61 Country 54-61; Foreign per barrel 24-42 Per sack 45-56.

FRIDAY, Jan. 31.

The weather in the early part of the week was very stormy and wet; we have since had some night frosts, followed by a milder temperature and frequent showers; yesterday fine. The advance in the value of Wheat which we reported last Friday has been well maintained throughout the week, and in many of our leading markets on the east coast and in the agricultural districts best samples have further improved 1s. to 2s. per qr., but the Scotch markets, Liverpool, and Birmingham were not dearer. Spring Corn of all descriptions was saleable at full rates, and in some instances a small advance was established on Oats and Beans. We observed no alteration in the value of Flour in the markets of the interior. The arrivals of grain and seed in vessels off the coast this week consisted of 14 cargoes, of which, with those left over from last week, there remained for sale last night 11 cargoes. Arrived Wheat was finally held at late extreme rates, and Egyptian, which meets with favour, was 1s. per qr. dearer. Barley commanded likewise 1s. per qr. more money. Of other articles the coast is entirely cleared, and prices nominal. For Wheat on passage and for forward shipment there was little demand; prices were without alteration. Paris, Jan. 30.—The Wheat and Flour markets show an improving tendency. The six marks are quoted at equal to 57s. 9d. per 280 lb. The stock at the Halle is estimated at 22,520 cwt. The arrivals of foreign Wheat this week have been to a fair extent, of all other foreign and English grain very limited. The attendance at this morning's market was small. Dry samples of English Wheat continue in request at Monday's prices, but other descriptions are very unsaleable; the inquiry for foreign was of a very retail character, and its value unaltered. Our quotations for Spring Corn remain unchanged.

ARRIVALS THIS WEEK.

Wheat 610 qrs., Barley 300 qrs., Oats 110 qrs., Flour 1720 sks.; Irish 10,780 qrs., 980 qrs., 3710 qrs., 590 qrs.; Foreign 11,390 qrs., 1370 qrs., 3620 qrs., 590 qrs.

LIVERPOOL, Tuesday, Jan. 28.—At today's market we had a very moderate attendance, and in Wheat a tolerable business.

COLONY of NATAL. IMMIGRATION and FREEHOLD LAND GRANTS. GRANTS of GOVERNMENT LAND are given to Men familiar with Farming operations, and possessing sufficient means to turn their Land to account.

Home News.

THE COURT.—On Friday morning the Queen went out with Princess Christian, and in the afternoon drove out with Princess Louisa, Princess Beatrice, and Princess Henriette of Schleswig-Holstein, accompanied by Prince Arthur on horseback.

THE PRINCE and PRINCESS OF WALES.—On Saturday morning the Prince went to Marham for a day's shooting over Mr. Villebois' manor, returning by special train in the evening to Sandringham.

visit; and last evening another ball was to be given to the local Volunteers and their friends. This visit is probably the last of the kind the Prince will make during his present stay in Norfolk, as his Royal Highness and the Princess are expected to leave Sandringham for London about the 12th inst.

COURT ARRANGEMENTS.—It is announced that the Queen will hold a Court at Buckingham Palace on Tuesday, March 3rd, to receive the Diplomatic Corps, her Majesty's Ministers, and other official personages, with the ladies of their families, who will receive notifications of her Majesty's gracious intention through the Lord Chamberlain.

LAW APPOINTMENTS.—Sir Charles Jasper Selwyn, the Solicitor-General, M.P. for the University of Cambridge, has succeeded to the Lord Justiceship vacated by the resignation of Sir John Rolfe.

PARLIAMENTARY MOVEMENTS.—The elevation of Sir C. J. Selwyn to the bench has caused a vacancy in the representation of Cambridge University. A meeting of the principal members of the Conservative party in the University was held on Thursday, the Master of Peterhouse in the chair, when Mr. Anthony Cleasby, Q.C., late Fellow of Trinity, was selected as a candidate for the vacancy.

Mr. Beresford Hope's friends declined to accept the decision, and it was formally announced yesterday that Mr. Hope will contest the seat with Mr. Cleasby. It is said that Lord Sandon will be the Conservative candidate for Stoke-upon-Trent in the event of Mr. Hope's resignation, and that Mr. George Melly, of Liverpool, will be the Radical candidate.

civil service of India, and was the assistant of the late Mr. Wilson in the financial department.

NEW ADMIRALTY ADVOCATE.—Dr. Deane, Q.C., has been appointed Admiralty Advocate, in the place of Sir Travers Twiss, who resigned on his appointment as Queen's Advocate.

KNIGHTHOOD.—At the Council held at Osborne last week the Queen conferred the honour of knighthood on Charles Wheatstone, Esq., F.R.S.

THE ARMY.—The Colonelcy of the 1st Dragoon Guards, vacant by the death of Sir T. W. Brotherton, has been conferred on General Sir James Jackson; the Colonelcy of the 6th Dragoon Guards, vacated by this promotion, has been conferred on Major-General Sir John Rowland Smyth; the Colonelcy of the 7th Dragoon Guards, vacant by the death of Sir M. White, has been conferred on Major-General Lord George Paget; and the Colonelcy of the 106th Regiment, vacant by the death of Sir G. C. Whitlock, has been conferred on Major-General Pole.

THE NAVY.—At the Council at Osborne last week, an Order was issued appointing Admiral Sir James Alexander Gordon, G.C.B., Governor of Greenwich Hospital, to be Admiral of the Fleet on the Reserved List.

BISHOPRIC OF MAURITIUS.—It is rumoured that the bishopric of Mauritius, vacant by the resignation of the Right Rev. Dr. Ryan, will be conferred upon the Rev. John Postlethwaite, late incumbent of Coatham, near Redcar, who was nominated a year or two ago to the bishopric of New Westminster, which it was proposed to found out of the diocese of British Columbia, but which, from various circumstances, has not yet been formed.

Foreign.

FRANCE.—In the sitting of the Corps Legislatif on Friday the debate on the new Press Bill was resumed. The following is a summary of the debate:—

M. Jules Favre said that the Opposition would vote the Bill, in so far as it abolished the necessity for preliminary authorisation and the monopoly of publishing and printing; but there were other portions of the Bill which required modification. The subjection of the Press since 1852 had produced abroad the expedition to Mexico, and had made France play a secondary part in 1866, while at home it had caused a complete stagnation in public business, a new loan, anxiety and disasters. He blamed the blows which had been directed against the Press and which had condemned it to silence. He concluded that the system of a free Press ought to be adopted without apprehensions being entertained of the passing agitation which might result therefrom. M. Granier de Cassagnac asked why the Bill was presented. The majority did not ask for it, nor was it accepted by the Opposition. It would cause trouble to society in general, and would only contribute to give additional strength to the adversaries of the Government. He concluded by asking a postponement of the Bill until political passions being appeased and the violence of parties disarmed, it would be possible to adopt the system in force in England. In the sitting of Saturday, M. Baroche, the Minister of Justice, protested against the objections made against the Bill. It was, he said, in accordance with the liberal principles of 1789, but, nevertheless, it left in the hands of the Government sufficient power of censorship. The Government would carefully examine all the amendments proposed. It was necessary for the Chamber to subject the question before them to a thorough and searching discussion before deciding upon the fate of the Bill. He concluded by saying that the voice of the nation was not to be found in the opinions of the public Press, but in the electoral body, the representatives of which were about to pronounce their judgment. M. Picard regarded the adoption of the Bill as indispensable now that the decree of 1852 had been broken. He protested against the interdiction imposed on the Press, which would imply silence as regards the debates in the Chambers. The general discussion then closed. In the sitting of Monday M. Ollivier developed his amendment, which was opposed by M. Nugent St. Laurent, and rejected, as was also that of M. Bethmont. In the sitting of Tuesday M. Benoit opposed the first Article. M. Rouher in reply, referring to the Emperor's letter of the 10th of January, denied that any attempt had been made to obstruct the liberal movement, and said that the Government had honestly accepted the work intrusted to its care. A certain amount of anxiety had been shown respecting the opportunity of the Bill. They had carefully examined the question, and from that examination had come to the firm conclusion to sustain the Bill energetically. They had entered into an engagement, and a strong Government should never retreat from its engagements. They did not fear the Press. They had the means to keep it within bounds. He did not believe in the modification of party feeling, but in its impetuosity. The majority ought, therefore, to side with the resolutions of the Government, and not allow a division in its ranks. A new generation had arisen. Four millions of electors who made the first Empire were dead. Four millions of new electors had thrown a new life into the nation; they should not be stopped, but public Article 1 was then adopted by the large majority of 215 to 7. Article 2 was also adopted. In the sitting of Wednesday Article 3 was discussed. In the sitting of Thursday the amendments of M. Guéroult, Darmon, and Hautjean were rejected. An amendment by M. Joliet respecting the stamp upon pamphlets which are not periodical was adopted. Article 3 was then referred back to the committee.

The *Moniteur* of Wednesday, in its bulletin, says:— "On the occasion of M. Benoit's speech, the Emperor's Ambassador at Berlin, M. de Bismarck, has declared that the Emperor of France to the North German Confederation, the King of Prussia, and the Emperor of Austria, have all pledged themselves to friendly relations between the two Governments. He also spoke of the recent Franco-German Convention, and of the reception he met with at Paris from the Emperor and Empress of the French."

SPAIN.—An additional estimate has been laid before the Congress of 195,000 crowns for completing the armament of the fortresses already in existence. The report of the resignation of Senor Barzanallana is devoid of foundation. The *Official Gazette* of Sunday publishes the return of the first half-yearly revenue for the current Budget. In the taxes and town dues throughout the peninsula there is an increase of 401,398 crowns, and in the duties on imports an increase of 63,404 crowns. The Senate has adopted, without debate, a Bill reforming the law on the maintenance of public order. The laws relating to the rural gendarmerie and to the extraordinary credit granted to the

Government for the conversion of rifles were promulgated on Saturday.

PORTUGAL.—The King and Queen, with a numerous suite, left Lisbon on Friday for Villa Vicosa on a hunting excursion. On their return to Lisbon on Wednesday a tumult occurred near Braga, between the people and the troops escorting the royal party. The troops fired, and killed and wounded several persons. Viscount de Moura, Portuguese Minister at St. Petersburg, died in that city on the 23d ult. He was many years Secretary of the Portuguese Embassy in London.

SAXONY.—The Chamber voted on the 31st ult., in a secret sitting, a Bill authorising the Government to contract a Four per Cent. Loan of 8,000,000 thalers. The publication of the discussion was subsequently resolved upon. The Five per Cent. Debt of 6,000,000 thalers remains under the control of the Committee for the Public Debt. The Chambers authorise the Ministry to fix the price at which the new Four per Cent. Loan is to be issued. The new bonds will immediately be applied to the redemption of the former bonds. The Ministry are also authorised to re-purchase the Alberts Railway, and are invested with discretionary powers to settle the period and the conditions of the purchase. The financial committee recommend the Ministry to contribute 20,000 thalers towards covering the deficit in the balance account of the Industrial Exhibition of Chemnitz.

PRUSSIA.—In the sitting of the Chamber of Deputies on Saturday the debate on the Bill settling the amount of compensation to be granted to the King of Hanover, the Elector of Hesse, and the Grand Duke of Nassau was resumed as follows:—

Count Bismarck said it was requisite to look at the policy of the Government as a whole. The history of Germany showed similar arrangements to those now proposed. He was convinced that the Italian Government would willingly adopt the same course, provided it were in a position to do so. The present pecuniary compensation was unquestionably preferable to the territorial compensations formerly proposed. He would rather have expended much money, and have granted a large compensation to Austria for the Duchies, had that Power been inclined to accept such an arrangement. The peace concluded was favourable upon pecuniary point of view. The province of Hanover had brought with it a large amount of property in cash, and the transaction was advantageous to Prussia. Were the opportunity to occur again, he would not hesitate to adopt the same course, and if requisite grant even a larger sum. He was better able than the House to comprehend the political bearings of the question. The Government did not carry on public business if the Bill were rejected, nor would the Liberals be able to conduct the administration for such a long period as six months. He would therefore appeal to the House not unreasonably to excite the public mind with regard to these grants in presence of the distress existing in East Prussia. Public order would become disintegrated by raising up political questions of a different character. Herr von Twisten said that, notwithstanding serious misgivings, he agreed to the advisability of passing the Bill, on account of the pressure of accomplished facts. Even a different Ministry could not advise the King to withdraw his signature from the treaties. Count Bismarck denied the accusation of having disregarded popular rights. Herr von Waldeck severely criticised what he called the sham constitutionalism of the Government. The King could not be regarded as the Head of the Government, but as the Head of the State. The House should not be led astray by Count Bismarck's threat of resignation. Like all pretences, King George would renounce his claims to the throne. The debate being declared closed, the House voted by 264 to 130 votes the proposal of the Committee to adopt the Bill as proposed by the Government. In the sitting of Tuesday the proposal of the Government to establish a special fund for the province of Hanover by placing the former Royal Domain fund at the disposal of the Hanoverian Provincial Estates for provincial purposes was discussed. Count Bismarck said that the Government had introduced the Bill with the view of preparing the way for a greater extension of the system of administrative decentralisation. The Government entertained with the sanction of the King, the same intentions as regarded the other provinces, and intended even to devote a portion of the Budget to their special benefit. The Government firmly maintained the proposal to establish a provincial fund for Hanover. In the sitting of Thursday, in reply to objections raised by Herr Brauchitsch, Count Bismarck said that the Government had not abandoned their Conservative principles. Should this party not support the Government the formation of a Coalition Ministry would be the result. The Government did not fear a conflict with the Chamber. An amendment was proposed by Deputy Kerpapoly, specially assigning 500,000 thalers out of the revenue to the provincial administration of Hanover, and proposing that this amount shall henceforth be placed on the ordinary Budget. On the vote being taken by calling over the names of the members, the amendment was carried by 197 to 192. The general vote of the House on the entire Bill was postponed in accordance with the standing orders.

AUSTRIA.—In the sitting of the Hungarian Delegation on Saturday the answer of the Ministry to the interpellations made by Herren Ghyczy and Kerkapoly on the 30th ult. was read.

It stated that the title of Ministry of the Empire was only employed because verbally identical with the words "affairs common to both portions of the Empire." It had not been the object of the Ministry to attain thereby an enlargement of their sphere of action. As regarded Parliamentary reform, the Hungarian Delegation and the Ministry for the Empire were in agreement. The Ministry had no objection to the proposal of the Delegation to have the Ministry of the Empire referred to Austria in the Fundamental Law, and declared that the right of the Hungarian Legislature and Government to settle the defective system must not be infringed. Herr Kerkapoly expressed himself satisfied with the explanation. Herr Ghyczy said he would state his opinion shortly. In the sitting of Sunday, Herr Ghyczy said that he was satisfied with the reply of the Ministry to his interpellation as to the use of the title "Ministry of the Empire." The Delegation then elected a committee of 30 members to deliberate upon the Budget.

The Committee of the Cis-Leithan Delegation on the Estimates of the Ministry for Foreign Affairs proposes the voting of the secret service item of 550,000 florins without reduction, as an expression of the confidence of the Delegation in the policy of Baron von Beust. The Austrian Red Book was laid before the Delegation on Tuesday. It contains 158 documents, which are preceded by a statement of the position of the

Empire in regard to Germany, Prussia, and the Papal States, the Danubian Principalities, &c.

HUNGARY.—The Emperor and Empress arrived at Pesth on Wednesday evening, and were received with acclamations by the people. The Ministers of the capital were voluntarily sworn to the Majesties having declined an official reception.

ITALY.—In the sitting of the Senate on Friday the provisional exercise of the budget for 1869 was approved. Count Cambrey Digny announced that he would present the budget for 1869 in February. In the sitting of Saturday General Menabrea announced to both Houses the approaching marriage of Prince Humbert to Princess Margherita of Genoa. The House appointed a Commission to congratulate the King, the Prince, the Princess, and the Duchess of Genoa upon the happy event. General Menabrea's announcement was received with great applause. Congratulatory addresses to the King on the approaching marriage have since been arriving daily from all parts of the kingdom. In the sitting of the Chamber of Deputies on Friday the discussion on the budget of the Ministry of Commerce was continued. In the sitting of Saturday the committee nominated to examine the re-organisation of the National Guard presented its report. The committee proposed that the National Guard should be considered as the last reserve of the army, to be called into active service if required in time of peace as well as of war. In time of peace it would protect public order should it be disturbed, and in time of war it would act as a contingent in the defence of the State. The National Guard would consist of two categories, one of which would be called to serve out of the commune to which it belonged. It would have to serve permanently, the other would be appointed by the Government, and the army, the custody of the Government authorities. In the sitting of Monday the estimates of the Ministry of Justice were discussed. In the sitting of Tuesday Count Cambrey Digny presented Bills for reorganising the system of public accounts, the collection of taxes, and the unification of the tax on Government contracts. In the sitting of Wednesday the Estimates of the Ministry of Public Instruction were discussed. The first 11 Articles were voted. The Estimates of the Ministry of War for 1869 amount to 150,000,000 francs. The committee proposes a reduction of 12,000,000 francs. The Naval Estimates for 1869 amount to 50,000,000 francs. The committee propose a reduction of 10,000,000 francs. Addresses have been sent from Milan, Venice, and Modena to the Chamber of Deputies, requesting the Chamber to expedite the discussion on the administrative measures, leaving aside all other questions. Accounts from Naples state that a mountain which fell last week, and caused a great loss of life at Naples, was not a part of Vesuvius, which is only a few miles distant from the city, but the Pizzofrone, a mountain between the Castel del Uovo and the quay of Santa Lucia. Certain constructions were found a communication between the quay and the barracks on the top of the hill, have for some time past given indications of being undermined by infiltration of water, and want of necessary repairs. There is no doubt that they had been shaken by recent eruptions of Vesuvius. The loss of life, including 8 or 10 persons who were drunk at the canteen of the Castel del Uovo, is estimated at 25.

PAPAL STATES.—The *Nazione* contradicts a report that the Holy See had raised objections to granting a request for a dispensation removing the canonical impediment of consanguinity against the marriage of the Crown Prince with the Princess Margherita. On Sunday, being the festival of the Purification, the Pope assisted at high mass at St. Peter's in presence of the members of the Sacred College, and the high dignitaries of the Church. Members of the Diplomatic body were present. A French expeditionary corps in the Papal States has been reduced to a single division, under the command of General Dumont. A squadron of cavalry of Civita Vecchia on Wednesday for Toulon.

MONACO.—Letters from Tunis to the *Moniteur* state that 170 deaths occur daily from famine and apprehended that sickness will arise through a number of unburied dead. There is a severe famine at Beuhazi, and the cholera has broken out at Tangier, where, as well as at Tetuan, the population is suffering severely from scarcity of food. The dry seasons and a deficient harvest had led to the famine throughout Northern Africa.

GREECE.—Advices from Athens to the *Moniteur* state that the Ministry have resigned in consequence of a disunion that existed between them. Some Ministers desired a dissolution of the Chamber, but the others were opposed to such a step. It was reported that the King apprehended the effects of a resignation. The Ministry, before their resignation, had several officials, especially Prefects, from the Ministry of the Interior.

SERBIA.—The *Debatte* of Thursday reports the example of Prussia, Russia having reported the protests submitted by Austria, England to the Servian Government against the measures now being carried on by that Power.

THE PRINCIPALITIES.—The *Constitutionnel* publishes a letter from Bucharest, stating that three battalions of armed men, each band 450 strong, are assembled at different points of the Principalities. They appear to be under the command of foreign leaders, and are preparing to enter Bulgaria to set fire to the Turkish villages, and renew the scenes of brigandage which were suppressed last year.

CANDIA.—According to Greek accounts, published in the Athens papers, the Turks have been defeated by the Candiotas at Heraclium, Canea, and other parts of the island, leaving stores and munitions in the hands of the insurgents. Russian vessels continue to capture large numbers of Candian families to Greece.

amer Union has also made many successful
between Syria and Candia with ammunition and
between the Cretans.

SIR S. Northcote has received the fol-
lowing telegram from Sir Robert Napier, dated
Jan. 25—

114 carts with supplies proceed
towards Senafe. The most
are being established with Prince Kassal.
will proceed immediately towards Antala.
will be moved to the front. One shell
will accompany the advance troops. All well.

has received the following telegram from its
Correspondent with the Abyssinian Expedi-
tion, dated Jan 25, and forwarded from Alexandria,
12:10 P.M.—

Sir Robert Napier has started for the front. A brigade of
will start tomorrow from Senafe on Antalo.

On the 29th December an encounter took
place between our troops and a band of Wagheer insur-
gents. Our troops were led by Captains Hebbert and La-
ing. The 17th Bombay Native Infantry, were
led by Major Reynolds, of the same corps, who
was severely wounded. No
were killed on our side. Three leaders of the
insurgents were killed, one being Dewa Manik, the
chief leader of this expedition.
M. M. Manik, the dispossessed chief of Dwarka
At the date of the last advices from Cabul a
war was imminent between Shere Ali Khan and
Bahman Khan. It is expected that before the
monsoon the Godavery River will be opened for
navigation as far as the second barrier, 225 miles from

Intelligence from Hong Kong announces
that the ports of Higo and Osaka have been opened
to trade without difficulty. The abdication of
the Mikado is confirmed, the Foreign Representatives
have been officially notified of it. The Mikado is
regarded as the ruler of the country as regards foreigners.
The assembly of Daimios has been ordered by the
Government to deliberate on the government of the empire.
The Government has said to carry a manifesto from the
Government to the European Governments
concerning political affairs in Japan.

According to the New York
Mr Adams has resigned the post of United
Minister in London. President Johnson has
passed a Bill repealing the internal
duty on the import duty on
from the 1st of November, and also the
the sale of the surplus ironclads.
Contracting Bill, suspending Mr. McCul-
lough's authority to contract the currency, has
been agreed to by both Houses of Congress,
and is now law. The House of Representatives on
the 1st ult. passed, by 123 votes to 45, the Bill
for no valid civil government to exist in the
rebellious States, prohibiting the recogni-
tion of the National Executive or Judiciary,
and the powers of removal or appointment con-
ferred on the President by the Reconstruction Act,
and conferring them on the General of the Army, and
making it unlawful for the President to employ the
army and navy to enforce the authority of the
provisional State Governments, or oppose the
of the Reconstruction Act. On the 25th
the Committee of Foreign Affairs resolved to
introduce a Bill declaring that naturalised citizens
are entitled to the same protection as native-
born citizens unless such protection shall have been
withheld by crimes against the Federal laws or against
the Governments committed within their jurisdic-
tion or by desertion from actual service in or by
employment in a foreign army or navy, or by adoption
of a name beyond the limits of the United States for
more than one year. By this Bill the President would be
empowered to demand the release of citizens detained
in foreign Governments upon the ground of Federal
allegiance on not absolving them from allegiance
to their native country. Should the release be
denied or delayed the President would be autho-
rised to cause the arrest of any subject of such
Government as an indemnity and reprisal.
President Johnson has sent a message to Congress
stating that the Bill granting political equality in
the District of Columbia had failed because Congress
had adjourned before the expiration of the 10 days
allowed by the Constitution for the
passage of Bills. Mr. Stanton has announced
that he will not resign.

Accounts from Rio state that no further
fighting had taken place between the Brazilians and
Paraguayans to the 9th ult. A revolution had
broken out in the province of Santa Fé, in the Argen-
tine Confederation, and the insurgents, who had
been ordered for Urquiza, had taken the town of Rosario.

City Intelligence.

Consols at 93½ to 93, both for Money and
New and Reduced Three per Cents, 93½
India Five per Cents, 111½ to 112½; Bank
of England, 250; Exchequer Bills, 20s. to 25s. pm.—
Egyptian (1864) Bonds, 90½ to 91½; Mexi-
can (1864) Bonds, 77 to 77½; Greek,
New Spanish, 36½ to 37; Turkish, 32½
Italian (1861), 48½ to 49½; Peruvian (1862),
United States 5-20 Bonds, 71½ to 71½; Erie
Railroad, 46½ to 47½; Illinois, 87 to 88.

Metropolis and its Vicinity.

THE GREAT STORM OF SATURDAY.—On Friday
evening and during the whole of Saturday the metropolis
was swept for several hours by a terrific gale, which
was also to have been equally felt by the whole

island, from Land's End to John o' Groat's. The force
of the wind reached a pressure of 35 lb. on the square
foot, or 6 lb. more than that of the great storm in
which the Royal Charter and so many other ships were
wrecked. Several lives were lost at Old Ford, Stepney,
Poplar, and other places at the East End by the fall of
chimney stacks, &c., and the damage to property
was immense, many losses of life from floods being
reported from the North, and the accidents of a
minor character being so numerous that we might fill
whole columns with the details. It is remarkable that
the shipping on the coasts appear to have sustained
less damage on this occasion than the buildings
on shore.

CLERKENWELL EXPLOSION RELIEF FUND.—The
committee of this fund has announced that having now
received a sufficient sum for the purposes contem-
plated by their present action, they have suspended
their appeals to the benevolent. The question of the
liability of the county to compensate the owners of
injured dwellings having been referred to the Court of
Queen's Bench, they have determined to await that
issue. If a decision adverse to the sufferers should be
given, they propose again to appeal to the sympathy of
the country.

THE CLERKENWELL OUTRAGE.—On Tuesday
Timothy Desmond, William Desmond, Jeremiah Allen,
John O'Keefe, William Barrett, James O'Neill,
Nicholas English, and Anne Justice, the persons
charged with murder, arising out of the Clerkenwell
outrage, were again brought before Sir Thomas Henry,
at Bow Street Police-court, for further examination.
The prisoner Patrick Mullany, who was formerly
charged with the other prisoners with murder, now
stands charged with the minor offence of treason-felony,
in consequence of his having turned Queen's evidence.
Mr. Odling, professor of chemistry at St. Bartholo-
mew's Hospital, gave evidence as to the deposit found
upon some of the staves of the exploded barrel, from
which it appeared that the material used was gun-
powder, the cask having been previously used for
storing petroleum or paraffin oil. The evidence of the
other witnesses went to strengthen the case against
Barrett as the man who fired the barrel. Sir Thomas
Henry said that he should commit all the prisoners for
trial on the capital offence except Mullany, who would
be committed for treason-felony. Another adjourn-
ment for a week then took place in order that the
depositions might be completed, but it is not expected
that any further evidence will be taken.

DISCOVERY OF HAND GRENADES NEAR COLDBATH-
FIELDS PRISON.—On Wednesday morning two hand
grenades were discovered in a timber yard, only a few
yards from the outward wall of the House of Correc-
tion, Coldbath Fields. At 8 a.m. a man called James
Stanlake, on going to his work at Mr. Birch's timber
yard, at the corner of Calthorpe Street, found con-
cealed among the timber two large hand grenades, both
in heavy iron shells, and of a spherical form. One of
them was empty, but the other was loaded, and quite
ready for use. The finding of these missiles was imme-
diately communicated to the police authorities in
Scotland Yard.

THE CASE OF SHOOTING AT TWO POLICEMEN.—
On Tuesday Sir Thomas Henry committed Patrick
Clancy to Newgate for trial on three charges of
shooting with intent to kill.

THE DEPTFORD FENIANS.—On Thursday Lytel-
ton, Macarthy, and Richardson, the three men charged
with endeavouring to administer a Fenian oath to
James Boutall, were again brought before Mr. Maude
at the Greenwich Police-court. After a long examina-
tion, all the prisoners were committed for trial, Rich-
ardson stoutly protesting his innocence, and declaring,
that being a special constable, he went out on that
night for the specific purpose of finding and arresting
Boutall, having been informed that he was a Fenian.
Lytelton complained bitterly of the usage they
received at Maidstone goal, where, he said, they were
fed like swine and treated like oxen.

DISTRESS AT THE EAST END.—After a full discus-
sion in a conference summoned for the purpose,
the various Societies now engaged in relieving the
distress at the East-end have agreed to unite and
to place the contributions they receive at the disposal
of a single committee, styled "The United Executive
Committee for the Relief of Special Distress at the
East-end of London." The first meeting of the united
committee was held on Monday, Mr. Corbett, jun., in
the chair, when arrangements were entered into to
secure a proper distribution of aid to the famished and
destitute.

TREASURE TROVE AT HIGHBURY.—A few days
since the gardener of Mr. Brogden, the jeweller, in
trenching some meadow land at Highbury, found a
vase containing nearly 7000 silver coins, consisting of
silver pennies of London, York, Middlesex, Bristol,
and Canterbury; groats and half-groats, halfpennies, &c.,
Irish and Scotch, Venetian and Teutonic; two gold
coins of Edward III., and an amber rosary. The
coins have been partially arranged by Mr. Vaux of the
British Museum, to which institution Mr. Brogden
intends to present them.

PERSONAL PAYMENT OF RATES IN SHOREDITCH.—
On Thursday week two justices of the peace for Mid-
dlesex sat at the Vestry Hall in Old Street Road,
Shoreditch, for the purpose of hearing appeals against
the payment of rates by weekly tenants under the
Reform Act, and which rates have hitherto been com-
pounded for and paid by the landlords. It was calcu-
lated that about 1600 persons were present, and the
utmost confusion prevailed, which grew in intensity
until it ended in a complete riot. All efforts to quell
the disturbance were unavailing, and messengers were
sent off to the nearest station-house for assistance.
Fortunately nothing serious occurred beyond an up-
roarious assemblage and threats of violence towards
the parochial authorities if the demands were enforced.

The police having arrived, consisting of one inspector
and 20 constables, they at once began to clear the place,
and the men, who were entirely of the working classes,
quietly dispersed to their homes. Of course, the magis-
trates had no alternative but to consider what should
be done for the future. There is in this district a large
number of workmen out of employ, who are utterly
unable to pay rent, and very little inclined to pay rates,
which have hitherto been paid by the landlords of
these small tenements.

THE LOYAL IRISH ADDRESS TO THE QUEEN.—It
is announced that the loyal address to the Queen, pre-
pared by Mr. Digby Seymour, has been signed by
13,000 Irish residents in London. It is to be presented
through the Home Secretary on the 10th inst.

STATUE OF SIR R. PEEL.—The statue of the late
Sir Robert Peel is now placed in New Palace Yard,
Westminster, but it is not yet decided when it is to be
uncovered.

TESTIMONIAL TO DR. JELF.—On Friday a meeting
was held at King's College, under the presidency of
the Bishop of London, for the purpose of presenting a
testimonial from the past and present scholars, and
other friends of the institution, to Dr. Jelf, who is
about to retire from the principalship, after having
held that office for 24 years. The right rev. chairman,
Dean Stanley, Professor Plumpton, Sir Thomas Watson,
Bart., Sir W. Fergusson, Rev. Prebendary Ball,
Professor Miller, Rev. Canon Robertson, and other
gentlemen, moved the various resolutions commemo-
rating the long services of Dr. Jelf, and a general
committee was formed to receive subscriptions for a
testimonial, to consist of a piece of plate or a portrait.

ROYAL ACADEMY.—Mr George D. Leslie and Mr.
W. G. Orchardson have been elected associates, and
Mr. Thomas Landseer associate engraver of the
Academy.

ROYAL ACADEMY OF MUSIC.—This institution,
having struggled for nearly half a century to support
itself on the voluntary principle, by subscriptions,
balls, concerts, &c., has been obliged to close its opera-
tions. The surrender of its charter has been offered to
the Government, and it is stated that the directors
will cease to act in March next.

CORONERSHIP FOR WEST MIDDLESEX.—Three of
the gentlemen who were announced as candidates for
the coronership of West Middlesex, vacant by the
death of Mr Bird, have withdrawn their names, viz.,
Dr. Whitmore, medical officer of health for Maryle-
bone; Dr. Dunn, and Mr. Isaacson, solicitor. There
are now five candidates in the field, viz., Dr. Hard-
wicke, deputy coroner for Central Middlesex; Dr.
Dylock, of Chelsea; Mr. George Brown, surgeon, of
Kensal Green; Mr. Hand, solicitor, of New Inn (the
late Mr. Bird's deputy); and Mr. Walter, solicitor, of
Clifford's Inn. No day has yet been appointed for the
election.

SOUTHWARK PARK.—The plans for laying out the
land recently acquired and fenced by the Metropolitan
Board of Works for the formation of a park for South
London have been approved of by the General Purposes
Committee of that Board, and will shortly be made
public, for the purpose of inviting tenders for the
execution of the work. The ground has been acquired
at a cost of 60,000l. Its area is 65 acres, but in order
to recoup a portion of the sum expended on its forma-
tion, belts of land skirting its wider parts will be
appropriated to the erection of 300 houses, of such a
class as to command a yearly rental of about 50l. In
all, the ground thus used will be about 15 acres.

MR. GLADSTONE AND THE TRADES' UNIONS.—A
meeting of the sub-committee of trades' delegates,
appointed to arrange the proceedings connected with
the approaching trades' unions' conference with Mr.
Gladstone, was held on Wednesday evening, Mr.
George Potter in the chair. The chairman said that
since the last meeting of the committee he had been in
correspondence with Mr. Gladstone as to the points to
be discussed at the conference, and those points had
been finally settled as follows.—The limitation of
apprentices, the minimum rate of wages, piecework,
and overtime, and the rules of the unions alleged to
be in restraint of trade. No doubt other and
collateral questions would arise out of these points,
but they would form the basis of the conference.
By Mr. Gladstone's request he had also furnished
that gentleman with the names of the trades repre-
sented by the general body of delegates, and the
aggregate number of members represented by those
delegates. The conference would take place on the
18th inst., at Mr. Gladstone's residence. The secretary
then laid a number of letters before the committee,
from trades not directly represented by delegates,
giving information to the committee as to their rules,
&c. The committee then proceeded to elect the
eight members who, with the chairman and secre-
tary, were to constitute the deputation to Mr. Glad-
stone, which resulted in the appointment of the
following:—Mr. Laurence (tailor), Mr. Dunning
(bookbinder), Mr. Squire (painter), Mr. Broadhurst
(mason), Mr. Cohen (cigar-maker), Mr. M'Namara
(plasterer), Mr. Upshall (joiner), Mr. Lewis (brush-
maker). The chairman said it would of course be
understood that the deputation would not go as repre-
sentatives of their respective trades, but as represent-
ing the whole body of delegates. He also stated that
Mr. Gladstone's arrangements admitted of only one
reporter being present at the conference. As it would
not be desirable to give any one paper a preference over
another, he would suggest that an experienced short-
hand reporter be specially engaged by the committee,
who should supply each of the morning papers with a
full report of the conference, free of any charge. After
some discussion, a resolution was carried to that effect.
The secretary was then instructed to prepare a report
from the sub-committee to lay before the next general
meeting of delegates.

WESTMINSTER ABBEY.—In consequence of con-

siderable inconvenience having arisen to the public from unauthorised persons in the neighbourhood of the Abbey assuming the character of guides, and thus misleading and exacting money from visitors, under the pretence of showing them the precincts and the entrance to the church, a notice has been published warning the public against such persons, and stating that the north door of the Abbey is always open on week days from 7 45 A.M. till dusk, and on Sundays, for the services, both this door and that by Post's Corner. On week days the latter door is closed for the present, in consequence of the works for the restoration of the Chapter House close by.

EXTENSION OF THE POST OFFICE.—Several of the houses in Aldersgate Street immediately opposite the principal entrance to the General Post Office in St. Martin's-le-Grand, have been purchased by the Government for the purpose of extending that establishment. The tradesmen who have carried on business there have removed, and the demolition of the houses will commence forthwith.

THE CAB QUESTION.—On Monday a deputation of hackney carriage proprietors had an interview with the Chancellor of the Exchequer, Alderman Lawrence, M.P., introduced the deputation, and said that it was impossible to have vehicles equal to those of the Continent so long as the proprietors had to pay 18*l.* 5*s.* per annum duty, and 1*l.* a year for a license for the working of each cab, or 19*l.* 5*s.* per annum for every 50*l.* worth of property. After some remarks by Mr. Crocker, Mr. Gower, and Mr. Fry, the Chancellor of the Exchequer said that personally he had a very great objection to taxing locomotion in any way, and was aware that the hackney carriage trade in London had many disadvantages that did not arise in foreign cities. The whole matter should receive the most careful consideration of her Majesty's Government and himself; but at the present time, seeing that there was a decreasing revenue and increasing expenditure, he was not prepared to say what the result of those deliberations might be, but he felt certain that, should there be a reduction in the duty, it would be for the mutual benefit of the proprietors and the public.

AERONAUTICAL EXHIBITION.—The Council of the Aeronautical Society have decided on holding an exhibition in London of objects connected with aeronautical science in June next. Arrangements have been made for the exhibition to be held at the Crystal Palace, where ample opportunity will be afforded it for experiments. The Shipwrecked Mariners' Society have allotted 50*l.* as a prize in connection with "the best form of kite, or other aerial arrangement or modification thereof, for establishing a communication from a wreck on shore or between two vessels at sea." The late successful experiments in Paris, conducted by M. Giffard with a captive balloon, have suggested their repetition upon the forthcoming occasion, when Mr. Glaisher will probably prosecute further experiments, and give an opportunity to inventors to propose means for controlling ascent and descent without loss of gas or ballast. The objects for exhibition, and for which prizes will be offered out of the funds now raising, are light engines and machinery, complete working aerial apparatus, models (working and stationary), plans and drawings, articles of interest commemorating previous experiments, kites or other similar apparatus proposed to be used in cases of shipwreck, traction, or in the attainment of other useful ends; paintings of landscape and cloud scenery as observed from a balloon. The interest excited among inventors in this and other countries has been manifested so strongly that, although the idea has only been made known through the members of the society, already many new inventions have been promised for exhibition.

THE DIGEST OF THE LAW.—Friday was the last day for sending in preliminary papers to the Digest Commissioners. The *Law Times* says that "a very large number of gentlemen have embarked in the competition, among whom are several Queen's Counsel. A considerable time must elapse before the Commissioners make their selection, and a long time must then pass away before the specimen digests themselves are completed, so as to enable any opinion to be formed respecting the ultimate success of the scheme."

A HORSE DINNER.—On Thursday evening a company numbering upwards of 100 gentlemen, assembled in the dining-hall of the Langham Hotel, and partook of a banquet the chief components of which were furnished by the horse. The chair was filled by Mr. Forsyth, Q.C., and among the company present were Mr. T. Hughes, M.P., Sir H. Thompson, Dr. W. H. Russell, Mr. Maule, Q.C., Sir J. Lubbock, F.R.S., Mr. Bicknell, &c. The promoters of the dinner stated that their object was neither the gratification of idle curiosity nor the desire to recommend a new epicurean luxury; but that, having been tacit observers of the partial success which had attended the French movement, they had thought it worth their while in the interests of the poorer classes of the English people, who are at the present moment too frequently debarred, by the high prices of beef and mutton, from participation in those articles of diet, to suggest the desirability of utilising a description of meat which, while little inferior in flavour to mutton and beef, has the advantage of being considerably cheaper than either. The meat was cooked and presented to the company in a variety of forms, as will be seen from the bill of fare, and the general verdict was decidedly favourable to the new dishes. The announcement that the *fillets de sole* were prepared in "horse-oil" was hardly calculated to provoke an eager demand for fish thus treated, but, as the proof is in the eating, those who were hardly enough to prefer sole to salmon were by no means disappointed with the result, and ate their fish with evident relish. The cuts from the solid joints received less praise than was awarded to the previous dishes. The meat was somewhat over-done, and

there was an absence of the fat which is so general with beef; the flesh, however, was anything but coarse or ill-flavoured, and some of the choicest portions of the *baron de cheval*, which was brought in upon the shoulders of four stalwart cooks, who were preceded by a trumpeter, playing, though not appropriately, "The Roast Beef of Old England," were tender, juicy, and well-flavoured. The following was the bill of fare.—

"Potages. Le consommé de cheval à l'A.B.C.; à la purée de deatriers. Amantillado. Poissons. Le saumon à la sauce Arabe. Les filets de soles à l'huile hippophagique, vin ou Rhin. Hors d'œuvres. Les terrines de foie maigre chevalines. Les saucissons de cheval aux pistaches syriennes. Xeres. Relais. Le flet de Pégase rôti aux pommes de terre à la crème, le flet aux châtaignes, l'Aloyau de cheval farci à la centaur aux Choux de Bruxelles, la culotte de cheval braisée aux chevaux-de-friso, Champagne Sec. Entrées. Les petites pâtes à la moelle Bucephale; Kromesky à la Glaciateur, les petits gâteaux à l'hippogriffe, les langues de cheval à la Trévigne, Château Perayne. Second Service.—Rôts. Les canards sauvages; les pluviers, Volnay; les mayonnaises de homard à l'huile Rostante, les petits pois à la Française; les choux fleurs au parmesan, Entremets. La gelée de pieds de cheval au marisqun, les zéphirs sautés à l'huile chevaleresque; le gâteau vétérinaire à la Dacrix, les feuillantes aux pommes des Hesperides; St. Paray. Glaces. De crème aux truffes, sorbets contre-pépiges. Liquors. Dessert. Vins fins de Bordeaux et Mûdres café. Buffet. Collard horse-head, bacon of horse, boiled withers."

Three horses were slaughtered for the banquet, of the respective ages of 4, 20, and 23 years. Two had been cart-horses; one had drawn a brougham, and in his prime had been worth 700 guineas. The baron was carved from the four-year-old. The chairman, Mr. Forsyth, Q.C., in proposing "Success to Hippophagy," reminded the company that they secured to the horse humane treatment in his latter days when they showed that his carcass was fit, not for dogs, but for men, Statisticians declared that in this realm 75,000 horses, free from disease and available for human food, were slaughtered annually. Here was animal food, palatable, nutritious, cheap. Should it be any longer wasted when animal food was so dear as to be practically beyond the reach of our poorer countrymen? He treated the horse question not as one for epicures, but as a practical question of the highest importance; and said that this dinner was intended not to gratify the palates of a few, or to introduce a new dish into the rich man's house, but to popularise a new article of food for the poor. "The horse; and meat at 2*d.* per pound," was the text on which he dwelt. Mr. Maule, Q.C., Sir Henry Thompson, Sir J. Lubbock, and Mr. A. S. Bicknell also spoke. Sir Henry Thompson said that to the latter gentleman was justly ascribed the merit of providing the banquet—a task, where the staple dish is horse, of considerable difficulty. It only now remained to convince the classes who have most to gain from the cheapening of animal food that horse-flesh is good to eat. In conclusion, he declared, as a surgeon, that for invalids equine tea was more nourishing than beef tea. Other medical authorities who were present at the dinner were ready, it was said, to corroborate Sir Henry as to the stimulating properties of the horse when treated in this way.

SALE OF BEER.—On Saturday a deputation from the Church Temperance Society waited on the Home Secretary to press upon him the advisability of repealing the Act of 1830 by which beerhouses were created. Mr. Hardy acknowledged the importance of the question, and thought that some remedy was wanting for the present unchecked sale of intoxicating liquors, but could not undertake any legislation on such a subject with an expiring Parliament.

FORTIFYING POLICE-STATIONS.—The Government have determined to fortify the police-stations in London, as the preliminary step to a scheme of general fortification of all the police-stations and barracks in the United Kingdom. The head office of the Metropolitan force in Scotland Yard will be the first to be placed in a state of defence, and with this object Messrs. Clarke and Co., of Rathbone Place, are manufacturing bullet-proof iron shutters for the windows of the station. The shutters will be so constructed that they can be closed almost instantaneously, and an apparatus adjusted inside which will make them proof against any fusillade of small arms. The doors will be similarly protected. When all the stations in the metropolis and suburbs are provided with the ball-proof shutters, the stations and barracks of the police in Ireland will be placed in a state of defence.

CONVICTION OF PRIZE FIGHTERS.—On Monday a pugilist named Michael Gannon was brought up at the Thames Police Court on remand, on the charge of attempting to murder Inspector Taylor of the metropolitan police, on the 22d ult. It appeared that Inspector Taylor received orders to stop a prize-fight about to come off in Long Reach, and that he and other officers went for that purpose on board a steamer at the Tunnel Pier. He found the vessel full of prize-fighters, their backers, and roughs. On warning the captain that he was assisting in an unlawful act, the prisoner Gannon and others seized him, and a cry being raised of "Throw him overboard," they lifted him off his legs for that purpose. The captain and one of the prize-fighters interfered and prevented his being thrown overboard, but he and his men were literally thrown out of the steamer upon the pier. The steamer then went its way, and the prize-fighters had "the Reach" all to themselves. The adjourned hearing on Monday lasted five hours, and the court was densely crowded with "the fancy." In defence it was alleged that Inspector Taylor had grossly exaggerated the case, and the magistrate appeared to think that this was partly true. Two of the leading pugilists were fined, the one 20*l.* and the other 30*l.*

ATTEMPTED ASSASSINATION BY A LUNATIC AT CLERKENWELL.—On Wednesday morning an attempt was made to assassinate a man in the public street near the Clerkenwell House of Detention, and was generally believed for a time to be another outrage by Fenians. The incident, however, although serious, had

no political significance whatever. A person named Thomas Chatterton was passing along the street near the House of Detention shortly before 9 a.m., when he was suddenly fired at by a man who held a revolver in his hand, of which he discharged four chambers with great rapidity. One shot only took effect, striking Chatterton in the neck just below the ear, and inflicting a dangerous although it is hoped not a mortal wound. A man called Robert Bass, of St. Luke's, who was passing by, seized the assassin with one hand and the revolver with the other, and held him till a policeman came up and took charge. The revolver was one of seven barrels, of which remained undischarged. The assassin was recognised as Robert Needell, an attorney well known among his companions as "mad Needell," also known to the police by his insane delusions respecting persons six feet and a-half high for lower about. He was taken before the magistrate at Whitechapel Police-court in the course of the day, and remanded. The wounded man, Chatterton, is now lying in St. Bartholomew's Hospital. The bullet entered the neck by the angle of the jaw on the right side, making a very small wound. It is supposed to be in the neck; but it is deemed inexpedient at present to search for it. No important structures were divided, and the patient is doing well.

THE LATE MURDER IN LAMBETH.—The sentence of death passed upon the prisoner Clark for the murder of his child, has been commuted to penal servitude for life.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London and in 13 other large towns of the United Kingdom states that in the week that ended on Saturday, February 1, 4712 births and 3182 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 26 per 1000 persons living, being 23 per 1000 in London, 27 in Edinburgh, 34 in Dublin, 28 in Bristol, 24 in Birmingham, 31 in Liverpool, 29 in Manchester, 33 in Salford, 25 in Sheffield, 24 in Bradford, 24 in Leeds, 24 in Hull, 25 in Newcastle-upon-Tyne and 32 in Glasgow. The rate in Vienna was 26 per 1000 during the week ending the 25th ult. In London the births of 1207 boys and 1157 girls, all 2364 children, were registered in the week, the corresponding weeks of 10 years 1850-59 the average number, corrected for increase of population, was 2283. The deaths registered in London during the week were 1394. It was the fifth week of the year at the average number of deaths for that week, corrected for increase of population, was 1629. The present rate is, therefore, 235 below the estimated number.

Provincial.

BIRMINGHAM.—At the adjourned inquest on the Milbourne, of Henage Street, on Friday, the jury returned a verdict of Wilful Murder against a person or persons unknown. On Tuesday morning the police-court, three men and a woman were charged with the murder. They were Joseph Beesley, 27, cooper-maker, a cripple, William Beesley, 27, coster, Charles Greyson, 35, hawkker; and Elizabeth, his wife, 28. They were arrested in their beds at half-past the morning by seven detectives. One of the Beesleys offered desperate resistance. The prisoners were remanded till Tuesday next. Another of the Beesley family, a brother of the other prisoners who had been calling himself Morley, was apprehended on Tuesday on suspicion of being one of the murderers. He was brought before the magistrates on Wednesday and remanded also until Tuesday. These proceedings have been made on the statements of an informant from which it appears that the step-mother of the Beesleys was from time to time employed to do household work for the deceased, of whom she was a cousin, and that her reports of the deceased having several hundred pounds in the house induced the prisoners to resolve on robbing the house. It is said, however, that they had no intention of committing murder, but that on seizing her by the throat the cart-liner was so brittle from age that death ensued almost immediately.

—On Tuesday evening Mr. Bright, M.P., addressed his constituents in the Town Hall of this town. His speech occupied upwards of an hour and was in the delivery, and was devoted exclusively to the Irish question, which he had selected, he said, because it was at present exciting great feeling, and would, before it is settled, will give rise to great heartburning, and in all probability cause the fall of ministries, or perhaps the dissolution of Parliament. The following is a summary:—

"He commenced by adverting to Lord Stanley's declaration of the Ministerial policy at Bristol, and expressing his disapproval of his protest against calling in questions the difficulties of the case after the regular procedure had been pronounced hopeless. He said that he had no remedy in the efficacy of the repeal of the Union, but that nothing to prevent the two countries being in harmony, and he would never consent to a separate statesmanship was dead and the principles of national unity had lost their influence. There were two questions considered—the Irish Church, and the relation of the landlords and Irish tenants. With regard to the latter would retain some portion of the endowments of the Established Church for its future clergy and another share he would allot to the Protestant clergy. To the other religious bodies of the Island he would grant a globe or some stipend to the Catholic funds already devoted to pious uses. But all these should, from the time of the distribution of the property among them, be disconnected from the land order to settle the land question, he would have the ballot. Grant the ballot, and leases would be given, leases, prosperity, good farming, and contentment the ballot, and auxiliary to it, he would place his power in the hands of the tenants, and assist them to buy the farms they hold from the English landlords. In conclusion, he deprecated the

Wednesday Mr Bright attended a public breakfast by Mr Wright, the chairman of the Chamber of Commerce in the borough, to the artisans who visited the Paris Exhibition. The Mayor presided, and speeches were delivered pointing out that the working men of the borough were slightly inferior to those of all other parts, and were slightly inferior to some, who not only excelled them in design and workmanship, but also in the wages in a more sensible and rational manner. Mr Bright then addressed the meeting as follows:—

He complained that, like some of their Conservative friends who were dragged on at a rate which almost bewilder them, he had been entrapped into an expression of opinion on the subject of education to which he had not for a long time past given attention. He therefore found it necessary to refer to what he used to say and predict years ago on the subject, when arguing upon the question of the suffrage. He considered the ignorance of the masses at the present time to be a very serious and far below that of Prussia and Switzerland, and he believed the principle that everything should be done by the Government, and ridiculed the feverish anxiety about education which had been manifested since the last election. He adduced practical reasons why the proposal to make compulsory education, however strictly narrowed, should be carried out on all sides before any attempt be made to carry it into execution. He suggested that the imposition of a great tax, supported by rates and supplemented by a police to enforce it, would be a people unable to weigh the burdens they laid against the advantages they did not understand, and might be followed by a dangerous reaction; and he recommended a gradual assault upon the ignorance of the uneducated classes, in which all existing educational machinery should be put to use. With respect to the fashionable cry for Technical Education he said that he understood this phrase to mean that, in the principles of trades and manufactures, but he was in the contrary convinced that if boys were to be taught the means of learning in ordinary schools—if, when they left them, they were able to read, to write, to perform the common operations of arithmetic, and to be left to acquire for themselves the principles of the work which might occupy them in later life. As regards the utility of invention shown by the inhabitants of the States, he attributed it to the absence in the States of a very rich class without stimulus to exert themselves in a very poor class without possibility of aspiration. He said that the true remedy for the alleged defect in the present system was to be found, not in the establishment of a school in the principle of South Kensington at the expense of the voluntary establishment of schools for apprentices and young workmen in the great manufacturing districts. In conclusion he said that he was sure those who thought he was slow and Conservative would advance for him as they could, and he was sure that whatever was offered to the public and to Parliament would be prepared to be likely in the smallest degree to the intellectual and moral elevation of the people, and would never be found unwilling to give it his cordial support.

BLACKBURN.—Considerable excitement has been caused in this town by the sudden disappearance of Mr Zarah Maudsley, who has been for some years manager of the Blackburn Branch of the National Savings Bank Company (Limited), and who is believed to be a defaulter. A few months ago the bank suspended payment, and at the present time its affairs are being wound up. The principal sufferers will be poor people who were induced to invest their earnings in the bank. Mr Maudsley has been for many years secretary of the Blackburn district of the W. M. F. Fellows.

WATERFORD.—In accordance with the sentence of the court-martial on Patrick Daly and James Molloy, two privates in the 24th Battalion of the 1st Royals, on the charge of having made use of Fenian and seditious language in the public streets of Chatham, the prisoners have been branded with the letters "B. C." and discharged from Her Majesty's service with disgrace. They were also sentenced to undergo five years' penal servitude and Molloy to be imprisoned and kept at hard labour for two years.

WATERFORD.—The court-martial which commenced on Saturday on James Anderson, of her Majesty's ship Canopus, for endeavouring to seduce a woman from his allegiance, was concluded on Sunday when the prisoner was sentenced to five years' penal servitude.

WATERFORD.—On Friday John Whetstone, compositor, was brought up for the fourth time on Monday before a full bench of magistrates, charged with being drunk on Sunday evening, the 19th ult. He was committed to the Prison, Private Cordner and others, of the 1st Battalion, stationed in the Citadel Barracks, to the Fenian Brotherhood. There was great excitement in connexion with the case in the town and county. After due deliberation the magistrates discharged the prisoner, partly on the good character borne by him, and partly on the ground of a doubt as to whether or not he was under the influence of drink at the time he conversed with the military.

WATERFORD.—A man named "Pinny" Loyd, who was sentenced to transportation for sheep-stealing in this town, lately confessed to one John Titchmarsh, when dangerously ill and not expected to live, that he was the murderer of Mr Titchmarsh, dealer, of Shepreth, whose death has been a matter of mystery. Mr Titchmarsh, at the time of his leaving Trumpton, had with him about 1000*l.* in notes, all of which were missed, and it was supposed by the jury at the inquest that Mr Titchmarsh met with his death by falling out of his window, but that supposition is cleared away by this confession. The notes, it is said, were burnt by Loyd to prevent detection.

WATERFORD.—A destructive fire broke out in the morning at Dr Steele's, a short distance from Douglas, on Saturday morning. The house and its contents were nearly destroyed, and a fireman of the brigade named Titchmarsh was burnt to death. There were 48 boarders at the school, principally sons of English and Scotch

gentlemen. The fire was discovered by a carpenter in the neighbourhood, who, about half-past 6 on Saturday morning, observed the window curtains of Dr. Steele's study on fire. Being unable to attract the attention of the inmates by ringing the bell, he burst the door open with a sledge hammer. As the flames were spreading with extraordinary rapidity, the inmates, in their anxiety to save themselves, left behind them all their clothing. The fire brigade arrived about 20 minutes to 8, and as by this time the front premises were a mass of flame, they directed all their attention to saving the back premises. While the deceased was trying to put out the fire in the school-room the ceiling fell, burying him and two other firemen in the ruins. The latter contrived to save themselves, one by springing out of the window into an adjacent quarry, and the other by holding on to the ledge of the window until rescued by a ladder. The deceased, being crushed by one of the falling beams, remained caged in the burning room, and though his cries for help were plainly heard, and a rope was thrown to him, it was impossible to reach him. The flames at this juncture reached his face, setting his whiskers and hair on fire, and he sank, face downwards, and perished. The flames made such rapid progress that by 9 o'clock the whole of the premises, valued at about 1000*l.*, were totally destroyed. The loss is only partly covered by insurance. About 11 o'clock a search was made amid the ruins for the body of the deceased, which, when discovered, was a more charred mass. An inquest was held the same evening, when a verdict of Accidental Death was returned.

LEICESTER.—On Monday evening an inquest was held in this town, on the bodies of Emma Stonecraft and Emma Preston, her daughter. The child was illegitimate by a man called Preston, of Grantham, with whom the mother had lived after her husband had left her owing to her dissolute conduct. On Wednesday, the 29th ult., she snatched it out of the arms of her sister, and, running to the canal, threw the child into the water and then jumped in herself. The jury returned a verdict of Murder and Suicide.

LIVERPOOL.—On Saturday the cab proprietors of this town struck against a new bye-law of the cab committee providing that the Manchester system of free trade—with the fare per mile painted outside each cab—should come into operation on the 1st of February. Only one man presented himself at the police-office to take out the new licence, but he did not venture to place his cab on any of the public stands. The "strike" commenced immediately after midnight on Friday, to the great disgust of several gentlemen away from their homes, and who did not relish a long stroll in the face of a gale of wind and showers of rain. As Saturday was fine though stormy, the cabbies made the most of their holiday by driving through the town in four-horse carriages, waggonettes, and other vehicles, all greatly overloaded, and driven at the fastest pace, simultaneously giving vent to their feelings by uproarious cheers and wavings of pocket-handkerchiefs. The "strike" still continues, to the great inconvenience of the public, and more especially to strangers arriving in the town by sea, and it is now stated that the omnibus proprietors are about to strike also, in order to support the cabbies, and bring the corporation more speedily to terms. In the meantime the corporation offer to licence any species of vehicle for conveyance of goods or passengers.—On Wednesday evening a fire broke out in the church of St. Nicholas, better known as the Old Church, in this town. The flames were got under, but not before considerable damage was done to the building.

MONMOUTH.—All the colliers in this county, with the exception of those at Risea, are now on strike, having come to the determination, after holding several meetings, not to accept the proposed reduction of 3*d.* per ton. The turn-out will probably have some effect on the district, although it is generally believed the strike will be of short duration, as the men are well aware that low prices and the smallness of the demand have led to the necessity of lessening the cost of production. At present precautions are being taken in the western valleys of the county for the prevention of any breach of the peace, and at Abercarn the police force has been strengthened with the view of affording protection to the enginemmen and others engaged at the Abercarn colliery. What step the other steam-coal colliers will pursue is not yet known.

ONGAR.—On the 30th ult. the body of a well-dressed man, apparently from 35 to 45 years of age, and 5 feet 8 inches in height, was found in the river Roding, near the mill in the parish of Stapleford Abbots, a few yards from the old Dunmow Road, between Abridge and Ongar. It had evidently been in the water for many days, and was much decomposed. The clothing, which was of a superior kind, was marked with the initials "P.L." in old English characters. An inquest was held on Saturday at Stapleford Abbots, but as no evidence was forthcoming to show how the body got into the river, the inquest was adjourned for a week. The body, which still remains unburied, was not identified up to Wednesday afternoon.

OXFORD.—The Earl of Derby as Chancellor of the University, has conferred the Principalship of Magdalen Hall, vacant by the death of Dr. Macbride, on the Rev. Richard Michell, B.D., formerly fellow and tutor of Lincoln, and for many years vice-principal of Magdalen, and public orator of the university.—The election to the vacant Professorship of Political Economy in the University took place on Thursday, when Mr Bonaux Price was elected by a majority of 127 over Mr. Rogers, the numbers being 620 to 193.—The long-looked-for challenge from the Cambridge University Boat Club reached the hands of Mr. Willan, the President of the Oxford University Boat Club, on Thursday afternoon. The fixture will remain for future consideration, but there is little doubt that the race will be rowed, according

to precedent, on the Saturday preceding Good Friday, viz., April 4. The difficult task of selecting the crew will at once be proceeded with.

PORTLAND.—On two occasions during the last few days the Portland magistrates have been called upon to investigate charges against warders of the convict establishment at that place for trafficking with prisoners. A warder named Morris de Young was charged with conveying letters out of the establishment. James Schlotz proved delivering notes which he had received from another convict named Milkienwicz to the warder, sewn up in a piece of cloth. He had attempted to deliver him another note as he was talking to the prisoner about a chain; but was prevented, by another warder coming up at the time, and was obliged to tear it up. This led to the prisoner being detected. The convict Milkienwicz proved that the prisoner had given him tobacco, and, to the best of his memory, he had received 2*lb.* in all, which the prisoner brought to his cell. Witness gave him two letters to post to his brother in Belgium, and one also to his brother-in-law. The prisoner pleaded guilty, and was sentenced to three months' imprisonment with hard labour. Peter Aldersley, warder, was next charged with attempting to introduce tobacco into the prison. He was overheard by some of the convicts under his charge arranging to fetch a parcel addressed to Mr. Thompson, at the parcel office at Weymouth Railway Station, and was taken into custody as he was in the act of taking it away. He also pleaded guilty, and was sentenced to four months' hard labour.

SHEFFIELD.—Two brothers named Marshall, who are scissor grinders, were rattened last week, no less than five bands being taken away. They were formerly members of the Scissor Grinders' Union, but in consequence of the depressed state of trade, and the class of work which they ground, they were unable to continue the contributions, and some few months ago ceased to be members of the Union. It is said that they have several times been warned by officials connected with the union that it would better for them if they paid. The place in which they worked was properly secured by the gatekeeper, and the ratteners, finding that to be the case, had to climb up a kind of funnel which is outside the wall and then got through one of the windows.

WALMER.—The ceremony of "drumming out" a soldier was performed at Walmer Barracks on Friday, the culprit being John Quin, a private of the 1st Battalion 7th Royal Fusiliers, who was convicted at a court-martial on the 3rd ult., of making use of treasonable and traitorous language towards the Queen, and also avowing himself a Fenian. Previous to being drummed out he was branded on the left breast with the letters "B. C.," and was then removed to Canterbury to undergo his sentence of two years' imprisonment.

WITHAM.—The cases of fever at Terling appear to be on the increase, notwithstanding the exertions of the medical men and the liberality shown by the board of guardians and by Lord Rayleigh, who is the owner of about one-half of the cottage property of the parish. The total number of deaths up to Saturday night was 80; six took place last week, four males and two females, varying in age from 17 to 78. Meanwhile the preparations for converting the national school-room into a temporary hospital have been actively going on under the direction of Dr Grimson, the bedding and all other requirements being supplied at the expense of Lord Rayleigh, who is said to have given *carte blanche* to Dr. Grimson to provide everything that is necessary in this respect. There are about 40 cases which it is considered necessary to remove to the hospital as soon as it is opened, which will probably be at an early date, as the arrangements are now nearly complete, and on Saturday two Protestant Sisters of Mercy, from East Grinstead, arrived at Terling to assist in removing the patients. Several of the old wells have been closed, and three new ones sunk, by direction of Lord Rayleigh, which will supply pure water from a higher level than the old wells which caused the outbreak by becoming contaminated by sewage matter. Many of the patients have been young people, and it is said that many able-bodied young men who assisted in cleansing the cesspools have since been struck down by the fever.

WORTLEY.—The adjourned inquest on George Thirkill, the head gamekeeper to Lord Wharcliffe, was resumed last week, and after several witnesses had been examined at some length, the jury returned a verdict of "Wilful Murder" against the three prisoners in custody, and also against a fourth man unknown.

Ireland.

GREAT PROTESTANT DEMONSTRATION IN DUBLIN.—A great meeting, organised by the Central Protestant Defence Association, was held on Wednesday in the Rotunda, and is said to have been attended by 3000 persons. On the motion of the Earl of Enniskillen, seconded by Lord Huntingdon, the chair was taken by the Earl of Bandon. Mr. Ion Trant Hamilton, M.P., read letters of apology from peers and others who could not attend. Deputations were present from various places. The speakers were the Chairman, the Marquis of Downshire, Lord Bective, Sir Benjamin Guinness, M.P., Lord Erne, Mr. Alexander Parker, D.L., Lord Oranmore, Colonel Knox Gore, Hon. Cavendish Butler, Mr. Bruen, M.P., Mr. Gamble, J.P., Lord Castlemaine, Mr. Denis Kelly, D.L., Sir Charles Lanyon, M.P., Mr. John Sibthorpe, Colonel McCintock, Colonel Leslie, Mr. Peel Dawson, M.P., Mr. John Vance, M.P., Mr. Traill, F.T.C.D., Lord Dunboyne, Sir Edward Grogan, and Lord Crofton. Resolutions were unanimously adopted in support of the Constitution and Church, and expressing attachment to the Throne; and a petition to the Queen was adopted.

praying her Majesty to continue her support to the Protestant Churches in Ireland, and condemning an Ultramontane ascendancy. A permanent association for the promotion of these objects was also inaugurated, which is to have branch societies in every district in the country.

TREASURY GRANTS FOR IRELAND.—The *Irish Times* states that the Treasury have granted 100,000*l.* for the purchase of the Exhibition Palace, the site for the Royal Irish Institute of Art; 100,000*l.* for the improvement of Cork Harbour; and 100,000*l.* for the construction of a harbour in Belfast Lough.

FURTHER OUTRAGES IN CORK.—On Saturday night a canister of powder, containing, it is stated, about 8*lb.*, was placed against one of the gates of the establishment of Messrs. Keatinge, bacon-curers, and exploded with a tremendous noise. The gate was shattered, the lock torn off, the iron bars which had been placed for additional security driven from their places, and some of the panels broken in. No person sustained any injury. It is supposed that the object was to try the effect of certain quantities of powder upon strong gates. Several similar canisters have been found in other parts of the neighbourhood. On the same night all the telegraph wires were simultaneously cut in a circle of four miles outside the city.

FENIAN PLOT TO ATTACK MACROOM CASTLE.—A Fenian plot to attack Macroom Castle and seize militia arms there deposited, was defeated on Tuesday at the moment an armed band was about to make the assault. The police having suddenly arrested two of the insurgents acting as scouts, they alarmed the main body, which dispersed. At the time the attack was to have been made the telegraph wires communicating with the city were cut.

ATTEMPT ON ATHLONE BARRACKS.—Some alarm was created in the barracks at Athlone on Friday night by a man who was discovered in the act of scaling the wall, and who is supposed to have been the leader of a party who intended, if they could have effected an entrance unperceived, to have plundered the stores of arms and ammunition. He was perceived by a sentinel, who at once turned out the guard, but before they could reach the spot he had made his escape, and no trace of him or his companions could be discovered. In consequence of this the armoury and magazine—which were situated near the walls—are to be removed to a more secure locality within the barracks. Twelve 56-pounder guns have been sent from Athlone to arm the forts on the Shannon.

THE REVOLVER ROBBERY AT CORK.—On Monday afternoon two men, named David Barry, a coach painter, and Cornelius O'Sullivan, a cooper, were arrested on the charge of being parties in the recent robbery of revolvers and ammunition from the shop of Messrs. Alport. The former was fully identified. Subsequently, Barry Fitzpatrick, after considerable resistance, was arrested for being concerned in the recent explosion of Greek fire, and was committed with the other prisoners to Bridewell, which is now strongly guarded.

DEFENCE OF CONSTABULARY BARRACKS.—A meeting of proprietors of constabulary barracks was held on Thursday, Lord Castlemaine in the chair, when it was resolved to co-operate with Government in providing suitable defences; the Land Improvement Act being extended, and the Government leasing barracks at a rent sufficient to cover instalments of loan.

FENIANISM AND THE ROMAN CATHOLIC CLERGY.—The *Kerry Evening Post* says that Bishop Moriarty and his clergy find great difficulty in collecting their customary dues from their Roman Catholic flock, owing to the Bishop's recent denunciation of Fenianism.

THE LATE MURDER IN QUEEN'S COUNTY.—A man who gave the name of Patrick Byrne was arrested last week at Baldoye, county Dublin, for the murder of William Dunne, at Ballyadams, Queen's county, on 19th December. He is supposed to be James Caffrey, who stands charged with the murder.

THE LOSS OF THE CHICAGO.—The Board of Trade inquiry on the loss of this ship has terminated in the suspension of the captain's certificate for six months, on the ground that he should have kept the ship's head off shore till the weather cleared up, and should have verified his assumed position by further casts of the lead. Jennings, the marine who fired upon and wounded one of the wreckers of the Chicago, has been committed for trial. Bail will be accepted for him when the wounded man is pronounced out of danger.

THE EDUCATION COMMISSION.—The names of the members of the Royal Commission upon Education in Ireland have been officially published. They are—The Earl of Powis, the Earl of Dunraven, the Bishop of Meath, Lord Clonbrock, the Right Hon. Michael Morris, Justice of the Court of Common Pleas; Sir Robert Kane, Kt.; Mr. William Brooke, one of the Masters in Chancery; the Rev. Dr. David Wilson; the Rev. R. J. Cowie, one of her Majesty's Inspectors of Schools; Mr. John Arthur Dease; Mr. James Gibson; Mr. Scott N. Stokes, one of her Majesty's Inspectors of Schools; Professor Sullivan, Professor of Chemistry in the Royal College of Science of Ireland; and Mr. Laurence Waldron. The Secretaries are Mr. G. A. Chichester May, Q.C., and Mr. J. B. Dunne.

Scotland.

PARLIAMENTARY REPRESENTATION OF SCOTLAND.—On Monday night a meeting, called by the Lord Provost, of the inhabitants of Edinburgh and others interested in securing adequate representation for Scotland in the House of Commons, was held in the Music Hall, and was largely attended. The first resolution, which affirmed that the share of representation assigned to Scotland, in proportion to other divisions of the kingdom, whether viewed with reference to their respective population or their contributions to the

Imperial revenue, is much too small, was proposed by Mr. McLaren, M.P. Other resolutions in support of the object of the meeting and demanding 15 additional members for Scotland, were also passed, and the Lord Provost was authorised to sign on behalf of the meeting a petition embodying the resolutions. It was also resolved that copies of the resolutions should be sent to the counties and burghs in Scotland for support.

MURDER IN DUMFRIESHIRE.—On Saturday evening a little girl, about 14 years of age, called Thomasina Scott, the daughter of a shoemaker at Cummeltrees, was sent by her mother to Annan to buy groceries. On her way she stopped to rest at the cottage of a woman named Paterson or Creighton. Sitting there was Robert Smith, or Colvin, a harvest labourer, who was well known in the district. He said he also was going to Annan, and left the cottage with the girl, who was never after seen alive. Three hours afterwards he returned to the cottage and attempted to cut Mrs. Paterson's throat and shoot her with a pistol—it is supposed to annihilate the evidence she would be able to give of his having been in company with the girl. A fearful struggle ensued, during which he attacked her with the fire-arms, when, just as she was exhausted and unable to offer further resistance, two lads came to the door. The murderer immediately rushed out of the house, left his intended victim, and ran away. Mrs. Paterson received several wounds in the throat, but is in a fair way of recovery. Smith was followed on account of his attack upon her, and was arrested at Carlisle on his way south. The murder of the little girl Scott was not then known, but her parents becoming alarmed towards evening at her not returning home commenced a search by lantern light, and late at night discovered her in a neighbouring wood outraged, murdered by strangulation, and robbed of about 10*s.* in silver with which she had been entrusted. There were marks of a violent struggle in the plantation, and the girl had been strangled by a thin ligature—probably a leathern boot-lace. The prisoner, Robert Smith, alias Colvin, is between 19 and 20 years of age, and is a native of Eaglesfield, near Kirtlebridge, in Dumfriesshire. He has been examined this week by the Sheriff-substitute, and committed for trial. The inquiry was conducted in private; but it is understood that the prisoner has confessed his guilt, stating that rape was the motive of his outrage upon the child, and that he attempted to murder the woman because she could have given evidence of his having left her cottage with the deceased at noon. It has further transpired that during the interval between the two crimes the prisoner purchased the pistol at Annan with which he fired at the woman when he first attacked her. The pistol was afterwards found in the cottage, and some percussion-caps were found upon the person of the prisoner.

THE OVERLOADING OF SHIPS.—The Board of Trade inquiry as to the loss of the *Ivanhoe* has terminated in a report that she was, when she left Leith, in every way seaworthy, and that as her deck cargo was included in her general cargo, and was not in excess of her carrying capacity, there was no proof that the cargo carried on deck was the cause of her loss. On Friday night a public meeting of "sailors and householders favourable to a conference regarding deck loading and overloading of ships, and the case of the *Ivanhoe*," was held at Leith, and was largely attended. Mr. John Adam, who presided, moved a series of resolutions to the effect—that the *Ivanhoe* was too deep when she left Leith on the first of December last; that the stowage of her cargo, with special reference to deck loading, rendered her unseaworthy; that the recent Board of Trade inquiry into her loss had not been properly conducted, particularly as the Court gave in its finding no decision relative to the stowage of the cargo; and that a properly qualified person under Government should be appointed to inspect all ships before leaving port. The resolutions were adopted, and it was agreed to send copies of them to the Lord Advocate and the Board of Trade.

BREACH OF PROMISE OF MARRIAGE.—An action for breach of promise of marriage, in which the Hon. William Bruce Ogilvy, son of the late Earl of Airlie, and formerly Captain in the Coldstream Guards, residing at Cowden House, Perthshire, was defendant, and Miss Fanny Pugh, residing at the North-Western Hotel, Stafford, was pursuer, was tried before Lord Barcaple and a jury, in the Court of Session, at Edinburgh, last week. The pursuer is daughter of the late Benjamin Pugh, of Treberth, Pembrokeshire, gentleman farmer, and 27 years of age. In 1865 she was managing the Crewe Arms Hotel, at Crewe, when the defendant became acquainted with her, and, as she alleged, not only promised marriage, but wrote to Mr. Halsey, in whose employment she then was, a letter announcing that he was to be married to Miss Pugh, and hoped he would be able to dispense with her services under the usual month's warning. The defendant subsequently broke off the engagement, and in 1866 married Sarah Boyden, daughter of the late Henry Boyden, of Birmingham, pew-opener at the Jewish Synagogue. Damages were laid at 5000*l.*; the jury returned a verdict for 1200*l.*

Railways.

OPENING OF THE NEW LINE OF THE METROPOLITAN.—This new line was opened last week for goods traffic only, when several heavy trains passed over it between the Great Northern and London, Chatham, and Dover Railways. The independent service which will be afforded to the Metropolitan line, owing to the separate communication between the Midland, Great Northern, and London, Chatham, and Dover will, it is thought, prove a great boon to the company. At the present time there are no less than

174 down and the like number of up trains between King's Cross and Farringdon Street during the day, and notwithstanding the rapid means of conveyance frequently happens that passengers are left behind at both stations. But when the new line is opened, passengers there will be little fear of want of accommodation. There will be little, if any, diminution in the number of the trains; and the convenience of passengers travelling for distant parts, and wishing to change carriages or shift their luggage, will be greatly increased.

FATAL ACCIDENT ON THE CAMBRIAN.—During a storm on Saturday morning a bridge over the line at Caersws, on the Cambrian line, broke down at an early hour while the mail train from Shrewsbury to Welshpool was passing over it. The engine, the driver and stoker were killed, and several passengers seriously hurt.

ACCIDENT IN THE PRESTON TUNNEL.—On Saturday afternoon while a goods train from London to the north was stopping at the exit from the Preston tunnel in water, another goods train passed through the tunnel and ran into it with such force that waggons and the engine of the second train were smashed to pieces. No lives were lost.

CALEDONIAN AND NORTH BRITISH.—A meeting of the North British Railway shareholders was held in Edinburgh on Monday, when the agreement between the Caledonian Railway was adopted. A motion for the withdrawal of the arrangement is not to be made without the shareholders' consent.

THE METROPOLITAN.—In the Court of Chancery, Friday, in the case of *Bloxam v. the Metropolitan Railway Company*, which was a motion to rescind a declaration and payment of a dividend out of which were alleged to be capital of the company, Vice-Chancellor Wood gave judgment to the effect that the earnings of the line from Paddington to Marylebone Street for the past half-year shall provide not only the charges of the management of that railway, but also for the interest of the money borrowed and expended thereon, but also for the charges incurred in the management of and for the payment of the interest of the money borrowed for and expended on the line in the course of construction which are now in progress and therefore wholly unremunerative. In consequence of this judgment the directors have announced that the dividend to be paid will be 2½ per cent. for the half-year, or at the rate of 5½ per cent. on the Capital Stock.

COMPENSATION CASE.—A jury were summoned six days since at York Castle, before the under-secy to assess the damages in the case of "*Crowthor v. Lancashire and Yorkshire Railway Company*," judgment having been allowed to go by default. The damages were laid at 2000*l.* The action had been brought to recover damages for injury and loss in business sustained in a collision in the Bowling tunnel, near Bradford, on the 7th of March last, whereby the plaintiff, Mr. Jonathan Crowthor, a wool and wool waste dealer of Elland, was very severely injured, and had not been enabled to attend to his business. The jury assessed the damages at 1100*l.*

Law.

COURT OF APPEAL IN CHANCERY.—The Court of Appeal in Chancery last week gave judgment in an appeal from Vice-Chancellor Wood, on an application under the Railway Companies' Act of 1867, to restrain proceedings by unpaid landowners against the Company, with a view to the scheme of arrangement with their creditors in pursuance of the Act. The Vice-Chancellor held that such proceedings might be restrained, the Act gave the Court power to restrain proceedings by unpaid landowners. His judgment was chiefly founded on section 23 of the Act, which provides that nothing "hereinbefore" shall be taken to prejudice the rights of landowners; and his lordship held that the word "hereinbefore" must be taken to refer to the preceding portion of the Act, and not merely to the provisions of the Act which are now in force. The Company appealed against the judgment of the Vice-Chancellor, and the Lord Justice Cairns, after reviewing the provisions of the Act at considerable length, came to the conclusion that the argument propounded in favour of the judgment which confined the application of the word "before" to section 23, and he therefore refused to grant the proper case the Court would have jurisdiction to restrain proceedings by unpaid landowners pending the completion of the scheme, though the landowners would not be bound by the scheme when finally confirmed. There remained the question whether this was a proper case for the application of the Act, and his lordship was clearly of opinion that it was. The scheme only provided for the payment of the debts by means of annuities, or securities, falling due at a future date. This would not be a proper provision for the non-payment, then for the payment of the landowners. His lordship, therefore, thought that the Vice-Chancellor's order was right, and that the appeal should be dismissed. As, however, he did not agree with the order on the face of the order an appeal, there was a dissent of the appeal.

COURT OF COMMON PLEAS: (Sittings at the Old Bailey.)—Chief Justice Bovill, and Justice W. W. Lushington.—**Stock Exchange Contracts.**—This case, which has excited some interest, was argued last November, and was given judgment. The plaintiff was Mr. Park, near Dorking, and at the time of the trial was partner in the firm of Overend, Gurney, and Co., was the plaintiff's company, upon which 15*l.* each had been paid, and the plaintiff instructed his brokers, Messrs. Park and Co., to sell the 80 shares, and they sold them to the defendants, who were stock jobbers and members of the Stock Exchange, at 11½ discount. The sale was for the sum of 1250*l.* There had, however, been a sale of the shares between Messrs. Park and Co. and the defendants, and they had bought 95 more Overend and Gurney shares, the number they had sold to defendants, and the shares were delivered to nominees of Messrs. Park and Co. in the practice of the Stock Exchange, and the shares were settled. The usage of the Stock Exchange is to give names to receive transfers of every party to the side or other on the settling day. The consequence

market was moderately attended, but buyers confined their purchases to their immediate necessities, and the business transacted in foreign Wheat was consequently in retail quantities, for which late rates were realised. Barley, Beans, and Peas brought last week's quotations. In Oats a fair amount of business was done at late prices. Flour sold slowly at about the rates of this day's night.

FRIDAY, Feb. 7.

From the 31st ult. to the 5th inst. the weather has been very stormy, with occasional heavy rains, but the last two days were fine and seasonable. The Wheat trade throughout the kingdom has relaxed during the past week into a state of great inactivity, and any alteration in value was against sellers, but the decline did not exceed 1s. per qr. Feeding Barley, Beans, and Oats met a slow sale at former rates, Malting Barley and Peas were in some markets the turn cheaper. Maize in Liverpool gave way about 2s. per qr. for American, of which the arrivals were large. The demand for Flour was very slight, but we did not notice any change in value during the week, except at Birmingham, where a reduction of 3s. 4d. per sack was quoted. The arrivals of grain off the coast during the week consisted of 37 cargoes, of which, with those left over from last week, there remained for sale last night 26 cargoes. The floating trade has been throughout the week in a state of suspense, in the early part business in Wheat off the coast was much restricted on account of the few cargoes on offer, while, since the last day or two, the trade was waiting for box samples, the tendency of prices is downward, and for Saida Wheat 1s. to 2s. per qr. decline was accepted. Barley and Beans were in demand; of other articles the coast is clear. Wheat on passage and for forward shipment was little inquired after, Rye and Maize neglected, but Barley more in favour. Paris, Feb. 6.—Business in Wheat very limited, but prices remain without alteration. Flour is a slow sale at previous rates. The six marks are quoted at equal to 58s. per 280 lb. The stock at the Halle is estimated at 20,000 cwt.

The arrivals of all grain, both English and foreign, this week, have been unusually small. This morning's market was thinly attended, and millers showed little disposition to purchase either English or foreign Wheat, in some instances a slight reduction was acceded to for inferior descriptions. Spring Corn was firm at Monday's quotations.

ARRIVALS THIS WEEK.

LIVERPOOL, Tuesday, Feb. 4.—There was a moderate attendance at to-day's market. Wheat rather slow, and prices have declined generally about 3d. per cental since Friday. Flour limited demand, and prices nominally unchanged. Beans and Peas without alteration. Oats and Oatmeal quiet. Indian Corn pressed, ex quay, at 1s. decline; mixed, 43s. 6d.

FRIDAY, Feb. 7.—A fair attendance at market. Wheat in rather better demand, at Tuesday's rates. Flour 6d. per barrel and sack cheaper. Beans 6d., and Peas 1s. 2d. lower than Tuesday. Oats and Oatmeal favour buyers. Indian Corn in moderate demand at late rates; mixed, 43s. to 43s. 6d.

To Nurserymen and Seedsmen.

A PARTNER WANTED in one of the oldest Trades in the South of England, in consequence of one of the Firm retiring from ill health. A first-class opportunity for a Young Man with £400 or £500 capital. The Nursery is well stocked with choice Shrubs, Roses, Fruit Trees, Strawberries, &c. the soil and climate being especially suited to the growth of Roses, Evergreen Shrubs, &c. A good Seed Trade is done, but which could be very much increased. For particulars, apply to A. B., care of J. Wrench & Sons, London Bridge.

AGRICULTURAL EDUCATION.—A Cotswold Farmer has room in his house for a respectable YOUNG MAN, who would have an excellent opportunity of becoming acquainted with the routine of Farm Work in all its branches, including a small Dairy. The Farm is situated near a good market town, and in a capital hunting country. For terms, &c., address A. B., Standard Office, Gloucester.

MR. WILLIAM BULL is in WANT of a thoroughly experienced PROPAGATOR and FOREMAN. Salary, £100 per annum. None need apply but those whose character and abilities will bear the strictest investigation. Address, stating where last employed, &c., Establishment for New and Rare Plants, King's Road, Chelsea, S.W.

MR. WILLIAM BULL is in WANT of a CLERK and BOOK-KEEPER. An unexceptionable character indispensable. State where last employed, and salary required. Establishment for New and Rare Plants, King's Road, Chelsea, S.W.

WANTED, in Mr. WILLIAM BULL'S Establishment, TWO ASSISTANT PACKERS, who are accustomed to Pack Pot Plants. Wages given, 18s. per week.—Establishment for New and Rare Plants, King's Road, Chelsea, S.W.

WANTED, a GROWER of SOFT-WOODED PLANTS, for Market.—REVUEZ BROS., Notting Hill, W.

WANTED, a GARDENER (Single-handed), to keep in good Cultivation a Kitchen and Small Flower Garden, and to look after a Cow. State wages, with references and address, H. W., Ollerton House, Ollerton, near Newark, Notts.

WANTED, by a Gentleman in the neighbourhood of Darlington, a thoroughly respectable married Man as **GARDENER.** Must understand the Management of Vines, Fruit, Vegetable, and Flower Garden. Must be well recommended.—Apply to A. H. C., Langton Grange, Gainsford, Darlington.

WANTED, a GARDENER for a Family House 20 miles from town, where another Man is kept.—Wages, £52 per annum, with a house and a fat pig. Must understand Kitchen Gardening, Grapery, Pruning, and Flowers for House and Conservatories. State particulars by letter.—X. D., Post Office, Gerrard's Cross.

WANTED, a WORKING GARDENER, in a London Garden; one who has held a Single-handed situation some years preferred. He will be required to produce a constant supply of Fruit and Flowers, Forced and otherwise. He will have assistance. None but neat tidy Gardeners need apply. State wages required, and full particulars. Apply by letter only, to C. R., Pittam's Library, King's College Road, Adelaide Road, Regent's Park, N.W.

A YOUNG MAN of ability as a GARDENER and GROUND-WORKMAN, and who is a good hand amongst Plants, may HEAR of a SITUATION by applying, by letter, to J. C., care of Mr. C. Hunt, Post Office, Loughton. Character must be unexceptionable, and stand strict investigation.

WANTED, a SECOND GARDENER to take charge of Houses Single, and not under 20 years of age; must have large experience in Propagating, and Forcing in every department. Wages, 16s.; house, firing, light, and milk and vegetables found.—Apply to A. B., Marlow, Bucks.

WANTED, a married MAN, to work in the Kitchen Garden. Wages, 10s a week, with cottage.—Apply to G. Currox, Bretton Gardens, Wakefield.

WANTED, near London, TWO YOUTHS to Learn the Growing of Fruits and Flowers for the London markets. They will live on the premises free, and have a wage. A small Premium required.—Apply, stating wage required, age, &c., to O. W., Post Office, Barnet, N.

WANTED, a NURSERY CLERK.—Must be thoroughly efficient.—Apply, stating age, wages required, and where last, or now employed, to "D., Messrs. Hurst & Son, 6, Leadenhall Street, London, E.C.

SHOPMAN WANTED.—Must be a good Salesman, and well up in Flower and Vegetable Seeds, and possessing a knowledge of Plants. He must be well recommended.—Address, stating salary and other particulars, BARR & SPOONER, 12, King Street, Covent Garden, W.C.

SHOPMAN WANTED.—A Young Man as UNDER SHOPMAN. He must have a good character and good address.—BARR & SPOONER, 12, King Street, Covent Garden, W.C.

WANTED, a good DAIRYWOMAN, and to take the Charge of Poultry on a Gentleman's Estate; age about 45. Also a steady MAN, to Milk and look after Stock.—Address, post paid, to A. B., 51, Jackson Road, Holloway, London.

WANT PLACES.—Letters to be Post Paid.

EXPERIENCED GARDENERS (or as GARDENER and BAILIFF), of various qualifications, recommended to Gentlemen.—Further particulars given on application to Messrs. F. G. HANDBRICK & SON, Wellington Nursery, St. John's Wood, London, N.W.

Gardeners (Head, Foremen, and Under). **JAMES CARTER AND CO.** having many applications for the above, request those wanting Situations to send Name, Address, and Copies of Testimonials, for entry in their FREE REGISTER. Only those who can send unquestionable references need apply. Any Lady or Gentleman requiring Gardeners, as above, may rely upon J. CARTER & CO., adopting the most stringent regulations in reference to testimonials as to ability, honesty, &c.—JAMES CARTER & CO., 237 & 238, High Holborn, W.C.

MR. WM. PAUL begs to announce that he has made arrangements by which he will be enabled in future to furnish Gentlemen with the NAMES, ADDRESSES, &c., of GARDENERS and GARDENERS and BAILIFFS, of various qualifications, who are open to engagements.—The fullest particulars as to services required and wages given, should be forwarded with application. PAUL'S Nurseries, Waltham Cross, London, N.

GARDENER (HEAD).—Age 27, single; 10 years' first- class experience. Excellent character.—C. J., 222, Strand, Temple Bar, London, W.C.

GARDENER (HEAD).—Age 34, married, no incum- brance; has had considerable experience in the Cultivation of all kinds of Fruit, Flowers, and Vegetables, Early and Late Forcing, &c. Good character.—GARDENER, South Norwood Hill, Surrey, S.

GARDENER (HEAD).—Age 28, single; has had much experience in the various branches of his profession. Five years' unexceptionable character from last employer.—X. Y., Mr. Williams, Railway Nurseries, Watford, Herts.

GARDENER (HEAD).—Age 32, married; thoroughly competent in the various branches of the profession. Excellent character. Satisfactory reasons for leaving.—W. H. S., Springfield, Dulwich, S.

GARDENER (HEAD).—Thoroughly understands the Cultivation of Vines, Stove and Greenhouse Plants, Early and Late Forcing, and Flower and Kitchen Gardening. Good character.—E. W., Mr. Hughes, Eastgate Street, Winchester.

GARDENER (HEAD).—Seven years' Head Foreman in the Gardens of His Grace the Duke of Northumberland, Syon House, and Head Gardener in two other large and good places.—P. P., 3, Lily Terrace, Warwick Road, Kensington, London, W.

GARDENER (HEAD).—Age 36, married; understands the most approved Systems of Gardening in all its branches. Seven years in the Gardens at Bletton, Devon; and 11 years' character in last situation.—R. SNOW, Mr. Hill's, Mill Bridge, Stoke, Devon.

ROYAL SCHOOL OF MINES, Jermyn Street.—PROFESSOR WILLIS, M.A., F.R.S., will COMMENCE a COURSE OF THIRTY-SIX LECTURES ON APPLIED MECHANICS, on Monday, February 17, at 12 o'clock, to be continued on every Monday, Wednesday, Thursday, and Friday, at the same hour, but Saturday, at the same hour. Fee for the course, £3. TRENHAM REEKS, Registrar

Home News.

THE COURT.—The Queen and Royal family continue at Osborne. On Friday the Queen drove out with Princess Christian, Princess Beatrice, and Princess Henriette of Schleswig-Holstein. On Saturday the Queen went out in the morning with Princess Christian, and drove out in the afternoon with Princess Louisa. On Sunday the Queen, Prince and Princess Christian, Princess Louisa, and Princess Henriette, attended Divine Service in the parish church of Whappingham. On Monday morning the Queen went out with Princess Christian and Princess Beatrice and drove out in the afternoon with Princess Louisa and Princess Beatrice. On Tuesday morning the Queen went out with Princess Christian, and drove out in the afternoon with Princess Christian and Princess Henriette. Count Bernstorff left Osborne. On Wednesday morning the Queen went out with Princess Christian, and drove out in the afternoon with Princess Christian and Princess Henriette. Count Bernstorff left Osborne. On Thursday the Queen drove out with Princess Louisa.

THE PRINCE AND PRINCESS OF WALES, with Prince Albert Victor, Prince George, and the Princess Louise, arrived at Marlborough House on Tuesday, when they resided since November 14. It is stated that the Princess has derived the utmost advantage from the healthy atmosphere in which she has been living, and is now able to walk without the aid of the stick, and without any perceptible lameness. On Thursday the Princess rode out. In the afternoon the Princess drove out. In the evening their Royal Highnesses went to the Haymarket Theatre.

PRINCE LEOPOLD went out on Wednesday morning in a garden chair, and is progressing very satisfactorily. The British Medical Journal of yesterday says that the Princess has now suffered severely on more than one occasion, "one of those anomalous conditions which sometimes unaccountably affect persons otherwise perfectly sound in constitution, but it will undoubtedly, throughout life, require Prince Leopold to abstain from violent exertion of any kind, or from indulging in the more active departments of professional activity suggested by the Duke of Edinburgh and Prince

ARRANGEMENTS.—It is announced that Her Majesty's stay at Osborne being unavoidably prolonged in consequence of the late illness of Prince Leopold, the Court which was announced for Tuesday, March 3, is postponed till Friday, March 6th.

THE CABINET.—A Cabinet Council was held on Monday at the official residence of the First Lord of the Treasury in Downing Street. Another Council was held on Tuesday. The Earl of Derby, who is recovering from his attack of gout, is still so weak that he has been unable to leave Knowsley for the meeting of Parliament.

PARLIAMENTARY MOVEMENTS.—In the House of Commons on Thursday Mr. Finch took his seat for the first time in the room of Mr. Heathcote, called to the House of Peers by the title of Lord Aveland. Mr. Lowther also took his seat for Westmoreland, in the room of the late Colonel Lowther. A new writ

was ordered for Stoke-upon-Trent, in the room of Mr. Beresford-Hope, resigned; a new writ for the University of Cambridge, vacant by the appointment of Sir Jasper Selwyn to the office of Lord Justice; and a new writ for Helston, vacant by the appointment of Mr. Brett as Solicitor-General. Mr. Beresford Hope and Mr. Cleasby are in the field for Cambridge University, and committees to promote their election have been formed both in London and Cambridge. Mr. George Melly and Mr. Colin M. Campbell have come forward as candidates for Stoke-upon-Trent, the former in the Liberal, the latter in the Conservative interest. Mr. Brett, the Solicitor-General, will probably be re-elected for Helston without opposition, the Liberal party being divided in opinion as to contesting the seat on this occasion. Mr. Alison, the principal partner in the firm of Alison, Merry, and Cunningham, iron-masters, Glasgow, is announced as a candidate for Lambeth.

THE NEW SHERIFFS.—The following is a list of the Sheriffs appointed for the present year for all the English and Welsh counties excepting Cornwall:—ENGLAND: Bedfordshire—Sir John Montagu Burgoyne, of Sutton, Bart. Berkshire—Alexander William Cobham, of Leighton Park, Reading, Esq. Bucks—James Carson, of Spinfield, in Great Marlow, Esq. Cambridgeshire and Huntingdonshire—George Ebenezer Foster, of Brooklands, Cambridge, and Shippea Manor, Isle of Ely, Esq. Cheshire—John Coultis Antrobus, of Eaton Hall, Congleton, Esq. Cumberland—Sir Robert Brisco, of Crofton Hall, Bart. Derbyshire—Francis Westby Bagshawe, of The Oaks, near Sheffield, Esq. Devonshire—Sir Alexander Palmer Bruce Chichester, of Arlington Court, Bart. Dorsetshire—Charles Joseph Parke, of Henbury, Esq. Durham—Anthony Wilkinson, of Hulam, Esq. Essex—William Charles Smith, of Shortgrove, Saffron Walden, Esq. Gloucestershire—Hattil Foll, of Beckford Hall, near Tewkesbury, Esq. Herefordshire—Tomkyns Dew, of Whitney Court, near Hereford, Esq. Hertfordshire—Robert Pryor, of High Elms, Watford, Esq. Kent—Stephen Musgrave Hilton, of Bramling House, Ickham, Esq. Lancaster—Le Gendre Nicholas Starkie, Esq., of Huntroyde. Leicestershire—Ambrose Lisle March Phillipps de Lisle, of Garendon Park, Loughborough, Esq. Lincolnshire—John Wilson Fox, of Girsby House, Market Rasen, Esq. Monmouthshire—Frank Johnstone Mitchell, of Llanfrehfa Grange, near Newport, Esq. Norfolk—The Right Hon Thomas Heron, Viscount Ranelagh, of St. Faiths. Northamptonshire—Henry de Stafford O'Brien, of Blatherwycke, Esq. Northumberland—John Blenkinsopp Coulson, of Blenkinsopp Castle, Esq. Nottinghamshire—John Bagshaw Taylor, of Radcliffe-upon-Trent, Esq. Oxfordshire—William Earle Bischoe, of Holton Park, Esq. Rutland—Robert Heathcote, of North Luffenham, Esq. Shropshire—Charles Spencer Lloyd, of Leaton Knolls, Esq. Somersetshire—Inigo William Jones, of Kelston Park, Esq. County of Southampton—Sir Edward Hulse, of Breamore House, near Salisbury, Bart. Staffordshire—James Timmins Chance, of Handsworth, Esq. Suffolk—Sir Charles James Fox Bunbury, of Barton Hall, Bart. Surrey—Robert Carter, of the Grove, Epsom, Esq. Sussex—Henry Peter Crofts, of the Abbots, Sompting, Esq. Warwickshire—James Dugdale, of Wroxhall Abbey, Esq. Westmoreland—Thomas Taylor (commonly called Lord Kenlis), of Underley Hall, Kirkby Lonsdale, Esq. Wiltshire—Charles John Thomas Conolly, of Cottleshouse, near Melksham, Esq. Worcestershire—Charles Michael Berington, of Little Malvern Court, Esq. Yorkshire—Sir John William Ramsden, of Byram, Bart. Wales: Anglesey—Henry Lambert, of Tan-y-Graig, Esq. Breconshire—John Evan Thomas, of Penishapentre, Esq. Cardiganshire—Alban Thomas Davies, of Tyglyn Aeron, Esq. Carmarthenshire—Charles William Nevill, of Westfa, Llanelly, Esq. Carnarvonshire—Robert Sorton Parry, of Tan-y-Graig, Esq. Denbighshire—Sir Robert Alfred Cunliffe, of Acton Park, near Wrexham, Bart. Flintshire—Richard Pelham Warren, of Hope Owen, Esq. Glamorganshire—George Thomas Clark, of Talygarn, Esq. Merionethshire—Richard John Lloyd Price, of Rhiwlas, Esq. Montgomeryshire—William Fisher, of Maesfron, Esq. Pembrokeshire—George Richards Graham Rees, of Penllwyn, Esq. Radnorshire—Walter Thomas Mynors Baskerville, of Clyro, Esq.

Foreign.

FRANCE.—In the sitting of the Corps Legislatif on Friday the debate on the Bill on the Press was resumed. Articles 4, 5, and 6 were referred to the committee. Articles 7, 8, and 9 were adopted. On Saturday the debate was resumed on Article 10, which provides that offences against the Press shall be tried by the tribunals of Correctional Police. M. Jules Favre moved as an amendment that such offences should be tried by the Courts of Assize before a jury. After an animated debate, in which M. Pinard, M. Thiers, M. Nugent St. Laurent, M. Baroche, and M. Jules Favre took part, the amendment was rejected by 199 to 35. In the sitting of Monday M. Jules Simon moved and explained his amendment, which proposed that the lapse of time during which a journal could be prosecuted after the committal of an offence, should be three months, instead of three years. M. Jolibois, the Government Commissioner, opposed the amendment, which was rejected by 190 to 15. M. Schneider, the President of the Chamber, replying to M. Thiers, stated that the question of the rotation in which judges would sit at Press trials was reserved, and would form the subject of an additional article. Art. 10 was adopted, and Art. 11 then came under discussion. An amendment by M. Beauverger, asking that the penalty of imprisonment in cases of defama-

tion of private persons should be maintained, was taken into consideration. In the sitting of Tuesday, after speeches from MM. Picard, Jules Favre, Rouher, and Ollivier, the identical amendments of MM. Gueroult and Beauverger, proposing that the penalty of imprisonment should be maintained in cases of defamation of character, were rejected by 170 to 59. In the sitting of Wednesday Article 13 was adopted by 205 against 33 votes. The Epoque of Thursday evening says that a rumour is current that a complete administrative change is about to occur in a Liberal sense. The modification in question would be the establishment of a Parliamentary Cabinet, with M. Rouher at the head, supported by MM. Buffet, Segris, and De Lagueronniere. The Epoque adds that this rumour requires confirmation, but it is not unlikely to be correct. The Presse and the Liberte allude to a similar report. The Bill fixing the military contingent for the year 1868 at 100,000 men was presented to the Corps Legislatif on Saturday. The departmental journals publish a circular of the Minister of War, dated the 11th inst., enjoining the Prefects of the different Departments to order immediately a census to be made of the men called to compose the National Garde Mobile. The result of the census will be published between the 16th and the 23d of February. The circular points out that the object of the measure is simply to incise the names of the men on the lists, without there being any necessity for calling the men together at present. The Presse announces that the Exhibition building in the Champ de Mars, together with all the materials composing it, was sold on Saturday by private agreement to the agent of a company of foreign contractors, for the sum of 1,100,000 francs. The money is to be paid down. The printing establishment of the Abbe Migne has been destroyed by fire. The damages are estimated at 6,000,000 francs.

SPAIN.—The ceremony of the delivery to the Queen of the Golden Rose sent to her Majesty by the Pope took place on Wednesday in the Chapel of the Palace. The Bank Bill has been referred back to the Ministry of Finance. In consequence of Senor Barzanallana and Senor Belda having respectively resigned their posts in the Cabinet, Senor Sanchez Oscana has been appointed Minister of Finance, and Senor Marfors provisionally Minister of Marine. In the sitting of the Senate on Monday the Public Offices Bill came on for debate. All the Ministers were present during the discussion. In the sitting of Thursday the Bill relative to public functionaries was discussed. At the end of the sitting a royal decree was read appointing Senor Severo Catalina, at present director of Public Instruction, Minister of Marine. It is reported that Senor Cabezas y Montemayor will resign his post as Under Secretary of State for the Finances. A commission will shortly be appointed under the presidency of a General of Brigade to proceed to Abyssinia.

PORTUGAL.—The Count da Ponte de Santa Maria, Marshal of the Portuguese army, is dead. Several tumults have occurred in the provinces on account of the new taxes.

HOLLAND.—The second scrutiny of the elections to the Chamber of Deputies was completed on Friday. The result was the election of six Ministerial candidates, three of whom were old members; and five Opposition candidates, three of whom were in the former House. The general result has been the election of 35 Ministerial candidates, 27 of whom previously belonged to the House; and 38 Opposition candidates, 31 of whom were old members. One candidate of each party and Herr Vanreenen, the former President, having been nominated for double constituencies, three new elections will be necessary.

PRUSSIA.—The Crown Princess of Prussia gave birth to a prince at three o'clock on Monday morning. Her Royal Highness and the infant Prince are both doing well. Dr. Gream, who left London to be present at the accouchement, will remain in attendance for a few days. In the sitting of the Chamber of Deputies on Friday the Bill for establishing a special fund for the province of Hanover, and for including in the ordinary budget a yearly amount of 500,000 thalers for that purpose, was passed by a majority of 200 to 168. The King is said to be annoyed at the attitude of the Conservative party in this question. After the close of the sitting Count Bismarck requested leave of absence for an indefinite period, which the King granted. During Count Bismarck's absence he will be replaced in his functions by the Minister of Finance. The semi-official Provincial Correspondence of Wednesday evening says:—

"The abstinence of the Minister-President from official business will certainly continue until after the close of the Chambers. The preliminary deliberations in reference to a new arrangement of the provincial districts will now take place, the Minister of the Interior having resumed his post. The rumour of differences of opinion existing in the Cabinet on this point is entirely unfounded."

Preliminary arrangements are being made by the Ministry of the Interior for the establishment of a Central Association for the protection of German emigrants by directing them to certain societies and shipping agents.

AUSTRIA.—In the sitting of the Committee of the Reichsrath Delegation on the war budget on Friday, the Minister of War declared that a reduction of the effective strength of the army was as a general proposition impossible. Nevertheless it was possible to effect certain economies in the cavalry, the military, and bands. Baron von Beust, in reply to an interpellation on the political situation, explained the present foreign relations of the empire, and in conclusion said that he considered the foreign relations of Austria to be of so peaceful a nature that all danger of war must appear as a thing only to be brought about by extraordinary

events; although every effort was being made to ward off all dangers, and although there was every reason to hope that peace would be maintained, yet, on the other hand, it appeared necessary to maintain the army on such a peace footing as would enable Austria, if necessary, to assume an attitude inspiring respect, and at a short notice send her army into the field ready for action. In the sitting of Wednesday the Budget Committee of the Delegation resolved to add to their report upon the Estimates of the Ministry for Foreign Affairs the following paragraph:—

"Austria requires the preservation of peace as a condition of her consolidation and advancement. The Red Book shows that the present Minister for Foreign Affairs has recognised this necessity and acted upon it with as much prudence as dignity."

The Reichsrath reassembled on Monday, when Dr. Kaiserfeld was elected President of the Lower House. In acknowledging his election he alluded to the guarantees for the commencement of a constitutional system which had been afforded by the appointment of a Parliamentary Ministry, and said that a Ministry which was the interpreter of the sentiments of the Reichsrath would certainly receive the support of the House. Prince Auersperg, the President of the Council, asked the House to place confidence in the Ministry in order that the system now introduced might be strengthened. The Ministry had been appointed in order to carry out the principle of dualism, and was upon the most cordial footing with the Government of Hungary. Without trenching upon the principle of self-government, it would, in case of necessity, strictly enforce the observance of the laws. It desired to promote the strength of the State in unison with the Reichsrath. The Austrian Government has replied to the complaints of Prussia relative to the granting of Austrian passports to the members of the Hanoverian Legion. Austria promises that an investigation shall take place on the subject to ascertain whether any irregularities have occurred, and announces the adoption of strict preventive measures in future.

ITALY.—It is stated that the Pope has granted a dispensation for the marriage of Prince Humbert with the Princess Margharita. The Chamber of Deputies on Friday concluded the discussion of the Estimates of the Ministry of Public Instruction. The Estimates of the Ministry for Foreign Affairs were approved. On Saturday the first seven articles of the Estimates of the Ministry of Marine were voted. Signor Danneo moved an order of the day, which was accepted by the Ministry, and approved by the Chamber, engaging the Government to present within one year an organised scheme for the reorganisation of the army. Signor Cardona presented a Bill for the reorganisation of the Provincial Central Administration. The majority of the Committee on the grinding tax have decided to impose the tax upon the grinding of cereals, but rejected the proposal to extend the tax to other substances. It reduced the tax on wheat to 2 lire per quintal, and 1 lira on other sorts of grain. The Committee have also rejected the Ministerial proposal appointing tax collectors to be collectors of the grinding tax. In the sitting of Monday the President announced that the members deputed by the Chamber to congratulate the King on the approaching marriage of the Crown Prince had been received by his Majesty, who had expressed his heartfelt acknowledgments for the good wishes of the national representatives. The Chamber then resumed the discussion of the Estimates of the Ministers of Marine, and voted the first 23 articles. In the sitting of Tuesday the debate on the Estimates of the Ministry of Marine was concluded, and the House commenced the discussion of the Estimates of the Ministry of War. In the sitting of Wednesday the debate on these estimates was resumed, and was continued on Thursday. The representatives of the Italian and Swiss Governments have signed the final protocol of the treaty establishing the frontier line between the province of the Valtellina and the Canton Grisons. The King signed a decree on the 9th inst. authorising the retirement of the Marquis d'Azeglio from his post as Minister at the Court of St. James's. The Prefecture of Milan has been declined by the Marquis d'Affito, and subsequently accepted by Count Torre. General Cialdini has arrived in Florence. Brigandage prevails in the provinces of Velletri and Frosinone. The eruption of Vesuvius has broken out with fresh violence. On the morning of the 5th great quantities of ashes were ejected, together with lava, and in the evening some shocks of earthquake were felt.

PAPAL STATES.—General Dumont arrived at Rome on Friday, and assumed command of the French troops in Roman territory. A French steam transport arrived at Civita Vecchia on Saturday to embark another squadron of cavalry for France. On Thursday afternoon a grand review of the Papal troops took place at the Villa Borghese. General Kanzler distributed many decorations among the officers and men. The youthful Prince Salvador Iturbide, grandson of the Emperor Iturbide, shot in Mexico in 1823, has just entered the Pontifical Zouaves. A telegram from Munster, dated the 6th inst., has been published at Rome, announcing that the first address of the German students to the Pope has been enthusiastically despatched to Rome. In this address they announce that they will maintain 20 Zouaves for the service of the Pope. It is said that the negotiations of Austria with Rome for the revision of the Concordat encounter serious difficulties. Baron von Beust has demanded the complete abolition of the present Concordat as a preliminary step, but the Pope wishes that it should serve as the basis for the modifications proposed. On the other hand it is stated that Prussia is endeavouring to establish more intimate relations with Rome, and has taken steps to obtain the establishment of an Apostolic Nuncio at Berlin. On Wednesday last Baron von Arnim, the Prussian

Minister, presented his credentials to the Pope as representative of the North German Confederation to the Holy See.

GREECE.—A Royal decree has been issued dissolving the Greek Chambers. The elections are fixed for the 3d March. The new Chambers are to meet on the 3d May. A ball had been given at Athens by the English Minister, Mr. Erskine, at which the King and Queen of the Greeks were present. The new Ministry have published their programme, of which the following is an extract:—

"We fully understand the serious position of our internal affairs, and the necessity, dictated by pure patriotism, that our dear country should make earnest preparations for the future marked out for it by Providence. We consider ostentatious demonstrations too burdensome for the country, and believe that preparations for the future ought to advance in proportion to the well being of the present. Moved by the sufferings of a kindred people, which have enlisted the sympathies of the whole of Christendom, we will grant it all the assistance in our power."

TURKEY.—The *Levant Herald* states that an Imperial order was despatched to the Grand Vizier on the 11th, recalling him from Crete. The Egyptian Prince Mustapha Fazil has just been made a Freemason.

SERBIA AND THE PRINCIPALITIES.—It is asserted that France, England, Austria, and Prussia, have made representations to the Servian and Rouman Government on the subject of the armed bands assembled in the Principalities, which are said to consist of 2000 Servians, Russians, and Roumans. It is said that Prussia, in expressing her disapproval of any sort of incitement or protection being given to revolutionary intrigues against the Porte, at the same time declared her conviction that it was the duty of the Servian Government not to oppose the wishes of the European Cabinets in this respect. M. Cretzulesco, the Rouman agent in Paris, has been instructed to communicate to the Cabinet at the Tuileries a formal denial on the part of his Government of any participation, direct or indirect, in Russian or Servian manoeuvres.

CANDIA.—It is stated that at the urgent request of the British Ambassador, the Porte has consented to grant to the Cretans administrative regulations much more liberal than those originally introduced by the Grand Vizier. These new regulations amount to a true national representation, and to the participation of the population in the government of the country. The Greek steamer *Creto*, while on her way to Candia with provisions and munitions of war, was chased by two Turkish cruisers. She succeeded, however, in landing her cargo, and returned to Syra. Russian vessels continue to transport Cretan families to Greece.

EGYPT.—The Viceroy has imprisoned a number of Tunisian officers, suspected of having been concerned in a political intrigue. Contradictory rumours are afloat concerning the conclusion of an important financial transaction by the Viceroy.

ABYSSINIA.—Advices from Annesley to the 23d ult. announce a rapid movement of troops to the front. A battery of artillery left, on the 20th, for Senafé; the 25th Native Infantry on the 21st, and three companies of the 4th Europeans were to go forward immediately. Advices to the 29th ult. announce that Sir Robert Napier had arrived at Senafé, from which place a force of 1500 men, consisting of cavalry, artillery, and infantry, advanced upon Antalo on the 26th ult. It was reported that a skirmish had taken place between Abyssinian freebooters and a British reconnoitring party in the direction of Antalo, but the rumour has not been confirmed. Advices to Feb. 2 state that Sir Robert Napier is about to advance from Senafé to Antalo. It is reported that King Theodorus is at Magdala, and that all the captives are with him. Menelek has been defeated, and has retired to Ankobar. The 21st Bengal Infantry arrived at Annesley on the 2d inst. The Punjabees landed on the 23th ult. The native followers are to be sent back to India. The wells on the American principle have proved successful at Koomagloo, and good water had been obtained. The lighting of the Abyssinian coast was reported as complete. The Egyptian troops are pushing forward without the concurrence of the British authorities.

INDIA.—The *Times of India* states authoritatively that 238 vessels are employed in the Indian seas and for the Abyssinian expedition, and that the monthly freight, exclusive of coal, is 392,000*l*.

PERSIA.—According to intelligence received at Constantinople cholera has reappeared in Persia, and is especially virulent in the province of Mazanderan.

CHINA.—Mr. Burlingame, who has been appointed Minister Plenipotentiary for China to the foreign Courts of Europe, arrived at Shanghai on December 10th. The reports concerning the Nienfei are favourable to the Imperialists, the movement having received a considerable check. Shocks of earthquake were felt at Ningpo and Shanghai on the 17th and 18th December. Ale has been successfully brewed at Shanghai.

JAPAN.—The preparations for the opening of Osaka and Hiogo were being rapidly advanced, and the formidable fleet of 15 of 16 men of war assembled in Osaka Bay was considered to be a safe guarantee that the opening of the ports three months hence would be peaceably effected.

AUSTRALIA.—The Duke of Edinburgh continued to meet with a magnificent reception. He left for Tasmania on the 1th of January. The Judges of the Supreme Court had declared against the validity of Government payments under confessed judgments, without an Appropriation Act. A general election was to take place in January. The decision of the Home Government regarding the postal question had been received with great satisfaction.

MAURITIUS.—Advices from the Mauritius state that in a severe gale the British ship *Hammersmith* was totally wrecked. Three sailors were drowned and the

captain hurt. The epidemic had again made appearance.

UNITED STATES.—Mr. Edward Thornto, newly-appointed British Minister to the United States, was presented to President Johnson on the 7th inst. by Mr. Seward, and was cordially received. The New York papers contain contradictory reports from Washington regarding the Alabama, stating that the President has resolved a question to an immediate issue, while another states that the report has no foundation, but that correspondence on the subject of the claims will be opened through Mr. Thornton. The President's consent by arbitration is said to have been obtained. The House of Representatives has passed a resolution instructing the Judiciary Committee to report the truth of a report that a Judge of the Supreme Court had, in private conversation, denominated the Reconstruction Act as unconstitutional, and that the Supreme Court would so decide. The committee was also instructed to report whether an offence demands impeachment. The Freedmen's Bureau until July, 1863. The House has adopted a resolution asking the President for information relative to the trial of Father Mathew and Colonel Lynch by the British authorities. A Bill concerning the rights of naturalised citizens has been reported by the Committee of Foreign Affairs to the House of Representatives. The Senate has passed the Bill, previously passed by the House of Representatives withdrawing the sale of surplus lands with an amendment retaining 19 large tracts. At a Democratic mass meeting at New York, 1000 week resolutions were adopted denouncing the acts of Congress as revolutionary and partizan, and endorsing the course adopted by President Johnson. Speakers were in favour of Mr. Johnson as a candidate for the Presidency. The Connecticut Democratic State Convention has adopted similar resolutions endorsing the course adopted by President Johnson, and strongly denouncing that of Congress. The Tennessee Radical Convention has adopted a resolution in favour of the nomination of General Grant for the Presidency. It is officially announced at Washington that the treaty ceding the island of St. Thomas, Canby has issued an order exempting property in Carolina from legal executions for three months. A disastrous fire has taken place at Chicago, the destruction of property to the amount of \$2,000,000.

PERU.—News from Peru to the 12th ult. confirms the disastrous defeat of Prado by the revolutionists before Arequipa, and states that he fled in disorder upon Lima, narrowly escaping capture. Prado afterwards left for Chili. Intense excitement prevailed at Lima and Callao. The whole country is now held by the revolutionists.

Parliament.

BOTH Houses of Parliament met on Thursday first time since the Christmas recess. In the attendance of peers was numerous, but not of any public importance was transacted. The Duke of RICHMOND laid on the table respecting railways. No public business was transacted. In the Commons on Thursday, after notices of motion had been given, the CHANCELLOR of the EXCHEQUER announced that the Scotch Bill would be introduced on Monday, and promised to fix an early day for the Irish Bill. Metropolitan Foreign Cattle Market Bill was read a second time, Lord R. MONTAGU having moved at the suggestion of Mr. MILNER GIBSON that it should be referred to a Select Committee. The Public Departments (Extra Revenue) Bill was also read a second time. The CHANCELLOR of the EXCHEQUER moved for leave to bring in a Bill to amend the laws relating to election petitions, providing more effectually for the prevention of practices at Parliamentary elections. He stated that the Government had intended to give full effect to the recommendations of the Select Committee in Session in favour of a transfer of the jurisdiction of the House from a Select Committee to the Court of Queen's Bench. The judges were, however, opposed to the policy of the measure on constitutional grounds, and had declared that it would impose upon them an utterly inconsistent with their duty and the oaths of office. Though they had received the sanction of the judges with mortification and indignation, the Government did not think it right to therefore proposed to create a new Court of election petitions, consisting of three judges with salaries of 2000*l*. a-year, to which would be referred all appeals from revising barristers. Mr. KNATCHBULL-HUGHESSEN, Mr. WHITBREAD, and R. P. COLLIER took constitutional objection to the proposed change, contending that it was reasonable to suppose that the duty of election petitions could not be performed by members of the House. Mr. RUSSELL and Mr. SANDFORD deprecated part of the portion of the jurisdiction of the House. Mr. SANDFORD doubted whether the Judges had more right than other public servants to refuse duties imposed upon them by Parliament, and thought that Parliament should not be deterred by their remonstrances from imposing this duty upon them. Lord CHANBORNE, in reply to the conduct of the Judges, and argued that it was more had been active party men, and might still be so to retain party predilections, to throw these political duties upon them would be to weaken unlimited confidence at present reposed in them. Mr. PALMER thought the Judges had done their duty if their motive for protesting

function was a belief that it would public confidence in their administration of But he denied altogether that the fact of been active party men would affect their Judges in any matter. Mr. HENLEY as strong jealousy of the proposed transfer of to a court of law, fearing that the end to give the House of Lords the decision in election matters. Mr. AYBION the Judge by their protest had saved the trouble of discussing an un- position. After some remarks by Mr. Mr M BEACH, and Mr. H BEBBLIEY, pointed out two considerations in a transference of jurisdiction—one that could only deal with the questions two candidates, and could not enter on the examination of the manner in which the franchise had been exercised in a particular the other, that by the present system the advantages of a local inquiry were sacri- the principle of a transference of juris- did not object, but it must be to the Judges. The question he held to be— the House give this power to the highest of the law, or retain it in its own hands. of the present system would be raised to by the creation of an inferior tribunal. Mr. denied that the case was so desperate as to the House to give up this important privilege; of the prevention of bribery he preferred to trust to the inevitable enlargement of constituencies, adoption of the Ballot. After some remarks Mr. LEAR, Mr. BONHAM CARTER, Mr. GOLDNEY, Mr. D. GRIFFITH, the Bill was brought in and a first time—Yesterday, in reply to Mr. W. E. CHANCELLOR of the EXCHEQUER said the Government intended to bring forward a on the subject of National Education during the present Session. On the motion that the Public Bill be read a second time, Mr. WALPOLE that the schools which would be affected by the were Winchester, Eton, Shrewsbury, Rugby, Westminister, and Charterhouse. The House sitting.

City Intelligence.

Metropolis and its Vicinity.

THE Loyal IRISHMEN'S ADDRESS TO THE QUEEN. On Tuesday afternoon a very numerous deputation, introduced by Mr Digby Seymour, Q.C., waited on the Home Secretary, at the Home Office, to present an address, signed by 22,608 Irishmen in London expressing their devotion to the Crown and their disapproval of Fenianism. The deputation consisted of about 70 or 80 persons, and included Mr J E Naghtan, barrister-at-law, Captain Fitzgerald Studdert, Lieut.-General Sir G. Lawrence Dr Rytter, Captain Cairnes, Mr. J. T. Westropp, Mr Arthur G O'Connor, Mr. T. de Courcy Atkins, Captain Edward Hoare, the Hon. Campbell Fair, Hon J. J. O'Connell, Dr Dempsey, Dr. Parke Latty, Dr. Fitzgibbon, Colonel Haly, Mr. J. J. Ridley, Mr. Joseph C. E., Mr. James Walker, Major Cooke, Mr. Duffy, Mr J H. Allen, Mr. E. Loney, Mr. T. T. Boylan, Mr. M. B. Talbot, Mr. Roger Seymour, Mr. A. F. Jackson, Mr. E. J. Maguire, &c. Mr. Digby presenting the address, said that it was devoted to the expression of their indignation at the Clerkenwell outrage, and a ready determination, without reference to party, to support her Majesty's Ministers, whoever they might be, in their efforts to put down and effectually suppress all conspiracies and attempts to disturb the peace of the country. He added that he had received from the heads of many large firms in London an address, and that he had placed himself in communication with Archbishop Manning and Dr. Roman Catholic bishop of Southwark, who had given him their hearty support, and stated their belief that this step would have more weight if the religious feeling and influence were kept as far as possible. He had also received the support of many Roman Catholic priests of London, and many Protestant clergymen. He expressed his belief that the Government would introduce remedial measures for Ireland, and an opinion that there was in the country very little disloyalty but very great disaffection. In conclusion he warmly denounced the address having been presented, and Mr. Digby replied as follows:—

glad of an opportunity of declaring, under peculiar and trying circumstances, their loyalty to the Crown and institutions of the country. It will, of course, be my duty to lay this address at the earliest moment before her Majesty. I cannot doubt of its favourable reception, and I will afterwards communicate her Majesty's gracious answer to Mr. Seymour, whom I presume you wish should be the medium of communication. On my own part, and on the part of the Government, I beg to thank you for the moral assistance which is afforded to us by the address in our efforts to uphold the law and preserve the tranquillity of the country in a period of great difficulty. I assure you nothing could have caused me to discharge the duties which have devolved upon me during the last few months if I had not felt certain that I was thoroughly supported by the loyalty of both Englishmen and Irishmen. I do not wonder that, with the misconception which may have arisen in the minds of the humbler classes of Englishmen, as well as the humbler classes of Irishmen, there should have been a desire on the part of many who feel deep and true affection to her Majesty, and a deep loyalty towards the institutions of the country, to afford a rallying point to the humbler classes of their countrymen for joining with those who might otherwise be deterred by the supposition that there was more disaffection than existed. I have no doubt that without that many who have affixed their signatures to this address would have had no opportunity of rallying round their countrymen in London, in their expression of loyal and true affection to the Crown. I will take care that the address is presented to her Majesty as early as possible."

