In reference to the above, I may again cite the instance of the Balsams, which I subjected to intense heat and excessive moisture by syringing, apart from the aid of fermenting material throughout the whole process. Such Was the exuberant growth on that occasion from the plantir being transferred from 60 -sized pota to 12-sized, that had a repeated intention of again shifting them; but the stimulating material in which they were placed proved capable of imparting a vigour far exceeding the expectations, of all who saw them, and though cultivated in houses whose structure was favourable only to a dry heat, yet the humidity which they were subjected to daily caused the protrusion of roots above the suriace of the soil-a sufficient proof of the genial element and intense agency to which they were exposed.

To obtain fruit of a much larger size, it will be found necessary to restrain the plants from bearing fruit to a greater age than mine have ever been permitted to acquire, plants annually into larger pots. The difficulty of thul removing, without danger to the roots, \&c." Remarks.-Here it appears that Mr. Knight aupposed growth. But I am strongly inclined to think that he
here lost sight of the principle which he in part carried out, and that if be had then perceived the application of
dispensing with all shifts-by the possibility of obtaining dispensing with all shifts-by the possibility of obtaining
a uniform circulation of moisture from a larger amount a uniform circulation of moisture from a larger amount of material, whether applied in larger pots, tubs, or proportionately sized pits-he would still have attempted it on a larger scale. It appears that his attempts on a smail scale-yet then proportionately larger than others believed
possible-were crowned with success. And here I would possible-were crowned with success. And here I would inquire whether his application of vegetable matter in a fresh or undecomposed state was at all favourable to the highest possible effects-whether its nutritive properties were not to a certain extent pernicious, not as an element capable of being assimilated by the roots, \&c., but pernicious or unfavourable as a medium by whichithe remaining chemical agencies were to derive and impart their force? Is not the efficiency of every cause to a certain cxtent modified or regulated in proportion to the FITNESS of the MEDIUM through which it operates? If not, I am perfectly unable to establish a method in support of those principles of Horticulture upon which all that is true in cultivation depends.
Referring again to the materials used in the cultivation of the Balgams, I am convinced that the application o materials subservient to the highest possible effects of cultivation must answer a twofold purpose, mechanical and nutritive (or assimilative), and that the amount of material subservient to the latter purpose should only be functions of each plant. I would even apply these views to the cultivation of such plants as are exposed to the most intense agencies; for this reason, that the amount of material equal to a given effect would be in proportion to the former-the more powerful the agent, the greater the amount of material a plant could operate upon ; and the greater the amount of material, the more essential that its qualities, proportions, arrangement, \&c., should be rendered subservient to the progressive stages of growth medium that the law of gravitation operates, and it is the mediform operation of this law which constitutes the capability and power of uniform agency in all material bodies. bility and power of uniform agency in all material bodies is requirel, to place the plants at all periods of their growth at considerable distances from each other, because the leaves of the Pine-Apple plant act less efficiently in the generation of sap in proportion as they are made to take a perpendicular direction, and the direction they are compelled to take when they are laterally much shaded -for the leaves of this plant, like the stems of Potatoplants, are subjected to the conflicting influence of graviation and the at-he one lizo a perpenand the comparative power of one agent increasing as that of the other decreases."
Remarks.-The above very instructive observations appear to inculcate the great importance of equalising the great opposing powers in Nature, and serve to afford the have given in a previous paper on the essential importance of "a uniform circulation of moisture," as a principal medium by which"the highest possible effect a the tion are to be attained. As this condion, have excited some little attention, and in some fecture, as to the causes which operate to produce it, I beg to submit the following proposition to the consideration of cultivators :
A uniform circulation of the fiuids necessary for the highest objeots in Horticullure is the resull of adapt ing the arrangement, proportions, textures, and qualities
of the materials employed in cultivation, to the organic of the materials employed in cultivation, to the organio
structure of plants, and the external agencies whioh structure of plants, and the externalial
operate upon them.-William Wood.

\section*{MR. BECK'S TANK-HOUSE.}

Pireaps a description of my Tank-house may be acceptable to the general reader, and may serve to answer the numerous inquiries 1 have received upon the subject What 1 aimed at was, to employ every portion of the space inclosed to the best advantage. Under one roof are the means of obtaining, at pleasure, stove, bottom, moist and dry heat, and likewise ventilation; the arrangements for may be allowed once simple and effective. The house (if the mame) is a "lean-to" against a south wall; it is 35 feet long by 7 wide, and is divided in the centre by a glass partition. The tank, which is heated by one of Stephenson's conical boilers, is an iron one, and made by the same company; it is 30 feet long and 3 feet wide, and is 9 inches deep. it is corered with \(1^{\frac{1}{2}}\) inch slate, and the depth of the water in it is about 4 inches.
The tank is divided as shown in the Chronicle, p. 804. The half of the house nearest the boiler I use as a stove, and which is 4 feet from the wall, in both divisions rise a series of shelves removable at pleasure. At either end a series of sheves and a fern Aceither end water from the rond a sashes is placed water from the roof, and under the front sashes is placed a shelf, which is easily let down whenever wide path-room tion is effect for lights run in the usual manner, and the front ssshes are sliding. The the usual mavner, andio fithes:- In the stove suspended from her and pleced upon shelves are about 70 choice O Ho roor, and placed uponinel some Roses, just coming into full blom. There are also some Hiracinths and other phants boom. There als The shelf under the window is filled with various cuttings that have been struck, and are to remain there until they become established. Beneath the tank, which is sup
ported upon small iron columns 2 feet 6 inches from the ground, are planted Rhubarb, Asparagus, and Seakalethe two former promise to be excellent crops, the latter has only been lately planted, and therefore little can be
said about it ; here are also stowed away Fuchsias aud said about it; here are also stowed away Fuchsias aud other plants that remain in a dry state through the winter; as are likewise Hyacinths, and other bulbs, for forcing in succession. This space was at first intended for a Mushroom bed, but could not be spared for that purpose. In the second or greenhouse division, some of the shelves are filled with seeding Pelargoniums, and the front one is occupied with seedling Calceolarias.
I should add that, in the stove, one half of the tank is covered with dry tan, and the other is divided into two water-tight compartments. There is also a similar one of small size near the sluices C and B . In the greenhouse division the slate cover is entirely bare. With respect to the management : suppose it to be eight o'clock, P.m., the glass falling and the night promising, what we have had this season, \(12^{\circ}\) of frost ; suppose, farther, that the stove is at \(70^{\circ}\), the water in that division of the tank \(120^{\circ}\) or \(130^{\circ}\); the sluice-board at A is put down, and those at B and C are pulled up , and in ten minutes the greenhouse division of the tank, previously cold, is radiating heat in this way it remains for an hour or so, and then the circulation is shut off and confined to the stove. The fire is made up, and the water-divisions in the stove are in order to supply the necessary moisture. In the morniug the foliage will be covered with a dew-like

\section*{PLAN OF A POTTING-SHED.}

The accompanying plan is an inside view of a most convenient potting-shed belonging to Mr. Beck, of Isleworth. This shed is 25 feet long and 12 feet wide (part of the timbers have been left out for the purpose of better showing the other parts). Although it is not a very substantial building, it is remarkable for its neatness and general arrange ment, and contains within itsel every convenience which A is the potting bench, B a bench for standing plants on over this bench are roof-lights, \(K\), which make it a convenient north house, as well as a potting-shed ; C is a large water-tub, running on castors, which may be pushed under the bench, out of the way; at \(D\), though not seen, is a Stephenson's conical boiler-the iron chimney is shown
moisture, and if this is considered to be too heavy, a small plug in the several divisions is pulled up, the water sinks into the tank, and the evaporation ceases. If the tank be too full to allow its escape from the surface, a cock may be turned learing from the botw of the farther end, and this allows sufficient to run out to accomplish the object. Should the water boil, the safety of the whole is provided for by a small steam-pipe. The first admission of air is through the small doors near the bottom, and this mingles with the warm air before reaching the plants. If we wish to propagate, we take off a hower sheif in the stove,
plunge the pots of cuttings in the tan, and cover with a plunge the

\section*{hand-glass.}

Now, I dare say many gardeners in large establishments will smile at this elaborate description of a place that would scarcely hold their tools. But I thought it would be acceptable to humble horticulturists like myself. I could not desire for my purpose a better house than one of several divisions. The readers of the Chronicle may remember a notice which appeared in its columns, of the first little structure I worked on the tank-system, and which first directed attention to Rendle's plan in this part of the country. I have had no occasion to vary my original arrangements; all I have done is only to enlarge it, and I believe for simplicity, certainty, economy variety of temperature under one roof, useful occupation of all space, my wooden boxes may serve as a model For the health and luxuriance of all they contain, abundance of practical men can vouch.

E ; this boiler heats a small greenhouse at the back and likewise gives out sufficient heat for the shed; \(F\) is a ruit-loft, 16 feet long and 4 feet 4 inches wide; \(G\) are bins for peat, sand, crocks, \&c.; \(H\) is a cupboard for paint-pots and other tools which the amateur may require ; I is a shelf for plants on the outside. As this building faces the north, and has a roof partly glazed at K , it is found useful as a place in which plants can be emporarily preserved while in flower, in cases where it is desirable that they should not be exposed to too much ight. The water-tub, C , is very useful for washing pot in. The row of bins at \(G\) enables the gardener to keep all his composts and potting materials distinct, and always ready, so that there is no time lost in hunting after this or that, and the place never needs to be unneat.

THE FIG.
THERE is, perhaps, no fruit-tree more easily grown than the Fig. It will thrive under a greater variety of circum stance, as regards soil and situation, drought and moisture, than whll even the common orchard trees; and it will also bear a wide range of temperature, provided this does not descend much below the freezing point. The tree is ho adapted for withstanding any great degree of frost. Alsufficient will ripen its hut under a of the latter, when their growth is perfected, will bear in winter a degree of cold that would kill the Fig to the ground. Notwithstanding the amplitude of its foliage, and proportionabiy rapid growth under favourable circumstances, the Fig may be fruited in very small compass, although limited in its supply of nourishment-- a consequence of its tevacity - fife.

The mode of bearing is somewhat peculiar, and requires particular attention. On the lower part of the current shoots of the season wood-buds are generally formed in the axils of every leaf. If the shoots are upright and very vigorous, such only are to be found along the shoot-the natural tendency being to form stems and branches, more already exist; but the ramifications from such usually already exist; but the ramifications from such usualy
exhibit a fruitful appearance. When the tree is in a bear ing condition the shoots are generally furnished with wood-buds at the base; then fruit-buds begin to be ford to in the axils of the leaves, and continue to be so formed the very extremity of the shoot. The fruit-buds earliare formed-those lowest on the current year's shoot-a generally developed into fruit of considerable size; they rarely attain maturily in the open air in this clim so, whilst those formed later can never be expected to do so and none will stand over so wither have the appeurarice of minute Figs. They will withe with the leaves; and although they may hang on the Bhoots after the leaves have dropped, yet their vegetlowing spring.

But some fruit-buds at and near the extremity of the shoots will be observed not larger than small Peas;-in fact, still enveloped by their protecting scales at the time when the vegetation of the season ceases. These stacontinue alive, if protected from frost, and remain stationary, like wood-buds on other parts of the txee, , vegetation becomes active in the following spring. Whers that period arrives, these autumn-formed fruit-bud during from the scales which inclosed and proteded thems course winter ; and they acquire perfect maturity in the courso
of the summer, unless from various causes the fruit drops ematurely
thus appears that the Fig-tree is naturally adapted from near the base of the of fruit, progressively formed, the greater part, if not the whole, of the fruits which push he greater part, fos the whole, of the fruts which push formed, fail in attaining maturity in this climate, although they coli a lims and and likey constitute the principal crop in warmer chmates, and rewise in forcing houses in this of a derived from the embryo fruit-buds formed towards the extremities of the shoots. It is, therefore, evident that the latter ought not to be cut off in pruning
The propagation of the Fig is easily effected, either from suckers, by layering, or from cutlings. Suckers may be taken off at any time when the trees are not in leat, and planted either in the open ground or in pots. Layer-
ing may be performed at any season. Cuttings should be made early in spring, and struck in heat.
In some parts of the south of England the Fig succeeds Is standards, bearing large crops in favourable seasons, It then receives little or no pruning. But in general it is found necessary to plant the Fig against walls;
case pruning and training become necessary.

\section*{ON THE ATMOSPHERE OF HOTHOUSES.}

Chemical Composition.-The last but not Ieast important topic of my discourse is the permanently gaseous great bulk of this material, Nitrogen \({ }^{*}\), forming four-fifths of the whole compound, little need be said, as, so far as Neither will it be necessary to dwell on oxygen, ahich, althougls a proiluct of vegetation, and entering into the atmosphere to the extent of one-fifth, o1, more correctly, inquiry. Suffice it to say, that the proximate proportion of four-fifths nitrogen and one-fifth oxygen, composing the atmosphere, is found exceedingly stable-the
analysis of cluemists at various times, and from nll possianalysis of chemists at various times, and from nit possigas as an ingredient in the atmosphere, I, however, propose to be somewhat more minute, as it is now an acknowthe basis of woody fibre, or carbon, from this source. The result of extensive and careful analysis has proved that the atmosphere contains of carbonic acid gas about rove of
its bulk, and for the proper growth of plants, this exists as a minimum proportion. Heat, light, moisture, and all things else necessary for plants, may be present in the atmosphere surrounding them; but if this minute and
apparently unimportant ingredient be wanting, they will then cease to grow.
By examining our coal-fields and other deposits containing vegetable organic remains, we have the evidence of a period when vegetation must have been exceedingly
luxuriant. Ferns, Araucarix, Stigmarix, Sigillarix, and other fossil tribes, to a great extent now extinct in species, grew in vigorous profusion in that early world; but hav-
ing ceased to live were buried, and became those beds of coal so abundantly disinterred at the present day. Although most of these primeval plants differed in contiguration from those now extant, there is no reason to imgine their
functions were of another sort than that which living plants now perform. They must therefore have inlualed carbonic acid gas from the atmosplhere, and obtained their carbon from that source : hence the conclusion is forced upon us, that the then atmosphere was more copiously
impregunted with carbonic acid impregnated with carbonic acid gas, for all the coal of our plants of that era luxerriated in an atmosphere surcharged With carbonic acid, may not plants of the present day do the tive both by experiment and observation ; and hence it may be an object in artificial cultivation, where we wish to urge on vegetation as rapidly as possible, to afford an additional supply of this gaseous food to our plants. in hot-beds and pit-stoves: for this purpose a quantity of vegetable matter, such as bark, leaves, or litter, is heaped together and allowed to ferment, when not only is there a generation of heat, but a copious formation of carbonic acid gas. There is no doubt that the chief object contemplated in this process is the production of heat; but there can be as little doubt that carbonic acid has been likewise progetaced, and had its influence in the result-a vigorous obtaining bottom-heat by the fermentation of vegetable matter, will, when properly managed, never be excelled in its effects by the more modern and manre manageable means of the wanm-water tank. It is not without reason, therefore, that many of our old gardeners adhere to their ouchrce of hentring leaves or litter to steam or water as a in their ferment. Like the Grotto del Cane, they possess, bonic acid gas, which, diffusing itself through the at mo * Nitrogen.-Although this gas is a compoinent of alt plants,
they do not, according to the present state of our kinwledire

 oxygen to form nitric acid, which, combining with the ammonia
present in the atmosphere, and carried down in ruins to the roots
of
 oxygen aut soift, such as potash, exerts adisposing afinity upon

sphere of the house, is absorbed and assin.
foliage it encompasses. \(-J . L\). Newownegh.

\section*{ON THE MANAGEMENT OF BEES.}

By T. Ward Jeston, Esq., Henley-on-Thames. I Have found by experience my plan for the management of Bees, and mode of taking their superfluous honey athout destroying the parent hive, fully to succeed. eturn for his trouble, and not require so much watching as the old plan; for the older the hive is, the less chance there will be of swarming, but the greater chance of a larger deposit of honey. I have kept Bees more than 20 ears; have tried Huish's, Nutt' \(s\), and various other plans ut the one suggested by the industrious insect itself and will not cost the cottager more than \(6 d\). to adopt in addition to his old hives.
Some years ago I placed an empty butter-tub under the board on which the hive rested ; the sun cracked the board and the Bees took possession of the tub, and after filling their own hive deposited 26 lbs . of honey and comb in the ub. This I took for my own use, leaving their hive full of honey for their winter's consumption. By improving apon this simple plan I have carried ofi the prizes for honey at the Henley Horticultural Society for the last four years. A board halt an inch in thickness, 18 inches in widh, and perforated with two holes, each half an ineh in diameter is placed between the hive and the butter-tub: when the hive of Bees is placed on a stage in a Bee-house, the hole may be bored near the entrance of the hive, but under without a second board; and the tub placed underneath must be closely cemented to the board, to preventight or insects intervening. Ifind bee-houses do not succeed s well as separate hives resting on tubs. When the tub of honey is taken away in August, my practice is to place the hive over a similar empty tab and board, leaving the hole open, which will save the Bees muca labour, as they wil deposit all their dead Bees in the tub during the winte months; therefore, the tub requires to be cleaned out in
March, not later, as the Bees have a great dislike to any March, not later, as the Bees have a great dislike to any disturbance of their arrangements.
The tub must be securely cemented to the board with putty; any light penetrating the tub will prevent the Bee depositing their store in it; and I have found the commo butter firkin, when dry and deprived of its wooden hoops, in the second year of use, not to succeed so well a at first, on account of the light being admitted between the staves. I last year (1841) took upwards of 401bs. of honey in this way, although the season was so bad, and an ample supply of food was left for the Bees to subsist on during the winter. This plan will prove a good substitute for the "rear" used to enlarge the common hive, with this advantage, that a supply of honey can be obtained from the strong swarms as well as from the old which. honey had been taken in the mode described
There is little or no corse or heath near Henley, and the character of the country is arable.- Published in the "Transactions of the Royal Agricilltur al Sociely" for 1842. I have tried Mr. Jeston's plan with sis hives and boxes, -old ones and swarms. In every tub taken in Sept. this year there was a large mass of comb; in two there had been honey, and in two there were altogether 6 lbs . of honey, -these two were swarms, or casta, as late as 28 th and 30th June. Of six hives, old and new, the weights on 3 d September were from 26 lbs . to 34 lbs . I bored the two holes just so far within the entrance of he hive, that, when put over the firkin, the holes came just within the frkin. Each firkin was closely cemented with plaister by the Bebetter than putty, as not liable to be gawed embrace both holes, into which I slip a thin piece of board; when I took the hise off in the morning of the taking, yushed the piece of board home, and thus cat off the communication. The hives were lifted off with the
bottom boards, and the few Bees in the firkins went very soon. The combs were then taken off. Nothin can be more simple. The firkins have cost fourpence each. This year has been a bad one for Bees. I took the liberty of feeding each swarm for three or four days after it had swarmed,-wax was made immediately, as because I did not ventilate as I ourms to do I stock precaution of stopping the mouth of each hive on the taking morning, and when the tub was removed I opened the hive door. The Symphoria racemosa is the geate source of Bee-food that 1 ever saw, more so almost Dutch Clover; the Raspberry is next in the class of

\section*{AMATEUR'S GARDEN.-No. XLVII.}

This to many will appear a curious time of the year to talk of commencing the growth of any plant, but never producing unusually large snecimens of Tuch desirous of work. The Fuchsia, unlike most other plants, does not luxuriate under powerful light; on the contrary, it grows with great exuberance in dull weather, but requires the assistance of powerful sun-light to enable it to mature its fluwers. Thus if you take a small plant in January or from three to six feet high by the lst of May; but take a similar sized plant in May, and nurse it with all the care imaginable, you will experience considerable difficulty in growing it to six feet by the 1st of November, or double the space of time; and why is this? The answer Fuchsia management, and here it is:-In the winter and
early spring months the Fuchsia grows vigorously, if properly stimulated by heat and moisture, becallse it has no disposition to produce flowers; but so soon as the sun has sufficient power to thoroughly elaborate the juices of the plant, then it becomes organisable, growth in a grea measure ceases, and the sap is expanded in the production of flowers.
The Fuchsia may be induced to bloom earlier than June, but this can only be effected by unnatural treatment, such as checking its growth, confining it in a small pot, stint ing it for water, and keeping it in a dary atmosphere. Oid plants not cut down, will generally bloom better than young plants in the early part of the year; but old plants rarely make handsome specimens, unless they are cut down to the surface of the pots ; they will then break away with great strength, and form beautiful pyramidal least f A Cochsia, to be int for exnition, she pe at wards, and forming a cone of verdure and blossom.
Now, to have them of this size, it is only necessary to commence at the present time, either by cutting down old plants or starting young ones. Keep them gently growate thag the winter in a little moist heat, and lengthen. The soil which I peat, with a small quantity of leaf-mould and loam, and sprinkling of silver-sand. Young plants that are well rooted, may be removed from small 608 into 24 sized pots at this season, and from them into 8,4 , or 2 sized ones, in February ; but after the commencement of the new year, they may be put into the large pots at once.
Among the new kinds that are to conse out next season, there are, doubtless, some varieties of great beauty but we must not be surprised if many that have been highly spoken of, from the inspection of single flowers, turn out comparatively worthless. F. exoniensis, as exlibited on the plant at Chiswick this season is, in my estimation, it is thable, because the habit is bad; but off the plant of Bagshot Hortioulal sumomer, which ereciall, formg size and ercollor forge bust bith med
 only to breed froug Mrus of Maidstone has also only 0 breed but of good seedings , one nold anothr Fill another called Espartero, as large 1. Eppin, with an excelen purple corolia. Mr. L. has also another of the upritht Cbil bur aprept All thas kind 1 bab the plans, and there ko kood but those seedlings of which 1 have only seen the flowers I say nothing.-W. P. Ayres, Brooklands.

\section*{HOME CORRESPONDENCE.}

Salled Mangel Wurzel Leaves.-I have just met with the following passage in a work whicl I saw advertised in your columns, "The Economy of Farming," translated explain the procese, and l theore send it thinkis
 of Swabia no pable of or other rout, throwing hem into bonk her herp the or sis feet sura, salt. The whole then becomes sour, and when preserved for winter use it forms excellent food."-Anthony.

Allotments.-Having seen Mr. Trimmer's statements in the "Highland Agricultural Society's Quarterly Journal" for Cctober, 1843, that ten acres is the minimum quantity of land on which a family could support itself, I take the liberty of saying that I have for nearly four years on the Eastbe the soum howns in the wif and har Eastbourne, Sussex, supported my wife wd foar chindren in comfort on five acres only, whithe help or little boys to whom I teach reading, writing, and accounts, collects and catechism, for three hours before woon, in return for three hours work on my land the afternoon five days a week; they average only eight years of age, and if I was able bodied I should not need their help. I here state what a man would want to begin with : 一
ist, Two Cows at 96 , per cow
One young sow
Seed-rto and Tares for one nere to stal-feed the cows Clover-seed for one acre of
Seed-potatoes for one acre
Seed-oats for half-acre
Sweed Turnip and Mangel-seed for half-acre
Fifteen pounds for the man to subsist upontill his cows
-Georye Crultenden, Master of the Willingdon \(\overline{\text { School. }}\) A Self-supported Agricultural School, of which further particulars are printed in the "Farmer's Almanac" for 184.

I should feel obliged by your inserting the foregoing letter in your columus, as is in different soils foll by spade will maintain beachey Head, in the paid, stallifeed of cows, \&c. On Becer twa Ihad let 10 acres each to wo thents; but finding 10 acres were beyond their strength to cultivate well, last year, and one of the tenants, T. French told aid master of the he would not give up his five acres, for which he nass me he would not give ud his five acres, for which he pays me
12. an acre. (including rates, tithes, and tazes) a year
besides the rent of his house, cow-lodge, and threshing
floor, for 16 s a week; and if you publish this letter I ap in hopes it may induce cardeners from various parts of the country to state how much will keep their families by the spade only, and encourage proprietors letting land for this purpose. At the request of the Earl of Ashburnham, the chool, and then sent William. Pettit, who Cruttenden years kept one cow on three acres of pasture and one years kept one cow on three acres of pasture and one don school, at the end of which time he returned to Ashburnham, ready to teach all the boys who came to him from? till \(90^{\prime}\) clock, daily, under his kind vicar's direction at one penay a week each, satisfied that by these boys' help in cultivating his grass land he would be able to grow more corn, and keep two instea
Mummy Wheat.-.It strikes me that in your account of my Wheat, 55 must be an error for 33 , one easily made I certainly did not myself know that this Wheat was so prolific, and have been accustomed to state it generally at
1000 fold. This year Mr. Mitchell, at Kemp Town, had 1000 fold. This year Mr. Mitchell, at Kemp Town, ha from balf a pint of seed a large sackfull, more than three
bushels : and that in gpite of the birds, which necessarily ravage town gardens. This increase, though an enormous one and almost unparalleled, does not, I think, exceed 700 fold. I read also in the Times some time ago, tha Mr. Ford, Lord Haddington's gardener, had raised from four grains 181 ears, averaging 30 grains each, about
1300 fold: surely an astonishing increase. Mr. Hallett, of Brighton, told me that this Wheat yielded as 13 to 1 of common Wheat: 80 I suppose it may prove to be of Trupper.
Vegetable Irritability.-The movement which was ob served among the tubers of the Achimenes pedunculata by Mr. Whiting is not caused by "sensitiveness," but by alutinous substance, which, by adhering to other subw tances, causes the tubers to be a longer time in falling they are closely observed, the movement among them may easily be supposed to be caused by "sensitiveness. either the stamens of bloom of the Portulaca splendens touched by anything while the flower is expanded, it will rise up in a slow and pleasing manner. This I do not Meehan, Ryde.

Svallows.-Your correspondent "S.W." will perhaps be satisfied with the simple and humane mode (that of a net) suggested to prevent his hirds attaching their nests number (in which case it must be admitted that grea comber (in which case it must be admitted that they be race of House-Martens, as his enemies should be called more properly than Swallows? They are generally hailed as the sprightly harbingers of the pleasantest time of the year ; they serve to diminish the pests of gnats and flies trutb,-

\section*{ \\ Most breed and haunt, I have observece they}

You have objected to Virgil's insinuation that Swallows are destructive to bees, and it perhaps remains to be proved that they are. It is true the poet recommends an apiary to be placed so as not to expose the bees to the the Merops and the Swallow as particularly destructivethe first, a most rarely-accidental visitant in England, is nnquestionably a voracious devourer of bees. 1 do not
know that the crime can be fairly imputed to cur British Hirundines, neither can I assert that they are wholly in nocent; no fly-fisher but must have had his hook occa sionally struck at by some of the Swallow tribe, and some times 80 as to catch them upon it. It is not unlikely that in the rapidity of their fight they seize, without dis crimination, every small object floating in the air, and possibly, like the Merops of the south of Europe and the Honey Buzzard of our own countries, their throats may be proof against the stings of bees and wasps.-. Flectra. hey and warm water. This will effectually destroy them, although they be ever so nume
Fleas on Dogs.-The most effectual and speedy way to get back from the top of the rump to the back of the head, rubbing the sides, haunches, and flanks well with the hand, until the oil be well incorporated with the hair. on the animal in ten minutes after the application. They vellow colour, with legs, sce, the surface of the bair of instantaneously.-B. WV., Glasgow.
Iruculia gratissima. \(\mathbf{M r}\). Beaton, in his Calendar of the 18th, makes a very just remark, when he says "what plant for winter, I know not a finer object, both on account of its fine head of pink flowers and delightful fragrance. We shall all be anxious to know what the stock is that Mr. Beaton has discovered for grafting it on; and if it answers well, it certainly will be valuable to have such easy means of increasing it. It is astonishing how much
chased a small plant last spring in a 60 -gized pot, and I plenty of pot-room. I have only shifted it twice; it is now in what is called here a No. 8 -sized pot, and has 39 about a fortnight it will be very beautiful; its foliage particularly green and healthy, which is not always the case.-Bridgenorth.

Bees and Wasp.s.-In the Chronicle of Sept. 23 extent as Wasps." I beg to state that Bees certainly do attack fruit, but not to the same extent as the "brazen mail invaders," the Wasps, whose mandibles are well suited to attack either ripe or unripe fruit; not so with beginning to decay. I by their proboscis fruit that i beginning to decay. I atracked by Bees had some speck or other of decay upon of Bees A. B. inas of for I am far more interested in protecting fruit than Bees for I am far more interested in protecting fruit than Bees. unusual voracity ; but the reason is obviona-they are driven to it by the season being unfavourable for collecting better food; their empty hives sufficiently prove this In last season it was the reverse of this, and Wasps and Flies might have enjoyed the fruit for aught the Bees By the bye, "A. B." mentions they are not so with him. By the bye, "A. B. mentions they are not so with him;
he says "there has been upwards of 130 nests destroyed, and it has not weakened them ;" and he further observes:--We destroyed a great many Queen Wasps, and the we weather in the beginning of June put an end to nearly all the remainder. This seems strange; for how came there to be so many nests if so many Queens were destroyed? pondent " Parl"" he saw in the "top of a Red Currant bush." It belongs to the Vespa Britannica, or Tree Wasp, not uncommon in Scotland and the northern parts of England, but seldom met with in the south. A nest of this Wasp, however, came under my notice last season, suspended on a branch of a Silver Fir, whose flat branches served as a protection to the interesting papered city. Will "Paddy" have the goodness to state the colour and texture of the mest in question, whether there were not two holes below instead of one, and if the inmates were their nest by their own accord, and about what time? Wighton.
Bees. At p. 695 are mentioned "Instances of the Journal." The writer says, "A few pounds of honey had been taken from a hive, and placed in a closet under lock and key. The window of the room having been left open, the Bees obtained admission, and entering the closet under the door, removed the whole of the honey." There was when the Bees accomplish it, there was no need of "spies observing where the honey was placed." Bees smell food at a grea in the affray, and will soon carry off a few pounds of honey. In the case alluded to it happened to be in the dark; but such is only a common occurrence, and indeed showed no more "sagacity" than that of pilfering a neighbour's hive, whis couna, is dark within. This time to feed them. If this important duty is neglected, many hives must perish. By-the-bye, this may not be applicable to "Facile's" Bees. He speaks of one hive being very prolific, and the offspring from it in a pros wee?" Examine them again; perhaps the case will be reversed.-J. Wighton.
Paving below the Roots of Fruit-Trees.-The beneficial effects of this in a case of bad subsoil is exemplified by the following statement, with which we have been favoured by Major C. Some Apple-trees, espaliers, and dwarf gravelly soil, originally the bed of a gravel-pit. Tiles were placed underneath their roots when planted, from shooting these and penetrating into the gravel, the fruit became stunted and shivelled. They pruned early in 1842, and fair, plump, well-coloured specimens [received along with this communication] were the result of thus reducing the roots to the tiles. In order to accommodate the young roots, the Major will probably extend the paving, otherwise-they will follo the course of their predecessors, with similar results.
Practical Success of Spade Cullure-An intelligent and industrious tenant of a very sman holding states, that the ploug the spade the depth of 12 incresed his on lay about 20 s . per acre, he has obtained a produce at the rate of 40 bushels per acre, which is nearly double the average produce of the district. His little field had been twice cropped since its last coat of yard-dung. He sowed only 8 pecks to the acre, went over the field once with a weeding. grain excellent, and the straw wonderfully fine, both in
quantity and quality,-Nouth Devo Rosa Hardii unon Cli nophylla? The mother is the fit person to carry her own offspring. Or if that Rose is not easy to procure, then why not upon its most closely allied variety? The most frac spealingy will let its owa a bbid stocks ; or, if one parent be tender, then upon the hardy
one. I suspect that in difficult cases of grafting or inothe canal of nutrition through ill-adapted and heterogenous vessels, the less wholesome to the scion it may probably be found.-A. \(H\).
Rosa Hardii. -The account of the origin of this plant which was given in "Paxton's Magazine of Botany," was supplied by a friend from Rivers's "Rose Amateurs or Rosa berterifoli Hardii is most interesting Rose lately raised from seed by Monsieur Hardy, of the Luxembourg Gardens, from Rosa involucrata, a variety of R bracteata, fertilized with that unique Rose, R. berberifolia, or the single Yellow Persian Rose." J presume the work in question may be regarded as an authority. - \(E . \pi\).
Garderier's Associations. It is stated at \(p .807\) last part of the Metropolis are to have regular meetings for meners require ; and it is the in my opinion, is what garm deners 1 nightly spelling lessons-for it is a lamentable fact that many gardeners are bad spellers. After having learned to spell correctly, they may meet, and some experienced should be chosen as teachers, and the study of Horticulture may be set a-going on scientific principles. Some head gardeners, I am sorry to say, are averse to such meetings, from the belief that they have a tendency to make young men careless, by diverting their minds from their work. If it takes men who have charge of fires from their work, I would suggest that a room for this purpose should be on the prenises of every good place, and that head gardeners should occasionaly countenance, by their persons and their purses, such institutions, in order that books might be purchased to enable them to spel,, write, and pronounce correctiy the various botanical terms. I would add, in conclusion, that if gentlemen delight more to look at a correct label than at one in-spelled and badly written, they would use their endeavours to promote Gardeners' Instruction Societies.-F.

One-shaft system of Potteng.- Gardeners who have been in the habit of putting in greenhouse cuttings under bell-glasses, and growing early Cucumbers in frames, cannot but have noticed how ready they are to force their roots above the soil, particularly if the plants are in a close and damp atmosphere. Now, the law by which these roots are regulated in their upward course, is the same as that which induced those of my Ericas and Boronias to take a downward direction. During the early part of the summer the wind was cold and the air dry, and when admitted into our greenhouses its capacity for moisture was increased, and this capacity not being sufficiently supball from other sources, abstracted moisture fro compared with thg together with the limited portion of sand used in potting, goes far, in my opinion, to account for the failures which have attended this system of potting during this season, and where the roots have run vertically, as mine have done, rising from flues, as this will be likely to injure them, \(-C\). Vegetables.-Lately I partook of a nice dish of Green Vegetable, which was to me a novelty, although perhaps it may be known to Gardeners. This I think would be found very useful to the Cottage-Gardener whose space is much limited. I desired my cook, late in the spring, e the orown of the stem of all the Cabbages supplied by the green-grocer for the use of the family (I mean that pity ry had been collected y planted them, putting them just
 Cablu b and infinitely superior to the common garden-greens.An Experimentalis

Dahlias.-In reply to "T. C. W.," I beg to state that the Dahias which fowered so well with me last season and failed this summer, were Sussex Rival, Fanny Keynes, Ruby, Egyptian King, Scarlet Defiance, Essex Rival, Hylas, Metella, Conductor, and Bishop of Salisbury. The roots were exposed to a gentie heat on the 25 th of March, and made strong shoots. They were planted out on the 12th of June, and grown in a mass, with about 30 other sorts (none of which disappointed me), close to a south and an east wall, and quite open to the sunshine till an hour or two past noon. My garden is within I \(\frac{1}{3}\) mile of the sea, and at no great elevation above it ; it lies in 57 degrees north latitude.- A Subscriber.

Winter Gardening.- Now that Mr. Beaton has divulged his method of Winter Gardening, I venture to trouble you with an idea which, if carried out with taste and neatness of execution, will furnish amusement in the art of design to the junior members of establishmenta, either as employers.or employed. Mr. Ayres has with great propriety recommended the use of small plants of evergreen and variegated shrubs for ornamenting the bare of still scrolls, figur plants, and ther arrical acording as the situation will admit for this purpose there are many plants which can be got in Nurseries at a cheap rate, when taken in dozens or hundreds, as Andromeds polifolia, hardy Heaths, Rhododendron ferrugineum, R, hirsutum, neat small-sized plants of which may be procured at from \(25 s\), to 40 s . per 100 ; or the design may be lcarried out cheaper still by employing dwarf Box small Spruce, or any small plants of evergreen that may be procured at from \(1 s\). to 2 , \(6 d\) er 100 . greea border-plants that may be employed in this way, as Saxifragas, Gentianella, and others.-Twist.

Mildew - In order to show that there are doubts respecting the real cause of Mildew, I offer the following observations:-Supposing six practical gardeners were
asked the reason why their Peach-trees were mildewed, they would inost probably all assign it to different causes The 1st is aware that his trees are in a damp situation hence arises the Mildew. The 2d, that his soil is light and dry, and this he thinks favours the disease. The 3 d remarks that Mildew is a parasitical fungus, and that there is no getting clear of it. The 4th, that it proceeds from a fungus on the roots of the trees, and that the only Mildew is a kind of itch, similar to that in animals, and that sulphur is the only cure for it. The 6th says, hesitatingly. having seen the effects of Mildew on trees in all kinds of soil and situation, that he is at a loss to account for the cause of it, or to prescribe any certain cure. It may be Barberry to blight Corn be only a mildewed opinion, perhaps some one who knows more of Mildew than myself will expluin the reason why that shrub is blamed for havin such an evil influence upon Corn.-J. Wighton.

A Weasel Sportsman.-A covey of partridges rose, six were about three feet from the bround a weasel was observed to spring up from the grass and fetch one of them down, and the observer immediately made to the spot, and found this new sportsman in the act of tearing in quick time, leaving the dead bird, as a prize to the observer.- Facile

Capture of a Hawh.-A fine specimen of that rare bird, the Merlin (Falco ※salon), was caught a few days ago in the river Lune, near Overton, by Richard ThompBon, a fisherrosn, who, on going to examine his nets at supposed that he had been in pursuit of a sand-pipe, which had taken refuge beneath the nets, and, in his laste to pounce upon his prey, overlooked the obstruction between pounce upon his prey, overlooked the nbstruction, he dis-
them. His native ferocity continues unabated, dains raw flesh or dead birds; but, if a living one be
placed within his reach, he darts upon it with unering placed within his reach, he darts upone with his small but powerful beak, and devours it at his leisure. The Merlin is the Jeast of the falcon tribe; it files with celerity thrush or blackbird is size, is so courageous that it will not hesitate to attack a full-grown quail or partridge, which it kills with a single stroke. In the days of falonry the Merlin was considered the ladies bird.-F acie.
IIeating Apparatus.-This construction fully answers the purpose for which it was intended, viz., the forcing of Dahlias, the striking of cuttings, and raising of plants from seed, towards the conmencement of April. If you force much earlier than that time, you mustdeviate from my plan, by making the smoke and hot air to return in the frame, nnd enter the chimney somewhere near the point of starting ; so that less heat may be lost, and a higher tempera-
ture gained, than in an erection like mine. I have found the temperature to differ only ten degrees from that of the pen air; my walls are not built below the surface of the ground, and I am inclined to think that a building above ground is preferable to one helow, both for keeping plants through winter, and preventing the heat from being conducted outside, and consequently lost. The inclosed seetion is, I think, an improyement on the one given at
p. 428 . This plan is on the same principle as the hothouse lues are now; and I am rather surprised that the thing should not have been adopted years ago, as it may be done at so trifing an expense. Fig. 1 , is the ground plan, show-

n the inside to retain the heat in th apparatus, as pointed out above; and it also points ou by turf or coal. Fig. 2, is a section showing that the flues ise no above another, which I think is better than all upon one level. \(-M\). Saul.

\section*{PROCEEDINGS OF SOCIETIES.}

ROYAL AGRICULTURAL SOCIETY OF ENGLAND in Han. 15.-A weekly Council was held at the Society's House 46 entler, 1 Members of the societ doptione next Monthly or Special Comeli, he shou rave notite the udoption of add ditonal Regulations for the elixhbit.m of 1 mple-
ment at the Country Meetung of the Society. Mr. larkce, C.E.,
Consution acconnt of a Brazziluan ©rass :- "1 sendi for preseltation to the
 tuguese. I am informed that it is purcly an aquatic, grass, grow-
ing under water or floating on water. I co nut know its proper
boter hor do mame, but it is sometimes climatrs. A considerable quantity of this product is annually imported into England, and is, , am informed, solely used at present for makng brushes. As a brush, it \(1 s\) amazingly durabic,
and withstands the altcrnations of wetness and dryness better than any know substance. It has becen sclected ly Mr. WhitWorth as the sweeping medium of hus admirable 'Strect-cleansing
 or relaxation of effect. It turned out to be of such importance to the success of the machine, that Mr. Whitworth1 sent his
brother to the Brazils, to collect and import a large quantity for
this special purpose. The strongest bundle is of the quality used
for this machine, eut into lengths of about six inches, and fixed for this machine, cut into lengths of about six inches, and hixel
in wooden stoks. The bundie of slenderer grass, of which I
beg the Society's acceptance, is such as is usually imported into beg the Society's acceptance, 15 such as is usually imported ints
London. Brukhes are \(r\) ade of it chiefly for the use of butchers, no other being foud which has equal endurance, or which pene-
rates and cleans so effectually the cracks and fissures in their blacks and slabs. The selling price in London The commercial name for the article is 'boss,' 'so, however, it is called by the brosh-makers. Mr. Whitworth informed me that
it may be imported and sold to a fair profit at 91 . per ton. The grass grows 30 feet in length. Its being so dry, trom its wood fibrous nature, has led to the belief in England that itis kill -dried, but Mr. Whitworth has informed me that such is not the factspecimen of the Hopetnin Oat, grown hy Mr. shirref. on Lerrd Ducie's lant, near Bristo, measuring
and the average of a crop of 70 acres.

LINNAN SOCIETY.
ward Forster, Esq., in the Chair. D. W. November 22 .- Edward Forster, Est., A ine ine Chair. D. W exhibited several specimens of Hunt's Flower Pots. A continuation of Mr. Grifith's paper on the Rhizantheer was read. In conclusion the author criticised the position in which Blume and Endiciser had placed thus portion of the Yegetahle Kimgdom. He
came to the conclusinu tiat there was not sufficent gromnd for the spparation of these plants as a distinct class. That even as an artucial arrangement it was not warranted hy utinty, and was unphilnsophical. As an appendix to the paper, a description was given of a new genus of Rhizantheac, callerl Sabria, which
had been discovered by the author in his recent expediton to Assam. The genus Sabria holds a position between the genera
Brugmansia and Raffesia. The paper was illustrated by beartifni drawings of dissections of the only species of Sabria, the Cissus, which is abundant in the Himalaya. In our last report We stated that some apecimens of electrotyped plants were exhi-
bited; we ought to have added that these had been prepared by Mr . Neville, of Birmingham. NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUY, OR ORNAMENTAL.
Dendrobium aqueum. Watery Dendrobium. (Orchidaceous Epiof Inuian speries belonging to ihis large genus, or groupt of of India. With the manner of growth of D. Prerardi, its quite pale watery green flowers are destitute of the attractive colours of that gay species, and are entirely different in the structure of
the lip. which is furnished with a large cavity, almost a pouch, at the base of the middle lobe. It is also a much stouter plant, with wavy leaves. Thas species may he grown in the same way
as many other Dendrohiums, potted in rough turfy peat, well mixed with pieces of broken pots. For drainage, the pot should fourth the height of the poot above its brim. Being thus pottedi, too much water can scarcely be giver during the growing season'.
The house should he slightly staded in sunny weather, tak ing care to kecp the temperature as near \(80^{\circ}\) by day as poscible, and matured, water shonld gradually be with held, so that in winter the plant may only reccive 4 mite weather. The temperature may Viscarta oculata. Dark-cyed Ciscaria, (Haray Ammul) hardy ammal called Agrostemma Colt tona, that for some time we regauded it as a mere wariety. Jiat npon a more munte exa-
misation we find marksot difference that seem to belong to a species. In the first place it has a dark eye, which the old kind has not. Then its petals have a short and slightly emarginate here is this difference, that in the plant before us it contracts gradially, Furthermore, the surface of the seed-vessel here is like the Cooli rosa, is a harrly ammal; it was gathered by Mr . Giles Manby on dry hills, thrty miles trom Algiers, and given by
him to Messrs. Backhouse, Nurserymen, York, to whom our specimens are owing. This pretty annual may be sown in any In the usual way. Afterwards the plants should be thinned so a to stand singly, in which state they fower longer and produce
much larger and finer blossoms. It may also be sown mutumn, renain in pots in a cold frame through the winter, and be planted out abont April. It flow Duvaua Lonolvolia. Long-leaved Duvaua. (Hartly Ever
reen Shrub.) Anacardiaceæ. Polygamia Monoecia, -The Da green shreab.) Anacardiaceæ. Poly overgreen slirubs, smelling of turpentire, vauas amall green flwwers, a calustse juice, and cousiderable
with smith to Rhus. We have now in our partens the following
affinity species, wiz., D. dependens, ovata, latifnlia, ths longitoia, and
another or two undescriberl and minnfiriently examinerit. They all inhalnt the southern temperate legions of Nouth Ansersea,
and are capable of living with ins in the openn air through ordual winters, especially if placed in a norib-western exposure. Ihs
speries differs troms D. denendens mo its leaves not hemge at all serrated, and decidedly narrowed, not widened, to the base; and
also in having very slort cory mbs of tiowers. With the oither also not necessary to compare it. It is much hardier than any of
it is no
the othere, having stood against an exposed wall in the hard the others, having stood apanst an exposed wall in the hard
winter \(183 \%-8\), when all the others were either killed down to the ground or entirely destroyed. It grows freely in any good gard the
soil ; flowers in June or July; and is increased by sceds, or by cottings of the half-ripe wood taken off about August, and
treated in the ordinary way. This plant was presented to the treated in the ordinary way. This plant was presented to the
Horticultural Sncicty some years ago by Mr. H. Iow, of Clapton,
Register.
Boronta Frasert. Mr. Fraser's Boronia. (Greenhorse Shrub.) Rutacea. Octandria Monogynia.-This is the Boronia
anemonefolia of "s Paxton's Magazine," and, as Sir William anemonefolia of is intended for the plant of that name pub-
Hooker ohserves,
lished by Allan Cuninghan; ;although, as is the chastom with hat work-which, it must be acknowledged, takes away much from its uscfulness no synonym, or refernce, is glven. The
plant, however, is wholly at variance with the B. anemonefolia of A. Cunningham ; nor does it appear to be a speciec taken un
on specumens in my berbarium, trom the late Mr. Claries Frase Which that melefatigable hotanist collected, and noted as
" Boronia: a native of ravineson the banks of the Nepean River its height three fect; observed minflower in September; rare," With us it, gy cuttugs; and its deep rose-colonred flowers are

\section*{MISCELLANEOUS}

French Winter Gardens.-We learn that the good people of Paris have proposed to get up a company to raise twenty millions of frames, by shares, for the purpose of constructing a Winter Garden larger than the Palais Royal, which is to be covered in,
with the rarest flowers and plants.

Parchment Labels.-Some nurserymen use these with
ont any preparation, writing on them with ink; others
slighty moisten the surface of the label and write with: Frankland (see "Hort. Transo,") write with Indian mk instead of common ink; others again ruba little white paint on them, as is done in writing names on wooden allies; but the mode at present considered most efficient is to rub the surface of the parchment with white lead and a write with a black-lead so durable, that thus made, Mr. Rivers informs us, is the end of the second seen the labels querosed to the weather the whole of the time.-Loudon's Gard. Mag Slatistics of Agriculture- (From the "Censvs. England and Wales," 1843.) - Waste Land.-There are England and Wales, 1843.) - Waste Land.- Were are 3,450,000 acres of following table ue of land, per statute acre, in England and Wales :-

Extraordinary Cabbuge.-There was gathered a few days since a Cabbage, grown in the garden of John Lee, mason, at Pound, adjoining the town at Moretonhamstead, which weighed \(421 \mathrm{bs} .-\) Exéter Flying Post.
Ancient Oaks.-In the court-yard of a modern farmSaintes, in the department of the lower Charente, wrows an Oak which is estimated to be from 1800 to 2000 yeara old, and is thought likely to stand some bundred years longer. The diameter at the ground is from 24 to 27 feet; at the beight of a mati, 18 to 21 feet. The expansion of the a 60 feet. A room has been built out of the dead wood rom 9 to 12 feet wide, and 9 feet bigh.-Annals of the Ayricullural Sociely im Auslande, No. 192.
German Travellers.-Professor Charles Koch appears, from late intelligence, to have landed safely at Trebisond, vith his companion Dr. Rosen, having left Constantiople on the 14th of July. The voyage across the Black sengers were one night very near coming in contact with another steam-boat, the passengers in which appeared to be asleey; an accident was, however, prevented by backing the engine. The Pasha of Trebisond Bhowed them much attention when he was informed of their intention of proceeding to Erzeroum. They thought of starting on the ath of July, by cad between Frankfort sud I ipsie quented as the high ro
Dr. Bischoff.-Professor L. W. Theodor Bischoff, a talented physiologist, and well known as a botanist by his memoir " Deen appointed Professor of Physiology in the Intitute of Gressen.-Botanische Zeitung
Ripe Strawberries, Apple and Pear Trees in Full Bloom, and Indian Corn.-Irish letters and newspapers speak of some remarkable cases of this sort. Apples in flower in the garden of Mrs. Baylee of Cork, Strawberries ripe, and Jargonelle Pears blooming and fruiting. Fine growth of Tndian Corn ars also mentions some fine growth of lhath the demesne garden of Creago; length 38 graine inches, and containing 12 rows of grains, and grains in each feet. Some of the plants grew to the height of eight feet, and one plant had 15 cobs equal to the specimen the Americans derive from this plant are too well known to need comment; and though they have the advantage of a hotter summer, yet to balance that we are enabled to sow the Corn much earier than they can in the season, as of will not bear the slightest frost. I mean to sow some ceedin seed saved this year next season. By thus pro sively, it might in a short time be acclimated.

Singular Occurrence. - About six o'clock on the morning of Toursday se nnight it was discovered that one seat of Mr. J. Round, M.P., was on fire. Assistance was soon afforded, and the treewas saved from total destruction, but the interior touchwood was wholiy burnt out. The fire pouring through the various cavities which time had worn in the trunk presented a very curious and interesting anpearance. We understand that "the brave intd Oal" has not suffered any vital injury but is likely old Oak by Mr . Round for its antiquity and picturesque form. Ne
posilive cause can be assigned for this fire. - Cambridge

Ciunun. - The adulteration of guano is said to be carried on in this country to a dangerous and unwarrantable exefficacy of this valuable manure is materially impaired is the admixture of stone ground into fine powder.--Morning Paper.

\section*{}

Florisls' Journal, Nos. XLVI., XLVII., XLVIII Adlard.
We have frequently thought, in looking over various Numbers of this little periodical, that some of the matters might be, and may, indeed, be considered heyond the ange of subjects expected from a publication of its nature For jnstance, the space devoted to Orchidaces we consider to be so occupied, to the exclusion of subjects that come more immediately home to the greater scribers. The work is, however, well conducted, and the articles sensibly written; the Numbers under review con. tain useful and interesting papers, supplied by experienced men. The embellishments are good.

Sertum Plantarum; or, Drawings and Descriptions of Rare or Undescribed Plants from the Author's Herba, rium. By H,
8vo. Bailliere.
THIs is a work on the plan of Hooker's Icones, and, like that book, consists of black outlines of plants, executed in lithography, and accompanied by descriptive letter-press. It will be very acceptable to systematic Botanists, to whom such books have become indispensable, and we trust it will Fielding has a noble herbarium, and is a man of fortune he has therefore all the means of rendering himself useful to the great mass of scientific men who are otherwise circumstanced, and we trust he will secure for himself a niche

REPORT ON COVENT-GARDEN MARKET,
Tris supply of both Fruit and Vegetables has been well kept up during the week, but the market continues to be very dull, as i tiful, and of good quality; these consist of Queens, Black Antigua some good Black Hamburghs, and there is also a good supply of
Foreign Grapes in the market; these are selling at Foreign Grapes in the market; these aro selling at neanly the
same prices as last week. Some excellent Ribstone Pippins have
 bushel. Cioner Pears cnnsist chicily of IBeurré Diel, Beurré dit remberg, Guern-ey (liaumontel, Chapman's Passe Colmar, and a
fow of the Ghnut Morcenu. Enephin and Jutch Melons have
almost
 Cucumbers in the market during the weck. Cabbages and Brocol of good quality are abundant. Turnips and Carrots are also
good and sufficient to meet the demand. Brussels Spronts are plicntiful and good. I fechs and Onions are very abundant and exclient in qua.ity, as are skewise Celery, Fudive, and other
salading. A few Cardoons have been brought to the market to \(1 s\). 6 d. each. Cut Flowers chiefly consist of Erica from 18. acuminata longiffora, hycmalis, and caffra; Lechenaultia formosa, Gardenia radicans, Cypripedium insigne, Pimelea hispida, Chrysanthemumas, Camellias
China and Perpetual Roses.

Nolices to Correspondents. Commumications from the following Correspondents are in
type, and are only waiting till room can be found for them: B. Mand, Bromsgrove, J. Lh., Totty, Pe Neill, J. Wighton,
Atlas, A Practical Mun, J, F. M'Elroy, Peter Mackenzie, Tyro, Booss.-K, T. A. B.-Parnell's "British Frasses" is the book for you-- W. \(\mathrm{H} .-\mathrm{Mr}\). Selby's "British Forest Trees" is much the lest work ons Arloriculture, but it does not go far
cnough into details. "Bilingtoun oll Planting " is yery nscul. and an excellent book for a beginner.- Surve King ", is cheap, aware that there is any work. excent Pfeiffer and Otto's, on Cacti, with coloured phates so That work is uscrul; sucl a pu-
blication would have no sale in this country. Cereus setacens pretty orange-fowered stove Bromeliacous plant.

Cabbagrs,--W.J.-Road-scrapings are recommended by son
preventing the clubbing of the roots of Cabbage-plants
as your soil is of a light sandy nature the adding any as your soil is of a light sandy nature, the adding any more of
that material might prove injurious. A good dressing of marl,
if it if it can be gor, is equally effective in preventing the disease, almost every kind of vegetable. The disease has also been effectually cured by the following mixture, viz., 1 gallon of
fresh soot, and 1 lb . of pounded saltpetre; mix them with water to the consistency of coallotar, and dip the root of every plant in this before planting. "By, this simple method," says a subscriber, "I have not got a single clup rooted plant in my gar-
den, although many of them had begun to club in the den, altl
seed-bed

\section*{Cellaze, -Villager,-Cellars, if frost-proof, or capable of being
made so, and dry, are very useful for gardening purposes.} They will preserve Dahlias, may be kept in them in winter. \(\qquad\) Oran folium, which has grown luxuriantly, but not flowered, has
, probably been to kindly treated. It is quite hardy, and ditches. \(\ddagger\)
Decinvous Suruss,-An Amateur.-The following hardy de-
ciduous shrubs are showy, and form a succession of flowers: 1, Amygdalus nana, 2 feet high, deep rose; 2 , Cytisus purpu: reus, 2 ft., light purple; ; 3 , Ceanothus americanus, 2 to 3 fti,
white; 4, Prunus japonica, 2 to ft., rose 5 . Daphne Mezeron
and varieties, 2 to 3 ft., pink and white ; 6 , Pyrus japonica and

 cotinus, 4 to 5 ft., greenish white, 12 , Deutzia scabra, 3 to 5 ft.,
white \(; 18\), Hibiscus syriacus and varieties, 3 to 5 ft., pink, White, \&c. 14 , Calycanthus floridus, 3 to 4 ft., brown; 15 , Syringa Josikæe, 3 to 5 ft., purple; 16 , Viburnum dentatum, handsome : Coronilla Emerus, 3 to 4 fto, yellow, If
edgings to walks, viz., Thiftr, Daisies, Primulas, and
Gentians. Erica cinerea, carnea, and vale Gentians. Erica cinerea, carnea, and vulgaris have also an entertion may bo kept dwarf and neat. The varieties of dwarf Thyme are likewise sometimes ussed for edgings. Sulphate of ammonia is not suitable for the purpose you mention
Fibing Pros,-Anthony,-You ask why meal water ferment is so much more fattening than sweet meal. The is in many points similar to that of fermentation ; great portion of the food has to be transformed into other substances before it can enter into the animal system; it is possible that in sousing meal for pigs the process of dipestion may be
considerably facilitated, by the food being brought into a condition more favourable for undergoing the usual transformations effected in the stomach. There are a great many points connected with the philosophy of digestion which are very im-
perfectly understood. \(E\). walls. Peaches : Acton Scot Grosse Mightorg is a good selection for
wrone wans. Paches : Acton Scot, Grosse Mignonne, Royal George,
Noblesse, Royal Charlotte, Bellegarde, Barrington, and Late
Admirable. Admirable. Nectarines: Elruge, Violette Hative, Balgowan,
and Pitmaston Orange. Plums; Green Gage, Purple Gage, and Pitmaston Orange. Plums: Green Gage, Purple Gage, Doke, Knicht's Early Black, Elton, and Florence. Apricots: Large Early, Royal, and Moorpark. Pears: Jargonelle, Dunmore, Gansel's Bergamot, Marie Louise, Beurré Diel, Hacon's
Incomparable, Glout Morceau, Passe Colnıar, Winter Nelis, Easter Beurré, and Beurré Rance. With the exception of the Jargonelle and Gansel's Bergamot, the above-named Pears will be suitable for espaliers or dwarf standards, and in addition,
the Seckel, Louise Bonne (of Jersey), Duchesse d'Angouleme, the Seckel, Louise Bonne (of Jersey), Duchesse d'Angouleme, and Ne Plus Mcuris. Apples for dwarfs: Wormsley Plppin, Golden Reinette, Court of Wicis, Ribstone Pippin, Margil, Sturmer Pippin. These are all first-rate sorts For farther information, see the Advertisement of the Horticultural Society's Catalogue of Fruits. The Sturmer Pippin deserves the
character given of it. As your ground is mueh exposed to Plum, espaticrs and dwarf standards will be preferable for Hibernicus.-On your south wall you would have too many Peaches ripe at the same time. If you substitute a Bellegarde substituted for the Fotheringham Plum, and Nectarine may be for the Washington Plum, The Orleans Plums on the west aspect should be replaced by the Royale Hative, Reine Claude,
Violette, and Kirke's; and the Red Magnum Bonum by the Washington, transferred from south aspect. Throw away the of the latter on the north aspect wall, which may be then filled of with Morello Cherries and a Catillac Pear. Under the name of Blue Gage, you may perhaps have the Purple Gage, or Reine
Claude Violette; but you ought to make sure of havine the latter. 1
quently alwara, Gloxinias are deciduous herbs, and conse. and require a die down after flowering; they are stove piants, should be kept pretty dry, but water should not altogether be withheld from them, and when they commence growing in spring this may be liberally supplied \(f\)
a thing as a bunch of Black Hamilurgh Grapes never was such correspondent reminds as that Mr. Davis, gr. to Sir S. Claiks. obtained a medal in 1836, for a buncli weighing 81bs. 602 , ex on a Aspar as we remember, that specimen, like one exhibuted
speaking ous occasion by Mr. Dowdung, was not, properly bunches, a browing from the monstrous cluster of two or three discussion among the Judges at the time.

\section*{NEWS OF THE WEEK}

After numerous delays the State prosecutions in Treland are beginning to approach their crisis. On Monday the traversers joined issue to the demurrer of the AttorneyGeneral, and after a long argument, conducted, as the Court admitted, with great ability and moderation on both sides, the Judgen unanimously decided that the plea of abatement was insufficient, and that the demurrer should be held good. Another argument then arose on the time to be allowed the traversers to answer to the indictment, the Attorney-General insisting that they were bound to plead immediately, and the traversers endeavouring to obtain a further delay of four days for the purpose. The Court, however, decided in favour of the Crown, in consequence of which all the parties were called upon their recognizances. They all appeared in person and pleaded Not Guilty, and it was arranged that the Court at yesterday's sitting should name a day for the trial.
From France we Iearn that the visit of the Duc de Bor deaux to this country continues to excite much un asiness in the Court circles, and that the visit of the Duc de Nemours is condemned with equal animosity in the Opposition journals. The quarrel between the Clergy and the University is still the leading subject of discussion, and public attention is excited by the proposed dotation for the Dac de Nemours and by the anticipated debate on the fortifications in the approaching Session of the Chambers.-From Spain we have a detailed account of the proceedings which followed the declaration of the Queen's majority. Her Majesty appears to have been received with great enthusiasm and to have manifested a self-possession and a dignity which was scarcely expected from her years. The Cortes have passed a vote of confidence in the Provisional Government, but a change of Ministry is nevertheless resolved upon, and \(S\). Olozaga is said to have undertaken the formation of the new Cabinet. The accounts from Gallicia and Catalonia continue favourable ; Vigo has made ite submission without conditions; Barcelona also has capitulated, and there is no doubt that the insurrection is gradually expiring.-The accounts from Italy are by no means satisfactory; fresh arrests have been made in Romagna, and the people are represented as being in' a tate of great excitement. Disturbances are said to have broken out in Naples and in Calabria, and the sudden despatch of reinforcements to Sicily proves that apprehensions are entertained for the tranquillity of that island. From the United States we Jearn that the Elections are till the topic of the day, and from Mexico that the insult ffered by the President to the British Minister has called forth the marked reprobation of the Home Government, and that Lord Aberdeen intends to despatch a squadron to demand an apology for the affront.