CONFERENCE ON CHURCH EDUCATION.—On Wednesday afternoon a conference of Churchmen was held at Will's Rooms to discuss the resolutions drawn up by Archdeacon Denison, on the question of National Education, and long since put in circulation by him. The Hon C. L. Wood presided, and there were present Mr Hubbard, M.P., Mr. Dinsdale, M.P., Sir Alfred Slade, Bart., Sir W. Denison, the Hon. and Very Rev. the Dean of York; the Rev. Canon Melville, Rev. G. D. Boyle, of Kidderminster; Rev. Canon Gover, of Worcester; Archdeacon Denison, and several of the London clergy. The chairman, in introducing the subject, said that education had now resolved itself into the question of the day, and had become of especial interest to members of the Church of England. Their duty on that occasion was to consider the state of education in England, how the difficulties connected with it might be met, and the consequences involved in the adoption of the various plans before them. He would leave it to others to bring forward in detail the plans of the present scheme. What did they mean by education? Did they mean mere reading, writing, cyphering, and scientific instruction? If so, the State could supply it; but he considered that mere intellectual learning, without religious instruction, might become a curse. He held that morality could not properly be taught apart from the doctrines of religion—that was in fact to impart merely secular instruction. Much public attention had been directed to Mr Bruce's Bill, which seemed to be capable of flexibility, and to the propositions laid down at Manchester. With reference, however, to the conscience clause, they must remember that the apparent illiberality of enforcing the conscience clause was only apparent. It left the British and Foreign Schools alone, involving only Church schools and schools in a somewhat similar position. The Church could not assent to eliminate a part of the truth in order that she might be allowed to teach the remainder. He asked that absolute and influential position for the Church of England which they accorded to others—the right to proclaim public those eternal truths which could alone satisfy the heart as well as the intellect. Archdeacon Denison then moved the first resolution:—

"That it appears to this meeting that it is necessary that aid be given out of the public funds towards building and maintaining sufficient schools for the education of the poor." He said this was the first of a series of resolutions which had been drawn up to be submitted to the meeting. The turning point of the whole scheme was that the civil power should confine itself in respect of conditions annexed to its grants to the national and secular parts of education, leaving religious teaching in the schools to the several religious bodies, and all manner of regulations connected with it unconditionally free to the managers of each school. The second proposition was that those who preferred a purely secular school should be entitled to the same assistance from the civil power as those who preferred a school of religious education. Nothing was more unphilosophical than to go about to meet momentous difficulties by discarding differences, or treating them only as deserving the contempt and pity of the educated mind. The mistake of a partnership between the Church and the civil power was a natural one, but after 20 years' reflection he was convinced that it was a mistake. The old formal identity between Church and State was now gone, and under the new order of things the State was in no position to touch the religious part of education. With regard to secular education he did not, indeed, profess to understand the principle or the practice of education in a purely secular school. It seemed, however, to him to lack the one thing needful in the training of a child, and he regretted that there should be such schools. But he apprehended that what they might approve or not was not the question. The question was about the universal application of the principle of unconditional freedom. As citizens they had a right to ask that this principle should be applied in their own case, because they saw that this was the only way by which true religion could be saved in such of their schools as were aided by the State. They were content that it should be applied in the case of all other citizens, and they would take care that there should be no mistake about being so content. He did not ask the State to assist religious or secular schools as such, but to assist all citizens alike. He did not, however, understand by a secular school one where the children were to ridicule or to deny the truth of religion, and which was avowedly hostile to all religions. In places where local resources fell very short, he should not be sorry to see the State undertaking the greater part or even all

of the original outlay in building and starting a school, and then placing it on the hands of either the Church or some sect. A great struggle was impending, and while he did not disguise on which side present success was likely to be, present success was often a miserable thing. Even now the fidelity of the Church of England was trembling in the balance in respect of great doctrines of the faith, and why did it so tremble? The reason, he believed, was to be sought in the prevalence of the evil principle of comprehensive religion within, and in the action of the State without. Mr Kenyon, Q.C., seconded the resolution, and said that the whole question arose out of that which he might designate as the danger which they incurred by their unhappy differences. Amid every difficulty he would hold by this principle, that every kind of education to be real must be based on religion. The Rev. A. D'Orsey moved an amendment to the effect that the clergy should teach religion, and that the schoolmaster should limit himself to imparting other branches of instruction; but the Chairman ruled that the amendment was out of order at that stage of the proceedings. Sir W. Denison believed that this resolution would not prove effective, because he did not believe the House of Commons would vote the sums necessary for education. He held that the education of the people was not to be trusted to the nation in any way, but that it should devolve on the members of the different religious communities to whom the children were attached, and who should devote a tithe of their property for purposes of religion. He concluded by moving, by way of amendment, "That each religious community should provide for the education of its own people, and should furnish out of its own means the money required for the purpose." Archdeacon Denison briefly replied. He approved of the principle of devoting a tenth of property to sacred uses, but did not think it calculated to meet the difficulty with which they had now to deal. The amendment was not seconded, and, on the resolution being put, it was carried, there being only one dissentient. Sir Alfred Slade, Bart., moved the second resolution:—

"That such aid be not by rate, local or general, but by parliamentary grant, to be administered by the Committee of Council of Education as Parliament shall direct." The bad effect of the proposed system would be unduly to burden landed property, passing over funded property. He appealed to all religious bodies to oppose the system of local rating for schools, for the religion taught there would never be satisfactory to anybody. Mr. Thomas Plumer seconded the resolution. However well the system might answer for democratic America, it would not work well in constitutional England. The principle of local rating would work very unfairly, as it would fall upon the labouring classes on account of the inequality with which the rates fell on the poor and the rich families of metropolis. The Rev. Mr Fowler opposed the resolution. Local rating would come to help the clergyman from one of the most unnatural and unreasonable burdens that could be laid upon him that of securing the necessary funds. Mr. Winkley protested against their being robbed of their educational endowments, like those of Harrow, by the Public Schools Bill, and then of there being a prospect of a rate being laid upon them. The Rev. Mr. Mayow would like to know how long the denominational system would stand after compulsory rating were resorted to. Within three years there would result absolute disarrangement. The resolution was agreed to, with only six dissentients. Archdeacon Denison moved the third resolution:—

"That such aid be applied to assist in building schools of all religious bodies upon sites legally conveyed, secured for the purposes of education, and open to all children, whose parents are willing to accept the education, and to comply with the rules and regulations of the school. Religious teaching therein and all manner of regulation connected with it, to be left unconditionally free to the managers of each school."

The Rev. Mr. Mayow seconded the motion. The Rev. Mr. Melvill moved as an amendment:—

"That, in the present crisis of the educational question, for the Church to abrogate its position as a national institution would, besides the impulse given to the secular system, depress its influence and narrow its sphere." The Rev. Mr. Boyle seconded the amendment. The Rev. Dr. Miller thought it was untenable that if the clergy took State money they should look upon these schools as missionary positions from which they were to reinforce the ranks of the Church. They should endeavour, as administering a national fund, to meet the case of those Nonconformist children who were under their care. The pinch of the case was where there was only room for one school. He had never known the case of a parish where a clergyman had done his duty to Dissenters that he was not fairly met by them. He looked upon this as the last chance for the Church of England to take her fit place as a national educator, and this depended on the existence of a liberal conscience clause. After some further discussion, Archdeacon Denison briefly replied. The amendment was put and lost, and the resolution was then agreed to.

THE CLERKENWELL OUTRAGE. — On Tuesday morning William Desmond, Timothy Desmond, Nicholas English, Jeremiah Allen, James O'Neill, William Barrett (alias Jackson), John O'Keefe, and Anne Justice, the eight persons charged with wilful murder arising out of the Fenian explosion at the House of Detention, were again brought before Sir Thomas Henry at Bow Street, for the purpose of hearing the remaining depositions read, after which it was expected that they would have been formally committed to take their trial on the capital charge. It appeared, however, from the statement of Mr. Giffard, Q.C., the counsel for the Crown, that some very important information had been unexpectedly received during the week, and that instead of having the prisoners committed on that day, a further remand for a week would be necessary. The depositions were then read

and attested by the witnesses, after which the prisoners were again remanded till Tuesday next. The prisoner Nicholas English has, since Mullany turned Queen's evidence, evinced a great desire to do likewise, and on Monday he sent for one of the detective officers at Scotland Yard, to whom he made a lengthy statement. This was submitted to the proper quarter for acceptance, but was rejected as Crown evidence; though it may probably be taken as a confession.—On Wednesday evening Dr. Lankester held an inquest on the body of Eliza Leeland, aged 60, the wife of a journeyman baker, living at 43, Skinner Street, in the immediate neighbourhood of the House of Detention at Clerkenwell, and who at the time of the late outrage was pursuing her usual domestic duties, and was knocked down by the force of the concussion. From that time her health declined, and on the 21st of January she was taken into the Clerkenwell Infirmary, suffering from paralysis produced by shock to the system and fright, and died there on Sunday last. The medical officer of the Infirmary deposed to the admission of the deceased in a low and weak state, suffering from paralysis of the left side, and afterwards insensible. On the 1th and 5th inst her intellect returned, but on the 6th stupor again set in, and she died on Sunday from disease of the brain and spinal cord, accelerated by the shock to the nervous system, arising from the explosion. He had no doubt that the shock and fright from the explosion in the weakly condition of the deceased produced the paralysis. The jury returned a verdict of "Death from paralysis, accelerated by the explosion which took place at Clerkenwell on the 13th December, 1867."

METROPOLITAN MUNICIPAL GOVERNMENT.—On Wednesday a deputation representing nearly the whole of the metropolis waited upon Mr. Gathorne Hardy at the Home Office, for the purpose of expressing the decided hostility of the representative bodies of the metropolis to the two Bills introduced into Parliament by Mr. Stuart Mill, with the view of establishing municipal corporations within the metropolis. The deputation, which consisted of members of the vestries and district boards of St. George, Hanover Square; St. Marylebone, St. Pancras, St. Olaves, Southwark, St. George, Southwark, Clerkenwell, Kensington, Whitechapel, Greenwich, Lewisham, Plumstead, Lambeth and other parishes, was introduced by Mr. Harvey Lewis, M.P., Mr. Thomas Chambers, M.P., Mr. Locke, M.P., and Colonel Hogge, M.P. Major Lyon, of St. George, Hanover Square, referred to the large rateable value of the metropolis, which was, exclusive of the city of London, 14,000,000*l.* He referred to this for the purpose of showing that the district of Westminster, which by a majority of one had decided not to join the deputation, represented but a very small portion of this, its rateable value being only 450,000*l.* The Metropolitan Municipal Association, which advocated the adoption of the Bills in question, was a self-elected body, not representing any particular portion of the metropolis, and yet it had presented itself before Mr. Hardy as representative of the metropolis, and offered to call an aggregate meeting, and forward to the Secretary of State the resolutions there passed. That offer had not been carried out, for at the meeting which was held he moved as an amendment to the motion in favour of the Bills, that the proposals contained in Mr. Mill's Bills did not meet the requirements of the metropolis, and while four only voted for the original motion, the whole of the rest of the meeting was in favour of his amendment. After the passing of his amendment the meeting had become uproarious, and a motion was made to throw the chairman out of window, upon which he left, thinking discretion the better part of valour. The City of London expressed no objection to the first Bill of Mr. Mill, but it made the most determined opposition to the second, which subjected it to a central municipal authority. The Vestry of St. George, Hanover Square, were most decidedly opposed to the Bills, which, if passed, would involve great expense in the erection of town halls and the keeping up of a certain sort of state, as at the Mansion House. The rates of the metropolis were rapidly increasing, and would necessarily continue to do so as long as the parishes carried out those improvements and repairs which were demanded; therefore to pass the Corporation Bills would be to increase the expenses to an unbearable degree, and destroy what remained of local self-government. They trusted the Bills would meet with the opposition of the Government, who in that event would receive the thanks of the whole metropolis. Mr. Carr, of St. Marylebone, said the government of the metropolis under the present Local Management Act had been much improved. St. Marylebone would decidedly object to go to the expense that corporations would entail. Mr. Jonathan Salter, of St. Pancras, said that the parish to which he belonged was thoroughly opposed to the Municipal Bills. Mr. Collinson, of St. Olaves, Southwark, was satisfied with the present law. During the last 12 years, since the passing of Hall's Acts, there had been a great improvement in the government of the metropolis. A great deal of the business transacted by local boards was business of detail, which could only be carried out in the parish immediately affected, and if it was spread over a larger area local self-government would be done away with entirely. He considered that the Acts at present in existence were ample, if properly carried out, and the duties under them demanded of vestrymen were great and onerous. After hearing several other speeches, Mr. Hardy said that his attention had already been called to the proposals made in the Bills introduced by Mr. Mill—first, by a deputation of those who called themselves the Metropolitan Municipal Association; and secondly by Mr. Ayrton's committee on the subject of the local government of the metropolis, that had been sitting for two years, and had made three voluminous reports. He felt it had been admitted by all present that some slight amendments were

required in the present Acts for the government of the metropolis. He also gleaned from their observations that they would not object, where vestries and district boards did not carry out that which the law required them to do, that there should be legislation to force them to carry out their duty, and he thought that such an Act was necessary. Local institutions best considered their own interests when they carried out that which was committed to them. He felt at the same time that the introduction of new corporations would not have that effect. His personal opinion was not at all favourable to the federal corporations for the government of the metropolis, as proposed by the Bills of Mr. Mill. Although municipal government existed in most of the large provincial towns, and was well adapted for them, he was not aware of the existence of any system of federal corporations, and he was quite sure that in the metropolis it would cause constant conflicts and contentions. The deputation must understand that he spoke entirely for himself, and not for the Government. He was not prepared to accept Mr. Mill's Bills, and would urge his colleagues to oppose them, as not desirable for the metropolis (Cheers.) The deputation had admitted by cheers—that they would not have any objection to pressure being put on those districts of the metropolis where existing Acts were not carried out, and that he thought, would be sufficient. Major Lyon tendered Mr. Hardy the thanks of his colleagues for the favourable reception they had met with.

EAST LONDON MUSEUM.—On Wednesday afternoon a deputation waited upon the Duke of Marlborough, at the Council Office, for the purpose of asking his support, and that of the Government, to the Bill which has passed the House of Commons, and is now before the House of Lords, and to which Lord Redesdale, in his official position, has raised certain objections, which, however, are mainly of a technical character. The deputation was introduced by Mr. Ayrton, M.P., and was a very numerous one. Amongst those present were Sir R. Murchison, the Revs. T. J. Rowse, Dr. Mullar Solly, Dr. Hewlett, J. C. Canning, W. Bramley Moore, J. B. Reed; Messrs. A. Brady, Briscoe, M.P., A. Kinnaird, M.P., G. Godwin, N. S. Powell, Charington, and others. Mr. Ayrton, in introducing the deputation, explained that as a commencement of the East London Museum, it was to be constructed of spare materials from South Kensington, offered by the Government, or a space at Bethnal Green, which had been left by the donor to the district, but with such restrictions that rendered it useless. To get over the restrictions by which the bequest was hampered, application had been made to Parliament, and the House of Commons had passed the necessary Bill, and it was now before the Lords, and certain technical objections having been there raised to it, those interested in this movement had formed this deputation, with a view of giving such explanations as they thought would remove all objections to the bill. Mr. Connolly (a working man), the Rev. Mr. Hansard, Mr. Briscoe, M.P., and some other gentlemen, having said a few words, the Duke of Marlborough said the views of the Government on this matter would be well known to the deputation, as they had been clearly indicated by the course they had hitherto taken. In 1865 the desirability of establishing museums in different parts of London was admitted, and an offer was made of certain materials, which had been in use at South Kensington, for the purpose, at a nominal price, and the reply from the Government was considered most satisfactory. In 1866 and 1867 a correspondence was carried on relative to the sanction of the Treasury to certain expenditure, and, on the estimate that 20,000*l.* would be required, 5000*l.* was granted. Difficulties arose, to remove which a Bill was passed through the House of Commons with the sanction and approval of the Government. In the House of Lords fresh difficulties had arisen, but he did not think they were by any means insuperable; and he had very little doubt that, with the assistance of the Government, the Bill would pass the Lords. He assured the deputation the Government fully appreciated the importance of the subject, and would endeavour to get the Bill passed as soon as possible.

THE REFORM ACT AND RATES.—A large number of weekly tenants have been summoned before Mr. Maude at Woolwich, who have been called on for the first time to pay rates under the provisions of the Reform Act. The plea they made was that the landlords would not deduct the rates from the rent. Mr. Maude said there would no doubt be a great deal of hardship felt for some time to come until the new law went on smoothly. If the landlord originally agreed to pay the rates he believed he was still liable to do so, though the tenant was made responsible to the parish.

REPORT OF THE METROPOLITAN BOARD OF WORKS FOR 1866-67.—In this report the Metropolitan Board of Works dwell with satisfaction upon the various improvements which have been effected in the appearance and sanitary condition of London during their eleven years' administration. The main drainage system, which they commenced, and have now almost completed, has been attended with results whose beneficial operations cannot yet be fully calculated. Already the general health of the metropolis, and especially the health of those who inhabit the low-lying districts near the river, has perceptibly improved. It will be long enough before the water of the Thames is transparent, but it is certainly not half so muddy as it was two years ago, and fish are now found in those places which were previously the most polluted. New thoroughfares have been formed in different districts, with the result not only of facilitating communication with, but increasing the circulation through our crowded neighbourhoods. The embankment of the river has been commenced, and is making fair progress; new

parks have been opened, and old ones have been maintained and beautified. The Board desire to effect, and perhaps more important improvements, but which urgently require funds for these purposes. As the occupiers of property, they express the opinion that a portion at least of this heavy burden should be borne by the owners. Since 1859 it appears that the area of 117 square miles, with a population of three millions. The sewage, which is now accepted on its way to the Thames, amounts to about millions of cubic feet on the north and four millions on the south side of the river. The only outlet required to complete the main intersecting sewer, is the northern low level sewer, which is now in process of construction, and is intended to form a main outlet for the western district. Its total length will be 12½ miles. The delay which has occurred in the completion of this sewer to the failure of the Metropolitan District Railway to commence their works when arranged under a portion of the Thames Embankment Act. The Abbey Mills Pumping Station at West Ham, soon to be completed, will be provided with engines, equal to 1140 horse-power, for lifting the sewage and ordinary rainfall from the low level to the outfall sewer a height of 36 feet. The most important of these works in the purification of the Thames will be the conversion of the sewage into a point where it will be harmless, until by the Essex Reclamation Company it is either used on the farm lands of Essex, or distributed on the reclaimed sands of Maplin. The Board believe that the completion of the Thames Embankment will conduce to the purification of water by quickening its flow and increasing its scouring power; and in addition to this there will be the "important improvement" which will result from the conversion of foul and wholesome mud banks into useful and ornamental thoroughfares." For some time the necessity of preventing the discharge of sewage into the Thames from town or village above the metropolis has been upon the Legislature, and the result has been that Acts of Parliament have been passed, from the execution of which very excellent results may be expected. The Board, however, were not successful in presenting their claims to be represented at the Thames Conservancy Board. With respect to the utilization of sewage, the report states that the Essex Reclamation Company have commenced the formation of a culvert for taking the sewage down to the Sands, and for the distribution of so much of it as may be required by the neighbouring farmers in the range of their experiments with considerable success. The sewage has proved most valuable as a manure for the growth of mangels, potatoes, flax, cabbage, and strawberries. One of the most promising experiments was in the case of a wheat crop. The growth of the field in which the sewage had been down could be easily distinguished from the rest by the strength and length of the straw, and the size of the ears. The grass on the company's farm is used in the feeding of milk cows, and leaves a considerable surplus which is sold to stable keepers in the metropolis. The Board have had some difficulty in deciding upon tenders received for the utilization of sewage on the south side of the river, but up to the date of the report they had not come to any definite arrangement. Improvements have been effected by the covering of sewers in different districts. Plans for the construction of 66 miles of brick and pipe sewers by local vestries have been under consideration. Some attention has been given to the plans proposed for abating the nuisance caused by the escape of offensive gases from the sewers. Experiments are still being carried out for the purpose of thoroughly testing the alleged efficiency of charcoal ventilators. Having fully described the improvements effected in the drainage of the city and condition of the river, the report goes on to the Thames Embankments. That portion of the Embankment extending from Westminster Bridge to Waterloo Bridge has made considerable progress. Temple not only is the river wall constructed to full height, but the subway and sewers are completed. The Embankment between the Temple and Blackfriars Bridge has not yet been commenced. The delay caused by negotiations with the Metropolitan District Company and the City Gas Company in the Southern Embankment from Westminster to the Blackfriars Bridge progresses satisfactorily. The Embankment on the site of the proposed street between Blackfriars Bridge and the Mansion House was demolished at the time when the report was issued. Since then Middle Row, Holborn, has been reconstructed, and the Board are taking steps for the construction of a new street to connect the Commercial Road, Whitechapel, and which may fairly be characterized as an important improvement. In another part of the metropolis, the Embankment of Finsbury and Southwark Park. Efforts have been made to preserve for the public open spaces which have for so long been regarded as commons, but much regret is expressed that the negotiations regarding Hampstead Heath have been totally unsuccessful—a fact which the Board attribute to Sir Thomas Maryon Wilson's statement of no interest in the heath is worth from 5000*l.* to 10,000*l.* acre. The report points also to the increase in the numbers and efficiency of the Fire Brigade, and various stations. Temporary stations have been erected in many populous districts, and efforts are being made to procure suitable sites for permanent stations. A new floating steam-engine, 120 feet in length, breadth, 108 tons burden, capable of steaming at the rate of 11½ knots an hour, and, moreover, of so light

that it will never be liable to be stranded, is at present being constructed for the more effectual protection of the wharves in the river. The Society for the Protection of Life from Fire have transferred all their escapes and other property to the Board, and their conductors have entered the Fire Brigade. The brigade is quite as well as it can be rendered, but complaints are still frequently made as to the loss of property, arising from the want of water to work the engines, and the report is strongly in favour of the establishment of a constant high-pressure service instead of the present intermittent supply. Many pages are devoted to the discussion of the gas question, on which the Board say that from the first they have strongly urged the necessity of a substantial reduction in the price of gas, and a considerable increase of illuminating power.

THE BOARD OF WORKS AND MR. DOULTON.—At a meeting of the Metropolitan Board of Works on Friday, the report of the committee appointed to consider the charges against Mr. Doulton in reference to the sureties provided by Mr. Furness, the contractor, was brought up for consideration. The charge was that Mr. Doulton received 3000*l.* for having procured two gentlemen to become sureties for Mr. Furness. The report having been read, Mr. Silas Taylor moved a resolution declaring that the Board, having investigated the evidence of Mr. Furness, given before the Registrar of the Bankruptcy Court on oath, and adhered to by him, were of opinion that the statements made by him had been proved. Mr. Le Breton moved an amendment, deprecating the taking part, by its members, in business or professional transactions, with parties connected with the works of the Board in matters relating thereto, as calculated injuriously to affect the character of the Board in the conduct of its business. After a very long discussion a vote was taken, when there appeared—For the amendment, 15; against it, 15. The Chairman gave his casting vote in favour of the amendment, and then vacated the chair, which was taken by Mr. Savage. It was afterwards stated that the name of a voter present had not been recorded, and after some discussion the chairman ruled that it must be inserted, which negatived the amendment. On the original motion being put, Mr. Cook moved an amendment to the effect that, the Board having no power to summon witnesses, to compel the production of books and papers, or to examine on oath, did not feel that the evidence given by Mr. Furness in the Bankruptcy Court had either been confirmed or disproved by the statement laid before the committee, and must therefore leave Mr. Doulton to meet those charges in the way in which he deemed best. This amendment, on being put, was also negatived. Some other amendments were moved, and great disorder prevailed. Eventually the original motion was put, when 7 voted for it and 20 against it, so that no decision whatever was come to upon the subject, although it had been discussed for upwards of five hours. Mr. Doulton declared that he had not profited to the extent of a penny by the transaction, and handed in a protest concerning the proceedings which had been taken against him. It was then moved that the protest be entered on the minutes, and Mr. Richardson moved as an amendment, that the protest do lie on the table, and that the receipt of it be not recorded in the minutes. On a division, the amendment was carried by 15 to 6. The meeting lasted seven hours.

THE METROPOLITAN POOR ACT.—The metropolitan district board formed under Mr. Hardy's Act, have already obtained sites for two imbecile asylums, each of which is to contain accommodation for 1500 inmates; and before the summer is over another asylum will be begun. The sites are in the neighbourhood of Watford and Caterham. Large plots of land have been purchased on each site, in order that the sewage of the asylums may be disposed of by irrigation on the land. More difficulty has been found in obtaining sites for the Fever and Small-pox Hospitals, which must necessarily be in the vicinity of London. One site, on which both a small-pox and a fever hospital may be erected, has already been obtained for the north district, and sites are also to be provided for similar hospitals in the East-end and on the Surrey side. In addition to these improvements arrangements are in progress for the effectual separation of the sick poor from the ordinary inmates of workhouses, and for the opening of dispensaries for the sick poor.

HOUSES OF PARLIAMENT.—The most recent improvement at the new palace of Westminster is the completion of the members' private entrance. The passage leading from the Houses of Parliament to Westminster Bridge is lighted inside by ornamental gas burners in unison with those inside the House, and they are suspended from the centres of the various arches. The stained windows of this arcade are also completed, and have a good effect in the Speaker's chamber contiguous to the Speaker's official residence. The pavement of this arcade will be completed in the Easter recess. In New Palace Yard, parallel to Westminster Hall, turf has been temporarily laid out with flowers, &c. In addition to the statues of William the Conqueror and King John, which are placed in front of this arcade, four other royal statues will be added shortly.

MR. THEODORE MARTIN was sufficiently recovered from a recent accident to leave Osborne last week, but is still unable to move about except on crutches. The Queen presented Mrs. Martin (Helen Faucit) with a magnificent ruby and diamond bracelet, as a souvenir of her visit to Osborne.

FIRE AT THE OXFORD MUSIC HALL.—Between 10 and 11 o'clock on Tuesday morning a destructive fire occurred at the Oxford Music Hall, near the Tottenham Court Road end of Oxford Street. At the close of the performances on Monday night the gas was

turned off at the main, and everything seemed safe but at about a quarter past 3 o'clock the police on duty in Oxford Street observed a great deal of smoke hovering over the tops of the houses, and while they were instituting an examination, a body of flame burst forth; from the roof of the Oxford. In a few minutes the roof, from end to end, was in flames, and the fire was descending to the main body of the hall, having laid hold of the stage and the balcony boxes, and it was thought that no portion of the edifice could be saved. However, on the arrival of the brigade, seven steam-engines were brought into play, and although at times the heat and smoke nearly overcame the men, they succeeded after great exertion in finally extinguishing the flames. The roof by that time had been burned off, the balcony and stage severely damaged by fire, and the rest of the premises injured by fire, water, and breakage. The cause of the fire is at present unknown.

THE SHOOTING OF THE BANDSMAN.—It may be remembered that, while the inquest was pending on Macdonald, the bandsman of the Guards, Police-constable Saunders was shot at in New Church Mews, Euston Road, at 3 o'clock in the morning, and wounded in the thigh, as well as about the head. He is now reported as hopelessly insane in consequence of the injuries to his head, and he has been sent to Stamford, in Lincolnshire—an idiot for life.

HIGH TIDES.—Considerable damage was done along the Thames on Saturday by an unusually high tide. The water rose three feet higher than the usual spring tides, and it is some years since such an influx of water has taken place. The water overflowed the Thames Embankment as well as the vacant space which is being reclaimed from the river. Other damage to property has resulted on the Surrey side. Several streets were partially inundated.

THE THAMES SHIPWRIGHTS.—The shipwrights of the Isle of Dogs have not yet been able to make up their minds to any reduction in their demands, and have consequently lost the chance of bringing back to the Thames some of the shipbuilding business which is now being transferred so completely to the northern ports. Mr. Bullivant at the recent meeting stated that iron and wood of the kinds required for shipbuilding can be procured quite as cheaply on the Thames as on the Clyde, and, in some instances, more cheaply; the difference in the price of coal is only about 7*s.* per ton in favour of the Scotch yards, or on a ship of 1000 tons about 1*s.* per registered ton. At the same time he offered to get orders for a couple of iron ships at 5*l.* a ton, but the men would not answer at once, and while they were hesitating, the shipowner, who could not afford to lose time, sent his commission to the builders in the north.

A "SHILLING DISPENSARY" has been opened in Walworth, for the benefit of such inhabitants as may be unable to afford the charges usually made for attendance by surgeons, and yet are unwilling to accept hospital or parochial medical aid.

THE CONTAGIOUS DISEASES ACT.—It has been resolved by the military authorities to apply the provisions of the Contagious Diseases Act to Colchester, Shorncliff, Canterbury, and the Curragh.

HIPPOPHAGY.—Mr. A. S. Bicknell, the promoter of the recent dinner at the Langham Hotel, delivered a lecture at the Crystal Palace on Thursday, on the subject of hippophagy; and a few days previously his brother, Mr. Herman Bicknell, gave a horse dinner at the Falstaff Inn, Ramsgate, to between 30 and 40 tradesmen and others of that town. The bill of fare included the following:—"Soup. Flying-horse. Side dishes: Racehorse patties, Shetland pony, with salad. Joints: Roast fillet of war-horse, royal charger stew. The horseflesh was sent from Paris for the purpose, and was prepared by a French cook.

GREAT CAPTURE OF STOLEN WATCHES.—A few days ago the police made a great capture of receivers of stolen watches. Three officers of the F division, in plain clothes, placed themselves to watch a certain house at Hackney. While so doing they became aware that three men were also anxiously on the look-out for some arrival, and the movements of the latter were closely observed. At length a railway van arrived, and a small box was delivered. By a ruse one of the officers approached without suspicion, and saw one of the men sign the delivery book. A signal having been given, the other policemen came up, and the three men and the wife of one of them were taken into custody. The box, which came from Liverpool, contained 21 gold watches and some chains, all the produce of robberies. In the cellar of the house was another box of exactly the same size, and addressed in the same handwriting; while on one of the prisoners was found a letter invoicing the lot at 29*l.* 18*s.*, and expressing a hope that the transaction would be completed without any such squabbling as occurred on the last occasion. A number of pawnbrokers' duplicates, representing watches and chains, were also found on the prisoners. On Saturday the men were brought up at Bow Street, and some evidence having been taken as to the ownership of the property, they were remanded until Monday, when some additional confirmatory evidence was taken, and the prisoners were again remanded. The woman, having acted under the direction of her husband, was discharged from custody. It was stated incidentally that all the stolen watches had their bows broken, showing that the robberies had been accomplished by professional thieves.

THE HAMMERSMITH MURDER.—The sentence on the prisoner William Thompson, who was convicted of the murder of a man at Hammersmith, at the last session of the Central Criminal Court, and left for execution, has been commuted to penal servitude for life.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London states that in the week that ended on Saturday, February 8, 4831 births and 3088 deaths were regis-

tered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 25 per 1000 persons living, being 23 per 1000 in London, 29 in Edinburgh, 32 in Dublin, 28 in Bristol, 21 in Birmingham, 29 in Liverpool, 29 in Manchester, 26 in Salford, 24 in Sheffield, 26 in Bradford, 21 in Leeds, 20 in Hull, 34 in Newcastle-upon-Tyne, and 29 in Glasgow. The rate in Vienna was 33 per 1000 during the week ending the 1st inst. In London the births of 1162 boys and 1235 girls, in all 2397 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2301. The deaths registered in London during the week were 1394. It was the sixth week of the year, and the average number of deaths for that week, corrected for increase of population, was 1560. The present return is, therefore, 166 below the estimated number.

Provincial.

BAENSBLEY.—At the police court in this town on Monday, Joseph Gregory, the fourth man concerned in the murder of Lord Wharncliffe's head gamekeeper, was brought before the magistrates on the charge of wilful murder and night poaching. It will be remembered that the prisoner escaped at the time of the murder, and eluded the vigilance of the police up to Monday, when he gave himself up. The murder was committed on the 11th of December last. No evidence was offered, and the prisoner was remanded for a few days.

BIRMINGHAM.—On Tuesday morning the three Beesleys and Grayson and his wife, charged with the Heneage Street burglary and murder, were again brought before the magistrates. There was no evidence offered against Grayson and his wife, but the detectives said they had enough to justify a re-arrest should they be discharged. They were not ready to go into the case as regards the Beesleys, who were shown to have been in Heneage Street—but, so far as appeared, not together—about the time of the murder. The prisoners were remanded till Tuesday next.

CANTERBURY.—The *Kent Herald* states that on Monday week the church of Godmersham, near this city, was broken into, and the candlesticks taken from the high altar; a scrap of paper being left in their place, on which was written a threat that if such things were put there again the church would be blown up.

CHATHAM.—The new iron-clad frigate Hercules was unlocked on Monday in this dockyard in the most successful manner. She carries on her sides out of the water an armour-plating of, at least, 6 inches in thickness, a line of 8-inch plates over her main box-battery, and a belt of 9-inch plates along the water-line. The First Lord of the Admiralty and other distinguished visitors arrived a little before 2 o'clock, when Miss Corry performed the ceremony of naming, and the ship glided slowly into the river, as the men on board hoisted the capstans upon the hawsers. The Hercules is said to be the most powerful iron-clad which has yet been built.

GRIMSBY.—On Thursday week a collision took place in the Wolds off Hasborough, between the Sea Gull, from Hull to Rotterdam, with a general cargo and six passengers, and the Swan, from London to Newcastle. The Swan struck the Sea Gull abaft the main rigging, and cut her nearly in two. In about a quarter of an hour the Sea Gull had disappeared. One passenger was drowned. The other passengers and the crew were saved by getting on board the Swan, which sustained damage in her bows.

HELSTON.—A deplorable state of affairs exists in this parish. Within three years there have been three vicars, the last of whom, the Rev. Dr. Hayne, has just been appointed to the professorship of music at Eton College, and has consequently resigned the living, worth about 450*l.* per annum. Owing mainly to religious differences in the parish, the churchwardens are left entirely without funds; the roof of the church is in such a state that the organ has been rendered useless by rain, and the evening service on Sundays has been discontinued for want of light, the gas company having cut off the supply of gas in consequence of their inability to get their account settled.

HULL.—On Saturday a remarkably high tide was experienced in this town, the water having risen to a height of 30 feet, or about 3 feet higher than the usual heavy tides. Houses, cellars, and streets were flooded; and Messrs. Davis & Co., drapers, Market Place, suffered a loss of 7000*l.*, in consequence of injury done to large quantities of flannels stored in their cellars.

LIVERPOOL.—The cab strike in this town, after existing for about a week, terminated on Saturday last. On the previous day, Mr. Graves, M.P., the mayor, and the head constable, induced the car owners and the watch committee to make certain concessions, and on Saturday, after another conference, the car proprietors agreed to give the amended regulations a fair trial for six months. Cabs were consequently plying as usual on Saturday evening and Sunday to the manifest satisfaction of the public.—On Friday, at the annual meeting of the Liverpool Chamber of Commerce, Mr. Horsfall, M.P., moved that the views in the report as to alterations in the bankruptcy laws should be inserted in the Bankruptcy Bill rather than be afterwards proposed as amendments. Mr. Graves, M.P., seconded the motion, and urged that every trader who gave a lien upon his trading property should be made to register it. Mr. Goschen, M.P., supported the motion. He feared that the present commercial depression was owing to commercial disrepute. The Bankruptcy Bill now being prepared embodied the new, radical, and stringent change of the future acquired property of the debtor being appropriated for the payment of his debts. He had formerly resisted the idea, but he had now come to

the conclusion that short of that they had no chance of doing away with the disgraceful system which now prevailed.

MANCHESTER.—On Monday morning a meeting of the citizens, convened by the mayor on a requisition signed by about 300 gentlemen of the advanced Liberal party, was held in the Town Hall, to consider the present state of the Irish Church Establishment and the duty of Parliament in relation thereto. The Mayor presided. The Rev. G. W. Couder (in the absence of Alderman Heywood) moved the first resolution, declaring the opinion of the meeting that in view of the gross injustice involved in the establishment of the Church of England in Ireland, and of the lamentable disaffection now existing in that country, it was the duty of Parliament to give its immediate attention to the subject of the Irish Church. He was interrupted several times while reading the resolution, and again while speaking in its support, so that it was necessary for the mayor to interpose to secure him a hearing. Alderman Rumney seconded the resolution, and quoted some statistics to show that the Protestants in Ireland formed only a small minority of the population of that country. The Rev. Dr. Garrett moved an amendment, to the effect that the meeting declined to pronounce an opinion in favour of destroying the Established Church in Ireland, because it had not evidence before it to justify such a proceeding, and also because it had no desire to excite the angry passions of controversy throughout the kingdom. He said the question before the meeting was one which made it the bounden duty of every Christian man to come forward and speak words of truth before the nation. Mr. W. Touchstone seconded the amendment. Mr. Jacob Bright, M.P., supported the resolution, and said, amidst continual interruptions, that it seemed to him that the Irish Church was in danger, and if it were in real danger he should regard it as a favourable sign of the times. If a majority of the people of the United Kingdom had their will, the Irish Church would cease to exist as a political institution; and if that meeting had been held in the evening when everybody could attend, it would not be possible to carry the amendment. The conclusion of his speech was inaudible in consequence of the clamour. The meeting was subsequently addressed by Mr. Ambrose, and at the close of his address it was decided to have no more speeches. The Mayor then put the amendment, which was carried by a majority of about five to three, amid great cheering from the opponents of the meeting.—On Tuesday a conference of the members and friends of the National Reform Union was held in the Town Hall, Mr. George Wilson, the president, in the chair. There was a very large attendance, delegates being present from various branches of the union in all parts of the kingdom. The chairman, in opening the proceedings, congratulated the members of the Union on the results they had achieved, by the agitation which they had carried on since its formation by the working men of Leeds. But only one portion of its programme had been, and that only partially, accorded to them. The following resolution was then passed on the motion of Mr. Bazley, M.P.:

"This conference is glad to recognise the homage paid to the principle of household suffrage in the Reform Act of last session, but regards that Act as an instalment only of Parliamentary Reform. This conference condemns the redistribution of seats as totally insignificant and worthless—the rate-paying clauses as unnecessary and vexatious—the representation of minorities as absurd, unjust, and unconstitutional, and is of opinion that energetic action is more than ever required in order to remove the highly objectionable enactments in the Bill, and to secure the remaining and still more important objects for which the National Reform Union has so long contended."

A second resolution was moved by Mr. Jacob Bright, M.P., and carried—

"This conference considers it the duty of Reformers everywhere to demand and put forth renewed efforts to obtain—1st The repeal of the rate-paying clauses; 2d. The abolition of the representation of minorities; 3d. The assimilation of the county to the borough franchise; 4th. The protection of the voter by means of the ballot; 5th. A just and equitable redistribution of seats, in proportion to population and property; 6th The shortening of the duration of Parliament to three years."

Another resolution was passed calling upon the branches of the League to further its objects by every means in their power. A Miss Wilson then moved—

"That this conference is of opinion that any household rated to the relief of the poor ought not to be excluded from the franchise."

Mr. Carrier seconded the motion, which was supported by Mr. Jacob Bright, M.P., but after an explanation from the chairman as to the rules governing the Reform Union, which rules restricted the suffrage to male occupiers, the resolution was withdrawn, three cheers being given for Miss Wilson. Mr. Jacob Bright, M.P., said he had been informed by Mr. Lings, of the overseer's office, that under the new Reform Bill there would be about 7000 female householders in Manchester, as near as he could guess.—On Tuesday afternoon, at the City Police-court, a young man, of respectable exterior, named Patrick Mullady, was charged with taking part in the attack on the prison van and the murder of Serjeant Brett, in Hyde Road, on the 18th September. The prisoner arrived in Kirtland, to whose custody he had been given at Bow Street Police-office, London, under a warrant granted for his apprehension. The prisoner said that he knew nothing about the offence with which he was charged, but the Superintendent stated that he had already been identified by three witnesses, and that there were besides other reasons for asking for a remand. The magistrate then remanded him for three days.

MARLBOROUGH.—The experiment made by the Marchioness of Ailesbury in establishing a cottage

hospital at Savernake, near this town, appears to have succeeded admirably. At the annual meeting held a few days ago, under the presidency of the Marquis of Ailesbury, the report showed that during the past year an addition of 144 had been made to the endowment fund, and that 79 cases had been received into the hospital (making up nine beds only), 40 of which were discharged cured, 28 were relieved, two pronounced incurable, and two fatal.

MONMOUTH.—All the colliers in this county, with the exception of those at Risca, are now on strike, having come to the determination, after holding several meetings, not to accept the proposed reduction of 3d. per ton.

OXFORD.—The New York papers publish a letter from Mr. Goldwin Smith, stating that there is no truth in the report that he is about to become a naturalised citizen of the United States. He intends, however, to devote himself to the study, and, if after due study he feels equal to the task, to the composition of American history. With this view he will probably take up his abode in the United States in the course of the summer, at some place where there are books and records, and where he can obtain permission to use them. His undertaking, he adds, necessarily implies a prolonged residence in the country where it must be carried on.

YORK.—At the meeting of Convocation for the province of York last week, the business of chief interest was the discussion of the question of promoting a reunion between the Wesleyan body and the Church of England. It was at first moved by Archdeacon Hamilton, and seconded by the Archdeacon of Carlisle, that the Wesleyan Conference should be invited to nominate a committee to meet a similar committee appointed by Convocation, with the object of considering this question; but subsequently the House adopted a modified resolution, moved by the Bishop of Ripon, to the effect that whereas the union of all faithful Christians was earnestly to be desired, and many of the causes which originally led to the separation of the Wesleyans from the Church of England were sensibly diminished, that House would cordially welcome any practical attempt to effect brotherly reconciliation between the Wesleyan body and the Church of England.

Ireland.

ORDER OF ST. PATRICK.—The Marquis of Drogheda was invested as a Knight of the Order of St. Patrick on Friday in Dublin Castle, by the Grand Master, the Lord Lieutenant, in the presence of the other members of the chapter. There was a distinguished attendance.

PURCHASE OF RAILWAYS.—An influential meeting on the question of railway reform in Ireland was held on Friday at the Mansion House, the Lord Mayor in the chair. Speeches were made by the Marquis of Clanricarde, Lord Bandon, and Sir Benjamin Morris. Resolutions urging the purchase of the railways by Government were adopted.

OPENING OF THE DUBLIN COMMISSION.—The ordinary spring Commission of Over and Terminer was opened on Monday by Judge Fitzgerald, who in his charge to the grand jury referred at great length to points at law connected with the Press. He gave it as the opinion of himself and his colleague that the publication of seditious or libellous articles from American or other foreign newspapers could not be justified or excused by law. In reference, however, to all such publications, the time, the object, and all the surrounding circumstances were to be taken into consideration, as they might be such as to rebut the inference of criminal intention on the part of the publisher. True bills were returned against Mr. Sullivan, the publisher of the *Weekly News*, and Mr. Pigott, the publisher of the *Irishman*, for seditious libel. True bills were also found against Patrick Lennon for high treason and for the murder of Constable Keena; and also against Mr. John Martin and others for walking in the recent Fenian processions. On Tuesday Patrick Lennon was tried for treason-felony. Constables were examined, who identified him as leader of the party who took some of the police prisoners and attacked the barracks at Stepaside and Glencullen. The jury, after 10 minutes' deliberation, returned a verdict of Guilty. He was tried on Wednesday for firing at Sergeant Kelly, with intent to murder. The defence was that the evidence of Kelly and other witnesses as to identity was not to be relied on. The case was not concluded at the rising of the Court, and the jury were conveyed to a hotel. On Thursday a witness for the defence swore that he spent the evening of the occurrence in company with the prisoner in a public-house, and at a quarter to 12 returned with him to his lodgings, where he remained until half-past 5 in the morning, sleeping in the same bed. On cross-examination he said he never slept with Lennon before, but he was shut out of his own lodgings that night. Other witnesses corroborated the evidence. At the close of the case Judge Fitzgerald charged the jury. He pointed out the discrepancies in the testimony of the Crown witnesses as to the identification. The jury, after deliberating three-quarters of an hour, acquitted the prisoner. The Attorney-General stated that he would not proceed with the indictment for murder. Yesterday morning the prisoner was brought up for sentence on the conviction for treason-felony, and was sentenced to 15 years' penal servitude. The prisoner declared his belief that the Government would be overthrown before the expiration of that term, and boldly stated that, if again free, he would act as he had done. In the case of Mr. Pigott, the Attorney-General applied to have the traverser transferred to the sheriff of the county, or arraigned under the County Commission. Mr. Heron objected,

and said that the legal course had not been pursued. The Court reserved judgment on the point. Yesterday Mr. Pigott, on learning that a warrant from the Bench was necessary to compel his appearance for trial, left the Court, and the police have since been unable to execute the warrant. The Attorney-General expressed a hope that Mr. Pigott would be advised to appear in Court this morning.

ARREST OF CAPTAIN MACKAY AT CORK.—Friday evening Captain Mackay, a notorious Fenian, was arrested by the constabulary in a public-house in Cork, with the tavern-keeper and several others. The prisoners made a desperate resistance. One of them got on the head constable's back and endeavoured to choke him; they struggled for about 20 minutes, and were frequently up and down on the ground. Mackay caught the head constable's revolver by the muzzle and tried to wrest it from him. He then got the constable's revolver and fired, wounding another constable in the leg. Eventually the police were reinforced, and conveyed the prisoners to Bridewell. A large, excited crowd assembled, and the police charged with bayonets wounding one man. Mackay, while going to prison, said he pitied such a fine body of constabulary for being loyal to an oppressive Government. More than 100 police guarded the gaol at night against a mob. On Saturday Mackay was brought up at the police court with six other prisoners, named Cronin (a public-house keeper), Mannix, Walsh, Hinchin, and White. The prisoner Hartnett, a draper's assistant, Mannix a fisherman, the others are labourers. All the prisoners were remanded except Cronin, who was discharged. Since the investigation Mackay, who is a very young man, has been identified as the leader of the party who attacked the market tower at Fota.

ATTEMPTS TO MURDER IN CORK STREET.—On Friday night, shortly after Mackay's arrest, Mr. Hilliard, a book-keeper, was returning home on Sundays Well, Cork, when he noticed a man behind him on the footpath who, as he approached, stepped into the road and presented a revolver at his head. The night was clear. After staring into Mr. Hilliard's face and seeing that he was not a detective, the man returned the revolver into his pocket and made off. On Sunday night Constable Courtney, of the detective force, when in company with two other policemen, was fired at four times from a revolver, by one of two men who had followed him for some time. None of the shots took effect, and the assassins escaped, the police being provided with fire-arms. On Monday afternoon Patrick O'Brien, stone mason, lately from America, and John Eddy, boiler maker, from England, were arrested on suspicion of being the guilty parties. The former was positively identified. On removing the prisoners a large mob assailed the police with stones, and attempted to rescue the prisoners. At length the mounted and foot police charged the mob with drawn swords and fixed bayonets, wounding several of the rioters, and effected a secure retreat to the police station. The rioting, however, continued until after midnight, without cessation for more than nine hours. The Riot Act was read late in the night, and the police were again obliged to charge the mob with drawn swords and fixed bayonets. Many of the rioters were wounded. One of them, a lad named O'Leary, died in the hospital on Tuesday morning. Two of the rioters were brought before the magistrates during the day, and committed for trial before the Recorder. On Tuesday evening two policemen arrested a suspicious-looking man in Cork, and were proceeding to search him, when he presented a revolver and fired. The police returned the fire and shot him. They went for medical aid, and on returning found that he had been removed to the hospital. A six-barrelled revolver, with two barrels discharged, was subsequently found near the man, and in a house adjacent a man named Dineen was discovered under a bed with his nose recently shot through. He was identified by the police as having fired at them. He has been committed for trial. On Thursday the waggons which conveyed powder from Ballincollig Mills for shipment were escorted by a large body of lancers and infantry. The police were on street duty day and night with loaded rifles.

ATTACK ON A PRIVATE HOUSE.—On Tuesday night the house of Mr. Hugo, in Pope's Road, Cork, was attacked by three men, who demanded arms, and obtained a gun. At the Police Office, on Wednesday, two men named Bullen and Hynes were charged with the illegal possession of arms. Bullen had concealed the barrel of a gun loaded, and Hynes had the stock. The gun was identified by Mr. Hugo as the one fired from him.

Scotland.

THE SCOTCH ROMAN CATHOLICS AND FENIANISM.—On Sunday, in all the Roman Catholic churches throughout Scotland, the *Glasgow Free Press*, a Roman Catholic organ, which has lately been devoted to columns to the propagation of Fenianism, was denounced from the altar, in accordance with instructions received from Cardinal Barnabo, Prefect of Propaganda. The Cardinal, in his letter, dated Rome, January 16, says that it has been reported to the Sacred Congregation "that the journal edited by the *Glasgow Free Press* does not desist from disseminating writings which cause great scandal to the Catholics of Scotland." In carrying out the instructions of his Eminence the vicars apostolic framed a pastoral address, in which they forbade ecclesiastics under their jurisdiction from taking any share in the publication of the paper in question, and require of them, under pain of suspension, to abstain from writing or in any way whatever contributing to it.

THE LOUDOUN ESTATE.—The Ayr papers state

week have been small, of Barley good. This morning's market was well attended. English Wheat was taken at the full price of Monday, and a good business was transacted in American spring and Australian, at an improvement of 1s. per qr. upon late rates, other descriptions were comparatively neglected. There was no change in the value of Barley, Beans, or Peas. Oats continue scarce, and in some instances brought rather higher prices.

THE SHERIFFALTY.—At the Council of the Duchy of Cornwall, on Saturday, the Prince of Wales directed letters patent to be passed under the Seal of the Duchy appointing Edward Coode, of Saint Austell, Esq., Sheriff of Cornwall for the year ensuing.

NEW MEDICAL BARONETCY.—It is announced that the Queen has signified her intention of conferring a baronetcy on Dr. Jenner, who has for some years been Physician in Ordinary to her Majesty and the Royal Family.

CONVOCAION.—Both Houses of Convocation reassembled on Tuesday after the recess. In the Upper House the Bishop of London said he had been asked by the Archbishop to move the following resolutions—

"That this House, viewing with anxious concern the increasing diversity of practice in regard to ritual observance, as causing disquiet and contention, and perceiving with deep regret that the resolutions adopted at the Convocations of Canterbury and York have failed to secure unity, deems it expedient for the peace of the Church—1. That the limits of ritual observance should not be left to the uncontrolled discretion of individual clergymen, and ought, therefore, to be defined by lawful authority.

The Bishop of Winchester seconded the motion, and after some remarks by the Bishop of St. David's in support of the resolution, and by the Bishop of Oxford against them, the debate was adjourned. Immediately afterwards the Archbishop of York, the Archbishop of Armagh, the Bishop of Chester, and other bishops from Ireland and the northern province, entered and sat in consultation with the bishops of the province of Canterbury. On Wednesday the debate on the Bishop of London's resolutions was resumed by the Bishop of Llandaff, who spoke in their support.

"That the limits of ritual observance cannot be left to the unrestricted discretion of individual clergymen and ought, therefore, to be defined by rightful authority, and that, therefore, means should be provided for enforcing the due observance of the same but I own at the end of the service concerning the services of the Church, with a view of duly interpreting diversely taken common rules, and if necessary, for removing anomalies in the existing law.

In the Lower House on Tuesday Archdeacon Wordsworth and other members presented gravamina and petitions on the state of the Church in Natal, the object of which was to induce Convocation to take any further steps in its power to enforce the sentence of deposition and excommunication passed by the African bishops against Dr. Colenso. The discussion on the question was postponed. Canon Woodford then moved that the President be asked to direct the encyclical letter adopted by the Lambeth Conference to be read in that house.

"This House acknowledges with thankfulness the act of his grace the President in writing to the Eastern Patriarchs, and in communicating to them the episcopal address of the Lambeth Conference."

Dr. Fraser seconded and Chancellor Massingberd supported the motion. The Dean of Westminster said that while the letter attacked the Mariolatry of the Church of Rome, it held out the right hand of fellowship to the Eastern Churches, who were practically as guilty of undue exaltation of the Virgin. He did not, however, object to the motion, because by giving the sanction of Convocation to that letter they repealed, as it were, the damnatory clauses of the Athanasian creed. After a few words from Archdeacon Mackenzie, the motion was adopted. The remainder of the sitting, which was very lengthy, was occupied by a debate upon the Colenso question. On Thursday, in the Upper House, a discussion took place on a petition in favour of allowing, in cases of sickness, the Sacrament to be conveyed from the church to the house of the sick person. Several of the bishops expressed their opinion that the practice would be attended with danger, and the Bishop of London showed that by the Rubric it was not a matter of absolute necessity that the Sacrament should be administered to sick persons who were unable to attend church. The Bishop of Oxford moved the adoption of the report of the Committee of the Lower House recommending the increase of the number of proctors to be sent to that House, and for enlarging the constituency by admitting curates to vote at the election of proctors. The motion was agreed to. The Bishop of Gloucester and Bristol moved the adoption of the report of the Committee of the Upper House on the question of diocesan Synods. After considerable discussion the debate was adjourned. In the Lower House, the debate on Canon Seymour's motion on the South African Church and Bishop Colenso was resumed. The Dean of Ely moved an amendment expressing sympathy with the Bishop of Capetown, but declaring that it was unable to adopt the grava-

men proposed by Canon Seymour as an *articulus cleri*, because it involved questions of law upon which the House did not feel itself competent to decide. The Dean of Canterbury seconded the amendment. A long debate ensued, at the close of which the amendment of the Dean of Ely was rejected by 45 to 25. Another amendment by Archbishop Wordsworth was withdrawn. Canon Seymour's gravamen was then made an *articulus cleri*, and ordered to be presented to the Upper House.

INTERNATIONAL COINAGE COMMISSION.—Her Majesty has been pleased, on the recommendation of the Government, to appoint the following Royal Commissioners to examine and report upon the proceedings and recommendations of the International Conference, held in Paris last year, under the auspices of the French Government, relative to the establishment of a universal system of international coinage.

Viscount Halifax, chairman. Right Hon. C. P. Villiers, M.P., Right Hon. Steph. A. Cave, M.P., Right Hon. J. Wilson Patten, M.P., Right Hon. M. Longfield, Sir J. Lubbock, Bart., Baron Lionel de Rothschild, M.P., the Governor of the Bank, Mr. T. Baring, M.P., Mr. Thomson Hankey, M.P.; Mr. Hubbard, M.P., Mr. J. B. South, M.P., the Astronomer Royal, and the Master of the Mint. Mr. Rivers, W. Esq., of the Treasury, who was deputed, with the Master of the Mint, to attend the Paris Conference, will act as secretary of the Commission.

Foreign.

FRANCE.—In the sitting of the Legislative Body on Friday, the debate upon the Press Bill was resumed. Article 16 was referred back to the Committee. M. Berryer made a speech in favour of the amendment proposing that Press offences should be tried by different tribunals in rotation. M. Baroche, the Minister of Justice opposed this amendment. M. Berryer again pressed it, and an excited discussion ensued, during which M. Pelletan was called to order by the President. The amendment was finally rejected, by 175 to 48 votes. In the sitting of Saturday a Bill was introduced proposing to abolish definitively the extra tax upon corn and flour imported in foreign bottoms. The extra tax was already temporarily suspended on the 13th of November last. In the sitting of Monday the debate on the Press Bill was resumed. An amendment relative to the system of advertisements in the public journals respecting legal proceedings came under discussion. M. Pinaré, the Minister of the Interior, said that the Government was determined to exercise its rights in this matter, and would not give these advertisements to papers which desired the overfavour of the Government. M. Olivier, referring to a remark of M. Pinaré, expressed astonishment at the Minister's qualifying as enemies such men as M. Latour-Dumoulin and others, who certainly did not desire the overthrow of the dynasty. M. Latour-Dumoulin characterised the expression made use of by M. Pinaré as a calumny. Great excitement prevailed in the Chamber. When M. Pinaré resumed his speech, and that the Government in distributing the accounts kept strictly in view the requirements of the public. It had, indeed, given advertisements to 17 newspapers which belonged to the Opposition Press, but were not actually hostile to the present Government. The amendment was rejected by 186 against 47 votes. M. Berryer then spoke in favour of an amendment proposing that the judicial authorities should designate the journals in which legal advertisements should be published. M. Rouher opposed this amendment, which was defeated by 126 against 193 votes. In the sitting of Tuesday M. Garnier Pages explained the object of his amendment, proposing the abrogation of the second article of the decree of 1852, which requires that preliminary permission be obtained before foreign journals can enter France. M. Nogent, the reporter of the committee, said that the free admission of foreign journals would be detrimental to the French newspapers, and place them on an unequal footing. M. Jules Favre maintained that there was an absolute incompatibility between the restriction upon the admission of foreign journals and the suppression by the present Bill of the preliminary authorisation hitherto required to establish a newspaper. The state of affairs placed France in a position of inferiority unworthy of a free people. The amendment of M. Garnier Pages was rejected, as was also an amendment moved by M. Pelletan, respecting the penalties to which journals are to be liable. Another amendment respecting the sale of newspapers in the public streets was defeated, by 194 against 33 votes. In the sitting of Wednesday the amendment demanding the abrogation of the 8th article of the law of 1817, which renders a journal liable to fine for any attacks upon public morals or religion, was rejected. The amendment proposing to abrogate the provision of the decree of 1852 which prohibits the press from publishing reports on Press trials then came under discussion. MM. Pinaré and Jules Favre spoke in support of the amendment. In reply to M. Jules Favre M. Pinaré, the Minister of the Interior, said that the publicity of trials before the Courts was a necessary guarantee, but that the publication in the newspapers of the proceedings in cases against the Press was a danger without any compensation. The amendment was rejected by a majority of 204 to 39. In the sitting of Thursday, M. Puchon's amendment, proposing to grant to the law courts the right of authorising the publication in the journals of reports of their proceedings in Press cases, came under discussion. MM. Baroche and Pinaré opposed the amendment, which was rejected by 164 votes against 58. Another amendment was discussed demanding the abrogation of the decree of August, 1848, which renders newspapers liable to prosecution on the charge of endeavouring to bring the

Government into hatred and contempt. MM. Baroche and Rouher opposed the amendment, which was also rejected. Another amendment, proposing to abrogate Articles 14, 15, and 18 of the decree of 1852, was rejected without debate. The Chamber then began the discussion of M. Janz's amendment, which proposes that the journals should be allowed to publish analyses and criticisms of the debates which could not be classed with the prohibited reports of the sittings. M. Schneider, the President of the Legislative body, is suffering from complete loss of voice, but his health is not seriously affected. M. Magne, the Minister of Finance, is said to have submitted to the Council of State the draft of a Bill authorising the Suez Canal Company to all lottery drawings to their loan of 100,000,000fr.; the prizes not to exceed each year 1 per cent. of the borrowed capital. The Commercial Treaty between France, Mecklenburg, and Prussia was ratified on Saturday. The Zollverein will reduce the duties on French wine in cask and bottle to 20 francs. The arrangement will be put in force after the treaty between Austria and the Zollverein has been signed. The Hanoverian Legion in Switzerland passed over into France last week, without the knowledge or permission of the French Government. They were provided with Austrian passports, granted by a mistake of the subordinate police authorities. As soon as the French Ministers were informed of the fact they took the necessary measures to locate the officers and men separately, and at a considerable distance from the eastern frontier. According to the *Etendard*, the court of honour instituted to try the charges of corruption, made by M. Kerveguen against certain Paris journals, has terminated its labours. Its decision is said to be a complete dismissal of the charges preferred.

SPAIN.—A Carlist band of about 50 men have made their appearance in Navarre. They are said to have had a skirmish on the 16th with the Civic Guard, in which several were wounded. The police in Navarre have seized 3000 copies of the portrait of Don Juan's eldest son, whom his partisans denominate Charles VII. The Minister of Finance announced on Tuesday in the Cortes that he proposed to make several reductions in the Budget. The Senate continued on Wednesday the debate on the reform of the Courts of Justice. The Count of Paris arrived at Madrid on Wednesday.

NORWAY.—The new postal treaty between Norway and the North German Confederation is concluded. The correspondence is sent by steamer from Copenhagen to Christiania twice, and from Kiel to Christiania once a week: postage, 3½ sh.

BELGIUM.—A vessel laden with 200 barrels of petroleum oil caught fire on Saturday in the Antwerp Docks, and with another vessel laden with petroleum was consumed by the flames. The property destroyed is estimated at 150,000fr., but is covered by insurances.

DENMARK.—The Crown Prince will leave Copenhagen in a few days on a visit to England. The Copenhagen papers state that the Princess of Wales has been invited to be present at the inauguration of a new railway line in the vicinity of the city of Copenhagen, but has been unable to accept the invitation.

SWITZERLAND.—The Federal Council officially states that no reclamations have been received from Prussia respecting the Hanoverians who had repaired to Swiss territory. The Council left to the respective Cantons the right of affording asylum to those persons, but they suddenly quitted Switzerland of their own accord with Austrian passports after their position as residents in the country had been settled.

HANOVER.—The Vienna papers publish an account of the dinner given by the King of Hanover on Tuesday, in celebration of his silver wedding, the 25th anniversary of his marriage. They state that in the toast his Majesty proposed he returned thanks to those who had come from a distance to be present at this family meeting, held to show the intimate connection of the House of Guelph with the Hanoverian people. He entertained the conviction that he should return to Hanover as a free King. His ancestors had been compelled to leave the country, but found upon their return a larger Guelphic kingdom. Providence justified him in the belief that he, too, would go back to the country as a free and independent Sovereign. His Majesty concluded by drinking prosperity to Hanover and a speedy reunion in the land of the Guelphs. The dinner was attended exclusively by Hanoverians.

BAVARIA.—The illness of the ex-King of Bavaria has taken an alarming turn. The doctors propose making a second incision in his leg.

PRUSSIA.—In the sitting of the Chamber of Deputies on Saturday the Government asked that the sum fixed in the estimates for the police administration in Hanover should be voted. This amount had been reduced by the committee, but, owing to the agitation at present prevailing in Hanover, the whole amount requested by the Government was now granted. The Minister of the Interior presented a Bill relative to the closing of the gambling establishments at Wiesbaden, Ems and Homburg, which will take place, at the latest, by the 31st of December, 1872. They may, however, be closed at an earlier period by Royal decree. No compensation is to be granted to the proprietors. The Finance Minister brought in a Bill to increase the funds for removing the distress existing in East Prussia. The Bill provides that the Treasury shall grant loans by way of advances for agricultural purposes, the money being raised by the issue of interest-bearing bonds. The Bill was referred to a Committee. In the sitting of the Upper House on Monday the special debate commenced on the Bill based upon the proposal of the Committee, that members of the Diet should be arraigned before a court composed of members of both Chambers when prosecuted for expressions used while engaged in the performance of their duties as representatives. On the votes being taken, by calling over the names of the

members, paragraph 1 was rejected by 65 to 10. The Bill was therefore thrown out. In the sitting of the Upper House on Tuesday the Bill relating to compensation to the deposed German King, whether the Government still adhered to the treaty with the ex-King of Hanover after the incidents which had occurred in connection with the Hanoverian Legion. The Finance Minister replied in the affirmative. The Government had taken the measure into serious consideration. If after the Bill had been introduced into law and promulgated King George would attach his property, and not deliver it to the Emperor until it was convinced the treaty was fully observed. The House then unanimously rejected the Bill. The Bill relating to the establishment of a provincial fund for Hanover then came under discussion. The Bill was supported by the Minister of Finance, and adopted by 127 against 14 votes. It was in which it passed the Lower House.

AUSTRIA.—Letters from Vienna state that the sequence of the remonstrances of Prussia against the 500 Austrian passports delivered to the Hanoverian Legion to go from Switzerland to France, the Government has addressed to Count Platen, Minister of the ex-King of Hanover, a despatch, blaming the connivance of the direction of police with the Hanoverian refugees in Austria. In the sitting of the Reichsrath Delegation Monday the estimates of the Chancellery Imperial Cabinet were voted without alteration. The estimates of the Ministry for Foreign Affairs were passed, only a slight reduction being made in the amount of secret service money, namely 150,000fr., being left intact. The proposal to abolish the unimportant legations was rejected in consequence of the declarations of Baron Von Beust. In the sitting of the Upper House of the Reichsrath on Tuesday all the Archdukes were present. Prince Camillo Mansfield, the President, welcomed the new members on behalf of the House, assuring them of the full confidence in their endeavours. Prince Auersperg, the Minister President, requested the support of the House, which had, he said, so faithfully fulfilled its mission, and supported the Ministry in a spirit of patriotic impartiality. The Government, on its part, would leave no effort untried to uphold the Crown in undiminished splendour, and at the same time firmly adhered to the principles of Liberal institutions. In the sitting of the Reichsrath Delegation on Thursday Herr Schindler brought forward an interpellation, asking the Chancellor of the Empire for information respecting the Austrian passes granted to the Hanoverian refugees, and the festivities which recently took place at the Court of King George of Hanover. Baron Beust gave a reply at once, in order, as he said, to dispel any uneasiness. He declared that there was no reason either of home or foreign policy to disturb the recently festive celebration of the 25th anniversary of King George's wedding-day. Every measure had been taken to keep its celebration within the bounds of the family residence. He added that the statement recently published on this subject in official journals was the whole truth, and that the contrary assertions were false. He dwelt upon the exertions which the Austrian Government had made to prevent any interruption of the understanding with Prussia, even when there had been good ground for suspicion on the part of the Austrian Cabinet. The Government had limited itself to granting hospitality, would not suffer that efforts should be made to mine, by illegitimate acts, the edifice of peace which had been so laboriously erected. A circular had been issued by Dr. Giskra, the Minister of the Interior, to the provincial governors of Upper Austria and Styria. The Minister calls attention to the agitation of the clergy in those districts against the nation, and instructs the governors to watch against encouraging intrigues. They are to inform the bishops that the Government has no intention of interfering with the clergy in the exercise of their spiritual duties, but that it also demands that they should not consider themselves as above the law. In case of non-compliance, the Government is compelled to bring the disturbers of the public peace before the tribunals.

ITALY.—It is stated that the Italian Government has instructed the Chevalier de Nigra to inform the French Cabinet of its intention to honourably carry out the terms of the Convention of the 15th September; and also that it has made the most necessary arrangements to pay the interest of its portion of the Pontifical debt on the 1st April. In the sitting of the Chamber of Deputies on Friday the debate upon the Estimates of the Ministry of War was concluded. Count Cambrey, the Minister of Finance, promised to present a Bill abolishing the Government monopoly of the manufacture of gunpowder, and imposing a tax on that article. The Chamber approved a proposal to suppress the debate on the Estimates of the Ministry of Finance for 1868, and commenced the discussion of separate articles. In the sitting of Saturday the Articles of the Estimates of the Ministry of Finance were voted. Count Cambrey Deputé stated that the issue of Treasury Bonds was authorised, and promised to present a Bill increasing the amount of bonds in circulation, to be moving in March. The Minister for Prussia stated that the Adriatic Railway line would be completed by July, 1869. In the sitting of Sunday the debate on the Financial Estimates was continued. The President announced the return of the deputation sent to the Princess Margharita of Genoa, at Turin.

Primo Humbert, at Milan, to congratulate their
 on their approaching marriage, and said
 In the Senate on Sunday the President
 announcement. In the sitting of the
 of Deputies on Monday the Ministerial
 the immediate continuation of Public
 for the parts of Southern Italy was adopted
 to 1868. Count Cambray Digny presented
 the provisional exercise of the
 during the month of March. The report
 of the Ministry of Finance for 1868 was continued.
 referring to the interest of 4,180,000 lire on
 contracted with the National Bank in 1866.
 discussion. Signor Rossi moved an order
 engaging the Ministry to present, among
 for the restoration of the finances.
 Bank, in order to remove the forced currency.
 Count Cambray Digny said that he was not
 the order of the day. He requested
 to fix a day for the discussion. The
 proposal, and the Chamber approved the
 of the debate until after the conclusion
 of the Estimates of 1868. In the
 of Thursday the Committee on the Estimates
 Ministry of Finance relinquished their proposal
 29 millions as the amount of premium for gold
 abroad. The Committee decided to propose
 that the Minister of Finance should be autho-
 rized to make the necessary payments on this account.
 Chamber approved the provisional exercise of the
 for March by 194 votes against 32. The
 of 600,000 lire to the Princess Marg-
 was passed by 207 votes against 20. This con-
 the discussion on the financial estimates.
 on the Estimates of the Ministry
 of Public Works then commenced. A banquet
 on Friday evening to Admiral Farragut by
 of Italian senators and deputies. The Mi-
 of Marine presided. On the previous day a
 was given in honour of the Admiral, at
 the superior officers of the Italian army and

Reactionary intrigues are very active
 and disturbances have occurred at Grotte and
 The Government have taken the necessary
 to put down any further attempts.

The Carnival commenced on Satur-
 day. The Corso was very animated. Although few
 were observed, large crowds filled the streets.
 order prevailed.

It is said that the Great Powers acted
 information when they made representa-
 and Bucharest. Prince Michael has
 considerable energy in resisting the warlike
 of the population.

The Patrie, of Thursday,
 under reserve, news from Ibrala announcing
 of Russian troops near Konzas and
 other villages on the frontiers of Bessa-
 and Moldavia. The Patrie adds that these
 do harm in giving an apparent confirma-
 of the operations of the committees who are
 to rouse the Bulgarian populations from
 by affirming that, if a rising were effected,
 would come to their aid.

Moscow journals announce the death in
 from inflammation of the lungs, of the
 of Georgia, Anna Paulowna, wife of the
 Emperor, daughter-in-law of the late Czar
 George XIII, born Countess of Koutaissof.
 known for her great erudition, and
 acquainted with all the remarkable personages
 of the 18th century; was a pleasing writer, and so
 a composer that Meyerbeer, in speaking of
 said, "I should like to have produced them."
 resided for some years before her death in
 where she was much esteemed.

The British troops occupied Addis-
 on the 31st ult. The Deral and Talanta
 are reported to have submitted to Theodore.
 body of the troops cannot advance until the
 have been formed at Senafe, which will require
 time, as each mule's burden upon reaching
 is reduced to an average weight of 10 lb.
 of piping for the conveyance of water
 through Egypt for Abyssinia. Annesley
 of transports, which were lying idle, the
 weather rendering towage impossible. Colonel
 has been killed at Senafe by the accidental
 discharge of a forling-piece. A great scarcity of water
 prevailed at Annesley, and the daily allowance was
 three quarts.

Accounts from Table Bay
 to the 29th ult., state that the rate of mortality at Cap-
 town from fever still continued very high. Exertions
 were being made to suppress the disease. The harvest
 proved a bounteous one, though less favourable than
 expected. From a return just published marked
 revenue and the extent and prospects of
 were more favourable than for years before.
 entertained of a surplus revenue in the
 of the present year. It had been
 to open the docks in Table Bay
 to excavate eight acres of the inner dock, to a
 depth of 25 feet of water. More coal fields
 were found in Port Natal, and the prospects
 of further brightening. Gold quartz and
 also been discovered in the Trans-
 country, and a large party was in course

of organisation to explore the neighbourhood
 A German mineralogist, Herr Mauch, who has been
 exploring Moselkutsso's country, reports that he
 has found gold—not in small, scarcely visible specks,
 but in great veins of quartz, one of them more than 60
 miles long, the other about 20 miles broad, besides
 numerous small parallel veins. The Cretaceous Theatre
 has been totally destroyed by fire. Accounts from
 Natal of Jan 13, state that judgment has been de-
 clared in the suit of Bishop Colenso against Dean
 Green. The Supreme Court has set aside the judg-
 ment of the Privy Council, and declares that Natal
 was a Crown colony when the plaintiff's patent was
 issued; that Dr. Colenso is therefore trustee of all the
 buildings, and has ecclesiastical jurisdiction. The
 judgment further ejects Dean Green from the deanery,
 and prohibits him from officiating in any of Dr
 Colenso's churches. The friends of the dean have
 since held a meeting, at which it was resolved not to
 appeal against the judgment, but to erect or hire tem-
 porary churches, and that Dean Green should at once
 proceed to England.

INDIA.—Letters from Bombay of the 29th ult. state
 that nearly 30 vessels have left Bombay for Abyssinia
 during the previous fortnight with troops and animals
 and the 3d Brigade field force. The departure of the
 4th Brigade is indefinitely delayed. Great and success-
 ful exertions have been made by the Bombay Govern-
 ment to meet the requisitions of the Commander-in-
 Chief for more animals and stores. The task has only
 been accomplished through a great strain being put
 upon the Executive branch department. Over
 13,000,000 lb of cotton were shipped from Bombay in
 December. The new lighthouse was brought into use
 on the 15th of January. The prisoners in the Janna
 Gaol recently rose against the gaoler, but were over-
 powered and three of them were killed. A large gang
 of Wahger prisoners overpowered the guard of the
 Rtnagberry (?) Gaol and escaped, after killing and
 wounding several and arming themselves. Bhootan
 continues in a most disturbed state, the chiefs con-
 tending with each other. Emir Sher Ali has retired
 to Herat and abandoned Balkh, which has been peace-
 ably occupied by Abdul Rehman.

Intelligence from Japan, dated the
 27th January, announces that the Daimios have
 revolted, and made the Mikado prisoner. The Saigoon
 had fled to O-saca, where he was organising a force to
 attack the Daimios. The town of Hogo and two
 palaces at Jeddo had been burnt. The Foreign
 Ministers refused to interfere. Rear Admiral Bell,
 commanding the United States squadron in China and
 Japan, and his Flag-Lieutenant Reid, with a boat's
 crew of 10 men, were drowned at O-saca, on the
 11th January, while attempting to cross the bar.

Mr Thornton, the new British
 Minister to the United States was presented to
 President Johnson by Mr Seward on the 7th inst. and
 cordially received. In his address to the President
 Mr Thornton commended the course of the
 Queen's friendship towards the country over which
 Mr. Johnson so worthily presided, and said that her
 Majesty's Government felt deeply grateful for the
 sympathy shown by America on account of the death
 of Sir Frederick Bruce. Mr. Thornton concluded by
 declaring that it would be his endeavour to strengthen
 the friendship between the two countries. President
 Johnson replied that the Queen, more than any other
 Sovereign, enjoyed the respect and the sympathy of
 the American people. Her Majesty's kind message
 encouraged him to hope for a speedy adjustment of the
 existing differences between the two Governments. Sir
 Frederick Bruce had won the respect and friendship of
 the American Government and nation, and the same
 consideration and confidence would be extended to
 Mr Thornton. It was reported at Washington that
 President Johnson had selected General McClellan to
 succeed Mr. Adams as United States Minister to
 England. There was much doubt, however, whether
 General McClellan, who is at present in Europe, would
 accept the offer. Mr. Dickens had been cordially
 received at the Executive mansion by President
 Johnson. The Bill suspending the contraction of the
 currency became law on the 4th inst., the President
 not having signed or vetoed it within the 10 days
 allowed by the Constitution for its consideration by
 him. A resolution has been referred to the Com-
 mittee for Foreign Affairs requesting the President
 to demand the release of Nagle and other American
 citizens arrested by the British authorities for words
 spoken and actions done in this country, and should
 the release be refused to cease diplomatic intercourse
 with Great Britain. The correspondence furnished to
 the House by the Secretary for War, in response to the
 resolution of inquiry, has been published. It shows
 that President Johnson, on the 29th ult., ordered
 General Grant to disobey the orders issued by Mr.
 Stanton unless authorised by the Executive, and that
 General Grant replied that he should regard Mr.
 Stanton's orders as authorised by the Executive unless
 actually countermanded. The Reconstruction Com-
 mittee have refused by a majority of 6 to 3 to
 recommend the impeachment of President Johnson for
 violating the Tenure of Office Bill by his opposition to
 the reinstatement of Mr Stanton as Secretary for War.

Advices from Canada announce
 that a motion has been made in the Nova Scotian
 Parliament that the province should withdraw from
 the Confederation.

In Lima the political events of the past two
 months had been of the greatest importance. The Presi-
 dent, Colonel Prado, sustained an ignominious defeat
 before Arequipa in an attack on the city made under
 his directions on December 26, when he displayed great
 want of military skill. Subsequently, on a false rumour
 that his army was in revolt and clamorous for his life,
 he fled and returned to Lima. The public indignation
 was unbounded, and, after a revolutionary combat of

five hours, he was obliged to resign the Presidency and
 take refuge under the flag of the United States.

Parliament.

In the House of Lords on Monday, in answer to the
 Earl of ARLIE, the Earl of LONGFORD said that the
 Defence Commissioners had recommended the destruc-
 tion of floating batteries, but he feared that there was
 no immediate prospect of carrying out their recommen-
 dations unless Parliament granted a special vote of
 money, of which at present there seemed to be little
 probability. The East London Museum (Site) Bill
 passed through committee. The Bishop of OXFORD
 brought in a Bill for amending the Consecration of
 Churchyards Acts Bill, which was read a first time.
 On Tuesday the LORD CHANCELLOR moved the
 second reading of the Promissory Oaths Bill, the object
 of which was to abolish several of these oaths, and to
 prescribe that five only should be taken, namely,
 the oath of supremacy, and the judicial, official,
 military, and constable oaths. The Bill also substituted
 a short and simple form of oath for the quaint and
 obsolete ones now in use. After a short discussion, in
 which Lord LYVEDEN, Earl RUSSELL, the Bishop of
 OXFORD, and Lord WESTBURY took part, the Bill was
 read a second time and referred to a Select Committee.
 In reply to a question from LORD STANLEY, LORD ALFORD
 relative to the East London Museum Site Bill, the
 Duke of MARLBOROUGH explained its provisions, and
 added that the Government were under no engage-
 ments whatever beyond the cost of the erection of the
 building, which was only one of the now disused
 "Brompton Boilers." After some remarks by the
 Dukes of CLEVELAND and SOMERSET LORDS REDFERN
 and STANLEY of ALDERLEY, the report of the
 amendments was agreed to. On Thursday the Habeas
 Corpus Suspension (Ireland) Act Continuance Bill
 was brought up from the Commons, read a first time,
 and ordered for second reading on Monday. The Select
 Committee on the Promissory Oaths Bill was nomi-
 nated, and the East London Museum Site Bill was
 read a third time and passed. Yesterday the House
 sat only for a few minutes, and no public business was
 transacted.

In the Commons on Friday, on the motion of Mr.
 WALPOLE, the Public Schools Bill was read a second
 time. The Earl of MAYO obtained leave to bring
 in a Bill to renew for one year the Habeas Corpus
 Suspension (Ireland) Bill, stating that it was the
 earnest conviction of the Government that it was
 absolutely necessary for the preservation of the peace
 of Ireland to frustrate the efforts of the Fenian con-
 spiracy. The Bill was then brought in, and was read a
 first time. On Monday the Earl of MAYO gave notice
 that he should ask leave to bring in the Irish Reform
 Bill on the 9th of March. Mr. HUNT said that he
 hoped in a few days to introduce a Bill for the regu-
 lation and working of the electric telegraphs in the
 United Kingdom. The motion for a second
 time the Habeas Corpus Suspension (Ireland) Con-
 tinuance Bill was agreed to, and the Bill was ordered
 to be committed. The LORD ADVOCATE moved for
 leave to introduce a Reform Bill for Scotland. He
 said that it was not proposed to disfranchise any exist-
 ing constituency. The borough franchise would be
 similar to that in England, and every man who occu-
 pied a house and paid rates would be entitled to vote.
 In the counties the freehold franchise would be
 reduced to 5/., and the occupying franchise to 12/.
 As the Government were of opinion that there was
 no superfluity of representation in Scotland, but
 that, on the contrary, she was entitled to more
 members, they were prepared to increase the number
 by seven. It was proposed to give two to the
 universities, one each to Lanarkshire, Ayrshire, and
 Aberdeenshire, one to Glasgow, and one to a new
 group of boroughs to include Ardrossan, Coatbridge,
 Wishaw, Barrhead, Johnstone, Helensburgh, Pollok-
 shaws, and Kirkintilloch. It was also proposed to
 group the towns of Hawick and Galashiels and
 add them to the Haddington district, and to
 add Alloa to Stirling. After some remarks by
 Mr. BAXTER, Mr. SMOLLETT, Sir J. OGILVY,
 Mr. LAING, Mr. MONCREIFF, Colonel SYKES,
 Mr. M'LAGEN, Sir T. E. COLEBROCKE, and Sir J.
 FERGUSON, the CHANCELLOR of the EXCHEQUER
 described the measure as the most magnificent offer which
 had ever been made to the people of Scotland. He
 owned he was surprised that it had not been received
 with greater favour, but promised that whatever sug-
 gestions might be made by the Scotch members would
 be considered by the Government in a spirit of candour,
 and with a desire to make the Bill as satisfactory
 as possible to the people whom they represented.
 After some further remarks leave was given to bring
 in the Bill, which was subsequently read a first time.
 On Tuesday Mr. DODSON moved a series of resolutions
 for amending the Standing Orders relating to private
 Bill legislation, with a view to facilitate, simplify, and
 economise the future proceedings of the House in that
 respect. Mr. CAVE assented to the motion on behalf
 of the Board of Trade, but Lord HOTHAM, as chairman
 of the Standing Orders Committee, having expressed a
 hope that time would be given them to consider the
 scheme, the debate was eventually adjourned for a fort-
 night. In reply to Mr. FAWCETT, SIR NORTHCOTE stated
 that representations having been made to the Viceroy
 of Egypt, to the effect that any movement of his troops
 in Abyssinia might create prejudice against the British
 mission to that country, his Highness had at once
 promised to recall them. Mr. SEELY called attention
 to the cost of building and repairing ships in the dock-
 yards, and moved for a select committee to inquire
 and report—1st, as to the application of moneys voted
 by Parliament for the use of the Admiralty; and, 2d,
 as to the accounts of the department, and more espe-

cially as to the method in which they should be prepared for presentation to the House. Mr. CORRY said that he was willing to accede to a Select Committee on the condition that it was confined entirely to accounts, and did not enter into questions of general policy. After some remarks by Mr. CHILDERS, Mr. SAMUDA, and Lord H. LENNOX, the motion, limited in accordance with Mr. Corry's suggestion, was agreed to. Lord ENFIELD obtained the reappointment of his Select Committee on the law and practice relating to the summoning, attendance, and remuneration of Special and Common Juries. Mr. COLERIDGE brought in a Bill to repeal certain tests and alter certain statutes affecting both Universities and the colleges therein, and stated that it was an amalgamation of his own and Mr. Bouverie's Bills of last year. In Committee on the Habeas Corpus Suspension (Ireland) Act Continuance Bill, Mr. BAGWELL moved the insertion of a clause providing that no warrant granted under the Act should continue more than three months, and that no prisoner be detained longer, unless a new warrant were issued for his detention. The clause was supported by Mr. REARDEN, Major GAVIN, and Mr. WHALLEY, and opposed by the Earl of Mayo and Mr. HARDY. On a division the clause was rejected by 31 to 18. The Bill then passed through Committee. On Wednesday Sir C. O'LOGHLEN's Bank Holidays Bill, the object of which was to make bills due on Bank holidays payable the day after instead of the day before, and to provide that St. Stephen's Day (the day after Christmas Day), and any day fixed by Royal proclamation, should be a Bank holiday, was read a second time, and referred to a Select Committee. Mr. SHAW-LEFEVRE's Life Policies Nomination Bill, the object of which was to enable persons who have effected insurances on their lives to assign them to their wives and children by endorsement simply, without the necessity of creating a trust, was read a second time. Mr. GLADSTONE moved the second reading of his Compulsory Church-rates Abolition Bill, the object of which was to abolish hereafter all legal proceedings for the recovery of Church-rates, except in cases of rates already made, or where money had been borrowed on the security of the rates, but to permit voluntary assessments to be made; all agreements to make such payments on the faith of which any expenditure had been incurred to be enforceable in the same manner as contracts of a like character in any court of law or equity, and no one who had not paid to be able to vote on any question relating to assessment. Mr. HENLEY said that the Bill would be an aggravation of the evils of total abolition, and would put so many difficulties in the way of collecting voluntary subscriptions that he preferred the Bill of Mr. Hardcastle. He also objected to the Bill because it made it quite clear that any man who agreed to pay a rate might be made a party to a Chancery suit if somebody else failed to carry out their agreement. Lord CRANBORNE was prepared to consider the Bill with a sincere desire to get the best terms he could for the Church, though he preferred that of Mr. Hubbard. As, however, Mr. Gladstone's measure offered certain advantages to the Church by continuing the machinery for collecting the rate, and by giving a voice in the expenditure of the money to those who subscribed it, he should accept it, on the principle that he might "go further and fare worse." Mr. NEWDEGATE opposed the Bill, and preferred total abolition. Mr. HARDCASTLE (who has charge of the Bill for total abolition) said that he was so anxious to see the question settled that he would not stand in the way of what seemed to offer a satisfactory compromise. Mr. HUBBARD, who has also introduced a Bill on the subject, said that he would not oppose the second reading of the Bill, as its principle was the same as his own—to relieve Dissenters from liability. Mr. HARDY said that although he was as hostile as ever to the principle of total abolition, he was prepared to assent to the second reading of the present Bill in the hope that in committee it might be moulded into a measure which would reconcile the prejudices of all sections of the House. After some further discussion, the Bill was read a second time. The Habeas Corpus Act (Ireland) Suspension Bill was read a third time and passed. On Thursday Lord STANLEY, in reply to Mr. B. POTTER, said that the subject of abolishing the agencies in the Foreign Office was now under consideration. Mr. HUNT, in answer to Mr. BAXTER, said that notice had been given by her Majesty's Government to that of the United States to terminate the new postal treaty between the two countries, with a view to the revision of the treaty in certain particulars. The ATTORNEY-GENERAL, in reply to Mr. MOFFATT, stated that a Bankruptcy Bill would be introduced into the House of Lords in a short time. The CHANCELLOR of the EXCHEQUER, in reply to Mr. WHALLEY and Mr. D. GRIFFITH, said that he had no reason to believe that the general estimates for the Abyssinian expedition which he had laid before the House in November had been exceeded. Leave was given to Mr. M'EVROY to introduce a Bill for the repeal of the Ecclesiastical Titles Act, to Mr. HARDY to bring in a Bill to provide for the carrying out of capital punishment within prisons, to Mr. CAYE to bring in Bills for the improvement of the River Lea, and to enable the Board of Trade to give further time for making certain railways; to Mr. HUGHES to bring in a Bill to amend the laws relating to the sale of goods in the metropolis on Sunday, and to Mr. AYRTON to bring in a Bill to regulate the construction of subways in the metropolis. Yesterday, in answer to Mr. R. MILLS, Mr. ADDERLEY said that the Government intended, as soon as possible, to introduce a Bill to relieve the Consolidated Fund from the charge of 20,800*l.* for the ecclesiastical establishments in the West Indies. In answer to Mr. T. BABING, Lord STANLEY said that there were no diplomatic relations at present between

this country and Mexico, but he hoped that a more satisfactory condition of things might shortly be brought about. Mr. GOSCHEN called attention to the last report of the Metropolitan Board of Works, and to the continuous increase of the burdens laid for various purposes on the occupiers of rateable property in London and elsewhere. The House was left sitting.

City Intelligence.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 93 to 93½ both for Money and Account, New and Reduced Three per Cents., 93½ to 93½; India Five per Cents., 111½ to 112½; Bank Stock, 248 to 250; Exchequer Bills, 12s. to 17s. pm.—**FOREIGN:** Egyptian (1860), 88 to 89; Do. Railway Loan, 92 to 92½; Peruvian (1865), 76 to 76½; Mexican, 15½ to 16½; Greek, 12½ to 13; New Spanish, 36½ to 36½; Turkish (1865), 32½ to 32½; Italian (1861), 41½ to 41½; United States 5-20 Bonds, 72½ to 72½, Erie Railroad, 47 to 48; Illinois, 88 to 89.

Metropolis and its Vicinity.

THE LONDON IRISH ADDRESS TO THE QUEEN.—Mr. Digby Seymour has received a communication from the Home Secretary stating that he has had great satisfaction in laying before the Queen the loyal and dutiful address of her Majesty's Irish subjects residing in London and its vicinity, and that her Majesty has been pleased to receive the same most graciously.

THE CLERKENWELL OUTRAGE.—On Tuesday William Desmond, Timothy Desmond, Nicholas English, James O'Neill, John O'Keefe, Jeremiah Allen, Michael Barrett, and Anne Justice, were again brought before Sir Thomas Henry at Bow Street on the charge of wilful murder of the persons killed by the Clerkenwell explosion. Mr. Giffard, on the part of the Crown, said the evidence was complete as against some of the prisoners, whom he should ask the magistrate to commit for trial; but with regard to Allen, though at first there were very strong grounds of suspicion against him, the evidence of Mullany had put another feature on some of the facts, and there was no doubt that Allen had been in communication with the police, and was at the prison not with the intention of aiding and abetting in the explosion, but with a view of obtaining evidence against the others. The magistrate concurred in this view, and Allen was ordered to be discharged. On leaving the court, however, he was again arrested by Inspector Potter, the coroner's jury having returned a verdict of wilful murder against him. The other seven prisoners were remanded for a week.

THE INQUEST ON THE CLERKENWELL SUFFERERS.—The adjourned inquest on two of the persons killed by the explosion at the House of Detention was brought to a close yesterday, when the jury, after an hour and a quarter's deliberation, returned a verdict of wilful murder against Michael Barrett, Timothy Desmond, Wm Desmond, Nicholas English, John O'Keefe, Patrick Mullany, Anne Justice, and other persons not in custody. They also presented a resolution expressive of their opinion that sufficient precautions had not been taken by the police at headquarters to prevent the explosion. The foreman said the jury were divided with respect to Allen. The Coroner, in compliance with the request of the jury, promised to send a copy of the resolution to the Home Secretary.

DISCOVERY OF AMMUNITION OUTSIDE GAS WORKS.—At a late hour on Thursday week a parcel, containing 12 ball cartridges and 23 percussion caps, was found secreted under some grass by the towing-path of the Surrey Canal, and near the South Metropolitan Gas Works, in the Old Kent Road. It appears that for several weeks past extra watch has been kept, both day and night, by the police, in consequence of a communication having been made that it was the intention of a body of Fenians to fire the place; but what the object of the person could be in concealing the ball cartridges and percussion caps, as stated, is a matter of conjecture. The ammunition was handed over to the police, and conveyed to Scotland Yard.

TRADES UNION CONFERENCE WITH MR. GLADSTONE.—On Tuesday a deputation from the London trades' societies delegates had an interview with Mr. Gladstone, at his private residence on Carlton House Terrace, for the purpose of explaining to him the actual working of trades' unions, and of refuting the alleged incorrect statements made by him in his speech at a public meeting at Oldham on the 18th December last. The deputation was composed of Mr. George Potter, chairman of the delegate meeting, and of other delegates. Mr. Potter, who was the chief speaker, avoided altogether all mention of the recent occurrences at Sheffield and Manchester, and argued that the trades' unions fostered skill, while competition extinguished it, that all the bad work was done by outsiders, by so-called apprentices, and men who had never learnt their trade; that the employments in which there were no unions, or which the unions could not control, fell into the hands of women and boys, who worked for just what they could get; and that such competition naturally drove away skill to other countries, where it was better protected. Mr. Gladstone in reply, after alluding to the points upon which he said they must all be agreed, admitted in all its breadth the right of combination. It was true that rights might be exercised to an improper extent, as if a landowner should give all his tenants notice to quit, and eject them accordingly. But if labour and skill would sometimes push their rights a little too far, capital sometimes did the same. If any change in the existing laws had to be made, he was not sure that the trades' unions did not deserve recognition by the State upon natural principles, without its enforcing a compliance with arti-

ficial conditions. The present state of indicated an undue jealousy, and fraud was a danger to be checked, against whomsoever it was committed, even if it be a trades' union with injudicious laws, and not very ascertainable operation. On the other hand, he agreed with Mr. Potter that the best organized were liable to abuse. He had heard of some unions which seemed open to objection—rules, restrictions, apprenticeships, rules against piece-work, against working stone at the quarry, against employing "dressing off," to the injury of adult bricklayers, against lime-washing except by skilled plasterers, against extra hours, and so forth. Such rules were said that it appeared to him that the best course for the labouring community was that in which the law upwards was the easiest and the most open. Mr. Lawrence, one of the delegates, said that the evidence inquiry would show that the limitation of apprenticeship had acted beneficially on those trades in which it was carried out, and that the principle of no limitation dragged down tailors, shoemakers, weavers, and others to the lowest point of starvation. Mr. Lawrence said that they considered that those who had spent years in acquiring a particular trade ought to live by it. The other members of the deputation expressed different points in connection with their trade, and controverted statements made to their prejudice.

METROPOLITAN BOARD OF WORKS.—At the meeting of this Board on Friday Colonel Hoze moved the standing order requiring that copies of proceedings minutes be sent to the vestries and district Boards of the metropolis, be suspended so far as regards the evidence contained in the minutes of the Board of the 21st inst. in relation to Messrs. Doulton and Roche, and that complete copies of the minutes be sent to the members of the Board only. He urged that it would be a breach of confidence on the part of the Board to publish communications which were obtained as private and confidential, and protested against any matter being made public against the advice of their solicitor. Mr. Lawrence seconded the motion, and said that if they published the evidence taken in the Bankruptcy Court it would amount to contempt of court. Mr. Collinson moved as an amendment that the minutes of the meeting be sent as usual to the vestries and district Boards. Mr. Howse seconded the amendment. Mr. Shaw said that nothing marked private and confidential had been brought before the Board, and that a letter written by Mr. Doulton himself in his own defence. Mr. Cook said that in the evidence in the affairs of persons who had nothing to do with the transaction had been introduced, and it would be unfair to publish them. Mr. Bidgood said he was aware that the Board had obtained any evidence, and the understanding that it was not to be published. They were not under a pledge of secrecy to the public, and he could see no harm in sending the whole of the evidence to the vestries and district Boards. Mr. Saunders said that after the report had been given upon the minutes every ratepayer could, under the Act of Parliament, go to the offices of the Board, read and copy it. He believed it to have been a mistake to have taken the evidence at all, and that if they decided to take it, they had made a greater mistake in taking it in private. Mr. Collinson said that he found that it was unnecessary to pass a special resolution in order that the minutes might be sent to the vestries and district Boards, and he therefore withdrew his amendment. Mr. Freeman pointed out that the Board represented the public as well as the vestries, and if they withheld from the public the evidence which they had taken, their character would be injured. There really was no reason why the evidence should not be made public. Mr. Richardson said it was the duty the Board owed to the public to put the evidence. Mr. H. L. Taylor said that Mr. Doulton and Mr. Roche were anxious that the whole of the evidence should be published. Mr. Evans said that the evidence was obtained by the solicitor from the Bankruptcy Court on the understanding that it was for the private use of the Board, and not to make public. Mr. Howse said that if they published that portion of the evidence which would clearly be a breach of confidence, he would say that Mr. Furness had stated in a letter that if the evidence were published he should look upon it as a breach of faith. On a division the motion was carried by 30 to 9. The evidence will, therefore, be published in the usual way.

RETIREMENT OF MR. DOULTON FROM THE BOARD OF WORKS.—On Wednesday night Mr. Potter, chairman of the Metropolitan Board of Works, received a communication from Mr. Doulton, M.P., resigning his seat at the Board as one of the members for Lambeth. It is understood that this resignation has been made in the discussions on the Furness contract for the Tamesis Embankment, and that the decision to withdraw Mr. Doulton has arrived will materially simplify the proceedings of the Board in reference to the contract.

EXPERIMENTS AT SHOEBOURNE.—The 10-inch (400-pounder) and 12-inch (600-pounder) guns were tried on Friday at Shoeburness, and with very favourable results, especially in respect to the latter, with which the target was hit at very long ranges. The turntable designed by Mr. Inglis, for traversing guns within segments, was used in conjunction with Mr. Cunningham's gear for the purpose of working the 600-pounder gun, and answered admirably.

ELECTION OF A CORONER FOR WEST MIDDLESEX.—The nomination for the vacant coronership of West Middlesex took place on Wednesday, in the Hall, Brentford. The candidates were Dr. Hanbury, Dr. Diplock, and Mr. Walter, the two former being medical men, and the latter a member of the legal profession. The proceedings were characterized by all the uproar and licence of a county election.

of the candidates being put to a show of majority was slightly in favour of Mr. Walter having only one hand in his favour. Dr. Hardwicke formally took the poll, and the proceedings, which throughout were marked by the greatest disorder, were then brought to a close. The polling commenced yesterday.

MR. PEABODY'S GIFT.—The last annual report of the Peabody gift to the poor of London shows that the original fund has been increased by interest on unexpended capital to the extent of £170,042l. 6s. 4d. The buildings at Islington continue fully occupied, with demand in anticipation of vacancies. At the four ranges of buildings forming Peabody Square are slow in filling. The total population of buildings erected by the trustees is 1583. The Chelsea and Bermondsey are not yet built and the trustees are negotiating for a new site in Westminster. Mr. Peabody's second gift of 100,000l. is available in 1869. The cost of the general management during the year was 268l. 15s. 4d.

ITALIAN OPERA.—It is understood that there is no longer to have two rival opera houses, but the establishment of Her Majesty's Theatre and the Royal Italian Opera are to be united under the management of Mr. Mapleson. This arrangement had been determined upon in consequence of a wish very generally expressed by many influential supporters of the Opera since the destruction of Her Majesty's Theatre, and of the desire of Mr. Gye to be relieved of the arduous duties of management which he has borne for 20 years at the Royal Italian Opera, Garden. It is hoped that the arrangement will be carried out, because it affords a promise of one complete grand Opera. It is stated that Mr. Mapleson will be supported by powerful influence, and that the Opera, under the new arrangement, will be conducted, if possible, on a grander scale than hitherto.

THE WIDENING OF LUDGATE HILL.—At the meeting of the Metropolitan Board of Works on Friday a report from the Works Committee recommending the Board to contribute 11,756l.—one-half of an improvement proposed at the western end of Ludgate Hill, was brought up by Mr. Freeman. Mr. Newton opposed the recommendation. The motion was eventually carried.

THE "EVENING MAIL."—The *Evening Mail* newspaper was disposed of by auction last week, and an order from the Court of Chancery. The purchase was put up at 1500l., and it eventually realised 2000l. The *Mail* was established in 1789, and the number of its proprietors varied from 1450l. in 1800 to 800l. in 1866; its circulation averaging a little more than 3000 each issue. The name of the purchaser will not transpire.

THE OLD FLEET PRISON.—On Monday, by instruction of the London, Chatham, and Dover Railway Company the materials of several houses at the corner of Ludgate Hill and Farringdon Street, including the boundary wall of the old Fleet Prison, were disposed of, in order to carry out the long-contemplated improvements in that locality, and in a few days the residue of the prison will remain.

MEASLES AT WOOLWICH.—A very serious outbreak of smallpox has taken place in the Woolwich district. The *Lancet* states, as the result of personal inquiry, that about five weeks ago 60 cases had occurred among the paupers alone, and that in the subsequent weeks cases amounted respectively to 30, 80, and 100 for the week ending February 12, 10; the total amounting to 15, or thereabouts. A calculation from the known number of cases under the care of the present men of the neighbourhood indicates that there must be in and around the district very nearly 300 persons stricken with measles under medical care. It is stated that the patients have applied to the Metropolitan Asylum for special hospital accommodation, but that request has been refused.

AT THE CHABING CROSS STATION.—On Tuesday afternoon an alarming fire broke out at the terminus of the South-Eastern Railway, and first some apprehension for the safety of the station itself with its hotel and surroundings, and then excitement in the immediate neighbourhood. The terminus, outside the area covered by the Custom House department, and the siding or arrival platform at which the passengers from the Continent was overhauled. The roof was supported on a series of iron columns, and the structure stretched away in a curve from the station along the western side of the Thames towards the first signal station. The roof was first visible on the roof shortly before 2 o'clock, and it advanced with alarming rapidity, shooting upwards in masses of smoke and flame. In a short time fire engines were on the spot, with 120 men, and the floating engine was brought from the New River. By 3 o'clock the fire had entirely destroyed the detached building in the rear, and by 4 o'clock it was subdued beyond the possibility of doing further mischief. Before, however, it could be extinguished it had done considerable damage to the roof of the station, especially at the west end, and masses of glass of which the roof is composed were falling for some time afterwards, to the great alarm of the men engaged below. As soon as the fire was under control the telegraph was put in motion, and all the general traffic of the line flowing westward was stopped at the Cannon Street station. During the fire dense masses of smoke were wafted in the direction of the Strand, but the hotel was never regarded as being in any danger. Meanwhile, enormous crowds were attracted to the spot, especially on the Strand, and a powerful body of police, mounted and on

foot, was called into requisition to maintain order. Thousands of people assembled on the bridges and in the immediate neighbourhood to witness the spectacle, and for some hours the carriage traffic was diverted from all the principal thoroughfares leading to Charing Cross. The river steamers were also prohibited for the time from landing passengers at Hungerford pier, and foot-passengers were prevented passing along the footway attached to the railway bridge from Villiers Street to York Road. In the half-yearly report of the South-Eastern Company, issued on Thursday, the directors state that the cost of restoration and improvements (by the use of unflammable materials and otherwise), as estimated by the engineer, will not exceed 4000l.

THE CLERKENWELL SHOOTING CASE.—On Wednesday James Needall was again examined before the magistrates, on the charge of attempting to murder Thomas Chatterton, by shooting at him with a revolver, in Compton Street, Clerkenwell. Chatterton, who received a wound in the neck, was brought from the hospital to give evidence, and after detailing the circumstances of the attack, deposed that he did not know the prisoner, and had never spoken to him in his life. The surgeon said the wound was a dangerous one, and the bullet was still in the man's neck. The prisoner was committed for trial.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London states that in the week that ended on Saturday, February 15, 4910 births and 2977 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 21 per 1000 persons living, being 23 per 1000 in London, 26 in Edinburgh, 26 in Dublin, 26 in Bristol, 24 in Birmingham, 31 in Liverpool, 33 in Manchester, 22 in Salford, 22 in Sheffield, 21 in Leeds, 24 in Hull, 22 in Newcastle-upon-Tyne, and 29 in Glasgow. The rate in Vienna was 35 per 1000 during the week ending the 8th inst. In London the births of 1238 boys and 1114 girls, in all 2352 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2236. The deaths registered in London during the week were 1307. It was the seventh week of the year, and the average number of deaths for that week, corrected for increase of population, was 1519. The present return is, therefore, 212 below the estimated number.

Provincial.

BARNSELEY.—On Monday the fourth man charged with being concerned in the murder of George Thirkill, head gamekeeper to Lord Wharcliffe, on the 11th of December last, was brought before the borough magistrates for final examination. The evidence was simply a repetition of what was produced when the other men were committed. The witnesses were subjected to a severe cross-examination, but their testimony was not shaken in any material point. The prisoner was committed to take his trial at the assizes on a charge of murder and night poaching.

BRAINTREE.—Dr. Thorne has supplemented his original report on the epidemic of typhoid fever at Terling with some additional particulars relative to the more recent progress of the disease. It appears that up to the 31st of January upwards of 200 cases and 28 deaths had occurred, and that the disease has now attacked the able-bodied men and boys, who have comparatively escaped hitherto. Dr. Thorne states that the village is honeycombed with cesspools, the contents of which must in due course find their way into the soil, while the peculiar flatness of the district makes it difficult, except at great cost, to carry out an effectual system of drainage so as to remove the sewage out of the way of the streamlets. It has been suggested that Moule's earth-closet system, which would allow the closing up of every cesspool in the place, should be introduced, and the plan is at present under the consideration of the Home Secretary.

CAMBRIDGE.—The untimely death of the Hon. J. Gordon, of Trinity College, has not only caused the postponement of the second division boat races to the 26th, 27th, 28th, and 29th inst., but has led to a discussion as to the propriety of Cambridge sending a boat at all this year against Oxford. It is no secret that Mr. Gordon was the great hope of the light blues for stroke oar; and he was to have taken his seat the day after the accident by which he lost his life. There was much difference of opinion as to whether the races should be rowed; a number of old university oars advising the president to withdraw from the contest, while others considered that it would be a bad precedent. A meeting of the captains was held on Monday, at which it was resolved that no race should be rowed against Oxford this year in consequence of the death of the proposed stroke oar, and this decision was at once communicated to Mr. Willan, the President of the Oxford Club. Mr. Willan forthwith called a captains' meeting, the result of which was an answer from the Oxford committee, expressing the severe disappointment felt by the withdrawal of the challenge, with an earnest hope that Cambridge would reconsider the matter. This they have done, and an overwhelming majority of the Cambridge captains have decided to row against Oxford this year as usual. The day is not definitely fixed, but it is considered probable that the race will take place on Saturday, April 4th.

CARLISLE.—Dean Close made a long speech at the anti-ritual meeting in this city on Friday, which he delivered sitting, in consequence of an attack of the gout. He vehemently denounced the English Church Union, and the attempt of the bishops, with the primate at their head, to fraternise with the Greek Church. "Mr. Graham has told you," said the dean, "of an Archbishop of Canterbury who gathered together men of different denominations. That good archbishop prayed with them in his palace

of Lambeth, and held out his Christian hands to all faithful Protestant believers. What a contrast now, when the present amiable prelate has presumed, writing in the name of the Archbishop of Canterbury—which as an individual I deny he had a right to do—to address a letter to the false and corrupt Greek Church, which is unsound in her doctrine of the Trinity, and whose worship is debased and degrading and superstitious in the extreme. Sooner be my hand withered than that I should hold it out to the Eastern or Western Churches. I expect next to see a letter from the archbishop to the Pope, asking for reconciliation, and I hope that the Pope will deal with Dr. Pusey's 'Eirenicon,' and nail it on his church door as farmers nail weasels, rats, and other vermin."

MANCHESTER.—The Secretary of State for the Home Department has granted a free pardon to James M'Master, who was convicted at the last Manchester Assizes, along with two others, of an alleged conspiracy.

OXFORD.—In a Convocation held on the 13th inst. it was agreed, after a protest from Mr. Goldwin Smith, who held that the vote would be a legal nullity, that a grant of books from the University Press, amounting in value to 150l., should be made to the University of the Southern States of America. A decree was then brought forward to grant from the University chest the sum of 350l. towards restoring the buildings of the said University, which were destroyed during the late war. The proposition was opposed by Mr. Goldwin Smith, Professor Conington, Mr. Kitchen, of Christ Church; Professor Rawlinson, Professor Rolleston, and Mr. Neate, of Oriel. It was supported by Mr. Liddon, of Christ Church; Mr. Burgo, of Oriel; Professor Pusey, and Professor Burrows. Dr. Acland expressed a wish that it could be withdrawn without being put to the vote. On a division the decree was rejected by a majority of 3, the numbers being 63 to 60. The opposition seemed to rest partly on general financial grounds, partly on the fear that such a vote would be taken in America as an expression of sympathy with the South. The Heads of Houses at their meeting on Tuesday resolved not to allow the Oxford and Cambridge Athletic Sports to be held at Oxford this spring.

PEMBROKE.—A sergeant in the 9th Regiment, named George Keating, has been dismissed her Majesty's service in this port. He had been tried at the Fort Barracks on charges of being absent without leave and of insubordination, of having struck his superior officer in the face, and of making use of the following language—"I am an Irishman and a Fenian, and to — with the British Government; I am a Fenian, and will not be ruled by the British Government. He was found guilty on all the charges, and sentenced to five years' penal servitude, to be branded with the letters "B.C.," and to be discharged from her Majesty's army with ignominy.

RAMSGATE.—On Sunday night a collision occurred in the Gull stream between the *Lena*, screw steamer, from Odessa to London, and the ship *Superior*, from London to Carthage. The steamer cut the ship down to the water's edge, and the latter immediately sank, with two of the crew. The captain and the others saved themselves by getting on board the steamer.

SHREWSBURY.—An inquest was held last week at Pontesbury on the body of a child three months old, the illegitimate son of a domestic servant. The child had been farmed out to a woman by the mother, at the rate of 2s. per week, and it was proved that it had been very much neglected, and that death had been partly caused by the want of proper food and nourishment. A verdict of Manslaughter was returned against the nurse, who was committed for trial.

TENBY.—The Bishop of St. David's has addressed a long letter to some of the inhabitants of this town who have protested against the ritualistic practices of the Rev. George Huntington, recently presented by the Earl of Derby, on the part of the Crown, to the vicarage of the parish. In reference to his proceedings 248 parishioners memorialised the Bishop—1, against the use of the surplice in the pulpit; 2, against his not reading the exhortation to Holy Communion (there being a weekly celebration); 3, against his omitting the long exhortation at the celebration; 4, against introducing a hymn after the third collect; 5, against his using Hymns, Ancient and Modern; 6, against his bringing in the elements after service has begun, and standing during parts of the service with his back to the people; 7, against his not using a collect after the sermon, but leaving the pulpit after there is a late celebration without prayer, public or private; 8, against his introducing choral services, and having a procession round a chapel of ease, on a harvest festival, of persons in surplices; 9, against his attempting to introduce the offertory; 10, against his introducing a lection; 11, against his giving out the psalms and lessons improperly, *e.g.*, day one, and the Acts of the Holy Apostles. The following is the substance of the Bishop's reply:—

"I consider the alleged novelties in themselves perfectly harmless, and some positively commendable. I cannot condemn the practice of preaching in the surplice in the morning service. It is the practice of my own parish church, and I believe it to be the right one, and that the black gown was never intended to be used at that service. I cannot consistently require Mr. Huntington to read the whole exhortation to Communion, as I do not do it myself, and till I came to the diocese I never heard it done by others. With regard to the diocesan exhortation, which I do not remember ever to have known omitted, I am glad to find that Mr. Huntington invariably reads it at the monthly late sacrament, and still more that he estimates its theological value most highly, and only omits it at the early sacrament, and that merely to save time and labour. I should, indeed, be very loth to increase the burden of a labour of love freely undertaken; but, on the other hand, the theological value of the exhortations seems to me so great at a time when so much pains is taken to misrepresent the character of our Communion office, as well as actually to assimilate it to the Romish Mass, that I should myself certainly feel a conscientious scruple which would prevent me from omitting either the whole or even a part of it."

character and reputation of the defendant. Having... briefly explained the points which they might dismiss... from their consideration, he said the only question... was, whether the defendant fraudulently... with the... intention of inducing the plaintiff to embark his capital in... the company, led him to believe that it had for several... years paid a uniform dividend of 12 1/2 per cent., and had... assets amounting to 80,000l., which the... were in a condition to distribute among the share-... holders, knowing at the time that such representations were... untrue and illusory. His Lordship then pointed out the state... of the accounts as it had been shown in evidence, and told... the jury that if they thought the defendant really believed in... the truth of what appeared in the prospectus and abstract of... the balance sheet of June, 1865, and in his own letters to the... plaintiff, or had been misled himself by others into making... the statements complained of, they would find a verdict for... him; but if they were of opinion that those statements were... fraudulently made with an intention to deceive, the plaintiff... was entitled to a verdict with the amount he had paid upon... his shares. The jury, after a 20 minutes' absence from Court, returned a verdict for the plaintiff—damages, 35,000l.

Obituary.

LADY CRANWORTH died on Saturday, in Upper Brook Street, in her 61st year. She was the youngest daughter of the late Mr. Thomas William Carr, of Froggall, Hampstead.

LADY HENRY SPENCER CHURCHILL died on Friday last, at her house in Park Street, Grosvenor Square. She was the eldest daughter of the Rev. Dr. Nares and Lady Charlotte Spencer, and after the death of her first husband, the Rev. Lord Henry Spencer Churchill, in 1828, she married Mr. Whateley, Q.C.

MR. JUSTICE SHEE, one of the judges of the Court of Queen's Bench, died on Wednesday morning in Sussex Place, Hyde Park Gardens, after an illness of several days, from an attack of apoplexy. He was the eldest son of Joseph Shea, Esq., of Thomastown, Kilkenny, who settled at Belmont Lodge, South Lambeth, and became a London merchant of repute and opulence, by the daughter of John Darell, Esq., of Sootney Castle, one of the old Roman Catholic families of Kent. He was born at Finchley, in 1804, and was therefore in his 63d year. He was educated at the Roman Catholic College of St. Cuthbert, Durham, and remained throughout his life an earnest and sincere, although by no means bigoted, member of that communion. He was called to the bar in 1828, and soon distinguished himself as a sound lawyer and a successful pleader. He went the Home Circuit, of which he became the leader. In 1840 he was created serjeant-at-law. In 1847 he unsuccessfully attempted to enter Parliament by contesting Marylebone; but was more fortunate in 1862, when he was returned for Kilkenny in the Liberal interest. He was, however, defeated on reappearing for reelection after the dissolution of 1857, and also in 1859. At this time he had received the rank of Queen's Serjeant, which was conferred upon him in 1858. His last attempt to enter Parliament was at Stoke-upon-Trent, in 1862, but he was again defeated. In 1864 he was appointed one of the judges of the Court of Queen's Bench, and was the first Roman Catholic who in modern times has been raised to the English bench. He received at the same time the honour of knighthood. He married, in 1837, the daughter of Sir James Gordon, of Gormstown.

ADMIRAL LOCH died at Cheltenham, on the 13th inst., in his 80th year. He entered the navy in 1799, and served in various operations on the coast of Italy and Genoa. In 1801 he co-operated with the army in Aboukir Bay, and on Lake Merlotis, and in 1805 was present in action with a large flotilla, under the batteries of Fecamp. He afterwards served at the capture of Mocha, and in the expedition of Buenos Ayres. He was actively employed on the coast of Spain after the siege and surrender of St. Sebastian, at the mouth of the Bidassoa, and during the naval demonstration at Socoa. In 1814 he sustained a partial action with the French frigates Sultane and Etoile, which were afterwards taken by the Hobbins and Hannibal. He commanded the Eden in the expedition against the pirates at Ras al Khyma, in the Persian Gulf, in 1819-20.

MR. HERAPATH, the well-known toxicologist of Bristol, died last week in that city from diabetes, in his 72d year. He was the son of a maltster, and for some little time followed the occupation of his father. He had, however, a strong inclination for scientific pursuits, and devoted himself to the study of chemistry. Nearly 40 years ago he gained a reputation by his analysis in a case in which a woman named Burdock was convicted at Bristol upon circumstantial evidence of poisoning. In the more celebrated case of Palmer, of Rugby, he was a witness, and he was concerned in many other important criminal and civil trials. He was also a decided politician. In the Reform Agitation of 1831 he was the president of the "Political Union," and exerted such power as he possessed to stop the Bristol riots. On the passing of the Municipal Reform Act he became a member of the Town Council; but with advancing years he ceased to be a democrat, and was at last expelled from the Radical ward he had long represented. He was in the commission of the peace, and was the senior magistrate for Bristol.

MR. CHARLES E. STEWART, who filled the office of secretary to the London and North-Western Railway Company for nearly 20 years, and who has been chairman of the Anglo-American Telegraph Company since its formation about two years since, died suddenly in the board-room of that company on Wednesday evening. He suffered from a dangerous illness last summer, and, though his health had been apparently restored, it is feared that the close attention with which he devoted himself to the duties of his office accelerated his death. He had been occasionally ailing of late, but his friends had no reason to anticipate so early a termination to his career.

WILLS.—The will of Lady Salusbury, widow of Sir T. R. Salusbury, Bart., has been sworn under 4000l. personalty; Lady Preston, relict of Sir B. Preston, Bart., 90,000l.; Colonel Clark Kennedy, C.B., 6000l.; Colonel Home Purves, 2000l.; Lieut.-Colonel J. Hyde, 16,000l.; Dr. Daubany, of Oxford, 25,000l.; Dr. Sutherland, M.D., F.R.S., 43,000l.; Dr. Lloyd Morgan, M.D., of Haverfordwest, 25,000l.; Dr. Knox Vado, M.D., 18,000l.; Mr. Thomas Lawrence Ward, of the Foreign Office and Wimbledon, 45,000l.; Mr. Charles Dymley, of the Prerogative Court, 8000l.; Mr. Frederick Slight, secretary of the London and Brighton Railway, 5000l.; Miss Elizabeth F. Wyatt, of Oxford Terrace, Hyde Park, 25,000l.; Miss Jane Chapman, of Biney House, Clifton, 30,000l.

Markets.

COVENT GARDEN.—FEB. 22. Oranges are arriving in considerable quantities from the Azores, Valencia, and Palermo; they are slightly improving in price, and very much in quality. Seville Oranges for marmalade are still in perfection. Pine-apples are in better demand than they were last week, and hothouse Grapes continue good; they consist of Lady Downes', Barbarossa, and Foster's Seedling. A few Strawberries have made their appearance this week, but not in sufficient quantity to enable us to quote a price for them. Spanish Chestnuts for planting realise about 10s., and Spanish Hazel Nuts for planting 16s. per bushel. Potatoes have not altered in price since our...

last report. Flowers chiefly consist of Orchids, Cyclamens Chinese Primulas, Pelargoniums, Mignonette, Early Tulips, Hyacinths, Poinsettia pulcherrima, and Roses.

Table with 2 columns: Fruit and Price. Apples, per bushel, 4s to 8s; Cob nuts, per lb., 1s; Grapes, per lb., 8s to 12s; Lemons, per 100, 4s to 10s; Oranges, new, per 100, 2s to 7s; Pears, per doz., 3s to 9s; Pine-apples, per lb., 6s to 8s; Chestnuts, per bushel, 10s to 16s; Walnuts, per bushel, 10s to 20s.