\section*{}

Court.-On Saturday her Majesty and Prince Albert took their accustomed morning waik, and after breakfast proceeded with the Duc and Duchesse de Nemours to harriers. Her Majesty and the Duchesse de Nemours ode in a pary phaton. A brace of hares were found and illed after two good runs in the neighbourhood of Horton The sport was witnessed by her Majesty and the Duchesse de Nemours as they rode in their carriage.-On Sunday morning her Majesty and Prince Albert took their usual walking exercise. Her Majesty and his Royal Highness Castle The Duc and Duchesse de Nemours ate Castle. The Duc and Duchesse de Nemours attended nass at the Cathonc Caper at Clewer. In the afternoon her Majesty and the Duchesse de Nemours rode out in an pen carriage, accompanied. -On Mondayafter her Majesty's usual walk, Prince Albert and the Duc de Nemours shot
over the royal preserves, and in the afternoon the Queen and Prince Albert took a walk on the terrace and in the slopes.-On Taesday the Queen did not leave the Castle in consequence of the unfavourable state of the weather Majesty's stag hounds in the momours hunted. The Princess Royal having this day completed her third year, her birthday was celebrated at Windsor with the ringing of bells, firing of cannon and other rejoicings.-On Wednesday morning the Duc de Nemours attended by his suite left hunting in Leicestershire, from which His Royal Highness returned yesterday. Her Majesty and Prince Albert accompanied by the Duchesse de Nemours took their usual morning and afternoon promenade on the terrace and in the slopes and grounds around the Castle,
The Princess Royal and the Princess Alice were taken their customary walk in the precincts of the Castle, and the Prince of Wales was taken a carriage airing.-On Thursday her Majesty and Prince Albert, accompanied by the Duchess de Nemours, took their customary walk in de Neighbours Buckingham Palace, where they will sleep to-night, and Preparations are now in progress for her Majesty's visit to Preparations are now in progress for ber Majesty's visit to
the Midland Counties. According to the last arrangements, it is said that her Majesty will leave the Castie at \(y\) o'clock on Tuesday morning, for Slough, and from thence Uxbridge, where relays of horses will be stationed to pro that station, on the London and Birmingham line of that sfation, on the London and Birmingham line of rail
way a special train will be in readiness to convey her Majesty and the Prince to the Tamworth station, which is within two or three miles of the seat of \(\operatorname{Sir}\) Robert
Peel. The Queen is expected to reach Watford in about two hours from the period of departing from the Castle, the distance being nineteen miles, ten miles to Uxbridge, and nine miles thence to the Watford station. On Friday her Majesty is expected to take her departure from Drayton Manor, and proceed from the Tamworth station, by the Birmingham railway, to Chesterfield, and from thence to Chatsworth, on a visit to the Duke of
Devonshire. On Monday, the 4 th, the Queen will honour the Duke of Rutland with a visit at Belvoir Castle, and return to Windsor Castle on the 7th. Her Majesty will be accompanied by Prince Albert, and
the Queen Dowager has signified to Sir R. Peel her intention of joining the Royal party at Dravton Manor -The Hon. Miss Liddell and the Hon. Miss Paget have succeeded the Hon. Miss Murray and the Hon. Miss Lister as maids of honour in waiting; Lady Portman has anceeded the Countess of Mount Edgecumbe as the lady Lord Byron as the lord in waiting; and Admiral Sir R. Otway has succeeded Colonel Drummond as the groom in waiting on her Majesty.-The visitors at the Castie mond, the Marquess of Exeter, Earls Devon, Rosslyn, Jersey, Ripon, and Lincoln, Lady Caroline Lennox, and
Admiral Casey of the French navy. The Duchess of Gloucester continues indisposed, although all her symptoms are better than they were at
the close of last week. The last report of the physicians states that her Royal Highness is going on favourably.
The Duc de Bordeavx.-His Royal Highness and suite ived at Hull on Friday last. From thence he proceeded to Burton Constable, on a visit to Sir Clifford and Lady Constable, where a large party of nobility and gentry were Constable on Wednesday morning for York, and from thence proceeded to Newcastle. The Prince was expected to arrive at Alnwick yesterday on a visit to the Duke of Northumberland. According to present arrangements, Northumberland. According to present arrangements, \({ }_{28} \mathbf{t h}^{\text {th. Sir John Shelleg's mansion in Belgrave-square }}\) 28th. Sir John Shelley's mansion in Belgravesquare
(lately in the occupation of the Duke of Marlborough), (lately in the occupation of the Duke of Mariborough), residence in London. The house, it is said, has been taken for three months certain. -The Vicomte de Cbateaubriand and his Secretary the Marquis d'Espenel, with the Vicomte de Tocqueville, arrived in town on Thursday, and are staying at the York Hotel, Albemarle-street, for the present. \(\mathrm{M}_{\text {. de Chateaubriand is in excellent }}\) health.-M. Berryer left town on Wednesday for Oxford, the heads of that University. M. Berryer returned to Mivart's Hotel on Thursday, and will remain in town Mivart's Hotel on the arrival of his Royal Highness the Dec de Bordeaus, Parliamentary Movements. -The nomination of can didates for the representation of Salisbury took place on
Wednesday. The Hon. Mr. Bouverie and Mr. Campbell were proposed, and the show of hands was dectared to be in favour of Mr. Bouverie. A poll was demanded on behalf of Mr. Campbell, which terminated on Thursday in favour of Mr . Campbell; the numbers being for Mr .
Bouverie, 270 ; for Mr . Campbell, 317 ; majority for Mr . Campbell, 47.-A rumour bas been in circulation for the last fem days that Mr. Estcourt was about to resign the representation of the University of Oxford ; and that Mr. W. E. Gladstone, the President of the Board of Trade, would be brought forward as his successor ; but both statements have been contradicted on authority, Mr. EstThe Irvsh Sheritfs. . Lloyd of Cwnmorthin, Esqrs. Montgomeryshive.-J Owen, of Broadway ; J. W. L. Winder, of Vaenor-park Mytton, of Penylan, Esqres. Pembroheshare.-W Castlemalgyn; C. C. Wells, of Tenby, Esqrs. Radnor-shire.-Hon. F. G. Hamilton, of Llanbister ; D. James, The Church and Universities.-The Gazette announce the appointment of the Right Reverend Dr. Spencer, now Bishop of Newfoundland, to be Bishop of the see o Jamaica, and the creation of an Archdeaconry in the
Bahama Islands, to be subordinate to the bishopric Jamaica, and to be styled the Arcldeaconry of Bahamas ; and her Majesty has been pleased to appoint the Rev. John \(\mathrm{M}^{6}\) Cameron Trew, D.D., to be Archdeacon thereof Llandaff. A rumpur in Oxford is very generally credited that at the end of the present term, the Rev. Dr. Wynter will resign the Vice-Chancellorship, and at the same time the Presidentship of St. John's College. The indisposition of Mrs. Wynter, who has been recommended to try the effects of change of air, is said to be the cause of this determination.-The Society for the Propagation of the Gospel having requested its president, the Arclibishop of Calcutta, in the place of the late Mr. Coles, his Grace has appointed Mr. George Weidman, fellow of Catharinehall, Cambridge.
The Colonies. The Queen has been pleased to appoin Commander Edmund Norcott, R.N., to be Governor an Commander-in-Chief in the Gambia; Commander T. C Sherwin, R.N., to be Emigration Agent General for the
colony of British Guiana, and William Henry Butt, Esq. to be Rector of the University of Malta.
National Gallery.-The Queen has been pleased to confer upon Sir Augustus Calicott, R.A., the appoint ment of Keeper of the Paintings by the Old Masters in the National Gallery, Trafalgar-square, vacant by the
decease of Mr. Seguier. The appointment of the Condecease of Mr. Seguier. The appointment of the Con-
servator of the Royal Pictures contained in Windsor Castle and other Palaces has been conferred upon Mr Eastlake, R.A. and Secretary to the Fine Arts Commission
jForetan.
France.-The Paris papers are still filled, as they have been for some time past, with discussions and dis-
putes on the visit of the Ducs de Nemours and Bordeaux to England, the fortifications of Paris, and the Bishop of Chalons' quarrel with the University. The Opposition journals, of all shades and parties, declaim against the visit of the Duc de Nemours to the Queen, while the entire press, with the excention of the papers in the interest of the Legitimatists, condemn as much the visit of the Duc de Bordeavx, and the demonstration it has manner in which the prosecution of Mr. O'Connell and his associates has been hitherto conducted is also selerely criticised in most of the journals. Rumours of a change in the Ministry are prevalent, and it is believed that M. Martin, M. Duchatel, and M. Lacave Laplagne will retire forthwith. The principal reasons given for these expected changes are the divisions of opinion in the Cabinet on the subject of the quarrel between the clergy and the University, and on the subject of the Duc Ne Nemors \({ }^{2}\) dotation. Should the Ministry venture to bring the dota tion forward in the Chambers, which is not though bable at least at the commencement of the seasion formidable opposition is expected ; and some of these who hitherto been considered staunch supporters of the Ministry are understood to have intimated their intention to oppose it. Public discontent at the completion of the detached forts, or as they are termed bastiles, is said to be on the increase, and the desire of the Government for the termination of those works is becoming greater as the period for the opening of the Chambers approaches. during the intention of M . Thiers to attack to the fortifications, particularly as respects the works Vincenes and St Maur -It appear that the judgment of the Council of State on the bishop of Chaloos letter, and the royal ordinance issued publication of more letters in newspapers. The Bishop of Cbalons himself has once more published a letter, in wich he stoutly maintains that in his former letter he did not exceed the limits of his attributes and rights," and that the judgment of the Councif of State was arrived and upon was entirely within his competence, prescribe rules to him." He asks if it is not within his right and power in his quality of bishop to maintain the faith and to improve the morals of those within his diocese, and taking it for granted that the answer will be in the affirmative, he says that is the whole question, and that so far from excommunicating the children by with rawing the chaplain from the university, it is his duty to do so as a means to expose the danger to which the Catholic religion was exposed in those universities, and de denies the rigat of the state to take up his letter. The Debals comments in very severe terms nipon his letter, and insinuates that the same spirit of dispute influences the whole of the clergy. It expresses regret that the ehuke inflicted of recening with milaness and respect the persist in his former course, and maintains that by the concordat with the Church, the Minister of Public Worship is fully justified in checking the erratic nropensities of the bishops.-M. Lagrenee, the French Ambassador to China, left Paris on Friday for Brest, where he as to embark. Count Mole has denied a statement in the Havre papers that he had arrived in that townh on his way to England. Lord Brougham had arrived at the chateau de Tholouet, on a visit to the Marcuis de Galiffet. His lordship was to proceed thence to Cannes, where he intends to reside for two months. M. Ce Chatenubriand left Paris for London on Sunday.-The Courvier rancais announces on what it considers unquestionable authority, that Baron de Rothschild liad accented the modifications proposed by the Northern Railway Committee, and that the Minister of Public Works had consequently undertaken to submit to the ratification of the Messra. Rothschild.-For some days back several acts of Vandalism have been committed in the gardens and park Versailles. On Friday all the fingers of one of the hands of the Vous of the well as the bead ad arms of the child held by Hercules Accounts from the denatments mounce that the rivers which wer folling The Ruo bla bour Durance has altogethe done rortuntely thoseinunDations aloget hose inun lessened the amount of dame though still the effects of the disaster lom . Arles and Tan lin lase Arles and eleven places. The loss occasioned by the carrying away It is said that the bridge of boats at Saint-Gilles has been also carried off. The damage caused in the neighbourhood of Pertuis by the rise of the Durance is incalculable. Several points in the Haute-Pyrenees have also suffered exceedingly. The Larros spread over a vast length o country, covering the fine plain of Ozon, and tinreatening the little town of Tournay with destruction. Happily the waters began to subside just at the moment wild danger appeared most imminent. The handsome bridge of Chelle was carried away when on the point of being completed, for in three days more the last stone woul have been put on. Fortunately no lives were lost in th neighbourhood.
Spain.-As announced in our last, Queen Isabella II. took the oaths on the 10 th inst. before the Cortes, the foreign Ministers, \&cc. After her Majesty had taken he seat on the throne, the President of the Senate advanced holding in his hand the Gospels open. The Queen rose and with her hand on the holy book pronounced, in
sonorous and mild voice, the following oath :- "I swear serve, and cause to be observed, the Constitution of the Spanish monarchy promulgated at Madrid on the 28th of June, 1837 , and that I will respect the laws and cause
them to be respected, without having any other view than the national welfare. If I should act contrary to what I have sworn or to any part of it I ought not to be obeyed, have sworn or to any part of it I ought not to be obeyed,
and my acts should be null and void. Thus may God assist me, as otherwise I should be accountable to Him for my conduct." Her Majesty concluded amidst the her Majesty reviewed the troops of the garrison on the Prado. At the reception of the deputations of both houses on the 9 th the Queen also evinced singular self-possession
and dignity of mannerg. It is expected that one of lier and dignity of manners. It is expected that one of her Majesty's first acts will be an amnesty for past offences. Queen, but her Majesty, as was expected, had refused to accept them. In the sitting of the Congress on the 1Ith a decree was read by which the Queen confirmed for the present the existing Ministry. A resolution was then
curried unanimously declaring that the Provisional carried unanimously declaring that the Provisional joyed the confidence of the Chamber, for which M. Lopez returned thanks. A change of Ministry is however
certain, and M. Olozaga has undertaken to form the new cabinet. On the 14 th General Narvaez proceeded to the palace, and presented to the Queen his
resignation of the post of Captain-General of New Castile. Thesignation of the post of Captain-General of New Castile. but it was rumoured that he had taken offence at the ayuntamiento of Madrid not having uttered a word about the attempt on his life and the death of his aide-de-camp, Whilst it had made great noise about an insult offered by an officer of the garrison to a drummer of the National Guard, who was the bearer of some order from that muni-
cipal body. It was also believed that he was rather jealous cipal body. It was also believed that he was rather jealous of General Serrano, and felt hurt at some censure passed on his conduct on the 12 th, when, after inviting the Officers of the garrison to dine with him, he conducted his guests to the palace, and presented them to the Queen. to persuade him to recall his resignation, and it was believed that they would succeed. Several arrests took place in the evening of the 14th. A coffee-house keeper impliamong the individuals against whom arrest warrants had been issued, as compromised in the attempt against the life of General Narvaez. Three writers of the Eco del Comeroio and the principal editors of the Espectador opposition journals, M. Palruo, former commander of a battalion of Luchana, and M. Savita, an officer of the garrison, had also been arrested as participators in the attempt on the life of General Narvaez. The fuaeral of Commander Baseti, his aide-de-camp, who died of the wounds received in this attack, took place on the IIth amidst an immense concourse of people. Gen. Mazaredo paid a brief tribute to his memory, after which the cortège
moved to the tomb of Diego Leon, where the Political Chief also mourned over that unfortunate Officer, and the clergy sang a "De profundis."-The Government have received satisfactory accounts from Galicia. In the number of Officers and soldiers, entered Portugal, on the side of San Gregorio. On receipt of this intelligence, the Government despatched Colonel Salazar to Portugal, to demand the arrest and extradition of the rebels. A lation from Barcelona, of the 13 th, states that city was signed on that day, and that several detachments of troops were to enter the town in the course of the same evening. The news of the Queen's taken the opportunity of exhorting the people to peace and order. Apportunity of exhorting the people to peace the day before the capitulation. The few people remaining in the town immediately availed themselves of the change in affairs, and showed themselves in the
streets, and they were even allowed to mount the ramparts. The insurgents at Figueras, however, had made formidable state of defence. General Prim on arriving at Figueras had summoned the castle to surrender but his demand had been moned the castle to surrender, but batteries had opened a fire upon his quarters by way of defiance. The castle was supplied with provisions for 12 submission the llth the insurgents of Vigo made their submission without conditions. The submission of that town and the declaration of the Queen's majority have produced the most lively satisfaction at Corunna.
tour in the Alt. The Queen returned to Lisbon from her tour in the Alemtejo on the 31st. As stated in our Spanish news, General Iriarte and his staff had arrived in the Portuguese territory, which they entered at Melgaço in the province of Minho. The Civil Governor of Viana having been made acquainted with the arrival of these Spanish officers and troops, and with their request that an asylum should be given them, immediately communicated by telegraph with the Government at Lisbon, which assigned Braga, 40 miles north of Oporto, as their residence. At Lisbon all was quiet and the Cortes were opened as the packet left.
have been receiveders from the Rhine state that orders have been received from Berlin to employ double the ments of the Royal Palace at Coblentz during the whole Finter, so that the works may be completed in the wegin ning of May next, when his Majesty is expected fer the purpose of receiving there and at the Castle of Stolzenfels
son.-Letters from Hanover state that his Majesty the King intends leaving his capital and country again for the greater part of the winter, and that Berlin, in particular would appear by accounts from Vienna that the appointment of his Imperial Highness the Archduke Stephen to difficulties. The Archduke wishes for very extended powers, which the Aulic Chamber does not feel disposed to grant, as it would materially diminish its own authority over that important part of the empire,-A Berlin lette of the 12th states that Messrs. Clegg and Samuda inventors of the Atmospleric Railway, have made proposal their Prussian Government for the construction, upon laid at the expense of the State. But before taking this proposal into consideration the Government resolved on witnessing a trial of the principle, and therefore has Berlin to Charlottenberg, the works for which will be commenced in the spring and be quickly executed, as the ground is very favourable. Letters from Leipsic mention
that on the 1st, the subscription for the Saxo-Silesian Railroad was opened at the Bourse. The estimated cost would be \(25,000,000\) thalers in shares of 100 thalers each Italy.-A letter from Bologna of the 6th inst. states that M. Barretti, of Ravenna, had been arrested for the part he took in the late disturbances. He had been for some time settled at Bologna. A quantity of arms and ammunition were found in his house. A barber who was accused of putting upa treasonable placard at a café was
also arrested. The disturbances were still far from being put down, and the people were in a state of great excit ment. Several of the insurgents had taken refuge in Malta and Corsica, and it was said that the Italian states had applied to have them removed. It is by no means request, but the French Government has already so far complied with it as to remove all Italians from Corsica to the interiay of France. The two brothers Muratori, the Counts Biancoli and Righi, the Marquess of Melara, and several other refugees have been ordered to Chateau Rouge. It was reported in Paris on Saturday that the of a serious nature Disturbances were said Naples broken out in the neighbourhood of Naples and in Calabria. The particulars were not published, \({ }^{\text {w }}\); but it preparations to send reinforcements to Sicily, and that some demonstrations were apprehended in Calabria and the Abruzzi, where the events of Bologna had produced a deen impression. An Italian paper printed in Paris, La refugees, states that the circulation among the Italian Romagna failed, not because that disaffection was not Romagna failed, not because that disaffection was not general throughout the Peninsula, but because the The reason given for this is that the Republicans would not aid in a movement openly said to have been suggested by Russia, Everything ,was, it seems, prepared for general Italian insurrection. The movement was the army would lead or immediately enter into it. Upon the knowledge of that revolt, Lombardy, Piedmont, and the Romagna. would rise, and form an Italian empire, the ruler over which would be the Duke de Leuchtenberg, son of Eugene Beauharnais and son-in-law of the Emperor monarchical views of any man, and consequote the revolt in Italy miscarried According to the ame the the revolution in Greece was connected with the move ment in Italy, and equally instigated by Russia.-A Neapolitan steamer arrived at Toulon on the 12 th with despatches frow the Court of Naples and the Due \(\mathrm{d}^{3}\) Aumale, which were immediately forwarded to St Cloud by express. It appears that the marriage of Naples, the object of the Prince's journe King of agreed upon. Letters from Naples of the 6th state that a difference has arisen between the Government and the British cabinet on account of their having taken possession of the island of Lampedosa. The English minister coms and he the British name bas been wounded, and he demands reparation. Although the islan belongs to Naples the British and that the British flag be restored. The minated, declared that more prompt measures have not been take merely on account of the friendly relations which pre viously existed between the two Governments. From Sicily we learn that Mount ena was at the close of last month throwing out volumes of fiames.
Malta. - it is announced in Tuesday' e Gasette that the Government have appointed Mr. W. H. Butt to be rector of the University of Malta. It had been previously stated that the office had been conferred on the Rev. \(F\) Mahony, better known as Father Prout, but it now on account of the have obliged the clerical squabbles in the island, which to resort to this step. The new rector is of course Roman Catholic.
Grebce.-Letters from Athens of the 30th ult. announce the arrival of General Coletti at the Piræus on differen. He received a salute of 175 guns from the and Austrian-in the harbovr where a vast multitude was assembled, the cries of "I live Coletti! long live the good patriot!" resounded on all sides. When his carriage drove off it was accompanied
by a number of women and children repeating with enthusiasm similar exclamations. The following is the result are nearly 90 Napists, and 135 Cons of the Assembly there 80 nearn 90 ars 80 acknowledge Coletti as their chief. -The German papers state that the Emperor of Russia is not content with refusing his sanction to the new state of affairs in Greece, but that he proposes to address an energetic protest against the revolution to all the European Powers.
rebuilt after the dreadful conflagration of 1838 , barcely yet rebuilt after the dreadful conflagration of 1838 , has again been completely destroyed by fire, 1400 families have lost everything and are without shelter. The King, upon being informed of the disaster, had immediately despatched one of his Aides-de-Camp with 30,000 dollars from his private purse and promises of further relief.
Turker.-Accounts
Turkex.-Accounts from Constantinople of the 31st ult. state that the offices of the Porte and most of the public administrations had remained closed during the preceding ten days in consequence of the solemnity of the Bairam. It was believed for a moment that the revolution in Greece might lead to new complications ; this anticipation, however, had not been realised. The Porte, after adopting measures commanded by prudence to guard Thessaly and Epirus from all attempt on the part of the Greek revolutionists, had declared that in its relations with the Hellenic Government it would be guided by the conduct of the Powers which protected the new kingdom. The Persian question still remained in statu quo. The last letters from Erseroum, dated the 17 th, merely mention that the Turkish and Persian plenipotentiaries having received fresh instructions from their Governments had resumed the negotiations, and that Mr , Curzon, one of the British Commissioners, was dangerously ill. The French Envoy had taken up seriously the affair of the Armenian decapitated for his relapse to Christianity.
Egypt.-The accounts from Alexandria come down to the 26th ult. They state that Mehemet Ali had abandoved all hope of the return of the Pacha of Soudan to his allegiance, and that he was consequently re-organizing ment. with the remainder of the and Mise Dalzell passengers, arrived safely at Aden on the 9 th Sept, A letter from Lieutenant Agar, dated Aden, Sept, 13, after describing their dreadful sufferings from thirst and the burning heat of the sun, \&c, pany's brig of war Tigris was seen rounding the Hulloolla point, with the preconcerted signal flying. About sunset point, with the preconcerted signal flying. About sunset
she anchored; the unfortunate sufferers were speedily on board, and in a few days aafely landed at Aden. Cape of Good Hope.-Accounts have been received from the Cape to Sept. 23 d , and from Natal to the 10 th affairs in that part of the Colony the leaters of thent of conspiracy Prinsep. Rodeloffy, the leaders of the Boer having as it was affirmed submitted to ber Majers, authority and to the terms of the late Gover Majesty's clamation. Accounts from Port Elizabeth dated Aro28th give some details of a dread ful storm in that quarter The ships Delhi, Elizabeth Rowell, Laura, and Sea-gull were driven ashore, and all but the second seemed to have suffered total destruction. Many lives too were unfortunately lost. Including the amount of damage done to the jetty the total loss sustained is estimated at nearly 30,000l. Rains had again fallen in copious quantities in drought a the rising crops were therefore becon more prond the rige was a more promising. There was a rumour at Cape Town of Napier Governor papers are, as usual, filled with complaints of the ravages of the Caffres.
United States and Canada.-By the arrival of two sailing packets we have accounts from New York to the 3d inst. The news is not important. The papers contain much speculation on the coming elections, The friends of Mr. Clay had held a meeting New York, and each party were loud in the praises of their respective candidates.- By an arrival at Clarieston of a vessel from Havannah we have news to the 19th. The newly-appointed Governor-General O'Donnell had arrived at HaFannah, and was to have been installed the day the vessel sailed. -In Canada the Provincial Parliament was very active. A bill for the suppression of secret societies had passed in committee of the whole house. Another for the prevention of party processions, said to be aimed at the Orange societies, had excited very great discussion. A bill had also been introduced for the regulation of steam boats in the province, which forbids the use of high pressure engines.
Mexico.-It is rumoured that Lord Aberdeen has declined to enter into any negotiation with the Mexican minister Mr. Murphy on the subject of the affront lately offered to the British flag, and that he intends sending out a new minister to Mexico in a frigate which will call at with him to the Mexican coast, and require an apolog for the affront before landing. By the packet before the last, advice was received that Mr . Doyle had made a monstrance to the Mexican Government on the subject of a breach of contract between it and a British house in Mezico, in such strong terms that the Government objected to the expressions. Mr. Doyle refused to retract a and the consequence was that the Mexican Government in Lo special messing him to of the lagage in wich it had been or the la guage the then addressea. This Lrierance preceded Aberdeen will not admit that the Mexican Govern-
ment had any just ground for breaking contract with the house in question. The last accounts confirm the statement which has been current that the Government of that country has issued a decree prohibiting foreigners from ers, foreigners married to Mexican women, and those who reside in the republic with their families are made exceptions to the prohibition
Brazirs.- By the Satelitite sloop of war we have accounts from Rio to the 4th Oct. The rejoicings conse quent upon the marriage of the young Emperor and a general manifestation of gloom, arising from the subsequent indisposition of His Imperial Majesty, who had ing to the latest bulletins, was upon the increase, with renewed symptoms of irritation. The result of this attack of the sufferer, not without a strong hope that it migh terminate favourably.
Money Market, Friday.-CITY.-Consols closed at 95 䂞 to 96 , for time and money; Three per Cents. Red., \(95 \frac{1}{8} \frac{1}{8}\) to \(\frac{1}{4}\);
Three-andda-Half per Cents. Reduced, \(102 \frac{1}{4}\), to \(\frac{10}{\bar{y}} ;\) New Three-and-a-Half per Cents. Reduced, \(102 \frac{1}{8}\) to \(\frac{3}{4}\); New Bills, 54s, to 56 s . prem

\section*{fitetropolts and its Zicíníty.}

The Royal Palaces.-Her Majesty has just caused to be carried into effect a design, emanating entirely from herself and Prince Albert, for the establishment of "DoPalace into effect her Majesty has been pleased to make a dona tion of 1000 . for the purchase of books to commence with, instructive character to both libraries. Prince Albert ha also presented \(50 l\). for the same purpose. The committee appointed by the Queen to superintend the arrangements consist of the followg donations and variou works of utility :-Sir H. Wheatley, Mr. G. E. Anson, Hon. and Rev. C. L. Courtenay, Hon. C. A. Murray, Master of the Household, has been appointed treasurer to the two library funds, with
Destitution in the Metropolis.-On Monday a public meeting was held at the Western citerary nnstitution, titution now existing in the metropolis, and of adopting measures to alleviate the distresses of the houseless poor. The Rev. Mr. Ward, the Rector of St. James's, was called to the chair, supported Ch Mr. Robinson chairman Ranelagh, Sir Joseph Copley, Mr. Robinson chairman Evans, Hon. Stuart Wortley, Mr. Walter, and others. Mr . Arber, the promoter of the measure, briefly explained to the meeting that it was originally proposed to pass the parochial clergy be requested to become presiden the parochial clergy be requested to become presiden and rice-presidenittee be appointed; and-3. That public subscription be set on foot in behalf of the institution, to be called the Western Refuge for the Destitute. These resolutions, however, were thought by some of the gentle men on the committee to be hardachaid that he was decidedly of this opinion ; he thought that if any measures were taken they ogit the metrol that now exised the metropolis, to be taken upon national and comprehensive scale. The house of refuge
to be established should be as well known as St. Paul's. Lord Dudley Stuart was most happy to take part in any measure that might tend to obrterate the relthior whic all must feel so grievously attached to the waealdier chasses a refage for those houseless and shelterless beings who thronged our public thoroughfares and parks. He knew of no one to whom the presidency of such an institution could better be intrusted than to the Bishop on the quesbut at the same time he would not enter upon thi question whether such an institution should. He would con. clude by moving that it is expedient to establish an institution for the relief of the houseless and destitute poor in the metropolis, and would suggest that the day, and that the Bishop of London be requested to pre side. Mr. Cabbell was in favour of a comprehensive plan, but objected to the word refuge. While the instituanight's shelter, inquiry should at the same time be made into the cause of his destitution, so as to prevent its recurrence. He would cordially second the resotution. sir tion mooted by the Noble Lord, as to whether the care of the institution should or should not be confined to clergymen of the Church, it was a question which had better be
aroided. On the other hand, he thought that a national or more comprehensive plan was not practicable, as there the City. Mr. Ridgway, Mr. Kingscote, Mr. Robinson and other gentlemen addressed the meeting, and Dr. Lynch suggested that the Flleet Prison might be appropriated as a place of refuge. The meeting, after that Mr. Cabbell be requested to act as treasurer, and Mr. Arber as honorary secretary; and that it be
ing at Exeter-hall, and request the Bishop of London to preside at the same. The thanks of the meeting were then unanimously given to the Rev. Mr. Ward for taking
the chair, and to Mr. Arber for his active interest in the chair, and to
calling the meeting.

Court of Aldermen.-On Tuesday a court was held for the despatch of business. The Lord Mayor having taken the chair, Alderman Brown mooved a vote of thanks to Alderman Humphery for the uniform kindness, impar-
tiality 4 and good temper which had distinguished him tiality, \({ }^{4}\) and good temper which had distinguished him during his mayoralty, and which had secured for him on his retirement the good wishes and esteem of his fellowcitizens. The vote was carried unanimously and with acclamation. Alderman Copeland brought up the report of the Gaol Committee, which recommended the appointment of a superintendent, with a salary of 3000. a year and 2. a year for a house. He represented the anxiety with portance investigation into the medical department and other matters. The report was referred back to the committee, and the testimonials of the candidates for the office of superintendent of the gaol of Newgate were ordered to Wellington had recommended Capt. Kincaid governor o Bridewell as eminently qualified for the discharge of the duties of the situation. After some other unimportant business the Court adjourned.
East India House, - A Special General Court of Pro prietors was held at the India House on Friday, pursuan requisition, for the purpose of considering tionists - " Ist. That from the printed papers recently laid before Parliament on the subject of Scinde, it is the opinion of this Court that the proceedings of the Government of India which ended in the dethronement, exile, and imprisonment of the Ameers, and the seizure of their country, were uncalled for, impolitic and unjust. 2d. That the Court does therefore most earnestly recommend to the Court of Directors the immediate adoption of suc steps, by representation to her Majesty's Government o made for the injustice already committed, and enforce the abandonment of a line of policy inconsistent with good faith and subversive of the interests of the British rule in India." Mr. Cotton, the Deputy-chairman, before any discussion took place, stated that the papers relative to the object of these resolutions had not been laid before the proprietors, and that he would therefore move a nce that the airectrs reque ten lay them by the Secret Committee regarding the proceedings them by the secret Comwinte regarding the proceeding printed for the use of the proprietors, and that this Court of Directors be requested to apply for and lay before the Court all further information upon this important sub-
 on the question whether the chairman had the power to bring forward this motion, and Mr. Hume expressed his belief that the directors wished to "burk the discus-
sion. It was, however, ultimately resolved to adopt the sion. It was, however, ultimately resorved to adopt the proprietors should be convened at the earliest possible period after the publication of the papers.

The tate Duel.- In reference to the rumour noticed in our last respecting the surrender of Lieut. Munro, it appears from the scotch papers that Lieut. Munro landed at Hull on Friday last from a Hamburgh steamer, and passed through inverness on the 18th, on a visit to hial father at Tain previous to surrendering to take his trial.
At the Marylebone Police Court on Friday, Inspector A the Marylebone folice Court on Friay, hapeth Colo who conducted ind that I take their. Munro and Lieut. Gsion of the Central Criminal Court, and that the witnesses to be subpoenaed on the trial would be 31 in number.
Metropolis Roads.-Another meeting of the rate-payer of Hammersmith was held last week for the purpose of adopting measures to light the Great Western Road from Hammersmith turnpike to the New Road leading to Oxford-street, being nearly the whole leagth of the road running through that parish. A meeting for the same purpose was held about a fortnight ago, but in consequence of some irregularity in the proceedings it was null and void, and by making a alight alteration in the notice !to call another meeting. Mr. Shackell having been called to the chair, Mr. Millar moved the adoption of the General Lighting Act within that district. Mr. Daley seconded the resolution. Mr. White moved as an a mendment, that the meeting be adjourned until that day twelve months. A lengthened and angry discussion thing negatived. The Chairman then put the original motion, when there appeared, on a division, to be 78 for, and 69 against the lighting. The Chairman declared that as there was not sucl a majority of those present in favour of the lighting as was required by Act of Parliament, that object could not be carried out for a twelve-month. Mr. Millar and others demanded a poll, which was granted. The meeting was then adjourned
result of the poll will be deciared. Hungerford Suspension-Bridge. It is intended to open this bridge in May next. The abutments on both sides of the Thames and the pier on the Hungerford side are completed, The pier on the Lambeth side is of the bridge will be 1,440 feet, the breadth in the clear
about 14 feet, and the height from the water level to the ootway, 28 feet. The links that compose the supporting chains are made be necessary for the construction of the bridge. The property required for approaches has cost 13 , the bridge cost of \(80,000 \mathrm{l}\). The total cost, including expenses ncidental to the progress of the works, the Act of Parliament, \&c., will be 106,000 . The proprietors calculate that a net annual income of 8 , 1 . Kensington.-On Monday, at a meeting of magistrates division of Midelese was granted for the ensuing year ; Mr. Morland, the proprietor, having entered into a of penaltie in sureties in 70. each, for the payment Tires.-On Monday morning, shortly hefor. 'clock, a denday morning, shortly before four premises belonging to Messrs. Bramah and Prestige engineers and patent lock-makers, Belgrave-place, Pimico. The manufactory in which it originated was upward of 180 feet in length, and was one of the finest in Europe The fire was discotered raging on the nork end of the building; and the wind blowing furiously fom the south west, the flames raged with ungovernable fury. In less than half-an-hour the whole of the engine-room, with it valuable machinery, was destroyed, and the entire building rapidly took fire. By this time the alarm was com municated to several stations of the Fire Brigade, and water having been procured the fury of the flames was omewhat subdueत, but they subsequently spread to nother part of the factory. By five o'clock the whole building was on fire from top to bottom, and the flames continued their fury until there was not one article of a combustible character to feed them. The number of workmen lately employed on the premises amounted to about 120. On Saturday evening they were at work until 8 o' clock casting a heavy shaft, and when they quitted actory everything appeared safe. On examining the premises after the fire, it was discovered that they had stained with blood near the counting thouse, through which a forcible entry had been made. This circumstance in duced an impression that the fire was the act of an incendiary, and a clue has been discovered which will doubtless lead to his discovery. Mr. Braidwood reporls the entire destruction of the engineering and pattern shops, with their valuable contents. In Belgrave-street South the school of industry of St. George s parish has the roof of the workshops burmed and the back part ex tensively injured. In Upper Ranelngh-street 6 houses have their back premises injured, and one in Eaton-lane is also much damaged. Messrs. Bramah and Robinson are insured and the loss to thefire-offices will not be far short of \(12,000 \mathrm{l}\) Saturday morning, a fire broke out on the pre Old . agington, the rick buming with siderable fury in a shed at the rear of the buildings, used Assislance bein speedily procure the fiomes were extinguished with little destrup of Sropery. On Satay evening involvin the destruction of property to the extent o 20001 bre in 2, 0.., bre and 1 ach pying a large frontage on the east side of the street, reacis 120 feet depth to the edge of the Regent's Canal Basin the north and south portions adjoined by aluable prop When the fire was got under, nothing remained but the smoking ruins

Allempted Suicide.-On Monday morning the neigh bourhood of Bryanstone-square was alarmed by an attempted suicide at the house of Mr. Jos. Hum, M.P. It appears that Mr. Gubbins, ana of the married Mr. Hume s eldest dagher shor 0 During the last fow weeks they have been on a virt Duke and Duchess of St. Abans, in Sincolnshire. The to returned to town from Redburn on Saturday, and ware stay a few days at Mr. Hume's prior to their departar for India. On Monday morning, shortly before 50 cha the screams ar Mrs. Gubbins awoke Mi. Hume 1 family, and it was then discovered that the unfortuas gentleman had thrown himserf on the pavement fro ling bedroom window on the third floor. He was found lying there in a pool of blood and quite insensiole., Dr. Arnolt Mr. Liston, and other medical men, were sent for, whe it was discovered that in addition to other serious inj of ries Mr. Gubbias bad sustainea a compound fracture one of his thighs, and that his otber leg was broke. The greatest secrecy appears to have been imposed on then domestics in Mr. Hume's service, and all the information that could be obtained on application at the house was that a member of the family bad met with a serious aces visited \(t\) attendants, and but faint hopes are entertained of his ultimate recovery. In reference to the above, Dr. Anotr has addressed a letter to the daily papers, stating to Mr. Gubbins had been under medical treatment for some a suddenous to the accident; that it occurred durbs is so far recovered as to be able to give some account of the accident. It appears from this, that during a horrid dream he fancred he was walking on the parapet of a house, from which he was thrown off; but in what manner or by what n
Morlality of the Metropolis.-The number of deaths
registered in the week ending Saturday, Nov. 11, was as
follows:-West Districts, 126 ; North Districts, 196 Central Districts, 202; East Districts, 215 ; South Dis tricis, 277; Total, 1,016 (males, 524 ; females, 492) 442 females); and for the last five autumns, 908.

Bollon.-An address signed by nearly 900 inhabitants of this town and neighbourhood, who are mostly heads of
families, has been presented to the Bishop of Chester, expressing satisfaction at the opposition made by his
Iordship to the doctrines of Tractarianism. The following is an extract from the Bishop's reply :-"You would scarcely bave thonght it worth your while to encourage me in the course which \(X\) have pursued unless personal experience had, taught you to value the doctrines wain which I have felt myself bound to marn my clergy. There is much to justify anxiety in the favour which for a while, and in some quarters, those writings have obtained. Bu there is also matter of consolation in the opportunity which public mind, and the determined adherence of the country at large to the doctrines of the Reformation. May I not frther assume that the same circumstance proves the wheral faithtulness of the ministry of our church, by tained, and which has fixed the opinions of the people on a foundation too firm and solid to be shaken by the occasional storms which only affect what is light and weak and wavering
Brighton.-On Wednesday morning several hundred To of earth and chalk slipped into the sea, near Kemp One ofrighton, and carried with it two men and a boy, Aldrington, near this town, contains according to the last census but one inhabitant; a solitary turnpike-gate house, kept by a man with a wooden leg, being the only habitation in the place. The desolation of this parish, in To have the ruins of the church are still standing, is said sea, at the mouth of the river Adur-Shoreham harbonr baving been originally there, but being now choked up with shingle.
Burton-on-Trent,--The Rev. J. M. Crockett, Incumlent on the 14 th inst. It appears that he was returning home with a friend, when on passing the house of a widow of the name of Hassell he heard a confused noise of voices, as if in altercation. On pausing a little, he could hear violence. Mr. Crockett immediately left the arm of his friend and stepped through the wicket, intending to enter by the end of the house the covering of an old well which was under the pavement gave way and Mr. Crockett wa precipitated to the bottom, a large quantity of earth and tones falling upon bim. The alarm was immediatel given, but the unfortunate gentleman when rescued was Bury. -On Tuesday week thired two hours afterwards. Openshaw Fold, near this town, the property of Messrs. Openshaw, woollen manufacturers, was destroyed by fire the origin of which is unknown. The loss is said to be length and three stories in height and the amouns in loss is understood to be upwards of \(10,000 l\).
Carmarthen.-The Special Commissioners since our Iast report have visited Haverfordwest, Narberth, \({ }^{\text {and }}\) New castle Emlyn, on their way to Cardigan and Aberystwith to be of the rioters who were com and tollhouses at Parkamorfa and that place have been 500 each their trial for the same offence and have been held to bail in 502 . each with two sureties in \(25 \%\). each. Much Fishguard, and the informers Thomas Williams and wife ncurred the displeasure of their countrymen to such an extent as to render it necessary for them to be placed under the protection of the military.
his coast in seang the last week a whale has been visiting Sund an morn search herrings. In was distinctly seen on on Friday it was seen off Dover from the shore, and some men who were in a boat just as it was a pproaching had a arrow escape of an upset, but they luckily got on board gelves. The whale is sussing at the time and saved themEly. - The Bury Post states that "there are at the present time in and about the fens around Ely such Great efforis rats that their numbers cannot be reckoned. but still they are not sensibly lessened ; many acres of wheat must be sown again, and this again may fall a prey their incursions. Poison is laid in large quantities mirning. Mr. WV. Harluck has had men eapployed on his ave du some time past to take these amimals, and they fon last weed thove 2,000 . A man wert into Nidulle the vast numbers, the a hround seeming quite terilitied at with life ; numbers, the ground seeming literally to teem noxious animals.'
is halderssfield. -The agents of Sir J. W. Ramsden at his intention to give the munificent suma of 8,000 l. for the erection of four new churches and schools in the extensive
parish of Huddersfield, with ground for the sites of the same. The patronage
in the young baronet.
Kirlcdale.-An affray with poachers took place a Knowsley Park on the 10 the inst., in which Richard Kenyon, Lord Derby's gamekeeper, was so severely
Wounded that he died in a few days. A man named John Sham, one of a gang of poachers who have long been notorious in the neightourhood of Liverpool, has been Manchester.
Manchester.--since the last report of the meeting in favour of the League Fund, additional subscriptions have een received to the amount of 1,527 , maling a total the names of many gentlemen who never before subscribed the sailor who was last week remanded on a charge of
the setting fire to a number of corn-stacks near Denbigh, wa brought up for further examination. It will be recollected ordered to be keptman the informer in this case was ordered to be kept in custody by the magistrates, in consequence of his statement implicating bimself, while at that his account there were strong grounds for believing itnes account was untrue. Hardman was placed in ioe hoss-box, and Joseph Kedger, the prisoner's companion, teamer Penelothe had rua away from her Majesty deserter, was apso, and was consequently dechief superintendent of police stated that since the prisoners had been remanded he had written to various places for the purpose of ascertaining the truth of the statement made by Hardman before the Court on Friday week, and he had found untrue. The magistrates after a long hearing decided on again remanding the case.
Newmarket. -The bank of Mr. Bryant, in this town suspended payment on Friday last, but there is no doub mmediately available.
Oldham.-A great portion of the mill of Mr. John Lees, Primrose-hill, with a considerable quantity of by fire machinery, were consumed on Thursday week but is believed to have been accidental. The property estroyed is estimated at about 5,000 .
Windsor.- On the afternoon of Friday, as Capitaine de Reille was leaving Windsor Castle on horseback, in attendance upon the Duke de Nemours, his horse slipped as it was proceeding through the gates of the Home Park, opposite to the Long WaIk, and threw the Captain with considerable force upon the gravelled road ; but, although considerably bruised, he mounted another horse, and proceeded throughout the ride with his Royal Highness. The Hon. C. A. Murray, while hunting with Prince Albert's harriers on Thursday last, was thrown from his horse, in the vicinity of Chalvey, near Slough, but fortunately with out sustaining any serious injury. It appears that while Mr. Murray was in the act of opening a gate with his hunting-whip, his horse rushed over the gate, taking its and thus causing him
Railways.-The following are the returns for the pas week :-Birmingham 1 . Edinburgh and Gisurirmingham Great Western, 12,143l.; Grand Junction, 6,787 Glasgow, Paisley, and Ayr, 1,220l. ; Great North of England, 1,302l.; London and Birmingham, 14,213l.; South Mestern, \(5,1132\). ; Blackwall, 641l.; Greenwich, 6582. Brighton, 3,432l. ; Croydon, 219l. ; Liverpool and Manchester, 3,8806 . ; Manchester and Leeds, 4,465l.; Mid2,416l. ; Northern and Eastern, 1,415l.; North Midland 4,281l.; Newcastle and Carlisle, 1,400l.; South Eastern York Dover, 3,0786 . ; Sheffield and Manchester, \(458 \%\). and Dover Company held their half-yearly meeting last week. The report announced that the viaduct at Folkestone was now complete, that the hotel on the harbour ould be opened this month, and that the trains in a few In reference to the communication with France, the directors hoped that the French Government will forward one or more of the lines of railway by which it is proposed to reduce within the limits of a moderate day's journey the route between Paris and Brussels and London on the other. The promise of opening throughout to Dover before the end of the year would, with favourable weather, be fulfiled, and Mr. Stephenson, the engineer, encouraged a hope of the completion of the branch line to Maidstone by September ext. A supplemental account had been received from The Brighton Company claimivg a further sum of \(34,623 \%\), The construction account showed a balance of 33,232 ,郎 number of passengers carried on the line during the ant hair-year was 274,000 , the receipts from which had increased to 4,700 . per week. The total receipts for payment of expenses, a balance of \(12,750 b\),, applicable to paymentend ; but considering the unfinished state of the line, the directors proposed to defer the payment until line, the directors proposed to defer ine payment until directors to improve the harbour at Folkestone; to adjust the accounts in dispute with the Brighton Company ; railway, France, and Belgium ; and to apply to Parliament in the next session for powers to construct a branch line from Ashford to Canterbury, Ramsgate, and Margate. lines having a common terminus at L.ondon Bridge took place, but the subject was deferred until a future day.
ing from a Brussels paper:-"We learn from good authority that an English company will establish steam-boats, which draw so little water thand Ostend by both ports both ports at low water, 80 that travellers leaving London Ostend toxard by the railway to rokestone will arrive a Ostad evening. Another English company will wall and Oster Therem will perween Black wail and Ostend. The steaniers will perform the passage ne able to ten hours, and always arrive at Ostend so as to he morninter the port. They wil also leave Ostend in the morning is the tide suits. Thus travellers who arrive London sin the the raiway from lologue may reach London in the afternoon or the following day. -The irectors of the Great Western Railway have given notice orir intention to apply to Parrament next session for ine extension act, which will enable them to carry their ine into the town of Cheltenham. The new bill embraces three objects:-1. a branch line from Pangbourne station Newbury, a disfance of about 15 miles; 2 . the extension of the line through the city of Gloucester; and 3. its extenlon int cutting and embarkments from Kennington towards Didcot on the are branch to Oxford, (about two miles in length) ings opposite Nuneham are the ballast. The cutupwards of 2000 yards per week are taken to the long embankment which runs down to the river at the end o Nuneham park. Where the railway crosses the river a bridge made of timber was commenced on Saturday, and nin eompleted in about five weeks.-A prospectus has Knareshore of a new railway from Harrowgate and North Midland at Bolton Percy station. Mr. Locke has been engaged to survey the line, and has made a report. The line is proposed to commence at Knaresborough \(\mathrm{Spa}_{1}\) nearly half way between Harrowgate and Knaresborough ; is said, will benefit not only those towns but Wetherby, Thorparch, Tadcaster, and even York.

\section*{IRELAND.}

Dublin.-On Monday, Mr. Ford, one of the attorneys Benche traversers, attended in the Court of Queen's plea in the case of the Queen v. O'Connell. The AttorneyGeneral said, he did not wish to put the traversers to any inconvenience, but no parties were authorized to hand in the rejoinders for the traversers, who should do so in person. He would, however, take it that they had done So, and move that the argument on the demurrer be taken ttorney-Gy morning. Mr. Ford submitted that ine the case of the Queen \(\quad\) Dungarvan and others, there was a rule of Court, dated Nov. 2,1842 , that the parties having joined issue to the demurrer, the argument should be set down for argument the next term after, and that the paper books should be prepared for the Judges at the expense of the parties. In the present case, therefore, the ttorney-General could not, in the face of that rule, now Attorney-General insisted on his right to proceed, and expressed a hope the Court would not make itself a party to these delays. Mr. Moore and Mr. Hatcheil appeared for the traversers, and contended that the case could not be argued until next term. The Chief Justice said that he Court expected that the parties would be prepared in the morning. Mr. Ford complained that the traversers \({ }^{3}\) briefs were not ready. The Chief Justice-That is your idling all that time. The Court will call the cases on tomorrow. Accordingly, on Tuesday the plea in abatement or ratber the demurrer of the Crown to that plea, was called up for argument. The court was full at an early hour. All the traversers, save Mr. O' Connell, atten for in person, and an appearance by attorney was taken for him. The Attorney-General commenced, and war. Moore Reply The reply devolved upon Mr. SolicitorGeore, Q.C. The argument was conducted on both sides with calmness, and with scarcely any interruption from the Court. At the conclusion of the SolicitorGeneral's argument, the Chief Justice said that judgGeneral's argument, would, be held over until the next morning. In consequence of this intimation the Court on Wednesday was crowded in every part from an early hour and the greatest anxiety was evinced to know the result At 11 o'clock the Chief Justice entered the Court and was immediately followe ed by the other Judges. Mr. Stcele was the first of the traversers who mace his appearance and muntes the Attorney-General and Counsel lapse of a few maving taken their places, the Chief Justice on both side the he question at issue had been argued with great ability the question at he was st cient and that the demurrer should be held good. Mr. Justice Crampton, Mr. Justice Perrin, and Mr. Justice Burton follod, expressing their entire concurrence in what had fallen from the Chief Justice. The AttorneyGeneral said it remained then for him to move that the traversers be called on their recognizances to appear and to plead instanter. This was opposed by the counsel for the traversers on the ground that they were entitled to a fourday rule. The arguments on both sides were purely technical, and of no interest to the public. The Chief Justice said that Mr. O Connell hid the indictment ine indictment-he had been clarged whin the inctment a fortuight ago, and ject-matter of that indictment or that he did not under*
stand it. He had now to plead not guilty or to enter a general demurrer, whichever course he may be advised to adopt. But while in this application he admitted the dis. cretion of the court, he withbeld any case for the exercise of that discretion. It was the unanimous opinion of the Bench that no case had been made out why the justice of the country should be delayed and the Attormey-General be refused the answer he made to the indictment. Mr.
O'Connell must therefore plead instanter. The AttorneyGeneral then required that the traversers should be called on their recognisances to appear and to plead forthwith.
The traverstrs were then called on by the Clerk of the The traverssers were then called on by the Clerk of the
Crown. They respectively answered to their names. Mr. O'Connell sat at the side bar. His plea was first handed in. The following is a copy :- "In the Queen's Bench, Crown Side-Daniel O'Connell and others, at the Prose-
cution of the Queen.-And the said Charles Gavan Duffy, cution of the Queen.- And the said Charles Gavan Duffy, in his own proper person, comes into court here, and Guilty of the premises above laid to his charge, or of any
of them, or of auy part thereof. And of this lie puts himself of them, or of auy part thereo.. And of this lie puts himself
upon the country, and so forlh. -Thomas O'Hegan; Peter M. E. Gartlan, attorney." Similar pleas were handed in for all the other traversers. The Attorney-General then said that notices should that evening be served on each of the traversers of his intention to apply to the Court on
Friday to fix a day for the trial of this case at bar in this Court in the ensuing vacation, under the statute 4th William IV.- Sunday last was the day aypointed for collectthe Dublin returns alone amounted to treble the average of the five previous years, the sum collected being no less than 3,577l.-The Roman Catholic Archbishops and in this city last week, resolved for the third time within seven years to publish a decided declaration against a state provision for the clergy, in any form whatever. They
state that their determination remains the same us in 1837 and 1841, when a similar proposal was brought forward; and that they unanimously pledge themselves to resist by every influence they possess every for the Cato clergy, in whatever shape or form it may be offered. - The weekly meeting of the Repeal Association took place on Monday. Mr. O'Connell opened the proceedings by referring to the determination of the and moved resolutions approving of their conduct, declaring that the laity will support them on the ground "that the control of the Church by the State is calculated only
 lings in to the place of the sainted pastors of faithful flocks," -and "that all the bribes of England could not purchase. throughout their entire isle." These resolutions were passed by acclamation. Mr. O' Connell handed in \(103 l\). Canada; 21l. from Maine, Portland; and 23l.11s. 5d. from Mexico, the first remittance. At this stage of the
proceedings a messenger from the courts informed Mr. \(\mathrm{O}^{\prime}\) Connell and the other traversers who were present diately left the meeting, stating, amidst much laughter, that he would be back as soon as possible. Mr. D' O'Connell, jun., asked if Mr. Ray would have Mr. O'Connell replied, amidst renewed laughter, all the conspirators. Those of the "nine" wLo were Queen's Bench. Mr. O'Connell returned in about an hour, and having addressed the meeting on the subject of a federal Parliament, in reply to an address from Mr. Sturge, announced the weekly reut to be 932l. 19s. 6 wich, has sent his name to Mr. O'Connell as a Repealer, "so far as a substitute caa be found in a federal union," and announcing his willingness to support him in "any Society conspicuous in the annals of Irish eloquence, and Society, conspicuous in the annals of irish eloquance, aad 1815, was revived on Friday night. The Provost was in the chair. The opening address was read by Mr. W. C. The revival of this society, said to be the cradle of the The revival of this society, said to be the cradle of the genius of Burke, Grattan, Plunket, Bushe, Curran, Croker, North, Perrin, Doherty, and ruany others, suggests interesting reffections; and the adaress of Mr. Magee, when published, wistory.
Finoe. - The last accounts from the scene of the late outrage at this place state that Mr . Waller is not yet out of danger, and that Miss Vereker died on Tuesday morning. An inquest has been held on the body of the unfor" Died in consequence of founds inficted by some person or persons unknown." Mrs. Waller has recovered, but or persons unknown ." Mrs. Waller has recovered, but
Mr. Braddell's case is still precarious. A letter from LimeMr. Braddetha case is 8 till precarious. A etter from dime-
rick states that the writer was at Skinone ten days before the attack, and then heard it reported as an event that had the attack, and then heard it reported as an event that had
taken place. The writer says, "I heard that Mr. Waller taken place. The writer says, had been attacked, when he and his family were at dinner, and the report went on to say, that when the men fired at Mr. Waller, his servant rushed at him (the man that fired)
with a carving knife in his hand and secured him. The with a carving knife in his hand and secured him. The
cause alleged for the attack was revenge of a servant who cause alleged for the attack was revenge of a servant who
had been dismissed. I was afterwards, on Monday week, had been dismissed. I was afterwards, on Monday week,
in the neighbourhood of Finoe, and heard that the report was false; but I think it proves that the attack was planned, and even the very time it was to take place, and
also that it was well known through the country."

Linzerick.-The Limerick Reporter of Friday states that "the hills and mountains of the adjoining counties of Limerick, Kerry, Tipperary, and Clare were again illumined on Thursday night, and the whole country was
a blaze of light, extending over a distance of at least fifty a blaze of light, extending over a distance of at least fifty
miles. The cause of this wide-spread illumination of hill and mountain and valley is the news which reached here of Mr . O'Connell's plea of abatement being received,
and his subsequent triumph over the law officers of the and his subsequent triumph over the law oficers or cevil
Crown. No sooner does intelligence of good or arrive from the metropolis than it spreads to the inliabitants of the mountains, and is communcated instanch signal fires,"

Killeenny.-"This county," remarks a local paper, " and we presume the counties adjoining, were studded with
bonfires or signal-fires on Thursday night were the hills iliuminated, but in numerous places fires were visible aloag the lowlands. Rumours of various kinds are afloat as to the cause, but it is supposed they were
lighted in consequence of the motion for lighted in consequence of the motion for a postponement Tiposarry \(A\) local paper of Frid
Tipperary.-A local paper of Friday states that "The entire country was literally in a blaze last night. every eminence as far as the eyurrounded them could be heard, in many instances, in the vicinity of our town. As we remarked upon a similur circumstance berore, he most perfect organization was observable an the same minute, and it was stated that the object of the incendiaries was to infuse dread and awe into the minds of the respectable portion of society by an exhibition of their discipline reminded one more of a country of savages than of civilized human beings."
Cavan.-These mysterious but significant fires have at
length extended to the north. On Wednesday evening, at about \(70^{\circ} \mathrm{clock}\), the inhabitants of Mount Nugent were thrown into a state of the greatest alarm by a simultaneous appearance upon the hills of fires blazing in immense numbers, forming a circuit of several miles,
accompanied by firing of shots and shouting. At Belaccompanied by firing of shots and shout thrown into state of great excitement, in consequence of fires blazing in every direction as far as the eye could reach. They com menced about \(90^{\prime}\) clock, and from that time fire answered fire in quick succession, till the whole surrounding country was illuminated. Shots were heard from hill to hill, and several Protestant families fied into the town for procec nearest fire diste and taree policemen wearn the nature of the movement and a came near to they saw a large party of men whom they desired to disperse; but they refused, and a shot was fired at the party, upon which the constable and his party rushed upon them, when they all retreated. Two of them were captured, and they got upou the ground a pike, a shovel, and a pitchfork about 10 feet long. The police bronght their prisoners and their trophies with them into the town. Soon after Mr. Gumley, J.P., took with him out of barracks a company could not obtain any trace of the former party, and seturned. King's County.-On Thursdar night simultaneous fires blazed on the hills around Clura and as far as the eye could reach,-horns sounded and many shots were fired. The shouting and yells within the town were incessant for many hours, and repeated challenges were given "Tory to show'his face." The fires and other disturbances which with marching and counter marching continued throughout the night, are openly avowed to have been illuminations and rejoicings for O'Connell's victory over Queen's Bench. The peasantry ridicule the idea of his being forced to a triul at all, but state that even if he be the Government will soon get enough of it, for that O'Connell hasithe'means of protracting it for years. missen, Dunshaughlin, and the far-famed Tara, in the county of Meath, exhibited the same demonstration of fires and shoutings as other places on Thursday evening.

\section*{SCOTLAND}

Edinburgh.-Lord Meadowbank has resigned his office as one of the Lords of Justiciary and Session. Mr. Alexander Wood has succeeded him as Lord of Justiciary and Mr. Patrick Robertson has succeeded him as Lord of Session. The situation of Dean of Faculty, vacant by the promotion of the latter gentleman, has been conferred on Mr. Duncan M'Neil, the Lord Advocate.- We learn from commeotsman that the worsing men of a on a large scale for their own use in that city. They are to hold a public many leading men in Edinburgh have resolved to encourage the project
Glasgow.-The election of Lord Rector took place last week. The public are a ware that although an election to the rectorial chair takes place annually, tie Lord Rector s generally allowed to remain in office for two years, his matter of course. On the present occasion, however, a large portion of the students resolved, in consequence of Church of Scotland, to adopt measures for his expulsion, and for the election of a person entertaining sentiments toun was accordingly fixed upon as the opposing candidate. The result was Mr. Manle's return by a majority of 59 the numbers being for Lord Eglintoun, 187; for Mr.

Maule, 246.-At a meeting of the Senate of the Unive sity, on the 7th inst., resolutions advocating the abrogation (except in the case of divinity professors) of the conrequiring professors to subscribe the the worship and discipline of the Church of Scotland were adopted. This Act was passed for the purpose of preventing the possibiity of an Episcopalian holding a Professorsmesent movement, that it especially refers to the admission of Episcopalians as well as Dissenters. The 14 th resolution states "That it is scarcely necessary to remark that the enforcement of a law which would have deprived this members of the English Church who have filled these offices here, could produce no beneficial influence on
offices her
education.

\section*{fitiscllancots.}

American Repudiation.-Gen. Duff Green, an American officer now in England, published a few days since in the Times a reply to the Rev. Siduey Smith's letter on American Repudiation. On that attempt to defend the conduct of the non-paying States the Times itself commented with considerable severity ; but Mr. Smith has since entered the field with the fullowing characteristic letter :-To the Editor of the Morning Chronicle. Sir,-Having been unwell for some days past, I have had no opportunity of paying my respects to General Duff Green, who (whateve a
be his other merits) has certainly not shown himself a Washington in defence of his country. The General demands with a beaut,fiul simplicity, "Whence this morbid hatred of America \({ }^{2}\) " But this question, all affecting as suoght by the leg in near the form-yard uttered the most piercing cries of distress; forthwith all the birds of the yard gathered round him and seemed to delight in his misfortune ; hens chuckled, geese hissed ducks quacked, and chanticleer, with shrill cockadoodes reat the air. 'Whence,' said the fox stepping of the fox? What have I done? Whom have I injured? am overwhelmed with astonishment at these symptoms aversion.' 'Oh you old villain,' the poultry exclaimed 'where are our ducklings? where are our goslings? Did I not see you running away jesterday with my mother your mouth? did not you eat up all my reationsto be week? Yqu ought to die the worst of deaths-General Green comes the morbid hatred of America as you term it. Because her conduct has been predatory-becuuse ste has ruined so many helpless children, so many miacrabe women, so many aged men-becanse se sacred treasares which human virtue had hoarded for human misery. Why is such hatred morbid? Why, is it not just, inevitable, innate? Why is it not disgraceful Hate want it? Why, is it not honourable to America all my life; and in the Edinburgh Review, and at all opportunities which my trumpery sphere of action has afforded, I have never ceased to praise and defend the United States; and to every American to whom I have had the good fortune to be introduced, I have proffered all the hospitality in my power. But I cannot shat my eyes to enormous dishonesty; nor, remenabering their (though I copy Satan) to spring up from the gulf of infamy in which they are rolling.

I am astonished that the honest States of America do not draw a cordon samitaire round their unpaying brethren, that the truly mercantile New Yorkers, and the thoroughly honest people of Massachusetts do not in their European, visits wear a uniform with "S. S., or Solvent States, full worked in gold letters upon the coat, and receipts in full of all demands tamboured on the waistcoats, and the the own property" figured on their pantaloons. Buericans General seems shocked that I should say the do I mean cannot go to war without money. But what do bodying by war? Not irruptions into Canada-not matitime war of
of militia in Oregon, but a long tedious mar four or five (irags duration. Is any man so foolish as to suppose that Rothschild bas nothing to do with such wars as these? and that a bancupt State, without the power of borrowing a shilling in the world, may not be crippled in such a contest? We all know that the Americans cay fight. Nobody doubts their courage. I see now in ay minds eye a whole army on the plains ont light infantry, bathe array, immense battalions) of repudiregiments of heavy horse debtors, Vivre sans payer, ou ators, brigades of bankrupts, with Vivre sains on their trumpets; all these desperate debtors would fight to the death for their country, and probably drive into gain, I have no doubt I wish I had the same confidence in their widom. But I believe they will become intoxicated by the flattery of unprincipled orators; and instead of petition in making calico (the great object for which the Anglo-Saxon race appears to have been created, they will waste their happiness and their money (accursed can get any) in years of silly, blociy, man, and that the carronades of the \(W\) ashington steam will carry farther than those of the Britisher Victoria the Robert Peel vessel of war. I am accused o at sepudi-
the epithet 'repudiation' to States which have not
ated. Perhaps so; but then these latter States have not "I don't owe you anything, and will not pay you" and another who says "I do owe you a sum," and who having admitted the debt never pays it There seems in the first to be some slight colour of right, but the second is broad, blazing, refulgent, meridian fraud. It may be very true that rich and educated men in Pennsylvania wish to pay German agriculturists real objectors are the Dutch and the effect of character upon clover. All this may be very true, but it is a domestic quarrel. Their churchwurdens of repudiation must make a private rate of infamy for themquarrel is the Unpaid World versus the State. The real vania. And now, dear Jonathan, let me beg of you to follow the advice of a real friend, who will suy to you speakers in the eleven recent Pennsylvanian elections have cautiously abstained from saying, " make a great tion of the obloquy and contempt to which you are exposing yourselves all over Europe. Bull is naturally disposed to His imaginary paradise is songe who does not pay him ment, where ready money prevails, and where debt and discount are unknown. As for me, as soon as I bear that the last farthing is paid to the last creditor, I will appear the plumeopicean robe of the Pemasylvanian Senate, in conscript Jonathan shall trickle over me a few drops of tar and help to decorate me with those penal plumes in which the vanquished reasoner of the Transatlantic world does homage to the physical superiority of his opponents. And now, having eased my soul of its indignation, and sold the subject, with per cent. discount, I sulkily retire from money to free and enlightened republics, but of employiug purehasing into the Turkishing up Abyssinian bouds and and-a-Half per Cent. Funds.-Sydney Smith.