Table with 2 columns: Vegetables and Price. Mint, per bunch, 1s; Mushrooms, p. pott., 1s 6d to 2s; Onions, per bushel, 3s to 4s; Parsnips, per doz., 9d to 1s; Parsley, per bunch, 2d to 4d; Potatoes, York Regents, p. ton, 190s to 195s; Rocks, do., 100s to 120s; Flukes, 13s to 160s; Other sorts, 7s to 80s; Seakale, p. punn., 1s 6d to 2s; Spinach, per bushel, 2s to 4s; Tomatoes, per doz., 3s to 5s; Turnips, per bunch, 4d to 6d.

Table with 2 columns: COALS.—Feb. 19. Cowpen Hartley, 15s. 6d.; Walker Primrose, 11s. 6d.; Wylam, 15s. 3d.; Eden Main, 15s. 6d.; Walls End Braithwaite, 15s. 9d.; Walls End Russell's Hetton, 16s. 9d.; Walls End Haavel, 17s. 6d.; Walls End Hetton, 17s. 6d.; Walls End Hetton Lyons, 15s.; Walls End Cassop, 16s. 3d.; Walls End South Hetton, 17s.; Walls End Garadoc, 17s.; Walls End Kelloe, 15s. 6d.; Walls End Tunstall, 10s.; Walls End Hartlepool, 17s. 6d.; Walls End Hough Hall, 16s.; Walls End East Hartlepool, 16s. 9d.; Walls End Tees, 15s.; Walls End Thorpe, 15s.—Ships at market 6s. 6d. to 2s.

Table with 2 columns: ENGLISH WOOL. The rapid rise in cotton, the more peaceful aspect of politics, and a slow though steady improvement in general business, have not been without a beneficial effect on Wool, and prices are now generally 1d. to 1 1/2d. per lb. dearer, the better grades still taking the lead. Should speculation step in, as appears not unlikely, we may go up another 2d. to 3d. per lb.

Table with 2 columns: CURRENT PRICES OF ENGLISH WOOL. per lb.—s. d. s. d. FLEECES—Southdown hoggots .. 1 2 1/2 to 1 3; Half-bred ditto .. 1 3 —; Kent Fleeces .. 1 2 — 1 3 1/2; Southdown ewes and wethers .. 1 1 1/2 — 1 2 1/2; Leicester ditto .. 1 1 —; SORTS—Clothing .. 1 0 1/2 — 1 6 1/2; Combing .. 1 0 1/2 — 1 8 1/2.

POTATOS.—SOUTHWARK, Monday, Feb. 17. During the past week the arrivals coastwise and by rail have been moderate, and trade steady at the following rates:—Yorkshire Flukes, per ton, 140s. to 170s.; do. Regents, 130s. to 160s.; do. Rocks, 120s. to 130s.; Kent and Essex Regents, 140s. to 160s.; Lincolnshire Regents, 130s. to 150s.; Dunbar and East Lothian Regents, 140s. to 160s.; Perth, Forfar and Fife Regents, 120s. to 140s.; ditto Rocks, 110s. to 120s.; French and Belgian Whites, 100s. to 110s.

Table with 2 columns: NEWGATE.—Feb. 21. Best Fresh Butter .. 18s. per dozen lb.; Second do. do. .. 16s.; Small Pork, 4s. 0d. to 4s. 4d.; Large Pork, 3s. 8d. to 4s. 0d. per 8 lb.

HOPS.—BOROUGH MARKET, Friday, Feb. 21. Messrs. Patten & Smith report a steady demand for middling and choice descriptions, prices ruling firm at the reduction. The stock of good qualities on sale is very limited.

Table with 2 columns: HAY.—Per Load of 36 Trusses. SMITHFIELD, Thursday, Feb. 20. Best Green Hay .. 95s to 100s; Prime Meadow Hay 75s to 80s; Inferior do. .. 70 — 90; Inferior do. .. 55 — 70; Prime new Clover .. — —; Inferior do. .. — —; Straw .. 30 — 36; CHARLES JAMES FAYTON.

Table with 2 columns: CUMBERLAND MARKET, Thursday, Feb. 20. Sup. Meadow Hay 84s to 92s; Inferior do. .. 65 — 75; New do. .. — —; Straw .. 30 — 43; Superior Clover .. 95 — 107; JOSHUA BARRETT.

Table with 2 columns: METROPOLITAN CATTLE MARKET. MONDAY, Feb. 17. The supply of Beasts is again short, and consequently prices are rather higher for the choicest descriptions. Inferior qualities are not very readily disposed of. The supply of Sheep is about the same—a usual one for the time of year. There is a fair demand, and the quotations are well maintained. Good Calves remain still dear. Our foreign supply consists of 520 Beasts, 1290 Sheep, 61 Calves, and 45 Pigs; from Scotland there are 580 Beasts; from Ireland, 150; from Norfolk and Suffolk, 1200; and 730 from the Northern and Midland Counties.

Table with 2 columns: Best Scots, Herefords, &c. 4 10 to 5 0; Best Shorthorns 4 6 — 4 10; 2d quality Beasts 2 8 — 3 6; Best Downs and Half-breds .. 5 0 — 5 4; Do. Shorn .. — —; Beasts, 3150; Sheep & Lambs, 17,500; Calves, 66; Pigs, 460.

Table with 2 columns: THURSDAY, Feb. 20. We have a large number of Beasts on offer, and a dull trade, consequently prices on the average are rather lower, and it is difficult to effect a clearance. The supply of Sheep is also larger, and the demand very limited; they cannot all be disposed of at our quotations. Good Calves are still scarce and dear. Our foreign supply, consists of 65 Beasts, 720 Sheep, and 60 Pigs.

Table with 2 columns: Best Scots, Herefords, &c. 4 8 to 4 10; Best Shorthorns 4 6 — 4 8; 2d quality Beasts 2 8 — 3 4; Best Downs and Half-breds .. 5 0 — 5 2; Do. Shorn .. — —; Beasts, 600; Sheep and Lambs, 5030; Calves, 47; Pigs, 140.

MARK LANE.—MONDAY, Feb. 17. The supply of Wheat from Essex and Kent to this morning's market was small, the choice samples brought an advance of 1s per qr. upon the prices of this day se'nnight, but the qualities are unaltered in value. The market was fairly attended, and a moderate business was transacted in foreign Wheat, at full prices, Australian and American descriptions being 1s. per qr. dearer. Barley was a very slow sale. Beans were very firm, and rather dearer. Peas unaltered in value.

For Oats there was a moderate demand, and needy purchasers paid an advance of 6d. per qr. For Flour there was a fair inquiry at last week's rates.

FRIDAY, Feb. 21.

The weather during the past week has been fine in places, though not without occasional high winds and frosts. The trade throughout the kingdom has shown considerable firmness, leading to a slight increase in the value of Wheat in all the chief markets; the general improvement has, however, not exceeded 1s. per qr. Spring Corn of all sorts met a good sale at about late rates, feeding Barley, Beans, and Oats being slightly dearer in a few of the local markets, while prices of malting Barley were against the sellers. The transactions in Flour were limited, and did not lead to any quotable advance in value. The arrivals of grain and seed laden vessels off the coast during the early part of the week were good, consisting of 111 cargoes, of which, with those left over from last week, there remained for sale last night 39 cargoes. In arrived Wheat a large amount of business has been transacted, at 1s. to 3s. per qr. advance, fine qualities of Ghirkas particularly were in active demand for U.K., the secondary sorts of red and finest white for the Continent. Barley was firm, at the extreme prices of last week. Rapeseed continues steady. Cottonseed commanded more money. Cargoes of Wheat on passage and for forward shipment were sought after at improving rates. Maize was a very dull trade. Barley steady. Rye without alteration. Paris, Feb. 20.—The demand for Wheat is active, with improving prices. Flour unaltered, but firm. The six marks are quoted at equal to 60s. 3d. per 260 lb. The stock at the Halle is estimated at 21,615 cwt.

The arrivals of English and foreign Oats this week have been small, of foreign Wheat moderate, and of Barley good. This morning's market was thinly attended. English Wheat was inquired after at the extreme prices of last Monday. Foreign met a moderate demand at late rates. Spring Corn was firm at our last quotations.

ARRIVALS THIS WEEK.

	Wheat.	Barley.	Oats.	Flour.
English ..	990 qrs.	420 qrs.	520 qrs.	1570 ska.
Irish ..	—	—	30	—
Foreign ..	13,230	4430	740	{ 1120 3700 brls.
	14,220	4850	1260	

Liverpool, Tuesday, Feb. 19.—To day's market was well attended by buyers, but the inquiry for Wheat was somewhat checked by the advance in prices demanded by holders; the rates obtained, however, were 3d. to 4d. per cental higher for white, and 1d. per cental for red descriptions on the week. Flour experienced a moderate request at recent extreme figures. Indian Corn met a fair demand at previous quotations. Egyptian Beans moderately active, and prices unchanged. Oatmeal without alteration. Peas quiet at former rates.

FRIDAY, Feb. 21.—A thin attendance at market. There was a fair demand for Wheat, at 1d. to 2d. per cental over Tuesday's rates for all descriptions. Flour in moderate request at extreme rates. Beans, Oats, and Oatmeal unchanged in value. Peas held for 1s. per qr. advance. Indian Corn slow; new mixed, 43s. to 43s. 6d.

THE LANDS IMPROVEMENT COMPANY, Incorporated by Special Act of Parliament in 1853. TO LANDOWNERS, THE CLERGY, ESTATE AGENTS, SURVEYORS, &c., IN ENGLAND AND WALES, AND IN SCOTLAND. The Company advances Money, unlimited in amount, for the following works of Agricultural Improvement, the whole outlay and expenses in all cases being liquidated by a rent-charge for 25 years.

1. Drainage, Irrigation, and Warping, Embanking, inclosing, Clearing, Reclamation, Planting, for any beneficial purpose, Engines, or Machinery for Drainage or Irrigation. Farm Roads, Tramways and Railroads for Agricultural or Farming purposes. Jetties or Landing-places on the sea-coast or on the banks of navigable rivers or lakes.

2. The Erection of Farm Houses, Labourers' Cottages, and other Buildings required for Farm purposes, and the improvement of and additions to Farm Houses and other Buildings for Farm purposes. Landowners assessed under the provisions of any Act of Parliament, Royal Charter, or Commission, in respect of any public or general works of Drainage, or other improvements, may borrow their proportionate share of the cost, and charge the same with the expenses on the lands improved.

The Company will also negotiate the Rent-charges obtained by Landowners under the Improvement of Land Act, 1854, in respect of their Subscription of Shares in a Railway or Canal Company. No investigation of title is required, and the Company being of a strictly financial character, do not interfere with the plans and execution of the Works, which are controlled only by the Government Enclosure Commissioners.

Apply to GRANVILLE R. REYDS, Esq., Managing Director, 3, Parliament Street, London, S.W.

DR. GEORGE SWINEY'S LECTURER on GEOLOGY.—The Trustees of the British Museum are about to appoint a LECTURER on this Foundation. The office is tenable for five years; the stipend is £144 a-year. All charges incurred for the delivery of the Lectures are to be defrayed by the Lecturer. The number of the Lectures is not to be less than 12 in each year, nor more than three in the same week. The First Course is to be delivered at Edinburgh before the end of July, 1868, and each subsequent Course between the 1st November and the end of July following, at such places within the United Kingdom as the Trustees shall hereafter approve. The Public to be admitted thereto without Fee. Candidates must have taken the Degree of Doctor of Medicine at the University of Edinburgh. Certificates to this effect, and other Testimonials as to qualifications, are to be transmitted to the Principal Librarian of the British Museum, not later than the 31st day of March, 1868.

J. WILKINSON, Principal Librarian. British Museum, February 27, 1868.

Home News.

THE COURT.—The Queen has deferred her departure for Windsor from the 28th inst. to the 3rd of March, in consequence of the medical attendants on Prince Leopold having reported that his Royal Highness is deriving much benefit from the sea air. On Friday the Queen went out with Princess Louisa. On Saturday morning the Queen drove out with Princess Louisa. The Prince of Wales arrived from London. The Queen went out with his Royal Highness and Princess Louisa. The Prince of Wales afterwards left Osborne. The Queen drove out with Princess Beatrice. Dr. Jenner kissed hands on being created a baronet. On Sunday the Queen and Princess Louisa attended Divine service at the parish church, Whippingham. The Rev. G. Prothero officiated. On Monday morning the Queen went out with Princess Beatrice. Sir William Jenner left Osborne. In the afternoon the Queen drove out with Princess Louisa. On Tuesday morning the Queen drove out with Prince Leopold. In the afternoon the Queen drove out with Princess Louisa. On Wednesday morning the Queen went out with Princess Louisa. In the afternoon the Queen drove out in a landau and four. Sir William Jenner arrived on a visit. On Thursday morning the Queen went out with Princess Louisa. Sir William Jenner left for London.

THE PRINCE AND PRINCESS OF WALES.—On Saturday morning the Prince went to Osborne on a visit to the Queen, and returned to Marlborough House in the afternoon. The Princess drove out. On Sunday the Prince and Princess attended Divine service at the Chapel Royal, St. James's. The Rev. Dr. Vaughan preached the sermon. On Monday the Prince rode out. The Princess drove out. In the evening their Royal Highnesses went to the Lyceum Theatre. On Tuesday morning the Prince left Marlborough House for Badminton on a visit to the Duke and Duchess of Beaufort. The Princess drove out. On

Wednesday the Prince hunted with the Beaufort foxhounds. The Princess drove out.

THE CABINET—A Cabinet Council was held on Saturday at the official residence of the First Lord of the Treasury, in Downing Street.

RESIGNATION OF LORD DERBY.—The Earl of Derby, on Tuesday, by the advice of his medical advisers, tendered his resignation to the Queen, who accepted it. Her Majesty at the same time commissioned Mr. D. S. ... the Chancellor of the Exchequer, to reconstruct the Cabinet, and on Thursday afternoon the new Prime Minister left town for Osborne, to submit to Her Majesty the names of the members of the new Cabinet. It is understood that the changes in the Ministry will be as follows. Mr. D. S. ... resigns the office of Chancellor of the Exchequer, and will be succeeded by Mr. Ward-Hunt, Secretary to the Treasury. Lord Chelmsford vacates the Lord-Chancellorship, and will be succeeded by Lord Cairns, one of the Lords Justices of Chancery. Overtures were made to Viscount Cranborne and General Peel to join the Administration, the one as Secretary of State for India and President of the Indian Council, the other as Secretary of State for War, but they were not successful. Sir Stafford Northcote and Sir John Pakington will therefore retain their present offices. Mr. Walpole retires from his position as a Cabinet Minister without office. The Lord Justiceship, vacated by the elevation of Lord Cairns to the Chancellorship, has been conferred on Vice-Chancellor Sir William Page Wood. It is understood that Mr. Ward-Hunt's successor at the Treasury will be Mr. Selater-Booth. A meeting of the Conservative party will be held at the official residence of the First Lord of the Treasury on Thursday, on which day the new Premier will indicate in the House of Commons the policy of his Government.

PARLIAMENTARY MOVEMENTS—The majority in favour of Mr. Beresford Hope, at the election for Cambridge University, had increased on Saturday evening to 536, the numbers being for Mr. Hope, 1933, for Mr. Cleasby, 1397. The committee of Mr. Cleasby, feeling then that they had no farther prospect of success, issued a notification that the contest would not be continued. Mr. Beresford Hope, therefore, was formally declared on Monday to have been duly elected as member for the University. In consequence of the announcement that the Marquis of Hartington will become a candidate for North Lancashire at the next general election, the Conservatives have got up a requisition to the Hon. F. Stanley, M.P. for Preston, to offer himself for the same division. Mr. Laurence Oliphant has announced his intention not to offer himself again for the Stirling Burghs, on account of ill-health.

MEETING OF LIBERAL STATESMEN.—A meeting of the leading statesmen of the Liberal party was held on Monday, at the residence of Mr. Gladstone, on Carlton House Terrace. There were present Earl Russell, Mr. C. P. Villiers, the Earl of Kimberley, Mr. Milner Gibson, Mr. C. B. ... the Marquis of Hartington, Mr. G. ... the Duke of Argyll, Mr. C. ... Mr. B. ... and Mr. G. ... A discussion extending over an hour and a half was held on Irish questions, but no definite line of policy was decided upon.

THE BARONETCY.—The *Gazette* of Tuesday announces that the Queen has directed letters patent to be passed under the Great Seal granting the dignity of a Baronet of the United Kingdom to William Jenner, Esq., of Harley Street, Cavendish Square, Doctor of Medicine, one of Her Majesty's Physicians in Ordinary, and the heirs male of his body lawfully begotten.

THE VACANT JUDGESHIP.—Mr. James Hannen, of the Home Circuit, has been appointed one of the Judges of the Court of Queen's Bench, in the room of the late Mr. Justice Slade.

COMMISSION ON COURTS-MARTIAL.—A Royal Commission has been appointed to inquire into the system of Courts-martial, their powers and practice, and into the nature of military punishments generally. The Commissioners have been instructed to suggest such improvements as they may think desirable.

CONVOCAION.—In the Upper House on Friday the debate on the report on diocesan synods was resumed by the Bishop of Bangor, and after some remarks by the Bishop of Rochester and the Archbishop of Canterbury, was unanimously adopted. The Prolocutor brought up the *articulus cleri* on the case of Bishop Colenso, agreed to on the previous evening by the Lower House. The Bishops sat in consultation nearly three hours, during which time the matter was fully considered. On the readmission of the reporters, the Bishop of Capetown was admitted at the same time as "a stranger." The Bishop of Oxford, after a lengthened review of the *articulus cleri*, said that the canonical difficulties of the case had been greatly increased by the new judgment of the colonial court, the effect of which, stated the plaintiff, seemed to be to render any appeal from the matter, that it would be wrong to proceed to an immediate decision. He therefore moved the following resolution:—

"That a committee of this House be appointed to inquire into the expediency of the deprivation referred to in the *articulus cleri*, and to examine and report on the merits of the writings of Dr. Colenso. That his Grace the President be prayed to take such measures as he may see fit to remove the existing scandal from our church. That these resolutions be communicated to the Lower House, with the expression of our thanks for the aid they have exhibited in protesting against false teaching, and our assurance that we are striving to strengthen to the utmost the bonds of the Bishop of Capetown in his noble efforts for the maintenance of the truth of Christ. But that, in view of the canonical difficulties of the case, aggravated as we feel them to be by the announcement of the new judgment in the Supreme Court at Natal, the particulars of which are not yet in our hands, we think it right to postpone our decision on the matters laid before us."

The Bishop of London seconded the motion. After some remarks by the Bishop of St. David's, the Arch-

bishop, and the Bishop of Salisbury, the resolution was unanimously adopted. By direction of his Grace, Convocation was then prorogued to the 28th of April. In the Lower House on Friday Archdeacon Hale presented a gravamen against so much of the decision of the House on the preceding evening as related to the approval by the House of certain proceedings by the Bishop of Capetown in his metropolitan court and provincial synod on certain days in the year 1863. The Dean of Chichester moved the adoption of the resolutions on Ritualism, sent down from the Upper House, as follows:—

"That the limits of ritual observance cannot be left to the untrammelled discretion of individual clergymen, and ought to be defined by rightful authority, and that therefore means should be provided—A. For enforcing the due observance of the rule already laid down at the end of the Rubric 'concerning the service of the Church,' with the view of duly interpreting all diversely taken common rules, B. And if necessary for removing ambiguities in the existing law. That this resolution be held to apply to deviations from the rule and directions of the Book of Common Prayer as well as defect as in excess."

Archdeacon Mackenzie seconded the resolution. Archdeacon Denison moved the following amendment:—

"That this House earnestly desires that it may be able to co-operate with the Upper House upon the whole matter now submitted for its consideration; but having regard to the fact that two formal inquiries by authority are now pending, one before a Royal Commission, the other before the highest ecclesiastical court, the issue of both which inquiries will supply materials now lacking but indispensable for a sound decision by this House upon the whole case, this House humbly represents to the Upper House that it does not appear to this House to be expedient to proceed by way of any abstract resolution at this time."

The amendment was seconded by Archdeacon Allen, and supported by Canon Woodgate, Chancellor Massingberd, the Rev. J. W. Joyce, and others. The original motion was supported by the Rev. Messrs. Sumner, Oxendon, &c., and after an animated debate it was found necessary to adjourn their further consideration. The House was then prorogued to the 28th of April.

Foreign.

FRANCE.—In the sitting of the Corps Législatif on Saturday the discussion of the Bill on the Press was continued. M. Rouher said that the prohibition against publishing any other but official reports of the debates in the Chambers did not imply the prohibition of the right of discussing the debates. The Senate had left it to the courts of law to fix the limits of that right. The Legislative Body could not fix how far that limit extended. It would be assuming to itself unconstitutional powers, which would give rise to a confusion of prerogatives. If the Government thought it advisable to introduce a constitutional modification, it would submit the question to the consideration of the Senate. M. Gueroalt replied that the proposers of the amendment would withdraw it if the Government would promise to bring the question before the Senate; otherwise the point must be decided by the Legislative Body itself, so that no doubt should remain on the subject. MM. Thiers and Rouher respectively addressed the Chamber. The amendment was then put to the vote, and rejected by 155 votes against 66. M. Darimon's amendment, to the effect that a discussion by the papers of the debates in the Legislative Body should be allowed on condition of its being accompanied by the official report, was rejected by a majority of 129 to 62. In the sitting of Monday two amendments, one proposed by M. Janzé, the other by M. Richard, asking for a reduction of the penalties established by two *Senatus Consulta* against offences of the Press, were brought forward. M. Nogent moved the previous question, on the ground of the incompetency of the Legislative Body to amend a *Senatus Consultum*. MM. Janzé and Lanjuinais replied that it was the Senate that had overstepped the limits of its competency. M. Rouher supported the motion for the previous question. M. Janzé's amendment was then rejected, through the adoption of the previous question, by 187 against 17 votes. The other amendment on the same subject was also rejected. The Chamber then discussed the interpellation of M. Janzé respecting the refusal of the Government to investigate the charges of malversation and immorality made against a Judge of Loudeac. After some observations from M. Baroche, the Minister of Justice, the Chamber passed to the order of the day over the interpellation. M. Havin subsequently ascended the tribune, and attempted to read the sentence of the jury of honour appointed to decide upon the charges of corruption made by M. Kerveguen against certain Paris newspapers. Loud interruptions prevented him from proceeding, and the President declared the sitting to be closed and withdrew. Great excitement ensued, and the Opposition members protested against the close of the sitting. The *Presse* says that the sentence of the jury of honour was that there was neither proof nor presumptive evidence that M. Gueroalt or M. Havin had received money from the Italian or Prussian Governments. The jury also censured M. Kerveguen for having brought an accusation of which no proof could be adduced against his colleagues in the Legislative Body. The Minister of War has fixed at 2500 francs the amount necessary this year to obtain exoneration from military service. The *France* of Thursday evening gave a denial to certain disquieting reports spread on the Bourse during the day respecting the relations between France and Russia, and said that the movement on the Bourse ought to be attributed rather to commercial than political causes. An important article on the causes which led to the easy victory by Prussia over Austria, and containing some reflections on the new French Army Bill, from the pen of the Prince de Joinville, appears in the present number of the *Revue des Deux Mondes*.

SPAIN.—The debate on the Spanish railway companies will shortly be begun in the Congress in March. The golden rose which has been a remarkable work of art, representing a rose tree, with the thorns and buds having at the extremity a flower of Papal arms among its ornaments. The only, is about 100l. The last golden rose of the Prince Imperial, in 1870, was sent to the Queen of Naples, in 1871.

PORTUGAL.—Accounts from Lisbon, of Portugal state that great agitation prevails in that country. The troops had been called out, and several had taken place, resulting in some men and wounded. The resignation of the Duke of Loule to office was expected.

HOLLAND.—The Session of the States opened on Tuesday by a Royal Commission of the Ministers of the Interior and Finance. King's Speech says that the Government conduct of foreign policy to have been advantageous to the country. It was with regret, but after reflection, that it decided on dissolving the Chamber. There was at present a new Chamber of which consisted of new members Government and the representatives had a guarantee that agreement between the Executive and Legislative powers which was necessary confidence in their public institutions. If the Government received the support of the States, the Session would be fruitful. Let them address people, and the country would profit by their reflection towards the Sovereign and in care for the people, and the country would profit by their reflection.

BELGIUM.—In the sitting of the Chamber of Representatives on Saturday, the general debate on the Army Reorganisation Bill was concluded. M. de ... amendment, proposing that the army should be composed of volunteers, was rejected by a majority of 71 to 18. M. Couvreur did not vote in the division. Another amendment, proposing to do away with the system of drawing lots, was rejected by a majority of 71 to 22. M. de ... Chamber then adjourned till the 3d of March.

DENMARK.—The Crown Prince of Denmark left on Thursday for London, on a visit to the Queen and Princess of Wales. His Royal Highness has revived rumours of his marriage.

THE DUCHIES.—It is rumoured that Prussia demanded of Denmark the cession of an island in the Baltic as a condition of the return of the Danish portion of North Schleswig to Denmark. Prussia is directing her attention to the creation of strategical lines opposite to the northern side, or to prevent a landing in the north. Some hesitation is felt as to the execution of the works of Alsen-Duppel-Ba., of Kiel, Rendsburg, and Friedriehstadt. In the old Dannewerk, which was used as a defence by the Danes in the Schleswig campaign, also as an advanced line for the Prussians on the peninsula. In another quarter several arsenals were armed and organised in the early spring at Stettin, Neisse, and Wesel. Schleswig and Holstein are henceforth to have but one Government, the Government of Schleswig being chosen as its seat.

HANOVER.—The semi-official Prussian *Presse* on Wednesday published an article headed "The Proceedings of King George of Hanover," in which it stated that the Government will take measures to prevent means being supplied from Prussia in enterprises against the Prussian Monarchy, a course of action which would be the ruin of former subjects.

PRUSSIA.—In the sitting of the Chamber of Deputies on Saturday the Bill for augmenting the relief of the distress in the districts of Gumbrecht, Königsberg was adopted in accordance with the draught of the Committee, which had been prepared by the Government. According to the Bill of interest may be made to those districts of the State Treasury to provide seed for the sowing, and in cases of urgent necessity other means may be made to alleviate the distress. To cover the cost made by the Treasury the Minister of Finance is empowered to issue State bonds to the amount of 3,000,000 thalers, bearing interest and redeemable in one year. A motion of Deputy ... further issue of bonds by the loan banks ... the sufferers was negatived. On the other hand, the proposition by the Committee that during the now prevailing in the eastern provinces of Prussia the Prussian Bank should be authorised to place of the loan banks was adopted. During the debate the Minister of Finance stated that the required for the advances in question were ... hand. In the sitting of Wednesday Herr ... a question to the Government, signed by members of all parties, to ask whether, after the recent ... at Hietzing, and in view of the formation of a ... persist in carrying out the pecuniary arrangements accorded to King George. The Minister of Finance replied that the Government considered it its relative duty to put a stop to any further ... the part of King George, and that such measures were considered necessary for that purpose would be previously concluded the Government would ... the said Bill during the present Session.

apply at the reopening of the Diet for the measures as they might have thought to adopt. This statement was received by the Emperor with applause. The Bill brought forward by the Emperor of the gambling banks at Ems, Homburg in 1872 was then adopted, and it is intended that the rooms are to be shut up for holidays. An amendment moved by the Emperor that the period fixed for the Diet in 1868, instead of 1872, was rejected by a majority of two votes. The Diet will be closed on the 1st of March in person. A Convention is to be held Saturday between Prussia and the Emperor respecting the treatment of emigrants and fulfilled their military obligations in the country. The main stipulations of the treaty are as follows:

Germany and Prussia will consider as German in America as American citizens residing in that country, with the exception of deserters from their flag. If a German returns to his native country without a passport, he will be regarded as having forfeited his naturalization rights. This clause applies to Germans who may reside for more than six months in North Germany after returning from America. The Extradition Treaty of 1854 is extended to the whole of North Germany. The duration of the treaty is fixed at 10 years, and it is to be exchanged within six weeks.

BRITAIN.—The term for closing the gambling saloons at Baden and Homburg having been fixed by the Emperor's Government, the proprietors of those establishments are looking out for new quarters, and have made a brilliant offer to the municipality of Geneva. They propose, in return for the privilege of opening a gambling-house in Geneva, to pay the whole of the municipal debt, complete the construction of the quay on the lake, and make a large street in the town. The Administrative Council has not yet given a reply to this offer, but there is no doubt that it will be declined.

AUSTRIA.—In the sitting of the Upper House Committee of the Reichsrath on ecclesiastical affairs on the 24th inst. the draft of the Marriage Laws Amendment Bill was adopted. The Bill proposes a restoration of certain clauses of the civic code in existence before the conclusion of the Concordat, and renders the celebration of marriage before the civil authorities a matter of necessity, coinciding thus with the vote of the Lower House. The minority of the Committee announced its intention of submitting separate proposals to the House. In the sitting of the Lower House of the Reichsrath on Thursday the President of the Ministry introduced a Bill relative to the abolition of the Council of State. The Minister of Justice presented a Bill on the disciplinary treatment of the Judges, and their obligation to take the oath of allegiance to the Empire.

HUNGARY.—The editor and publisher of the Radical paper published Kossuth's letter to the electors. Wartenberg has been condemned by the jury to one year's imprisonment and a fine of 2000 florins.

RUSSIA.—In consequence of representations made to the Committee of the Ministers, an Imperial decree has been issued, ordering the immediate establishment of a newspaper, which is to be the organ of the ultra-absolute and absolute Protectionist parties. The Comptroller of the Empire has presented to the Council of the Empire the Budget for 1868. The extraordinary expenses for the Ministry of War are estimated at 100,000,000 roubles, for the Ministry of Public Works 100,000,000, and for the Ministry of Marine 1,500,000.

ITALY.—Admiral Farragut has left Milan for Genoa. The Mayor and the principal inhabitants of the latter city presented a special, friendly demonstration in honor of the Admiral. The Marquis Oldini, the Italian Minister at Munich, has been appointed Italian Minister at Lisbon, and has left for Munich, presenting to the King his letters of recall from the Emperor's Court. He will be succeeded at Munich by the Marquis Magliorati.

FRANCE.—At the reception of the preachers of the Holy Spirit, the Pope delivered an allocution in which he expressed the wish that Rome might not be visited any more. The French Ambassador delivered to the Pope an autograph letter from the Emperor of the French thanking his Holiness for having sponsored Prince Bonaparte to the cardinalate. On Wednesday, being Ash Wednesday, the Pope took part in the usual ceremonies in the Sistine Chapel. His Holiness blessed the ashes and distributed them to the members of the Sacred College and Diplomatic Body who were present.

SPAIN.—It is said that there is great agitation in the parts of Sicily, and that an outbreak is imminent. Thirty-eight bags, containing 100,000 roubles with the effigy of Francis II., and containing several merchants of Palermo, have been found on board the steamer Electrico.

MALTA.—A slight shock of earthquake was felt at Malta on the 24th inst.

THE PRINCIPALITIES.—The French papers state that in spite of the declarations of the Roumain Government, Servian and Bulgarian intrigues are still carried on in the territory of the Principalities, and that 100 rifles and 10 cases of revolvers, destined for Roumania, have been delivered at Bucharest. The Roumain Government is reported to have sent M. Cantacuzene to St. Petersburg, to present the Roumain Government's project for procuring the absolute independence of Roumania on the 1st of May next, and expresses a hope that the project will be without foundation.

THE LOWER DANUBE.—A telegram from Constantinople, dated 24th inst., asserts that Omar Pasha, who has been expressly ordered by the Sultan to hasten on his journey to take the supreme command of the army on the Danube, has left Constantinople for Rustchuk.

TURKEY.—It is said that the Minister of Finance has concluded a loan of 120,000,000 with two London financial firms. The terms are stated to be about 18 per cent per annum, redeemable in four years, and guaranteed by the Adrianople tith revenue. The commander of the Russian squadron in the Levant has demanded from the Grand Vizier an explanation respecting the reports circulated by the *Times* and the *Levant Herald* that the Russian squadron had given material assistance to the insurgents in Candia. The Turkish Admiral has made a report, in which he brings no charges of that kind against the Russian squadron, and the Turkish Government has expressed its disapproval of the reports published by the above-mentioned journals. Mr. Calvert, late English consul at the Dardanelles, has been convicted by the Supreme Court of Constantinople of an attempt to defraud the underwriters at Lloyd's of 12,000*l.* In 1862 he insured, in the name of Hussein Aga, a ship which he called the *Poseidon*, laden with oil, and which he alleged was destroyed by fire in Turkish waters. The claim was backed by official documents, signed by him as consul, and sealed with the consulate seal, and included bills of lading, certificates of the departure of the vessel, and of the fire. Suspicion being aroused inquiry was made, when it turned out that no such ship as the *Poseidon*, and no such person as Hussein Aga ever existed. He was sentenced to two years' penal servitude.

EGYPT.—The Daira Bonds, which had been protested, have been paid, and the Daira has offered to take up the bonds falling due on the 8th of March at a discount of 12 per cent. The coast of Egypt has been visited by a furious gale. The Peninsular and Oriental Company's steamer *Ripon*, from Marseilles, was kept two days outside the harbour of Alexandria, and was finally piloted in by Captain Roberts, the company's agent. A shock of earthquake was felt on the night of the 20th. Sir Thomas Gabriel, the late Lord Mayor, Alderman Sir Sidney Waterlow, Mr. Deputy Virtue, and some other citizens of London, are now in Egypt as guests of the Viceroy. They first visited Pompey's Pillar, Cleopatra's Needle, and the other historical sights of Alexandria, and were attended by the viceregal interpreter. They then visited the Pacha at his Palace of Gizeh, after which his highness placed a steamer at their disposal to convey them up the Nile to Thebes, Luxor, and the first Cataract.

ABYSSINIA.—Sir Stafford Northcote has received the following telegram from Sir Robert Napier, dated the 6th inst.—

"Major Grant, whom I had deputed to Prince Kassal, has been well received by the Prince. My letter and presents were suitably received in an open Durbar, attended by 2000 chiefs and people. Owing to the Prince being engaged in certain ceremonies, a private interview has not taken place. The people around the Prince seem to be well disposed towards us, and the woman of Alwa received the mission in its entry to the town with a hearty cheer in honour of its arrival. No complaints are to be apprehended."

AUSTRALIA.—Accounts from Melbourne of the 5th inst. state that His Royal Highness the Duke of Edinburgh had visited Tasmania, and was then at Sydney. The elections were being held, and the new Parliament was expected to meet on the 8th of March. Storms had prevailed along the coast. Agricultural prospects were favourable.

CHINA.—Much adverse discussion continues in China regarding Mr. Burlingame's appointment as envoy from the Chinese Government to the various European Courts and the United States. An earthquake had occurred in Formosa, which lasted 32 minutes. Much damage was done.

JAPAN.—A Japanese vessel arrived here from Hiogo has reported the due opening of that port and of Osaka, on the 1st of January, without any difficulty. Twelve British, six American, and one French war vessels were present.

UNITED STATES.—President Johnson has nominated General McClellan as Minister to Great Britain. President Johnson last week issued an order removing Mr. Stanton from the post of Secretary for War. Mr. Stanton, however, declined to vacate the office, and, having referred the President's order to the Senate, that body passed a resolution declaring that his removal was illegal, and referred the matter to the Reconstruction Committee. A resolution for the impeachment of the President was introduced in the House of Representatives, and referred to the same Committee. On Tuesday, in accordance with the recommendation of the Committee, the House of Representatives appointed Mr. Thaddeus Stevens and Mr. Kingham formally to impeach President Johnson at the bar of the Senate, and a committee of seven to prepare the articles of impeachment. Mr. Stevens and Mr. Kingham afterwards impeached the President formally at the bar of the Senate. The Senate ordered the appointment of a Select Committee to consider the subject. President Johnson has sent to the Senate the nomination of Mr. Thomas Ewing as Secretary of War, with a message maintaining that the removal of Mr. Stanton was no violation of the Tenure of Office Act, and expressing the wish that the constitutionality of the Act should be tested before the Supreme Court. The President has also asked the Courts for a writ to oust Mr. Stanton, who remains at his post. The President has sent to the House of Representatives copies of his letter of the 10th to General Grant, the latter's reply, and letters of Secretaries Seward, Welles, McCulloch, Browning, and Postmaster-General Randall, corroborating the President's version of the interview with General Grant in presence of the Cabinet relative to the reinstatement of Mr. Stanton. The President's letter accuses General Grant of insubordination, and of accepting the portfolio of War in the interest of Mr. Stanton, and with intent to circumvent the President. General Grant replies that the circumstances justified his asking written instructions from the President relative to his disobeying the orders of

Mr. Stanton. He disclaims any intention now or hereafter of disobeying the orders of the President when legally and distinctly communicated. The Senate has passed a Bill for effecting the gradual reduction of the army. The House of Representatives has voted an appropriation of 50,000 dollars for the relief of American citizens imprisoned in foreign countries and subsequently discharged. The House has passed a Bill authorising the surrender of foreign convicts who escape from justice and seek asylum in America. Mr. Seward has issued a circular advising all American citizens visiting Great Britain and Ireland during the suspension of the Habeas Corpus in Ireland to procure passports from the State Department. Mr. Sumner has presented a memorial from the citizens of Boston to the Senate, praying the abolition of the presidency. General Grant has appointed General Sheridan to the temporary command of the department of Missouri, the President having prohibited the appointment of any permanent commander. It is reported that General Sherman has declined his nomination as General by brevet. The Peterhoff prize case has been finally settled in the United States District Court, and the moneys paid over to the English claimant's agent. It is reported that Mr. Seward has requested Messrs. Charles O'Connor and J. T. Brady to go to Europe, in order to defend American citizens prosecuted by the British authorities for Fenianism. The President has created a new Military Department, named the Atlantic, comprising the Department of the East and the Lakes, the headquarters of which are to be at Washington. Lieutenant-General Sherman has been assigned to the command. Saturday the 22d being Washington's birthday, was observed as a holiday throughout the States.

BRAZILS.—President Lopez was fortifying his position and making a road in the Chaco. The allied army under the Marquis de Caxias was inactive. Sickness prevailed in the army and fleet. Some anxiety was beginning to be felt in Rio as to the result of the war, there appearing to be no hope of an immediate termination. The cholera was still very bad at Buenos Ayres, and had spread to all parts of La Plata. Business was completely paralysed at Buenos Ayres. The revolution in the province of Santa Fé was very serious.

Parliament.

In the House of Lords on Monday Lord ST. LEONARDS brought in a Bill to provide that the Lords Justices should sit together and not separately on appeal motions. The Marquis of CLANRICARDE, in introducing his Bill relating to the tenure of land in Ireland, contended that the only mode of improving the land of Ireland was the introduction of capital, which could only be profitably employed in farming on a large scale. He would therefore recommend his Bill as a measure calculated to secure to the tenant fair remuneration for his improvements, and to deal fairly with the rights and interests of both landlord and occupier. Lord ST. LEONARDS saw no necessity for fresh legislation unless it could be shown that the Act of 1860, which appeared to be a most fair and business-like measure, had failed. The Earl of KIMBERLEY also thought that the proposed Bill might clash with previous legislation, and said that what was required was a moderate and practical measure, sweeping revolutionary remedies being likely to produce worse evils than now existed. The Earl of MALMESBURY, on behalf of the Government, assented to the introduction of the Bill, and said that the general policy of Ministers would be fully explained in the course of the debate in the House of Commons on Tuesday evening by the Chief Secretary for Ireland. The Bill was then read a first time. The Earl of MALMESBURY moved the second reading of the Habeas Corpus Suspension (Ireland) Act Continuance Bill. Earl RUSSELL, while admitting the necessity of the measure, said that it was no light thing for the Government to ask leave for the third time to suspend one of the most important liberties of the subject, and contended that they ought not to have come unprepared with any statement as to how they meant to conciliate the disaffection which undoubtedly existed largely in Ireland. No man knew what the future might bring forth, or how dangerous to the security of the Empire the disaffection of Ireland might prove if our relations with the United States should become suddenly complicated. Above all, relief must be given in the matter of the Irish Protestant Church, which had no parallel in Europe, Asia, Africa, or America, and immediate legislation was necessary to remedy that and other grievances, of which the Irish people most justly complained. The Earl of HARDWICK asked Earl Russell how, with the opportunities he had so often enjoyed while in office, he could account for his inaction in what he called such a vital matter. In his opinion there should be perfect equality between the Protestant and Roman Catholic Churches in Ireland; but to merely abolish the Irish Establishment would be to raise up more enemies in Ireland than the Government had there even now. Earl GREY agreed with the views of Earl Russell, and insisted upon the abolition of the Irish Church, which he held to be an insult and degradation to the people of Ireland. The Duke of RICHMOND, on behalf of the Government, declined to anticipate the statement to be made on Tuesday in the House of Commons as to the course of legislation which they proposed for Ireland. The Earl of ELLENBOROUGH agreed with Lord Hardwicke that there should be a perfect equality of religions in Ireland, as a measure demanded by justice and dictated by the soundest policy. At the same time it must not be forgotten that the Protestants were the civil garrison of Ireland, and the Government were bound to that extent to stand by them. After a few

words from the Marquis of WESTMOUTH and the Bishop of Killaloe, the Bill was read a second time. On Tuesday the Earl of MALMESBURY repeated the formal announcement made by Lord Stanley in the Commons at an earlier hour, that the state of Lord Derby's health had necessitated his resignation of the Premiership; that Mr. Disraeli had received the commands of the Queen to form a Ministry; and that the right hon. gentleman was at that time occupied with the task. He then moved that the House should adjourn to Thursday for the third reading of the Suspension of the Habeas Corpus (Ireland) Act Continuance Bill, and should meet again on Friday for the Royal assent to the Bill, which must be passed before Sunday. EARL RUSSELL said that there could be no objection to the arrangements proposed, and warmly expressed his sympathy with the Government at the loss they had sustained. Often as he had differed, and long as he might now differ from Lord Derby on public questions, he could never fail always to entertain for him those sentiments of regard and esteem which his great qualities were so calculated to inspire, and he hoped that the noble lord would soon be again in the House to give their lordships and the country the benefit of his experience and undoubted talent. The Habeas Corpus Act Suspension Bill then passed through Committee. On Thursday the House had a formal sitting, at which the Habeas Corpus Act Suspension Bill was read a third time and passed. Yesterday the Royal Assent was given by Commission to the Habeas Corpus Suspension (Ireland) Act and the East London Museum Site Bill.

In the Commons on Friday Mr. GOSCHEN, in calling attention to the continuous increase of the burdens laid for various purposes on the occupiers of rateable property in London and elsewhere by the Metropolitan Board of Works, stated that the expenditure of that Board had gone on increasing year by year, until in 1866 it had amounted to the enormous sum of 1,970,000*l.*, and a total expenditure between that year and 1857 of nearly 11,000,000*l.* He showed that the taxation of the occupier had been carried to its extreme point, had driven away capital from the building trade, and had made it impossible to house our poor, inasmuch as it was only by overcrowding and by the neglect of sanitary regulations that cottage property could be made remunerative. With a view to meeting the state of circumstances, he recommended that there should be an equalisation of rates over the metropolis, a rate on the owners instead of the occupiers of rateable property, and a municipal income-tax of one penny, which the Board might hand over to the Government in exchange for the house-tax, which would produce about the same amount. After some remarks by Colonel HOGG, Colonel SYKES, Mr. AYRTON, Colonel R. N. GRENVILLE, and Mr. H. LEWIS, the House was counted out. On Monday the Public Departments (Extra Receipts) Bill was read a third time and passed; the Railways (Extension of Time) Bill was read a second time; and the Lords' amendment to the East London Museum Site Bill were agreed to. Bills were brought in, by Mr. W. EWART, to introduce into this country the metric system of weights and measures; by Mr. CAVE, to carry into effect a Convention between her Majesty and the Emperor of the French concerning the fisheries between the French and English coasts, and to amend generally the laws relating to the British sea fisheries; by Lord J. MANNERS, to further continue and appropriate the London Coal and Wine Duties; and by the LORD-ADVOCATE, to amend the procedure and the judicial arrangements in the Scotch Courts of Justice. On the motion of Mr. AYRTON, all Bills relating to gas companies in the metropolis were ordered to be referred to a Select Committee of 10 members. On Tuesday the rumours of ministerial changes which had been afloat all the afternoon attracted the first large audience of the session. After the private business had been disposed of, Lord STANLEY rose and announced that Lord Derby, in consequence of the state of his health, which made absolute repose for a considerable period essential, had tendered his resignation, which had been accepted; and that, acting on her Majesty's commands, Mr. Disraeli was now engaged in forming an Administration. He therefore moved that, following the invariable course, in order to give time for the necessary arrangements, the House should adjourn to Friday. Much as Mr. Disraeli regretted to delay the discussion of Mr. Maguire's most important motion on the condition of Ireland, he had no option. Mr. GLADSTONE remarked on the singular destiny which had imposed upon Lord Stanley the duty of making this announcement, and expressed his deep regret that a career so long, so active, and in many respects so distinguished and remarkable as that of Lord Derby, should have been brought to a close by bodily illness. He agreed that the adjournment proposed was most appropriate under the circumstances. Mr. VICTOR pressed that some Government night should be appropriated for his motion on Irish affairs. Lord STANLEY in reply said that the Government were quite as anxious as any one could be that the great subject referred to should be fully and fairly discussed. The motion for adjournment was then agreed to. Yesterday Lord STANLEY, on behalf of Mr. Disraeli, who was still at Osborne, stated that it was necessary to ask the House to sanction a further adjournment till Thursday next, when the day for the postponed debate on Ireland would be arranged. Mr. GLADSTONE, for the special reasons caused by Lord Derby's illness, assented to the adjournment, which was agreed to. The House then adjourned to Thursday.

City Intelligence.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 92½ to 93 both for Money and

Account; New and Reduced Three per Cents., 93½ to 93½; India Five per Cents., 112 to 112½; Bank Stock, 249 to 251; Exchequer Bills, 11s. to 15s. pm.—FOREIGN: Mexican, 15½ to 15½; Greek, 12½ to 12½; New Spanish, 35½ to 36½; Italian, 15 to 15½; Turkish, 32½ to 32½; Brazilian (1865), 74 to 75; Peruvian (1865), 75½ to 76½; Russian (1862), 84 to 85; Egyptian (1864), 86 to 87; Do. Railway Loan, 90½ to 91½; Viceroy's Seven per Cents., 73½ to 74; Do. Nine per Cents., 88½ to 89; United States 5-20 Bonds, 71½ to 71½; Erie Railroad, 44 to 45; Illinois, 87½ to 88½.

Metropolis and its Vicinity.

DISCOVERY OF THE REV. MR. SPEKE.—Sir Richard Mayne on Monday requested the evening papers to make known that information had been received that morning of Mr. Speke's safety. He was found at Padstow in Cornwall, dressed as a drover, with other disguises and a large sum of money in his possession. He was arrested by the police on suspicion of being a bankrupt who had absconded from Hull. As, on further examination, he answered the description of Mr. Speke, he was taxed with being that gentleman, and confessed that he was. Mr. Murdoch, his brother-in-law, left London for Cornwall on receipt of the intelligence, and with Mr. W. Speke, his brother, and Detective-Sergeant Williamson, arrived at Bodmin on Tuesday morning by the London mail. They had an interview with the Chief Constable, Colonel Gilbert, and subsequently left with Mr. Speke for London. Mr. Speke gave them a full account of his proceedings since leaving London. On the night of his departure he went to Basingstoke, and next day walked to Winchester, a distance of 18 miles. The day following he proceeded to Bishopstoke, and thence to Southampton, Gosport, and Portsmouth, and remained in the neighbourhood of Portsmouth till the 29th of January, occupying himself by visiting various places in the locality. He arrived at Plymouth by steamboat on the 30th, and stayed there till February 16, during which time he visited Saltash, Cotehele, Egg-Buckland, St. Germans, Tamerton, Roborough, Ivybridge, and other places in the neighbourhood. On Sunday, the 16th of February, he attended church at St. Germans; the next day he proceeded to Powey, on the south coast, and thence to Lostwithiel on the 20th. He then went to Bodmin, and put up at a second-rate inn, the Queen's Head. On the 21st he went to Padstow, where he was arrested, having left his luggage at Bodmin. His luggage was in several small bags enclosed in one large bag. The money found in his possession amounted to 200*l.* in notes and gold. He was somewhat excited when taken to Bodmin, but talked quite rationally to the Chief Constable. He appeared, however, to entertain peculiar religious views, and said his great object in leaving home was to get to some country where nobody knew anything about him, so that he might work for his living and preach the Gospel to his fellow-labourers. He had obtained, he said, much greater insight than heretofore into the principles of the Bible by his lonely study of it on the rocks by the sea-shore. When asked why he did not go abroad at once, instead of roaming about the country, he said he knew it would have been of no use to attempt it, for the telegraph would have been set to work and detectives placed on the watch to stop him. He hoped by moving about the country from place to place to keep them off the scent, and that after a time he would be able to embark from a seaport without being suspected. His plans for the future were to return to Bodmin and attend church there on Sunday, and then to visit various places of interest on the Cornish coast; after which he proposed to proceed to Ilfracombe, and cross by steamboat thence to Swansea. With that view he had ascertained the times of sailing of the steamers. On getting to Swansea he intended to walk through Wales to Liverpool, and there embark for America. He admitted having read the newspapers daily, but said the excitement caused in the country by his disappearance had no effect in altering his determination to carry out his scheme. He acknowledged, however, to his brother that he was now ashamed of what he had done, and seemed affected by his position. On leaving Bodmin for town he was calm and composed, but appeared dejected. On arriving in London Mr. Speke at once placed himself under medical care. Dr. Gull and Dr. Tuke, the physicians consulted, recommend an entire cessation from clerical duty for some time longer, rest of mind and body, and change of climate. Mr. Speke will, therefore, proceed in a few days to the south of France, probably with his relative, Mr. Murdoch. The *Western Morning News* states that the Cornish police are to have the reward promised by his friends for his discovery.

THE JAMAICA OUTBREAK.—On Thursday morning, at Bow Street Police Court, Sir R. P. Collier, on behalf of Mr. John Stuart Mill, the president, and Mr. Peter Taylor, the treasurer of the Jamaica Committee, applied to Sir Thomas Henry for a warrant against Governor Eyre for the murder of Mr. Gordon, in Jamaica, after the outbreak of 1865. Mr. Mill and Mr. Taylor occupied seats on the bench. Sir R. Collier said that he was instructed to apply for a warrant against Mr. Eyre, on the charge of having been accessory to the murder of Mr. Gordon, at Morant Bay, in Jamaica, on the 23rd Oct., 1865. It might be said that these proceedings were taken at a somewhat late period, considering the date at which the offence took place. Upon that point he must mention that at the time when the warrant was applied for and obtained against General Nelson and Lieutenant Brand as principals, it was intended to make the application against Mr. Eyre as accessory, but it was found that he was not at that time within

the jurisdiction of the court. It was a common knowledge that an application made to the magistrates in Shropshire, within the jurisdiction Mr. Eyre was; but he presumed that Thomas Henry would not consider himself bound by their decision, but would exercise his own discretion. Moreover, that decision was given prior to the of the charge of Chief Justice Cockburn to a jury in reference to the case of "Nelson and Brand." That charge had since been published by the Chief Justice, with notes, and with a lucid statement of martial law. It was no disparagement of Justice to say that if they had been acquainted with all the learning and authority upon the subject, would have come to a different conclusion. The peculiarity of English law—and he, for one, would think it a defect—that there was no prosecutor, no official person charged with bringing offenders to justice, but it was the action of private individuals, and they do it frequently from a sense of duty, and even without investigation. Many great crimes would escape without any personal motives, but by a very judiciously instructed him were certainly not induced by any personal motives, but by a very judiciously of duty, believing that a great crime had been committed—that a British subject had been put to death without warrant, and under circumstances constituted what the law called murder, and consider that a most important matter, as a tenure under which every man in the British dominions, held his property. He then gave an outline of the instances under which the execution took place the legal grounds upon which it was considered amounted to murder. His arguments were to a great extent identical with those of Mr. Fitzjames Stephen, in the case of "Nelson and Brand," and he supported them by references to authorities, and especially to the charge of the Chief Justice. Having contended that it was not necessary to prove express malice, he went on to say that there was evidence on which he would submit that Mr. Eyre would be justified in finding that Mr. Eyre was actuated by express malice. There had been a feud between Mr. Eyre and Mr. Gordon; and in an instance Mr. Eyre's conduct had brought down severe censure from the Duke of Newcastle, entering into the details of the disputes between Eyre and Mr. Gordon, and quoting largely from correspondence, he proceeded to contend that of indemnity passed in Jamaica did not bar Sir Thomas Henry here. Sir Thomas Henry said it was not necessary to argue that point, as it had been decided in the "Nelson and Brand" case. Sir R. Collier proposed to ask that it should be executed, and Mr. Eyre would voluntarily attend, as General and Lieutenant Brand had done. He concluded by reminding Sir Thomas Henry of his own words in summing up that case. Sir Thomas said that was before the delivery of the charge to by Sir R. Collier. In that charge all the evidence used by Sir R. Collier had been so put that it was impossible to state them more forcibly, and the jury had thrown out the bill. He was not aware there had ever been a case there—certainly not during the 28 years that he had presided on the bench, in which, after the grand jury had returned a bill against the persons charged as principals in a murder, a magistrate had issued a warrant as accessory. He did not think that he ought to grant such a precedent, and he therefore refused to grant a warrant. That, however, would not prevent the prosecutors from preferring a new bill against another grand jury if they thought fit.

THE EASTER VOLUNTEER REVIEW.—On Monday the largest meeting of metropolitan Volunteer officers held met at the rooms of the National Rifle Association to consider what steps should be taken regarding the of metropolitan Volunteers usually held at Easter. Mr. Truro occupied the chair. The first resolution that was carried unanimously, that the usual review should take place at Easter, a long discussion ensued as to the respective merits of Brighton, Dover, and Portsmouth as the site of the review. A deputation, consisting of the Mayor of Portsmouth and several Volunteer officers and gentlemen from that town, were appointed in favour of that place being selected. Mr. Knight, who represented the interests of the Volunteer companies of Chatham, and Dover and South-Eastern, stated that those companies would carry the review to and from Dover with the same facilities as given last year for 1*s.* 6*d.* each. After various resolutions had been proposed, it was agreed to appoint a committee of officers, consisting of Lord Ranelagh, Colonel the Hon. Loyd Lindsay, Colonel Taylor, Colonel Warde, and Colonel Gordon, should be appointed to report as to the best arrangements for the review, and the facilities offered by the companies.

THE CORONERSHIP FOR WEST MIDDLESEX.—The election concluded on Saturday in the person of Dr. Diplock. On Monday the sheriff declared the numbers to be as follow:—Dr. Diplock, 112; Dr. Hardwicke, 113; Mr. Walter, 55, 200. Dr. Diplock had been elected by a majority of 100. A protest was entered against the return by Dr. Hardwicke, but Dr. Diplock took the requisite office.

THE CLERKENWELL OUTRAGE.—On Monday morning William Desmond, Timothy Michael Barrett (alias Jackson), Nicholas James O'Neill, and Anne Justice were examined before Sir Thomas Henry at Bow Street for the examination. Mr. Giffard, Q.C., having taken the case for the Crown was closed, Mr. Desmond should reserve the defence on behalf of the

Barrett, and Justice, but as no evidence had been produced against O'Neill, he hoped that the court would discharge him. Sir Thomas Henry could not do that, but should send the prisoner to jail. Mr. Lewis then asked if he would take Sir Thomas Henry's reply, certainly not. Mr. Justice should also reserve the defence of his witnesses were then formally bound over to appear at the March sessions of the Central Prison, but will probably be taken next week. Mullany was afterwards placed at the bar and remanded on the charge of treason.

STRESS IN THE EAST-END.—On Monday the Executive Committee, formed for the relief of the exceptional distress in the east of London, met at the Mansion House, when their proceedings took a very unexpected turn, and resulted in a unanimous resolution to suspend their relief for two days. Mr. Samuda, M.P., called the attention of the committee to a letter which appeared in the Times of that morning, from Messrs. Pontifex Wood, builders, stating that 30 carpenters, engaged temporarily by them at their works at Millwall on the agreed wages of 5s. 6d. a day, to which they had offered to add an additional shilling on that day, but to work till 4 o'clock, in common with their regular hands, had on Saturday struck. They had given no previous notice of their intention, but simply intimated that they would resume work unless they were paid 8d. per hour on the Saturday half-holiday. Messrs. Wood added that some of these men were unwilling to come to work with them until they had been paid. Mr. Samuda said that with such a letter before them it became them, as a committee for the purpose of mainly relieving the exceptional distress among the labouring classes in the east of London, to reconsider their position. He observed that the men in this case, earning 33s. a week, had been wiled away from their work by the influence of unions, and that the course they had taken had been at the dictation of a trades' union. It was a question, therefore, for the consideration of the committee—with that fatal influence at work among the labouring classes—whether they were right in seeing that the committee might thus become an instrument, with the funds placed in their hands for benevolent purposes, of enabling those who were under restraint of trade and to carry out their agency. The Rev. Septimus Hansard, Secretary of Bethnal Green, said that, before the committee arrived at a conclusion on the letter of Messrs. Pontifex, they ought to hear the men themselves. The Rev. T. J. Rowsell dissented from the opinion that, by reason of the conduct of those who were the real distress, which was widespread and had found it among a great many classes connected with ship-building—such as cooper, cobbler, and others. Mr. Ravenhill said that the Labour Committee of the Poplar Board of Health last week, finding that a number of bricklayers were at work in the stoneyard, proposed that they should be set to work to build a new boundary wall, which was wanted, instead of being kept at the Labour Committee expressed a strong opinion that the Union was at the bottom of the refusal, at the same time, that they did not ask to lay the full number of bricks they would be satisfied with some work of that kind as a test. Mr. Scrutton, the head of a deputation from the East Central Relief Association, said that the bricklayers had not up to that time begun the work, though everything was in readiness for them to do so. He believed it was a matter of pride with them. A dispensary was being opened in the neighbourhood, and they apprehended violence if they did the bricklaying they had been asked to do by the Labour Committee. They had required being 500, he believed. The Rev. S. Rowsell said the men might think in doing the work that they were being used as a lever for the labour market. The Lord Mayor observed that their notion was that the committee was taking advantage of their necessity. After a long discussion, a resolution was passed, on the motion of Mr. Cazenove, adjourning the committee on Wednesday to afford time for their being better informed on the subject of certain strikes which had taken place, and which had tended, in their opinion, to the unnecessary aggravation of the existing distress. The secretaries, in the early part of the proceedings, had stated that the public subscription had been raised to 3000l. by the committee up to that morning, including 800l. by an anonymous donor, and that they had a balance in hand of 1673l. A meeting on Wednesday, the secretaries alleged to have struck for higher wages, but on being questioned denied that they had done so, and that they had asked for 8d. per hour and to work till 4 o'clock, because the bricklayers did so, and they understood they were to be on the same terms as the bricklayers. In short, they affirmed that the strike had arisen out of a misunderstanding, and that they were willing to resume work at 5s. 6d. Other explanations followed, and the com-

mittee resumed its duty of administering relief to cases of exceptional distress.

MR. GLADSTONE ON THE CO-OPERATIVE MOVEMENT.—Messrs. Jones, Evison, and Barter, of the Borough, wrote to Mr. Gladstone last week, calling his attention to the spread of the co-operative movement, and especially to the Civil Service stores, and stating that a feeling of irritation has arisen among the trading class at seeing the Civil Service, which costs the country so much, and the Estimates for which have grown so rapidly of late years, doing their utmost to destroy the trader altogether, and, in fact, becoming traders, although retaining their situations at the country's cost. They ask how, if this goes on, the trader is to meet the heavy taxation he has to bear, and express the hope that he will use his great influence in the correction of this tendency, which is, they say, "being viewed with great anxiety by many, and which is, probably, doing more than any movement has yet done to set class against class." In reply Mr. Gladstone writes as follows:—

"11, Carlton House Terrace, Feb. 18.
Gentlemen,—I cannot wonder either on the one hand that consumers should endeavour to adopt means for buying in the cheapest market, or that tradesmen should feel sore when their regular means of an honourable livelihood seem likely to be impaired. It is scarcely likely that the fundamental law, so to call it, of society which has given the retail trader, or distributor of commodities, his place in it ever since it was organised, is erroneous, and, if so, the tendency at any given moment to replace that important class by a contrivance for the purpose may be indicative of some defect, removal of which would restore things to their natural course. I speak even without the authority of a private housekeeper, for my engagements do not allow me to give due and proper attention to these matters. But I have the impression that there is a prevailing vice in the practice of retail trades which might be cured—I mean the system of dealing upon long credits, and of allowing no discount for ready money payments. This system prevails, I believe, in most trades connected with the supply of families, and with many other traders of this great metropolis. Long credits mean large loans by men in business out of their trading capital to men out of business. These loans must be paid for at the rates usually current for trading capital, which are, of course, high. Here we have a total inversion of the natural order, which is that men in business should be borrowers from, and not lenders to, men out of business. This system also aggravates the risk of bad debts, which form an additional charge to a good debtor; and it is connected with a general irregularity and uncertainty, which must also be paid for. I do not doubt that we, the consumers, are much in fault; but I cannot help thinking that traders are in fault also, and that much might be done by a vigorous effort, and by combination among traders in favour of ready-money dealings, either absolutely or as encouraged by discounts. As you state that others as well as yourselves are disposed to appeal to me in this matter, although I have no specific to propose, I am quite willing that, if you think fit, you should give publicity to this letter. I am, &c.
W. E. GLADSTONE."

METROPOLITAN BOARD OF WORKS.—At a meeting of the Board on Friday, Mr. Le Breton moved the following resolution:—

"That it is proved that Mr. Roche, acting on behalf of the Lundy Granite Company, obtained from Mr. Furness a written agreement to purchase from that company the stone which might be required on the Thames Embankment works for which he had made a tender, the acceptance of which was then under the consideration of the Board, and that Mr. Doulton consented to act as referee in the event of differences arising between the parties to such agreement; that the taking part in such matter by members of this Board is most reprehensible, and calculated injuriously to affect its character."

Mr. Adams seconded the motion. Mr. Elt then moved the following amendment:—

"That the Board extremely regrets that any of its members should have taken part in business or professional transactions, with contractors of the Board, in matters connected with its contracts; and it strongly deprecates such conduct, as calculated to affect injuriously the character of the Board in public estimation."

After some remarks by Mr. Shaw and Mr. Howes, Mr. Roche entered into a long explanation of the course he had taken, and said that he had acted, not as a member of that Board, but as a professional man. Mr. Turner objected both to the resolution and amendment, and moved the following:—

"That the Board is of opinion that the charge against Mr. Roche, of having promised to support Mr. Furness in his application for the Embankment contract, on condition of Mr. Furness contracting to take the granite he might require from the Lundy Granite Company, is destitute of foundation. 2. That the only connection of Mr. Roche with the transaction consists in his having, in his character as a solicitor, employed by the Lundy Granite Company, drawn up and obtained the signature of Mr. Furness to a contract, to take his granite from that company, in pursuance of an arrangement previously made with the company by Mr. Doulton. 3. That the course taken by Mr. Roche was not intended by him and did not, in fact, operate to the prejudice of the public interest. 4. That such course is, nevertheless, objectionable in itself, inasmuch as any connection whatever, whether of a business or professional character, between a member of the Board and a party who has contracted or is in treaty for a contract with the Board, in reference to the subject matter of such contract or treaty, is calculated to shake the confidence of the public in the integrity of its proceedings."

Mr. Le Breton withdrew his motion in favour of Mr. Turner's, and Mr. Elt declining to withdraw his amendment, it became the original motion, and Mr. Turner's resolution the amendment. After a long discussion the amendment was put, when there were, on a division, for the amendment, 19; against, 7; majority for the amendment, 12. The original motion was therefore lost. Mr. Richardson then moved that the last paragraph of the amendment, which expressed the disapproval of the Board of any of its members acting for contractors in a professional or other manner, be omitted. The resolution was seconded, but was negatived, on a division, by 20 to 2.

ROYAL ACADEMY OF MUSIC.—Several of the public papers having recently stated that the Royal Academy of Music was about to close, Mr. Sterndale Bennett, the principal, has announced that the institution will open its summer session, as usual, on the 9th of March, with an increase in the number of its students.

SECESSIONS TO ROME.—The Rev. E. G. Shapcoote, Rev. G. Akers, and Rev. F. M. Wyndham, of St. George's Mission, St. George's-in-the-East, seceded last week to the Roman communion. The superior and some of the branch sisterhood of St. Mary's Priory, Hackney, seceded last week to Rome, but one of the sisters has since returned to the English Church. It is said that the superior, who led the secession, was originally a Roman Catholic, and has now returned to her mother communion.

LIGHT WEIGHTS AND SHORT MEASURES.—Forty South London shopkeepers were last week fined for knowingly or unknowingly cheating their customers by using unjust weights and measures. The fines amounted to 56l. The black list included 11 licensed victuallers and beer retailers, 8 chandlers, 1 eating-house keeper, 3 grocers and cheesemongers, 1 confectioner, 2 butchers, 6 coal and potato dealers, 5 bakers, and 2 milkmen.

DEMOLITIONS IN THE CITY.—Another of the old landmarks, which have of late been destroyed to give place to modern improvements, is doomed to immediate demolition. The Saracen's Head Hotel, in Skinner Street, Snow Hill, celebrated in the old carrier and coaching days, was disposed of by auction a few days since, by instructions of the Improvement Committee of the City of London.

FIRE IN PORTMAN MARKET.—On Saturday night, soon after midnight, an extensive fire took place in Portman Market, opposite the Marylebone Theatre, by which about 20 houses and shops were destroyed, and many families rendered homeless. The fire broke out soon after midnight in a shoe shop, and spread with such rapidity from shop to shop, that in less than an hour the whole pile was in flames. It is said to have been the result of carelessness. It appears that at 11 o'clock on Saturday night the side blind in the shoe shop was blown by the gale against the gas jet outside and caught light. The shop was being closed at the time, and the flames having been hurriedly extinguished, the blind was rolled up and put under the counter. About an hour afterwards the counter of the shop was found in a blaze, and it is supposed that some sparks of fire must have remained in the blind when it was rolled up, and smouldered until they burst into a flame.

FATAL FIRE IN COVENT GARDEN MARKET.—On Tuesday morning, at half-past 2, a fire broke out at Mr. Bocking's, basket maker, at the corner of King Street, Covent Garden, immediately opposite Evans's Hotel. In a very short space of time several steam fire-engines arrived, and water was poured upon the burning houses in great quantities, but from the inflammable nature of the stock the progress of the fire was very rapid, and the interior of the building was completely destroyed. Mr. W. J. Lobjoit, a well-known grower in the market, residing at Barnes, was in the habit of sleeping in the top-floor front, over Messrs. Bocking's shop, in order to be early in the market each morning, and was unfortunately occupying his usual quarters when the fire occurred. He could have been saved by the escape, but suddenly remembering that he had left some money in a carpet-bag in his bed-room, he went back for it, in spite of the warnings of the escape man. He had no sooner set his foot upon the floor than it fell in, and he was precipitated into the burning mass below. The flames rushed out of the window of the room as though from a furnace, and compelled the fireman to retreat. He was so burned about the head and face, that he had to be sent to the hospital in a cab. The charred remains of Mr. Lobjoit were found at half-past 8 o'clock. It is understood that he had a wife and family, and that he was 59 years of age. At the inquest on Thursday the jury returned a verdict that he died from suffocation, and that the fire was accidental.

ATTEMPTED BURGLARY AT WANSTEAD.—On Friday night a daring burglary was attempted at the house of Alderman Finnis, Park Gate, Wanstead. About 3 o'clock in the evening a maid servant went to the Alderman's bed-room and lighted the fire. At a quarter to 9 she went up again, and found the room-door locked. Hearing a scuffle of feet she became alarmed, and called the butler, who went up and forced the door open, and then found that it had been barricaded from within. The room was in the greatest confusion and disorder. Burglars had effected an entrance by means of a rope ladder fastened to the balcony, and had cut a pane of glass out of the window, and with a jemmy prised off all the fastenings. They had also opened the door of the strong room in which the Alderman kept his plate, by cutting round the lock, and had brought out four chests containing plate, the contents of which, amounting in value to above 2000l., had been abstracted and placed in sacks ready for removal. Fortunately only a few small articles were missing.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London states that in the week that ended on Saturday, February 22, 4655 births and 2955 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 24 per 1000 persons living, being 22 per 1000 in London, 25 in Edinburgh, 33 in Dublin, 24 in Bristol, 21 in Birmingham, 28 in Liverpool, 28 in Manchester, 26 in Salford, 21 in Sheffield, 23 in Leeds, 23 in Hull, 20 in Newcastle-upon-Tyne, and 23 in Glasgow. The rate in Vienna was 33 per 1000 during the week ending the 15th inst. In London the births of 1159 boys and 1156 girls, in all 2315 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2251. The deaths registered in London during the week were 1336. It was the eighth week of the year, and the average number of deaths for that week, corrected for increase of population, was 1579. The present return is, therefore, 243 below the estimated number.

Provincial.

BIRMINGHAM.—On Friday Thomas Beesley, alias Marlow; Joseph Beesley, William Beesley, Louis Bee, alias Grayson, and Elizabeth Bee were again brought before the magistrates on remand, charged with being concerned in the murder of Miss Mary Melbourne, on the 21st of January. Further evidence, implicating the prisoners, having been adduced, William Beesley, Thomas Beesley, and Louis Bee were committed for trial at the Assizes on the charge of Wilful Murder; and all the prisoners were committed on the charge of feloniously breaking into the house of deceased and stealing money.

HOLYHEAD.—The breakwater at Holyhead extends nearly two miles seaward. At the extremity a lighthouse is in course of erection. A terrific north-wester on Sunday made a great breach between the lighthouse and the breakwater, demolishing the machinery and cranes. A breach that was repaired last week was also again broken through, and the lights put out.

LIVERPOOL.—On Monday, about noon, much excitement was caused in this town by the report that a merchant had been attacked by two men in his own office, and savagely assaulted. It appears that Mr. Adolphe Kasel, a wine merchant, having offices in No. 58, Tower Buildings, was alone in his office, both his clerks having gone out on business, when two persons presented themselves, one of them dressed as a young woman, chignon and all complete, and the other as a young man, with heavy beard and moustache. The man produced an advertisement, and said, "You have these wines to sell, I want to see some," and with that stepped inside the counter. Mr. Kasel turned round to enter his inner office, when the man sprang on his back and commenced beating him about the head, when the other joined, and they got him down. He then cried out "Murder," and managed to get to the door, which he found locked. Some one having then knocked loudly from the outside, the men desisted from beating him, and Mr. Kasel succeeded in opening the door. The occupant of the next office and his clerks came in and secured the men, who were given into custody. A variety of small articles were found on them, including a jemmy a foot long, and on the floor of the office was found the loaded end of a whip. Mr. Kasel was taken to the dispensary, where it was found that he had sustained severe contusions on the head and that his right arm was broken. The prisoners were at once taken to the Central Police-station and examined. They are both young men, of less than the average build. One of them—the "lady"—is named John Wilson, and is in the employment of Mr. Wood, confectioner, of Bold Street, and the other, David Harris, is a clerk in the office of Mr. R. S. Williams, solicitor, in Moor Fields. On Tuesday the prisoners were brought before the magistrates, and as Mr. Kasel was unable to attend were remanded for a week. Two clerks of Mr. Kasel have also been taken into custody, charged with collusion with the prisoners. A room in which the present witness was concealed for a short time had a floor covered with saw-dust, and on his being removed it was found that he had written with his finger in the saw-dust the words, "Forsake us not, O Lord, in this our hour of sorrow."

MAIDSTONE.—About 3 A.M. on Tuesday the 18th inst., the watchman at Linton Place, the seat of Viscount Holmesdale, M.P. for West Kent, noticed a light in the mansion which excited his suspicions. He examined the windows from the outside, and found that of the butler's pantry open. He entered, and had just crossed the room and gained the passage, when he met two men with blackened faces. A scuffle ensued, in which the watchman used his stick somewhat freely. One of the men had a life preserver, and the other a pistol. The watchman was so severely cut about the head that he was forced to give in, the blood which was running down his face almost blinding him. The men then ran upstairs into a long corridor. They entered a room occupied by two female servants, and locked the door. The servants were, of course, alarmed, and the burglars, producing a pistol each, threatened to blow their brains out if they made a noise. The men then jumped from the window to the gravel walk in front of the mansion, a height of 15 feet, and made off. The watchman was found to be dreadfully cut about the head, but his wounds are not likely to prove fatal. The housebreakers had been disturbed at the commencement of their operations, and had secured no booty. They have not yet been apprehended.

MANCHESTER.—On Friday the suspected Fenian, Patrick Mulcahy, who was apprehended in London, and charged with an attack on the police van at Manchester and the murder of Sergeant Brett, was again brought before the magistrates of this city. The witnesses swore positively to his identity, and he was committed for trial.

PRESTON.—During the past week a cotton-mill in this town has received a large consignment of spinning machinery from Belgium, which, notwithstanding the cost of transit, has been supplied at 15 per cent less than the English prices. Preston was once a noted place for the manufacture of machinery, and supplied a great part of Lancashire, now its machinery is being actually imported from the Continent.

SHEFFIELD.—The Corporation of this town, following the example of the Corporation of Liverpool, have adopted the use of Aveling & Porter's 30-ton steam road rollers for making the streets and roads of Sheffield.

SUNDERLAND.—The fine iron steamship Norfolk was totally lost on the French coast, between Cherbourg and Brest, during the late heavy gales, while on her way from the Tyne to Barcelona with a cargo of coals. It is supposed that the crew, numbering 18 persons, must have been washed off the vessel. The Norfolk was the property of Mr. R. Young, M.P., and was of about 600 tons register.

TROWBRIDGE.—The local papers report the discovery of coal on the estate of Earl Manners, near this town. Boring operations are to be commenced, with the view of testing the extent of the seam.

WALSALL.—On Thursday week a young woman named Mary Jane Youngman, who, during the past fortnight, has been exhibited as a curiosity, was interred in the cemetery of this town. She was born in New South Wales in 1850, and was 35 inches in height, being 2 inches less than Tom Thumb, and feet 6 inches round the body.

Ireland.

THE LORD MAYOR'S DINNER.—The inaugural banquet of the Lord Mayor of Dublin took place on Tuesday night. The Lord Lieutenant, who was enthusiastically received, spoke at considerable length. He regretted that a seditious spirit was rampant in Cork and other localities, but it was utterly powerless except to annoy and irritate the local authorities. The number of the conspirators was contemptuously few, and the leaders sooner or later would be brought to justice. Two-thirds of Ireland was sound to the core. He was sorry that the exceptional state of Cork should be considered too much on the other side of the water, and that the Quixotic attacks on martello towers and the plundering of gunshops should be set down as characteristic of the condition of the whole of Ireland, rather than as the peculiarly exceptional character of the remotest corner. There was, he added, a universal desire to consider the grievances of Ireland, and to examine the condition of the people. This feeling was independent of temporary Fenian alarms, and was rapidly gaining ground every day in the sister isle. He held out hopes that the result of the Railway Commission would greatly advance the commerce of the country, and said that the returns showed a decrease of 19,000 in emigration last year, and an expected further decrease this year, while the tonnage of Dublin had increased from 890,000 in 1857 to 1,436,000 in 1867, and the revenue from 26,000*l.* to 44,000*l.*

THE DUBLIN COMMISSION.—The first instance of failure in the Crown prosecutions against the Fenian agitators occurred on Friday. The jury empanelled for the trial of Messrs. Martin, Sullivan, and others, on the charge of taking part in an illegal procession in Dublin (that in honour of the men executed at Manchester), were unable to agree on a verdict after four hours' deliberation, and were, therefore, discharged. Ten of the jury are said to have been in favour of a verdict of guilty, and two for acquittal. The Attorney-General said he would not proceed to re-try the case this Commission. On Saturday morning Mr. Sullivan, proprietor of the *Nation*, and Mr. Pigott, proprietor of the *Irishman*, who had been convicted of publishing seditious libels on the Government, were brought up for sentence. Mr. Justice Fitzgerald, in passing sentence on Mr. Sullivan, said that it was the grossest folly or the most flagrant misrepresentation to say that the Fenians at Manchester were not legally and righteously executed not for a political offence, but for murder, and that government would be impossible if the administration of justice were to be so grossly libelled as it had been by the defendants. The sentence of the Court was that Mr. Sullivan be imprisoned for six calendar months from the present time, and at the end of that period that he give security, himself in 500*l.*, and two securities in 250*l.* each to be of good behaviour for two years, or in default of such security being given that he be further imprisoned for a second period of six calendar months. Baron Deasy, in passing sentence on Mr. Pigott, said that it was painful to deprive of their liberty gentlemen of education, intelligence, and ability, but the duty was imperative, and his colleague and himself had come to the conclusion that they could not consistently with their duty pass upon him a less sentence than that he be imprisoned for 12 calendar months, and at the expiration of that time enter into recognisances to be of good behaviour for two years, himself in 500*l.* and two securities in 250*l.* each, or in default be further imprisoned for six months.

THE FENIAN TRIALS AT SLIGO.—The Grand Jury at Sligo Assizes yesterday found true bills against Captain Nagle and other Fenian prisoners. Mr. Heron moved for the postponement of the trial of Nagle.

DEATH OF CONSTABLE CASEY AT CORK.—Constable Casey, who was shot by William Mackay, the Fenian captain, on the night of his arrest, died on Sunday morning, after suffering amputation of his leg. At the inquest on Monday the jury returned a verdict of Wilful Murder against Mackay, Timothy Mannix, Walter Walsh, and David Spillard. At the funeral, which took place in the evening, many Protestant magistrates, but no Roman Catholic, though Casey was of that faith, attended the funeral. When the corpse was brought out of the hospital the mob hooted triumphantly.

ATTACK ON THE HOUSE OF A CORK MAGISTRATE.—On Monday night the house of Mr. Newenham, a magistrate at Douglas, two miles from Cork, was attacked by five armed men in disguise, who demanded arms. Mr. Newenham, who was in the drawing-room, pretending compliance, went to the bed-room, locked himself in, and going to the window with a double-barrelled gun, fired at a man outside. The Fenians returned the fire, striking the window. Mr. Newenham again fired, but without effect. The house-keeper rushed into the hall exclaiming "Police!" and the men then ran off.

ANOTHER FENIAN OUTRAGE IN CORK.—On Thursday night the house of the Rev. Leshe Wilmount was attacked by an armed party of 25 men. Mr. Wilmount refused them admittance, rang the alarm bell, and fired on the assailants, who fired in return. The police hearing the alarm came out, and the Fenians decamped.

ARREST OF A HEAD CENTRE IN LIVERPOOL.—The Fenians in Limerick, alleged to be the headquarters of that city. In his house were found a "torpedo," or torpedo, capable of being used on land or under water, and some machinery which may render necessary his trial. A torpedo, the *Cork Examiner* states, has been discovered by Captain Kennedy, of HMS *Thetis*, and several other naval officers, and is of a similar form to those employed in the Black Sea, or those more recently used in the Baltic.

ANOTHER FENIAN OUTRAGE IN LIVERPOOL.—Monday night an outrage, supposed to be of a Fenian character, was perpetrated at 15, Great George-street, having arisen, one of the party named Brown, in the groin; the others escaped. A revolver was found in the street, which exploded; the others were loaded. Some time has been made in connection with the affair. His dying depositions, stated that he could not identify the party who shot him.

THE PARTY PROCESSIONS ACT.—The Government announce that the Government have commenced prosecutions against a large number of the party for trial for breaches of the Party Processions Act. Eighteen of the Protestant processionists of July and 28 Roman Catholics were drunk and charged with riot on Lady-day have received that effect. The 17 July processionists and 17 day rioters will be put on their trial.

PROTESTANT MEETING IN DUBLIN.—At the Protestants of Dublin, was held a meeting in the Metropolitan Hall, Mr. Verner, in the chair. Resolutions were passed in support of the Irish Established Church and its attachment to the throne and Constitution, and that subversion of the Church would be dangerous to the revolutionary; and that its maintenance was necessary for civil and religious liberty, the meeting determined to resist all attacks against it. The meeting was large and enthusiastic. There was great cheering on the assembly leaving the hall.

THE PURPLE FEVER IN DUBLIN.—The journals state that the cases of cerebro-spinal meningitis are becoming more numerous in Dublin, to be found at present both among the military population.

Scotland.

NATIONAL EDUCATION IN SCOTLAND.—A meeting was held in Glasgow on Friday night, for the discussion of the question of national education. The Provost occupied the chair, and in the evening resolutions were passed in favour of a comprehensive measure of national education, of a compulsory education, of an unsectarian character, that the system should be partly supported by rates. A committee was appointed to confer with the Lord Advocate, and to watch the progress of any educational measure that may be introduced in Parliament.

OVERSTOCKING OF GAME.—On Wednesday of last week a case was tried in the division of the Jury Court, Edinburgh, in which Mr. George Syme, farmer, estate of the Earl of Moray, Fifeshire, sued to the extent of 270*l.* from the trustee of the late earl, with whom he had entered leases. The issue laid before the jury was, during the year 1865, the late earl had overstocked by the pursuer an "unreasonable stock of game" beyond what existed at the dates of entering into the leases, to the loss of the pursuer. In the course of his evidence the pursuer stated that one evening in 1865, between 70 and 80 hares in a field of 100 acres, the pheasants were "so numerous that it was impossible to count them." He had seen on occasions 70 or 80 pheasants in a field of 100 acres. The loss was alleged to have been sustained in the mansion of Donibristle, that they were taken by coverts, and in a situation where it was expected to abound. Evidence was adduced that the farms had been let at a low rent, and their being liable to injury from game was a tenant taking them must necessarily have incurred 197*l.* damages.

RATTENING IN GLASGOW.—On Wednesday at Camlachie Foundry, a number of machines had been prepared by non-union men, were found to be partly filled with water, with the view to injure the workmen who had accepted the employer's terms. The design would doubtless have been realised had the water not been discovered by the iron being poured into the moulds. The officers, who investigated the circumstances, named John Stewart, an apprentice moulder, charged of being concerned in it. Stewart, 20 years of age, confessed to the crime, and was committed to the Sheriff.

Railways.

FATAL COLLISION IN SCOTLAND.—A collision place on Thursday morning between a mineral train near Arncliffe Colliery and a passenger train from Edinburgh, on the North British Railway, guard of one of the trains, a driver, and a passenger killed. The bodies, which were terribly mangled, were taken to Edinburgh to await the inquest.

COMPENSATION CASES.—In the Court of

ature for the time of year. The Wheat trade throughout the country has been less animated than of late, but the continued inquiries from the Continent have prevented any adverse change of quotations, which remain unaltered, and we notice no decided pressure to sell. Excepting an advance of 3d. to 6d. per qr. on Egyptian Beans at Liverpool, and on Oats in one or two of the parts of the east coast, we observe no change in the value of spring corn of any description. Flour moved off slowly at barely former prices. The arrivals off the coast during the week consisted of 71 cargoes, of which, with those left over from last week, there remained for sale last night 42 cargoes. The floating trade ruled steady in the early part of the week, but during the last two days arrived cargoes of Wheat have been less sought after, and the last prices paid show a decline of 1s. to 2s. per qr. from the highest price. Malt met with a slow sale. Barley and Beans were steady. Rye a fraction dearer. For Wheat on passage and for forward shipment late rates are asked, but the demand has abated. Malt was cheaper to sell. Barley firm; Rye quiet, Rapeseed and Cottonseed steady. Paris, Feb. 27.—The supply of home-grown Wheat continues small. Flour shows a downward tendency. The six marks are quoted at equal to 58s. per 250 lb. The stock at the Halle is estimated at 20,530 cwt.

The arrivals of English grain this week have been most trifling, of foreign Wheat and Barley large, but small of Oats. This morning's market was thinly attended. English Wheat met a slow sale at Monday's quotations. Business in foreign was very restricted, partly owing to the disinclination of holders to make any concession in prices. Spring Corn was unaltered in value.

ARRIVALS THIS WEEK.

	26,960	9070	7180	

LIVERPOOL, Tuesday, Feb. 25.—To day's market was fairly attended by buyers, but for Wheat there was only a limited inquiry, at prices about 1d. above those of Tuesday last. Flour steady, and prices unchanged. Indian Corn quiet, at 9d. to 1s. 3d. per qr. lower on the week. Egyptian Beans quiet at former rates. Canadian Peas dull and unchanged. Oats and Barley unchanged.

FRIDAY, Feb. 23.—The market was moderately attended. Wheat was in limited request, and prices of fine old red are about the same as Tuesday; white is 2d. to 3d. per cental dearer. In Flour there was little doing, and quotations nominal. Beans 6d. per qr. cheaper. Oats and Oatmeal a slow sale at late rates. Indian Corn in slow demand at 6d. per qr. decline, mixed American, 42s.

Dr. De Jongh's

(KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM)
LIGHT-BROWN COD LIVER OIL.
 Invariably pure, palatable, and easily taken. Prescribed as the safest, speediest, and most effective remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, AND DEBILITY OF ADULTS AND CHILDREN. Universally recognised by the highest Medical Authorities as INCOMPARABLY SUPERIOR TO EVERY OTHER.

DR. EDWARD SMITH, F.R.S., Medical Officer to the Board, in his work "On Consumption," writes:—This is the best advantage that there is a kind of Cod Liver Oil universally admitted to be genuine—the Light-Brown by Dr. De Jongh.

DR. LANKESTER, F.R.S., Coroner for Essex, observes:—"I deem the Cod Liver Oil sold under this name to be preferable to any other kind as a respiratory and medicinal efficacy."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is only in Capsules, Imperial Half-pints, 2s. 6d., Pints, 4s. 6d.; labelled with his stamp and signature, written on the wrapper. It is guaranteed to be genuine, by respectable Chemists and Druggists.

Sole Consignees.

ANSAR, HARFORD, and CO., 7, STRAND, LONDON.

RHEUMATISM.
 "Gentlemen.—A remarkable case of Rheumatism has been published to-day, and as I have permission to send a publication, I do so, hoping it may benefit some of you. I am, Sir, Captain of the schooner Mary Mary, of the Tyne, at present taking in cargo at Portrush, where I was obliged to use crutches to enable me to walk. I suffered greatly from Rheumatism. A friend of mine, before this sad state, advised him to try PARR'S PILLS. He had before he had finished taking the first box, and was able to rest. Since he commenced taking the Pills, he has lost weight, looks younger, and feels better. I am, Sir, your obedient servant, GENTLEMEN, yours truly, T. ROBERTS & Co., 5, Crane Street, London, E.C.
 PARR'S LIFE PILLS may be obtained of any Druggist in boxes, 1s. 1d., 2s. 6d., and in Family Packets, 1s. 6d., with each box.

The Gardeners' Chronicle Newspaper.

SATURDAY, MARCH 7, 1868.

Address, BENJAMIN EDGINGTON, (only), 2, Duke Street, London Bridge, S.E. No other Establishment.

RALPH WALLER AND CO., 45, Dale Street, Manchester. Manufacturers of all kinds of GARDEN NETTING, &c. The serious injury done every spring to fruit crops by frost, has proved to every gardener the absolute necessity of providing some protection to the trees early in the year. If the blossom, in its earliest development, be not slightly weakened by frost, the vitality of the fruit germs is destroyed, and the fruit is lost. In this climate, on the average of a season, there is not more than one year in 10 when the protection is unnecessary. Many fabrics have been tried for this purpose of protection, with more or less success; and we may now say, without fear of contradiction, that we have succeeded in manufacturing the only fabric which is altogether unobjectionable for this purpose. Without unduly nursing, it effectually protects the young germ, and does not impede the action of light and due circulation of air. Some other fabrics do this, and thus weaken the vitality of the tree altogether. Almost every large grower in the three kingdoms can testify to these facts.

The Nettings also make a beautiful shading for Hothouses in summer, and are cheaper than other fabrics on account of their great durability.

Netting (qualities) Nos. 1, 2, 3, in pieces of 30 yards long, 1 1/2 yards wide. Tiffany in pieces 20 yards long, 30 inches wide.

For prices, &c., apply to the above address—45, Dale Street, Manchester.

Caution to Gardeners.—When you ask for SAYNOR and COOKE'S WARRANTED PRIZE PRUNING and BUDDING KNIVES, see that you get them.

Observe the mark SAYNOR, also the Corporate Mark, OBTAIN WARRANTED, without which none are genuine.

S. & C. regret having to caution Gardeners and others, but are compelled to do so, in consequence of an imitation, of common quality, having been sold for the genuine one, and which has caused many complaints to be made to them of Knives which were not of their make, all of which are warranted both by Sellers and Makers.

S. & C.'S PRUNING and BUDDING KNIVES are the best and the cheapest in the market. Paxton Works, Sheffield. Established upwards of 125 years.

AGRICULTURAL and HORTICULTURAL PRIZES. A Pamphlet of Prices, illustrated with 300 Engravings of Cups, Goblets, Tankards, &c., will be forwarded gratis and post free on application.

GARDEN BORDER EDGING TILES, in great variety of patterns and materials, the plainest sorts being especially suited for KITCHEN GARDENS, as they harbour no Slugs and Insects, take up little room, and once put down incur no further labour and expense, as do "grown" Edgings, consequently being much cheaper.

GARDEN VASES, FOUNTAINS, &c., in Artificial Stone, of great durability, and in great variety of design.

F. & G. ROSSER, Manufacturers, Upper Ground Street, Blackfriars, S.; Queen's Road West, Chelsea, S.W.; Kingsland Road, Kingsland, N.E.

Sole London Agents for FOXLEY'S PATENT GARDEN WALL BRICKS. Illustrated Price List free by post. The Trade supplied.

ORNAMENTAL PAVING TILES for Conservatories, Halls, Corridors, Balconies, &c., as cheap and durable as Stone, in blue, red, and buff colours, and capable of forming a variety of designs.

Also TESSELATED PAVEMENTS of more enriched designs than the above.

WHITE GLAZED TILES, for Lining Walls of Dairies, Larders, Kitchen Ranges, Baths, &c. Grooved and other Stable Paving Bricks of great durability, Dutch and Adamantine Clinkers, Wall Copings, Red and Stoneware Drain Pipes, Slates, Cement, &c.

To be obtained of F. & G. ROSSER, at their premises as above.

SILVER SAND (REIGATE, best quality), at the above addresses—14s. per Ton, or 1s. 3d. per Bushel; 2s. per Ton extra for delivery within three miles, and to any London Railway or Wharf. Quantities of 4 Tons, 1s. per Ton less.

FLINTS, BRICK BURRS or CLINKERS, for Rockeries or Grotto Work. F. & G. ROSSER.—Addresses see above.

N.B. Orders promptly executed by Railway.

Oil Paint no longer Necessary.

HILL and SMITH'S PATENT BLACK VARNISH for preserving Iron Work, Wood, or Stone. This Varnish is an excellent substitute for oil paint on all out-door work, and is fully two-thirds cheaper. It may be applied by an ordinary labourer, requires no mixing or thinning, and is used cold. It is used in the grounds at Windsor Castle, Kew Gardens, and at the seats of many hundreds of the nobility and gentry, from whom the most flattering testimonials have been received, which Hill & Smith will forward on application.

From J. A. TAYLOR, Esq., Streatham Court.

"In answer to your inquiries, I beg to inform you I find your Black Varnish an excellent substitute for oil paint upon iron and wood out of doors, and have found the iron Barrow with apparatus essential in applying the Varnish to lines of fencing. I can strongly recommend the Black Varnish for all out-door work as superior to anything I have yet used for the purpose, and it can be applied with great economy by careful labourers."

Sold in casks of about 30 gallons each, at 1s. 6d. per gallon, at the Manufactory, or 1s. 3d. per gallon paid to any Station in the Kingdom. Apply to HILL & SMITH, Brierly Hill Iron Works, near Dudley, and 22, Cannon Street West, E.C., from whom only it can be obtained.

CORNS and UNIONS.—A Gentleman, many years tormented with Corns, will be happy to afford others the information by which he obtained their entire removal in a short period, without pain or any kind of inconvenience.—Forward address on a stamped envelope to F. KIRKMAN, Esq., Cheam, Surrey.

Notice of Removal. WILKINSON AND KIDD, SADDLERS to HER MAJESTY, AND H.R.H. THE PRINCE OF WALES, Have REMOVED their Establishment from the Corner of Park Street, Oxford Street, to 6, HANOVER SQUARE, W (Adjoining the Queen's Concert Rooms.) Established 1786.

THE LANDS IMPROVEMENT COMPANY,

Incorporated by Special Act of Parliament in 1853.
 To LANDOWNERS, THE CLERGY, ESTATE AGENTS, SURVEYORS, &c., IN ENGLAND AND WALES, AND IN SCOTLAND.
 The Company advances Money, unlimited in amount, for the following works of Agricultural Improvement, the whole outlay and expenses in all cases being liquidated by a rent-charge for 25 years:
 1. Drainage, Irrigation, and Warping, Embanking, Inclosing, Clearing, Reclamation, Planting, for any beneficial purpose, Engines, or Machinery for Drainage or Irrigation.
 2. Farm Roads, Tramways and Railroads for Agricultural or Farming purposes.
 3. Jettyes or Landing-places on the sea-coast or on the banks of navigable rivers or lakes.
 4. The Erection of Farm Houses, Labourers' Cottages, and other Buildings required for Farm purposes, and the improvement of and additions to Farm Houses and other Buildings for Farm purposes.
 Landowners assessed under the provisions of any Act of Parliament, Royal Charter, or Commission, in respect of any public or general works of Drainage, or other improvements, may borrow their proportionate share of the cost, and charge the same with the expenses on the lands improved.
 The Company will also negotiate the Rent-charges obtained by Landowners under the Improvement of Land Act, 1864, in respect of their Subscription of Shares in a Railway or Canal Company.
 No investigation of title is required, and the Company being of a strictly financial character, do not interfere with the plans and execution of the Works, which are controlled only by the Government Enclosure Commissioners.
 Apply to GRANVILLE R. RYDER, Esq., Managing Director, 3, Parliament Street, London, S.W.

COLONY of NATAL.

IMMIGRATION and FREEHOLD LAND GRANTS.
 GRANTS of GOVERNMENT LAND are given to Men familiar with Farming operations, and possessing sufficient means to turn their Land to account.
 Applications for further information to be made to Dr. MAXX, the Special Agent of the Natal Government, at the Natal Immigration Office, 15, Buckingham Street, Strand, London, W.C.

Home News.

RETURN OF THE COURT TO WINDSOR.—The Queen, accompanied by the Princesses and Prince Leopold, left Osborne on Tuesday afternoon at 3 o'clock, and arrived at Windsor Castle shortly after 6. Her Majesty crossed over to Gosport in the Royal yacht *Alberta*. On Wednesday morning the Queen drove in the grounds with Princess Louisa, and in the afternoon drove out with Princess Christian. Mr. Gathorne Hardy arrived from London. Sir James Clark arrived from Bagshot. On Thursday morning the Queen drove out. Yesterday morning her Majesty came to town, with Prince and Princess Christian and Princess Louisa, and drove from Paddington Station to Buckingham Palace, escorted by the 3rd Hussars.
THE COURT AT OSBORNE.—On Thursday the 27th the Queen, accompanied by the Princesses and Prince Leopold, was present at some sports performed by the detachment of Scots Fusilier Guards doing duty at Osborne. The Right Hon. Benjamin Disraeli arrived from London, and kissed hands on his appointment as First Lord of the Treasury. Mr. Disraeli remained at Osborne on a visit. On Friday the Queen drove out in the morning and afternoon with Princess Louisa. On Saturday morning the Queen drove out with Prince Leopold. In the afternoon the Queen held a Privy Council, at which Lord Chelmsford had an audience, and delivered up the Great Seal. Lord Cairns had an audience on being appointed Lord Chancellor, when her Majesty delivered to him the Great Seal. Mr. Disraeli had an audience, and delivered up the seals of office of Chancellor of the Exchequer. The Queen then delivered the seals to Mr. Ward-Hunt, who was sworn in as a Privy Councillor. Her Majesty conferred the honour of knighthood on William Bahol Prett, Esq., M.P., Solicitor-General. Mr. Disraeli and the other Ministers afterwards left for London. Sir William Jenner arrived on a visit. On Sunday morning the Queen, accompanied by Princess Louisa, attended Divine service at Whippingham Church; the Rev. G. Prothero officiated. In the afternoon the Queen drove out with the Princesses. On Monday morning the Queen walked and rode with the Princesses and Prince Leopold.
THE PRINCE AND PRINCESS OF WALES.—The Prince returned to Marlborough House on Saturday afternoon from Badminton. The Princess drove out with Princess Mary of Teck. In the evening their Royal Highnesses dined with Prince and Princess Mary of Teck, at Kensington Palace. On Sunday morning the Prince and Princess attended Divine service at the Chapel Royal, St. James's. The Bishop of Rochester preached the sermon. On Monday the Prince hunted with Her Majesty's stag-hounds. The Princess drove out. On Tuesday morning the Prince rode out. The Princess drove out. In the afternoon the Prince held a Levee at St. James' Palace on behalf of her Majesty. In the evening their Royal Highnesses dined with the Duke and Duchess of Sutherland, at Stafford House. On Wednesday the Prince rode out. The Princess drove out. On Thursday the Prince hunted with Baron Rothschild's stag-hounds. The Princess drove out. In the evening their Royal Highnesses dined with the Duchess of Cambridge at St. James's Palace.
COURT MOURNING.—It is announced that the Court will go into mourning to-morrow for the ex-King of Bararia, but that the Queen has been pleased to dis-

pense with it at her Majesty's Drawing Room on the 12th inst., excepting for her Majesty's Household, on account of the injury which might be occasioned to trade.

THE CABINET.—A Cabinet Council was held on Monday at the official residence of the First Lord of the Treasury, in Downing Street. Another Council was held on Tuesday.

CONSERVATIVE MEETING.—A meeting of the supporters of the Government in the House of Commons was held on Thursday at the official residence of the First Lord of the Treasury, in Downing Street. Upwards of 160 members of the party were present. Mr. Disraeli, who was received with enthusiastic cheers, addressed the meeting as follows:—

"He began by alluding briefly to the loss the country, the Conservative party, and he personally had suffered in Lord Derby's retirement. But he was glad to be able to state that they would still have the benefit of the noble lord's council, and that in a short time he would be able to return to his old seat in the House of Lords. He admitted the difficulties that lay in their path as a minority having to deal with the great questions now pressing on their attention. But the past two years had given them great triumphs, and he had every confidence that with a firm front they might add to them fresh triumphs in 1864. He next alluded to the Scotch Reform Bill, which, he said, must be carried with its main features intact, in order that the whole question of Reform might not be reopened. To the Irish Reform Bill, which would be introduced at once; and to the report of the Boundary Commissioners, which, as the result of the deliberations of a thoroughly impartial tribunal, must be respected. In regard to the treatment of Irish questions, he left the secretary of Ireland to make the ministerial statement on the occasion of the discussion on Mr. Maguire's motion. He concluded by expressing his confidence in the future, and reiterating his expressions of gratitude for the warm support he had experienced."

Sir John Trollope, as the oldest member of the House present, assured Mr. Disraeli of the cordial satisfaction with which the party hailed him as their leader, and Sir Stirling Maxwell, Bart., expressed the same sentiments on behalf of the Scotch Conservatives.

ILLNESS OF THE BISHOP OF WINCHESTER.—On Wednesday afternoon the Bishop of Winchester was attacked by paralysis on entering his carriage at Farnham Castle. Dr. Sloman, his Lordship's medical attendant, immediately telegraphed for Dr. Gull, of London, who arrived at Farnham in the evening. The case was pronounced a severe attack of paralysis, rendering one side completely powerless, and depriving his Lordship of the power of speech. The accounts yesterday stated that there was no improvement. His Lordship, although speechless, is completely aware of everything passing around him. He was born in 1790, and has been Bishop of Winchester for more than 40 years.

Foreign.

FRANCE.—Prince Napoleon left Paris last week, after a private interview with the Emperor, on a journey through North Germany. His absence is expected to extend over several weeks, and a rumour is current that he is entrusted with a diplomatic mission to the Court of Berlin. Public opinion in Paris has connected the Prince's journey with an alleged estrangement between France and Russia on the Eastern question, the mere mention of which has again given rise to rumours of war. The *Patrie* of Saturday, however, in reference to these reports, says, that it is enabled to state positively that Prince Napoleon has not been entrusted with any mission whatever. The *France* of Friday says that Baron de Budberg, the Russian Ambassador, had a long interview on that day with the French Minister of Foreign Affairs, and that since the Baron's return, in interviews with many political personages, he has energetically proclaimed the sincerity of the political sentiments of Russia, and her firm resolution not to separate from the other cabinets in the questions concerning the condition of the Christians in the East. The *Presse* says that Marshal Regnault de St. Jean d'Angely, Commander of the Imperial Guard, has issued a circular ordering the recall of the soldiers belonging to the Guard who have received leave of absence till the 31st of March, and prohibiting any leave of absence being granted without a report first being made to the superior authorities. The *France* says that this recall of the Imperial Guard is not the result of exceptional circumstances, but simply the execution of an annual regulation. In the sitting of the Corps Législatif on Monday M. Havin said that he did not intend to read to the Chamber the verdict of the Jury of Honour in the case of the charge brought by M. Kerveguen, but should simply state that the jury had declared the allegations of M. Kerveguen to be false and calumnious. M. Havin was repeatedly interrupted during the delivery of his observations. When this incident had subsided, M. Jules Simon requested an explanation respecting the regulations of the Chamber as interpreted by the President at the termination of the last sitting. M. Jerome David replied that, as President he could not have acted otherwise than he had acted. The report of the previous sitting was then read and passed. The Committee's report on the Bill relative to the contingent of 100,000 men and the third supplementary report of the Committee upon the Press Bill were laid upon the table. In the sitting of Wednesday the election of M. Estournel, the deputy for Peronne, was annulled. The Bill fixing the contingent at 100,000 men then came on for discussion. M. Rouher, in reply to M. Picard, said that the relations of France with foreign Powers were excellent, and that the clouds which had begun to appear, and had caused various alarming reports, were now entirely dispelled. Marshal Niel made a speech, in which he

will be more economical. Next spring the whole army will be armed with the new rifle, the most known. In consequence of its adoption in France other Powers are obliged to reform their armaments. It has a two years' start of them, which is a great consideration the events which have been accomplished. Protected by this strong organisation, the country is itself in security to the labours of peace.

M. Picard's amendment was rejected by a majority of 220 to 29. Another amendment by M. Haubert was also rejected. An amendment by M. Picard, to apply to volunteers and substitutes to the military standard height, which has been lowered to 55, was opposed by Marshal Niel, but was rejected by a majority of 122 to 104. An amendment by M. Breton, proposing to organise a contingent of 10,000 eastern departments, consisting of battalions of Chasseurs, whose duty it would be to guard the forests of the Ardennes and the Vosges, was rejected. In the sitting of Thursday the debate on the Press was resumed. Various amendments were proposed to reduce the stamp duty on newspapers, and were brought forward and successively rejected. Article 3 of the Bill then passed. An Imperial Decree of the 18th article of the Commercial Treaty between France and Mecklenburg. Another decree approving a ratification signed on the 21st ult. between France and Italy, concerning the privileges granted to French subjects in Italy, and to Italian subjects in France. It provides that the subjects of either country shall respectively be exempt from all service in the national guard, or militia; from all judicial, administrative functions, forced loans, and military requisitions. A Ministerial ordinance, signed by Marshal Niel on the 18th ult., fixes the price of exemption from military service for 1869 at 2500*fr.* The *Moniteur*, in its issue of Wednesday, alluding to the retirement of Lord Derby, says that few statesmen have so much deserved the popularity and the respect of his fellow-countrymen, both on account of the greatness of his talents, and the celebrity of his talents. It adds that the selection of Mr. Disraeli has been favourably received, and that the desire is felt to do justice to a man who has surmounted so many difficulties to arrive at the position he now occupies. The Council of Ministers has decided that the Boulevard project projected by Baron Haussmann to traverse a corner of the cemetery of Montmartre shall not be made. The Emperor reported to have said:—"Public opinion respects the project, which, besides, is not of indispensable necessity. Satisfaction should be given to the feelings which animate the population of Paris on the subject." A ship, the *Devonshire*, Captain Clark, from Alexandria, with grain, was lost, with all hands, on the 16th ult., and a passenger called Epps, on the 19th, nine miles north of Boulogne, at 10 P.M. on the 16th. She has gone to pieces.

BELGIUM.—The English schooner *Mary*, Captain Marshall, laden with naphtha and pitch, was caught fire at Antwerp on Tuesday morning, and in consequence of an explosion on board the ship was destroyed, and the captain and crew perished.

HANOVER.—A Royal decree was issued at Berlin on Tuesday relative to the sequestration of the property of King George of Hanover, and announced that the Supreme Court had decided to proceed against Count Platen, King George's Minister at Hietzing, on the charge of high treason. The official *Provincial Correspondence* of Berlin of Wednesday says:—

"The proceedings taken by the Government against the ex-King of Hanover will undoubtedly meet with the approval of the Prussian people. The European Powers regard them as being inevitable, being determined by justice and by policy. The Government's measures they have adopted will not entirely prevent the continuance of those senseless enterprises, which are really dangerous to Prussia. Nevertheless, the measures taken will put a stop to the abuse of Prussia's good-will, and the furtherance of criminal plans hostile to the King. It will also cause the adherents of the ex-King to be the Powers most immediately concerned, France as well as England. They have this time equally shown what value they attach to the continuance of good relations with Prussia."

PRUSSIA.—The King of Prussia closed the sitting of the Chambers on Saturday with a Speech from the Throne, of which the following is a summary:—"His Majesty expressed his satisfaction that the measures had been passed, mainly by the just action of the Government and of the representative bodies of the country, which had placed the Chambers of the Diet in a position to have displayed in voting additional guarantees for the maintenance of the dignity of the Crown. The King then alluded to the measures which had been adopted to allocate the contingent in the province of East Prussia, and for the establishment of a provincial fund for Hanover. His Majesty then alluded to the unanimity of views displayed by the Chambers and the Government respecting the compensation of the former rulers of Hanover, and concluded as follows:—"My Government has endeavoured to maintain the relations, has incessantly endeavoured to preserve the influence for the preservation and consolidation of Europe, and I may state with satisfaction that these endeavours, inasmuch as they were pursued in the Governments of foreign Powers in the most judicious manner, bore within themselves the seeds of success. I may, therefore, express the confidence that the family based general confidence in the good-will and material welfare, and the prosperity of Europe will bear the desired fruits."

Prince Napoleon arrived in Berlin on Wednesday night, travelling under the title of Count Mecklenburg, and will remain for 10 days. On Thursday the Prince of Prussia paid a visit to Prince Napoleon at the Hotel Royal. His Imperial Highness afterwards proceeded to the Royal Palace in one of the King's carriages to visit the King. His Majesty returned the visit of his Imperial Highness. Princes Carl Albrecht and Aualbert, Duke of Wurtemberg, and Count Bismarck also visited Prince Napoleon, who had previously visited the Prince and the Queen Dowager at Charlottenburg. Prince Napoleon dined with the King at a Court

"The Opposition will soon have reason to regret having attacked the new military organisation of France, that organisation will be a pledge of safety for the country, it will fall less heavily upon the population than the former one, and

more than half his life. He then explained that the policy of the new Administration was identical with that of Lord Derby's Cabinet, that their foreign policy would be that which had obtained for Lord Stanley the approbation of the country and the confidence of Europe—a policy of peace, but not a policy of peace at any price, nor of selfish isolation, but a policy of sympathy with foreign nations as well in their anxieties and troubles as in their prosperity. In domestic affairs, he said with much emphasis, they would follow "a Liberal policy" (a remark which was received with loud cheers from below the gangway on the Opposition side, followed by counter-cheers from the Ministerialists) when he added—"a truly Liberal policy," which would not shrink from any changes required by the wants of the age, but always bearing in mind that this was an ancient historic country, rich in traditionary influences, which were the best security for order and liberty, and the most valuable elements of our national life and strength. He next touched on the Irish question, and while regretting the necessity of the suspension of the Habeas Corpus Act, said that in the approaching debate on the condition of Ireland, Lord MAYO would take the earliest opportunity of stating the Irish policy of the Government in detail. He concluded by expressing regret at the delay of public business caused by the ministerial changes, and assured the House that his Government would spare no labour to advance public business, and would give every facility in their power to the motions of the Opposition. Mr. BOUVERIE asked whether the Government meant to adopt the policy of Lord Derby when he came into office, or that which inspired the Reform Bill. The new Administration, like the last, did not possess sufficient Parliamentary power to carry on the business of the country satisfactorily; and while he admitted that the Liberal party did not deserve the name of a party, and was little better than a rabble, he regretted that Mr. Disraeli, in reconstructing the Government, had not invited the co-operation of some of the leading members of the Opposition, in order that a strong and united Ministry might have been formed. Mr. HARDY moved the second reading of the Capital Punishment Within Prisons Bill, the object of which was to put an end to public executions. Mr. Serjeant GASELER moved as an amendment that the Bill be read a second time that day six months. After some discussion, the amendment was negatived by 181 to 25, and the Bill was read a second time. Mr. DISRAELI, in moving the second reading of the Election Petitions and Corrupt Practices at Elections Bill, said that it was proposed to establish a new tribunal for the trial of election causes, to consist of two judges of the Superior Courts, to be nominated by the Crown, and to cease to be ordinary judges. It would be their duty to investigate controverted elections on the spot, and also to act as members of the Judicial Committee of Privy Council and of the Exchequer Chamber, or any other Court of Appeal which might be established in its place. After some remarks by Mr. GLADSTONE, the Bill was read a second time. Yesterday Mr. SHAW LEFEBVRE called attention to the failure of the negotiations with the United States Government for arbitration of the Alabama claims, and expressed his regret that Lord STANLEY, although expressing himself as willing to submit the matter to arbitration, had excepted the question of the recognition of the Southern States. Lord STANLEY believed that, however strict had been the neutrality of this country, it would have fallen short of what was expected of them by the Northern Americans. In his opinion the question was one which time would greatly simplify. The House was left sitting.

City Intelligence.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 93 to 93½ both for Money and Account; New and Reduced Three per Cents., 91½ to 92 ex div; India Five per Cents., 112½ to 113½; Bank Stock, 249 to 251; Exchequer Bills, 10s. to 15s. pm.—**FOREIGN:** Italian, 45½ to 46; Orel-Vitebsk Railway Loan, 77½ to 78; Viceroy's Seven per Cent. Bonds, 74½ to 75; New Spanish, 36½ to 36¾; Turkish, 32½ to 33½; Egyptian Railway Debentures, 90½ to 91½; Mexican Bonds, 15½ to 15¾; Greek, 12½ to 12¾; Egyptian (1864), 71½ to 75; Brazilian, 71 to 72; United States 5-20 Bonds, 71½ to 71¾; Erie Railroad, 46 to 47; Illinois, 88½ to 89½.

Metropolis and its Vicinity.

THE EASTER VOLUNTEER REVIEW.—On Tuesday a meeting of Volunteer commanding officers was held at the rooms of the National Rifle Association in Pall Mall, Lord Truro in the chair, for the purpose of determining the locality in which the Easter Monday Review for 1868 should be held. Three places had been proposed—Dover, Brighton, and Portsmouth, and the report of the committee which had been appointed to visit the several places, and make inquiry as to the suitability of the ground, as well as to the sufficiency of the means of transport and accommodation, was presented by Lord Ranelagh. The committee had decided to recommend Portsmouth, on account of the advantages it presents for a combination of regular troops with the Volunteers in the manoeuvres, and because it will allow a great many country corps to join which had not hitherto had that privilege. An amendment in favour of Brighton was moved and lost, and a resolution adopting the recommendation of the committee as to Portsmouth was carried by a large majority. It is understood that the Volunteers on their arrival at Portsmouth will rendezvous on the glacis of the town fortifications of Portsea and Portsmouth, and afterwards march past the reviewing officer on Southsea Common. The after manoeuvres

will commence where the Hilsea defensive lines guard the entrance to the island of Portsea from the mainland over the tidal channel which unites the harbours of Portsmouth and Langston. Portdown Hill and forts will be supposed to be in possession of the enemy, who has successfully landed on the Sussex coast, and who has now, as the next step towards the capture of Portsmouth Dockyard and Arsenal, completely invested the Hilsea position. The defenders determine upon a sortie, and this will be made in great force in pontoons and other bridges at three points, supported by gunboats, &c. The battle will be fought out over the ground between the Hilsea lines and the crest of Portdown Hill, and will eventually terminate with the defeat of the enemy and the relief of Portsmouth.

THE CLERKENWELL OUTRAGE.—On Tuesday morning Timothy Desmond, William Desmond, Nicholas English, James O'Neill, John O'Keefe, Michael Barrett, and Anne Justice were again brought before Sir Thomas Henry, and finally committed to Newgate for trial at the April sessions of the Central Criminal Court, for the wilful murder of the persons killed by the explosion at the House of Detention at Clerkenwell. The prisoners were brought from Millbank Prison in a police van, attended, as usual, by a strong escort of mounted and armed police, arriving at the court at the early hour of 8 o'clock. They were at once taken before the chief magistrate, who had attended specially for that purpose. They were placed at the bar and finally committed. The two Desmonds and English complained that they were not in possession of funds to pay the expenses of their defence, and were referred by Sir Thomas Henry to the Sheriffs, who would no doubt see that proper steps were taken. They were then removed back to the van, which drove away with them at 5 minutes past 8, and conveyed them direct to Newgate. In the afternoon Mullaney was brought up, and was also fully committed on the charge of treason-felony.

ATTEMPT TO MURDER TWO POLICEMEN.—On Tuesday, at the Clerkenwell Police Court, an Irishman, named Thomas O'Horan, aged 22, who described himself as a shoemaker, and refused his address, was charged with discharging a loaded revolver at John Henry Hill and Porteus Maley, police-constable 216 S, with intent to murder them, at Whitecross Street, St. Luke's. It appeared that Hill, who was formerly a constable of the A division but is now retired, and living on an independent income, was turning out of Finsbury Square into Chiswell Street, on his way home, when the prisoner suddenly appeared in front of him, and presenting a pistol at his head, fired from a distance of six yards. The bullet passed his right ear, and a second shot followed, which also whizzed by his right ear. A third shot was then fired, when shouts of "Murder!" and "Police!" bringing assistance, the prisoner made off up Whitecross Street. One of the two men who came up was a policeman named Maley, who on being told what had happened ran after the man with the revolver, who was walking quietly along as though nothing had happened. Maley and Hill seized him, and a desperate struggle ensued. The prisoner struggled to get his right arm free, and at last succeeded, fired over Hill's shoulder two shots at Maley, both of which missed him, but a piece of one of the caps went into Hill's eye, whose face, as well as that of Maley, was blackened by the powder. Another man then came up, with whose assistance the prisoner was secured and taken to the lock-up, where he expressed his willingness to "do 10 years for this." The revolver in his possession was a new one with five chambers, all of which were empty, which was accounted for by the five shots that had been fired. The police-sergeant, after the prisoner had been secured, went back and examined the spot, and on a gate-post, exactly opposite the spot where the first shot was fired, found the dent of a bullet. The prisoner, who treated the matter with the greatest indifference, made no defence, and was committed for trial, but will be brought up again on Tuesday next for the completion of the depositions. The police have reason to believe that he was engaged in the Fenian rising in Ireland in the early part of last year, and that since he came to this country he has been actively employed in the movement. It is said that Hill, one of the persons shot at, has been engaged in watching the Fenians, and that, it is considered, is the reason why he was attacked.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London states that in the week that ended on Saturday, February 29, 4865 births and 3017 deaths were registered in London and in 18 other large towns of the United Kingdom. The annual rate of mortality was 25 per 1000 persons living, being 21 per 1000 in London, 31 in Edinburgh, 27 in Dublin, 26 in Bristol, 27 in Birmingham, 29 in Liverpool, 32 in Manchester, 28 in Salford, 20 in Sheffield, 21 in Leeds, 27 in Hull, 23 in Newcastle-upon-Tyne, and 33 in Glasgow. The rate in Vienna was 35 per 1000 during the week ending the 22d ult. In London, the births of 1206 boys and 1118 girls, in all 2324 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2223. The deaths registered in London during the week were 1266. It was the ninth week of the year, and the average number of deaths for that week, corrected for increase of population, was 1551. The present return is, therefore, 285 below the estimated number.

Provincial.

DOVER.—The Belgian mail steamer Rubis, from this port to Ostend, ran on shore near Ostend on Thursday. The mails and passengers, with their baggage, were

saved; but the vessel was a total loss. The papers state that during the last winter one of the fishing boats that usually work off Dunkirk, Calais was driven by stress of weather as far as the fisherman had let down his nets to retrieve the progress of his vessel, on taking it up, it contained magnificent oysters. He kept it to himself for some weeks, sending lots of them to London; but at last the other fishermen found the place, and now the whole fleet of from 200 to 200 boats have quitted the Calais banks of Ostend. This new bank is reported to be as broad as leagues in breadth, and is within sight of Blackenbergho. It is said that the quantity of oysters is "incalculable," and that new beds are discovered.

MARKET WRIGHTON.—On Sunday morning a man was found murdered in a drain adjoining the railway leading from Cliff Common station on the railway to Weighton turnpike road, where it meets. The neighbourhood is very lonely. A man named William Jackson, a groom, in the employ of Mr. Micklethwaite, of Blackwood house, was going at a quarter past 9 on Sunday morning last when at a place about 500 yards from the four-mile he found a bundle, a hat, and a trowel in the middle of the road, and a little further on the right hand of the road he found a thick hedgestake, about five feet long, and bloody at one end. On searching he discovered the body of a man in the nearly covered with water, his head only protruding the side of the drain. The arms were raised in an attitude of defence; the head presenting a horrid spectacle. In addition to a dreadful wound on the side of the eye, which was sufficient to cause death, there was another at the back of the head, under the chin, and a very severe one on the right side of the head, dividing the ear. Alarm was immediately given, and the rural police, together with several constables were immediately on the spot. The body was taken out of the water and conveyed to South Driffield. The deceased was dressed as a working man, and much like a bricklayer, but not of a common class, every part of his attire being good. He was a man of about 28 years old, well built, and of a height. His name is not yet known, nor his residence be discovered, but in his pocket were found two letters; one addressed from "Mrs. Driscoll, Tottenham, Middlesex," "My dear mother," and ended "Your affectionate son, Daniel Driscoll." To every appearance he had been robbed.