\section*{siam.}

Rould Court, -The Dake of Brunswick v. The King of fanover.
This suit was instituted by the Duke of Brunswick against the King of Hanover, prayng by the Duke of Brunswick angainst the Tarover curator of huts of the fammy, appointing the timg of ments. Upor, and to obtait ant account of the receipts ano pay-
to thic Lord Checevang the letters missive the defencidnt applied refusced, ar Chance ant of erpolity, whe iek, was deprived 830 the plaintiff whe court had any jurndiction the Duke of Cambrid bis duchy by a revolutionary made a decree Ginvitinanic Diet on the 2 d December, 1830 , they imself the government proviutifis blother Wilham to take upon legitimate agnati of the farnily to provide for the future govern-
meut of the Duchy. His Majesty Wilian IV, is hins of Hanc-

 his Majesty Whilitin IV., and by Whatian Duke neecess
stoorl suremine Duke of Brunswick makit ieruire, that the under-
 the conviction that the Duke was at that time wastiug the for at gerowhich he possessed in enterprise alike impossible, and danons minexested now and hereconsidered that the one upon his property, they therefore fore ruin was to appoint a guardian over him. They there-
him male scions of their house. It then appointed the noble
of Came
 Duke the death of his Majesty William IV., in private property. of Cumberland to himberland, who had become King of Hanover, and accourted arisen from the receipts and application of the income whinch had took possession of thes estates and property of plaintift, but renout of the jount, and until his late visit to England had resided appointmentirisdiction of the Court. It was insisted that the Englayn, and Great Britann. The plantiff was dominiled in said that some inritain, and asked for relief. Su C. We etherell With hin the Juringrienuity haa been exerted to bring the defindant Armagh. The defend Cumberland and Teviotdale, and Earl of of a resign the ditle of King, and accept the bill in the character cellor to recul application liad incert made to the Lord Char one in which the f otters nimsive, and the cause appearediot o be Was instituted, could have stopped the suit in limine. The suit grounds of co court, und the suit ought to be stopped upon jurisrecall thety of the suit was and constituticnal principles, as the has a rmaxim ters missive the ofescnt demurrer was finsal Woverot a forenste subject with whinch the court could deal. be suspentry he foverned was panished ; the Soverem has person He was the ply fact, the Homo and \(A\) it could not be separated mot get back to bis oldien time, of a king of Scotland who did that anibacsae. The statute passed un the thine of but this wa Upon thiss occasion the could be arrested was a declaratory ann sador. Wher daring to velate his easin in thant under an The subllat author the authority that a sovereign could be sued, suit was in this suat was not here, but in l3runswicke's wr.t truna a foreign trust. There were a transaction in England, but which were undertaken by wirtue of proce

rclievel. Where there exlint cla a rigut there also existed a remedy
and

 ould be sued in cquity, the considerations were what let remphe
 of right. Whether that was always the rule might be doubted in a passage of 16 Viner, 535 , title, "Prerogative," where it was
said athet in the time of Henry III, and always befure, a man
mighit have suect the King as a common might have sued the King as a common person might be sued; but
Edwwrd f. ruled that none should sue the King but only petition at common law the King could or could not thave coensider whether Crown could now only be sued by pettion of right. The principle
was this-It is by command of the Cruwn that sulicets

 own dominions, if a subject of England asserter a a right against
him, it was said that rught could not be maintained in our ennrts, because of the privilege to which he was entitled by the
laws of his own kunctom; that it whuld be a conthet of juntsextion between a right existing in British subjccts and a right
exin the foreign Sovereign. Upon principles of interna tional law, and on the comity of nations, no country was fere with the rights of their own other countries so as to inter-
administered otherwise than in the mas not to be
tow decorous nanuer administered otherwise than in the most decorous nanuer
towards the Sovereigns or abjects of foreign countries, but it
was a right Was a right to be administered, and a rigit which every Govern-
ment silded to its own subjects in preference. The leanned
counsel cited Storeys there was no personal incayacity founded either unou primeiple
or authority of the defendant to be sued, who if not sued in tinis tiun was attempted to be shown. He then went tlrough the
facts stated in the bill, of 1833 was, as stated by the bill, wholly void, was so admitted but to the personal property of the relatintiff, who was entitled to argued that the refusd of the ford Chancellur tame recald his and
tet
ters missive, was a decision that the pir cuss on
 the oath of alleglance, liad submitcd himself to the laws of thi
country. The suit was against the defendant, not as King o
Hanover, bat as curator of the plaintiff Nether was ject-matter of the suit an act of state, but one of forensic juris diction for an account, to which the plaintiff was entitled.-
Sir C. Wetherell was heard in reply, after which Lord Langdai said the circumstances were extraorduary, and as much learn ing had been brought to bear upon the case, he should no
decide it without full consideration. BAlL. CoURT. - The Queen V. the Judge of the Arches Courb,-
Mr. Rogers, Q.C., applied for a rule, calling upon the Joutge o prohibition should of Canterbury to shom cause why a writ o eake now pending in that court uuder the name of "The offic the case were given in our last. The foundation of Mr. Rocts ors's
present application for the prohibition was, thatthe put by the judge of the Arches Court upon the 20th section o the statute of Victoria was erroneous. The offence of the vicar, hury, bat the non-burial; alad liss offence was complele when correct, the statute protected the defendant against the presen admit the defence was erroneons. Mr. Justice Wightman thought that the judgment of the ecclesiastical court proceeded upon the ground either that there was a continuing offence between, and was in itself, in the circumatances, a fistinct offence and refusa 68th canon. The question was oue of ecclestastical cuganzance the proper mode of proceeding was by appeal to an ecclesias dical court of a higher nature. Upon this ground his Lordship Court of Quekn's Bencar-The Queen V. Mr'Nell.-The At
torney-General pray cuthe judgment of the Court on the defeadSmith, the banker the arguments on buth sities invoived son many olucs poms of deMr. Smith and Mr. M'Nenl hatu business transactons together and Mr. M Nell, after writing a letter requesting an explanation, without effect, horsewhipped Mr. Smith in the street. Mr, Kelly,
for the defence, said that this question was nut uow whether the defenatant had rendered hanselt amenable to the law, fors
that he had confessed by lis plea of guily; bit whether the prosecutor had not so fur miscor cueled himself as to have for an aggravated punishment upon the defeudant. He subright. The provocation given to the defemdant was very
serions. His character had been wantonly, and without any justification, slaudered by the prosecutor. The first idea that the defminnt had was to obtain an explanation. To that
on. \(y\) was his first letter addressed. Lord Dennan - We are perslightcst mace of provoknig a cinarrel. We think it right at once to relicve the defendant from that pait of the cuse. Mr. Kelly Wus must happy to hear the Court express thas opinion. He must prtssions he had uttered, he knew that, Without any fuarrel, prevalent amung gentlemen, he could have maintained his asser-
tion, and maintained it without dagger. The prosecutor could
not have believed the charge, for otherwise he would havestated
this at the time that the defendan this at the time that the defendant sought for his certificate.
Lord Denman-The commissioner expressiy petused to witnhold the delendant's certificate, sayng expressiy retused to there was thiold
defendant's conduct which would justify sucl nathing in the Kelly said that it was so. Well, then, there roult be hese. anub
that the prosecutor had improperly met the first request for an
explanation by sent explatiation by sending the defendant's friend to anguest forney an
was sald that the defendant oueht to have brought an action,
but the words spoken did not afford the defend action. Mr. M. Chambers followed on the ssmene side, and after
a long argument Lord Denman said that as this was an unusualiy
complicated cose Court could hardly would be better to let it stand over, for the satisfactorily without again looking into with all the affidavits [Sittings in Banco.] - The Queen v. Gregory. - Mr. Sergeant Shee on the part of the defendant, the obromprietor of the Sergeant Central Criminal Court, corcted to the commissioners of the Court certaminal Court, commanding them to send up to this the Dike of Brumswick aganst the defeudant for a libel and conLord Denman said that a lifere had not beent on tefichent cause points,
to indure the Court to say that the defeurant was entatied to the
exercise of their exercise of their Lordships' discretion in his favour. He found indictments ayainst the defendant, and he must say that that
fact was at the very best a most equivocal reason for granting any indulgence at all to the defendant. In the September grassions inexpedient to hisis senterrce one the defendant, because they
were in cirult rihether ufficavits could be read and counsel heard

 sintence on the defendant, its sentence would be louked at by
the Court that next moceeded to pass seutence on him, what cile
allowance given in the one for

 might think couvenient, it would be man, e ansolute ou the conat
ditions proposed by his counsel. - Run en preterred against the defendant for perjury, alleged to lave been
comnaited by himo in the course of some examindtions the Commissioners of Customs of some examinations taken by cause wis thin iudictment should not be quashoud cor further pro-
ceedings stayed. Mr. Cnckburn and Mr. Chambers shuwed cause
arainct the rule.

 the rute ought not to be made ausolute. The rule was therefore
discharged, but without cost:.

SATURDAY, DECEMBER 2, 1843.
MEETINGS FOR THE TWO FOLLOWING WEERS.

Wexn the Gardeners' Curonicle was established the prowrietors did not contemplate the admission of Agriculture into its columns, except to a limited extent But the different branches of cultivation prove insepa rable. Gardening was, in fact, the mother of Farming and the parent will not be divided from her offspring.

Our correspondence also tells us that a large number of the readers of the Gardeners' Chronicle are greatly interested in Agriculture, and anxious to obtain the same amount of information upon that as has been afforded relating to Horticulture ; and this has gradually led to occupying a larger space with Agriculture than the demands of Horticulture will permit.

In order to remedy this, and at the same time to zacet fully the interests of the Agricultural community, the Proprietors have determined to enlarge their Paper, permanently, to the size of 72 columns; of which the customary space will be occupied with general news, and the remainder will be divided between Horticulture and Agriculture. They do not, however, on this account are happy to show their sense of the favourable reception which their Journal has already met with, by making it owe-half larger without further charge.

At the commencement, we undertook that the Gardeners' Chronicla should become a well-conducted channel for the diffusion of sound Horticultural science and practice, and that it should be, at the same time, a field in which all questions connected with the subject could be discussed in a gentlemanly manner. The large sule of the Paper shows that this promise has been kept. The same plan will be followed in the Agricuitural department. The science of Agriculture, its practice in all its bearings, and the many details connected with so vast a subject, will form topics of consideration and of temperate discussion. Political questions will be avoided; our field will be the Farm. While other Journals are absorbed in ephemeral disputes concerning matters of human legislation, we hope to be engaged in the investigation and application of those great truths which regulate the actions of plants and animals, and which no change of times or human laws can affect. The discovery of a new truth in Vegetable or Animal Physiology-a new imple-ment-or a new or improved point in Agricultural practice, will be of more permanent interest than the most triumphant settlement of some disputed point in the polities of the day.
It is needless to repeat the hacknied phrases that have become current in speaking of the high station claimed by Agriculture among human affuirs. Man acknowledges its paramount importance; the vast interests commected with it speak in a louder voice than the flourishes of oratorical trumpets. But its actual condition, whether we consider it as an art or as a science, is not so well understood. There are those who imagine that a subject Which has engaged the attention of mankind from the Oreation cannot now require further investigation:--there are others who declare it to be only in its infancy: and certainly, when we look to the mechanical improve-
ments now making in rural implements, and to the Jarge strides that have been lately made towards more correct views in the Chemistry and Physiology of the organic world, the latter would seem to be the more just in determining.
Let us, however, not be misunderstood. We have no thought of exalting science over pructice. We are no adrocates of inconsiderate speculation. We fully ren chonise the impossibility of applying abstract principles to often as varying as places. We admit that, upon some points, the opinion of a good ploughman, who has never stirred from his farm, is precisely that which a wise
ducting farming operations unon one invariable plan, and while we welcome science as the best auxiliary of practice, we regard crude scientific speculations as the most dangerous of delusions. But, on the other hand, we feel that in Agriculture, as in all other arts, there are great general principles upon which successful farming must neoussarily depend; that there are practical errors which no local circumstances can justify; that there is room for improvement even in those branches of husbandry which are best understood; and, in short, that Agriculture offers one of the richest fields in which men of talent may labour
Of course the Editor of the Horticultural Department does not take upon himself the management of that of Agriculture. His ground is the garden, and to that he will confine himself. The charge of the Agricultural Department will be confided to a gentleman well acquainted with
the best kind of farming, in which he is actively engaged, and supported by the communications of our most distinguished farmers. The Agriculturai Gazette-for uch will be the name of the new part-will therefore, like the Gardeners' Chroniole, not be confined to an exposition of the views of a few individuals, but will guished practical and scientific men of the age.

That one of the best treatises we have on the Pineapple is that of Mr. Glendinning, * is well known to gardeners. It will not diminish the reputation of the book when we state that the large Queens lately sent to London from Longleat have been obtained by following its directions in most respects. We shall thereforewithout pledging ourselves to defend all Mr. Glendinning's principles, some of which, in fact, we think what we conceive to be the important points in his code of instructions.

The first, and we apprehend the most essential circumstance upon which he relies is the growing his plants slowly at first, and rapidly afterwards. It is a certain law in Vegetable Physiology that plants which grow fast when young never carry good fruit.
It is, indeed, impossible that they should : for how can we expect vigour in old age from debility in youth? and rapid growth when young is inevitably attended by debility. Plants grow fast, but acquire no solidity. They are like children who shoot up at once into the stature of manhood, and immediately afterwards perish of consumption; or they may be likened to
those Fungi which are formed in a day, and rot in an those Fungi which are formed in a day, and rot in an
hour. This truth, which is just as applicable to Melons, Strawberries, Peaches, and Vines, as to Pineapples, is, as we conceive, the corner-stone of Mr Glendimning's system.
"If," says Mr. Glendinning, " the Pine-apple in its younger state is supplied with the same amount of heat and moisture as are required in ripening the the whole plant so constitutionally weak, that nothing the whole plant so constitutionally "In fact, the suc-cession-house and the fruiting-house are managed upon a very different plan, the temperature of the former being from 1\(]^{\circ}\) to \(16^{\circ}\) below the latter, as is shown in the following Table :-

Mr. Glendinning regards this as a deviation from the natural habit of the Pine (p. 12); but in that he is mistaken. The Pine grows in the cool season and fruits in the hot season in its native habitation, and there is scarcely less than \(26^{\circ}\) of difference between these two periods. For instance, at Nassau, where the Providence Pines are found, the difference is from \(14^{\circ}\) to \(15^{\circ}\); and in some parts of India it amounts to as much as \(30^{\circ}\). It is true that these variations of season are not applicable when Pines are several seasons before they fruit ; but then very fine Pines are always produced on young plants, for the whole of whose prowth two seasons-the cool and the hot one-are sufficient. When the vicissitudes of six seasons, or three years, are allowed to operate on Pines, as Mr. Speede says is the case in Calcutta, nothing but bad fruit will be the result. In fact, this writer, with the climate of India at his back, thinks a Pine of six or seven pounds a prodigy!

In the next place, the Pine-houses are provided with the means of obtaining milk-warm water for syringing and watering. This, which is so often nerlected, is a capital point in the cultivation of all tropical plants, which are unacquainted with the low temperature of * Practical Hints on the Cuiture of the मue-apule. Ny R.
Glendining, 12mo. 1839, pp. 55 .
northern countries in any shape, \({ }^{*}\) and unprovided with the means of resisting its effects. It is of little use to maintain a steady bottom-heat, or a steady air-heat, if the warmth of the soil or of the leaves is to be suddenly lowered six or seven degrees by a deluge of cold water. Tender plants do not like shower-baths.

Steam is admitted to the air when necessary, so as to maintain a due atmospheric moisture. A steady, uninterrupted growth is to be secured at all times. Liquid manure is given abundantly; the dung of sheep or deer, steeped for a long time in water, being used for this purpose. Finally, a stiff turfy loam mixed with sheep or deer dung, is recommended as the soil; but as the Pine-apple grows capitally at Versailles in peat, and at home in sand, it does not appear to us that the soil is a very important consideration, provided it is open.

Such appear to us to be the main features in Mr . Glendinning's practice. There is, however, still a point of perhaps as much importance as the others At p. 35 we are told that few persons acquainted with the management of Pine plants are ignorant of the injury consequent on any sudden change of treatment, and of the certain destruction that follows unexpected transitions. Again, at p. 47 it is directed that if large fruit is wanted, plenty of pot room should be allowed But then at p. 23 it is said, that the gardener must always guard against over-potting, and the system of frequent shifts is there laid down as the rule to be fol lowed. That the first rule is right and the second wrong we have entertained no doubt; but for the sake of being sure that good practice did not contradict good theory we wrote to Mr. Murray, to inquire which of these two methods he followed. His answer is as we expected, that he adopts the large shift systent, and to a much greater extent than is recommended by Mr. Gleudinning, and that he proposes to carry it still further next year. We have some reason to believe that this is also the plan at Bicton, and we regard it as the certain precursor of getting rid of potting altogether. At all events, we shall soon know how Mr. Barnes does manage his Pines, for we understand that a full account of his practice may be expected in the "Gardeners" Magazine" of January next.

Our attention has been directed for some time to the experiment of Mr . Archdale Palmer, on transplanting the roots of Wheat after separating them into several plants by splitting. The experiment is by no means new ; and the result, in many instances, perfectly astonishing. The increase from one grain sown early in the season, by repeatedly dividing the plants as they throw out tillers, amounts to many thousands ; and by this means valuable varieties may be rapidly brought into general cultivation. But all the experiments which have been made have been on a small scale, and in gardens, or at least in very mellow well-prepared soils; and it appears, at first sight. that however great the saving of seed might be, if the practice of splitting the roots were to become general, and supposing that hands could be obtained in sufficient numbers, without raising the fair wages of labour, to extend the plan to considerable farms, the saving of seed-wheat would be sufficient to supply food for a greatly increased population. We have employed experienced practical labourers to calculate the fair value of the additional manual labour required in planting, dividing, and replanting Wheat on an acre of land; but the results differ so widely, ranging from 19 s to 60 s., that without actually planting a considerable portion of land with Wheat in this way, and keeping very minute accounts of the expense, it will be impossible to decide whether it could be recommended, generally, as economical.

The only way to ascertain this is to let it be fairly ried by experiment, the details of which must be stated as follows:-
Digging and preparing seed-hed, 1 square pere
Dıbbisug 484 seed at 9 inches each way,

Dividmg \(145^{2}\) mlants 11 to 4 sach, and raking the
ground for trinsplanturg, hours
gromid for trinsplantmg, hoirs
Dividing each of these into 3
Raking the ground, Rcc.
Transplanting 17,424 plants

Suppose each plant occupies a square of \(\overline{9}\) inches, this number of plants will cover very little more than 32 square perches, just one-fifth of an acre; so that whole acre, treated in this way, w
The farther we go on in the division, the greater the labour and the chance of plants failing. Every time the roots are divided and replanted, the ground should have some stirring, if only a harrowing or raking, which last would be easiest, as a raker could follow the person who divided the roots, and level the holes made by taking up the plants. Compare this tedious operation with dibbling 5 pecks of seed at 8s, per acre, as is done in Suffolk and Norfolk. There
at least a bushel of seed is saved, which pays for the dibbling; for you must allow at least Is for broadcast sowing and harrowing, which leaves the cost of dibbling at \(7 s_{s}\), the price of a bushel of seed at the average of \(56 s\). per quarter. There is no prospect of any invention to shorten the labour of dividing roots and transplanting them, whereas machines have been invented, and will gradually be perfected and simplified, by which seed may be dibbled as easily as it is now drilled. Instead, therefore, of attempting what appears impracticable on a large scale, and expensive on a small, we had better direct our attention to the more practical operation of dibbling the seed, of which we have many examples, the cost of which is known, and the advantages established by long experience. We would recommend fewer seeds to be deposited in each dibble-hole, and these to be more
distant, so as to admit of the operation of the hoe. On distant, so as to admit of the operation of the hoe. On
loose soils the tread of the dibblers and of the depoloose soils the tread of the dibblers and of the depo-
sitors of the seed has an excellent effect; four or five inches is not too deep to deposit the seed in such soils; it will then find moisture, the first roots will take a firm hold, and the frost will not affect the young plants, or throw them out of the ground, as is the case when the roots have little depth. It is only on heavy clays, which will not bear treading when wet, that dibbling does not answer; but when these are well drained they change their nature, so ás to become mel-
low and almost light in a few years after draining, low and almost light in a few years after draining,
subsoil-ploughing, and ample manuring; changing into a real garden soil, and showing all the fertility of garden-mould.- \(M\).
Such were the opinions of our late lamented friend, Mr. Rham, upon the curious subject of Wheat-splitting. The dibbling machine to which he referred was a most ingenious contrivance of his own, which he believed he had at last brought to perfection, and which Messrs. Ransome the celebrated machine makers were to have executed for him. And nothing can be more just than his opinions, if Mr. Archdale Palmer's pracice, as well as his principles, is to be observed:.
But while we are disposed to regard the latter with favour, we consider the former wholly inadmissible.
The principle of Wheat-splitting is full of promise, but The principle of Wheat-splitting is full of promise, but
the plan adopted by Mr. Palmer is too complicated the plan adopted by Mr. Palmer is too complicated
for practice; and therefore we see no advantage in repeating his experiments in his way. The true mode of proceeding is that pointed out by a correspondent, No. IV., at p. 735, who suggests one sowing and one splitting ; a little seed being wasted, in order to save the excessive amount of labour incurred by Mr. Palmer. Now as this is a gardening questionfor the operatious required are those of a gardener, and not a farmer, we may be permitted to offer an opinion upon it. That opinion is, that the plan may possibly succeed upon land that is not too stiff; but, to what extent, it is impossible to say without further of country people making fair wages by splitting and of country people making fair wages oy spitting and
planting the Wheat at \(4 d\). per 1000 ; that is to say, planting the Wheat at \(4 d\). per 1000 ; that is to say,
after they have acquired dexterity in such work; for at first they would be awkward and would waste a great deal of time. And if this is so, the cost of planting will be at least one-half less than sowing, provided the Wheat

The distance at which Wheat can be most profitably planted is not, we believe, at all determined. Such experiments as have come to our knowledge were
made in gardens, or otherwise in an unsatisfactory way. Experiments in several different places are required to settle that point, and we would advise their being tried on quarter acres of fair Wheat land, thus:-

\section*{No. 1, at
No. 2 , at
No. at
No., ,
Not
No.
Not at
N, at}

An acre and a half on a few farms would determine that part of the question, and the expense of the
experiment would be inconsiderable. Nor would experiment would be inconsiderable, Nor would or split for the purpose of such an experiment. Then, when the most profitable distance at which to set Wheat, on fair Wheat land, was determined experimentally, it would be time enough to resume the question of Wheat-splitting.
Where, however, experimentalists are desirous of putting the plan of Wheat-splitting at once to the
proof, we strongly advise them to place the operation proof, we strongly advise them to place the operation
under the superintendence of an active young gardener who is acquainted with the method of planting seedlings in the Scotch Nurseries, who can do such work himself, and can teach others the readiest way of performing it. Those who have never seen it done would never believe the rapidity with which a skilful work-
man will get through so apparently tedious an operation. We certainly think the experiment worth a fair trial on a small scale, because if nothing is saved by it otherwise, we must at least remember that it would
be an immense advantage to find a large means of
employing the poor, especially the least able-bodied employing the poor, especially the least able-bodied
part of the population, without any additional burthen upon the farmer. \(\qquad\)

\section*{ON The CULTURE of TROPICAL ORCHidA} By JAMes Batrman, Esq., F.R.S.
Or Orchis-culture the ancients were entirely ignorant, nor does it appear to have made any progress among the
moderns until the commencement of the present century moderns until the commencement of the present century. A few species had, it is true, been estabisied at Kew, and earlier period; but these may be said to have succeeded rather in defiance than in consequence of the barbarous treatment they received. If, however, the gardener was in the dark as to the management of the tribe, the botanist was as much at fault as to their numbers and importance, for even Professor Lindley-the first to edirtain enlarged views upon the subject-in an early
edition of his "Natural System," estimates the probable extent of the tribe at only two thousand, a number that is exceeded, at the present time, by those actually cultivated in the hothouses of England alone
But, before we enter upon the details of the prevailing modes of culture, it may not be uninteresting to make brief mention of the parties who, by their zeal and skill, its present palmy state; and first on the list must stand the well-known firm of C. Loddiges and Sons. A collection appears to have existed in this establishment for more than balf a century, which in the last ten years has increased so rapidly that it now includes more than one thousand eight hundred species. Mr. Cattley, of Barnet, whose memory is embalmed in the splendid genus that
bears his name, appears to have been the first successful bears his name, appears to have been the first successful
private grower, and had the merit of introducing many private grower, and had the merit of introducing many
excellent plants. \({ }^{1}\) The Horticultaral Society had also, from the first establishment of their garden at Chiswick spared no pains to discover the secret of Epiphyte culture and their experiments enabled Professor Lindiey to compile his memorable paper "Upon the Cultivation of Epiphytes of the Orchis Tribe," which was read May 18,
1830, and from which the science of Orchis-culture be said to date. \({ }^{2}\) Contemporary with Mr. Cattley, and no doubt prompted by his success, other collectors soon appeared, of whom the nost remarkable were the late Mrs. Arnold Harrison, and her brother Mr. Richard Harrison, the Rev. J. T. Huntley, and the late Lord Fitz-
william \({ }^{\text {s }}\) Mr. R. Harrison's collection was, for many ears, "the leader," and was visited accordingly not by Epiphyte lovers only, but by botanists and men of science from all parts of the world. Aigburgth, in fact, became a sort of Mecca, to which the faithful Orchis-grower made his annual pilgrimage, and never without finding himsel
abundantly rewarded by the sight of its then anrivalted treasures. What are called "fine specimens" were here seen for the first time, and many were the years of patient care and skill that had been requisite to produce them. Next in order, and second to none of his predecessors in of the tardy rate at which new species crossed the impant determined to expedite matters by despatching a botanical collector to seek them in their native haunts. This service was undertaken by Mr. Colley, who sailed for fell short of expectation, it yet was sufficient to encourage other parties to embark in similar adventures. From this period the importation of Orchidaces has steadily in creased, and although we now reckon the species by
thousands, an inexhaustible fund of novelty seema to be in store for us, and collections have multiplied almost as rapidly as the plants. Those of Mr. Barker and Mr.
Williams, in the neighbourhood of Birmingham, became Williams, in the neigabourhood of birmingham, became
celebrated about the year 1834, and the former gentleman, by sending out Mr. Ross to Mexico, added greatly to the number of species in cultivation. The collection of the
Ret. Jolhn Clowes next came into notice, as did shortly ufterwards that of the Duke of Devonshire, at Chatsworth, which was incalculably enriched by the mission of
Mr. Gibson to India in 1836. But the annus mirabilis of Orchis-importatum was 1837. In addition to the spoils brought by Mr. Gibson from the Nipalese-hills, and which reached Chatsworth in this year, Mr. Skinner poured into our stoves the richest treasures of the barhe choicest Air-plants from the Philippine Islands ; Mr. Shomburgk contributed zome exquisite species from the interior of Guiana; and M. Deschamps, a Frenchman, arrived with his vessel from Vera Cruz, entirely laden with Mexican Orchidaceæ. In the whole, not less, probably, than 300 species were seen in England for the first time in this memorable year.
Besides the collections already noticed, many others deserve to be enumerated, which, although more recent han some we have named, are not less rich in species, land, Baron Dimsdale, Mr. Norman, Mr. Allcard, Mr lad, Baron Dimsdale, Mr. Norman, Mr. Allcard, Mr.
Cox, and Mrs. Lawrence, all in the neighbourbood of London ; Mr. Brocklehurst, at Macclesfield; Mr. Horstall and Mr. Moss,', at Liverpool ; and Mr. Wanklyn and

2 This paper is published in the "Horticultural Transactions," 2d Series, Part I.: except that it advocates a temperature unne\({ }_{3}\) Of these, all except the collection at Wentworth have disan peared. At the edeath of Mrs. Arnold Harrison, that lady's col. Iection passed, like M. Carte Ar's, into the hands of Mr. Knight;
Mr. Huntley's was removed to Mr. Huntley's was removed to Chatsworthans in 1895, and Mr. R.
Harrison's dispersed by the hammer last year.

Mr. Bow, at Manchester. There are also good collections at Enville (Lord Stamford); Arley (Lord Mountnorris) ; at Carclew (Sir Charles Lemon); Penllargare
(Mr. Liewelyn); Bicton (Lady Rolle), \&c. \&cc., in fact, an Epiphyte-house is already considered an almost indispensable adjunct to a place of any consideration.
Although many of the collections above enumerated are nearly on a par as respects the number of species they contain, there is a wide difference in the modes of culture employed, and in the degree of success attained; and therefore a tour among those of greatest note would be instructions that moung Orchis-grower han anidance.
The collections which may be studied with the greatest advantage are those of the Duke of Devonshire, at Chatsworth; the Messrs. Loddiges, at Hackney; the Rev. John Clowes, of Broughton-hall, near Manchester ; and Mr. Rucker, of West-hill, Wandsworth. The two first are on an immense scale, and are dispersed through several houses, which differ in their temperature and general arrangements, according to the particular section of the tribe that they are intended to accommodate. At Chatsworth, the largest Epiphyte-house is maintained at a moderate temperature, and contains a large number of Nipalese and South American species ; while a smaller house, in which a much higher degree of heat prevails, is devoted to plants from such sultry localities as Sierra Leone, the Mauritius, and the East India Isles. At the establishment of the Messrs. Loddiges, a house immensely long, ment of the Messrs. Loddiges, a house immensely long
and hot and damp almost to suffocation, contains their and hot and damp almost to suffocation, contains their principal collection of Orchidacese, a smaller house and
lower temperature being reserved for the remainder. In lower temperature being reserved for the remainder. In
the great house are some magnificent specimens, and the general aspect of the plants is vigorous and healthy; but the system tends to produce exhaustion, and the number of plants seen in flower is smaller in proportion than at Chatsworth.
The collections of Mr. Clowes and Mr. \({ }_{3}^{2}\) Rucker are admirably grown, and the houses in which they are disposed seem so well adapted to serve as models, that, with the permission of the owners, a ground-plan of each is given in a subsequent page. [We have Mr. Bateman's and one Rucker's \(s^{5}\) plants are the most vigorous; but the house of Mr . Clowes is the most enjoyable, and displays Orchidacee to greater advantage than any other that we have hitherto seen. The plans will explain themselves. And now as respects the leading points in cultivation. Supposing the plants established in a suitable housewhich is an indispensable preliminary-the following rules will be found to contain all that is most essential for their successful management
1et. The plants can scarcely have too much light or too Lïght
Light prevents miidew, strengthens the fibre, and shoots, the disposition to throw up a succession of weakly flowers. The sun, on the contrary, scorches and turns the leaves yellow, especially when it first begins to shine powerfully upon plants that have just left their winter quarters. In order to secure as much light as possible, many species should be suspended in the air from rafters or ehains, some being placed on blocks of wood (Cork-wood is the best), or fragments of Cocoa-nut husks, and others in peat, or in pots with pierced sides. The latter answer peat, or in pots with pierced sides. The latter answer slow growth, and thrust their roots into the air. Baskets answer best for Stanhopeas and the like. To prevent injury from the rays of the sun, shading is of course necessary, but this should be so arranged as to be easily removed, as it ought not to be continued for more than 10 or 12 hours on the very longest summer's day. Exatic climbing plants
introduced sparingly are advantageous, and have a good effect

2d. Take care of the roots.
On the health of the roots everything depends. The winter is with them the most critical season, for if suffered to grow too dry they shrivel up and perish ; if too wet they rot. Much, of course, depends upon the mode in which the plants are potted, and which should be such as to admit of their readily parting with all superfluous moisture; and to secure this nothing is better than a plentiful admixture of broken potsherds. High-potting is now so generally practised in good collections, that it is neediess to insist upon its importance. Rapidy-growing plante, such as the different species of Phaius, Gongora, Peristeria, Stanhopea, \&cc, require to be broken up and entirely repotted every second or third year ; on the other hand, there are some Air-plants, \&cc. that may remain undisturbed for five or ten years togelher.

3d. Beware of noxious insects.
Orchidacese are more particularly exposed to the attacks of the following insects:-woodlice, crickets, and cockroaches, the thrip, a minute woolly white scale, and a diminutive species of snail; the two last being innaitely the most pernicious. Woodlice are easily kept in check by placing the plants on saucers, or within teug toads be
with water, especially if the valuable aid of a

the modie of treatment, \(\$\).c. at West Hill:- Our average temthe mode of treatment, \(k\) co. at west the warm end of the house,
perature, in winter, is about 650 at the which usually fallst to about \(60^{\circ}\) at the other end; in summer \(77^{\circ}\)
to \(80^{\circ}\). Ifind that all the plants from temperate climates thrive to \(80^{\circ}\). Ifind that all the plants from temperate climates thre better at the cool end of this long house
is less moisture and alower temperature."
called in. The "Oniscamyntic Epiplifte-stand" "invented by Mr. Lyons is an ingenious and, no doubt, effectual way of accomplishing the same end. It is made by merely fixing a forked branch, or block of mood, to the raised centre of a massive saucer or feeder, which, being kept constantly full of watere, forms a sort of fosc-inpasskept constantly fall of watex, forma a sort of fosi-unpass-
able to vermin-round the nlant it is intended to guard. Crickets and cock roaches ate very fond of fower-seapes, Crickets and cockroaches ate very fond on fower-scapes,
and to be dreaded accordingly. Rei wafers scattered over and among the pots are to them very tempting baits, and, if swallowed, the red lead they contain acts as a poison, but these pests are best destroyed by the mixture recommended for the white scale. The thrip dnes not do much mischief, except where nlants are either neglectect, grown in too hot and dry a femperiture. It usually first appears among the Cataseta, nard is to be removed by careful washing. Small snails abound in some collections, while in others they are unknown ; it is difficult to conjecture whence they come, and all but impossible to eradicate them entirely. They batten upon the tenderest roots, such as plants put forth when they are just beginhing to grow, and if not kept in check would speedily produce irretrievable mischief. Lettuce-leaves, slices of Potato, Turnip, \&c., are very enticing; and while they divert the attention of the enemy from the roots, they also afford an opportunity of capturing him. The col. lections which are watered exclusively with rain-water are the least infested. But the worst plague of all is the small white scale, which, in its furst insidious approaches, appears only as a white speck upon the leaves, then covers them with a soft whitish down, and finally kills them. For this the following remedy will be found efficacious ; viz., dissolve half a pound of camphor in a pint of spirits of wine; the result will be an impalpable powder, to which ad d one pound of Scotch snuff; one ditto, pepper; one ditto, salphur and keen in a bottle (carefulis stopped) This mixture should be dusted over the infected ports and repented whon wores tself. If persisted in for some time the mixture ramy fails to effect a perfect cure and it has the further good property of a perfect cc., which Knypersley since thi mixpere Besides the since this mixture came into frequent use. brown'scale are frequently injurious, but never except in cases of gross neglect.
4th. Give the plants a season of rest.
all, and others do so rest, most plants will not flower at all, and others do so very imperfectly. It is easily accomfrom the a variety of ways, either by moving the plants diminishing the to the cooler end of the house; or by cooler although it even exposure in a hot, dry atmosphere, them in scorches their leaves, not unfrequently throws them into vigorous flower. Plants from the East Indies, and from other climates, where the extremes of drought and wet are not felt so severely as in Brazil or Hindostan, require a season of rest proportionably short, and of a less lided character.
5th. Attend to the condition of the air.
In winter \(60^{\circ}\) to \(65^{\circ}\) is a
In winter \(60^{\circ}\) to \(65^{\circ}\) is a wholesome temperature for \(75^{\circ}\), or even hicher if derived from it may rise to \(70^{\circ}\) or Where there are be lower than \(70^{\circ}\) ho houses, the warmer one should not are comparatively few kinds that but, fortunately, there berth. The air should always be soft, and nearly saturated with moisture. The latter should, however, be prerented from dripping upon the plants, as it condenses and this is easily effected by fixing a small or piece of chasnelled wood, under each rafter and sashfir, to catch anli carry off the water.

\section*{6th, Do not over-water.}

This a beginner is very apt to do, and a grievous fault it is. When plants do not shrivel or flag it is a sign that they are content with the humidity that the atmosphere of the house supplies. When watering is necesBary, it should not be done indiscriminately, but according to the wants of particular plants. It is also of great importance to use rain-water only, which may be collected Rucker's purpose in a tank, as shown in the plan of Mr . temperature below \(60^{\circ}\) Which should not be applied of a had recourse below \(60^{\circ}\). Syringing in moderation may be together mith to hot weather. Rucke following is a ground-plan and section of Mr. be given Onchidaceous house. That of Mr. Clowes will a future occasion.

\section*{ON THE ATMOSPHINE ON IIOTLOUSES.}

IT being an admitted fact that all plants recuire carbonic not less in the atmosphere surrounding them, in quantity their growth they are continually abstracting that during nourishanent, it is continually abstracting this gaseous fresh supolics must be aforded. A frequent renewal of the mory ventilation may yield the necessary supply, but 6 more freely any house is ventilated, there is the greater ingenious device!

expenditure of heat, the external air in forcing being always colder than the interior. It would be therefore wise and economical in all cases to have a source of carbonic acid gas within the house, and thus obviate the necessity of a frequent demand on the external air by rapid ventilation, with its cooling influence. A portion of fermenting material, even where the tank-system is in operation, may be advisable for this end; but nothing can excel the practice I have observed in some instances of

making the hot house also a sort of aviary : whilc plants absorb carbonic acid gas and give off oxygen, animals absorb oxygen and give off carbonic acid gas, and thus in nature the two great families of organic beings mutually purify or fit the air for each other. If we therefore keep the requisite number of birds or any other animals in a hothouse, it might be made comparatively air-tight, and both kept in health. By keeping animals in hothouses it is clear we supersede the necessity of thorough ventilation, and thus economise heat; it is equally clear, however, that we cannot much increase the natural quantity of carbonic acid gas in our confned atmosphere by this means, for the animals preserit would then necessarily suffer. A certain increase no doubt may take place with impunity, for animal beings have been found living in an atmosphere charged with two per cent. of carbonic acid gas: it is better, however, izl all houses where operations are carried on in their interior not to encourage a great accumalation of this animal poison, lest the health of the attendants should suffer ; but in pits, frames, and hotbeds, which are managed from without, such accumulation may with advantage be promoted by particular means; and whe adantage be promoted by particuiar means; and the old method, with fermenting material, they possess the old method, with fermenting material, they possess
superior powers for fostering vegetation to such as are heated with hot water contained in tanks or gutters.

A fact in vegetable physiology must here be borne in mind, that it is only in the light plants assimilate carbonic acid gas: in the dark or obscure light they cease to appropriate carbon, so that what of this gas has been transudes into the atmosphere again, unchanged. Thus, therefore, in the morning in a close hothouse there may be an accumulation of this aerial compound, but the first rays of the morning sun will give power to the first rays of the rising sun to absorb, make use of it, and in this way cause the redundancy to disappear. Where artificial means are employed to yield this gas, the morning excess in the house will be greater, and the attendant must bo on his guard accordingly.-J. L., Newburgh.

ON THE QUALITY AND APPLICATION OF PEAT OR HEATH-MOULD.
A correspondrnt of this Paper, using the signature of "Quæsitor," has inquired whether a specimen of that sort of peat "found in moorish bogs, and used for fuel \("\) northern and other parts of the kingdom for fuel," is fit for the growth of plants. It is not in any respect the kind of peat (better called heath-mould) to which I have occasionally adverted. The great differences are these,- the portion sent is the true material, (pure vegetable matter, but in its raw and unprepared state; in other words, in an incomplete state of decomposition ; Whilst the peat or heath-mould suitable for the cultivation of plants generally, and of heaths and select greenhouse plants in particular, is the same vegetable matter, after a much higher state of fermentation and decomposition: the former retaining its organic texture, in consequence of leaving been excluded from the decomposing power of atmospheric and solar agencies; the latter by long exposure to the intense and combined action of air, heat, and water, being so far reduced and decomposed as to enable the roots of plants to re-assimilate its chemical and nutritive properties (the basis of their own). The term "fibrous peat" has been used by men as a mark of distinction rather than of fitness, as a texture of soil embodying the primary elements of vegetable matter by Which plants are sustained, in contradistinction to "sandy-peat" which, to a certain extent, implies the absence of those same elements of veretable support From the fact that the best qualities of heath-mould are generally found almost and often altogether exclusive are a sandy ingredient, some eminent cultivators have of a sandy ingredient, some eminent cultivators have held an opimion that a perfect system of cultivation will ultimately dispease with all materiais incapable of being assitracts of heath or moor-land there may be found, on tracts of heath or moor-and there may be found, on
turning the surface up to the depth of two or three
inches, scattered portions of vegetable mould (adhering to the under side) entirely free from the substra tum of sandy soil beneath, as well as of the fresh growing portion above. Such, in a higher and more
condensed form of decomposition, may be considered condensed form of decomposition, may be considered As the character of a good material for cultivation. Again, in the entire absence of the true form or substance, take equal portions of thoroughly-fermented woody fibre in a dried state, pure leaf-mould in a half-decomposed fected 'night-soil; these equally pulverised and highly reduced will give a tolerable idea of the texture of true heath-mould, as distinguished from a barren sandy peat In the adaptation of all soils to the growth of plants, the higher the state of decomposition the more immediate may be their application, and the greater their capability o being appropriated by the organic functions of plants, and vice versa. The application of sand to beath-mould and soils generally is not, as is too often supposed, in order to render their texture more open or porous, but on the contrary, to modify and compress the expansive properties of vegetable matter by its gravitating tendency
perhaps the most suitable of all materials for regulating the proportions and enbancing the qualities of other mgredients in the cultivation of plants. Hence their application as a prime material in those instances of cul ture wherein the higher and intense agencies of nature are gressively mechanical and nutritive effect will be still more effectual in the highest purvoses of Horticulture when combined with concentrated forms of animal and other

Perbaps the most common and efficient substitutes for the deficiency of vegetable matter in barren or sandy peat, are pure balf-decomposed leaves and woody fibre from the stems of plants, equaly pulverized, in a highly reduced latter reduced in proportion to the amount of soil used in ach process of potting
The suitability of heath-mould for immediate use in the will generally depend upon its prepared state when ob tained from its native bed-that is to say its being in ot
sufficiently pulverised and friable state. Its application in very coarse form or texture will mostly depend upon the condition now given, and also upon such an arrangemen in the process of potting as will secure under all con ditions a uniform circulation of moisture.
It is almost unnecessary to add that the addition of all undecomposed and porous substances, whether vegetable or otherwise, is principally intended to produce a nechanical result, by maintaining the soil in an open state, so
that fluid may pass freely among it, and ultimately, by that fluid may pass freely among it, and ultimately, by
their gradual decomposition, become subservient in the mature stages of growth to a chemical and nutritive effect This point will be readily understood by stating that the mechanical texture and arrangement of the material should in all cases be in proportion to its amount, it being through the medium of mechanical agency that a chemical or
Where large quantities of material are wanted for the cultivation of plants requiring heath-mould in open borders, and a sandy peat is the only material at band, it may be much improved by adding an equal portion of dried and highly-reduced state. In the application of peat in a raw and undecomposed state (such as is generally used for fuel), it will be essentially requisite to reduce its texture until its component parts will admit of a uniform leaves in a highly-pulverised and reduced condition leaves in a highly-pulverised and reduce

As the capability of plants to assimilate food from the materials to which they are subjected is in proportion as the mechanical texture of the soil admits of that medium ties being held in solution for a period equal to the excita bility of their organic structure, it may be assumed that will, to a certain extent, determine texture of the material will, to a certain extent, determine its elevation in exposed
situations, such as clumps. The higher the state of its decomposition, the slower will be the abstraction of its moisture by atrospheric and solar agency, and vice versa.
In a wet bottom or subsoil a bottom-drainage is neces In a wet bottom or subsoil a bottom-drainage is necesaccording to their depth or the quantity of material they contain. A dry or solid bottom should, in the frst instance, have a heavy substratum of undecomposed sphagnum, or other absorbent material ; and the latter, a broken surface, or substratum of broken drain
A consideration of the importance attached to the tex ture of soil (essential to a uniform circulation of moisture, apart from the consideration of its chemical or nutritive properties, appears to involve the following principles,

\section*{1st. All matter, however circumscribed by space, is subject in}

HORTJCULTURAL AND AGRICULTURAL OB SERVATIONS MADE IN SOME OF THE PRO INCES OF TURKEY

\section*{From the German of Dr. Grisebach.}

The Gardens of Salonichi.-The gardens of the Franks, Which I saw here, although distinguished by fine groups neglected, to deserve any great comment. I had, how eglect, of of of seing the flower-garden of a Turk, who was noted for his love of Floriculture. Were ny one to suppose that the ancient fame of the East, with espect to taking the lead in Horticulual maters, had been apbeld in Turkey, or at least in Roumelia, where, on the characters, either in the taste of the designer or in the choice of flowers and plants, he would be deceived. The whole space is for the most part occupied by small beds, shaped into strange figures and designs, baving generally jet of water in the middle, around which these beds are
egularly arranged. They are edged with box, and mostly contain a dense mass of Tulips, Marygolds, and simila plants; while all variety of form or colour is totally neglected. Still, when compared with what I had previously seen on the shores of the Bosphorus, the garden pen pavilions of abservable, their columned walls covered with garlands of Roses, and the interior enlivened by elegant jets of water. Everywhere springs and fountains were bubbling axound the beholder, and the somewhat confined area of the garden was hidden, or rather extended, by the walls having been covered with creepers, and the contiguous places planted with Roses and Oleanders. The paths were kept particularly clean, and sprinkled with water. Notwithstanding all this, the ame dearth of plants, and the sauae attempt at insigainin arnament prevailed. The proprieto to enter into conersation with us, and after a short salutation continued his lonely ramble. A dervise, however, who seemed to ave received orders to attend us, walked with us through the grounds, duly extolling the beauty of the garden and he riches of his patron. Contrasted with this well-kep dancing dervises, which is in a perfectly wild state. It was here that I had an opportunity of observing what kinas of plants will luxuriate in this climate, when the turf, but of evergreen shrubs. I found here, also, amongst a few Pomegranate and other fruit-trees, a most dense vegetation of Oleander, which had evidently been planted at some former period, but which had increased rapidly and overgrown everything else, showing, as it were, that duce (if left to themselves) that evergreen cover of vegeation which, most probably, had clothed these coasts previously to their being subjected to the control and arts of man. Although this had occurred in the garden of these lazy dervises, who passed their time lying ment, it could not take place generally in the immediate vicinity of this industrious town, becanse most of the places which are not cultivated are ill adapted for any plants of a robust character, being for the most part stony and dry slopes, which, on the north side of Salonichi, descend to the shores of the Bay. On one of these hills, which is crowned by the castle of Heptapyrgion, I paid particular attention to the vegetation, as far as the adanced stage of the season, and the leat of the lattex permit. This inclined ground possesses only a slight depth of soil, which has resulted from the decomposition of the mica schist, large strata of which are visible amongst the oil. With the exception of a few trees, among which he soil does not bear any hard-wooded plants, but merely exhibits that scanty herbage, which becomes pulserised by he heat of the summer, piercing with their tenacious roots into the crevices of the rock, and constituting (if we take them either by families or the great variety of this pecies) the most important constituent of the Me literranean Florg. It is the very limitation of most f the plants belonging to this group, within a very cirities (amongst forms widely diffused, and common everywhere), some rarities are also to be met with, which characterize the country at present under observation. visited the shores of the Adriatic, and has had an oppor-
unity of observing on Monte Spaccato, near Trieste, for instance, that abundance of gregarious plants, which is not be met with in any other locality in Europe north of the Alps. A similar vegetation adorns the schistous hills, ear Salonichi. But in the same ratio as the seasons have a greater influence on this than on any other form of egetation, one single observation can afford but a very ncomplete idea of it. In the middle of June, the nume ous annual herbs have already disappeared, which, in conunction with monocotyledonous plants, spread a transient he of lowers over this country. Still the greatest dearth is apparent at a somewhat later period, when even the most
striking objects of this flora--ihe dicotyledonous shrubs, -have completed their annual growth; when the decaying erbage above their perennial roots has lost its verdure, and a barren rocky solitude has ostensibly usurped the place of what shorty before rather resembled a cultivated redominant, vegetation of the Heptaprrgions not ssume a too general character, I may remark that the middle, or rather the last-period of vegetable life had then aready commenced-that in fact, which I call the season of Compositæ, because it is plants of this group which, mongst the two largest families of European vegetation, pecies; whilst annual leguminous plants are met with most frequently in spring
On the hills of Salonichi, as far as growth is concerned, hich comprises plants of a stunted form, mostly trailing on the glound, growing intermixed with others, and bearing stiff interwoven brapches: the other, those of a more portly growth, possessing equally numerous branches, yet istinguished by growing in tufts, which are divided corns the former the principal are the Cynarese Silenez, Im Umbelliferm * but thir abund is nown burn enth of 50 oull it call it, creeps about everywhere in the shape of a small eavea vaict. ppearace, coners and egetation of those southern hils, where the sun, glaring own for months from an unclouded sky, would destron hich hinch eaceeds the moisture supplied by the son, if they were not provided with this covering. In the higher gre garious shrubs of the second class 4 , which are still more subject to that influence, because deficient in the enlarge ame vith proctiog organs of vegetable life are to be met dense silky covering, the Eryngium, of pithy, dry structure, resists a superabundant evaporation by its chosekinned epidermis; the Peganum, on the other hand, which prevails in many localities, approaches, by the ffinity of its natural order, and probably by some internal mechanism which retains the moisture of the atmosphere and the soil in its cellular tissue, to those fleshy-leaved plants which are capable even of resisting the heat and dearth of the African deserts.-J. \(L h\).

THE ANTIQUITIES OF GARDENING.

\section*{Gardening. (Continued.)}
" Of Fruite-trees and Orchards.-Fruit-trees proper or ordinary walls under 9 foote high, are-Cheryres higher for the following: White, Blacke, and Red Hearts, the Blacke is best; the Caroone Cherry, the Orleans Cherry, a new Cherry. Plums: the Cherry Plum, the Queen Mother Plum, the Damaseene, the Cheston Plume the Perdigan, the Amber Plum, the Morocco Plum, Marbled Plum, the Muscle Plum, the Great Holland Pium, a great white new Plum [probably the wesse Magnum Bonum], Monsieur's Plum [Orleans], Atemas Plum, Mirabelle, Pigeon's Heart Plum, Whte Dawm Plum, Catalonia Plum, the Orleans, alias Lambert's Pumy Peaches - the Red and the White Nutmeg Peaches ( early and smal ) the Primordian Peach, the Bellowes, the Savoy Peach, the Pan Peach, the Persian Peach, the Rambouillan Peaca, the Moden Peach, the Orleang Peach, the Superintenden Peach, the Smyrna Peach, the Laval Peach, the Sion Peach the Magdajen Peach Neatorans: the Real Roman Nectara the Murrey Nectoran, the Green Nec Roman Nectoran, the Murrey Nectoran, the comes from a rone and White Ne the Masculine Early Apricocke, the Orange Apricocke. Peares for walls are only used to bee with us-the Wrieur Bon Chrestien, and the Wynter Bergamotts, Monsieur John, and the Beurree Pears, all good Wynt
ther sorts bearing well enough as standards. Vine, the
\(V i n e s\) fittest for England are the Parsley the Yellow White Muscadine, the Redy Frontire Grape, very good; Frontinisc ; the D'Arbois Vine-a whit

\section*{Muscat, the Auvergne Srintamier.} Fruit-trees for Hedges or Patisades, Pearmaines, any high commonly:- Codling Apples, Pearmaines, Sommer Sommer Apples, Sonomer Bergamot Pears, Sor sorts Bon Chrétien Pears, Slip Pears, and almost all other All of Pears. Dukes, Flanders, and Vines. The manner of sorts of Plums, Quiuces, and Vines. The manner of
making the FHedges [Espaliers] is either with straight * Tencrium polium, L.; scabiosa ncranica, L. ; Centanrea paniculna, L. var.; Cardurss nutans, L.; Dancus involucratus,

this Of Colonel Blunt's Vineyard, 1665.-The Soyle of Greenwich in (which was a part of Blackheath, near be,) of a light whitish sand mixt with small stones, in the be, of a light whitish sand mixt with smail stones, in the
earth naturally grows nothing but ling and furze. The earth naturally grows nothing but ling and furze. The
situation is on the side of a hill, which lies full facing the south, well defended by the hills from the north and west winds. The parcel of ground was between one and two digged into earth was in the summer time or autumx after Christmas, the plants were set in the trenches two yards asunder. Between each rank of vines there was a yards asunder. Between each rank of vines there was a
path of four feet tide, to goe betwixt the vines, and dig and prune them. wide, to goe betwixt the vines, and dig shoots only were allowed to root every pear, which were tied up to a stake about four feet high, and soe stood till the time vines begin to sprout out, which is in April, and then the tops of each of these two shoots are bound arwn to a stake stuck between every two roots, and tied the right hand stake, and the other to the left hand stake These two shoots aforesaid, bowed soe down, put forth young branches at the joynts, which will fall and hang down to the very earth, and bear grapes to the ground; from thest grapes are sweetest, because of the reflection are cute earth. The shoots which have once borne frui not be a foot higher than the earth; and two of the strongest shoots produced and tied upright in summer are bent as those of the former year, and soe on ",

Colonel Blunt says that vibes camnot stand too dry, nor never need watering, and prosper best in a shallow gravel. Where the roots cannot run deep, as on rocks or if there be any; the roots cannot endure wet. The colonel says hee uses no dung nor compost to this barren tarth of his vineyard, which is very strange."

A List of Fruite-trees and Flowers, with the prices, sent me from George Ricketts, of Hogsden, London:3s. each. Peaches-Newington, two sorts; Mignomne, Savoy, Orleans, Red Nutmeg, Roman, Queen's, Royall, Musk, Arabian, White Nutmeg. 2s. each. Cherries White, Black, and Amber Hearts, Prince Rovall, and Carnation ; all these at \(8 d\). the tree. Prears Royall, and are enumerated, at \(12 d\). the tree. Apples - Sommer Pepin, Holland Pepin' Russet Pepin, Kentish Pepin, the ceadine Qupposed in England, Russeting, Gilliflower, Musthe Royal, Hollown Apple, King Apple, Golden Reinette, the Royal, Hollow-crowned, and Common Pearmains, Old Wife, Nonsuch, Figg Apple ; all thi
except the Figg Apple, which is 5 s .

\section*{AMATEUR'S GARDEN - No. XLVIII.}
\(\mathrm{T}_{\mathrm{HE}}\) greatest drawback, which we experience in the cultivation of the more tender kinds of Chinese, Teascented, and Bourbon Roses, is the diffculty of preservwithout being killed to the ground. It is true months, borders are 'mulched with ground. It is true that if the preserved; and will break strong shouts again in the spring; and then these shoots will not bloom before midsummer, most interesting, the Chinese the bloom would be the tively a blank. It is therefore neocessary that comparadevise some plan of protecting the plants through the Winter unscathed, so as to have them in bloom in May and operation which I purpose I have some experiments in The garden for tender Roseself will answer the purpose. which are sufficiently Roses here is a mound, the sides of Wet in rainy weather. On this mound beds are formed,
and the branches of the Roses are kept pegged down, so
that they are a mass of bloom when the plants are in flower.
nower. with a view to the protection of the plants, I have had them pegged close to : the ground, and all the superfluous and young succulent wood cut out. At present they are uninjured, but as soon as severe with dry fresh leaves, and to keep them from blowing away I shall cover them with the brahcles of everaway 1 shaels over some of the more delicate kinds I hreen placed drain-tiles, so as to allow a'current of air to pass through them, b ds is so arranged as to sllow weather; and one of the bedetwen the plants and the a current If these plans answer, the plants when uncovered next April will be quite sound, and after being regulated and pegged out, wir aford aung the Chinese bloom in May and June. In pruning the chese to varieties in the summer, I generally mas old branches close out to the root as soon as they cease to produce bloom, and replace them with young wood. In this way they bloom with considerable vigour, and affords an excellent opportunity of manuring or regulating the beds several times in the season.
In America, I believe, they find it necessary to bury all their Roses in the winter season, for the frosts are so severe that the stocks they are worked upon-the Wild Briar of our hedges-are not if this is sufficient protection there, I think my plan will be all that we require for tender kinds in this country.
Standard plants of the tender kinds must be protected y dried fern and a waterproof covering, as directed in the early part of the year, with a thick hayband round the Ayres, Brooklands.

\section*{HOME CORRESPONDENCE}

Peat-draining. - Observations made at the Preston Agricultural Society, Oct. 14, 1843, by Wilson France, Esq., of Rawcliffe Hall, on Peat-draining. -" He had been
blamed for saying that turf-draining was the only sort of blamed for saying thar turf-draining was the only sort of thing. He had said that those situated like himself, on turf-moss, would find turf-draining the best and the cheapest. He quoted from an article by Sir James Graham, in one of the first volumes of the Royal Agricultural Society's Transactions, where he said it had always appeared to him that skill in'Agriculture does not so much consist in the discovery of principles of universal application, as in the adaptation of acknowledged principles to
local circamstances. If they found turf the best and local circumstances. If they found turf the best and cheapest, they ought to adopt turf; if they found tile the cheapest, let them adopt tile; or if stone wears the best let them adopt stone. He had said that whenever they found turf the best they should use turf. He had brought that day, and would produce to them, turf that he could prove had been put in a drain fifty-six years since, and they would bear him out in saying, it was now perfectly good and sound. This proved that turf was serviceable, and as a means on draining should not be neglected when it was applicable. He could make them at \(2 s .9\) d. per thousand, and could inserted as a wedge in the drain; they wer not brittle, and in the use of the subsoil-plough, which ought to be used after draining when the substratum was clay, suppose the plough came in contact with the drain, and even cut an inch off his turf, it would not injure the drain, as the turf was spongy, and would give way. I they touched a tile with the plough they knew the effect,
the drain was broken into. He cut his drains 11 ins wide at the top, remoring away no more soil than was necessary for the formation of the drain. He made them 30 ins . deep, never less than 30 , and the width of the drain tapered, until at the bottom it was only 2 ins. wide The turf w'as cut in a certain way, 9 ins. or 10 ins . long, ins. wide at the bottom, and \(4 \frac{1}{}\) ins. at the top par This fits in the drain as a wedge, leaving a channel for the water of 6 ins . deep, and evell when the drain was com plete, as he had already stated, the subsoil-plough coming in contact with the asire question that the longitudinal plan injure it. There was no question that the longitudinal plan
of draining, or down the field, was the best ; the general distance of the drains should be 6 yards, or 18 ft . apart and the ordinary drains run into main drains, which should flow into the ditches. The turf which he produced, 56 years old, was cut so as to rest upon shoulders, and by the pressure of soil had been in some degree had not been spoiled. These drains had been laid across the field, but it was better to drain down. In favour of the superiority of turf-draining he would refer them to the last Number of the Transactions Hill, of Stowmicultural Society, by the Rev. Copinger described the several modes of draining in Suffolk, he says, "Better than all peat cut for the purpose in the fens of Cambridgeshire, in length 15 ins. and 3 ins. square; it is pressed gently into the top of the narrow dran, made 10 ins. wide at the top, 2 ins. at the bottom; and 30 ins. deep, and then the earth thrown in upon it. The peat swells peat-draining, ofmy fixed, and is very peeces of peat instead of one are placed in, side by side, and in bad cases the sides of the drain are built with turf as well as the top." Sir H. Davy says, "inert peaty matter remains or y \(\%\) This was proved by the turf which undergoing change." This was proved by the turf which
had lasted 56 years at Rawclife. The size of Mr. Hill's
drains were the same as his, Mr. France's. Peat sells at the rate of 6 s . per thousand, and eight score rods of draining to the acre, the rod measuring \(5 \frac{1}{2}\) yards, takes 2000 feet. This was an important testimony to the advantages of turf, and this was not mere theory, but the experience of a gentleman. He was himself unacquainted with the county of Suffolk, and coald not speak of the facilities or difficulties of obtaining tile or stone. The secret of farming, he said, was to produce the greates possible crop at the least possible expense. Now it was important to notice the expense of these turves, which had lasted 56 years, as he could prove (the old man who laid them was now living on his estate) and were no worse (he did not see why they shonld not last 556 years). He would put it in this way: it would take about 28 turves to drain a rod of seven yards, which, at the tate of 2 s .9 d , wages of his lab cost \(1 d\). He was anxious to pay the from \(1 s, 8 d\), to \(2 s\). per day, and the price varied for the cutting of these 28 turves from \(3 d\). to \(4 d\).-ssay \(4 d\). He then said he gave to his tenants free of all charge. He then said they might either pay a per centage for
the outlay or join him in the cost; he preferred the latter mode, because it gave the tenant an interest in the work, and being a paymaster as well as himself the tenant could remonstrate if any of the work were not done properly. The marl had to be carted from the arain the pil acre. The results arising from his draining were quite astonishing. He had been highly gratified at seeing fields formerly thick with rushes recently covered with luxuriant green crops. Another field very rushy had borne an excellent crop of Oats, and from which he calculated \(7 \frac{1}{2}\) to 8 loads of meal per acre. Draining was the first nove to good farming ; land was grateful, and made ample returns for whatever was bestowed upon it. There were many instances where the expense of this should be shared by the landlord and tenent, and others where the landlord should do all and the tenant pay a per centage; and considering the confidence that ought to exist between lamdlord and tenant there should be no difficulty in such a matter. He was anzious to have held fencesin straight ines; fields when large should be square, and when smail should be of an oblony form ; in number they should be according to the size of the farm, \(8,12,16\), or 20 , so as to suit a proper rotation of crops. The shape of the field had a material influence in the labour of the plougliman; supposing a nield of 4180 yards of a sta nine inches wide or 88 furrows in the 66 feet: the horses in ploughing this, travel 11 miles exclusive of turning, which make onetenth, and then the horses travel 12 miles and 176 yards. If the field is shapeless and requires cuts, how much the distance and the time are increased! The loss of time in upon first-rate authority, Sir John Sinclair, in the first or second book of whose 'Treatise on Agriculture they would find it Yes there was a loss of one tenth of the time, and in shapeless fields there would be a loss of one fifth. The thaptshould have his fields so that he could plough them without any unnecessary loss in turning. It was necessary that these things should be attended to ; he did not think produce would be much higher in price, indeed he hardly thought it should : prosperous times, as times of high prices were sometimes called, did not make the best farmers, for if the farmer courtions to have a whole balt a crop, he woul times improvements ; it

The present times hastened exaprovementse increase their crops. He would again strongly recommend e their crops. small farms into a regular number of the dour-course system of husbandry. He was ansious at all times to give any information on such subjects to see any gentlemen
benefit. He would be glad tor who . He wo see his system of draning at Raweliffe, and if they came they should see the old drain which he was now crossing." Mr. Wilson France then sat down amidst great applause. In the yast 56 years, and by referring Chronicle of the present year, page 737, we have Mr. Fair's account of a further improvement in thePeat-draining in what he calls the tile-turf. The Duke of Hamilton has been for some years adopting the Peat-draining on his estales in Lancashire on the same plas of land will be and there is no doubt but a great quantity of land wich has brought into cultivation by these The Duke has also been adopting what Mr. France has pointed out respecting fields Duke's wirefences, which I suppose are hali-a-mile long and quite straight, and the fields made about 17 rods wide, parallel to each other, which gives them a very striking effect when viewed from a distance. - \(F\) acile the Ropal Guing.- Going over the pear quar the head gardener that he considered the tying down the branches a sufficient check to overgrowth, without the assistance of root-pruning, except as regards any very free-growing vess and good bearing of the Pear-trees; they were of a conical shape, and all the branches tied down so as to present the appearance of a conical chandelier, and of course much more bearing wood obtained than in the trees which were stunted by root-pruning. I believe Mr. Rivers (whose experience in rool-pruning is great) does not agree with me. 1 have no
seeing this, favour with hisws. sidering how far French gardening is applicable to England, eve must never lose sight of one mosi important
fact; viz., that their summers are as often hot and dr
as ours are cool and moist. duiumn Cornalions - H
kets at Paris are throughout the autumn filled with bunche of white and of red crimoson Carnations? What treatment necessary to make them flower in the autumn? We seem never to succeed in flowering in the autumn the mall plants of Catalonian Jasmines, Pomegranates, and Winter Cherry, which make the Paris flower-markets so gay in the autumon.- Totty.
respecting the rot in Larch. Most laten some discussion respecting the rot in Larch. Most writers lay the fault to the soil; this supposition is in a great measure correct, in Mr. London's Gardener's Magazine for 1840, p. 386 . Perhaps it may not be out of place to give an extrac from it:--" When Larch and Spruce Firs are young, they
grow often rapidly, and the wood formed at that period grow often rapidly, and the wood formed at that period
is very porouf, both in the trunk and roots. As the trees is very porous, both in the trunk and roots. As the trees
advance in age, the supply for their growth is less, from advance in age, the supply for their growth is less, from not having been thinned out in proper time. The outer case of wood then formed is less porous, and becomes in
time too compact to admit air to the early-formed wood within. This latter being of a coarse grain, the dry rot begins to infect it, in the same manner as it attacks
wood which has been painted in a green state, the paint excluding the air from the inside wood. 1 , according to the grain of the wood. It ascends the trunk, and makes its way along the roots : at least
those first formed, which have become the conducting those first formed, which bave become the conducting
tubes to the trunk from the smaller roots and fibres. As the disease advancer, the sap collected in the fibres with difficulty through the decayed conductors trunk, and the trees become sickly, although the smaller roots and fibres, where the sap accumulates, be healthy As further proof that decay proceeds from too quick growth, the trees that have grown beside decayed ones and it may often be slowly, have been found sound that is, the quick growths in the trunk that are rotten. It is a common observation, that a tree has got down to a soil which it does not like. If the soil were in fault, the wood grown there woald be bad, whereas in reality it is decay proceeds in age from soil and climate, but its proondation is actually laid in the youth of the tree. In cold and barren situations are always sound. These growths are small, and the wood in consequence is durable keld. Larches for instance, in Britain, is grown at Dun What I have said agrees in some of Sir C. G. Stuart Monteath attention to this important subject. He says, in the Chroniole, Aug. 19, 1 have found a great proportion the root in the course of ten or twelve years." Again, the root in the course of ten or twelve years." Again, of Grauwacke or siaty rock, so common in the south o Scotland, I have always found to succeed best, and not at all liable to the disease." After what has been observed, Larches be planted in poor soil, resembling as nearly as possible that of their original native region, and if possible on elevated situations; and let them be properly thinned out whea young, to admit air freely around them. The farther they are from the desired soil and situation, the greater attention must be paid to this important point, so much warmoth. If I am wrong in the opinion that the rot proceeds from the exclusion of air from the beart or external wood, there can, at least, be no doubt that the seeds of decay are first sown by too rapid growth. And little do planters think, when admiring the great progress of their young Larch Firs, that growth so rapid is but
Florists' Flowers.-A teaspoonful of Humphreys' soluble compound to a gill of rain-water, applied once to an Auriapplied to Pinks caused them to growt. Liquid manure than usual. One sort, which is considered an excellent self, and which 1 the centre petals partially laced before, but never the guard-leaves. The liquid was prepared by steeping in heap of horse-dung, which had received the slop-pails of a house during that period; to this liquid a little soot was out much Grass, remained, but often. The plants threw freely. Some time ago, a loncashire forist told me seed freely. Some time ago, a Lancashire florist told me that he frequently had seen his neighbours who grew Hyacinths
topping their pots with coal-ashes to clear the white. In topping their pots with coal-ashes to clear the white. "In novator, some years ago recommended gypsum for the same reason to be mized among Carnation compost. Perhaps sulphuric acid was to be the agent in both cases. Five years ago I mixed some Carnation compost, to which gypsum, pounded to the size of small peas, was added in the proportion of one-sizteenth of the whole. In the nor could I perceive any difference in the colour of the flowers, but the plants grew well in it. I find that when my Pinks and Carnations are plunged in coal-ashes, the roots run through the pots into the ashes; and I have noticed that when small cinders have been employed as
in the compost with good effect, especially when the Carnation is potted in an 8 or 10 pot, not unusual here.-O. Canker in Auriculas. - What is the faase of this disease? Old florists here say it is infectious; and though excision is sometimes a cure, yet they will often prefer destroying a cankered plant at once, lest it should infeot the others. It attacks plants in the open ground, therefore perhaps is not caused by drip nor yet by confine-ment.-O., Leeds.
[Perhaps some corresp
Jointing Earthenvoare Pipes.-For some time past I have looked for Mr. Hurst's mode of jointing these pipes; but in vain; and as "W. B. H." wishes information on When the I beg to offer a plan adopted here with succeas. When the pipes were fitted the end of the one into the
other, a quantity of white and red lead was procured and mixed together. That part to which the lead was to be applied, was touched with a brush dipped in oil, a good
coating of lead was put on, and in this manner every joint coating of lead was put on, and in this manner every joint paint became quite hard and dry, which was in about six or eight days after the operation, and they have kept perfectly water-tight ever siace. The advice given to gardeners in the leading article at p. 807 is good, and Green experience I can state that tanks do not answer for suitable for pits to preserve plants in, on account of emission of vapour, and the earthen pipes are also ob-
jectionable for the same reason.-J. M. [We are glad to hear that earthenware pipes will do. What we have seen tried have all failed, in consequence of expansion and contraction, which broke them.]