TODMORDEN.—On Monday night a murder was committed in this place by a weaver of chevise named Miles Wetherill. It appears that for some time Wetherill had been paying his addresses to Sarah, a servant living with the Rev. A. J. Plow, at the sonage, and in consequence of his visits the woman had been discharged, and went back to York, where her parents lived. On Saturday and Sunday Wetherill appeared to have resolved on taking vengeance on her late master and mistress, as well as upon the maid, who was supposed to have told of his visits to his fellow servant. About half-past 10 o'clock on Monday night Mr. Plow, who was preparing to retire to his bedroom, heard a noise at the back door, and proceeded to the back of the house, where he met Wetherill with a pistol and hatchet in his hand. Wetherill immediately snapped a pistol at him, which missed fire. He next attacked Mr. Plow with the hatchet, but Mr. Plow closing with him, fell backwards struggling into the lobby of the house through the back door. The noise alarmed the servants, and the housemaid, cook, and nurse, who saw what was the matter. Some of them seized Wetherill by the hair and clothes to hold him in the hall door, but not until he had received two or three wounds at the back of the head, and another on the top of the head, several cuts on the forehead, and torn from top to bottom, and other wounds on the women also got out of the murderer's way. Wetherill, having locked the front and back door, and having sought shelter in the dining-room, and kept the murderer at bay by placing her back to the door; Wetherill, however, managed to get his right arm through the door, and discharged a pistol, shooting her dead. He next went into the lobby, armed himself with a poker, and proceeded to a bedroom in which Mrs. Plow, who had just given birth to a child, was lying. The murderer told her he could not go there, but he told her to get up as he had finished those below, and forced her to get up. Stripping down the bed-clothes, he fired at Mrs. Plow, but the ball did not take effect. He then attacked her savagely with the poker, inflicting severe scalp wounds, breaking her nose, and injuring her. While in the act of striking her, a blow at her his arm was arrested by Mr. Plow, who was church organist, who had seen Mr. Plow, and accompanied by two other men. He was removed and given over to the police. It is reported he was armed with three pistols and a hatchet. He went to the house. He behaved with great coolness in custody, remarking that he had done his best to do it, and was only sorry the pistol had not done better. The lobby of the house was marked with blood like a slaughter-house. The housemaid and nurse are lying in a precarious state, but it is thought that their injuries are not fatal. At the inquest on Wednesday the jury returned a verdict of Murder against the prisoner, who made a confession, and said he committed the murder because he would not allow him the privilege of being a sweetheart.

Ireland.

FENIAN TRIALS AT SLIGO.—On Friday at Sligo the bills were found against Captain Nagle and other Fenian prisoners charged with treason. Captain Nagle, an American officer of some repute, was charged with having been one of the chiefs of the Fenian expedition. As it is known as the Jacknell expedition. As an American citizen, he had a right to a jury half composed of Americans, and his case having excited much interest, the Government of that country had incurred the expense of his defence. On the jury returning a verdict for the defence, applied for a writ of habeas corpus to remove the trial to the Queen's Bench, on the ground that six Americans could not be found in Sligo. Judge Fitzgerald refused, and the prisoner was entitled to a mixed jury, but the Government might be of any country. Nagle was arraigned. Mr. Heron asked that the indictment be quashed, on the ground that six of the jurors were not resident in the county. The Court decided against the objection. The Court repelled the interference of Mr. Heron, through whom the offer was made. Saturday Nagle was again placed at the bar, when a jury panel, containing the names of twelve of whom were Prussian seamen, was called, only six answered, and three of these, being members of the Sligo Rifles, were objected to. Mr. Heron applied for a postponement of the trial. The Attorney-General consented, and Judge Fitzgerald ordered that the proceedings should be removed by writ into the Queen's Bench, and the prisoner be committed to custody. On Monday a juror having been called during the trial of Nugent, the prosecution was postponed, and the trial concluded.

THE CASE OF CAPTAIN MACKAY.—The American Government has declined to aid by counsel Captain Mackay whose true name is Lomasney on his trial, on the ground that he violated British law on British soil. He was born in Boston in the United States.

THE LATE OUTRAGE AT CORK.—It appears that the late attack on the house of the Rev. Mr. Mackay, near Cork, between 36 and 40 bullet marks have been counted about the hall-door and the rest of the house. Of these, 14 were found in the hall-door, which is strong that none of them actually penetrated it. The entry is entered by a door only a quarter of an inch thick, and through this three bullets were fired.

ATTEMPT TO FIRE THE BUTTEVANT BARRACKS.—An attempt was made on Wednesday week to burn the magazine at the military barracks of Buttevant, in the county of Cork. A loud explosion alarmed the military and villagers, and the next morning the magazine wall adjacent to the magazine was discovered perforated by some explosive missile.

ATTEMPT TO BURN A WAREHOUSE AT LIMERICK.—An attempt was made on Monday night to burn the drapery establishment of Messrs. Cannock, in Limerick, by throwing a bottle of explosive into the rear of the premises. The fire was soon discovered, and extinguished before any damage was done.

AN OUTRAGE IN DUBLIN.—On Thursday week, a young man named Briscoe was shot in the house in Gregg's Lane, off Sackville Street, under mysterious circumstances. A bullet entered his thigh, but he recovered from the wound. The owner of the house and four or five young men who were seen remanded. A song, reprinted from one of the "National" papers, and headed "God save Ireland," was sung by one of them. Shortly after the occurrence the attention of a passer-by was attracted by a man shouting in the kennel, and on examination was discovered to be a revolver, one of the chambers of which had been recently discharged. The wounded man was removed to the hospital, where he died on Saturday from the result of the wound. He adhered to the statement first made by him, that he did not give any information concerning the revolver until the inquest, found that he was accidentally

MR. JOHN MITCHELL ON THE PROSPECTS OF THE FENIAN ORGANISATION IN AMERICA.—Mr. John Mitchell, to whom the leadership of the Fenian organisation in America was lately given, has written a long letter to Mr. John Martin, Secretary of the Fenian Society in Dublin, explaining his reasons for declining to accept the position. He says that in the United States there is a "confusion and disarray;" that the Fenian element, therefore, is completely paralysed, and, for any Irish purpose, utterly ineffective. This is not, however, because of the disunity of the original vice of the organisation itself, but because of the wrong basis by that wretched organisation upon the project of immediate insurrection in Ireland while England was at peace. The Fenian project, he adds, was in itself wild, and could only be made to look feasible by systematic "posture." False pretences have been used to deliberately cheating each other on opposite sides of the Atlantic. The Fenian army was for ever on the point of fighting the Fenian army, and "the men at home were carefully

taught to believe that in America there was a great and powerful Irish nation, with unlimited resources, and army and navy both willing and able to give their important aid in troops and arms, with the connivance, or even in spite of the United States Government." He asserts, however, that there is zeal and patriotic devotion enough, if properly directed, to "go where the work lies ready for it," but this cannot be done, simply because the "government of the country in which his fellow-countrymen and himself reside will not suffer that, and is able to hinder and bound to hinder that." The American Government, he further states, "has its hand firmly upon the whole movement, but it has made use of it, by holding it up in *terrorem* before the eyes of England, to induce her to be more compliant in the diplomatic discussions which are going on between London and Washington."

THE ORANGE PROCESSIONS IN THE NORTH.—At the Downpatrick Assizes on Friday, a number of Roman Catholics and Protestants pleaded guilty to a breach of the Party Processions Act, and were discharged on their own recognisances, to come up for sentence when required. Mr. William Johnston, of Ballykilbeg, Grand Master of County Down and Grand Secretary for Ireland, who was charged with participating in the Bangor procession on the 12th of July, refused to plead guilty, and was put on his trial, declining to take a seat elsewhere than in the dock. The jury found him guilty, and on Saturday he was sentenced to a month's imprisonment. Judge Morris in passing sentence stating that his not pleading guilty had prevented the Crown from dealing with him as it had done with other traversers, against whom it did not press for punishment. Mr. Johnston has since memorialised the Lord-Lieutenant, and agreed to enter into recognisances, and he will at once be discharged from custody. Before they separated the grand jury passed a resolution, expressing disapprobation of party processions, as calculated to create disturbances and perpetuate animosities among her Majesty's subjects, and pledging themselves to discourage such illegal acts.

ARREST OF MR. TRAIN IN DUBLIN.—Mr. Train, who was to deliver a lecture in Dublin on Tuesday night, was arrested in Nassau Street, as he was going to the Rotunda, for an old debt on a judgment obtained by Messrs. Crickmer & Co., of London, for goods supplied to him in connection with his tramway scheme. About 500 persons had assembled to hear his lecture, and when the arrest was announced to them by Train's agent, the audience demanded their money and the agent refused. The audience became greatly excited and denounced Train as a swindler. The agent promised to make some arrangement. Train has been taken to the Four Courts, Marshalsea.

Obituary.

HIS EXCELLENCY BARON BENTINCK, Minister of State, Chamberlain of the King of Holland, and Minister Plenipotentiary at the Court of St. James for more than 16 years, died at the residence of the Legation in Eaton Square, on the 2d inst., in his 70th year. He was formerly Secretary of Legation at Copenhagen, Stockholm, Berlin, and Vienna, and for seven years Councillor of Legation in London; he afterwards became successively the Netherlands Minister in Bavaria, Baden, and Wurtemberg, and subsequently in Belgium and Great Britain. He also held the post of Minister for Foreign Affairs at the Hague for a short period in 1848, which post he resigned after having taken a distinguished part in the measures which led to the modification of the Constitution of the country. He was a Knight Grand Cross of the Order of the Netherlands Lion, of the Luxembourg order of the Oaken Crown, and of several foreign Orders.

THE EARL OF ROSEBERY, K.T., died on Wednesday last at his town residence in Piccadilly, from an attack of apoplexy, in his 85th year. His Lordship, the Right Hon. Archibald John Primrose, fourth Earl of Rosebery, was the eldest son of the third Earl, by his second wife, the only daughter of Sir Francis Vincent. He was born in 1783, and succeeded to the Scotch honours on the death of his father in 1814. He was twice married—first in 1808, to the second daughter of the Hon. Bartholomew Bouverie (which marriage was dissolved in 1815), and secondly, in 1817, to the Hon. Anne Margaret Anson, eldest daughter of the first Viscount Anson. By his first marriage he leaves surviving issue a daughter, Lady Harriett Dunlop, widow of Sir John Dunlop, and a son, the Hon. Bouverie Francis Primrose, Receiver General of the Post Office in Scotland; and by his second marriage he leaves an only daughter, Lady Louisa, who is unmarried. The late Earl was created a peer of the United Kingdom in 1828, by the title of Baron Rosebery, of Rosebery, county Edinburgh, and was a baronet of Nova Scotia, created in 1851. For some years he was Lord-Lieutenant of Linlithgowshire, but resigned the office a few years ago. He was one of the senior knights of the Order of the Thistle. He is succeeded in his titles and estates by his grandson Archibald, Lord Dalmeny, eldest son of Lord Dalmeny (who died in 1851) by Lady Wilhelmina Stanhope, now Duchess of Cleveland. The present peer is a minor, having been born in May, 1847.

ADMIRAL LORD BYRON died on Monday last, after a long illness, in his 79th year. He was born in 1789, and entered the navy at 11 years of age. He was the son of Captain George Anson Byron, R.N., second son of the Hon. Admiral Byron, who was the second son of the fourth Lord Byron, by the daughter of Mr. Robert Dallas, of Dallas Castle, Jamaica. In 1816 he married the daughter of the late Mr. Sacheverell Chandos Pole, of Radbourne, Derbyshire, by whom he leaves a numerous family. He succeeded to the title in April, 1824, at the death of his cousin, the celebrated poet. He was an Admiral on the reserved half pay list, having attained the rank of Rear Admiral in 1849, Vice Admiral in 1857, and Admiral in 1862. He was one of the Lords in Waiting to the Queen for several years, but resigned in 1860, when he was appointed an extra Lord in Waiting. He is succeeded in the family honours by his eldest son, George Anson, born in 1818, and married in 1843 to the eldest daughter of the late Rev. William Wexcomb, rector of Langford. He was formerly in the army, and, as Captain of the 19th Foot, retired in 1843.

WILLS.—The will of Vice Admiral Sir William Dickson Bart, R.N., has been sworn under 16,000*l.* personally Dr. Mcbride, D.C.L., principal of Magdalen Hall, Oxford 20,000*l.*; Mr. Peter Saramanga, of 22, Hyde Park Gardens 150,000*l.*; Mr. John Vickers, of the Victoria Street Distillery, Westminster, 350,000*l.*; Mr. Henry Slundell, of Devonshire Place, Balham, 50,000*l.*

Markets.

COVENT GARDEN.—MARCH 7.

Prices, supply, and quality have altered but little since our last report; foreign produce is, however, a little in excess of the demand for it. Fine-apples are now realising good prices, as are also hothouse Grapes. Strawberries continue to make their appearance. Spanish Chestnuts for planting realise about 10*s.*, and Spanish Hazel Nuts for planting 16*s.*, per bushel. Cornish Broccoli is plentiful and good. Potatoes have not altered in price since our last report. Flowers chiefly consist of Orchids, Cyclamens, Chinese Primulas, Pelargoniums, Mignonette, Early Tulips, Hyacinths, Poinsettia pulcherrima, and Roses.

FRUIT.

Apples, per bushel, 4*s* to 8*s* | Pears, per doz., 6*s* to 10*s*
Cob nuts, per lb., 1*s* | Pine-apples, per lb., 6*s* to 10*s*
Grapes, per lb., 8*s* to 12*s* | Chestnuts, p. bush., 10*s* to 16*s*
Lemons, per 100, 4*s* to 10*s* | Strawberries, p. oz., 3*s*. 6*d.* to 5*s*
Oranges, new, per 100, 2*s* to 7*s* | Walnuts, per bushel, 10*s* to 20*s*

VEGETABLES.

Artichokes, per doz., 2*s* to 3*s* | Mint, per bunch, 1*s*
Asparagus, per bundle, 8*s* to 20*s* | Mushrooms, p. pott., 1*s* 6*d* to 2*s*
Beans, Kidney, p. 100, 2*s* to 3*s* | Onions, per bushel, 3*s* to 5*s*
Beet, per doz., 1*s* to 2*s* | Parsnips, per doz., 9*d* to 1*s*
Cabbages, per doz., 1*s* to 1*s* 6*d* | Parsley, per bunch, 2*d* to 4*d*
Carrots, per bunch, 6*d* to 8*d* | Potatoes, York Regents, p. ton, 130*s* to 160*s*
Celery, per bundle, 1*s* to 1*s* 6*d* | — Rocks, do., 100*s* to 120*s*
Cucumbers, each, 3*s* to 5*s* | — Flukes, 130*s* to 160*s*
Endive, per score, 1*s* 6*d* to 2*s* | — Other sorts, 75*s* to 80*s*
Globe and 8*d* ditto, p. lb., 8*d* | Sea-kale, p. punn., 2*s* to 3*s*
Herbs, per bunch, 2*d* to 4*d* | Spinach, per bushel, 2*s* to 4*s*
Horse Radish, p. bund., 3*s* to 5*s* | Tomatoes, per doz., 3*s* to 5*s*
Leeks, per bunch, 2*d* to 4*d* | Turnips, per bunch, 4*d* to 6*d*
Lettuces, per doz., 2*s*

POTATOS.—SOUTHWARK, Monday, March 2.

During the week the arrivals coastwise and from abroad have been more than equal to the demand, and trade slow, at the following quotations:—Yorkshire Flukes, per ton, 140*s.* to 170*s.*; do. Regents, 130*s.* to 160*s.*; do. Rocks, 120*s.* to 130*s.*; Lincolnshire Regents, 130*s.* to 150*s.*; Dunbar and East Lothian Regents, 140*s.* to 160*s.*; Perth, Forfar and Fife Regents, 120*s.* to 140*s.*; ditto Rocks, 110*s.* to 120*s.*; French and Belgian Whites, 90*s.* to 105*s.*

COALS.—March 4.

METROPOLITAN CATTLE MARKET

MONDAY, March 2.
The number of Beasts is exactly the same as on Monday last. Trade is by no means brisk, but that day's quotations are pretty well maintained. The supply of Sheep is about the same as last week; the demand has, however, improved, and on the average prices are better. Calves are not quite so dear. Our foreign supply consists of 820 Beasts, 1300 Sheep, 92 Calves, and 30 Pigs; from Scotland there are 381 Beasts; from Ireland, 110; from Norfolk and Suffolk, 1500; and 579 from the Northern and Midland Counties.

Best Scots, Herefords, &c.	4 8 to 4 10	Best Long-wools	4 8 to 5 0
Best Shorthorns	4 6—4 8	Do. Shorn	—
2d quality Beasts	2 8—3 4	Ewes & 2d quality	3 6—4 6
Best Downs and Half-breds	5 0—5 4	Do. Shorn	—
Do. Shorn	—	Lambs	—
Beasts, 3390; Sheep & Lambs, 16,850; Calves, 95; Pigs, 410.		Calves	3 8—5 8
		Pigs	3 4—4 8

THURSDAY, March 5.

We have a short supply of Beasts, and they are consequently readily disposed of at fully Monday's rates. We have a fair supply of Sheep, but the demand is also good, and prices are well supported. The tone of the market generally has improved. Choice Calves are scarce and dear. Our foreign supply consists of 14 Beasts, 145 Sheep, 34 Calves, and 5 Pigs.

Best Scots, Herefords, &c.	4 8 to 4 10	Best Long-wools	4 8 to 5 0
Best Shorthorns	4 6—4 8	Do. Shorn	—
2d quality Beasts	2 8—3 4	Ewes & 2d quality	3 6—4 6
Best Downs and Half-breds	5 0—5 4	Do. Shorn	—
Do. Shorn	—	Lambs	—
Beasts, 500; Sheep and Lambs, 4560; Calves, 85; Pigs, 110.		Calves	4 0—6 0
		Pigs	3 4—4 8

MARK LANE.—MONDAY, March 2.

The supply of Wheat from Essex and Kent to this morning's market was moderate, the sale could only be proceeded with at a decline of 1*s.* to 2*s.* per qr. from the price of this day.

tonight, consequently the greater proportion remained unsold towards the close of the market. There was not a large attendance, and but very little business was transacted in foreign wheat; we do not alter our quotations, but in some instances a slight concession was accorded to on secondary qualities. Maltng Barley brought fully last week's rates; grinding, also Beans and Peas, were unchanged in value. The Oat trade was quiet at late quotations. In Flour there was very little business doing.

PRICE PER IMPERIAL QUARTER	s. s.	s. s.

— Foreign	per barrel 34-42	Per sack 48-56

FRIDAY, March 6.

We have experienced repeated gales, accompanied by heavy rain, during the early part of the week; but since then we have had a few fine days with a high temperature for the time of year. The dullness in the trade throughout the country, noticed at the close of the preceding week, has continued and even increased, resulting in a general decline of 1s. to 2s. per qr. on wheat, both for home grown and foreign, business being most inanimate. All descriptions of spring Corn have been equally neglected, and prices were in most instances against sellers. Flour moved only in retail, the tendency of prices having continued downwards. The arrivals of grain and seed-laden vessels off the coast during the week consisted of 122 cargoes, of which, with those left over from last week, there remained for sale last night 80 cargoes. Hoping to enforce a further serious reduction in the value of wheat cargoes off the coast, buyers held back in the early part of the week, but as the French markets showed more tone, and a few Continental orders were executed, the trade showed during the last day or two more disposition to purchase, so that a fair business resulted, at a decline of 2s per qr. on the week. Of Malze there was nothing on offer. Barley and Rye commanded barely late rates. Beans 1s. per qr. dearer. On passage and for forward shipment, wheat was very quiet, Malze a dull sale, Barley and Rye nominally unaltered, Linseed, Rapeseed, and Cottonseed quiet.

The arrivals of grain, both English and foreign, this week have been moderate. There was only a small attendance at this morning's market, and English stands were tolerably cleared at fully the prices obtained on Monday; rather more disposition was evinced to purchase foreign, and previous quotations were realised on the business transacted. Several cargoes off the coast were disposed of at extreme rates, some being destined for the Continent. Spring Corn was steady at late rates.

ARRIVALS THIS WEEK.

	8530	2900	12,410	

LIVERPOOL, Tuesday, March 3.—To-day's market was only very moderately attended, and in wheat very few transactions took place, at a decline of 3d. to 4d. per cental on the week. Flour inactive, and 1s. to 1s. 6d. per sack cheaper on the week. Indian Corn in limited request, at a decline of 1s. 6d. per qr. from the rates of this day week. Oats rather dearer. Oatmeal 3d. per load easier. Egyptian Beans in fair request, at 6d. per qr. decline. Peas, Barley, and Malt unchanged.

FRIDAY, March 6.—The market was moderately attended. Wheat and Flour slow sale, at barely Tuesday's rates. Beans, Oats, and Oatmeal without alteration. Indian Corn in better request, at 1s. per qr. advance; mixed, 41s. 6d. to 42s.; white, 41s.

WANTED, a HEAD GARDENER (WORKING), where five others are kept. He must thoroughly understand the profession in all its branches, and have filled a similar situation before. Apply by letter, stating full particulars of the different situations held during the last 10 years, if married, age, wages required, &c.—R. BORSARIAN, Lamorby Park, Bexley, Kent.

WANTED IMMEDIATELY, a FOREMAN in a Nursery of about 40 Acres; he must thoroughly understand his business in all its branches. He will have the option of PARTNERSHIP, by giving a cash security for say £150. One who has a connection with London Nurseries would be preferred.—CARTER & Co., 237, Holborn, W.C., London.

WANTED, a WORKING FOREMAN, to take charge of a Nursery in the vicinity of London, he is required to be married, and to have had good experience in the Propagation and Management of Fruits, Roses, and out-door Nursery Stock in general. The position is one of trust, and liberal remuneration will be given, therefore none but those who can furnish good references need apply.—GEOFFREY CLARKE, Nurseryman, Streatham Place, Brixton Hill; and Motttingham, Kent, &c.

WANTED, a respectable YOUNG MAN, to take charge of the Houses, and to assist in the Budding and Grafting in a Small Nursery; he must be well up in Propagating (Soft-wooded principally), and be competent to conduct the Establishment in the absence of the Principal. None need apply unless they can be well recommended, and have served for some time in a Nursery.—Address, stating wages, &c., to Mr. E. HILLIER, Nurseryman, Winchester.

WANTED, as GARDENER, a practical Man who thoroughly understands the Kitchen Garden.—Apply to HENRY CLARKE & Sons, 39, King Street, Covent Garden, W.C.

WANTED, a GARDENER, used to Glass, not over 40, married, no incumbrance. Wife good Laundress. Both willing to assist. Place light. Wages, £62 the two, with house, coals, and gas. One year's personal character.—Address, post paid, H. C., 31, South Bank, N.W.

WANTED, a Young Man as HARD-WOODED PROPAGATOR and PLANT GROWER.—Wages progressive, to commence at 20s per week. Address, in own handwriting, Mr. Gosse, Nursery, Landport, Portsmouth.

WANTED, a steady, active YOUNG MAN, well up in Jobbing and general Nursery Work.—Apply to W. MZADMORE, Romford, E.

WANTED, a BAILIFF, to take charge of Garden, Hothouses, and to Manage a Farm of 150 Acres.—No one need apply who is not thoroughly competent in every department, or prepared to perform his duties in a strictly conscientious spirit.—X. Y. Z., Post Office, Bromley, Kent.

WANTED, on an Estate in Wilts, a HEAD CARPENTER. A person acquainted with the Erecting and Repairing of Agricultural Buildings preferred. The duties include the control of Masons and Plasterers, so that a knowledge of their work is necessary. Wages, one guinea per week, house, and garden.—J. L. F., Wotton Hill, Gloucester.

WANTED, a MAN and WIFE, without incumbrance, about 10 miles from London.—The Man as COACHMAN, and willing to make himself generally useful, wife to undertake the LAUNDRY for a small family. There is a comfortable cottage. A person who understands Cattle would be preferred.—Address, by letter only, A. B., Mr. Stevens, Stationer, 42, Tottenham Court Road, W.

WANT PLACES.—Letters to be Post Paid.

EXPERIENCED GARDENERS (or as GARDENER and BAILIFF), of various qualifications, recommended to Gentlemen.—Further particulars given on application to Messrs. F. G. HENDERSON & Sons, Wellington Nursery, St. John's Wood, London, N.W.

MR. WM. PAUL begs to announce that he has made arrangements by which he will be enabled in future to furnish Gentlemen with the NAMES, ADDRESSES, &c., of GARDENERS and GARDENERS and BAILIFFS, of various qualifications, who are open to engagements.—The fullest particulars as to services required and wages given, should be forwarded with application. PAUL'S Nurseries, Waltham Cross, London, N.

To Gardeners and Bailiffs (Head, Foremen, or Under). JAMES CARTER AND CO. having many applications for the above request that those wanting situations will send name, address, and copies of Testimonials for entry in their FREE REGISTER.

Only those who can send unquestionable references need apply. Any Lady or Gentleman requiring Gardeners or Bailiffs may rely upon J. CARTER & Co. adopting the most stringent regulations in reference to testimonials as to ability, honesty, &c.—JAMES CARTER & Co., 237 and 238, High Holborn, London, W.C.

GRAY'S OVAL TUBULAR BOILER.

INTERNATIONAL EXHIBITION, CLASS IX., No. 2119.

MR. GRAY begs to call the attention of the Nobility, Gentry, Nurserymen, Gardeners, &c., to his
NEW OVAL TUBULAR BOILER,

Acknowledged by practical judges to be a great improvement on every form of Tubular Boiler yet introduced. It has proved itself superior to all other Boilers for quickness of action and economy of Fuel, doing its work with one-third less the amount required by any other.

Extract from Report in GARDENERS' CHRONICLE of International Exhibition, May 24, 1862, page 476.

"The upright form of Boiler is usually made on a circular plan, but the oval form given to Mr. Gray's variety of it is said to be preferable in consequence of its bringing the tubes in closer contact with the fire. The usual form of a furnace being a parallelogram rather than a square, it seems sensible that the Boilers on the oval plan should bring the tubes more completely within range of the burning fuel; and this being so, the change, though a slight one, is no doubt an improvement."

They are made of all sizes, which, with prices, may be had on application.

JAMES GRAY, HORTICULTURAL WORKS,
DANVERS STREET, PAULTON'S SQUARE, KING'S ROAD, CHELSEA, S.W.

PORTABLE AND FIXED HOT-WATER APPARATUS, FOR HEATING CONSERVATORIES, HOUSHOUSES, CHURCHES, PUBLIC BUILDINGS, PRIVATE RESIDENCES, ETC., WITH

ABERCROMBIE'S (JOHN) GARDENER'S POCKET JOURNAL and DAILY ASSISTANT in ENGLISH GARDENING. With a Treatise on Warden Cases, Aquariums, Fern Culture, &c., by G. GLENNY, F.H.S.

Footstep 8vo, cloth, red back, pp. 720, 6s., free by post. EVERY MAN HIS OWN GARDENER. By THOMAS MAWE and JOHN ABERCROMBIE, with directions for work to be done in the Kitchen, Fruit, Flower, Forcing Garden, &c., for every month in the Year.

Latest and Cheapest Edition of Loudon's Gardening. In One Vol. 8vo, with many Hundred Woodcuts, price 31s. 6d. LOUDON'S ENCYCLOPEDIA of GARDENING comprising the Theory and Practice of Horticulture, Floriculture, Arboriculture, and Landscape Gardening; including all the latest Improvements, &c. Corrected and improved by Mrs. Loudon.

Youatt on the Horse, Edited by Watson. Revised Edition, in One Vol. 8vo, price 12s. 6d. cloth. THE HORSE. By WILLIAM YOUATT. Revised and enlarged by WALTER WATSON, M.R.C.V.S. With numerous Woodcut Illustrations.

YOUATT on the DOG. 8vo, Woodcuts, 6s., may also be had. London: LONGMANS, GREEN, & Co., Paternoster Row, E.C.

New complete, in Three Vols., medium 8vo, price 62s., cloth. A DICTIONARY of SCIENCE, LITERATURE, and ART; comprising the Definitions and Derivations of the Scientific Terms in general use, together with the History and Description of the Scientific Principles of nearly every branch of Human Knowledge.

This edition is a great improvement on the former one. That was in one very thick volume, and not of convenient size for use; besides, the print was small. In the present edition, not only is there the addition of much valuable matter, but the type has been improved, the book being easily legible, and the disadvantage of having it in three volumes is nothing to the comfort of reading it.

Now ready, price Six Shillings. THE JOURNAL of the BATH and WEST of ENGLAND AGRICULTURAL SOCIETY V. XV, 1867.

Grass Seeds—When, and What to Sow. Just published, price 7s., post free. JAMES CARTER and CO'S FARMERS' CALENDAR for 1868 (with two Chromo-Litho Illustrations of Mansel and Swale) contains a Practical Treatise on the Cultivation of Permanent Pastures, with Tables of Grasses best adapted to particular localities, &c.

THE LIVERPOOL and LONDON and GLOBE INSURANCE COMPANY. Offices: 1, Dale Street, Liverpool; 7, Cornhill, E.C.; and Charing Cross, London, S.W.

THE LANDS IMPROVEMENT COMPANY, Incorporated by Special Act of Parliament in 1853. To LANDOWNERS, THE CLERGY, ESTATE AGENTS, SURVEYORS, &c., in ENGLAND AND WALES, and in SCOTLAND.

Home News. THE COURT.—On Friday the Queen held a Court at Buckingham Palace, at which the Marquis d'Azeglio, Italian Minister, presented his letters of recall.

THE PRINCE AND PRINCESS OF WALES.—On Saturday evening the Prince went to the conversazione of the Royal Society at Burlington House.

VISIT OF THE PRINCE OF WALES TO IRELAND.—It is announced that the Prince of Wales will pay a visit to Ireland during the Easter recess.

THE CABINET.—A Cabinet Council was held on Saturday at the official residence of the First Lord of the Treasury in Downing Street.

THE PRIME MINISTER AND EARL RUSSELL.—Mr. Disraeli on Friday addressed the following letter to the morning papers.

"Sir,—Lord Russell observed last night in the House of Lords that I 'boasted at Edinburgh that, while during seven years I opposed a reduction of the borough franchise, I had been all that time educating my party, with the view of bringing about a much greater reduction of the franchise than that which my opponents had proposed.' As a general rule, I never notice misrepresentation of what I may have said; but as this charge against me was made in an august assembly, and by a late First Minister of the Crown, I will not refrain from observing that the charge has no foundation. Nothing of the kind was said by me at Edinburgh. I said there that the Tory party, after the failure of their Bill of 1859, had been educated for seven years on the subject of Parliamentary Reform, and during that interval had arrived at five conclusions, which, with their authority, I had at various times announced, viz.—1. That the measure should be complete. 2. That the representation of no place should be entirely abrogated. 3. That there must be a real Boundary Commission. 4. That the county representation should be considerably increased. 5. That the borough franchise should be established on the principle of rating. And that these five points were accomplished in the Act of 1867. This is what I said at Edinburgh, and it is true. I am, Sir, your obedient servant,
"Downing Street, March 6.
B. DISRAELI."

THE PEERAGE.—The Rev. W. O'Neill, of Shane's Castle, Antrim, has been created a Peer of the United Kingdom, by the title of Baron O'Neill.

PARLIAMENTARY MOVEMENTS.—Mr. Ward Hunt was re-elected on Saturday for North Northamptonshire, without opposition. The Marquis of Lorne was elected last week for Argyshire, without opposition. There is a vacancy for Huddersfield, caused by the death of Mr. Crosland, Mr. E. A. Leatham is a candidate for the vacant seat in the advanced Liberal interest. It is said that Lord Amberley will be the Liberal candidate for South Devon at the next general election.

THE NEW VICE-CHANCELLOR.—Mr. George Markham Giffard, Q.C., has been appointed Vice-Chancellor, in the room of Sir W. Page Wood.

THE FINANCE MINISTER OF INDIA.—Sir Richard Temple has telegraphed his acceptance of the office of Finance Minister in India, vacant by the resignation of Mr. Massey.

Foreign.

FRANCE.—The *Moniteur* of Wednesday praises the language held by Lord Stanley on the 6th inst., relative to the Alabama question, and says that "Lord Stanley dwelt in very wise terms on the considerations of every nature which render desirable a complete harmony between England and the great American Republic, and it is to be hoped that a friendly solution of the question will not be long delayed." The same paper in its bulletin says:—

"International tendencies of a peaceful nature become daily more evident. As was declared by M. Rouher in the Legislative Body on the 4th inst., the relations of France with foreign States were never of a more cordial character. The wisdom of the European Cabinets, in harmony with the general interests, will produce salutary effects towards strengthening confidence and maintaining tranquillity."

In the sitting of the Legislative Body on Friday the debate on the Press Bill was resumed. A new article (Article 11), concerning punishments to be awarded for libel with regard to affairs of private life, was adopted by a majority of 135 to 105. In the sitting of Saturday M. Gueroult, in consequence of the accusations made by the *Pays*, asked for explanations respecting the relations between that journal and the Government. The Chamber declined any further discussion on the subject. In the sitting of Monday the debate on the Press Bill was resumed. After the rejection of several amendments, and the adoption of Articles 15, 16, and 17, the whole Bill was voted by 242 votes against 1. The Bill relative to the Army Contingent was then passed by a majority of 230 to 12. In the sitting of Thursday the President communicated a notification from the Procureur-Général, demanding authority to take proceedings against the *Figaro* and *Situation* for articles offensive to the Legislative Chamber. The Chamber then formed itself into a secret committee, at which it was resolved to authorise the proceedings against the above journals. The discussion on the Bill relative to the right of holding public meetings then commenced. M. Garnier Pagès spoke against the Bill. The Bills relative to the supplementary credits for 1868 and the Budget for 1869, were laid on the table on Monday. The supplementary credits for the ordinary Budget of 1868 amount to 61 millions, of which 49 millions are for military expenses. The supplementary credits for the extraordinary Budget of 1868 amount to 100 millions, of which 57 millions are for military and 26 for naval purposes. The excess of expenditure over revenue for 1868 is estimated at 128 millions. In the ordinary Budget of 1869 the expenditure for military purposes is fixed at 381 millions, or 33 millions more than in 1868. In the extraordinary Budget the total expenditure amounts to 184 millions, of which 37 millions are for military and 21 for naval purposes. On Tuesday the Bills relative to the Press and the military contingent were laid before the Senate. The *Pays* on Saturday published the documents on which it grounded the charge of receiving advocacy money against several of the Paris papers. They entirely failed to substantiate the charge, and the principal document, which mentioned the names of these papers, has proved to be a forgery, two of the papers not having had an existence till five years after the date of the document. The *Débats*, *Liberté*, *Avenir National*, and *Revue des Deux Mondes* have consequently addressed a letter to M. Kerveguen, summoning him to publish fresh documents in justification of his recent assertions. As he has not complied with their summons, they have demanded permission of the Legislative Body to prosecute him before the Correctional Tribunal of Police, which has appointed Friday,

the 27th inst., for the trial. There have been some disturbances at Toulouse, caused by recruiting for the National Garde Mobile. The *Moniteur* says they were soon suppressed by the energy and promptitude of the authorities, and adds that in all other places the recruiting measures have been conducted in a peaceful and quiet manner.

ALGERIA.—Letters from Algiers state that the famine which has prevailed so long in Northern Africa still continues in Algeria. Marshal M'Mahon had left for France with the intention of urgently demanding the sum of 1,000,000 francs in aid of the distressed.

DENMARK.—The Crown Prince of Denmark leaves Copenhagen to-morrow by way of Hamburg, Munich, and Trieste, for Athens, where he intends to remain for a month, after which he will visit London.

PRUSSIA.—Prince Napoleon visited Potsdam on Tuesday, and in the evening dined with Lord Augustus Loftus, the English Ambassador, who gave a grand banquet in his honour. On Wednesday the Prince dined with Prince Charles, and on Thursday with Count Bismarck. His Imperial Highness has abandoned his intention of visiting Vienna, and will return to-day direct from Berlin to Paris. The Federal Council of the North German Confederation held a sitting on Monday. The Customs and Commercial Treaty with Austria was signed on Monday at the office of the Chancery of the North German Confederation. The ratification of this treaty will be effected within two months. The treaty is intended to come into operation by the 1st of June, by which time it is expected that Mecklenburg will have joined the Zollverein. The legal committee of the North German Federal Council on Wednesday discussed the recent treaty with the United States respecting the nationality of emigrants. On the same day the committee charged with the preparation of a uniform law of civil process throughout the North German Confederation took the subject of the abolition of imprisonment for debt into consideration. Count Bismarck has addressed a report to the King, stating that, on account of the late period at which the elections in Hesse and Wurtemberg to the Customs' Parliament have been fixed to take place, the opening of the Parliament in the latter half of March cannot be recommended. At the same time he proposes that the Federal Council shall be convoked for the 7th inst., and the North German Parliament for the 23d. The report is followed by a Royal decree approving these proposals.

AUSTRIA.—The Delegation of the Austrian Reichsrath adopted on Saturday the motion by Herr Pravo-bevera, granting 996,000 florins, instead of 672,440, as recommended by the Committee for the new fortification works. The Minister of War thanked the Delegation for this vote, and for the amount granted for providing new firearms, and said that the army would know how to use the new weapons should the constitutional development of Austria be mischievously interfered with. The Delegation voted the supplementary Budget of expenditure, the amount being 26,181,674 florins. In the sitting of the Delegation from the Hungarian Diet on Saturday, the proposals of the Committee for maintaining the Legation in Saxony and the Embassy at Rome were adopted. During a debate lasting two hours on the Roman Embassy, Court-Councillor Falke, the Government Commissioner, combated the opinion which had been expressed that the maintenance of the post of Ambassador at Rome could be looked upon as implying hostile intentions towards Italy. He declared that at the present time the best understanding existed between Austria and Italy, and that the greatest importance was attached to the future preservation of the same. In the sitting of Wednesday, in a debate on the military estimates, Councillor Falke, the representative of the Government, replied as follows, in the name of the Minister for Foreign Affairs, to the censure cast by several previous speakers upon the Government for the policy it had pursued in the German and Eastern questions:—

The Government had never desired or attempted to recover its former position in Germany. With the exception of the mission of Count Tauffkirelin, which was directly at variance with the peaceful efforts attempted, no sign had yet been displayed by Prussia of a wish for more intimate relations with regard to the eastern policy of the Government. All the justifiable wishes and demands of the Christian subjects of the Porte had met with the most emphatic support upon the part of the Government. In the event of an unrelenting enforcement of the demands made upon the Porte by any individual Christian population, the Government would not remain passive. It was essential to the preservation of European peace that the reforms in Turkey and the concession of the just desires of the Christian population should be effected peacefully and without any interference on the part of a foreign Power. He laid stress on the impossibility of the Government remaining passive in the case of a one-sided active intervention of any Power in the affairs of Turkey, but he trusted that the policy intended to bring about the maintenance of peace would be crowned with successful results in this question also. He advocated the grant of the supplies asked by the War Ministry, because to deprive the country of the means of defence required was the indispensable minimum by the Government would not only nullify in advance the efforts made for the maintenance of peace, but would remove every chance of that success which it might otherwise hope would be achieved.

In the sitting of the Lower House of the Reichsrath, on Thursday, the Minister of Justice brought in a Bill for abolishing imprisonment for debt. The Bills for the abolition of the usury laws and the dissolution of the State Council in the sense proposed by the Government were read a third time and passed.

HUNGARY.—The Hungarian Diet was opened on Monday with the usual ceremonies.

ITALY.—The debate in the Chamber of Deputies on Signor Rossi's motion for the abolition of the forced currency was resumed on Friday and continued until Tuesday. The following is a summary of the principal speeches:—

Count Cambray Digny, Minister of Finance, said that economy alone was insufficient to meet the present wants of

the State. If the proposed taxes were not voted in the first six months of the present year, a catastrophe would longer be avoided. Those who imposed the taxes would be responsible for the failure of the State. He was opposed to an immediate proposal for the abolition of the forced currency, and the proposal to nominate a Committee of inquiry to inquire into the best suited to effect the abolition. In the Budget of 1869 showed a deficit of 100,000,000 francs. That deficit would be reduced 25 millions if the taxes and the measures proposed were voted. Signor Fenzi supported the arguments of Deputies Majorana and Calabroni presented for the abolition of the forced currency. In the sitting of Signor Doda censured the policy of the Government, the banks, and moved an order of the day for the Ministry to bring forward a Bill limiting the day of the issue of money. After some remarks by Count Cambray Digny, the Chamber approved the order of the day. Signor Rossi's motion. Signor Ferraris moved that a Committee of inquiry should be instituted to inquire into the causes of the deficit. Several speakers supported their schemes for the abolition of the forced currency. In the sitting of Monday Count Cambray Digny would accept an order of the day signed by Signor Ferrara, Rossi, Fenzi, and Correnti, engaging the Government to present, as an indispensable condition of financial measures, a Bill for procuring the abolition of the forced currency. Meanwhile he would appoint a committee of seven members to inquire into the question of the forced currency, and to report on the 15th April on the best means of effecting its abolition. Depretis moved an amendment that the Chamber should embody their recommendations in a resolution, simply reporting upon the subject. Signor Depretis and the members of the Left concurred in the amendment, and withdrew their own proposals. The Minister of Interior declared that the amendment was in accordance with the views of the Government. Signori Crispi and Rattazzi opposed this view. Count Digny said that the Ministry could not accept the amendment. An animated discussion followed relative to putting the order of the day and the amendment. The Left refused to allow the President to proceed, and a violent tumult ensued, during which the President put on his hat and closed the sitting. On Tuesday Signori de Sanctis and Correnti gave an order of the day to justify the position taken on the previous day by the Left on the forced currency. Signor Depretis stated that he did not support his amendment with the object of raising a political question. Signor Rattazzi objected to the matter being raised as a question. Signor de Sanctis disclaimed any intention on the part of the Left. Count Cambray Digny declared that the Ministry could not accept the amendment, and not undertake to present a Bill to remove the forced currency at a fixed period. The first paragraph of the order of the day signed by Signori Corsi, Rossi, and others, was the vote and adopted by a majority of 111 to 138. Signor de Sanctis withdrew his amendment to the Senate, instructing the Committee to draw up a Bill for the abolition of the forced currency, and the second paragraph was then approved. The other orders of the day were then withdrawn. Count Cambray Digny presented a Bill on the income tax. In the sitting of Wednesday Ricciardi questioned the Ministry relative to the position in the French Senate respecting the Italian Company. He asked what were the intentions of the Government on the question. General Menabrea, after the embarrassments and failure of the company, stated nevertheless, the Italian Government had no intention of withdrawing its claims, and would continue to do so. The company claim rights which it did not possess. An appeal was made to a court of law. Justice existed for all. Florence as at Paris or London. Signor Correnti stated that the Italian Government was released from its obligations by the failure of the company to carry out the conditions of the contract. The Minister of Public Works stated that the company had not fulfilled the conditions which entitled it to the concession. The Chamber, in consideration of the declaration of the Minister, passed to the order of the day. Signor Depretis and other members of the Left, presented a motion for the amendment of the discussion upon the grinding tax. Administrative reforms had been voted. In the sitting of Thursday Signori Minghetti and Cevinati opposed the amendment which was supported by Signori Crispi and Depretis.

PAPAL STATES.—The Italian and Papal authorities met last week at a village on the frontier, and concluded an arrangement for the provisions of the conventions for the suppression of brigandage on the Italian and Papal frontiers. General Pallavicini will direct the operations on the Neapolitan frontier. At the Consistory of yesterday for the creation of nine Cardinals, Lucien Bonaparte was first to receive the appointment in a special and separate ceremony. Companies of Zouaves have been despatched to the frontier province of Campagna. They have been given to expedite the completion of the fortifications of Castel St. Angelo and Mount Aventine. It is expected that Signor Guglielmi, the Director-General of the Monte di Pietà, will be appointed Minister of Commerce and Public Works. Enrolments of volunteers for the Pontifical army continue to increase. Those who lately returned to France have engaged themselves to return to Rome whenever summoned. A marriage has been arranged between the Countess Caserta, younger brother of ex-King Francis II, and the Princess Marie Antoinette de Bourbon, daughter of Count Trapani. The ex-Queen of Naples has left Rome for Vienna, to be present at the approaching confinement of the Empress of Austria. The Canadian Volunteers arrived at Rome on the 10th and were received on the same day by the Pope, who expressed his satisfaction at their devotion, and bestowed upon them his benediction.

RUSSIA.—It is reported that the Emperor will pay a visit to St. Petersburg in June. By the Emperor's orders a review of 100,000 men will be prepared for his Majesty's reception. It is understood that the Budget for 1868 is about to be published. The revenue of the year is stated at about 280,000,000 roubles, and the expenditure at 175,000,000. The surplus amount 35,000,000 roubles are intended to be applied to railway works. As compared with last year, the revenue shows an increase of 35,000,000 roubles, and the expenditure of 30,000,000 roubles.

MOROCCO.—Accounts from Tangier state that thousands of families from the Rif, in a state of destitution, have flocked into that city and are augmenting the distress, which was already very great.

of the famine and the exorbitant provisions. To the ravages of hunger are these of typhus, dysentery, and cholera. Typhus fever of an aggravated character in Tunis, in consequence of the famine are not allowed to land at Malta. Several secondary nominations have been made in the Administration at Constantinople. Captain Hobart, who was Councillor of the Turkish Admiralty, has been promoted to the rank of Pacha, with a salary of 3000. It is said that the Powers are settling the Cretan question by their Ambassadors, now being held at Constantinople, with the assent of the Porte. Two steamers, with 30,000 lire on board, have left the port for the purpose of transporting emigrants to return from Greece to Crete, and of carrying with funds for their immediate wants. A dispute has taken place off Sinope, between the French steamer Benjamin Attwood and the French steamer, both English built. The former went to the aid of the latter, and upwards of 30 of the crew were drowned. No Egyptian troops have yet returned from the Sudan. A reinforcement, consisting of 2000 men, left Suez a few days ago for Mas-sowah, and 2000 more were to leave in three or

Letters from Magdala to January 17. King Theodore was within one day's march. The King had sent a friendly message to the British, and an assurance that he was only waiting until he should meet his countrymen. The British forces had not then entered the British forces had occupied Antalo. On the 21st February Sir Robert was two marches beyond Attegerat, and was likely to remain for several days, the advance of more troops, and of which were delayed by the deficiency of the transport Corps. Kassai was to meet Sir Robert on the 20th ult., but it was doubtful whether he would be able to do so. It was again asserted that Menek had advanced on Magdala, and that the British were close to Losta, and advancing on Magdala. A British officer, who was engaged as Amharic dragoman, has been ordered to quit the expedition and return to England, having lost his health in the performance of

AFRICA.—The Government has resolved to send Mr. Angelo, the African traveller, to the district of Moshesh, to inquire into the alleged existence of slaves in that district. Mr. Angelo will be accompanied by means with which, if possible, to effect the liberation, and will go out as the paid agent of the Government, but it is not yet decided whether or not he should be accredited in an official capacity. Mr. Angelo, however, is willing to bear the whole responsibility, as far as his own personal safety is concerned, of meeting with a good reception from the natives of the tribe, to most of whom he is known.

GOOD HOPE.—News has reached the Cape that Her Majesty's Government are determined to maintain British protection and control over the territory. It was understood that the protectorate was established by the appointment of a British Resident at Moshesh's capital, and that the Basutos would be taxed to a sufficient extent to defray the revenue for maintaining the protectorate. Mr. Woodhouse had required Mr. Brand, the British Resident, to suspend hostilities against the Basutos until matters could be arranged. The news has been received of the death of Mr. Anderson, the traveller, in the wilds of the interior near Oyampo Land, bordering on the Orange Possessions.

The Government have contracted for the construction of four jetties in the river Hooghly. It is reported that Captain Cunningham's sentence has been remitted and the prisoner released. The British invasion of Burmah proper by Shans has spread alarm at Mandalay. The expedition to explore the new route to Western China has been abandoned. Unsatisfactory arrangements have been given as to the good faith of the King of Siam with respect to the new treaty. It is reported that extensive military preparations are being made, and that a great movement of the Russians is expected in the spring. The Nizam has consented to the construction of a branch railway from Hyderabad to a distance of 130 miles. Dr. Fennelly, the Roman Catholic bishop in Madras, is dead.

STATES.—The Select Committee of the House of Representatives adopted the rules of procedure for the trial of the President at the approaching session. Chief Justice of the Supreme Court will preside. The trial will be conducted with open doors, and the proceedings will commence on the day following the presentation of the articles of impeachment by the House of Representatives. President Johnson is summoned to appear in person or by counsel. In the event of his non-appearance, the trial will proceed on the assumption that the defendant pleads "Not Guilty." The final argument will be conducted by counsel on each side, and closed by the prosecution. The votes of members of the Senate will decide the final judgment. The articles of impeachment will be tried as four in one, and charge the President with violations of the Constitution and Tenure of Office Act, and also with holding the seals of the War Office. General Stanton attended a meeting of the Cabinet on the 28th

ult., at the invitation of President Johnson as Secretary of War *ad interim*. On the 26th ult., the President delivered a speech at a delegation of Conservatives from Baltimore. He declared that he would consider no personal sacrifice too great to bear in defence of the constitution, and expressed a belief that the intelligence and patriotism of the people would yet rescue the country from the threatened ruin. Both Houses of Congress have passed the supplemental Reconstruction Bill, providing that the majority of votes cast, instead of the majority of registered voters, shall decide elections under the Reconstruction Act. The Bill will now be submitted to the President. Mr. Stanton, who still holds his position at the War Office, had General Thomas arrested on the 22d ult., on the charge of having threatened to seize the War Office by force. General Thomas was released on bail, but Mr. Stanton failed to appear against him on the 26th ult., whereupon the Court discharged General Thomas, who immediately instituted proceedings against Mr. Stanton for false and malicious imprisonment, laying the damages at 150,000 dollars. The Loyal League Clubs in the principal cities have been firing salutes in honour of the President's impeachment. The Pennsylvania Senate, the Mississippi Convention, the Wisconsin Republican Convention, and a Republican mass meeting at Chicago have approved the impeachment, while on the other hand the New Jersey Legislature and the Californian Legislature and a mass meeting at New York have adopted resolutions approving President Johnson's course, and denouncing that of Congress. It is also reported that the Maryland Militia have tendered their services to President Johnson. The Keystone Club, in Pennsylvania, the Military Club at St. Louis, and numerous other Democratic bodies are effecting military organisation in opposition to a Republican military organisation called the "Grand Army of the Republic." The New Jersey House of Representatives have passed resolutions inquiring, in view of the peril in which the country is placed, into the condition of the State armament.

BRITISH COLUMBIA.—The *New York Herald* states that the citizens of British Columbia apprehend a Fenian attack from San Francisco.

Parliament.

In the Lords on Monday the Duke of Richmond, in answer to the Marquis of Clanricarde, said that the report of the Commissioners on Irish Railways would be published soon after Easter. The Lord Chancellor laid on the table various Bills on the Law of Bankruptcy. On Tuesday the Court of Appeal Chancery (Despatch of Business) Bill passed through committee; the Public Departments (Extra Receipts) Bill, the Registration of Writs (Scotland) Bill, and the Railways (Extension of Time) Bill were read a third time and passed. On Thursday, on the motion of the Marquis of Clanricarde, the Tenure of Land (Ireland) Bill was read a second time and, after some discussion, was referred to a select committee. The Ecclesiastical Commissioners (Orders in Council) Bill was read a second time, and the Court of Chancery (Despatch of Business) Amendment Bill was read a third time and passed. Yesterday the Earl of Devon brought in a Bill for the amendment of the Poor Law. The Duke of Argyll called attention to the rate-paying clauses of the Reform Bill, for the purpose of referring to the letter of the Prime Minister in answer to a recent speech of Earl Russell. The House was left sitting.

In the Commons on Friday Lord Stanley, in replying to the speech of Mr. Shaw Lefevre on the Alabama claims, said that upon all doubtful questions of fact and law the two Governments were prepared to abide the decision of any impartial arbitrator; but the question now at issue was, whether the English Government would consent to include in the reference the question whether we were right or wrong in recognising the Confederates as belligerents. Her Majesty's Government could not see what bearing this had upon the main subject of dispute, although as a matter of fact and history England had not recognised the Confederates as belligerents until after Mr. Seward had announced that the United States had accepted the civil war as an inevitable necessity, and until the Southern army was almost at the gates of Washington. The money consideration was inappreciably small, and we had claims which might be set off against those of the United States. He hoped that upon consideration the United States Government would admit the justice of the reasons put forward by her Majesty's Government against raising the irrelevant issues with respect to the recognition of the belligerents. From various circumstances he argued that an improved feeling had sprung up as regards England in the United States, and he was sanguine in the hope that, either by the machinery of a mixed Commission or by some other means, a satisfactory solution would be arrived at of the only point now remaining undecided. So far as the policy of the Government was concerned in declining to give way upon that point, he was satisfied to leave their conduct to the judgment, not only of the House of Commons, but of all candid and impartial persons on both sides of the Atlantic. Mr. W. E. Forster and Sir G. Bowyer expressed their satisfaction at the conciliatory tone of Lord Stanley's speech. Mr. Sandford suggested that Mr. Bright should be appointed a Commissioner to settle the matter. Mr. Mill concurred in this suggestion. Mr. Gladstone said that Lord Stanley's remarks were conceived in a spirit of thorough equity, not only towards those who had preceded him in office, but towards all those with whom he had been brought into connection in reference to the matter. With respect to the only subject really in dispute between the two countries—the recognition by England

of the belligerent rights of the Confederates—he believed that the country would support the view which the late as well as the present Government had taken of it. After some discussion on the arrangement of the Irish business, Sir W. Gallway and Mr. Wyle obtained leave to bring in Bills to establish county financial boards, and Mr. C. Forster obtained leave to bring in a Bill to amend the law relating to appeals from the Court for Divorce and Matrimonial Causes in England. On Monday, on the motion for the second reading of the Fines and Fees (Ireland) Bill, General Dunne moved, as an amendment, that it be read a second time that day six months. After some remarks by Mr. Disraeli in favour of the second reading, the amendment was carried without a division. The Lord Advocate moved the second reading of the Scotch Reform Bill. Mr. Hatfield moved as an amendment that the Bill be read a second time that day six months, on the ground that it increased the numbers of the House of Commons, and that if additional seats were required for Scotland they should be provided by disfranchising the smaller English boroughs. After some discussion, in which Sir W. Scott, Mr. B. Cochrane, Mr. Smollett, Mr. McLaren, Mr. Moncrieff, Sir J. Ferguson, the Lord Advocate, and other members took part, Mr. Hatfield withdrew his amendment, and the Bill was read a second time. The Sea Fisheries Bill passed through Committee. The Metropolitan Subways Bill was read a second time, and the Railways (Extension of Time) Bill was read a third time and passed. On Tuesday Mr. Maguire moved that the House of Commons should resolve itself into Committee, with the view of taking the condition and circumstances of Ireland into immediate consideration. Deprecating at the outset the treatment of the question in a party or sectarian spirit, he sketched in the gloomiest colours a picture of the political and material condition of the country. He contended that there had been a large falling-off in the live stock of Ireland, that the acreage under cereals had diminished, and that the productive power of the country had gone back—the farmers, by reason of the insecurity of their tenure, having lost heart, and begun to despair of the wisdom and honesty of Parliament and of statesmen. The discontent which had its root in the memories of past misgovernment and penal legislation, was rapidly growing into disaffection and alienation. The land question, he said, lay at the root of Fenianism, and without the sympathy of the tenant class the conspiracy would speedily collapse. Passing to the Church question, he emphatically refused for the Roman Catholic bishops and priests any share in the Church revenues, or payment by the State, and declared that nothing short of disestablishment and the disendowment of the Establishment, which they regarded as a badge of conquest, would satisfy the Irish people. He contended that Ireland should have a fair share of the public expenditure, the existence of a Royal residence, and frequent visits of Royalty. With regard to emigration as a means of relief, he said that the people who now left the country did so with a bitter feeling of hatred against England; and the only way to make that emigration harmless was, in brief, to settle the Irish question upon broad principles. In conclusion he said, that if the British Parliament would do justice and legislate for the Irish people as they would legislate for themselves, they would produce a better state of feeling, and would restore the prosperity of the country. Mr. Neate moved an amendment declaring that the constant recurrence of impracticable resolutions, and the proposal of extravagant and impossible remedies, were the great obstacles to the pacification and prosperity of Ireland. The proposition, however, was withdrawn in favour of an amendment, moved by Sir F. Heygate, to the effect that, before the consideration of constitutional changes in the laws and institutions of Ireland, it was both just and expedient to inquire into the causes of alleged discontent and the best mode of remedying the same. Lord A. Clinton next moved an amendment in the form of a series of resolutions, affirming that Parliament ought to legislate on the subject of education, the Established Church, and the system of land tenure, entirely in accordance with the ideas of the Irish people. The Earl of Mayo stated the view taken by the Ministry of the condition of Ireland, and the policy by which they proposed to deal with it. Not denying that much disaffection and even disloyalty existed in Ireland, he pointed out that those feelings were of foreign growth and confined to a much lower class than had ever before been known in similar times of discontent. Adverting to the charge that Ireland was governed on an English system, and that its people were oppressed by Englishmen, he appealed to the character of the Executive Government, to the judges, to the constabulary, and to the municipal authorities, to show that the country was practically governed by Irishmen, and in accordance with the feelings of the great majority of the people. He quoted numerous statistics to disprove the statement that Ireland was a decaying country, and showed that during the present generation there had been a great increase in the acreage under cultivation, in the value of live stock, and in other agricultural produce. He laid considerable stress on the general diminution of crime and pauperism, and on the large extension of education, and referred to official returns to prove that the material prosperity of the people had improved also. Having enumerated at some length the various remedial measures suggested by Mr. Bright, Mr. Mill, Sir John Gray, and others, he proceeded to the policy of the future, and said that he proposed next week to bring in a Land Bill, containing provisions to enable limited owners to charge their estates for improvements, and to encourage written contracts between landlords and tenants, instead of the present verbal agreements. In addition to this, it was proposed

at the earliest possible moment to institute a solemn inquiry by Commission into the relations between landlord and tenant. The Irish Reform Bill would be introduced in a few days, and steps would be taken to increase the efficiency of Irish railways. The question of education was already under consideration by a Royal Commission, but the Government, without disturbing the existing arrangements of Trinity College or the Queen's University, proposed to confer a Charter on a new Catholic University. Finally, with regard to the Irish Church, he said that a Commission at the instance of Lord Russell was now inquiring into the Establishment, and that it would be premature to attempt any hasty legislation upon such a question. On the motion of Mr. HORSMAN, the debate was then adjourned to Thursday. In reply to Mr. GLADSTONE, Lord MAYO said that the Government, as at present advised, intended to oppose both the original motion and the amendment. On Wednesday Mr. HUBBARD moved the second reading of the Church Rates Regulation Bill. A long discussion ensued with regard to three other Bills on the paper—Mr. Hardcastle's Church Rates Abolition Bill, Mr. Newdegate's Church Rates Commutation Bill, and Mr. Gladstone's Compulsory Church Rates Abolition Bill. Mr. HARDCASTLE and Mr. NEWDEGATE postponed their Bills until the 8th of April, but Mr. HUBBARD desired to have his Bill read a second time, in order to have it referred to the same Committee as the Bill of Mr. Gladstone. This suggestion was supported by Mr. B. HOPE and Sir S. NORTHCOTE; but Mr. GLADSTONE strongly objected to it, on the ground that in principle the two Bills were diametrically opposed to each other, and that there was no hope of welding the clauses of the two into one Bill. Ultimately, on the advice of Mr. WALPOLE, Mr. HUBBARD consented to postpone his Bill until April 8; and the House then went into Committee on Mr. Gladstone's Bill. On Clause 1, providing for the abolition of compulsory Church-rates, Mr. HENLEY insisted on a division, when the clause was carried by 167 to 30. Clause 5, which provided the machinery of a poll in cases of difference, was struck out on the suggestion of Sir S. NORTHCOTE, with the consent of Mr. GLADSTONE, and the remaining clauses were agreed to, with verbal amendments. The Bill then passed through Committee. The Artisans' and Labourers' Dwellings Bill was read a second time. Mr. M'LAREN brought in a Bill to abolish the Edinburgh Annuity Tax. On Thursday, in answer to Mr. FAWCETT, Lord MAYO promised that nothing should be done to create a new Catholic University until Parliament had had an opportunity of giving an opinion upon it. Mr. CLIVE stated that the Irish Church Commission had made some progress, and would probably report in two or three months. The adjourned debate on the condition of Ireland was resumed by Mr. HORSMAN, who expressed his thorough disappointment with the Irish policy of the Government, contending that it was on the Church question inaction, on the land question procrastination, and on education retrogression. Mr. LOWE maintained that the Irish question ought to be considered apart from the temporary phenomenon of Fenianism. He considered the proposal to create a Roman Catholic University as a pyrotechnic display, intended merely to conciliate an Ultramontane prelaty for election purposes. He regretted the determination of the Government not to touch the Irish Church, which he regarded as the flagrant, manifest injustice of Ireland, and as the last link of a galling fetter, the prolonged existence of which was a disgrace to Englishmen and a degradation to Parliament. After some remarks by Mr. T. HUGHES and Mr. VANCE on the land question, and by Mr. JACOB BRIGHT on the anomalies of the Irish Church, Mr. MILL spoke at some length in defence of the views put forth in his recent pamphlet. Mr. HARDY defended the Government programme, and pleaded the example of preceding Governments as a proof of the difficulty of dealing with the endowments of the Irish Church. The debate was then again adjourned. Yesterday, in answer to Colonel KNOX, the Earl of MAYO said that Mr. Johnston, being in bad health, had been offered his release if he would find recognisances. He had, however, refused, stating that he considered it as a matter of principle to do so, and consequently he had not been released. The adjourned debate on the state of Ireland was resumed by Mr. CRICHTON-FORTESCUE, who opposed the programme of the Government. The House was left sitting.

City Intelligence.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 93 to 93½ both for Money and Account; New and Reduced Three per Cents, 91½ to 92; India Five per Cents, 114½ to 115; Bank Stock, 249 to 251; Exchequer Bills, 10s. to 15s. pm.—FOREIGN. Mexican, 15½ to 16; Greek, 12½ to 12¾; New Spanish, 35½ to 36; Italian, 45½ to 46; Turkish, 33 to 33½; Orei-Vitetske, 78 to 78½; Peruvian, 76½ to 76¾; Brazilian (1865), 71½ to 71¾; Egyptian (1864), 86½ to 87½; Do. Railway Debentures, 90½ to 91; Viceroy's Nine per Cents, 88½ to 89; Do. Seven per Cents, 73½ to 74; United States 5-20 Bonds, 71½ to 72; Erie Railroad, 49 to 50; Illinois, 89½ to 90.

Metropolis and its Vicinity.

THE DISTRESS IN THE EAST-END.—On Monday the Executive Relief Committee for the East-end Distress met at the Mansion House, under the presidency of the Lord Mayor. At the close of their meeting on the previous Monday they had barely a balance of 100l. in hand, but they had since received 500l. from an anonymous donor, 500l. from Miss Courts, and nearly 150l. more from about 50 persons. After some discussion it was urged that the absence of more extensive contri-

butions from the general public was an indication that their administration must be brought to a close, and eventually it was agreed to adjourn for a fortnight.

COURT OF COMMON COUNCIL.—At a meeting of the Common Council on Friday, a report was read from Mr. Cubitt, the engineer of the new bridge at Blackfriars, describing the progress made, and stating that the work was expected to be finished in a year or a year and a-half. It was also stated that the new meat market at Smithfield would be completed and opened before Christmas, and that the thoroughfare along the viaduct over Holborn valley would be opened at the close of this year or the beginning of next.

THE OPERA.—It is announced that Mr. Mapleson has taken Drury Lane Theatre for performances of Italian opera during the approaching season. His tenancy commences on the 28th of this month.

OPENING OF THE HYDE PARK DRINKING FOUNTAIN.—A drinking fountain, erected at the expense of the Maharajah Murza Vijeram Gujaputty Raj Munca Sooltan Bahadoor, of Vizianagram, by the Metropolitan Drinking Fountain Association, was formally opened a few days since by the Duke of Cambridge. It is about 12 feet square and 47 feet high, and in style is early Gothic. There are four bowls and four jets. On two sides are the portrait and arms of the Maharajah, and on the two other sides the portrait and arms of the Queen. The top is surmounted by a conventional crown. The material used is Box ground stone, the columns being blue pennant, and the bowls polished granite. The entire cost is about 1200l. It is erected near Stanhope Place Gate, not far from the Marble Arch. A large number of ladies and gentlemen assembled to witness the ceremony, including several native gentlemen of India residing in London.

THE FENIAN PROSECUTIONS.—The Fenian prisoners Burke, Casey, and Shaw, who were committed for trial at the Warwick Assizes, but who are to be tried at the Central Criminal Court, arrived on Friday at Newgate, having been brought from Warwick Castle by night train.

THE FIRING AT TWO POLICEMEN.—On Tuesday Thomas O'Haran, the Irish shoemaker, charged with having discharged five barrels of a revolver at two policemen in the neighbourhood of Finsbury Circus, was brought up for re-examination at the Clerkenwell Police Office. The question having been distinctly put to the police, it was stated that there was no reason for supposing that the prisoner was connected with Fenianism. He was committed for trial.

DISHONEST TRADESMEN.—A return has been issued of the convictions for false weights and measures in the metropolis for the first six months of 1867. In Finsbury 78 persons were convicted, 75 of them for the first time; in Marylebone 19 were convicted, all for the first time; St. Pancras, 30 were convicted; but the return does not say in many cases whether the convictions were first, second, or third offences. In Westminster there were 110 convictions, mostly for first offences.

FALL OF A HOUSE IN THE STRAND.—On Saturday morning, shortly before 12 o'clock, the house formerly occupied by "Professor" Holloway, in the Strand, near Temple Bar, fell with a crash. During the morning it had been noticed that the house, one of a row in course of demolition to make way for the new law courts, had cracked across the centre, and threatened to fall every instant. The traffic in the Strand was forthwith stopped by the police, all carriages and other vehicles coming from the eastward being obliged to go up Chancery Lane, and no one being allowed to walk along the north side of the Strand near Temple Bar. At a few minutes before 12 the front wall swayed outwards and fell into the street between Temple Bar and Twining's Bank. No accident happened in consequence of the excellent arrangements made by the police. A dog which had run into the house just before it fell was buried in the ruins, and of course killed.

THE PUBLIC HEALTH.—The Registrar-General's Weekly Return of births and deaths in London states that in the week that ended on Saturday, March 7, 1655 births and 2996 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 24 per 1000 persons living, being 22 per 1000 in London, 30 in Edinburgh, 27 in Dublin, 23 in Bristol, 24 in Birmingham, 26 in Liverpool, 30 in Manchester, 32 in Salford, 26 in Sheffield, 20 in Leeds, 27 in Hull, 25 in Newcastle-upon-Tyne, and 29 in Glasgow. The rate in Vienna was 40 per 1000 during the week ending the 29th ult. In London, the births of 1187 boys and 1082 girls, in all 2269 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2222. The deaths registered in London during the week were 1331. It was the tenth week of the year, and the average number for that week, corrected for increase of population, was 1610. The present return is, therefore, 279 below the estimated number.

Provincial.

DERBY.—On Saturday evening a desperate attack was made upon the life of Mr. W. G. Fox, chief constable of Derbyshire. Between 5 and 6 o'clock Mr. Fox was walking towards his office at the top of Station Street, when he was met by a man named James Connor, who was recently discharged from the county force. Connor said, "Is that you?" and became very abusive. At length he said, with an oath, "I will shoot you," and, pulling from his pocket a pistol, presented it at Mr. Fox's head. Mr. Fox tried to persuade the man to go towards the office, but he said, "No, sir, I shall not go with you; I will shoot you at once," and thereupon fired the pistol. The pistol was

heavily charged, and Mr. Fox was wounded in the hands and legs. Ten or 12 shots were aimed at one leg, and eight or 10 from the other. Several of the shots were also extracted from his hands. Mr. Fox succeeded in wrenching the pistol from the assailant, and in dragging him to his office. On Monday he was brought before the county magistrates and committed for trial.

ETON.—A circular has been addressed to the heads of Eton boys by the new head master Mr. Fox, informing them that from this time the practice of giving leaving books at Eton will be discontinued. The order for leaving books will be given by the school, and that boys will not be allowed to receive or return leaving books in any of the houses, or in College. Mr. Fox asks for their co-operation and support in putting the school to a system which presses very heavily on the minds of boys. He has since informed the boys that he has determined to deal with another abuse of the school himself—that of "leaving money." He said that the resolution of course did not bind his colleagues, but he wished the school distinctly to understand that he should not henceforth take any leaving money.

LIVERPOOL.—At the Police Court on Friday, Wilson, David Harris, Walter Ford, and Jackson, the young men remanded on Tuesday for conspiring to rob and murder Mr. Adair, a well-known merchant, of this town, were brought up for re-examination. The prosecutor made his deposition from the witness-box with his head bandaged up, and his arm in a sling, and seemed to be in a very weak state. He described the assault of Mr. Adair, who had been the victim, and the prisoners were committed for trial. The Town Council last week gave the Committee authority to borrow 71,000l. for the purpose of the conversion of privies into water-closets, and for sanitary improvements.

SHELBY.—The adjourned inquest on the body of Daniel Driscoll, bricklayer, who was murdered at Duffield, on the night of February 19, was held in this town on Tuesday. The evidence showed that a man named Frederick Parker, who was discharged from Beverley House of Correction the day before, that they travelled together to Duffield, and that Parker was dealing with Driscoll, and watch the day after the murder. The jury returned a verdict of "Wilful Murder" against Frederick Parker, who was committed for trial. On Wednesday the magistrates also committed the prisoner to the capital charge.

TODMORDEN.—On Friday Miles Weatherill, who was committed for trial on Tuesday for the murder of Jane Smith, at Littleborough, was again brought before the court. The principal witnesses were the Rev. Mr. Bell, the girl whom the prisoner courted, and a mistress disapproved. At the close of the evidence the prisoner confessed that it was his intention to take the life of Jane Smith. He was then committed for trial at the assizes. Mr. Plover, on returning to his home, became gradually worse, and died on Thursday in great agony from inflammation of the brain, by the wounds he received on the head. He was born three weeks before the murder, and died on Thursday at Littleborough, where it had been after the attack in the care of the wife of Mr. Molesworth, the brother of Mrs. Plover. His removal from its mother is supposed to have been the cause of its death. Mrs. Plover remains in a very weak and precarious condition. The trial of the prisoner commenced yesterday at Manchester. The court was densely crowded, and thousands of people were present to obtain admission. The funeral of Jane Smith took place on Friday morning, and was attended by a large concourse of people. She was buried in the churchyard of the parish church, which adjoins the house where she was murdered.

Ireland.

THE FENIAN TRIALS AT CORK.—The trials were opened on Monday by Baron Deasy, Chief Justice O'Hagan. Peculiar precautions were taken in conveying the judges into the city. In passing the streets they were protected by a force of Lancers and mounted constabulary. Mr. O'Hagan charged the grand jury, who afterwards returned true bills for the wilful murder of Constable Mackay, Thomas Mackay, Thomas Walsh, and David Spillard. On Tuesday, the grand jury challenged on behalf of the prisoner Captain O'Hagan, who was given in charge to the jury for the wilful murder of Constable Casey. The Attorney-General appeared for the Crown, and the evidence for the prosecution occupied the Court to its retirement. The Court was locked up for the night, and the judges were taken to and from the Court by a large cavalry force of Lancers and constabulary. On Wednesday, the case for the Crown, Mr. Heron, Q.C., presented the jury for the prisoner. He contended that the prisoner committed no felony and the police had not a Lieutenant's warrant with them. He stated that the pistol was discharged by the hand of the prisoner, Geale while endeavouring to strike the prisoner, and that if there had been proper instruments in the infirmary Casey's life might have been saved. The evidence was examined for the defence, and the jury returned a statement by Casey that the explosion was accidental; and to an observation by the prisoner that he could have shot him twice. Geale and Spillard were recalled, and positively contradicted the evidence of Casey. Sir C. O'Loughlin having replied for the Crown, Chief Justice O'Hagan charged the jury, who returned a verdict of guilty.

in, and holders were more inclined to make concessions in the prices of secondary qualities. Maize has improved in value. Barley was a slow sale; in Rye nothing doing. In cargoes on passage and for forward shipment the business is at a standstill. Linseed was somewhat easier to purchase. Rapeseed unaltered. Paris, March 12.—The supplies of Wheat are limited, and with an active demand prices exhibited an improved tendency. Flour meets with a steady sale at improved rates. The six marks are quiet equal to 60s. 9d per 280 lb. The stock at the Halle is estimated at 20,000 cwts.

The arrivals of English grain this week by water have been small, also of foreign Wheat and Oats, but large of Barley. This morning's market was thinly attended, and business transacted in either English or foreign Wheat limited, but on the sales effected late prices were maintained. Spring Corn was quiet at Monday's quotations.

LIVERPOOL, Tuesday, March 10.—To-day's market was very well attended by both town and country buyers, and Wheat experienced a moderate demand, white kinds and the better sorts of red realising the currencies of this day week. Flour steady at the full rates of Tuesday last. Indian Corn in fair request, at 1s. 6d. to 1s. 9d. per qr. advance since this day week. Oats and Oatmeal unchanged. Egyptian Beans active, and 6d. to 9d. per qr. dearer. Canadian Peas slow and unchanged. Malt and Barley without alteration.

FRIDAY, March 13.—The market was moderately attended. Wheat and Flour in moderate demand at Tuesday's rates. Beans, Peas, Oats, and Oatmeal in retail demand. Prices nominally unchanged. Indian Corn very slow sale, at 1s. per qr. decline; mixed, 42s.

Great Flower Show, Manchester, June, 1867.
FIRST-CLASS CERTIFICATE TO

THE PATENT TERMINAL SADDLE BOILER,

with following note.—
"The Judges consider this one of the most powerful and useful
Boilers for general purposes."
Gardeners' Magazine.—"This Boiler possesses the rare merit of
sucking all the heat from the fire, so that it furnishes a maximum of
power for a minimum of outlay in respect of fuel."—*S. H.*
The Gardener.—"Of Boilers, by far the best, according to our
judgment, was the Terminal Saddle."—*W. Thomson.*
Journal of Horticulture.—"T. Jones's Terminal Boiler was con-
sidered by the judges the best of all exhibited on this occasion."—
J. Will.
J. IRELAND, Edward Street, Broughton Lane, Manchester.

"Far exceeding every publication of its class."—"The British Medical Journal." London. Published by SIMPKIN, MARSHALL, & Co. Booksellers.

Germany in his quality of Protector of 30 millions of North Germans.

SAXONY.—Prince Napoleon arrived at Leipsic on Sunday morning. A great crowd had assembled to witness his arrival. His Imperial Highness partook of a *dinner* at the residence of the French Consul, to which the authorities were invited. In the evening the Prince was present at the theatre. He left on Monday for Cassel.

AUSTRIA.—In the sitting of the Hungarian Delegation on Friday, a statement was made in the name of the War Minister, correcting a declaration made in his name a few days before by Herr Griviciz. The Minister stated that he interprets the Hungarian law respecting the organisation of the general army of the empire as meaning that the command, officering, and internal organisation are to be in common, but that the settlement and modifications of the military system can only take place with the consent of the Legislature. The Minister admits the duty of strictly adhering to the law. The delegation thereupon resolved to enter on the consideration of the War-office estimates in detail, and the report of the committee on the subject was ultimately adopted. In the sitting of Saturday the Hungarian Delegation agreed to the Naval Estimates and to the extraordinary supply asked for the army and the fleet. In the sitting of Monday the Hungarian Delegation adopted the report of the Committee declaring that the expenditure for the Chancellery of the Imperial Cabinet is not common to both portions of the Empire but must be voted separately by the Hungarian Diet. The report declares, moreover, that the payment of any of the above expenditure out of the Hungarian quota is incompatible with the dignity of the country and the respect due to the King. In the sitting of the Lower House of the Reichsrath on Wednesday, the Bill relative to the constitutional position of the Judges was read a third time and passed. In the sitting of the Upper House of the Reichsrath on Thursday, the debate on the Civil Marriages Bill commenced. After the reporters of the Committee had read the proposals of the majority and minority, the general discussion was opened. The Minister of Public Instruction, Herr von Hasner, announced that the Government sided with the report of the majority, and proceeded to say:—

"The Ministry considered the present Bill an unavoidable necessity. Referring to the negotiations opened at Rome for the revision of the Concordat, he said the Government was convinced that if a good will were shown these negotiations might be speedily concluded. Unfortunately this did not seem to be the case. The Concordat obstructed the action of every department of the State."

Counts Rechberg and Blome and Cardinal Rauscher defended the proposals of the minority. On the motion of Baron Mensdorff, the discussion was adjourned. Great excitement prevails as to the issue of the debate. The Committee on the new Press Bill have concluded their deliberations, as have also the Committee on the Bankruptcy Bill. The Budget Committee of the Reichsrath Delegation have agreed to the decisions of the Hungarian Delegation on the greater number of the points upon which they were at variance. The Government has nearly completed a new Army Bill, introducing a uniform system for both portions of the Monarchy. The Austrian and Hungarian Ministers will shortly deliberate together on introducing the Bill in an identical form in the Reichsrath and the Hungarian Diet.

RUSSIA.—The *Courrier de la Russie* of Monday, referring to the rumours of Prince Napoleon visiting St. Petersburg, says:—

"We hope these reports may be true. Prince Napoleon might then judge for himself of the falsity of the ideas circulated in France respecting the institutions, policy, and aspirations of Russia, and we have no doubt that a change in his personal sentiments would have an influence upon public opinion in France."

ITALY.—The Chamber of Deputies resumed on Friday the debate on Signor Crispi's motion for deferring the discussion on the grinding tax until reforms had been voted for diminishing the expenses and increasing the revenue of the State. Count Cambray Digny opposed the motion, and numerous speakers proposed other orders of the day. In the sitting of Saturday Signor Crispi's motion was rejected by 213 votes against 103. The Chamber then adopted by a large majority an order of the day moved by Signor Minghetti, inviting the Ministry to present within a month a Bill for effecting certain savings and modifications which would produce a gain of 100 million lire to the Treasury in the Budget of 1869. The Chamber also approved Signor Bargoni's order of the day proposing that the grinding tax should be discussed, but that the House should reserve its final approval of the tax until after all other financial measures had been discussed. Count Cambray Digny accepted these orders of the day. The debate on the grinding tax then commenced, and has continued daily during the week. The King has nominated 14 new senators, including Signor Antonio Panizzi and the Marquis di Pepoli. Prince Amadeus has been created Vice-Admiral. A grand banquet was given on the 12th to Admiral Farragut, Commander of the American squadron in the Mediterranean, by Admiral Provana, Commander of the Second Naval Department of Italy. Generals Pettinego and Carrano, the prefect, and the principal military, civil, and municipal authorities were present. The greatest cordiality prevailed. The commercial community are organising another banquet in honour of Admiral Farragut, to be given in the name of the citizens of Naples. Admiral Farragut left for Rome on Monday. He was accompanied to the railway station by many of the principal citizens of Naples. Mount Vesuvius is again extremely active, throwing up an enormous quantity of incandescent matter to a great height. Dejections are very loud and frequent, but the flow of lava is not abundant.

PAPAL STATES.—Monsignor Lucien Bonaparte, Gonella, Barili, Berardi, Moreno, Borromeo, Ferrieri, La Valetta, and Capatti were created Cardinals in secret Consistory on Friday. The Pope pronounced a short allocution on the occasion. Several bishops were appointed to various dioceses in Spain, Hungary, New Grenada, Holland, and the United States. Monsignor Pacca was appointed Major-Domo of the Pope; Monsignor Marini, Under-Secretary of State; Monsignor Franchi, Nuncio at Madrid; Monsignor Origlia, at Lisbon; Monsignor Cattani, at Brussels; Monsignor Bianchi, Internuncio at the Hague; and M. Agnozzi, Chargé d'Affaires at Berne. On Monday the Pope held a public Consistory in the presence of the members of the Diplomatic Corps and other distinguished personages. After having taken the oath the new Cardinals received their hats. The Pope afterwards held a private Consistory, at which he pre-ordained bishops for the dioceses of Quito, Louisville, Erie, and Buffalo, and appointed other bishops *in partibus*. His Holiness then conferred the ring and titles upon the new cardinals. Cardinal Bonaparte received the title of Saint Pudentius, and was appointed member of the congregations of Bishops and Regulars. The ceremonies concluded with the usual rites and the granting of indulgences. Count de Sartiges, the French Ambassador to the Holy See, gave a reception in the course of the day.

GREECE.—Russian vessels arrived at Athens on the 7th inst. with upwards of 1000 refugees from Candia. A Russian corvette arrived on the 12th with 500 refugees from Candia. The total number of refugees now exceeds 60,000. Many deaths have occurred among them, and sickness prevails to a great extent. The coming elections promise to be attended by considerable political excitement.

SYRIA.—In compliance with a telegram from the Chancellor of the North German Confederation, the Consul of the Bund at Constantinople has visited Jerusalem, to investigate in person the persecutions of the Jews, stated to have occurred at Jerusalem. The Consul has procured the release of Rabbi Aye from confinement, and has removed Dragoonian Dahud, the Prussian consular representative, from his post.

ABYSSINIA.—Sir Stafford Northcote has received the following telegrams from Sir Robert Napier:—

"Camp, Arranrein, Feb. 16.
"Prince Kassal met me yesterday, with about 10,000 followers. His demeanour was extremely friendly. We conversed together for many hours, and our intercourse was most gratifying and satisfactory. The Prince accompanied me in the afternoon to a parade of my troops, after which himself and his army escorted me to the Prince's own tent where the Prince entertained me till night. He has promised to arrange for the supply of necessaries for our army. I am about to arrange this important matter with the Prince's brothers, and shall march to-day towards Antalo."
"Antalo, March 2.
"I arrived here to-day, with the wings of four regiments, and four horsed guns of G Battery, 14th Brigade, Royal Artillery. The advance column moves towards Ashangi to-morrow, the 3d March."

MAURITIUS.—The fever is on the increase in Mauritius, and there is much sickness among the better classes of society. The death rate in Port Louis is 30 daily, out of a population of 60,000. The north of the island is now free from fever, which on the other hand has at length reached the south, and now prevails to a limited extent for the first time at Savanne and Grand Port. The total mortality in the island from the 1st to the 14th inst. was 1012.

JAPAN.—Intelligence from Japan announces that the Tycoon has been totally defeated by the Daimios, and has fled to Yeddo. The intestine war paralysed trade. The Mikado had addressed a note to the foreign ministers declaring that the treaties would be respected. All the foreigners, however, at Hiogo and Osaka had embarked for safety in consequence of the prevailing hostilities. A French or American vessel of war had been fired into; it was not known whether by the rebels or by the troops of the Japanese Government.

CHINA.—A great fire has occurred at Foochow. The loss is estimated at 200,000 dollars.

AUSTRALIA.—Lord Belmore, Governor of New South Wales, arrived at Sydney on the 7th ult.

UNITED STATES.—The House Committee presented to the Senate on the 14th inst. 12 articles of impeachment against President Johnson, charging him with high crimes and misdemeanours in violating the Tenure of Office Law by attempting the removal of Mr. Stanton from the War Office and the appointment of General Thomas without the advice and consent of the Senate, in conspiring forcibly to seize the public property in the War Department; in violating the Army Bill by trying to induce General Emery to obey orders not sent through General Grant; in denying the legality of Congress; in attempting to devise means to defeat the execution of the Reconstruction Laws; in denouncing Congress in public speeches in terms unbecoming the chief magistrate; and in generally violating the Constitution by not enforcing laws specified. On the 5th the Senate organised itself as a Court of Impeachment. Chief Justice Chase, who presided, and all the Senators, took an oath to do President Johnson impartial justice. Senator Hendrick, a Democrat, objected to Mr. Wade having a voice in the trial, on the ground that he was directly interested in the result. After a debate the objection was withdrawn, and Mr Wade was sworn. The managers of the impeachment on the part of the House formally demanded that President Johnson should put in an appearance. The Senate, in response, ordered the President to be summoned to appear on the 13th of March, to which day the Court adjourned, after authorising the impeachment managers to summon witnesses, administer oaths, and to take testimony. The Senate Court met on the 13th for the trial, when Attorney-General Stanberry, Judges Black, Nelson, and Curtis, and the Hon. W. M. Evarts

appeared as counsel for the President. The Court ordered the President to file an answer to the articles of impeachment on or before the 23d inst., and has refused to receive a protest from the Democratic members, declaring that the majority of the House in limiting the debate upon the impeachment, and with indecent haste in passing impeachment under a strict party vote, was announcing the impeachment as a partisan act. The Democrats have carried the election in New York and Rochester by increased majorities. Jefferson Davis has been enthusiastically elected in New Orleans. A riot has occurred on Wall Street, New York, between the German and Irish clubs. About 1500 men were engaged, pistols, clubs, and clubs being freely used. More than 80 persons were wounded, four of them fatally. Ex-Senator B. Delaware, is dead. The Hon. Joseph R. Ingersoll, Philadelphia, who was American Minister in London from 1850 to 1853, died in Philadelphia on the 14th ult., at the age of 82.

MEXICO.—Advices from the city of Mexico, 15th February, state that Yucatan had been reconquered and had recognised Juarez.

BRAZILS.—Advices from the seat of war state that after a conference between the Admiral and Generalissimo of the allied forces, the intended attack upon the Paraguayan position at Humaita was postponed. Upon receiving information that the Brazilians refused to attack at once, the Brazilian Government proposed his dismissal, but this was opposed by the Emperor.

Parliament.

In the House of Lords on Friday the Duke of ARGYLL, after calling attention to the inconvenience arising out of the ratepaying clauses of the Education Act of last year, referred at great length to the subject. Mr. Disraeli to the newspapers as a result of an explanation of his speech at Edinburgh. He stated that the Conservative party were exceedingly anxious to endure the process of education to which the nation had been subjected, and said that he could not see how public life on the terms to which it had been virtually lowered by the public conduct of the policy of the First Minister of the Crown. The CHANCELLOR defended the Reform Bill, and expressed a strong opinion that the "rating" which the Duke had given to Mr. Disraeli would have been honestly repaid had the Minister of the Crown happened to have been in that House. EARL RUSSELL maintained that the public confidence could not be given to the party after they had asserted one policy in opposition and reversed it when in power. The EARL OF MANSFIELD vindicated the conduct of Ministers, and stated that they had only at last succeeded in settling the reform question by treating it no longer as one subject of its own reconstruction. After some remarks by EARL GREY and EARL GRANVILLE on the clauses, the EARL OF DEVON expressed his belief that the distress at the East-end of London arose from the working of the ratepaying clauses, and would be advisable to simplify the process of the poorer class of householders were excused payment of rates. On Monday the Duke of MARRIOTT gave notice that on Tuesday the 24th inst. he would call attention to the subject of elementary education in England and Wales, and would introduce a reference to it. The Railways (Extension Bill and the Ecclesiastical Commissioners (Council) Bill were read a third time and passed. Tuesday the LORD CHANCELLOR said, in answer to the Marquis of CLANRICARDE, that the Government had no objection to the appointment of a Commission to inquire into the constitution, jurisdiction, and procedure of Quarter Sessions Courts in Ireland. Thursday the Bishop of LONDON, in presenting a petition against the admission of Nonconformists to the full privileges of members of the University, declared his opinion that no danger would be incurred by the admission of persons dissenting from the Church to the Senate and to professorships, provided they were not also admitted to the government of colleges. In reply to LORD TAUNTON, the Archbishop of CANTERBURY stated that the second report of the Ritual Commissioners would shortly be published. Representation. Yesterday the Duke of Devon moved the second reading of the Regulation of Accounts Bill, and said that it provided for the accounts, annual returns of capital, official correspondence, and communication with guards and passengers. The great grievance of the companies with respect to collections of small parcels being sent to the colonies. LORD REDESDALE made some remarks on the Bill. The House was left sitting.

In the Commons on Friday the adjournment of Ireland was resumed by Mr. C. FORBES. He denounced the Ministerial programme as insulting to the real grievances of Ireland. Mr. M'KENNA, The O'DONOGHUE, Lord C. HANCOCK, Mr. H. A. HERBERT, and Mr. NEWDEGATE supported Mr. BRIGT's contention that the land and the tenantry were at the root of all the mischief in Ireland. In reference to the former, he would not discuss the rights of property, but if the Government were to raise money at 3½ per cent and purchase Irish land to be divided among tenant-farmers, who would be 5 per cent. for 31 years, tenant right would be secured, and each tenant would, at the expiration of 31 years, become the freeholder of the land he had cultivated. The Church question, he considered

His trial is said to have lasted a year... The jury accordingly again returned... Mr. Justice then left the... Mrs. Weston... The jury... sentenced to 15 years' penal servitude.

OBITUARY: WARWICK.—The Birmingham Murder.—*William Beesley*, and *Louis Bee* were indicted for the murder of *Mary Milbourne*, at Birmingham, on the 1st of January. The facts of this case were fully noticed in the *Chronicle*, and it will be remembered that the body was found from strangulation and the chief evidence to connect the prisoners was given by a man called *Mack*, who stated that he had seen *Beesley* and *Bee* at the time of the murder, who lived at *Deritend*, when they were both employed as labourers for an old man named *Marlow*, and in turning over an old house in *Deritend*, some Bank of England notes were discovered. The result was a conviction of *Beesley* and *Bee* in the perpetration of which they were charged intentionally, but the pressure being applied to her neck, or the threat of the witness's evidence, though it was confirmed by the jury, the defence was contended, as it was that *Mack's* evidence could not be relied upon, and an *alibi* was given for the benefit of *Beesley* and *Bee*. Mr. Justice then said that if satisfied that the prisoners had a common purpose to rob *Miss Milbourne*, and were prepared to use such force as might be necessary, and further committed the robbery, they were then charged, in connection with *Joseph Beesley*, with having stolen the property of *Miss Milbourne*. To this charge the others not guilty. *Marlow* made his own share in the robbery, but the prisoners had never been in the house of the former *Mack*, and a man who was seen at the scene was sentenced to 14 years' penal servitude.

AVLESBURY.—The Luton Murder.—*Blocker*, and *Levi Welch*, blocker, were indicted for the murder of *William Bradberry*, at Round Church, Luton, on the 3d of August. A man named *Day* was committed for trial with the charge of having murdered *Bradberry*. No evidence was given against *Welch*, and he was therefore acquitted on the 31st of August left his home to buy some clothes, and purchased a pair of trousers, a blue waistcoat, and a waistcoat, which he put in a bag. At 10 o'clock at night he went to a public house and had some beer. On leaving the house he was followed by *Welch* and *Day*, who were found lying murdered in the road, and a blow in the head, inflicted by *Day*, the prisoner had borrowed his brother's gun, and liberating for about 20 minutes, found the body of *Bradberry* then sentenced the prisoner to 14 years' penal servitude. *Levi Welch*, who had been charged with robbing the body of *Bradberry*, and the judge said he would not see he could, which was one of penal servitude. *Mack*, of a *Gambler*.—*James Mack*, the wilful murderer of *John White*, a servant of *Captain Swanbey*, of *Wavendon*, and another man, who now came forward pleading, when deceased and another man. The other man ran away, and the prisoner was shot into the body of *White* and killed. It was argued that the gun went off by accident, and the prisoner guilty of manslaughter, and sentenced to 2 years' penal servitude.

Obituary.
On Tuesday at his residence in *London* was the only son of *Robert Smith*, first Lord of the first marriage with the eldest daughter of *Richard*, of *Cave Castle*, *Yorkshire*. He married first, in 1822, the second daughter of *Richard*, who died in 1832; and the third daughter of *Lord Willoughby* of *Parham*. He was a Liberal, and was a member of the House of Commons from 1832 to 1839, when he first married. From 1839 to 1850 he represented *Weymouth* and was a strong advocate for the reform of the House of Commons. He represented *Weymouth* when he succeeded his father in the family. He was a strong Liberal, and took an active part in politics. He was a member of the *Buckinghamshire*, and *Colonel* of the *54th Regiment*. He is succeeded in the family by his son *Charles Robert Carrington*, born in 1834, who was elected *Major-General* of the *54th Regiment*, and *Colonel* of the *54th Regiment*.

was killed on the 12th inst by a fall from his horse, while hunting in the neighbourhood of *Fulbeck Hall*, his seat in *Lincolnshire*. He fell on his forehead, and broke his neck. His death was therefore instantaneous. He was the fifth son of the *Hon. Henry Fane*, second son of the eighth Earl of *Westmoreland*, and was consequently brother of the late *General Sir Henry Fane GCB*, the *Rev. Edward Fane*, prebendary of *Fulbeck*, and of *Sidbury*, and of the late *Bankrupt Commissioner Cecil Fane*. He was born in 1764, and was unmarried. He entered the army in his 16th year, and served in the *Peninsula* from 1812 to 1814, including the battle of *Vittoria*, assault and capture of *San Sebastian*, and battles of the *Nive*. He served also the campaign of 1815, including the battles of *Quatre Bras* and *Waterloo*, at the former of which he was severely wounded. He had received the war medal and three clasps for *Vittoria*, *San Sebastian*, and *Nive*, and the *Waterloo* medal. In 1855 he was appointed colonel of the *96th Foot*, from which he was removed in 1860 to the colonelcy of the *54th Regiment*.

MAJOR-GENERAL GEORGE KING died on the 11th inst., at *Bradford Abbas, Dorset*, in his 55th year. He entered the army in 1811, and served throughout the campaigns in *Afghanistan*, from 1838 to 1842 inclusive, including the storm and capture of *Ghuznee*, storming the *Khoord*, *Cabul Pass*, affair of *Tesien*, forcing the *Jugdulluck Pass*, reduction of the fort of *Mamoo Khail*, defence of *Jellalabad* and sorties, general action and defeat of *Akbar Khan* before *Jellalabad*, storming the heights of *Jugdulluck*, general action of *Tesien*, and recapture of *Cabul*. He also served in the Crimea from June, 1855, and was at the siege and fall of *Sebastopol*. He served in the Indian campaign, and commanded the left wing of the *10th Light Infantry*, in the operations under *Colonel Kelly*, in *Turkistan* and the *Indus*, including the actions at *Bootwab* in 1849, in which he was awarded the *Order of the Bath*, a medal for *Jellalabad*, and one for the recapture of *Cabul*, he received a medal and clasp for *Sebastopol*, was made a *Knight of the Legion of Honour*, and of the *Order of the Medjidie*, 5th class, and received the *Turkish* medal for his services in the Crimea. He retired a few years back on full pay, with the rank of major-general.

THE REV. PROFESSOR CHRISTMAS died on the 11th inst., in *Charing Cross Hospital*. He engaged a *Hansom* cab between 12 and 1 o'clock on the previous morning, near the *Marble Arch*, and ordered the driver to take him to the *Haymarket*. On arriving there he was found to be insensible, and was taken to the hospital, where he died, 12 hours after admission, from apoplexy. At the inquest on Monday, Mr. S. G. Grady, Recorder of *Gravesend*, identified the body as that of the *Rev. Henry Christmas*, or as he recently called himself, the *Rev. Henry N. Fearn*, having assumed his mother's name in lieu of his patronymic. He was about 55 years of age, and resided at *S. Danes Inn, Strand*. He was formerly Librarian of *Ston College*, and was a few years ago Professor of *British History and Archaeology* to the *Royal Society of Literature*. He had latterly been suffering from gout. The medical evidence showed that death arose from natural causes, and a verdict to that effect was returned.

THE REV. DR. ROBERT LEE, minister of *Old Greyfriars' Church, Edinburgh*, and well known in connexion with endeavours to introduce into the Church of Scotland what are called "innovations," died at *Torquay* on Saturday last, in his 63rd year. He never recovered entirely from a severe shock of paralysis by which he was attacked in May last, and he left *Edinburgh* for the south in October for the benefit of his health. *Beesley* being minister of *Old Greyfriars, Dr. Lee* was Professor of *Biblical Criticism* in the University of *Edinburgh*, and one of the *Deans* of the *Chapel Royal*.

THE VERY REV. CANON O'NEAL, Vicar General of the Roman Catholic diocese of *Westminster*, died on Sunday night. He had been for many years one of the priests of the Church of *Our Lady in Grove Road, St. John's Wood*. He was one of the leading men among the Roman Catholic clergy of the metropolis, and a zealous promoter of all works of charity connected with that communion.

MR. C. J. ANDERSON, whose death was reported by the last mail from the *Cape of Good Hope*, was well known as an intrepid traveller in *South Africa*. He was the author of "Lake Ngami or Discoveries in South West Africa, and also of "The Orange River: A Narrative of Travel." A few years since he settled in *Damaraland*, and became a cattle breeder on an extensive scale, but in an engagement with the *Namaquas* to recover a very large herd of cattle which had been stolen, he received a gunshot wound, which splintered the thigh bone and rendered him a cripple for life. Notwithstanding this, after staying some time at *Cape Town* for surgical aid, he returned up the country, and, aided by some eminent zoologists in *England*, proposed to publish "An Illustrated Fauna of South West Africa." He died in the wilds of *Onodoga*, near *Ovamba Land*, bordering on *Portuguese possessions*.

Mrs. GEORGE COMBE died at *Nice* on the 19th ult. She was the daughter of the great *Mrs. Siddons*, and widow of the author of the "Constitution of Man," whom she married in 1833. During the 25 years between that time and his death, she was his companion in all his journeys, spending three years with him in a tour through *America*, where he lectured in most of the principal towns, and collected materials for his work on the *United States*, to which *Mrs. Combe* contributed a description of the shore scenery near *Portland*, in *Maine*. *Mrs. Combe* was the last survivor of her family.

WILLS.—The will of *Sir Norton Joseph Knatchbull, Bart.*, has been sworn under 25,000*l.* personally; *Mr. Samuel Eyres*, of *Armley, Leeds*, 1,200,000*l.*; *Mr. Henry Tull*, of 18, *Cork Street, Burlington Gardens*, 140,000*l.*; *Miss Ann Lockwood*, of *Betchworth*, 40,000*l.*

Markets.

HAY.—Per Load of 36 Trusses.

SMITHFIELD, Thursday, March 19.			
Best Green Hay	—	Clover, old	95 to 100s
Prime Meadow Hay	75s to 80s	Inferior do.	70 90
Inferior do.	55 70	Prime new Clover	—
New do.	—	Inferior do.	—
Straw	30 36	CHARLES JAMES EASTON.

Cucumbers, each	2s to 4s	— Flukes, 130s to 160s	—
Endive, per score	1s 6d to 2s	— Other sorts, 75s to 80s	—
Garlic and Shallots, p. lb.	8d	Seakale, p. punn.	1s to 1s 6d
Herbs, per bunch	2d to 4d	Spinach, per bushel	3s to 4s
Horse Radish, p. bund.	3s to 5s	Tomatoes, per doz.	3s to 5s
Leeks, per bunch	2d to 4d	Turnips, per bunch	4d to 6d
Lettuces, per doz.	2s		

POTATOS.—SOUTHWARK, Monday, March 16.
During the week the arrivals coastwise and from abroad have still been in excess of the demand; trade very dull at the following quotations:—*Yorkshire Flukes*, per ton, 140s. to 170s.; *do. Regents*, 130s. to 160s.; *do. Rocks*, 120s. to 130s.; *Lincolnshire Regents*, 130s. to 150s.; *Dunbar* and *East Lothian Regents*, 140s. to 160s.; *Perth, Forfar, and Fife Regents*, 120s. to 140s.; *ditto Rocks*, 110s. to 120s.; *French and Belgian Whites*, 90s. to 95s.

HOPS.—BOROUGH MARKET, Friday, March 20.
Messrs. Pattenden & Smith report the market firm at the advance, with a very limited supply of choice descriptions, which continue to meet a steady demand.

COALS.—March 18.
Hollywell Main, 15s. 6d.; *Walls End Caradoc*, 17s. 6d.; *Walls End Wharfedale*, 15s. 3d.; *Walls End Caspob*, 17s.; *Wylam*, 15s. 6d.; *West Hartley*, 16s. 6d.; *Walls End Gosforth*, 16s. 3d.; *Walls End Haswell*, 18s. 6d.; *Walls End Hetton*, 18s. 6d.; *Walls End Tunstall*, 15s. 6d.; *Walls End Russel's Hetton*, 16s. 3d.; *Walls End Braddyl's Hetton*, 16s. 6d.; *Walls End Hartlepool*, 17s. 3d.; *Walls End Keppier Grange*, 16s. 3d.; *Walls End Kelloe*, 16s. 3d.; *Walls End East Hartlepool*, 17s. 6d.; *Walls End Original Hartlepool*, 18s. 6d.; *Walls End Heugh Hall*, 17s. 6d.—Ships at market, 39; sold, 22.

ENGLISH WOOL.
There has been a good demand, and prices are again dearer. A fair amount of orders has been placed at *Bradford* and elsewhere for goods to be made from *English* and similar grades of wool, and the prospects are for firmness for some months to come.

CURRENT PRICES OF ENGLISH WOOL. per lb.—s. d. s. d.

FLUCCES—Southdown hoggets	1 4	to	1 5
Half-bred ditto	1 5	—	1 6
Kent Flucces	1 4	—	—

NEWGATE.—March 20.
Best Fresh Butter 17s. per dozen lb.
Second do. do. 15s.
Small Pork, 4s. 6d. to 5s. 6d.; Large Pork, 3s. 6d. to 4s. 2d. per 8 lb.

METROPOLITAN CATTLE MARKET
MONDAY, March 16.
There are a few more *Beasts* than on *Monday* last; the average quality is very middling, consequently choice qualities are readily disposed of. On the whole there is a fair demand. *Sheep* are more plentiful, and trade is not quite so active, yet prices are scarcely any lower. Good calves continue scarce and dear. Our foreign supply consists of 540 *Beasts*, 3790 *Sheep*, 107 *Calves*, and 5 *Pigs*; from *Scotland* there are 382 *Beasts*; from *Ireland*, 153; from *Norfolk* and *Suffolk*, 1800; and 845 from the *Northern* and *Midland Counties*.

Best Scots, Herefords, &c.	4 8 to 5 0	Best Long-wools	4 8 to 5 0
Best Shorthorns	4 6 — 4 10	Do. Shorn	4 4 — 4 6
2d quality Beasts	3 0 — 3 8	Ewes & 2d quality	3 6 — 4 0
Best Downes and Half-breds	5 0 — 5 4	Do. Shorn	—
Do. Shorn	4 4 — 4 8	Lambs	—
		Calves	4 0 — 6 0
		Pigs	3 4 — 4 8
		Beasts, 3720; Sheep & Lambs, 2,780; Calves, 113; Pigs, 360.	

THURSDAY March 19.
The supply of *Beasts* is very small, but the demand is very limited, and consequently prices have not advanced from *Monday* last. The number of *Sheep* is much larger, and trade is dull, consequently prices are lower, and a clearance cannot be effected. *Calves* are still dear, owing to a short supply of choice qualities. Our foreign supply consists of 33 *Beasts*, 1910 *Sheep*, 151 *Calves*, and 23 *Pigs*.

Best Scots, Herefords, &c.	4 8 to 5 0	Best Long-wools	4 8 to 5 0
Best Shorthorns	4 6 — 4 10	Do. Shorn	4 2 — 4 4
2d quality Beasts	3 0 — 3 8	Ewes & 2d quality	3 6 — 4 0
Best Downes and Half-breds	5 0 — 5 4	Do. Shorn	—
Do. Shorn	4 4 — 4 8	Lambs	—
		Calves	4 0 — 6 0
		Pigs	3 4 — 4 4
		Beasts, 520; Sheep and Lambs, 6740; Calves, 222; Pigs, 130.	

MARK LANE.—MONDAY, March 14
The supply of *Wheat* from *Essex* and *Kent* to this morning's market was very small, and met a slow sale at the quotations of this day's night. The market was moderately attended, and foreign *Wheat* was taken in retail only at last week's prices. *Fine malting Barley* was in demand at extreme rates, grinding and white *Peas* difficult of sale. In the value of *Beans* there was no change. *Oats* sold slowly at

about late prices. For Flour the demand was limited, and there was no alteration in the value.

FRIDAY, March 20.

Excepting some showers the weather has been fine and spring like from the 13th to the 17th inst., since then it has been colder, with slight frost at night. The supplies of home-grown Wheat during the past week having been small in the agricultural districts, it has been impossible for buyers to gain an advantage in price for such, in the import markets, however, the supply has been good, and in order to realise, sellers had to make a concession of 1s. per qr. on foreign Wheat, but business was far from active. We notice no special change in the value of spring corn. Flour was very slow, and to effect sales holders showed willingness to submit to a reduction, but buyers would not be tempted. The arrivals of grain and seed-laden vessels off the coast during the week consisted of 83 cargoes, of which, with those left over from last week, there remained for sale last night 73 cargoes. Fine cargoes of arrived Wheat have in the early part of the week been in free demand for home consumption, as well as for Continental requirements, secondary qualities were neglected, but during the last two days the demand abated, and as the number of cargoes left unsold appeared to decrease but slowly, owing both to fresh arrivals and to the fact that some cargoes sold to speculators appeared again in the list for resale, the trade became dull, and prices fully 1s. per qr. lower. Malze lost the advance obtained last week. Barley a dull sale. In Rye nothing doing. In cargoes on passage and for forward shipment the business is at a standstill, and prices nominal.

The arrivals of English grain and foreign Barley during the week by water have been small, but fair of foreign Wheat and Oats. This morning's market was thinly attended. The little English Wheat on sale was taken at Monday's prices; for foreign the demand was in retail only, at that day's quotations. Barley, Beans, and Peas were unaltered in value, but Oats were purchasable upon rather easier terms.

ARRIVALS THIS WEEK.

	Wheat.	Barley.	Oats.	Flour.

	31,600	7,530	10,660	

LIVERPOOL, Tuesday, March 17. — Today's market was moderately well attended by town and country dealers, and for Wheat there was a fair demand; white descriptions unchanged, but red kinds were 1d. per cental easier than on Tuesday last. Flour quiet and unchanged. Oats steady. Outmeal 6d. per load dearer on the week. Indian Corn neglected, and 2s. to 2s. 6d. per qr. cheaper on the week. Egyptian Beans dull, and 8d. per qr. lower. Canadian Peas slow. Other articles unchanged.

FRIDAY, March 20 — The market was thinly attended. Wheat a rather slow sale, and prices in favour of buyers. Flour continues dull. Beans and Peas unaltered. Oats and Outmeal steady, at Tuesday's rates. Indian Corn mixed a shade better, white rather cheaper; sales at 41s. for the former, and 39s. 6d. to 40s. for the latter.

WANTED, an INDOOR FOREMAN and PROPAGATOR. — Must be an experienced and thoroughly practical Man. — Apply, stating wages required, and where last employed, to D. Messrs. Hurst & Sons, 6, Leadenhall Street, London, E.C.

WANTED, a MAN possessing a knowledge of New Ground Work, Kitchen and Flower Gardening, Budding, Grafting, and Pruning Trees. Wages 16s. per week. — Apply, stating references, to W. Dawson, The Cemetery, Coventry.

WANTED, a GARDENER (Single-handed, Working), for a Gentleman's house, 40 miles from London; no glass; a Married Man from the country preferred. An excellent cottage, with wood, firing, and vegetables found. — Address, stating ages of himself, wife, and children, to A. B., Messrs. Layton's, 150, Fleet Street, London, E.C.

WANTED, as GARDENER, a married Man, who will look after a Pony and Chaise and make himself generally useful. He must have a good character, and thoroughly understand the Culture of Flowers and Vegetables, Pruning, &c. Wages, 15s. a week, and a nice cottage, with a small garden attached, rent free. — Address Mrs. HAYATT, W. Hurn, Bedfordshire.

WANTED, as GARDENER, where two other Men and one Boy are kept, a Young married Man, with unexceptionable references as to experience and character. Wages, £1 per week, and a house. — Mr. WILLIAM SMITH, Bailiff, Horton, Northampton.

WANTED, an active, steady, and industrious YOUNG MAN, to take the Management of Plants, under a Foreman and Propagator. — He must have had considerable experience in the Culture of Plants generally. — Apply, by letter, giving reference, and stating the wages expected, to D. S. THOMSON, The Nursery, Wimbledon, Surrey, S.W.

WANTED, a Young Man, as GROWER of SOFT-WOODED PLANTS. He will have to work under the Foreman, attend to the Fires, and make himself generally useful. Wages 16s. per week. — Apply to Mr. CHILDS, Blenheim Nursery, Rye Lane, Peckham, S.

WANTED, to Work in the Houses, a YOUNG MAN, expert at Potting, Watering, Tying-up, &c. — Wages, 15s. per week. — Apply, in own handwriting, to WILLIAM BADMAN, Cemetery Nursery, Gravesend.

GARDENER. — There is a VACANCY in a Gentleman's Garden for a Gardener who can Paint and Glaze Hot-houses, and make himself generally useful under the Head Gardener. Apply, stating experience and wages, to Messrs. WILLIAM ROLLISON & Sons, the Nurseries, Tooting, S.W.

NURSEY WORK. — JOHN CARTER, Nursery, Keighley, Yorkshire, is in IMMEDIATE WANT of TWO or THREE MEN who have been accustomed to DIBBLING and PLAIN NURSEY WORK. Married men, with wife or boys to assist, preferred. To steady, industrious men, constant work will be given, and wages according to ability. Also Wanted a YOUNG MAN to assist Foreman in Propagation of Hardy Shrubs and Fruit Trees, and executing orders, &c.

WANTED, in a Market Garden, where Forcing is carried on, a YOUNG MAN, not under 18 years of age, to Assist, under a Foreman. He must be accustomed to Firing and Air Regulating. Wages, 15s. per week. — Apply to Mr. SMITH, Market Gardener, Back Common, Turnham Green, Middlesex.

WANTED, several respectable JOBBING HANDS. — Good wages given. — Apply to WILLIAM HOLMES, Frampton Park Nursery, Hackney, N.E.

Under Bailiff.

WANTED, a middle-aged married Man as UNDER BAILIFF. He must be practically acquainted with the Management and Cropping of Heavy Clay Land, and be experienced in the Management of Stock. He must be able to read and write, and understand putting labourers to work, and must produce unimpeachable references for honesty and sobriety. His Wife must understand the Management of a Dairy and Poultry and make Butter for market, for which the usual allowances will be made. All applications must be prepaid, in the writing of the applicant, giving all particulars of previous employment, ages, family, &c., and address to A. B. A., care of the Manager, Commercial Sale Rooms, Mincing Lane, London, E.C.

WANTED, a STOCK-MAN (Wife to look after Dairy, Poultry, &c.). — In a month's time a Man and his Wife, without incumbrance, will be required in the above capacities, and to take charge of the house. The Man will also have to look after a Pony and Chaise; and the Wife must be a good Plain Cook. — Letters, stating age, full particulars of former places, and wages required, to be addressed to T., 28, Great James Street, Bedford Row, W.C.

WANTED, a LAD, about 16 years of age, to Assist in the Shop of a Seedsman, Fruiterer, and Florist. — Apply, in own handwriting, to B. MALLER, Lewisham, Kent.

WANT PLACES. — Letters to be Post Paid.

EXPERIENCED GARDENERS (or as GARDENER and BAILIFF), of various qualifications, recommended to Gentlemen. — Further particulars given on application to Messrs. F. G. HENDERSON & Son, Wellington Nursery, St. John's Wood, London, N.W.

To Gardeners and Bailiffs (Head, Foremen, or Under). JAMES CARTER and CO. having many applications for the above request that those wanting situations will send name, address, and copies of Testimonials for entry in their FREE REGISTER.

Only those who can send unquestionable references need apply. Any Lady or Gentleman requiring Gardeners or Bailiffs may rely upon J. CARTER & Co. adopting the most stringent regulations in reference to testimonials as to ability, honesty, &c. — JAMES CARTER & Co., 27 and 28, High Holborn, London, W.C.

MR. WM. PAUL begs to announce that he has made arrangements by which he will be enabled in future to furnish Gentlemen with the NAMES, ADDRESSES, &c., of GARDENERS and GARDENERS and BAILIFFS, of various qualifications, who are open to engagements. — The fullest particulars as to services required and wages given, should be forwarded with application. PAUL'S Nurseries, Waltham Cross, London, N.

To Noblemen and Gentlemen.

AMBROSE SANDERS, having completed a service of 12 years with Sir Henry Meux, Bart., at Theobald's Park, Waltham, N., begs to offer his services to any Nobleman or Gentleman who may require a first-class GARDENER, or GARDENER and BAILIFF. At Theobald's Park he has managed an extensive Forcing Establishment and Flower Garden, to the perfect satisfaction of his employer, has had the care of the Gasworks, and has been very successful in the Purchase and Management of Stock. He can give unexceptionable references as to character and ability; and he is leaving solely in consequence of Sir Henry's quitting the place. — Present address, Theobald's Park, Waltham Cross, N.

GARDENER (HEAD). — Age 40, no incumbrance; has had 20 years' practice in the routine of Gardening. Can manage Land and Stock. Wife fond of Poultry. — A. B., Messrs. Henderson's Nursery, Wellington Road, St. John's Wood, N.W.

GARDENER (HEAD). — Married; perfectly understands his profession. Wife can undertake a small Laundry or Dairy. Also Young Man as UNDER GARDENER, age 19. South preferred. Excellent references. — A. B., Post Office, Buxton, Derbyshire.

To Noblemen and Gentlemen.

GARDENER (HEAD). — Age 30, married; thoroughly understands his profession in all its branches. Unexceptionable references for the last 10 years. No single-handed place accepted. — S. B., Post Office, Little Sutton, near Chester.

GARDENER (HEAD), age 35, married. — Mr. Wm. PARR can confidently recommend to any Gentleman in want of a thoroughly good Working Head Gardener, one who understands Early and Late Forcing of Fruits, Flowers, and Vegetables, also Flower and Kitchen Gardening. — J. J., Mr. W. Paul's, Waltham Cross.

GARDENER (HEAD). — Age 37, married; thoroughly practical in the Management of Vines, Melons, Cucumbers, Flower and Kitchen Gardening, and the routine of Gardening generally in all branches. First-class character of several years' standing. — A. B., Post Office, Watford, Herts.

GARDENER (HEAD). — Age 30, married, one child; thoroughly understands his profession. Can be highly recommended by his present employer, Sir Charles Fox, whom he has served as Head Gardener three years. — A. M., 17, Boone's Road, Lee, Kent.

GARDENER (HEAD). — Age 32, married, one child; thoroughly understands the cultivation of Stove and Greenhouse Plants, Ferns, Vines, Peaches, Cucumbers, Melons, Flower and Kitchen Garden. One year and nine months good character. — A. B., Wren Road Nursery, Camberwell Green, S.

GARDENER (HEAD). — Messrs. BUNDY & CHAPMAN, Seedsman, Barton, Southampton, can recommend to any Nobleman or Gentleman a first-class Gardener, thoroughly experienced in the Cultivation of Vines, Peaches, Stove and Greenhouse Plants, Flower and Kitchen Gardening. First-class references. Character will bear the strictest investigation. — Address as above.

GARDENER (HEAD). — Married, 20 years' practical experience in the Flower, Fruit, and Kitchen Garden; first-class Plant, Pine, Grape, and choice Fruit Grower, in Melons, Cucumbers, and Mushrooms, distinguished as a Grower; understands Plantations, Land, and Stock, if required. Good character. — J. D., Morley's Library, Forest Hill, Kent, S.E.

GARDENER (HEAD). — JOHN GOODE, Head Gardener to the Right Hon. the Earl of Antrim, Glenarm Castle, North Ireland, is at liberty to treat with any Nobleman or Gentleman requiring a thorough Gardener; will be disengaged the 1st of April. The highest testimonials can be given. To save trouble, none but a first-class place and liberal salary will be accepted. — Applications to be made as above.

GARDENER (HEAD). — Age 36, married; well understands Forcing, Pines, Vines, Peaches, Strawberries, Orchard-house Trees, Kitchen and Flower Gardening, has had charge of a miscellaneous collection of Stove and Greenhouse Plants. Fourteen years' in present situation, leaving on account of breaking-up of establishment. His employer will certify to all of the above. — C. STANLEY, Mr. A. Henderson, Pine-apple Place, Edgware Road, W.

GARDENER (HEAD). — Scientific, practical, the highest success in the whole field of the profession. Post Office, Dorcas Terrace, Hammersmith, London, W.

GARDENER (HEAD). — Age 32, married, good knowledge of his profession in all its branches. Good character. — H. C., Mottingham, near E. Ham, Kent.

GARDENER (HEAD). — Age 28, has a practical knowledge of his profession in all its branches. Had 14 years' experience, unexceptionable references. — PROVENDER, Faversham, Kent, S.E.

GARDENER (HEAD). — Age 31, married, stands his profession in all its branches. Good and an excellent Pine, Pot. Vine, Strawberry and Mushroom. Good references as to character and ability. — F. J. R., The Park, Highgate, London, N.

GARDENER (HEAD WORKING). — Age 30, confidence recommend to any Lady or Gentleman who has lived under him four years; understands Kitchen and Fruit Gardening, also Forcing. — Direct as above.

GARDENER (HEAD or SINGLE-HANDED). — Married, no incumbrance; first-class practical in his profession. First-class testimonials from present employers. — J. B., Combe Court, Godalming, Surrey.

GARDENER (HEAD), or GARDENER and BAILIFF. — Age 36, married, no incumbrance, understands in all its branches. Has a practical knowledge of Stove, &c. Good references. In present situation at Abbey Lodge, Rugby.

GARDENER, in a small Family. — Age 25, eight years' excellent character, and can be recommended. — G. MERRITT, Polesden, Dorking, Surrey.

GARDENER. — Age 33, married, three understands his profession. No objection to Cards. Three years' good character. — G. W., T. A. Hanksy, Surrey.

GARDENER. — Age 29, married; thoroughly stands Forcing, Kitchen Garden, and Flower. Good references as to character can be had. — T. P., 19, Bonhill, Hanwell Middlesex W.

GARDENER. — The Advertiser is desirous of sending to any Nobleman or Gentleman a first-class Gardener, who is well up in the Culture of Stove and Greenhouse Plants, Orchids, Pines, Vines, and a Horticultural first-class Establishment. — E. F. FAIRBAIRN, Eden Terrace, Carlisle.

GARDENER (UNDER). — Would not mind Premium for good sound instruction. — CHAS. BAKER, Park, Battle, Sussex.

GARDENER (UNDER), where Plants are produced. — Age 22; can be well recommended by his present employer. — H. H., Post Office, Windsor.

GARDENER (UNDER). — Age 24; good character. — the situation he is now leaving. — EDWARD GIBBS, Thomson, Esq., J. P., Kenfield Hall, Petts Wood, Kent.

GARDENER (UNDER), age 23. — JOHN JAMES GARDNER, Carlton House, Workop, Notts, is recommending an industrious young Man, who has served his directions for two years, in the Forcing House.

FOREMAN, in a Nobleman's or Gentleman's Garden. — Has a thorough knowledge of Forcing. — A. B., Post Office, Reigate, Surrey.

FOREMAN. — Age 22, understands Vines, Greenhouses, Kitchen and Flower Gardens, has a thorough knowledge of his profession. Good character from present and previous employers. — M. T., Albert Place, High Road, Tottenham, N.E.

Catalogues, Estimates, or Plans on application.

Midland Steam Power Horticultural and Hot Water Works, Loughborough.

T. G. MESSENGER, Midland Steam Power Horticultural Works, Loughborough, Hot-Water Apparatus and Valve Manufacturer.
Honorary Member on awarded at the International Exhibition, 1862, and at the Dublin Exhibition, 1865, also a First-class Certificate by the Royal Horticultural Society.
T. G. Messenger, Patentee of many important improvements in Buildings and Appliances connected with Horticulture, and which meet with unanimous approbation, is prepared to give reference to hundreds of works entrusted to him and pre-eminently answering the purpose for which they were constructed.
Any House Glazed single or double, with or without putty.
The mode adopted by T. G. Messenger for Heating and Ventilating Greenhouses is particularly successful.
Houses are constructed by his Patented Ventilating principle to open the whole of roof and sides as though the glass were entirely removed, at once placing the plants in the external atmosphere.
T. G. Messenger's Boiler possesses all the advantages of the Saddle and Saddle combined, has hollow furnace bars, requires but a few stokeholes, and exposes as much surface to the direct action of the fire as can possibly be obtained, the whole of which can be easily cleaned; and it is an important fact that out of upwards of 500 now at work made upon the improved principle not one has cracked.
T. G. Messenger's Valve (single or double) is effective, simple, easy to work, and as durable as the pipe to which it is attached. Designs and Estimates supplied for all kinds of Horticultural Works, and guaranteed to answer the purpose for which they may be intended.

GRAY'S OVAL TUBULAR BOILER.

INTERNATIONAL EXHIBITION, CLASS IX., No. 2119.

MR. GRAY begs to call the attention of the Nobility, Gentry, Nurserymen, Gardeners, &c., to his **NEW OVAL TUBULAR BOILER,**

Acknowledged by practical judges to be a great improvement on every form of Tubular Boiler yet introduced. It has proved itself superior to all other Boilers for quickness of action and economy of Fuel, doing its work with one-third less the amount required by any other.

Extract from Report in GARDENERS' CHRONICLE of International Exhibition, May 24, 1862, page 476.
"The upright form of Boiler is usually made on a circular plan, rather than a square, it seems feasible that the Boilers on the oval plan should bring the tubes more completely within range of the burning fuel; and this being so, the change, though a slight one, with the fire. The usual form of a furnace being a parallelogram is no doubt an improvement."

They are made of all sizes, which, with prices, may be had on application.

JAMES GRAY, HORTICULTURAL WORKS,

STANLEY BRIDGE, KING'S ROAD, CHELSEA, LONDON, S.W.

HEATING BY HOT WATER.

SHANKS' IMPROVED WROUGHT-IRON BOILER.

This Boiler is made on the principle of the Saddle and Tubular combined. The Tubes, Fire Box, and Shell-plates are all of Wrought-iron, and consequently are not liable to break from expansion and contraction of the metal, as Cast-iron Boilers are. The Tubes are placed in the Fire-box, and so arranged as to expose a very large effective heating surface to the direct action of the fire, the advantage of which is obvious. There is no brushing or cleansing of Tubes required in this Boiler.

A. S. AND SON have no hesitation in saying that their Improved Hot-water Boiler is the most effective and the most economical yet introduced. Prices on application.

SHANKS' IMPROVED HOT-WATER VALVE.

This Valve is perfectly water tight, very simple, and costs less than the Valves at present used for effectually shutting off Hot-water.

A. S. AND SON will be glad to furnish their Improved Boilers or Valves separately, or to furnish Plans and Estimates for Erecting Hot-water Apparatus complete in any part of the country.

HORTICULTURAL BUILDINGS IN IRON OR WOOD.

Catalogues containing Designs of Houses, &c., will be forwarded on application. Special Plans and Estimates for Ranges of Houses to be erected in any part of the country will also be furnished.

THE LANDS IMPROVEMENT COMPANY. Incorporated by Special Act of Parliament in 1853. TO LANDOWNERS, TENANCY, ESTATE AGENTS, SURVEYORS, &c., IN ENGLAND AND WALES, AND IN SCOTLAND.

The Company advances Money, unlimited in amount, for the following works of Agricultural Improvement, the whole outlay and expenses in all cases being liquidated by a rent-charge for 25 years.

- 1. Drainage, Irrigation, and Warping, Embanking, Inclosing, Clearing, Reclamation, Planting, for any beneficial purpose. Engines, or Machinery for Drainage or Irrigation. 2. Farm Roads, Tramways and Railroads for Agricultural or Farming purposes. 3. Jettyes or Landing-places on the sea-coast or on the banks of navigable rivers or lakes. 4. The Erection of Farm Houses, Labourers' Cottages, and other Buildings required for Farm purposes, and the improvement of and additions to Farm Houses and other Buildings for Farm purposes.

Landowners assessed under the provisions of any Act of Parliament, Royal Charter, or Commission, in respect of any public or general works of Drainage, or other improvements, may borrow their proportionate share of the cost, and charge the same with the expenses on the lands improved.

The Company will also negotiate the Rent-charges obtained by Landowners under the Improvement of Land Act, 1854, in respect of their Subscription of Shares in a Rail way or Canal Company.

No investigation of title is required, and the Company being of a strictly financial character, do not interfere with the plans and execution of the Works, which are controlled only by the Government Enclosure Commissioners.

Apply to GRANTVILLE R. REYDS, Esq., Managing Director, 2, PARLIAMENT STREET, LONDON, S.W.

Home News.

THE COURT.—On Friday morning the Queen walked in the grounds of Windsor Castle, and drove out with Princess Louisa. In the afternoon the Queen drove out with Prince Leopold and Princess Beatrice. Princess Louisa, accompanied by Prince and Princess Christian, went to London and dined with the Duchess of Cambridge, and returned afterwards to the Castle. On Saturday the Queen drove out with Princess Louisa and Prince Leopold. Prince Arthur arrived from Greenwich Park. The Lord Chancellor, Mons. Mde., and Miss Van de Weyer arrived at the Castle on a visit. On Sunday the Queen and Royal Family attended Divine service in the private chapel. The Rev. W. H. Brookfield preached the sermon. On Monday morning the Queen drove out. The Duke and Duchess d'Aumale visited the Queen and remained to luncheon. Prince Arthur left the Castle for Greenwich Park. The Lord Chancellor also left the Castle. In the afternoon the Queen walked in the grounds and drove with Princess Louisa. On Tuesday morning the Queen went out with Princess Christian. Countess Blucher arrived at the Castle on a visit. The President and Secretary of the Royal Academy arrived at the Castle and presented for her Majesty's sanction the transactions of the Academy for the past year, and laid before her Majesty the diplomas of the four Academicians last elected for her Majesty's signature. Sir James Clark arrived on a visit. In the afternoon the Queen drove out with Prince Leopold and Princess Beatrice. Princess Louisa went to London, and dined with the Prince and Princess of Wales at Marlborough House. Her Royal Highness afterwards accompanied Prince and Princess Christian to a Ball given by M. and Madame Van de Weyer, in Arlington Street. On Wednesday morning the Queen went out with Princess Beatrice. Princess Louisa returned from London. In the afternoon the Queen drove out with Princess Louisa. On Thursday morning her Majesty went out with Princess Beatrice. The Prince and Princess de Joinville and the Duke and Duchess de Chartres visited the Queen, and remained to luncheon.

THE PRINCE AND PRINCESS OF WALES.—On Friday the Prince hunted with her Majesty's stag-hounds. The Princess drove out. In the evening the Prince went to a lecture at the Royal Institution. On Saturday the Prince visited Mr. Leighton's studio. The Princess drove out. In the evening their Royal Highnesses went to the Princess's Theatre. On Sunday the Prince and Princess attended Divine service at the Chapel Royal, St. James's. The Bishop of Lichfield preached the sermon. On Monday the Princess drove out. In the evening the Prince attended a meeting of the Royal Geographical Society, at Burlington House. On Tuesday afternoon their Royal Highnesses drove out, and in the evening were present at a dance given by M. and Madame Van de Weyer, at their residence in Arlington Street. On Wednesday the Prince visited the studios of Mr. John Bell and Mr. Watts, R.A. The Princess drove out with Princess Christian. In the evening the Prince and Princess were present at Mrs. Disraeli's reception at the New Foreign-office. On Thursday the Prince hunted with his harriers near Windsor. The Princess drove out.

PRINCE ARTHUR.—It is stated that arrangements are making for a tour by Prince Arthur, which will include most places of interest in Italy and the East.

PRIVY COUNCIL.—The Queen will hold a Council at Windsor Castle to-day.

THE CABINET.—A Cabinet Council was held on Saturday at the official residence of the First Lord of the Treasury in Downing Street. Another Council was held on Tuesday, and another yesterday.

PARLIAMENTARY MOVEMENTS.—The Coventry election terminated on Thursday in the return of Mr. Carter, the Liberal candidate, by a majority of 281 over Mr. Staveley Hill, the numbers being 2415 to 2134. The following letter has been addressed by Mr. Disraeli to the Earl of Dartmouth, in reply to a memorial from the Council of the National Union, and of the Constitutional Association connected with that body.—

My Lord,—I have received with much pleasure the Memorial of the Council of the National Union of the Constitutional Association, connected with that body, in which they express their confidence in me, and their thorough determination to support me in their power the Government I have formed by the aid of and with the approval of Her Majesty. Such expressions of feeling on the part of influential bodies of the country are encouragingly opportune. We have heard a stirring cry of the crisis of Ireland. In my opinion the crisis is lodged is rather at hand, for the purpose is now achieved, and that by a powerful party, of destroying that sacred union between Church and State which has hitherto been the chief means of our civilisation, and is the only security for our religious liberty. I have the honour to remain, my Lord, yours sincerely, B. DISRAELI.

THE ARMY.—The Colonelcy of the 54th Foot, vacant by the death of General Midway Fane, has been conferred on Major General Hodgson.

Foreign.

FRANCE.—The *Moniteur* of Friday published, without comment, long extracts from the pamphlet entitled—"Les Titres de la Dynastie Napoléonienne," with the motto, "Vox Populi vox Dei." In the sitting of the Legislative Body on Friday, the Government laid on the table the demand for a grant of 2,000,000 francs for the succour of the starving population in Algeria. M. Jules Simon opened the discussion on his interpellation relative to the councils for the settlement of disputes between masters and workmen. After some debate the Chamber passed to the order of the day. In the sitting of Wednesday the debate on the Public Meetings Bill was resumed. After Article 9 had been voted, the House adopted the entire Bill by 209 votes to 22. The orders of the day being thus finished, the Chamber adjourned on the motion of the President. The date of the next sitting is not fixed. The Committee has reported in favour of authorising proceedings against M. de Kervezac, and the Chamber has agreed with the conclusion of the Committee. The trial of M. Grenier, editor of the *Situation*, and M. Jules Richard, one of the most popular writers in *Le Figaro*, for attacking the majority of the Corps Legislatif, took place on Friday before the Police Correctional. M. Jules Richard was sentenced to the maximum fine imposed by law, 5000 francs, and two months' imprisonment. M. Grenier was sentenced to a fine of 1000 francs. The *Proces* of Monday says that placards of an anarchical nature have been posted up at Rennes. The Imperial Procureur ordered the arrest of three young men charged with the offence. On their examination it was found that their object was to foment agitation. Sir Roderick Murchison has been elected by the French Academy of Sciences Foreign Member, in place of the late Professor Faraday.

SPAIN.—A sum of 1,353 crowns has been included in the Budget as indemnity for the ship Queen Victoria. The Cortes has adopted the Bill for the suppression of tribunals of commerce. The official gazette says that with a view to improve the financial position of the colonies, the Government has contracted with MM. Bischoffshelm and Goldschmidt, of London and Paris, a loan of 2,200,000l. guaranteed upon the revenues of the colonies. The Government will pay annually for the interest and sinking fund 13 per cent. on the amount received. The Cortes has appointed a commission to inquire into the proposed establishment of a foucier bank.

PORTUGAL.—The elections have resulted in the almost complete triumph of the Government candidates. Tranquillity prevails everywhere.

DENMARK.—The Danish Minister of War has applied to the Chambers for a credit of 438,000 crowns for the fortification of Copenhagen. The Danish Government has made known to the Great Powers its fears of an attack by Prussia.

BELGIUM.—Disturbances have taken place in the coal districts of Charleroi, in consequence of the strike of the colliers. At Chantelaineau a lieutenant of the Gendarmerie was seriously wounded. At Montigny 10 or 12 rioters were killed or wounded. General Thibaut left Brussels on Thursday for Charleroi with a regiment of Carabiniers, two battalions of the Line, and a detachment of cavalry. A serious conflict took place at midnight at Chateau de Charleroi between the troops and the rioters, in which eight men were killed and ten wounded. The Council of Ministers assembled twice in the course of the evening.

HOLLAND.—In the sitting of the Second Chamber on Friday the discussion on the report of the committee appointed to investigate the diplomatic documents concerning the questions of Limburg and Luxemburg was continued. The Minister of the Interior demanded that the conclusion of the committee's report should distinctly lay down an issue for the Chamber to vote on the foreign policy of the Government, so that the Ministry could make it a Cabinet question.

SAXONY.—A man called Siebert, an umbrella maker of Dresden, attempted to shoot the Prince Royal of Saxony last week. He was immediately arrested and has since been declared, after a careful medical examination, to be insane. He has consequently been ordered into permanent confinement in a lunatic asylum.

HANOVER.—Count Platen, ex-Minister of King George, has been summoned to appear on the 5th of July before the criminal court of Berlin. He is charged with high treason, for having, being a Prussian

subject, attempted in 1867 and 1868 to separate the province of Hanover from the kingdom of Prussia.

HESSE DARMSTADT—It is rumoured that the Queen of England will visit, this summer, the Princess Alice at Darmstadt, and will thence go to Gottra.

HESSE CASSEL—The statue of Napoleon I., one of the *chefs-d'œuvre* of Canova, which under the reign of Jerome stood in the Salle des Etats of Westphalia, has been found in a hay-loft of the garrison of Cassel. In 1812 it had been thrown down and broken. As soon as this discovery came to the knowledge of the French Consul at Frankfort, he hastened to apply to the Prussian authorities, claiming these mutilated parts.

PRUSSIA—The North German Parliament was opened at Berlin on Monday by the King of Prussia in person. The members were assembled in the White Saloon. His Majesty in his Speech from the Throne announced the further development of the domestic institutions which had recently been founded, and mentioned the modification of the postal arrangements with several countries, and the conclusion of the postal treaty with the United States of America. The King expressed his satisfaction at the manner in which the representatives of the North German Confederation had been received at foreign Courts, and in conclusion said he was convinced that the blessings of peace would rest upon the labours of the Parliament. The sitting of Tuesday was adjourned, owing to an insufficiency of members being present to form a quorum. In the sitting of Wednesday Dr. Simson was re-elected President by a large majority. Duke Ujes was elected first and Herr von Bennigsen second Vice-President. It is semi-officially stated that the Prussian Government has addressed a Circular to its representatives abroad in reference to the recent visit of Prince Napoleon to Berlin. It is added that this is not an unusual step, but in conformity with the diplomatic custom that when a distinguished personage visits a foreign Court the Government should explain the visit by a Circular to its diplomatic representatives. In the present instance the Circular expressly states that Prince Napoleon had no political mission. The baptism of the youngest son of the Crown Prince of Prussia was celebrated on Sunday afternoon. He received the names Joachim Frederick Ernest Waldemar. The godfathers and godmothers present were the King, Queen, and Dowager Queen of Prussia, Princes George and Adalbert, the Cesarewitch, the Crown Prince and Princess of Saxony, Prince Augustus of Wurtemberg, Prince Henry of Hesse, and the Grand Dukes of Saxe-Weimar and Oldenburg. The King has appointed Count Bismarck hereditary member of the Upper House of the Diet.

AUSTRIA—In the sitting of the Upper House of the Reichsrath on Friday, the debate on the Civil Marriage Bill was resumed. Count Hartig, Lieutenant Field Marshal von Gablenz, Herr von Kraus (formerly Minister of Justice), and Count Anton Auersperg spoke in favour of the Bill, which was opposed by Professor Arndt, Cardinal Schwarzenberg, and Prince Halm. The close of the general discussion was then agreed to. In the sitting of Saturday, a proposal of Count Mensdorff that the debate upon the Civil Marriage Bill should be adjourned was defeated by a majority of 65 to 45, and the proposals of the minority of the Committee were then rejected by a majority of 69 to 31. The Bill then passed by a large majority. In the sitting of the Committee of the Upper House on Saturday on the Public Schools Bill the majority agreed to all the principal features of the Bill as passed by the Lower House. The minority proposed that the Bill should be referred to a Committee, which should be instructed to draw up a new Bill having for basis the preservation of the influence of the Roman Catholic Church over the religious and moral education of the young, and the maintenance of the denominational system in the popular middle schools. In the sitting of Monday Cardinal Rauscher and his political friends addressed a document to the President, announcing that, in consequence of the vote of Saturday on the Civil Marriage Bill, they were no longer able to take part in the discussion of the House. After this document had been read, the order of the day for the special debate on the Civil Marriage Bill was brought up, and the Bill, with a verbal alteration, agreed to by the Government, was read a second and third time without debate, only 17 members voting against it. In the evening Vienna was spontaneously illuminated by the inhabitants in consequence of the vote of the Upper House on the Civil Marriage Bill. Immense crowds congregated in the streets, and made enthusiastic demonstrations in front of the residences of some of the Ministers, and also in front of the monument of Francis Joseph II. No disturbances or accidents occurred. In the sitting of the Lower House of the Reichsrath on Tuesday the Finance Minister brought in a Bill providing for a continuance of the provisional levy of the taxes from April until the end of June. The Minister then proceeded to explain his financial Bills for covering the deficit. He said—

The deficit for 1868 would amount to 52,000,000 florins, exclusive of an extraordinary amount of 18,000,000, which could be covered out of the sum remaining in hand from the revenue of 1867. The Government considered the permanent regulation of the finances necessary, because the credit of the country had sunk to a low ebb. The deficit coverable during the next three years would amount upon the average to 150,000,000. The reform of taxation now being attempted could only be expected to produce results in some years time, and it was therefore essential to make provision from other sources for the next few years. The Government would avoid loans. It considered the conversion of the State debt a useful measure, and that a saving of 30,000,000 would be effected thereby in three years, thus reducing the deficit to be met to 12,000,000. The Government would also obtain from increasing the issue of paper money, as although the prospects of peace were at present favourable, yet the general situation of Europe did not admit of the possibility of Austria being suddenly called

upon to take military measures, and in that case it would undoubtedly be necessary to have recourse to an increased issue of notes. Hungary was paying 12,000,000 less than her share of the common expenditure, and the Government therefore considered itself entitled to ask her to consent to a 10 per cent. tax upon the coupons. He next explained the operation for the conversion of the State debt, stating that he hoped to obtain from that source, from the taxation upon capital, and from the sale of the Crown lands a sufficient amount to cover the deficit during the next three years. He estimated the amount obtainable in three years from the tax upon capital at 60,000,000. The Government admitted the heaviness of the burden these measures imposed upon the country, but hoped by these means, coupled with all possible economy and a more equitable distribution of taxation, to remove the deficit within the space of three years, provided no extraordinary circumstances intervened.

The Bill for the abolition of the imprisonment for debt passed the final reading without debate. In the sitting of Thursday the modifications of the Civil Marriage Bill, proposed by the Upper House, were adopted. The Government Bill relative to the provisional levy of the taxes until the end of June was also passed. In the sitting of the Hungarian Delegation on Tuesday an Imperial rescript having been read, sanctioning the close of the Session, the Government Commissioner, Von Falke, rose on the part of the Chancellor of the Empire to thank and salute the Delegation in the name of the Emperor. The President then in an eloquent speech took leave of the members, and closed the sitting. At the final sitting of the Reichsrath Delegation on Tuesday Baron Beust, in reply to a question, said that he hoped the Austrian expedition to Eastern Asia would leave in the course of the summer. The Chancellor of the Empire then announced the Imperial sanction to the resolutions adopted by the Delegation, adding that he was commissioned by the Emperor to express his Majesty's satisfaction at, and grateful recognition of, their labours. He also thanked the Delegation in the name of the Ministry, and said that the misgivings as to the success of the Delegation had not been realised. Their proceedings had quite come up to the expectations entertained. By endorsing the decisively expressed peace policy of the Government the Delegation had imparted to that policy a redoubled emphasis. The President of the Delegation then delivered the closing speech, in which he laid stress upon the fact that peace was based on the establishment of a constitutional state of things and on the concord existing between the national representatives and the Crown. The Session was closed with three cheers for the Emperor.

RUSSIA—An Imperial decree, dated the 29th of February, was made public on Saturday, by which the Government Commission for Internal Affairs in the Kingdom of Poland was abolished, and its administrative jurisdiction handed over to the respective authorities of the Empire. The complete union of the province of the Kingdom of Poland with the other portions of the Empire is hereby effected.

ITALY It is announced that the Queen of Portugal, Prince Napoleon, the Princess Clotilde, and the Crown Prince of Prussia, will be present at the marriage of Prince Humbert. The Archduke Louis Victor and several German princes are expected. In the Chamber of Deputies on Sunday Count Cambray Digny presented the Budget for 1869. It estimates the ordinary revenue at 775,531,835, and the extraordinary revenue at 28,984,031 lire; the ordinary expenditure at 941,611,031, and the extraordinary expenditure at 62,651,221 lire. The total deficit would therefore be 199,745,509 lire, or 8,331,918 lire less than in 1868. The estimates for the Budget of 1869 are made according to the existing laws. In the sitting of Tuesday the debate on the Grinding Tax was continued as follows.—

Signor Correnti, speaking in the name of the members of the third party, declared that they could only accept the Grinding Tax as the ultimate complement of Radical reforms, and of other measures destined to restore the public credit and a financial equilibrium. The third party had lately supported the Government, and would continue to support it, if its policy was just and advantageous to the country, but it could never consent to an alliance with the Church. Count Cambray Digny replied to the objections made by various speakers to his financial proposals. He refuted the accusation of exaggeration in his description of the gravity of the financial condition of Italy, and demonstrated that not more than 574,000,000 of ecclesiastical property were available to remove the deficit of 1868 and the forced currency. He deemed it necessary, therefore, to meet the deficit of 1869 by new taxes. In the sitting of Wednesday Count Cambray resumed his speech. He denied that the Income-tax Bill was intended to prejudice the question of deducting a tax from the interest of the public debt. He considered it unjust to subject to this tax foreigners who had neither interest nor domicile in Italy. He proposed, therefore, to authorise foreign holders of Italian stock to exchange the scrip payable to bearer for scrip bearing their names. Count Cambray Digny acknowledged the necessity for economy in the public administration, and stated that the Ministry associated themselves with Signor Minghetti's order of the day on this subject. The Minister of Finance further promised to consider the proposed tax upon alcoholic liquors, opposed a general tax upon production, and defended the Grinding Tax, as being much less onerous than direct taxation. He repelled any idea of reducing the interest on the public debt, as being dishonourable and ruinous to Italian debt. In the same sitting General Menabrea, replying to an interpellation of Signor Sgarbi, stated that the Government had determined to send the frigate *Clotilde* to Japan for the protection of Italian commerce. In the sitting of Thursday Count Cambray Digny concluded his speech on the Grinding Tax by pointing out the necessity for the tax, and showing that the people were able to support it. Other members then addressed the Chamber. The general debate continues.

The Minister of Public Instruction has suspended three Professors of the University of Bologna, in consequence of their having publicly expressed Republican sentiments. The University has not been closed as reported, but the students have protested against the suspension of the professors, and have refused to continue their studies. General Pallavicini has assumed the command of the troops for suppressing brigandage in the provinces of Molise, Benevento, the Upper

Abruzzi, and in the Terra di Lavoro Saturday evening the remains of Daniel Manin were conveyed by water from the railway to the Grand Canal of San Zaccaro, followed by the State barges and representatives from the Italian Senate and Chamber of Deputies, the members of the Municipality and foreign Commissioners. An immense number of gondolas followed. The Grand Canal and the houses in the procession were illuminated, thus forming a magnificent spectacle. The houses displayed various draperies.

PAPAL STATES—Mr Odo Russell has obtained an extension of the provisions of the Franco-Prussian Treaty of Commerce to England, the arrangement date retrospectively from the 1st of November. It is believed that the North German Confederation, Austria, and perhaps Italy, will obtain the same conditions. The French brigade Pothier has been ordered to return to France. Four transports have been ordered to Civita Vecchia to embark the brigade. The Russian Admiral Farragut had an audience of the Pope on Saturday, and was very graciously received. He proceeded to Sicily, Malta, and the Levant. The Pope blessed the Golden Rose on Sunday in the church of the Vatican.

TURKEY—The Grand Vizier has presented to the Sultan a very able and detailed report on his operations in Crete. The report explains the origin and causes of the revolt, the measures adopted, and the concessions granted. In conclusion, the Grand Vizier says he considers the submission of the Creteans completed, provided the Russian transport fleet and the open aid afforded by the Greeks are stopped. Aldermen Gabriel and Waterlow were admitted to an audience of the Sultan on the 15th, and on the 16th they dined at the Grand Vizier's with the members of the Embassy. The Duke and Duchess of Saxe-Coburg arrived at Constantinople on the 14th from Aleria. The Grand Marshal Rakki Pasha is dead.

ABYSSINIA—A telegram from Suez dated the 1st inst., announces that advices had been received from Abyssinia, stating that King Theodore had entrenched on the Talanta Plateau, and was intending giving battle. The Filtis (2^d Fifth Brigade) was to advance on Ashangi on the 11th inst. All the troops are now on the high lands. Large quantities of supplies have been collected in the neighbourhood of Antalo. Letters received from an officer at Antalo state that Theodore was said to have 13,000 men at Magdala, and was storing the place with provisions. He was also said to have 10,000 disciplined troops, and to be quite determined to fight. The British officers and men were anxious to storm the fortress. Special Correspondent of the *Times*, under the name of Antalo, March 8, telegraphs as follows—

"The advanced guard has arrived at Attala, about 10 miles north of Lake Ashangi. The roads are extremely bad, and a detachment is opening a mule road. The only provisions to be found in the country are flour and meat. The British will be at Ashangi by the middle of March. All well."

CAPE OF GOOD HOPE—By the Cape mail of February we learn that Parliament will not assemble in the middle of May, as the Governor will not be able to return to the north-east frontier until late in the month. The communications addressed by Governor Brand to the house of Moshesh, the Basuto chief, and to the President of the Free State, notifying the intent of the English Government to annex Basuto Land, have been very differently received. The Basutos were jubilant, but President Brand had refused to discontinue the operations of his commanders against the Basutos. The fever in Cape Town has disappeared. The death-rate, which during the worst phase of the epidemic was nearly 100 per week, has fallen to 19, and the average for the last four weeks was 20. The *Eastern Province Herald* reports that some of the working classes and small tradesmen are about to emigrate to Monte Video or to return to their country. Herr Mauch had arrived at Durban with exhibited specimens he had collected of gold nodules embedded in pure white quartz. He has revealed to the Government for 2000/ the site of the goldfields, and says he believes that some of them prove richer than those of California or Australia. The ship *Tugela*, of the Aberdeen Copper Company, was stranded at Durban, Natal, on Feb. 2, in consequence of the parting or slipping of her cable, and since been condemned.

INDIA—Mr. Massey made his financial statement in the Legislative Council on the 14th. The account for the present financial year show a surplus of 2,000,000 and a surplus of 230,000/ is anticipated in the next year. The licence-tax is abolished, and a tax on professions is substituted. There will be no new taxation. The proposed to increase the session duties are totally rejected. Public works are being energetically prosecuted. The latest news from Burmah states that the exploring party is proceeding. Telegrams from Peshawur state that Azim Khan has been killed. Lady Lawrence left Calcutta on the 14th for England. Dr. Norman Macleod, who was returning home on account of ill health, accompanied her.

CHINA—A great fire has occurred at Foochow. The loss is estimated at 200,000 dollars.

JAPAN—Intelligence from Japan announces that the Tycoon had been totally defeated by the French and has fled to Yeddo. The intestine war between the Mikado and the Tycoon has addressed a note to the Foreign Ministers declaring that the treaty would be respected.

UNITED STATES—It is reported that Mr. Cameron, apprehending a guerilla raid upon the War Office in Virginia, has ordered the garrison of Washington to be held in readiness. General Thomas has been ordered to

tion consisted of Dr. Hooker, Professor Huxley, Mr. Busk, Mr. Bentham, Mr. Selater, and the following officers of the British Association:—Mr. Spottiswoode, treasurer; Messrs. Galton & Hirst, secretaries, and Mr. Griffith, assistant secretary.

NATIONAL PORTRAIT EXHIBITION.—The arrangement of the third and final collection is now making good progress at South Kensington. There is no want of portraits; indeed the great difficulty is to find space for those already received. The exhibition will consist of portraits of eminent persons who have lived during the present century, and of many others who flourished prior to that time, forming a supplement to the whole series. In all there will be about 900 portraits, and efforts are making to open the exhibition, which promises to be of greater popular interest than its predecessors, on Easter Monday.

SPECIAL CONSTABLES.—The period for which special constables were sworn in last December, after the alarm occasioned by the Clerkenwell outrage, has in many instances expired; and the warrants of others will expire in the course of the present month. It is not intended to ask for any fresh powers, but to rely on the ordinary powers of the City and Metropolitan police force for the preservation of the peace. The justices in special sessions will meet next week, to order payment to special constables of reasonable allowances for their trouble, loss of time, and expenses.

BRITISH ASSOCIATION.—Mr. Gladstone has consented to preside over the statistical section at the approaching meeting of the British Association at Norwich, and Professor Huxley will also address the working classes.

RATING OF CHARITIES AND SCHOOLS.—A deputation of more than 200 gentlemen waited upon the Prime Minister on Tuesday to urge the importance of exempting the various charitable institutions of the country from rating. The Earl of Harrowby introduced the deputation as one which represented nearly all the charities in England and Scotland. His Royal Highness the Duke of Cambridge addressed the Premier on behalf of Christ's Hospital, and was followed by Mr. Barnes, M.P., for the Leeds Infirmary and Schools; by Mr. Gurney Hoare for Guy's Hospital; the Rev. Mr. Lingham for the Church Schools at Lambeth; Archbishop Manning for the Roman Catholic charities and schools; Dr. Jobson for the Wesleyan schools; Alderman Salomons, M.P., for the Jews' schools; Rev. Dr. Sailes (vicar of Sheffield), for the Ragged schools; Mr. Thomas, for the Bristol charities; and the Hon. and Rev. Mr. Yorke, for the charities and schools of Birmingham. Mr. Disraeli, in reply, said the subject was deeply interesting to the Government and the people, and was one of the deepest social importance. Lord Derby had brought the subject before his colleagues, but his illness intervened, and though it had not been lost sight of, the Ministers had been prevented from coming to a decision upon it. The question should be again brought before the Cabinet without delay, and should receive all the consideration which its gravity demanded.

DECORATION OF HOSPITALS.—The governors of Guy's Hospital have just been presented with 10 pictures by Mr. John Absolom, painted expressly by him for the decoration of the sick wards. These are chiefly enlarged duplicates of the artist's previous works, painted in pure water colours, mixed with a powerful preservative material. The pictures average 8 feet by 7 feet each, and are remarkable for their homely and cheerful character. To allow the public an opportunity of judging of the merits of the gift, the pictures will be exhibited at the Gallery of the Institute of Painters in Water Colours, 53, Pall Mall, for a fortnight.

THE DISTRESS AT THE EAST-END.—The Mansion House Executive Committee for the relief of exceptional distress in the east of London, met at the Mansion House on Monday, and adjourned *sine die*, handing over a small balance to the East-end Emigration Fund, which they commended to the confidence and support of the public. The report stated that the Committee had raised and expended 5000*l.* since the 1st of February.

CITY IMPROVEMENTS.—A great improvement is now in progress at the corner of Fenchurch Street and Gracechurch Street. The church of St. Benet is nearly demolished, and a large space of the opposite corner of Fenchurch Street has been rounded off and added to the roadway, affording room for another line of vehicles. The width of the roadway will be further increased when the materials of the church are cleared away and the ground arranged.

THE STEAM ROLLER IN PARK LANE.—On the 19th inst. the powerful steam roller, just completed by Messrs. Aveling and Porter, of Rochester, for the Sheffield Local Board of Health, was subjected to a public official trial in Park Lane, previous to being forwarded to its destination. For some days past Park Lane had been closed to vehicles to enable its entire surface to be covered with granite. At nine o'clock the steam roller commenced its work, and before two o'clock in the afternoon fully one-half of the side of the roadway presented a hard uniform smooth surface. The trials were witnessed by a number of the leading officials connected with the public departments.

THE THAMES EMBANKMENT.—It is announced that the whole of the completed part of the Thames Embankment will be forthwith prepared for public traffic. At the meeting of the Metropolitan Board of Works on Friday Mr. Freeman moved the adoption of the recommendation of the committee of works, that the contract for that portion of the Embankment between the Temple and Blackfriars Bridge be at once proceeded with. A letter from Messrs. Baxter, Rose, & Norton, the solicitors of the Metropolitan District Railway, was read, suggesting that the railway should carry on its works with the embankment, so as to give a solid embankment and a road 100 feet wide to the public, the amount of compensation to be paid by

the Board and the railway respectively to be settled by arbitration, the reference being to Lord Stanley and any one he might call in to assist him. Mr. Freeman said no doubt this was a very fair proposal, but what guarantee had they that the railway would do this? All their experience of the Company was that it was without funds. However good its intentions, he regarded the letter as mere waste paper unless it was accompanied by some material guarantee. Sir John Thwaites suggested that if the Company were in earnest they should deposit a certain sum, and the Board should deposit a certain sum, in the hands of some bank, and they would then have a substantial guarantee. If any other course were adopted, the Board would find itself primarily liable for compensation to the wharfholders, and any amount of compensation they paid they would have to get from the railway company as best they could. The duty of the Board, having put its hand to the plough, was that it should go on, and although no doubt the letter was a perfectly *bond fide* one, it was certainly calculated to put the Board in the wrong. He suggested that a letter, proposing a mutual deposit, be sent to the solicitors of the railway. After some discussion the report of the Committee was adopted, and the letter was referred to the Committee to answer.

WORKHOUSE INFIRMARIES.—On Saturday a large deputation from the Workhouse Infirmaries' Association, headed by the Archbishop of York, and 40 members of Parliament, waited on the Earl of Devon, Sir M. H. Beach, M.P., and the other members of the Poor-law Board. The Archbishop stated the object of the deputation, which was to suggest the provision of a more complete inspection of workhouse infirmaries by properly qualified officers, in order that the arrangements for the accommodation of sick paupers might be more consistent with the conditions of convalescence, and that such cases of inhumanity and cruelty as now were continually revealed might be impossible. The Earl of Devon said that the Board felt its hands strengthened by the opinions of such an influential deputation, and that their representations would receive every attention.

FENIAN RECRUITING.—On Monday Peter Morgan, alias Mohan, was again brought before Sir Thomas Henry, at Bow Street, on the charge of inducing soldiers to desert, and enlist in the so-called Fenian army. The charge, it will be remembered, was made by a man named John Malony, who, in November, 1865, the time of the alleged transaction, was a soldier at Woolwich. His evidence was corroborated on Monday by Richard M'Carthy, a sapper in the Royal Engineers at Chatham, and the prisoner was remanded.

THE PUBLIC HEALTH.—The Weekly Return of the Registrar-General states that in the week that ended on Saturday, March 21, 4743 births and 2934 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 24 per 1000 persons living, being 22 per 1000 in London, 28 in Edinburgh, and 24 in Dublin, 19 in Bristol, 23 in Birmingham, 25 in Liverpool, 30 in Manchester, 31 in Salford, 21 in Sheffield, 25 in Leeds, 27 in Hull, 27 in Newcastle-upon-Tyne, and 31 in Glasgow. The rate in Vienna was 37 per 1000 during the week ending the 14th. In London, the births of 1183 boys and 1111 girls, in all 2299 children, were registered in the week. In the corresponding weeks of 10 years 1858-67, the average number, corrected for increase of population, was 2218. The deaths registered in London during the week were 1298. It was the twelfth week of the year, and the average number for that week, corrected for increase of population, was 1599. The present return is, therefore, 301 below the estimated number.

Provincial.

ACCRINGTON.—At the Police-court in this town on the 19th, Mr. Murphy, the anti-Popery lecturer, was fined 20*s.* and costs for firing his revolver in the streets of Accrington on the 29th February, prior to starting a "Protestant procession" in the town.

ALRESFORD.—The funeral of the Dowager Lady Tichborne took place on Thursday morning, the 19th, in the family vault in the Lady Chapel of Tichborne parish church. The preparations for it were arranged by the Australian claimant to the title and estates, and a controversy has arisen in the daily papers between his solicitor and the relatives of the deceased lady as to what actually occurred on the occasion. It appears to be undisputed that at 10 o'clock on the morning of the funeral Lord Arundell of Wardour, nephew of the deceased lady and uncle of the infant at present in possession of the title and estates, and Mr. Alfred Seymour, M.P., her brother, accompanied by the Hon. Hubert Dormer, Colonel William Greenwood, and Mr. M. Higgins, her nephews by marriage, and by Colonel George Greenwood and Mr. Stourton, entered the chapel at Tichborne House, to which the body had been removed from London. Shortly afterwards the Australian claimant arrived, accompanied by his solicitor, Mr. Holmes, by Messrs. Guildford Onslow, M.P., Scott, Marx, and Benson, and by a number of professional men and tradesmen from Alresford and Winchester. As soon as the service for the dead had been performed and a short sermon preached, the bearers raised the coffin, and proceeded to carry it to the parish church, distant about a quarter of a mile, when Lord Arundell and Mr. Seymour wished to assume the position of chief mourners, but finding that the Australian claimant had taken that position, they withdrew from the procession, as did all the other relatives and connections of the family, and walked on to Tichborne Church, where the rector provided them with seats, from which they witnessed the conclusion of the ceremony. For centuries past it has been the custom of the Tichborne

family, at the funeral of a member of that family, to distribute a dole of bread to the poor, consisting of as many gallon loaves as the deceased numbered years. At the funeral last week the double dole—one being distributed by the priest's house by the Hon. Mr. Stourton, and the other by the Hon. Mr. Bowker, the steward, of Winchester; the mansion, on behalf of the claimant, the mansion being at present occupied by Colonel Leveson, there 59 loaves were given, but at the priest's such being the discrepancies as to the number deceased.

ASHFORD.—Shortly before midnight a fire broke out at the residence of the Earl of Ashford, at Eastwell Park. The flames were first issuing from the roof over the north front of the house, and owing to the high wind then blowing the spread. The floor above the dining-room afterwards the glass dome over the chief staircase in, destroying much valuable property. Lord Ashford and one from the neighbourhood, Richard Tufton were quickly on the spot, and was confined to the north front of the house. Very valuable pictures were totally destroyed, and is estimated at 12,000*l.* Both the house and contents were insured.

BIRMINGHAM.—A serious accident happened at the performance of the Birmingham Concert Hall, in this town, on Friday. The performance concluded with a ballet, and in one of the scenes, representing the "Home of the Fairies," a number of dancers arranged round the stage while the principal dancer, a *pas seul*. One of the dancers accidentally struck the lamp with her wand, and the wick falling on the dress of another of the dancers she was immediately enveloped in flames. She rushed on and on, but none of the officials rendered any assistance. A man jumped from the side gallery on to the stage, pulling off his coat, enveloped the sufferer with it, and extinguished the flames. She was taken to the Queen's Hospital, where it was found that a particle of clothing had been burnt off her face, and her injuries were so severe that she died on the morning. The proprietor had pieces of hair cut at the wings in order to be used in case of accident, but the men whose duty it was to look after them were either absent or neglected their duty.

DERBY.—The colliery strike in South Derbyshire has at length terminated, the men having been to accept the masters' terms, after a struggle which has extended over 12 months, and has been disastrous to them in its effects, the loss alone being estimated at 25,000*l.*

LEEDS.—On Saturday a deputation, representing the locked-out workpeople of Messrs. Salt, Sons & Saltaire, waited upon the firm to represent their grievances and suggest remedies, in relation to wages in some departments. Messrs. Salt received the deputation with courtesy and kindness, and in reply that they were quite ready to consider the case of their workpeople in the most favourable manner, and also to give them wages equal to those given by other firms, and even higher, but an independent condition preparatory to an arrangement of this kind was that the workpeople should at once resume work. The deputation accepted the condition, and it was that the engines ran as usual on Monday, and work was resumed.

LIVERPOOL.—A meeting was called for the evening of the 19th at the Concert Hall, to meet Mr. Maude, C.B., of the London Free Labour Association, and to consider the question of organising a Free Trade Association for this town, but in consequence of the action taken by the trades' unionists in the afternoon, the room from an early hour, the object of the meeting was entirely defeated. Before the chairman's speakers appeared on the platform, the hall was filled with yells, groans, and cries of all kinds, and the speakers were so much interrupted by hisses and shouts that the chairman was ultimately compelled to discontinue the meeting. Police-officers were present, but no violence was attempted.

MANCHESTER.—The governor of the County of Lancashire on Sunday received a communication from the Government, announcing that a respite had been granted to the condemned Fenians Thomas Mullady. It has since been announced that the sentence has been commuted to penal servitude for life. The execution of Miles Weatherill for the murder of a sweetheart at Droylesden, is fixed for Saturday, 4th of April.

SALFORD.—On Thursday morning a man was arrested in this town on the supposition of being "Captain" Deasy who was rescued with a woman from a prison van at Manchester, which resulted in the murder of Sergeant Brett, and the subsequent execution of Allen, Gould, and Larkin. He was found in bed with a loaded pistol and dagger under his pillow. On being taken to the police station he was found to be Deasy, but a man named Russe.

SELBY.—Frederick Parker, who was executed at York of the murder of Daniel Deane, 12 miles from this town has confessed in a letter to the governor of York Castle and the Secretary of State, that he was guilty of the murder and that his execution was a just one.

TODMORDEN.—Mrs. Plow continues to improve, and is able to leave her bed. The Queen's physician, Lord Stanley, written a letter of condolence to Mrs. Plow, and kindly inquired as to the state of her health.

WIGAN.—At an early hour on Saturday the policeman on duty in that portion of Wigan, as Whelley heard the noise of breaking glass, and a loud report. Proceeding about 40 yards, he saw that an attempt had been made to injure the

116; from Norfolk and Suffolk, 1400; and 771 from the Northern and Midland Counties.

We have a few more Beasts than on Thursday last, the demand is, however, good, and Monday's quotations are well supported. The number of Sheep is rather smaller; trade is not very active for them, but choicest descriptions are readily sold at fully late rates. The trade is not quite so good for Calves as of late. Our foreign supply consists of 80 Beasts, 500 Sheep, 103 Calves, and 30 Pigs.

MARK LANE.—MONDAY, March 23.

The supply of Wheat from Essex and Kent to this morning's market was very short, and met a quicker sale than last week, at the full prices of this day's night. There was a fair attendance, and foreign Wheat was also rather more inquired after at our late quotations. Barley, Beans, and Peas brought last week's prices. For Oats there was a fair demand, at a reduction of 6d. to 1s. per qr. There was no alteration in the value of Flour.

FRIDAY, March 27.

During the past week the weather has been changeable. The Wheat trade throughout the kingdom since the 20th inst. has (owing to colder weather and increased Continental demand, coupled with serious discussions as to future supplies to meet our estimated consumption till harvest), gradually emerged from the state of inactivity which we had to repeat during the first week of this month, and prices have assumed an upward tendency, without, however, leading to a greater advance than 1s. 6d. per qr. from the late West rates in some markets. Malting Barley and samples fit for seed were in good demand at extreme prices, grinding qualities remained a slow sale. Beans and Peas met more attention, and prices were in sellers' favour. Oats, which were very depressed at the beginning of this week, are again firmer. Prices of Flour have hardly undergone any change, but we notice a better inquiry than of late. The arrivals off the coast during the week consisted of 16 cargoes, of which, with those left over from last week, there remained for sale last night 34 cargoes. In arrived Wheat a large amount of business has been transacted, at an improvement of 2s. per qr., fine qualities being principally inquired after. Barley was a dull sale. Rye rather lower. In Maize no business transpired. Wheat on passage and for forward shipment was in strong demand at improving prices, and a large business is reported to have been concluded in Black Sea qualities. Paris, March 26.—Wheat is held for an advance, the business done is not extensive. Flour is firm. The six marks are quoted equal to 60s. per 280 lb. The stock at the Halle is estimated at 21,200 cwts.

The arrivals of English grain by water continue to be small, those of foreign, particularly of Barley and Oats, during the week have been large. This morning's market was moderately attended, and English Wheat, being scarce, was inquired for at the extreme rates of last Monday; in foreign the business was less extensive than on Monday or Wednesday, but the rates of the latter day were fully supported. Barley was scarce, and brought full quotations. Beans and Peas were unchanged in value. Fine Oats brought Monday's prices, but inferior were rather cheaper.

LIVERPOOL, Tuesday, March 24.—The market was fairly attended, and there was a large demand for Wheat, at 1d. per cental over Friday's rates, chiefly for California. Flour was in good request, at late rates. Beans unchanged. Peas is dearer. Oats and Oatmeal in moderate demand. Indian Corn brisk, and 6d. to 1s. per qr. advance.

POTATOS.—SOUTHWARK, Monday, March 23.

During the past week the arrivals both coastwise and from abroad have been greater than the demand, and trade dull at a decline of 10s. to 15s. per ton on most sorts. The following are this day's quotations.—Yorkshire Flukes, per ton, 10s. to 16s.; do. Regents, 130s. to 140s.; do. Rocks, 110s.

to 120s.; Lincolnshire Regents, 120s. to 140s.; Dunbar and East Lothian Regents, 130s. to 150s.; Perth, Forfar, and Fife Regents, 120s. to 130s.; ditto Rocks, 105s. to 120s.; French and Belgian Whites, 80s. to 90s.

GRAY'S OVAL TUBULAR BOILER.

INTERNATIONAL EXHIBITION, CLASS IX., No. 2119.

MR. GRAY begs to call the attention of the Nobility, Gentry, Nurserymen, Gardeners, &c., to his NEW OVAL TUBULAR BOILER,

Acknowledged by practical judges to be a great improvement on every form of Tubular Boiler yet introduced. It has proved itself superior to all other Boilers for quickness of action and economy of Fuel.

Extract from Report in GARDENERS' CHRONICLE of International Exhibition, May 24, 1862, page 476. "The upright form of Boiler is usually made on a circular plan, but the oval form given to Mr GRAY's variety of it is said to be preferable in consequence of its bringing the tubes in closer contact with the fire.

They are made of all sizes, which, with prices, may be had on application.

Home News.

THE COURT AT OSBORNE.—On Christmas Eve the Queen distributed Christmas gifts to the labourers on the Osborne estate and their wives. Her Majesty was assisted in the distribution by the Crown Prince and Princess of Prussia, Princess Charlotte, and the Royal family. The Right Hon. Edward Cardwell left Osborne for London. On Christmas Day the Queen and Royal family attended Divine service at Whippingham Church. The Rev. George Prothero officiated. On Saturday the Queen walked in the grounds in the morning, and drove out in the afternoon with Prince Leopold. Sir Edwin Landseer arrived at Osborne on a visit. On Sunday morning the Queen, the Crown Prince and Princess, Princess Charlotte, and the Royal family, attended Divine Service at Osborne. The Rev. R. Duckworth officiated. On Monday morning the Crown Prince and Princess, with their children, Princess Charlotte, Princess Victoria, and Prince Waldemar, took leave of her Majesty, and left Osborne for Dover, where they embarked for Calais, on their return to Germany. Prince Arthur accompanied their Royal Highnesses to Portsmouth. The Earl and Countess Spencer arrived from London on a visit. On Tuesday morning the Queen walked in the grounds with Princess Louisa, and drove out in the afternoon. On Wednesday morning the Queen drove in the grounds with Princess Louisa. Prince Arthur shot in the preserves at Swainston with Sir John Simeon. The Earl and Countess Spencer left for London. The Earl and Countess Granville and the Right Hon. John Bright arrived on a visit. On Thursday morning the Queen walked out with Princess Louisa. Prince Arthur went out shooting. Sir Edwin Landseer left for London.

THE CABINET.—A Cabinet Council was held on Tuesday in the Foreign Office.

PARLIAMENTARY MOVEMENTS.—It is understood that on the reassembling of Parliament, on the 16th of February, the session will be formally opened by a Speech from the Throne. At the sitting of the House of Commons on Tuesday, Mr. Gladstone, Mr. Lowe, Mr. Bright, Mr. Cardwell, Mr. Foster, Mr. Childers, Mr. Goschen, Mr. Stanfield, Mr. Layard, Sir R. Collier, Sir J. D. Coleridge, Lord John Hay, and Captain Vivian, all of whom were re-elected last week without opposition, took the oaths and their seats, and were formally presented to the Speaker. New writs were issued for the seats vacated by the other appointments in the Administration. There is a vacancy for Renfrewshire, caused by the death of Captain Speirs. There are two candidates in the field for South Derbyshire, vacant by the death of Sir T. Gresley—Colonel Wilnot, Conservative, and Mr. T. W. Evans, of Alltree Hall, Liberal. The day of nomination has been fixed for Tuesday, and the polling for Thursday next.

CONFIRMATION OF THE ARCHBISHOP OF CANTERBURY.—The ceremony of confirming the election of Dr. Tait, Bishop of London, to the Archbishopric of Canterbury, took place on Wednesday in the church of St. Mary-le-Bow, in the presence of the Bishops of Lincoln, Rochester, Hereford, Gloucester, and Peterborough. The see of London being now vacant, the *congé d'élire* will be at once issued for the election of Dr. Jackson, the Bishop of Lincoln, to the See of London; and on his confirmation the same steps will be taken for the election of Dr. Wordsworth to the See of Lincoln.

THE BISHOP OF SALISBURY is slowly improving, but it will be some time before he will be able to resume his diocesan duties. The Bishop of Sodor and Man has been confirming for his Lordship, and his other official duties are performed by the Commissary.

THE CANONRY OF PETERBOROUGH.—Dr. Magee, the new Bishop of Peterborough, has conferred the canonry in Peterborough Cathedral, vacant by the death of Dr. James, on the Rev. Brooke Foss Westcott, B.D., formerly Fellow of Trinity, and for many years one of the assistant-masters of Harrow School.

ORDER OF THE STAR OF INDIA.—The Queen has appointed the Right Hon. Sir William R. Seymour V. Fitzgerald, Governor of Bombay, to be a Knight Grand Commander of the Star of India; the Rajah of Parri-cood; James Duncau Sim, Esq.; Pundit Mumphool;

Robert Henry Davies, Esq.; the Nawab Gholam Hussein Khan; John Clark Marshman, Esq.; Major-Gen. Cotton; Sahib Khan Tawanna Khan Bahadour; Col. A. Broome; Col. A. Fyche; Col. C. H. Dickens; Col. E. T. Dalton; Lieut.-Col. O. E. Rothney; Lieut.-Col. L. Pelly; Lieut.-Col. James B. Dunsterville; Lieut.-Col. T. Rattray; Major F. R. Pollock; Dr. Fyler, M.D.; J. H. Oliver, Esq.; and F. H. Souter, Esq., to be Companions of the Order.

THE ARMY.—The Colonelcy of the 13th Hussars, vacant by the death of General Maclean, has been conferred on General Lawrence. The Colonelcy of the 8th Hussars, vacated by this appointment, has been conferred on Major-General Gibbons. Major-General T. P. Flude has been appointed Colonel-Commandant of the Royal Artillery, vacant by the death of Field Marshal Sir H. D. Ross.

THE REVENUE.—The Revenue returns for the year and quarter ended December 31, show an increase of 3,197,161*l.* on the year, and an increase of 1,553,115*l.* on the quarter. The year's account shows an increase in the Excise of 259,000*l.*; Property Tax, 3,148,000*l.*; Crown Lands, 22,000*l.*; Miscellaneous, 412,161*l.*; and a decrease in the Customs of 144,000*l.*; Stamps, 423,000*l.*; Taxes, 70,000*l.*; Post Office, 70,000*l.*. The quarter's account shows an increase in the Excise of 339,000*l.*; Property Tax, 1,133,000*l.*; Crown Lands, 12,000*l.*; Miscellaneous, 309,115*l.*; and a decrease in the Customs of 104,000*l.*; Stamps, 76,000*l.*; Taxes, 80,000*l.*; Post Office, 30,000*l.*

BOARD OF INLAND REVENUE.—The vacancy in the Board of Inland Revenue caused by the death of Mr. James Disraeli, will not be filled up, the office having been abolished.

THE CIVIL SERVICE.—It is reported that Mr. Frank Ives Scudamore will shortly be removed from his position as second assistant-secretary to the Post Office, to the Treasury; where his administrative talent and powers of organisation will have a more ample field for their exercise, in the preparation of a great scheme which the Premier, aided by Messrs. Childers and Stanfield, is said to have in contemplation for the reform and reorganisation of the whole civil service. Mr. Scudamore is at present engaged, in conjunction with Mr. Forster, by commission from the Treasury, in revising several of the offices of account at the Custom House. It is expected that by a simplification of the cumbrous machinery now in use, and a redistribution of the duties of several of these departments, increased efficiency and greater economy in their administration will be effected.

CIVIL SERVANTS AND THEIR DEBTS.—A Treasury minute has been issued relating to the bankruptcy or insolvency of members of the Civil Service. It lays down the following rules for general observance:—

1. That it is to be understood that serious pecuniary embarrassment, from whatever cause, must be regarded as a circumstance which necessarily has the effect of impairing the efficiency of a public servant, and rendering him less valuable than he would otherwise be.
2. That such embarrassment, if occasioned by imprudence or other reprehensible cause, will be held to be an offence, as affecting the respectability of the service and the trustworthiness of the individual; any person who has thus conducted himself will be considered to have forfeited that honourable position in the service which is necessary to give him a claim to promotion or increase of salary from length of service; and these benefits will not be permitted to accrue to him again until he shall have relieved himself from the discredit of such a position. Aggravated cases of this description will be noticed whenever they become known; and such measures will be taken, either in the manner above adverted to, or in a manner more summary and severe, as the circumstances may appear to deserve.
3. That the mere fact, under whatever plea, of becoming a party to accommodation bills, whether for his own purposes or for another person, and whether resulting in pecuniary embarrassment or not, will subject a civil servant to the consequences described in the preceding paragraph.
4. That in the event of any civil servant being arrested, or being adjudicated bankrupt, or entering into a composition with his creditors under the Bankruptcy Act, he will, on the fact being known, be suspended from duty and salary, and will not be reinstated unless, after examination of the facts and of the schedule prepared by the court, it shall appear that his difficulties have been occasioned by unavoidable misfortune, and not by extravagance or culpable improvidence, or unless the case shall be characterised by previous circumstances of extenuation.
5. That any person who shall not immediately, on his being arrested, or proceeding being taken with a view to bankruptcy, inform the head of his department of the fact, shall, upon its becoming known, be removed from the service without expectation of being reinstated.

Foreign.

FRANCE.—A Cabinet Council was held at the Tuileries on Saturday, at which it was ordered that the Senate and the Legislative Body should meet on the 18th January, and the *Moniteur* of Sunday published a decree convening the Chambers for that day. The negotiations for the proposed Conference on the Turko-Greek question are proceeding, and it is understood that the first meeting will take place in Paris to-day. The Great Powers have agreed that the discussion should be limited to the examination of the Turkish ultimatum. The integrity of the Ottoman territory and the maintenance of the *status quo* with regard to Crete are to be the bases of the Conference, and England only accepts the invitation on those conditions, the Earl of Clarendon having declared that the principle of the integrity of the Turkish empire must not form the subject of discussion. The official papers state that all the Great Powers are animated by the most conciliatory intentions on the subject. Prince Napoleon has been suffering from indisposition for some days past, and the accounts of M. Moustier's health continue very unfavourable. Mr. Jefferson Davis is expected in Paris, on his way to Nice. The Tribunal of Commerce has prohibited M. Whittersheim from publishing a newspaper bearing the title *Moniteur*, that title being the exclusive property of M. Panckouke. The paper which M. Whittersheim intended to bring out under that title

on the 1st of January is the new official organ of the French Government. M. Rouher has since then decided that the new journal shall be called *Journal Officiel de l'Empire Français*. The offices in Paris, and seized their books and papers, a measure is supposed to be a preliminary step to the suppression of these establishments.

SPAIN.—The journals publish a manifesto from the Duke de Montpensier, dated Lisbon, the 19th inst. The Royal Highness explains the purpose of his recent journey to Spain, which he justifies on the plea that he was anxious, as a citizen, to exercise his rights as a soldier, in order to aid in its defence against an enemy which he believed had been instigated by the reactionary party. He simply intended to serve as a volunteer, and gave no official notice of his step, as he had no intention to throw off his *incognito* as soon as he should have reached the scene of contest. Upon his arrival at Cordova he discovered that the true aim of the expedition was not of a reactionary character, and he returned to Portugal. The letter declares that certain accusations which had been raised against him, and proceeds to recall the fact that he had never as could be proved from official documents further, that he and his Consort, the Infanta Isabella in 1859 and in 1866 to follow a liberal course—efforts which unfortunately had been unavailing. He respects the principle of universal suffrage as a source of the legitimate claim of a nation to share in the political administration of a free country. The Duke says that, notwithstanding the fact that he himself is a devoted Catholic, he wishes that every one should worship God according to the promptings of his conscience with as much liberty as is enjoyed by Spanish residents in London, Edinburgh, and Geneva. The letter concludes with the assurance that the writer is not influenced by ambition, that he covets nothing, save once more to belong to the new Spain of liberty. The *Liberté* of Spain publishes a letter, dated Paris, December 21, from Her Majesty's brother of the ex-King of Spain, addressed to the Provisional Government. The writer attacks vigorously the ambition of the Duke de Montpensier, declares that the glory of Washington is far more enviable than that of Cesar, and asks to be permitted to return to Spain as a more citizen, and again to serve in the Spanish navy. In consequence of a letter of the Duke de Montpensier, the leaders of the Republican party had a meeting to consider the advisability of renouncing for the present the Republican form of government, and of putting Marshal Espartero forward instead as candidate for the throne. They resolved, however, to maintain the programme of their party. A commission of six members of the Monarchical Committee has been appointed to act with the Government to re-establish and support liberty and moral integrity at the elections. The army, under the command of General Caballer de Rodas, arrived at Cordova on Tuesday. The National Guard of Seville surrendered its arms without opposition. General Caballer de Rodas was to enter Malaga yesterday, and had announced beforehand that he did not intend to take any hostile steps, as he considered in the good sense of the citizen militia. Rear-Admiral Mendez Nunez has resigned the rank of Vice-Admiral, and his resignation has been accepted by the Government. Marshal Pezuela, who is in Paris, and General Gasset, have refused an order of banishment to the Canary Islands, and have resigned their ranks in the army. The semi-official newspapers state that the Provisional Government will not entertain any proposal for selling Cuba to the United States. Ten thousand soldiers will leave Cadix this month to reinforce the garrisons of Cuba and Porto Rico.

PORTUGAL.—Senor Samedanos has been appointed Minister of Finance. The stability of the Cabinet is thought doubtful. At a meeting of the principal capitalists and bankers of Lisbon and Oporto, convoked by the Government, the Ministers explained the necessities of the Treasury, chiefly to meet the Portuguese funds, due in London on the 15th inst. It was stated that they could not accept the exorbitant terms asked in Paris for a loan, or yield in honor to the exigencies of foreign railway companies. These statements were well received, and the meeting, expressing confidence in the Ministers, appointed a committee for the purpose of providing funds for the present necessities of the Treasury. Her Majesty's frigate *Warrick* has arrived at Lisbon. Her Majesty's despatch vessel *Helicon*, with Admiral Warden on board, has sailed for Cork.

BELGIUM.—The Prince of Wales arrived at Antwerp on Tuesday, and visited the citadel, accompanied by four officers of the British army. The Crown Prince and Princess of Prussia arrived at Brussels on Monday evening. Their Royal Highnesses were received at the railway station by the King, and dined with the Royal family at the Castle. On Wednesday they left Brussels for Berlin. The Court of Appeal at Brussels has given judgment in the Doune case. The Court admits the competency of the lower Court, but declares that the facts brought forward at the trial, however irregular in their character, do not constitute an offence within the Penal Code.

PRUSSIA.—The Crown Prince and Princess of Prussia arrived at Berlin on Thursday from Osborne with their children. In consequence of a rumour that a Bill had been submitted to the North German Federal Council to authorise subjects of Baden and Prussia to enter the armies of North Germany and Prussia respectively having caused a fall on the Paris Bourse on Monday, it is semi-officially declared that the proposition which proceeded from the Government of Baden, was

communicated to the President of the Com-
mission as far back as June, 1868. The agreement
at on this point owes its origin solely to a desire
to facilitate the performance of military service as much
as possible for the subjects of the two states. Twenty-
three export firms have requested the senior Board
of the Berlin Trade Association to urge the Federal
Government to take steps for establishing a North
German Consulate in British Columbia. It is said that
Miss Hamilton-Douglas, sister of the Duke of
Hamilton, is about to be married to Prince Hohenzol-
lern, brother of Prince Charles of Roumania.

HANOVER.—The former officers of the late kingdom,
bound from their oaths by King George, and who receive
a pension from the Prussian Government, have been
called upon by the latter to sign a declaration that in
case of war they would only take service in the Prus-
sian army. In case of refusal, their allowance is to be
withdrawn.

AUSTRIA.—Archduke Albert, generalissimo of the
Austrian army, and chief of the war party, has published
a pamphlet, only 50 copies of which have been printed.
The Archduke expresses his conviction that Austria
can secure years of peace before being able to em-
brace a campaign, with an army equal to her situation
as a first-rate Power. He vehemently reproaches the
Austrian army for having led the monarchy into an
adventurous attitude without
preparing previously, as was its duty, if the Austrian
army was in a position to efficaciously support their
projects. From 1815 to 1830 Austria was almost with-
out an army. He says that it was only during the
twelve years which preceded the revolution of 1848
that Marshal Radetzky succeeded in forming one; and
that to form a good army such a period is strictly
necessary, and diplomacy would be wise never to
forget it.

BOHEMIA AND GALICIA.—The negotiations with the
Poles have been broken off, and M. Rieger has left
Vienna to return to Prague. M. Giskra has promised
some concessions to the Poles.

HUNGARY.—The Minister of the Interior, on the
20th ult. issued an order to the municipalities of the
kingdom to make the customary preliminary arrange-
ments for the elections to the Diet within 20 days.

CROATIA.—A conference, called together by the Ban
of Croatia to deliberate on the organisation of an inde-
pendent Government for the country, was opened on
the 20th ult. The Emperor and Empress are expected
to arrive to be present at the installation of the Ban.

RUSSIA.—It is announced that the Russian Grand
Duchess Maria, who is to be married to the King of
Bavaria, is to become a Roman Catholic, and that M.
Wagner's mission to Rome was connected with that
circumstance. Her Imperial Highness is the first
member of the Russian Imperial family that has ever
abandoned the Greek religion for Catholicism. The
semi-official papers publish an article, of which the
following is a summary, on a speech delivered by the
Württemberg Foreign Minister in the debate on the
address:—

"We consider that this speech demonstrates the good
standing existing between Wurtemberg and Bavaria,
and their consent to enter into an offensive and defensive
alliance. The Customs' Treaty was a national duty, but
there is no occasion to proceed further on the course
indicated by that Treaty; nor has Prussia made any attempt
at any suggestion in favour of overstepping the boundaries
which have been internationally settled. In the case of a
foreign war the South German army will be with and for
Germany."

RUSSIA.—A letter from St Petersburg states that
Prince Sergius, third son of the Grand Duchess
Maria, and who is only 19 years of age, is about to
marry, at the example of his elder brothers, by making a
marriage of inclination. The lady is the Princess
Zubovskoi, a lady of honour at the Russian Court,
and cousin to the Duchess di Sesto. The Emperor has
already given his consent.

ITALY.—The semi-official papers contradict the
reports of Italian interference in Spanish affairs, and
state that it is untrue that Prince Carignano intends
to visit Spain.

ITALY.—Sunday being the Pope's *fete*, his
Holiness presided at the mass at the Vatican, and
wards received the congratulations of the Sacred
College, the Diplomatic body, the public functionaries,
municipal authorities, and officers of the army. In
returning thanks, the Pope expressed confidence in
the Providence.

GREECE.—A circular note has been addressed by the
Government to its representatives abroad, in
which it is declared that the Cabinet of Athens was
satisfied that portion of the Turkish complaints
which was supported by all the Powers. The Turkish
representations at Athens, it is added, was made aware of this
and the demands of the Sublime Porte were, never-
theless, repeated in the form of an ultimatum, so that
the only answer which could be given.

The Government has issued a proclamation, asking to
be supported by the people in the present diffi-
culty. The Chamber has granted to the Govern-
ment a credit for 100 million drachmas, and
at the same time accorded to them full power
to employ other financial resources, and to make an
extraordinary levy of men for the army and navy.
The Turkish Commander, Hobart Pasha, who
arrived at Syra with nine vessels, had demanded the
surrender of the *Enosis* or her disarmament, and
until Sunday for compliance with his ulti-
matum. The Greeks refused to accede to his demands,
and, according to one account, sunk the vessel, but it
is now said that she is merely detained pending the
decision of the Greek tribunals. The Greek Minister
at Constantinople arrived at Athens on Tuesday. A
Danish frigate has arrived at the Piræus.

TURKEY.—The public belief at Constantinople has
turned in favour of peace, in consequence of the

expected meeting of a Conference. The Turkish Govern-
ment has issued a circular to its representatives abroad,
stating that the Sublime Porte does not admit the
necessity of the Conference, but has nevertheless agreed
to it, on the understanding that the five points of the
Turkish ultimatum are to form the basis of the discus-
sion, and that the Cretan question is not brought
forward. The Turkish representative is to withdraw
in the event of the introduction of other questions. The
time for the departure of the Greek residents from
Turkish territory has been again extended, and the
British and Austrian ambassadors, acting on behalf of
the shipping interest, have represented to the Porte
the desirability of the non-expulsion of the Greek pilots
on service at the mouth of the Danube. The 3d and
4th Dragomans and an unpaid *attaché* of the Hellenic
Legation have changed their nationality, and become
subjects of the Porte. The Russian authorities have
suspended the facilities granted to Greek ships to
assume the Russian flag. The Turkish army in Thessaly
is about to be raised to 50,000 men.

CANDIA.—Official information has been received
from Crete announcing that Petropoulaki, with 900
Greek Volunteers, the Provisional Government, and
all the insurgents in the island, have surrendered to
the Turkish forces.

THE PRINCIPALITIES.—Above 20 ships, carrying
Greek fugitives, have arrived from Turkish territory in
Roumanian ports. They have received permission to
stay, provided they implicitly obey the law of the land,
and pledge themselves to abstain from all political
manifestations.

WEST COAST OF AFRICA.—The cholera has arrived
at St. Louis, the capital of the French possessions in
the Senegal, the inhabitants dying at the rate of 100 a
day. This is the first occasion on record of the disease
having reached the West Coast. Its advent is much
dreaded among a people so underfed as the natives.

CAPE OF GOOD HOPE.—Accounts from the Cape to
the 19th ult. state that the colonial border relations
were very unsatisfactory, and from Namaqualand to
Victoria West the country was being kept in perpet-
ual embarrassment by small hordes of plundering
Bushmen and Korannas. On the north-east border
there was a disturbance with the Tambookies, but
nothing very serious was apprehended. The Basuto
dispute remained as before, the Basutos distinguishing
themselves as formerly by their zeal and skill in cattle
theft. Mr. Erskine, a son of the Colonial Secretary
of Natal, had discovered the mouth of the Simpopo
river, in 24.55° S., 84.10° E. Herr Malich had dis-
covered gold in another locality during his journey
to the north-west. The natives stated they used to
dig there for copper, but it was of a different colour
to that now obtained. A Government commission
had not been sent to investigate those discoveries.
The Bishop of Capetown had been enthusiastically
received by the members of the English Church on
his return to the colony. The movement for improving
the quality of Cape wines, and opening up foreign
markets for their sale, was progressing, and a company
was formed with a capital of 100,000*l.* for carrying out
those objects. Ostrich farming was proving very
successful, and its adoption extending among farmers.
Very bad weather had prevailed along the coast of
South Africa, and considerable damage had been done
among shipping.

INDIA.—The Earl of Mayo landed on the 20th ult. at
Bombay, under the usual salutes, and was received by
the military and civil authorities. Extensive prepara-
tions had been made to give him a brilliant reception.
Lord Napier has also arrived, and assumed the com-
mand of the Bombay army. The *Friend of India* says
that the Viceroy proposes, at the instance of the Maha-
rajah of Cashmere, to withdraw Dr. Cayley from
Ladakh. It regards this step as one threatening ruin
to the trade with Cashmere, which promised well upon
the appointment of a British agent in that country. It
is authoritatively stated that no battle had occurred in
Afghanistan before the evening of the 26th of last
month, but the Ameer of Maimana had made a diver-
sion in favour of Shere Ali, by advancing towards Bal-
hand, and seizing Siri Pool. The *Bombay Gazette*,
however, publishes news in confirmation of its previous
announcement that a battle had been fought. Several
shocks of earthquake—some of them severe—have been
felt in Northern and Central India. A Hindoo, named
Ramadheen, not quite 21 years of age, has confessed
that for the last twenty months he has followed the
calling of a poisoner, and has during that time poisoned
twenty-seven persons, mostly Brahmans or Faquirs.

JAPAN.—Advices from Yokohama confirm the news
that the Mikado's power had been completely estab-
lished. He had taken up his residence at the capital,
Yeddo. Her Majesty's gunboat *Gnat* has been lost.

AUSTRALIA.—Recruits are being enrolled in Victoria
to assist in suppressing the rebellion in New Zealand.
A conference is expected to be held at Sydney in
February next, to discuss the question of inter-colonial
free trade. The Anti-Ritualist party in Australia
have formed what they designate a "Free Church of
England," and have elected Dr. W. F. Bailey to be its
first bishop. He went through the form of conse-
cration, took the oaths of supremacy, and on the follow-
ing Sunday held a general ordination. Mr. Robert-
son is the new Premier of Sydney, and Sir William
Manning the Attorney-General. Mr. Bagot is the
chief of the new Ministry at Adelaide, and Mr.
Strangways the Attorney-General. The Treasurer's
budget has been approved by the South Australian
Parliament. The Northern Territory is to be sur-
veyed forthwith. The new land policy has been
generally approved. The goldfields are yielding mode-
rately. In a recent discussion at Melbourne, before
the Royal Society, relating to the South American
earthquake, it was stated that the great wave which
rolled on the coasts of New Zealand and all the eastern
and southern shores of Australia on the 15th August,

must have rolled over the Pacific Ocean in 18 hours, or
at the rate of 383 miles an hour.

NEW ZEALAND.—Advices from New Zealand state
that the rebel Maories have committed frightful atroci-
ties. Fifty Europeans with their families have been
massacred. Titokowaru has forwarded some potted
meat, made of the flesh of our fellow-countrymen who
fell in the late disaster at the front, to the natives
of the interior, from whom he expects assistance,
and also to the Waikato district and the tribes near
Lake Taupo. The Government is accused of being
lamentably incompetent. Auckland papers of the 26th
of October report the occurrence of an earthquake.
The earth seemed convulsed by a perpetual pulsation
for six hours, and for 48 hours afterwards sleep was
hardly possible, as the constantly recurring shocks were
very violent. It is supposed that there were no less
than forty shocks, and some were felt more than two
days after the occurrence of the first.

UNITED STATES.—President Johnson issued a pro-
clamation on Christmas Day granting an unconditional
pardon to all Confederates heretofore unpardoned,
including Mr. Jefferson Davis, General Lee, General
Breckenridge, Mr. Benjamin, Mr. Mason, and Mr.
Slidell, with restoration of all their rights, privileges,
and immunities under the Constitution, and the laws
enacted in pursuance thereof. It is considered prob-
able that Congress will not recognise this pardon, but
it will relieve those named from legal penalties, and
the frequently adjourned trial of ex-President Davis
will now stand over *sine die*. Mr. Johnson
has sent the Senate a Message, declining to
furnish copies of the correspondence respecting
the Alabama claims, on the ground that its publi-
cation was inexpedient. The Senate, by 42 votes
to 6, has passed a resolution disapproving the Presi-
dent's suggestion that the interest on the public debt
should be applied to liquidate the principal. The
House has passed a Bill allowing women in Govern-
ment employ the same pay for the same work as men.
The report that Mr. Caleb Cushing has been sent to
Spain to negotiate the purchase of Cuba is officially
denied. It is now reported that he has left for New
Granada to negotiate on behalf of the United States
for a grant of the right of way for the purpose of making
an inter-oceanic canal. It is reported that Samana Bay
has been bought by a party of New York capitalists, with
power to sell to the United States' Government for the
establishment of a naval station. A mutiny has
occurred on board three monitors recently sold to
Peru, and awaiting transfer, below New Orleans.
It is rumoured at Washington that these monitors
were intended for the use of the Cuban insurgents.
General Grant was the guest of the Union League Club
of New York at a banquet on the 8th ult. Being called
upon to return thanks for the toast of "Our Guest, the
General of the Army and the President Elect," he
made the following speech:—

"Gentlemen,—It is with extreme regret that I find myself
unable to respond in appropriate language to the warmth of
feeling with which this toast has been received. You all know
how unaccustomed I am to public speaking, how undesirable
a talent I think it is to possess, how little good it generally
does, and how desirous I am to see more of our public men
follow the good example which I believe in this particular, if
in no other, I have set them. I must, however, express my
acknowledgments to the Union League of this city, as well as
to the Union Leagues of other cities, for the great benefits
they conferred upon the Government during the rebellion
through which we have passed of late years. I wish to
acknowledge their liberality toward myself and toward the
soldiers serving against the rebellion, and to thank them for it."
This speech was interrupted and followed by hearty
laughter and uproarious applause, which continued for
several minutes.

CANADA.—The Canadian Assembly has adjourned
until the 6th of January. Whelan has been respited
until the 1st of February. The Toronto Court of
Queen's Bench has refused to grant him a new trial.

NEWFOUNDLAND.—A strong agitation is being got
up by the Press and at public meetings in Newfound-
land, in favour of annexation with the new Dominion.

BRITISH COLUMBIA.—The Governor of British
Columbia has announced to the Legislature that the
Confederation project will be held in abeyance pending
the settlement of the Hudson's Bay question.

CUBA.—Intelligence from Havannah states that the
insurrection is assuming greater proportions, that the
Spanish garrison of 200 men is besieged at Santiago,
and that their communications are all cut off. Villa
Delcobre has been recaptured by the insurgents, who
have destroyed Lucretia Point Lighthouse. General
Balmaseda had been obliged to abandon Puerto
Principe, and has sent to Madrid for reinforcements.

BRAZILS.—On the 15th November the allies made
an attack upon Villeta, and were repulsed with a loss
of 1,500 men. It is recommended that the American
Minister, Mr. M'Mahon, be charged with the task of
offering mediation between the belligerents with the
assent of M. Sarmiento, the President of the Argentine
Republic. It was said that the Emperor of Brazil would
withdraw his representative from Buenos Ayres.

PARAGUAY.—The Foreign Office received yesterday
the following list of British subjects who had been re-
leased from their detention in Paraguay, and arrived
at Buenos Ayres on the 13th November.—Dr. John
Fox, M.D.; Mrs. Nesbit, Miss Nesbit, and an infant
child; Mrs. Short, Misses Harriet and Maria Short;
Alfonso Cambridge, Mary Ann and Margaret Cam-
bridge, orphan children; John and Emily Wright,
orphan children; John Trudgeon, aged 16; William
and Mary Ann Chartress, orphan children. Some
British subjects, who might have been brought off,
preferred to remain in Paraguay.

HAYTI.—Salave has organised a renewal of the
attack on Jacmel, and has captured and pillaged
Miragoane.

SAN DOMINGO.—The Revolutionary forces have been
disbanded, the revolt against President Baer being
abandoned.

CHILI AND PERU.—The ports of Chili are again opened to Spanish vessels. A revolution was imminent both in the north and south of Peru, and financial affairs were unsatisfactory. The release of the ironclads at New Orleans, which were purchased from America, had caused general rejoicings.

Parliament.

THE House of Commons met by adjournment on Tuesday, to enable the Ministers who have just been re-elected to take their seats, and to move new writs for the re-election of members of the Government representing Scotch or Irish constituencies. Several members having taken the oaths and their seats, new writs were issued for county Clare, on Sir Colman O'Loughlin's acceptance of office as Judge Advocate General, the Wigton burghs, on Mr. Young's appointment as Solicitor-General for Scotland; county Kerry, on the acceptance by Lord Castlerosse of the post of Vice-Chamberlain of the Royal Household; county Kildare, on Lord Otho Fitzgerald becoming Comptroller of the Household; county Louth, on the appointment of Mr. C. Fortescue as Chief Secretary for Ireland; the borough of Mallow, on Mr. Sullivan's promotion to the office of Attorney-General for Ireland, the counties of Clackmannan and Kinross, on Mr. W. P. Adam's acceptance of a lordship of the Treasury; the county of Westmeath, on the nomination of Captain Neville-Nugent as Groom-in-Waiting to the Queen; and for the Border district of burghs, on the appointment of Mr. G. O. Trevelyan, Civil Lord of the Admiralty. A new writ was also ordered for South Derbyshire, vacant by the death of Sir Thomas Gresley. Lord BURY took the opportunity of protesting against the inconvenience of these re-elections, and signified his intention of moving to repeal the statute of Anne which makes them necessary. Other notices of motion were given, and the House adjourned to Tuesday, February 16, when the business of the session will be commenced.

City Intelligence.

OVEREND, GURNEY AND CO.—At the Mansion House yesterday, Mr. Henry Edward Gurney, Mr. Robert Birkbeck, Mr. Henry George Gordon, Mr. William Rennie, Mr. Henry Lord Barclay, and Mr. William Henry Gurney, the directors of Overend, Gurney & Co. (Limited), were charged before the Lord Mayor, Alderman Sir C. T. Gabriel, Alderman Sir R. Carden, Alderman Sir S. Phillips, and Alderman Cotton, with wilfully conspiring together, and by false pretences inducing the public to take shares in the said company, with intent to defraud them. At the conclusion of the speech of Mr. Lewis for the prosecution the case was adjourned, the defendants being admitted to bail.

MONEY MARKET.—Yesterday being New Year's Day the Stock Exchange was closed. The following are extracted from Thursday's quotations. — **BRITISH FUNDS:** Consols closed at 92½ to 93, both for Money and Account; Bank Stock, 240 to 242; Reduced and New Three per Cents., 92½ to 92¾; India Bonds, 10s to 20s. pm; Exchequer Bills, 1s. to 6s. pm. — **FOREIGN.** An active demand prevailed for foreign stocks, and the tendency of prices was decidedly upwards, owing to the satisfactory character of the advices from abroad. Turkish Stocks were in especial request, at higher quotations. United States 5-20's (1882), 74½ to 74¾; Erie's, 26½ to 26¾; Illinois, 95 to 95½.

Metropolis and its Vicinity.

THE CHIEF COMMISSIONER OF POLICE.—It is understood that the appointment which has become vacant by the death of Sir Richard Mayne will not be filled up at present, it being more than probable that a fusion of the Metropolitan and City forces will take place, and be under one controlling power.

THE "PEEL" STATUE IN NEW PALACE YARD.—It is now settled that this statue, which was removed some time since, shall not be placed again where it formerly stood, the pedestal on which it stood having been taken down. Where it will be eventually placed, is a matter for further consideration.

LECTURES TO LADIES.—Several Professors of University College have expressed their willingness to give courses of lectures to ladies on the plan which has been carried out with such success at Edinburgh, Manchester, Clifton, and other towns. The lectures will be given under the auspices of an association, including many influential names, which is at present being formed. It is proposed to commence in February with two courses, a literary and a scientific; but the scheme may be greatly extended next winter.

ST. ALBAN'S, HOLBORN.—On Sunday morning there was a large attendance at St. Alban's, attracted by the expectation of seeing some result of the judgment of the Judicial Committee of Privy Council. The two points decided in opposition to Mr. Mackonochie were the use of lighted candles at the celebration of the Communion, and kneeling or prostration during the Consecration prayer. Disregarding the judgment altogether, Mr. Mackonochie had the candles lighted at the usual time, and knelt before the altar both at the end of the prayer for the consecration of the bread, and of that for the wine. It was said, though not publicly, that Mr. Mackonochie had not received any official notice of the judgment of the Privy Council, and therefore considered himself at liberty to adopt the practices to which he has been accustomed. The sermon was preached by the Rev. Arthur H. Stanton, from the Epistle of the day, "Truly our fellowship is with the Father, and with his son Jesus Christ." He said that a grievous wrong had been done them—whether by the Judicial Committee or by the promoters of the late suit he did not say—

but it had not marred their sacred joy, and, perhaps, this was the happiest Christmas they had ever spent or should spend. Their aim, he said, was not to obtain power, or to master the intelligence of England, but to win the hearts of the people, and this they were doing. Since the wrong they had sustained had become known they had received the warmest demonstrations of sympathy, and in hundreds of Christian homes St. Alban's had been remembered this Christmas with love and prayer. After observing that patient endurance of wrong was one of the means by which the world was to be won for Christ, the preacher, without any formal conclusion, descended the pulpit stairs, and resumed his place in the chancel. The Bishop of London has addressed the following letter to Mr. Mackonochie:—

"Fulham Palace, S. W., Dec. 29.
"My dear Mr. Mackonochie,—I have received from the Privy Council Office a copy of the judgment which has now with authority explained the law on the various points of ritual observance in the service at St. Alban's, Holborn, respecting which there has been so much contention. I expect that this will be the last day of my tenure of the see of London, otherwise I should have invited you, at a personal interview, to arrange with me what is the best mode of giving effect to such changes in your services as will at once bring it into conformity with the simplicity enjoined by the Rubric, and at the same time be the least distasteful to a congregation like yours, which has become accustomed to a form of worship more ornate than it is now ascertained the law of the Church has sanctioned. Probably before you receive formal notification of what is now required of you through the proper officers of the Bishop's or Archbishop's Court I shall have ceased to be your diocesan. But I will take upon myself, as my last act in that capacity, to advise you and all others of the London clergy who may now feel themselves placed in a difficulty by their having conscientiously, though I believe unwisely, thought it their duty hitherto to act against the advice and judgment, I believe I may say, of all the bishops, in introducing novelties of worship, to do now what I am sure all true Church principles must suggest—viz., to take counsel with those directly set over them in the Lord as to the mode in which their services are henceforward to be conducted, in conformity with the ascertained law of the Church. Some weeks must elapse before my successor has entered fully on the duties of his office, but I can have no doubt he will be ready to give you his best advice at once, and to approach the subject of your present difficulties with that same appreciation of your devotedness and zeal which I have ever myself entertained. You are quite at liberty to make any use you please of this letter, which I shall myself make public.—Believe me to remain yours faithfully,
A. C. LONDON."

DR. PUSEY ON THE JUDGMENT OF THE JUDICIAL COMMITTEE.—The following letter has been addressed by the Rev. Dr. Pusey to the *Times*, on the effect of the recent judgment on the Ritualist party:—

"Sir,—I agree with yourself so far that, since the judgment against Mr. Mackonochie does not (at least, to any outward appearance) turn on any matter of faith, but is simply an exposition of Acts of Parliament, it does not affect the consciences of Churchmen in itself. It only tells us the law under which, in the opinion of the Judicial Committee, we live. We who believe in the Real Objective Presence are bound in all honesty to let the Church know what we do believe. The belief showed itself, of necessity, in our way of celebrating, without our adopting any of the acts which the Judicial Committee has condemned, and it will still. The author of the 'Christian Year' was no Ritualist, whatever sympathy he had with the piety, devotion, and faith visible in many Ritualists. Yet no one who saw him celebrate could doubt as to his belief. The loss of modes of outward expression of belief (if so be) only drives pious souls more inward, and the inward devotion shines the more through. But will you allow me to remark on one statement which forms no legal part of the judgment since it was made in support only of a point which was ruled? The judgment runs—'In the rubric, as to the reception of the sacramental bread and wine, the words, all "meekly kneeling," apply, as their Lordships think, to the celebrant as well as to other clerks and people.' Now the rubric is—'Then shall the minister first receive the Communion in both kinds himself, and then proceed to deliver the same to the Bishops, priests, and deacons in like manner (if any be present), and after that to the people also, in order, into their hands, all meekly kneeling.' Now, if this clause, 'all meekly kneeling,' applied at all to the celebrant, it would grammatically involve the direction that he should kneel while administering to others. A direction which occurs after the mention of two acts of a person cannot (if it applies to him at all) be limited to the first of those two acts, to the exclusion of that the mention of which immediately precedes that direction. If this (as it would) involves an absurdity, then the whole construction is faulty, and it follows that the direction can apply to neither. Yet, although this is only an argument, and so not binding in law, the charge against Mr. Mackonochie could not have been substantiated without it. For, apart from this construction, it could not have been alleged that any offence had been committed by his kneeling at the end of the prayer of consecration. Now, even allowing that the construction were doubtful, we all of us remember how carefully Dr. Lushington, in the 'Essays and Reviews' case, laid down again and again that, it being a criminal cause, the doubt was in each case to be given in favour of the respondent. I need not say what effect it will produce in the minds of English Churchmen if the Supreme Court of Appeal is at one time stringent in its construction of words, at another lax, and both alike in criminal causes. For, however the accuser's costs, which are thus laid upon Mr. Mackonochie, may be paid by others, the law knows nothing of this. It has not only condemned him of doing an unlawful act in the most solemn part of public worship (which is the most sensible wound it could inflict on any clergyman), but has laid a considerable fine upon him. The world would call this 'playing fast and loose'—'loose' whenever it is the question of allowing any matter of faith to be disbelieved; 'fast' when it is the question of not allowing anything to be believed which popular prejudice disbelieves. If the union of Church and State involves this ultimate laxity and more than rigidity in the construction of our formularies, involving the denial of true doctrine and the prohibition of practice which represents doctrine, it certainly will be the earnest desire and prayer of Churchmen that the precedent now being set as to the Irish Establishment may be speedily followed as to the English.—Your obedient servant,
E. B. PUSEY."

MR. MILL AND WOMEN'S SUFFRAGE.—The following letter has been addressed by Mr. Mill to Mrs. M'Laren, of Edinburgh, in answer to an address from the Edinburgh branch of the National Society for Women's Suffrage, expressing their regret at the result of the Westminster election:—

"Dear Madam,—Few things could be more gratifying to me than the letter with which I have been honoured by you and your committee, and I beg you to accept and to convey to the committee my warmest acknowledgments. Of all my recol-

lections connected with the House of Commons, that of having had the honour of being the first to make the cause of women to the suffrage a Parliamentary question is the most gratifying, as I believe it to have been the most important public service that circumstances made it in my power to render. This is now a thing accomplished, and the cause has sufficient number of supporters among the best minds of the House of Commons to carry on as much of the contest as can be conducted there. It remains for the intelligent and patriotic country to give their moral support to the cause, and to be engaged in urging their claims, and to operate as an effectual remedy for the evils which in that respect are that women suffer. Whatever power I may have in this cause outside the House of Commons I shall exert to the utmost. Your expressions of sympathy, feelings, and approbation of my conduct on the subject of Jamaica atrocities, are peculiarly grateful to me, and I have been with especial sorrow that I have seen so many of our women cold and unmoved at the recital of sufferings which have been supposed would at least have excited womanly pity and generous indignation against the traitors. It is peculiarly among women who are engaged in politics that the severest condemnation of Mr. Fox's instruments should have been found; for if a woman possessed the warmth of heart which all women are entitled to feel, and they would have been revolted at the thought which these were attempted to be palliated as a necessary province. As it is, the conduct of so many of our women afforded one more evidence that the renunciation of the line of intelligence gives no security for womanly conduct. I am, dear Madam, very sincerely yours,
J. M. MILL."

PROPOSED EMIGRATION OF LONDON ARTISANS TO THE UNITED STATES.—A deputation of workmen, who are shareholders in the Mutual Emigration and Colonisation Company, waited on the American Minister on the 24th ult., for the purpose of soliciting his advice and co-operation with reference to an emigration scheme which had been devised by the company with the view of ameliorating the condition of the artisans of this country. Mr. E. G. Johnson, having stated the purport of a letter which he had addressed to the Governor of Nebraska on the 14th of October, and to which he has as yet received no reply, Mr. Johnson replied as follows:—

"I need no further information to make me feel as I do in the object you have in view. That interest which has been diminished, but, on the contrary, increased, by the fact that you are a portion of the working men. Men of your position are always welcome in the United States, and in the same way as any other class. The United States belong to that class and I do not think it has any motive to live at all who has no work to do, and is incapable of working. I cannot help thinking that the Governor of Nebraska has not answered your letter, but he has not received it, but if you give me a copy of your prospectus, I will see that it falls into his hands. Whether you can accomplish your purchase of land I am not entirely sure. Under the present law each of you can become the proprietor of a tract, and then you might unite and establish yourselves as proprietors of all the sections. I regret very much that your condition is a distressing one, but more than that I hear that you think that it is owing to mismanagement at home. Whether that is so or not it is not for me to say. You leave and go to the United States, as you propose, with the non-interference of the Government. There may be a misgovernment from time to time, but it is affecting all classes alike, but sooner or later the Government is sure to be corrected, because with us the measure it must be so with you—the Government of the United States rests altogether on the opinion of the people. I do not mean the opinion of any class or class of people, but the opinion of all the people. As you of course know, the suffrage which exists there enables one man to exercise his voice to his Government, what any other man can do, such a class as yourselves—the working class—constitutes a large majority of the people in your country, have a voice in the Government, it is perfect, they cannot suffer from any misgovernment, or from any measure which it is in the power of Government to take, and substitute another for. If you go to the United States you may be sure that the prosperity of yourselves and your children will be secured beyond doubt. We have here you have not here to the same extent—a comprehensive system of education. All children are educated, and they are not by contributions from individuals, but by means raised from a tax upon all. I conclude by saying that I may be able to do to further your object with the greatest possible pleasure."

OPENING OF THE BOYS' COUNTRY HOME.—The Earl of Shaftesbury last week opened the 'Country Home' established by the Society for the Protection of the Homeless and Destitute Children of the Metropolis, as an addition to their Refuge in Great Street, and their establishment on board the 'Country Training Ship.' The Home consists of a farm of 100 acres at Busley, near Woking, to which it is proposed to transfer the young and weakly boys from the Refuge, so that they may be trained to look after the land, grow vegetables, and till the land, and by this means fitted for service at home or in the colonies. The building, which is designed in the Early Gothic style, is constructed of brick, and is capable of accommodating 100 inmates.

DULWICH COLLEGE.—Public meetings have been held by the inhabitants of Camberwell and Dulwich for the purpose of opposing the proposal of the Corporation of Dulwich College to double the present scale of the school fees, which would raise them to 14/ an 1/6. A considerable discussion a resolution was passed unanimously, disapproving of the proposed increase of capitation fees, deprecating the secret mode of conducting the affairs of the college, and urging the probability of combining the upper and lower schools into one. A deputation was also appointed to urge the reconsideration of their proposal.

READING-ROOM AT THE NATIONAL GALLERY.—The acquisition of Sir Charles Eastlake's art collection, recently purchased by the National Gallery, and the removal of the library of the Royal Academy to Burlington House, have induced the trustees to form a collection embracing every attainable work relating to the fine arts, and to establish a library of reference and reading-room for the use of students, and for the public under certain regulations.

SOUTH LONDON WATER.—It is stated that in the water supplied by the Lambeth and Southwark and Water Companies there are 20 grains of organic matter per gallon, of which half a grain is organic.

POISSONS IN THE RIVER.—During the recent months of porpoises have made their appearance near London Bridge; some of them were seen in pursuit of the fish, and later in the day they were seen between Hungerford and Waterloo. On Monday morning one of them ascended the river, and was chased to Battersea, where he

DISTRACTIVE STORM.—On Saturday, Sunday, Monday, and Tuesday, the metropolis and suburbs were visited by a severe storm, which did a great deal of damage to house property, made it dangerous to walk in the streets, uprooted trees or broke down branches in the parks and other places, and caused great damage to the shipping on the river, attended in some cases with loss of life. Along the lines of railway the telegraph posts and wires suffered severely, not to such an extent as to stop communication. In the storm of Monday a house was blown down at Lambeth, two were unroofed at Wandsworth, and one at Battersea. Much damage was done to shipping which had run in for shelter into the mouths of the Thames and Medway. The Great Bermuda was again dragged her anchors for some distance, but was safely brought up. The accounts from the provinces and the outports show that the storm was felt with equal severity along the coast as well as in the island towns.

FALSE WEIGHTS AND MEASURES.—Thirty-nine persons were convicted at the recent special sessions for using and possessing defective weights and measures. The list comprised 3 licensed victuallers, 4 beer-house-keepers, 2 butchers, 1 confectioner, 3 grocers, 3 greengrocers, 1 dairywoman, 4 coal dealers, 2 coal and potato dealers, 2 cheesemongers, 2 bakers, 2 grocers, 1 chandler and coal dealer, 1 tobacconist, 1 sausage seller, and 1 dog's-meat man. The fines amounted to the gross sum of 50*l.*, 10*s.*, the heaviest being 5*l.*, and the lowest 5*s.*

COLLISION OF A PICKFORD VAN WITH AN OMNIBUS.—On Thursday of last week an omnibus from Epsom was proceeding along the Gray's Inn Road at its usual pace, when one of Pickford's vans drawn by two horses turned suddenly out of a side street, and the driver of the omnibus, the pole of the van breaking through its panels and striking Mr. Heintz, a well-known member of Lloyd's, in the face, completely smashing his lower jaw, and inflicting other injuries of a frightful character. Mr. Herbert Street, of Highgate Hill, who was on the box of the omnibus, was thrown by the shock on the pavement, sustaining a severe dislocation of the shoulder and other injuries. The driver of the van was taken into custody, and was remanded on Thursday for a week.

ATTEMPT TO BLOW-UP A POLICE-STATION.—An attempt took place at about one o'clock on Friday morning at the Albany Police-station, which is attributed by rumour to a Fenian origin. There is nothing, however, to connect the affair with that organisation, except that its recklessness as to consequences had something of a Fenian character. Many of the windows of the station were smashed, and on the reserve men rushing out they saw a man looking over the railings of the area, where there was a great deal of smoke and a smell of gunpowder. The superintendent found the remains of a hand-grenade that had exploded, and another grenade that had not exploded, the latter having gone out. There being no other person near the spot the man, who gave the name of Barton, was apprehended. He gave a correct address, and stated that he happened to be passing when the explosion took place. He was brought up at the Marlborough Street Police-office in the course of the day, and, after a preliminary examination, was remanded.

FATAL EXPLOSION IN BETHNAL GREEN.—On Wednesday a serious explosion took place at the house of a manufacturer of ships' blue-lights, in Cambridge Road Bethnal Green, by which the premises were destroyed. On searching the ruins, the remains of a man were found lying across some of the charred woodwork, and it was found that he had entered the house in a view of saving any of the workpeople who might have been in danger. He was seen in several of the rooms while the explosion was going on, and it is supposed that his retreat was cut off by the continuous explosions of rockets and fireworks. He was a common traveller called Sandwick, and his remains were identified by his wife from a button she had sewn on the previous day, and some marks on the remains of a pocket-handkerchief.

CAPTURE OF HOUSEBREAKERS.—A few days since, at the Metropolitan Police Court, William Summers, 31, Henry Street, and John Bennett, 20, each being known by various names, were charged with being in Percy Circus, Clerkenwell, with intent to commit a felony, and were further charged with violently assaulting the police. The prisoners were seen by two policemen together about Percy Circus, but as they were doing anything which enabled the officers to apprehend them, although well known as convicted offenders, they were allowed to pass on. The officers proceeded to take them into custody. The prisoners then commenced a most violent assault upon the policemen, and injured one of them very seriously. It was proved that Summers had been convicted of burglary on one occasion, and Smith 3 times, Bennett 11 times, and Bennett 11 times, and Smith 3 times, Bennett 11 times, and Smith 3 times, Bennett 11 times. On being asked what they had to say in answer to the charge, Summers said his character was bad for him to say anything; Bennett denied that

he had committed any assault; and Smith said he should reserve his defence. They were committed to the Sessions for trial on all the charges.

ATTEMPTED MURDER AND SUICIDE IN SOUTH-WARK.—About three years ago a woman named Lack, residing in Southwark, murdered two of her youngest children, and attempted the life of a third. She was tried and acquitted on the ground of insanity, and is now confined in a penal asylum. What the history of the family has been since that time is not known; but on Monday evening the attention of the police was called to their house, when it was found that the father had given poison to his son in the form of laudanum and rum, had taken a dose himself, and had also cut his throat in several places. The father was taken to the hospital, where he lies in a dangerous state; and the stomach-pump was applied to the son with such effect that he was able to appear before the magistrates at the Southwark Police Court on Tuesday, when he was remanded for a few days.

MURDER AT BARNSBURY.—On Thursday night, the 24th ult., a young man named John Moir, about 23 years of age, living in Alfred Street, Barnsbury, was shot dead by a man called George Campbell, an upholsterer, residing in the same house. It appears that a party of Scotchmen were keeping holiday on Christmas eve, when Campbell, after having in vain challenged deceased to wrestle with him for 4*s.*, loaded a rifle, and shot Moir through the head, killing him on the spot. He was taken into custody, and after a long examination at Clerkenwell Police-court on Saturday, was remanded until yesterday, when he was committed for trial on the charge of Wilful Murder. At the inquest, which was held yesterday, the jury returned a verdict of Manslaughter.

THE PUBLIC HEALTH.—The Registrar-General's weekly return states that in the week that ended on Saturday, Dec. 26, 3630 births and 2970 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 24 per 1000 persons living, being 21 per 1000 in London, 29 in Edinburgh, 19 in Bristol, 18 in Birmingham, 26 in Liverpool, 30 in Manchester, 32 in Salford, 24 in Sheffield, 21 in Bradford, 23 in Leeds, 26 in Hull, 33 in Newcastle-upon-Tyne, and 34 in Glasgow. The rate in Vienna was 27 per 1000 during the week ending the 19th ult. In London the births of 803 boys and 856 girls, in all 1664 children, were registered in the week. In the corresponding weeks of 10 years, 1858-67, the average number, corrected for increase of population, was 1893. The deaths registered in London during the week were 1262. It was the 52d week of the year, and the average number of deaths for that week, corrected for increase of population, was 1595. The present return is therefore 333 below the average.

Provincial.

ABERDARE.—Thomas Morris, charged with attempting to blow-up the house of Mr. Richards, farmer, at Cwmdare, on the 5th ult., ten persons being in the house at the time, was brought before the magistrates for re-examination on Wednesday. The prisoner, who had been badly burnt from head to foot by the powder, which he had put through the dairy window and exploded, was closely wrapped up, and his features were almost indiscernible. He was also unable to stand, and was allowed to lie down in the dock. The inquiry was conducted in private, it being deemed essential to the ends of justice that the proceedings, which implicated several others, should not be published. The prisoner was charged with stealing four casks of powder, and with feloniously committing damage with intent to murder. After hearing evidence the bench remanded the prisoner for a week.

ARUNDEL.—The Duke of Norfolk attained his majority on Monday, and the event was celebrated at Arundel Castle with becoming splendour. There was a grand banquet in the baronial hall, at which the nobility and gentry of the neighbourhood were present, and addresses from the inhabitants of Arundel and Littlehampton were presented to the duke in the presence of his trustees—Lord Edward Howard, Mr. Hope-Scott, Mr. J. Abel Smith, and Serjeant Bellasis. The four following days were devoted to the entertainment of the smaller tenants, cottagers, school children, and husbandmen on the extensive family estates in Sussex.

BIRMINGHAM.—On Saturday night, and again on Sunday, a large number of thieves and depredators of every description assembled in Park Street, Glover Street, and neighbouring localities; their object being evidently a disturbance, with accompanying plunder. Their preliminary movements indicated an attack upon the Irish, but the police assembled in force, and managed to disperse them. Two of the ringleaders were brought up before the magistrates on Monday, and sentenced each to two months' imprisonment.

BLACKBURN.—A weaver named Compstead, living in the village of Ribchester, some miles distant from this town, was recently found lying with his head and shoulders out of bed, his throat fearfully cut, and quite dead. A good deal of blood was sprinkled about, and the constable suspected that a robbery had been committed, from the fact that the apartment was in a disorderly condition, and that there were two boxes in the room which appeared to have been broken open. No one lived in the house but the deceased and a lodger, an old man named Clayton. Suspicion fell upon him, and, as he was nowhere to be found, the police proceeded to trace him, and at last found him, lying drunk and asleep, at a public-house in Ribchester. He was taken before the magistrates, and remanded until the coroner's inquest has been held.

BRIGHTON.—On Christmas Eve a midnight celebration was held at St. James's, in this town. The

church was partly filled by a respectable auditory; the building itself profusely decorated with laurels, holly, and flowers. The altar was decorated with flowers, and on a side table was the usual light burning, surmounted by a carved figure of the infant Saviour. The usual display of embroidered dresses was exhibited by the officiating priests and choristers. The proceedings commenced with an imposing procession, during which and throughout the entire service, incense was freely used. In fact, notwithstanding the recent decision of the Privy Council, lights, incense and bowings were on the usual excessive scale. Many slightly suppressed sounds of discontent were heard throughout the service, both within and without the building; but at the commencement of the offertory sentences a gentleman cried out, "It is perfect bosh; I say perfect rubbish." Immediately some of the vergers, with their oaken staves, rushed to the pew in which he was sitting; the priests looked aghast, and the choristers and the congregation seemed terror-stricken. The gentleman proceeded to say, when efforts were made to expel him, "I expected this. I am not afraid to repeat my words; it is all perfect rubbish. Leave me alone; I will go away without help." The vergers again attempted to take hold of him, when he again said, "It is perfect rubbish; I came here to worship God according to the tenets of the Church of England, not of the Church of Rome. This is all mockery and rubbish, Mr. Purchas." The last words he uttered while crossing the church and nearing the altar. On reaching the door two or three vergers rather roughly pushed him into the outer lobby and thence into the street. The service was then resumed, though the voice of the officiator was very tremulous, and side-long glances were taken by those in the choir at every murmuring sound from without. Many persons immediately left the building; some ten or a dozen only remaining to partake of the Communion, in the celebration of which excessive bowings, lightings, and incensings were freely indulged in. The congregation separated about 1 A.M.; but as a detachment of police were stationed without, the crowd offered no personal violence to them as they dispersed.

COLCHESTER.—In the storm of Monday evening the spire of the Congregational Chapel in Lion Walk fell with a loud crash, breaking through the roof and doing considerable damage to the interior. The chapel, which is in the Gothic style, has been built only five years, at a cost of about 5000*l.*

COVENTRY.—On Wednesday morning a married woman named Holmes, living in the village of Allesley, two miles from this town, murdered her youngest child, nine months old, by cutting its throat almost from ear to ear. She is the wife of a wheelwright in the village, and both parties have been much respected by the neighbours. She is the mother of three children, but the other two were at the village school at the time the murder was committed. At the inquest on Thursday, the evidence threw no light on the cause of the deed, and it is supposed she was labouring under insanity at the time. The jury returned a verdict of wilful murder. The prisoner, who seemed to be in a very despondent state, wept bitterly when the verdict was communicated to her.

ELY.—The fens between this place and Peterborough are under water, several thousands of acres being submerged. From all directions complaints are heard both of the heaviness and long duration of the rains.

FEVERSHAM.—A third of the sufferers from the recent gunpowder explosion at Messrs. Hall's works died on Wednesday. Five out of the six survivors remain in a dangerous condition.

HEXHAM.—The "Countess of Derwentwater" is preparing for a new trial in London, to set aside the decision of the magistrates of this town as to "her being an obstruction on the highway." She has recovered from the illness caused by the fatigue and wet whilst encamped at Dilston, and now occupies her time in arranging the "family papers" for this new attempt to recover her estates.

LANCASTER.—The recent heavy rains have partially, and in some places completely, flooded the low-lying districts of north and north-east Lancashire. In the neighbourhood of Garstang, St. Michael's, Eccleston, &c., a large tract of land has been under water, and on Saturday towards midnight the Ribble overflowed its banks in several of the low-lying districts around Preston. At Croston, Rufford, Mawdesley, &c., the drains, sluices, and ditches have not been sufficient to carry off the immense quantity of rain which has fallen, so that hundreds of acres are submerged, and the district has the appearance of a great lake.

LINCOLN.—Priscilla Biggadyke, who was convicted at the recent assizes of the murder of her husband by poison, was executed on Monday in Lincoln Castle. The execution took place within the castle-yard, and was witnessed only by official and other persons, as provided by the recent Act of Parliament. The culprit fainted away while being pinioned, but soon recovered, and walked to the drop with a firm step. She declared her innocence to the last, although the facts disclosed at the trial left no doubt as to her guilt.

MAIDENHEAD.—On Tuesday a man of independent means, named Henry Miller, residing at Hurley, near this town, was brought before the mayor and other magistrates on several charges of forgery. It was proved that the prisoner gave a bill of exchange for 35*l.* to Mr. Dawson, of the White Hart, which bore the signature of "E. Riggall, Queen's Road, Bayswater." Mr. Riggall, who is a medical man, living at that address, attended the sitting, and deposed that the signature was a forgery. There were two other cases, the amount of one bill being 80*l.*, and the other 18*l.* 10*s.* When apprehended, the prisoner said there was an action pending in which he was plaintiff, and he hoped to have realised the amount necessary to meet the bills before they became due. The magistrates committed him for trial at the assizes, and consented to accept

week, for the purpose of organising an... to the proposed railway from the Marble... Post Office, underneath Oxford Street, Cheapside. Resolutions were unani-... declaring that the line would be of little... advantage; that it would be highly... the inhabitants of Oxford Street and to the... both sides of the street; and that during... its construction it would be a public... causing great obstruction to the traffic and... to the public, as well as serious loss to houses of... It was also resolved to invite the co-opera-... concerned in opposing the Bill, and a com-... appointed to take the necessary steps for... the opposition.

ON THE LONDON AND NORTH-WESTERN... Christmas Day an accident, fortunately un-... with any loss of life, took place near the... Station, being the fourth that has occurred... Coventry branch within a very short time... left the rails, but as the speed had been... none of the carriages were upset and no one... beyond a severe shaking.

ON THE LONDON AND NORTH-... On Wednesday afternoon a third-class... from Manchester, ran into an engine... standing on the main line of rails near... The carriages were much damaged, and... injured. Nine of them were taken... infirmary, and, with their exception... of a railway clerk, who had his leg fractured, ... of Leek, who was much shaken, the... of the passengers proceeded on their journey... On Tuesday night a collision took... at the Springs branch junction on the same... Manchester express ran into some coal... was shunting to an adjacent line. Two... were smashed, and the first passenger... was thrown across the other line, passing... the rails. Several of the passengers were... shaken and bruised, but no lives were lost.

ON THE LONDON AND NORTH-... At Birmingham on Wednesday, Thomas... in the service of the railway company, ... brought up on the charge of assaulting... a railway guard, under circumstances... already been described. It was proved... had bought crocote at a chemist's shop in... on the day of the robbery, that the lid of... found in the van, was his property, that footsteps... to his own were found upon the guard's... reading to his residence, and that a bag which... a portion of the money was discovered on the... a ptey along the road he had passed. The... was again remanded till Thursday, when he... to the assizes for trial.

Law.

MAIDSTONE.—Attempted Wife Murder.—... in the army, and for some time... of the County Gaol, was charged with... murder his wife, from whom he was separated... that he met her in the street, and inflicted several... on her throat with a razor, and would have... in his purpose but for the aid of some... They had been married 11 years, and had had four... STAFFORD.—Child Murder.—Mary Manley, ... with the wilful murder of her infant... and her Guilty, but recommended her to... Bramwell promised to forward the recom-... to the proper quarter, and passed sentence of Death... in the usual form. The prisoner seemed quite unaffected by... the sentence. WORCESTER.—The Attempt to Murder at Old-... William Power, saddler, was indicted for shooting, ... with intent to murder, George Kettle, at Oldswinford, on the... of August last. Prosecutor is a tailor, living at Stour-... bridge, and the prisoner, his wife, and children, lodged at his... house. The prisoner owed prosecutor money, and when... spoken to on the subject he drew a pistol from his pocket and... shot prosecutor in the face. The jury found him guilty, ... and Baron Bramwell sentenced him to penal servitude for life.

MIDLAND CIRCUIT LEICESTER.—John Green, labourer, ... a ted for setting fire to the stackyard of his master... Mr Lee, a large farmer at Thorne whereby 14 stacks, consist-... of wheat, barley, oats, hay, and straw, to the value of... 1300l., were destroyed. The defence was that the fire might... have been caused by accident from the ashes of a pipe, which... the gamekeeper had been smoking in the vicinity of the... stackyard. The jury, after deliberating for two or three... minutes, found the prisoner Guilty. The prisoner said that he... could truly declare that he was innocent. Mr Justice Brett... said it seemed impossible it could have been set on fire ac-... dentally, or by any one else than the prisoner. He quite... agreed with the verdict of the jury. After commenting on the... gravity of the offence, his lordship sentenced the prisoner to... 15 years' penal servitude. John Green was charged with setting... fire to certain premises. The prisoner had been a tenant of... the prosecutor's, but had refused to quit when required. He... used expressions to the effect that he would have his re-... venge, and the prosecutor's buildings were set on fire, and... property to the amount of 1000l. destroyed. The jury found... him Guilty and his lordship sentenced him to 11 years'... penal servitude. Street H., Blair, J., and Able H., 20, ... 38 tailor, were in hotel for lodging on the 27th Septem-... ber a stack of hay at Bothriam. The prisoners were last-... ing the feed, and, on being apprehended, each made a statement... denying his own guilt and criminating his companion. The... evidence showed that the prisoners had fired the stack in a... most deliberate and wanton manner, and they were both... found guilty. Both of them had been several times convicted... and the Judge, in passing sentence, referred to the list of their... past offences, and sentenced them to penal servitude for seven... years. John Nolan, 40, labourer, pleaded guilty of having, on... the 5th September, set fire to a stack at Beauford. The pris-... oner, in mitigation of sentence, alleged that he had done the... act, not from any malice towards anybody, but because of his... utter destitution, and in order that he might be taken into... custody, and that, in fact, immediately after he had... committed the offence he gave himself up to the... police. The Judge remarked that in 1863 the prisoner was... convicted of a precisely similar offence, and sentenced to... five years' penal servitude, and yet almost as soon as he came... out of prison he was at the same work again. Arson was rife... in this county, and it was necessary that persons guilty of... this crime should be severely punished. As that was not the... prisoner's first offence he did not feel justified in passing upon... him a less sentence than 10 years' penal servitude.—Garot-... ting.—John Edwards, 38, tailor, and Solomon Robinson, 19, ... dyer, were indicted for having, on the night of the 27th Sep-... tember, at Leeds, assaulted David Naylor, and robbed him, ... with violence, of his purse and its contents. There were three... men engaged in the robbery, and their victim was severely... injured that he was not able to lie in bed for some time. The... prisoners were captured by two policemen as they were run-... ning away, when Robinson made a desperate resistance, ... endeavouring to stab the policeman. The third man got away... His lordship sentenced Edwards to 15 months' hard labour, ... and to receive 25 lashes with a "cat." Robinson, who had... been previously convicted, was sentenced to seven years' penal... servitude and to receive 25 lashes.—The Attempted Murder... Child.—Mar. Stood was charged with attempting to suffo-... cate her child. The child had been "farmed" out, but was... returned to the mother, who said she would not have it, but... should send it back again. The prisoner's master afterwards, ... attracted by the cries of the child, found it at the bottom of a... privy, half suffocated in the soil. The child died five weeks... ago at the union. The jury found the prisoner Guilty, with a... recommendation to mercy. His lordship sentenced her to... penal servitude for five years. FROTHINGHAM.—Richard... Thomas Moore, 28, blade striker, Robert Morton, 21, cutter, ... and Norman Hall, 41, blade forger, were indicted for violently... assaulting with sticks and bludgeons John Smith, and also... with stealing certain money from his dwelling house, and... putting him in bodily fear on the polling-day, during the... recent election. The jury found them Guilty, and they were... sentenced to 12 months' imprisonment each. Edward Gillett, ... 21, spring-knife manufacturer, was convicted on a similar... charge, and sentenced to six months' imprisonment.

NORTHERN CIRCUIT MANCHESTER.—Burglary.—John Ken-... worthy and Samuel Worrall were indicted for having... burglariously entered the house of George Simmons, at... Ashton under Lyne, and stolen a quilt, a rug, a pair of... blankets and a pair of sheets. The prosecutor's house had... been broken into and robbed, and the prisoners were after-... wards found in possession of the property, and trying to dis-... pose of it. The evidence against Worrall was slight, and he... was acquitted, but Kenworthy was found Guilty, and, having... been four times previously convicted, was sentenced to... 10 years' penal servitude. DURHAM.—The Attempted Murder... at Bishopwearmouth.—Richard Alderson was charged with... wounding John Hardacre with intent to murder him, at... Bishopwearmouth, on the 11th of July, by stabbing him in... the chest with a pocket knife. The motive for the attack was... jealousy on the part of the prisoner with regard to Hardacre's... wife, who had lived with him up to the very day of her... marriage. The jury returned a verdict of wounding with... intent to maim and disfigure, and he was sentenced to penal... servitude for six years.

CENTRAL CRIMINAL COURT.—Alleged Forgery of a Will.—... Henry Spong, maltster, residing in the Weald of Kent, was... charged with forging and uttering a will purporting to be the... last will and testament of Henry Trimmer, with intent to... defraud. The case was one of some intricacy, which was not... lessened by the fact that the prisoner had apparently no... beneficial interest in the document alleged to be forged, ... though it was suggested by the prosecution that, if successful, ... he was to receive half the amount obtained for the party to be... benefited by the will. The jury returned a verdict of Guilty, ... but recommended him to mercy on account of his family. ... Sentence was deferred until next session.

THE HON. ARABELLA CATHERINE WOLSTENHOLME died on... Christmas Day. She was aunt of the fourth Viscount Bangor, ... and married in 1811 the late Mr. Edward Wolstenholme, of... Clarence House, Southampton. SIR RICHARD MAYNE, K.C.B., Chief Commissioner of Metro-... politan Police, died on Saturday in Chester Square, in his... 72nd year. He was a son of the Hon. Edward Mayne, one of... the Judges of the Court of King's Bench in Ireland from 1817... to 1820, a member of an old Kentish family which migrated... into Ireland in the reign of Elizabeth, and established itself... in the counties of Fermanagh and Monaghan. He was born in... Dublin in 1748, and was educated at Trinity College, Dublin, ... afterwards at Trinity College, Cambridge, where he took his... B.A. degree in 1817, and proceeded M.A. in 1821. He was... called to the Bar at Lincoln's-inn in the following year, and at... one time went the Northern Circuit. He was nominated in

1829 by Sir Robert Peel, then Home Secretary, to the post of... Chief Commissioner of Metropolitan Police, on the establish-... ment of that force in lieu of the antiquated parish constables... to whom the custody of our streets by night had been pre-... viously entrusted. He was nominated a Companion of the... Bath in 1847, in recognition of his official services, and was... advanced to the dignity of a K.C.B. at the time of the Great... Exhibition of 1851. He married, in 1831, the eldest daughter... of Mr. Thomas Carwick, of Wyke, Yorkshire, and of Meot... Mount, Highwood, Middlesex, by whom he had four sons and... two daughters. His eldest son, Richard Charles, is a Captain... in the Royal Navy, and is at present at Rio in command of her... Majesty's ship Nassau.

THOMAS ESMONDE, BART., of Johnstown Castle, county... Wexford, died on Thursday. He was 82 years of age, and was... the defendant in the great will case of "Brown v. Esmonde." ... SIR WILLIAM MACKENZIE, BART., died a few days ago, at... Coal House, his seat in Ross-shire. He was the second son of... Sir George Stuart Mackenzie, F.R.S., vice-president of the... Royal Society of Edinburgh, by his marriage with the fifth... daughter of Mr. David MacLeod of Gairloch, and was born... at Coal House in 1786. He was educated at the High School... and University of Edinburgh, and at the early age of 14... entered the naval service of the East India Company. He... served in the Bombay and China country service, afterwards... the Peninsula and Oriental Company's steam transport Manilla... during the late war. He succeeded his brother as ninth... baronet in 1856, and married in 1858 the second daughter of... Mr. Ross Thompson Smyth, of Ardmore, Londonderry. He... is succeeded by his brother, Robert Ramsay Mackenzie, born... in 1811, and married in 1816 to the daughter of Mr. Richard... Jones, of Sidney, New South Wales.

H. E. HAMLIN FANE, of Avon Lymington, and... Clerical Court, Devon, died on the 27th ult. He was the eldest... son of the Rev. Edward Fane, of Finesand, and was born in... 1817. He was for some years colonial commandant of the... South Lancashire Militia, and Conservative M.P. for South Hants. ... He succeeded by royal licence, in 1867, the additional name of... Hamlyn, in consequence of his marriage with the eldest... daughter and co-heiress of the late Sir James Hamlyn-... Williams, of Clavely and Ewinsford. MR. ABRAHAM COOKER, R.A., died on the 24th ult. at... Greenwich, in his 86th year. He was born in a humble en-... vironment of life in Red Lion Street, Holborn, in 1787, and at one... time kept an inn at Holloway. He was elected an associate... of the Royal Academy in 1817, and full academician in 1820. ... In early life he passed much of his time among horses, and... to this circumstance must be ascribed the first notion taken by his... artistic talent. His first picture was the portrait of a... favourite old horse belonging to the late Sir Henry Mux, ... Bart., who recommended the young painter to study art, and... became his friend and patron. The only studio frequented... by him was the stable or the grass field, and the only books... he consulted were some old numbers of the Sporting Magazine, ... illustrated with portraits of horses drawn by Marshall, a well-... known animal painter of that time. His first exhibited... picture, "Lam o' Shanter," sent to the British Institution in... 1814 was bought by the then Duke of Marlborough. He was... afterwards a constant exhibitor both at the Royal Academy... and at the British Institution. He was the chief "battle... painter of the English school, and among his principal... pictures may be mentioned "Blucher at the Battle of Ligny," ... "Cornwall at Marston Moor," "Lord Arundel Capturing a... Turkish Standard," "Lord Arthur Capel defending Colchester... during the Civil War," "The Battle of Shrewsbury," "Sir... William Russell at the Battle of Zepherin," "The Death of... Harold," "Richard I. at Saladin at Ascalon," "The Battle... of Assaye," and "Battle of Waterloo." Several of these... pictures have been engraved. MR. JOHN SIMMONS, one of the senior clerks in the Legacy... Duty Department at Somerset House, died on Christmas Day. ... He had been upwards of 40 years in Somerset House. MR. CHALMERS, the inventor of the Chalmers target, and... projector of the Channel Railway, died on Saturday, just as... his second target ordered by the authorities was on the eve of... completion, for further experiments. He leaves a widow and... family in very straitened circumstances. MR. JOHN PRITCHARD, the tragedian, died of fever, on the... 24th ult., at his residence, Nursery Cottage, Newcastle-on-... Tyne, at the age of 41. Mr. Stanley first introduced Mr. ... Pritchard to Newcastle at the celebration of the Shakespearean... tercentenary in the Town Hall, when they gave selections from... "Othello." Mr. Stanley sustaining the character of Iago and... Mr. Pritchard that of Othello. This and Virginia were his... finest impersonations. He appeared as Othello at the New-... castle Theatre two seasons ago, and continued a great favourite... until he took his final farewell, shortly after the close of last... season. He leaves a young widow, herself a great favourite in... Newcastle.