The Coffee Plant.-A Coffee-tree in my bark stove was clothed with fruit in the spring of the year: many were eaten, but many dropped; of the latter a crop sprang up are about an inch high, with the remains of the dry pulp clasping the seminal leaves ; others one inch and a-ualf, with the round seed-leaves expanded like shiling or halflast being about sia months old. We have potted off a dozen or so. I was not before aware of the rapid germination of the Coffee-bean. \(-P\). Neill.
Swons and Weeds in Ponds.-In a late Chronicle Mr. Ayres said something respecting Swans clearing weeds from ponds that brought forth remarks from an EdinSwans in ponds almost choked up with weeds, I lean to what the latter said. The case, however, may be different when Swans are in very small ponds, and amongst certain kind of weeds. Putting more Swans into larger ponds, agree. When Swans are in large streams, each pair have heir own boundaries, and woe betide the weaker that venture beyond their beat. I may mention an instance
of this, which came under my observation. During last summer, a pair of young Swans (not cygnets) happened to stray near where their next neighbours nest was. The old male soon drove the young ben into the field, and a battle ing of their wings, biting coch ;if and what by the splasiof the boys, there was a fine affray. At last the old cock drove the other to the side, and forced his neck against the bank, and would have soon killed him, if they had not wards separated. The intruders took to the field home distance. Finding this he took to the stream, as if be knew where it was likely they would cross. The retreaters, field and gave their expecting antagonist the slip.. Wighton.
Manure for Melons.-In the Chronicle for the 16 th of September, p. 645, \(X\) find your correspondent "E. M." mentioning that the Persian Melons derive their guperiority rom the use of pigeon-dung. Now, p. 9 , where it treats on this subject, the thought struck me that there might be a similarity between the stimulating properties of bens' dung and pigeons' in promoting the growth of the Melon. I accordingly requested, in the spring of 1842 , that the manure from the hen-house
should be saved, and after having obtained a heap of it, free from any other mixture, I reserved it by itself, and turned it over two or three times during the winter. In the month of May I erected a temporary 7 -light frame, and under each light made a bole for the fermented manure about 18 inches deep. In mixing up the soil I used better than one-fourth part of hens manure. May, and planted under each light. These had a space of 4 ft . by (MS. illegible), to grow in, and it was evident soon after they began to grow that the soil agreed with them. From their luxuriant growth I was compelled to use my thumb and finger freely; and in proportion to was generally so was their fruifulness. Some bore a second a good crop of fair-sized frat done so had they been allowed; but it was too late in the season, and it was not convenient to apply a lining. I equal success. I srust these observations will call forth the attention of gardeners who may have a better opportunity of ascertaining its merits, and the means of applying it more successfully.-J. \(F^{\prime} \cdot M^{4}\) Elroy.
Pine Apples.-Some sensation having been occasioned by a statement lately made in the Chronicle about the ing from 5 to 6 lbs , I beg to atate such was by no means a rare occurrence there previous to the present manage
ment; for from 1834 to 1840 during which time I was foreman under the late gardener Mr. R. Glendinning now of Chiswick Nuruery) froit was annualy produce equal to the weight of those recently noticed. One grown in 1835. I well remember, weighed, when divested of all its under leaves and the stem cut close to the fruit, 6 lbs 3 oz . Mr. Glendinning some time since published a treatise on the cultivation of this noble fruit, and having practically carried out under his own superintendence the directions therein contained, I can confidently assert that by following his system. Pine-apples of the above weight will be thought no rarity, and scarcely worth recording. Laruler, Exetp
Large Pines.--Having for many years felt an interest in the culture of the Pine-apple, will be my apology for
troubling you with the following remarks. The readers of the Gardeners' Chronicle, as well as those who attend the Chiswick and Regent-street Exhibitions, have abundant testimony of Mr. Spencer's eminent success in the production of this prince of fruits. We require no further statement from hin or from Mr. Murray, who has pro bably in the present day produced the largest Queen Pineapple in the highest possible state of cultivation. The circumstance of public exhibition has placed these two eminent gardeners in a different position from those whose success rests on the statement of one or two persons however unquestionable such reports may be. Hundreds and thousanda have seen with complete astonishment the distinguished productions of Messrs. Murray and Spencer and this public exposition of their successful practice has created a desire, as extensive as it is intense, among prac tical men to become acquainted with the method pursued in attaining such extraordinary results. It may be inferred that it is by other means than those which have resulted in a few fruit of 2 lbs , and some wonderful ones of 3 lbs . It has been insinuated that some of these successful Pine farmers do their oxen on Tarnips ; and it is further alleged that the plants consume the one with as much avidity is the oxen do the other.-Prurient, Nov. 22.
Pruning.-With reference to the propriety of pruning orbes, do your correspondents "Quercus and otbers, 8 ufficiently comsider that the principal object is the trely without pruning may, perhaps, produce the largest quantity of actual wood in any given time; but then how mach of this is useful as timber? At eight or ten fee from the ground it branches out into a large head, which with the limbs, except of the largest trees, is fit only for the fire, and this is the case with most trees grown in hedge-rows. If, however, it is regularly pruned from an arly age, by much reducing the head at any one time, it will grow up with a tall trunk, and produce a considerable length o excellent timber, according to the soil in which it grows and this kind of pruning is, in some measure, naturail performed for the toplings in woods, by the branches of other trees, and the underwood constantly brushing sgainst them, and preventing the growth of the side shoots. If it is wrong to take away any part of the head of a tree, how is it that the trunks of Pollards (which are entirely beheaded-a horrid practice !) increase in girth more rapidly than spires ?-E.A.C.
New Hardy Plant.-As considerable interest is evinced on the subject of plants that will stand the winter in thia country, and feeling certain that many now considered tender will, with judicious treatment and proper soil, bea the rigour of our chimate, thus bringing numerous orna mental specimens within the reach of persons not having greenhouses, and adding greatly to the beauty of out gardens, I beg to mention having seen a beautiful tree growing in this neighbourhood (the Eucalyptus calophylta), which, in page 783 of the Gardeners \({ }^{2}\) Chronida nearly 12 feet high, and has been growing for the las seven situation at Brodwinsor, in this county. The specimen has not flowered. Two leaves of the tree are inclosed, as I may be wrong in the name of the plant.-A. \(R\)., Bea obliging correspone the oblig Planting - Your \({ }^{\text {Pap }}\) manding. Your Paper of massed in in quired in inting quired in visiting mountain districtsio Scolland and walder in the nothing else could be cultivated, and for the later in the lovely surface of Warwickshire and other districis of England, which (however rich in pasture and grain) would be unadorned indeed, deprived of their hedge-ro is timber. Happily the subject of planting and pruning is can connected with party-feelings-is one on which we can agree to differ, and if we find ourselves in error we may acknowledge our mistake, and not be ashamed to confess it and declare our determination to correct it Under this impression I am led to notice a passage in you Paper on the subject of pruning, bearing the sigaatied "Quercus." If I recollect right "Quercus" was repie to in a former paper by "Pro Bono Publico" in whe Dr. Thackera are made of the course plantations Nerquis, in Wales, of pruning ; this mode "Quercus" objects to as injuriou to the trees: "Pro Bono Publico" challenges investiga tion for Dr. Thackeray, by a minute examination into state of his woods. His course is confirmed by no less an authority than that of Mr. Humphreys and Mr. Scot Russel both of whom if I mistake not, personally in spected these before they felt authorised to express any opinion about them. Now surely it is not too much to
ask "Quercus" to do the same ere he pronounce judgment against a system so sanctioned, when there is so itttie
difficulty in following the example of Messrs. Humphreys and Scott Russel, and that too in a matter not of momentary importance, but of increasing consequence to ages yet to come, as regards not only ornamental timber, but the very defence of our nation. Our ships, to be good and service-
able, must be made of solid timber ; as the old song says,

\section*{Hearts of Oak are our ships,
Jolly tars are our men."}

It appears by a note signed "Cymri," in the Paper to which I advert, that this system was pursued by Dr.
Thackeray in the woods of Mr. Wilson Jones, commencing Thackeray in the woods of Mr. Wilson Jones, commencing in which "Quercus" challenges this inquiry-"whether any systern of pruning has proved beneficial to plantations,
or whether the woods would not have been more valuable without it." It appears to me the opportunity is afforded to him, by making a personal inspection of the woods of
Mr. Jones and of Dr. Thackeray, (which I suppose cannot be far distant from each other, ) and having done so, I hope "Quercus" will report the state in which he found these plantations, and his reasons why he shall have retain his oninion upon the benefit of the no-pruning system. I most earnestly request of "Quercus" to avail himself of the advice of "Pro Bono Publico:" "Come and examine for yourself, or depute some one on whom woods in question." The subject is one of deep and permanent interest to the public. If Dr. Thackeray's ouse for the apparent success of his plantations has, I am assured, encouraged many gentleman around to plant and to follow country, but if right much good. Let the subject be seriously taken up under this consideration, and I doubt circumstance on the subject of Dr. Thackeray's exertions to cover the mountains with which he is connected, (either Mr. Wilson Jones's or his own, which 1 think worth intro ations he was forced to send to Scotland for his plants, none being to be had in his neighbourhood, and that now there are very extensive nurseries in the district of Chester If he who has made a blade of grass to grow where it
never did previously is entitled to praise, I caunot think he who has covered hundreds of acres with trees in situations that were thought in every way unprofitable, without
cause for praise also.-Consule Planco, Wichlow Mountains, November 22
Training Forest Trees. - Having observed several
articles on " thinning and articles on "thinning and pruning forest trees," and "prune not at all," by "Quercus" and others in some late find the same chaos of opinions on that subject as formerly; and so it ever will be till there is an Arbori cultural Society formed, with experimental plantations, near the metropolis, to show the true principle by practice
and example, as I have so often suggested. From the confused ideas about the term pruning, I have substituted for it the word training forest-trees. I find "Quercus' that all pruning is how young? and that all plantations however thriving Would have been better without any at much as to say, leave all to Nature; but is it not by leaving them to Nature and unskilful treatment that we witness the worthplantations, and hedse-row timber in general? "Quercus" asserts that all pruning reduces the head, and consequentiy the timber in the stem and the reciprocity between the roots and branches." Now I distinctly said in a reply to "Quercus" on this subject some time ago, that the practised (for I will no longer call it pruning) increases the number of branches on a tree, consequently the increase of timber in the atem, and I presume the recipro-
city between roots and branches. If any check is produced by merely breaking out the central bud, or shortening an over-strong young side shoot, in order to produce a greater number of a less size, it must be momentarily as
it were; in fact the system is to increase and regulate the number and size of the branches, and establish the plished without training. I admit Mr. Cree's practice or system and mine are nearly alike; yet I do not agree uith him in taking the lower tier or periods, because many trees do not require it, for the longer the branches are left on the more is the stem increased, so long as they do not get too large to injure the timber when they are formal or artificial. Neither do I agree with Mr. Cree on the increase of timber in trees merely by cambium ; but I Will say a little more of my ideas on the increase of timber your stems of trees shortly, if you allow me space in Dr. Thackeray's plantations; I opine Dr. Thackeray is a "mountaineer," and who lately sent me a printed paper on Arboriculture without a name; if so, and he should W. Billinglinn, UTuderhill. neat Oswestry, Salop. Dayging Shrulleries. -I perceive that Mr. Ayres, in of digging slirubheries, and styles it an absurdity of the present age. I beg to inform Mr. Ayres that the practice Which he calls an absurdity is an advantage, and shall show that hiis modern system is not only absurd, but as
regards economy, impracticable ; for his system is a waste of time and an expenditure of money to no advantage. does he that the front or the bo flower-garden? or does he mean only those that surround shrubberies? Taking it to be the latter, such borders generally consist of Herbaceous plants and Ansuals, intermixed here and there the Annuals and Herbaceous plapts, where is the turf to come from to turf the borders? It is very expensive to buy, and very few like to strip their parks for that purpose; but suppose they do this, there is the trouble of mowing it will be once a week, and where there are many shrubs this (for they can scarcely be called shrubs if the ruch trees 30 fquare can scarcely be called shrubs if the roots extend renewuare yaras), the tanf will need to be sanually little gained. Instead of a fine show of Annuals and Herbaceous plants there will be only a strip of grass about 6 ft . wide running along the side of the walk. One half of the year will be occupied in watering and mowing, the other half well as those in dug borders or shrubberies; the digging tends to increase their growth instead of retarding There is also a want of neatness attending Mr. A.' plan, for the first windy day or night will cause a portion of the leaves to be blown all over the grass, and this will continue until all the leaves are fallen off the trees. If Apple, Pear, Plum, Gooseberry, and Currant-trees not only dug between, but also cropped to within a foot of the stem. The branches of these are not stunted, nor will one week of dry weather cause them to lose their leaves; their produce is abundant and of good quality, and the practice there is just the reverse of Mr . A.'s theory; hence if digging benefits fruit-trees, will it not also benefit shrubs? If manure was spread on the surface of the ground, would decomposition take place sooner than if it were dug in? I should think not ; but Mr. A. would allow the wind to blow all the leaves a way instead of digging them in. I would go further, and say that all the into shrubberies. Mr. A. asserts that he could point out scores of places round the metropolis where the digging of shrubberies has been practised, and that he could take a shrub that has been planted for 25 years, and put it in or breaking the ball. I beg to call on Mr. A to nats one place where he could do this, for I do not consider it fair for any one to make such an assertion without being able to prove it.- The Knave of Spades.
Pilchard Oil.-A Subscriber would be obliged to any of the readers of the Garaeners Chronicle residing in "Whether Pilchard Oil is a painting, -being told that it is much used in Cornwall for that purpose ; if it is so, begs to know the mode of use, and where it could be obtained
Propagation in Water.-Passing through Buckingham Palace garden, my attention was called to a rather interesting fact. One of the Artists who are engaged by command of her Majesty in painting the walls of a Summer temple-in the Fresco style, from designs from Milton's "Comus "-had some weeks ago detached two small branches of Solanum dulcamara, probably as aids in forming an outline from Nature, and thus exposed them in water near the front windows, where they bave now emitted roots several inches long. My obliging attendant (Mr. Hynes) not having observed them until found in the state now described, could not ascertain the exact period in which the process had taken place. This adaptation of organic structure to a state not common in Nature, adds one more instance to the proofs of a capability to assimi. late food to a certain extent from fluid elements apart from those ordinary materials which Nature has desigaed for is higher and nltimate effects. From the power possessed by water of affording sustenance more immediate and effeccive than any other agent, it may be inferred that the more exter its influence in the economy of Vegetation is the amount of material to which plants are exposed, such an application will invariably be found accompanied by an adaptive process, in which the circulation and appropriation of this single element will be such as to exceed all by which other ar manent circulating fluid of plants throughout their various stages of existence. The above fact recals a similar instance which occurred 15 or 16 years ago. A small twig of Stachys fruticosa, a shrubby greenhouse 'plant, was placed in a small vial on a plate-rack or case, situated at the side of the room most distant from the light, was eventually transferred to a more favourable position and material for growth.-W. W.

To keep Moss Green Twenty Years.-Get it at the right time of the year, wash it: clean from the dirt, and set it in the saade out of the sun and out of the wind to and lay it up in papers, and it will keep good for 20 years - Anonymous

Leaf-cutter Bee-Amongst the various insects that adopt singular contrivances to protect their offspring which belones to the mentioned the are eight species indigenous to Britain. These insects must at an early period have attracted the attention of the obin leaves. What Réaum roling their cello respecting them is well worthy of attention; but for the
sake of readers who perhaps seldom or never peruse their pages, I shall state what I know respecting the history of one of the noost interesting of the species called the "Rose-leaf-cutter Bee," so named from its preferring the green leaf of that shrub as a protection to its cells. A friend gave me some cells of this insect that he had found in the lock of a door, rolled in Rose-leaves in a singular manner, something like little thimbles or balls united together as if they had been shot from a pop-gun. My friend expressed his surprise respecting them, but not so much as did St. Francis Xavier, when he discovered the "Leaf-cutter Bee moving along in its solemn way, holding up its fore legs as in the act of devotion." I kept the cells until the beginning of the following summer, and was astonistied at perceiving a number of small flies emerging from them, instead of, as I expected, a Bee from each cell. On a number of small chrysalids, but no honey, as stated by Rennie in the "lnsect Architecture." I do not see why they should, for honey is the food the insect ia the winged state. The same author says they indeed, I doubt it for such plants are not suitable for that purpose To accoun for the intruders puzzled me; howpurpose. lo cear it up, I sent some of the cells to the Rev. J Din wh have sent have all been pierced by a small four-winged parasitical fir 1 . phrysalises. Whe of consumed the whe bos it is very like the sma the caterpillars gabler of the common Cabbage Butterfiy The during sur The Leaf-cutter Bees ane not gregarious ding ", Rose-leaf Cutter Bee," thongh not unlike the Honey Bee, may be easily distinguished by the curious circuan collecting pollen under its body between the segments, and not on its legs, like other Bees, (these being admirably adapted for that purpose). Their parasitical enemies may account for their being rather rare, and it would be wel if the Butterflies that produce the Cabbage Caterpillars were so. However, this little insect destroys vast number of the latter, as noticed by the able Entomologist I have quoted, who has thrown much light on the insect destructive to vegetation.-J. Wighton.

\section*{PROCEEDINGS OF SOCIETIES. \\ OXFORDSHIRE HORTICULTURAL SOCIETY.}

Now, 14,--At the annual meeting of the Members of this
Society, holdere in the Council Chamber, in this city, Mr. A Society, holder in the Council Chamber, in the committee was
Browning in the clair, the following rer ort of the
read:-"Your Committe, in submitting to the Members of the Soclety a statement of therr proce adngs during the past year,
have great pleasure in advertme to the fournhus ard improving The extuhtions of the last scanor have been well supported by specimens have been seen u, on those ozcavions. The awarding resuits, since this system has beenl aci,pted, he sum of \(11 ; /\) ha been paid to cottagers whose rental is unce ghat a
Committee, however cannot close their report whithout expressance and co operation at an times, but more particularly at the public exhbitions of the pust 3 ear. At the same titme they beg
to express a hope that the present Members wal not fai, to exert hemselves to induce ot hers to become sure favourable position place the funds of the societite a have been long contemplated."

Subscriptions received 153 Expenses at Shows,
Bands, paid Judge, Entries for Pr
Admisaions

Eands, paid Judge,
Acting Secretary,

Arrears due to the Society, 352. 14s.-Debts owing by the Soctety, none.
The rules and bye laws of the Society were read approved of, after some verbal alterations. It was proposed and carned that a Committee of sever, be appointed to take thereon to the Society,
re-admission of Mr. Bates, and report thersingly. Committee for
and sucl Committee was appointed accordingly and sucls Committee was apper, Rev. F. Barnes, D. D., Cation of
the year 1844--Rev. J. Baker,

which is called Candollea cunelformis in gardens is a species
with leaves and present plate, and stamens placed from siz to nine in a parcel;
otherwise it has much the otherwise it has much the same appearance. This species is
manifestly very different manifesty very different. The former comes, or is said to come,
from King George's Sound ; this has been raised from Swan River
seeds. seeds. In that country, therefore, they are not very different.
Relying uphat the traditionary app,acation of the name c. crinei-
formis, I separated the present piaut uncter the nameof dra. But upon lonking into pris \(I\) authorities, I fegin to to count
diont
whether this or the small wie has the hest clam to the former name. De Candolle says nothing about the numiser of stameng figure in the " Hotamcal Magaz ne,", 2 , 711 , of what purports to be to mine stamens, and not at al. of thus, which has l, ut four. No
doubt, indeed, can be well entertained about the figure being generally intended for the C. cuncifornus of the gardens, as seems
proved by the shortncss of its petals; and it mas therefore bo presumed that some matale has been mande it man thicrefore be
 able for the large size and orange colour of the ann of sts seenk. represent the nature of the mace in that spice. This, in and wirech-
house plant, and will grow freely in ain ost any sort of soll, but and sand, in equal proportions. It will bloom freely in a pot, out in a bed. Whether potted or planted out, the e cech of the
plant (that portion of the stem immediately abr ve the woll shoula
be a litule elevated, be a littie elevated, otherwise it is liable to suffer trom tarmy in
winter. Water should be liberally given durng the summer
months, and plenty of air at applying no fire-heat except to keep off front. It is carile perm its,
gated by cuttings under ordinary treatment.
 Pentstemon Mexicanuc, buder whinch thing wherect the name
gardens, has been puhbished. It has poselbly priginated in Bel from, wexico. the a wiant seem
from Mate
who has given particular is of opinion that this is
stemon, with the same or very little) of th sterile stamen corolla, but withont any trace

It also difiers, he says, from Capraria and Russelia, in its decidedly many points. It is a very pretty greenhouse plant, quite peculiar the profusion of little corymbs of showy purple and white flowers which rise up from among the leaves on long purple scapes. It and kept rather dry, in an intermediate house between a stove and greenhouse, during winter. In spring it should be re-potted
in light free soil, chiefly leaf-mould and sandy-loam, and placed
in a greento in a greenhouse, where it will remain in bandy-loam, and placed the usual way.- It matay be propagated
Mogegister.
phyte). Orchidacear. Gynandria Monandria.-On (the prespioccasion we shall only point out in what respect this plant
difters from M. pardinum, the only species to which it approaches closely. In habit the two are similar, but M. aromaticum is the
smaller, and has shorter leaves. The spike of M. paxdinum is
much longer, and bears three times much longer, and bears three times as many flowers; the sepals
and petals are narrower, and more taper-ppiated: their difference in colour is obvious; the labellum of M. pardinum has the
same form as the sepals, except that it has three sharp-pointed
lobes, and a lobes, and a kind of stalk, which M. aromaticum wants. This
species, although only introduced a few years since from Mexico,
is now comole is now common, and although of little beauty, is vaiued for the
nicul Register.
Al,STgesmeria lineatiflora. Lined Alstremeria. (Green-
house Perennial). Amaryllidaceæ. Hexandria Monogynia. - At lasse Perennial), Amaryllidaceæ. Hexandria Monogynia.-At
last we have the pleasure of publishing the true Alstromeria
lineatifora, from Peruvian roots presented to Society by, John Mactean, Esq., of Lima. It is one of the finest
of its class, and although, doubtless, very near A. Liptu, pere grina, and pulchra, apparently distinet from either. It will be
found that A. pulchra has the sepals and petals serrated, which is never the case in the other three, and that the
form of their leaves or sepals affords clear marks for fant dorm of their leaves or sepals affords clear marks for further
discrimination. In A. lineatifora, the leaves are short, very
blunt, and of nearly blunt, and of nearly equal size; in A. peregrina they are also of
nearly equal size, but very sharp; and in Ligtu the upper are
very narrow and taper-pointed. Then, as to the sepals, in A.peregrima they are deeply nbcordate, in Pulchra narrow, spatu-
late, nd obvate with a jitte point, in Ligtu roundish obovate,
with a very small point, and in Ineatiflora ohovately wedge shaped, with a large point. By these marks it appears that these species may be certainly distinguished; and that being
so, we are constrained to cecard and not a mere variety of Ligtu. It is a greenhouse perennial, other peat and sand. This, like many other species of Alstroe-
meria, produces tuterous roots in o quently it requizes a large pot, which should be nearly half filled place, where it will receive very plittle whould be set in some airy state, plenty of water should be given, and air at all times whe the weather will permit. It may be propagated abundantly from
seed.-Botanical Register.

\section*{MISCELLANEOUS}

Grafting the Grape Vine--Nothing is more simple than this if the right mode be adopted. Cut off the old
Vine below the surface of the eartlu, after the leaves are fully expanded, and all danger of bleeding is past. Split the stock as in cleft-grafting. Insert the scion, consisting of first cut the end to be ingerted in a wedge-like shape If the stock close firmly on the scion, tying is unnecessary Draw the earth up around then must be bound up tight. mainly depended on, usually the second from the top just ever with the surface, and the work is done. The rise from the stock, those that spring from the scion, all but one, and training that up carefully as it grows. No this way. No clay, or wax, or adhesive plaister is wanted. No special care is required to fit bark to bark, as in other tock. Thave always put the scion on one side of the stock would admit of it, put in two scions, one on each side of the cleft, but never have taken especial care to paper, and then drawing up the earth, as before mentioned, omitted. found success far more certain when this was tial that the operation be performed after the leaves of the over. I am informed, howerer all dangex of bleeding is that success by this mode is just as certain, if the operahave not peried took up the stock, grafted it as above described, andjthen planted it where I wanted it. On the lst of June, of this Vine. It had on the 30 th June grown about two feet. I lave had scions grow, when put on strong roots, fully crops the second year. A white Grape from France of our on the root of the vigorous-growing Fox.Grape cuttings of the same Grape, treated as cutting year, while grew very slowly, and were five years in coming to a bearing found to be wonderfully strengthened it have invariably the roots of our strong native kinds. In propagating by single eyes; but I find that single eyes suctings, and much less certainty than cuttings. I greatly prefer short cuttings, inserted in pots, put on moderate bottom-heat, April. I have Vines that are now four and remain in bigh, from cuttings inserted last January, and managed New Medicine.-Much is about a new vegetable medicine. Dr. Mettayer (and ates him many other physicians) make use of an infusion of Date Plum, whose bark has alreads been also called the febrifuge, with surprising success in cases of Chiol as tum, and the worst forms of Mississippi diarrhcos. The particulars as to the manner of applying it are to be found
in Hay's 1 American Journal of Medical Science,"
October, 1842 . October, 1842.
Cranberries.-The species of Cranberry most commonly found in the United States has been described as an in digenous, low trailing vine, growing wild in bogs and meadows, and bearing a beautiful red berry of an exceedingly sour though agreeable taste, which is much used in domestic economy for tarts and sweetmeats. Mr. Kendrick, of Boston, says the Cranberry is a plant of easy culture, and not a doubt exists that meadows which are now barren wastes or yield nothing but coarse herbage, but answer for their growth. They mrow well it is said, will after draining. If the bogs are covered with bushes they should be removed; but it is not necessory to rushes, as the strong roots of the Cranberry soon overbe plouem. It would be well, however, if the land could Henry Hall, of Barnstable, who has cultivated the Cran berry more than 20 years, usually spreads beach sand on his bogs, and digs holes four feet distant each way, the same as for Corn, though somewhat deeper. In these holes three years the whole gronnd roots, and in the space of The planting is usuall bogs are drier and can be better duga autumn, when the other geasons of the year. better dug or ploughed than at is said to raise 400 year, A Mr. Hayden, of Lincoln, Mass., bring him 400 dins in more. An a more. An acre of Cranberries, in full bearing, will often produce 200 bushels; and although a moist soil is best snited to the plant, yet with suitable mixtures of bog earth or mud, it will flourish, producing abundant crops, even
in a comparatively dry soil.-Dover (N.H.) Gazette. On Fermentation, \&o. By Prof. Mitscherlich.-Fermentation is effected by a vegetable, putrefaction by an animal production. In the course of the two last winters stances only one species of Infusorium to be developed which consisted of one or of several globules, in the latter case arranged in series; the diameter of such globules was about 0.001 mm , the motion vibratory. According to his observations it would seem probable that the other animalcules which are observed in putrefying substances bave insects, insects, or some other means. A certain quantity of these Vibriones, and the putrefactive process is dependent, according to the author, on the free access of a certain amount of atmosphere to the decaying substances. The maceration of vegetable substances in water, even when pe temperature in the rooms is kept at a summer-heat, substances are employed in a clean state. During this process nitrogen is disengaged. These Vibriones are widely diffused in the intestinal canal throughout its entire course, in the cavity of the mouth, and in the stomach, of whe it is very easy to be convinced by examining under the teeth; sometimes they are even found on the skin, but the author has hitherto not succeeded in detecting them in the blood, in the milk, in urine, in the gall, or in other fluids of this kind. When a little sugar is added to augments which these amimals are formed, their numbel production is generated, viz, the same time a vegetable of sugar be adda the parger amoun pended or censes en and of these animals is sus is formed. The author has a greater quantity of ferment formed in a liquid which contained no sugar. Whether a fungus be the fermentative fungus or another species, may be determined with certainty under the microscope; but also very, easily by adding some of it to a solution In a clear lifuid, in which it is nossible for ferment to be produced, a turbidness is first possible for ferment the microscope globules of various sizes, from the smallest Froms From day to day the snall glohules increase in size, and many new ones become apparent. In some liquids, as dual globules are observed, which are generally of an oval form; and sometimes, but rarely, a second is developed at one of the extremities, but thas never attains to the size of the primitive globule. Ferment which has been is otherwise circumstanced: from having been multiplied through a series of years it has mocquired a constant chat distinguished with certainty, the kinds of ferment may be top ferment. The former multiplies at a temperature which must not exceed \(48^{\circ}\), nor go below \(32^{\circ}\) Frahr. ; this is the ferment in Bavarian beer. The most beautifully multiplies at a temperature of alfout \(75^{0}\). Bottom ferment consists of single globules of various sizes. The author never observed a small globule to be formed on any diffused throughowt the liguid. In top ferment scarcely ever could any single small slobules be detected, but only large ones, at the extremities of which the smaller globules were developed, thus forming ramifications. These infrease the efore by the moduction of gems; the bottom in the liguid pecies of ferment in the varmous periods of their development. In the older ferment an envelope and granular contents may be readily distinguished, which becomes,
however, more evident on the addition of a drop of
aqueous solution of iodine. By means of a compressorium easily pressed out under the microscope. The author considers it probable that in the bottom ferment the globules burst and disburthen themselves of their contents, from each granule of which a new globule is developed, sothett the bottom ferment would be multiplied by sporules. Subbottom ferment would be multiplied by sporules. Sub-
stances which act as poisons on fungi destroy the action of ferment, for instance corrosive sublimate, and other of ferment, for instance corrosive sublimate, and other
substances of similar nature; but liquids which act most substances of similar nature; but liquids which act most
violently on the animal frame, such as tartar-emetic, in violently on the animal frame, such as tartar-emetic, in turb the process of fermentation. Several fungi which are turb the process of fermentation. Several fungi which are
known as vegetable diseases are similarly circumstanced, as for instance dry-rot to woody fibre; and with these facts a new field is evidently opened, explanatory of the
decompositions which the roots of plants are capable of decompositions which the roots of plants are capable of
effecting in the soil; and it may be expected that we shall be able to demonstrate by experiment, what general experience has shown, that the roots of plants, when unable to obtain from the atmosphere the substances requisite for improbable that the roots themselves effect the necessary decomposition of the substances contained in the soil, just as the greater portion of vegetables obtain the requisite substances for their first developnent from the seed
itself. Although this is difficult to prove in the higher order of plants, it may be proved more definitely in the lower tribes, especially in the fungi, as for instance in the Champignon. The process of fermentation is therefore of considerable interest. One of the most important chemical combinations is decomposed by a contact-substance, which contact-substance is an organized being which but its first origin is moreover of great interest, for it is formed in a liquid in which it appears as numerous points so small as to escape observation.-Poggendorff, as quoted in the Annals of Natural History.
Agraculture of Ceylon.-"The Kandyan plough is only like an elbow ; it merely tears up the ground, something as if it were done by hogs. They then overflow the field as if it were done by hogs. They then overflow the field
water. They plough twice before they sow; but before they give the first ploughing they let in water upon the land, in order to make it soft and the easier to be
worked. After it is once ploughed, they usually make up worked. After it is once ploughed, they usually make up
the banks; for if they were to put off doing so till after the second ploughing, the soil would have become mere pensable, not only as paths for the people to walk upon through the fields, who otherwise must go in the mud, ground. They in and contain the water overflowing the ground. They make these barks as smooth and level as respect they pay great attention to neatness. These banks at the top are not above a foot in width. But after the laid is ploughed, and the banks are finished, it is again laid under water, and remains so till the time for the
second ploughing, when it becomes exceedingly muddy, as much from the trampling of the cattle as from the plough; for the more it is stirred up the better. Sometimes they use no plough the second time, but only drive
their cattle through and through the field, until the soil is made sufficiently muddy. Whe land being thes soil pared, it is still kept overfowed with water, in order that the weeds and grass may be destroyed. They then
soak in water for a night the Corn whicin they intend for seed. The next day it is taken out and laid in a heap, covered over with green leaves; and thus it remains for
five or six days, so as to make it sprout. They then it again, and lay it in a heap covered over, as before, with green leaves; and thus it is caused to shoot out its blade and roots: whilst this process is going formard, they have prepared the ground for sowing,-which is thus done: Which they drag over the land by a pair of buffal long, oxen; not flat-ways, but upon its edge, which is so done and it also levels and makes the ground so together; even, that the water afterwards stands equally over it. It still remains covered with water whilst the seed is growing, and until it is become fit for sowing, which to soak. The seed being ready, they let off the water and with boards of about a foot in length, fastened to
long poles, very smooth, and making small furrows in it, that in case rain or other water should come in, it may drain andy then more water now would very likely rot the seed. They
then sow, which they do with great evenness, strewing the seed, which they do with great evenness, strewing remains without any water, until the grain has grown three or four inches above it. There had been gaps made
before in the banks to let out the water; these are now stopped up to keep it in ; which is not only to noure now
Corn the Corn, but to kill the weeds, for they always keep their grown about nine inches higharden. When the gram has Weed it, and to pull it up where it has grown too thick,
80 as to It as to transplant it, to places ' where it may be wanted. let the stands overflowed, till the grain is ripe, when they manurping. They never, as I before remarked, use ling, and soaking ; but their mode of ploughing, tramphecessity for it. The ground, apparently obviates the and as they had assisted each other in tilling the ground, field, and then lise at harvest. They first reap one man's
of the grain is cut; and their custom is that every man, during the time his Corn is reaping, has to find all the rest with food. The women's work is to gather up the
Corn after the reapers, and carry it all to one place." Corn after the reapers, and carry it all to one place."
Col. Campbell's Excursions in Ceylon, as quoted in the Athencum.
Experiments with Manures for Turnips.-The result of all experiments with manure is decidedly in favour of
Guano as a manure for growing Turnips. So very appaGuano as a manure for growing Turnips. So very appa-
rent was its superiority in this respect in most of the fields, that there was no difficulty in pointing out the furrows in which it had been used. The general idea of its
value in the commencement of the season, when it was applied, seems to have been that one cwt. of Guano was equal to five yards of farn-yard manure, or six bushels of bones; and it is our impression, from the result of the estimated. A crop of Turnips, for which the first pre mium was awarded, was raised on different fields from the following proportions of manure :

Aberdeen Yellow and White Globe
Swedish, one field ..

\section*{Swedish, one field
Doo, another field}

One furrow in the last field, grown with Guano at the rate of four cwt. per acre, notwithstanding the very heavy manuring which the other part of the field had received,
was very considerably a better crop.-Galloway Courier Presence of Organic Matter in Water.-In the last Number of the "Transactions of the Royal Society of Edinburgh," Prof. Connell has shown that a notable quantity of-apparently nitrogenous-organic matter is present in the purest waters from terrestrial sources, an excellent illustration of which is afforded by the wellAnown spring of St. Anthony's well, at the foot of Arthur's Seat, near Edinburgh. The water of this well may be considered as a very pure spring-water, as respects it shows that its proportion of organic matter is consider able. It will readily occur, that if this matter exists in all waters which have filtered through strata below the considerable importance in the economy of nature. Being in solution in water, it is evidently in that state which is best adapted for being taken up by the roots and fibres of \(r\), and so contributing to their nourishment, in so And Prof, Connell asks, May not a bart these channels. effects of irrigation be due to such dissolved organic matter? Even as regards the animal economy, we cannot suppose that it will not contribute, in proportion to its partaki, to the nourishment of man and other animal partaking of such waters; and this will more particularl be true, if it really be an azotised body.
Swan River Vegetation.-Lobeliacese and its allied but only three of much order we have many species, heterophylla of much beauty; these are the Lobelia latter is one of our most beautiful plants, it varies with snow white, deep purple, rose-colour, and every possible property of growing and flowering, bringing the seeds to maturity in our hottest and driest weather, without receiving any nourishment from the roots, which are geneis extremerore the plant begins to flower. This species poisoning the shid, and I long wrongfully suspected it of time I have gathered over 60 Swan River, or rather Western Australian species; by far the larger part of these are greenhouses in Engend, for independently of the the irritability of their column, they tiful gaily-coloured flowers, the abundance of which compensates for their smallness, and their tints are by no means confined to pink, which generally has been the colour of the species seen alive in Europe. We have many yellow and purple species, one beautiful climbing species has deep scarlet fowers. The Stylidium hirsutum Western Australia, but that with the finest foliage grows n the ironstone hill, to the south of the black-snake creek; I have observed the old seed-vessels on the
plant, the flowers are not known. Stylidium Drummondii of Lindley, an inhabitant of the rocky pass on the Darling Range, growing eighteen inches feet high, with large nearly white flowers, is a very fine species. Of Goodeniacere tion of yellow shep chefly blue-flowered, the proporiest of the latter is Velleya lanceolata, which The pretthe borders of the sandy country to the east of the Toodyay district. I have noticed our beautiful red and yellow Leschenaultia in our journey to the south. My celestial blue Leschenaultia grandiflora is common near the foot of the Darling Range; my Leschenaultia sanguinea, which sports into endless varieties of shades of purple and scarlet, is one of the most beautiful plants our colony can King Georg's Leschenaultia formosa is common near have a fine yellow-flowered plant of this order, common about Augusta, and growing five or six feet bigh. One of our handsomest annuals is a species of Brunonia, which grows in large patches in the grassy districts, and forms, the beautiful pink and yellow Everlasting flowers that surround it.-Drummond, in the Inquirer
frican Oil.-The Carapa Taloucouna, a meliaceous plant, which furnishes the seeds from which Tallicoonah or Kundah oil is procured, is found growing abundantly in the Timneh country, and over the colony of Sierra

Leone. The tree is lofty. The fruit is a large, 8 mewhat globular five-celled capsule ; the seeds, of which there are
from 18 to 30 in each capsule, vary in size from that of Chestnut to 18 in each capsule, vary in size from that of a Chestnut to a hen's egg; they are three-cornered, convex on the dorsal surface, of a brownish or blackish red colour, and rugous. Specimens of the seeds, with the fruit are contained in the Banksian Collection, at the British Museum. The natives mannfactare it into oil, which affords a pleasant and good light. The leaves are used by the Kroomen as a thatch to their huts. At the village of Kent, near Cape Schilling, the oil is manufactured as follows :-the seeds are dried in the sun, then hung up in wuts racks or hurdles, and exposed to the smoke of the oasted and exposed for a sufficient time, the seeds are reduced to a pulp. The mass is then boiled, when the supernatant oil is removed by skimming. Tallicoonah oil, medicinally, is both purgative and anthelmiatic ; its nauseous odour and bitterness render it, however, an unpleasant remedy. It is sometimes liquid, sometimes solid according to the variable quantities of oleine and stearine which it contains; and it owes the bitterness which it possesses to an alkaloid principle. Mr. Redwood, Member of the Pharmaceutical Society, who made a few experiments to determine some of the most prominent characters that alcohound it to be entirely saluble in ether, and stance, which pas temperatures, on which the alcohol took no effect. The former contained the bitter principle and the nauseous odour of the oil, the latter was nearly colourless and tasteless. Tallicoonah oil is sold in the colony at 2 s . a gallon retail, and could be prooured in abundance from the coast as an article of commerce. Its medicinal properties are fully detailed in the Pharmaceutical Journal perties are fully detailed in the Pharmaceutic

The Palmetto Root.-Another important branch of business is likely to do much for the state of Mississippi. The Palmetto-root, which almost covers the country near the sea-shore, is found to contain a large quantity of tannin. These roots lay almost on the top of the ground, three to ten or twelve starting from one common centre, or top root, and frequently growing ten feet long, and from two and a half to four inches dameter, of a spongy fibrous texture, the leaves springing out of the extreme end, which lengthens the main root as the old leaves fall off. The main root is attached firmly to the ground by small fibrous roots growing out, and directly down from the lower side of the main root. This root can be dug up and ground cheaper than oak bark, besides the clearing of the land, which is an important consideration, as taking up these roots has heretofore been considered the most expensive part of our clearing.-American Agriculturist. The Date Tree.- We calculated at Dalaki (in Persia) Where very good Dates grow, that every full-grown tree produces 100 pounds weight of fruit, which brings to the he Consequently, the annual value of 100 Date trees, in taxkept gardens, amounts to only 300 rupees.-Bot. Zeit.
Experiments with Guano on Polatoes.-In the districts f Dumfries-shire and Galloway, numerous trials on an extensive scale have been made of Guano, with a view accurately to ascertain its comparative qualities; and as it is desirable that the results of these should be made known, we give the following:-Guano, at the rate of 5 cwt . per Scots acre, was sown along the drill before planting the Potatoes, and a variety of drills compared with \(30^{\circ}\) cu

> White Potatoes, called " Daily Wonders," Iately
introduced, with Guano, per Scots acre : With dung, per do.

The land is fair in point of dryness, it had been cropped for several years, and was in grass before Oats-the soil from deep. Where Guano alone was used, the shaws atronger and of a darker green colour ; but, during September, decayed sooner than where the dung was used. With the mixed manure, the same effects as to strength and colour were produced; but in a less degree, and they remained fresher to the last. From this circumstance, and the result of weight, we would be inclined in future to adopt the mixed manure, varying, of course, the proportion according to circumstances. On some lands in Dumfries-shire this facility of raising productive and profitable crops of Potatoes with the half quantity of farmyard manure, may lead to the partial adoption of an additional grain and green crop before sowing out, viz, First, Oats next Potatoes, with dang and guano; then Wheat; then Turnips, with dung and bones mixed; then Barley or Oats, with Grass seeds.-Galloway Courier
Constituents of Maize, Dr. C. T Jackson made verbal communication on researches made by himself and Mr. A. A. Hayes, of Roxbury, respecting the saline and other ingredients of Zea mays, and other grains, exhibiting specimens of seeds to which Mr. Hayes' test of sulphate of copper, for the detection of the limits of the phosphates, had been applied. He also exhibited specimens to which tincture of iodine had been applied, which indicated the extent of the starch in each kind of grain and in several other plants. Mr. Hayes' discovery of the limits of a
salt of the peroxide of iron was demonstrated by soaking

Indian corn in sulphydrate of ammonia. The relative proportions of oil in the different varieties of corn was shown by sections of the kernel, also the relative proportions of the zeine of Gorham or the gluten of corn. The causes of the peculiar explosion and evolution of the starch and glation of corn in parching was explained portions of the grain. Dr. Jackson had observed, in April, 1840 , while analysing the ashes of Indian corn, that after combustion of the corn in a platina capsule, at a high temperature, the platina was rendered brittie, and On examining into the cause of this, he discovered phosphoric acid united to some volatile or destructible base, mixed with the phosphates of lime and of magnesia. His subsequent researches satisfied him that the volatile base in question was ammonia, which he separated by the
action of potash and lime, at a temperature below that action of potash and lime, at a temperature below that
required for charring the grain. By the action of nitric acid required for charring the grain. By the action of nitric acio
he burnt out the carbonaceous matter from the ashes of corn, and procured a considerable quantity of glacial phosphoric acid. In all these experiments, thus far, the whole grain was employed. In May, 1842, Mr. A. A. Hayes,
of Roxbury, exhibited to the chemical association some of Roxbury, eshibited to the chemical association some
specimens of southern corn, which had been cut in two and soaked in a solution of sulphate of copper; and this test most beartifully marked out the limits of the phosphates in that grain. Profiting by this interesting experiment, and observing that the phosphates were indicated only in the cotyledon of corn, Dr. Jackson disseected out the cotyledons, analysed them separately; and glacial phosphoric acid, phosphate of lime, phosphate of magnesia, and ammonia were obtained. The proportions in the ashes of the whole corn was but 1 per cent. of phosphates of lime, magnesia, and free phosphoric acid, and a little silica. The cotyledons taken separately gave 6.4 per cent. of fusible matter, which ran freely when melted magnesia, 0.8 . He also made an extenaive series of researches on other seeds, both of the Monocotyledonous and Dicotyledonous plants, which determined the existence of the phosphates exclusively in their cotyledons. The specimens to which Mr. Hayes test had been apphed, and of various kinds, Squash and Pumpkin seeds, Horseof various kinds, Squash and Pumpkin seeds, Horse-
Chesnuts, the common Chesnut, Pea-nut, Barley, Oats, Wheat, Rye, Buckwheat, and Cocoa-nut ; also Potato tubers and Turnip bulbs. In all these the existence o phosphates was demonstrated. In Almonds, Walnuts, phosphates was demonstrated. In Almonds, Walnuts, Butternuts, and most oily seeds, the suiphate of copper
fails to demonstrate the presence of phosphates. The fails to demonstrate the presence of phosphates. The limits of starch in the Turnip, and in several other plants which were exhibited. A sample of the hard and trans parent portion of Indian corn, from which the oil and zeine had been removed by alcohol and ether, was proved by the iodine test to be starch. It was observed that weak tincture of iodine does not colour this portion of the corn until the
oil is removed. If strong tincture of iodine is employed, the alcohol removing the oil causes the freed starch to take the blue colour. Beans and Peas, consisting mostly of legumine, discovered by Braconnot, do not take a blue colour like the starch containing grains, but become dark brown. Specimens of various germinated and growing
plants were also tested before the society. In the Potatoplants were also tested before the society. In the Potato-
sprout the starch was traced up into the plumule about sprout the starch was traced up into the plestrine was present, the starch having undergone a metamorphosis into that substance. Similar experiments were tried on high, in pure powdered quartz. The changes which the seed had undergone were quite interesting, and it was seen, by the jodine test, that the starch of the absumen dextrine absorbed, and was changed in the plu where the oil exists with starch and gluten, had begun to change, and iodine instantly forms a blue compound with the of phosphoric acid in the radicle and plunoule, and a little around it, was readily proved. On testing germinated English Beans the presence of phosphates was demonformation of starch from the legumin. The same experiment was performed with the common Bean, with the mane results It will be interesting to study the chance same results, It will be interesting to study the changes
which legumin (a substance now supposed to be identical which legumin (a substance now supposed to be identical with caseine), undergoes in the process of germination. As yet we know of no chemical researches on its transformations in the living plant. Dr. J. had observed that Cucurbitaceous plants contained nitrate of potash, and had consequently directed its application around the roots of
such Vines. Observations on such plants grown on nitrous ground, where old barns bad been removed, proved the value of that salt as a manure for Squashes, Pumpkins,
and Melons.-Proceedings of Boston Society of Natural History.

\section*{}

Chemistry in its Applications to Agriculture and Physiology. By Justus Liebig, M.D. 8vo. Taylor and is rather THORD EDITION IT is rather wore than three years since this remarkable book was laid before the British Association. In the course of that time two Editions have been printed; they have been received on the one hand with most extravagant praise, and on the other with unmeasured censure. The first was attributable to the clearness with which some views that are really new, and others that are thought so, were brought before the public; the second arose from the
manner in which Professor Liebig was so ill-advised as to
attack Vegetable Physiologists, of whose science he knows attack Vegetable Physiologists, of whose science he knows
much less than they of Chemistry. The issue of all this mach less than they of Chemistry. The issue of all this
bas been productive of mnch good. Had it not been for English trumpets, public attention would never have been so strongly directed to Professor Liebig's excellencies; and we have to thank the German catcalls that his own thoughts have been 80 advantageously turned to the duced a to a very considerable extent unlike them. We hear no more of Starch consisting of concentric layers of wax and amylin ; the exaggerations about grand experiments on about and meadows are omitted, as is mathe mat and the offensive observations upon Physiologists. In the place of these and other subjects that are cancelled we have chapter considerable quantity of new matter. A new of Arable Land," another to "Fallows;" that on the "Rotation of Crops " is almost entixely rewritten, and so devoted specially to a general retrospect of the theories included in the previous pages. To these are added supplementary chapters on the sources of ammonia, and on the questions whether Nitric acid is food for plants, tation. In an Appendix are given at length the important tation. In an Appendix are given at length the important
experiments of Wiegmann and Polstorf on the food of experin.
In the former editions ammonia was the great subject of discussion. As chemists seem agreed in considering it improbable that plants should obtain their nitrogen directly from the air, and as all plants contain that
element, ammonia seems to be the only source by which it can be supplied; and in all probability this is a just view of the case. Nevertheless it is by no means proved that larger quantities of ammonia than the atmosphere naturally contains are necessary to the most healthy vegetation ; and although it is certain that matter rich in it has stantly present along with the ammonia may be of equal or even greater importance. Such is sulphuretted taken up by Professor Liebig, who devotes a whole chapter to its consideration. After stating that animal matter contains invariably the substances named albumen,

From what source does the animal body derive these three fundamental components? Unquestionably they subsist ; but in what form, and in what condition, are they contained in plants?
answer these questions with positive certainty Plants contain, either deposited in their roots or seeds, or dissolved in their juices, variable quantities of compounds containing sulphur. In these nitrogen is an invariable constituent. Two of the compounds containing sulphu exist in the seeds of cereal plants, and in those of legumiis always present in the juices of all plants; and it is found in the greatest abundance in the
use for the purposes of the table
"A very exact inquiry into the properties and composition of these substances has produced a very remarkable the juice of plants, is, in reality, identical with the AL \(\#=-\) MES contained in the serum of blood, and in the whits o an egg ; that the sulphur-compound in the seeds of the cereals possesses the same properties and composition as
the fibRIN of blood : and that the nutritious constinuent of Peas, Beans, and Lentils, is actually of the same natur and composition as the casein of milk. Hence it follows that plants, and not animals, generato the constiңuent of blood containing sulphur. When these are absent from the food given to an animal, its blood cannot be forped portionally nutritious and fit to sustain the vital procdsse of the animal body, according to the amount of these ingredients contained within it.
-There also exist certain families of plants, such as the Crucifere, which contain peculiar sulphur-compound tuents of blood. The seeds of Black Mustard, the Horseradish, Garlic, Onions, and Scurvy.grass, are particularly obtain, by simple distillation with water, certain volatile oils, differing from all other urganic compounds not containing sulph
agreeable odour.
"Those compounds containing sulphur are present in the seeds of all plants, as well as in plats themselves employed for animal nutrition, it is quite obvious that a substance containing sulphur is absolutely essential to the development of such compounds, in order to supply to them their proper proponion of in element
These are very rean ated wreat attention. The opinion that sulphur is beneficial to plants is not originally Prof. Liebig's; he, on the contrary, so lately as 1842 , adopted the crroneous views of Caristison and Turner, and
regarded the "hydrosulphate of ammonia (sulphuret of ammonium) as a deadly poison to vegetables, the properties of which we cannot change by dilution. (Ed. \({ }^{2}\) p. 195.) It was, however, proved experimentally by Mr. Edward Solly (First Report of the Chemical Committee
of the Horticultural Society, P. 9, June, 1842) that this
wàs a mistake. "I made use of the hydrosulphuret of ammonia, the very compound described by Liebig as being a 'deadly poison ;' but in place of killing plants, I found that in small quantity it produced decidedy beneicia effects: in some cases when it was applied to plants in an
unhealthy state from the action of other substances, it had the effect of invigorating them, and of restoring thei leaves to a healthy, green, and crisp condition. The plants with which these effects were best observed were
the garden Lettuce and the common Windsor Bean. The the garden Lettuce and the common Windsor Bean. solution of the hydrosulphuret of ammonia employed was prepared by mixing a saturated solution of the compound with firty times its buik of water: such a solution had a most nauseous disgusting smell, and contained of course a larg quantity of sulphuretted hydrogen. The piants under experiment were selected from many, and were of the same age and size, and as far as possible in the same healthy state of growth. Some were watered with com mon water, others with a dilute solution of hydrosulphure of ammonia. At first only a few drops of the solution were given, but finding that this producenf inttle or no ounce a day, and sometimes even more, was given to each plant; it was found that those thus treated became stronger and sturdier, their leaves were of a bright deep green, the space between the nodes, or the distance from leaf to leaf, was shorter, and the stems were in those watered in the ordinary way, although all other circumstances were alike, and care was taken to place all under the same condition, by exposing them equally to every day. 'Plants in a languid state from over-doses of nitrate of Mas a or saline maveres, if not too much injured by their previous treatment appeared \(t 00\) much injured by ly previous with the solution of hydrosulphuret of ammonia, than when merely treated with common water. In some of these latter cases a much stronger solution was employed than that already mentioned, containing two drachms of the saturated solution of hydrosulphuret of ammonia in eight drachms were given daily. For some time after thus watering the plants the eart retaised a strong smelied sulphuretted hydrogen, and the water which drained through, when tested by a salt of lead, evidently contained a large quantity or that gas. And then he proceds point out the extreme improbability that a substance 5 constantly evolved from decaying matter as sulphuretted hydrogen should not be the food of plants. Its presence manures is well known and readily proved, but phe eace io the air, in which it exists in exceedingly bat quantity, is less readily shown. We know, however, that in cosstantly being formed on the surface of the earth, and we bave evidence of its presence in the air by sect he blackening as the tarnishing of some metals take place gradually and slowly, are principally occasioned by the presence of sulphuretted hydrogen and its compounds, more particulariy the hydrosulphuret of ammonia, in the of puritying the air, and retaining it in a fit state for the respiration of men and animals, the absorption and decomposition of sulphuretted hydrogen by plants must constitute not the least important of their functions.
We believe, too, but cannot lay our bands upon the passage, that Dr. Lankester had previously brought forward some evidence to show
The source from which sulphur is obtained by plants is not the atmosphere, according to Dr. Liebig, but the soil, "Thee ir" he says ( 63 ) " conpost conta subtane air, he says (p. 63), caniot contais aje we except minute and scarcely appreciable traces of sulpharetted hydrogen." We confess our inability to understand this. That anamonia is obtained from the air whe there in the author's triumphant proofs, and yet it exists huretted as minute and inappreciable a quanticy as suphe latter hydrogen; and we cannot compresend why
should not be thus supplied as well as the former. If not, what, let us ask, becomes of the volumes of this gas co we tinually escaping from the surface of the soil. Alourets? to suppose that it is all consumed in forming sulphurets? Surely not.
Next to sulphur stand phosphates in their importance contretation. This, indeed, is not a new doche former editions; not, however, we think, so strongly as now. question, for it seems to points out one thing more strongly than another, it is trkgreat importance of phosphates. Nothing is more lime on able than the action of the superphosphate or yet seen employed from yarden-soil being rich in all other substances excep phosphoric acid, which is always largely carried off, and but sparingly returned in the processes of garden curiking The remarks of Prof. Liebig on this subject are too striking to be omitted:-

In a former letter I showed you how great a waste of phosphates is urravoidable in England, and referred to the well-known fact that the importation of bo felds exhausted a most admirable ma 1827 the importation of from this cause. Ta the year 1000 tons, and Huskisson bones for manure amounted to \(100,000 /\) to \(200,000 \%\)
 sterling. The importalion to the waste
"Another proof of the efficacy of the phosphates in
restoring fertility to exhausted land is afforded by the use of tuction into - a manure which, although of recent intro duction into England, has found such general and exten-
sive application. "We believe of guano is equivalent to the importation of eight bundredweight of Wheat-the hundred-weight of guano assumes in a time which can be accurately estimated the form of
quantity of food corresponding to eight hundred-weight o quantity of food corresponding to eight hundred-weight of
Wheat. The same estimate is applicable in the valuation of bones.
"If it were possible to restore to the soil of England and Scotland the phosphates which during the last fifty year have been carried to the sea by the Thames and the Clyde,
it would be equivalent to manuring with millions of hun-dred-weights of bones, and the produce of the land would increase one-third, or perhaps double itself, in 5 or 10 years.
"We cannot doubt that the sameresult. would follow if the price of the guano admitted the application of a quantity to the surface of the fields, containing as much of the
phosphates as have been withdrawn from them in the same period.
"If a rich and cheap source of phosphate of lime and the alkaline phosphates were open to England, there can be altogether dispensed with after a short time. For these materials England is at present dependent upon foreign vents their ceneral application, and in sufficient quantity Every year the trade in these substances must decrease, their price will rise as the demand for them increases,
According to these premises, it cannot be disputed that the annual expense of Great Britain for the importa
tion of bones and guano is equivalent to a daty on Corn tion of bones and guano is equivalent to a daty on Corn foreigners in money.

To restore the disturbed equilibrium of constitution of the soil, -to fertilise ber fields, -England requires an enormous supply of animal excrements, and it must therebeneath her soil beds of fossil guano, strata of animal excrements, in a state which will probably allow of thei being employed as a manure at a very small expense.
The coprolithes discovered by Dr. Buckland, (a discovery The coprolithes discovered by Dr. Buckland, (a discovery and it seems extremely probable that in these strata England possesses the means of supplying the place of recent bones, and therefore the principal conditions of improving agricultur
"In the autumn of 1842, Dr. Buckland pointed out to me \(\&\) bed of coprolithes in the neighbourhood of Clifton,
from half to one foot thick, inclosed in a limestone formation, extending foot thick, inclosed in a limestone formsalong the banks of the Severn. The limestone marl of Lyme Regis consists, for the most part, of one-fourth ant in the lias of Bath, Eastern and Broadway Hill, near Eversham. Dr. Buckland mentions beds, several miles in extent, the substance of which consists in many places, of a fourth part of coprolithes.
"Pieces of the limestone rock of Clifton, near Bristol, Which is rich in coprolithes and organic remains, fragand were found to contain above 18 per ceat. of phosphate of lime. If this limestone is burned and brought in that state to the fields, it must be a perfect substitute for bones, been efficacy of which as a manure does not depend, as has genised matter which they contain, but on their phosphate of lime. The osseous breccia found in many parts of England deserves especial attention, as it is highly probable that in a short time it will become an important subject for conmerce. What In the remains of an exting subject for contemplation! In the remains of an extinct animal world, England is to find the means of increasing found the great support of her manufacturing industry in fossil fuel, - the preserved matter of primeval forests, -
the remains of a vegetable world." We quinte of a vegetable world.
We quote this passage for the sake of showing the vivid style of the author, and not because we quitet concur in
Prof. Liebig's anticipations concerning coprolites, whose value is probably exaggerated.
From these we turn to other considerations. It will be remembered that in former editions the author adopted, as a proved fact, the theory of excrementitious deposits by plants, and even went so far as to assert that it was a necessary consequence of their secreting power that excre-
mentitious matters should be formed. We and others have pointed out the objections that must be taken to these views; and upon tarning over the pages of this new abandoned. We find, however, at p. 75, that the accuracy of Macaire Prinsep's views is still unquestioned, at least in part. In this instance Dr Liebig relies upon the following case :-

\section*{"Let us," be says "consider the composition of the ashes} of two Fir-trees as analysed by an acute and most accurate chemist. One of these grew in Norway, on a soil of particularly composition, but to which soluble salts and by rain-water. How did it happen that its ashes contained no appreciable trace of salt, although we are certain that ts roots must have absorbed it after every shower?

We can explain the absence of salt in this case by which of the direct and positive observations referred to, ing to the soil all substances unnecessary to their of returnBut to our apprehension there must either be some error in these apalyses, or the trees never could have
absorbed any salt. For if they had ever taken it up, there must have been some portion remaining at the thme when
they were felled. It strikes us that this case proves too they w
much.
But if the old theory of vegetable excrements be virtually abandoned, or limited to the extrication of oxygen (p.170) we have a new one, which is not a little curious, Professor Liebig considers bark a kind of excrement. To avoid the suspicion of misrepreseutation we quote his words :-

These barks are in so far true excrements, that they arise from living plants, and play no further part in their vital functions; they may even be removed from them, without thereby endangering their existence. It is known that certain trees throw of annually their barks: this circumstance, viewed in its proper light, shows that, vital processes, materials arise which are incapable of experiencing a further change.

There is every reason to believe "that this separation takes place over the whole surface; it is observed not bence we must conclude that the same excretory process goes on in the roots
We will not set about seriously refuting this strange hallucination, but content ourselves with asking whether scurfskin, the points of our hairs, the ends of our nails or the slough of a snake are excrements?
We bad hoped that Professor Mohl had put an end to the folly of asserting that dryness of the soil is of no consequence to plants when matured; that is, we suppose, when the fruit is ripened. We are, however, mistaken. Professor Liebig maintains this opinion with as much pertinacity as if there was not a tree or bush within a undred miles of Giessen :-

When a plant is quite matured, and when the organs by which it obtains food from the atmosphere are formed, " carnic ace of

Deficiency of moisture in the soil, or its complete dryness, does not now check the growth of a plant, provided it receives from the dew and from the atmosphere as During the heat of summer it derives its carbon exclusively from the atmosphere.
It seems useless to put him right upon such points, for he does not appear to be acquainted with some of the therefore dismiss the subject for the present without further comment, in the hope that with time this learned chemist may become sensible of such errors as this, and his speculations about lactescent plants, which he still maintains have their moisture seoured from evaporation them by a waterproof envelops !

The Almanacs of Farming and Gardening.-The pproach of another year reminds us of these little proson's, published by the company of Stationers is a useful publication of 96 closely-printed pages, filled with all sorts of information relating to Horticulture; Glenny's is a sort of Florists' Calendar, very trashy, very dear, and chiefly intended as a puff of "The Gardener," a book containing a greater mass of ignorance than any work that we are acquainted with. The author tells his readers (p. 20) that "it the ground be hard frozen the seed cannot be of April ( 27 ) , that Chryssnthemums are the most untidy of all our flowers" (p. 34). the when most fruit-trees are budded in July the stocks are to be cut down to with buded in down to within a few inches of the ground (p. 34), and so Shaw contains 100 Als and Shaw contain 100 pages of We need not say that such a companion is invaluable to a We need Th say that such a compaaion is 96 a farmer. The British Farmers' Almanac has 96 pages, more loosely printed, and 16 pages of miscellaneous advertisements ; it contains two calendars, one for farmers, the other for garde
fairs, tariff, \&c

presents a rain-gauge. A cop-
opening below of a quarter of
an inch in diameter, is fastened upon a cylindrical tube, \(b\). A \(c\), is placed, which communicates with it below, and has a graduated scale attached. It is graduated scale attached. It is in the two tubes at the same height, and will be measured by the graduated scale. Enougi the graduated scale. Enough water is then poured into the ring which fastens the glass tube ring which fastens the glass tub just above the cock, and this
will form the zero point of the will form the zero point of the
scale. The diameter of the
known, a quantity of water that would occupy the same surface for an inch in height must be poured into the funnel, and the beight at which it stands in the glass tube will indicate the height at which an inch of fallen rain would stand in the instrument, and must accordingly be marked off on the scale. The same quantity of water should be added again and again, in order to mark off on the scale several inches. As the diameter of the tube is small compared with that of the funnel, the water rises several inches in the tube, and by this means many subdivisions of the inch may be easily made. When the scale is constructed in this way, it is of little importance what the form of the funnel is, as the relative depth of the rain is measured, and not the actual quantity. This apparatus rests upon a tripod, which should be fastened to the ground, so that the wind may not turn it over. The edge of the funnel should stand horizontal, and the opening of it should be small, in order to prevent a rapid evaporation of the water, as the true quantity of the rain should be ascertained independent of external circumstances. The best way is to measure of the water as after rain, reducing the quantity of it to the point marked zero in the scale before alluded to
Page 132.-" It is through the wind that the moisture of plants and the earth is constantly borne away, and thus the evaporation of plants is increased, for no still damp air, as is the case in a calm, surrounds plants.