Markets.

COVENT GARDEN.—Jan 1.

We have had a very quiet week here, and no change that... would command attention or lead to business, the only... article being in rather more request is Kent C. Be. which... realise 95s. per 100 lb. Fruit and Vegetables are abundantly... supplied, and prices are barely kept up. Almeida Grapes... are exceedingly fine, and worth from 8s to 10s. per dozen... pounds. American New Town Pippins of excellent quality... have arrived, and fetch 50s. per cask, there are also arrivals... of Reinette de Bordeaux and Duchesse Apples from... Bordeaux, realising from 12s. 6d to 15s. per cask. Oranges... are very plentiful. French Asparagus may now be had, at... 15s. to 20s. per bundle. Very fine Onions are arriving from... Bordeaux, at 12s. to 14s. the cwt. Potato trade is dull, except... for best samples, of which there is a scanty supply in general, ... though there are large arrivals of Kidney Potatoes of fine... quality from Belgium, realising 90s. per score bags of about... 110 lb. each. Flowers chiefly consist of Orchids, Primulas, ... Hyacinths, Tulips, Heaths, Mignonette, Poinsettias, Cytisus... roeemosa, Cyclamens, Deutzias, Lantanas, and Camellias.

FRUIT.

Apples, per bushel, 4s to 8s
Grapes, per Doz., 3s 6d to 6s
Kent Cobs, per lb., 1s
Lemons, per 100, 4s to 8s
Melons, each, 2s to 4s
Pears, per doz., 4s to 8s
Pine-apples, per lb., 6s to 8s
Oranges, per 100, 2s to 7s

VEGETABLES.

Beet, per doz., 1s to 2s
Cabbages, per doz., 1s to 2s
Carrots, per bunch, 6d to 10d
Celery, p. bund., 1s 6d to 2s 6d
Cucumbers, each, 1s to 2s
Endive, per doz., 1s 6d to 2s
Garlic and Shallots, p. lb., 9d
Herbs, per bunch, 2d to 4d
Horse Radish, p. bund., 3s to 5s
Leeks, per bunch, 2d to 4d
Lettuces, per score, 1s to 2s 6d
Mint, per bunch, 6d to 8d
Mushrooms, p. pott., 1s 6d to 1s 9d
Onions, per bushel, 6s to 7s
Parsley, per bunch, 4d to 6d
Potatoes, York Regents, p. ton
120s to 150s
Flukes, do., 120s to 160s
Shaws, do., 120s to 180s
Seakale, p. punn., 2s to 3s
Spinach, per bushel, 2s to 3s
Turneps, p. bunch, 2d to 4d

HOPS.—BOROUGH MARKET, Friday, Jan 1.

Messrs Patten & Smith report that trade has been... quiet during the week, quotations remaining unchanged. ... Stocks of good Hops, both English and foreign, are very... limited.

bail in 600*l*. The bail not being forthcoming, the prisoner was conveyed to Reading Gaol.

MONMOUTH.—A special session was held last week at Newport, to consider the claims made by 91 persons for damage done to their houses during the election riots in that town on the 17th and 18th November. The claimants sought to obtain compensation from the High Constable of the hundred, but as the Act under which the claim was made, according to the interpretation of the judges, required that, to prove a felonious intent, there must be such a demolition of property as rendered the houses unfit for habitation, the magistrates decided that as it could not be shown that the rioters had any felonious intent the claims could not be sustained. They said that they sympathized greatly with the sufferers and others similarly situated, and regretted their inability to give relief.

NORTHAMPTON.—On Saturday night, James Kemp a detective policeman in this town, seeing a young man in the street with a double-barrelled gun, approached him with the view of ascertaining what he was doing, when the man called out, "Keep back, or I'll shoot you." The detective still advanced, upon which the man fired the gun, and lodged the charge in the officer's left breast. The perpetrator of the outrage was pursued and taken. He is a shoe machinist, named Bridgwater, who had come from Wellington-borough to spend Christmas with his parents in this town. The officer was removed to the hospital, and died from the effects of his wound on Tuesday morning. The prisoner was taken before the magistrates on Wednesday, and committed for trial on the charge of Wilful Murder.

NOTTINGHAM.—Many parts of Nottinghamshire, Derbyshire, Lincolnshire, and Leicestershire are deeply flooded. The Trent, Derwent, and other rivers have completely overflowed their banks, and several bridges have been damaged by the extraordinary volume of water. Near this town the works of the new bridges over the Trent have been altogether stopped, and one part of the old bridge over that river leading into the town by the London road has given way. On Monday afternoon rain and snow were still falling heavily, and the water was rapidly rising.

OXFORD.—The floods are higher at Oxford at present than they have been for some years past. The meadows adjacent to the Isis and Cherwell are completely covered for miles. Christ Church meadow is quite submerged, the water encroaching upon the gravel path. In the walks of Magdalen College the flood is also very high, and the lands in the vicinity of the New Park are quite inundated. Port Meadow has entirely disappeared beneath the water, and for some distance below Oxford the country looks like one vast lake.

PICKERING.—On Monday a girl named Isabel Scates, under 13 years of age, was charged with attempting to poison a family in which she was a servant. The crime was committed on Sunday week at a farmhouse in Thornton Marshes, the poison having been mixed with the sugar, of which Mr. and Mrs. Dodsworth, three children, and two farm lads partook. Six of these have now recovered, but Mrs. Dodsworth is not sufficiently well to give evidence. The prisoner was remanded.

PLYMOUTH.—During the storm of Monday two ships at anchor in the Sound were driven on Mount Batten rock, but were got off and towed into harbour. Owing to the boisterous weather which has for some time prevailed in the Channel the Trinity tender has not been able to communicate with the Eddystone Lighthouse for eight weeks, so that it has been impossible to relieve the keepers whose turn it is to be ashore. The tender has several times run within hailing distance of the rock, but the terrific sea running over it has rendered nearer approach impossible. The light-keepers board themselves, but have in store at the lighthouse a supply of Government provisions provided for such an emergency.

READING.—On Sunday morning, before daybreak, eight poachers made a desperate attack upon four gamekeepers in the employ of Mr. Benyon, M.P., at Mortimer, in which Mr. Newman, the head keeper, was wounded in his head, and a keeper named Duffin was treated in such a brutal manner that his skull was broken in several places, and he lies in a very precarious state. The police have apprehended four men, who have been brought before the magistrates and remanded.

ROCHDALE.—During the storm of Sunday last a shocking calamity occurred in this town. A new building, constructed for a Sunday-school, was opened in the afternoon, and about 400 persons assembled to take part in the special religious services which were to mark its dedication to the intended work of religious instruction. Shortly afterwards the wind blew out one of the windows, but notwithstanding this warning the congregation remained. About an hour later the gale lifted the roof, the walls fell inwards, and a great number of persons were seriously injured. Six of them had their legs or arms broken, and one of them, a young woman called Nuthall, has been obliged to have her leg amputated.

SALFORD.—A murder was committed on Saturday evening in one of the main thoroughfares of this town. A young man about 20 years of age, named Johnson, who was partially intoxicated, went to a public-house where dancing was going on, and became so noisy and troublesome that the landlord ejected him. He then drew a knife, and tried to stab the landlord, but did not succeed. Shortly afterwards he forced his way into the house, knife in hand, and, threatening to stab somebody, thrust it into the thigh of a waiter named Nurney, who died in a few minutes. The murderer, after remaining about the spot a short time, was allowed to walk quietly away, the bystanders being afraid to interfere with him. Nothing was seen of him until Sunday afternoon, when he was apprehended concealed underneath a bed in a house belonging to his cousin.

SALTASH.—A burglary was committed late on the night of Saturday week, or early on the following morning, at Trematon Castle, the seat of Admiral Tucker. The admiral's father and the admiral himself have been collectors of coins and other antiquities, which were placed in the "square tower," a building some hundred yards distant from the main part of the castle. On the Monday morning it was discovered that the door of the tower had been broken open with a crowbar, and a large number of coins and articles of *virtu* stolen. None of the plate was touched, the reason for which is a mystery, as the articles stolen were those most likely to be easily traced.

SCARBOROUGH.—On Monday, in consequence of information that a robbery had been planned to take place at the house of Mr. Leadley, at Hayburn Wyke, the superintendent of police sent three constables to Mr. Leadley's assistance. On their way they fell in with three notorious poachers, called Johnson, Holland, and Walker, by whom the robbery had been planned, and who immediately fired upon the officers, bringing them all three to the ground. The prisoners were apprehended on their return to their homes, and have been remanded until the officers, one of whom is severely shot in the face, are able to appear against them.

SHEFFIELD.—The storm of Sunday was felt with great severity in this town. The roof of the steel melting-house and coke-shed at the Cyclops Works, constructed of iron girders, covered with slates, and supported on massive iron pillars, was blown down, the girders having snapped asunder. Some workmen were just leaving; four had got out of the house, and two were going out, when they were crushed by the falling roof, and killed on the spot. At New Grimesthorpe a house fell down, and seven persons were precipitated, beds and all, into a yard 12 feet below, but without sustaining any serious injury.

STONEHOUSE.—On Tuesday Colonel Penrose, commanding the Plymouth Division of Royal Marines, issued an order on parade forbidding any officer or private of the division to attend the Christmas pantomime at the Plymouth Theatre until further orders. Pickets of Marines were placed at night at the entrances to the theatre, apparently on duty, to see that the order was obeyed. A Government Arsenal policeman was also said to have been present. The order is said to have been caused by the fact that part of the pantomime is considered to throw ridicule on the corps, particularly on the officers. In addition to the diminution of the audience caused by this order, several Marines employed at the theatre were obliged to resign their appointments. The order was revoked yesterday.

SWANSEA.—A desperate poaching affray took place on Sunday at Pentregar, on the land of Mr. J. D. Llewelyn, one of the magistrates. At about 2 o'clock in the morning his five keepers came in contact with five poachers and their dogs, and a fight ensued, in which the keepers, who had been prohibited from carrying any defensive weapon, were so severely injured that two are not expected to live. Four of the poachers have been apprehended and identified. Another sitting of the coroner's inquiry has been held upon the body of John Morgan, the aged farmer of Velindre, who was shot through the head while sitting before the fire in his cottage, and whose body was subsequently found lying dead upon the floor in a pool of blood. The pockets had been rifled, but nearly 40*l*. remained undiscovered in an inside waistcoat pocket. The evidence proved that shot and slugs had been found in the house of the accused, Henry Evans, a nephew of the deceased, hitherto considered a respectable young man of the district. The inquiry was again adjourned until Dr. Taylor, the analytical chemist of London could attend and state the result of his examination of portions of the clothes of the accused which had been sent him by the police authorities. On Tuesday Dr. Taylor gave evidence to the effect that on the trousers of the accused, and also on the hair of his dog, there were traces of blood of recent date, but the quantity was not sufficient for him to be able to state with certainty whether they were the spots of human blood or not. There was nothing inconsistent in their appearance from that of human blood. He had carefully examined the small pieces of lead taken from the wound in the head of the deceased, and his opinion was that these slugs were made from flattened lead, and were not the usual gun shot. Previous witnesses proved that the accused had borrowed a piece of flattened lead some time previously, as he had then said for the purpose of killing a bull. The coroner, in summing up, pointed out the various suspicious circumstances which weighed against the accused, but urged the jury to give a most careful investigation to the facts. The jury, after a short consultation, returned an open verdict of Wilful Murder against some person or persons unknown. The accused was consequently discharged, but on Wednesday he was taken before the county magistrates in petty session at Swansea, and charged with the wilful murder of John Morgan. After some preliminary evidence he was remanded.

WELLS.—On Sunday the governor of Taunton Gaol received from the Home Secretary a respite for Robert Sweet during her Majesty's pleasure. This is doubtless attributable to the fact that he has all along protested his innocence, and declared his belief that God would not allow an innocent man to be hung. Bisgrove, the other convict, remains in the same sullen state, and still persists that the confession he made the day after his conviction was true—that he, and he alone, was the murderer, although Sweet was sitting on the stile almost close to him at the time. The execution of Bisgrove will therefore take place, as already fixed, on Monday morning within the walls of the prison.

WIGAN.—On Thursday of last week a party of searchers, accompanied by the Government Inspector, succeeded in recovering the bodies of the two men, Cheetham and Sharrock, who were killed by the recent

explosion at Norley Colliery. They were taken down the shaft, and the bodies were frequently brought to bank.—On Wednesday another terrible explosion took place at the Pit, in the Haydock Colliery, near St. Helens, 12 miles from this town, in which 22 lives were several men severely injured. Mr. Government inspector, said that the mine was ably managed, and the cause of the disaster is known. It is rumoured that an illegal brattice cloth interfered with the air, and the explosion was most violent, shattering rails into splinters.—The murderer of the girl Aimee, at Th'Aokhurst, near this town, is still at large, notwithstanding the arrest of suspected persons in different parts of the country. At the inquest on Wednesday a returned a verdict of Wilful Murder of a person unknown.

WINDSOR.—The Thames has been so much by the heavy rains of the last few days that meadows on either side are flooded, and having entered the lower floors of the banks, has caused great damage to property. Cookham and Windsor the towing path is part under water, and very dangerous for the stream being in many places very swift.

YORK.—The first general fall of snow for the year commenced at noon on Tuesday in the North Riding. The wolds and moors, as well as the country, were soon covered, and at night falling heavily. Frost occurred during the day, and the flood waters have run in considerably.

Ireland.

THE IRISH PEERAGE.—The *Dublin Gazette* contains the official announcement that the Earl of Devon has been chosen by a majority of votes to be the peer in the House of Lords in the room of the late Earl of Farnham.

LAW APPOINTMENT.—Mr. Lane Joyce has been appointed Crown and Treasury Solicitor in the room of the late Mr. Kemnitz.

THE LATE LORD-LIEUTENANT.—Before his departure from Dublin, the Duke of Abercorn addressed a letter to the Commander of the Forces, and the military authorities, expressing his high appreciation of their loyalty, discipline, and conduct under trying circumstances which occurred during the late war. His Lordship's daughter, the Countess Mount Edgumbe, is considerably better, and a telegram received from Cannes, and is pronounced of danger. In consequence of this change, the Duke of Abercorn is expected to return home in the latter part of the week.

THE LATE DR. COOKE.—The memorial to Dr. Cooke has been definitively decided upon. Assembly Hall is to be erected in Belfast as part of the memorial, and, in addition, a statue, mounted on a column or pedestal, is to be erected on the most suitable site that can be procured.

THE TUSKAR LIGHTHOUSE.—In consequence of the recent storm signals of distress have been sent from Tuskar Lighthouse during the past few days, a light tender has been sent down to render assistance to those on the rock. It appears that the boats were in distress for water.

THE AGRARIAN OUTRAGE IN MEATH.—It is reported that the attack on Mr. Rotheram, in the county of Meath, did not occur at the town of Athby, but at a distance of three miles from it. Three shots were discharged from a carriage, at the distance of a few paces. The slugs took effect, wounding Mrs. Rotheram in the forehead. Mr. Rotheram's escape is extraordinary, the marks of no fewer than 20 slugs being discovered in the carriage. There were at least two persons engaged in the outrage, and they must have been perfectly aware of Mrs. Rotheram's presence.

AGRARIAN OUTRAGE IN TIPPERARY.—On Wednesday morning, at six o'clock, Mr. George Coe, Justice of the Peace for the county of Tipperary, was shot dead near his own house. It is said he had served some ejection processes.

Scotland.

INVERCAULD FOREST.—It is reported that the pine forest of Ballochbuie, the most superb natural-grown Scots Firs in all Scotland, has been granted on a lease of 19 years to the Queen by Mr. Farquharson, of Invercauld, the proprietor, during the period of the lease, is to have the forest, with the stipulation that no more than the timber are to be cut or sold further than the down trees, and such as are considered to be of importance. It is also rumoured that Ballochbuie is to be an important section of the royal deer forest on the lease.

Railways.

OPENING OF THE WESTMINSTER BRANCH OF THE METROPOLITAN.—That portion of the Metropolitan District Railway which extends from Westminster Bridge to Gloucester Road, Bromington, is about a fifth part of the entire circuit, and is nearly 13 miles in length, starting from the City and returning to a given point. The trains are to be running between 5 and 6 o'clock in the morning, and continued to run between Westminster and the City with great regularity, at intervals of 15 minutes.

THE PROPOSED HYDE PARK AND CITY RAILWAY.—The inhabitants of Oxford Street held a meeting

last week, for the purpose of organising an... to the proposed railway from the Marble... to the Post Office, underneath Oxford Street...

Christmas Day an accident, fortunately un-... with any loss of life, took place near the... Station, being the fourth that has occurred...

On Wednesday afternoon a third-class... from Manchester, ran into an engine... standing on the main line of rails near...

On Tuesday night a collision took... at a distance south of the Wigan passenger... The Manchester express ran into some coal...

Law.

Maidstone.—Attempted Wife Murder.—... in the County Gaol, and for some time... his wife, from whom he was separated...

in the usual form. The prisoner seemed quite unaffected by... Worcester.—The Attempt to Murder at Old...

MIDLAND CIRCUIT LEEDS.—Arms.—John Fowler, labourer, was indicted for setting fire to the stackyard of his master, Mr. Lee, a large farmer at Thorne, whereby 13 stacks, consisting of wheat, barley, oats, hay and straw, to the value of 3000l., were destroyed.

Arson was rife in this county, and it was necessary that persons guilty of this crime should be severely punished. As that was not the prisoner's first offence he did not feel justified in passing upon him a less sentence than 10 years' penal servitude.

Garotting.—John Edwards, 36, tailor, and Solomon Robinson, 19, dyer, were indicted for having, on the night of the 27th September, at Leeds, assaulted David Naylor, and robbed him, with violence, of his purse and its contents.

Election Riot at Sheffield.—Thomas Moore, 28, blade striker; Robert Morton, 21, cutler; and Norman Hall, 41, blade forger, were indicted for violently assaulting with sticks and bludgeons John Smith, and also with stealing certain money from his dwelling-house, and putting him in bodily fear on the polling-day, during the recent election.

Burglary.—John Kenworthy and Samuel Worrall were indicted for having burglariously entered the house of George Simmons, at Aslton under Lync, and stolen a quilt, a rug, a pair of blankets and a pair of sheets.

Richard Alderson was charged with wounding John Hardacre with intent to murder him, at Bishopwearmouth, on the 11th of July, by stabbing him in the chest with a pocket knife. The motive for the attack was jealousy on the part of the prisoner with regard to Hardacre's wife, who had lived with him up to the very day of her marriage.

Alleged Forger of a Will.—Henry Spang, maltster, residing in the Weald of Kent, was charged with forging and uttering a will purporting to be the last will and testament of Henry Trimmer, with intent to defraud.

Obituary.

THE HON. ARABELLA CATHERINE WOLSTENHOLME died on Christmas Day. She was aunt of the fourth Viscount Bangor, and married in 1811 the late Mr. Edward Wolstenholme, of Clarence House, Rochester.

1829 by Sir Robert Peel, then Home Secretary, to the post of Chief Commissioner of Metropolitan Police, on the establishment of that force in lieu of the antiquated parish constables to whom the custody of our streets by night had been previously entrusted.

SIR THOMAS ESMONDE, BART., of Johnstown Castle, county Wexford, died on Thursday. He was 82 years of age, and was the defendant in the great will case of Brown v. Esmonde.

SIR WILLIAM MACKENZIE, BART., died a few days ago, at Coul House, his seat in Ross-shire. He was the second son of Sir George Stenart Mackenzie, F.R.S., vice-president of the Royal Society of Edinburgh, by his marriage with the fifth daughter of Mr. Donald MacLeod, of Geanies, and was born at Coul House, in 1806.

MR. ABRAHAM COOPER, R.A., died in the 4th ult. at Greenwich, in his 82nd year. He was born in a humble condition of life in Red Lion Street, Holborn, in 1787, and at no time kept an inn at Holloway. He was elected an associate of the Royal Academy in 1817, and full academician in 1820.

MR. JOHN SIMMONS, one of the senior clerks in the Legacy Duty Department at Somerset House, died on Christmas Day. He had been upwards of 40 years in Somerset House.

MR. CHALMERS, the inventor of the Chalmers target, and projector of the Channel Railway, died on Saturday, just as his second target ordered by the authorities was on the eve of completion, for farther experiments. He leaves a widow and family in very straitened circumstances.

MR. JAMES PRITCHARD, the tragedian, died of fever, on the 24th ult., at his residence, Nursery Cottage, Newcastleton-Tyne, at the age of 45. Mr. Stanley first introduced Mr. Pritchard to Newcastle at the celebration of the Shakespearean tercentenary in the Town Hall, when they gave selections from 'Othello'. Mr. Stanley sustains the character of Iago and Mr. Pritchard that of Othello.

Markets.

COVENT GARDEN.—Jan. 1. We have had a very quiet week here, and no change that would command attention or lead to business; the only article being in rather more request is Kent Cobs, which realise 9s. per 100 lb. Fruit and Vegetables are as abundantly supplied, and prices are barely kept up.

Table with columns for FRUIT and VEGETABLES. Includes items like Apples, Grapes, Kent Cobs, Lemons, Melons, Peas, Pine-apples, Oranges, Beet, Cabbages, Carrots, Celery, Cucumbers, Endive, Garlic and Shallots, Herbs, Horse Radish, Leeks, Lettuces, Mint, Mushrooms, Onions, Parsley, Potatoes, Turnips, etc.

HOPS.—BOROUGH MARKET, Friday, Jan. 1. Messrs. Pattenien & Smith report that trade has been quiet during the week, quotations remaining unchanged. Stocks of good Hops, both English and foreign, are very limited.

ENGLISH WOOL.

Markets have partaken of the holiday character of the season, but there is every appearance of firmness, and much confidence is expressed in the prospect of better business and higher rates as the season advances.

METROPOLITAN MEAT MARKET.—Dec. 31.

Best Fresh Butter	10s. per dozen lb.
Second do. do.	17s. "
Small Pork, 4s. 4d. to 5s. 0d.; Large Pork, 4s. 0d. to 4s. 4d. per 8 lb.	

METROPOLITAN CATTLE MARKET.

MONDAY, Dec. 29.

We have a fair supply of Beasts for the day as to numbers, but the average quality is very middling. Choice qualities are consequently in demand at high prices. The number of Sheep is very small, and the demand is by no means large; best descriptions are, however, readily disposed of, at fully late rates. Choice Calves are scarce and dear. Our foreign supply consists of 337 Beasts 34 Calves, and 5 Pigs; from Scotland there are 232 Beasts; from Ireland, 280; from Norfolk and Suffolk, 120; and 1100 from the Midland and Northern Counties.

s. d. s. d.	s. d. s. d.
Best Scots, Herefords, &c. .. 5 4 to 5 6	Best Long-wools 5 0 to 5 4
Best Shorthorns 5 2 — 5 4	Do. Shorn
2d quality Beasts 3 8 — 4 6	Ewes & 2d quality 4 0 — 4 6
Best Downs and Half-breds .. 5 4 — 5 6	Do. Shorn
Do. Shorn	Lambs
	Calves 3 8 — 5 10
	Pigs 3 4 — 5 0

Beasts, 2030; Sheep and Lambs, 10,340; Calves, 85; Pigs, 90.

THURSDAY, Dec. 31.

We have a good supply of Beasts, and but a small demand, consequently prices are lower for all descriptions, and several lots remain unsold. The number of Sheep considerably exceeds the demand; choice descriptions, however, are comparatively scarce, and find purchasers at about late rates. Long-wools and ewes are lower, and a clearance cannot be effected. Good Calves are scarce and dear. Our foreign supply consists of 125 Beasts and 38 Calves.

s. d. s. d.	s. d. s. d.
Best Scots, Herefords, &c. .. 5 2 to 5 4	Best Long-wools 4 10 to 5 0

Beasts, 1130; Sheep & Lambs, 5070; Calves, 97; Pigs, 60.

POTATOS.—SOUTHWARK, Monday, Dec. 28.

During the past week the arrivals have again been in excess of the demand, and trade continues in a languid state. The following are this day's quotations:—York Regents, per ton, 70s. to 120s.; do. Flukes, 100s. to 140s.; Lincolnshire Regents, 60s. to 90s.; Dunbar and East Lothian do., 80s. to 120s.; Perth, Forfar, and Fife do., 60s. to 105s.; do. Rocks, 60s. to 70s.; French Belgian Whites, 40s. to 80s.

MARK LANE.—MONDAY, Dec. 28.

The little English Wheat fresh up to this morning's market was sold at the rates of this day's night. There was a poor attendance, and but little business transacted in foreign Wheat, prices remaining as on that day. Spring Corn of all descriptions was firm at our last quotations.

FRIDAY, Jan. 1.

Owing to the Christmas holidays and the approaching new year the Wheat trade throughout the country was slow and inactive; prices, however, have been well maintained, and

during the last day or two an advance of 1s. per qr. has been realised in many leading markets. Malting Barley met a steady demand at 1s. to 2s. per qr. advance; in the value of grinding and distilling qualities we observe no quotable change. Oats moved off steadily, and were the turn dearer. Beans and Peas continued a slow sale at former prices. Flour met more attention at fully late rates. The supplies of grain off the coast since the 18th ult. consisted of 77 cargoes, of which, with those left over from last week, there remained for sale last night 47 cargoes. The floating trade has been firm during the last fortnight, but business, owing to the intervening holidays, although at fully previous rates, was far from active. For arrived Wheat 1s. per qr. higher bids were made within the last day or two. Maize was a dull sale, but closed firm. Barley in steady demand. Rye and Beans about unaltered. In cargoes on passage and for forward shipment the trade is slow.

The arrivals of English grain are small, and moderate of foreign. There was a poor attendance at this morning's market, and the little English Wheat on offer was taken at rather over Monday's quotations; foreign was generally held for an advance, with which millers were unwilling to comply, but the business done was at full rates. Spring Corn of all descriptions was very firm. Flour brought rather more money.

LIVERPOOL, Tuesday, Dec. 29.—There was a very fair attendance at to-day's market. Wheat met a good average demand, at the extreme rates of Tuesday last. Flour steady, at previous rates. Indian Corn met but a moderate request, at a decline of from 3d. to 6d. per qr. from last Tuesday's rates. Peas dull, and 6d. to 1s. lower. Oats and Oatmeal quiet, and unchanged. Beans dull and rather easier.

SEED MARKET.

Our seed markets have this week been thinly attended, and quite of a holiday character. The amount of business done has, in consequence, been limited; values have, nevertheless, continued very firm, with decidedly an upward tendency. Fine new English Red Clover Seed is exceedingly scarce, and is held at very high rates, of French Red there is but little offering, new German is in fair supply, and sells readily at enhanced prices; in White Clover Alsike, and Trefoil Seed, values are unchanged. Some heavy transactions have recently taken place in French Italian Rye grass, at an advance of 1s. to 2s. per cwt.; of choice quality seed the supply is very scanty. Rape and Mustard Seed sell slowly at last week's quotations. We have a fair inquiry for Canary and Hemp Seed. Seed Peas and Beans meet with a brisk den and at high rates. Orders continue to come to Land for English winter Tares. Konigsberg spring meet with a small speculative demand. The Clover trade is generally rather inactive about Christmas; nevertheless, for the time of year a very fair amount of business has lately been transacted in agricultural Seeds.—JOHN SHAW & SONS, 10, Water Lane.

WANTED IMMEDIATELY, a HEAD GARDENER.

—One who thoroughly understands Forcing all descriptions of Fruit and Flowers, and Growing Pines, Grapes, Melons; also all kinds of Vegetables. Will have six or seven men under him. Must be a middle-aged married Man, without incumbrance, or if with children, not more than two, and they not under 10 or 12 years of age. Wages, £70 per annum, an excellent house, milk, and wood-firing.—Apply to Mr. WILLIAM BELL, Establishment for New and Rare Plants, King's Road, Chelsea, S W

WANTED, by a Gentleman in Gloucestershire, an unmarried Man, as WORKING HEAD GARDENER and BAILIFF. All the outdoor men will be under him, including the Woodman, Cowman, &c. DINNEFORD & Co., 172, New Bond Street, London, and of all Chemists throughout the West.

HALE'S GALVANIC APPARATUS.—The best Cures of Paralysis, Rheumatism, Loss of Motion, Indigestion, Debility, Tic, Asthma, &c. Send two shillings to HALE, No. 40, Addison Road, Kensington, for his pamphlet, which contains the particulars of the most extraordinary cures. Will be astonished at its contents.

ELECTRICITY IS THE SELF-ADJUSTING CURATIVE AND ELECTRIC buffers from nervous debility, indigestion, weakness, now cure themselves by the only "Guaranteed Remedy" protected by Her Majesty's Great Seal.

Free for One Stamp, by H. JAMES, Esq., Medical Electrician, the London Hospitals, Percy House, Bedford Square, W. N.B.—Medicine and Fees superseded. A Testimonial details. Established 1840.

Galvanism and Medicine Superstitions.

NEW METHOD OF CURING DYSPEPSIA.—The aid of doctors and their drugs, by study of the human mind and Nature. Invalids can't too carefully avoid the use of life droppers, and other dangerous medicines, as they contain poisons, which act on the delicate tissues of the stomach, destroy the receptacle of our daily sustenance, and render it pronourced incurable, but, acting in accordance with the now offers, has, by God's blessing, been restored to strength; and with sympathy for like sufferers, the medicine will be sent, post paid, on receipt of address, and a few shillings. PHILIP GANPEY, Esq., 20, York Buildings, S.W.

CORNS and BUNIONS.—A Gentleman, who has been tormented with Corns, will be happy to give information by which he obtained their complete removal, without pain or any inconvenience.—Forward your stamped envelope to F. KINGSTON, Esq., Ware, Herts.

The Best Remedy for Indigestion.

NORTON'S CAMOMILE PILLS.—Recommended as a simple but certain remedy for Indigestion. They act as a powerful Tonic, and in certain cases, after their operation, safe under any circumstances, and persons can now bear testimony to the benefits of their use. Sold in bottles at 1s. 1½, 2s. 6d., and 5s. 6d. in the Kingdom. CAUTION.—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the name.

general use and benefit. That, in their judgment, it is better that the necessary expenses of church and churchyard, and of public worship, should be provided for by assessment made under the authority of the new Act, than by pew-sitting rents, or by money collected at the offertory. That the provisions of section 7, enabling all bodies corporate, trustees, guardians, and others, to pay church-rates, and the provisions of section 8, enabling the owner, on condition of the payment of the assessment, to stand in the place of the occupier who makes default of payment, after one month's demand, are valuable, and ought in every case to be adopted. Lastly, they recommend the adoption of the provisions of section 9 for appointment of trustees for the purpose of accepting by bequest, donation, contract, or otherwise, and holding any contributions which may be given to them for ecclesiastical purposes, by the parish.

The document was signed by W. H. Hale, Archdeacon of London (chairman), and by the Archdeacons of Canterbury, Middlesex, Maidstone, Cleveland, Northumberland, Durham, Lindisfarne, Surrey, Winchester, Bangor, and Anglesey, Merioneth, Taunton, Bath, Wells, Carlisle, Westmoreland, Chichester, Lewes, Ely, Sudbury, Bedford, Huntingdon, Exeter, Cornwall, Totnes, Barnstaple, Bristol, Gloucester, Derby, Salop, Stafford, Stow, Nottingham, Monmouth, Llandaff, Norfolk, Norwich, Suffolk, Oxford, Buckingham, Berks, Northampton, Leicester, Richmond, Essex, Colchester, Sarum, Wilts, St. Asaph, Montgomery, Brecon, Cardigan, Worcester, Westminster, Sodor and Man, and of Salop, in the diocese of Hereford.

ELECTION ADDRESSES.

MR. G. O. TREVELYAN, the new Lord of the Admiralty, at his re-election for the Border Burghs, on Monday, spoke as follows on the reduction of naval and military expenditure—

"In the appointment of several members under Government he had no doubt that Mr. Gladstone had recognised the services rendered by Scotland during the recent election. With regard to the question of economy, he confidently hoped that the next few years would witness a continuous and very sensible reduction in the public burdens. The admirers of the late Government said the reduction would be effected by diminishing the fighting strength of the country, that was not the case. The spirit in which they were going to work was one of careful economy, which would aim at saving public money without neglecting the public security. For that purpose they wanted men who were thoroughly imbued with public spirit, men who were born British in the best sense of the term. These who were at the head of the War Department had a terrible task before them. They had opposed to them two tremendous influences—the influence of the aristocracy, and the influence of the Court. He would not speak against any member of the Royal family, whom they all affectionately esteemed, but he maintained that it was not right that a Royal duke should be placed permanently in such a position as that of Commander in Chief. According to the present system in the army, they had wealth barring the door very closely against merit and moderate means. In regard to the Admiralty, he believed the public would see, in the first Estimates laid before Parliament, a marked indication that a change for the better had been made in the management of that department."

MR. GEORGE YOUNG, Solicitor-General for Scotland, at his re-election for the Wigton Burghs, on Monday, spoke as follows on the business of the coming session:—

"Before the general election there was a great variety of opinion as to what the result would be. Extremes men on the one side predicted that the Tory party would find a certain class—and that a large class—of the newly enfranchised prepared to do their bidding to such an extent as to return a Tory majority to Parliament. Extremes men on the other side predicted that a vast number of the newly enfranchised would distinguish themselves and signify their independence by returning to Parliament men of another order, who have not hitherto appeared there; that we should, in fact, have an extremely diverse and Radical Parliament, consisting, to a large extent at least, of different men from those hitherto familiar within the walls of St. Stephen's. Both these parties have been entirely disappointed. On more than one occasion in the course of the recent election I took occasion to express my own belief that the Parliament of the new constituency would have the strongest possible family likeness to its predecessors, that it would consist to a great extent of the same men, and altogether of the same order of men; and that while a large majority of Liberals would be returned, yet that they would be Liberals of that order who show their moderation to all men. And accordingly, the Parliament which we have is a Liberal Parliament, with a large majority of Liberals and of moderate Liberals; and I venture to think that even those who were most alarmed with the prospect of the effects as they anticipated them—if the recent great extension of the franchise, have had their fears appeased, and laid by the Parliament which has been returned. The election was a glorious election for the Liberal party. The very report of the result of it before Parliament met in the late Government to resign in a manner certainly unprecedented for they resigned by circular—the first time, so far as I can remember, in the history of the country in which a Government resigned in that somewhat undignified manner. Yet I don't doubt that upon the whole it was the wisest and most dignified course. It has saved a great deal of time. It has saved the discussion, the debate, the division which was anticipated before Christmas as the testing contest between the one party and the other, and Parliament will be able as soon as it meets next month to proceed with the business of the country. We know what the first business will be. It must be the carrying out practically of that great measure on which the last Parliament closed itself so gratefully, and upon whose judgment and against whose judgment the late Government appealed to the country, and upon which appeal the country pronounced its judgment at the last election. Probably the carrying out of that great measure by the present Parliament will occupy a great deal of the present session, so as to render it impracticable to introduce many of those other measures for which there is pressing, but not so pressing, occasion. I am not to detain you on this winter day by attempting to speculate or draw a programme of the future. A Liberal Parliament has been returned—a Liberal Government has been formed under Mr. Gladstone, of whom I have always spoken as in my judgment one of the greatest statesmen of the day—and we may all have confidence that those great and beneficent Liberal principles which have hitherto guided the legislation of the men who are now in the majority and in power will not be allowed to rest there, but will be advanced further and further in the legislation of the immediate future."

SIR COLMAN O'LOGHLIN, at his re-election for Ennis on Wednesday, made the following remarks on the Irish Church and land questions.—

The first act of Mr. Gladstone's policy will be to settle the question of religious equality. My friend Mr. O'Connell has

alluded to that question, and he has told you it lies at the root of all the evils from which Ireland suffers; and I agree with him that it has rendered this country a prey to factions which are a disgrace to the empire at large; and it is only by settling the question in the manner proposed by Mr. Gladstone that this country can be made prosperous and happy. It has been said that this question was taken up merely as a party question, and that Mr. Gladstone would find some way of settling it when it had answered his purposes. Those who made that accusation did not know Mr. Gladstone. In his speech to the electors of Greenwich everything he said while out of office he repeated and had pledged himself to carry out in office the principles he had before recommended. The first blow to religious ascendancy was struck in this country when O'Connell was returned the champion of the gentleman who has secured my nomination to-day, and I, too, in Parliament have been obliged to assist in that work, as I have been instrumental in carrying a Bill which has enabled the present Lord Chancellor of Ireland, Judge O'Hagan, to occupy that post, and I have no doubt he will occupy it in a distinguished manner. Although the question of religious equality will be the first to occupy attention, there is another question behind it in which you are all deeply interested—the land question. Mr. Gladstone in his speech at Greenwich said that it was only settling the question of religious equality, and that as far as he could he was determined to settle it. He may not be able to do so at this session, but he gave the electors of Greenwich to understand it would be taken up eventually, and you may rely upon it he will not retract. I do not wish to detain you longer—but I will just observe that as far as I am acquainted with the feeling of the majority of the Government they are inclined in every possible way to do justice to Ireland. If you think they do not go fast enough, you must remember that there are difficulties to overcome, and that above all only one thing can be done at a time. Probably you will have no land Bill this session, but you will have a grand jury measure which will embody the principle of the Bill brought in by Captain Stacpoole last session, and no doubt the Irish railways will be taken up by Mr. Gladstone, and settled in a satisfactory manner. No man is more competent to deal with that question than the Premier, who is a recognised authority upon all financial subjects. With regard to taxation, though the late Government had, it was stated, not left the country in a worse condition than it had been with respect to its revenues, two millions more, contrary to expectation, will have to be provided for the late Abyssinian expedition, and consequently no reduction in taxation can be anticipated for the present."

Foreign.

FRANCE.—The Emperor received the Diplomatic Body and the Ministers of State at the Tuileries on New Year's Day. His Majesty made the following reply to the congratulations of the Diplomatic Body:—

"I am happy to say that a spirit of conciliation animates all the European Powers, and that the moment a difficulty arises they agree among themselves to smooth away and avert complications. I hope the year now commencing will contribute, like the one just expired, towards removing many apprehensions and strengthening the bonds which should unite civilised nations."

To the congratulations of the Deputies his Majesty replied—

"Every year the co-operation of the Legislative Body becomes more indispensable to the preservation in France of that real liberty which can only prosper through respect for the laws and a just balance of power. It is always, therefore, with lively satisfaction that I receive the expression of your devoted and patriotic sentiments."

To the members of the Court of Cassation the Emperor addressed the following:—

"The sense of justice must penetrate now more than ever our national customs; it is the most sure guarantee of liberty."

His Majesty spoke as follows to the clergy:—

"The congratulations of the clergy move me deeply; their prayers sustain and console us. From what is going on in the world we can see how indispensable it is to assert the great principles of Christianity, which teach us virtue, that we may know how to live, and immortality, that we may know how to die."

All the Paris papers agree in interpreting these speeches in a peaceful sense. The *Constitutionnel* says:—

"Peace has been maintained in spite of all the insidious predictions which have been made during the year just expired. This fact is to be attributed to the good faith and conduct, as firm as it has been prudent, of the French Government in its relations with all the Great Powers, and especially with the North German Confederation. To preserve peace without sacrificing the dignity and the legitimate influence of France, is the great and difficult problem which the Government is endeavouring to solve without unsteadiness or weakness."

The *Official Journal of the French Empire*, which appeared for the first time on New Year's Day in lieu of the *Moniteur*, says—

"After the diplomatic rupture between Turkey and Greece the Cabinets of Europe showed themselves animated by the desire to prevent serious consequences. Prussia proffered the advice that friendly relations should be resorted to on the part of the Powers which signed the Treaty of Paris assembling at a Conference. The Government of the Emperor recognised the opportuneness of this proposition, and recommended it without delay to all the Courts of Europe, with a view to obtain their assent, agreeing with them that the intended deliberations should be confined to the sole and well-defined purpose of examining to what extent compliance ought to be made with the demands of the Turkish ultimatum. A telegram has been received from M. Bourée, the French Ambassador in Constantinople, dated the 31st of last month, announcing that the Porte has declared its readiness to join the Conference. It has also been agreed to admit a Greek plenipotentiary as merely taking part in the discussion, without a vote. Complete harmony therefore exists between the Powers as regards the assembling of a Conference at Paris."

The first sitting of the Conference will take place in Paris to-day, the request of Turkey that the meeting should be postponed for eight days, to enable the Ottoman Cabinet to forward instructions to the Turkish Minister at Paris, having been withdrawn, at the suggestion of the French ambassador, who has induced the Porte to consent to transmit its instructions by telegraph. The Marquis de Lavalette, Minister of Foreign Affairs, will preside over it, and the representatives of the Powers who are to take part in it are as follows—Austria, Prince Metternich; Great Britain, Lord Lyons; Italy, Count Marnier; Prussia, Count Solms; Russia, Count Stackelberg; Turkey, Djemil Pasha; Greece, M. Rizo Rangabé. The report that the ships belonging to the bankrupt estate of Messrs. Arman & Co., of Bordeaux,

have been purchased by Greece, and that a Greek legion is being formed in Paris, is contained in Prince Napoleon is suffering very severely from a complaint. The Emperor went down to Mantes Monday to see him. The Marquis de Morny, Minister of Foreign Affairs, lies in an ambulance at the Foreign Office. The election of a member for the Department of la Manche took place Monday, when M. Auvray, the Government candidate, was elected by 17,648 votes. His opponent, Lenoel, polled 10,751 votes. Mr. Jefferson, Messrs. Slidell, Mason, Dudley Mann, &c. Southerners now in Paris, will leave shortly for the United States. Baron Seguiet, Premier of Toulouse, has published a letter in the papers in which he has resigned his functions in consequence of M. Baroche's reproaches for his conduct in the matter of Press prosecutions. This resignation has been followed by M. Tarquette, Premier Imperial at Vervins, who has also resigned. A very severe sentence was pronounced on Wednesday against the *Diablo à Quatre* for an article on the Emperor's person contained in the number of that publication of the 19th ult. M. L. Krantz was condemned to four months' imprisonment and a fine of 3000f.; M. Pfeiffer, the manager, to two months' imprisonment and a fine of 3000f., and M. Dubouché, printer, to a month's imprisonment and a fine of 3000f. Marshal Vaillant, Minister of the Emperor's Household and of the Fine Arts, has given a site on the left bank of the railway bridge from Calais to Boulogne. The Civil Tribunal of Marseilles has just given judgment on the interpretation to be given to the will of Mr. Robert Gower, a wealthy English merchant of that city, and on which depended a considerable fortune. The deceased, who was unmarried, leaving a valuable gallery of pictures in his collection, museums in England and France, disposed of the remainder of his property in the following terms:—"I give and substitute as my heirs, my brother Henry Gower, or his children, and my other brothers and nieces who shall exist at the date of my death, their representatives." The Court decided in favour of the construction of this phrase indicated two meanings, the designation of the brother by name, and the exclusion of all others, and the inference from the word *or*, which implied that, in case of predecease, his children then would be merged in the category of nephews and nieces mentioned in a general manner, that Mr. George Henry Gower, being living at the date of the universal legate, a verdict in accordance with the view was in consequence given.

SPAIN.—The insurgents at Malaga having refused to obey the proclamation of General Caballero, the latter, supported by the ships of war stationed in that city, attacked them on New Year's Day in the quarter of Santa Trinidad, where they had entrenched themselves, while General Pavía, the Military Governor, attacked their stronghold from another quarter. The insurgents were completely beaten, and the latter the line took possession of all the districts around them. The greatest enthusiasm prevailed in the ranks of the regular army. In General Pavía's corps 1000 men were killed, but, on the whole, the troops of the line did not suffer much. The losses in the insurgent force were 100 killed and wounded, and 800 prisoners. Of these General Caballero has released 200, and detained the 230 others, who will be tried before military tribunals. Two battalions of the National Guard remained faithful to the Government, the others having taken part with the insurgents, but were now armed. The last advices announce that General Caballero now occupies every part of the territory that the insurrection is completely suppressed. Carlist conspiracy has since been discovered at Logona, with ramifications in Saragossa, Pamplona, Tortosa, and Lerida. Several military men have been arrested, and compromising papers have been seized from the authorities. Republican movements have been taken place at Cadiz and Seville. At Cadiz a Communist conspiracy has also been discovered. It was considered necessary to proclaim martial law, but the state of siege has now been raised. Sagosta, Minister of the Interior, has issued a decree in which he attributes these conspiracies to the Reactionary party, and says that the Government is resolved to preserve intact the sacred deposit of the National Sovereignty, and to maintain it until the assembling of the Cortes, whose assembling it respectfully awaits, and does not desire to hasten. Advices from Corunna state that 6000 men washed in from the sea were picked up between Finisterre and Cape Ortagal, on December 28th.

PORTUGAL.—The King opened the Cortes on Monday. His Majesty in his speech briefly alluded to the disaster which had occurred at Mozambique, and that the Government had taken energetic measures to retrieve it. The state of the finances was stated to be good order in the administration, and by the reduction of the expenditure and self-sacrifice, his Majesty said the difficulty might be overcome. The President of the Chamber of Deputies took the oath on Monday, and resulted in the defeat of the Government, the successful candidate being Senhor Mendes. On Thursday the President of the Chamber of Deputies resigned, which the King had accepted.

GIBRALTAR.—A discussion has been going on some days past in the London papers, respecting the surrendering Gibraltar to Spain in exchange for the Spanish settlement of Ceuta, on the opposite side of the Straits. It originated in a letter from Admiral George Grey, formerly Governor of the port at Gibraltar, advocating the exchange of the ground that, in spite of the vast sums which have been expended by England on the fortifications of the place, it is now unable to resist the attacks of the

...while experience has proved that it will never be possible to render its harbour safe or commodious for the use of a fleet in time of war. To these arguments other naval and military officers have added that Ceuta, though possessing a better harbour, is not equal in strength to Gibraltar, and that when it will be commanded, in the present state of modern artillery, by hills behind it; that Gibraltar has been dearly purchased by English blood in the memorable sieges it has sustained during the long period of 150 years in which it has been in our possession; that, if the principle of restoring places of equal force be applied to India and most of our possessions. It is also contended that Spain has as much right to expect Spain to restore Gibraltar as England, that Morocco might likewise object to our settlement at Ceuta, and that we should be unwilling to see the English flag planted on any part of the Mediterranean coast of Spain, where we could have no security that, in the distracted state of Spanish politics, Gibraltar would not fall into the hands of some other Power capable of using it against us, and not likely to give it to Spain or any other nation, unless compelled to do so by force of arms. The Madrid papers are in great exultation at the very possibility of England regaining Gibraltar for Ceuta, and almost all of the articles of the London papers on the subject.

DENMARK.—A Court ball was given at Copenhagen on Tuesday evening in honour of the Prince and Princess of Wales. The ball was opened at a quarter to 10 by the polonaise, the King dancing with the Princess of Wales, the Prince of Wales with the Queen of Denmark, and the Danish Crown Prince with the Countess of Frisenborg. The English, French, Russian, and Swedish Ministers, were among the guests, who numbered in all about 1500. The Princess of Wales wore a blue dress, with a diadem of brilliants.

BELGIUM.—The Crown Prince, whose immediate recovery was declared inevitable months ago, is much improved in health, although the water from time to time makes its appearance, and baffles the skill of the doctors, who, however, still cling to the hope that by treatment adopted they may ultimately be able to conquer this obstinate enemy, the real source of the illness. A Royal order has been issued granting to the Belgian Minister in London honourable relief from his post, and appointing Baron Beaulieu, Minister of the Hague, as his successor.

SWITZERLAND.—Mr. Fell, the English engineer, has been selected by the Swiss Federal Council to undertake the construction of three railroads over the Alps for a guarantee of interest of 600,000*fr.* annually. He estimates the cost of that over the Simplon at from 11 to 12 millions, of the St. Gothard at from 13 to 14, and of the one at Cham at from 15 to 16 millions.

PRUSSIA.—In the sitting of the Lower House of the Reichstag on Wednesday, the Minister of Finance brought in a bill as a supplement to the budget, whereby the Emperor is asked to approve the expenditure incurred in the regular adoption of the budget as that of the land. It is officially contradicted that Prussian officers had been authorised to enter Roumania with power on their return to form a Prussian army. The Landwehr is being reorganised and increased by 167 battalions. The *New York Times* publishes an article on the subject recently delivered by Herr von Varnbubler, Minister of Finance of Wurtemberg. It expresses great satisfaction at the tone of the speech, and says that the Prussian Government will continue, as heretofore, to adhere to existing treaties in its attitude towards the other German States. Professor Ewald has been appointed to the charge of high treason against the King. The acquittal was based on the ground that it had not been proved that the King was persecuted in the Professor's pamphlet, and that no evidence had been brought to show that the Professor intended his remarks to be defamatory. The Prussian court received the decision with loud applause. The Monastery of Newstadt, the closing of which was postponed until its inmates should die off, has been discovered to be secretly recruiting its members. The Berlin Chamber of Deputies has now passed the establishment, which was the last of the class of houses in the kingdom.

SAVON.—The Savon Landwehr is now going through military manoeuvres. It is the first time that such assistance has occurred in winter.

BAVARIA.—The proposal of the Minister of War to divide the Bavarian army into two corps of four divisions in unison with the military system of the German Confederation, has received the approval of the King.

AUSTRIA.—It is rumoured that Count Beust is to be appointed by Count Andrassy, but that he will remain in charge of foreign affairs; the rumour, however, is not confirmed. In accordance with an announcement of the committee for the Control of the Public Debt, the conversion of the debt commenced on Thursday. Count Mensdorff, a relation to Queen Victoria, has been created a Prince, and assumed the name of Prince Mensdorff, having married a daughter of the late Prince Dietrichstein. A long train of goods arrived a few days back at Tschakow, the first train to appear in Austria on the railway from Prussia to Cracow. There was nothing remarkable in the appearance of their contents, which were registered as agricultural implements in transit to Moldavia, but one of the railway servants having had suspicions excited by the weight of the packages, the wagons were searched and were found to contain

small mountain guns, with their carriages, hidden beneath straw and parcels of goods of less importance, and covered over with tarpaulins. The whole weighed about 150 tons. The convoy was at once detained, and an inquiry has been opened at Cracow and Vienna.

HUNGARY.—Herr Deak has consented, on the invitation of the Central Electoral Committee, to come forward again as a candidate for the Chamber of Deputies. The agitation for the elections has commenced throughout the country. A Jewish congress, composed of delegates from Hungary and Transylvania, convoked by the Minister of Public Worship, is now sitting at Pesth. The object of it is to draw up a special statute relative to religious and communal affairs, and for the administration of the funds constituting the endowments of the Hebrew schools. An appeal has been issued to the inhabitants of Servian nationality, calling upon them to render assistance to the Greeks in their conflict with the Turks.

CROATIA.—The Conference convoked by the Ban of Croatia has decided in favour of establishing a responsible Government, similar to that existing in Hungary.

RUSSIA.—Advices from Tauris state that a violent earthquake was felt there on the morning of the 3d inst. which took its direction from north to south. No disasters are reported.

ITALY.—In the provinces of Verona, Cuneo, Modena, Piacenza, Arezzo, Bologna, Cremona, Parma, and Pavia, there have been popular assemblages and demonstrations against the Grist-tax. At first the people were dispersed, and order restored without bloodshed, except at Campegine, in the province of Rizzio, and at Pelago, in the province of Florence, where some of the rioters were killed and several wounded. A renewal of the disturbances has since occurred in the vicinity of Parma, where the rioters have burnt the prefectural archives of San Donnino. The province of Reggio is also agitated, and disturbances are threatened at Bologna. A Royal decree was consequently issued on Tuesday, charging Cadorna, the commander of the troops of Central Italy, with the mission of restoring order and tranquillity in the provinces of Bologna, Parma, and Reggio, and ordering the prefects of those provinces, and of Modena, to place all their available forces and means at his disposal. General Cadorna has fixed his head-quarters at Parma, and has issued a proclamation warning the rioters of the consequences that will attend any further violation of the law. The *Official Gazette* states that the disturbances were promoted by political parties adverse to the national institutions. The ringleader of the rioters at Campegine was an ex-ducal gendarme. Seditious placards have been posted in various towns in the province of Verona, where shouts have been raised of "Viva l'Austria!" "Viva il Papa."

PAPAL STATES.—Archbishop Manning arrived at Rome on Tuesday from London.

GREECE.—Hobart Pasha's demand against the Enosis has been brought to trial before a mixed naval commission. The *Levant Herald* of Saturday announces the landing at Syra from a Turkish vessel, on the 31st ult., of 650 of Petropulaki's Greek Volunteers from Crete, and their enthusiastic reception by the population and troops.

TURKEY.—The Porte, on the representation of her Majesty's Ambassador at Constantinople, has decided that all Greek vessels which might be loading in Europe before the rupture of the relations between Turkey and Greece should be exceptionally allowed to enter the Ottoman ports to discharge their cargo. The Porte has also modified the order for the expulsion of the Greeks; all Greeks by birth or of Greek parentage, provided the latter be born in Turkey, are to be allowed to remain in the country, subject to Turkish laws, but the expulsion of all persons who were formerly Ottomans but have become Greeks by virtue of adoption, is insisted on unless they resume their allegiance. The *Turquie* publishes an article under the head "The Meeting of the Conference," in which it says:—

"Russia having taken initiatory steps towards effecting a diplomatic decision, has done so under the veil of exaggerated Liberalism; nevertheless, her designs are sufficiently apparent. Ever since the year 1856 it has always been Russia who sought to revive the Eastern question, and now Russia, aware that the insurrection in Crete has terminated owing to the energetic attitude of the Porte, proposes a Conference, which it is impossible for the Porte to refuse to join without incurring heavy responsibilities. Russia hopes that the result of such Conference will be the abandonment of the measures adopted by the Porte for the expulsion of the Hellenes. The Turkish Government, however, will not submit to the discussion of her legitimate acts of self-defence. Should such a step be taken, its Plenipotentiary would at once retire, and the Conference would collapse. The article concludes by advising Russia to be careful, since another war might be more disastrous than the Crimean war."

Mr. Morris, the diplomatic agent of the United States, has received orders from Washington not to take Hellenic subjects under his protection. The mosque of Foundoukly, at Constantinople, has, by order of the Sultan, been lit with gas, and the other Mussulman places of worship are likely to be shortly lighted in the same manner.

TURKEY IN ASIA.—About midnight on the 17th ult. at a place called Carabournou, about 41 miles from Smyrna, the steamers Galliou and Charkeich, belonging to a Turkish company, came into collision. The Galliou, which had a very valuable cargo and a large quantity of specie on board, foundered almost immediately, only 80 passengers out of 250 being saved. The Charkeich was so much damaged that she had to be run ashore to prevent her from sinking.

CAPE OF GOOD HOPE.—Accounts from the Cape to the 14th ult. state that the result of the mission of the Rev. Mr. Vandewall and Commandant de Villiers, the deputation from the Free State to England, is that all the later and angry correspondence between Sir Philip Wodehouse and President Brand will be considered as cancelled, and that the negotiations with respect to the

Basuto boundary will be commenced afresh. The Korannas, on the northern border, are still giving much trouble. A band of them recently came down upon a party of farmers, and carried away stock and other property worth 6000*l.*

INDIA.—The Earl of Mayo arrived at Madras on Saturday evening, and met with an enthusiastic reception. An influential committee has been formed at Calcutta for the purpose of erecting a statue commemorating the Indian career of Sir John Lawrence. The Maharajah of Edur died on December 26. The Cashmere authorities have expressed their readiness to facilitate trade with Yarkund, *via* Ladakh. Colonel Ortasoff, the Russian agent, is now at Cabul. Government news from Peshawur of December 3 states that no battle has been fought in Afghanistan.

CHINA.—It is stated that three more Chinese ports will be opened to foreign trade at the end of 1869. Consul Swinhoe has been appointed to visit and report upon them. A notification of Sir Rutherford Alcock promulgates revised pilotage regulations. They are to be applicable to British subjects only, but it is supposed that other foreign representatives will issue similar notifications. The first Protestant church was dedicated at Hankow by the Bishop of Victoria on November 27. Colonel Meadows is dead. Mr. Cooper has been unable to penetrate into Thibet, and has returned to Hankow. Lieut. Dunlop has surveyed the Grand Canal 60 miles northward of Yangtse, and found the water very shallow. A torpedo has been successfully constructed at Nankin, by which the Arsenal junk was blown up two miles distant from the operator, Dr. Macartney. The foreign diggers in Chefoo have armed themselves, and intend resisting Chinese interference.

JAPAN.—It is credibly reported that the rebellion has collapsed, and that the Northern party have unconditionally surrendered to the Mikado's authority. Preparations were in progress for the Mikado's visit to Jeddo. The British garrison troops at Yokohama had attended a general parade, and fired a Royal salute to commemorate the Mikado's coming of age. They marched past before two of the Mikado's representatives. A conference was sitting respecting the opening of Jeddo to foreign commerce. Decisive official information will be published shortly.

UNITED STATES.—Armed bands of negroes have plundered the plantations near Savannah. They rescued some negro prisoners from the custody of the Sheriff, picketed the roads, and defied the authorities. Federal troops, under General Sibley, were sent to quell the disturbance, and the latest news states that the insurgents have abandoned their resistance, and that the Sheriff, aided by the military, has arrested the ringleaders. Mr. Sumner has presented to the Senate a memorial asking that the word "white" be struck out of the Naturalisation Law.

CUBA.—Telegrams from Havannah announce that General Dulce has arrived there, and assumed the government of the island. General Lersundi has left for Spain.

PARAGUAY.—Accounts dated the 28th of November state that an attack had been made on Villeta, which ended in the repulse of the Allies. Three Brazilian iron-clads were injured.

BUENOS AYRES.—A decree has been issued by the Argentine Government, offering a prize of 1600*l.* to the inventor or importer of the best method of preserving meat on a great scale.

HAYTI.—Accounts from Port-au-Prince to Dec. 11 state that Nonuil, the President of the South, is dead, and that Miragoun and the adjacent places had fallen into Salnave's power. Severe fighting occurred before the surrender. It is reported that Jacmel and Jeremie, in the South, and St. Mark, in the North, are in favour of Salnave.

City Intelligence.

OVEREND, GURNEY & Co.—At the close of Mr. Lewis's address in the case of Overend, Gurney & Co., at Guildhall, on Friday, the sitting, which had lasted four hours, was adjourned to Saturday, the defendants being bound over to appear, themselves in 2000*l.* each, and one surety in 2000*l.* For Mr. Gordon, Mr. Kirkman Hodgson, a Governor of the Bank of England, became security; for Mr. Barclay and Mr. H. E. Gurney, Sir Thomas F. Duxton; for Mr. J. H. Gurney, Mr. Fowell Buxton; for Mr. Rennie, Mr. Robert Gillespie; and for Mr. Birkbeck, Sir John Lubbock. Baron Rothschild had tendered himself as surety for the Messrs. Gurney and Mr. Birkbeck, but was unable to attend personally. At the sitting on Saturday Dr. Thom, Mr. Peek, of Liverpool, and Mr. Clark, of Haverstock Hill, shareholders, gave evidence as to their having been induced to take shares by the statements put forth by authority of the directors. Mr. Howell, accountant, then gave an account of his investigation of the affairs of the old firm and the limited company under the direction of a committee of shareholders. The object of the evidence, so far as it went, was to show that the old firm was insolvent to a large amount. The inquiry was then adjourned to Wednesday, when further evidence was taken as to the insolvent condition of the old firm. Mr. Slater, who was temporary secretary from July, 1865, to February, 1866, was examined as to the launching of the new company, and the remainder of the sitting was taken up with a continuation of the evidence of Mr. Howell, who proved that nearly 9,000,000*l.* consisting of irretrievable bad debts lost by the old firm, were carried to the credit of the new firm, and that 125,000*l.* were also carried to the credit of the new firm as interest due upon that amount, the whole transaction being, of course, a myth. The proceedings were then adjourned to yesterday, when Mr. Howell's examination was continued. He stated that liabilities to the amount of 9,319,000*l.* were not at all debited to the new company, and were kept altogether out of its accounts, and that

the old firm, for five or six years previous to the transfer, lost 500,000l. a year. This concluded Mr. Howell's examination-in-chief, and the inquiry was then adjourned to Friday next.

MONEY MARKET, FRIDAY — BRITISH FUNDS
 Consols closed at 92½ to 92¾ for Money; and 92½ to 92¾ for Account; New and Reduced Three per Cents, 92½ to 93; India Five per Cents, 112 to 112½; Bank Stock, 240 to 242; Exchequer Bills, 1s. to 6s. pm.—**FOREIGN**
 Mexican Bonds, 15½ to 15¾; Spanish, 30½ to 31; Italian, 5½ to 5¾; Tobacco Loan, 1 to 1½ pm; Turkish Five per Cents, 10½ to 10¾; Ditto Six per Cents, 60½ to 60¾; Egyptian (1864), 85 to 86; Ditto (1868), 74 to 74½; Viceroy's Seven per Cents, 77½ to 78½; Ditto Nine per Cents, 90 to 90½; Russian (1862), 85½ to 86½; Orel, 80½ to 80¾; Nicolas, 66 to 66½; Moscow, 78½ to 79½; Charkof, 78½ to 79; Peruvian, 76 to 76½; Portuguese, 36 to 36½; United States 5-20 Bonds, 74½; Erie Shares, 27; Illinois, 95½.

Metropolis and its Vicinity.

ADDRESS TO THE NEW LORD CHANCELLOR—A public meeting of the inhabitants of the precincts of St. Peter and of the united parishes of St. Margaret and St. John, Westminster, was held on Saturday at the Westminster Palace Hotel, for the purpose of presenting to Lord Hatherley (late Sir W. Page Wood) an address of congratulation on his elevation to the office of Lord High Chancellor of England. The meeting, which was of the most influential character, was densely crowded, and the most lively interest was manifested throughout in the proceedings. Dr. Stanley, Dean of Westminster, took the chair, and after opening the proceedings in a brief speech, read the address, which expressed the grateful and affectionate sympathy of the parishioners, and said that during an unbroken residence of 35 years the new Lord Chancellor had been the foremost among the residents of Westminster; a never-failing stay to its inhabitants, whether as a judicious and munificent patron of all good works, a zealous defender against misrepresentations, a wise counsellor and helper in all difficulties. It said that the abbey claimed him among the earliest and most punctual of its daily worshippers. St. Margaret's owned him as amongst its most faithful parishioners; St. John's had received his constant and cordial co-operation. The Free Library of Westminster, first of its kind in the metropolis, looked back to him as its founder. The Sunday schools of the district had enjoyed, week after week, the encouragement of his presence and instruction. The Westminster Spiritual Aid Fund, with its important consequences, was fostered, in great measure, by his generous interest. But, more than all, the parishioners desired to acknowledge the blessing experienced from his personal influence and character, drawing out from each one whatever there might have been of good, uniting them by genial sympathy and neighbourly kindness, and keeping alive in the midst of them a constant sense of the duty of upright dealing and of unwearied continuance in well-doing. The Lord Chancellor, on rising to reply, was received with great cheers, and appeared greatly moved by the enthusiastic reception given him. He said:—

"He deeply felt the feeling manifested towards him by his fellow parishioners, for he was convinced that whatever position in life a man might attain there was none more desirable than that of reciprocating the kindly sentiments of those with whom he was closely associated. If there were anything in that day's proceedings of which he had to complain it was the fact of their not allowing him a longer time of association with the parishioners of Westminster. His father lived in Great George Street in 1827, and in that year he was called to the Bar. He reviewed the history of the country politically, but more especially the parochial and religious history of the district, and the spread which had taken place in the religious and moral education of the people. Much had been done in this respect by the dean and clergy of Westminster. Schools which formerly only afforded accommodation for 30 or 40 scholars had been replaced by those which accommodated hundreds. They had now eight churches, the clergy had increased to 27, and this had been accomplished by good, earnest, and solid work. Much had been done by the clergy in augmenting, and by the laity in aiding, the movement, and nothing had contributed more to the elevation of the great masses of the people than the establishment of evening services in the Abbey for the great masses of the people. After referring to the subject of the free library and other points in the address, he alluded to the subject of his elevation to the high position he then held, and to the former one when he was in Parliament as Solicitor-General. On the former occasion he found, when placed by the Liberal party in that position, that it entailed upon him so large an amount of late work, and so interfered with his duties of domestic life and comfort of home that he felt bound to relinquish his honourable position. Of course, he knew that he was on the road of promotion, but he begged to assure them that he never had the least hope that he should ever occupy the high and distinguished position he then held. It had, however, pleased her Majesty to confer upon him this high honour, and when he was informed by his political friends that this was to be for the benefit of the State he should assume it, although he felt that it was almost time that he should retire from public life, and not hesitate to accept the honor. He trusted that, having been blessed with the opportunity of health for 4 years, he might be spared a little longer time to discharge the high duties which had devolved upon him, and he should still continue to carry out that precept which had been instilled into his mind in early life, and which he should always endeavour to instill into the minds of any one who came to him for advice, namely to do his duty in that state of life to which it had pleased God to call him."

Mr. Justice Williams then moved a vote of thanks to the Dean of Westminster for presiding on the occasion. The Rev. Canon Jennings seconded the resolution, which was carried by acclamation, and acknowledged by Dean Stanley in a few appropriate sentences.

ADDRESS OF THE WORKING MEN OF SOUTH LONDON TO THE AMERICAN MINISTER.—A crowded gathering of working men assembled at the South London Baths on Saturday evening to present an

address to Mr. Reverdy Johnson, the American Minister. The presentation arose out of a desire on the part of the working men to show they had no sympathy with the proceedings of those connected with the Reform League, who a short time since withdrew the invitation they had given to Mr. Johnson to meet the working men at a banquet. The large hall in which the presentation was made was densely crowded, and the proceedings were marked throughout by the greatest enthusiasm. The chair was taken by the Rev. Newman Hall, who was supported by Mr. Locke, M.P., and Mr. M'Arthur, M.P. The Chairman and the Rev. Mr. Murphy having addressed the meeting, the address was read. It said that the working men of South London desired to convey to his Excellency, and through him to their brethren of the great republic he represented, their sincere respect and hearty goodwill, that they recognised in him the representative of a free and a kindred nation, that they had watched his course since his arrival in this country with the liveliest interest and the intensest satisfaction; and believing as they did that any rupture of the relations between Great Britain and America would be the direst calamity and the most heinous crime, they esteemed more highly than they could express his zealous endeavours to remove all misunderstanding, and to lay a secure basis for friendly and fraternal relations in coming years. In conclusion, he said that, during the late civil war in America they needed no laboured arguments to convince them on which side their sympathy was due. Their brother workmen in the cotton districts were prepared to starve rather than support a slave empire, and they were ready to stand by them; and now, with him and them, they rejoiced and thanked God for the triumph of law and order, of union and of liberty. Mr. Reverdy Johnson, who was received with enthusiastic cheers, replied as follows:—

"I had occasion a week or two since to say that I believed I stood well with the working men in London. The manner in which you have received me to night satisfies me that in that belief I was not mistaken. If there be any persons present who were sceptical at that point before, their scepticism will assuredly remain no longer. If they are not blind they will see that your looks betoken confidence; if they are not deaf they will have heard that your cheers bespeak confidence. Under the impression, therefore, that I stand to you in the relation of friend to friend, I propose to address you as a friend should address friends. When I was first told that it was the desire of some of the working men of your city to entertain me at a banquet, it was accompanied by the suggestion that some persons thought I might be unwilling to accept such an invitation. If that suggestion was in fact made, be it they who made it do not know my character, or the nature of the political institutions under which we respectively reside. They did not know my character, for I have been all my life a working man, and a very hard-working man too; and all that in my character is of any value is owing to the fact that I have been a man of that class, and have associated with men of that class. I have not laboured with my hands—except, perhaps, while speaking, but many and many hours of the night when you were resting from your more active toil, and I were reposing in your beds, I have been obliged to sit up until the dawn of day to prepare the address to the chamber. And for the first time I can't imagine how any man can be so contentedly happy who has nothing to do. But the suggestion to which I have referred showed an ignorance of the political character of the institutions under which we live. These institutions rest upon public opinion. And what class in your country—what men have more power in forming that public opinion than the working classes? The drones who skim over the surface and do nothing for themselves, but expect everything to be done for them, not only have not the means of forming public opinion, but they are utterly incapable, as a rule, of taking a rational view of public opinion. With you, as with us, public opinion is the law. It may fail for a time, but it never fails in the end. I forbear to illustrate this by referring to incidents in my own country, but you will pardon me if, for the purpose of illustrating it, I refer to some incidents in your own career. At a time when mind was dark and ignorant, and, what is still worse, was bigoted, a Roman Catholic was permitted to hold office or to vote. Great men of the time, standing infinitely in advance of those to whom that policy owed its existence, and the people of England, began to agitate, and from year to year continued to agitate, Government from year to year refusing to yield, until at last public opinion was triumphant, and that spot upon English honour and English justice was wiped off. Next came meetings held all over the country for the purpose of inducing Parliament to reduce the duty on corn, so as to put cheap bread within the reach of the poorest man. This also was resisted from year to year, but at last it triumphed, and, like every just measure, benefited the labouring and working man—and I do not think it has injured the farmer. Next came the extension of the suffrage. The man of the iron will, and certainly of patriotism—his who gave you such immortal fame upon the plains of Waterloo—resisted the proposed measure; but he had to yield, and finally all the lords who were associated with him gave up the ghost. But you were not satisfied with what was done in 1830, and, as you had a right to do, you began to agitate again. That went on for a considerable time, but at last it ended, and you have recently had an election. I know nothing personally, but the impression seems to be very general that the result of this election has not done irreparable mischief to the greatness and honour of England. The fact is, that the Government which undertakes to try its strength with the opinion of its people fights at great odds. If the rev. chairman will permit me to use the language of the pugilist I would say that the Government which has the hardihood to enter the ring to try its strength with public opinion is sure, sooner or later—and generally sooner—to throw up the sponge. My friends in whose hands the government of this country recently was, and whom individually I honour, as I have cause to honour, when they found that if they entered the ring they would be compelled to throw up the sponge, refused to enter the ring or fight at all. This was brought about by the power of the people of England. Now, this being your power, I know you are intelligent enough to feel that it is your duty to your country and to your God to prepare yourselves to discharge your duty with honour and credit to yourselves and to your country. Do not believe there is any difference in your skulls and those of other people. We in America thought at one time that there was a difference—not in the white skulls, but between the black and the white ones. We have changed that opinion now, for we have evidence in the colony of Liberia, settled by blacks rescued from slavery 20 or 30 years since, that they are fully equal to the whites. And I have seen State papers written by the President, a black man, which would do honour to any that your Mr. Disraeli or Mr. Gladstone could write. It is idle, therefore, to tell me that we run any risks in emancipating our blacks. The stain of slavery was almost universally admitted, but it was said that the peril of emancipating so

many as four or five millions, grossly ignorant as they are at once, and without giving to them the means of providing themselves for the discharge of the duties of citizenship, would be so great that, however humane the intention, it would be suffered to remain God willed it. Why, the fact is, the only charge made since I have been here is that I have made too much. As regards yourselves and those of your greatest men your nation and the world have sprung from the working men. Next to Washington, the country stands the name of one who is held in highest esteem, as a general leading his army to victory—I mean Greene, the blacksmith. He was an apprentice to the printer, became the world's printer, your own country you have a Burns, who, in his poverty and privation, produced poetry which, for its patriotism, will live for all ages. Well, be it that others have obtained it, but do not imagine that inferior to others because of the condition in which they were born.

"Honour and shame from no condition come. Act well your part—there all the honour lies."

You have rights and liberties of which you can be deprived unless you violate some law of the land. You have the right secured to you of acquiring property, and when that right is small or be it great, it stands protected by the law which protect the palace of the prince or the cottage of the poor. It is your duty, and the duty of freedom, to guard your country like yours and mine, to guard as carefully the rights of property as the rights of liberty and life. Liberty and life if they be not accompanied by the security of acquiring property for the support of yourselves and your families I have not language sufficient to thank you for the banquet in which you have received me; but of this you may be sure that I am grateful. Referring to the invitation to a banquet of the working men, he said that he had much preferred meeting them as he did, when their heads were cool and unaffected by the wine of a seen some banquets—they were, of course, not in the least where a good many of these present preferred anything else. No man should know better than you were to break out it would fall the heaviest burden upon you. You form the rank and file, your bones would be in battle fields, while the honour, if gained, would be to one who does not belong to your class. While, therefore, sure that if your country at any time should have its rights violated, and its honour attempted to be tarnished, a should be found impossible to protect the one or the other except by war, that you would rather die than which for more than 1000 years has braved the barbaric breeze. Yet, as you value life, as you value the lives of your families, as you value the precepts of wisdom, you value the higher precepts of your God, so that war shall occur which can be averted without a sacrifice of rights or impairing the honour of England. If there be any circumstances be a calamity to be averted, it would be the character of a war between your country and mine. Why, I would as soon think of raising my arm against my own country as against this country. I know the difference between us. I would ask you, after the war, over, to ask yourselves what is the difference between myself and an Englishman. I am unable to detect the slightest difference between any Englishman and myself, except, as I stated a few days ago as a joke (and I hope you will take it as such), that in America, speak English a little better than you do yours. In America we have lived 1000 years during the last 100 years we have pressed centuries into years, and we were wise now as we should have been if these centuries had been the ordinary course of time. We know the good and valuable relations between Great Britain and the United States, and we know that such relations are not to the interests and welfare of both countries, but to the interests of the world. With the flags of the two countries every ocean as friends, what have we to fear from each other? We shall be able to keep the peace, and if we fail we shall be able to punish those who shall dare to shoulder to shoulder the two countries will rear up the pioneers of Christian civilisation, to exchange the shackles of freedom, to break down the trammels which have fettered the members of the world, and sooner or later to be free, but by example, the world will come to be what England and the United States now are—not only the freest, but the most powerful of the habitable globe, but the happiest and the most powerful. He then briefly touched upon the subject of a uniform ocean penny postage, the effect of which would be to bring the people into closer and more frequent communication with each other, and, in conclusion, said, I have my best wishes for each of you, and your families, and the assurance of a heart full of gratitude for the kind manner in which you have received me. I bid you all good night."

CONVERSION TO ROMANISM.—After the death of which took place a few months ago at Cardiff in the Buteshire on the coming of age of the Marquis Bute, it was reported that he had abandoned the religion of his ancestors, and become a convert to Catholicism. The report was at once contradicted, on the authority of Lord Bute himself. It is now announced by the *Westminster Gazette*, the organ of Archbishop Manning, that the Marquis has just been received into the Catholic Church, by Monsignor Capel, at Nice, and that his lordship is on his way to the Holy Land.

THE RECENT JUDGMENT ON RITUALISM.—Mackonochie, in acknowledging the receipt of Archbishop Tait's letter on the recent judgment, says:

"The subject of it is one which deeply concerns the clergy and laity, and not myself alone. It is at this time the matter of their most serious anxiety. Under these circumstances I feel sure that you will excuse me from entering into any details of the question. I cannot, however, cease this day specially thanking you for the great personal consideration which I have received from you in the last ten years."

A meeting of those aggrieved at the recent decision of the Judicial Committee was held last week at the Freemasons' Tavern. The Archdeacon of Exeter presided, and read a paper, which had been prepared by Dr. Pusey, counselling submission, but was opposed by Mr. Bennett, of Frome, and Mr. Nugee were in favour of opposing the court. Mr. Bennett, of Frome, said that as he had pleaded before the court, and that he remained for him but to submit to it, and that he would do, without wishing to prejudice others. The Rev. Mr. Cowie, Rev. C. W. Page, Rev. J. Oakley, the Rev. D. Wood, Rev. J. G. Cowan, and others counselled submission, while Dr. Lee, Dr. Littledale, Mr. Perry, and other pronounced Ritualists took a

At the parish church of St. Mary's, Atherstone, on... the Rev. Edward Husband preached a sermon... the recent judgment, in which he denounced the... "rites of a purely secular and worldly court of law,"... the absurd anomaly of a Presbyterian lord... to dictate to Catholics what the Ritual of... Divinity-instituted Church should be to which... to wise belongs." He said that as an individual... he most earnestly and fervently hoped that the... army of Catholics throughout the land, as a body,... would decide to ignore the judgment altogether, at all... and he concluded by adding that, "if by this act... should happen, as many anticipated, that they... should be driven from the Church of England as an... Establishment, God would then build up for them a... Catholic Church, exempt from the tyranny of... state interference, and endowed with the liberty which... pure religion afforded, to worship Him in the... way in which their saintly forefathers loved to... worship."

A WEEK OF SPECIAL PRAYER.—The past week has been observed, according to the practice which has prevailed for some years past among the various branches of the Evangelical Alliance, as a season of special prayer. In London, besides meetings at various places of worship, there have been daily assemblies for prayer and addresses at the London Tavern and Freemasons' Hall. Lord Radstock presided at the latter place on Monday morning, and in his opening address referred to the circumstances which had principally affected religion during the past year, expressing deep thankfulness for the means which had been provided in many countries, and especially in Spain, for extending the Gospel. Prayers were offered up for an actress, "an unconverted," and afflicted with a mortal disease, and for many persons who had made special requests, after which an address on "Confession" was delivered by the Rev. T. Nolan, of Regent Square Church. The chairmen for the remaining days of the week were General Walker (in the absence from illness of Mr. Harry Verney, Bart., M.P.), Mr. Lockhart Gordon, Mr. Mackelod Wylie, magistrate of Calcutta, Sir Robert Lytton, and Mr. S. R. Pattison. Mr. R. C. L. Baker, banker, presided at the London Tavern on Monday, and the Rev. Dr. Edmond, of Highbury, delivered the address.

THE THAMES EMBANKMENT.—The planting of trees on the North Embankment, as recommended some time since at a meeting of the Metropolitan Board of Works, has been commenced, nearly 50 trees being now in the ground. The trees are placed at intervals of about 20 feet from each other, and already the line of ground between Westminster Bridge and Hungerford has been thus planted. The new piers—at Hungerford and Waterloo Bridges and the Temple—are fast approaching completion, and are expected to be opened in the course of a short time.

UNIVERSITY TEACHING FOR WOMEN.—The University of London proposes to hold its first examinations for women in May next, and to continue the examinations annually in the same month. Under the title

of "Regulations relating to the examinations for Women," it has published the details of its plan of procedure, so far as it has yet been settled, and it appears from them that there are to be two sets of examinations—the one a "general examination," pretty nearly equivalent to the matriculation examination for young men; the other "examinations for certificates of higher proficiency."

THE SPECIAL SERVICES AT ST. PAUL'S.—On Sunday evening the special services under the dome of St. Paul's cathedral were resumed. The preacher was Dr. Atlay, Bishop of Hereford. The congregation was overflowing large, and the service appeared to create much interest.

MR. MILL ON WORKING-CLASS REPRESENTATION.—Mr. G. Howell, who unsuccessfully contested Aylesbury at the late election, has addressed a letter to Mr. John Stuart Mill, thanking him for a contribution of 10*l*. towards his election expenses, and expressing the wish that he had been successful, in order that he might have had the honour of placing the seat at his disposal. To this letter Mr. Mill has sent the following reply:—

"Avignon, Dec. 30, 1868"

"Dear Sir,—I cannot leave unacknowledged the concluding sentence of your letter. If you had been returned for Aylesbury, and had made the public spirited offer of retiring in my favour I could not possibly have accepted it. I attach far too much importance to the representation of the working classes—in some cases at least by the electors themselves—to have consented to put myself in the place of one of them if he had been fortunately elected. The defeat of all the working class candidates and of most of those of any other class in whom the working classes take especial interest, would have made my presence in the House of Commons of far less use than it might perhaps have been if I had been one of a phalanx of men of advanced opinions. I hope the working classes will learn from their present failure a lesson on organisation; and, as the Liberal party can never succeed at a general election without their active support, will henceforth make such support conditional on being allowed an equal voice in the election of the Liberal candidates, so that wherever a constituency returns two members, one of them may be a man designated by, and specially acceptable to, the interests of the working classes—I am, dear sir, yours very truly, J. S. MILL."

LONDON FOG.—On Thursday morning a dense fog hung over the metropolis, enveloping it almost in darkness. In the busiest hours—from nine till twelve—all offices and shops were lit up, and much inconvenience was caused. The traffic of steamers on the Thames was interrupted for several hours. In the City and in North London the fog cleared away about noon, but in the southern districts, and more especially in those which adjoin the river, it lasted till nearly two o'clock.

THE RELIEF OF VAGRANTS.—An important circular has been issued by the Poor Law Board to various Unions throughout the country, drawing the attention of the Guardians to the existing system of relieving vagrants, and suggesting several reforms. In order to distinguish between professional tramps and those whose real destitution gives them a claim to relief, the Board suggests that the name and occupation of each applicant, with the place whence he comes, and the place whither he is going, be recorded in a book of reference; that the applicant should forthwith (except when ill) be put in a bath; that as far as practicable he should be lodged in a separate cell; and that the performance of a sufficient task should be required before he sets out in the morning. For reasons which the recent publication of certain workhouses make manifest, the Board point out the advantage of providing a uniform scale of diet and taskwork in the casual wards throughout the country. With a view to the attainment of such uniformity, the Board append to the circular a scale of food and work which they submit for the consideration of the several Boards of Guardians, and ask for an expression of opinion as to its desirability. The scale proposes to give for breakfast to male tramps above 15 years of age either 6oz or 8oz. of bread (at the discretion of the Guardians), and one pint of gruel; women to have an equal quantity of gruel, but only 5oz. of bread. In return for this food and lodging male tramps will be required to break from 1½ cwt to 3 cwt. of stone, or to pick 1 lb. of oakum, and women to pick ½ lb. of oakum or to perform such other task as the Guardians may deem more suitable, and the Board may sanction. The Board intimates that when the answers from the various Unions have been received and considered, an order embodying these suggestions, or such modifications of them as may seem desirable, will be issued.

LOSS OF THE CALUMET.—The Court gave judgment on Monday in the case of the ship Calumet, which was abandoned at sea on the 16th November, on her voyage from Liverpool to Calcutta. They considered that Captain McGavin had prematurely abandoned the ship, and that sufficient exertions had not been used by him to keep the men at the pumps. They therefore suspended his certificate for twelve months. As to the boatswain, Thomas Breen, who in his evidence deposed to the ship having been scuttled by the captain, the Liverpool magistrates on Wednesday committed him for trial on the charge of perjury.

RESUMPTION OF MILITARY DRILL BY THE POLICE.—On Thursday an order, signed by Colonel Labalmondiere, acting chief commissioner of the metropolitan police, came into operation, directing some of the inspectors and sergeants to attend at Wellington Barracks to undergo a course of instruction in military drill.

SENDING DISEASED MEAT TO THE LONDON MARKET.—At Guildhall on Monday, Mr. James Kingsley, a farmer, of Longford, Bedfordshire, was brought before Alderman Finnis for sending four quarters of beef to the London market for sale as human food, the same being diseased, unsound, and unwholesome. Mr. James Newman, the inspector, and other officers of Newgate Market, proved that the meat was totally unfit for human food. It had

evidently been killed while it was suffering from disease and near the point of death. Alderman Finnis fined the defendant 20*l*. and 5*l*. costs, or in default of payment one month's imprisonment. The fine and costs were paid. Mr. Robert Philip Dodd, a farmer, of Great Ryburgh, in Norfolk, occupying 700 acres of land, was then charged with sending four quarters of unwholesome beef to the London market. Evidence having been given to this effect, Alderman Finnis said this was one of those cases in which a fine ought not to be inflicted, for here was a man of position in the country, farming 700 acres of land, and a man of wealth, to whom a fine would be no punishment at all. He therefore felt it to be his duty to send him to the House of Correction for one month.

THE DIFFERENT FORMS OF FEVER IN ENGLAND.—A committee appointed by the Royal College of Physicians of London has prepared a nomenclature of diseases suitable to England and to all countries where the English language is in common use. This nomenclature recognises the following forms of common fever—1, typhus fever; 2, enteric fever; 3, relapsing fever; and 4, simple continued fever. Neither cerebro-spinal fever nor plague need be referred to, as they do not prevail here; nor febricula, as it is never fatal. The majority of the fatal fever cases in England may probably be designated either as typhus or as enteric fever. The two forms are thus defined by the committee—Typhus Fever. A continued fever, characterised by great prostration, and a general dusky mottled rash, without specific lesion of the bowels. Enteric Fever: Synonym, typhoid fever (or typhus). A continued fever, characterised by the presence of rose-coloured spots, chiefly on the abdomen, and a tendency to diarrhoea, with specific lesion of the bowels. Enteric fever occurring in the child is often named infantile remittent fever. The Registrar-General has issued a notice requesting medical practitioners to use these names, in order that the Registrar-General may distinguish the several forms of fever in the returns of the ensuing year.

EMBEZZLEMENT BY THE ACCOUNTANT OF THE BOARD OF WORKS.—At Bow Street on Saturday Mr. Edward Hughes was brought up on the charge of having embezzled the sum of 2005*l*., the moneys of the Metropolitan Board of Works, at which he was chief accountant. The prisoner, who was elected a few years ago out of numerous candidates at a salary of 800*l*. a-year, had every confidence placed in him, and was intrusted with various amounts from time to time for payment of weekly wages, petty cash, and other miscellaneous matters on behalf of the Board. These sums had not been accounted for, and the evidence went to show that the prisoner had appropriated them to his own purposes. Two cases were partly proved, one for 1140*l*., and the other for 665*l*. 13*s* 8*d*., and Mr. Vaughan deemed the evidence sufficient to justify him in remanding the prisoner for a week, taking bail in two sureties for 500*l*. each. It appeared that the whole loss will not fall upon the Board, as they hold a surety for 1000*l*. from the Guarantee Society, which, when applied to, was unable to comprehend the matter, and "expressed their astonishment at the position in which the accountant was placed."

THE FATAL EXPLOSION OF A FIREWORK FACTORY.—The inquest on Mr. W. Londbeck, a commercial traveller, who lost his life in the recent explosion at the firework factory of Messrs. Baker, in the Cambridge-heath Road, was concluded on Wednesday, when the jury returned a verdict of Accidental Death, with the expression of their opinion that there was too great a quantity of combustible materials kept in the house, and that all places where fireworks are manufactured ought to be regularly visited by Government inspectors.

THE EXPLOSION AT ALBANY STREET POLICE COURT.—The young man who was arrested on the spot at the moment of the recent explosion, was brought up on remand before the magistrate at Mary-le-bone Police Court on Friday, and as it appeared that he was a person of good character, and there was no reason to suspect that he had thrown the explosive matter into the area, he was discharged. The police do not appear to have any clue by which this singular occurrence may be explained.

THE PUBLIC HEALTH.—The Registrar-General's weekly return states that in the week that ended on Saturday, Jan. 2, 5076 births and 3429 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 28 per 1000 persons living, being 27 per 1000 in London, 30 in Edinburgh, 25 in Bristol, 25 in Dublin, 24 in Birmingham, 29 in Liverpool, 31 in Manchester, 28 in Salford, 23 in Sheffield, 27 in Bradford, 24 in Leeds, 21 in Hull, 32 in Newcastle-upon-Tyne, and 34 in Glasgow. The rate in Vienna was 29 per 1000 during the week ending the 26th ult., and in Berlin 31 per 1000 during the week ending the 31st ult. In London the births of 1303 boys and 1202 girls, in all 2505 children, were registered in the week. In the corresponding weeks of 10 years, 1858-67, the average number, corrected for increase of population, was 2037. The deaths registered in London during the week were 1629. It was the 53d week of the year, and the average number of deaths for that week, corrected for increase of population, was 1660. The present return is therefore 31 below the average.

Provincial.

CAMBRIDGE.—The following regulations respecting examinations for women were issued by the University authorities on Monday:—

"There will be an examination, commencing on Monday, the 5th July next, open to women who have completed the age of 18 years before the 1st January, 1869. Such candidates may be examined in such places as the synodics appointed by the University may determine. The synodics will entertain applications from places where 25 fees at the least are

guaranteed. Before any application for an examination be approved the syndicate must be satisfied as to the following points—1. That there is a committee of ladies who will efficiently superintend the examination, one of whom will undertake to act as local secretary. 2. That this Committee will see that suitable accommodation will be provided for candidates who are strangers to the place. 3. That a responsible person will be at hand to receive the examination papers from the conducting examiner and to collect the answers. Committees wishing to have examinations held in their several districts may obtain all necessary information from the Rev. T. Murky, Trinity Hall, Cambridge. No application will be considered which is received after the 1st May, 1866."

DONCASTER.—At the annual meeting of the Corporation on Friday, a report from the race committee was read, recommending them to increase their grant to the September race meeting from 1500*l.* to 2000*l.* annually. The grant has been repeatedly increased in the course of years, the receipts from the races increasing, however, in a far greater ratio, until they have reached 8000*l.* at one meeting. After the recommendation had been read, a letter was read from Dr. Vaughan, the vicar of Doncaster, who is also chaplain to the Corporation, protesting against the attempt to lay a heavier burden upon the borough fund for the encouragement of races, which are usually accompanied by immorality and crime. Alderman Hatfield said that, but for the races, the Corporation would have been unable to make the grants they had made towards charitable and religious objects, including a contribution of 10,000*l.* for the repair of the parish church, and Alderman Sir Isaac Morley moved that the vicar's letter be simply entered on the minutes. Councillor Clark moved as an amendment that no notice should be taken of the letter. This amendment was carried by a small majority, and the grant to the race fund was then unanimously increased to 2000*l.* a year.

FEVERSHAM.—Two more men have died from the injuries sustained by the recent explosion at Messrs. Hall's powder mills, making six deaths altogether. One of the two now dead, a millwright named Gutteridge, was the man for whose evidence the inquest on the 26th ult. was adjourned, as it was he who was driving an iron rod home when the explosion occurred.

LEEDS.—At the recent assizes three garroters were sentenced to receive 25 lashes each, in addition to their terms of penal servitude. The flogging was inflicted on Tuesday in Armley Gaol, in the presence of the governor, the surgeon and his assistant, the town clerk, three of the borough prosecutors, several representatives of the Press, and about a dozen of the more refractory prisoners, who by way of warning were made spectators of the scene. Two of the delinquents groaned and howled dreadfully during the infliction. The third and youngest never uttered a sound from the descent of the first stroke to the last.

LICHFIELD.—Bishop Selwyn has safely arrived in this city from New Zealand, and will at once enter on active official work in his new diocese. His lordship was accompanied on the voyage home by Dr. Abraham, Bishop of Wellington, in New Zealand.

LIVERPOOL.—At the Borough Police Court, on Saturday, a tobacco-pipe maker, named Garbert, was charged with the wilful murder of his wife. From the evidence it appeared that the prisoner and deceased had not lived together for some time, and that he was aware that his wife had an improper intimacy with another man, by whom she was pregnant. On New Year's morning he went to her lodgings, and, during a quarrel, knocked her down and cut her across the abdomen in a frightful manner. She died from the injuries the same night. The case was adjourned until after the inquest, which took place on Tuesday, when the jury returned a verdict of Wilful Murder against the prisoner.

MONTGOMERY.—The magistrates at Machynlleth, in this county, have had before them an extraordinary case of burglary and attempted arson. The accused was a lady-like person, named Mary Jane Grey, who until recently was governess in the family of a gentleman resident in that neighbourhood. His house had been broken into, a quantity of silver stolen, and an attempt made to fire the place. The evidence against the prisoner was purely circumstantial. She was committed for trial.

NORWICH.—On Saturday a gentlemanly-looking man, who said his name was William Sheward, and that he was 57 years of age, was brought before the magistrate at Lambeth Police Court, charged on his own confession with the murder of his wife, on the 15th June, 1851, in this city. He stated that he cut her throat with a razor and then dismembered the body, parts of which were subsequently found in different places in the neighbourhood, and preserved for some time in spirits at the Guildhall, in the expectation that the mystery would be unravelled; but no suspicion had ever attached to him. He had since married again, but had suffered much from remorse, and had more than once attempted to commit suicide, and being now no longer able to bear the reproaches of his conscience, he had determined to give himself up to justice. He was remanded to give time for inquiry, and on Tuesday information was received from Mr. Hitchman, Chief Constable of the Norwich Police, stating that he and other members of the force had investigated the circumstances of the murder, and that there was no reason to doubt the accuracy of the confession made by the prisoner. It appears that in June and July, 1851, severed limbs and portions of a human body were picked up in various places in and around Norwich. On the 21st of June a hand was found, and the next day a foot, near the same spot. On every day for a week other remains were found, and, when the whole were collected together, they were pronounced by a board of surgeons to be those of a young adult female. No clue was ever obtained towards a solution of the mystery, and no suspicion ever attached to Sheward, who passed among his neighbours

for a quiet, inoffensive man, and who explained the disappearance of his wife by stating that she had left home on a long journey. After July, 1851, the matter appears to have excited scarcely any notice, and it had become forgotten, when the news of the present confession arrived. In consequence of the communications which have passed between Mr. Hitchman and the metropolitan police, the prisoner has been removed to Norwich, for examination before the local magistrates.

PICKERING.—On Friday, a servant girl, named Isabel Scales, was brought up on remand, charged with attempting to poison the family of Mr. John Dodsworth, a farmer of Pickering Marshes. The prisoner, who is only twelve years old, having some cause of complaint against two boys of the family, obtained some tartar emetic and nitre, which was used on the farm as a horse medicine, and put it into the sugar with which the coffee at breakfast was sweetened, and of which the whole family partook. Several were seriously affected, but fortunately there was not enough to destroy life. The girl, who admitted her knowledge that the stuff was poison, was committed for trial at the sessions.

PORTSMOUTH.—The new iron-clad screw frigate Hercules, Captain Lord Guilford, made her trial of speed at the measured mile on Friday with great success, the mean speed attained being at the rate of 14.691 knots, or 17 statute miles per hour. The turning power of the ship proved equally satisfactory, a complete circle being made in four minutes, a shorter time than the same evolution was ever before performed in by a ship of the same length.

SWANSEA.—The investigation in reference to the murder of John Morgan at Velindre, after having occupied the attention of the county justices for three entire days, upwards of 20 witnesses having been examined, was brought to a close on Friday, when the chairman announced that the magistrates were unanimous in committing the prisoner for trial at the next assizes.

WELLS.—Bisgrove, the man under sentence of death at Taunton, and who was to have been hanged on Monday for the recent murder in this city, has been respited. It appears that a number of persons living in Taunton and the neighbourhood forwarded a memorial to the Home Secretary praying for the respite, on the ground that the murder was unpremeditated, and without malice, and that fits of epilepsy, to which Bisgrove was subjected, might have impaired his intellect. No answer was received by the memorialists for several days, but on Friday evening a Queen's messenger arrived at the county gaol with a respite, Mr. Bruce having satisfied himself, by inquiry, that the man's mind had been impaired by repeated attacks of epilepsy. It is understood that Bisgrove will pass the remainder of his life in penal servitude. The respite has occasioned great dissatisfaction in Taunton, and more so in Wells and Shepton Mallet, on the ground that the culprit had confessed to the perpetration of a foul and deliberate murder.

WIGAN.—The list of persons killed by the recent explosion at Haydock Colliery has been further increased by the death of a lad of 13, who was very badly burned. This increases the number of the dead to 25. The inquest was opened on Monday, and adjourned.

WINDSOR.—A meeting of the Corporation has just been held, for the purpose of considering the report of Colonel Ewart, R.E., the gentleman appointed by the Home Secretary to give advice on the drainage of the towns in the Thames Valley, when the following recommendations were discussed and finally adopted—

1. That the separate system be the system of drainage adopted in all future dealing with the sewerage of Windsor.
2. That Messrs. Ripley and Simmonds be retained to draw the plans for the drainage works, provided that their terms for doing so are satisfactory to the Board.
3. That notice be given to all parties whose drainage is connected with the sewerage of the town that a further arrangement must be made relative to the connection of their drainage.
4. That the Board be requested to obtain an advance from the Public Works Loan Commissioners to carry out the works, at 3 per cent. The expenses of carrying out the contemplated drainage of Windsor and Eton, exclusive of Windsor Castle, are estimated—for Eton, 6,000*l.*, and Windsor, 10,000*l.*

Ireland.

THE NEW LORD-LIEUTENANT.—Earl Spencer, accompanied by the Countess, will arrive at Dublin, to enter upon his duties, either on the 23d or 25th inst.

THE MURDER IN TIPPERARY.—At the inquest held on Mr. Baker, at Ballydavid, on Friday, an open verdict was returned. It appeared that Dwyer, a yearly tenant, holding 12 acres, had received notice of ejection, and called on Mr. Baker the day before the murder, to request the withdrawal of the ejection, which was refused. Shortly after six o'clock on Thursday morning the deceased left his residence to visit his father, the Rev. Mr. Baker. A woman in the neighbourhood heard shots fired, and found the deceased lying dead on his own avenue, shot through the head. The skull was fatally fractured, and the body bore the marks of heavy blows. Thomas Dwyer, the tenant, and his son were both arrested, and remanded for eight days, but no fresh information has yet been obtained to lead to the arrest of any other persons. The feeling of the people is stated to be divided on the subject of his assassination. Those residing in the immediate neighbourhood, who knew the murdered gentleman and esteemed his good qualities, feel indignant at the outrage; but in more remote localities, even in the adjacent town of Tipperary, the first announcement of the murder was received by many with an expression of satisfaction at the doom of another tyrant landlord.

RIOTOUS PROCEEDINGS IN CORK.—The installation of Mr. Dan O'Sullivan as mayor for the coming year took place on New Year's Day, and was a true and noble tribute of admiration for his national opinions and emphatic condemnation of the policy of the Government in depriving him of the office. The peace for subscribing to the fund for the families of the Manchester "martyrs" had been invested with the insignia of office, and formally presented with a green flag by Mr. O'Sullivan, who obtained some notoriety by her conduct at the Cork election, and has been a heroine. Mr. O'Sullivan, holding the flag in his hand, delivered the following speech—

"I think any man, an Irishman, an Englishman, or a Frenchman, is bound to pay attention to the interests of his country, and not to pay attention to the interests of a foreign nation at all. About a year ago some of our men were butchered at Manchester by the Government of another land. I considered it was my duty to subscribe a fund for the benefit of their families. Some of the people here have taken exception to my doing so, and the Government have appointed a commission of the peace for saving lives, and I am an honest Irishman, and that they suffered for their native land. I think it is the duty of every Irishman in his own country to express his opinion on the subject, as it is the birthright of every man to be free, and to pull together, ought to be sister countries. The people of one country should be equal to the rights of another—no one should have no greater right than the other. The armies of England and Ireland should have the same footing, and the armies of Ireland have equal rights with the armies of England. They battled for the English nation, and they won the greatest victories—they planted the standard of the highest hills of India—they conquered the islands of 140 or 150 millions, and the finest cities of the world, the walls of Seringapatam, and the city of Calcutta, and they have been led by the great general of England, the Duke of Wellington. They fought under Wellington in Spain. They that in 1808 landed in Spain, and those that marched to the walls of Paris—the bravest troops that won the victory of Wellington—he himself, though no friend of Ireland, acknowledged that his bravest men were Irish soldiers. The fact is, if the two nations stand together, they will be stronger than if the Irish soldier and the English soldier fight against each other. England and her dominions in distant lands, and not the country that supplies these troops, why should not she, instead of a trampled nation, be treated as a sister nation? I have no objection to the English people are secured by the arms of the nation in more regions than in Ireland—water, and again by the Irish people in England. I believe that that action is a change of opinion on the other side of the water. I am sure, will be beneficial to this country. I doubt that the days of Ireland's servitude are far away. I have no doubt that the people of Ireland are dispersing, and I am certain that as Lord Scannell in her natural colour to-day that Ireland will yet wave in Ireland. When I was a boy, I never heard that some Irishmen wanted to see Napoleon and clanked his interference in Ireland. The answer was that the Orange flag should be pulled down, and the green flag of Ireland flourish once more. It will be brought about, and I am confident that it will be brought about by the action of the Irish people. I am confident that at the other side of the water there are men like Bright and Gladstone, who would wish to see a new policy in this country—statesmen who are wishing to see this country trampled by the minority, supported by the armies of England, would, I am sure, wish and desire that the national ideas should be carried in this country. We are, please God, arriving at a point, I am sure that, as far as my year of office goes, I will be quiet in the city. He concluded by declaring that he would give 25*l.* to the funds for supporting the families of Fenian prisoners."

He then subscribed the usual declaration, but did not take the usual oath of office, and was patriotically cheered by the populace. At night there was a torch-light procession in honour of the new mayor, and an assault on Protestant houses, being anticipated the military were under arms, and the police force was strongly augmented from the out districts. The commotion prevailed in the city during the night, and the Government magistrates were on duty. The extensive military and police arrangements, and the threatened violence, and the night passed without any serious outrages. Mr. O'Sullivan has since been making use of his restored magisterial powers, and is less calculated to stimulate the zeal of the police than to gain for him the favour of the people. Some publicans were on Saturday summoned before the police-court in which the mayor presided, for having their houses open at illegal hours, harboured persons of improper characters, and similar offences; but in the case the mayor took the part of the accused, and believed the evidence of the constables, and reorganised the police administration as part of an improved system.

AGRARIAN OUTRAGE IN MEATH.—Mr. Pearce, a gentleman who holds on lease considerable property on the estate of Lord Darnley, some of which he has been driving home from the sessions of Tralee on Tuesday evening, when he was fired at by two men. Four slugs and some shot lodged in one of his shoulders; but the wounds are not dangerous, and was accompanied by his son and a tenant, and supposed that his escape from assassination is due to the desire to avoid injuring the man who sat next him. Mr. Pearce is stated to have provoked hostility by serving notices to quit upon two tenants.

REMOVING GUNS FROM THEIR CARRIAGES.—A carriage containing guns in the park at Waterford were found on Monday morning to have been overturned from their carriage and lying on the ground. They were restored to their former position in the course of the day by direction of the mayor. A reward of 20*l.* has been offered for the discovery of the offenders.

DISTURBED STATE OF MEATH.—Mr. Robertson, who was recently fired at in the County Meath, attended divine service on Sunday last, armed with a new-barrelled gun, and attended by a servant also armed.

and a gentleman who was recently attacked in the same county, is now going about armed and guarded by a man who had been in the police.

Scotland.

MURDER OF A POLICE INSPECTOR AT GREENOCK. On New Year's Day an "Irish Yankee," named ... a confectioner's shop in Hamilton ... and was creating a disturbance. Mr. ... owner of the shop, tried to get him out, and a blow on the mouth which knocked out teeth. A young man standing by offered ... a policeman was sent for; but, ... he received a stab in the arm. ... He was speedily caught, how- ... The murderer was ... taken to the police ... he was brought before the magis- ... Inspector M'Kin- ... had the reputation ... best behaved men in ...

ATTENDED MURDER AT KILMARNOCK.—On New Year's Day a man named James Drummond bought ... of gunpowder, and on going home told his ... would give her three minutes to prepare for ... and at the expiration of that time threw the ... into the fire. The explosion threw his ... severely burnt ... with only a slight scorching. ... hearing the explosion, ran in and ... assistance to the wife, who is now recovering. ... taken into custody, and charged with ... commit murder. He admitted the charge, ... himself as sorry that both he and his ... blown into eternity. Both were ... worse for liquor. He is about 34 ... and has a grown-up family.

Railways.

NEW REGULATIONS AT STATIONS.—On New Year's Day the following provision in the new Railway Regulation Act took effect:—

"On and after the 1st January, 1869, every company shall be exhibited in a conspicuous place in the booking-office of each station on their line a list or lists, painted, or written in legible characters the fares of passengers on the trains included in the time-tables of the company from that station to every place for which passenger tickets are here issued."

OPENING OF THE NEW SUBURBAN LINES.—The Kensington and Richmond and the Kingston and Wimbledon lines of railway were opened for public traffic on New Year's Day, bringing into direct communication the systems of the London, Chatham, and Dover, London and South-Western, North London, Metro-land and London, Brighton, and South Coast lines. By the Kingston and Wimbledon line trains run from London Hill to Herne Hill, Tulse Hill, Streatham, Wimbledon, Maldon, Surbiton, and Kingston. By the opening of the new line from Kensington (Alison Road) to Richmond, trains run from Kensington, Chelsea, Ludgate Hill, Clapham, and Richmond to Kensington, Turnham Green, Brentford, and Kew Gardens. The advantages of this extension to the Metropolitan line, as passengers may be taken to the latter can, by changing at Hammersmith, go on direct to Richmond, Twickenham, Teddington, and Kingston. By the line from Acton to Richmond, trains run direct between Richmond, Kew Gardens, Brentford, and Broad Street, Dalston, Highbury, Camden Road, Kensal Town, Willesden, and all stations on the North London and Hampstead Junction. Consequently this arrangement the train service to and from Richmond, Twickenham, and Kingston, by Kew and Barnes, was discontinued. A new and improved service of trains, connecting Victoria Station with the London and North-Western and North London systems, was also commenced on Friday. At Willesden Junction these trains were brought in connection with the express trains to Birmingham, Liverpool, Manchester, and the north. The opening of Waterloo Junction Station, which likewise took place on Friday, brought the South-Western and South-Eastern lines into direct communication, and gave to South-Western passengers access to Charing Cross and London Bridge. More than 300 additional trains will be run on the united lines in consequence of these important changes.

METROPOLITAN.—It appears from the report of the Metropolitan Railway Company, that the number of passengers on the Metropolitan, the Metropolitan District, and the Hammersmith and City lines during the Christmas holidays, from the 24th to the 31st of December, inclusive, was 800,072. Of this number 174,251 were passengers on Boxing Day, the 26th ult.

DISASTERS ON THE MIDLAND.—A somewhat serious accident occurred on the 31st ult. on the Midland and Rotherham branch of the Midland. As a passenger train was shunting to the siding leading to the Rotherham works, it was run into by a train of empty trucks. The passengers were very much shaken, considerable damage was done to the rolling stock, and some time elapsed before the line was clear.

ACCIDENT NEAR STREATHAM JUNCTION.—On Sunday a passenger train was approaching Streatham Junction when the engine and tender left the rails, and the passengers were much shaken, but none seriously injured. On being released from the carriages they

found their way to the station at Streatham Common. The accident is supposed to have been caused by the recent heavy rains having loosened the sleepers.

Obituary.

LADY GRANVILLE SOMERSET died on the 4th inst., in Cadogan Place, after a short illness. She was the widow of Lord Granville Somerset, second and youngest son of the sixth Duke of Beaufort, and brother of the late Duke. She was the youngest daughter of the first Lord Cromwell, a sister of the late Lord, and aunt of Earl Stanhope and the Duchess of Cleveland.

LADY HANRIET HAGEMANN died at Copenhagen on the 27th ult. She was the sister of the sixth Earl of Buckinghamshire, and died in 1830, General Jasper Scityn Hagemann, of the Dutch army, who died some years since.

THE HON. AND REV. JOHN FORBES, Canon of Worcester, died at his residence in that city on Sunday, at the age of 73, his death having been preceded by that of his wife less than a week. He was the fourth son of the first Earl of Bessborough, by the sister of the first Marquis of Buckingham, and great-grandfather of the present Duke. He was appointed to a canonry in Worcester Cathedral by the Government of Earl Grey in 1831, and also held the rectory of Poltimore, in Devonshire, to which he was presented in 1835. He was born in 1796, and in 1842 married the daughter of the Rev. H. Neville, rector of Cottesmore, Rutland. He leaves a son and two daughters.

SIR JOHN RALPH MILBANKE HUSKISSON, BART., died on the 3rd ult. at Arthara House, Sussex, after a short illness. He was the only son of Sir John P. Milbanke, the seventh baronet, by the youngest daughter of Mr. James Heron, and was born in 1801. He entered the diplomatic service in 1823, and, after probationary service at the Foreign Office, was appointed Secretary of Legation at Frankfurt in 1829, and during his residence there had occasion to fill the post of Chargé d'Affaires. He was transferred to the Embassy at St. Petersburg in 1835, where he was Minister from June, 1837, till October, 1838, when he was transferred to Vienna, where he remained till 1843, when he was appointed Minister Plenipotentiary at the Hague. He succeeded to the baronetcy on the death of his father, in 1850, and in 1866, in compliance with the will of the widow of the Right Hon. William Huskisson, he obtained permission to take the name of Huskisson. He married, in 1843, the third daughter of the late Mr. John Mansfield, of Diggeswell House, Northamptonshire. He is succeeded in the title and estates by his eldest son, John, who was born at the Hague in 1847.

ADMIRAL WARDE, K.H., died at Squerryes Court, West- ham, on the 5th inst., in his 83d year. He entered the navy in 1798, and was present at the blockade of Malta, the capture of the Ganéureux, the expedition to Egypt, and at the capture of the Danish West India Islands. He subsequently rendered important services in sounding round the world, and in making a plan of the sea defences of Algiers, previous to the bombardment, in 1816. He became rear-admiral on the retired list in 1821, and a full admiral in 1852.

LIEUT. GENERAL GOLD, Colonel of the 53d Regiment, died a few days since. He had seen considerable service in India, where he served as Lieut. Colonel of the 53d in the campaign on the Sutlej, including the affair of Buddial, the battles of A. and S. where he was wounded. He commanded the regiment during the subsequent operations, and received a medal and cross for that campaign. He was appointed Colonel of the Regiment in 1867. He attained the rank of Lieut. General in 1868.

MAJOR GENERAL WALTER HAMILTON, C.B., died on the 30th ult., aged 65. He entered the army in 1812, and for some time commanded the 78th Highlanders. He commanded a brigade during the Persian war in 1837, and was present at the bombardment of Mohumrah. He commanded the 78th High- landers in Havelock's column from its first taking the field in 1857, including the actions at Fattehpore, Aoung, Pandoo Nuddee, Chawpore (where his horse was shot under him), Gung, Buscorut Gunge (where his horse was killed by a round shot), Boorbaokchowree, and Bythoor; commanded the Left Infantry Brigade in the several actions ending in the relief of the Residency at Lucknow and its subsequent defence, and served in the force under Gen. Outram at Alnabagh, including the repulse of the numerous attacks. He was frequently mentioned in despatches, and for his distinguished services was made a Companion of the Bath in 1858. He was also in receipt of a pension for distinguished and meritorious services.

CAPTAIN SAMUEL GODDARD, a Military Knight of Windsor, upon the Royal foundation, died on Sunday at his residence in the Lower Ward of Windsor Castle. He was formerly in the 14th Regiment, in which he was present at the storming of Cambray, and the battle of Waterloo, and afterwards served in the East Indies, being present at the siege of Hatties, and in the campaign of 1817-18 in the Deccan. Besides the Waterloo and Indian medals, he received a reward for distinguished service. He originated the measure by which the nominal rank of captain was accorded to meritorious quartermasters of long service.

CAPTAIN WALLING EVERARD, Attaché of the Vice-regal Court, and Private Secretary to the late Lord-Lieutenant, died suddenly on Wednesday, at the Vice-regal Lodge, Dublin. He had been for some time in bad health, and fell on entering his breakfast-room, and before assistance arrived he was dead. He had been attached to the Vice-regal Court for nearly 20 years.

MR. ALEXANDER CAMERON CAMPBELL, the head of the clan of that name, died on Tuesday night, at Markham House, Leamington. He possessed extensive estates in Perthshire, and on more than one occasion was honoured with visits from the Prince Consort and her Majesty at his seat at Monzie, during their Highland sojourns. In her Majesty's "Journal," Mr. Campbell is several times referred to, and it was with him that the Prince Consort made his first deer-stalking excursion. He was a thorough sportsman, but had been so long in failing health that his death was not unexpected.

MR. GEORGE SIMON HARGRETT died on the 29th ult., at Bedford, at the age of 72. He was formerly in the army, having held a commission in the 6th Foot, and afterwards in the 1st Dragoons, and was one of the few remaining officers who served at the battle of Waterloo.

PRINCIPAL FORBES, D.C.L. and LL.D., late Principal of St. Andrew's, died on the last day of the old year, at 11, Aston, where he was residing for the benefit of his health. He had attained his 60th year, having been born in Edinburgh in 1808. He was the youngest son of the late Sir William Forbes, of Pitsligo, by the only child and heir of Sir John Stuart, of Fettercairn, and was educated at the University of Edinburgh, where he was appointed in 1836 to the Professorship of Natural Philosophy. He had already made his name known in Scotland as a student of natural philosophy, and at an early age wrote some papers on "Heat," and other kindred subjects, and while holding his Professorship at Edinburgh he published his "Travels in the Alps of Savoy," "Norway and its Glaciers," "Papers on the Theory of Glaciers," and other works on Physical Science. He also received the Keith Medal of the Royal Society of Edinburgh, and the Rumford and other Medals of the Royal Society of London, for various papers contributed by him to the "Transactions" of those bodies. He resigned his Professorship at Edinburgh in 1860, on being appointed to the Principalship of St. Andrew's, which he held till within the last few months. He married, in 1843, the

daughter of Mr. George Wauchope, of Edinburgh, by whom he had a family.

THE REV. DR. KRAMMACKER, of Berlin died in that city, last week. He was Court preacher in the time of the late King, and warmly supported his Majesty in his various schemes for extending Protestant principles. He was the most distinguished clerical member of the religious party known in Germany as Pietists, and in England as Evangelicals, and wrote a number of books, which have been published in England under the sanction of the Religious Tract Society. Among the best of these works are "The Bible," and "The Protestant Faith." Dr. Krammacker was a Prussian lord, and was greatly distinguished by the Liberals.

THE REV. DR. SHEPPARD, head master of the Kidderminster Grammar School was seized with apoplexy on Wednesday week, and died on the evening of New Year's Day, in his 52d year. He was a fellow and tutor of Wadham College, Oxford, and was the author of a work on the "Fall of the Roman Empire and the Rise of the New Nationalities."

WILLS.—The personal estate of the Dowager Duchess of Sutherland, who died intestate, has been sworn under \$1,000,000; Don Christobel de Murrisset, 600,000; Right Hon. Sir Richard Pakenham, K.C.B., 15,000; Hon. Walter Berwick, Senior Judge of the Bankruptcy Court, Ireland, who perished in the Abercromby Railway accident, 14,000; General Sir Thomas Monteach Douglas, K.C.B., 46,000; Lieut.-General Blichley, R.A., 15,000; Major-General Sir Robert Honour, K.C.B., 35,000; Lieut.-Colonel Reeve, of the Coldstream Guards, 100,000; Mrs. Ann Morris, of Monmouth, 45,000; Miss E. Mockett, 20,000; Rev. Thomas Carter, 35,000; Mr. James Block, of Charlton, Wilt., 50,000; Mr. Henry Lewin, of South- ampton Street, Strand, and Field Sussex 60,000; Mr. Henry Scott Turner, 14,000; Mr. James Oakes, 10,000; Mr. Thomas Jones, 6,000; Mr. Philip May, 3,000; Mr. Henry Morris, 5,000; Mr. William Lushon, 1,000; Mr. Lincoln a Inn Fields, 14,000; Mr. Charles Stewart Parker, merchant of Liverpool, 60,000; Mr. Henry Bacon, of Lincoln's Inn, barrister-at-law, 30,000; Dr. Henry Brown, M.D., surgeon to the Queen's Royal Household at Windsor, 45,000.

Markets.

COVENT GARDEN.—Jan. 9. We are still very quiet here, no changes having taken place that would command attention; the only article rather more in request is Kent Cobs, which realise 95s. per 100 lb. Fruit and Vegetables are abundantly supplied, and prices barely kept up. Alcinra Grapes are exceedingly fine, and worth from 8s. to 10s. per 12 lb. American New Town Pippins of excellent quality fit for export, there are also arrivals of Reinctte de Bordeaux and Dieu Donne Apples from Bordeaux, realising from 12s. 6d. to 15s. per cask. Oranges are very plentiful. French Asparagus may now be had, at 15s. to 20s. per bundle. Very fine Onions are arriving from Bordeaux, at 12s. to 14s. the cwt. Potato trade is dull, except for best samples, of which there is a scanty supply in general, though there are large arrivals of kidney Potatoes of fine quality from Belgium, realising 2s. per score bags of about 110 lb. each. Flowers chiefly consist of Orchids, Primulas, Hyacinths, Tulips, Heaths, Mignonette, Pansies, Cytisus racemosa, Cyclamons, Deutzias, and Solanum Capsastrum.

Table with 2 columns: Fruit and Vegetables. Apples, per bushel, 4s to 5s; Grapes, per lb., 3s 6d to 6s; Kent Cobs, per lb., 1s; Lemons, per 100, 4s to 5s. Melons, each, 2s to 4s; Pears, per doz., 4s to 8s; Pine apples, per lb., 6s to 8s; Oranges, per 100, 2s to 3s.

Table with 2 columns: VEGETABLES. Beet, per doz., 1s to 2s; Cabbages, per doz., 1s to 2s; Carrots, per bunch, 6d to 10d; Celery, p. bund., 1s 6d to 2s 6d; Cucumbers, each, 1s to 2s; Endive, per doz., 1s 6d to 2s; Garlic and Shallots, per lb., 8d; Herbs, per bunch, 2d to 4d; Horse Radish, p. bund., 3s to 5s; Leeks, per bunch, 2d to 4d; Lettuces, per score, 1s to 2s 6d. Mint, per bunch, 6d to 9d; Mushrooms, p. pott., 1s 6d to 1s 9d; Onions, per bushel, 6s to 7s; Parsley, per bunch, 4d to 6d; Potatoes, York Regents, p. ton, 120s to 150s; Flukes, do., 120s to 160s; Shaws, do., 120s to 180s; Seakale, p. punn., 2s to 3s; Spinach, per bushel, 2s to 3s; Turnips, p. bunch, 2d to 4d.

Table with 2 columns: HAY.—Per Load of 36 Trusses SMITHFIELD, Thursday, Jan. 7. Best Green Hay, 11s to 12s; Prime Meadow Hay, 10s to 11s; Inferior do., 8s to 9s; New do., 9s to 10s; Straw, 2s to 3s. Clover, old, 11s to 12s; Inferior do., 8s to 9s; Prime new Clover, 10s to 11s; Inferior do., 8s to 9s. CHARLES JAMES EASTON.

Table with 2 columns: CUMBERLAND MARKET, Thursday, Jan. 7. Sup. Meadow Hay, 11s to 12s; Inferior Clover, 110s to 112s; New do., 110s to 112s; Straw, 34 to 42. Superior Clover, 123 to 134. JOSHUA BAKER.

Table with 2 columns: WHITE HAY, Thursday, Jan. 7. Fine Meadow Hay, 11s to 11s; Inferior do., 9s to 10s; Prime New Hay, 10s to 11s; Inferior do., 8s to 9s; Straw, 2s to 3s. Prime stout Clover, 12s to 12s; Inferior do., 8s to 9s; Prime 2d cut do., 10s to 11s; New Clover, 10s to 11s; Inferior do., 8s to 9s.

Table with 2 columns: METROPOLITAN MEAT MARKET.—Jan 6. Best Fresh Butter, 17s per dozen lb.; Second do., 17s. Small Pork, 4s. 4d. to 4s. 9d.; Large Pork, 3s. 8d. to 4s. 4d. per 9 lb.