Page 135.-" Shades over plants recently transplanted not only prevent evaporation from the plant, but they also prevent the moisture of the soil being carried away

Page 141.-" In the case of plants covered with thatched hurdles, is should be borne in mind that the material used for covering absorbs heat during the day, and produces an increased temperature by offering a resistance to the influence of the cold air, by radiating the heat immediately the sun is away. The heat also thus absorbed will be communicated to the covered plant, as there must always be a tendency to a balance of temperature between the covered and covering body.
Page 141.-"We find it very advantageous, during the winter, to surround those plants which grow on grass with leaf-earth (Lauberde) to the extent of about six inches in height and twelve inches in breadth.
Page 142.-" "In a climate such as ours, (Vienna, where frost and rime so often appear before or at the time of the flowering of our fruit-trees, it would be a senseless experiment to endeavour to force the blossoms by blackening the walls. In many parts of the country, branches of the Conifere are employed as a means of covering against the severe frosts at the beginning of the winter, and are continued till the time of the disappear ance of frost and rime. The longer permanest rest and the greater power of the sun's rays soon remove the resulting interruption.
Page 143.-The expression, \(30^{\circ}\) Fahrenheit, as stated in the original, can only be regarded as an error of the press. (The translator has altered it in the text of the work to \(3^{0}\) Reaumur.

\section*{THE NATURALIST'S CORNER.}
66. Impurities of Water corrected, -The use of certain plants and vegetable juices in correcting the bad qualities of water admits of anople illustration. It is understood that the original inducement of the Chinese to the use of tea was for the purpose of correcting the bad qualities of their water ; and our early colonists in America infused in the water, for the same purpose, the branches of Sassafras. Niebubr, speaking of the Nile, observes, "The water is always somewhat muddy, but by rubbing with bitter almonds, prepared in a particular manner, the earthen jars in which it is kept, this water is rendered clear, light, and salutary." Roberts, in his "Oriental Illustrations," has some interesting observations concerning the practices of the Hindoos with reference to this subject. He informs us that the brackish water in the neighbourhood of the sait-pans, or of the sea, is often corrected by the natives throwing into it the wood called be very bad, the well is lined with planks cut out of this tree. He adds-"In swampy grounds, or where there has not been rain for any long time, the water is often muddy and very unwholesome. But Providence has again been bountiful, by giving to the people the Teatia maram (Strychnos potatorum). All who live in the neighbourhood of such water, or who have to travel where it is always carry a supply of the nuts of this tree. They grind one or two of them on the side of an earthen vessel; the Water is then poured in, and the impurities soon subside. 67. Darnel.-The Lotum temulentum, or Darnel, is emarkable as being to the order Grasticated instance of a plant belonging to the order of Grasses in which narcotic or even deleterious properties have been found. The grains are said to produc intoxication in man, beasts, and birds, and to bring on fatai convulsions. According to Christison, Darnel, when mixed with flour and made into bread, has been known to produce headache, giddiness, somnolency, delirium, convulsions, paralysis, and even death. Some years ago, the same author tells us almost all the inmates of the Sheffield workhouse were attacked with symptoms supposed to be produced by their Oatmeal having been accidentally adulterated with Lolium; and a case is on record of a farmer, near Poictiers, in France, having killed himselt by persevering in the use of Darnel flour for making bread. His wife and servant, who discontinued to eat st, escaped, but were violently affected with vomiting and purging.

CALENDAR OF OPERATIONS for the ensuing week. For some yerrs I have entertained views on early forcing
Grapes at rarixnce with common practice, without thi oppor
tunity of putting them to the test. 1 offer them, therefore, by
Way of suggestion only. For reasons which I shall mention Fay of suggestion only. For reasons which I shall mention
below, I have come to the conclusion that from the middle of
November to Chnstmas-the usual carly Vinery-is the worst time of the season for that purpose, as, although the mean temperature of our climate during the same period immediately following, the mean excitabılity of the Vine-if the term be proper-is lowest during the former period,
and therefore more difficult to put in action. The solar influence is also less powerful at that time; but the greatest objection will be found in the comparatively stort time allowed for the plants to ripen a crop, when Grapes are wanted in March or early
in April, and thus compelling the gardener to depart from natural laws, by keping up a high temperatere day and night
after the frrit is set. There are those, it is true, who mantain that Grapes will ripen as soon with a low night temperature in winter as when a contrary course is pursued; but this is a
delusion, and the question therefore resolves itself thus:- You must either take more time to mature a crop, or violate the first obtain your end at a great sacrifice to the Vine, which, although
proverbial for its capacity to suit itself to particular circumstances, will some day, under this mismanagement, reach the point that I lately mentioned a case which occurred many years since where the Vines of an early Vinery broke into leaf early in September, and also a similar case which took place this autumu,
but not quite so early. As far as I recollect, there was a fair but not quite so early. As far as I recollect, there was a fair
crop ripened in the former house in February, and my friend, crop ripened in the former house in February, and my friend, whose Grapes were all set before the middle of last month recollect where a Vinery has been forced at that early season;
but I have little doubt that this is the best time to begin to force ripen their fruit any time in April. If I had suggested this course at the proper time-say about the mid-
die of September-would have defeated my object, as some would have been bold enough to have tried the experiment at once, which Would have been certain to fail in some measure. Vines must be
gracually prepared for this early growth; say, those that have been accustomed to grow about Christmas ought this season to be put in motion nux, and alter the crop is gathered next May,
keep the house close, in order to rupen the wood early; these meep the be forced again from the beginning of next November ;
might
the following season a month earlier, and the third season from the middle of September, which is the period I would suggest as the best to begin for the earliest crop. When the Vines are once
brought to this early state, they will afterwards move at the accustomed time with less artificial heat, and with greater ceryou may calculate, on the average of seasons, to get them into
foll leaf before the fire is lighted. The border is then warmed throughout by the summer heat, and therelore in a better condition for the roots than it can be at any other period till the
following summer. This of itself would be a sufficient reason for the change : anticipate. These are not hasty conclusions them lately to some friends well versed in the subject, and I wish I had room to give their opinions in detail, instead of engrafting
them with my own. I should much wish to hear the opinions of old practitioners on the subject.
I.-KITCHEN-GARDEN AND ORCHARD

Pinirx.-With any of the ordinary means of keeping up the
heat there will be no difficulty in manaping the surface tempera ture in Pine-stoves in winter. I wish I could say as much aboat the bottom-heat. I can at this moment see in my mind's eye lank of water, with here and there an old bark-bed, the thermometer placed over the centre of the tanks, and the attendant looking on like an engineer, conscious of his full command over the simple machinery, giving a little more heat here and taking
off some there, and regulating the whole with precision. The toils of a long life are nothing to the pleasure of anticipating such a state of things.
starting the first Vinery two months earlier than propsed plan of "I suppose the greatest benetit you expect to derive from this to ripen the crop;" just so, and this greater length of time will allow you to let down the night temperature, as it does naturally
where the Vine is at home, in the warm valleys of Syria, instead of being kept up between \(60^{\circ}\) and \(70^{\circ}\), as I have ofters seen it. But suppose you were to ripen the frut in a shorter time, as at
present, the fact that the border being about the same temperature as the mean ternperature in the Vinery at that time is of itself of equal weight. Then the border would have to be covered and thus render it capable of retaining its heat to a longer period. But
PeAch- Hovise. - The last paragraph reminds me that the outdry leaves or litter.
Musfroom-hous, -As this house requires stronger fires now MUsiroom- \(\mathrm{HOUs} \mathrm{\%}\).- As this house requires stronger fires now,
yon had better keep it more moist, if you are in a hurry with them, and can keep up the atmosphere to saturation; it is
astonishing the heat they will stand. In rearranging some of our buldings here lately, our old Mushroom-house had to be taken down without previous notice, thus cutting of our
supply at a time when we most wanted them. A new house was erected forthwith; a bed or two made up and spawned at moisture as the air would take up, and in less than six as much had no want of Mushrooms; after that the heat was let down to
\(60^{\circ}\), at which it will be kept throngh the \(60^{\circ}\), at which it will be kept through the winter

Among the various operations now gotag on in the Kitchen-
garden we must not overlook our spring broccoli; they have garden we must not overlook our spring Broccoli; they have suffer from frost untilafter the middle of Jannary, they had better now, or very soon, be laid down-as we call it-with their heads or from being less exposed, or from both, I know not; but they are much safer this way than left standing. As for digging and
trenching, making new beds, borders, or walks, every one
will be guided rather by partiular cire will be guided rather by particular cireumbtancess than by a Crchard. - X do not know of anything very particular to men-
tion here; but there is a great deal to be done in this department for here; but there is a great deal to be done in this department saw amoug other things that Mr. Paxton had trained up some looked like the heads of standard Roses. I Ithought they looked very pretty, and that I might as well have some too; so when planted them in a very rich bed in a shaded place, watered them Well next summer, and some of them were long enough for atandards the first season, and all of them the following one. The latent eyes are formed there which your shannot see to pick out, but which would push afterwards in the shape of suckers; the shoot was allowed to grow, and the cuttung was made short that the shoot might grow from the surface of the ground, and thus
look clean and straight all the way up, which could not be the case if the catting was long out of the ground, because the
young shoot would form " knee" with the top of the cutting.

\section*{II.-FLOWER-GARDEN AND SHRUBBERY.}
for his. - A correspondent who is afraid that the heat necessary stove-plants plant, if at all' well established, will do well enough in winter with any degree of heat at night, from \(50^{\circ}\) to \(60^{\circ}\), and not more than
\(60^{\circ}\), with fire-heat; but when a fine day occurs, the suan-heat may be allowed to raise the temperature to \(80^{\circ}\), withont doing
any harm. "I can, if you think it necessary, place it in the meantime under a hand-glass, and in March give it a gond bot-
tons-heat;" no one could do better than this with it. The handglass will keep the air more uniform and moist aloont it; but see
that no drops fall on the leaves. The trst time you come to london procure admittance to Mr . R
Grienifoush.- The late mild damp weather has been a tryin sition several times for a few hours in the middle of the day heating-apparatus as Mr. Beck has with his close-covered tan wnder his graenhouse stage, and here also the depth of water is almost at random, and the heat of the water too from \(320^{\circ}\) to \(133^{\circ}\), keep 2ft. of soil up to \(80^{\circ}\) or \(85^{\circ}\) if placed over such a tank. Notthere are tanks very deep now being put up in Suffill

State of the Weather Chiswick during the last 17 years, for the ensuing
Weeks ending December 9,1848 .

REPORT ON COVENT-GARDEN MARKET,
For the Week ending Dec. 1, 1843.
Tere weather during the week has been very steady, and the market has, in general, been pretty well supplied; but trade con-
tinues dull. Pine-apples are good and plentiful, and bring nearly tinues dull. Pine-apples are good and plentiful, and bring nearly
the same prices as last week. The supply of hothouse Grapes is rather short, but good Portugal ones are abundant. Apples of
good quality are scarcer, and the trade for inferior sorts is bad: a few good Blanhem Oranges are to be seen, and are selling at
from \(4 s\), to \(6 s\). per bushel; we likewise noticed a few Golden Pippins of good quality, these bring from 7s. to 10s. \(6 d\). per bushel Pears are selling at nearly the same prices as last week, and con-
sist of the same market, and bring from 18, 6id. tn 2 s. each, Vegetables of almost
every kind are good and plentiful. Cabbages and Broceoli are Sprouts are plentiful, and Leeks and Onions of good quality are
abundant, as are also Celery, Endive, and other salading. Seakale and Asparagus have this week made their appearance in th market, but only in small quantities; the former is selling a
from \(2 s\), to \(3 s .6 d\), per punnet. A consulerable quantity lent Horse-radish has been imported from Hamburgh and brought 1s. 6 d . each ; they are very smal. Awong Cut Howers w noticed Erica hyemalis and gracilis, Epiphyllum truncatum,
Luculia gratissima, Bignonia venusta, Neapolitan Violets, Chry santhemums, Camellias, Pelargoniums, Primulas, Verbenas, Cme rarias, Chima and Perpetual Roses.

\section*{NEWS OF THE WEEK}

The Court of Queen's Bench in Ireland have at length ecided that the trial of Mr. O'Connell and his fellow traversers shall commence on the 15 th of January. The pond till necessary for the due preparation of the defence, and that the present Jury-list was very imperfect and in process of revision. The Attorney-General regarded as insufficient Il the other grounds for postponing the trial, save the imperfection of the Jury-list, but under the circumstances consented to the postponement to the beginning of nex Term. The Lord Chief Justice in giving judgment approved of the decision of the Attorney-General, and said he Court were of opinion that the traversers would have abundance of time between this and the 15 th January, the day proposed by the Crown for trial, to prepare their for the commencement of the trial.-Her Majesty's progress in the Midland Counties on her visit to Sir R. Peel, the Duke of Devonshire, and the Duke of Rutland is another leading topic of domestic news. The details of the Royal progress will be found in another column and will be read with interest.
From France we learn that the Government have united with England in a determination to abide by the recent revolution in Greece, and to resist the incroach ments of Russia in the East. The rumour that Prince Polignac had been ordered to quit Paris is confirmed, and there is no doubt that this summary measure has been suggested by the late remarkable proceedings of the Duc de Bordeaux and his partisans in England.-From Spain we have accounts of the formation of M. Olozaga's Ministry and of the reduction of Barcelona, which took place on the 19 th.-The long-pending disputes with Portugal on the subject of the tariff are now finally set at rest by an announcement from the Board of Trade and the Foreign Office that the negotiations were broken off in April last by the Portuguese Government, and have not since been renewed.-The accounts from Italy in the French papers contain a rumour that the Pope is dangerously ill, but as the report has not ome direct from Rome it will probably be found to require confirmation.-Advices from Constantinople announce that the President of the Council, Hafiz Pacha, has been dismissed, as a satisfaction to England and France for the execution of the unfortunate Armenian, and that Achmet Fethi Pacha, brother-in-law of the Sultan, has been appointed in his stend. From Alexandria We have the important news of the death of Achmet
Pacha, the rebellious Governor of Sennas\%. Some doubts Pacha, the rebellious Governor of Sennaar. Some doubts no doubt that the event has removed a serious obstacle to the peace of the Ottoman Empire.

\section*{}

The Court. -The Queen and Prince Albert, accompanied by the Duc and Duchesse de Nemours, arrived at by a special train on Saturday morning from Windsor Castle. Prince Albert left the Palace soon after his arrival for the office of the Duchy of Cornwall, in Somer-
set-house, and her Majesty paid a visit to the Duchess of Gloucester. The Duc and Duchesse de Nemours also called on the Duchess, and afterwards went to Cambridgehouse to visit the Duke of Cambridge. His Royal Highness also honoured the French Ambassador with a visit. At \(30^{\circ}\) clock the royal party took their departure on their return to Windsor Castle. On Sunday morning the Duc apd Duchesse de Nemours, attended by their suite, arrived in town by the Great Western Railway, and went from Paddington to attend mass in the chapel of the French Amlassador. Their Royal Highnesses and suite afterTras left town for Woolwich to embark on board the Fremch steamer Archimede for Calais. They were reunder royal salutes from the batteries and the steamer. The Archimede did not leave until \(10 o^{\text {chelock }}\) P.M., on account of the state of the tide, and in consequence of the darkness of the night she ran ashore below Gravesend. The French Admairal despatched an officer for the assistance of one of the riors, bre arrive at the spot the Archimede had got off and proceeded on her voyage.-Her Majesty and Prince Albert eft Windsor on Tuesday on a visit to the Midland Counties. The particulars of the Royal progress will be found in another column. The Prince of Wales and the Prinher Majesty, under the charge of the Dowager Lady Lyttelton. Prior to the departure of the Court Colonel Buckley and Colonel Wylde were succeeded by MajorGeneral Wemyss and Colonel Boaverie, as Equerries in Waiting on her Majesty and the Prince. The Marquess of Ormonde, Sir Robert Otway, the Hon. C. A. Murray, and the Hon, and Rev.c. L. Courtenay, remain at the Castle. It is confidently asserted in the Court circles that her Majesty has expressed her intention of paying a visit to the King of Prussia at Berlin at the end of the poses, if circumstances are favourable, to return from more probable if we may credit the report that King Louis Philippe intends to visit England in two months, and that a steam-yacht is constructing in the French Her Majesty's Visit to the Midland Counties.-On Tuesday morning, at \(90^{\circ} \mathrm{clock}\), the Queen and Prince Albert eft Windsor Castle for the Watford station of the BirmingSir R. Peel. The suite consisted of Lady Portman, Lady in Waiting ; the Hon Miss Paget, Maid of Honour : Earl J Jersey, Master of the Horse : Mr. G. T. Anson, Private Secretary to Prince Albert; Major-General Wemyss, her Majesty's Equerry in Waiting; and Colonel Bouverie, Equerry to Prince Albert. She royal party proceeded relays of horses had been stationed, and thence to the Watford station." Her Majesty's punctuality is proverbial, but on the present occasion she arrived nearly half-anhour before the time appointed. On alighting, her Majesty was received by Mr. Glynn, the chairman of the directors, the deputy-chairman, sce. by whom sue was condacted to elegant ppartment appropriately fitted un for the occasion. Her Majesty was looking remarkably well, and wore a satin plaid dress, with blue. At 20 minotes past 11 all being in readiness, Mr. Bury, the superinendent of the locomotive power, took the direction of the engine, which was gaily decorated, and liad a royal standard floating from it. The train then left the station amid the cheering of the crowd, and proceeded at a moderate pace through the tunnel, on emerging from which the speed was increased considerably. Passing King's Langley, Two Waters, and Berkhampstead, in each of which the inhabitants who thronged the road-side vied with each arrived at the Tring station, where many huadred persons had assembled to greet it. No stoppage however took place, and the rogal travellers glided across the beautiful vale of Aylesbury at the rate of comething more than 30 miles an hour. At Leighton the station was decorated with banners bearing apcrowded with spectators. The train reached Wolverton at half-past twelve, performing the distance of 35 miles in one hour and ten moinutes. At this station magnificent preparations had been made, it having been arranged that her Majesty should partske of lunch at this point of the Journey. The platform was covered with crimson cloth, and an apartment especially devoted to the use of the Queen was handsomely decorated for the occasion. The directors conducted the Queen and Prince to the apartment, where her Majesty partook of coffee and other refreshments, wher was taken in. In less than five minutes her Majesty was again seated having taken occasion in the interval to express to Mr. Glynn her entire approbation of the mode in which the journey had been thus far performed, and remarking upon the perfect ease afforded by the carriage provided for her The perfect ark of the company at Wolverton, which has exen entirely colonised since the formation of the rilwa railway, were seen by hajer the advantage, ranged along the opposite line. The train left amid the ranged along the oppling of the assemuled crowd. Passing Roade station amid similar marks of loyalty, the train next reached Blisworth, where a company of the 64 th Regiment were stationed along the platform. As the train passed the troops presented arms, the band at the same time playing the national anthem. On approaching Weedon, where there is an extensive Military depot, a royal salute was
fired from the barrack-ground. The troops were stationed
on either side, and as the train approached the men pr sented arms, the band playing " God save the Queen." short stoppage was made at this station, and Prince Albert from the window of the state carriage, entered into conversation with Lieut.-Col. Stretton, the officer commanding the regiment. Various flags and banners were suspended about the station, and an immense crowd of persons were ranged at every point from which a glimpse of the Royal party could the train again proceeded, passing the Crick and Welton station and entering the Kilsby, tunnel, shortly after emerging from which the Rugby station was approached. Here also great preparations had been made, but the speed was merely slackened to allow her Majesty the opportunity of seeing the scholars of Rugby-school, who, to the number of 450, under the 10 . The staty spires stationed on the south platform. The stately spires of state that at this point 10,000 persons must have been assembled. For upwards of two miles the line on each side was thronged with a multitude of spectators, who testified their loyalty by every possible means as the train glided by. This was the climax of the welcome with ing onwards the Roval party reached Hampto steed where the Where the Derby Junction diverges from the Birmingham line, at 20 minutes past 2 P.M., thus performing tance between Watford and Hampton, \(85 \frac{3}{4}\) miles, in exactly three hours including stoppages. At this point the directors of the Derby line met her Majesty, and the locomotive belonging to the latter company, supplying the place of that which had brought the train thus far, in less than five minutes the Royal tourists were on their way to dent worth under the guidance of portion of the journey 15 miles, calls for no remark beyond the fact that the distance was performed in 20 minutes, the Royal carriage being brought to a stand at the Tamworth station at a quarter to \(3 \mathrm{o}^{\circ}\) clock. The station was very tastefully of the resident gentry occupying places on the platform. Sir Robert Peel was in waiting, accompanied by his son, Ingestrie, \&cc. The ground without the terminus was kept by the Staffordshire Yeomanry Cavalry, under the kept by the Colonel Monckton, the arme repiment lining the road into the town. Upon Her Majesty aligbting she was received by Sir R. Peel, with whom she shook hands heartily. Her Majesty also entered into conversation with the Duke of Buccleugh, and resting on taircase the carriage then proceeded towards the outer entrazce. Piamphe e R Peel, the Lhaise of Buccleugh and the other noblemen in alluded to, the mayor of Tamworth Mr. Bremell advanced towards the royal carriage, handing the mace of office to her Majesty. The Queen was pleased to return with the remars that it could not be in better hands. Loyal addresses on the auspicious occasion of her Majesty's visit to the borough were presented, after which
the Royal corlége moved on towards Drayton, passing through the principal streets, all of which were densely crowded with spectators who vociferously cheered her
Majesty. No less than four triumphal arches were passed by the'Queen in ber progress through the town, and on arriving at the Drayton road the royal carriages proceeded at a rapid pace towards the manor-house, where they arrived about half-past three, her Majesty being received by Lady Peel and a circle of distinguished visitors About half-past five, the eleven oc clock train from London arrived, bringing the Duke of Wellington and the new circle at Drayton. The Duke of Wellington travelled the whole distance from town alope in his open britschka placed on one of the carriage trucks, and also brought bis Rutland, who took the Midland Counties line at Rugby and proceeded to Belvoir Castle to prepare for the recep tion of the Queen. After dinner, which took place at lection of statuary and paintings in the library, and retire to rest shortly after 11 o'clock. On Wednesday her Majesty breakfasted at 8 precisely, in her own private apartment. At balf-past 9, Prince Albert left on a visit to Birmingham, and at 1 , her Majesty went out to walk, accompanied by Lady Peel, tse Duchess of thucceugh, and Miss Paget. Her Majesty walked on the Terrace,
and afterwards visited Lady Peel's flower-garden, the farm and afterwards visited Lady Peel's flower-garden, the farm-
yard and dairy, and remanned in the grounds, apparently yard and dairy, and remumed in the grounds, apparently much enjoying the pirmingham of course occasion Prince Albert's visit to Birmingham of course occasione a general holiday in that town. On arriving at the termi-
nus, the mayor presented an address, after which his nus, the mayor presented an address, after which his
Royal Highness inspected the glass manufactory of Messrs. Bacchus, the foundry of Mesers. Muntz, the papier-maché works of Messrs. Gennings and Bettridge, the electro-plating establishment of Messrs.
Elkington and Co., the gun and sword-manufactory of Elkington and Co., the gun and sword-manufactory of
Messrs. Sargeant, and the zilt and silver-plated manufactory of Mr. Armfield. His Royal Highness then pro ceeded to visit the Town-hall and the Free Grammar School, where he had refreshment with the Rev. Mr. Lee. The Prince then inspected the School of Medicine, the Free Grammar School, and the Proof House, where he was received with a discharge of musketry and large guns. His Royal Highness then drove to the railway station, and there met the Queen Dowager, who had come from Witley Court to accompany him to Drayton. The royal party
then started amidst the enthusiasti. cheering of the people who were evidently much delighted with the courtesy o the Prince. The royal party arrived at 3 oclock, and were received at the Tamworth station by Sir R. Peel, aud escorted by the staffordshire Yeomanry to Drayton Manor The dinner took place at \(80^{\circ}\) clocks, when the Qusen Weimar, tinguished visitors, passed from the library and gallery to the dining-room. At the table the Queen sat betweea Si R. Peel and the Duke of Bucclengh, Queen Adelaide was on the opposife side of the table, with Prince Albert on her left and the Duke of Wellington on the right. After the healths of her Majesty and Queen Adelaide had heen pro posed, the company left the dining-room. In accordance their private apartments for the night about a quarter-pas ar the terraces and garden. The Prince, accompanied b the terraces and garden, dard of Saxe Weimar, Duke of Buccleugh, and Mr. Anson, left the Manor shortly after 10 clock to shoot over a portion of the demeene and had very excellent sport. The Prince returned to ing 2000 poor people sat down to a substantial dinner provided for them at the Town-hall, at which the Mayor presided; and another large party dined at the Castle with. Nevil, Erq, Price har. Soon after two \(0^{\prime}\) clock her Majesty and Prince Albert attended by their
suites, and accompanied by the Duke of Wellington, Sir R. Peel, and some of the most distinguished gueste, left Drayton, for Lichnield. At the different points of numbers, and cheered the Royal party as they passed. Four triumphal arches were erected in different parts of the route through which her Majesty was to pass The first arch was inscribed, "United for the good of the people," and the houses were very generally decorated with evergreens, festoons, and fiags. The
Roval party entered Lichfield about 3 o'clock, and were received with the utmost enthusiasm by crowds people who were assembled to hail their arrival. Her the Cassed aow st. Joun-8treet and Bher clerical authorities received her. Her Majesty and the Royal party were then escorted over the conted out to her. Her Majesty much admired the celebrated monument by Chantrey, which forms one of the principal objects of Royal party left Lichfield on their return to Tamworth. Her Majesty, in addition to her escort of die many of the gentlemen of the neighbourhood, on horseback. Her Majesty reached Drayton Ma the last arrangements, the Queen and Prince Albert were o leave Tamworth yesterday morning at a quarter-past ten for Chatsworth, and were expected to arrive there to tuncheon. The Duke of Wellington, the Duke and Duchess of Buccleuch, and Duke Maiand Dowager and Prince Edward of Saxe Weimar also intended to take their departure yesterday for Gopsall Hall, the seat of Earl Howe, near Atherstone, where Her Majesty will remain till Monday morning, and then repair to Belvoir Castle, to meet the Queen and Prince Albert on their arrival at the Duke of Rutland's from Chatsworth. The Duchess of Gloucester.-Dr. Hawkins and Mr. Keate are stillin aly The Duc de Bordeaux.--His Royal Highness, after stopping from the 17th to the 22d at Curtonle, onstabse, his journey to the north. His Royal Highness left Burton on the 22d for Hull, where a special train was in waiting for him. Lord Shrewsbury, Lord Beaumont, Sir Thomas Gage, Sir Clifford and Lady Constable, \&c., the Roys visitor, who was much cheor assembled at the terminus. Shortly after noon his Roya Highness reached York, and inspected the large prison of bat town. The Prince, after visitigg in successorling ton, where his Royal Highness slept. On the 23d he paida visit to the Duke of Cleveland, at Raby Casle After spending the day at that ancient edifice, replet to Newcastle to pass the night. The greater part of the 24th the Prince passed in inspecting the various glass Highness was much interested by the specimens of paintings on glass of the middle ages; he then visited in turn Co Northumberland rint Glass woks, tus of Messrs Burnup at the Barras Bridge. On leaving Newcastle the Prince proceeded to Alnwick, the seat of the Duke of Northumberland. The Prince was received at the grand
staircase by the Duke of Northumberland although bis staircase by the Duke of Northumberland, although hi his chair. The Duchess of Northumberiand was also present at the reception of his Royal Highness, Lord Strangford, Lord William Graham, Lady Stanley, Lady Walpole, \&cc. His Royal Highness left Aluwick on Sunday, and reached his residence, 35, Belgrave-square, on Monday evening, and was received on his arrival yy
M. de Chateaubriand. On Monday upwards of three Mundred noblemen, distinguished in France by their rank
wealth, and social position, assembled to present their respects to the young Priace. His Royal Highness was attended in the grand saloon by the Duc de Levis, the Duc Descars, Admiral Villaret de Joyeuse, M. de Barade, \&c. The Hanoverian Minister had the honour of an au dience, to deliver a letter from his Sovereign to the Duc de Bordeaux. M. de Chateaubriand first presented all the French in a body, and the PrinceGaston deMontmorencyand the Duc de Levis then introduced each gentleman in person to is Royaling ghess. M.Berryer presented the depulies ad arive, namely, the Duc de Valm, the Marquis de Preigne, and Count Blin de Bourdon. The list of persons presented on this occasion includes some of the most ilustrious names in the history of France. The scene is described to have been most affecting. The remembrance of the fate of Louis XVI.-to whom His Royal Highness of a striking resemblance-the recollection of the death birth ole de Berry-the circumstances attending tives on the attention of all present, and many of them shed tears. On Tuesday and Wednesday numerous noblemen and gentiemen who did not arrive from France in time to do homage to the Prince at his first levee, assenbly Deigrave-square to pay their respects to noblemen assembled at the apartments of \(M\). de Chateaubriand, for the purpose of presenting an address to that de Fitziames as their spokesman, that nobleman addressed M. de Chateaubriand in the following terms:-"Monsieur le Vicomte-After having done homage to the King of Frasee another duty yet remained for us to perform and we have now waited upon you to do homage to the royalty of intellect. You have taken your place in the Councils of our Kings, and, alas! you gave them timely advice in the days of their prosperity, and you now come to support by your presence the descendant of Louis the Fourteenth. You have afforded a grand spectacle to man kind. France, which notwithstanding all that has happened is still our country, looks upon your conduc , admiration. she has allowed sennes, accompanied by the sympathies of her people, because are knows that you had a great duty to perform. In you ar centered our fondest hopes. lou have lived in byeg aks times, and will know bow to teach us to avoid the rock and edaies which beset our course, and your genius pfe magh the veil of futriy. Ach ort And had 1, si, he son of your old friend, allow me toexp to you the sincere gratification which 1 feel in having bee selected by these gentlemera as their spokesman on this touching occasion. As soon as the Duc de Mazja Duid had delivered this address, His Royal Highness the Du de Bordeaux entered the room. M. de Chateaubrian endeavoured to express his gratitude to the assembled company, but his emotion so taickened his uterance tha his remarks were inaudible. The Prince then went up to him and said- Gentlemen, heard that you tad assembled in the apartments of M. de Chateaubriand, and I was glad to avail myself of this opportunity to return your vist I feel so supremely happy at finding myself once more in th midst of my countrymen. Llove France because it is my na tive land, and if ever my thoughts have strayed towaras the throne of my forefathers it has merely been 'in the hope that I might be permitted to serve my country with thos principles and sentiments which M. de Chateaubriand has so sloriously proclaimed, and which still boasts of so many and such noble defenders in our native land."-A grea number of English noblemen and gentlemen have lef their names for his Royal Highness during the week. On Friday night the Lord Chancellor and Lady Lyndhurs entertained M. Berver at dinner Among those wer tell Earl of Haddington Lod Whereliffe Tord Denman, Lord binger the Baron de Maltzahn, the Hanoverian Minister, the Rev Sydney Smith \&a Berryer left town on aturda 0 a Mivatt Mon M. Berryer Menday paring been placed at his command by the Lords of the Admiralty. Parliamentary Movements.-A rumour bas been in irculation for some days that Mr . Emerson Tennent is about to obtain a laystive appointm in India, and that he will in consequence resign his seat for Belfast.
Diplomatic Appointments. - The Queen has been leased to appoint Charles Bankbead, Esqq, now Secintenof Embassy at Constantinople, to be Minister Plenip Esq. tiary to the Mexican Republic ; J. R. Milbanke, Extranow Secretary of Embassy at henoa, to be Einvo ordinary and Minister Plenipotentiary to the Kery of Bavara, the Hos. H. R. C. Wellesley, now Embassy at Legation at Stutgardt, to be Secretary of Embetary of Legation at the Haque, to be Secretary of Embassy Vienna; D. F. O'Leary, Esq., now Consul at Puerto Cabello, to be Cbargé d'Affaires and Consul-General torn, Republic of New Granada ; and Alexander a Esq., to be Consul at Leghorn. Her Majesty under deen pleased to direct letters patent to We pashood upon Anthony Perrier, Esq., her Majesty's Consul at Brest.
Colonial Appointments. - The Queen has been pleased to appoint the Rev. F. J. Harrison Rankin to be Chaplain of her Majesty's Settlements in the Gambia.--M, appointment of the Chief Judgeship of Wellington, Chapmar of the Tho has sailed in comChapm, in intention of Government to send out to Hong Kong 12
inspectors of police and 12 privates; the general corps to be selected from the natives th

The Scotch Church.-The Queen has been pleased to present the Rev. John Murdoch to the parish of Eye-
mouth, Berwick, in the room of the Rev. J. Turnbull ; mouth, Berwick, in the room of the Rev. J. Turnbull ;
the Rev. D. Wiltiamson to the church at Kinloch Likart, the Rev. D. Williamson to the church at Kinloch Likart,
Ross, in the room of the Rev.A. Anderson; and the Rev. Ross, in the room of the Rev. A. Anderson; and the Rev.
P. M'Morland to the parish of South Leith, Edinburgh, in the room of the
Mary's, Edinburgh.
The Army. - It is stated that the post of LieutenantGovernor of Chester Castle, vacant by the death of
General Sir John Fraser, will not be filled up; and that a portion of the annual emoluments arising from the appointment will be appropriated in aid of the fund set
apart for defraying the pensions awarded for distinguished apart for defraying the pensions awarded for distinguished services; the residue reverts to the public. It is also
announced that the long-expected rolis for the second dividend of the Burmese prize-money have at length been received at the India House, and that the several claimants
will in all probability be paid early in the present month The Iong-talked-of new military cap for the infantry, after many "patterns and grotesque shapes," having been pre-
Wellington, has at last been decided upon, and will be delivered to the different regiments by next spring. It tion of leading officers of the army, by Messrs, Lock, the patentees, of Regent-street, and was highly approved of sent chaco, and is less than l lb. in weight. The head-band is three quarters of an inch in width, and the chin-strap one inch. They consist of pattern black leather. The when not used curves round the ball, and is similarly secured at the top, being embellished at the side with the rose of England stamped in posed of the same metal, and is surmounted by a small brass ball, upon which rests another of white or green Worsted, and red for the Grenadiers, similar to the French leather. The orifices on each side are adapted for causing ventilation for the head, particularly in warm climates, and the hind peak is a protection to the neck against cold, heat, or wet. A new cap for the cavalry is talked of in
The Navy,-The "total number of vessels of every description at present in commission in the British Navy is
227, viz, 11 line-of-battle ships, 29 frigates, 113 sloops 227, viz, 11 line-of-battle ships, 29 frigates, 113 sloops line-of-battle ships, 5 frigates, 7 sloops, \&c., and 10 steamers in the Mediterranean; 2 line-of-battle ships, 4 frigates, 25 sloops, and 3 steamers in the East Indies ; 1 line-of-battle ship, 3 frigates, 13 sloops, and 3 steamers in the West Indies; 4 frigates, 12 sloops, and 3 steamers,
Brazils and South America; 3 frigates, 3 sloops, and 2 Cteamers, Pacific ; 1 frigate, 10 sloops, and 3 steamers, Coast of Africa ; 4 frigates, 4 sloops, and \(l\) steamer, at the Cape; 1 line-of-battle ship, 2 frigates, 2 sloops, and Torreas Straits; 1 sloop at Falkland Isles; 1 sloops, at steamers, Canada; 1 steamer, Azores ; and 3 line-ofbattle ships, 2 frigates, 33 sloops, \&ce, and 35 steamers at
ber home, including the Post-office sailing and steam-packets. The Population of Ireland. - By a Parliamentary paper of last session, it appears that according to the census of 1841 the population of Ireland was \(8,175,238\), of England: \(6,427,712\) were Roman Catholics ; 642,356 Presbyterians: other Protestant Dissenters 61,808 . making the total of the abstract \(7,943,940\). There is no return as to the residue of the population set forth. On a return presented on the same occasion as to the populathe of England and Wales, it appears, that according to 4,896 travelling when the number was ascertained. There were at the same period in England ancertained. 1,241,101 males, and 8,135,649 females ; and in Scotland Winter Assizes. It has now been arr
shall be a winter circuit for the delivery of the that there prisoners charger circuit for the delivery of the gaols of all
Sesfences not triable at the Quarter Sessions. No civil causes, however, will be tried. The Collowing daysl have already been announced:-Oxford
Circuit, before Baron Rolfe, Oxford, Saturday, Dec. 9 ; Glocester, Wednesday, Dec. \(13 ;\) Worcester, Monday,
Dec. Dec. 18; Shrewsbury, Thursday, Dec. 21 ; Stafford, Cosday, Dec. 26. Western Circuit, before Justices 20; Ezeter, Wednesday, Dec. 27. Midland Cirouit,

Leicester, Thursday, Dec. 14 ; Nottingham, Monday, Dec. 18; Derby, Wednesday, Dec. 20. Home Circuit, before Justice Creswell, Chelmsford, Saturday, Dec. 9 Maidstone, Wednesday, Dec. 13; Lewes, Saturday, Dec. 16
Irish Land Commission. The to direct letters-patent to be passed under the Great Seal of the United Kingdom, appointing the Earl of Devon, Redington, Esq., and John Wynne, Esq., her Majesty's Commissioners for inquiring into the state of the law and
practice in respect to the occupation of land in Ireland. Post Office.-The report of the Select Committee appointed to inquire into the measures which have been
adopted for the general introduction of a general rate of Postage, and for facilitating the conveyance of letters, and
Por revenue and expenditure of the Post-office, and the general convenience of the country, has just been published with the minutes of evidence and returns of the gross and net
revenue of the Post-office for the three years before and after its adoption. The Report is dated August 14th. The Committee state that they have examined at great
length Mr. Rowland Hill, with regard to several proposals which were brought under their notice by him, for extending the facilities of the correspondence of the country, and for improving the management and reducing the expense of the
Post-office. They have also examined several of the officers Post-office. They have also examined several of the officers
of the Post-office, with regard to the expediency and practof the Post-office, with regard to the expediency and practiaccount of the late period of the session to which their inquiries were extended, they find it impracticable to report their opinions on these various matters, involving more than report the evidence which they have taken and the correspondence in connection therewith between the ments that the Post-office, from both of which departreceive the fullest consideration.-The Ministerial papers announce that by a recent convention arrangements between the Post-office of England and Holland have been established, which sescure to both countries a liberal reduction of postage.-Notice has been given that on and after United Kingdom and any place in Jamaica when conveyed by packet will be subject to the uniform rate of
one shilling and twopence the half proportion, in accordance with the scale now in operation in the United Kingdom. Letters however addressed to or posted at Kingston, the packet-station at Jamaica, will only be chargeable with the packet rate of one shilling the half ounce as at present, such letters not being liable to
internal colonial postage. internal colonial postage

\section*{ffarcten.}

France.-A royal ordonnance has been published in the Moniteur convoking the Cbambers of Peers and Deputies for the 27 th December. The same official journal contains a paragraph of apparently the most ordinary kind, but which in political circles is deemed of very singular import for his several private libraries copies of the Marcuis de Custine's celebrated work "Russia in 1839." It is said that this patronage of a work which deals so severely with
Russia, and which the Emperor has declared to be false, is an intentional affront provoked by repeated insults offered to the King by the Emperor of Russia. An im-
pression is general in Paris that the French and British Governments are perfectly in accord, and determined to act together in respect of Russian intrigue and Russian
ambition. Late events in Greece are said to have alarmed both, and to have induced a combined resolve to brave the danger before it become truly formidable.-A dinner took place at the Palace of St. Cloud on Saturday, on the King and of the 34th anniversary of the marriage of the "had scarcely announced the recovery of the Count de Paris, when the Count \(d^{\prime} \mathrm{Eu}\), son of the Duc de Nemours, wrince acked with the croup. The state of the young that the Duc de Nemours has been requested to return to dressed a circular to all the maritime prefects, desiring that no workman may in future be employed on Sundays in the Government dock-yards except in cases of absolute order are first, motives assigned by the Minister for this not work with energy on the other days of the week, and consequently that it is not profitable to the State to have labour performed on the Sabbath ; and secondly, that it is necessary for the State to promote the religious observance of France after stating that the Prince Polignac has been ordered to quit Paris, adds that the French Government has notified to his Royal Highness the Duc de Bordeaux that he must sell all the property he has in France.
Prince Polignac, it appears, was ordered to quit Paxis in 24 hours, or write to the King for permission to prolong his residence. Marshal Sebastiani immediately proceeded
to St. Cloud, and in audience of the King requester that the obnoxious order might be withdrawn. The King positively refused. The Marshal said, "Your Majesty
is aware that I would not make a request compliance with which would be in the slightest degree dangerous for your royal person or the State. I will be bail for the
prince," added he in conclusion. The King was still unPrince," added he in conclusion. The King was still unmoved, but after some time he said, "If the Prince will
write to me"-" I would not allow him to do so"" said Sebastiani. "Why, Peyronnet wrote to me." "M. Peyronnet is at liberty to do what he pleases," said the

Marshal ; " but if Prince Polignac follow his example in that respect, he will cease to be entitled to my esteem.
The Prunce has not come here to conspire ; conspirators do not move about, witl a tram of four children." The only concession he obtained however was an extension of the time to Saturday, when Prince Polignac was to quit Paris, protesting against his forced exile, for inflicting which full and plenary lhgal grouna, the amnesty having been fll and plenary that restored him to civil rights. against the University of Paris brethren in the crusade against the University of Paris. The Bishop of Rennes
has demanded the dismissal of \(M\). Zerort has demanded the dismissal of M . Zerort, the professor of moral philosophy in the University of Rennes and has intimated that, in case of refusal, he will remove the chaplain from the University, - Another trial is going on band of 24 thieves, who had selected Paris for the theatre of their operations.-The papers state that or the theatre been informed that the mother of Alibaud,who was executed for an attempt at assassinating him, has fallen into deep distress has sent to the Mayor of Marseilles a sum of money for the use of the unfortunate woman, with the promise of further assistance.-The leng-contested horse-cause between Lord Henry Seymour, Mr. Palmer, and M. Aumont, was decided a few days since by the Cour Rovale of Paris, after a hearing which lasted two days. The point at issue was whether a mare sold by M. Aumont to Mr. Palmer for 1000 francs with warrant of her pedigree, as Herodia, bred by Mr. Stirling of Battersea, and subsequently trans ferred by Mr. Palmer to Lord H. Seymour, was really Herodia as represented. The trial cyused greas really in the sporting circles of France Several witnesses were examined, and their evidence, as might be expected in were a case, was conflicting the trainino be expected in such vants of M. Aumont giving a detailed history of Herodia from the time that she mas brought from France until she was sold to Mr . Palmer ; and Mr. Stirling, his grooms, veterinary surgeon, and others swearing that the Herodia produced to them was not the Herodia noticed by Mra, and establishing the marks of difference noticed by Mr. Stirling in his certificate. The Court decided that the mare was a supposititious Herodia, and the 1000 f. paid for her, and a further sum, he returning Lord H parm for her, and a further sum of 1000p. to to and sorn to, and paying the costs of his Lordship and Mr. Palmer relative to the thirty political prisoners startling facts reative to the thirty political prisoners consigned only official returns to prove that of those thirty prisoners, all of whom are stated to be young men, two had been poison himself for suicide, one has twice attempted to into a state of fur have become madmen, two have fallen tacked with diseases which are likely to adhere to them during the remainder of their lives, and have been removed in consequence to prison-hospitals in different parts
of France.
20 Spain alt, A conference took place at the Palace on the the Lopez Cabinet, M. Olozaga and all the Members of termination of the Lopez Administration was formally announced, and a Royal ordonnance issued which was read on the following day in the Cortes offlicially announcing the nomination of M. Olozaga as President of the Council of Ministers and Minister of Foreign Affairs The Cabinet was constituted on the 24th by the appointment of the following Ministers: M. Luzurriaga, Grace and Justice: M. Domenecq, Interior: M. Cantero Finances ; M. Serrano, War, and M. Frias, Marine was believed that the new President of the Council would submit to the Cortes a project of law for regulating the attributes of the municipal bodies-a delicate question manner. According to never solved in a satisfactory cipal officers would hereafter be direct like that of \(M\). bers of the Cortes. The Queen's birthday had been celebrated on the 17th with much pomp. Her Majesty had been congratulated by the corps diplomatique, grandees, \&c., and the palace had been crowded on the occasion. The Queer replied to the Minister of Portugal, who addressed her in the name of the Ambassadors- "I have heard with much satisfaction the wishes expressed by the diplomatic body for my personal prosperity and that of my people, and if Providence bless my endeavours of this that my reign will consolidate the tranquillity friendship whichous nation, and draw closer the ties of represent which unite to the Governments which you Cepresent in so becoming a manner." The Prince de Carini passed through Bayonne on the 23d ult. on his way to Madrid, bearing the recognition by the King of Naples of the Government of Queen 1sabella II. The Prince is accredited as Minister Extraordinary at the Spanish Court, and is charged with negotiating the marriage of the Count de Trapani with the Queen. England and France are sald to have given their consent to the union.-From Barcelona we learn that the surrender of that city took place on the 19th. Dur.ng the night of the 17th the greatest confusion reigned in Barcelona, and a deadly struggle took place between the peace party and the Patulea and Republicans, which terminated by the defeat of the latter. In consequence of this victory five delegates had a long interview with General Sanz, and on the 19th the capitulation was signed, and on the 20th On Government troops took possession of Barcelona. informe evening of the same day the Captain-General was most desperate insurgents intended to fire the torn at different points, and blow up the Cathedral; in consequence of this timely warning every precaution was taken
to frustrate such a design, and the whole army remained under arms during the night. One of the principal clauses of the capitulation is the disarming of the entire population without exception. The inhabitants are also Ostore the streets and houses to their original cerdering a general surrender of arme within six hours on pain of death, and by the afternoon some thousands of muskets
were deposited in the Atarazanas and the Cathedral. The new municipality have been directed to number and class the inhabitants ; and to make a list of the damaged houses, and to whom they belong, including foreigners. By the
evening of the 21 st all the barricades had disappeared from the streets and most of the trenches were filled up. The Free Corps and National Guard of Barcelona have since delivered at the Atarazanas 500 muskets. Tranquillity is completely restored, the emigrants are returning, and the General has gone in person to assume the command of the troops blockading the castle of Figueras, and has taken British travellers were loud in their complaints of what they characterized as a gross extortion practised on them at the British Consulate in that city. For getting their passports endorsed there to go to Seville for a day they
were charged a dollar and a half ( \(6 \mathrm{~s} .6 d\). .) and the same were charged a dollar and a half ( 6 s .6 d. .), and the same
on their return to Cadiz for the Consul's on their return to Cadiz for the Consuls risa to Goraralan service whatever, while the charge of the Spanish authorities on both occasions for a real benefit was no more than
3s. This disproportion has long been known and complained of by traveliers in Spain, but it has now for the first time attracted the attention of the journals, and some hopes of the interference of the Foreign-office are entertained.
Portugal.-We have accounts from Lisbon to the 22d ult. The greatest tranquillity prevailed and all prospect
of its being disturbed had entirely disappeared. The Chambers were occupied with measures to cover the deficit of the current financial year, but the remissness of Iriarte and the Sparish troops who took refuge in Portugal are to be quartered in Oporto. An important communication has been made by the Board of Trade in answer to a recent memorial from appears that the Duke of Pal mella and her British Majesty's Government are a variance as to whether or not the propositions of the variance as to whetier or not the propositions of the states " that the megotiations with Portugal. which were interrupted in April last, have strictly speaking not been revived ; that since the arrival of the Duk Parla in Government his Excellency has to show tat the British propositions had been previously to the interruption or breaking off of the communications in April last accepted in their substance by the Portuguese Government, and that her Majesty's Government are clearly of opinion, upon Palmella is in error in that supposition, and that this conviction has been officially communicated to the Duke of Palmella." Lord Aberdeen has since made a similar communication.
Michael of Servia was shom Vienna announce that Prince for Dresden. The Prince has amongst his suite the celebrated writer Dr. Wuk and intends 8ojourning in that Berlin, among whom are the most celebrated authors and artists of Prussia, contemplate giving a representation at their private theatre of the comedy of The Frogs of piece by Professor Franz Kummer; costumes and decorations are nonged by M from designs furnished by the most renowned artists. The Frogs was in the first iastance intended for performance to M . Tieck, who on account of its contaming objectionable passages did not advise its production. Dr. Fian\% has now made several alterations and
Italy.-It was reported in Paris on Thursday that the Pope was taken suddenly and dangerously ill. In the present disturbed state of Italy, and especially of the states of the church, any change in the boly see is conof the 15 th from the Romann states that the disturbar in the neighbourhood of Bologna arid Ravenna have been put down.-A grand religious ceremony, the beatification in 1814 in a convent at Rome on the 12 th inst. The preparations for this ceremony are said to have cost 100,000 Roman crowns, independently of the portraits of the beatified nun, which it is customary to present to the cardinals and the principal churches and convents.-The Augsbury Gasette publishes the following letter from Naples of the 2 d of British Minister has frequent conferences with the Minister of Foreign Affairs and numerous audiences with the King It was at first thought that these conferences had reference to the treaty of commerce which is now so far settled as
only to require the signature of the plenipotentiaries. But as the English flag would get a privilege of ten per cent. over other nations the King wishes as a compensation that the English Government close Multa against the
Italian refugees who are now troubling the Peninsula. Italian refugees who are now troubling the Peninsula. This is too delicate a matter for the British Cabinet to keep a strict surveillance over the Italian refugees." In
reference to this subject a Maltar paper the Portafoglio Mallese states that the disturbances in the Roman domiMalion are in a great measure owing to the Malta press. The everything in have for the last theee or four montions the Papal legations to insurrection and rebellion. The scarcity of public journals in the Papal States is well known, and多 taken of this circumstance to furnish inteligence from Malta by way of Ancona to Bologna,
Ravenna and other cities in the Papal States.-It is said that the Princess who is about to marry the Duc Aumaie is not the sister of the King but his cousin, the Greref.-Accounts from Athens of the 10 th ult. state that about 150 Deputies had arrived, and that the Nationat Assembly was to meetin a fortnight, but its legislative labour were likely to be some what delayed by about a dozen double elections in the Peloponnese, which must first be decide upon. The Council of Ministers was holding protracted meetings every evening, and the Ministers at the head of the different departments regularly transacted business turn affairs may take in Greece, it is certain that France Austria and England will oppose any attempt of Russia to overthrow the existing Government, nor will they per mit the Emperor to exercise the same influence in Greece Turkey and Persia.-Letter
nnounce that the President of the Comstantinople Hafiz Pacha, had been dismissed on the 8th ult., and replaced by Achmet Fethi Pacha, brother-in-law of the Salran. The Sultan's object in adopting this resolution was to give satisfaction to England and France for the execution of the unfortunate Armenian. Letters had beeu received at Constantinople, announcing that serious dis-
turbances had arisen in Albanis and in Thessaly, and that ant attempt hard been Absanis and in Thessaly, and the adherents of the dethroned Prince. The Rev. Dr Wolff arrived on the 3 d inst., and was only waiting for the aecessary firmans and the arrival of Colonel Napier, who prising expedition to Bokhara.-Letters had arrived from Mosul which state that the remnant of the Mountain Nestorians who bad been enabled to resist the Kurdish invaders, joined by their fugitive brethren, have gained a complete victory over their oppressors, and succeeded in from Teflis of October 12th announce the important fact that the Emperor of Russia had under pretence of encoura line of posts guarded by Cossacks from the Caspian Sea to the capital of Persia.
mportant news the denia we mportant news of the death of Aclimet Pacha, the late result of intermittent fever, though many surmise that it as been co by this Oriental administration of justice. The Pacha guinary civil war. The Porte is said to have been benefited already by large sums remitted by Achmet to Reschid Pacha through Jerusalem in furtherance of his ambitious views. Emir Bey has Been appointed his successor. It again upon the ship canal from Suez to Pelusium, but upon the feasibility of a navigable canal from Boulac to
Suez through the desert, the superior altitude of the Nile at Boulac to that of the Red Sea at Suez ensuring a constant supply of fresh water, and possibly the means by
irrigation of cultivating a large strip of land on each side where now is a sandy desert.
United States.-The packet-ship Patrick Henry reached the Mersey on Sunday after an 18 days' passage, bringing 32 passengers and no less than 100 returned emithe previous packet. Mr. Horsley Palmer is among her passengers. The Britannia steam-ship has since arrived with dates from New York to the 16 th, Boston 17th, and between Halifax and Boston on the 18th, and the Acadia was spoken by the Britannia on the 26th, out seven days, in lat. 50,5 N., long. \(26,40 \mathrm{~W}\). The New York and whilst ingcharge of a pilot, in very rough weather, on the 11th ult. The passengers were saved by great exertion and presence of mind, and the vessel subsequently got off, Texas to the United States appears to be still a favourite scheme, and will it is said form a prominent subject of recommendation in the President's annual message, bring sn account of the de in this mone at the age of 87 . He was an aide-de-camp of Washington one of the first artists of the United Star became elections for the state and city of New York took place on the 7th, and were in favour of the Whigs. The contest was more than usually exciting from the near approach of the Presidential election, upon which
it will probably have a considerable influence. Mr. O'Connell is rising again into favour in the United States. A meeting to further repeal presided over by Colonel
Johnson had been held in the ' ? abernacle in New York, and another meeting was held of still greater pretensions at the Park when the news arrived out that he had been arrested and was ahout to be prosecuted. -The yellow of that city pubishes the names and addresses of 692 persons, natives of England, Ireland, Scotland, and Germany, who have fallen by its ravages, exclusive of 132 persons
unknown. The Irish and Germans appear to lave been the greatest sufferers by its ravages. and after them the Americans. The fever still lingered in the cify, but its
fierceness had abated. The appearance of frost whict fierceness had abated. The appearance of frost whicl
ustully drives it away was looked for with much anxiety usually drives it away was looked for with much anxiety -The Senate of the State of Tennessec have passed a law a the same undisturbed control of her own estate after marriage which she bad before, and prevents her property from passing out of her hands on marriage by mere operamilitia 1 whent rin from performing military duty, and several have been arrested and confined for disobeying the said law
Canada.-Our advices from Kingston are to the 3rd, nd from Montreal to the 6 th wit. The bill to secure the independence of Pariament had passed the Council by a vote of los to 12. The Agriculturail Protection Bill had the 5th January It had also Council, to go into effect on two to one, that Montreal is the only place for the seat of Government. To refer the decision to the Home Government was refused by a vote of 50 to 29 . There have been remarkable doings in the Parliament of the province, no less than 13 members of the Legislative Council, with Mr Morris at their head, having retired. It appears that in the House of Assembly an address to the Queen was made by Her Majesty to 27, con the seat of Gopernien molut When the adde to Mon Heunci for thir ch hill ang lill opponents of the bil a contenaids that bill could no again come before the conlil darigg the presert session without violating all Pariamentary rules, and setting a dangerous prece dinally disposed or, it was thought, for the session, and couid not be brought berore the Council whor was prorogued for few days. The measure was iosisted on, and the furthe discussion made the special order of the day for the 9th, when the Hon. Mr, Morris rose and said, that in view of their strange proceeding, it became his duty to record his protest, and proceedings of the Council. He then bowed to the Speaker and the House, and retired, followed by Messrs. De Blaquiere, Frason, Crooks, Washburn, Sherwood M Ray, Dickson, Hamiton, Macanbery, Draper, M Do nald, and A. Fraser. Soon after they retired, the Counci adjourned.- The transport Premier with troops on buard has been totally lost near Quebec, but the troops and crew were saved

Money Market, Friday.-Consols for the opening closed at \(96 \frac{3}{4}\); Three per Cents. Red., \(95 \frac{3}{4}\) to \(95 \frac{1}{2}\); Three-and-\&lealf per Cents. Red., \(102 \frac{1}{6} ;\) New Three

Destitution in the Mctropolis.-A meeting of the by Lord Dudley Stuart, Viscount Ranelagh, Sir De Lacy Evans, Sir Joseph Copley, Mr. J. A. Snith, M.P., and other gentlemen. Fmal arrangements were made for great public meeting in behalf of the destitute poor of the the Western Refuge for the Destitute. The proposed meeting to be held at Exeter Hall in the course of next week. Scottish Hospital.-On Thursday being St. Andrew the annual meeting took place in Crane Court, the Duke of Sutherland in the chair, supnorted by thout 200 Members of the Corporation. The Hon. Mr. Frasel opened the proceedings of the Court by tendering his resignation "of the appointment which lhe had heid as Treasurer for 21 years, when the meeting, which by thall ime had become over-crowded, adjourned from the then conme Chapel of the Corporation. The Chairman the of the body requesting that he mighterns to resign the ody, requesting that he might be permitted to ref the
 phe noble Dake the The noble Duke hen line Court, accompanied by M. Hon. W. Fraser, and was succeeded in the chair by P. M. Stewart, Esq., M.P. It was then proposed by Sir Peter Laurie, seconded by Dr. Webster, and carried by acclamation, that the Duke of Sutherland be re-elected Prary sident for the year ensuing, Major Adair the Secretary intimating to the meeting that his Grace had instructed him to state, that although he attended the Society's restival on the present occasion, yet that his medical advisers had forbiden him for the future to attenc a . public dinners. Dr. Webster then proposed that P. M. Stewart, Esq.,M.P., be elected treasurer in the room oriks Hon. W. Fraser, to whom a complimentary vote of thaniss proposed by Sir Peter Laurie and seconded by Sir C. Forbes was passed, for the able and independent manner in which he had discharged the office for 21 years. After some discussiou Lord Blantyre, the Hon. W. Fraser, and sir C. Forbes were elected to fill the vacancies in the list of vice-presidents. Major Adair then read a letter Corthe Rev. Dr. Brown, resigning the chaplaincy of the Cors poration, caused by the changes in, the Churcin and his translation to a clurch in Scotiand. After a lone and turbulent discussion, Dr. Brown's resignation having gen accepted, the Rev. Dr. M‘Leod was reinstated as senion Chaplain. Sir Peter Laurie then proposed that the Rer John Cumming be appointed to fill the vacant Chaplaincy. The motion was seconded by Mr. Waugh, zu after another stormy discussion was carried mithout any
apparent opposition. The vacancies in the different committees were then supplied, after which the accounts were read and ordered to be printed. From these it appeared
that the total expenditure of the institution for the past year had been 3,505l. The annual dinner of the Corporation took place in the evening at the London Tavern, the Duke of Sutherland in the chair. The subscriptions of the evening amounted to upwards of 3500 . His Grace the Chairman subscribing 50 guineas in addition to his annual subscription.
Anti-Corn-Law League.- On Thursday night the monthly meeting of the League took place in CoventWilson opened the business by announcing that the League liad won London and Kendal and had not won Salisbury, but intended to do better next time. Mr. Cobden then addressed the meeting on the late elections and on the Chairman of Mr. Bouyerie's Committee at Salisbury, Col. Thompson, and Mr. Bright, next addressed the meeting at very great length. At the close of Mr. Bright's speech the Chairman said he must now close what all present would probably consider to have been not the least interesting of the series of meetings. Mr. Bright had informed them that arrangements had been made for owns of Yorkshire and Lancashire, for the purpose of promoting subscriptions to the great League fund. When they met again this day month he hoped they would have
the pleasure of seeing that their labours for that object the pleasure of seeing th
had not been unrewarded
The Model Prison.-Although this prison has been open so short a time, and the prisoners have been
carefully selected from the various gaols in point of health, two have become insane this year, and have been transferred to Bethlebem; viz, John Reeve, on the 24th June, and John Hill Stone, on the 17th August. The Times observes that it is remarkable that insanity only
occurs in the Penitentiary and Model Prison under Government inspectors, and not in magistrates' prisons. Light Gold.-In consequence of the numerous complaints made by the merchants in the City and the public at the practice of the Bank's issuing light gold, orders have unless it has been previously weighed and is according to the standard currency. Henceforth all gold presented at the Bank will only be received according to weight, and will be defaced so as to prevent the possibility of a re-issue. Metropolitan Improvements.-Workmen are pulling leading from James-street into the Pimlico-road, to make way for the new improvements. The houses in Tothillstreet, York-street, and Caste-lane, Westminster, are also Almshouses, for the new road, which will run seross the ground of Elliott's brewery into the Vauxhall road. The minster nuisance is at last coming down, and a square will be built on the spot.
Common Council last week the Lord Mayor the of the the Court a copy of the following letter from Lord Lincoln, together with a plan for carrying out the projected embankment, which he described as a mea" 1 , Whitehall-place, November 8, 1843-My Lord, As chairman of the Commissioners appointed by He Majesty for 'inquiring into and considering the most
effectual means of improving the metropolis, and providing increased facilities of communication within the same, have the honour to transmit herewith for your lordship's
information a plan of the proposed embankment between Westminster and Blackfriars bridges, for the construction of which it is the intention of Her Majesty's Government to submit a bill to parliament in the course of the ensu-
ing gession. It will afford me, as it will I am sure afford the Commissioners, great pleasure to find that the resul of these inquiries into the expediency of the course pro-
posed will be acceptable to the Corporation, directed as those inquiries hape been to the interests both of the navi gation of the river and of the trade carried on upon its shores, and ultimately to the accomplishment, without prement. I have the honour to be, my Lord, Your Lordship's most obedient servant, Lincoln." On the motion of Mr. R. L. Jones, the letter and plan were referred to proaches Several members expressed their satisfaction that Government have assumed the responsibility of so great an Westmirister Bridge.-Since the carriage-way of this bridge was closed, workmen have been engaged in removing the great body of loose sand and rubble walls which loaded paring to substitute brick arches as was done to the sunken pier on the Middlesex side. The lessening of the weight upon each pier by this operation and by the protons, and since this lighteniug began there has not been the smallest movement in any part. Messrs. Walker and twrges have thought it prudent to take the opinion of
two engineers, Messrs. Cubitt and Rendel, who have stated as their opinion that the sinking of the piers is caused by the great load upon the clay foundation, there Surrey side being of a loose nature.
Shops of Londorr.-The attempt now making to abridge the protracted hours of labour in the shops of the metro-
polis has received the support of the leading drapers :-

Messrs. Swan and E lgar, Piccadilly; Mr. Redmayne, Bond-street ; Messrs. Hitchcock and Rogers, St. P'aul's
Churchyard; Messrs. Peters and Underwood, SloaneChurchyard; Messrs, Peters and Underwood, Sloane square ; Mr. Owen, Great Coram-street; Mr. Edwards, menosquare, and otters, close their respective estabisisfollowed by clock,-- examples whichare likely to be seon shopkeepers, provided that the public will lend their aid by abstaining from evening purchases.
Roman Remains in the City.-On Thursday in the course of excavations making for a sewer in Bridgewaterwall foure Barbican, the men found the shich extended in a direct line across the square from east to west. It was about 18 feet in depth and \(4 \frac{3}{2}\) in width. Pieces of a Roman pavement were also met with. In one part of the square a workman dug up a square plate of metal one side or which quantity of pottery was also found. During the week, in Tyefoot-lane (a narrow passage leading out of Queenhithe came against three Roman walls about 4 feer from the surface extending in parallel lines, and at about 12 feet from each other. They were about five feet in depth. The two external walls were about 4 feet in width and the inner one about 7 feet wide. They appeared to e of a circular form and were so firmly constructed as to o only separated and broken by an iron wedge.
ill be performed by the Queen's Scholars of Terence will be performed by the Queen s Scholars on Monday
the 11th, Thursday the 14 th, and Monday the 18 th inst., with a prologue and epilogue on the 14 thi and 18 th.
The Daily Papers.- is said that the prop the daily papers intend to raise the price of their papers from \(5 d\). to \(6 d\). Assuming the circulation of the Times to
be 12,000 a day, this will give to that paper an additional profit of 15,6502 . a year
Mortality of the Metropolis.-The number of deaths registered in the week ending Saturday, Nov. 18, was as
follows:-West Districts, 183; North Districts, 230; Central Districts, 224; East districts, 285 ; South Districts, 208 ; Total, 1,230 (males, 615 ; females, 615 ). Weekly average for the last five years, 903 ( 461 males, 442 females) ; and for the last five autumens, 908.

\section*{强robmesal Nrems.}

Birmingham.-Mr. Weale, one of the assistant Poor Law Commissioners, commenced an inquiry on Friday last in the workhouse of this town, in consequence of an anonymous letter which the commissioners had received In September last four young men entered the workhouse as tramps, and were put into the tramp ward. When there they tore up their clothes and were found in that state by the tramp-room keeper. He communicated the ircamstance to the governor, who accoraing to the chages hole in a complete state of nudity. They were put into this vault and there detained eight days and nights, during the whole of which time they had only one rug each to wrap themselves up in by day or night; they were in that state compelied the on a bare guard-bea and water gruel, there was no fire or hot air or any other means of heating the place, and in this state they were one of the men was so ill as to require medical advice. The second charge was that the governor had put a boy into this place of confinement and kept him there until it was necessary to give him a warm bath to ensure his woman bad been put into the tramp-room for punishment ; woman had been put into the tramp-ran had been put hy the governor into an insane ward for punishment. The governor in reply to the charges denied that any punishment had been inflicted. The keeper of the tramp-room however deposed that the four men above named entered the house in September, and that they were in ail respects treated in the manner set forth by the commissioner, and detailed other circumstances connected with their confinement of a very revolting nature. The house surgeon deposed that he found one of the tramps ill and ordered medicine for him. The governor's wife swore that the men had each two rugs in the hole, that she had ordered them bread and broth, but she could not. swear whether they received \(i t\), and that on one Sunday she ordered them meat, but she could not say they got it. The room was not cold, indeed the men complained of the heat, and she directed the keeper to open the door. The Commissioner said they jight of visit the place, and proceeded of indignation and abhorrence. It is a low arched vault, into which there is a descent of two steps, six feet wide, nine feet long, with a small iron grating at the top without any guard glass. A in a dark passage the men were confined. The Commissioner on returning said he never could have believed that there existed any such place of confinement in any workhouse in England. He certainly never beheld such a place for human beings to be placed in, no matter what might bave been their offence. In this expression of disapprobation the whole of the guardians concurred, and declared hat they did not know such a place had been used for the purpose. The governor said that on that very night they
most nights for tramps, and that on would most likely have more tramps than they could accommodate, and would be obliged to put them in that searching inquiry into the entire establishment, and searching inquiry into the entire estabisisment, and
adjourned the inquiry.

Bury.-The Blackburn Standard says that singular as it may appear, it is nevertheless true that at noon on Friday the petty sessions were adjourned for hail-an-hour, in order to allow the solicitors, county policemen, overseers, and other officials, an opportunity of witnessing
the entrance of Yan Amburgh with his large collection of wild beasts.
Carmarthen.-The toll-gate between Bettws and the Holyhead road was destroyed last week by the Rebeccaites. The gate-posts were sawed asunder and the gates carried off. A letter in Welch was left under the cottage-door whaced the toll-taker resides, stating that if the gate is remissioners arrive will be destroyed.-The Special proceeded at once to examine the road-surveyors, and to investigate the trust accounts and the apportionment of tithes in the parish of Pembryn. The Commissioners axe understood to have expressed a wish to further any agreement which might be come to between the titheowners and cituepayers to allay the bad feeling which exists, and as far as possible to remedy what seems to be regarded (so missioners mak as to their opinion of the best remedy to remove the grievances complained of, no doubt with the view of extracting some practicable suggestion to embody in their report to Government. They concluded their inquiry at Cardigan on Friday and proceeded thence to Aberystwith Wednesd - A call ins weduesday wille villuge of Willersey near Broadway in this county, by Which the house and farniture were conilcely destroyed, and the farmer's wife and five young chmoren Mr. Rimell) and three of his sons escaped through a window with much difficulty, but the rooms were so filled with smoke that the rest of the family were soon suffocated, and the mothe of the children could not be prevailed upon to fly with her Inusband and leave the children to perisb. It was a heart rending scene and no assistance could be rendered. The house was fitted up in the old style, wita wainscotting, an the divisions between the rooms were all of wood. Had not the engines arrived speedily from Campden and Eve shiam, the destruction of property might have been very extensive, as the house was close to thatched barns and sheds on two sides, and several stachs of corns were short distance apart. The consternation in the village may be easily imagined, and the cries of the people of al classes on hearing the loss of life were most distressing Knowsley. -Insormation has been received in Londo that a man called Hillingham, another of the party con cerned in the late murder of a pamekeeper at Knowsiey park, has been apprehended, and is now in prison.

Kirkdale, -The Privy Councll have ordered the plans disd inder the new system of This is to be erected at Kirk dale, near Liverpool, from the dessume Messs support and education of 1200 children, divided into thre classes - ine plans are remark able for simplicity of arrangement and capabilities for the master's and matron's supervisiun of the charges to be entrusted to them. Well-ventilated workshops for the mo 1 ank found those uf may bo me the extent of this edifice by mentionmay be fore occupied by the masonry alone will ing that the space aixes fland An infirmary detached from the main bulding is provided. The site is an open ground of considerable altitude, commanding the mouth of the Mersey.

Keswich.-On Monday a meeting was held in the townhall, of this town, for the purpose of carrying into effect a wish very generally expressed that a public testimony of ghou and respect the memory a ho mith parish he had spent the greatest portion of his life, and in
 wich churchyard his mortai remains werions entered into for that pure wase ; one of which was that a white marble for that purpose; one of which was that a white of Dr South, on which is to be a medalion liseness oflptor and ang, should be executed by some emizent sithin the and affixed to the wall in a conspicuoos part word John church.-Siuce this aunouncement appeared Churdhman Manners has sent a letter to the Enghs Con suggesting that the most appropriate monuwnt to Dr. Southey would be the institution of an estabistment of
Protestant Sisters of Mercy, and proposing a subscription for that purpose.
Lancaster.-A correspondent ("Facile ") informs us that corn still remains unhoused on Nateby and Pilling Moss, in consequence of the wet weather. since the 10 th October there has scarcely been a fine day, while the nights have been cold, leaving a white frost which there was neither wind nor sun to clear off. The farmers are now housing the crops in their wet state. After threshing out the corn they send it to the kilns to be dried, and the wet straw to the cattle, which seem very fond of
This step is rendered necessary not only by the upon the outstanding crops by the hares and partridges. Leeds.-On Thursday, Mr. James Bryam, of Gildersome, shopkecper, appeared before the magistrates at the court house to answer to an information preferred es gainst him by the clerk to the Excise at Leeds, for having in his possession and offering for sale 40 lbs . of spent tea- eave s whea. Mr. Rose, grocer, deposed that on or about 111/h July

THE GARDENERS' CHRONICLE.
last defendant, whom he knew, called at his shop and not. Defendant said he could talk to himo, and he told him that he had, an article which he was selling as a substitute for tea. He said he did not grow it, but procured it was used it would require to be ground down and mixed with other tea. The price was 1 s . \(4 d\). per 1 b . He subequently ordered and received 46 lbs . of this spurious tea, the price of which was \(3 l_{\text {. }} 1 s .4 d\). Mr. Philips, chemist to posed of redried tea-leaves, both black and green, and the posed of redried tea-leaves, of other plants not tea. The leaves have been dried with a vegetable red dye, apparently Brazil or \(\log\) wood, and the dust or small part of the sample contains yellow ochre, both raw and burnt, and sand as well. The bench after a short consultation convicted the defendant in the highest penalty of \(5 \%\). for every pound of the com
tion. The fine therefore is 200 l , and 1 s . damages.

Melton Mowbray.-On Thursday the 23d
Duc de Nemours, who was on a visit at the Earl of the Quorn hounds at Billesdon Coplow. The field was considerable, considering the early period of the season including Lord and Lady Seymour, Lords Wilton, For rester, A. St. Maur, Gardner, and Macdonald; Hon. W
Fitzwilliam, Sir Walter Carew, \&c. The weather was unfavourable, but towards the afternoon they bad a good run in which his Royal Highness went remarkably well. The sport has been excellent hitherto, and a good winter is anticipated.

Oxford. - On Wednesday the Court of Delegates of Appeals in congregation met to hear the arguments of Counsel in the appeal from the decree of the assessor of the Vice-Chancellor's Court, in the cause Macmullen \(v\) the Regius Professor of Divinity. Mr. Erle in a speech of two hours argued in support of the appeal, adverting to a vast number of legal decisions to prove that the ViceCancelior's Court was not the proper tribunal to try the same side arguing chiefly from the practice of the University. Mr. Hope then addressed the Court against the appeal, and contended that as the civil law was the only course could have been taken than bringing it before the Vice-Chancellor's Court. He supported his opinion by reference to a number of law authorities and statutes, At the close of his speech the Court determined on taking time to consider their decision.
Portsmouth.-The Artesian well at the Royal Hospital, Haslar, sunk by Mr. Docwra, manager of the large Artesian well now in progress for supplying Southampton with water, has resulted in producing an abundant supply of water, which has been analysed by order of the Admiralty and found to be of the purest and softest
quality. The water rises through 125 feet of shingle and quality. The water rises through 125 feet of shingle and running sand, which is full of salt water and affected by the
tides. The trouble and difficulty in stopping the salt water out bas been entirely overcome. The quantity of water that Mr. Docwra guaranteed to obtain was 12,960 gallons per day, but the actual quantity obtained from the
spring, 156 feet deep, is 59,328 gallons per day. This spring, 156 feet deep, is 59,328 galions per day. This
quantity can be pumped every day without reducing the water in the well more than about 40 feet from the surface.
Plymouth.-On Sunday evening between 10 and 11
o'clock, Commander Douglas, R.N., fell over the Bar-bican-quay and was unfortunately drowned. From the marks of a bruise on his chest it is supposed that he first stumbled over a vessel's warp which was fastened to a Although he did not sink and remained but a short time in the water, life was quite extinct when the body was
brought ashore. Comomander Douglas had just paid off brought ashore. Commander. Douglas had just paid off
the Tweed, 20 , from the North American and West Indian the Tweed, 20 , from the North American and West Indian
station. He was above 60 years of age, and having spent the greatest part of his life in the service of his country was waiting the arrival of a steamer to convey him to his lome near Brighton when this unfortunate event occurred. -Mrs. Hill, appetended witch charged with imposing upon the credulity of a simple country girl named Charlotte superstition still existing in the lower classes, was brought before the bench of magistrates on Monday for the second time and committed to the House of Correction for three calendar months as a rogue and
section of the 5 th George

Teignmouth.-A fire broke out last week at Rowdens, near this town, lately the property of Sir James Nugent, by which the whole building and nearly all the furniture was destroyed.
Railways.- The following are the returns for the past week:-Btrmingham and Derby, 1287l. ; Birmaingham and Glocester, \(1607 \ell\). ; Eastern Counties, 2289l.; Edin Grand Junction, \(6510 l\); Glasgow, Paisley, and Ayr, 12081. ; Great North of England, 1329l.; Hull and Selby, 976l.; London and Birmingham, 13,834l. ; South Western, 5023l.; Blackwall, 617l.; Greenwich, 677l.; Brighton, 3108l. ; Croydon, 2071.; Liverpool and Manchester, 3659l. ; Manchester and Leeds, \(4603 l\). ; Midland Counties, 2464.; Manchester and Birmingham, 2355l. ; Northern
and Eastern, \(1472 l\).; North Midland, 4,027l.; Newcastle and Carlisie, 1411. ; S South Eastern and Dover, \(2699 l_{\text {. }}\); Sheffield and Manchester, 479l.; York and North Mid land, 1521l.-The York and North Midland Company at their meeting last week empowered the directors to apply to Parliament for the extension of the line to Scarborough, with a branch to Pickering, and also to make arrangements for the purchase of the Leeds and Selby line. It is stated
that the extension will cost \(260,000 \mathrm{l}\)., allowing for all
contingencies, the money to be raised by the issue of \(25 l\). opposition is expected in Parliamont. \(507,500 l\). is the pur chase-money for the Leeds and Selby Railway, and from the working of the two companies it appears to be considered that a permanent dividend of 10 per cent. will be secured. avourably on the subject of the branch to Macclesfield The money required for this purpose they estimate at \(130,000 \mathrm{~L}\), and the revenue derivable from it, after paying more than 10 per cent. per annum. The sale of surplus property in the hands of the company will, it is said, be ound sufficient to raise the necessary means.-The North Union and the Preston and Bolton companies have united, the division of profits to be made at the rate of 6 per cent. respective capitals, after the payment of which any surplus ve capitals, after the payment of which any surplus in consequence of this arrangement will, it is thought, work beneficially for both companies- The Newcastle and Junction, and the directors are to apply to Parliament for head and other works to carry the railway over the Tyne - An ingenious invention has just been exhibited, and its powers tried on the Brighton and Croydon railway. It is England, the engineer of Hatcham iron-works, Kent-road for the London and Brighton railway. It weighs about
270 lbs., and is manufactured almost entirely of wrought iron. It carries four or six persons, two of whom propel greatest speed for a short distance is 25 miles an hour ; its average rate is 15 miles an hour, carrying in both cases four passengers. By means of this machine on a line of railway, one man can convey a message from station to should there beany fear of its encountering a train, it can be lifted from the tramaway with as much ease as a sedan-chair

\section*{IRELAND}

Dublin.-The Court of Queen's Bench on Safurday decided that the 15 th of January shall be the day for cussed at great length, and this arrangement was made by although bis notice of application stated that the 11th Deceaber was the day which he would ask the Court to motion on Saturday, he was met by a cross application from the other side. The traversers moved the Court They applied on the general ground that such a delay was necessary to them in order to be fully prepared; and secondly, on the ground that the present Jury list was very imperfect, a hat they specified. This would cation was moved by Mr. Henn, Q.C., who read a long affidavit from Mr. Pierce Mahony, which chiefly addressed itself to the imperfections of the existing Jury "There were only 4000 names upon the book altogether, and only 388 names upon the Special Jurors' List, of Which there were only twenty-three Roman Catholics. Such was the state of the list ; and at the present noment Dublin, at which the Recorder several times expressed his satisfaction at the benefit which would accrue to the citizens in obtaining fair Juries. At that revision it was lists were gone through, that there were no less than 500 persons qualified to serve, of which 100 were Roman Catholics; and it was sworn that there were no less than 300 members of that religion qualified; therefore under trial could torney \(G\) not be had from the present list. which had been grounds put forward for postponing the trial as insufficient, save that last mentioned. Uader all circumstances he said he had come to the conclusion that he would best discharge his duty by not objecting to the postponement Monday in count consent to its being put off to the vacation after contended that considering the importance of the case and the circumstances connected with is, the ends of justrial till February. The Solicitor-General was about to respond on the part of the Crown, when be was interrupted by the Chief Justice, who said that he forbore purposey throwing out anything like an expression o present case. In the first place-except from populax report, which amounted to nothing-they knew nothing at all about them. In the next place, it would did happen to know before the case came on for trial, when the accused would have to meet the charge made against them, and be prepared to do so. It was of due course of the administration of justice. The At-torney-General had very properly given way to the postponement of this case until everything like an imputation process of revision, which it appeared on all hands was now going forward before the Recorder of Dublin. He
isnew that there had been affidavits made by the gentlemen who acted as solicitors for the respective defendants, wherein it was represented that they did not think they would be ready before a certain day which they named. Now if what they so stated was a matter of ect disregarded what they said; but as that was a mere raatter of opinion the court was not called upon to decide it. Under all the circumstances the court were of opinion that the 15th January, the day nominated by the Crown for trial, o prepare their defence. His Lordship having observed that it was not mentioned in the affidavits that any of the that the trial should take place on \({ }^{2}\) Monday the 15 , ordered hat the trial should take place on Monday the 15 th Janubar) rose to ddreel (wo was sitho full s I am, one of the parties concerned in this cose Chiof Justice-Thi is Thats Steele Justice-Chis is, perhaps, somewhat irregular. Mr. Steele Chief Justice-I should be very sorry to cut you short, Mr Steele Mr. Steele-I hope I shall receive the same justice from you, my Lord, as I did from your illustrious when I'was tried before him. Chief Justice—Go . Mr. Steele-I most respectfully beg to say that, lest your Lordship they all resided in Ireland - Chief Justice-I merely stated, Mr. Steele, that the affidavits did not mention that any of the witnesses resided out of Ireland. Mr. SteeleMy Lord, what I bave to say is this: the only witness Whom I shall examine who resides in Ireland is Lord Plunket, and it is with pain I draw him from his present as then; all the other witnesses reside in England. It woulden ordered that Monday, the 15th January, 1844, should be fixed as the day of trial. The court, which was axtemely crowded during the day, was boon vacated by ceded wic and the ordinary business of the court pro most respectable citizens, numbers of whom thronged the hall of the court and the avenues to it to learn the re-ult.-On the same day an application was made to the court by Mr. O'Hagan, on the part of Mr. Charles Gavan Duffy, one of the traversers, for a copy of the names of upon the affidavit of Mr. J. Coppock, an English attorney, showing what was the practice in England. A motion similar to this had been brought forward, and had been ecided against the traverser. But for the present proposition they had special grounds, special affidavits, and pecial circumstances The Attorney and SolicitorGeneral opposed the application, and the Lord Chief Justice said the practice in England was not conclusive. It would, he said, be a different thine to call at the trial a witness whose name was on the indictment, and to make the concession reqrired here, when the consequence might be discussions in newspapers and their characters vilified. There was another danger of witnesses being put out of the way he did not say by foul means, but by foul means r otherwise. That as a danger which was to be uarded against He deemed that nothing could be more
 jurious than a diference or practice in to bound by . England; but he protested he was not to be bound by he opinion of M. Coppock; and he must say that if ho England and in Ireland, then he must abide by that in Ireland His opina, thenfor mould be refused. Mr. Justice Burton and Mr. Justice Crampton concurred with the Chief Justice. Mr. Justice Perrin dissented. The rule was consequently refused. At the close of the proceedings Mr. Smyly moved, on the part of the Crown, that their Lordships should direct the proper officer to strike a Special Jury in Jury list should be made out The order was granted.The weekly meeting of the Repeal Association took place on Monday. The inspector of police and governmem reporter were present. After reading several letters fre Presbyterians, approving of the late declaration of Catholic prelates against a state provision, Mr . \(\mathrm{O}^{\prime}\) Connel said he "had now to address the association on matco that related to the present state of the repeal quess to He was asked, did he feel any species of diffidence as隹 and might check its caretion haplety? His answer at once was, those prosecutions had assisted the cause, an made its ultimate success more secure and more sale more conciliatory, and, at the same time, more complete That was his thorough conviction. Look at the magnificent tranquillity of the people of Ireland. He always said that they were determined to obtain the repeal by peace able means. He was told that, if they were interrupted in their career-if the monster meetings, as they were called, were interrupted, the peace would certainly violated. They were interrupted in the way most dangerous to the peace; they were interrupted by having a short notice given them-they were interrupted in civil mode most likely to create tumult, and perhaps even prewar. But what was the result? Perfect tranquithe political ocean, and he was confident that tranquillity would till outs a the indictment, if he found in Treland plead guilty to disturb the If he found in Treiand one single effort to the prose pubic peace. What cared he for the resu facts in favour cution? He could not be deprived or the continuance of of repeal, and he looked forward to the He was sure of the repeal, if the tranquility assisted him
ind
on the trials and after them, as it did now. Why, they
might imprison them, but would they prevent them from writing? Would they prevent the people from looking forward to the day when the period of the traversers' sentence would expire? Oh! tbey might postpone the repeal cause for a season, but if the tranquillity continued, occur as the rising of to-morrow's sun, and it would come who were. now afraid that the people would engender disnextcommented onan article in the Times whichnded. He with anticipating the result of their trial. He bevailed the attack on Mr. Waller, and the dreadful murder of Miss Vereker, and again returned to the Times--whose conductors he denounced as "reckless ruffians." He warned England against the encroaching power of Russia, and again made pendence of Treland. A letter was read from Mr. Smith Association. Mr. O'Connell said he Committee of the he was highly honoured by being invited to to state that banquet to be given to Mr. Smith O'Brien on the 4tl insto, and he never performed a public duty with greate Pieasure than he would do in presiding at that banquet. He considered Mr . Smith \(\mathrm{O}^{\prime}\) Brien one of the greatest a his opinion, in the very highest grade of Irish patriotism. A vote of thanks was passed to Mr. John O'Connell for Steele announced that, in addition to Lord Plunket, he Lord examine on his trial Sir R. Peel, Sir J. Graham, Wellington. The repeal Bond Hughes, and the Duke of to be 636\%. 0s. \(8 \%\)-Mr. O'Connell has issued another address to the people against Ribbon Societies and midnight fires; the latter of which he condemns as " 2 foolish do a dangerous custom, which can do no good and may managh Reporter states that "the persons. who the Ferhe late repeal meetings throughout Ireland in the chaacter of French emissaries were neither more nor less han officers of the London police, sent over to Ireland or the purpose of watching the proceedings and noting number, seditious expressions of the leaders. They were 40 in guages. It is said that they can prove contain offers from the repealers which will substantiate the assertion of the Attorney-General, that he would prove the existence of a Mr. St. Clair O'Malley conspiracy."-Lord Lucan and commission of the peace for personal squabbles, have the the Pilot, been both reinstated in all their former honours as magistrates
Lord-Lieuten new proclamation has been issued by the hension of the persons concerned in the for the appreperson of Mr. Waller, from sol, to 1501., in oonsequence of the death of Miss Vereker. This proclamation states armed with pistuls." The resident party of three men, offered a reward of 500 l . for the discovery of the offenders Subsequent accounts received by express yesterday menbetween death of Mr . Waller on Wednesday morning entertained of his recovery, but on Tuesday his medical attendants felt alarm at the inflammation which was \(t\) night and immediately th on his head. He rallied two o'clock he awoke and rung the bell and desired the servant to tell hia family to come to him for he had not entleman expired less than half an hour the ill-fated municated to Mr. Waller until Monday, and the comupon him was most Wrejudicial. The immediate cause of his death was most prejudicial. The immediate cause of forming in hise either from erysipelas or from an abscess Waller is not expected to survive long. Creatherland. - The differences which have recently of Sutherland and the leaders of the Free Church have Grace declined to grant sites in the county of Sutherland Wase the reiterated declaration of the Seceders that they and the on the establishment as non-existent as a church and that their object was to sweep what they were pleased \(h_{\text {all }}\), however the riduary body from the face of Scotland. It thurch that the Seceders are not combined for the overis to diffuse institution they left, but that their sole object this assurance the Duke of Sutherland has felt it his duty \({ }^{t_{0}}\) gitive a favourable consideration to any applications for sites, provided they appear to his Grace to be founded on
such principle, reserving however to himself the power to grant them with due regard to the wants of the people, and to the welfare and security of the Establishment.
Edinburgh. - The Faculty met in their library on Saturday, for the purpose of electing a Dean in the room
of Lord Robertson, when Mr. Dnncan \(M^{6}\) Neill the present Lord Advocate was elected.-The musical chair in the University is again vacant. Sir Henry Bishop, who is
now in London, has written to the Senatus stating that his health will not permit him to come down and deliver lectures, and that in consequence he resigns the chair.

Aberdeen.-The Senate of King's College and Univer the Principal, approved generally of the resolutions of the Senate of the University of Glascow relative to the abrogation of religious tests in the Scottish Universities.

\section*{THEATRICALS.}

Drury-Lane.--On Monday night the lessee of this theatre fairly put forth his strengti by the production of a new opera, the work of a native composer. The ex-
periment, although hazardous in the extreme, looking at the fickle taste of English audiences, was most triumphant, and composer, author, and singers, were called for in succession. The Bohemian Girl is the title of Mr. Balfe's new opera ; the libretto is taken almost entirely from the new opera; the libretto is taken almost entirely from the
pantomimic ballet of La Gypsey, invented by MM. De t. Georges and Mazilier for Fanny Elssler when she was at the French Opera in 1839, and a version of which has been given at her Majesty's Theatre. Mr. Buon in arranging the words of the libretto has changed however is made to pass in the time of Charles II. The adapter as taken a somewhat corresponding period in Polish hisory. Thus Thaddeus a proscribed Pole, is to the Emperor There is There is little difference consequeatly in the situations. gipsies same history of an exile who joins a band of gipsies to save himaself from his pursuers, and who then saves the child of a Count from the antlers of a chased stag. The child afterwards stolen by a gipsy chief out her benefactor. The real rank of the heroine is finall discovered, as also the position of her husband, and the Baron consents to ratify the union. This would seem to end the drama, but there is a jealous queen of the gipsies and she nearly accomplishes the ruin of the lost child' character by accusation of robbery, and eventually her death, had not the blow been turned against the enraged queen herself. This is the operatic finale, for the opera ends fatally. This drama derives its entire interest from its domestic situations; but from the numerous incidents succeeding each other with such rapidity attention is kept alive to the end, and the composer has no ordinary scope for the exercise of his talent. The principal characters were sustained by Miss Rainforth, Mr. Harrison, Mr. Hudson, and Miss Betts. A ballad," That you loved me charmingly by Miss Rainforth, who is the stolen child arrived at woman estate, that it was demanded vacife rously a third time. At the close of the piece, Mr. Balfe, recei the "Bohemian Girl" will have a long career of success.

Court of Common Pusas.-Registration Appeals; Boroughs
Wenlock, Ludlow, and Birminghum.-In the two former cases of Wenlock, Ludlow, and Birmingharm.- In the two former cases
several decisions of the Revising Barrister striking off the list of borough voters persons who qualified in virtue of stables (not
being livery stables,) in fields, were decided by the court on ap-
peal last week. The judges held that tliough bridges or walls were not buildings of the samekind as "warehouses," \&ce., men-
 wingham the question movolved was, whether a leaschoider liad a rigl.t to clain to vote for a county, he berig the lessee for a
term origmally created for 99 years, in the borcough, of houses which, scparately, were not of the annual value of 101., but, collectively, were worth more than that sum. The Revising Bar-
noster deeded thrat the caimant was entitlect to sote for the
county. It was now contented tatat the decision of the Revismig county. It was now contended talat the decision of the Revisug

 that the language of the suth section of the Aet was so ce ear,
there couat be rocnbe that wens of this dencrition were con-
templated by the Legisiature. No nomeonvene templated by the Legisiature, Nonconvenience could are from
property unepresented in a borough belng represcnted an a county. The Court was of opinion that the Revising Barrister form Act. It was perfectly clear that the property in question fell within the meaning of the language of the \(20 t h\) section, and such though a portion of the term may lave been parted with by the votcr, yet such resinue or the term as remaned would give him
 Bomyas, Mr. Sergeant Channell, and Mr. Humfrey) stated that this aclion was brought by the plaintisf, H. Baxter, to recover editor of the Illustrated Polytechmic Review, of which journal defendant was proprietor. An introduction took place between
Mr . Nurse and plaintiff which ended in the latter bemg ent Mr. Nurse and plaintiff which ended in the latter bermg engaged
as editor at a salary of three guineas a week. His services, how ver, were not allowed to contmue for a long time, for after the ublication of the thurd mumber the defendant thought proper to mam,er, and wrote a letter to defendant stating that the custom in the engagements of editors was that continue to perform the
lic for the and therefore be should conth
duties of chitor. Winesse's conimected with the press were called thises of chtor. Winesses colnhected with the press were called always annual unless a specific agrcement to the contrary was
entered into. Among these witneshes were Mr. Dowling, editor entered into. Amongr these witnesses were Mr. Dowling, editor
of Bell's Life on Lumdug; Mr. Grifin, sub-editor of the Tablet;

Mr. Woods, parliamentary reporter of the Times; Mr. Ayckbown, a barsister and repnrter: Mr. O'Brien, a barrister ca mekgown, him-
sclf sub-edtor of the Inted sorrce Gazetlc, Mr. Grunelson,
foreign editor of the Momind foreign editor of the Morning Past; Mr. Bousfield, of the Times, and others, all of whom stated that an engagement of an editor Was alwaya for a year at least according to the usage of the press.
For the defence Mr. Sergeant Talfourd contended the For the defence Mr. Sergeant Talfourd contended that whatever
might be the nature of the engagements of editors of daily newspapers it could not app, st on engagcinent on a
new publication of this description published at the cheap rate of
dd. The sum of \(50 l\) had been paid in conrt which 4d. The sum of 501 , had been paid in court which the platintiff
had accejted for services readered before the phburation of the journal. But he lad thoupht pro, er to charge the \(\mathrm{e}=\mathrm{m}\) of of the
jod twelvemonth, \(4 l .4,4\). . week for the loss he had sustained in not having the perquisites, such as books, prints, \&c., generally the
property of the editor, which he would have acquired had he property of the editor, which he would hava acquired had he
continued editor, besides other pecuniary advantages, such as
an increase of calary an increase of saliary on the sale reachimy so many thonchads,
The publicat.on had, bowever, been a totai fantire, an l the defendant had made it over to Dr. Sigmond However, whether
such a usage as stated existed or not the defender such a usage as statedexff as he had reason to be displeased with the manner in which he conducted the journal. Witnesses were called to prove this dissatisfaction on the part of the plantiff.
Titus Danks, a foreman min the printmy housc of Mr. Rernelf, Titus Danks, a foreman in the printmg house of Mr. Res neld, very higli words. Mr. Nurse hal a uritten paper in fas land
which he showed to Dr. Baxter, sfatm, that lie should
be in be inserted. Dr. Baxter said "No; it is conveying an inaputa-
tion upon mee." Mr. Nurse stamped his hand upon the desk and said it should be inserted, whatever was theon the desk, He also aluded to an article about Dr. Playfair, which had been inserted in the first number of the Review, and which had preafterwards came up to the prantingen went away. Dr. Baxter print the article. It was, however, printed. The article was put
in in evidence, and was aan apology for having taken an artict
from the Gardeners? Polytechnic Review. Examicle, and inserted it in the Illustrated assist as editer when he came to the printer. He was rather in
the way than otherwise. Gardeners Chonicle, stated that he saw the article in the Illus
trated Polytechnic Review, Gurdeners Chronicle, stated that he saw the article in the Illus-
trated Polytechnic Review, copied almost entirely from the forme publication. The misprints were included. He complaned of
such proceeding in the Gardeners' Chronicle, because they stated that they had peculiar means of gaining inf rmati n, and they gave was not aware of any usage to give and pator a dut cal curarement Dr. Potts had lonked at the three first s.umbernot thins Review, and from its name it nught to have iseated nipon the arte waccls peculanyy cuncerned the Poly techare Instituthin, Fie ert so discusted that the articles were altogether preposterous and belied the title. There were three articles, one on the wind gauge, another on the
barometer, and the third on the thermometer, which were copied and atterly incorrect showing innorance of chemical know ledge. The witness also alluded to other inaccuracies, such as Thinting the name of a French chemist, "Pelouze," as "Pilonge." The three first numbers were sufficient to damn tie prblication. would have better suited Punch. The Lord Chief Justice summed up and told the jury that the principal questions they had to
deternine were whether this was an engagement for a year secondly, whether the defendant had by his plea and the evidence engagement before the end of the year; and lastly if it should entitled fors to what amount of camares the podintin was edly the general rule of law was that when there was nothing to in its nature a lasting and enduring service, the engagement was for a year. That was the general course the law assumed, but agreement itself, and therefore the plaintiff had called a considerable body of evidence to show that in the cases of editorships of
newspapers and other jul), ications of that nature, where an edito wan empluy ed and nu particular shintation, made, it was always understuod by buth partues and acted thon, and the gineral
llage was that it was an engagement for the whoic year fanWrge was that it was an engagement for the whoie year on-
doubtectir when there wana gencral understanong amu a pati-
 adduced on that subject was therefore of a nature very proper for them in determixing the verdict to take into their considerand after having been absent for a considerable time returned engaged Coved by the year; second, that defendant fiad proved his plea, Was an action by a market gardener, residing at Ealing, against
Signor Maxio and his coachman, a person named Albridge, to re cover compensation in damages for injuries done to the plaintifi's to have been produced by the negligent driving of Signor Marno' servants. Messrs. Jervis, Humirey, and James appeared for the plaintiff, Messrs. Cockbarn and Jones for defendant. It appeared C'clock, the morning of Sunday the \(2 d\) of July, at about one one horce, contaming a littue boy, the plamitifi's sum, and some meat and nther marketiog. Signor Muno's carruge was returning frum Notting Hill to town, after ucpositung the owner upon signor's cook and valet, and by home accudent tit came in collis slon with the plantift's cart, wheh was upset, mucli, bronen, and
the horse so severely mured that ne was afterwards hated. The plant.n's sun was thrown cut uncter the cart, in a sifuation of planitift himself was also sligntiy hurt. As usual m cures of this the circumstances in a very cufferent l.ght. Ine plans tiff 's witproper side of the road, and that there was albunuaut room to carelenshess of the defendant's coachman, who was driving rapidly. On the other side it was alleged that the signor's carriage was going at a moderate pace, and . hat the accident was oc-
casioned by the plaintiff keeping the odidle of the road. The case lhe plaintiff-Damages, \(50 l\).
Solomons v. Isaucs, Executriz. -This was an action by Mr.
Solomons Solomons, fruiterer in Covent-parden market, to recover from
Mrs. Isaacs, the widow and executrix of one Samuel Isaacs, accered, wie ammint of an 10 U for 2onl. With interest, alicged as the year 1839. Mr. Jertis, detendant. The plaintiff and the deceased, Mr lsaacs, were utimate friends, and had been partners in trade, and it was suga gested that the money, for which the 2001 . I O O was given, was
borrowed by Mr. Isaacs to advance to a son-in-law, whom he was
borrowhs, it. A stuck- -ruher, who was in the habit of seeng
writing, deposed that the signature to the 10 U was that of the
deceaved. There was also some evidence of the payment of
interent. The body of the concument was in the handuriting of
a clerk of Mr. Solomons, wat he could not recollect a clerk of Mr. Solomons, out he could not recollect under what

\section*{SATURDAY, DECEMBER 9, 1843. \\ MEETINGS FOR THE TWO FOLLOWING WEEKS.

}

THE Queen's sisist to Chatsworth is a great event in the history of Gardening. The magnificence of her Majesty's reception was owing more to the Gardenscenery created by the wealth and good taste of the Pake of Devonshire, than even to the splendour of the The fala the Peak, and all its interior ermbellishments. The fituess of gardens such as those of Chatsworth for the purposes of Regal entertainment has never been more strikingly illustrater, and they have proved how infinitely superior is Nature, skilfully assisted by art, to mere art however helped in its effect by Nature. There is no architect like Him who builds up the trees and clothes them with their leafy canopy, and causes them to bring forth flowers and fruit each after its kind.
How this was proved, in what way the Duke of Devonshire wielded the powers which he is so happy as to possess, and by what means the fables of enchantment were realised among Derbyshire-hills, will be learned from the following
REPORT of HER MAJESTY'S GARDEN RECEP
TION at CHATSWORTH.
For a week previous to its being in the slightest degres known to the public that her Majesty intended honouring princely seat-Chatsworth, a visible change took grace in all the garden proceedings there, and in the other out-dior Grace had left Chat the direction of Mr. Paxton. His Grace had left. Chatsworth about the 1st of Novo., and was
not expected there again for some months, so that the not expected there again for some months, so that the order during his Grace's reaidence there, were drafted off the pleasure-s.and to a variety of extensive alterations in great walks were also cleared of their gravel, for the the pose of allowing heavy mosterials to be carted to the new in progress when great rockery. These extensive works were the proceedings ; and the men thus employed, and all those from the distant works, were immediately set to *ork in putting the grounds in the highest state of order. very boisterous and wet, and it was found impossible to pequently gravel into a fit state to be walked upon ; conminesty, carts were sent for miles round to the different
of less than a week nearly a thousand tons of beautiful spar-gravel were brouglit to the spot and kitchen-gardens walks, both of the pleasure-grounds and ter was cleared from the lawns and flower-beds i and mefore
the the day of her Majesty's arrival, flowers from the different greenhouses were plunged into the open borders-so tha appearance of summer. Great efforts were also made to fhimish off and plant part of the extensive rock-garden now contanes more than two acres of ground, and which them weinhinseveral thousand tons of rocks (some of natural position nearly twenty tons each, placed in their exertions made. These efforts were successiuw, and the days the highest order were perfect and complete two ing perpore her Majesty's arrival, and this notwitlistanding perpetual bad weather for a fortnight.
cleared up and becore the Queen arrived the weather ing on up and became fine, and on the Royal party arriv appearazce of a fine day in of the gardens presented the park roads, the village of Edensor, and all the conspicuof high kef the domain were equally perfect in their state Digh keeping.
\(20^{\prime}\) clock, - Her Majesty arrived this day a little before ducted by his Gbout 20 minutes before \(30^{3}\) clock was conOrangery his Grace the Duke of Devonshire through the where Mr. Paxton was ready to conduct the royal party to the Mr. Paxton was ready to conduct the royal party The noble visitors invited to meet her Majesty at Chatsahont were in her Majesty's train, to the number of and 50 ; and altogether the scene, where so much rank ductions of Nature, prestire mingled with the lovely proAfterds are capable of describing.
conducted to the upper terrace of the Conservatory gardens, where they came suddenly upon a full view of and the Royal party immediately paused, and expressed their admiration and astonishment at the vastness of the structure. They then descended to the lower terrace of the Conservatory garden, and entered the house at the north end. Here, again, exclamations of wonder and
surprise burst forth from the distinguished visitors Royal party were conducted through every part of this immense edifice, and Mr. Paston explained the various objects of beauty, together with the peculiar structure of
the house. From thence her Majesty was conducted through the Fern Garden to the great terrace, to the upper bastion south front, where a very commanding view is had of the grounds, and particularly of the last new fountain, of the grounds, and particularly of the last new fountain,
which has not been long finished, and which throws water up from five jets, so contrived that each flows in a different way, an arrangement which gives this fonntain a Duke of Devpearance. Frou this bastion his Grace the where her Majesty and the Duchess of Kent had planted Where her Majesty and the Duchess of Kent had planted
two trees 11 years before. Beside this place the ground had been previously prepared for the reception of another tree, should Prince Albert feel disposed to plant one. At his Grace's request, his Royal Highness readily consented to set one beside the Oak previously planted by her Majesty, which is now grown to a considerable height.
The Queen then returned part of the way on the terrace, The Queen then returned part of the way on the terrace, race, which brought the Royal party to the south end of the Italian Garden, where his Grace pointed to both trees which bad been planted by her Majesty and august mother Mi. Paxton submitted to his Royal Highness several kinds of trees to choose from, when his Royal Highness selected a Sycamore. The Royal party then followed the private terrace of the west front, and descended into the Lower "Farden, whence her Majesty proceeded through the "Frivament" Room and the Great Court, to her Majesty's private apartments.
the same evening a grand ball was given to the Queen in the great Banqueting-room. The Orangery and whole Chinese lamps, and beautifully decorated with ted up by Chinese lamps, and beautifully decorated with plants in
flower. They were suspended from the railing of the flower. They were suspended from the railing of the
stairs leading to the ball-room, and at each step hung a stairs leading to the ball-room
beautiful flower in full bloom.
Dec. 2.-Her Majesty and Prince Albert walked ont early this morning, and again visited the Conservatory, Arboretum, and Flower-gardens. Mr. Paxton explained to her Majesty and the Prince the nature of the conserva-
tive-wall (see an account of this at p. 331 of our vol. for tive-wall (see an account of this at p. 331 of our vol. for
1842 ,) with the plants on it, which are protected by linan blinds instead of glass, the heat being supplied by flue is the centre of the wall.
Illumination of the Conservalory and Watcrworks. This evening the Conservatory and Waterworks were illuminated, although not the slightest sppearance of any pre-
parations for doing so were visible when her Majesty visited parations for doing so were visible wher her Majesty visited the grounds; but an immense number of men had been trained to at ond to the inumination and to fire the coloured lights according to a certain plan previously devised by men commenced lighting up the great Conservatory with thousands of variegated lamps. On each rib of the house were \({ }^{\text {suspended }} 120\) lamps, while others hung in festoons between the cast-iron columns supporting the gallery, which was also lighted. The "Robbers' stone," on the summit waterfall proceeding from nearit, the cascade, and all the fountains, were iluminated by Russian lights of different colours, hidacn from the house by boards placed in front of them. Many parts of the grounds were also lighted by lamps suspended from the trees, on the opposite side of the river from the house. In short, the whole place a a blaze of fire
Her Majesty, without being aware of the preparations that to the Conservarory at a quarter past 6 o'clock (every. thing then haviog been completed, when the Royal visitors expressed their astonishment at the singular effect produced by so immense a body of light and ita reflection on the multhudes of plants. There was something unusually grand in this magnificent scene. To illuminate such an immense mast of bulagg in so short a lime was a very bold undertaking, and was most successfully accomplished. The Queen anter expresing mach deight at the unusual scene, returned to the hase, and at balf-past seven the public were admitced to see the iluminations by tickets, issued through the liberality of his Grace
About ten o clock, on a private signal being given, a rocket was hired, wheh was a notice to the men placed by the great guns at the "stand." Amidst a roar of artillery, and at the same instant of time, a blaze of coloured fire burst from the Robbers stone and waterfall, cascades, fountains, and woods, and the whole scene was enveloped in a sheet of flame. The effect baffles descrip-tion-lue votcors were taken by surprise; in whatever direction the eye turned, the coloured lights-crimson, green, and blue, blazed forth to the aatonishment of the hundreds who were admitted to the grounds, and of the housands who wero on the opposica The Royal party could be observed at this time passing from window to window of the mansion, and viewing the exciting scene.
Sunday, Dec. 3.-Her Majesty walked out early this morning in the grounds and Conservatory, where not a vestige was to be seen of the materials employed in the previous evening's illumination - everything had been cleared away by an immense number of hands employed
for that purpose. The grounds were as neat and orderl as on the previous morning; and this, tho, afforded not After lunch, Conservatory, and exanined the conserve grounds and flower-gardens. The Royal party then kitchen-gardens, whither they were colducted to the Grace, Mr. Paxton being in attendance at the gate by hi Majesty first entered the Musa-house, where the sich lection of Chrysanthemuma elinited much The Royal parts then proceeded to the Greenhore where a large 'Tree Fern greatly excited the adminase of both ber Majesty and Prince Albert. His Grace ater wards conducted the Queen, Prince Albert, and ather of the Royal party into Mr. Parton's house wher the were much pleased with its neatness and order where they ton had the honour to present her Majesty wr. Pax ton had the honour to present her Majesty with the firs and lis "Botanical Magazine of Botany" richly bound was graciously pleased to accept was graciously pleased to accept. The Queen also deigned to permit the volume of the "Magazine of Botany" now in course of publication to be dedicated to her Majesty.

shines like the planets in the pure atmosphere of a shines like th
An imported specimen of this insect having been found in a greenhouse in Norfolk, \(I\) am induced to give its history, which I am able to do from having often seen it in its native haunts in Italy; the French also claim it as an inhabitant of the South of France, but we can never hope to see it naturalised in England. To describe the magical effect which the Fire-fly produces is impossible-it is a spectacle which far surpasses the imagination-and a shall never forget the delight and astonishment of this rienced the first time I beheld the coruscane evening in
glorious living gem. I was wandering one June in the neighbourhood of Mentone, along the banks of a river whose pebbly bed was dried up, and where the Lemon and Orange groves rendered it, with one exception,
the most enchanting spot I have ever seen, when suddenly saw lights, like electric sparks, emanate from the grass,

as night advanced their numbers and beauty increased, until they swarmed in a plantation, where they seemed to be enjoying the lovely evening, chasing one another aud playing about like troops of fairies, alternately hading and glittering meteors: it appeared as if the serene and beautiful heavens of Italy were reflected upon the earth and the stars were dancing for joy. As I returned, the Fire-flies were pursuing each other in the streets of the town, and having caught two in my hat, they were secured in a quill, and thick as the medium was, their light was sufficient to ascertain the hour by my watch during the night. No wonder that poets have sung in praise of the
"Tucciola:" and those who have visited Italy without seeing them have missed one of the most beautiful objects to be met with in that interesting country. The Fire-flies are only to be seen in June and July; their light is mos brilliant during their vigour, and it becomes extinct with life: they commence their excursions at sunset, and in the middle of a summer's night one cannot set a step in any direction without seeing these little animals darting from one side to the other; their flight appears undu lating: they seem to shine by intervals, their luminous effusions being excited by their movements. In the day they rest conccaled amongst herbage, and are difficult to find. The Italian Fire-fly differs essentially in form and likewise in its habits from the Glow-worm, as will be shown when we give the history of that insect. The larvæ are considerably alike; but both sexes of the perfect insects of the former species can fy, and are similar in appearance, the male being the smaller.
Linnæus, who gave the name of Italica to the European Fire-fly, describes it as having a black spot upon the thorax ; but I have never taken one so marked : this difference, however, led Bonelli to separate them, and he designated the species we have figured Lampyris pedemontana. Charpentier seems to have described the sam variety under the name of L. lusitanica. Whatever the scientific appellation may be, it is the Lucciola of Italy, and known by our countryman ss the Italian Fire-fly, which we will now describe, merely observing, that owing to the structure and other characters above alluded to, it has been separated from the genus Lampyris by modern systematists, and Dejean has included it in his group
Colophotia.
The Italian Fire-fly varies a little in size: the head is
\({ }^{2}\) Curtis's Brit. Ent. fol. and yl, 698 .
black; the eyes large, bemispherical, and not very remote, especially beneath; the antenne are eleven-jointed, short, filiform, and black; the basal joint fulvous; the thorad is of an orange colour, transverse, semicircular, the hinder angles lobed; the scutel is of the same colour; the und the side of the thorax and breast are deep ocliraceous; the abdomen is blackish: the two last segments are of are opaque cream-colour, and emit the light; the elytra aro much longer than the body, elliptical, and black or fuscous; the wings are ample and smoky, longer than the elytra, the tips being folded in repose; the legs are brow. the thighe ochraceous. Fig. 1 is the under side; Fig. is a male flying: the lines denoting the natural sizes. Ruricola.

\section*{LOUISE BONNE (OF JERSEY) PEAR.}

Synonyms-Louise Bonne d'Avranches, Beurré
Bonne Louise d'Araudore, William the Fourth. Tne Pear above designated is widely different from the Louise Bonne described by La Quintinye, Duhamel, and other Fiench authors, and infinitely superior to it Although the Pear they describe, obtained, in France, a good character in the time of Louis XIV., yet, even in that country, subsequent writers describe it as beid sometimes but half-melting, and good only in dry soils whilst in England it is found to be not adapted for bearing as a standard, and unworthy of a wall. La Quintinye enumerates the particulars of its merit, including amongg them, "and above all, that it pleases much his Majesty. It has no red, grown in any climate; in that of th country its flesh is either crisp or scarcely half melting. The louise Bonne (uf Jersey) is a more recent produc tion. Fruit, probably the first of it seen in this corntry was received from General Gordon, from Jersey, and sol to the Horticultural Society by the Marquess of Ailas, 1820. Subsequently, in the same season, fruit was fom sent to the Society by Major-General Le Couteur, Jersey ; and grafts of the variety were obtained through him for the Society's collection in the following season. having obtained the name of Louise Bonne in Jersey, and

AMATEUR'S GARDEN. No. XLIX. welkly Is recording the articles which have appeare never to under this head, it has been a rule with me never or, recommend anything which I had not either prothers, was from mature consideration and the success arabled, from sbout to practise myself; consequently I am enabors which experience, to deny the whole of the statements w
appeared at p. 843, relative to my method of managing Shrubbery borders, under the signature of "The Knave of border in a flower-garden to be turved up, or only those that surround the shrubberies? and taking it to be the latter, he says "such borders generally consist of there baceous plants and annuals, intermixed here and there of Herbaceous plants and Annuals? for the ornamental shrubs are but a secondary consideration with "The Knave." I have heard such assemblages of planta called an "Herbaceous border," and I have condemned them at \(p .789\), to which place I refer for my reasons for doing so; but when I spoke of Shrubberies I referred to those broad belts which geinerally form the boundary sube various kinds of trees fronted with deciduous and evergreen flowering shrubs; and in large gardens such Shrubberies dividing walks, breaking unsightly views, \&c. It wa dividing walks, breaking unsighty views,
for Shrubberies of this kind that my directions were for Shrubberies of this kind that my directions were men of taste as to which plan must be the best, vizo, a dry surface, or one at all times green and luxuriant. Annuals and Herbaceous plants, where is the turf to come from to turf the borders?" This is a mater which he must setle with his employer. Let hiu first show huch that the appearance of his Slupberies will be much improved, that the plants will grow better, and that the expense of keeping will be decreased atter the operation is completed at the rate of one man's wages in every sis, and then lhe will soon discover where the turf is to come annually reneved, and instcad of a fine show of Annuals and Herbaceous plants there will be a strip, of grass six feet wide running along the side of the walk." Where turf would require to be renewed, herbaceous phans coubbot exist, except as, which they too generdiy are in shind
borders, miserable specimens of bad culuvation.

I am referred to the market-gardens, where fruit-trees are both dug and cropped among, as a moof of the benefical effects of the digging sistem. But to make this argument of any service "The Knare" must first show that the crops of fruitare beiter than onground not ging in this instance is an annual "root-pruning." and therefore beneficial from counteracting the luxuriant
growth that would otherwise result from the quantity of manure used; hence, though digging under these circumit will "also benefit, shrubs."-W. 1 . Ayres, Brooklands.

\section*{HOMH CORRESIONDENCE.}

Pine Apples.-I scarely expected that the few obserran tions I had witten on the rilture of the l'me Ayple,
addressed to a local Horticultural Socinty fire years ago, should have been of such importance at the present day, nicle. The interest lately created is certamy not less than a fruit of such importance as the l'ine Aple leserser.
I am ghat to earn from the Chromele that ny sugnestions have been of service. I have also rese rid a number of
letters recenty, from good Horticulturists, beaning similar testimony. 1 will hastily venture a ramak on one or two particulars on whels we appear to difier. Now, nete ne follow the temprature and chmate of the tropics, म should of nectsity arrive at just what i consider a most
fatal error in the culture of this fruit, wa., the production of a great umber of line Apples at a purticular season, and few or none duing the greater fant of the year. Hence, by placing the flants unter stint art.mol managemant, Epheic at one and the same season, jou succeed in
liaving a supply of ripe fruit twelte montis in the year; which is, if I may we allowed to give an opinion, the ne plus uitra of Pine growing. It is this deviationfrom a - fropical climate that is the foundation of our success, and - fully accounts for our beating "MIr. Speede with the climate larger pots than Mr. Murray; but I cobsider that to secure fruitfulness as well as a vigorous development
of leaves, the plant should bear some proportion to the of leaves, the plant should bear some proportion to the
size of the pot: that was my opinion five years since, and subsequent experience has not altered it. Thave never found equal success attend popping a little Pine plant out of a 60 mato one of the largest dimenswns 18 used, viz.,
18 inches in dianeter and nearly the same in dejth, how careful soever one might be in the selection and allocation of the material used. I state his advasedly, as I entertain no prejudice one way or the other. I am, however, not entirely ignornt of what ine past season ug-
shift system, having subjecteil during the wards of 1,000 flants of various homds to this mode of potting, and this you will admit is not a tritung exper.ment Pine-mbants of that by-mul-bye. l lave also planted young Pine-rlants out in a prepared bed of son, there lo remain nary growth is securcd, and leave's ovtuin as set leng but then this is an attainment all good culivatons nerer Wish to accomplish; neither can you hy his mode of
culture econonically secure-if at all-a regular supply Ihold soil in the cultisation of the line-aple to be of great Consequence; some of those \(1 n\) this country who are fond
of novelty bave tried reat, but have glady retraced their stafs again; and I have yet to learn that the people Versaines produce the Queen Pne above Gibs., or that the general culination is at all equal 10 our best growers
in this country. I shall certainly be satisfied that soil is
of no importance, when I see them produced at our exhi-
bition bitions, grown either in sand or peat, equal to those of Messre. Murray and Spencer ; and I strongly suspect that if these cminent gardeners were to substar ine fand or peat fur the soil they now use, than, instead of gold and silver medals, they may next stmmer consider themselve well and liberally dealt by at Chiswick if their productions are dist
GIlendiznuing
Pine-apples....From expericnce, I beg to state that the collowing material may be used with advantage in any soil that is cmployed for the culture of Pines: viz., oneeighth of soot from coal-fires, to be well mixed win soil, and the heap to be well saturated This hamber ced or six times curng decomp of this excellent fruit.-W Pine-(l),plcs.- llaving read several paragraphs in the Cho ouille respecting the average weights of large Pines grown at Bicton and other places, I beg to state and as I anderstand they are cullivated after Mr. Glendinning's practice-with a low temperature and sow growth in or three stages- 1 concley come to the fruiting-house Suppose the retaining wall of a bark bed in a fruiting-pit to be 23 feet long by \(7 \frac{3}{2}\) wide, the size of most pits nea Manchester: and suppose that there were wa rows in crowded for a pit of the above dimensions; and that th arerage weights of 20 six-feet plants produced 110 lbs. of fruit, which is about the weight specified in the Chronicle consequently, if my calculations be correct, the cufotore of the six-feet plants wili have 110 lbs. of fruit for three Hamiton, garitener, Thornfied, with a pit of the abo dimensions has raised within the three years 700 lbs . weigh of fruit. The majority of his plants consists of the Mont 4errats, one of the slowest growers and most taruy frime," herenith hand you the weight of six Envilles cut

Errchimental Co-operation.-1 am much gratified by de ditmination exi ressed of making the Chemacte vehicle for Agrictifural, as well as ime in its pages the subject of Eyprimental Coopreration, and to report progress since the tur ming of infolk. I have been favoured with the results of an interestivg experiment, undertaken by Mr. Eree at Stowmarket, which 1 propose to give in the opening Number.-J. S. Henslow.

Pseud-Acacia,-As the quelities of the Pseud-Acacia (Colbett's Locust-thet) are not jet get.erally known, I an induced at this time (being the stason for flanting) to call the attention of your \(r\) taders (being practical men) to encourage the growth of them. upon removing one that had stood failed ; that one is now sound, and has consequently been in the ground 40 years. I planted 200 trees ( \(\% 0\) years ago) in consequence, und at
and ame time aloo uprards of 2000 Oohs; not one of the hiter is equal in size to the smallest of the Acacias, which are now useful for many purposes. The nood is nearly all heart. The Acacia of 30 years old may be reckoned as large as an Oah of 100 years; and this circustance cannot taitions, of the advantage that will be derived by ahopting this tree, mhilst the Oak may be allowed to prow for other purposes, particulaniy sbips, athough the pest are unported from A merica specially for that purpose 1 am aware that Mir. Witbens, of Molt, has pubished a small wark lately upon the usetuiness of this tree, but fear it is not generally hnown. Tcannot, herefore, refram from calling attemtiont agawn ts years ago for a fence, to another place, and not one of them shows any signs of decay; the ate only three inches squake, and have inoniods of the wind having much effect \(u\) on them, they being so
britlle-so they are when young, but the wouds beal very soon, and there is no necessity that they should be planted
in siluations much exposed. They do not require rich soil, and as far as my experience goes they do not thrive we'l on clay, yet I am told there are some g1owing well opon it, and of a good size. - A. P., Cheam.
Becs.-"Este" gays, in No. 47-" I have had seren swarms from three stocks, because I did not ventilate as I ought to have done." From this and other statements I perceive that "Este" has just commenced that journey which I have accomplished with great loss and disappointment; I would therefore strongly recommend him to pursue a different course, as no system of ventilation-whether applied to collateral hiving, storifying, or nadiring, except such as will prevent comb-building-will put a stop to swarming, especially in wet seasons. Thave had swarms come of with the thermometer standing below \(80^{\circ}\) in the middle box of a collateral set, and have frequently had them come off when both side.boxes have been partly filled with combs and honey. I have also found nearly the same results from storifyng and nadir hiving. In fact, the only way to reap the full benefit of the Beenive is to practise partial deprivation (see "Bevan's Honey-Bee," p.246) a few dars after the departure of a first Ewarm. By partial deprivation I mean extracting the whole of the combs containing honey only; this will most likely prerent a second issue. A stock 80 treated will generally be more valuable in the autumn than the swarm which broceeded from it, as it will contain a young queen, and, in all probability, more honey. Nadir hiving (or Mr. Jeston's Butter-tub), combined with storifying, without Jestonsion I think second to partial deprivation; but any vencess with nadiring separately must be more the result of chouce than of nood management, as it is a well-known fact that Bces have a great disposition to carry their stores upwards, and to keep their brood below. It is no wonder therefore, that empty combs are found in the wonder, September- - Thomas Buchland, Reigate.
Fertilization of Carnations.-Last spring Mr. Wood mblished in the Cluronicle a list of Carnations among pubich he directed attention to Toone's Ringleader, scarlet flake, as abounding in pollen. Y have not found it so, flake, as abounding in pollen.
yet Mr. Wood is. generally correct. Can you tell me how far the potling raight influence the production or pollen thinner fiowers than Carnations, for which reason I defer then thers ; besides they are less apt to rot prefre and a win wine that the layers or pipings should for seal be potted in pots not too large-not exceeding 12 s , and that the soil should be old turf partially rotted, mive with half-decayed leaves, and the plants not matilated for laying nor for piping. Possbly the double pots recently advertised might be very good; or, to avoid waterix g , the pots might be plunged in a box meashes, said box being pisced on feelers contanning limewater to keep out sluys, and in a great measure earwigs. mas glad eneral, eneral, wanale that Fletcher's Red Rover, scarlet flake, has in mounded in pollen; the anthers are larger as in mo aill in any and smoothess of petal be considered and firstrate. \section*{Willam.}

Morphology. - Two or three days since I was esamining
a flower of a Water Lily in a hothouse, in this neighbour-
bood, in company with the Gardener who has the manage-
ment of the place, and having lately bee ment of the place, and having lately been reading an out the gradual change of petals into stamens as being an out the gradual change of petals into stamens as being an the flower are but modifications of leaves; when parts of panion observed, "That is very true, but ; \(I\) should like to know how the Cactus makes his flower without any
leaves?" I thought this a shrewd question, and as I am but a Tyro in vegetable Morphology, shall feal obliged if you can find space to answer it in the Chronicle next week, -A Bolanical Student. [It will frequently be found
that the leaf-organs of a plant are developed unequally upon different parts. For example, on some Oaks the early shoots have only small scales instead of leaves, and it is only towards the end of the season that true leaves scale-like points, which soon drop off; when the flower begins to form, these leaves assume a higher development, as is seen at the base of the calyx; then they become
larger and larger, as is seen in the calyx itself, \&c. \&c. larger and larger, as is seen in the calyx itself, \&c. 8cc.
As soon as the year is turned we shall give you such reasons for the opinions of Morphologists as we doubt not will satisfy you. In the meanwhile read the Coory of Horticulture.
Cocoa \(N u t s\) for Manure-I have lately heard that of
the vast quantity of Cocoa Nuts imported into this country, a Iarge proportion turns out rotten and unfit for the purpose of food. Those who buy them of the captains of vessels always require a considerable allowance to be made to meet this casualty; and the nuts which are thus rendered useless are burnt, merely for the sake of getting
rid of them, because their stench, in s state of putrefac tion, is quite unbearable. I cannot but think that a tion, is quite unbearable. I cannot but think that a large mass of nourishment is thus wasted. There is in added to which, both the shell and the fibrous mass surrounding it must contain nutritive qualities. Can you or some of your readers tell me whether the value of this article as a manure has ever been tested, and if so what has been the result? In this age of science so much vegetable matter ought not to be wasted.- Asbestos.
[No doubt the kernel of the Cocos Nut is rich in nitrogen, and would form excellent manure; the difficulty is to get it out of the shell. As to the fibrous mass, that is probably consumed in the manufacture of door mats. I which would be so long a manure till it turns rotten, Which would be so long a time that the cheapest plan would be either to char
former we should prefer.]
Temporary Gardens.-Many of the lovers of gardens and evergreens will have thanked Mr. Beaton for instructgardens and other improve the appearance of flowerplan in several places, and they appear more tried his comfortable, and pleasing to the eye, than they were bofore. Several years ago, when I used to cover tender plants with straw coverings, the straw was also covered with branches of evergreens, and sometimes a top of evergreens was fixed to them, and when neatly done it looked better than the straw, and had some resemblance to the clipt shrubs in old Dutch gardens.-Peter Mackensie.
Italian Fire-Fly.-Let me inquire why, since the Firefly has been introduced from Italy, we may not naturalise it, and add to our summer evenings a shower of fire, as can be no reason fixed stars of the glow-worm? There and no doubt but it would succeed. During the wint, we may introduce the animal either in the chrysalis star or in the egg.-Questus. [We fear our climate is much too cold. The creatures could only live in a greenhouse.] deners' Magazine" of 1828 , relative to the Dod GarClover, which now, unfortunately, occupies so much of the attention of the farmers and others. "She seeds of Dodder, (Cuscuta europæa,) are not unfrequent among Dutch Clover seed, the plant being a great nuisance to the farmers in that country and Flanders; but the seeds of Cuscuta not being above a sixth part of the size of those of Clover, are easily separated from them by sifting."-Econom. with both Belgium and Holland would enable any one to procure some of the sieves used by their agriculturists for the above purpose.-E. C. [The sieves called Number 17 will probably be found well suited to separating these seeds.]
The
The Cuckoo and Goat-sucker.-In your Number of the Gardeners \({ }^{3}\) Chronicle, dated August 12, one of your been fortunate intimates a wish to know if any one has winter, and if so the method of doing so. I have much pleasure in stating that mine has consisted in feeding it on raw beef chopped in small pieces about the size of a and boiled bread and milk. By these bruised hempseed the Cuckoo throughout the winter. The Goat-suckerept Fern Owl I have also kept in the same manner. W. Rayner, Haveridge.