HOPS.—BOROUGH MARKET, Jan 8. Messrs. Patten and Smith report a continued steady demand for consumption, for both English and foreign, late rates being fully maintained.

POTATOS.—SOUTHWARK, Monday, Jan. 4. During the past week the arrivals have been coastwise and by rail, and with the exception of best samples of Regents, the trade continues in a very sluggish state. The following are this day's quotations.—Yorkshire Regents, per ton, 70s. to 120s.; do. Fines, 100s. to 140s.; Lincolnshire Regents, 60s. to 90s.; Dunbar and East Lothian do., 80s. to 120s.; Perth, Forfar, and Fife do., 60s. to 110s.; do. Rocks, 60s. to 70s.; French and Belgian Whites, 40s. to 80s.

Table with 2 columns: ENGLISH WOOL. There has been a steady business doing, and prices are gradually creeping upwards. CURRENT PRICES OF ENGLISH WOOL. per lb.—s. d. s. d. FLEECES.—Southdown hoggets, 1 4 to 1 5; Half bred ditto, 1 4 to 1 5; Kent Fleeces, 1 5 to 1 5; Southdown ewes and wethers, 1 4 to 1 4; Leicester ditto, 1 1 to 1 5. SORTS.—Clothing, 1 0 to 1 8; Combing, 1 2 to 1 10.

COALS.—Jan. 6. Walls End Braddyl's Hutton, 17s. 6d.; Cowpen Hartley, 15s. 9d.; Walls End Hawthorne, 15s. 9d.; Walls End Russel's Hutton, 16s. 6d.; Walls End Gosforth, 15s. 9d.

Walls End Original Belmont, 18s. 3d.; Walls End Hartlepool, 17s. 6d.; Walls End Hetton, 18s.; Walls End Hetton Lyons, 16s. 9d.; Walls End South Hartlepool, 16s.; Walls End South Hetton, 17s. 9d.; Brancopeth Cannel, 18s.

LEADENHALL AND NEWGATE POULTRY, &c.

THURSDAY, JAN. 7.

Fresh Butter, 1s. 4d. to 1s. 7d. per lb.

METROPOLITAN CATTLE MARKET.

MONDAY, JAN. 4.

We have a good supply of Beasts, and trade is by no means brisk; choicest qualities are making about the same as of late, but inferior are lower. The number of Sheep is considerable; trade is, however, active for best descriptions, and prices are quite as good as last week. Calves are very scarce and dear. Our foreign supply consists of 710 Beasts and 13 Calves; from Scotland there are 548 Beasts; from Ireland, 410; from Norfolk and Suffolk, 750; and 1262 from the Midland and Northern Counties.

Table with 4 columns: s. d. s. d., s. d. s. d. Items include Best Scots, Herd-fords, Best Shorthorns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Beasts, 3690; Sheep and Lambs, 10,890; Calves, 27; Pigs, 210.

The number of Beasts is small, but quite equal to the demand. Prices on the average are about the same as on Monday. Several inferior qualities, however, remain unsold. The supply of Sheep is small, they are disposed of at Monday's quotations, but trade is slow. Good Calves are scarce and dear. Our foreign supply consists of 184 Beasts and 29 Calves.

Table with 4 columns: s. d. s. d., s. d. s. d. Items include Best Scots, Herd-fords, Best Shorthorns, 2d quality Beasts, Best Downs and Half-breds, Do. Shorn, Beasts, 970; Sheep and Lambs, 4610; Calves, 91; Pigs, 90.

SEED MARKET.

We had an average attendance of buyers at our market today, and a fair amount of business doing. There is a good speculative demand for red Clover seed, at the late advance; new samples of home-grown seed are exceedingly scarce, and are held at extreme rates; of French red there is but little on offer, the quality of which is very inferior; new German meets with a ready sale at enhanced values, white and Alayke Clover seed are without quotable change. For Trefoil seed the trade is quiet, but firm. Now French Italian Rye-grass experiences a brisk inquiry, at full currencies. Rape seed is in better request, at an improvement of 1s. per qr. Mustard seed has a slow sale at last Monday's prices. For bird seeds we have a fair inquiry. Small orders continue to come on hand for English winter Tares; Konigsberg spring excite just now but little attention on the part of speculators. Garden Peas and Beans of all sorts are in lively demand, and command high values. On the whole the tone of the agricultural seed trade is exceedingly firm, and in spite of the holidays a good business has recently been transacted. Our advices from the Continent, and also from New York, all speak of great firmness in the Clover trade, with prices tending upwards.

JOHN SHAW & SONS, 16, WATER LANE.

MARK LANE.—MONDAY, JAN. 4.

There was a short supply of English Wheat fresh up to this morning's market, which was sold at an advance of 1s. to 2s. per qr. on the prices of last Monday. There was a fair attendance, and foreign Wheat was generally held for an improvement of 1s. per qr., but the business done, which was to a moderate extent, was at the extreme prices of last week. Fine English malting Barley was 1s. per qr. dearer, foreign and grinding unchanged in value. Beans and Peas brought late quotations. The Oat trade was firm, and in some instances an advance of 3d. to 6d. per qr. was established. Flour was rather dearer.

Table with 4 columns: Item, s. s., s. s., s. s. Items include WHEAT, BARLEY, OATS, RYE MEAL, BEANS, PEAS, MAIZE, FLOUR.

FRIDAY, JAN. 8.

The advance quoted last Friday has made further progress, and we have to report an improvement of 1s. to 2s. per qr. on Wheat throughout the markets of this kingdom; but this rise led to renewed duress, millers and dealers, being once more in stock, though probably for a short time only, will no longer operate at existing rates. Malting Barley has continued scarce, and a further advance of 1s. to 2s. per qr. has resulted, other qualities maintain late rates. We have no alteration of moment to report in the price of Beans, Peas, and Oats. Flour has continued a slow sale, but in some instances prices favoured holders. The supplies of grain off the coast this week consisted of 18 cargoes, of which, with those left over from last week, there remained for sale last night 13 cargoes. The absence of fresh arrivals of Wheat cargoes off the coast made holders very firm, and in the few sales effected late rates were paid. We estimate that about 50 Wheat cargoes are overdue and held back by the late storms. For cargoes on passage and for forward shipment prices are, in the absence of business, merely nominal.

The arrivals of all grain since Monday have been moderate.

There was a fair attendance at this morning's market, and the few samples of English Wheat on offer were taken at about the rates current on Monday: the transactions in foreign were to a limited extent, at the quotations of that day. There was no change in the value of Barley, Beans, or Peas. Oats were in fair demand at a slight advance.

ARRIVALS THIS WEEK.

Table with 4 columns: Wheat, Barley, Oats, Flour. Items include English, Irish, Foreign.

LIVERPOOL, Tuesday, Dec. 5.—Wheat in moderate consumptive demand, and 2d. to 3d. per cental dearer. Flour in fair request, at 1s. advance. Beans and Peas steady. Oats and Oatmeal unchanged. Indian Corn dull, at 9d. to 1s. per qr. decline; new mixed, 36s. 6d.; old, 37s. 6d.; round, 35s. 6d. to 38s.

AVERAGES.

Table with 4 columns: Wheat, Barley, Oats. Items include Nov. 28, Dec. 5, 12, 19, 26, Jan. 5, Agg. Average.

WANTED, for the Royal Belfast Botanical and Horticultural Gardens, a first-rate HEAD GARDENER, who fully understands his business in every department in the Propagation, Treatment, and care of Trees, Plants, and Shrubs, also in the Superintendence of Workmen and the general Supervision, Arrangement, and care of the Garden Conservatories, Store Houses, &c., of the Garden.  of most sizes on receipt of Orders."

PARIS EXHIBITION, 1867—GOLD MEDAL.

CLAYTON, SHUTTLEWORTH, & CO.

At the Great Triennial Trials of THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND, held
 Bury St. Edmund's, July, 1867, received the following Awards:—

For Single Cylinder Portable Steam Engine, **The FIRST PRIZE** of £25.

For Double Cylinder Portable Steam Engine. **The FIRST PRIZE** of £25.

For Horizontal Cylinder Fixed Engine. **The FIRST PRIZE** of £20.

For Double Blast Finishing Threshing Machine. **The PRIZE** of £15.

Also the **SOCIETY'S SILVER MEDAL**, for Adjusting Blocks for Machines.

The duty performed by all C., S. & Co.'s Engines on this occasion, considerably exceeded that of
 C., S. & Co. refer with pleasure to the fact that the duty of their "COMMERCIAL" or SINGLE
 ENGINE, at Chester, so long ago as 1858, was not equalled by any "ordinary" Engine at Bury.

CLAYTON, SHUTTLEWORTH, AND CO., LINCOLN; and 78, LOMBARD ST., LONDON.

**DENNIS & SCRUBY, PATENTEES,
 HORTICULTURAL ENGINEERS AND BUILDERS IN WOOD AND IRON.**

DENNIS AND SCRUBY beg to direct the attention of Noblemen, Gentlemen, Nurserymen, and Gardeners, to the many and varied improvements they have made in
 description of Horticultural Erections. They continue to Manufacture Buildings of the highest order in Wood, Galvanized Metal, and their HIGHLY APPROVED Patent
 Iron construction. They have much pleasure in announcing that by the aid of modern appliances, in their manufactory, all kinds of Horticultural Buildings w.l. be sur-
 the most moderate prices consistent with the high standard of their workmanship. Every description of Garden Structure, arranged, designed, and heated on D. S.
 improved system, will be guaranteed to fully answer the purpose for which they are intended.

Gentlemen waited upon by Members of the Firm to advise and arrange for contemplated Buildings.

Our new HOT-WATER BOILER and other specialities and patented arrangements may be seen *en modèlo* at our
 LONDON OFFICE—6, SLOANE STREET, S.W. POSTAL ADDRESS—ANCHOR IRON WORKS, CHELMSFORD.

NEWCOMB'S MIDLAND COUNTIES' ALMANAC and RURAL HANDBOOK. Price 6d.; interleaved for Writing, and strongly bound, 1s. Postage 2d. extra.

OPINIONS OF THE PRESS.

"It contains an interesting and useful array of information connected with the various departments of rural life—farming, the dairy, poultry management, bee-keeping, sport, gardening, housewifery, miscellaneous recipes, &c., and has the merit of uncommon cheapness."—Bristol Mercury and Western Counties' Advertiser. "The Almanac, although bearing the title of the Midland Counties, will be found serviceable in any part of the country, for it contains a vast amount of information calculated to be useful everywhere."—Banbury Guardian.

"This popular handbook will again be found the cheapest and most useful of its class, and to contain a large quantity of matter of great interest and utility, both to the farmer, gardener, and housewife. It has been before the public many years, and not one word is needed from us to recommend it to those who have perused it. Those who have not can form no opinion of the usefulness of this almanac to many classes."—Doncaster, Nottingham, and Lincoln Gazette.

"A perfect compendium of information on matters great and small connected with country life."—Norfolk Chronicle and Norwich Post.

"Again commends itself to the patronage of the public for the extent and excellence of its information."—Trueman's Exeter Flying Post.

"Newcomb's Midland Counties' Almanac and Rural Handbook, Newcomb's Farmers' Pocket Book.—These are both of them very excellent, well arranged, and useful publications."—Gardener's Chronicle and Agricultural Gazette. Sold Wholesale by SAMPSON, MARRALL & Co., London; NEWCOMB, Stamford, and to be had of all Booksellers.

Northcote House, Rugby.

THE REV. CHARLES HOUGHTON, M.A., Emmanuel College, Cambridge, RECEIVES a limited number of PUPILS, to Prepare for the Public Schools, the Naval, Military, and Civil Service Examinations.

Farming.

A SCOTCH FARMER has an OPENING for a PUPIL on a large Farm, where the old Arable Land is being improved, and a great extent of Natural Pasture reclaimed. The system pursued is combined Sheep and Corn Farming. The Duke of Buccleuch's Hounds hunt the district.—For particulars apply to No. 353, North British Agriculturist Office, Edinburgh.

THE SOCIETY of PAINTERS in WATER COLOURS.—The WINTER EXHIBITION of SKETCHES and STUDIES by the MEMBERS is NOW OPEN, 5, Pat. Mal. East. Ten till five. Admission 1s. Gas on dark days. WILLIAM CALLOW, Secretary.

GEOLOGY.—KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S., will COMMENCE a COURSE of LECTURES on GEOLOGY on FRIDAY, January 22, at 9 A.M. They will be continued on each succeeding Wednesday and Friday, at the same hour. A shorter Course will be given on Thursday evenings from 8 to 9. First Lecture, January 21. Text-book, Lyell's "Elements of Geology." Professor Tennant accompanies his students to the Public Museums and to places of Geological interest in the country. He gives PRIVATE INSTRUCTION in Mineralogy and GEOLOGY at his residence, 149, Strand, W.C.

Home News.

THE COURT at OSBORNE.—On Thursday, the 7th, the Earl and Countess of Clarendon arrived at Osborne on a visit. The Archbishop of Canterbury and Mrs. Tait, the Right Hon. Henry Bruce, and the Dean of Westminster left for London. On Friday morning the Queen walked in the grounds with Princess Beatrice, and in the afternoon drove in the grounds with Prince Leopold and Princess Beatrice; and on Saturday the Queen, accompanied by their Royal Highnesses, drove to Bonchurch and took luncheon with Lord and Lady Alfred Paget. The Earl and Countess of Clarendon left Osborne for London. Earl and Lady Constance Grosvenor and Lady Elizabeth Grosvenor arrived on a visit. On Sunday morning the Queen, with Prince Leopold and Princess Beatrice, attended Divine service at Whippingham Church. The Rev. G. Prothero officiated. On Monday the Queen walked and drove with Princess Beatrice. On Tuesday morning the Queen walked and drove in the grounds with Princess Louisa, and went out in the afternoon with Princess Beatrice. The Countess Dowager of Carnarvon, the Countess of Suffolk, and Lady Fanny Howard had an interview with her Majesty. On Wednesday morning the Queen walked and drove with Princess Louisa. Lady Augusta Stanley arrived from London on a visit. On Thursday the Queen held a Council, at which the Duke of Norfolk was introduced by the Lord Chamberlain, and took the oaths as Earl Marshal; and Baron du Jardin, Belgian Minister, presented his letters of recall. After the Council Mr. Matthew Digby Wyatt was introduced to her Majesty by the Lord Chamberlain, and received the honour of knighthood. Earl de Grey and Ripon and Viscount Sidney had audiences of her Majesty. The Duke and Duchess of Abercorn arrived from London on a visit.

THE PRINCE and PRINCESS of WALES left Copenhagen yesterday for Trieste, where they will embark for Egypt in the Ariadne frigate. In consequence of the hostile relations between the Porte and Greece, the Prince has determined not to pay his intended visit to the Court of Athens. Prince Albert Victor, Prince George, and Princess Louisa of Wales, are expected at Marlborough House on Monday next from Denmark.

ARRIVAL OF THE DUKE and DUCHESS of SCHLESWIG-HOLSTEIN.—On Monday afternoon the Duke Frederick of Schleswig-Holstein, the brother of Prince Christian, with the Duchess and the Princess Henriette, arrived at Frogmore on a visit to Prince and Princess Christian, and are expected to remain their guests for two or three months.

ACCIDENT TO THE DUC DE GUISE.—On Thursday, the 8th inst., the Duc de Guise, only son of the Duc d'Aumale, was thrown from his horse while hunting, and broke his leg. His Royal Highness was at once conveyed to Orleans House, Twickenham, where the broken limb was set, and the duke has since been progressing favourably.

ELECTION OF A BISHOP of LONDON.—On Thursday morning the Dean and Chapter of St. Paul's assembled in the Chapter-House, and, in accordance with the Queen's recommendation, elected Dr. Jackson, Bishop of Lincoln, to the Bishopric of London, vacant by the elevation of Dr. Tait to the See of Canterbury.

THE NEGOTIATIONS WITH AMERICA.—The Times of yesterday announced that a Convention was signed on Thursday by Lord Clarendon and Mr. Reverdy Johnson upon almost precisely the terms agreed upon between Lord Stanley and the American Minister. Lord Clarendon took up the conduct of the negotiation exactly as it was left by Lord Stanley, and Mr. Seward has accepted and approved the negotiations completed by the United States' Minister. "Nothing," it adds, "has been altered, save some practical arrangements, involving nothing which can give rise to a difference of opinion."

PARLIAMENTARY MOVEMENTS.—Mr. Chichester-Portescue, Chief Secretary for Ireland, has been re-elected for county Louth, and Lord Otho Fitzgerald, Comptroller of the Household, has been re-elected for county Kildare, without opposition. The election for South Derbyshire terminated on Thursday in the return of Colonel Wilmot, the Conservative candidate, by a majority of 29, according to the numbers published by the Liberal committee, over Mr. Evans: the Conservative return gives the majority as 40. Colonel Mure, of Caldwell, has withdrawn from the candidature for Renfrewshire, in favour of Mr. Bruce, the Home Secretary, who is expected to be returned without opposition.

THE TRIAL OF ELECTION PETITIONS.—The first trial under the new Act for the suppression of corrupt

practices at elections commenced on Tuesday. Mr. Justice Willes, in the Town Hall, Windsor, the member petitioned against was Mr. Roger Evers. The seat was claimed for Colonel Gardner the Conservative candidate, on the grounds of bribery. The examination of witnesses occupied the day yesterday, when Colonel Gardner abandoned the feeling bound in honour to admit that no bribe he had expected had been made out against Mr. Justice Willes then said that he should inform the Speaker that Mr. Eykyn was not guilty of his agents of corrupt practices, that the practices did not extensively prevail in the country, and that the costs of the trial must be borne by the petitioner, Colonel Gardner, although the petition opened the commission at Norwich. Mr. Bruce began yesterday the inquiry into Mr. Tillet's bribery against the seat of Sir H. Stracey. During the day each to induce them to vote for Sir H. Stracey. Court of Common Pleas on Monday had before it a question whether the amount of security required in disputed election cases in which the seats of members are attacked by one petition, should be 10 or 2000l. The Lord Chief Justice granted a writ against the petitioners in the case of Beverley, to show why the decision of Justice Willes, that security given is sufficient, should not be set aside in elections affected by this decision are Beverley, Hereford, Wigan, Preston, Southampton, Bradford, Coventry, Penryn, and Oldham. On Tuesday the Court gave judgment on an application by Mr. Smith, the sitting member for Westminster, who claimed that the petition against him should be taken off the file, because it did not furnish the names of persons said to be bribed or the agents who bribed them. The Lord Chief Justice refused a writ of Habeas Corpus, and the Court adhering to the orders laid down in the Second Division of the Scotch Court of Session. On Tuesday, rejected the reclaiming note presented by Mr. Grieve, [the sitting member for Greenock] against the decision of Lord Cowan, refusing to grant the petition against his return because it did not comply with the regulations laid down. The Court of Common Pleas gave judgment on Tuesday on the petition against the return of Mr. Dew for Wexford. It appeared that at the election Mr. Motte had the show of hands, and Mr. Devereux demanded a poll. Mr. Motte afterwards drew from the contest, and the Sheriff then declared Mr. Devereux elected without going through the formality of polling a few votes. The Court held that the election was null and void, that Mr. Devereux was not entitled to the seat, that there must be a new election, and that both parties must pay their own costs.

THE CONSERVATIVE PARTY.—Mr. Whitmore for Bridgnorth, has resigned the office of Conservative Whip, to which he was appointed by Mr. Disraeli in 1855, as successor to Lord Mandeville, now Lord Manchester.

NEW BARONET.—The Queen has granted the dignity of a Baronet of the United Kingdom to the Right Hon. Maziere Brady, of Hazelbrook, county of Dublin, in recognition of his services as three times Lord Chancellor of Ireland under successive Liberal Administrations.

POLICE MAGISTRACY OF GIBRALTAR.—The Queen has appointed Nicholas Kendall, Esq., of Penryn, M.P. for East Cornwall, to be police magistrate of the city and garrison of Gibraltar.

OFFICE OF WORKS.—Mr. Layard, the new Commissioner of Works, has appointed Mr. Fergusson, the architect, to the secretaryship of the Board, in the room of Mr. Alfred Austin, resigned.

RECORDERSHIP OF LYNN.—Mr. Douglas, Recorder of the Norfolk Circuit, has been appointed Recorder of Lynn, in the room of Mr. M. J. West, who has resigned in consequence of his age and infirmities.

THE ARMY.—The colonelcy of the 53rd Regiment, vacant by the death of General Gold, has been offered to Major-General Trollope. Major-General Grant has been appointed Colonel Commandant of the Royal Artillery, in the room of the late General. Major-General Moore has been appointed Colonel Commandant, in the room of the late General. Major-General Moore has been appointed Colonel Commandant, in the room of the late General.

REDUCTIONS IN THE DOCKYARDS AND ARMY.—It is understood that Mr. Childers, Secretary of the Admiralty, will close the dockyards of Woolwich and Deptford, with a little delay as is compatible with the execution of the service. The Steam Department has been re-organised. Mr. Lloyd, the Engineer-in-Chief of the Navy, will be succeeded by Mr. Murray, chief Engineer of Portsmouth Dockyard, whose appointment will be filled up. Mr. Eden, the chief clerk of the Admiralty, will be succeeded by Mr. Lang, the chief clerk of the Steam-office, who is superannuated. The Storekeeper-General of the Navy will also retire, and the office will be filled up by that of the Controller. The writers in the departments at Whitehall and Somerset House will be reduced in number or altogether abolished, and it is expected that many of the junior clerks on the establishment will be dismissed, with the view of retaining only the efficient public servants. It is also expected that reductions are to be made in the Coastguard.

Foreign.

FRANCE.—The first sitting of the Conference of the Turco-Greek question was held on Saturday. After the formalities had been completed, the plenipotentiaries were drawn up and despatched to the Cabinets of Constantinople and Athens, requesting them to state the status quo pending the duration of the Conference. The Greek Plenipotentiary then claimed to sit at

Ali Khan had become possessed of the territory in Turkistan, where his nephew, Abdul Rahman, had previously ruled. It is rumoured that Colonel Orstasoff, a Russian agent, is now in Cabul, and that Russian Cossacks have been seen on the southern side of the Hindoo Koosh. Meer Hajeer has been convicted at Delhi of the murder of Captain Douglas, commanding the Palace Guards, on the 11th May, 1857. A kind of Maine liquor law has been introduced into the State of Rampore by its Nawab, who has forbidden the use of all intoxicating drugs throughout his dominions.

CHINA.—A despatch from Hong Kong, dated the 20th ult., states that her Majesty's gunboat Guat, after going ashore on the coast of Balabac, one of the Philippine Islands, was struck by lightning and blown up. No lives were lost.

JAPAN.—Hakodadi has been besieged and taken by a rebel fleet of seven vessels. The assault was headed by foreigners. Her Majesty's ships Satellite and Argus, and the French war vessel Venus, have proceeded to Hakodadi. The foreign community are in safety, and have not been molested.

UNITED STATES.—The Bill for repealing the Tenure of Office Law was passed by the House of Representatives on Monday. The vote was 119 for, and 47 (all Republicans) against. The Democrats unanimously voted in the affirmative. In the sitting of the House on Wednesday a Bill was introduced by General Banks, for establishing an American Protectorate over Hayti, and after a debate it was ordered to be laid on the table. The vote was 121 to 36. In pursuance of President Johnson's Amnesty, a *nolle prosequi* has been entered in the cases of Messrs. Davis and Breckinridge, and Attorney-General Evarts has instructed the district attorneys to discontinue all prosecutions for treason and rebellion. The Republican Press generally condemn Mr. Reverdy Johnson's acts and conduct in England, and without stating anything definite, appear to believe that he is sacrificing American interests. The Democratic journals at first supported Mr. Johnson, but are now silent.

WEST INDIES.—A severe shock of earthquake was felt at St. Thomas on December 23. A tidal wave had been experienced on the east coast of Trinidad.

CUBA.—Accounts from Havannah state that General Dulce, the new Governor, has proclaimed liberty of the Press, and has offered a free pardon to all insurgents surrendering within 40 days. Cespedes, the leader of the insurgents, has proclaimed the emancipation of the slaves. The insurgents still menace Puerto Principe. General Dulce has asked for a reinforcement of 4000 men, who will be sent off by the Minister of War during the present month.

MEXICO.—An earthquake took place on the 20th ult. in the cities of Colima and Manzanillo. Several persons were killed, many houses destroyed, and nearly all the buildings in both places more or less damaged.

PARAGUAY.—The Paraguayan army was completely routed on the 11th of December at Villeta. Three thousand prisoners were taken by the Brazilians, and Lopez escaped with only 200 men. The Brazilian squadron was ascending the river Paraguay to take possession of Assumpcion. The war was considered to be at an end. The Earl of Clarendon has received a despatch from Mr. Stuart, her Majesty's Minister at Buenos Ayres, dated the 21st November, reporting that, as far as can be ascertained, there are two British subjects in prison in Paraguay, named Alonso Taylor and F. G. Masterman, who, it is believed, are suspected of complicity in an extensive conspiracy. Mr. Stuart had also been informed that four others, named W. Newton, W. Eden, G. Miles, and G. Higginbotham, who were in Government employ, have been dismissed from it, and that the three former of them were then at San Lorenzo and the latter at Paraguari. Mr. Stuart further reports that the commander of her Majesty's ship Beacon had received from President Lopez himself a positive assurance that every British subject in Paraguay should receive the best possible treatment.

City Intelligence.

OVEREND, GURNEY & Co.—The case for the prosecution was concluded yesterday at Guildhall, and the inquiry was adjourned to this morning.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 92½ to 93½, both for Money and Account; New and Reduced Three per Cents., 92½ to 93; India Five per Cents., 112½ to 112½; Bank Stock, 241 to 243; Exchequer Bills, 8s. to 8s. pm.—FOREIGN: Mexican Bonds, 15 to 15½; New Spanish, 30 to 30½; Italian (1861), 52½ to 53½; Tobacco Loan, ½ to 1 pm.; Turkish Five per Cents., 37½ to 37½; Ditto Six per Cents., 60½ to 60½; Egyptian (1864), 86½ to 87½; Ditto (1868), 74 to 74½; Honduras, 85 to 87; Peruvian, 76½ to 76½; Portuguese, 35½ to 36½; Danubian Eight per Cents., 80 to 81; Brazilian, 79½ to 79½; Russian (1862), 85½ to 86½; Orel, 80 to 80½; Nicolas, 66½ to 66½; Moscow, 78½ to 78½; Greek, 11½ to 12½; United States 5-20 Bonds, 71½ to 75½; Erie, 26½ to 26½; Illinois, 92½ to 93½.

Metropolis and its Vicinity.

MEETING OF RITUALISTS.—On Tuesday afternoon a great meeting of Ritualists, clergy and laity, was held at Freemasons' Hall, to receive the report of the committee appointed at the meeting on the 30th ult. on the steps to be taken in reference to the recent judgment of the Judicial Committee of Privy Council in the case of "Martin v. Mackonochie." Archdeacon Denison presided, and said that though he was not what was called an "advanced Ritualist," and his taste inclined rather to simplicity than to complication of ceremonial, he was in favour of the preservation, in all their integrity,

of all and each one of the many links which bound the Church of England to the Church Primitive and Catholic, and for the liberty of Churchmen as established at and by the Reformation. And he would say, that they should never cease the work of all their hands, and minds and hands, till they had rid the Church of God in this land of the Court of Final Appeal as now existing by law. Mr. Turner then read a lengthy and elaborate report from the committee appointed on the 30th ult., criticising under various heads and in great detail the recent report, and recommending that a memorial from clergy and laity be addressed to the archbishops and bishops of England and Wales, and, *mutatis mutandis*, to both Houses of the Convocations of Canterbury and York, praying their lordships to vindicate the Primitive and Catholic character of the Church of England, disparaged by the recent judgment, and to claim for Churchmen the lawful liberty now invaded and denied, and so far as in them lay, to relieve them from the contradictions, the difficulties, and the dangers in which they were placed by the late interpretation of the law. Mr. Turner moved and Lord Ehot seconded the adoption of the report, which was carried unanimously. The Rev. M. W. Mayow moved and Mr. H. J. Barehard seconded the adoption of the memorial, which was also carried unanimously. The Rev. J. W. H. Molyneux, vicar of St. Peter's, Sudbury, then moved and the Hon. C. L. Wood seconded the following resolution:—

"That this meeting does not recognise the existing Court of Final Appeal as a Court competent to declare the law of the Church of England upon either doctrine or ceremonial. That with respect to this particular judgment of the said Court in 'Martin v. Mackonochie' the meeting finds, among other things, that that judgment disregards the Church of England's fundamental principle of connection with and reference to the practice of the Church Primitive and Catholic. Nevertheless it acknowledges the duty of submitting, under protest, to the law of the land, upon that law being put in force, so far as such law is expressed in the decree of the said judgment, and until such law shall be further declared or amended."

The Rev. W. J. E. Bennett, Vicar of Frome, expressed his regret at being obliged to differ from many of his friends, but though he might be placed under the stigma of being a disobedient subject, he preferred to obey the law of God and His Church rather than the law of the Queen. He objected entirely to the "miserable conclusion" of the resolution, and moved as an amendment, that all the words from "nevertheless" should be struck out, and the following words inserted:—

"And therefore it is unable to reconcile submission to the present decree with its paramount and primary duty of obedience to the Church, and can only wait in patience the Providence of God."

The Rev. C. J. Le Geyt seconded the amendment, which was supported by the Rev. T. T. Carter, vicar of Clewer; the Rev. G. Nugee, vicar of Wymering; and the Rev. Orby Shipley, and others. The Rev. T. W. Perry, one of the Royal Commissioners on Ritual, the Rev. Dr. Littledale, and the Rev. M. W. Mayow opposed it, on the ground that they had no other course open to them than to submit under protest. The Rev. J. W. H. Molyneux, vicar of St. Peter's, Sudbury, also opposed it, and said that though it was his conviction that the judgment was unjust, he had reluctantly removed the altar lights, which he had used for twelve years, in spite of the remonstrances of Bishops Turton and Browne; and he had done so because, as long as the clergy retained their position as ministers of the Church of England, they were bound to obey the law of the land while the highest Court of Appeal declared it to be binding. On a division Mr. Bennett's amendment was lost. The Rev. T. W. Perry then moved to omit from the resolution the words, "Upon that law being put in force." The Rev. Canon Cooke seconded the motion, which was agreed to. The Rev. C. F. Lowden, vicar of St. Peter's, St. George-in-the-East, moved as an amendment that they should strike out of the resolution all the words from "nevertheless" to the end. Mr. Beavan seconded the resolution, which was carried with but few dissentients. The Rev. C. A. Fowler, rector of St. Margaret's, Canterbury, moved, and Mr. Goldney seconded, an amendment that a deputation should wait upon the Church Association (the Evangelicals), to ascertain whether the two bodies might not act together. On a division it was lost. The Rev. F. G. Lee moved to add, after the word "ceremonial," these words:—

"But sees no alternative for Mr. Mackonochie but obedience. At the same time this meeting maintains that if the unprecedented principles embodied in the judgment be applied by the spiritual rulers, it should only receive general obedience when applied impartially."

The Rev. J. Edwards seconded the amendment, which was lost. The Chairman said that the resolution as it now stood was nonsense, and he hoped that something would be added which would make sense of it. The Rev. M. W. Mayow then moved that there should be added to what was left of the resolution these words:—

"But at the same time, this meeting, feeling the great difficulty of the present case, and that there are many who have used the ceremonial now condemned by the Judicial Committee, who may be anxious to wait rather than give immediate effect to the decision now pronounced, considers that it is a matter which is best left to the individual judgment and circumstances of each priest who has been accustomed to the practices or ceremonial in question."

The Rev. T. W. Perry seconded the motion. After some remarks from the Rev. Orby Shipley, the Hon. C. L. Wood, and Mr. Carter, the Chairman said that the original resolution, which had been passed by a large majority of the committee, and embodied, in the most unexceptionable terms, the great duty of obedience, was now, by the words being left out, rendered capable of only one construction—namely, that that great meeting would not consent to any obedience at all. If the amendment now proposed was rejected, he must,

having regard to his own honour, leave the amendment was then put, and carried almost unanimously. The Rev. A. H. Mackonochie, of St. Alban's, moved the next resolution:—

"That the clergy and laity present at this meeting lament the late decision of the Judicial Committee of Privy Council, and see in it a call to use all possible positions in the Church and in the world, and in all possible ways the doctrine of the Real Presence."

Mr. Turner seconded the motion. The Rev. T. W. Perry moved the following amendment:—

"That this meeting deeply laments the late decision of the Judicial Committee of Privy Council, which has extinguished two lighted candles on the Lord's table during the celebration of the Holy Communion, though it was an ancient custom retained by the Church of England as signifying that it was the very true light of the world, and that it is the more important to use, as circumstances may require, other lawful means in their power of teaching the doctrine sought to be impugned by this prosecution."

This amendment was accepted by Mr. Mackonochie, and it was carried instead of the original resolution. Mr. R. Brett moved, and Mr. Le Geyt seconded, the following resolution, which was carried with a large majority:—

"That the meeting, having regard to the experience of the Church of England for the last 20 years, rejoices to see that all manner of denial or depreciation of the Sacraments has issued only in the truer interpretation and the wider and heartier acceptance of the doctrine of the Real Presence. The Earl of Limerick moved the last resolution, which follows:—

"That having regard to the circumstances of the case, and to precedents of the Court, the condemnation of Mackonochie in all the courts, both of the original and the appeal, appears to this meeting to be a severe and exceptional severity, inasmuch as the defendant originated the litigation, inasmuch as the defendant was testing the legality of the ceremonial which had never been condemned, in one part of which—namely, the two lights—he was upheld by the opinions of the highest counsel, and inasmuch as the defendant had yielded immediate submission as to the points on which he had not been so sustained."

Mr. J. Shaw Stewart, in seconding the resolution, said that Mr. Mackonochie had undertaken, if necessary, to pay the costs of the Bankruptcy Court for the costs of the English Church Union had borne a heavy share of the expenses, and he thought an appeal should be made to the country generally. The resolution was adopted, the Rev. J. L. Fish moved, and the Rev. Upton Richards seconded, a vote of thanks to the Archdeacon, who dismissed the meeting with a benediction. The proceedings lasted five hours. On Wednesday another meeting of Ritualists was held at Freemasons' Hall, composed almost exclusively of those who are in favour of continuing the altar lights and other practices condemned by the Judicial Committee of Privy Council. There was a very earnest discussion, in which the Rev. Mr. Bennett, Rev. Orby Shipley, Rev. J. Edwards, Rev. C. F. Lowden, and other gentlemen joined. It was generally admitted it would be very unwise to bind the clergy as a body, to any particular course, inasmuch as circumstances differed in various parishes, and many might feel it to be their duty explicitly to obey the law of the Church on those points where it differed from the law of the land as expounded by the Judicial Committee. It was stated that several clergy had determined to continue the lights—at all events until they received a monition from a superior authority. A question arose in reference to the decree of the Judicial Committee, and it was generally admitted that the bishop of the diocese should necessarily proceed by monition or otherwise against a clergyman who used the practices and ceremonies condemned. Any person, it was said, might bring an indictment against a clergyman so offending, and it was not likely that the Church Association would be the real promoters of the suit "Martin v. Mackonochie" would allow such an opportunity. The question of the prosecution of Mr. Bennett on doctrinal matters was alluded to, and it was generally admitted that, in the event of the Judicial Committee decreeing that the Real Presence in the Eucharist is antagonistic to the doctrines of the Church of England, the High Church party must, as a matter of course, secede.

THE FRENCH ATLANTIC CABLE.—The Eastern commenced shipping the deep-sea cables for the French Atlantic telegraph cable at Southampton on Thursday morning. The total length of cable shipped up to Thursday night was 1,000 nautical miles.

STREET ROBBERY IN THE DAYTIME.—An elderly gentleman, was robbed of his watch and pocket-money in Everilda Street, Islington, by a young man who asked him the time. No policeman being near, the thief escaped, although he was afterwards traced through the intervention of a pawnbroker to a chapel, at whose shop a female confederate was brought up at Clerkenwell Police Court on Wednesday, and committed for trial.

THE PUBLIC HEALTH.—The Registrar-General's weekly return states that in the week ending on Saturday, Jan 9, 1871 births and 3944 deaths were registered in London and in 13 other large towns in the United Kingdom. The annual rate of mortality was 27 per 1000 persons living, being 25 in London, 40 in Edinburgh, 27 in Dublin, 22 in Birmingham, 30 in Liverpool, 36 in Manchester, 29 in Salford, 23 in Sheffield, 27 in Bradford, 24 in Hull, 31 in Newcastle-upon-Tyne, and 35 in Glasgow. The rate in Vienna was 25 per 1000 during the week ending the 22nd inst. In Berlin 32 per 1000 during the seven days ending the 7th inst. In London the births of 1243 boys and 1243 girls, in all 2406 children, were registered in the week ending on Saturday, Jan 9, 1871.

The corresponding weeks of 10 years, 1859-68, the average number, corrected for increase of population, was 156. The deaths registered in London during the week were 1501. It was the 1st week of the year, and the average number of deaths for that week, corrected for increase of population, was 1681. The present return is therefore 180 below the average.

Provincial.

ARKLARE.—The proceedings against Thomas Morris, charged with the outrage at the house of a woman called Richard Richards, at Cwmdare, on the 6th ult., were resumed at the Police-court of this town on Tuesday. The prisoner had a bag of powder from a mining magazine in the neighbourhood, placed it inside the kitchen of the farmhouse and fired it. The roof was blown, and the windows blown into the garden, and one of the ten persons in the house was hurt. The prisoner, however, was found at some distance, his clothes burnt off his body, and frightfully injured. He has been in the hospital ever since, and is still suffering, was sufficiently recovered to be brought before the magistrate, by whom he was committed for trial.

LAW.—Martin Brown, who was convicted at the assizes of the murder of an old shepherd, called near Brighton, has made a full confession of the crime and the circumstances connected with it. He admits the supposition that he committed the murder for the sake of the paltry sum of money that he had, and asserts that he had a stronger motive than this, with the other circumstances now known by the convict, will, at his own request, not be put to the test after the execution on Monday next.

WIMBORNE.—The remains of the body which were buried near Norwich in June and July, 1851, were exhumed on Tuesday from the vault in the Guildhall, which they had been deposited, when it was found that they had been put into the jar of spirits of wine for their preservation. The result of this is that the flesh has been destroyed, and nothing now remains but bones. It appears also that the medical man who examined the remains when they were first found came to the conclusion that they were those of a young woman, whereas, at the time of the murder, the Sheward must have been approaching her sixtieth year, and the witnesses examined on Friday, when the body was brought before the borough magistrates, stated to her as an "old woman." The prisoner was committed until the medical men had completed their examination of the remains; but in consequence of the difficulty of identifying the remains with the body of the woman, it is supposed that he will retract his statement, and that he and his friends will endeavour to show that when he made his statement he was under monomania.

WIMBORNE.—A court-martial has been sitting for several days on board the Victory, for the trial of Captain Wilmshurst, R.N., acting Governor of Isle of France, for having saved on his own account a large quantity of cotton from a wrecked ship called the "Hesperus," and afterwards sold the ship and articles for his own benefit. The Court, after hearing a defence from Mr. Vernon Harcourt on behalf of the prisoner, found on Wednesday that neither of the charges had been proved, and that Captain Wilmshurst was fully and honourably acquitted. Admiral Thomas S. Passey, as President of the Court, then presented Captain Wilmshurst his sword, and expressed his satisfaction at doing so.

WIMBORNE.—The governor of the county gaol received a letter through the clerk of assize, a free pardon for the prisoner, who received the intelligence with great delight, and again asserted that he had had no part in the Wells murder. Bisgrove, who is at present in Taunton gaol, has had a successful epileptic fits, evidently affecting his already weak mind. It is said that he attempted suicide on Monday by hanging himself, but was unable to carry out his intention.

WIMBORNE.—On Thursday week the shaft pillars near the No. 7 pit of the Rainford Coal Mine were found to be on fire. A stream of water was sent into the downcast shaft, and eight men went down to extinguish the fire; seven of the number were killed, and the eighth, who was the only one who escaped, was killed upon them, by the reversal of the shaft. A few seconds, and inflicted such severe injuries that six of them have since died, and the seventh is not expected to recover. A still more singular accident occurred on Friday, when a strong jet of steam was driven down upon the flames, the shafts being stopped by platforms of iron. The men jumped, as they thought, upon one of the platforms, a distance of about 2 feet, but they fell into the bottom of the shaft and fell down the shaft, and nothing can be done to recover the bodies. The fire is extinguished. The inquest was held on Friday, and it was stated that it might be expected that the bodies could be recovered in a few days. The inquest was adjourned for a month. Another inquest was held on Thursday, when the jury found that the explosion was caused by a "blown out shot," but the explosion arose from a gradual accumu-

lation through deficient ventilation, or from a sudden escape of pent-up gas from the body of the coal, there was no evidence to show.

Ireland.

THE IRISH CHURCH.—The Executive Committee of the Central Protestant Defence Association held a meeting on Saturday, Sir Edward Grogan in the chair, and adopted a series of resolutions in favour of organising at once an extensive plan of deputation to bring before the English and Scotch people the momentous questions impending, and to take other means for the defence of the Irish Church. Another resolution advised the branch associations to hold meetings in their several localities for obtaining signatures to a petition and declaration, and also for collecting funds and enlisting the co-operation of the clergy and laity in support of the movement. The last resolution declared that the proposed disestablishment and disendowment of the Established Church in Ireland contained the seeds of incalculable disaster to the country, and that it is the duty of the Protestant laity to resist it as a grievous political mistake, an injustice, and a wrong.

CARDINAL CULLEN ON THE IRISH CHURCH QUESTION.—At a meeting of the National Association on Tuesday letters were read from Cardinal Cullen and a number of Roman Catholic bishops, declaring against any compromise on the Church question, and claiming thorough disestablishment and complete disendowment.

THE REGIUM DONUM.—The authorities of the Presbyterian Church have been officially informed that the office of distributor of the Regium Donum, which was held by the late Dr. Cooke, has been abolished, and that the stipends will in future be paid through the Bank of Ireland.

CASE OF THE FENIAN CONVICT COSTELLO.—The Court of Queen's Bench have granted a new trial in the case of Augustus Costello, the Fenian convict, on his assignment of error on the record of his conviction at the late Special Commission. The argument is to commence on the 24th inst.

Scotland.

DESTRUCTION OF A GLASGOW THEATRE.—On Wednesday evening, shortly after the closing of the Prince of Wales Theatre, it was found to be on fire. The flames spread with great rapidity, and terminated in the total destruction of the building, which has only been built within the last 18 months.

Obituary.

VISCOUNT STRANGFORD was found dead in his bed on Saturday at his residence in Cumberland Place. He was but little more than 43 years of age. His lordship, Percy Ellen Frederick William Smythe, was the youngest of the three sons of the sixth Viscount Strangford, who was many years Ambassador at the Courts of Stockholm, St. Petersburg, Lisbon, and Constantinople, and who acquired considerable literary fame as the translator of the lesser poems of Camoens, by the youngest daughter of Sir Thomas Burke, of Marble Hill, and widow of Mr. Nicholas Browne, of Mount Hazel, Galway. He was born in 1825, at St. Petersburg, during his father's residence in that capital. He was educated at Harrow School, and was afterwards one of the "Postmasters" of Merton College, Oxford. In 1845 he entered the diplomatic service, being appointed an Attaché at Constantinople, where he acted as Oriental secretary in 1857 and the following year. His father died in 1855, and his second brother having died young, he succeeded to the title on the death of his eldest brother, the seventh viscount, in 1857. He was by inheritance a grandee of the kingdom of Portugal, and, besides his Irish peerage of Strangford, enjoyed the English barony of Penhurst, which had been conferred on his father in 1825, in recognition of his diplomatic services; but these honours have both become extinct by his early and unexpected death. He married, in 1862, the youngest daughter of the late Admiral Sir Francis Beaufort, by whom, however, he has no issue. Lord Strangford was probably the best and most varied linguist this country has ever produced. His knowledge of Oriental languages was almost equally accurate and varied. A Persian would have recognised in him a perfect scholar, and in all the dialects, as well as the languages of the East, he was completely at home.

LORD HAWKE died on Friday at Womersley Park, near Pontefract, aged 60. His lordship, on the death of his father, the third baron, in 1824, succeeded to the title, which was conferred in 1776 on Sir Edward Hawke, the celebrated admiral. He was born in 1799, and was educated at Eton. He married, in 1821, the second daughter of Sir John Ramsden, and afterwards, in 1848, the oldest daughter of the late Walter Featherstonhaugh, Esq., of Chester-le-Street, and has issue one daughter. His lordship's death was caused by gutt in the throat, resulting from an accident he received from being thrown off his horse a short time ago whilst hunting, a sport to which he was particularly attached, having been no less than 42 consecutive seasons master to the Badsworth, a thing unparalleled in the annals of sporting. He is succeeded in the title by his brother, Captain the Hon. Stanhope Hawke, who has been for some time so seriously ill that little hope is entertained of his recovery. He was born in 1804, and became captain in the army in 1825.

ADMIRAL SIR LUCAS CURTIS, K.C.B., Senior Admiral of the Fleet and of the British Navy, died on Thursday at his residence at Portdown Hill, near the village of Cosham, at a very advanced age. He entered the service in 1785, and was present at the reduction of the Isle of Bourbon, and in the unsuccessful operations of Commodore Pym's squadron off the Isle of France. He was taken prisoner and kept for several months in captivity. He afterwards commanded frigates in the channel and other stations. He became Rear Admiral in 1839, and full Admiral in 1855.

ADMIRAL SIR JAMES ALEXANDER GORDON, G.C.B., governor of Greenwich Hospital, died on Friday last, at the age of 86. He was the third son of Mr. Charles Gordon, of Wardhouse, and Kildrinning, Aberdeenshire. He was born in 1782, and entered the navy in 1793, so that he had served for the extraordinary period of 75 years, and was the last survivor of Nelson's captains. He was in the actions fought under Lord Howe, Lord Bridport, and Lord St. Vincent, and at the battle of the Nile. He served in the West Indies, Mediterranean, and Adriatic; and commanded the Active frigate at the battle of Lissa, and at the taking of the French frigate Pomone, at Pelagos, in the same year, when he lost a leg. He commanded the Seahorse frigate in North America in 1814, was made Governor of the Royal Naval Hospital, Plymouth, in

1827; Superintendent of Chatham Dockyard in 1832, Lieutenant-Governor of Greenwich Hospital in 1840, and Governor in 1853. He was created K.C.B. in 1857 for services in the Adriatic, and G.C.B. in 1854, and became Admiral of the Fleet a few years ago. In 1812 he married the daughter of Mr. John Ward, of Marlborough, by whom he had an only son, who died in command of Her Majesty's ship Wolf, off the coast of Borneo, in 1846, and seven daughters, who survive him. The eldest is married to Mr. J. C. Toulger a Master in the Exchequer; the second to the Rev. Dr. Huntington, of Wimbledon; and the third to the Rev. William Barnett, rector of Boxgrove, Sussex.

CAPTAIN WHITLEY, a Peninsular veteran of the old school, died last week at his residence in Kingstown, at the age of 69. He was one of that small band who on the night of the retreat from Corunna took part in the burial of Sir John Moore. He afterwards served with honour through all the Peninsular campaign. He was the inventor of many projectiles of great efficacy in warfare.

Markets.

COVENT GARDEN.—Jan. 16.

There are still no changes of any importance; the only article rather more in request is Kent Cobs, which command a higher price. Fruit and Vegetables are abundant, and prices barely kept up. Almonds Grapes are exceedingly fine, and worth from 8s. to 10s. per 12 lb. American New Town Pippins of excellent quality fetch 50s. per cask; there are also arrivals of Reinette de Bordeaux and Dieu Donne Apples from Bordeaux, realising from 12s. 6d. to 15s. per cask. Oranges are very plentiful. French Asparagus may now be had, at 15s. to 20s. per bundle. Very fine Onions are arriving from Bordeaux, at 12s. to 14s. the cwt. Potato trade is dull, except for best samples, of which there is a scanty supply in general, though there are large arrivals of kidney Potatoes of fine quality from Belgium, realising 90s. per score bags of about 110 lb. each. Flowers chiefly consist of Orchids, Primulas, Hyacinths, Tulips, Heaths, Mignonette, Poinsettias, Cyclamens, and Solanum Capsicastrum.

Table with columns for Apples, Grapes, Kent Cobs, Lemons, Melons, Pears, Pine-apples, Oranges, Beet, Cabbages, Carrots, Celery, Cucumbers, Endive, Garlic and shallots, Herbs, Horse Radish, Leeks, Lettuces, Mint, Mushrooms, Onions, Parsley, Potatoes, Spinach, and Turnips.

Table for HAY—Per Load of 36 Trusses, SMITHFIELD, Thursday, Jan. 14. Columns include Best Meadow Hay, Prime Meadow Hay, Inferior do., New do., Straw, Clover, and Prime new Clover.

Table for CUMBERLAND MARKET, Thursday, Jan. 14. Columns include Sup. Meadow Hay, Inferior do., New do., Superior Clover, Inferior Clover, New do., and Straw.

Table for WHITECHAPEL, Thursday, Jan. 14. Columns include Fine Meadow Hay, Inferior do., Prime New Hay, Inferior do., Straw, Prime 1st cut Clover, Inferior do., Prime 2d cut do., New Clover, and Inferior do.

Table for METROPOLITAN MEAT MARKET.—Jan. 16. Columns include Best Fresh Butter, Second do., Small Pork, and Large Pork.

HOPS.—BOROUGH MARKET, Jan. 15. Messrs. Pattenden & Smith report that the demand for both English and foreign continues of a retail nature, consumers purchasing in small quantities to supply immediate requirements. Quotations are unchanged.

ENGLISH WOOL.—There has been a fair business done at rather better prices, and the tendency is still upwards, though the unsettled state of Continental politics has somewhat checked the manufacturers from going deeply into stock.

Table for CURRENT PRICES OF ENGLISH WOOL, per lb.—s. d. Columns include FLEECES—Southdown hoggets, Half-bred ditto, Kent Fleeces, Southdown ewes and wethers, Leicester ditto, and SORTS—Clothing, Combing.

LEADENHALL AND NEWGATE POULTRY, &c.

THURSDAY, JAN. 14. The London markets are just now very scantily supplied with home-grown Poultry, but large quantities arrive daily from Ireland and the Continent. Turkeys have been very scarce since Christmas. The arrival of the American Grouse adds greater variety to the bill of fare, and Norway is now sending Capercaillie, Black Game, Ptarmigan, and Gallinotia. The great glut of English Game seems over, but the market is still heavy for it. The real trade is very dull indeed.

Table for Geese, Goslings, Turkeys, Ducks, Ducklings, Wild Ducks, Surrey Fowls, Do chickens, Barn door Fowls, Partridges, Pigeons, Tame Rabbits, Wild Rabbits, Pheasants, Teal, Snipes, Hares, Leverets, English Eggs, and Foreign do.

METROPOLITAN CATTLE MARKET.

MONDAY, JAN. 11. We have a fair supply of Beasts, and trade is dull; the choicest qualities, however, are selling about the same as of late, but several inferior descriptions remain unsold. The number of Sheep is about the same as Monday last, and the average quality is pretty good; trade is scarcely as good as last week, yet in best qualities there is not much difference. Good Calves are still scarce and dear. Our foreign supply

consists of 920 Beasts and 22 Calves; from Scotland there are 530 Beasts; from Ireland, 430; from Norfolk and Suffolk, 800; and 940 from the Midland and Northern Counties.

	s. d.	s. d.	s. d.	s. d.
Best Scots, Herefords, &c.	5	2 to 3	6	Do. Shorn
Best Shorthorns	5	0 to 5	4	Ewes & 2d quality
2d quality Beasts	3	4 to 4	0	Do. Shorn
Best Downs and Half-breds	5	4 to 5	6	Lambs
Do Shorn	3	4 to 5	0	Calves
Beasts, 3620; Sheep and Lambs, 19,150; Calves, 36; Pigs, 270.				Pigs

THURSDAY, JAN. 14

We have a good supply of Beasts, and trade is dull, consequently prices are lower, and a clearance cannot be effected. The number of Sheep is in excess of the demand; choicest qualities are rather under Monday's quotations. Good Calves are still scarce and dear. Our foreign supply consists of 436 Beasts and 89 Calves.

	s. d.	s. d.	s. d.	s. d.
Best Scots, Herefords, &c.	5	0 to 5	2	Do. Shorn
Best Shorthorns	4	10 to 5	2	Ewes & 2d quality
2d quality Beasts	3	0 to 3	8	Do. Shorn
Best Downs and Half-breds	5	2 to 5	4	Lambs
Do Shorn	3	4 to 5	0	Calves
Beasts, 1290; Sheep and Lambs, 5340; Calves, 152; Pigs, 50.				Pigs

SEED MARKET.

We have had an average attendance of buyers on our markets during the past week, and a fair amount of business doing. The seed trade continues to exhibit great firmness, and prices are rapidly tending upwards. New English Red Clover seed is exceedingly scarce, and the quality is very poor, being unusually small, and having quite a foreign appearance. From France the arrivals are small, and a large proportion of the imports from that country is in reality German seed. Advices from America speak of a deficient crop, so that it is probable we shall not obtain much from that source. Of Belgian seed there is but little on offer, and that at high rates. If it had not been for Germany we must have been poorly off for Clover seed; under these circumstances it is not surprising that the seed trade rules extremely firm. Alsike and White Clover seed are somewhat slow of sale at last week's currencies. For Trefoil we have a better demand. An extensive business has recently been done in French Italian Rye-grass, at an improvement of 2s. to 3s per cwt. Our letters from France state that the yield this season is only half an average one. As the stocks thus side are very light, we shortly anticipate a considerable advance in this article. New English Dwarf Rape seed is in fair request. There is no alteration in the value of Mustard seed. As now Scarlet Runner Beans are this year very dear, a lively demand has sprung up for Dutch White Runners, which are being largely used in the place of Red. Lentils for feeding are 2s. per qr. dearer. Canary and Hemp seed are slow of sale, at about last Monday's quotations. We have a brisk inquiry for Windsor and Longpod Beans, and seed Peas. There is a good demand for feeding Linseed. Königsberg spring Tares are advancing in price.

JOHN SHAW & SONS, 16, WATER LANE.

MARK LANE.—MONDAY, JAN. 11.

The supply of Wheat from Essex and Kent to this morning's market was very short, the condition generally much affected by the weather; the dry parcels were taken at the quotations of this day's night, but the remainder was difficult of sale, and remained on hand till a late hour. In foreign the business transacted was limited, but the sales made were at about the prices of last week. Malting Barley was rather easier to purchase, but grinding met a good inquiry at extreme rates. There was no change in the value of Beans or Peas. The Oat trade was steady, and prices unaltered. Flour remains as last quoted.

PRICE PER IMPERIAL QUARTER.	s. d.	s. d.	s. d.

FRIDAY, JAN. 15.

The trade throughout the kingdom has been very dull since the 8th inst., and a decline of 1s. to 2s. per qr. on Wheat has been generally submitted to, without leading to any increase in business. Malting Barley has not maintained the extreme rates lately realised, and we have to report a reduction of 1s. to 2s. per qr. in several markets. Grinding qualities are also the turn against sellers. Beans, Peas, and Oats have not undergone any quotable change in value. Flour was difficult to sell, and prices slightly easier. The supplies of grain off the coast this week consisted of 159 cargoes, of which, with those left over from last week, there remained for sale last night 117 cargoes. The floating trade remained inactive throughout the week the fresh arrivals off the coast have not led to an increase in business. Buyers are waiting for the sample boxes and reports of the cargoes. Arrived Wheat has been held for late rates; Maize, Barley, and Beans were unaltered in value, and Rye in steady demand for the Continent. For cargoes on passage and for forward shipment business continues at a standstill.

The arrivals of all grain this week have been moderate. The attendance at this morning's market was very small, and the little English Wheat left over from Monday was offered at a decline of 1s. to 2s per qr. and a part of it only was sold. For foreign there was scarcely any demand, but factors would have accepted a similar reduction to have effected sales. Spring Corn of all descriptions met a dull sale, at rather under Monday's prices.

ARRIVALS THIS WEEK.

	Wheat.	Barley.	Oats.	Flour.
English	640 qrs.	1690 qrs.	— qrs.	700 sks.
Irish	—	600	3200	—

Sold in bottles at 1s. 1/2, 2s., and 3s. in the Kingdom. Caution.—Be sure to ask for "NORTON'S CAMOMILE PILLS," and do not be persuaded to purchase any other.

Freedom from Coughs is Insured. DR. LOCOCK'S PULMONIC. From J. W. F. COLLSMILL, &c. "I hear your Wafers highly spoken of by those who have found them excellent in Coughs, colds, &c." DR. LOCOCK'S WAFERS give instant relief to Coughs, colds, and all disorders of the Throat, to Singers they are invaluable for clearing the voice, and have a pleasant taste. Price 1s. 1/2, and 2s. 6d. per Box. Sold by all Chemists.

DESIGN FOR A NOBLEMAN'S OR GENTLEMAN'S KITCHEN GARDEN OF TWO ACRES.

The Gardeners' Chronicle Newspaper.

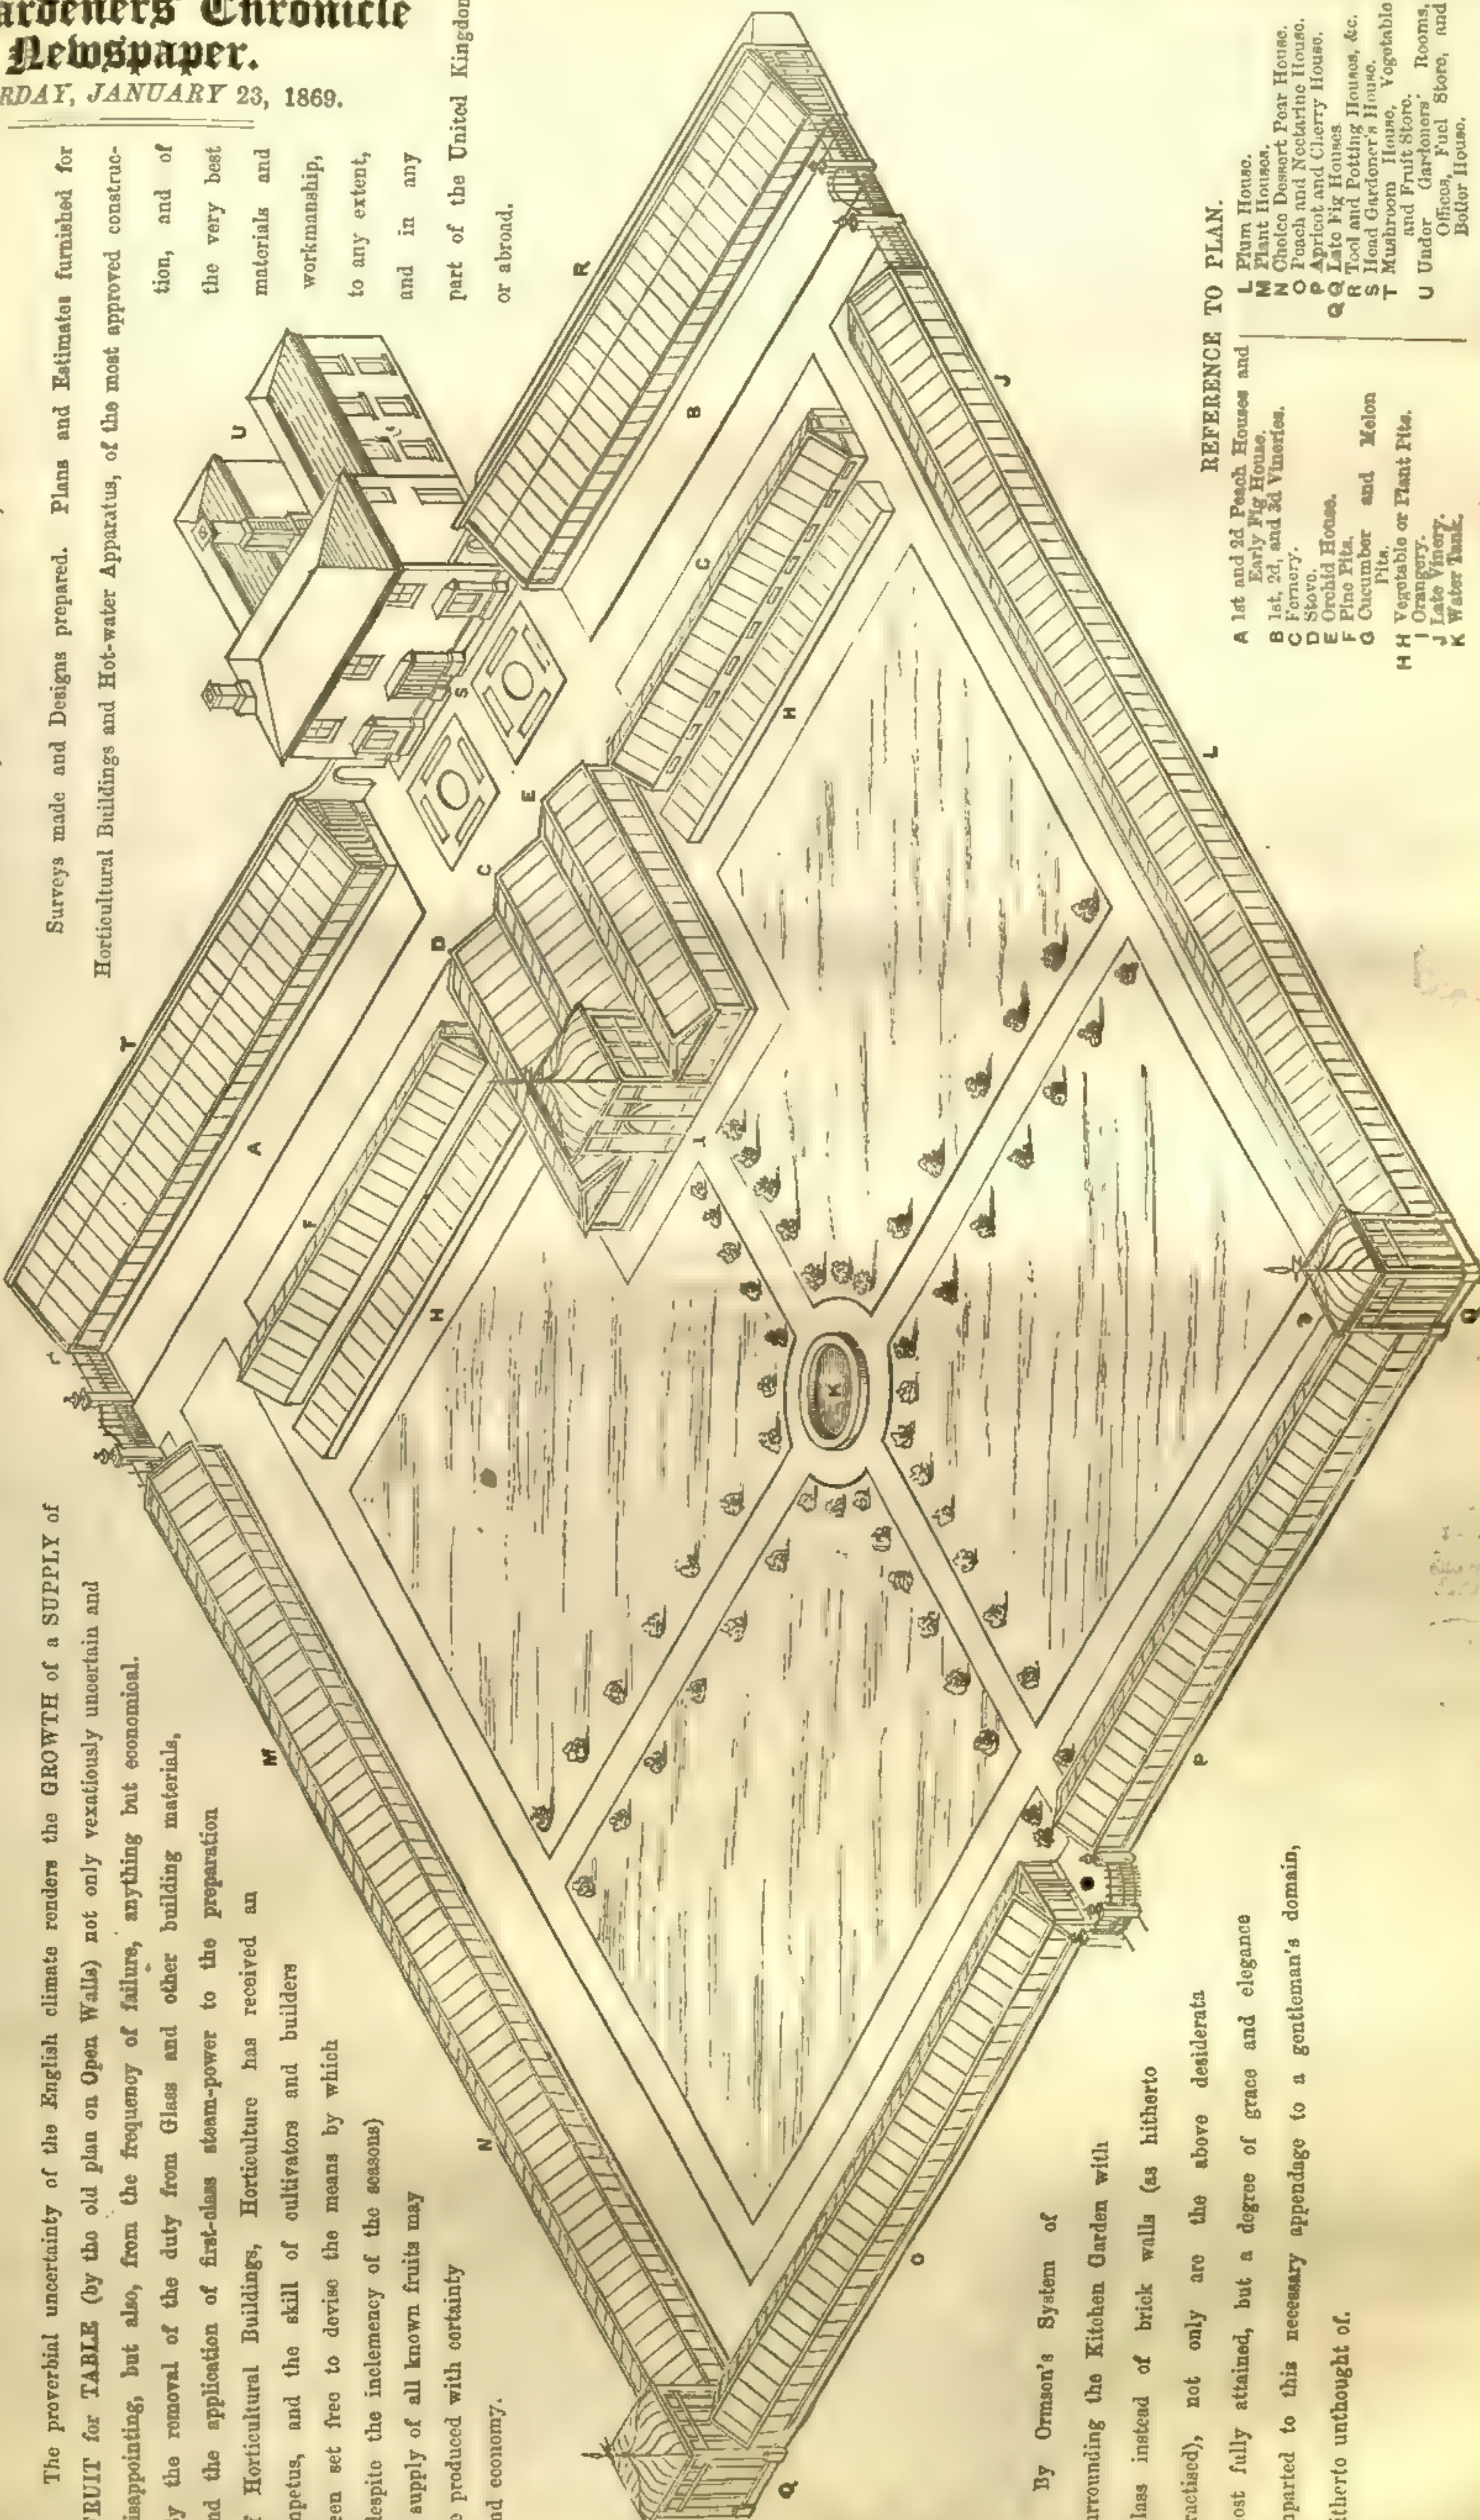

SATURDAY, JANUARY 23, 1869.

DESIGN FOR A NOBLEMAN'S OR GENTLEMAN'S KITCHEN GARDEN OF TWO ACRES, WITH HEAD GARDENER'S HOUSE, UNDER GARDENERS' ROOMS, OFFICES, &c., &c. BY HENRY ORMSON, HORTICULTURAL ARCHITECT, BUILDER, &c.

The proverbial uncertainty of the English climate renders the GROWTH of a SUPPLY of FRUIT for TABLE (by the old plan on Open Walls) not only vexatiously uncertain and disappointing, but also, from the frequency of failure, anything but economical.

By the removal of the duty from Glass and other building materials, and the application of first-class steam-power to the preparation of Horticultural Buildings, Horticulture has received an impetus, and the skill of cultivators and builders been set free to devise the means by which (despite the inclemency of the seasons) a supply of all known fruits may be produced with certainty and economy.

Surveys made and Designs prepared. Plans and Estimates furnished for Horticultural Buildings and Hot-water Apparatus, of the most approved construction, and of the very best materials and workmanship, to any extent, and in any part of the United Kingdom, or abroad.

By Ormson's System of surrounding the Kitchen Garden with Glass instead of brick walls (as hitherto practised), not only are the above desiderata most fully attained, but a degree of grace and elegance imparted to this necessary appendage to a gentleman's domain, hitherto unthought of.

- REFERENCE TO PLAN.
- A 1st and 2d Peach Houses and Early Fig House.
 - B 1st, 2d, and 3d Vineries.
 - C Fernery.
 - D Stove.
 - E Orchid House.
 - F Pine Pit.
 - G Cucumber and Melon Pits.
 - H Vegetable or Plant Pit.
 - I Orangery.
 - J Late Vinery.
 - K Water Tank.
 - L Plum House.
 - M Plant House.
 - N Chelsea Dessert Pear House.
 - O Peach and Nectarine House.
 - P Apricot and Cherry House.
 - Q Q Late Fig Houses.
 - R Tool and Potting Houses, &c.
 - S Head Gardener's House.
 - T Mushroom House, Vegetable and Fruit Store.
 - U Under Gardener's Rooms, Office, Fuel Store, and Boiler House.

HENRY ORMSON, HORTICULTURAL BUILDER TO HER MAJESTY, AND TO THE ROYAL HORTICULTURAL SOCIETY, AND HOT-WATER APPARATUS MANUFACTURER TO THE COMMISSIONERS OF HER MAJESTY'S ROYAL PALACES AND PUBLIC BUILDINGS, AND TO THE ROYAL HORTICULTURAL SOCIETY, STANLEY BRIDGE, KING'S ROAD, CHELSEA, LONDON, S.W.

Redhill Street, Regent's Park, London, N.W.
MRS. BIRCH begs to inform the Nobility, Gentry, and the Public, that she is prepared to ERECT any style of GREENHOUSE or CONSERVATORY in any part of the Town or Country (her late husband having manufactured the Paxton Patent Hot-Houses for the last 10 years). She will erect plain Orchard Houses, Vineries, &c., with 21-ounce good sheet Glass, and any simple plan of Ventilation, at the low rate of from 1s. 7d. to 1s. 10d. per foot superficial (heating and brickwork not inclusive.) Apparatus for opening all the Ventilators at one time, from 5s. each set. Plans and Estimates sent on application.

THE NEW PATENT A1 HORIZONTAL TUBULAR BOILER
 THIS IS THE MOST POWERFUL AND IN EVERY RESPECT THE BEST BOILER YET MANUFACTURED.

IT CAN BE MADE TO HEAT FROM 100 TO 10,000 FEET OF PIPE OR UPWARDS.
 Its advantages are set forth in our CATALOGUE, which will be forwarded on application to
DENNIS AND SCRUBY,
 HORTICULTURAL ENGINEERS, PATENTEES, AND GENERAL HORTICULTURAL BUILDERS IN WOOD OR IRON.
 POSTAL ADDRESS—ANCHOR WORKS, CHELMSFORD. LONDON OFFICE—6, SLOANE STREET, S.W.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

TO MEET A WANT WHICH HAS BEEN LONG FELT BY THE HORTICULTURAL PUBLIC,

MAW & CO.'S PATENT IMPERISHABLE TERRA-COTTA PLANT MARKERS

Are offered as a cheap and permanent substitute for WOODEN and ZINC TALLIES for the Labelling of Plants in Pots, and in the Open Border, and for suspending Roses, Orchids, Ferns, Fruit Trees, &c. These Labels, unlike Wood and Zinc, combine perfect durability with a lasting legible inscription, and form an elegant adjunct to the Garden and Conservatory for the naming of Horticultural and Botanical Collections. They are also invaluable for the labelling of Wine Cellars and for general use in situations where other materials are perishable by damp.

Commended by the Editors of the *Gardeners' Chronicle*, and the Floral Committee of the Royal Horticultural Society. (See *Gardeners' Chronicle*, July 11, 1868.)
 Can be procured from the Manufactory, or through any Nurseryman, Seedsmen, or Ironmonger.

Specimens sent Post Free on application.

No. 1	3 1/2 by 1 inch.	No. 8	1 1/2 inch diam.
No. 2	4 1/2 " "	No. 9	3 1/2 by 2 1/2 inches.
No. 3	5 1/2 " "	No. 10	2 1/2 " 2 1/2 "

No. 6	8 " 1 "	No. 13	2 " 4 "
No. 7	2 1/2 " 2 "	No. 14	3 " 5 "

Can be seen in use at the Royal Gardens, Kew; the Gardens of the Royal Horticultural and Royal Botanic Societies, Battersea Park, the Royal Botanic Garden, at Edinburgh, and Botanic Gardens, Glasnevin, near Dublin, &c.
 Directions for Writing on the Labels with Black-lead Pencil.—Apply a little white paint thinly over the part to be written upon, and whilst wet, write with a hard fine-pointed black-lead pencil. The writing will be perfectly indelible and unaffected by wet immediately the paint is set.
 Black Enamel Writing on the Labels.—All the above sizes can be supplied in several colours, ready written upon, with black enamel, having the appearance of jet black and perfectly permanent. On receipt of Lists of Names, Estimates of Cost will be sent for quantities of Pot or Border Labels, Suspending Labels for Orchids, Roses, Ferns, Fruit Trees, &c. Consecutive Sets of Numerals printed on the Labels, and Labels for Writing ready written with Enamel, kept in stock.

MAW & CO.'S ENCAUSTIC TILE and GEOMETRICAL MOSAIC PAVEMENTS and WALL LININGS
 FOR CONSERVATORIES, GREENHOUSES, ENTRANCE HALLS, VERANDAHS, DAIRIES, &c.

Printed Patterns of various Designs suitable for the above will be forwarded on application, and Drawings, free of charge, of any of the Designs adapted to the given dimensions of spaces proposed to be Paved, will be supplied, accompanied by estimates of cost, including the expense of laying or otherwise. Applications for Estimates should be accompanied by an exact plan of the space drawn to scale, with all the dimensions marked in figures, and care should be taken that the size and position of all door-ways and recesses that have to be paved are correctly represented; and when the walls are not exactly parallel, the measurements between the opposite angles, as well as the height of each wall, should be given.

Address—**MAW AND CO., BENTHALL WORKS, BROSELEY, SALOP.**

The Telegraph and Railway Station at Ironbridge, on the Severn Valley (Great Western) line, is within three minutes' walk of the Works.

HOT-WATER APPARATUS of every description, and complete in any part of the country, for Warming Green-houses, Conservatories, Forcing Pits, &c.

HOT-WATER PIPES. CASH PRICES.

Table with 4 columns: Pipe size (2-inch, 3-inch, 4-inch), Unit (per yard), and Price (1s. 6d., 2s. 3d., 3s. 0d.).

MR. DUCKHAM respectfully informs the Breeders of Herefordshire that he is now preparing for Publication the SEVENTH VOLUME of LYTON'S HERD BOOK, which will contain Pedigrees of Cows and Halls, with their Produce, to December 31, 1858, price 12s.

Nesbit's Practical Mensuration. A thoroughly revised Edition, augmented by a Treatise on Levelling, price 6s. bound.

A TREATISE ON PRACTICAL MENSURATION. In Ten Parts; containing—The most approved Methods of Mensuration of Haystacks, Drains, Drawing Geometrical Figures, Mensuration of superficies, Land Surveying, Mensuration of Solids, The Use of the Carpenter's Rule, Timber Measure, in which is shown the Method of Measuring and Valuing Standing Timber, Artificer's Works, Illustrated by the Dimensions and Contents of a House.

KEY to NESBIT'S PRACTICAL MENSURATION, containing Solutions to all Questions which are not answered in that work; with Reference to the Problems, Rules, and Notes, by which the Solutions are obtained.

A FARMER, in Wiltshire, wishes to receive Two Young Gentlemen as PUPILS in PRACTICAL AGRICULTURE. The system is Corn, Sheep, and Bullock Farming.

GEOLOGY—KING'S COLLEGE, LONDON.—Professor TENANT, F.G.S., COMMENCED A COURSE OF LECTURES on GEOLOGY on FRIDAY, January 22, at 9 A.M.

THE SOCIETY of PAINTERS in WATER COLOURS.—The WINTER EXHIBITION of SKETCHES and STUDIES by the MEMBERS is NOW OPEN, 5, Pall Mall East.

Home News. THE COURT.—On Thursday, the 14th, the Duke and Duchess of Abercorn arrived at Osborne on a visit to the Queen.

THE PRINCE and PRINCESS OF WALES arrived at Vienna on Thursday evening from Copenhagen and Berlin, on their way to Trieste, where they will embark for Egypt. The infant children of their Royal Highnesses arrived at Osborne on Thursday morning from Copenhagen.

PRINCESS CHRISTIAN.—The accouchement of Princess Christian may be expected shortly. Her

Royal Highness's outdoor exercise is now principally confined to carriage drives within the park and Frogmore grounds.

AN ORDER OF MERIT FOR THE COLONIES.—A despatch from the Duke of Buckingham has been published, in which he states that her Majesty has sanctioned such a modification of the statutes of the Orders of St. Michael and St. George, with such an enlargement of its numbers, as will render it available as a reward of distinguished merit or services in any part of her Majesty's colonial possessions.

ILLNESS OF M. VAN DE WEYER.—M. Van de Weyer, late Belgian Minister at the Court of St. James's, is lying seriously ill at his residence, New Lodge, Windsor Forest.

THE BISHOP OF SALISBURY, though he has rallied to some extent within the last few days, is said to be in a precarious condition, the affection of the heart from which he is suffering having become worse since his arrival in London.

THE NEW CANON OF WORCESTER.—Mr. Gladstone has conferred the canonry of Worcester, vacant by the death of the Hon. and Rev. John Fortescue, on the Rev. James Bowling Mozley, B.D., Vicar of old Shoreham.

PARLIAMENTARY MOVEMENTS.—The declaration of the poll for South Derbyshire gives Colonel Wilmot a majority of 33 over Mr. Evans, the numbers being 3511 to 3478.

THE ELECTION PETITIONS.—In the Court of Common Pleas on Thursday judgment was given on the question of the securities required for election petitions. The question raised was whether on a petition attacking two seats, it was sufficient that there should be one security for 1000*l.*, or whether two such securities were required. The Lord Chief Justice said that the Court had found great difficulty in deciding what was the real meaning of the Act, but had unanimously come to the conclusion that one security was sufficient. This case, which arose on the Hull petition, decides, of course, all others of a like nature. The trial of the Norwich election petition concluded on Monday, when Baron Martin gave judgment that Sir Henry Stracey was not duly elected. He considered that Sir Henry had not been guilty of personal bribery, but that bribery by agency had been proved against him. Mr. Tillett, the petitioner, did not proceed with the scrutiny, and, consequently, does not obtain the seat. Baron Martin reserved certain questions as to costs, and also the question whether he should report to the House that there was reason to believe that extensive bribery prevailed at Norwich at the last election. The trial of the Guildford petition concluded yesterday, when Mr. Justice Willes decided that Mr. Onslow was duly elected, and that corrupt practices did not extensively prevail; but he considered the petition very properly brought, and refused to allow the sitting member's costs. The trial of the Bewdley petition commenced on Monday before Justice Blackburn. Baron Martin will try the two Bradford petitions on Monday next, and the trial of the Lichfield petition is appointed to be heard by Justice Willes on Tuesday. The Second Division of the Court of Session at Edinburgh on Wednesday refused an application by Mr. Grieve, M.P., asking leave to appeal to the House of Lords against the recent judgment of the Court refusing to dismiss the petition against his election. The Court held that the appeal was both incompetent and inexpedient. Major Walker has lodged an intimation in the Court of Session that he proposes to withdraw altogether his petition against the election and return of Sir Sydney Waterlow for Dumfriesshire. Justice Keogh gave judgment on Tuesday in the Drogheda petition to the effect that Mr. Whitworth was not duly elected, that the system of intimidation and undue influence of voters was organised, and that Mr. Whitworth must pay the costs. The trial of the Limerick petition commenced on Tuesday in that city before Baron Fitzgerald. The trial of the Dublin petition is fixed for to-day, and that of Cashel for the 11th of February. The Carlow, Athlone, and Enniskillen petitions will be withdrawn.

Foreign.

FRANCE.—The French Chambers were opened on Monday by the Emperor in person. The following is the text of his Majesty's speech from the Throne:—
"Messieurs les Sénateurs, Messieurs les Députés.—The speech which I address to you every year at the opening of the Session is the sincere expression of the thoughts which guide my conduct. To explain frankly to the nation before the great bodies of the State the progress of the Government is the duty of the responsible chief of a free country. The task which we have undertaken together is arduous. It is not, indeed, without difficulty that, on a soil shaken by so many revolutions, a Government is founded sufficiently impressed with the wants of the age to adopt all the benefits of liberty, and sufficiently strong to bear even its excesses. The two laws which you passed during the last Session, and the object of which was the development of the principle of free discussion, have produced two opposite effects, which it may be useful to point out. On the one hand, the Press and public meetings have created in a certain quarter a factious agitation, and have caused the reappearance of ideas and passions which were believed to be extinguished; but, on the other hand, the nation remaining insensible to the most violent incitement, and relying upon my firmness for the maintenance of order, has not felt its faith in the future shaken. Remarkable coincidence! The more adventurous and subversive minds sought to disturb public tranquillity, so much the more profound became the peace of the country; commercial transactions reassumed a fruitful activity, the public revenues increased considerably, the public interests were reassured, and the greater part of the recent elections gave a new support to my Government. The Army Law and the subsidies granted by your patriotism have contributed to strengthen the confidence of the country, and in the just consciousness of its pride it experienced a real satisfaction the moment it

learnt that it was in a position to confront every eventuality. The land and sea forces, strongly constituted, are upon a peace footing. The effective strength of the active army does not exceed that which existed under former systems, but our armament rendered perfect, our arsenals and our magazines filled, our reserves well trained, the National Guard Mobile in course of organisation, our fleet reconstructed, and our strongholds in good condition, give to our power a development which was indispensable. The constant object of my efforts is attained, and the military resources of France are henceforward on a level with its destiny in the world. In this position we can loudly proclaim our desire to maintain peace. There is no weakness in our saying so when we are ready to defend the honour and the independence of our country. Our relations with foreign Powers are most friendly. The revolution which has broken out beyond the Pyrenees has not altered our good relations with Spain, and the Conference, to stifle a threatening conflict in the East, is a great act of which we should appreciate the importance. This Conference approaches its termination, and all the Plenipotentiaries have agreed upon the principles calculated to bring about a reconciliation between Greece and Turkey. If, therefore, as I firmly hope, nothing shall arise to disturb general harmony, it will be our fortune to realise many projected improvements, and we shall endeavour to solve all the practical questions raised by the agricultural investigations. Public works have been sufficiently endowed; parochial roads are being constructed. Education of all classes continues to be successfully developed, and, thanks to the periodical increase of the revenue, we shall soon be able to devote all our solicitude to the diminution of public burdens. The moment is drawing nigh when, for the third time since the establishment of the Empire, the Legislative Body will be constituted afresh by a general election, and each time it will have attained the limit of its legal duration—a thing hitherto unknown. This regularity is due to the harmony which has always existed between us, and to the confidence which I feel in the sincere exercise of universal suffrage. The popular masses are staunch in their faith as in their affections, and if noble passions are able to rouse them, sophism and calumny scarce ruffle the surface. Sustained by your approbation and your concurrence, I am thoroughly resolved to persevere in the course which I have laid down—that is to say, to adopt all real progress, but also to maintain, without discussion, the essential bases of the Constitution which the national vote has placed under shelter from all attacks. 'A good tree is known by the fruits it bears,' says the Gospel. Well, if we cast a glance at the past, which is the Government that has given to France 17 years of ever-increasing quiet and prosperity? Certainly every Government is liable to error, and fortune does not smile upon all enterprises, but that which constitutes my strength is the fact that the nation does not ignore that for 20 years I have not had a single thought, I have not done a single deed, of which the motive was other than the interest and greatness of France. Nor is it ignorant of the circumstance that I was the first to desire a rigorous control over the conduct of affairs; that I with this object increased the powers of the deliberative Assemblies, persuaded that the real support of a Government is to be found in the independence and patriotism of the great bodies of the State. This session will add fresh services to those which you have already rendered to the country. Soon the nation, called together in its *comitia*, will sanction the policy which we have pursued. It will once more proclaim by its votes that it does not desire revolution, but wishes to rest the destinies of France upon the intimate alliance of power with liberty."

The Corps Législatif held their first sitting on Tuesday, when the President, M. Schneider, delivered a short inaugural address, which contained no allusions to politics. The budget for 1870 was laid on the table. In the sitting of Wednesday M. Bethmont moved for permission to question the Government concerning the recent events in the Ile de la Réunion. The Blue-book was communicated to the Deputies during the day. The chapter relative to the relations of France with foreign Powers recalls the fact that the Emperor expressed last year his firm confidence in the maintenance of peace, and that his hopes have not been deceived. The military chapter states the total force of France, including the reserve and the national guard at 1,028,980 men. The Conference held its sixth sitting on Wednesday, and after signing the protocol, decided that it should be transmitted by the President to the Greek Government, and that the Conference should await a reply from Athens before definitively closing its deliberations. Count Walewski, son of the late Minister, will leave Marseilles to-morrow for Athens, with the protocol. The following is stated to be its substance:—

"The rupture between Greece and Turkey, and the events which occasioned it, have determined the Powers which were signatories to the Treaty of Paris, desirous of maintaining peace in the East, to meet in order to define exactly again the principles of international law. The Plenipotentiaries have solemnly declared that every State encouraging insurrection on the territory of another State, opening its ports for privateers engaged in breaking a blockade legally established, or lending its connivance to the formation on its territory of expeditions destined to invade the territory of another State where insurrection may have broken out, is guilty of a violation of international law."

If Greece accepts this declaration, Turkey will withdraw her ultimatum, and if she refuses it the Powers have resolved to preserve the strictest neutrality in the events which may ensue. The Marquis de Lavalette, Minister for Foreign Affairs, received Mr. Burlingame, the Chinese Ambassador, on Wednesday; and it is believed that the Emperor will receive him to-morrow. The case of M. Caron, prosecuted for having in his possession seditious placards, came before the Tribunal on Saturday. M. Caron was sentenced to eight months' imprisonment and a fine of 1000*l.*, and Messrs. Felix Pyat and Poirier, both residing in London, were condemned *in contumaciam* to five years' imprisonment, and fines of 10,000*l.* each. The *Constitutionnel* formally denies a rumour that France had notified the English Government that at the expiration of the Treaty of Commerce of 1860 important modifications of its provisions should be demanded. It declares that the French Government never entertained any intention of the kind. The Marquis de Moustier was transferred on Friday to his private house from the Ministry of Foreign Affairs, where he has been lying since he was taken ill.

SPAIN.—The general elections for the Cortes commenced on Saturday, and have terminated in a large majority for the Monarchical party. The ascertained results of the elections to the Cortes up to Wednesday

were as follows:—Monarchists, 223; Republicans, 15; doubtful, 10. In Madrid the Monarchical majority was more than 2 to 1. In Barcelona, Saragossa, and other cities in Catalonia, Aosta, youngest son of the King of Italy, is to be proposed by the Monarchists as a candidate for the throne. General Prim has ordered General de Camarillo to be struck off the rolls of the army, for having, in an address to the electoral body, General Pezuela and Gasset have also been cashiered.

PORTUGAL.—The President, Vice-President, Secretaries of the Chamber of Deputies have resigned their posts. The Duke of Saldanha has telegraphed the King from Rome, declining the task of forming a new Ministry. The King has consequently summoned the Marquis Sa da Bandeira, and instructed him to present Ministers to continue in office. It is expected that one of the first acts of the Ministers will be to dismiss the Chambers.

SWEDEN.—The Session of the Diet was opened Monday. The speech from the Throne expressed belief that the marriage of the Princess Louise of Sweden with the Crown Prince of Denmark would unite more intimately the three northern countries. Further announced that some new proposals submitted to the Chambers in reference to the constitutional relations between Sweden and Norway together with a Bill for the re-organization of the Army, and a loan of three million six dollars for way purposes. There will be no necessity for an increase in the taxation.

BELGIUM.—The Prince Royal died on Thursday night. His Royal Highness's state had somewhat changed for the worse since the 14th inst. Dr. Jenner, who had been summoned from London, Dr. Koepf, who had been sent for from Germany, abandoned all hope on Wednesday. The King is said to be indescribable. The demolition of the fortifications of Ostend has been commenced, workmen being engaged in filling up the northern part. The whole is to be completed by the 1st of July. MM. Jecker, the banker, and Odysse Barot, a writer on the *Liber* at Paris, have been condemned by the Correctional Tribunal of Brussels to a month's imprisonment and a fine each, for having fought a duel some time ago at Boisfort near Brussels. The seconds were acquitted. The significance of the judgment lies in the fact that this is the first attempt made to put a stop to the practice of Frenchmen choosing the territory of Belgium as a place of settling their "affairs of honour." A question charged, on the proposition of the Royal Academy of Medicine in Belgium, with an inquiry into the propriety of employing women in mines, has sent a report, which expresses the opinion that females are to be excluded from such occupations.

PRUSSIA.—The Prince and Princess of Wales arrived at Berlin on Sunday evening from Copenhagen, and were received at the railway station by the King and Queen of Prussia. Their Royal Highnesses took their residence at the palace of the Crown Prince on Monday, at a chapter of the Knights of the Order of the Black Eagle, his Royal Highness received the order, which had formerly been worn by the Prince Consort. On Wednesday evening the Prince and Princess left Berlin for Vienna. It is said that the North German Confederation will conclude a treaty with Bavaria and Wurtemberg similar to that of Baden, with the object of enabling subjects of Prussia and South Germany to go through their military service in the armies of either North or South Germany. The ordinance confiscating the private property of the King of Hanover will come on for discussion before the full sitting of the Lower House next week, as reported on by the Committee.

TRANSYLVANIA.—The delegates of the Transylvanian municipalities have assembled, to make the necessary preparations for the elections to the Hungarian Diet. The Roumanian members have announced that they will take no part in these elections.

BAVARIA.—The proposal of the Minister of War dividing the Bavarian army into two corps of divisions, in unison with the military system of the North German Confederation, has received the sanction of the King.

AUSTRIA.—The Prince and Princess of Wales arrived at Vienna on Thursday evening. Their Royal Highnesses were received by the Emperor at the railway station, and escorted by him to the palace. On Friday, the Minister of Finance brought forward a bill for amending the tax on trades and introducing an income-tax. The Minister of Commerce has signed the German-Austrian Telegraph Convention on the part of the House.

HUNGARY.—The Emperor and Empress are expected at Pesth at the beginning of February. It is understood that their Majesties will also visit Croatia and Transylvania. The Hungarian party in Prussia are agitating for the recall of the Royal Commission in that town. M. Szemere, Minister of the Interior in 1849, and President of the Ministry in 1849, died on Sunday. The trial of Prince Kara Georgewicz for complicity in the assassination of the late Prince of Serbia is to come publicly before the tribunals on the 8th February.

ITALY.—It is semi-officially denied that the Cambray Digny has opened negotiations for a financial operation on ecclesiastical property. The requirements of the Italian Treasury do not necessitate such an operation at the present time. It is the intention of the Minister to reserve this property for providing means to remove the forced currency.

PAPAL STATES.—Monday being the anniversary of the establishment of the Pontifical See, the Pope celebrated High Mass at St. Peter's.

surrounded by his whole Court. His Holiness enjoys perfect health.

TRUFTY.—The Turkish Government on Tuesday adopted the resolutions of the Conference, and instructed its plenipotentiary in Paris to sign the protocol.

WEST COAST OF AFRICA.—A slight earthquake was felt at Accra on December 21.

CAPE OF GOOD HOPE.—Accounts from Cape Town to the 20th ult. state that the Parliament stood prorogued till January 12, then to be prorogued till the end of February, and eventually would not meet for business till May. The relations between the Orange Free States and the Basutos continued unsatisfactory, and there were frequent skirmishes. Governor Wadehouse had arranged to pay another visit to Basutoland about February 1, with the hope of settling the difficulties. Hopes were indulged in Cape Colony that the Imperial Government might be induced to resume a sovereign sway northward of the Orange River, and that before long British rule would extend to Damaraland and Zambuni. Much discoveries of gold in small quantities have been made in Natal; five more diamonds have been obtained from the Orange and Vaal Rivers; a quantity of silver ore from the newly-explored mine of Namaqualand, and a gem, supposed to be a ruby, had been found near Hopetown.

INDIA.—The Earl and Countess of Mayo left Bombay on the 30th ult. for Madras, via Bejapoor, where they were to be met by Lord Napier of Magdala. Sir John Lawrence was to leave Calcutta for England on the 19th inst. A sharp shock of earthquake was felt on the 10th inst. in Calcutta, and generally throughout the Bengal Presidency. At Bekrar many buildings were damaged, and at Silchar and Cachar it was of a terrible character. Many natives lost their lives, and the destruction of property was very considerable, the Bazar being completely engulfed, and all brick buildings demolished. The earthquake extended to Assam and Dargeeling. The defeat of Abdul Rahman Khan is confirmed. The battle was fought at Ghuznee subsequent to the 24th of December. The exact date is not yet known. The troops of Abdul Rahman have joined Ameer Sheer Ali.

ISLE OF REUNION.—Letters from Bourbon, dated the 30th ult. state that riots had occurred at St. Denis, caused by the collection of the taxes. The College of the Jesuits was attacked, but the Governor succeeded in pacifying the people. On the 2d ult. a demonstration was made in front of the Hôtel de Ville, originating, it is believed, in a misunderstanding. After the crowd had been thrice summoned to disperse the troops fired on the people, and killed or wounded 80. The Governor received on the following day a deputation of influential inhabitants. Explanations were exchanged, and the maintenance of order was then intrusted to the Militia, the troops being confined in the barracks. The Governor, however, proclaimed a state of siege, which was raised the next day. A petition had been presented asking for the expulsion of the Jesuits. A decree was issued by Governor Dupré on the 14th, forbidding the colonial newspapers to publish articles or news of a political character. Authority was subsequently given for the publication of such political matter, on condition that the Editors abstained from attacking the Constitution of the colony, and from alluding to the events which had given rise to the state of siege. They were also ordered not to carry on any controversies calculated to keep up excitement in the public mind. Other letters estimate the number of persons killed or wounded at only 26.

CHINA.—The settlement of the Yangchow outrage has been completed, and the indemnity has been paid to the missionaries. A review of British troops at Yangchow had created a great sensation among the Chinese. Lieutenant Cooper is about to try the route to China from India via Simechow. Sir R. G. Macdonnell has returned from his trip to the north.

JAPAN.—The Mikado made his entry into Jeddo as arranged. A place was reserved for foreigners to witness the procession.

AUSTRALIA.—The Victoria Customs Union has proposed that a Conference should be held, at which delegates from all the colonies should assemble. It will probably be held in Sydney in February. The new Ministry at Sydney has been re-elected, and Parliament has re-assembled. The proposition to hold an Intercolonial Exhibition, after 18 months, has been favourably received at Adelaide. The financial policy of the new Government at Adelaide has been approved. The Surveyor-General is about to proceed on a survey of the northern territory.

NEW ZEALAND.—Advices from New Zealand state that the rebels had surprised the settlers in Poverty Bay, where they had massacred several European families, and committed horrible atrocities. Men were burnt alive, children mutilated, and the dead bodies of women thrown to the pigs. Great mismanagement is attributed to the authorities. The colonial forces on the West Coast have retreated before the rebels, and a large tract of territory had been abandoned. The latest news was more encouraging.

UNITED STATES.—The Treaty between Great Britain and the United States respecting the Alabama claims was sent on Friday by the President to the Senate for its consideration. The Senate on Tuesday had not yet considered the Treaty. In the House a joint resolution of the Vermont Legislature protesting against any renewal of the Canadian Reciprocity Treaty was presented and referred to a Committee. A resolution was offered by Mr. Kelsey, Republican, of Pennsylvania, for an inquiry into the expediency of abolishing or modifying the treaty with Great Britain for the suppression of the slave trade. The House refused to make any appropriation for the mission to Rome. A small military force sent by General Stoneman to assist the Sheriff of Princess Anne county,

Virginia, to execute some writs of ejection upon negroes, was resisted by the blacks, and a sergeant was killed. The negroes were thereupon attacked by the troops, and three of them were killed. It was reported that the blacks were organising to renew the attack. General Porter, of General Grant's staff, reports that the rebels in Arkansas had committed outrages on the Unionists, and that he had organised a militia for his protection, and had authorised them to subsist upon the property of the rebels. George Francis Train, under the auspices of the Fenian Brotherhood of New York, delivered a lengthy address in the Cooper Institute, on the evening of the 5th, on the subject of the wrongs of himself and Ireland, and assured his auditors that he would be the President of the United States for 1872. The steamer Gulf City was wrecked off Cape Look Out, on the coast of North Carolina, on Monday week. Twenty-five persons were drowned, and three were saved.

CANADA.—The Parliament of the Dominion of Canada has been prorogued until February 25.

CUBA.—The Government of Madrid has received a telegram from Havana announcing the capture of Bayama and other important points in the island. The insurgents were obliged to resort to pillage in order to obtain the means of subsistence, and were flying to the mountains. It is hoped that the insurrection will end as soon as reinforcements arrive. General Dulce has ordered all statues of Isabella and other Bourbon symbols to be removed from the public places in Havannah.

PARAGUAY.—Further accounts from Paraguay state that the success of the allies in the recent battle, which ended in the defeat of the Paraguayans and the flight of Lopez, was the result of a flank movement on Villeta, which is now occupied by the Brazilians. The war is generally considered to be at an end.

City Intelligence.

OVEREND, GURNEY & Co.—At Guildhall on Friday, in the case of Overend, Gurney & Co., Mr. Ernest Robins, a clerk in the Bankruptcy Court, was called, for the purpose of officially proving the bankruptcies of a number of firms who, at the time of the transfer of the business, were all largely indebted to the old firm, and whose liabilities were transferred, as valuable securities, to the limited company. Further evidence of a similar nature as to other cases was taken, and the remainder of the sitting was occupied with the cross-examination of Mr. Howell, the accountant. On Saturday the principal witness was Mr. Harding, one of the official liquidators, who gave evidence of a long list of unrealised and valueless securities and debts, the aggregate of which is an enormous sum, handed over from the old to the new firm as worth 20s. in the pound. The hearing was then adjourned for a week. Mr. Harding in the course of his evidence stated that the liquidators had determined on the previous day to make an additional call of 5s. per share, having found it impossible to realise the remaining assets in time to meet the promissory notes which will fall due in March next; and intimated the possibility that in August next a further call of some amount may be necessary to meet the promissory notes which fall due in September. The liquidators have since issued a circular announcing that under the advice of eminent counsel they have "filed a bill against the directors of the company, with a view of making them responsible for the losses sustained by the shareholders arising out of the purchase of the business of the 'old firm,' and the mode in which the arrangements for effecting that purchase were carried out." The inquiry was resumed yesterday, and after several witnesses had been examined, was again adjourned to to-day.

MERCHANTS' COMPANY (LIMITED).—At the Mansion House on Monday Mr. Richard Stuart Lane, Mr. Horace Edward Chapman, and Mr. Frederick John Helbert, three of the directors of the Merchants' Company, were charged with conspiring to defraud Mr. John Somerville, of Glasgow, Mr. Lund, of Litchurch, Derbyshire, and others, by the issue of a prospectus, knowing it to be false. The case appeared to excite extraordinary interest, and the Justice-room was crowded during the hearing. After several witnesses had been examined the investigation was adjourned for a week, and the defendants were admitted to bail—themselves in 1000l. each, and one surety in 1000l. each.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 93½ to 93¼, both for Money and Account; New and Reduced Three per Cents., 93¼ to 93½; India Five per Cents., 112½ to 112¼; Exchequer Bills, 3s. to 8s. pm.—FOREIGN: Brazilian, 76½ to 80½; Egyptian (1864), 87½ to 88½; Ditto Railway, 95½ to 95¾; Ditto Nine per Cents., 91½ to 92½. Ditto Seven per Cents., 74½ to 75½; Ditto (1868), 71½ to 72½; Greek, 11½ to 12; Mexican, 15½ to 15¾; Peruvian, 76½ to 76¾; Portuguese, 36 to 36½; Italian, 58½ to 58¾; Spanish, 31½ to 31¾; Turkish Five per Cents., 38½ to 38¾; Ditto Six per Cents., 60½ to 61; Russian (1862), 85½ to 86½; Oreil-Vitebsk, 80 to 80½; Nicolai, 66½ to 66¾; Moscow, 78½ to 78¾; Charkof, 78½ to 79½; Honduras, 86 to 87; United States 5-20 Bonds, 75½ to 75¾; Erie, 26½ to 26¾; Illinois, 92½ to 93¼.

Metropolis and its Vicinity.

THE ST. ALBAN'S CASE.—An Order in Council on the appeal of "Martin v. Mackonochie" from the Court of Arches to the Queen in Council was published in the Gazette of Friday. After reciting in detail the report of the Judicial Committee, stating that Mr. Mackonochie ought to be admonished to abstain for the future from kneeling or prostrating himself before the consecrated elements during the Prayer of Consecration,

and also from using lighted candles on the communion table during the celebration of the Holy Communion at times when such lighted candles are not wanted for the purpose of giving light; the Order announces that her Majesty, having taken the said report into consideration, had been pleased by and with the advice of her Privy Council to approve thereof and of what was therein recommended, and to order that the same be duly and punctually observed, complied with, and carried into execution. "Whereof all persons whom it may concern are to take notice and govern themselves accordingly." On Wednesday Mr. Mackonochie was served with a motion from the Privy Council, admonishing him to abstain from the practices condemned by the recent judgment. Mr. Mackonochie had previously addressed a long letter to the daily papers on the subject of the judgment, in which he complains of the manner in which the Ritualists are "outraged" by its injustice, and of the "marked and deliberate way in which the argument on which the decision is based cuts them off, as far as the act of a mere civil court can do so, from Catholic tradition." He says that they are to stand quiet, though in danger of being called upon to break their ordination vows on some matter which to the world looks trivial, though to them essential, and that "by a Court which has no spiritual jurisdiction over them, and whose decrees, therefore, cannot bind them in foro conscientie in matters spiritual." He calls upon Churchmen to "begin at once and stick to the work of insisting upon properly-constituted ecclesiastical Courts, in which Church law may be impartially and equitably administered by men really learned in the matter on which they are called to adjudicate." He says that the conviction is gaining ground that the time has come for the Church to claim deliverance from the yoke of State control, and that the union of Church and State is an anachronism, and ought to be swept away. "What right," he says, "has the Spouse of Christ to ally herself with the powers of the world? Surely to do so is to commit that terrible spiritual adultery against which her Lord has so often warned her." He calls upon the Ritualists, as citizens as well as Churchmen, to move every power to obtain a dissolution of this "ungodly alliance" and says that, once free from State control, they will begin to feel as a body, and not merely as individuals, that they belong to a kingdom which "is not of this world." He concludes by saying that it is a great blessing to find that "secession" does not appear to suggest itself to the minds of people generally as a possible solution of the present difficulties, and that they should have no faint-hearted desertion, but take courage out of defeat, and rally themselves in their proper posts for "the glorious contest which is before them—freedom for the Church of their fathers." At All Saints', Lambeth, on Sunday, the Rev. Dr. G. F. Lee, on entering the pulpit read the following protest against the recent judgment:—

"I, George Frederick Lee, vicar of All Saints', Lambeth, having in mind the provisions of Magna Charta, and the terms of my ordination, do hereby solemnly protest against the said judgment, and against the imposition of pains and penalties in matters of Church discipline by the said Privy Council."

The altar lights and the use of incense were discontinued at St. Mary Magdalene's, Munster Square, and St. Paul's, Walworth, on Sunday, but there was kneeling and prostration by the officiating ministers after the consecration at the latter church, as well as at All Saints', Lambeth. The Rev. W. J. Bennett, M.A., vicar of Frome, the leader of the party who intend to resist the decree of the Judicial Committee, has issued a statement of his views, and invited all who agree with him to join in the following "declaration":—

"We, the undersigned priests and deacons of the English Church, yielding to none in devoted loyalty to her Majesty the Queen, and the Crown of these realms, as in all cases ecclesiastical and civil supreme, are nevertheless constrained, by prior obedience to the Catholic Church of Christ, to repudiate the authority of the Court of the Judicial Committee of the Privy Council, which has lately pronounced a judgment in regard to the rites and ceremonies of the Church. We feel ourselves bound to continue as heretofore in our several churches those rites, ceremonies, and usages of the Primitive Church which have been condemned by a court purely secular and contrary to the English constitution. And this we do according to our Divine Lord's precept, which, while it enjoins us to obey Cæsar in the things of Cæsar, clearly enjoins us to obey God in the things that are God's."

Archdeacon Denison, at a meeting of the clergy at Taunton on Monday, expressed himself rather strongly on the untenable position of the Ritualists. He said that he was an advanced Ritualist himself, but it was impossible for him to understand how men could be content to hold their position by the law, and yet refuse to obey the law. This had led him to draw himself quite clear of men who would not obey the law. He would not say, "This is the law, but because it is against me I will not obey it." The Archbishop of York has sent the following reply to Canon Trevor, who made inquiry of his Grace respecting assertions which had been circulated as to the opposing votes, the neutrality, and the casting voice of certain members of the Judicial Committee at the recent sitting:—

"Bishopsthorpe, Jan. 2. My dear Canon Trevor,—I suppose your question refers to a letter of Dr. Littledale's in the Daily News, quoting an avowal of the mode in which the judgment of the Privy Council in the Mackonochie case was arrived at. The whole story is an invention, with no ground of truth. More you will not expect me to say. If I said less you might, perhaps, infer assent from my reserve.—I am, ever yours truly, W. Ebor."

THE CASE OF THE REV. MR. BENNETT.—The report of the commissioners appointed by the Bishop of London on the alleged charge of heresy by Mr. Bennett, of Frome, has been sent to the Bishop of Bath and Wells, and the case will forthwith be sent, by letters of request of his lordship, to the Arches' Court.

SECESSIONS TO ROME.—The Record states that both the curates of St. Mary's, Soho, have been received into the Church of Rome. The junior curate was ordained only on last Trinity Sunday.

...that the visiting justices of Taunton gaol had had a medical inquiry into the case; that the result of the inquiry was that he had been pronounced totally insane, and that an application had been made to the Home Office to have him removed to the asylum. He put it to the meeting if they would have acted otherwise than he did. The power lodged in the great responsible power, was exercised, it seemed to him, under circumstances exactly those for which it was intended, and he would have been acting an unworthy part if, on account of any fear of offence to the public, he had not exercised that power in the manner he had done.

Ireland.

THE NEW LORD-LIEUTENANT.—The public entry of Earl Spencer, the new Lord-Lieutenant, into Dublin took place on Saturday, but the unfavourable weather rendered it a very uninteresting spectacle. On Tuesday addresses were presented to his Excellency by the Corporation and the University of Dublin. The Corporation expressed the hope that his term of office would be marked by measures of conciliation and justice, producing tranquillity in this distracted and unhappy country, and that it would be the beginning of a new era in Ireland. It also stated that an amnesty of the Fenian prisoners would be much satisfaction to the country. His Excellency, in reply, said that England desired to mete out to Ireland the same measure of justice as she herself enjoyed, and he was sure that the Corporation would help the Government in carrying out such measures as were necessary in the interests of justice, respect for constitution, and personal liberty. The proposition of an amnesty, he said, would receive the anxious attention of the Government.

THE FENIAN CONVICTS.—The Dublin Corporation are about, in co-operation with other municipalities, to send a deputation to London to present a petition to the Queen in favour of a Fenian amnesty.

THE MURDER OF MR. BAKER.—A reward of 300l. has been offered by the Government for information likely to lead to the discovery of the murderer of the late Mr. Baker.

Scotland.

LORD-LIEUTENANCY OF LANARKSHIRE.—It is understood that the Earl of Home will be appointed to this post, vacant by the death of Lord Belhaven.

EDINBURGH UNIVERSITY.—On Monday the Right Hon. James Moncreiff, the Lord Advocate for Scotland, was installed as Lord Rector of the University of Edinburgh. The ceremony took place in the Music Hall at 10 o'clock, in the presence of the students of the University and a large company of ladies and gentlemen.

THE BOARD OF TRADE AND BOTTLE-NOSED WHALES.—A curious correspondence has taken place between Mr. Alexander Drew, of Nairn, and Mr. James M. Bright, President of the Board of Trade. Mr. Drew writes a scheme for clearing the seas of bottle-nosed whales and of porpoises, which, he says, are great destroyers of fish. In a letter to Mr. Bright he said:—"I beg to direct the attention of your great mind to the subject, and to state that it may be satisfactorily solved for the public benefit, and the nation at large. You see that I suggest a royal bounty be offered at the commencement of the enterprise, so as to induce parties to enter into the venture, which I have no doubt whatever will pay. In this I hope you will concur, and that you will use your influence with Parliament to grant such a bounty to patronise the laudable object in view—to clear the seas of these pests, which are depriving our fisherman of their living, by devouring and destroying the greatest quantity of the fish." Mr. Bright replied:—"I do not think Parliament is likely to grant any sum of money for the purpose to which you allude. If your facts are correct, would it not be better to employ some of your fishermen to make the attempt to capture those sea poachers, as you call them? If a single fisherman succeeded, and the venture proved successful, others would follow, and you would not need to apply to Parliament." Mr. Drew did not accept Mr. Bright's suggestion, and he wrote in answer:—"I think you take a far too contracted view of the great national problem which I propose—the clearing the seas of those whales and porpoises which have been feasting in luxury on the population of the three kingdoms have been, to a certain extent, fasting, not for their sins, but for want of food. You would not believe that it is a problem to our fishermen how to catch a porpoise. It will take a long training how to learn the art, and it will not do to depend upon single fishermen. The project I propose would be a company, of capital; but that would be useless unless patronised by the Government offering a small bounty at the commencement, so as to start the project, and would give a stimulus for other companies to other parts of the British nation. As I see it, instead of that if there were any redundancy it might be employed in this national undertaking, and confine their energies to the capture of bottle-nosed whales and other ponderous monsters." A subsequent letter from Mr. Drew elicited the following reply from Mr. Calcraft, the private secretary:—"I have your letter of the 26th of December, transmitting copies of a correspondence between Mr. Loch, and yourself upon the bottle-nosed whale."

Railways.

THE PROPOSED LINE UNDER OXFORD STREET.—The Hyde Park and City Railway has been abandoned in the present session, in consequence of the opposition offered to the scheme by the Oxford Street Railway.

FATAL ACCIDENT AT THE COPENHAGEN TUNNEL.

—In the fog of Monday a fatal accident took place at the Copenhagen Tunnel, Caledonian Road. The driver of a coal train from Holloway to King's Cross was unable to see the signals, and ran off the line to the siding, dashing eventually, at the rate of 20 miles an hour, against a brick wall 10 feet thick. The engine was knocked to pieces, and the driver and stoker were killed on the spot. The guard in the van at the end of the train jumped out and escaped with a few bruises.

COLLISIONS ON THE NORTH LONDON.—On Monday night as a train from Broad Street to Richmond approached the Acton Junction, the driver failed to perceive, in consequence of the fog, that the "danger" signal was on, and proceeded to cross the Kew and Broad Street line, when the Broad Street train to Richmond dashed into its centre. The shock to both trains was very serious, and great damage was done to the carriages. Six ladies and gentlemen, who were riding in the first-class carriages of the Kew train, were injured, but not to a very serious extent. Mrs. Morgan, who was in the carriage dashed into by the Broad Street train, had both legs broken, and is now lying in St. George's Hospital. On Tuesday morning another collision on this line took place at the Waltham Green Station between two trains, by which several passenger carriages were shattered and overturned, and several people more or less injured. Surgical aid was procured at the station for the wounded passengers, who were despatched to their homes as soon as possible.

COLLISION ON THE GREAT NORTHERN.—On Monday afternoon a collision occurred at the Ardsley station between Leeds and Wakefield. A coal train consisting of 30 waggons was emerging from a siding at the moment when a London fast train was running past. The engine-driver of the latter laid himself on the plates of his engine, while the fireman jumped off, to escape the consequences of the collision, which was disastrous in its effect upon waggons and material, but neither engine-driver nor fireman was seriously hurt.

ATTEMPT TO BURN A STATION.—At the Leeds Town Hall on Friday a young man named John Clay, who said that he came from Cleckheaton, was charged with setting fire to the Central Railway Station. The prisoner was sentenced to be imprisoned with hard labour for two calendar months.

Law.

CENTRAL CRIMINAL COURT.—The Barnsbury Murder.—George Campbell, the young Scotchman charged with shooting a fellow-countryman at a Christmas party at Barnsbury, was acquitted on the capital charge and found Guilty of manslaughter only. Mr. Justice Keating sentenced him to 12 months' hard labour.—The Leicester Square Fire. Joseph M. Morris was acquitted on the charge of attempting to defraud the Gas Light and Coke Company by undue claims arising out of the Saville House fire.—Fraud on the Paymaster-General.—Walter Ball and William Rutter, two clerks, were found Guilty of defrauding the Paymaster-General of £367, by uttering a forged cheque, and were sentenced—Ball to 10 years', and Rutter to 7 years' penal servitude.

MIDDLESEX SESSIONS.—The late Attack of Burglars on the Police.—William Summers, 30, Henry Smith, 28, and John Bennett, 20, were charged with assaults on several police-constables while endeavouring to take them into custody for attempting to commit burglaries in Percy Circus. It will be remembered that these men were well-known burglars, who had all been frequently convicted, and that one of them had been sentenced to six years', and the two others to four years' penal servitude, but had been released on tickets-of-leave. The Court sentenced Summers to five years' penal servitude, Bennett and Smith to two years' imprisonment, with hard labour.

Sporting.

THE CASE OF DAY v. ROUS.—Since the death of the Marquis of Hastings Mr. John Day has withdrawn the action brought by him against Admiral Rous, who has consequently withdrawn his letter published in The Times on the 16th of June, with an intimation that he does not consider himself justified in desiring it to be published.

Obituary.

SIR HENRY ELLIS, K.H., one of the oldest of our public servants, who held for nearly 30 years the post of Principal Librarian of the British Museum, died on Friday last, at 24, Bedford Square, in his 92d year. He came of an old Yorkshire family, and was born in 1777. He received his early education at Merchant Taylors' School, whence in due course he passed as a scholar to St. John's College, Oxford. He took his degree at the end of the last century, and was elected to a Fellowship, which, however, he vacated before he had held it many years, by his marriage in 1805 with Frances Jane, daughter of the late Mr. John Frost, of Ashurst Wood, Sussex. He was appointed principal librarian of the Museum in 1827, and was for many years was one of the most active officers of the Society of Antiquaries. In middle life he was indefatigable as an author, among the most valuable of his publications are his "Original Letters Illustrative of English History, with Notes and Illustrations," mainly from the autograph originals in the British Museum, the State Paper Office, and other sources. This work bears the reputation of being a most interesting repository of important facts, which his industry brought to light. He was also the responsible editor of an enlarged edition of Dugdale's "Monasticon Anglicanum," in several volumes folio. He was also the author of the General Introduction to "Domesday Book;" besides which he edited several volumes for the Record Commission, and edited revised, and introduced to the public numerous important publications on the history and antiquities of England. He will long be remembered, both in the Museum and among a large circle of attached friends, as one of the most learned and industrious of antiquaries. In recognition of his literary merits, the Hanoverian Guelphic order of knighthood was bestowed upon him in 1833.

MR. CHARLES R. WELD, late assistant secretary to the Royal Society, died on Friday, from a sudden attack of disease of the heart, at his residence, New Bridge Hill, near Bath, in his 56th year. He was born in 1813 at Windsor, and was the son of Mr. Isaac Weld, of Dublin, where he was educated. He was called to the Bar at the Middle Temple in 1844. In 1847 he was appointed assistant secretary and librarian to the Royal Society, and held that post for upwards of 15 years. He was known as the author of "The History of the Royal Society," published in 1847; "Auvergne, Piedmont, and Savoy," in 1848; "A Vacation Tour in the United States and Canada," in

1854; "A Vacation Tour in Brittany," in 1855; "A Vacation in Ireland," in 1858; "The Pyrenees, East and West," in 1859; "The Highlands, Orcadia, and Skye," in 1860; "Sketches in India," in 1862; "A Winter in Rome," in 1865; "Florence, the New Capital in Italy," in 1867, and of several pamphlets on subjects connected with Arctic explorations. He took an active share in the arrangement and management of the Philosophical Department of the International Exhibition of 1862; he also represented this country at the Paris Exhibition as one of the Assistant Commissioners, and produced an elaborate Report on the Horological Department.

Markets.

COVENT GARDEN.—Jan. 23.

No change of any importance has taken place. Kent Cobs are still in request, and command a good price. Fruit and Vegetables are abundant, and prices barely kept up. Almonds Grapes are exceedingly fine, and worth from 8s. to 10s. per 12 lb. American New Town Pippins of excellent quality fetch 50s. per cask, Reinette de Bordeaux and Dieu Donne Apples from Bordeaux realise from 12s. 6d. to 15s. per cask. Oranges are very plentiful. French Asparagus may be had, at 15s. to 20s. per bundle. Very fine Onions from Bordeaux, at 12s. to 14s. the cwt. Potato trade is dull, except for best samples, of which there is a scanty supply in general, though there are large arrivals of Kidney Potatoes of fine quality from Belgium, realising 90s. per score bags of about 110 lb. each. Flowers chiefly consist of Primulas, Hyacinths, Tulips, Heaths, Mignonette, Poinsettias, and Cyclamens.