Joining of Pipes.-If "J. M." (at page 842) had added a little cotton-wool to the lead and mixed it well together, lead from giving way or cracking. This might be used either for joining together earthenware or iron pipes, or for stopping leaks. When pipes have been over-heated, place, and with small twine or cord it be applied to the place, and with small twine or cord it may be secured to the place with very little trouble.-Facile.
cheap scale, they should contrive next matences on a cheap scale, they should contrive next March, about a
week or two before the Hawthorn buds have much
swelled, to obtain young vigorous shoots about the thickness of one's little finger, and about two feet in length; making the base of the cutting flat. The stems of somes, young trees here were protected with pieces roughly chopped off last year. These have made shoots six or What chiefly prevents a " dead staked hedge," as it is. termed, from growing away in a year or two after it has
been put up, is because the Hawthorns are chopped too much with the hand-bill and axe.-W. Brown, Merevale.
Fuchsia Exoniensis.-I beg to state that the remarks made by Mr. Ayres upon Fuchsia Exoniensis, in a late Chronicle (page 821) cannot be allowed to pass without made in any ing I am sure that these remarks were no calculated to make an unfavourable impression in the minds of those who have not had an opportunity of seeing the many fine specimens of this Fuchsia, which have bee flowering in the Exeter Nursery during the past summer and autumn. These have satisfied all those who have Ayres admits, "off the plant the finest Fuchsia in existof its habit, which is equally deserving of praise on accoun this justly-admired tribe. sees this plant next summer in collections, he will admi that he has passed an unmerited censure upon it. A public, Mr. he does recommend, but he should not rashly condemn that which is really first-rate.-S. Brown, Eeeter
Nursery.
Hardy Eucalypti,-Observing the Eucalyptus noticed doors at Brodwinsor, in Dorsetshire flourishing out o attained in seven years \({ }^{3}\) growth the height of 12 feet \(I\) beg to say that upon the northern side of this island the Eucalyptus robusta stands at the height of 28 feet, within our years from its seed. It well endures our winters. am told by the surgeon of a convict-ship, who has often there, ind ference at 4 feet first branch 150 from ground to statement quite 150 feet; entire height, 381 feet. This Hooker quite corroborates the report of Dr. Joseph the "Botanical Mascribed in the last October Number of which Van Dienan's Land abounds. The E. piperita is a seedling also here, and promises to be hardy; but small plant of the E. muitiflora, raised from seed obtained from the Neapolitan Botanist Tenore, already appears to feel the weather we have as yet had, and it
seems inclined altogether to refuse our winter.
ind seems inclined altogether
Vewport, Isle of Wight.
I bitality of Seeds.-As there are doubts on this subject, I beg to state that about four or five years ago a part of
the Birkenhead and Chester line of railway was through poor meadow-land, perpendicularly, to the depth of 12 or 14 feet. The work was going on at Christmas, and the subsoil was stiff retentive loam. During the months of May and June following, the slopes on either side of the excavation were densely covered with Charlock (Sinapis arvensis) in flower; from the regular appearance of the soil, and the absence of any ploughed field near, I concluded that the seed must have lain there since the Deluge, I inquired if any seed had been purposely sown, and was answered in the negative.-Nemo.
Larch Insects.-Amongst the admirable papers on insects by your correspondent "Ruricola," I do not which country. I suppose it to be an Eriosoma. It fixes on the bark, and I know of no instance of a tree once infested by was about 40 its vigour. The oldest I have seen attacked present, I had all the As there are plenty of them a immediately, to check the spread of the pest ; but that system must cease, of course, and rubbing with brushes stc. can only be applied to a very fep ornamental trees o avourites. There is one important question which Mr Curtis has not alluded to-do these and similar insects, such as the Scolytus of the Elmas, \&c., attack healthy rees, or those only in which the elements of disease are as the present? This is worthy of careful investigation, cause of the of the insect may be the result, and not the further back, and investigate the very origin of the bad health of the tree. I much wish that sckuricola' may have leisure to give his opinion upon the subject.-S. \(C\).

African Kidncy Beans.-Reading lately in "Moffat's Missionary Labours and Scenes in South Africa," I found the following in a foot note:- Maize I found abundant alsong the Matabele, where it does not require irrigation : also a fine large species of Kidney Bean, the pods of which grow underground, and are earthed up like Potatoes." The account of the Kidney-Bean rather surprised me. Is any such thing known of, or has it ever before been heard of in this country? Moffat himself was bred a gardener, and I wonder he was not a little more explicit. The part of Africa in which these Matabele were located is known as the Bakone country, themselves a tribe of Zoolus The natural besuty of the country, its richness in woods and metalic ores, as well as fertility-when cultivatedare described by Moffat as extraordinary. Dr. Andrew Smith conducted an expedition through it for the purnose of scientific research. Moffat led him into the country of the Matabele, which is intersected by the Limpopo river Moselekatse, the Matabele Sovereign, though a powerful
and savage tyrant, never saw an African ox-waggon till at their approach He that any one recommended by Moffet would travel in his dominions.-Quercus. [This underground Kidney Bean is no doubt either the Voandzeia or Arachis. Both are too tender for this country.]

Material for Potting.-The following material, which highly beneficial to the culture gardeners, will be found viz., the decayed matter toure of plants in pots generally On account of its permitting beneath Fern and Furze. through it, it will form a valuable water speedily to pass shift system ; this system, the desideratum in the one individuals, is daily progressing. In most professions there are to be found some who will, despite of everything scoff at roodern improvements, and persist in adhering to old practices; and if you ask the reason why they do so, the answer is, simply, Because our forefoy they do the same. The above material will be found in addition to potsherds, to produce a good effect on many Orchidacere; incorporated with turfy loam and river-sand, Anemones, Ranunculuses, Dutch bulbs, \&c., may also be found a valuable comprest perfection. It will likewise be the Tropæolums. The seaco that beautiful tribe of plants, the ropæolums. The season for planting is at hand, and may emit the first two or three feet of the stem the tuber ittle soil, on the surface of the pot, covering it with a the plant, young tabers will be produced by the time the plant has completed its growth. It would be useless or me enumerate any more genera that are particularly enefited suffice it to say, that I have applied it acorporated with various substances, and its use has far exceeded my most sanguine expectations.-George Bishop,
Buckland.
Araucaria Seed.-I think one of your correspondents the Araucaria. Iniry as to the mode of raising the seeds of he Araucaria. Ilost a great many fine fresh seeds of he A. imbricata, from Chin, by imbedding them too deeply in the mould, where they all rotted. I was not ware athe of a secret, now perhaps generally underthed, that these large seeds ought to be merely laid upon the suce of cis, with, pernaps, a fittie earth raised round the edges, but not so as to cover them. Treated in this mode, I have now some very healthy young seedlings; and it may not, perhaps, be uninteresting to you hibited different stages of germination in July last.-Atlas.

Germination of the Seeds of the Arancaria imbricata, from

PROCEEDINGS OF SOCIETIES.
Dec. 5.-R. W. Barchard, Esq., in the chair. Sir J. W. paper was read respecting the cultivation of Oxalis Deppei. A specimen of Whitney's (of Shrewsbury) protecting material was alao shown to the meeting, with two specimens of
similar kind that might be used for the same Halifax; the latter, however, were not so transparent as promises to th admits nearly as much light as ground glass, and is not required very useful in many instances where much light that would cost \(12 s\). or great advantage is its cheapness; a sassi it is perfectly impervious to for the tritling expense of 9 d or \(10 d\). for many purposes. From the circumstance of its bein gardens proof, it will also make a good protection for frits being water in spring in damp wet weather, or from cold winds that generally panted over with a fluid, the The material is common calico, but is sold in bottles and may be easily applied by means of a painter's-brush. From F. Cox, Esq.. of Stock well, were
Lycaste Skinneri, a pretty species from light-coloured petals and dark purple labellum ; this has, besides hemg very showy and handsome, the good property of continuing long in bloom; also Cattleya guttata, and the old Cymbidium Rinense, with dark-brown fragrant blossoms; this has been weeks,
to keep blooming in a room for the space of six or eight wind and during the whole time the house was quite perfumed with its fragrance. In the same collection were likewise Oncidium is nollosum, having a fine spike of dark-spotted yellow flowers; this is not very common, and is a good species of that hant Steno-
genus. Mr. J. Robertson, gr to Mrs. Lawrence, sent
flesh-coloured flowers. broad dark-green follare, andio spike flesh-coloured flowers; also Odontoglossum grande, Dendro-
of the rare Epidendrum Skinneri, with fine purple blossoms;
this is very dificiut to cultivate; according to Mir. Bateman it has
been found to succeed well in a Vinery where there was a cool been found to pedium venustum
fowers, Rodriguc with greenish yellow petuls, and Find windendrim viscosum,
also Loclia albuda, with small sweet-scented whing blossoms, Max, also Lelia albda, with small sweet spented white blossoms, Max-
illaria cueullata, and ano dher species wilh simall dul-brown
flowers. There were likewise Erica Sebana lutea, and a small flowers, There were likewise Erica Sebana lutea, and a small

Chalk with
without it. In order to get the lime, the carbonic acid must be got fid of. This is effiected by heat, as in limekilns. Fifty cwt, of carbonate of lime or chalk yields 28 cwt. of lime, and 22 cwt .
of carbonic acid are diviven off, flime consisting of 22 parts car--
bonic acid and 28 parts lime. Chalk should always be burned in bonic acid and 22 parts lime. Chalk should always be burned in
a corrent of air, and the more moisture this contains the better.
If If lime is exposed to the atmosphereit zbsorbs water Such is acid, forming a by drate of hime and a carbonate or lime. Such is
đhe afinity of lime for water, that it will dry air exposed to its
influence in \& confined space. When water is poured on lime it is rapidly absorbed and heat is given out, so that a match may be lighted by it. This is called slaked edine. .hen this?
to the is is exposed and parts with its water. Lime is soluble in 700 times its weight
of pure water, and in this state becomess the best possible test of of pure water, and in this state becomps the best possible test on
the existence of carbonic accid. If shaken in a vessel containing carbonic acid, whether from the combustion of
cardle, the reespration of an animal) cr the fermenting vat of
brewe brewery the lime. water becomes milky from the prescnce of car-
bonale of lime. Carbonic acid may be proved to ex ist thus ever in spring water and in the water of the river Thames. When carbonic acid is in excess in water it dissolves the chalk or car-
bonate of lime and whist under presure the water holde it in
solution, but the moment the carbonic acid is given of then soiution, but the moment the carbonic beid is given of then
the carbonate of lime falls down, and this is the origin of the stalactites and stalagmites of many of our caverns and springs. The uses of lime in Agriculture are several. 1 st, it decomposes
vegetabe matter,
it ne converts it into what is called humus; it neutralises acids which may collect in the soil; sa, it decom-
poses injurious salts of iron, forming an inert oxide of that seting free their elements; ;th, it decomposes bone manure, and thus producees ammonia, a very valuable constituent in soils.
When ammonia comes in contact with potash it becomes converted Whenammonia comes it contact with potash in becomes converte beds of various parts of Tndia , 6 bha, , when it comes in contact
with felspar it evolves the potash and the silica of these zock ancl thus prounces the hest possible soil for the growth of the gramineous plants which are known to require so much silica
One of the best tests for the presence of lime is the oxalote ammonna, which throws down in lime-water a copious white
arecinitate, which is oxalate of lime. The presence of carbonate precinitate, which is oxalate of lime. The presence of carbonate
of lime alone may always be ascertained in rocks by its making clear solution in weak acids, but if there is magnesia or othe
salts, then the solution becomes turbid. It had been stated the sime is bencticial to plants, as they excrete from therr roots an acid which, on comnng in contact with the lime, is converted
into soluble salt. Which is then taken up into the system of
ine the plant. The exulpha'e and phosphate of lime are to be treated
of in the next lecture. The lecture was illustrated hy a number
of of judicrously s-elected and well-performed experiments. The
Duke of Richmond at the conclusion of the lecture, proposed a vote of thanks to Mr. Brande, who had at a short notice, in in con.
sequence of the indisposition of sequence of the indisposition of Di. Playfair, the Society's
chemist, prepared the admirable ecture they had just listened Royal Institution for the use of their lecture-room. This pro-
position was carried by acclamation. Lord Spencer, having couposition was carried by acclamation. Lord Spencer, having cou

- Proceedings of Boston Society of Natural History. Allolments.-Before reaching the factory of Messrs entrance to a large plot of ground presenting a twofold interest, both from the purpose to which it is now applied and from the improvements which it indicates in mode of manufacture. This ground was formerly occupied mode of manufacture. This ground was formeriy occupied of its manufacture, was suspended by hooks on rails to dry. But the custom became introduced, by degrees, of drying the cloth in close rooms or galleries heated by team or by hot air ; and this has been found in various tentering is no longer acted on in large establishments. The tenter-ground thus set at liberty has been laid out in series of gardens for the workmen in the factory, and a series of gardens for the workmen in the factory, and the fatory on the eastern side. The extent of ground he factory on the eat eight acres, divided into 142 allot ments neal equal size. Such of the workmen as ments of nearly equal ning are allowed to cultivate these ittle allotments, paying a trifling sum in the form of rent ot as a source of profit to the proprietors, but to the men an undisputed right to the produce which they me men an uadisped. Nearly all the allotments are in flourishing and healthy condition, each one staked off, separated from the others, and numbered, and each one serving to denote the kind of produce which its cultivator others (and these more generally) contain such culinary vegetables as Potatoes, Cabbages, Lettuces, Onious, \&c. The family of one of the workmen reside in a kind of Lodge near the entrance, and to this family the care of the arden is intrusted. Opposite the lodge is a tool-house, here, on hooks and nails properly numbered, hang all he gardening tools, such as spadoo, hoos, In this tool house is a board inscribed with the 'Rules and Regulations, 'which the proprietors have established for the good management of the garden : such as the hours during which the workmen and of the friends of the workms the garden, the admission of similar character workmen, and other arrangen mise forses fin a busy town auch as Leeds, where houses and factories are necessarily congregated in a plot of garden groun of the in respect to the feal likely to result from the maintenance of the good effects likely tetween masters and workmen. - Penny Magasine.

Bermuda Coflee was introduced into Bermuda almost as early as into Jamaica. Its cultivation being neglected, it has maintained itself as if it were on ind genous plant, growing wild under the Cedars. The quality of this Coftee is excellent, so that the Bermudians never find any they import to equal it. Mocha lies in a more
southern latitude, but the Mocha Coffee is said to grow on
terraced mountains, having a temperature of about \(85^{\circ}\) or \(86^{\circ}\), which is exactly the summer temperature of the Bermudas. The Coffee-tree thus maintaining itself in a wild atate in Bermuda is an interesting subject, and in a public address the Governor, Col. Reid, has recently directed attention to it. Some which has been sent us by his Excellency proves of the finest quality, and would
take a very high rank in the European market.
take a very high rank in the European market.
Substitute for Wood.- A singular substance has lately reached this country from Singapore, and promises to become of some importance as a material for the handles of
knives, tools, and all instruments which require great knives, tools, and all instruments which require great
strength. It is a pale greyish salmon-coloured material, strength. It is a pale greyish salmon-coloured material,
rather stringy, softening at \(150^{\circ}\), and then capable of being moulded into any form. It is hard, compact, and not very unlike horn in texture. We believe it has been found by Mr. Edward Solly to be analogous to India-rubber in its chemical constitution
Australian Wheat.-Some fine specimens of Australian Wheat have recently arrived in this country. They consist of white Wheat, equal, if not superior, to the finest
English. The lot of which we have seen a sample cost 35 s a a quarter at Hobart Town, where it was shipped ; the freight and expense amounted to from 10s. 10 12s. a qr., and the duty to \(5 s\)., , Bo that it cost the importers from
\(50 s\), to 52 s a a qr. in England. As it is worth from 58 s . 50 s. to 52 s a a qr. in England. As it is worth from \(58 s_{\text {. }}\)
to 60 s . a qr. at London or Liverpool, it will leave a fair profit. This is, however, chiefly owing to the very low rates of freight, and the abundance of grain in the Hobart Town market.-Liverpool Paper.
The African Guano Islands,-If it is true that between 40 and 50 vessels have gone out to bring guano from the rocky islands on the west coast of Africa, there will be no want of that article next year, even if the West
India planters, who have begun to use it freely for their sugar-canes, should require a larger supply than they have yet had. Immense beds of it are known to exist on two
of the islanda lying on that desert and uninhabited coast, of the islands lying on that desert and uninhabited coast, possessions of Congo, almost to the Great Orange River, the northern boundary of the British possessions at the Cape and as rain rarely if ever falls along this coast, it is probable that the guano win be found to have been colecting for centuries. The first guano searchers who landed on those islands had to fight as fiercely with the birds for their cargoes as Eneas and his companions had to fight
with the harpies of old in defence of their dinners.with the harpies
Liverpool Times.
Cider.-In the last Number of the "Pharmacentical Journal "we find the following useful information on Cider making :- "The usual system is to filter, fine with isinglass, and rack frequently, leaving the bunghole open
until fermentation has ceased. When living in a fruit country, I had placed in my cellar three pipes of cider which bad been a day or two previously pressed from the fruit. I added to each cask four ounces of isinglass in
solution, and one pound of coarsely-powdered charcoal. solution, and one pound of coarsely-powdered charcoal.
I then bunged it down, and introduced a tube through the bung of the shape of a siphon, the contrary end dipping intomater for the purpose of excluding the atmospheric air, \({ }^{\text {s.and }}\) at the same time ensuring the safety of
the vessel. When it had dropt tolerably fine, I racked it as quickly as possible, adding another quantity of the solution of isinglass and charcoal, stopping it down as
before. At before. At" the expiration of three weeks fermentation the bung, and found I had a bright, rich, and delicious beverage, which continued in the same state until it was drunk.
New Works on Botany, \& c.-Ledbeour's "Flora Rossica," Vol. ii., fasc. 4, containing the orders from Amygdaleæ to Saxifragaceer. "Elojo Historico de Don Mariano La Gasca," by Dr. Agustin Yã̃ez Y Girona,
President of the Academy of Sciences of Barcelona. "De Candolle's Prodromus," Vol. viii., completing the Wrat as far as
M. Extraordinary Produce.-On three acres and a quarter of land on Chatmoss, near Manchester, and only reclaimed some three or four years ago, there has been dug up this season 595 loads of Potatoes, of 2521 bs . each, and equal to \(67 \frac{1}{2}\) tons, and worth fully 548 . per ton. chester Union.-Country Paper.

\section*{RRebiéfos}

The Rose Amateur's Guide. By T. Rivers, Jun. 12 mo . 1843. Longman. 3rd Edition What can we say of this, the third edition of Mr. Rivers' - Rose Amateur's Guide,"' except that it excels its predecessors? No book which we possess gives so good an
account of the origin and classification of varieties; no account of the origin and classification of varieties; no book deals with their management, has more claim to the approval of the gardening no book has more claim to the approval of the gar details, but those we shall treat of in another place. The cultiva tion of Roses in pots for the greenhouse is a new topic which is treated thes by the authon.

For this purpose a selection should be made of some of the finer varieties of China and Tea-scented Roses on their own roots; it may also include such Bourbons as the Queen, Acidalie, Crimson Globe, Grand Capitaine, Madame Nerard, Madame Margat, Proserpine and Phoenix, and Noisette's Miss Glegg, Lelieur, Ne Plus Ultra,
and Victorieuse. These are all of dwarfish and compact habit, and free bloomers. Presuming these Roses to be procured in the spring or summer, in the usual amall pots
hey should be immediately potted into pots called 32s, these are generally 7 inches deep, by 6 over at the surface, a compost of turfy sandy loam and well-rotted manure, equal quantities, or leaf-mould; if the latter is used, twothirds to one-third of loam will be as well ; inis compost
must not be sifted, but merely chopped into pieces as large as a walnut: the fine mould, which will, as a matter large as a walnut : the fine mould, which win, as a marated from the pieces of turf, but all must be well mixed with the manure or leaf-mould. The pots should then be filled bout one-third with broken pieces of crockery or potabout one-third with broken pieces of crockery or pot-
sherds, the plants taken from the small pots, and the balls of earth gently pressed so as to loosen them ; place each plant in the centre of the large pot, press the earth well cound them, give a soaking of water, and plunge them in the sawdust or tan in some sunny exposed place, where they may have all the sun our fickle climate will give they should be removed into the greenhouse; but a fortney should be removed into the greenhouse; burters, lift every pot, and place it on the surface of the bed in which hey have been plunged : their roots then become hardened, and bear the dry warm air of the greenhouse without
injury : they should at this time also be pruned into any andsome desirable shape, (a compact bush is perhaps the prettiest, ) or, if tail plants are required, the long
shoots may be fastened to a neat painted stick. Roses hhoots may be fastened it a beat painted stick. April, and continue one of its brightest ornaments till the beginning of June: they should then be repotted into larger pots if large plants are wished for, and again
plunged in the open air till the autumn : care must be taken to place he pots on slates, to prevent their roots getting through the bottoms of the pots. If compract and pretty little plants are required the same pots may be a small quantity of compost for the plant to feed upon. A most excellent compost for potted Roses may be made as follows :--Pare some turf from a loamy pasture; the parings must not be more than one inch in thickness; perature is equal to that just after it has been used for baking bread ; they must not be burned:* this, chopped directed, with equal parts of rotten mawre, forms one of the very finest of composts. The plants nust be looked to carefully in spring, and whenever infested by the aphis, or green-fly, tobacco-smoke must
be applied: extraordinary luxuriance of growth may be given by watering them once a week with guanowater.'
Erratum, -Tn the review of "Liebig"s Agricultural Chemistry," P. 846, we omitted to state that the quotation relating to
Phosphates was from his "Letters," a little work noticed a
p. 776 .

\section*{THE NATURALIST'S CORNER.}
68. Sponges.-There are about fifty different species of this well-known marine production, which has been in use from very early times, and regarding which naturalists animal or vegetable kingdom. Most authorities now agre in putting the sponges in the lowest scale of the former The best are those which come from the Archipelago where they abound near many of the islands, whose inhabitants may be said to subsist by the sponge-fishery, forms the chief employment of the population. By the old physicians, sponge was regarded as a cure for a long burnt sponge, in which form only it is used, still has a place in the Materia Medica.

\section*{CALENDAR OF OPERATIONS for the ensuing week,} Trr fact that earthenware pipes have been fitted together so
as to hold water, is, indeed, of essential service. In 1834 I saw a complete failure, on a large scale, in an attempt to heat a Pinery with these pipes, jointed with cement; but, from want of perse
verance, I thought the expeximent had not been fairly tested, and
not wishing to prejudge the question when it was proposed to not wishing to prejudge the question when it was proposed to
repeat the experiment at Chiswick, I was silent respecting itbesides, Ihad heard that something of the sort years succeeded in
the neighbourhood of Newcastle two or three
one man succeeds in a thing where twenty fail, it shows how easectial it is for ciarclenersto persevere in expenments, garden, we ought thoroughly to rnderstand all the delails of
buidding hothouses, pits, and other structures, the best modes of painting and glazing, and all the minution of fitting-up bonlers,
pipes, flues, and tanks, \&c. not, perhaps, that we should prac-
tise these things witheour own hands, bunt to be aware if others
did so for us in the best and cheapest manner. And this knowledge gives a confidence which is really necessary when we are
called upon to conduct these affairs. When alterations or additions are to be made in the present mode of heating hothouses, \&c,
whether for the purpose of building a better flue whether for the purpose of building a better flue, or for adopting a
hot-water apparatus with pipes or tanks, or for all three combined -there are many minor points as necessary to be attended to as
first principles. There is a kind of fire-proof mortar which I have first principles. There is a kind of fire-proof mortar which I have
used almost every season for the last 15 years, which I do not recollect to have seen noticed in any publication; this I would
strongly recommend to be used instead of common mortar for all strongly recommend to be used instead or common mortar for all
fire-places, flues, and for build ing pits- thatare always more orless
moist with the linirg g-also for pointing or filling up joints along moist with the linizgs-also for pointing or filling up joints along
the tops of old garden walls, \&cc. ; it is made with two thirds of the best limestone and one third of the gritty black dust from blacksmith's forge, both sifted very fine and well mixed, winarly
any sand: it stands heat enually with fire-bricks, and sets nearly
as hard as Roman cement; it requires more time to prepare than as hard as Roman cement; it requires more time to prepare than
common mortar, and more labour to spread it with the trowelbut it may be made softer than common mortar, which removes
the difficulty of applying it, and it will dry in half the time the usual mortar would take. I entertained the idea for some time of making a quantity of it with common oil, as we make putty painting the joints as "J. M." mertions in a late Chronicle We all know, in glazing, that front putty should not be put o * I have used, with much success, turf roasted on a sheet of
iron (placed in temporary brickwork) under which a moderate
fre has been kept : about one hour's roasting is sufficient. Thi chars the turfy side, and acts most beneficially.
until the slip of glass under it is first painted and dry-putty thus
put on never parts with the glass untili it perishes, which was great fault in old-fashioned glazing. Even the simple article putty is seldom made as it ought to be for pits and hothouses seed oil, with a little spirits of turpentine (or "driers," as it is called), are all thet is thought necessary for garden purposes; but this soon perishes in some situations, and if you ndd one
tentlo white ead it gets so hard that it is dificicult to get off when tenth) white jead it gets so hard that it it difficult to get of when
repairs are neecssary. The best glaziers now make it thus:
 this last prevents, the white liead from hardening, and also preserves the putty for a long time; -all putty ought to be mal
some time before it is used. Since it has become general to
 on the leaves of plants trained near the glass, I have known
Vine leaves to be much scorched by incautiously leaving the hars inside with no more paint than the first coat of red, or priming;
and I think the cause of the reflected rays from the red bars scorching the leay
Cork last August
 was at least \(10^{\circ}\) too low : the plants are not under a course of
culture, but undergoing a process for killing the scale, and ought for a few days to be at from \(77^{\circ}\) to \(100^{\circ}\) - for all experience proves
the ammoniacal gas to be most desiructive at a high temperafew hours; in 1824 I saw about st young Pines cleaned comfresh dung, and as soon as the heat was atits highest the bed was covered with hurdles, the plants turned out of the pots, and inserted over the hurdles, the glass put on, and covered with a
double mat; the sufficating heat was very high, and the plants were completely cleaned in that time, and did not seem to be in rsome weeks afterwards. "You know," says a friend, "when came here, the pines were bad with the scale and meay bug,
I disrooted them all in August, gave them a good lining of dung, and kept them well excited until October, and by the next spring This was a morerational mode than the former, and the summer Vonths are preferahle for the operation.
VINERY, Any Vinery that is to be forced on this side of January should be begun forthwith, if only to give more time to
the plants to ripen the crop. Begin very gently at first, with no the plants to ripen the crop. Begin very gently at first, with no
more than \(50^{\circ}\) of fire heat, and let the air be saturated with mois-ture-if from a few barrowfuls of horsedung or leaves all the stirred, and well watered with tepid wate

\section*{ment at first; and to have the fruit ripe by the middle of May
the house should now be closed, with a temperature of \(45^{\circ}\). At} this 10 temperature the house does not require so moist an atmosphere as the vine; yet it is a qood practice to syringe the higher, temperature than that of the house. If insects have been seen on the trees last summer this is a good time to destroy either them or their eggs; indeed, it is a general rule to coat over the
trees at this time wilh paint made of sulphur and soft soap, ( UCUMnER8.- In Mr. Jolnson'our. very useful Almanac it is the Cucumber "is more sedulously cultivated in Suffolk than
in any other county in England." Fam in correspondence with ame of the most successiul growers, and I learn that the plants much as to individual growers as to the systems of growing the country have patronised the "Jpswich Cucumber Society,"
it will, indeed, be interesting to know how far the two systems will maintain the views of their advocates. For these prize Cucumbers a range of \(10^{\circ}\), with a bottom-heat about \(90^{\circ}\), with air every, day. \(75^{\circ}\) o KInNBy-Brans and STRAWBxhmiks.-Preparations for both best place to begin the Strawberries, except where pits are

Besides the regular work of manuring and digging the ground,
there are there are many things which ought to be seen to in the dead of
winter in and around the kithen-garden; anything which can
be done to forward spring work is ugeful. I heve ben more than once asked last summer to say something about making
borders for fruit-trees. There is hardly anything that can be added on the subject; nothing in thie whole range of garden literature is better supplied than this subject. Many years since
I broke up an old Vine-border which was well drained with round stones, brickbats, and the like, to the depth of 18 inches in some
places, but many of the roots found their way through the drainage, and some of them were severely injured, being pressed between the stones by their own growth, showing that ruble frd its way down through a yard deep of such dramage, if the there ought to be an impervious bottom, to keep back the roots, small, and well rammed when perfectly dry; if it is put together
in a wet state it will form a compact mass through which the in a wet state it will form a compact mass through which the
drainage cannot enter. The bottom of a border made on a bed all plants; the chalk acts like a sponge against the soil, keeping it in a friable, porous state.

\section*{NEWS OF THE WEEK.}

The Overland Mail has arrived this week with accounts from Bombay to the 1st Nov., from Lahore to the 12th Oct., and from Hong Kong to the 24th August. The tragical events in the Punjaub are the chief topic of interest, and that once powerful country is likely to continue the scene of anarchy and tupoult. The rumoured murder of Dhyan Singh is confirmed, and a child of six years of age, the reputed sou of Runjeet Singi, bas been placed upon the throne. It is now ascertained that a great number of principal persons have been murdered in addition to the Maharajais and his family. It is not known whether Lord Ellenborough will interfere, though the assembling of a large army of \(30,000 \mathrm{men}\) on the frontier has induced a general belief in India that he will eventually do so. Sawan Mull, the powerful chief of Moultan, was murtiered about the time of the first outbreak at Lahore; Holkar, the ruler of Malwa, has died without issue, and has been succeeded by his adopted son, though the numerous claimants who have started for the throne render his tenure of it precarious. Dost Mahomed has become very unpopular and is not likely to retain very long the reins of authority at Cabul. The Eastern Ghilzies and many of his other subjects are in open rebellion, his troops have deserted for want of pay, and an attempt had been made to assassinate him, but without success. The troops in Scinde are suffering severely rom sickness, and the events in Lahore will prevent their being relieved so soon as was expected. rebuilding of the Bogue forts by the Clinese, and the issuing of several proclamations exhibiting a wish to protect the "foreign barbarians.
In France the proceedings of the Duc de Bordeaux and his followers in London are still the cause of murh ansiety in the Court circles; and the conduct of the Deputies who have come over to pay homage to the Prince as King of France is likely to be the subject of discussion in the ensuing Session of the Clambers.-From Spain we have the important news that S. Olozaga, the new Prime Minister, had com-
pelled the young Queen by personal violence to sign a decree for the dissolution of the Cortes. As soon as she was free her Majesty summoned the Presidents and Vice Presidents of both Chambers, and in compliance with their advice, a decree was instantly issued dismissing S. Olozaga from his Ministerial offices. Madrid as might be
expected is in a state of great excitement, and the subsequent resignation of all the Ministers renders the formation of another Cabinet inevitable. - From Greece we learn that King Otho opened the National Assembly of that country With a speech from the throne on the 20th ult.-From Italy we have a contradiction of the rumoured death of
the Pope, and the important announcement that the ramifications of the late conspiracy are so extensive, that the
Papal Government have relinquished the idea of trying the offenders by a military commission.

Court.....Her Majesty and Prince Albert returned to Prince of Wales and the Princesses who remained at the Castle during her Majesty's absence are quite well. The nees. The Earl of Morton has succeeded the Marquis of Ormonde as the Lord in Waiting, and Sir F. Stovin has on her Majesty.
Her Majesty's Visit to the Midland Counties.-The Queen and Prince Albert left Drayton Manor on Friday Majesty proceeded by railway from Tamworth to Chesterfield, where the Duke of Devonshire was in waiting to receive her. Nothing could surpass the loyalty with which the Queen was welcomed at the different stages of the route, and on arriving at Chatsworth there were no honour to the Royal visitants. Her Majesty was received on alighting by the Duke of Devonshire, who had pre the saloon, where a déjeûner had been prepared. Among the visitors assembled to meet her Majesty were Lord Melbourne, who was invited at the Queen's especial re quest, Lord Paluers of Bedford, Lords Alvanley, Lord vale, Alfred Paget, Leveson, and Emlyn, Sir A. Clifford, \&sc. \&cc. The Duke of Wellington, accompanied by the Duke and Duchess of Buccleugh, arrived in the course of the afternoon. About two o'clock her Majesty, led by Albert, leading the Dnchess of Bedford, and nearly all the Royal suite, left the saloon, and passing throught the magnimansion. The spectators who by the kind pernission of his Grace were allowed without restriction to approach the vici the Queen and the Royal party. Her Majesty's appearance was the signal for the most enthusiastic cheering from al quarters. After a few minutes the Royal party proceeded incident took place. Her Majesty when Princess Victoria in company with the Duchess of Kent visited Chatsworth occasion the Queen planted an acorn which has since under the care of Mr. Paxton, head gardener to his Grace, be come a fine sapling oak. The Duchess of Kent also was extended to this spot by the express who the Queen, and the two trees were pointed out to the observa-
tion of Prince Albert without informing him actually which had been planted by the Queen. Four saplings of different kinds were then banded to the Prince with a request that he would select one and plant it near that which he supposed to have been the choice of the Queen ; without a and planted it in a convenient spot near that which bad sprung from an acorn set eleven years since by her Majesty. Dinner was ordered for half past 7 in the grand dining banquetting-room, covers being laid for nearly 50 . Her Majesty was led into the dining-room by the Duke of Devonshire, the Duchess of Bedford taking the arm of
Prince Albert, and the other distinguished visitors followPrince Albert, and the other distinguished visitors following in succession. Her Majesty took her seat on the right hand of the Duke of Devonshire having on her right Lord Melbourne and being faced by the Duke of Wellington. Prince Albert occupied the seat at the left of his noble host, the Duchess of Bedford sitting on the left of the Prince. Her Majesty rose from the table about balf past 9 and retired to the drawing-room. A ball to which all the nobility and gentry of the district extending through several counties were invited was given in the banquetinghall at night. The preparations were on a most extended
scale of magnificence. The cascade was lighted up by 500 Venetian lights, and in the conservatory alone no less than 40,000 lamps were exhibited in tasteful devices. Festoons of lamps were extended from tree to tree in the grounds opposite the mansion, and there was a display of fireworks during the evening. The Queen opened the ball with the quadrille with Lady Louisa Cavendish. In the second quadrille the Queen danced with Lord Morpeth and Prince Albert with the Duchess of Buccleugh. A waltz followed in which her Majesty and Prince Albert waltzed together, and the last dance in which the Queen took part was a country dance, Lord Leveson dancing with her Majesty, and Lady Leveson with Prince Albert. Majenty retired about 10 oclocks. On Saturday morning
the Queen and Prince Albert breakfasted in their private apartment. At half past 12 o'clock Prince Albert, accompanied by Mr. Anson and the Hon. Mr. George Caven-
dish, left the mansion and proceeded to the Noble Duke's farm on the borders of the park, where his Royal High ness had an opportunity of inspecting the stock of fat cattle belonging to his Grace. His Royal Highness spent more than an hour in examining the excellent arrangements of the farm, and expressed himself much pleased with it, as also with the beautifully neat appearance of the village of Edensor, the whole of which has been
designed and rebuilt by the Duke of Devonshire. His Royal Highness returned to the mansion about 10 clock The Duke of Wellington walked through the grounds to the conservatory shortly after daybreak, and spent nearly
an hour with Mr. Paxton examining the collection of plants and shrubs. About half-past \(20^{\prime}\) clock the Queen, Prince Albert, and the other visitors proceeded to Haddon Hall, the ancient seat of the Vernon family, now the property of the Duke of Rutland, and on their return drove Chatsmorth in time to visit the conservatory, which was illuminated for the occasion. Her Majesty and Prince Albert drove thither in one of his Grace's chariots. The Earl of Jersey and his Grace seated themselves in the dickey behind the carriage, and followed by two pony phaetons, the party repassed from the ing carriage-road leading to the heights, and through the rockery now in progress of formation, entered the building. The military band were stationed on the the National Anthem was played. At the entrance be Majesty was received by Mr. Paxton, who had the honour of showing to the Queen the collection of tropical, temperate, and aquatíc plants contained therein. Her Majesty peculineat interest in Mr. Paxton's expianacon of the conservatory, and, before the carriage had reached the east end of the shrubbery expressed a wish to alight Her Majesty accompanied by her suite then minutely artificial the shins and piants, and in allusion to the to show decoraco by lamps (which were so arranged a of the building) remarked that "It was indeed a fairy scene, and gave her the highest possible delight." The Duke of Wellington formed one of her Majesty's suite on which hich he mainh wise the Royal part be very much pleased with the effect. The
having returned to the house the remainder of the noble Duke's guests walked through the rockery from the easterin ton was again in attendance and rendered most obliging pervice by anc ding most 1 , covers being laid for 48. Her Majesty sat on the right of her noble host, and the other guests were arranged in the same order as the day before. A second table wa lais in an adjoining room for about ten difording sufficient accommodation for the large party assembled. I he evening about 10 clock 20 men were simultaneousi employed ignting Russian ligno as proasly placed in such positions about the grounds as to reflect heightof about 300 yards on the garden-front of the mansion The various fountains and the magnificent jels d"eau throwing up a volume of water about 15 feet square in the centre of the Grand Terrace were also similarly illuminated. This completed, her Majesty and Prince Albert with the Royal suite were conducted to the windows commanding th most perfect view of the whole scene. The park near the mansion was studded with spectators, and abou 400 tickets to admit within the gardens were issue through the kindness and liberainty of his Grace. A
signal rocket was fired at twenty minutes past 10, and immediater wasped by the battery sta tioned round the "stand" on Hunting Tower. At the same instant from the summit of the cascade to the ter race overhanging the Derwent on the western front of the mansion, a distance of about three quarters of a mile, coloured lights were ignited, which burat with intense brilliancy for about one minute and a half, each displayang most minutely the beaunies observable on every side, distan the marble statues between the trees, half a mile ceeded each othouse. Green, cremson, and wive tints on mountain, tree, and valley; while their effect on the aquatic portion of the scene may be more easily imagined than described. During the continuance of the illuminatime, artilery on the deights fired guns in al salute in volley, which appeared almost to shake the foundation of the mansion. Her Majesty who had attentively and with deep interest watched the progress of the scene, at its conclusion came forward to the window, and bowed repeatedly to the spectators on the terrace, who cheered her most enthusiastically. Nothing could exceed the imposing Duke of Wellington said, "I have travelled Europe through and through, and witnessed scenes of surpassing grandeur on many occasions, but never before did I se so magnificent a coup d'coil as that now extended before me." On Sunday her Majesty and Prince Albertbreakfasted alone shortly after 8 o'clock in the Queen's private apartment, and directly after proceeded through the gardens into the Rockery, and thence to the Conservatory. The Queen and Prince attended the private chapel of his Grace at \(90^{\circ}\) clock, when prayers were read by the Revo Mr.

Wilmot, chaplain to the Duke At 12 divine service was performed in the coapel. Her Ahesty and Priace Arber attended the service, and sat in his Grace's gallery pew. The Duke of Devosire, the Duke Duness of Buccleugh, Lady Portman, the Eari of Jersey, and the Duke of The Majesty. The service was performed by pie Rev. Mr Wimot, assisted by the Re. Mr. Jebb. Her Majesty afterwards walk by he her Wempanio by De Tor Wellington, the Earl of Jersey, he Duke and Duchess of Buccleugh, Lord and Lad Marchioness Howard, Viscols Lady Leveson, Fon. Charr. dish, Miss Cavendish, Mr. Frederick and Lady Emlyn, Lord and Lady Leveson Gower, Hon. F. Gower, Sir A.
Clifford, \&\&. Her Majesty was attended by Lady PortClifford, \&c. Her Majesty was attended by Lady Port-
man and Miss Paget. Mr. Anson and Col. Bouverie were in attendance on Prince Albert. The Queen was attired in a purple velvet dress, with a tunic of crimson velvet. Her Majesty wore an open straw bonuet trimmed with purple velvet. Lord Melbourne was prevented from accompanying the Royal party through slight indispo sition. On entering the park from the terrace, through the grand arch, the Royal party were loudly cheered. Her Majesty was engaged in conversation with her noble host nearly the whole period occupied in reaching th gardens. On arriving at the entrance gate her Majest was received by Mr. Paxton, and conducted to the firs greenhouse, which contained the chrysanthemums, roses, and camellias. Her Majesty proceeded from the firs greenhouse to a second, containing the New Holland plants and heaths. The various menbers of the suit wandered tbrough the gardens, while her Majesty and Prince Abert, accompanied by the Duke of Wellingto and the Earl of Jersey, honoured Mr. Paxton by visiting his cottage, which is beautifolly situated within the grounds. Mr. Paxton had the bonour to present his wife and family to her Majesty and the Prince. The Quee was pleased to inspect Mr. Paston's library, and Mr. Paxton presented her Majesty with a copy of his Magazine of botany, in 8 vols., splendidly bound in gold and morocco, which her Majesty was pleased to accept. The Duke of Wellington conversed for some time with Mrs. Paxton, and complimented her upon her fine family-nol without reason, it may be observed. Passing from the cottage the Queen next proceeded to the greenhouse devoted to Orchidaceous plants. Her Majesty expresso plants admiration of the collection, and admired that bulles should be forwarded to Windsor without delay After inspecting the gardens, \&ce, her Majesty and Prince Albert, accompanied by the Duke of Devonchire and Lady Louisa Cavendisk, entered an ope Duke of Wellington followed the carriage on his chesnit hack, attended by his groum. On leaving the gardens We Royal party were loudly cheered, and the Duke of Wellington was repeatedly and loudly cheered as he rode slowly down the carriage road towards the mansion. On reaching the house Prince Albert alighted, and joined by to Encor Cavencish and Mr. Anson, walked over the hice with Edensor. Her Majesty and the Duke of Devonshire the pretty village of Edensor, and returned to Chatsworti the pretty about half-past 4. Cavenmer party was much the same as on Saturday. On Monday, at a few minutes after 9, her Majesty was conducted to the entrance-hall, and taking a final leave of the guest Majesty shook hends with Lord Melbourne, Lord Mor Majesty shook bands with Lord Melbourne, Lor her peth, and several other noblemen, before taking has
departure. The carriage in which her Majesty rode was an oper . The carriage in wican Majesty rode at this early hour thronged the grounds, an excellent opporRoyal party. Her Majesty at the Chesterfield station about 10 , and was handed \({ }^{\text {a }}\) d the carriage by the Duke of Devonshire, and con seated by the directors to the saloon cariage. The Queen shaken herself on the ottoman, and laving corially the hands with his Grace and Lady Louisa Cavenus, was train moved onwards towards Derby. A Royal salute fired from the hills above Chesterfield, opposite the stauiond as the train left. The Duke of Devonshire accompan of her Majesty in one of the carriages, in his chardress of Lord Lieutenant of Derbyshire, to present the ader that the freeholders of the county at the station near made. At D, where the necessary preparations had been county and city his Grace presented che address frome Majesty. At thi of Derby, and then toot leave of the Midlaidly Counties point the Royal train diverged to train rapidig passed the Borrowash, Sawley, and Long Eaton staid by At the Nottingham station her Majesty was receivounty, the Earl of Scarborough, Lord Lieutenant of the Notting Lord Lincoln, Lord Rancliffe, and the Mayor of Nompany ham. The directors of the Midand Counties were also in attendance. The Royal party left Nom aboul about \(\frac{1}{2}\) past 11, and arriving at Birming Arms, and \(\frac{1}{\overline{2}}\) reast 12, changed horses at the Chesterfie. The Duke of Rutland attended by the Marquis of Granby, Lorester met Manners, Lord Charles Manners, and Lord Foreins Not her Majesty at the point where Leicestershire ottended tinghamshire. The Duke and his relatives were allod by by a number of servants in state livery, and the principal
yeomen and gentry of the county, pearly one-half of
number being his Grace's own tenantry. On reaching the top of Bottesford Old-hill, the cavalcade drew up and Yeomanry Cavalry forming a guard of honour at the confines of the county. Shortly after one the Royal cortège came in sight, and upon entering the county her Majesty's
carriage drew up to allow his Grace, in the character o carriage drew up to allow his Grace, in the character of Queen. The Duke then galloped off towards Belvoir, to be in readiness to receive the Queen on her arrival. Queen attendants were stationed at the entrance to receive the carriage by the Duke of Rutland, was received at the foo of the grand staircase by Lady Adeliza Manners and the members of the family and guests. The keys of the entering the Castle, and her Majesty was pleased to return them. As her Majesty stepped from the carriage a Royal salute of 21 guns was fired from the bastion of the Castle. nd Lady Bowager, attended by Earl Howe, and Lord 4 o'clock. Her Majesty was received with every mark o respect; Prince Albert accompanied the Marquess of entrance hall, and conducted her of the family"to the saloon. Sir Robert and Lady Peel arrived soon afterwards. Dinner was served at 8 o'clock, covers being laid the Duke of Bedford occupying the of her noble host, The Queen Dowager faced the Duke of Rutland, and Prince Albert sat on the right of her Majestry the Duke of Wellington occupying the seat at her Majesty's left. Nearly the whole or the gur half past 9 the healths of the Queen, the Queen Dowager, and Prince Albert having been drank, the ladies left the table, and her Majesty retired to rest about \(110^{\prime}\) clock. On Tuesday morning the Duke of Wellington was up and Walking in the grounds before seven o'clock. Her Majesty apartment ath preakfasted together in their private accompanied by most of the guests in the Castle attended morning prayer in the chapel. The service was read by the Rev. Mr. Thornton. Her Majesty afterwards went The Queen and Queen Dowager attended by the Duke of Rutland proceeded to meet "in one of his Grace's amriages. Prince Albert looked remarkably well, and even acknog the followers of the Duke of Rutland's hounds the kingdom, he was the admiration of every beholder. He foot a sportsman. The number of horsemen who had by this time joined the
of etiquette a matter of some difficulty, but her Majesty of Rutaueen Dowager who were seated with the Duke concerted by the first carriage did not appear at all disconcerted by the near approach of horsemen to the car-
riage window. On the contrary enjoy the scene very much and laughed heartily at those little accidents of flood and field which are the necessary accompaniments of a gallop to the cover side. In passing that the postilions were Croxton the throng was so great and the Royal party were compelled to walk their horses, her Majesty and the Queen Dowager acknowledging most graciously the loyal manifestations of the people ging most graciousiy the loyal manifestations of the people. Passing and here the hounds were first seen. On an open plain 50 acres in extent with a fine greensward, the cavalcade assembled for the first time and drew up in double
lines extending for an immense distance, while the carriages containing the Royal party drove up the avenue
thus formed. The riders closed in, and on the carriages coming to a halt the noble huntsman Lord Forrester Queght the hounds under the window of that in which the Queen rode for her Majesty's inspection. At this point the Duke of Wellington left his carriage and mounted his The Der which had been brought to the spot by his groom. The Duke was dressed in a scarlet coat and white leathers. Every eye was turned towards him as he rode up to Lord minutes, and whom he remained in conversation zome field seemed scarcely second to that occasioned by Royalty His Grace rode among the thickest of the horsemen and ing to thito conversation with several gentlemen belonggave tongue almost instantly-buta difficulty arose from having too many. The pack were upon three brushes at once, but it was for some time impossible to get either of and the fox m. At length they found at Newman's Gorse, Spring leaving Sproxton a good pace ihrough Ntonesby were nearly all well up, and numbered about 500 , chiefly red-coats. Amongst the first rank were Prince Albert Mr. Stuart Wortley Esess of Granby, Lord G. Manners, Passing Colston the fox veered to the left and croser, \&cc brook, the Prince going over it in fine style. Colston cover to the left the fox made its point for Woodle round to the right leaving Wymondham village to his loft his point now being Stappleford Park. The pace has left, tremendous. The run had lasted nearly half an hour over second horses were called for by in the kingdom. 'The and away they went, the Prince still keeping the first rank, With Mr. Anson a little in advance. Clearing the village acur-dog coursed the fox, turning him round short to the
right and causing a momentary check which gave
breathing-time to many a panting horse. The hounds soon tracked again and followed the fox back to
Colston village, recrossing the brook, and he who after run to ground at Garthorpe, having afforded a run of about forty minutes, during the greater portion of which time the pace was first-rate. Both the equerry in attend treasurer, Mr. Anson, had falls during the run. Many of the horses were dreadfully beat, and the hounds have not fox was run to ground, the field dispersed, the Prince and the Duke's party returning to Belvoir Castle. Her Majesty saw very little of the run, and returned to the Castle about half-past 2 with the Queen. Dowager and the not mount. At a few minutes before 8 , her \(M\) ajesty was conducted from her apartments by the Duke of Rutland, preceded by six pages in state liveries, towards the dining the guests were assembled, the Mayor of Leicester pre sented addresses to her Majesty from the corporation o that borough, from the freemen Mayor of Grantham also had the honour of presenting an address from the corporation of that borough. This ceremony concludeb, her Majesty procueded, resting on
the arm of her noble host, to the banquetting-hall, where covers were laid for the same guests who had the honour of dining with the Queen on Monday-with the addition Lord and Lady Wilton, and the Mayors of Leiceste and Grantham. The guests sat exactly as on the pre-
ceding day-the Duke of Bedford occupying the left, and the Duke of Rutland the right of the Queen. The Queen Dowager had Prince Albert on her right and the Duke of Wellington on ber left. The dinber was served on gold plate, a magnificent candela-
brum presented by the electors of Cambridge to Lord Charles Manners (the Duke's brother) occupying the centre of the table. At half-past \(90^{\prime}\) clock, the bealths of the Royal Family having been enthusiastically responded to, retired to the Elizabeen Dowager rose from table, and by the Prince and the gentlemen about twenty minutes by the Prince and the gentlemen about twenty minute
after. Her Majesty and the Prince played cards together during the evening, several of the guests watching the game with much interest. At 11 refreshments were handed round, and shortly after the Queen and Queen Dowager
retired to their a apartments. On Wednesday her Majesty retired to their apartments. On Wednesday her Majesty apartments with Prince Albert. Her Majesty and the Prince walked on the terrace for some time, about halfphe remains of the late Duchess of Rutland, situated in panied by the Duke of Wellington and the Duke of Bedpanied by the Duke of Wellington and the Duke of Bed-
ford, went out to shoot in the preserves near the castle and had capital sport. At 11 her Majesty, accompanied by the Duke of Rutland, Lady Adeliza Manners, and Lady Portman left the castle for the purpose of seeing the Belvoir hounds throw off. The cavalcade was splendid, and the hounds threw off at Harlasran towards Belton Park miles from Belvoir. The fox after a run of an hour and 10 minutes. The dinner took place at half-past 7, but the ball which was expected to follow did not take place. On Thursday her Majesty rose at half-past 6, and took breakfast with Prince Albert in her private apartments. Her Majesty and his Royal Castle so took leave of the guests assembled at the on one at about half-past 7. The Duke of Rutland rode Granby on the other. The escort consisted of a company of the Leicestershire Yeomanry Cavalry, relays being placed along the whole line of road. The Royal party passed through Waltham and Melton Mowbray to Magistracy, the troops stationed at Weedon, and the directors of the Railway. Her Majesty and suite then entered the state-carriage on the Birmingham Railway, and proceeded at a rapid rate towards town. The train stopped ingham minutes at Wolverton, where the Duke of Buckreceive her Bucks Yeomanry cavalry were assembedio about half-past 2. At the station to receive her Majesty were Lord Verulam and Mr. Creed the secretary of the Company. The Herts Yeomanry cavalry under the command of the Marquis of Salisbury in person, were also in attendance to form the escort to her Majesty on the route to Mr. Glynn the chairman of the Company, and thanked him for the attention that had been shown by himself and the directors to her convevance. The Queen said-"I have had a very pleasant journey and I feel that you have done everything possible to secure my comfort and convenience throughout." Her Majesty then entered the carriage and arrived at indsor about heafr-past the Eighth's Gateway and presented arms as her Majesty passed. The streets were lined with the inhabitants, who greeted her
Majesty with hearty cheers on her return to the Castle, and the bells of the parish and Castle churches rang merry peals during the evening. Her Majesty was looking remarkably well and experienced no fatigue from her journey.

meeting of householder Metropolis Roads.--An adjourned smith, for the purpose of declaring the result of the poll on the question whether that portion of the Great Westcommissioners have refused to light them shace the lighted under the provisions of the General Lighting Act. the parish made to get a rate for the purnose of lighting have been occasions the proposition has met with determined oppochurchwardens. Morison being called to the chair, the follows :-For lighting 162, against it 106 , beine to be as han the number required ; the Act requiring that there hould be a majority of two-thirds in favour of lighting gain mooted for a adopted, and the subject cannot be meeting were disfranchised in consequence of non-payment of church-rates, arising from the churchwardens refusing to permit the auditors appointed by the vestry to investigate
Bank of England.-A batch of 1l. notes to the amount or 14002. was paid into the Bank a few days ago on an executor's account, and no doubt constitutes the greater
part of those remaining in existence. The inferest lost on capital lying dormant in such a shape must have been St. Georie.
Charcheorge the Martyr, South wark,-A meeting of the Monday rolens and overseers of this parish took place on the parish has an interest. It appleared from a statement of city merchant, dated 1631 , a sum of Mr. Dickenson, apart merchant, dated 1631 , a sum of money was set
apprenticing a poor boy belonging to St. George's and three other parishes alternately, and that the Churchwarden of St. Stephen's Walbrook was appointed Churyears, however, Alderman Gibbs, as the permanent the morcharden of that parish, had failed to account for the money and no apprenticeships bad been made. On
being applied to, Alderman Gibbs stated that the lease of
the premises from which the money is derived will expire in 184, and that as the Court of Chancery may then be expected to devise an improved scheme he thought it however, resolved unanimously that Alderman Gibbs be called upon for an immediate settlement, and requested to pay over to the Churchwardens of St. George
Mortality of the Metropolis.-The number of deaths egistered in the week ending Saturday, Nov. 25 , was as Central Districts, 236; East Districts 306; South Districts, 275 ; Total, 1,188 (males, 625 ; females, 563). 442 females) ; and for the last five autumns, 908 .

羽robincial 2vebus.
Provinoial Fires.-We regret to state that the loca papers contain very sad accounts of the progress of incendiarism throughout the country. The determination of Government to punish with severity the perpetrators of these fires is manifest by the large rewards offered for the apprehension of the chief offenders, and the inducements Queen's evidence. The following are the last cases which have been communicated to the authorities:-On the 19th ult. a barn and other out-buildings the property of Mrs. Tyrrell of Polstead Hall, in the occupation o Mr. Tabar, together with a quantity of beans and straw, C. Tyrrell, Esq., 502 . ; and the Suffolk Fire Offce 50l. on conviction, with pardon to any but the person actually firing the premises. On the same night a stack of Barley on the farm of Mr. Gayford of Rymer House, Suffolk the Duke of Gr 250., reward is offered, Go pardon to but the actual incendiary. On the 18th plt the berns and out-buildings in the occupation of Mr. Buck of Hawstead Lodge farm, Suffolk, were destroyed, with a quantity of corn; 200l. reward is offered, 100l. being given by Government, and pardon to accompl Mr. Kerse bam, Suffolk, was destroyed ; 250l. reward is offered, 1002 by Government, and 502 . by the Duke of Grafton, with pardon to any acco 10 . Fach wisf. Nonh tonshire, was fired and destroyed, together with a Wheat rick and two carts. On Tuesday week at St. Columb Cornwall, an incendiary fire took place at the Red Lion Hotel, which destroyed property to the value of 200l. A Billington, near Leighton, on the same day an extensiv arn filled with Wheat, the property of Mr. Garret, was on the same day three stacks of Wheat on the farm of in Hertfordshire, on Wednesday a barn filled with Corn belonging to Mr. Proyer was fired and destroyed. Damage 400l. A few days before, a fire broke out at Stoliold nea Baldock on the farm of Mr. Gibbons, which destroyed property to the amount of 6000 l. Near Sawbridgeworth happened at the homestead of Mr. C. Bennett in Clay lane, a few hundred yards from the town. It destroyed in three hours several barns, eight stacks of grain of connected with the farm. Loss 2000l. At Falmersham in Hertfordshire, on Thursday a spacious homestead belonging to Mr. Swannell, and two cottoges, wer last the storehouses full of hay and corn on the farm Sir J. Lubbock at Farnborough, Kent, occupied by Mr. Stow, a farmer, were destroyed with all their contents. Bristol.-A case of alleged murder which has caused much excitement in this city was brought before the coroner last week. It appears that in August last Mr Mountjoy, a master rope-spinner, died from inflammation of the bowels. He was a man of some property, about about 24 years and one child, to whom he bequeathed his property For the last tro years of his life his wife and himself had lived very uncomfortably, but no suspi cion having arisen that deceased had been unfairly dealt with, no post mortem examination of the body was made was interred. Last week, however, communica ions were made to the coroner by the sister of the wido and by other parties, by whom it was alleged that deceased hader porsoned, and the circumstances detailed to the mon a jury. The body was subsequently exhumed, and the inquest adjourned until Mr. Herapath the chemist has had time to analyze the contents of the stomach.
Crewe.-On the 23d 1 a ciating priest of the sect of Mormonites or Latter-day place, with.others of that persuasion, assembled at the river at night to baptize into their sect a woman who had been induced to submit to the operation after much entreaty and violence from her husband. The priest and
others having made the woman remove nearly all her clothing, immediately plunged her into the stream! The night was cold and dark, and in consequence of the late rains the river was running at a great rate and was much
higher than ordinary. The priest having hold of her naked rm, infortunately let wo lis grasp, and the current ran ning like a mill-race immediately carried her away, and it being pitch dark she was instantly overwhelmed and
drowned. The husband walked home with the greates deliberation and told his neighbours what had occurred and after seating himself declared his conviction "that was the will of God that she should be drowned," adding
"that it was the weakness of her faith that caused it, but that he was now satisfied that she was in glory." Captain the ingy of the Crewe station and other parties hearing of after some time imediately rushed down to the river, and woman in a bend of the river about 200 yards distant from the spot where she was immersed, but life was extinct A coner sinquest has been held upon the body, and the ury baving returned a verdict of "Manslaughter," the take their trial.
Foots Cray.-On Tuesday the 28th an inquest was held at Sidcup on the body of Maria Plummer, aged 40, the wife of a gardener in the employment of Lord Bexley, who came to her death under circumstances which officer of the Bromley union. From the evidence, which as very voluminous it appeared that about sir jeare ince the deceased summoned her husband before the Foots Cray for ill-treatment, on which occa. ton be agreed to give her half-a-crown a week, which he 4s. a week, the result of which was thet although earning o considerable distress, wandering about from one relation to another, till each in turn, being poor persons, were pport her any lon a deplorable a lition hers he relieving officer, who lives at Chiselhurst. She immeditely went oper to Mr. Banks whom she saw, and told him that she had slept in a water-closet all night, and wished him to compel her husband to find her a lodging. Tas unabised to do so and called to relieve her but told her to spply next day to the board of guardians at St Mary's Cray three miles distant ; and when he had been spoken to on the subject by Mr. Rogers, a respectalle draner of Foots Cray, he replied that if he relieved her without bringing her case before the oard of guardians they would immediately reprimand called at the poor woman wandered over to Sidcup and his tae Black Horse, whero she asked for a bed Her hushand erhibited has driming in the ho her lotion shd retired be most hicre bo meak feeble that she was about half an hour getting up-stairs and fell down in the bed-room. In the night she was attacked with illness, and in the morning when the landlady Pritch she tas found in the agonies -f. tion, and had never seen a human being in so deplorable condition in his life. The chest was generally healthy There was a large tumour in the right lobe of the liver; flammach and intestines exhbited a great deal of in which she had been subjected from want of suff cit bile he stomacl and bowels ot the slibhest partiel were porfeclly ewph, these was ind to be found therein. fand or nourienment of any that she lad been a victim to neglect, dirt, and improper attention.  esponsibility. The inquest after nearly four hours' dura. con was adjourned, to enable the jury to discover what seetings of the jury bare been held, but without ge jury have been hid, but without coming and conclusion; andone er jur Cliny as unfortunate woman, her five children, and servant, Who were burnt to death in the fire at Willersey, as noticed in our last. It was clearly proved that no attempt could the flames, and that they must have been suffocated soon fter the fire broke out. With respect to the cause of the ire, it appeared that two days previous to the calamity the kitchen-chimney caught fire, and apparently buined itself out, but there was no doubt that one of the boud timbers had ignited, and communicated white loorig. The ouse was insured for fatherless children. The jury after brief consideration returned a verdict of "Accidental Death" in each case.
Huddersfield, - A movement has been begun in this and other towns of Yorkshire, in favour of the liberation of Mr. Oastler from the Fleet-prison, and for providing an annuity for him and his wire, as an acknowledgment of his services in the ugitation for a ten-hour Factory-bill. The clergy have taken an active part in promoting the movement. The Rev. W. Maddon was the first to propose a resolution at the Huddersfield meeting; at BradCord, four clergymen supported the cause by their ddresses, at Dewesbary the Vicar ooch the chair, and was supported by the incumbent of Batiey. On the M. P., in the chair, when 24 tradesmen and operatives formed themselves into a committee to canvass tbe parish oners for subscriptions. Since then meetings have been convened at Dewesbury, Halifax, Sheffeld, as well as at Mancheater, Liverpool, and other towns in Lancashire A central committee has been formed in Manchester, and subordinate committees are in course of formation in the principal towns in Lancashire, Cheshire and Derby

THE GARDENERS' CHRONICLE.
[Dec. 9,
shire for the promotion of the same object. About
\(2000 l\). it is stated will be sufficient to effect Mr. Oastler's liberation, but it is proposed to raise \(8000 l\)., in orde that some permanent provision may be made for him.
Ilford.--Our readers are aware that in consequence o ertain innovations alleged to have been made by the officiating curate of Ilford Church, some of the congre gation opposed to those forms called a meeting of the parishioners at which the subject was discussed with was agreed to, calling upon him to interpose his authority was agreed a stop to the practices complained of, their tendenc being to drive from the church its most constant attend ants. The Bishop in reply has forwarded to the memo rialists a letter expressive of his sentiments upon the fact to the course indicated in his last visitation charge to the clergy of the diocese. In reference to the specific alle gation of the introduction of novel forms, set lordship is of opinion that the clergyman is not accountable, provided the service be performed in accordance with the Rubric. In such cases the congre gation have no right to object to the introduction of these
forms. If, however, the minister goes beyond the Rubric, herms. is open to censure. The prayer for the church militant, \&c. should not be omitted, nor is the congregation entitled to object to it. The memorial averred sign of the cross which had given great offence to conscientious Protestants; that he usually read lhe Litany with his face the congregation: and that be knelt while packing alms on the table during the offertory-service. These matters call forth the curate by whom they were performed, and the incumbent is condemned irregularities unrebuked. In reference to a particular sermon presched in the parish church, which, as the memorialists alleged, maintained the dot the sermon referred stantiation, his lordon construction to the extent which the memorialists had put uponit. The letter, which is of very great lengt b, concludes by enjoining harmony betwist ministers and their flocks as the motion of piety and sound religion.