FRUIT.

Apples, per bushel, 4s to 8s | Melons, each, 2s to 4s
Grapes, per lb., 3s 6d to 6s | Pears, per doz., 4s to 8s
Kent Cobs, per lb., 1s to 1s 3d | Fine apples, per lb., 6s to 8s
Lemons, per 100, 4s to 8s | Oranges, per 100, 2s to 7s

VEGETABLES.

Beet, per doz., 1s to 2s | Mint, per bunch, 6d to 8d
Cabbages, per doz., 1s to 2s | Mushrooms, per pott., 1s to 1s 3d
Carrots, per bunch, 6d to 10d
Celery, p. bund., 1s 6d to 2s 6d
Cucumbers, each, 1s to 2s
Endive, per doz., 1s 6d to 2s
Garlic and Shallots, per lb., 8d
Herbs, per bunch, 2d to 4d
Horse Radish, p. bund 3s to 5s
Leeks, per bunch, 2d to 4d
Lettuces, per score, 1s to 2s 6d

HAY.—Per Load of 36 Trusses.

SMITHFIELD, Thursday, Jan. 21.

Best Green Hay 120s to 130s
Prime Meadow Hay 110s to 120s
Inferior do. 85 95
New do. 26 36
Straw 26 36

CUMBERLAND MARKET, Thursday, Jan. 21.

Sup. Meadow Hay 112s to 120s
Inferior do. 100 105
New do. 26 36
Superior Clover .. 128 135

WHITECHAPEL, Thursday, Jan. 21.

Fine Meadow Hay 108s to 114s
Inferior do. 75 90
Prime New Hay 28 33
Inferior do. 28 33
Straw 28 33

COALS.—Jan. 20.

Cowpen Hartley, 15s. 6d.; Hollywell Main, 16s.; Walls End Haswell, 17s. 6d.; Walls End Pittington, 16s.; Walls End South Hetton, 17s. 6d.; Walls End Tunstall, 15s. 8d.; Walls End Original Hartlepool, 18s.—Ships at market, 17; sold, 13.

METROPOLITAN MEAT MARKET.—Jan. 23.

Best Fresh Butter 19s. per dozen lb.
Second do. do. 17s.
Small Pork, 4s. 4d. to 5s. 0d.; Large Pork, 3s. 8d. to 4s. 2d. per 8 lb.

HOPS.—BOROUGH MARKET, Jan. 22.

Messrs. Pattenden & Smith report the trade quiet, quotations being nominally unchanged. The stock of choice Hops, both English and foreign, is very limited.

ENGLISH WOOL.

There has been a brisk demand for wool, and prices in most instances must be quoted 1/4d. dearer. Consumption is going on freely, and with peace, and every prospect of a dear cotton market, rates will probably yet materially advance.

CURRENT PRICES OF ENGLISH WOOL. per lb.—s. d. s. d.
FLEECES—Southdown hoggets 1 4 to 1 5
Half-bred ditto 1 4 1/2 to 1 5 1/2
Kent Fleeces 1 5 to 1 5 1/2
Southdown ewes and wethers .. 1 4 to 1 4 1/2
Leicester ditto 1 1 to 1 1 1/2
Sorts—Clothing 1 0 to 1 8
Combing 1 2 to 1 10

POTATOES.—SOUTHWARK, Monday, Jan. 18.

During the past week the arrivals both coastwise and by rail are still more than equal to the demand; trade is extremely dull, and second rate samples were neglected. The following are this day's quotations.—Yorkshire Regents, per ton, 70s. to 120s.; do. Flukes, 70s. to 140s.; Lincolnshire Regents, 60s. to 90s.; Dunbar and East Lothian do., 70s. to 120s.; Perth, Forfar, and Fife do., 60s. to 110s.; do. Rocks, 60s. to 75s.; French and Belgian Whites, 40s. to 80s.

LEADENHALL AND NEWGATE POULTRY, &c.

THURSDAY, Jan. 21.

Trade dull; supply in general good, but a singular deficiency of English Ducks and Geese.

Geese, French, each 5 0-7 6 | Pigeons .. each 1 0-1 3
Goslings 8 0-10 0 | Tame Rabbits .. 1 4-1 8
Turkeys 7 0-15 0 | Wild Rabbits .. 0 9-1 3
Ducks 2 6-3 6 | Pheasants .. 2 6-3 6
Ducklings 3 6-4 6 | Teal 1 2-1 6
Wild Ducks 2 0-2 6 | Snipes 1 3-1 6
Surrey Fowls, couple 7 0-11 0 | Hares 2 6-3 0
Do. chickens .. 5 6-7 0 | Plovers 1 0-1 3
Barn-door Fowls .. 5 6-8 0 | English Eggs, p. 100, 10 0-12 0
Partridges .. each 1 0-1 6 | Foreign do .. 10 0- ..
Fresh Butter, 1s. 4d. to 1s. 6d. per lb.

METROPOLITAN CATTLE MARKET.

MONDAY, Jan. 18.

The supply of Beasts is rather larger than on Monday last. Trade is by no means brisk, and some kinds are rather lower; choice English Beasts are not very plentiful, and find purchasers at about late rates. The number of Sheep is small; an early clearance is effected at higher rates. Calves are still scarce and dear. Our foreign supply consists of 1645 Beasts

and 30 Calves; from Scotland there are 540 Beasts; from Ireland, 376; from Norfolk and Suffolk, 600; and 819 from the Midland and Northern Counties.

Table with columns for 'Best Scots, Herefords, &c.', 'Best Shorthorns', '2d quality Beasts', 'Best Downs and Half-breds', 'Do. Shorn', and 'Best Long-wools', 'Do. Shorn', 'Ewes & 2d quality', 'Do. Shorn', 'Lambs', 'Calves', 'Pigs'.

THURSDAY, Jan. 21.

We have had a short supply of Beasts, and consequently trade is rather brisk; prices for all kinds are quite as good as on Monday, and in a few instances are exceeded.

Table with columns for 'Best Scots, Herefords, &c.', 'Best Shorthorns', '2d quality Beasts', 'Best Downs and Half-breds', 'Do. Shorn', and 'Best Long-wools', 'Do. Shorn', 'Ewes & 2d quality', 'Do. Shorn', 'Lambs', 'Calves', 'Pigs'.

SEED MARKET.

Firmness of tone continues to characterise the agricultural seed trade. New English Red Clover seed is much inquired for, but choice qualities are exceedingly scarce.

MARK LANE.—MONDAY, Jan. 18.

There was only a moderate supply of English Wheat to this morning's market, the condition of which was much affected by the weather; millers, consequently, were reluctant purchasers.

Table with columns for 'WHEAT, Essex, Kent, Suffolk, White', 'Norfolk', 'Foreign', 'BARLEY, grind. & dist. 38sto40s. Chev.', 'OATS, Essex and Suffolk', 'RYE', 'BEANS, Mazagan', 'PEAS, White, Essex, and Kent', 'MAIZE', 'FLOUR, best marks delivered'.

FRIDAY, Jan 22.

The business in Wheat has been slow, and the condition of home-grown being much affected by the weather, we have to report a further general reduction of 1s. to 2s. per qr. in the value of this article throughout the markets of this kingdom.

The arrivals of all grain and foreign Wheat this week have been small, of foreign Barley and Oats moderate.

ARRIVALS THIS WEEK.

Table with columns for 'Wheat', 'Barley', 'Oats', 'Flour', and rows for 'English', 'Irish', 'Foreign'.

LIVERPOOL, Tuesday, Jan. 19.—We had a fair attendance at our Corn Exchange this morning, who showed more disposition

to purchase Wheat than of late, but holders being unwilling to make the concession demanded, a moderate extent of business was ultimately transacted, at a decline of 4d. per cental on the currencies of this day se'night.

AVERAGES.

Table with columns for 'Wheat', 'Barley', 'Oats' and rows for 'Dec. 12', '19', '26', 'Jan. 2', '9', '16', 'Agg. Average'.

To Landscape Gardeners, Surveyors, and Others. CORPORATION of MANCHESTER.—ALEXANDRA PARK.—The Corporation invite Landscape Gardeners, Surveyors, and others, to send in DESIGNS in Competition for Laying-out the Alexandra Park.

WANTED, a HEAD GARDENER, married, without children.—R. V., Oldbury Court, Fishponds, Bristol.

WANTED, a single Man, who is accustomed to general NURSERY WORK, and a good PROPAGATOR.—Apply by letter, stating wages and other particulars, to J. E. ROBERTS, 7, Piazza, Denbigh.

WANTED, a SALESMAN, for Covent Garden Plant Market. Unexceptionable references required.—HENRY BAILEY, Royal Nursery, Feltham, Middlesex.

WANTED, a sharp, active SHOPMAN, to Superintend the Seed Trade in all its branches.—Must be strictly honest, trustworthy, and used to the business.—Apply to FLINTHAM & SON, Market Place, Rotherham, Yorkshire.

WANTED, an ASSISTANT SHOPMAN, who writes a good hand and is quick at counter work.—Character must bear the strictest investigation. A young Man would find this a good opportunity for improvement.—Address, with terms and experience, Y. Z., Messrs. Hurst & Son, 6, Leadenhall Street, London, E.

WANT PLACES.—Letters to be Post Paid.

EXPERIENCED GARDENERS (or as GARDENER and BAILIFF), of various qualifications, recommended to Gentlemen.—Further particulars given on application to Messrs. F. G. HENDERSON & SON, Wellington Nursery, St. John's Wood, London, N.W.

To Gardeners and Bailiffs (Head, Foremen, or Under). JAMES CARTER AND CO. having many applications for the above request that those WANTING SITUATIONS will send NAME, ADDRESS, and COPIES of TESTIMONIALS for ENTRY in their FREE REGISTER.

GARDENER (HEAD).—Age 28, single; thorough knowledge of the profession in all its branches. Good character.—A. D., High Street, Hampton Wick, Middlesex, S.W.

GARDENER (HEAD).—Age 35; one child 5 1/2 years. Experienced. Nine and a half years in present situation.—A. B., Coombe, Croydon, Surrey, S.

GARDENER (HEAD).—Age 31, married, one child; has a good practical knowledge of his profession in all its branches. Can be highly recommended. Three years in last situation.—J. W., Maison Dieu, Richmond, Yorkshire.

GARDENER (HEAD), age 32, married.—The Advertiser wishes to recommend his Gardener, now about to leave his service. Active, thoroughly practical, with good character in every respect.—W. H., Post Office, King Street, near Wokingham.

GARDENER (HEAD).—Age 35, married; practically understands the Culture of Fruit and Flowers, Early and Late Forcing, also the Management of Grass Land if required.—W. K., Gardeners' Chronicle Office, W.C.

GARDENER (HEAD).—Age 26, married, no incumbence; has a good knowledge of Early and Late Forcing of Fruit, Flowers, and Vegetables, Stove and Greenhouse Plants, also Kitchen and Flower Gardening. Can be well recommended by present employer.—A. B., Dunorlan, Tunbridge Wells.

GARDENER (HEAD).—Age 40, married, no incumbence, well understands Modern Gardening in all its branches. Five years' character from a Gentleman where he has had the Management of a First-class Garden.—HOBBS, Mr. Siley, Kirkdale Nursery, Upper Sydenham, S.

GARDENER (HEAD).—Age 30; has served in first-class and very extensive places, and is well acquainted with the Forcing of Pines, Vines, Peaches, Nectarines, Melons, and Strawberries, Summer and Winter Cucumbers, the Growing and Fruiting of Vines in Pots, the successful Cultivation of Orchard-house Fruits as well as all kinds of Outdoor Fruit, Master of the Indoor Plant Department, the supplying Conservatories with Blooming Plants all the year, much experience in Kitchen and Flower Gardening, the keeping of Pleasure Grounds, &c. Testimonials most reliable.—S. E., 240, Rochdale Road, Manchester.

GARDENER (HEAD, or SINGLE-HANDED), married.—Mr. DRAPER, Gardener to the Right Hon. Earl Vane, will be glad to recommend his Foreman as above, to any Lady or Gentleman, as a steady, industrious young Man, well versed in the various branches of his profession.—J., Seaham Hall, Sunderland.

To Noblemen and Gentlemen. GARDENER (HEAD), or GARDENER and BAILIFF, to any Nobleman or Gentleman in want of a good Servant.—Age 45, has for the last 20 years held two important situations as above. Testimonials and character will bear the strictest scrutiny.—H. M., Royal Albert Park, Middlesborough, North Yorkshire.

GARDENER (HEAD, WORKING).—Age 27; thoroughly understands Pines and Vines, Early and Late Forcing Stove and Greenhouse Plants; Flower and Kitchen Gardening. Good character.—Y. R. S., Mr. J. Head, Petersfield, Hants.

GARDENER (HEAD, WORKING), age 28, married.—JAMES HARLOCK, Gardener to the Right Hon. Lord Lilford, can with confidence recommend his Foreman to any Nobleman, Lady, or Gentleman in want of a thorough practical, steady, energetic Man.—E. W., Lilford Hall, Oundle, Northamptonshire.

To Noblemen and Gentlemen. GARDENER (FIRST-CLASS).—Age 33, married, one child; thoroughly competent to Manage an extensive Garden in every department. First-class references.—Apply in the first place to Mr. BARRON, Superintendent, Royal Horticultural Society, Chiswick, W.

GARDENER.—Understands every branch of Gardening. Growing Pines, Grapes, all kinds of Vegetables, and Fruit. Wife very good Cook. Good character.—W. C., Park Street, Birmingham.

GARDENER.—Age 43, married, no incumbence; a good practical knowledge of his profession in all its branches. Satisfactory reasons for leaving present situation. Has filled for 10 years, 11 years in previous one. First-class testimonials.—ALPHA, Post Office, Fenny Stratford, Bucks.

GARDENER.—Middle-aged, married; most practical experience; thorough master of his profession in all departments. No objection to the charge of Land.—A. B., whom he has lived 13 years.—A. B., Mr. Lord's Farm, Bury St. Edmund's.

GARDENER (SINGLE-HANDED).—Age 30. Two and a half years' character.—G. C., 1, Charnock Road, Maida Vale, W.

To Noblemen and Gentlemen. GARDENER, or GARDENER and BAILIFF, Age 36; has had many years' experience in every branch of the profession, also Land, Woods, and Stock.—H. R. O., Park, Wantage, Berks.

GARDENER, or GARDENER and BAILIFF, married; has been in present situation, with a large estate, six years, and possesses an excellent character. Is thoroughly his business as a Gardener, and in the Management of an Estate.—ROBERT F. DAWBY, The Nurseries, Cirencester.

To Noblemen and Gentlemen. GARDENER, or BAILIFF and GARDENER, Incumbence; thoroughly practical. Character of employer (whom he served for years), will bear the strictest scrutiny. MORRIS, 10, Western Terrace, Clyde Road, Tottenham, London.

FOREMAN, in a Nobleman's or Gentleman's Garden.—Age 25; good character.—J. S., 6, Atwell Street, Peckham, S.E.

FOREMAN.—Age 26; several years' experience in Nobleman's Gardens. Two years' good character.—Mr. J. Head, Petersfield, Hants.

FOREMAN.—A young man; nine years' experience. First-class character from previous employer. N. B., Stanley Bridge Post Office, Fulham, S.W.

PROPAGATOR, or FOREMAN and PROPAGATOR.—A Man of considerable practical experience in the Culture of Hard and Soft-wooded Plants, Roses, Rhododendrons, &c. A general collection of Plants appertaining to the Glasshouse.—G. F., Skerton Nurseries, Lancaster.

PROPAGATOR, &c., in the Glass Department of a Nursery. Middle-aged; is a good Propagator of all kinds of Plants. Understands the Culture of Vines, &c.—References to late employers.—X. Y., 11, James Street, Covent Garden, W.

PROPAGATOR and GROWER (INDOOR).—A good reference from last situation.—A. B., Grove End, Fulham, S.W.

BAILIFF, or FOREMAN.—Age 39, married, great experience in Lincolnshire and Middlesex. Understands Stock, Heavy and Light Soils, Woods and Pastures, and Timber Measuring, &c. References to late employers.—A., 48, Upper Stone Street, Maidstone, Kent.

BAILIFF.—Age 32, married; will be disengaged, owing to a change in the property. Practical in the every-day management of Light and Heavy Woods and Plantations, Root, Hop, and Steam Cultivation, all modern Machinery, good Accountant. References.—BAILIFF, Wrecclesham, Farnham, Surrey.

IMPROVER in a Nobleman's or Gentleman's Garden.—A. H., The Gardens, Haverland Hall, Norwich.

IMPROVER in the Houses, where Fruit and Potatoes are Grown.—Age 19, 2 years' good character. A Premium given.—X., Post Office, Gerrard's Cross, Bucks.

TRAVELLER, in the Nursery and Seed Trade. Information, with particulars, on application to T. W. HURST & SON, 6, Leadenhall Street, London, E.C.

To Nurserymen and Florists. TRAVELLER.—Has represented one of the largest Houses in the Trade, and possesses an extensive knowledge throughout the kingdom. The most satisfactory testimonials be supplied.—A. B. A., Gardeners' Chronicle Office, W.C.

To the Seed Trade. SHOPMAN, WAREHOUSEMAN, or TRAVELLER.—A Young Man, having seven years' experience in the Wholesale and Retail Trade. Holds first-class testimonials, and can be recommended by last employer. Moderate salary expected.—Mr. John McIntyre, 70, Princes Street, Edinburgh.

To Noblemen and Gentlemen. CARPENTER (HEAD).—An Experienced Carpenter wants a permanent engagement, has had considerable experience in Constructing Villas, Agricultural and Domestic Buildings in Brick, Stone, Iron, or Wood; has twice received the First Prize for Model Cottages, can prepare Drawings, and Measure and take out Quantities, with the Material and Labour. Testimonial from late employer, over 20 years.—Z. W., Post Office, Windsor.

CLERK, or otherwise.—Age 20, no incumbence. Country. Good testimonials.—A., 11, Stove Road, Hammersmith.

To the Seed Trade. SHOPMAN, or UNDER SHOPMAN.—Age 25, 5 years' experience, and good character.—A. Z., Lyndhurst, Hants.

COWMAN, &c.—Married Man, no incumbence. Will take the Management of Cows, Horses and Poultry, and himself generally useful. Wife good Dairy and Poultry. Nine years' character.—J. H., Post Office, Warrington, Cheshire.

DINNEFORD'S FLUID MAGNETIC.—The best remedy for Acidity of the Stomach, Headache, Gout, and Indigestion, and the best for delicate constitutions, especially adapted for Ladies and Infants. Dinneford & Co., 172, New Bond Street, London, and of all Chemists throughout the World.

J. BAILEY DENTON Principal Engineer
Works of Drainage of any extent, Irrigation, Enclosing, Wood Grubbing, Road-making, Farm Houses, Farm Buildings, and Labourers' Cottages, are executed on all descriptions of Property, whether Freehold, Leased, Mortgaged, Trust, Ecclesiastical, Corporate, or Collegiate, or Loans granted for the purpose to Landowners who desire to execute the works by the power granted.

Tenant farmers may also, by arrangement with their landlords, procure the execution of the above improvements on their farms at an annual cost to themselves of between 6 and 7 per cent on the outlay and official expenses.

The whole of the outlay in the works, with all official expenses, may be charged on the Estate for a term of years, to be fixed by the landowners to meet the circumstances of tenants.
No investigation of title being required, no legal expenses are incurred.

Applications to be made to Mr. HORACE BROKE, the Secretary, at the Office of the Company, 22, Whitehall Place, S.W.

A FARMER, in Wiltshire, wishes to receive two Young Gentlemen as PUPILS in PRACTICAL AGRICULTURE. The system is Corn, Sheep, and Stock Farming terms, £150 per annum, inclusive of the keep of a Horse.
H. B. Gardner's Chronicle Office, W.C.

GRESHAM LIFE ASSURANCE SOCIETY,
37, Old Jewry, London.

Realised Assets exceed	£1,120,000
Annual Income	320,000
Payments under Policies	870,000

Mortgages granted on Rates, Lands, &c.
F. ALLAN CURTIS, Actuary and Secretary.

THE SOCIETY of PAINTERS in WATER COLOURS—The WINTER EXHIBITION of SKETCHES and STUDIES by the MEMBERS is NOW OPEN, 5, Pall Mall East. Ten till five. Admission 1s. Gas on dark days.
WILLIAM CALLOW, Secretary.

Home News.

THE COURT.—On Thursday the 21st the Queen, accompanied by Princess Louisa and Prince Leopold, drove round by Black Gang Chine and the Undercliff to St. Lawrence, and visited Earl and Lady Constance Grosvenor. On Friday morning the Queen, accompanied by Princess Beatrice, walked and drove in the grounds. Prince Albert Victor, Prince George, and Princess Louisa of Wales arrived from the Continent, and will remain with her Majesty during the absence of the Prince and Princess of Wales. On Saturday the Queen walked and drove. Mr. and Mrs. Gladstone arrived from London on a visit. On Sunday the Queen, with Princess Louisa, Prince Leopold, and Princess Beatrice, attended Divine service at Whippingham Church. On Monday morning the Queen went out in the grounds with Princess Beatrice. Mr. and Mrs. Gladstone left for London. In the afternoon the Queen drove out with Prince Leopold and Princess Beatrice. General and Lady Alice Peel and Miss Macgregor arrived on a visit. The Judge-Advocate-General had an audience of the Queen. On Tuesday morning the Queen walked and drove in the grounds with Princess Beatrice, and drove out in the afternoon. On Wednesday morning the Queen walked and drove in the grounds. In the afternoon the Queen, accompanied by Princess Beatrice, drove to Carisbrooke, and visited the Roman Catholic convent, which has been founded there by Lady Clare. On Thursday morning the Queen drove out with Princess Beatrice. Princess Mary of Teck arrived from London on a visit. It is expected that the Queen will return to Windsor Castle on the 19th or 20th of next month. Her Majesty afterwards intends to pay several short visits to Claremont, and during the London season the Queen will reside for a time at Buckingham Palace.

COURT ARRANGEMENTS.—It is announced that the Queen will hold a Court at Buckingham Palace, on Tuesday, the 3d of March, to receive the Corps Diplomatique, her Majesty's Ministers, and other official personages, with the ladies of their families, who will receive notification of her Majesty's intention through the Lord Chamberlain. The Queen will hold a Levee at Buckingham Palace on Friday, the 5th of March; a Drawing-Room on Wednesday, the 10th of March; and more Drawing Rooms later in the season, the dates of which will be hereafter announced. Levees will be held at St. James's Palace by Prince Arthur, on her Majesty's behalf, on Friday, the 12th, and on Friday, the 19th of March.

THE PRINCE and PRINCESS OF WALES left Vienna on Wednesday for Trieste, and there embarked for Alexandria.

ACCOUCHMENT OF PRINCESS ALICE.—A telegram from Hesse Darmstadt states that the Princess Louis of Hesse has given birth to a son, who will be named Ernest Louis.

THE CABINET.—A Cabinet Council was held on Tuesday at the official residence of the First Lord of the Treasury in Downing Street.

PARLIAMENTARY MOVEMENTS.—It is understood that the Queen will herself deliver the Speech from the Throne on the re-assembling of Parliament. Mr. Bruce, the Home Secretary, was elected for Renfrewshire on Monday, in the room of the late Mr. Spiers, without opposition. Mr. Greer Price has vacated his seat for the Radnor Boroughs, in favour of the Postmaster-General, the Marquis of Hartington, who will

be opposed in the Conservative interest by Mr. H. Phillips. Mr. Edward Warner has been declared vacant at Norwich, which he represented for some years.

THE TRIALS OF ELECTION PETITIONS.—Mr. Willes on Friday gave judgment in the election petition, to the effect that Mr. Ouseley was duly elected, and that corrupt practices did not prevail in the borough, but he considered the petition very properly brought, and released the sitting member's costs. On Monday Mr. Blackburn gave judgment in the Bewdley petition, and declared that the election was void, that Mr. E. had no personal knowledge of corrupt practices, that his agent and his clerk were guilty of corrupt practices, that extensive corruption and corrupt practices prevailed, but not what was called "popular bribery," and that all the costs, except those incurred in the petition of a scrutiny, must be paid by the respondent. Mr. Lloyd, the petitioner, having withdrawn his petition for the seat, the scrutiny will not be proceeded in. Baron Martin gave judgment yesterday in the Brockton petition, and declared that Mr. Ripley's election was void on the ground of treating, but that corrupt practices did not extensively prevail; the costs to be paid by Mr. Ripley. The trial of the Lichfield petition is in progress. The trial of the Gloucester petition has been fixed for the 18th of February. Baron P. gave judgment in the Limerick petition on Monday, declaring that Messrs. Gavin and Russell were elected, and that the charges of bribery, treating, and intimidation had not been proved. At the same time he denounced the system of hiring one mob to punish another, regretted that the law did not provide for punishing such a system, and expressed the strongest terms of disapprobation of magistrates and clergymen taking part in such a proceeding. Mr. Justice O'Brien gave judgment on Tuesday in the Carrickfergus petition, declaring Mr. Dalway to be elected. The trial of the Dublin petition commenced on Saturday. The trial of the Belfast and Derry petitions commenced on Wednesday. The Carrickfergus Athlone petitions have been withdrawn. The Wick County petition will also be withdrawn. The petition against the election of Sir Sydney Waterlow for Denbighshire was withdrawn on Friday.

THE CONSERVATIVE PARTY.—The Earl of Salisbury has resigned the leadership of the Conservative party in the House of Lords. No peer has yet been chosen to succeed to the post. Mr. Hart Dugdale, for Mid-Kent, has been appointed assistant whip to the Conservative party in the House of Commons in the room of the Hon. Mr. Noel, who has succeeded Colonel Taylor as head whip.

ORDER OF THE THISTLE.—The vacancy in the Order of the Thistle, caused by the death of Lord Southesk, has been filled up by the appointment of Lord Southesk to be a Knight of that Order.

LORD-LIEUTENANCY.—Sir T. E. Colebrooke, Bt. M.P., has been appointed Lord-Lieutenant of Lancashire, in the room of the late Lord Belhaven.

THE BISHOPRIC OF LONDON.—The Confirmation of Bishop Jackson as Bishop of London took place yesterday, at Bow Church, Cheapside, with the usual ceremonies. The Gazette of last evening announced that the Queen has appointed his lordship to be Bishop of the Chapels Royal.

THE BISHOP OF SALISBURY.—It is stated during the last few days there has been a marked improvement in the health of the Bishop of Salisbury. Some of the more urgent symptoms have subsided, his condition is still regarded as precarious.

THE RITUAL COMMISSION.—The Earl of Carnarvon, the Bishop of Chester, and Mr. Charles Butler, M.P., have been appointed members of the Ritual Commission, one vacancy having been caused by the death of the late Archbishop of Canterbury, and another by the withdrawal, on taking office, of Mr. Charles Butler and of the Lord Chancellor.

GOVERNORSHIP OF GREENWICH HOSPITAL.—It is not the intention of the Government to fill the vacancy caused by the death of Sir James Alexander Gordon, who was in receipt of 3000l a year from the Hospital funds. It is stated that the infirmary will be removed to Netley in October next, and Greenwich will be occupied for military purposes.

REDUCTIONS IN THE CIVIL SERVICE.—The Lords of the Admiralty have determined on abolishing several offices of the Admiral-Superintendent of the dockyards, the Captain-Superintendent of several dockyards, and victualling-yards, the Master-Attendant of several victualling-yards, one of the two offices of Master-Attendant at the dockyards, and the Second Master-Shipwright, and on a general reduction in all the offices of the yards. A number of clerks have already been placed on the reduction list, and others are to follow, with a view to their ultimate discharge. No more clerks are to be entered for the civil department of the dockyards, and no promotions are to be made until further notice. At the Admiralty offices in London several clerks of the established list have received notice to quit on a certain date. Six clerks are to be dismissed unnecessary for the business of the office. Copy presses have been introduced for the first time in the Admiralty and dockyard offices, as a means of reducing the number of copyists. The Coastguard establishment in Spring Garden is to be broken up, and the offices of Controller-General and Deputy Controller-General are to be abolished, preparatory to an amalgamation with the corresponding branches of the Admiralty at Whitehall. At the Custom House Mr. Scudamore and Mr. Forster, of the Treasury, are engaged in simplifying the work and amalgamating the offices, with a view to the dismissal of some of the writers, and probably

newspapers highly censure the address. The Diplomatic Body have addressed a note to the Minister of State, protesting against the manifestation against the Papal Nuncio, and waited on the President of the Provisional Government, who replied that he had seen with pain the manifestation in question, and was resolved to uphold public order and the inviolability of the representatives of friendly nations. The rumour that the Papal Nuncio had quitted the city is denied but it appears that he is in hiding. The Editor and staff of the *Pensamiento* and *Espanol* have been arrested. A Protestant religious service was performed on Sunday in Madrid for the first time in public. The statement that negotiations have commenced between the United States and the Provisional Government for the purchase of Cuba, is categorically denied. The Provisional Government, as interpreter of the wishes of the nation, declares that it will never agree to any proposal of such a character. A decree has been issued, granting a complete amnesty, without any exception, to all Spanish subjects implicated in the insurrection of the 23d September at Porto Rico.

PORTUGAL.—The Marquis de Sa da Bandeira announced officially in the sitting of the Cortes on Friday that the King had empowered the Ministers to remain in office. He added that the Council of State had determined to dissolve the Chambers immediately. On Sunday the Chamber of Deputies was dissolved by Royal decree, and the new Cortes are summoned for the 4th of May. The King has assigned to the Treasury eight per cent. of the annual income of the Royal family, in consequence of the financial difficulties of the country.

DENMARK.—The Folkething has rejected a resolution to authorise the purchase of a large ironclad abroad, and has decided that a vessel of that description shall be built instead in Denmark. Notice has been given of a motion for the appointment of a committee to inquire into the conduct of the Commandant at Alsen at the time of the surrender of that place to the Prussians.

BELGIUM.—The funeral of the Prince Royal of Belgium took place on Tuesday, at the Palace of Laeken. The King and his brother, the Count of Flanders, were present at the ceremony, the Archbishop of Malines performing the funeral service. The deepest sympathy was shown by the people generally. Brussels was entirely in mourning. On Wednesday a solemn funeral service was held at the Cathedral in honour of the late Prince, at which all the different bodies of the State were present. The King did not attend, but the Count of Flanders and an immense crowd of persons were present. The Archbishop of Malines officiated. On Thursday the King received a deputation from the Legislative Chambers, who presented him with an address of condolence upon the death of the Duke de Brabant. His Majesty was deeply affected, and expressed his gratitude in lively terms.

HANOVER.—The Berlin papers state that the property of King George of Hanover, at present placed under the administration of the Prussian authorities, amounts to 2,074,800*l.*, which, placed in the Prussian funds, would bring in an annual revenue of about 88,200*l.* The expense of management, which is under the direction of the Superior President of the Council of Hanover, reaches 27,000*l.*

PRUSSIA.—The session of the Prussian Diet will probably be closed in the last week of February, and it is expected that the North German Parliament will be convoked for March 5. The Editors and journalists of Berlin have adopted, on the suggestion of Herr Berthold Auerbach, an address to General Grant, to be presented to him on his assuming the office of President of the United States, requesting him to take the initiative in a Bill for the mutual protection of literary and artistic property in America and Germany. The various literary societies of Germany have also been invited to unite with the Berlin Editors in this matter.

SAXONY.—The King of Saxony received on Sunday the Prussian Order *Pour le Mérite* for Arts and Sciences, awarded to his Majesty by means of an election in which the Knights of the Order entitled to vote took part.

HESSE DARMSTADT.—Several shocks of earthquake were felt in the duchy on the 21st. The strongest, which was accompanied with a subterranean rumbling sound, lasted twelve minutes. In many places bells were set ringing, plates thrown down, and plaster detached from the walls.

AUSTRIA.—The Prince and Princess of Wales left Vienna on Wednesday morning for Trieste, where they arrived at 10 P.M., and left at midnight for Alexandria. The Vienna papers state that the Bishop of Trieste, being hurt at a demonstration made against him by the Ultramontanes of that city, had gone to Capo-d'Istria, where, the day after his arrival, he ascended the pulpit, and taking for his text the words, "My kingdom is not of this world," demonstrated that the temporal authority of the Pope was incompatible with spiritual powers. The railway station at Trieste was burnt down on Thursday evening.

ITALY.—In the Chamber of Deputies last week the Opposition moved a resolution charging the Government with violating the Constitution in the application of the Grist-tax, and censuring the measures taken by them in levying the tax in the central provinces. Count Cambray Digny, on the part of the Government, declined to accept any resolution implying censure, and required, on the contrary, an explicit vote unreservedly approving the whole course taken by the Ministry, stating that the authority of the Government would otherwise be fatally weakened, and it would be impossible to collect the tax. The debate occupied the whole of Sunday, Monday and Tuesday, when Signor Ferrari modified his motion by withdrawing the accusation against the Government of violation of the Constitution, but censuring the Administration for its mode of levying the tax. Signor

Rattazzi supported the motion in its modified form. Baron Ricasoli then moved that the Chamber should pass to the order of the day on all the motions introduced, thus manifesting their opinion that the Government had done its duty, and had upheld the authority of the law. The Ministry accepted the motion of Baron Ricasoli in that sense, and the Chamber adopted it by a majority of 207 to 157. A resolution, moved by Signor Torrigiani, was afterwards adopted, requesting the Government to institute an inquiry into the recent disturbances in the central provinces, and to propose such measures as they may consider most expedient under the circumstances.

PAPAL STATES.—Accounts from Rome state that Archbishop Manning will be made a cardinal before his return to England, and that the Archbishop of Paris will also be raised to the same dignity.

RUSSIA.—The budget of the Empire for 1869 shows a large increase of revenue, which the Minister of Finance ascribes to an unusually good harvest and the stimulus given to commerce by the extension of the railway system. He expresses his conviction that nothing but a peaceful development of the moral and material interests of Russia can consolidate the finances of the country.

GREECE.—The decision of Greece relative to the declaration of the Conference is still unknown. It is asserted that the King recently intimated to his father his intention to abdicate, in consequence of the deep discouragement caused him by the disorder and anarchy of his Government; but, yielding to the pressing solicitations of his family, he has for the present abandoned his intention.

THE PRINCIPALITIES.—The Minister of the Interior at Bucharest has addressed a circular to the prefects, enjoining them scrupulously to watch over the maintenance of order, and to prevent any political agitation which might compromise the neutrality of the country in the event of an armed conflict between Turkey and Greece. The leaders of the bands which attempted to invade Bulgaria last summer have been tried, and condemned to six months' imprisonment. It is believed that this sentence will have the effect of greatly discouraging similar undertakings in future.

TURKEY.—The Porte has suspended the expulsion of Greek subjects from Turkish territory pending the reply of Greece to the declaration drawn up at the Conference. The report of the departure of Hobart Pasha's fleet from Syra is contradicted. The Turkish Government has purchased the British steamer *St. Lawrence* for 28,000*l.*, and the two iron-clad corvettes built at Bordeaux for the Chilean Government, but rejected for alleged non-compliance with the contract, for 180,000*l.*

EGYPT.—The Viceroy of Egypt has placed 50,000 men at the Sultan's disposal, and has suspended diplomatic relations with Greece by ordering the Greek Consul at Cairo to leave that capital immediately. The approaching arrival of the Prince and Princess of Wales has brought a large number of tourists into Egypt; and excursions have been organised for enabling the visitors to join the Royal party before they reach the first cataract. A party of 40 English has already arrived at Alexandria under the guidance of Mr. Cook, the well known manager of the autumnal railway excursions; and a steamer is advertised to leave Marseilles for Alexandria on the 5th February with another party of excursionists, under the guidance of Messrs. Chailau, of Paris, for a fixed price of 120*l.* out and home.

INDIA.—Sir John Lawrence was to leave India on the 16th inst. The construction of a permanent road bridge over the Hooghly has been officially sanctioned. The small force left at Huzara has been recalled. Meer Hajeer, the murderer of Captain Douglas and of other persons in the mutiny of 1857, has been hanged at Delhi. It is stated that 33,000 cattle have perished near Delhi for want of fodder. News from Burmah states that the health of Captain Sladen had improved, and that the King of Burmah had apologised for beating Niven, the Agent's servant. It is authoritatively announced that Azim Khan and Abdul Rahman Khan have arrived at Dour, and requested an asylum in British territory. The Government of the Punjab have consented conditionally to their request. Accounts continue to be received of the serious extent of, and the extensive damage done by, the recent earthquake in Assam. Troops have been despatched to Silhet and Cachar in consequence of depredations by the hill tribes in those districts. A frightful railway accident occurred on Monday last at Bhor Ghat. The train dashed into the embankment, smashing five carriages. Fifteen natives were killed, and thirty-six wounded.

BORNEO.—On the 28th November, the Mukah Fort at Sarawak, under charge of the resident, Mr. Rodway, was surprised and plundered by a party of six convicts (one Chinaman and five Malays) who were under sentence of imprisonment for trivial offences. Mr. Bain, late engineer of the Borneo Company, who was lying sick in the resident's apartments, and the sentry, were murdered, and the treasure, amounting to 1000 dollars, was stolen. After holding the fort for a few hours the convicts made off, but the inhabitants pursued them, killed four (including the murderer of Mr. Bain) out of the six, and recovered the treasure. The two others were being pursued in all directions.

AUSTRALIA.—The Victoria Parliament will assemble in February. The Government is considering an application for a subsidy from a new company which proposes to buy five steamers belonging to the Panama Company, and run a fortnightly mail to Galle. Four of the steamers of the Panama line have already been sold. The Government of New South Wales has formally cancelled the Panama contract. The new Governor of South Australia, Sir James Fergusson, and his family have arrived at Sydney. Her Majesty's ships *Challenger*, *Blanche*, and *Rosario* have gone to New Zealand in consequence of the recent outbreak.

NEW ZEALAND.—The following telegram from the Governor of New Zealand has been received from Granville, via Colombo.—

"The rebels on the East Coast of this island, after having engaged in several engagements with severe loss. It is now impossible to concentrate the greater part of the military force on the West Coast, with the object of putting down the rebellion in that quarter. The so-called Maori King is still in the colony."

From the details brought by the overland mail, respecting the recent massacre and atrocities committed against the Maories, it appears that on November 23, 1868, 35 persons—men, women, and children—were minutely massacred, neither sex nor age was spared. Returned prisoners from the Chatham Islands were killed every one that they could reach. The houses and herds of the settlers were destroyed, and the finest districts in New Zealand entirely covered with blood. Among those massacred were Major and Mrs. Wilson and their infant child, Lieutenant Walsh, Mr. and Mrs. Wilson who refused to leave her husband, and Lieutenant Wilson, Mr. and Mrs. Mann, Messrs. Dodd, Peppard, and Cadle. The wife of Lieutenant Wilson was also supposed to have been killed, but after being three days in the scrub, with her son, eight years old, who supplied her with eggs and a few potatoes, she was found by some hours still alive, but suffering from a wound in the abdomen, another through the leg, and five in other parts of her body. Two of the settlers are missing, three of whom—Messrs. Poynton, and Kempthorne—are believed to have been killed. Captain Westrupp, who was in command of the Tarananui Redoubt, subsequently was killed and buried the dead. Thirty bodies of Europeans were discovered, many of them dreadfully mutilated. Of Major and Mrs. Biggs were almost devoured and animals. Two Hau-hau spies were seen and shot down by Captain Westrupp and his men whilst engaged in burying the bodies. Mrs. and her little son were removed to the house of a deacon Williams, at Tarananui, and would have left for Napier on the 24th ult. The most sanguine hopes were entertained of Mrs. Wilson's recovery. Captain Westrupp made an attack on the post of Tamihana on November 23, with 300 men, and Europeans and natives, and defeated him in Poverty Bay rebels. Patea and other settlements since been abandoned. Particulars have also been received of Colonel Whitmore's repulse from the position occupied by Tito Kowaro at Okutuku, on the Whenuikuru and Waitokura rivers. This was made on November 7, with a force of 300 Europeans and 80 natives—the majority of the natives not being out when required. The encampment was forced occupied by a strong and well-posted force of rebels, finding his casualties very heavy, and there being no prospect of his gaining any advantage by continuing the attack, Colonel Whitmore was carrying away all the wounded that could be saved. Among the killed were Major Hunter, Mr. Kirwan, Constables Charles Lee and G. Stone, and three others. Among the wounded were Mr. Cole, Constables D. Dolan, Monk, Eastwood, Mr. son, Wesley, Williams, Cooksley, Kelly, Foot, Vance, Keane, Kapa, Lynden, and five other natives. In the following week the Hau-hau attacked the Wereroa redoubt, held by about 40 of the militia, under Captain Wilmot P. W., who was repulsed with the loss of several of the men killed and wounded. The bodies of a scouting party had been sent out under Karaitiana, a friend of the Hau-hau, had been discovered, killed with the tomahawk, and fearfully mutilated. An earthquake had occurred at Taranaki, which destroyed about 5000*l.* worth of property.

UNITED STATES.—Congress has passed a Bill raising the district commanders in Virginia, Missouri, and Texas to remove all civil officers unable to take the oaths of office prescribed by the Reconstruction Acts, and, moreover, to appoint their successors.

CUBA.—It is said that the Captain-General has been consulted by the Madrid Government by telegraph as to the advisability of declaring that all vessels engaged in the slave trade will be treated as pirates.

PARAGUAY.—Intelligence from Buenos Aires, 27th ult., states that Angustura was attacked on the 21st and 22d ult., and was reported to have been captured by Lopez escaped with 500 followers, the Argentine army being in pursuit.

City Intelligence.

OVEREND, GURNEY & CO. (LIMITED)—The charge against the directors of Overend, Gurney & Co., at Guildhall, before the Lord Mayor and Alderman Gabriel, was brought to a close on Saturday, so far as the evidence and the arguments counsel were concerned. The chief event of the day was the cross-examination of Mr. Edward Edwards, an official assignee in the Court of Bankruptcy, who, after stating that he had "a very good memory as to dates," that his memory was "entirely fail" him on other matters, and that he was not like to swear positively at all to anything, admitted that from 1859 to 1864 he had been a receipt of 5000*l.* a year from the old firm of Overend, Gurney & Co., to which he was first introduced by Mr. David Ward Chapman, at that time a partner in the firm. This sum was to be paid "in consideration of his services" as act for the firm in all matters in which they might ask for his advice and assistance.

The agreement was suddenly terminated in 1864 by Mr. Birkbeck, one of the partners, who told Mr. Edwards in rather strong language that he had been the cause of their heavy losses. Mr. Edwards thereupon demanded the sum of 20,000*l.*, being 5000*l.* for services rendered during 1864, and 15,000*l.* for the three ensuing years. This demand was granted by the firm on condition that the money should remain in the house on deposit at 6 per cent., but the firm having reduced the interest when the new firm was established Mr. Edwards withdrew the money. He also stated that, in the first instance, he lent privately the whole of the salary he received from the firm to Mr. Chapman, the partner who introduced him; that while he was receiving it, and acting as the nominee of Overend & Gurney in the transaction of a loan for 144,000*l.* to Mr. Stefano Xenos, the manager of the "Greek and Oriental Company," he was also receiving 500*l.* a year from Mr. Xenos, and was, moreover, presented by that gentleman with a yacht, "not for services rendered, but as a friendly gift." He also received a sum of 3000*l.* from Mr. Pearson, with whom he negotiated the sale of two ships on behalf of Overend & Gurney; 300*l.* from Lascaridi & Lever, both of whom were indebted to Overend & Gurney, and the usual fees as a director of the Atlantic Royal Mail Steam Company, which was largely indebted to Overend & Gurney. In addition to this he was the sleeping partner in a firm called Edwards & O'Beirne, which obtained advances from Overend & Gurney after he had left them. He would not swear that he did not receive money in connection with the Millwall Ironworks and other concerns, and said that his "memory was an entire blank on the subject." At the conclusion of this examination the case was again adjourned to Wednesday. On that day the court was crowded to excess long before the hour appointed for the sitting, and the approaches to Guildhall were besieged by an eager and excited crowd of well-dressed people, eager to obtain admittance. When the Lord Mayor and Sir Thomas Gabriel took their seats the bench was crowded by aldermen, magistrates, and merchants of the City, though not forming part of the Court. Upwards of two hours were occupied in reading and authenticating the written depositions which had been taken at the previous examinations. The Lord Mayor then said:—

"Since the last adjournment the most anxious and careful consideration has been given to the evidence adduced in support of this charge, with the view of determining how that evidence affected the several defendants. Due weight has also been given to the arguments put forth on the last occasion by the able counsel who represent the several defendants, and I have now to announce the decision at which the Court has arrived. That decision is, that there is evidence sufficient to prolong their trial John Henry Gurney, Henry Edmund Gurney Robert Birkbeck, Henry Ford Barclay, Harry George Gordon, and William Bennie. I have, therefore, to commit the several defendants for trial on this charge."

A burst of cheers followed this announcement, upon which the Lord Mayor said, "I must remark that in a matter of this grave character affecting so many individuals there ought to be silence befitting the occasion and a court of justice." This reproof had scarcely been administered from the Bench when the crowd outside, who by that time had heard the result, raised an enthusiastic cheer, which was audible within the court. Mr. Edwards, official assignee, who was hissed in Court while his depositions were read, was hooted on leaving the hall, and only escaped rough usage by taking refuge in a cab, under the protection of the police. The Lord Mayor then intimated that he was prepared to admit the defendants to bail, each of them in 10,000*l.*, and two sureties of 5000*l.* each. The defendants entered into the requisite recognisances, the sureties being—for Mr. J. H. Gurney, Mr. John Gurney Hoare and Mr. Charles Thomas Lucas; for Mr. Henry E. Gurney, Mr. George Moore and Mr. Henry Edmund Buxton; for Mr. Birkbeck, Sir John Lubbock and Mr. Joseph Hoare; for Mr. Barclay, Mr. R. C. L. Bevan and Mr. Joseph Gurney Barclay; for Mr. Rennie, Mr. W. Burnley Hume and Mr. Henry M'Chlery; and for Mr. Gordon, Mr. Kirkman D. Hodgson and Mr. Charles Oppenheim. The aggregate bail tendered and accepted amounted to the large sum of 120,000*l.* Dr. Adam Thom, the complainant, was bound over to prosecute in the sum of 5000*l.*

THE MERCHANTS' COMPANY (LIMITED).—On Tuesday Messrs. Stuart Lane, Chapman, and Herbert, directors of the Merchants' Company, underwent a second examination at the Mansion House on the charge of uttering false and fraudulent prospectuses, with a view to induce persons to become shareholders in the company, which is now under official liquidation. After some further evidence had been taken in support of the charge, the hearing was again adjourned until to-day. On Thursday another charge was preferred against Mr. Stuart Lane, in conjunction with one of the other directors, Mr. Childs, for issuing a call circular, which alleged that the company had suffered to some, and made other statements which it was submitted were utterly untrue, and known by the defendants to be untrue. The Lord Mayor remanded the accused, but admitted them to bail.

MONEY MARKET, FRIDAY.—BRITISH FUNDS: Consols closed at 93½ to 93¼, both for Money and Account. New and Reduced Three per Cents., 93½ to 94. India Five per Cents., 112 to 112½; Bank Stock, 24½ to 24; Exchequer Bills, 5s. to 10s. pm.—**FOREIGN:** Peruvian, 75½ to 76; Turkish Five per Cents., 38½ to 38; Ditto Six per Cents., 61 to 61½; Egyptian 1864, 87 to 88; Ditto (1863), 72½ to 73½; Italian, 54 to 54½; Tobacco Loan, 2½ to 2½; Spanish, 54 to 54½; Greek, 11½ to 12½; Mexican, 15½ to 16; Honduras, 86 to 89; Danubian Eight per Cents., 81½ to 82. Brazilian, 80 to 80½; Russian (1862), 85 to 86½; Ore, 80½ to 81. Nicolai, 66½ to 66½; Moscow, 79 to 79½; Charkof, 79½ to 80; United States 5-20 Bonds, 75½ to 75½; Erie, 26 to 26½; Illinois, 92 to 92½.

Metropolis and its Vicinity.

ABOLITION OF WOOLWICH AND DEPTFORD DOCKYARDS.—An Admiralty order was received at Woolwich Dockyard on Friday, directing the yard to be finally closed on October 1st next. An order has also been received at Deptford Dockyard, directing all the warehouses in the yard to be cleared by April 1st.

REDUCTION OF WOOLWICH ARSENAL.—It is stated that another reduction will shortly take place at the Royal Arsenal. A fixed limitation has already been made as to the hours of working, all overtime having been abolished, and a number of the old hands have been placed upon the superannuation list.

THE LATE RITUALIST TRIAL.—The *Church Times* states that the Council of the Church Association have come to the determination of paying their own costs in the recent suit of Martin v. Mackonochie, and consequently will not attempt to recover them from Mr. Mackonochie. The Church Association, who were the prosecutors in the suit, have made arrangements for a course of addresses in London on the subject of Ritualism. Among those who have consented to deliver addresses are the Rev. Dr. Taylor, vicar of St. Silas, Liverpool; the Rev. E. Garbett, vicar of Christ Church, Surbiton; the Rev. Aubrey C. Price, vicar of St. James's, Clapham; the Rev. J. F. Richardson, vicar of Bury St. Edmund's; the Rev. J. C. Ryle, vicar of Stradbroke, and the Rev. M. Hobart Seymour.

A NEW ECCLESIASTICAL PROSECUTION.—The Church Association, the promoters of the suit "Martin v. Mackonochie," have announced their decision to submit the question of vestments to a legal tribunal. They say they are confident that, neither as a consequence of the present nor of any other legal decision, will anything become obligatory upon the clergy which has the slightest reference to Romanizing symbolism, and which is not entirely in accordance with the spirit of the Reformers and the doctrine and teaching of our Protestant Church.

ARCHBISHOP MANNING AND THE ECUMENICAL COUNCIL.—A pastoral letter from Archbishop Manning has been read in all the Roman Catholic churches throughout London on the Ecumenical Council to be held in Rome towards the close of the present year. It said that during the last few months the Pope had written three Apostolic letters, of vital importance to the Catholic church and to the whole Christian world. The first was the Bull convoking an Ecumenical Council to be opened in the Vatican on the Feast of the Immaculate Conception in this year; the second was a paternal invitation to the patriarchs, archbishops, and bishops of the Eastern Churches, now unhappily, in schism; the third was a loving appeal to those who in the Western world have been separated during the last 300 years from the unity of the faith and of the Church. Archbishop Manning solicits the prayers of the clergy and laity of his diocese for the happy issue of the Council, and enjoins the clergy to hold special services each week for the same purpose. The council will be called the "First Council of the Vatican," as it will be held in the right transept of St. Peter's. The transept will, it is said, accommodate upwards of 2000 persons, and will be so arranged that the voice of each speaker may be distinctly heard throughout the whole council chamber. The stalls erected for the accommodation of the prelates will cost 9000*l.* or 10,000*l.*, and to make up this sum, as well as to meet the other enormous expenses which the Pope will incur, subscriptions are being actively raised in many Continental nations, as well as among the Roman Catholics of England. The labours before the Council are so immense that it is considered six months will not suffice to complete them.

THE LATE PERVERSIONS TO ROME.—In reference to the recent announcement that the two curates of St. Mary's, Soho, had been received into the Church of Rome, it is stated that the older of those curates, after residing for a time at the Brompton Oratory, applied to the Bishop of Rochester, and was readmitted by his lordship into the Church of England.

SHELL EXPERIMENTS AT SHOEBURYNES.—On Friday arrangements were made for testing a new shell patented by Mr. Fitzmaurice Palmer, at Shoeburyness. Considerable interest was manifested in the experiments, the result of which was expected to be of a very important nature, but after three rounds were fired it was discovered that the ordinary service fuse was unfitted for the shell. The experiments were thereupon adjourned to afford the inventor an opportunity of fitting the projectiles with suitable fuses. A satisfactory trial of Lieutenant Nolan's instrument for measuring the distances to inaccessible objects, for the use of coast and field batteries, in comparison with the usual service method of guessing similar distances, took place on Monday.

THE VAVASSEUR STEEL GUN AND CARRIAGE.—A gun-carriage and slide of a novel construction, by Messrs. Vavasseur, of the London Ordnance Works, for a 7-inch steel built-up rifled gun, was tested on Saturday at Yarmouth, with complete success. The compressor, which is the most important feature, consists of a cone and drum, working under a brake-strap, this friction gear being attached to the head of a long screw-shaft, actuated by a nut under the carriage, moving along it and turning it round. The great value of the system is that the compressor is always ready to be acted upon by the recoil, and is automatically put into gear the moment the gun-carriage begins to move.

INDIAN CIVIL SERVICE.—A deputation from the retired members of the India Civil Service—headed by Sir R. Hamilton, Bart., Sir H. Harington, Sir H. Ricketts, and Sir G. Harvey—had an interview with the Duke of Argyll a few days since, for the purpose of supporting their claims on the India Government, as set forth in a memorial they had presented to Sir Stafford Northcote, praying for a refund of the excess of the

accumulated subscriptions above one-half the value of their several annuities. The Duke of Argyll promised to give a careful consideration to the memorial, and has since informed the deputation that he sees no reason to depart from the decision of his predecessor, which was adverse to their claim. It is understood that a public meeting on the subject is to be called, preparatory to bringing the matter before the House of Commons.

THE VOLUNTEER FORCE AND THE GOVERNMENT.—A meeting of Volunteer commanders is about to be held, for the purpose of taking measures for bringing before Parliament the difficulties with which the movement has now to contend. It appears that on the 8th inst a deputation of the commanding officers of metropolitan and other volunteer corps waited on the Secretary of State for War to urge upon his consideration the necessity for an increased grant to the force. The deputation represented nearly the whole of the volunteer commanding officers throughout the kingdom, and was headed by Earl Spencer, Lord Elcho, Lord Gerald Fitzgerald, Lord Truro, and Lord Ranelagh. Lord Elcho stated that the present capitation grant, which is 1*l.* for each efficient member of corps, and 30s. for the "extra efficient," is not sufficient to pay the necessary expenses, the officers and men, and chiefly the officers, having to pay charges arising from the training of the regiments, the charges of head-quarters, drill-grounds, rifle-butts, and conveyance to and from drill. Several other commanding officers pointed out that 1*l.* a year only represented the charge entailed upon corps for uniform. Mr. Cardwell, in reply, expressed a great admiration for the volunteer force, and said he placed a very high value indeed upon the services so patriotically given; but he was of opinion that the present grant was sufficient to meet all necessary expenses of corps, and could hold out no hope of an increase. In consequence of this decision, the 4th Lancashire Artillery, which has been in existence nine years, is about to be dissolved. The commanding officers, in a circular they have just issued to their men, declare that this step is rendered necessary by the inadequacy of the sum of money granted by the Government in aid of the expenses of the corps.

THE EASTER VOLUNTEER REVIEW.—Lord Truro, chairman of the committee of metropolitan officers, in answer to letters addressed to the Mayors of Portsmouth and Dover, inquiring if the same facilities could be given to the volunteers as at former Easter reviews, has received letters from both places, offering the same hearty welcome to the volunteers, and all the facilities before accorded.

THE BECKFORD MONUMENT AT GUILDHALL.—At the last meeting of the Court of Common Council it was resolved to restore the inscription which had been removed from the monument to Alderman Beckford in Guildhall. The mover of this resolution took occasion to allude to a statement recently made in one of the daily papers, that it was very doubtful whether the speech reported to have been made by the Alderman to George III. in 1770, had ever been uttered by him, and read some extracts from the "Annual Register" of that date, and the minutes and journals of the court, which, he said, left no doubt that the speech really was made as represented by the inscription.

MONUMENT TO SIR HERBERT EDWARDES.—The Secretary of State for India has made known the unanimous resolution of the India Council to erect a monument to the memory of Major-General Sir Herbert Edwardes, as a mark of their high sense of the ability, daring, and resource which he displayed in times of great difficulty and great peril, and of their appreciation of the example which Sir Herbert Edwardes has left to all the servants of the Crown in India.

THE BRUNEL WINDOW IN WESTMINSTER ABBEY.—A new painted window has been erected in the north aisle of Westminster Abbey, in memory of Mr. Isambard Kingdom Brunel, the railway engineer. It consists of two lights, containing allegorical figures of Fortitude, Justice, Faith, and Charity. The upper part consists of six panels, representing three subjects from the Old and three from the New Testament.

ECLIPSE OF THE MOON.—On Wednesday night there was a partial eclipse of the moon, which had been announced as the only eclipse visible in England in the year 1869. Those, however, who took the trouble to watch for the eclipse were disappointed by the rain, which rendered the moon wholly invisible to the inhabitants of the metropolis. It appears also that no portion of the eclipse was visible in any part of England or Scotland, the moon being everywhere hidden by rain or thick clouds.

THE BOATS OF THE HIBERNIA STEAMER.—There is now little hope that the boats of the steamer Hibernia have been found. It appears that the 39 shipwrecked seamen of the Hibernia, who were reported as being on board the America, a Bremen barque, bound to New York, did not belong to the steamer Hibernia, but partly to a sailing vessel of that name and to another called the Cuthberts. The sailing vessel Hibernia left Quebec on the 10th November, was wrecked and abandoned, the crew being taken on board a passing vessel, called the Cuthberts. Bad weather continued, and the Cuthberts being in a sinking state, her signals were seen by the America, which picked up the united crews, when the Cuthberts went down.

PROPOSED TRAMWAY ON THE EMBANKMENT.—In consequence of Mr. Bazalgette's statement at a recent meeting of the Metropolitan Board of Works, that the works of the railway company on the Thames Embankment, if carried on at the present rate, would not be finished in six years, proposals have been made to complete the roadway along the embankment at once, and to lay a tramway along the embankment and the new street to be formed between the Mansion House and Blackfriars Bridge.

DEMOLITION OF FIFE HOUSE, WHITEHALL.—This

mansion, situated in the line of the Thames Embankment, is now being demolished by order of the Commissioners of Works. In a few days the entire building, with a portion of the premises of the United Service Museum, several adjacent houses, and the Tudor arched entrance to the Palace water-stairs, will be gone.

THE EPSOM COURSE.—The Grand Stand Association have offered to purchase for 15,500*l.* Six Mile Hill, which includes a portion of the Derby course between the mile post and Tattenham Corner, but Mr. Studd has declined to sell at any price. Mr. Baylis, his agent, has entered into an arrangement with the Epsom trainers for the use of the Six Mile Hill for training purposes, at an annual charge of 2*l.* per horse. Mr. Studd undertaking to keep the galleps in order, to grub up the furzes between the racecourse and Six Mile Hill, and destroy the rabbits, by which means a large extent of new training ground will be obtained and reserved for the exclusive use of the subscribers. The Epsom trainers have expressed their thanks to Mr. Studd for this arrangement.

FRENCH AND ENGLISH TRADE STRIKES.—At a meeting of the London Trades' Council on Saturday night Mr. Jeffery, of the Bricklayers' Society, called attention to the existing strike of the yarn and twist-spinners of Rouen (France), against a reduction of wages. After some discussion it was resolved that the case was well worthy the sympathy and support of the trade societies of the United Kingdom. The dispute which has arisen between the master masons and their men relative to the rough dressing of stone was then discussed for some time, each member expressing a hope that it would be settled without a strike. Eventually the secretary was instructed to write to the Masons' Executive for full information on the subject.

METROPOLITAN CONFERENCE ON THE INEFFICIENCY OF THE POLICE.—The delegates appointed by the whole of the metropolitan vestries and district boards to consider and take action upon the alleged inefficiency of the police, have adopted a memorial to the Secretary for the Home Department, showing that the force is in a very unsatisfactory condition, and praying for a parliamentary inquiry. They have also resolved to request the co-operation of all the parliamentary members for the districts concerned.

THE EMBEZZLEMENT AT THE BOARD OF WORKS.—The charge of embezzlement against Mr. Hughes, accountant to the Metropolitan Board of Works, was concluded on Wednesday at Bow Street Police Court, when the accused was committed for trial.

THE PUBLIC HEALTH.—The Registrar-General's weekly return states that in the week that ended on Saturday, Jan. 23, 4761 births and 3412 deaths were registered in London and in 13 other large towns of the United Kingdom. The annual rate of mortality was 27 per 1000 persons living, being 26 per 1000 in London, 38 in Edinburgh, 23 in Dublin, 29 in Bristol, 21 in Birmingham, 28 in Liverpool, 29 in Manchester, 23 in Salford, 23 in Sheffield, 27 in Bradford, 28 in Leeds, 26 in Hull, 28 in Newcastle-upon-Tyne, and 38 in Glasgow. The rate in Vienna was 28 per 1000 during the week ending the 16th inst., and in Berlin 29 per 1000 during the week ending the 21st inst. In London the births of 1125 boys and 1151 girls, in all 2276 children, were registered in the week. In the corresponding weeks of 10 years, 1859-68, the average number, corrected for increase of population, was 2286. The deaths registered in London during the week were 1578. It was the 8d week of the year, and the average number of deaths for that week, corrected for increase of population, was 1773. The present return is therefore 195 below the average.

Provincial.

ALNWICK.—A few nights since a room at Alnwick Castle, now used as a study for Lord Algernon Percy, was discovered to be on fire. The stove and hot-air pipes, being overheated, had ignited a portion of the flooring. The fire, however, was discovered and extinguished before it had done any serious damage.

BIRKENHEAD.—It was announced some time ago that St. Aidan's College would be closed at the end of 1868. It is now proposed, however, to continue the institution, under new management, as a place for the training of candidates for holy orders, and to give it more of a diocesan character than heretofore.

BOLTON.—On Friday afternoon a destructive accident occurred at the establishment of Messrs. Martin and Johnson, manufacturers in this town. The mill locomotive engine ran away, making the whole engine-house a wreck of machinery. Two engines of 50-horse power each were smashed into fragments. The fly-wheel, weighing 30 tons, was broken up, and the fragments thrown about, doing injury in all directions. No lives were lost. Seven hundred people are thrown out of work, and it will take six months to repair the damage. The loss in machinery and property is stated at 6000*l.*

CONGLETON.—On Saturday, at a special court of magistrates in this town, Mr. Joseph Clewlow Washington, late manager of the Congleton branch of the Manchester and Liverpool District Bank, a town councillor and magistrate of the borough, and who has twice served the office of mayor, was charged with embezzlement, arising out of certain bill transactions, in which, while acting on behalf of the bank, he received various sums of money by way of discount and interest, portions only of which he credited to his employers. The magistrates committed him for trial, but accepted bail, himself in 200*l.*, and two sureties in 100*l.* each.

EXETER.—On Friday Earl Fortescue presided at the annual meeting of the Devonshire Chamber of Commerce in this city. There was a long discussion on the proposal to have a national poor rate. The Somerset Chamber had requested that a deputation from the

Devon Chamber should be sent to the Central Chamber in favour of a common fund, raised through the income-tax assessment, for a national poor-rate. A resolution was unanimously passed, declining to comply with the request of the Somerset Chamber, at the same time admitting that an alteration was required in the incidence of local taxation.

ISLE OF MAN.—On Saturday morning the mail steamship Prince Alfred, belonging to the North Lancashire Navigation Company, was totally wrecked on Manghold Head, Isle of Man, on her passage from Fleetwood to Belfast. The mails and passengers numbering about 120, with the crew, were rescued, and landed at Douglas. The ship afterwards went down in about 20 fathoms.

LUTON.—The new Corn Exchange and Straw Plait Halls in this town were opened on Monday week by Earl Cowper, Lord-Lieutenant of the county, assisted by Mr. Reverdy Johnson, the American Minister; Sir J. Burgoyne, High Sheriff of the county; Lord Charles Russell, Colonel Gilpin, M.P.; Mr. H. Cowper, M.P.; Mr. H. Russell, M.P.; Mr. H. Brand, M.P.; Sir J. Sebright, &c.

MANCHESTER.—For the purpose of determining whether Mr. Ernest Jones or Mr. Milner Gibson shall be adopted as a candidate for the representation of Manchester, in the event of a vacancy occurring by the unseating of Mr. Birley, against whose return a petition has been presented on the ground of his being a Government contractor, a ballot organised by the United Liberal party commenced on Friday, and was concluded on Saturday, when the result was 4772 votes for Mr. Ernest Jones and 2193 for Mr. Milner Gibson. Besides being taken as a test as to the selection of a candidate, the ballot was regarded as an experiment to show the practicability of voting by ballot, the promoters of it believing that its result would have an important influence on any future discussion with regard to the adoption of this system of voting. There were 22 polling places, each of which was fitted up with the necessary apparatus, which was exceedingly simple. The ballot was confined to those electors who voted for Messrs. Bazley, Bright, and Jones at the late election.

NORWICH.—The prisoner Sheward underwent another examination on Monday, in reference to the murder of which he is charged on his own confession. The evidence was of a similar character to that given before, but does not appear to have greatly strengthened the case against him. The prisoner was again remanded, and an intimation was given that the case for the prosecution would probably be closed on the next occasion.

PEMBROKE.—In consequence of a letter which appeared in the *Times* of the 15th inst., stating that there existed on the coast of Wales a barbarous practice of stripping corpses washed ashore after a shipwreck, and that some of the bodies of the crew of a French vessel recently lost near St. Ann's Head had been so treated, the Board of Trade have directed strict inquiries to be made in the matter, and the results have satisfied the department that the statement was unfounded. It appears that ten naked bodies were found on the shore, but they were washed ashore in that state, and it is supposed that the men had stripped themselves before leaving the wreck for the purpose of being better able to swim ashore. All the bodies received proper burial. There are, however, no coastguards at the spot to prevent plunder in case of wreck.

PLYMOUTH.—The Portuguese screw corvette Bartholomew Diaz, from Greenhithe to Lisbon, came into collision at 6 A.M. on Saturday, 30 miles off the Eddystone Lighthouse, with the brig Magnet of Brake, from Savanalo to Bremen, with a cargo of coffee. The corvette put into the Sound to repair damages. The brig was picked up derelict, and towed into harbour by the Cunard steamer Balbec.

READING.—On Monday four poachers, charged with committing a most violent assault upon several gamekeepers in the employ of Mr. Benyon, M.P., at Mortimer, last month, were brought up for final examination and committed for trial at the assizes. The under-gamekeeper, who was seriously injured in his head by heavy blows from a piece of iron or some other blunt instrument, is still in a dangerous condition.

RIPON.—It has been resolved to erect a memorial to the late Dr. Longley, Archbishop of Canterbury, in the west front of the cathedral of Ripon, of which diocese his grace was the first bishop.

SHEFFIELD.—The Duke of Norfolk, who recently came of age, has entertained this week, at the Cutlers' Hall, his tenants, and gentlemen holding official positions in this town. The first entertainment took place on Tuesday, the second on Thursday, and the third will take place to-day. Upwards of 1100 invitations were issued. — A file-cutter called Edmund Barker, has been committed for trial on the charge of having attempted to poison his father, mother, a brother, and three sisters, by mixing vermin powder in the broth. Mr. Allan, chemist, who analysed a portion of the broth into which the prisoner had thrown the poison, discovered a quantity of strychnine, and other ingredients used in the manufacture of Battle's Vermin Killer.

SWANSEA.—For five whole days the magistrates of this district have been engaged in investigating a poaching affray which occurred on the preserves of Mr. Llewelyn, J.P., at Penllergare, on the night of the 26th ult. The delay in the examination has been in consequence of the serious injuries which two of the keepers received, and which prevented their attendance before the Bench. Eight men had been apprehended by the police, but the first four were discharged. The wounded keepers were examined on Friday, and were still suffering so much from the effects of the injuries they had received, that they were accommodated with seats. They all stated that the prisoners were four of the five men by whom they were

attacked. A large number of witnesses were called in the defence, the purport of whose evidence was to prove an *alibi* on the part of the prisoners. The case was again adjourned to Monday, when several other witnesses were called on behalf of the prisoners to prove the *alibi*. After hearing their evidence the magistrates retired to consider their decision, and in the absence of an hour the chairman said they had come to the conclusion that the prisoners were discharged. The case has created more excitement throughout the locality than any other of the last years past. It is reported that a large sum of money had been contributed from the various workhouse districts for the defence of the prisoners, the belief being that the police had not got hold of the right men, and the fact that four men had already been discharged in the offence favoured the idea that the keepers could not identify their assailants. Every day the court was densely crowded, scores having been unable to obtain admission.

TAUNTON.—The convict Bisgrove, the murderer of George Cornish, at Wells, in August last, was transferred on Tuesday from the County Prison to the Government Lunatic Asylum at Broadmoor. He appeared perfectly quiet and tractable, and his health did not seem to have suffered much during his imprisonment.

WEST BROMWICH.—On Wednesday the boiler of the steam-engine at the head of the shaft, which supplied the motive power by which the men were raised and lowered at Whitehall Colliery, exploded. Ten or eight men were at work below and some hours elapsed before they could be rescued. They all escaped without injury, but a man on duty in the engine-house was killed, and another seriously injured by the explosion.

Ireland.

THE NEW LORD-LIEUTENANT.—The inaugural address of the Statistical Society was delivered on Friday evening, the Lord Chancellor in the chair. The Lord-Lieutenant was present, and there was a brilliant attendance. His Excellency delivered a long speech. On Tuesday his Excellency received deputations from the Dublin Chamber of Commerce, the Royal Horticultural Society, and the Royal Agricultural Society of Ireland. In replying to the latter his Excellency said:

"On behalf of her Majesty I thank you heartily and kindly welcome which you have given to me as her representative here. I am not insensible to the value of societies of yours, which have for their object the advancement of useful arts. It is the province of horticulture, in addition to other useful works, to beautify our great cities, to give new charm to our squares and public parks, to adorn our streets and courts. It thus imparts to those whose labour confines them within a town a refreshment and a new pleasure in daily life. It will interest me to see you and myself to attend your exhibitions. I accede to your request that I should become a patron of your society."

EARL RUSSELL ON THE IRISH CHURCH.—Earl Russell has addressed a third letter to Mr. Charles Fortescue on the Irish Church question. His letter contained a plan for distributing the revenues of the Irish Church among Protestants, Episcopalians, Presbyterians, and Roman Catholics. His letter withdrew that plan. The present proposal is a sum of 120,000*l.* a-year shall be set aside out of the revenues of the Irish Church for the maintenance of the churches and parsonages of the clergy of the established Church, and that similar sums shall be assigned to the Presbyterians and to the Roman Catholics. The members of the Board of Charitable Bequests be applied towards the building and repair of Protestant and Roman Catholic places of worship, and dwelling-houses for their respective clergy, and for such other purposes as Parliament may determine. These grants if adopted would leave an undrawn balance of 200,000*l.*, or more, annually available for further purposes, and his lordship proposes that a small portion of this sum shall be applied to the maintenance of aged Irish peasantry in almshouses, of decayed married couples unable to pay their rent, of too old to emigrate, might live together, and of a small portion to the support and education of children who, by the fault or misfortune of their parents, are lodged in workhouses, and to the assistance of convents whose inmates minister to the less children; and the remainder to the improvement of the land of Ireland.

THE NEW MAYOR OF CORK.—Mr. O'Connell, the Mayor of Cork, loses no opportunity of expressing his political sympathies from the bench. On Tuesday a man called Daniel Morrissey having been brought on the charge of using seditious language, he said that he was a member of the Fenian Brotherhood, and that he did not care who heard him say so, and that he would "die for it." Whereupon the Mayor from the bench said, "That is good national language." Constables were not to think a man a Fenian because he says he is one. I do not hold the language of seditious. After all, the man was drunk and was answerable for what he said. He committed a breach of the law, nor did he incite any one to sedition. Some days before, while witnessing the pantomime at the theatre, at one of the local allusions, referring to Mrs. Scannell's shout at the election, "Down with the Tories," the Mayor rose and said, "Hear, hear, right; down with the Tories, down with the Fenian men." These words produced the utmost commotion and loud hissing, mingled with cries of "Turn him out." The Mayor, greatly excited, said, "I will not be quiet. Up with Gladstone, down with the Tories! Down with the Orangemen, down with the Tories! Down with them!" On the following day at the meeting of the City Justices, the Mayor referred to the observations he had made on a former day, and gatory to the police, and complained that persons

The following are this day's quotations:—Yorkshire Regents, per ton, 70s. to 120s.; do. Flukes, 70s. to 140s.; Lincolnshire Regents, 60s. to 90s.; Dunbar and East Lothian do., 70s. to 120s.; Perth, Forfar, and Fife do., 60s. to 110s.; do. Rocks, 60s. to 75s.; French and Belgian Whites, 40s. to 80s.

HOPS.—BOROUGH MARKET, Jan. 29

Messrs. Pattenden & Smith report the trade without alteration since Monday; the demand for consumption continues steady at firmer prices, with a scarcity of choice samples.

METROPOLITAN CATTLE MARKET.

MONDAY, Jan. 25.

The number of Beasts is considerably larger than on Monday last; there is, however, a fair demand, and prices are scarcely altered. There is rather a larger supply of Sheep; the demand is very good, and they are readily disposed of at higher rates. Good Calves are dearer. Our foreign supply consists of 2018 Beasts and 112 Calves; from Scotland there are 340 Beasts; from Ireland, 210, from Norfolk and Suffolk, 830; and 1092 from the Midland and Northern Counties.

Table with columns for s. d. s. d. and categories: Best Scots, Herefords, &c.; Best Shortborns; 2d quality Beasts; Best Downs and Half breeds; Do. Shorn; Beasts, 4490; Sheep and Lambs, 18,270; Calves, 127; Pigs, 210.

THURSDAY, Jan. 28

The supply of Beasts to-day exceeds the demand; trade is very dull indeed, and prices on the average are decidedly lower. Although the number of Sheep is not large, it is about as usual at this time of year, and quite equal to the demand. Trade is by no means brisk, yet for choice qualities Monday's quotations are maintained. Calves are not quite so dear as on Monday. Our foreign supply consists of 443 Beasts and 47 Calves.

Table with columns for s. d. s. d. and categories: Best Scots, Herefords, &c.; Best Shortborns; 2d quality Beasts; Best Downs and Half breeds; Do. Shorn; Beasts, 1010; Sheep and Lambs, 4550; Calves, 108; Pigs, 30.

SEED MARKET.

In the absence of a consumptive demand the agricultural seed trade is quiet, prices are, nevertheless, very firm, and fine new bold purple seed is held for more money. New English Red Clover seed meets with a brisk inquiry, but there is little on offer, and that mostly of an inferior quality; for one parcel, the quality of which was unusually good for the season, the owner refused a bid of 95s. per cwt. Samples of yearling home grown seed are held for long values. Of French and Belgian Red there is but little on our market, and the high prices asked prevent business in those descriptions. New German Red Clover seed is in fair supply, but it is for the most part weak and pale, there is no new American Red offering, and it is believed that on account of the deficiency of the crop on the other side of the Atlantic, no supply will be obtained this season from that quarter. Alsike Clover seed is in abundant supply, and realises moderate rates; it can now be bought at a little over the cost of white. White Clover seed is dull, without alteration. Fine new Trefoll seed is a little firmer. For fine new French Italian Rye grass seed the trade rules extremely firm, and prices, in sympathy with the advance in France, are daily hardening. Rape, Mustard, and bird seeds, are without change. Königsberg spring Tares are scarce and dearer. JOHN SHAW & SONS, 16 Water Lane.

MARK LANE.—MONDAY, Jan. 25.

There was a short supply of English Wheat to this morning's market, and the condition being somewhat improved, factors were enabled to obtain an advance of 2s. per qr. upon the prices of this day's evening. There was a fair attendance at market, and a moderate demand for foreign Wheat at about the prices current a fortnight since. Cargoes of Wheat off the coast brought an advance of 1s. per qr. on last Monday's prices. Barley brought the extreme rates of last week. There was no change in the value of Beans or Peas. The Oat trade was firm, at an advance of 3d. to 6d. per qr. Flour was without alteration.

Table with columns for PRICE PER IMPERIAL QUARTER, s. s., and categories: WHEAT, Essex, Kent, Suffolk, White; Talavera; Norfolk; Foreign; BARLEY, grind. & dist., 38s to 40s Chev.; Foreign, grinding and distilling; OATS, Essex and Suffolk; Scotch and Lincolnshire; Irish; Foreign; POLAND and Brew; RYE; RYE MEAL, Foreign; BEANS, Mazagan; Pigeon; Foreign; PEAS, White, Essex, and Kent; Maple; MAIZE; FLOUR, best marks delivered; 2d ditto; Foreign.

FRIDAY, Jan. 29.

During the past week a better tone has prevailed in the trade, and our country markets have reported in many instances a recovery of 1s. per qr. on Wheat from the depressed rates lately current; but in the seaport towns where the coast cargoes are arriving the trade has not been animated, dealers and millers appearing more inclined to pause in their operations, hoping for easier rates through increased farmers' deliveries. Malting Barley has not undergone any quotable change, but feeding qualities were dull and cheaper. Beans and Peas remained slow and inactive, at barely former rates. Oats have been sold at 6d. per qr. decline. Flour continued a difficult sale in the southern markets, but in Scotland a slight advance was realised. The supplies of grain off the coast this week consisted of 35 cargoes, of which, with those left over from last week, there remained for sale last night 70 cargoes. The floating trade exhibited firmness throughout the week. Arrived Wheat continued in fair demand at about last week's rates. Maize met with a slow sale at reduced prices. Barley sold at a further decline of 1s. per qr. and Rye was steady at our last quotations. Paris, Jan. 28.—The trade in Wheat as well as Flour was very limited, and prices unaltered. The eight marks are quoted at equal to 37s. 6d. per 280 lb. The stock at the Halle is estimated at 12,000 cwt. The arrivals of English grain, foreign Wheat and Oats are

willingly have accepted Monday's prices for the English Wheat on sale, but millers were disinclined to purchase except at a reduction. For foreign there was but little inquiry, and the few sales made were at barely late quotations. Barley was difficult of sale and rather cheaper. For Oats there was no change in prices, and trade was dull.

ARRIVALS THIS WEEK.

Table with columns: Wheat, Barley, Oats, Flour. Rows: English, Irish, Foreign, and totals.

LIVERPOOL, Tuesday, Jan. 26.—We had a good attendance at our Corn Exchange this morning, and for Wheat a fair demand at last Friday's rates. Flour also in fair request at previous rates. Indian Corn in limited request at the figures of last Friday. Beans dull and rather easier. Peas unchanged. Oats and Oatmeal slow, and slightly easier.

AVERAGES.

Table with columns: Wheat, Barley, Oats. Rows: Dec. 19, 26, 27; Jan. 2, 9, 16, 23; and Agg. Average.

To Landscape Gardeners, Surveyors, and Others.

CORPORATION OF MANCHESTER.—ALEXANDRA PARK.—The Corporation invite Landscape Gardeners, Surveyors, and others, to send in DESIGNS in Competition for Laying-out the Alexandra Park. A Plan of the Park, with printed instructions containing all necessary particulars, may be obtained on application to the City Surveyor, Town Hall, Manchester, on or after Monday, the 25th inst. The Designs must be sent in on or before Monday, March 8 next.—By order, JOS. HERON, Town Clerk. Town Hall, January 19, 1890.

WANTED, a good CLERK; one who knows something about Drawing, and Planning Gardens and Hothouses, preferred. State particulars as to wages, &c.—J. MEREDITH, The Vineyard, Garston, near Liverpool.

WANTED, IMMEDIATELY, in a Retail Seed Establishment, a steady, energetic young MAN—Must have a good knowledge of the Business, be willing to make himself generally useful, and be thoroughly trustworthy.—Address, in own handwriting, stating age, experience, salary required, and references, T. BEADWOOD, Jun., 16, Lune Street, Preston, Lancashire.

WANTED, an ASSISTANT SHOPMAN, who writes a good hand and is quick at counter work.—Character must bear the strictest investigation. A young man would find this a good opportunity for improvement.—Address, with terms and experience, Y. Z., Messrs. Hurst & Son, 6, Leadenhall Street, London, E.

WANT PLACES.—Letters to be Post Paid.

EXPERIENCED GARDENERS (or as GARDENER and BAILIFF), of various qualifications, recommended to Gentlemen.—Further particulars given on application to Messrs. E. G. HENDERSON & SON, Wellington Nursery, St John's Wood, London, N.W.

To Gardeners and Bailiffs (Head, Foremen, or Under). JAMES CARTER AND CO. having many applications for the above request that those WANTING SITUATIONS will send NAME, ADDRESS, and COPIES of TESTIMONIALS for ENTRY in their FREE REGISTER. Only those who can send unquestionable references need apply. Any Lady or Gentleman requiring GARDENERS or BAILIFFS may rely upon J. CARTER & CO. adopting the most stringent regulations in reference to testimonials as to ability, honesty, &c.—JAMES CARTER & CO., 237 and 238, High Holborn, London, W.C.

To Gardeners. JOURNEYMAN.—Age 20.—S. S., 6, Cambridge Terrace, S.

ASSISTANT, in the Seed Trade or Office.—Age 20. Has had some experience. Excellent character.—A. J., Cottage, Cuckfield.

ASSISTANT, &c., in a first-class Seed Business.—A Young Man, of good ability; five years' experience. First-class testimonials. No objection to go abroad on terms. A. B., Post Office, Glasgow.

WANTED, to place a respectable YOUTH, with a Nobleman's or Gentleman's Garden, in Gardening.—State terms, &c., to A. B., Messrs. SIMON & CO., bridge, Booksellers, Hertford.

To the Seed Trade.

SHOPMAN, WAREHOUSEMAN, or TRAVELLER.—A Young Man, 7 years' experience (Wholesale and Retail). First-class testimonials. Recommended by last employer. Salary expected.—B. S. J., Mr. McIntyre, 70, Prince's St., London.

BREAKFAST.—EPPS'S COCOA.—GRATEFUL and COMFORTING. Only in 1 lb., 1/2 lb., and 1 lb. Packets—unlined and sealed. Sold by the Trade in all Parts. Prepared by JAS. EPPS & CO., Homoeopathic Chemists, London.

A Success Unprecedented. MARAVILLA COCOA is PERFECTION.—Globe says:—"Taylor Brothers' Maravilla Cocoa has been a thorough success, and surpasses every other Cocoa in its Entire solubility, a delicate aroma, and a rare concentration of purest elements of nutrition, distinguished by the Maravilla of all others. For homeopathic and invalids we could not recommend a more agreeable or valuable beverage. Sold in Packets only, by all Grocers."

DINNERFORD'S FLUID MAGNESIA.—The best remedy for Acidity of the Stomach, Headache, Gout, and Indigestion, and the best mild and delicate constitution, especially adapted for Ladies, Children, and Infants. Dinnerford & Co., 172, New Bond Street, London, and of all Chemists throughout the World.

HAISE'S GALVANIC APPARATUS.—Extracts from the Cures of Paralysis, Rheumatism, Loss of Memory, Indigestion, Debility, Tic, Asthma, &c. Send two stamps to Halse, No. 40, Addison Road, Kensington, for his pamphlet, which contains the particulars of the most extraordinary cures. Will be astonished at its contents.

ELECTRICITY IS THE SELF-ADJUSTING CURATIVE and ELECTRIC REMEDY.—Sufferers from nervous debility, indigestion, weakness, &c., now cure themselves by the only "Guaranteed Remedy" in the world, protected by Her Majesty's Great Seal. Free for One Stamp, by H. JAMES, Esq., Medical Electrician, the London Hospitals, Percy House, Bedford Square, London. N.B.—Medicine and Fees superseded. A Test gratis. Details Established 1840.

Galvanism and Medicine superseded. NEW METHOD OF CURING DISEASE, without aid of doctors and their drugs, by studying the laws of Life and Nature. Invalids cannot too carefully avoid pills, life drops, and other dangerous medicines, as they contain poisons, which act on the delicate coatings of the stomach, destroy the receptacle of our daily sustenance. The Advertiser, pronounced incurable, but, acting in accordance with the laws of nature, has, by God's blessing, been restored to health, strength; and with sympathy for like sufferers, the remedy will be sent, post paid, on receipt of address and two stamps. PHILIP GASKETT, Esq., 20, York Buildings, Strand, London.

CORNS and BUNIONS.—A Gentleman, married, and tormented with Corns, will be happy to afford others information by which he obtained their complete removal in a short period, without pain or any inconvenience.—Forward address stamped envelope to F. KINGSTON, Esq., Ware, Herts.

The Best Remedy for Indigestion. NORTON'S CAMOMILE PILLS.—Recommended as a simple but certain remedy for Indigestion. They act as a powerful Tonic and general Aperient in their operation; safe under any circumstances; and those persons can now bear testimony to the benefits to be derived from their use. Sold in bottles at 1s. 1/2d., 2s. 6d., and 11s. each. Town in the Kingdom. CARRION.—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various cheap imitations.

Freedom from Coughs in 10 Minutes after the use of DR. LOCOCK'S PULMONIC WAFERS.—Insured by From Mr. W. J. DALE, Chemist, 65, Queen's Street, London. "From the immense sale I have had of Dr. Locock's Wafers throughout this populous locality I must do for the fact that I consider them invaluable for Coughs, Colds, and Asthma. To Singers they are invaluable for clearing and strengthening the voice, and have a pleasant taste. Price 1s. 1/2d., 2s. 6d., 4s. 6d., and 11s. per Box. Sold by all Chemists."

WHEN A PERSON TAKES COLD the system becomes charged with phlegm, which, pressing on the lungs, produces a natural effort to get rid of it. This effort is the cough. The only safe and prudent remedies to be adopted are those which assist Nature in her work, by loosening phlegm, and promoting freedom of expectation, until the evil is removed. SPENCER'S PULMONIC ELIXIR is admirably adapted to produce this effect, ease the breathing, loosen the phlegm, and prevent the tickling which occasions the cough, without the use of any irritating agents, and for all temporary and local affections, such as whooping cough, influenza, &c. SPENCER'S ELIXIR is perfectly safe, and while in more chronic disorders, is its effect, should it be persevered in the use of the medicine is required.

The Gardeners' Chronicle Newspaper.

SATURDAY, FEBRUARY 6, 1869.

Indestructible Terra-Cotta Plant Markers.
MAY AND CO'S PATENT.—Prices, Printed Patterns, and Specimens sent post free on application; also Patents of Ornamental Tile Pavements for Conservatories, Entrance Walks, &c.

GEORGE HALL, late Manager to the late Saynors' Firm. He was for 30 years in their employ.
GEORGE HALL AND SON'S CELEBRATED PRUNING and BUDDING KNIVES, SCISSORS, &c., may be obtained from the most respectable Nurserymen and Seed Merchants in the Kingdom, as so America, France, Germany, Holland, Prussia, Russia, &c.
 NB We only make one quality, the best that can be manufactured, the same as the late Saynors always made during their lifetime, with all the latest improvements.
CAUTION—None are genuine unless marked "Geo. Hall & Son." Other marks would cause disappointment, as these blades are tempered by a process known only to the Makers.
 Engravings of Patterns, with PRICE LISTS, gratis on application.
 Horticultural Cutlery Works, Sheffield.

MASTIC L'HOMME LEFORT, OR COLD GRAFTING WAX.

THIS PREPARATION IS KNOWN AS THE BEST WHICH CAN BE USED IN THE OPERATION OF GRAFTING TREES, SHRUBS, AND PLANTS OF ANY DESCRIPTION.

It requires no previous melting; it is always ready for use; it grows hard in the open air as well as in water, and once hardened is not liquified under a high temperature.

IT RAPIDLY HEALS ALL WOUNDS IN TREES, &c., ARISING FROM ACCIDENT OR DISEASE.

IT IS THE BEST STYPTIC TO PREVENT THE BLEEDING OF VINES AFTER PRUNING.

For the above and other purposes, which can best be illustrated in its use, it is indispensable. MASTIC L'HOMME LEFORT is strongly recommended by the most illustrious Professors of Horticulture and Arboriculture in Paris, such as MM. DU BREUIL, DECAISNE, CARRIERE, RIVIERRE, CAPPE, ALEXIS LEFEBRE, TROUILLET, and many others.

Sold in Tin Boxes of various sizes, bearing the Signature of the Inventor, L'HOMME LEFORT, Price, 6d., 1s., 2s., 4s., and 6s. per box.

TANNED GARDEN NETTING, for Preserving Seed Beds, Fruit, Strawberries, from Frost, Blight, Birds, &c., and as a Fence for Fowls, &c. One yard wide, 1 1/2d.; two yards, 3d.; three yards, 4 1/2d.; and four yards 6d. per yard in any quantity. May be had of **CHAS. WRIGHT & CO.**, William Street, Newark-on-Trent, or their Agents, Messrs. Hoozee & Co., Covent Garden Market, London, W.C.

RALPH WALLER AND CO., 45, Dale Street, Manchester, Manufacturers of all kinds of **GARDEN NETTING**, &c.—The serious injury done every spring to fruit crops by frost has proved to every Gardener the absolute necessity of providing some protection to the trees early in the year. If the blossom, in its earliest development, be but slightly weakened by frost, the vitality of the fruit germ is destroyed, and the fruit lost. In this climate, on the average of a century, there is not more than one year in 19 when the protection is unnecessary. Many fabrics have been tried for this purpose of protection, with more or less success; and we may now say, without fear of contradiction, that we have succeeded in manufacturing the only fabric which is altogether unobjectionable for this purpose. While it unduly burning, it effectually protects the young germ, and does not impede the action of light and due circulation of air. Some other fabrics do this, and thus weaken the vitality of the tree altogether. Almost every large grower in the three kingdoms can testify to these facts. The Nettings also make a beautiful shading for Hothouses in summer, and are cheaper than other fabrics on account of their great durability.
Netting (qualities): Nos. 1, 2, 3, in pieces of 30 yards long, 1 1/2 yard wide. Tiffany: in pieces 20 yards long, 39 inches wide.
For prices, &c., apply to the above address—45, Dale Street, Manchester.

COTTAM'S PATENT PORTABLE UNITED COW FITTINGS.

Their advantages are—Portability, not Fixtures, removable at pleasure, no Woodwork or Partitions to impede Ventilation or breed Vermin, Hay Rick dispensed with as unnecessary, increased width and depth of Feeding Troughs, Water Cistern, and Patent Drop Cover to prevent over-gorging. Cleanly, durable, and impervious to infection, being all of Iron. Prices of Fittings per Cow, 5s.
Prospectuses free of **COTTAM & CO.**, Iron Works, 2, Winsley Street (opposite the Pantheon), Oxford Street, London, W., where the above are exhibited, together with several important improvements in Stable Fittings just secured by Patent.

THE HYDRONETTE, (Robins' Patent), for Gardens, Greenhouses, Conservatories, Hotbeds, &c. Unrivalled ease of action, simplicity, convenience, and force.

The **HYDRONETTE** is a more useful, easy working, reliable, and convenient water-throwing machine than any other in use. It is made in five sizes, viz.:—No. 1, with 4 feet of Suction Hose, Strainer, Jet, and Rose, 12s. 6d.; No. 2, 15s. 6d.; No. 3, £1 1s.; No. 4, £1 5s.; No. 5, £1 10s. Extra Hose and Union Joints furnished to order.
DIRECTIONS FOR USE.—Take the Hydronette in the left hand, lay hold of the handle with the right, drop the strainer end of the Hose into the pail, then work the plunger quickly a few strokes, until water is drawn up to the brass tube; then work it slowly, or quickly, at will. To be obtained through any Ironmonger or Florist in the United Kingdom, or of the Proprietors,
HAYNES & SONS, 227, 229, and 231, Edgware Road, Paddington, W.

BARTON'S PATENT CIRCULAR-FRONT COOKING STOVE, with Open Chimney and Roasting Fire, that will adapt to Roast any size of Joint in Front of it.

Roasts Before the Fire. Roasts or Bakes in the Oven. Ventilates the Kitchen. Carries off the Smell of Cooking. Carries off the Dust. Cures Smokey Chimneys. Saves Labour. Has an Open Chimney. Keeps the Kitchen Cool. Is Simple in Construction. Has a Small Fire. Saves the Coal. Wastes no Heat. Gives a Large Supply of Hot Water.
HAYNES & SONS, 227, 229, and 231, Edgware Road, Paddington, W.
Sole Agents for London
In the Patent Circular Range the Fire is angle-shaped, and when in use, as shown in the illustration, Baking, Steaming, and Boiling upon the Hot Plate can be thoroughly maintained. By turning the handle the Fire Box is lowered, and a full size Roasting Fire obtained. Particulars, with numerous Testimonials, free on application.

MUSGRAVE'S PATENT SLOW COMBUSTION STOVE.—This Stove is the nearest approach to heating by hot-water. It will burn day and night for weeks with little care; is admirably suited for Conservatories, Halls, Churches, &c.; and is deserving of special attention, because of its safety, healthfulness, durability and extreme simplicity. Capacity of the apartment which these Stoves will warm:—
First Size .. 9,000 cubic feet. Third Size .. 38,000 cubic feet.
Second Size .. 15,000 cubic feet. Fourth Size .. 45,000 cubic feet.
Fifth Size .. 60,000 cubic feet.
London Depot: **HAYNES & SONS**, 227, 229, and 231, Edgware Road, London, W.

Wellington Pottery.
A. C. WILLIAMS & SONS.
604, Gallowgate, Glasgow.
FLOWER POTS of superior make, with Cut Bottoms: **ORCHID POTS, HANGING ORCHID POTS, and ORCHID SLABS**, approved Patterns, as used by some of the most successful Gardeners. **Ornamental Flower Vases, Fern Vases, and Tazza**, **Square Seed Pans, Crocus Pots, Rhubarb and Banksia Pots**, Propagating Pots, Small Trays, &c.
Price Lists and Illustrated Catalogues on application.

Caution to Gardeners.—When you ask for **SAYNOR AND COOKE'S WARRANTED PRUNING and BUDDING KNIVES**, see that you get the **WARRANTED** mark SAYNOR, also the Corporate Mark, **WARRANTED**, without which none are genuine.
S. & C. regret having to caution Gardeners and others, but are compelled to do so, in consequence of an imitation, of inferior quality, having been sold for the genuine one, and which has caused many complaints to be made to them of Knives which were not their make, all of which are warranted both by Sellers and Manufacturers. **S. & C.'S PRUNING and BUDDING KNIVES** are the best and the cheapest in the market.
Paxton Works, Sheffield. Established upwards of 125 years.

THE GENERAL LAND DRAINAGE and IMPROVEMENT COMPANY.

Directors: Thos. Chapman, Esq., F.R.S. The Rt. Hon. Viscount Combermere. Geo. Thomas Clark, Esq. Henry Currie, Esq. John C. Cobbold, Esq., M.P. Edward John Hutchins, Esq., M.P. William Tate, Esq., M.P. J. BAILEY DENTON, Principal Engineer. Works of Drainage of any extent, Irrigation, Enclosing, Wood Grubbing, Road-making, Farm Houses, Farm Buildings, and Labourers' Cottages, are executed on all descriptions of Property, whether Freehold, Entailed, Mortgaged, Trust, Ecclesiastical, Corporate, or Collegiate, or Loans granted for the purpose to Landowners who desire to execute the works by their own agents. Tenant-farmers may also, by arrangement with their landlords, procure the execution of the above improvements on their farms at an annual cost to themselves of between 6 and 7 per cent on the outlay and official expenses. The whole of the outlay in the works, with all official expenses, may be charged on the Estate for a term of years, to be fixed by the landowners to meet the circumstances of tenants. No investigation of title being required, no legal expenses are incurred. Applications to be made to Mr. HORACE BROKE, the Secretary, at the Office of the Company, 22, Whitehall Place, S.W.

Home News.

THE COURT at OSBORNE.—On Thursday, the 23rd ult., the Princess Teck, the Princess Mary of Teck, and the Prince of Leiningen arrived at Osborne on a visit. On Friday the Queen drove out with Princess Teck. Prince Arthur, Prince Christian, and the Archbishop of Canterbury arrived on a visit. General and Lady Alice Peel left for London. On Saturday the Confirmation of Prince Leopold took place at Whippingham Church, in the presence of the Queen and Royal family and the members of the Household. The Archbishop of Canterbury performed the ceremony. Prince Christian, Prince Leiningen, and the Archbishop afterwards left for London. On Sunday evening the Queen, Princess Louisa, Prince Arthur, Prince Leopold, and the Princess of Teck attended Divine service at Whippingham Church. The Rev. George Prothero officiated, and administered the sacrament. On Monday morning the Queen drove out with Princess Teck, and in the afternoon drove out with Princess Teck, Princess Louisa, and Princess Beatrice, accompanied by Prince Arthur on horseback. On Tuesday morning the Queen walked and drove in the grounds, accompanied by Princess Teck and Prince Leopold. In the afternoon the Princesses Teck and Princess Mary of Teck left for Kensington Palace. The Duke and Duchess Frederick of Schleswig-Holstein arrived from Frogmore on a visit to her Majesty. On Wednesday Prince Arthur left for Woolwich. Mr. and Mrs. Theodore Martin arrived from London on a visit. On Thursday morning the Duke Frederick of Schleswig-Holstein visited her Majesty's ship Hector in Cowes Roads. In the afternoon the Queen held a Council, at which Lord de Tabley, Sir George Markham Gifford, Lord Justice; and Mr. James Stansfeld, Third Lord Commissioner of the Treasury, were sworn as Privy Counsellors, and took their seats at the Board. The Lord President of the Council, Earl Granville, and the Lord Chamberlain had audiences of her Majesty. After the Council, Vice-Chancellor William Milborne James was introduced by the Lord Chamberlain, and received the honour of knighthood. Lord de Tabley and Lord Otho Fitzgerald kissed hands on their appointments as Treasurer and Comptroller of the Household.

THE PRINCE and PRINCESS OF WALES IN EGYPT.—Their Royal Highnesses and suite landed at Alexandria at an early hour on Wednesday morning, and left at mid-day for Cairo. According to the Levant Herald, it is now definitively arranged that the Prince and Princess will visit Constantinople after their tour in Egypt.

THE CABINET.—A Cabinet Council was held on Tuesday at the official residence of the First Lord of the Treasury. Another is summoned for this afternoon.

PARLIAMENTARY MOVEMENTS.—The following circular has been issued by the Prime Minister to his supporters in the House of Commons:—

"11, Carlton House Terrace, Jan. 30, 1869. "Sir,—I venture to express the hope that you may find it convenient to attend the House of Commons on the 16th of February, when the Address will be moved in answer to the Speech from the Throne. Very shortly afterwards business of great importance will be submitted to Parliament.—I have the honour, &c., W. E. GLADSTONE."

The following circular note has been addressed by Mr. Disraeli to the members of the Conservative party:—

"Grosvenor Gate, Feb. 2, 1869. "Sir,—I have to remind you that Parliament will meet on Tuesday, the 16th of February, and to express my hope that you may find it convenient to be in your place on that day, as business of importance may be expected.—Believe me, your faithful servant, B. DISRAELI."

It is generally understood that her Majesty will open Parliament in person. The Hon. Henry Cowper, member for Herts, will move, and Mr. Mundells, member for Sheffield, will second, the Address in the House of Commons. The executive committee of the united Liberal party at Manchester have resolved, almost unanimously, that, in the event of Mr. Birley being unseated, Mr. Milner Gibson shall be adopted as their candidate. Mr. Tillett, the unsuccessful Liberal candidate for Norwich at the general election, has declined an invitation to come forward for the seat

declared vacant by the recent election inquiry. Mr. Milner Gibson has also declined a similar invitation. Mr. E. Stracey, who has been selected as the Conservative candidate, has not yet issued his address. The Marquis of Hartington and his Conservative opponent, Mr. Philips, of Abbey Cwmner, have been actively pursuing their canvass for the Radnorshire Burghs during the past week.

TRIAL OF ELECTION PETITIONS.—Mr. Justice Willes gave judgment on Saturday on the Lichfield petition, stating that he should report to the Speaker that Colonel Dyott was duly elected and returned; that no corrupt practice was proved to have been committed by or with the knowledge and consent of any candidate; and that it did not appear from the evidence that corrupt practices prevailed at the late election. On Tuesday Baron Martin gave judgment in the second of the Bradford petitions, stating that he should report to the Speaker that Mr. Forster's election was valid, the costs to follow the event. On Thursday Baron Martin gave judgment in the Warrington petition, and decided that the election was not voided by the irregularities caused by the neglect or incapacity of a poll-clerk, and that Mr. Rylands was duly elected. The petitioners thereupon declined to proceed with the case, and abandoned the petition for a scrutiny. Mr. Justice Willes gave judgment yesterday on the Westbury petition, to the effect that the election of Mr. Phipps was void, on the ground of intimidation by Mr. Harrop, as his agent; that neither candidate was personally guilty of corrupt practices, and that it had not appeared that corruption extensively prevailed at the last election. The trial of the Wallingford petition commenced on Tuesday, and is still in progress. The two Stockport petitions have been withdrawn. The trial of the Westminster petition is fixed for Feb. 12; Coventry, Feb. 15. Gloucester, Feb. 18, Bridgewater, Feb. 23; Taunton, March 2; Hereford, March 9; Oldham, March 15; Preston, March 22. In Ireland, on Saturday, Baron Fitzgerald gave judgment in the Belfast petition, declaring that Mr. McClure had been duly elected, and condemning the petitioners to pay all costs. Mr. Justice Keogh gave judgment yesterday on the Dublin petition, declaring the election of Sir Arthur Guinness to be void, though not by his own corrupt acts, and ordering him to pay all costs. The Eniskillen petition has been withdrawn, with consent of the Court, the petitioners being ordered to pay Viscount Crichton's costs. The cross petitions against the return of Mr. Denis M. O'Connor and Sir R. Gore Booth, for county Sligo, were withdrawn on Monday with consent of Court. The Cashel petition will be tried on the 11th inst.; that of Sligo Borough on the 19th; Youghal, on the 19th; and Galway on the 24th.

ENTHRONEMENT OF THE ARCHBISHOP OF CANTERBURY.—The ceremony of enthroning the new Archbishop of Canterbury took place on Thursday, in the cathedral of that city, in the presence of between 2000 and 3000 persons from all parts of the kingdom, and was conducted on a more imposing scale than any former proceeding of the same kind that has occurred for very many years. The procession, consisting of the Archbishop, the Bishops of London, Oxford, St. David's, Ely, Peterborough, Hereford, and Honolulu; the Deans of Canterbury and Westminster, the Archdeacons and members of the Cathedral body, the Mayor and Corporation of Canterbury, assembled in the cloisters at 11 o'clock, and proceeded along the nave to the choir, at the entrance to which the party formed into file, along which the Archbishops, Bishops, Deans, and Archdeacons passed, and were conducted to the space within the rails at the east end of the cathedral, where the ceremony of induction was performed by the Ven. B. Harrison, Archdeacon of Maidstone, as proxy of Dr. Croft, Archdeacon of Canterbury, who, from his great age, was incapable of officiating. The Dean of Westminster represented by proxy four Bishops connected with the Cathedral who were unable, from illness or other cause, to attend—the Bishop of Winchester as Provincial Sub-Dean, the Bishop of Lincoln as Provincial Chancellor, the Bishop of Salisbury as Provincial Precentor, and the Bishop of Rochester as Provincial Chaplain. After the ceremony, the Archbishop and Mrs. Tait, the Bishops, the Dean of Westminster, Lady Augusta Stanley, and about 200 visitors were entertained at luncheon in the new library of the cathedral.

THE BISHOPRIC OF LINCOLN having become vacant last week by the confirmation of Dr. Jackson's translation to the see of London, the Gazette of Friday contained the usual conge d'elire and recommendation to the Dean and Chapter for the election of Dr. Wordsworth to the vacant see.

THE BISHOP OF SALISBURY was removed from Claridge's Hotel on Saturday to his brother's residence in Grosvenor Street. Since his removal he has not improved, and he is still in a very precarious condition.

CONVOCAION.—A meeting of the new Convocation for the Province of Canterbury was held on Friday at the Jerusalem Chamber, in order to have the approval and consent of the Archbishop to the election of a Prolocutor of the Lower House. The Convocation having been opened in due form, Dr. Bickersteth, Archdeacon of Buckingham, who has held the office for many years, was presented as unanimously chosen by the Lower House, by Archdeacon Denison, who made a Latin speech on the principal matters which are now interesting the clergy. The Archbishop, in complimentary terms, expressed his approval of the election of Archdeacon Bickersteth, and the new Prolocutor having replied, Convocation was formally adjourned to the 23d inst.

COLONIAL OFFICE.—Sir Francis R. Sandford, assistant-secretary of the Education Office, has been appointed to be Assistant Under Secretary of State for the Colonial Department.

HOUSE OF COMMONS.—Mr. Henry Lay, Second

Clerk Assistant of the House of Commons, has resigned his office, and Mr. Reginald Palgrave, who has recently been one of the Examiners for Standing Orders in both Houses of Parliament, has been appointed his successor.

Foreign.

FRANCE.—In the sitting of the Corps Legislatif on Monday, Baron de Benoist explained his reasons for questioning the Government respecting the Bill on public meetings passed last session. M. Baroche replied on the part of the Government, and after M. Ollivier and M. Pelletan had spoken, the motion of Baron de Benoist was withdrawn. The Princess Bacciochi, a relative of the Emperor, died on Wednesday, at her model farm of Korn-et-Ouet, near Rennes in Brittany.

ALGERIA.—A telegram from Algiers reached Paris on Tuesday announcing a rising of the tribes who have never given in their submission to the French. They were advancing in numerous bands towards Tell, and columns of troops were being organised to march against them. A subsequent telegram, dated Feb. 2, says:—

"At 9 a.m. to-day the French commander-in-chief in Laghouat, Colonel Soums, at the head of 1200 men, encountered near Ayn Madhy, 3000 horsemen and 800 foot soldiers belonging to the tribe of Ouled-Sidi-Cheik. The latter were completely defeated, and left 70 dead on the field of battle, besides carrying away many killed and wounded. The French loss is stated to be two officers and eight soldiers wounded. Colonel Soums is pursuing the rebels in a westerly direction. The engagement, it is hoped, will re-establish in the south the tranquillity which had been momentarily compromised. Marshal MacMahon is expected in Algiers on the 4th inst."

Another telegram, dated Thursday last, says that the enemy has been completely routed, and that the French are in full pursuit.

SPAIN.—The *Gaulois* of Monday published a telegram from Madrid, stating that in consequence of the attitude of the reactionary party, and the difficulty of choosing a candidate to the Throne acceptable to the whole nation, all the fractions of the Liberal party had decided to place the supreme executive power in the hands of a triumvirate, which would probably consist of General Prim, Marshal Serrano, and Senor Rivero. The news that General Espartero will not accept his election to the Cortes is confirmed. On Sunday afternoon a manifestation was made at Madrid in favour of religious liberty. Perfect order prevailed throughout. General Prim and Senor Ortiz, Minister of Public Worship, addressed the people, and repeated their former declarations that freedom of worship was an accomplished fact, but added that the Provisional Government preferred leaving to the Cortes to decide the question of separation between Church and State. The second Protestant service took place in Madrid on Sunday. Hundreds of persons were unable to obtain admission from want of room. The owner of the house in which the services are held has received an anonymous letter threatening him with assassination. The Government has authorised the erection of a Jewish synagogue. The Papal Nuncio has returned to the Nunciature accompanied by Senor Rayero, and was received by the Civil Governor of the Province of Madrid on his arrival. It is asserted that five individuals guilty of complicity in the assassination of the civil governor of Burgos will be executed this week. A decree has been issued granting a pension of 1500 crowns to the widow of the murdered governor. The authorities of Saragossa have arrested several persons known to belong to the Carlist party. The two Tristani Carlist chiefs have entered Catalonia by the Valley of Andorra. Troops have been sent to oppose their further advance.

BELGIUM.—The King and Queen, accompanied by the Royal children, left Brussels on Monday for the Château d'Ardenne, where they will remain for some time. The Prussian *Cross Gazette* of Wednesday, in a leading article headed "The future of Belgium," declares that it is to the interest of all the Great Powers that the independence and neutrality of that country should be preserved, adding that if, contrary to expectation, she should be threatened from any other quarter, allied Germany must vigorously undertake her defence.

SAXE COBURG-GOTHA.—The jubilee in honour of the 25th anniversary of Duke Ernest's accession to the Throne was opened on the 29th ult. by the reception of the National Representatives and Foreign Ministers at the Castle of Friedenstein. The President of the Diet presented an address, in which he laid stress upon the Duke's national labours, and said that his Government had been one constant development of liberal progress and undisturbed unity between the duke and the country. His Highness, in reply, gave a retrospective sketch of his career in the Government of the duchy, and of his conduct as a German patriot. In the afternoon a banquet was given to Duke Ernest by his subjects.

BADEN.—The Procurator-General has been instructed by the Minister of State to enter a prosecution against Bishop Kubel, coadjutor of the archbishopric of Freiburg, and Herr Burger, parish priest, for abuse of clerical power, in having excommunicated Burgomaster Stromeyer.

PRUSSIA.—The Chamber of Deputies on Friday deliberated on the ordinance for the confiscation of the private property of the ex-King of Hanover. A committee of the House brought forward a resolution, approving the ordinance with the following addition—"The decree of confiscation cannot be annulled except by means of legislation." A long debate ensued, in which the former Hanoverian Minister, Herr von Windhorst opposed the committee's proposals, and demanded protection for the private property of King George. He denied that the projected confiscation was either justifiable or constitutional, arguing that independent judges only, and not Legislative Assemblies,

were competent to decide on such a question. He, moreover, alluded to the absence of any proof of the alleged existence of a Hanoverian Legion or of a Committee of Agitation. Count Bismarck, in reply, proved by reports from the Prussian Ambassador in Paris, that the Legion really does exist, and, moreover, numbers 1400 men, and costs in maintenance 300,000 thalers a-year. The Prussian Government, in concluding the arrangement with King George, exhibited due regard for the Courts friendly with or related to the King of Hanover, and had not overlooked the fact that a large subsidy was made to his Majesty by the English Government. Count Bismarck further expressed hopes that King George would now abandon a useless pretendership; adding—"As his Majesty, however, considers himself in the light of a belligerent, and conspires with foreigners to injure the fatherland, the Prussian Government is under the obligation to defend itself, and acts according to the laws of war." The proposals of the committee were then adopted by a majority of 256 to 70. The members who voted against the proposals belong to the Party of Progress. Nine deputies abstained from voting. In the sitting of Saturday the Government Bill for confiscating the property of the Elector of Hesse Cassel, was passed by a large majority. Count Bismarck, on introducing the measure, pronounced it to be one of political necessity. It is expected that the Government will convoke the Customs Parliament for the month of May.

AUSTRIA.—The Upper House on Saturday adopted, with slight modifications, the measure allowing Press prosecutions to be tried by juries. In the Lower House the Bill was introduced by the Minister of Justice.

ITALY.—The Chamber of Deputies on Friday approved the treaty of commerce concluded with Switzerland. The King left on Saturday for Ancona and Naples. It is asserted that, in the event of hostilities between Turkey and Greece, the whole Italian ironclad squadron will be sent to Greek waters. Order and tranquillity have been restored in the provinces of Parma, Bologna, and Reggio. A decree was consequently issued on Saturday terminating the mission of General Cadorna. The Government on Tuesday definitively settled the convention for the concession of the Calabro-Sicilian lines with Messrs. Waring and M. Lowinger. It has also promised to the latter a concession for a direct line of railway from Florence to Naples. Both lines are to be constructed on Fell's system.

RUSSIA.—The Government has raised Kiew, chief town of the province of Little Russia, to the rank of third capital of the empire, placing it next to St. Petersburg and Moscow. In consequence of this resolution an Imperial palace is to be constructed there without delay. An Imperial ukase has been issued, approving the formation of a private company to commence the levelling works for the projected railway line from the Caspian Sea to Lake Aral.

GREECE.—Count Walewski, bearer of the Protocol of the Conference, and also of an autograph letter from the Emperor Napoleon to King George, arrived at Athens on the 28th ult. The declaration of the Conference was delivered to the Government by the French minister on the same day, eight days being allowed for an answer. On Tuesday it was announced that the Bulgarian Ministry, being unwilling to sign the Protocol, had resigned. The King, after accepting their resignation, entrusted M. Zannis and M. Deligeorgis with the formation of a new Ministry. These statesmen, however, declined the task, and the members of the Bulgarian Cabinet offered to retain their portfolios on condition that the protocol of the Conference be rejected. King George then sent for M. Faimis, a member of the Chamber of Deputies, who accepted the task of forming a new Ministry, and has constituted a Cabinet which assents to the protocol of the Conference. In this new Cabinet M. Faimis will hold the office of Minister of the Interior, and M. Delyannis that of Minister for Foreign Affairs. Great excitement prevails in Athens and in the provinces.

TURKEY.—Mr. Seward has authorised the American Minister at Constantinople, during the rupture between Turkey and Greece, to offer informally his good offices as a channel of communication between the Greek Government and the Porte.

THE PRINCIPALITIES.—The French Government has recalled the members of the French Military Commission after five years' service at Bucharest.

EGYPT.—The Prince and Princess of Wales arrived at Alexandria about 7 o'clock on Wednesday morning, disembarked at the Railway Wharf, and proceeded at mid-day for Cairo, accompanied by the Viceroy's son, Cherif Pasha, and Colonel Stanton.

INDIA.—The farewell dinner given to Sir John Lawrence on the 12th ult., was very successful. Many native chiefs are at present in Calcutta, for the purpose of taking leave of Sir John, and welcoming the new Viceroy. It is stated that the Lieutenant-Governor of the Punjab will shortly come to Calcutta for the purpose of arranging the terms of the alliance with the Ameer of Afghanistan. It is stated that the subsidy given by the Indian Government to Ameer Shere Ali Khan consists of 120,000*l.* An outbreak of the Coolie tribes on the frontiers of Sylhet and Cachar is reported. The Government of India has adopted very active measures to meet the famine. The octroi duties upon grain are to cease for the present in those districts where scarcity exists. A most seasonable fall of rain had greatly improved the prospects of the crops. The order for the commencement of the irrigation works at Behar has been issued.

CHINA.—A meeting of the leading merchants has been held at Foochow in reference to the fraudulent practices of the Chinese in mixing and packing teas. Every assistance has been promised by the consuls at Shanghai to prevent the fraud.

JAPAN.—The Japanese Government has notified the representatives of foreign Powers of the opening of the port of You deegas (Yokohama) to foreign trade. The advices relative to the annexation of Hakodadi are conflicting. The northerners have notified their intention of confiscating every foreign vessel conveying troops or contraband of war.

UNITED STATES.—The House of Representatives on Monday, by a majority of 110 to 62, tabled a resolution in favour of the annexation of the Republics of Hayti and San Domingo to the United States. The House of Representatives on Saturday, by a vote of 147 to 42, adopted a resolution amending the constitution so as to prohibit the denial of the suffrage to any person on account of race or colour. A bill has been introduced, and referred to a Judiciary Committee, providing that the jurisdiction of the Federal Court of Claims shall extend to the claims of loyal citizens in rebel States. Rumours of an again current in Washington that negotiations were being held with Spain for the purchase of Cuba have been denied by the part of the United States by Secretary Seward.

CANADA.—The Hon. Joseph Howe has been appointed President of the Privy Council of the Dominion of Canada. The case of Whelan, an assassin of Mr. D'Arcy M'Gee, was argued at the Court of Error and Appeals, at Toronto, on the 22d ult. The judges delivered judgment on the case, four for and two against granting a new trial. The prisoners were ordered to apply for leave to appeal to the Privy Council. The Court decided that it had no power to grant leave. The prisoner was sent back to Ottawa under the law to take its course, and if a reprieve is granted he will be executed on the 11th inst.

CUBA.—General Dulce has telegraphed to the Provisional Government that a riot of an insurrectionary character has broken out at Havannah, but that order has been restored, and that the insurrection on the island is diminishing.

PARAGUAY.—Several combats took place against the last Paraguayan fortifications between the 21st and the 27th December. On that day Lopez's headquarters were assaulted, and the chief redoubt taken. Terrible losses were sustained on both sides. The Paraguayans fled into a wood, and were completely surrounded, but Lopez was supposed to have escaped. Angostura was still untaken.

City Intelligence.

OVEREND, GURNEY & Co (LIMITED).—At the Central Criminal Court on Tuesday, the grand jury returned true bills against all the directors of Overend, Gurney & Co. (Limited), who were charged with fraud and conspiracy in the recent investigation of the Guildhall. The witnesses for the prosecution were under examination before the grand jury for several hours. The Court of Queen's Bench had previously granted a writ of *certiorari* for removing into that court any indictment that might be found at the Central Criminal Court against the directors. Lord Chief Justice expressing an opinion that in consequence of the excitement prevailing on the subject in the City, the case had better be tried in Westminster. On Saturday the defendants appeared before the Lord Mayor, at the Mansion House, with their sureties, and entered into fresh recognisances to appear for trial on the 15th of April, in the Court of Queen's Bench, at Westminster, and to be responsible in the event of conviction for the costs of the prosecution to the period of the bill being found by the grand jury. The bail amounted in all to 120,000*l.*, being 10,000*l.* each of the defendants, and 5000*l.* for each surety, 12 in number. It is rumoured that some of the leading members of the bar have already been retained for the defence, including Sir Esmond Palmer, Sir J. D. Coleridge, Sir John Karslake, Sir Mellish, Q.C., Serjeant Ballantine, Serjeant Parry, Giffard, Q.C., and Serjeant Sleight. The case is recently stated to be necessary to meet the promissory notes due on the 15th of March, has been ordered by Vice-Chancellor Malins to be paid on the 15th of March.

THE CASE OF MR. EDWARDS.—In compliance with a requisition from the Lord Chancellor, Mr. Edwin Watkin Edwards attended on Thursday at the Court as solicitor before Mr. Commissioner Holroyd, in a case in Bankruptcy he is official assignee. The purpose of giving an explanation of his recent conduct at the Overend, Gurney & Co. examination. Mr. Edwards stated that, as his connection with the case ceased in 1861, and his papers relating to it had been handed over to them, he was without documents to refresh his memory, and therefore asked for ten days to enable him to recall the facts, and to collect the evidence of others as far as possible in support of them. Mr. Holroyd consulted with the other Commissioners, and the ten days were granted.

THE MERCHANTS' COMPANY (LIMITED).—A charge of conspiracy to defraud brought against the directors of "the Merchants' Company," now in liquidation, was again heard at the Mansion House on Saturday. The principal witness was Mr. Capel, official liquidator, and at the close of the sitting the investigation was again adjourned.

The only safe and prudent remedies to be adopted, which assist Nature in her work, by removing the cause of the complaint, and restoring the system to its normal state, are SPENCER'S PULMONIC ELIXIR, which is admirably adapted to the cure of colic, and other ailments of the stomach, and the chest; and for a temporary relief, a few drops of the Elixir will be sent, post paid, on receipt of address and one shilling. FRUIT GARDEN, East, 30, York Buildings, Strand, London.

WHEN A PERSON TAKES COLIC, which is a consequence of a cold, a natural effort is made for its relief. The only safe and prudent remedies to be adopted, which assist Nature in her work, by removing the cause of the complaint, and restoring the system to its normal state, are SPENCER'S PULMONIC ELIXIR, which is admirably adapted to the cure of colic, and other ailments of the stomach, and the chest; and for a temporary relief, a few drops of the Elixir will be sent, post paid, on receipt of address and one shilling.