Liverpool.-On Friday two females named Scholes and Craig, with Andrew Craig the busband of the latter, and John Neil were brought before the magistrates, they were discovered by means of an application to Lord Newry purporting to be from Caroline Stephens and inclosing a dorged cer tificate from Lord of the writer. The police had traced the parties and seized a quantity of books and papers which showed such a system of fraud and deception on the part of tae prisorsers as it appeared that the ramifications of the gang extended far and wide, comprising sth the principal towns and cities in England, Theands bearing the names of the peers, bishops, and of the most wealthy and isfuential persons in the different locatities in which they wound amongt these papers, and if but a tithe of the sums there stated were given, it proves that they must have long practised a suecessful course of villany. Some of the papers seized related to Liverpool, Manchester, and various places in Chestire. To these towns ins of weathy individuals, particularly those having be called upon and being benevolent, were noted down to mee called minute were pointed out regarding them. Their hours of attendance, the general disposition of the parties applied to-whether liberal or otherwise-were carefugy noted. documents seized formed a catalogue unparaleled on theared by these that they had carried on their depredations in Cheltenham, Birmingham, Leamington, Nottingham, Sueffield, and had also practised to a great extent in Ireland. In Scotland their operations had extended to most of the counties and towns therein, comprising Berwick, Haddingtonshire, Roxburghshire, Dumfries-shire, Kirkcud-
brightshire, Fifesure, and Forfarshire. In all these disbrightshire, Fifeshure, and Forfarshire. In all these districts the prisoners have, according to the papers seized, can well be imagined. The magistrate after hearing the evidence expressed his determination to put down such fraudulent attempts on the public, and remanded the pri. Manchester further inquiry.
Manchester. - Up to Friday night the total amount subscribed in Manchester to the League Pund was
\(17.902 \%\). In addition to this, \(1,665 l\). Was subscribed in Rochdale from Tuesday to Thursday evening, making altogether, with the 1,150l. contributed by Rochdale at the late Manchester meeting, no less than 2,825l. from that town.
Northampton.-At the mayor's dinner in this town on
Tuesday week, after several coasts had been given, that Tuesday week, after several toasts had been given, that of Earl Spencer was proposed and recelved with his legs before quiet was sufficiently restored to enable him to speak. After dwelling on local affairs for some time, his lordship proceeded to express his views of general politics as follows :-"My Mattention has not been give you any useful explanation of my opinions, I can only say generally with respect to free trade, that neither of your worthy members is a stronger advocate of it than I am. The only time I addressed the House of Lords on the subject what I said was to the same effect. I am
landed proprietor and an occupier of land, and I have no other means of subsistence. If I were to say thet I
desired a repeal of the Corn-laws, believing at the same desired a repeal of the Corn-laws, believing at the same say that I was a very honest man, but you would certainly not say I was a wise one. But I believe no such thing I quite agree with what Mr. Currie has said. I believe the welfare of the empire at large. But I do not believe that the repeal of the Corn-laws would tend materially to lower the price of corn. I believe it would raise the
wages and increase the employment of the people. Thus, although it would not lower the price of corn, it would bring increased means of buging it. I believe, too, that it would be followed by a great increase in the price of
corn on the Continent, and the effect of this would be that our manufacturers would be enabled better to comrespect to the objection that foreigners will not take our manufactures in exchange, as Mr. Currie has said, if we to be paid for it I know of only one way of paying them directly or indirectly, and that is by the industry of the take from the foreigner corn, we must pay for it with ou manufactures, if not directly, indirectly; and the effect of such a trade must be to raise the continental price of earl concluded by saying that they would well understan why he, declaring himself an advocate of the total repeal of the Corn-laws, was anxious not to be misunderstood He should be sorry, indeed, if such a change should involve the ruin of those with whom he was now associated the agriculturists, but he had no such belief. He believed, as for the benefit of the would be farge. His lordsbi sat down amidst repeated rounds of the heartiest cheering. Windsor-A field of between 100 and 200 were present at the meet on Monday last, which took place at Maideahead. The celebrated Scotch deer, Highander, which has heretofore afforded such excellent sport, upon being uncarted on Maidenhead Thicket, went away across the thicket to the Great Western Railway, where it ran along the up line towards Reading for upwards of a mile and a half. The hounds followed in hot pursuit, having got upon the railway before the huntsmen and whippers-in had got up to call them off. When between a deep cutcing, an up-train, proceeding at the rate of thirty miles an hour, whole pack (the hounds still proceeding downwards on the up-line) sppeared inevitable. The stag made for the banks and thusing as soon as it saw the approach of the train, and thus got out of harm's way. who still pursued their dangerous career along the Ine. Fortunately, bowever, when the train had advanced
within less than 100 yards of them, and when every one expected that in another second or two the whole would have been sacrificed, the pack passed over to the down of all who witnessed the danger of the royal pack and their extremely lucky escape, were, as may be imagined, greatly excieding, and after a run of two hours and threequarters over 30 miles of country was taken in the taproom of a public-house.
Railways.-The following are the returns for the past and Gloucester, 1537l. ; Eastern Counties, 2118l.; Edinburgh and Glasgow, 1923l.; Great Western, 11,207l. Grand Junction, 6393l. ; Glasgow, Paisley, and Ayr, 1201l. ; Great North of England, 13416; Hull and Selby, 579l. South Western, \(4558 l\). . Greenwich, \(677 l_{\text {. }}\); Brighton, \(343 \%\). ; Manchester and Leeds, \(5191 l\).; Midland Counties, 22.57l. ; Manchester and Birmingham, 2304l.; Northern and Eastern, 1389l.; North Midland, 3907l.; Newcastle and Carlisle, 13781 . ; Sheffield and Mouth Eastern and Dover, \(2665 l\). -The works on the Newcastle and Darlington line, which is to connect the Great North of England Railway with Newcastle, are proceeding with a spirit that promises the successful completion of the undertaking at a considerably earlier period than the public had been led to anticipate. The works in the neighbourhood of Durham are in a state of great forwardness, and it is supposed that the whole line will be finished early in the Court of Queen's Bench upon Mr. Scott, one of the offeers of the Leeds and Manchester Company, for blocking up the highway at Rastrick, near Halifax ; but it is understood that this judgment is intended only to quicken the movements of that body, and that if the impediment be removed on or before the 10th day of Easter Term, neither that fine nor the fines of 20 l , each unon the other defendants will be enforced.-On the North Midland line a large carriage has been fitted up for the accommodation of smokers. It is termed the "divan," and first-class fare is paid for the convenience. -It has been currently stated othe Brighton and Croydon Companies with the view of解 the last-named companies, the terms to be mutually settled by the respective boards of directors

\section*{IRELAND.}

Dublin.-An express appeared in the Times of Saturday, announcing an important seizure of arms in this city. It appears that the superintendent of the detective force,
having received information that there was a cask on
board the Duchess of Kent, steamer which was charged in the manifest as "empty," and only \(2 s\). returned on its freight, and that the cask was, in reality, very weighty, removed to the police-office, where it was broken open, and found to contain 12 pike-heads, upwards of 14 inches ong; 12 muskets, 12 cutlasses, 6 horse pistols, and 6 pair of handcuffs. It was immertang ramered that after a long investigation before the Magistrates, it was proved that they were imported by some Conservative merchants for arming a vessel abdingly given up by mand of the Lord Lieutenant.- The usmal weekly meeting of the Reveal Association was leld on Monday, Mr. T falher of his country had gone to sport with his beagles amongst his native mountain, s, but that he could not bave done so it he did not place the most impheit ennfidence in
 bered Clontarf, of which he would not now speak, as they all knew his opinions about it ; the Americans, too, had their opinions about it. They remembered what had taken place lereagh, and blor the to be played in 1843. However that might be O'Connell had declared at the great meeting at the Abbey-street Theatre, that but for his accidental pre sence in Dublin, Clontarf would have become a scene of havoc and bloodshed which would have spread thoto was that "ther a crime strengthened the nem " and those be, he hose de clared that though a ponr man he would not change his present position for the brightest diadem in Europe. He Majesty's Attorney-General in Irelund had attempted to prejudice the minds of the Jury before whom they wero to be tried, but whatever might be the efret of aibilit attempt, should \(O^{\prime}\) Connell even by any human possibility be sent to prison, it would be the daty of the pople lhe to become doubly tranqu, for then would doubly terrible to his enemies-ay, moreterne en than while inhaling the ar of his native mounain. (Conall was the sole though sceptreless monarch who reigned in the hearts of the irsisheople, and if he were impria he might say to Earl Be Grey in the words or Manfred, "Thou worm whom I obey I scorn." Mr. J. O'Connel addressed the meeting on the subject of the system Ribandism, which he regretted to say was notwithstandin the repeated demunations of the Assochation, still spo ing in the neighbourhood of Dundalk. Mr. Barrett the Pilot made some observations on the same his conard referring to the kinnoe murders, expressed would be found to be neither Roman Catholics nor Repealers. The rend or be neituer Roman Cathotics 9947. 11s. 5 d.-Th Earl of Devon arrived in Dublin on Monday, and com menced his duties as chairman of the Landlord and Tenan Commission.-On Friday town-councillor O'Brien was elected Lord Mayor for the ensuing year without opposition. He is a thorough Repealer, and was proposed by Mr. O'Connell and seconded by Mr. M'Clelland.-The Penelope steam-frigate has arrived in Kingstown harbour, loaded almost to the water's edge with large gun-boas. They are intended for the Upper Shannon and the large lakes formed by that river in its progress towards the lower branch. A considerable number of persons wero collected on the banks of the canal to see them towed to Portobello from the basin at Ringsend. They areimmense boats with great beam, capable of carrying two guns ald a large body of men, are doubled banked and each pulle of twelve rowers.-Sir George Back and Capt. Fair, the Commisioners appointed to report on the comparative merits of Holyhead and Port Dynllaen Harbours, have sent in their report to the Admiralty, in which they stad their unqualified opinion that both as to capabinty. position, Holyhead is unquestionably the most eligible harbour on the coast as a port of communication of Dublin." -The Rev. Peter James Tyrrell, parish-priest of Lusk, and one of the nine persons implicated in the pend ing state prosecutions, died on Monday night atter a shad atack of erysipelas. The Rev. Gentieman was it is atil greatly beloved by his parishoners, and did not questions which have lately agitated this country. He caugr cold during his exertions to prevent the meeting al cirely tarf, after the proclamation was issued, and never entive recovered from the effects.
Tipperary.-At a meeting of the gentry of the North Riding of Tipperary, held on the 29th ult., at Borrisokane, the following resolutions were adopted:-"Resolverror That we contemplate, with feelings of the deepest Miss Vereker and Thomas Waller, Esq., and the brutal and barbarous attar on hamily, at Finnoe, on the Jiveinst. ; and we hereby tender the expression of That the frest sympathy to the members of that family. with great alarm upon the danger that evidently upon us in the present state of the county. the most the present and the county. That conviction that this outrage is connected with, and a proof of a widely-extended, secret, and well.organise prosirey a life, ond property in this counds That while, on the part of the landlords of this coum we we rejoice at the parion inquiry, still we deny emphatically that their conduct has been such at any manner to valliate or justify the crimes so constanil
occurring in this county. That we are fully persuaded mainly lawless and disturbed state of society has been publications, made by inflammatory harangues and seditious That fully confiding in the wisdom of her Majesty's councils, we deem it our in the wisdom of her Majesty's counconviction the it our duty most respectfully to express our conviction that the existing laws are inadequate to meet that we pledge ourganised and lawless state of society, and ment in pledge ourselves to co-operate with the Govern restoration and maintenance may deem requisite to the last accounts from Thenance of peace and order." The tatements resper finnoe fully corroborate the previou Waller and respecting the precarious condition of Mrs tusions of the old butler, Larkin; the wounds and convery unfarourable it is said have begun to assume a the shiavourable appearance, while the consequences of Waller's produced by the death of her busband on Mrs. The funeral spirit are regarded with serious apprehension. attended by of Mr. Waller took place on Friday and was Limerick, 一 On gentry and clergy of the neighbourhood. Limerick -On Monday Mr. Smith O'Brien, M.P., was city, to celebrate public dinner by the Repealers of this ceedings excited considerable interest, as Mr. O'Connell ceedings excited considerable interest, as Mr. O'Copnell Queen, Mr. O'Connell. In proposing the health of the Queen, Mr. O'Connell said, "There is not, I know, in any portion of her dominions an assemblage of persons more steady or devoted in its loyalty than the one I am now addressing. As for myself, you may perhaps have Deen in the newspapers the heading of "The Queen \(v\). Daniel O'Connell'-(Laughte \(i\) )-but I tell you what you are never very likely to see, what it is impossible for O'Connell v. the Queen' . (Renewed lang of 'Daniel believe there is not amongst her subjects one individual labouring more efficaciously than myself to secure the dability of her throne and the possession of it to her descendants." After the other loyal toasts the chairman gave "Repeal of the Union," and then proceeded to the of Mr the day, and spoke in terms of great approbation of Mr . Smith O'Brien and his services to Repeal. "He the en not," he said, "how the cause of Ireland might in the ensuing session be retarded by pending circumstances, he would were incapacitated from aiding it as vigorously as he would wish, there were men to fill his station in that respect, The national mind would have leaders-the national mind had those leaders at present and in prospective, and O'Brien would never be deserted as long as William Smith length. After declaring his adhesioned thanks at great length. After declaring his adhesion to Repeal, he adI consider this is notecutions, and spoke as follows :and the other persons who prosecution against O'Connell secution against
the entire Irish nation. I believe the Government with disgrace them and greatly advance only effect will be disgrace them and greatly advance the Repeal cause. verdict of gualty upon such trumpery charges; but if it Europe should be cousigned to a dungeon for having men in Europe should be cousigned to a dungeon for having loved his country too well, do you suppose that"by those means
lreland will be averted fiom seeking the Repeal? I know not what would be the result, but I am persuaded that nothing would more dishearren him and those who are
involved with him than a tumultuous rising. as Mr. O'Connell has said a belief up to a late period that there w s one way in which the Repeal question might be benefit, and that was by legislative enaciments for the benefit of Ireland. For my part I have not the slightest look forward with intense eagerness and certainty to the lime when the repeal of the Union will not be treated as arising within any given time, within a month or monthe or a year, as Mr . O'Connell does; but I believe that the confederation coming when Ireland will be banded in one least that we have the millions with us, and in such at when I look is no unimportant consequence. And filled with despair. In the first place, the hin not whatever, with respect to them I give moyself no concern whatever, for I am quite sure that whenever our cause here is a winning cause we shall domestic legislation would be an essential benefit to this they dey, but avoid taking part in support of it, because rou ought its attainment impossible. To them I say-party-those who are favourable to federalism, and is it far as repeal that they are bound to go along with us so entire legislative independence as it existed in 1782 . I am find from saying we ought to insist on that, for we might find one thing wossible and the other jompossible, but we tain those onvite and they are bound to come who enterdid belong, but have no right to accuse of improper English, I mean those who still hope for justice from the English Parliament. I will only say they are labouring under a dream from which I have myself awakened, and to I ask of them is conscientiously and before their God do thes sir hands upon their hearts and ask themselves do they still hope? If they answer in the affirmative I do not blame them, but I think that that class too will soon be in our ranks. There is another class whom I believe
to be most inf the sturdy Presbyterians of the north of Ireland, and really

I must say that they in common with their fellow-country-
men are concerned in the prosperity of their native land men are concerned in the prosperity of their native land,
for I ask them what class of Irishmen is it that have not such an interest. They have a common interest with us and I cannot but believe that ere long they will be awakened to a sense of that interest. How could I believe othermen who congregated in Dungannon in 1782 declared that they knew their duty to their Sovereign and were loyalbut that they knew their duty to themselves and were de-
termined to be free. Those were the words of truth termined to be free. Those were the words of truth, and believe me the spirit of the fathers will animate nion sons. Oh if were instrumental in effecting an would believe I had not lived in vain, then now to propose to you the health of
graphy is written in his nation's history whose bioworth and distinguished exertions will be more fully appreciated when his voice is hushed in the grave. I give O'Connell returned thanks, and said it was a for Ireland, and a proof of the wisdom of the prosecution "The state of the Repeal cause," he said, "is thispresent three-fourths of the Irish people have unanimously declared in favour of it. A portion of the remaining fourth-the Catholic portion of the north at least are also for the Repeal. An immense number of the honesthearted Presbyterians of Ulster are for the Repeal, and several enlightened members of the Established Church are for it; in short no cause had ever so powerful a sup-
port. That is one fact. What is the next? Why 37 monster meetings were held, not including the Why 37 meeting of this day. That more human beings were congregated for peaceable, ay, or even for warlike purposes, than ever assembled in any country before. That there were six millions four hundred thousand as mentioned in the bill of indictment. But what is the fact as was alluded to by Mr. O'Brien? not one breach of the Nay, it committed at any of the monster meetings. happened in a throng of so many thousands. Six millions four hundred thousand met together, and observed even the politeness of refined society in their behaviour towards each other, demonstrating their rights to govern their country by the complete manner in which they govern be composed of the Orange faction there is lithe the Jury us. I am asked how they can find a verdict on that agitator-but as to conspiracy I loathe the woing a Popish of conspiracy never entered my mind. No; I belong to a great national combination, and I am proud to belong to come weal I repudiate the nation. But I wish to tell the people again how they be unhappily misinformed, and a verdict be found against us, I ani not afraid of any disturbance. I am not afraid of any disturbance from this to that period, nor of any disturbance even then, but there is no harm in repeating my caution to the people. It would indeed break my heart to think that there should be any disturbance. would Don't the people see that their enemies are perfectly pre pared with troops, artillery and ammunition? Let the people recollect that it was the fomented rebellion of tranquillity which I conjured you to observe, and the noble is certain. Ireland need have no fear, unless from crime and violence. With that sentiment on my lips-with that conviction on my judgmeni-with that anxiety in my heart -I call upon you all to abide the coming trials with patience and tranquillity. Let us look forward to peace during the coming crisis. Let no man pity me nor feel that i was a wronged man-that I was an object of comand not the scaffold. I have struggled for Ireland-my first speech was against the Union-I have made more peeches since then than any other man, and my private life and public character have been vilified beyond measure; but while I have the confidence of my countrymen care not for it all. It has been suggested to me that if I consented to abandon the Repeal the prosecutions would be given up; or even if convicted the sentence would not be enforced-that offer was made to me. I said at once there shall be no compromise of the Repeal. would rot in a dungeon first. No, not while \(I\) have breath will I make a compromise. The Repeal! While I live I shall continue to argue Ireland's right to a domestic Parliament, and if I be incarcerated, my pen will enable me to teach my countrymen my sentiments. I rejoice, then, my friends, that we have made this demonstration. Your monster meetings went on until, at the close of them said that that which was peace before would on the suppression of those meetings be rebellion immediately. It was no such thing. Now we can contradict thew. They still is my command-peace still is my entreaty-peace still and Ireland shall be free." Several other toasts were proposed and the meeting did not separate until long after midnight.

\section*{721ab.}

Count or Conmon PLEAs.-Woods v. the Duke of Argyll and
 in copying certain maps and making a journey to Gravesend The Duke of Argyll, it appeared, had been put down by the pro-
moters of the scheme as the Prestdent of the British American

Association for Emigration and Colonisation, which had its
origin in an association founded for the purpose of securin the Nova Scotiaciation founded for the purpose of securing to
proceedings of the astan estates in Nova Scotia. The proceedings of the association, the fate of the empgrants who
had taken bertlis in the sthip Barbadnes, and the bankruptcy of
Dr. Rolph, one of the principal prom iters of the sconction Dr. Rolp
has been tasty of the pol ce and bankruptey reports, that it will nitt be
necessary to do more than advert to the evicence by which it
was sumpt to fix the defendats with lial lity for the acts of the
association. It appeared that the order to copy the maps, \&c.,
was given by the secretary was given by the secretary to the assnciation the maps, \&ic.,
September, 1842 , and that the first meetine which the Duke or September, 1842, and that the first meeting which the Duke of
Argyf and Sir J. Cockbtrn attender was held on the 22d
Apriin in the same ypar. They attended another ineeting on the Aprii in the same yrar. They attended another ineeting on the
20th April, and another on the 8th June, and after that time
there was no evikence to show that they ever interfered in any way, directly or indirectly, with the proceedings of the scociety,
or attented any of theur meetings. It alpeareu that a prospec.
tus was pubushed in whicin the Duke of Argyll firarea as or attenied any of their meetings. It appeared that a prospec-
tus was pub, ished in which the Duke of Argyll figured as ricei-
dent, and a number of noblemen andi gentiemen as vice prcsi-
dents, besides a number of baronets, among whom was \(S \Gamma J\).
 aftaur was left in the hands of six "commiss.oners,", and that
the functions of the president, vice-presidents and consulto
council were exclusively conined council were exclusively contined to the prots and consultion of the inte
rests of the shareholders. It was arranged by the very
tion of the association then rests of the shareholders, it was arranged by the very constitu-
tion of the association that no peer or baronet who should
become a vice-president should be liable 85 such
 which was adopted on the sth Jone, it was determined that no-
thing should be done by the association till \(50,000 l\). had been
subscribed for, Only 7000 . was subscribe 1842. There were several minor features fin the to December, above were its leading characteristics. Chief Justice Tindal
summed up, and the jury returned a verdict for defendaits.
Court or Quem
 formerly served at Sierrach Leone, was changed with having com-
mitted an assault with a criminal intent at Harrow School. The mifted an assault with a criminal intent at Harrow School. The
Jury found the prisoner Guilts, - At the Central Crininal Court
on Saturday, George Duzison charged with tworge Dimuson Loundes, a barrister uf fortune,
beens before the police on chargof ofsault, and who hos often beers befre the police on charges of the sane dexcrip'tnm, was
found Guilty, The Recordcr commenting apon the enmmity of
his offence, sald he not taken steps to wave surprised that the prisoner's friende had
notaced in snme asylum. He then

\section*{SATURDAY, DECEMBER 16, 1843.}

\section*{}
\(W_{E}\) have the painful duty of announcing the decease, at Bayswater, on the 14 th inst., of Jous CLavorus Loupon, Esq,, the well-known indefatigable writer on Horticultural subjects and the celebrated I andscupe-Gardener, in his 60th year. Whatever
differences of differences of opinion there may be as to some of
the views which Mr. Zoudon adyocated, there can be none as to the general value of his literary labours. The esteem which was entertained for them by one who has occasionally been opposed to him, was shown some years ago by the establishment of the genus golden flowers curious New Holland shrub, whose labours - Horticultural, Arclitectural, Ecconomical, and Botanical-under which Mr. Loudon at length has sunk.
THe Smithfield Show of fat cattle, implements, \&cc., which took place last week in Baher-street, viewed as an exhibition of the extent to which feeding can be carried in the fattening of cattle, sheep, and pigs, was considered fully equal to the shows of previous years.
We have not room to rive this year's award of the prizes offered by the Smithfield Club, and probably the majority of our readers would not feel much interested in it. Among the many heavy animals exhibited, we noticed particularly the beatifully-formed b-years and nine months' old short-horned heifer, bred Skipton, Whticmpest, Bart., of Broughton-hall, near to which gold and silver medals were also awarded.
Prince Albert was among the unsuccessful ex hibitors.
The exhibition in the galleries of implements, roots, sidered full and interesting. These may be conordinary specimeans, whose uee res shewn in the yard below them ; and whatever advantage may follow the spirit of emulation, which is, we think, the only useful consequence of a show of fal cattle, there can ments, and of the exhibition of Agricultural implements, and of the plants used in good farming must be useful in many ways. Some extraordinary Swedish
Turnips were exhibited by Mr. Skirving of Liverpool, and Carrots and Mangold Wurizel, by Messrs. Gibbs, of London ; but these, though they doubtless displayed the distinguishing marks of their respective varieties specim out to the fullest extent, could not be taken as the ordinary circumstances of field culture. We saw Whe series of specimens of Agricultural Grasses, or of Wheat, Oats, and Barley; yet these are surely quite worthy of classification, according to their varieties, and they would form to many as interesting an exhibition as that of the fat cattle patronised by the Smithfield Club; and we think that the display of the straw, as well as the seed of such specimens, would not only exhibitor. We spectator, but profitable also to the matters much more narrowly. next year look to these

The relation that plants bear to the carbonic acid which surrounds them may, at first sigbt, appear to be an abstruse question in the Chemistry of Physiology considerch Practice has no concern; but a moment's would be a being a mere point of philosophical speculation, it is one intimately connected with the fundamental principles of cultivation.
Phis is consist very largely of charcoal (or carbon). chemical plain enough, without having recourse to that sticks and branches are what become charcoal when properly burned, and that after the operation they are little less buiky, although much lighter than they were before. It is not, however, so generally much composed the most delicate parts of plants are as undoubtedly the fact. Take the petal of a Rose-the yet more delicate corolla of a Convolvulus-or even the tender Fungi which spring up in cellars like tufts of
snow, as fragile and as delicate-place them on a piece
of glass, thrust them for a moment between the redhot coals of a glowing fire, and whell they are withdrawn their colour and freshness is gone, but charcoal remains. In short, plants consist principally of charcoal and wate
If it is true that such is the fact-if it is thus evident that plants consist to a large extent of charcoal it is obviously most important to ascertain the source from which they derive it-for we need not say that they could not have it if cut off from communication goes to prove that a very large source of charcoal is carbonic acid : a kind of air, compounded of carbon and oxygen, found in the almosphere, incessantly expelled from the lungs of animals, and produced by the decay of vegetable and animal bodies. On this invisible,
untouchable substance plants feed; out of this they help themselves to the charcoal, returning the nxygen to the air. And thus the vast forests of the earth, and all the herbage at their feet, are gradually built up, and fashioned into the beautiful green mantle of our planet.
1 his great fact being established, some other questions about which Physiologists cannot agree are less important. It practically disposes of the question, atmosphere or not \({ }^{\text {a }}\) that carbonic acid is their food, we must necessarily admit that plants will take it up by their absorbent surfaces whenever it is presented to their surfaces And as the power of absorption exists nowhere in plants more powerfully than in their roots, so must w therefore admit that the roots will feed on carbonic acid if the substances surrounding them can furnish it. cultivated wiants must be considered to be so fed. W cannot for a moment admit the truth of those speculations in which the unimportance of carbonic acid at the roots of plants is insisted on. All experience shows the contrary

If these statements are well founded, as they surely are, one of the most important of all matters connected with cultivation is immediately touched-viz., the management of the soil in which plants grow; for it must be plain that one of the first things to be thought of is the introduction into earth of materials out of which carbonic acid can be steadily produced. The cultivator does this by means of manure-that is, by means of decaying matter capable of producing gaseous compounds of carbon, But although this is practically done universally to a
certain extent, it is by no means clear that we employ certain extent, it is by no means clear that we employ
for this purpose all the available substances at our disposal.
Of late years a great deal has been said of the value of common charcoal in soil. Experiments have been quoted to show that in powdered charcoal alone plants flourish with an extraordinary degree of vigour ; charcoal has been recommended as the best of substances in which to strike cuttings (see vol. i., p. 549, and many other places), and by degrees it has gained a reputation which nothing now can shake. It is true that some ex periments with it have failed, owing, we believe, to its having been used in too fine a state, or to other accidental causes; nevertheless the opinion of practical men is setting steadily in its favour. Messrs. Loddiges employed it advantageously in the cultivation of Orchidaceous plants, charring the wooden blocks on which they are attached: that practice was introduced beneficially at Chatsworth, and nothing can be more striking than its good effects in the garden of the Horticultural Society, where a few weeks have sufficed to give a dark green healthy colour to the plants attached to the charcoal blocks. By mixing it with the soil of Orange-trees their health was presently increased in a remarkable degree; and we understand that it is used largely as an ingredient in the soil emthayed by Mr. Barnes for the production of the great Pine-apples at Bicton.

This may be in part ascribed to the mechanical action of charcoal, and to its freedom from insects, or, as chemists maintain, it may be owing to the power possessed by charcoal of condensing within its pores carbonic acid and other gaseous substances which are slowly yielded up to plants as they are required. But we are persuaded that charcoal does itself enter into combinations capable of being consumed by plants, either in the form of carbonic acid, or of some other compound. It is true that chemists regard charcoal as one of the most unchangeable bodies in Nature, and altogether incapable of entering into combination with oxygen at common temperatures. But at p. 24 of our volume for 1841, we have pointed out an apparent voifficulty in the way of this supposition, and it is difficulty to be recollected that the powers which are assigned to living bodies are far beyond those of the laboratory. Enthusiastic chemists may undervalue
* For the sake of simplicity we here speak of carbonic acid carburetted hydrogen from the gaseous matters capable of being decomposed by plants.
the vital principle, but the world will hardly go witty them in doing so. They cannot decompose the earthy silicates with their most powerful solvents, but the feeble roots of a plant will do so with the utmost ease. We, therefore, regard the inability of man to make charcoal combine with oxygen or hydrogen as no proof whatever that plants cannot do so, and until some experimental evidence is producell to prove that plants cannot feed on charcoal, we shall believe that they can. In the meanwhile we may adduce, in support of our own view of this most important question, a statement just made by Mr. Rigg,* who expressly asserts that charcoal will combine with other elements at common temperatures. And this is only reasonable, considering the facility with which some carbonaceous compounds are decompesed; the charcoal being combined by Nature into carbonic oxide and carburetted hydrogen, which rush to the surface of tagnant water when the bottom is disturbed. Let any one push a stake into the mud of a wet ditch, and see what a vast quantity of air-bubbles rises inmedately to the surface. Those bubbles are composed almost entirely of compounds of oxygen or hydrogen, obtained by the decomposition of matter, consisting in part of charcoal, and formed among the decaying matter in the mud

The opinion of Liebig," says Mr. Rigg, "that the charcoal employed by Lucas (in growing platis) underwent no change, is based upon the indestructibility of this body when prepared from heart-wood of large timbers, which, after having been kept for centuries excluded from the access of the atmosphere has been found perfectly sound. But it is not so with charcoal made in the ordinary way, from the less valuable parts of timber when kept moist and exposed to the atmosphere. Charcoal of this description under goes decomposition, and carbonic acid is given off.
"Lucas would lead us to infer that this was the case with those experiments whicli succeeded best; for he says, "In order to ascertain the effects of differen kinds of cbarcoal, experiments were also made upon that obtained from the hard woods and peat, and also upon animal charcoul, although I foresaw the probability that none of them would answer so well as that of Pinewood, both on account of its porosity and the ease with which it is decomposed

The following experiment by Mr. Rigg favours the conclusion drawn by Lucas, and disproves the proposition of Liehig

Fifty grains of charcoal, made from Elm branches nearly an inch in diameter was put into a twelve cubic inch bottle whose long neck was graduated into \(\frac{1}{100}\) of a cubic inch. To this charcoal was added 400 grains of distilled water: the bottle was tightly corked, sealed, and placed in a greenhouse on May 26 th . It remained in this sitnation, at a temperature varying from \(60^{\circ}\) to \(90^{\circ}\), until the 6th of July, when the cork was drawn, and \(1 \cdot 1\) cubic inch of carbonic acid was removed over mercury by caustic potassa.
'The botlle remained open for ten days, when it was corked down and placed in a similar situation, where it stood for 28 days, during which 58 of a cubic inch of carbonic acid had been formed.

The bottle was again corked, and kept where the temperature yaried from \(36^{\circ}\) to \(60^{\circ}\). On drawing the cork a portion of air made its escape, and there was 64 of a cubic inch of carbonic acid removed by liquor potassex.

From these we may conclude, that the charcoal employed by Lucas underwent decomposition, and furnished to the atmosphere carbonic acid; and hence the plants in these experiments might always be in a situation for exercising their influence upon this gas, and for being influenced by it."

Fortunately it matters little in practice whether charcoal acts beneficially on plants by forming gaseous compounds from its own substance, or by seizing them from the atmosphere, locking them in its pores, and then releasing them as plants require them for their food. That it does feed plants, and most abundantly, seems proved by evidence that cannot now be controverted.
Why then should not kilns be erected for converting into charcoal all the rubbish of gardens and all the thousands of loads of \(\tan\) and sawdust now annually wasted, and thus another agent of fertility be added to the stock with which both gardeners and farmers have to work? But this opens a more extensive question which we cannot at present discuss.

Thoses who have pits heated by hot-water gutters will find, as we have already stated, that dampuess will be a formidable enemy in winter. When \(a b\) are the gutters, and \(c d\) the surface of materials placed above them, the air will have no considerable motion, water will lodge on the foliage, and death will result with all soft and tender plants.
But Mr. Donald, the superintendent of the hot-
* Eyperimentel Researches, Chemical and Agricultaral ; show ing Carbon to be a Compound Body made by Plants
posed by Putrefaction, 8vo, Smith, Elder, and Co,
house department in the Garden of the Horticultural

Society, has ascertained that the moment the line \(c d\) is made to slope, as in the next cut, the difficulty is
overcome. By laying bare, or nearly so, the gutter \(a\), which is the flow-guttcr, and raising the covering materials gradually to \(d\), a motion of the colder air takes place from \(d\) to \(c\), while at \(c\), the hotter air rises up to the sashes, follows them, and when cooled falls again to \(d\), and this kind of circulation going on incessantly, all damping off is effectually prevented.

We have no doubt that this piece of information will prove useful to many persons, even although they may not have pits heated with hot-water gutters; for the principle has a far more general application.

\section*{"ONE-SHIFT SYSTEM" zersus CENTRADENIA}

ROSEA.
cited as an instanber Centradenia rosea is erroneously system. As the plant in question was under the writer's care during its early growth, he is well aware that the individual who quoted it could have had no interest in mentioning it as evidence in favour of the system; at the principles of that mode of cultivation. What that system produces is not necessarily a larger plant, but a system produces is not necessarily a larger plant, but a
more perfect and uniform growith within a shorter period. The perfect and uniform growth within a shorter period. of its superior growth, than is any single element of the of its superior growth, than is any single element of the
soils to which it has been subjected as the principal cause of its vigour.
Centradenia rosea is a most remarkable instance of structure being so fully subservient to the purpose of the structure being so faly subservient to the purpose of the
cultivator as almost to dispense with the ordinary rules cultivator as almost to dispense with the ordinary sules
which are followed in securing superior growth. In proof which are followed in securing superior growth. In proot
of the distinction betwen this plant and others of comparatively easy culture, let us advert to Hlovea Celsi and Oxylobium retusum, amongst many others, in the green-house-plants which, when planted in sugh materials as Nature has adapted them for, are not of difficult manage-
ment; yet who has produced fine specimens of them ment; yet who has produced fine sperimenis of them
without recourse to the rules of accumulated growth? In without recourse to the rales of accumulated growta? In
the stove we have Ardisia hymenandra, Justicia coecinea, and Cerbera fruticosa, in the style of which none are of greater interest; but where are they found grown in due
and uniform proportions? They defy all ordinary modes of cultivation, and yet are proverbial for casy management, and for being capable of assimilating nutritive matter in a gross form. Among the commoner forms of regetation, we have the genera Lotelia and Verbena-the
former never seen in the state to which it is possible to former never seen in the state to which it is possible to
bring it without recourse being had to artificial rules in bring it without recourse being had to artificial rules in
its arify stages of growth; the latter, on account of its pliant and naturally slender growth, capable of being brought into almost every form that nature or art can derise.
The foregoing instances are given in illustration of a structure which is unfavourable to that medium development of parts which is considered essential to fertility, and the attainment of which involves an application of the following principle :
Nature has given plants the power (under favourable circumstances) of producing from the bosom of each Leaf, a branch which is capable of being rendered subser-
vient to the formation of bloom ; therefore it follows, vient to the formation of bloom; therefore it follows, that the proportion of bloom will, as a general rule, be in pro-
portion to the multiplication of such branches, subject to portion to the multiplication of such branches, subject to the condition of their being produced within a given pe-
riod prior to the season of bloom, and being duly exposed riod prior to the season of bloom, and being duly exposed to the agencies which are essential to maturity of growth. Amongst the occasional instances where a naturallyuniform growth forms an exception to the foregoing gularly elegant in its habit, it appears adapted to all the modifications of a medium temperature, thriving in a comparatively close frame or greenbouse in summer, and in the coolest part of the stove in winter, --preserving its beauty throughout the year ; maintaining its compant and gracefully-expanding growth and deep purplish foliage in summer-covered with innumerable pink blossoms in procesa spring; requiring no artificial support, no mandgement above that of exposure to light, no special adapiafion of soils and never subject to the fuctuating coddition of those plants in which a slow or rapid circnlation of a rap requires immetiate attention if immediate Id \({ }^{2} 5\) it to be avotded ; this plant is, in fact, a striking adaptation of one of the mass interesting forms of vegets tion to the linaited conveniencts of art. The perfection of hature is seat in all 1 dt proportions, The perfection plants, ittispan of thete \$ast suited to give evidence in your of any yystem of chetivation.
Thoos who hive sapposed that practice founded upon facts may bo reminded that truth-though "hewn like
the roangled body of Osiris into a thousand pieces, and satcered to the four winds-sual be gathered amb to immortal feature of loveliness and perfection." - W. Wood, Pine-apple-place

\section*{EXPERIMENTS WITH MANURES}

The following details of experiments with various manures, although on a small scale, may assist the readers of the Chronicle in forming an opinion of their relative strengtl. They were conducted under equal circum ground on which the experiments were tried is a deep and light sandy loam, of no adhesiveness, and has carried two or three crops a year for probably half a century.
\[
\begin{aligned}
& \text { ONIONs. } \\
& 1,6 \mathrm{oz} \text { charce }
\end{aligned}
\]

N.B.-The last experiments overpowered the Onions as they came up, and the ground was transplanted over from other parts of the bed; nevertheless, they advanced beyond all competitors, although the transplanting would
The next experiment was with Parsnips, and on ground 5 before, in precisely equal condition. It was as follows:-
\begin{tabular}{|c|}
\hline \multirow{8}{*}{\begin{tabular}{l}
1 Bone-sawings \\
2 Nitrate \\

34
N.B.-With regard to the proportions employed, they were not, as in the preceding experiments, weighed, but sprinkled in the drills according to their presumed power. This experiment took place under a pressure of business, It is, of course, by no means conclusive; but may serve, in conjunction with other trials, to assist in forming an astimate of the relative strength to assist in forming an kitchen-garden, however, whicla has carried two or three crops a year for the last half century, and received- amnual manurings, is by no means the fittest situation to try the effects of these things-full of humus, and effete in point ofrects of these things--full of humus, and effete in point different from that on "maiden" or rest soils. There are, however, some crops which are termed "gross are, however, some crops which are termed "gross
feeders," which, it would seem, are entirely independent of rest land or leys: such is the Mangel Wurzel, and such also the Drumlead Cabbage, with many others, of which the Mangel may be reckoned the clief. This root, as I have proved, providing it has a deep and free soil, may be produced on the same spot of ground for many years by annual manuring
Now for growers of green crops it appears to me that composts might be made which would enable them to draw much less on the muck-yard, which in Agricultural
matters is frequently wanted for the mowing \& matters is frequently wanted for the mowing, \&c. To
form such a compost, the bottom of old wood.piles, the fubbings or chippings of hedges burnt or smothered into ashes, saw-dust, cloacine which has some time been blended with saw-dust or other matter, and an old heap
of manure in the state of humus, if well turned and mixed, of manure in the state of humus, if well turned and mixed, and in the last turning some guano or other good and highly-concentrated manure added, would form an economical and highly efficient compost to put in the drills, for green crops in general ; it could scarcely be applied wrong.
The grand desideratum wonld be to lave it all highly deThe grand desideratum wonld be to luve it all highly decomposed and well blended.
To return to guano and other concentrated manures: the best way to obtain a conclusive proof of their powers, would, in my opinion, be to try them on soils of three
distinct kinds: vizo, clays, sandy loams, and peat s distinct kinds : viz., clays, sandy-loams, and peats ; the two first would require four distinct experiments at least, viz., hand-tilled clays destitute of organic matter, and old rest clays, with a good thick sward, and the same with regard to sandy loams. In these it would be seen whether those powerful agents could in any way dispense with the necessity of fallows and rest.
I have been using guano in water rather extensively after the rate of about half an ounce to a gallon, blended with dung-water, for some months, and I have an idea that it will be a most useful adjunct in gardening, more especially with the new and improved system of potting, so ably and cleverly explained by Mr. Wood in your columns, which are, in my opinion, (without pledging myself to all in any card, some the things that ever appeared (as might lave been expected, clors up the interstices of the soil ; therefore, if used regulariy, the plants should have their soil prepared accordingly. I have a house of Camellias and Chrysanthemums, now in fuil bloom, with Which I might challenge many establishments. These Erringlon, Oulton Park.

CHINESE CHRYSANTHEMUMS
There are few plants in cultivation more worthy of
attention than the beautiful varieties of Chrysanchemum. they adorn our greenhouses and conservatories at this time of the year, when everything else indicates their season of rest. Yet it seems strange that such plants should be neglected. In many gentlemen's gardens they are shaded or exposed, if out of sight, and are left without any sort of care; so that in autum, wher should display their beauty they must be plued a fin of other playts where cometimes even serve for nothing be seeo, and the flowers. Still peopie who treat them thus expect good plants, and wonder by what means others have succeeded so much better. If we do not sow we cannot reap-if me cultivate ill we cannot expect fine flowers. Were gardeners cess, and be recompensed for their trouble :
Alter the plants have flowered, cut them down to about three inches above the soil, and place them in a cold pit, three inches above the soil, and place them in a colding.
where they can be protected from frost till spring. During this dormant state no water is required, but as much air in fine weather as possible. In the beginning of April select cuttings, not from the strong shoots that pring from the ground, but those produced on what mains of the old stem ; the latter are always preferabie, When they When they are prepared pot them in ight sanay soil, each cutting in a 60 -sized pot, and plunge them in a sligh rooted and ready to repol into 32 s . At first give them rooted and ready to repot into 32 s . At first give them
light rich soil for the roots to run in, and place them in sheltered situation, where they will be exposed to the sub. When they are established cut them down to within two or three inches of the soil; this will cause them to pro-
duce numerous lateral shoots and to become low bushy duce numerous lateral shoots and to become low bushy plants, which will save a great deal of labour in stopping them during summer. When they have recovered thid rheck, repot them into 8 -sized pots, where they are to remain fully exposed to the sun for the remainder of the season. The soil best adapted for the last shift is a com post consisting of loam, sandy peat, and rotten dung, in equal proportions and quite rough, and if a few pieces potsherds are mixed through the whole mass so much tho better. During the whole season of growth, watering should be attended to with great care; in fact, where the plants are thus fally exposed to the sun, too much water in dry weather can scarcely be given them.
There are some people, who, for the sake of a few good hlooms, only allow one or two flowers to remain on each syst but where a profusion of fowers is wanted, is system, which sacrin.
inadmissible.-J. \(D\).

\section*{AMATEUR'S GARDEN - No}

From the number of letters which \(I\) have receired both from gentlemen and gardeners relative to the digging of Slurubbery-borders, and from the diversity of opinion Which seems to exist regarding this, I feel disposed to
resume the subject again this week. I will now show that as a matter of taste shain this week. I will now show bo dug ; neither ought shrubs to be intermixed with Herba= ceous pianis.
In planting a shrubbery, the object is either to form shady walks among fine trees, to hide unsightly views, or to form screens or shelter against strong winds. Suppose the principal object to be a love of trees, and a desire to possess large and perfect specimens: then it must be wrong to permit them to become so crowded as to destroy each other's form; and it is contrary to nature to dig the ground among them-because in Nature we never is, of ought to be avowedly a work of art, we are not so arth ficial in our ideas as to wish to give every tree in it the appearance of having been placed there by art, as they must have if surrounded by dug ground; but, on the con* refined e wish to make them specimens of Nature to smooth walks, we surround by smooth velvetty turf, which forms a kind of connecting link between tree and tree, and collects them into groups, which, though it may not be exactly the kind of scenery a landscape-painter would make choice of fur his pencil, is nevertheless scene that would not be objected to. Now, althougl theso remarks are offered on the supposition that a love of trees is the great exciting cause of their being planted, they are also equally applicable to the management of screeps shelters, or beltz, because by attention at the proper time, it is quite as easy to form a slumb into a fine specimen, \({ }^{\text {a }}\) it is to allow it to become an unsightly object.
The greatest objection that can be urged against dag gronnd, apart from its injurious tendency upon plants, is proper ening of that repose or quiet, so necessary for the are objectionable because they harno paintings of all the the any inesent with would My bestroy he bany or the composition
erfetly perfectly formed, and as large as the maintaining of proper collection whl allow hem to become, without bein Rhododendron, if properly planted and managed, will
Red form orm a bush or from eight to ten feet high, and the same in diameter, in a period of from six to ten years ;-but Where do we meet with such plants?-not in crowded and dug shrubberies, but where the great elements of vegeta-
ble existence-light, heat, air, and water, can play their
proper parts, which is a clear proof that both crowding and digging are injurious.-W. \(P\). Ayres, Brooklands.

\section*{HOME CORRESPONDENCE.}
** We trust to be able next week to clear off all arrears of
Correspondence. Tn the meanwhile we must continue to trespass upon the patience of some of our friends.
raised by Messrs. Barnes, Murray, and Snenceres lately raised by Messrs. Barnes, Murray, and Spencer, and the occasioned a sensation amongst Pine-growers, which is far from being agreeable to those who seldom or never ripen off fruit above two-thirds of the size of those spoken of. In what I am about to say, I beg to state that I have not the slightest intention to detract at all from the
merits of the respectable individuals alluded to, who \(I\) dare say are deserving the praise bestowed on them. But When we hear of some employers after reading the remarks in the Gardeners' Chronicle, expressing them-
selves dissatisfied with their gardeners who were previously thought to be completely masters of their profession,
it behoves some one to say \(~ a ~ w o r d ~ o r ~ t w o ~ i n ~ d e f e n c e ~ o f ~ t h e ~\) old, and by far the most general, system of growing Pines the moderate size; and having for a number of years had the management of Pines on a pretty extensive scale, I
may, perhaps, be allowed to do so. In the first place, I contend that the production of a large Pine is, without other more direct evidence, no proof of a gardener's skill. A friend of mine in the north of England, who had grown Pines for many years with varied success, at length, some nine or
ten years ago, produced a Providence Pine of the great weaght of produced a Providence Pine of he 11 lbs . and upwards (avoirdupois), inch a fruit, as might be expected, caused no small inquiry in the locality, and probably might be inferved as a proof
of superior skill ; while he, with a magnanimity which did of superior skill; while he, with a magnanimity which did
him credit, acknowledged himself an inferior Pinegrower to three-fourths of those who never cut a fruit much above one-half of the weight. Such an assertion
may appear singular, but is not the less true, and to those not acquainted with Pine-growing I may observe, that, whenever the plants are induced to continue their growth beyond a given period, and thus attain a large size was the case just alluded to: several of his Pines did not fruit the season he expected, or rather wanted them, and the result was, that large fruit was produced-more in spite above example it is obvious that much time and space were sacrificed, whicis, if more economically applied, might have probably produced double the weight of good useful fruit on large one. There were several more large old plants many of which did not mature fruit above three or four pounds weight, und which had remained twice as long in exclusion of a more profitable set of plants. I do not insinuate that the case of MIr. Barnes's Pines is similar, yet if his heavy Pines are produced at a sacrifice of time and space-the two criterions by which I judge of a gar-
dener's merit in Pine-growing-I must object to his system. Few will deny bat three fruits of three pounds each are much better than one of five or six; and if his plants are very large, and not of quick gronth, they may probably occupy double the time and also double the
space of others which may arrive at half this weight. If such be the case, it is obvious, where particular reasons do not call for large fruit, that the smaller are more profitable by a hundred per cent., and ferhaps more. given extent of beds and in the same space of time as good gardener of the old school can produce under the old Way of management, or even if he be able to produce the Eame weight of fruit collectively, then, and only then, will the first to adopt it. Such are my opinions of skilful practical gardeners, who do not grow themexclusiets or nearly so, for shonixg. I shou, therefure suggest that exactly the collective weight of fruit the duthor has cat within a given period of not less than three years, below a given space of glass, or rather the supertactal area of his
beds, including nursing and succession pits as well as the fruiting-louse. IIe olight also to be able to prove that no importat:on of plants bas taken fhace to any extent, and also that the phants remaining at the ternination of the ment of it; and he also puoht to give some isea of the expense of the materials made use of, as the costliness of any plan is a great duwback in the very many places a here economy is the ruling ouder of the day. If the witer, the rethen will his system receive from a discerning public that support which its merits deserve, and be adopted in every place except the few (and I maintain there is but few) in which bigotry and prejudice put an effectual stop places in which the limited ass.stance and scanty means within the reach of the gardener put it entirely out of his power to compete with his more fortunate neighbour ; with him it is required to make the most of the little he has at command, and if his Pines only reach the weight of two or three lbs. they may perhaps have the recom50 mendation of not costing his employer so much per lb. by five and six lbsent., and the 60 of his neighbours weighing odious character of he ought to be exempted frum the out of his power to alter it. I hope it will not be under-
stood that I mean to uphold an old against a new system ; on the contrary, I wish to set both on an equal footing, and would like to hear the opinions of other practical men on the subject. I think there can be no pairer \(\begin{aligned} & \text { of their respective merits than to proportion their respect- }\end{aligned}\) ive weights collectively relative area of glass or beds that each occupy, and also the time necessary to
Gardener, \(S\). \(V\).

Pine-apples.-Mr. R. H. Pope cannot possibly have read the leading article in the Chronicle, p. 837, on my system of Pine-growing. If he had, it would at least bave Every rapidly in the autumn months than during the scorching heatrof summer; and Dr, Lindley observes, "The Pine grows in the cool season." This fact is so well and universally understood amongst cultivators, that it scarcely Mr. R. H. Pope has advanced on this subject. I apprehend, however, that the Montserrat will prove to be the Black Jamaica, as I found in the North of England the it mer name generally substituted detract from the merits of Mr. Hamilton's productions.-R. Glendinning.

Tortoise, to keep in Frinter--Seeing in your last Number a question by "A Clergyman" as to the best
way of disposing of a tortoise during winter, I beg to inform him that in every instance within my knowledge of tortoises being allowed to bury themselves either in the open ground or a heap of sand in a greenhouse, the poor animals have fallen a prey to parasitical animals; whereas
they have lived many years in perfect health when enthey have lived many years in perfect health when en-
veloped in a mass of dry hay, and then sewed up in matting or an old piece of carpetting, or, what is better still, put in a hamper of dry lay in a dry place: If laid on its side, this admits
pleasure.-K. \(W . W\).
Kennedya splendens.-In your Paper of last week you state there is no such plant as "Kennedya splendens." Lad a remarkably fine specimen a short time back under hat name, received from one of the first London nursery-
men. It is unfortunately dead. I inclose some of the dried leaves.-E. R., Dec. 8. [We can only repeat that this name is unknown to Botanists. The leaves appear
to belong to Zichya inophylla.]

Van Mons Leon Le Clerc Pear.-This is the most Peice of any 1 have ever tasted. It is superior to most the trees different aspects will prolong its duration with out destroying its flavour.-J. Lecouteur, Jersey.

Guano versus Bones.- In reference to a leading artide in a late Number [we do not know what is alluced to by our correspondent as regards Guano, it should be
borne in mind that every ounce which comes to this country is paid for in manufactured goods, and not in gold; in Peru gold and silver are indigenous, (if I may be allowed the expression, and consequently are no required in payment ; but I suspect this is not the case with Bones from the Continent, which are, I fear, paid for in gold. I consider the above facts are of great importance, when our popula
IIalifux, December
Prof. Brande's Lectures. - In common with many other Members of the Royal Agricuitural Society of England, 1 hare recently had the pleasure of listening to Professor Brance's Lectures on Limes and Clays, and 1 bear my plislied the task be so kindly undertook. I was especially pleased to observe the profound attention with which the chen.ical truths announced were received by the audience, and the deen interest they seemed to take in the various scientific statements made by the learned Professor. There was, bowever, one point in the Iccture on clays which 1 think may perhaps mislead, if not expluned-1 and the voltaic battery which had for its object the proving Whether or no a clay contains alkuli, i.e., potassa or soda. This mode, though singularly elegant, and furnishing to and facile mode of arriving at a result, yet is it not su andisfactory, as regards correctness, ns could be desired We all witnessed the reddening effect of rotassa and lime upon yellow turmeric paper; we also saw the same effect upon yellow turmeric paper; we also saw the same effect produced by subjecting a specimen of clay to the voltaic
influence. In the later case it was ascribed to the preinfuence. In the latter case it was ascribed to the presence or potassa or soda in the clas-a sort oded, talken to prevent delusive inferences; for instance, the clay was thoroughly exhausted by the action of water, which, by dissolvg the soluble saline substances, sucta as source of fallacy. But supposing-which is very often the casefhat the clay contained traces of lime, as carbonate or sulicate, then the water would not remove them; and though the clay under examination might not contain an though the clas under examinatiould the reddening effect upon the test-paper be produced. I do not suppose that upon the test-paper be produced. I do not suppose that
the Agriculturist, in experimenting upon his soil, will often employ an extensive galvanic battery as a test for alkali ; get is it desirable that Chemists should be very accurate in yet is assertions and experimental deductions, for many eyes, intelligent and watchful, are upon their movements; end thought they may be forgiven many agricultural misthkes, yet an error committed in their onn particular department will not so soon be forgoten. This observation when Agriculturists are beginning to feel some degree of when Agriculturists are beginning to feel some degree ot

Dahlias.-The Dahlias enumerated by "A Subscriber" are some of the most uncertain bloomers in cultivation; and if he succeeded with them in the year 1842, the chances were that he failed in the following season. Sussex Rival I should not advise him to retain in alimited collection : it is seldom good, and is too small. Fanny Keynes never was, even at the best, more than a secondrate flower; it is of a common colour, and totally destitute of style or character. Ruby was a good flower in its time, but is quite gone by; it is too much quilled for the present day ; besides, it is thin and wanting in colour. Egyptian King is a good flower when in perfection, but is very uncertain. Scarlet Defiance never was good, although it sometimes promises well early in the season; later, it becomes quilled, flat, and deeply-serrated on the edge of the petal. I noticed, during the year 1842, that every Dablia, of which the colour had any tendency to searlet, was deeply notched-indeed to so great an extent, as to give the petal the appearance of a saw; the indentures were, in some mstances, more than a quarter of an inch deep. This did not happen to Dahlias of any other colour than red or ecarlet; nor did it again occur during the season just past, even in the flowers in which it was most conspicuous during that preceding. I apprehend that any solution of this unusual, and to me inexplicable circumstance, is impossible ; but it is clear that the colour of the flower, or whatever gives rise to it, made it susceptible of some influeace from which flowers possessing other colours were exempt. Essex Rival is a very uncertain bloomer: it is never really full, and often single or semi-double. Hylas is a flower of good colour, and is from and clean in petal; I have often regretted that it should be no better than it is, for, notwithstanding its
defects, it possesses style. Metella was a good Dablia, and is even now sometimes seen in good character; but I have seldom known it to be so bad as during the present year: the petal is, however, gcnerally very ciumpled. have seen conductor cccasionaly very beaunul, but wards the centre, and too uncertain a bloomer for a small collection. I have not grown the Bishop of Salisbury. The Jast Dallia season was altogether the best in my recollection; but no doubt, in consequence of the very dry weather that occurred during the blooming time, in a sandy soil many would fail that might have done well especially the case soil in a wet season. such circumstances, be thinner in petals than usual, and soon sfiow the disc ; miilst very double flowers would, from the sane cause, more rapidly expand, and lose their scaly centres. Having now made free with the characters of "A a dozen of which I think he will report favourably-some of them lie no doubt possesses, viz, Turvill's Essex Sale, Edwards's Mrs. J. Richardson, Thompson's Vivid Widnall's Queen, Jackson's Lady Cooper, Hudson's Princess Royal, Brags's Antagonist, Dodd's Prince of Wales, Mitchell's Mrs . Kelly, Keyues' Standard of Per fection. Essex Triumph is the flower that was so successfully exhibited at the meetings of the Floricultural Society of London. It is far from bemg faultess, but is constant, and one of the most desirable Dablas grown ; it is very glooular, and always perfect in the centre; its defects are too great a length of petal, and want of substance in the the bloom is in perfection : another fanit is, that notwith standing its fre dark colour there is a silvery white lup over the face of the petal, that gives the flower a dull appearance Adm. Stopford this searwas the only rival that could successfully compete with Essex Triumph, and the not, I imaine, generally be the case, for it is not constant and in the pelal is broad and bold, and the colour, though vari able, is very good and glossy. Sir R. Sale is another flower appred by the Fluricultural Society, and nas prosed to be one of the best of the season. Mrs, J Richardson, a white and parple, was also submitted to the same test, and justified the opinion given of it ; it is a very useful foner and one of the best of its class. Vivid though not by any means a first-rate flower, is an acqui Queen is too well known to require comment, it is generQlly clase but is certainly nearer rose-colour than anser Dahlia at present in cultivation. Lady Cooper and Princess Royal are rery beautiful when well grown and scaly in the centre Anta, white isist, ho ghe centre is the White is vely pure and the petal good, edly on we the beot in very one of the catre apt to be sunk ; but the latter fault does not interfere with the globular form and general outline, and therefore does not detract much from its value. Mrs. Shelley was much eshibited lust season, and was, withe, the finest flower in the garden; every bloom came perfect, save a little disposition to quill in the centre, Whick, increasing towards the end of the season, made the back of the petars is decidedan that it and although not a large filower was the most successful seedlıng exhibited in the present. year, and was the only Dahlia of 1842 that was placed in the first class by the Foricultural Society. \(-T . C\). W,
Picolees - In some Picoteet the stigma appears before the flower expands. Morria Mary, red Picotee, and
Martin's. Victoria, yellow Pico'ee, are examples. The
pollen will adhere to the part protruded, and I have sometimes seen the flowers so treated fade away without ever
opening, but no seed was rroluced; and whether they faded from fertulisation, or owing to the state of the weather at the time, may be doubted.-O., Leeds.
Digging Shrubberies.-I had hoped no one in the present day would have had the hardihood to support the so
justly called absurdity of digging Shrubberies to benefit justly called absurdity of digging Shrubberies to benefit
the plants, as a writer, under the signature of " Knave of the plants, as a writer, under the signature of "Knave of
Spades," has done in p. 843 of a late Chronicle. Although hardly worth while to answer the untenable arguments he has brought forward to aid his cause, it shall suffice to say that all practical men have long condemned the practice of digging round any tree, shrub, or herbaceous plant,
if the trees, \&c. ront near the surface, and if you wish if the trees, \&c. root near the surface, and if you wish
them to thrive. The fact of market-gardeners cropping them to thrive. The fact of market-gardeners cropping
within a foot of their fruit-trees says nothing in within a foot of their fruit-trees says nothing in
favour of the practice, as it is well known an opposite favour of the practice, as it is well known an opposite me of parties mowing over their Strawberry-beds in the autumn, and then digging between them, a practice justly condemned in this Paper lately. Herbaceous plants and annuals are never grown in perfection amongst chrabs, and are much better in detached groups by
themselves; the appearance of shrubs where the turf reaches under their branches is much more natural, (Gardenesque, as Loudon would call it,) than where there is a dug border three or four feet wide in front of them, filled with half-starved perennials and annuals; and from the lack of knowledge the said "Knave of Spades" displays when speaking of the time it takes to lay turf, the expenses thereof, and the annual renewing of the same I would much advise him to see a little operation in that nquiries about the degain. And as the "Knave," in his retrograding instead of "going a-head," I would say (as a celebrated doctor used to tell his patients,) buy Dr. Lindley's "Theory of Horticulture," and read it.-Obiler Dictum.
Vegetable Vagaries.-Under this head you have already published in the Gardeners' Chronicle some curious in stances of the wonderful freaks of Nature in transforming the flowers of one plant so as to resemble those of another, and I now present you with a sketch of a different kind of

metamorphosis which I conceive to be no less singular than many of the oddities previously recorded. It is panying sketch will give you some ider:-wherempanying sketch will give you some idea:-Where the pseudo-bulb that was made last . year after the plant formed two other bulbs, very much smaller than the and formed two other bulbs, very much smaller than the old and but similar in character, with leaves on the crown and at the base of each, and at last terminated by throwing out a flower-stem from between the two leaves on the crown of the latest-formed pseudo-bulb, at the same time as the scape hegan to show itself at the base of the original one. The flowers on hoth are now in perfection, and have rather a singular appearance. Were the lower scape removed, it would almost puzzle one acquainted
with the mode in which this plant usually flowers, to say With the mode in which this plant usually flowers, to say epidendroides, still the jointed sort are those of Aspasia epidendroides, still the jointed sort of stem with the terminal scape give it a totally different character,- such as would nearly induce us to look upon it as being a distinct species, or at all events a very different plant from what Aspasia epidendroides is described to be,-W. D3. Booth.
The Ash.Tree.- In the grounds here is an The Ash-Tree.-In the grounds here is an old timber Ash, which for many years has had one bough of a totally different character to the rest of the tree, or of any other Ash-trees which I have seen; being short-jointed and densely covered with foliage when in leaf. A few years beck 1 directed my father's gardener to graft some of its young shoots upon some young plants in a plantation. The grafts took well, and I now have two of them in a very flourishing condition, strictly corresponding in growth and foliage with the parent bough. This year I grafted some nore young Ashes, which have taken well. 1 grafted
may venture to name it, on account of ita exclusive
character, "Fraxinas Nectonensis." I trust it will prove -W. Mason, Necton, Norfoll. EWe shall be much obliged by a plant of this, sent to 21, Regent-street.]
Winter Gardening.-I beg to differ from Mr. Eeato in regard to his remarks on the appearance of fower-beds in winter. I think a well-planned and neatly kept flowergarden will always look well, even though the beds should be empty, since in a well-arranged combination of forms there will ever be something to attract and amuse the eye, though the pleasing variety of colour be wanting. I do not think that flower-beds filled with "fictitious" dwarf shrubs will have a happy effect. I practise a different plan, and one which perhaps many would admire quite as much as though the beds were filled with the little boughs ever so neatly trimmed. I generally allow the summer crops to remain in the beds as late, consistently with removed the beds are dug over, permit; when these are I then refill the centre of them with Poppy Anemones planted so as to keep the different colours distinct and well contrasted, and surround them with belts or edgings of Crocuses, Snowdrops, Jonquils, Arabis verna and albida, Hepaticas, Squills, Aristea pusilla [?] \&c. The Anemones will bloom through the whole of the dreary wintev months, and exhibit almost as gay a variety of colour as asked if I had brethren ; in fact, I have been frequently have found it, until after close jnspection, sometimes ficult to convince some persons to the contrary. No on can form an idea of the beauty of these charming little flowers, who has not seen them under proper cultivation They are more particularly desirable for enlivening the cold and gloomy winter, but they will also continuebion ing until April, and even when the flowers are cut from them they still keep throwing up fresh fower-stems usually take up the tubers in April, dry them and put them away in paper bage. In September, I plant them out in store-beds and afterwards than to the flower-garden when required.- J. L. Snow.
Glasgow Botanical Society.-This Society, which ginated in the impulse given to the study of Botany in Glasgow, by the appointment of Dr. John Hutton Bal four to the Botanical chair in the University, and has its November meeting, to form a junction with the Glas gow Philosophical Society-an old and prosperous institution, of which it now forms the Botanical section, with tution, of which it now forms the Botanical section, with
its own office-bearers and regulations as before. The proposal for union came from the Philosophical Society, nd was acceded to on account of the desirableness of concentrating the interest of the friends of science in on ociety.-Anonymous.
oniensis, the writer who -In a late notice of Fuchsia Ex annot the writer who condemns the habit of the plant by eod indses to beod specimen of it, for it is allowed braceful hages to be as remarkable or its vigorous and ness and superior eize of ficuous for the brimant iveli ness and superior size of its flowers. I may perhaps be tion thi but I lant I ;ebure I acquaiated with this noble plant, I venture say that candour and justice demand it.-A Subscriber, Exeter. [The flowers of this Fuchsia apprehend it is good under good management.]

Heating by Brick Flues.-I beg to state that the alterations suggested by \(\mathcal{J} . L_{1,}\), at p.772, respecting Brick Flues, are much opposed to my ideas on this subject. At that part of the house where the flue enters, the bility of keeping up an equable temperature oll practicability of keeping up an equable temperature all over the house. . L. recommends the fiue to be "enlarged as it recedes from the fire." Butif this plan was adopted, it would diminish still farther the already reduced temperature, on account of the expansion which the air would suffer in travelling from the fire. "J. L.," no doubt, knows that as air becomes expanded, its capacity for heat is increased, and consequently less heat will be evolved from it to the surrounding brickwork. This makes me doubt the utility of "J. L.'s" plan.-C.
Jointing Earthenware Pipes.-With reference to the material employed in jointing the earthenware pipes alluded to by me at page 693, and also by "W. B. H." and "J. M." at pp. 736 and 842 ; it consists entirely of good cement, which, with the whole apparatus, continues to afford great satisfaction. Several other gentlemen in this neighbourhood are fitting up pits after this method, and in the event of complete success attending the plan you may probably hear from me again respecting it.-W Hunt, Warrington.
Wasps.-In answer to J. Wighton's inquiry respecting the Wasps' nest in the Red-Currant bush, I beg to state that it was of the ordinary colour and testure of Wasps? nests, viz., a greyish-white paper-like substance. There is only one small hole at the bottom at which they enter; the Wasps left it about the end of September, they were the smaller size of the common Wasp.- \(A\) Paddy.
Wasps.-There is now (Dec. 4) in a shrubbery belonging Cork W. Aldworth, Esq.," Newmarket-house, county busy, a Wasps nest. The Wasps are as active and as of Julysing to and fro, as they would be in the month last three weeks, and have been no change in their activity. The nest is on level ground, under trees, and apparently in the rotten stump of a tree \(-A . K\).
Potter's Guano.-I assert without hesitation, that there were no crops in this neighbourhood equal to those there kitchen-garden ; and the effects ppon the those in my borders were perfectly astonishing. Although the season
was unfavourable, scarcely any of my annuals fatled, an the number of plants was quite double what could reasonabiy have been calculated upon. This was owing to the ure , Guano, which 1 received last Nov. (1812) Jo them was making up my Pansy-beds. I used it upol all much although my flowers were late, they were nearl in full bloom than 1 ever had them before, and remison Sunderland.

PROCEEDINGS OF SOCIETIES.
ROYAL AGRICULTURAL SOCIETY OF ENGLAND. Dec 7-Earl Spencer in the chair. There was a mach larger

 phur arsd oxyphate cf lime. Sulphuric acid is composect of sul-

 or common sulphate of Jime, of anhyverous selenite, \&cc. It requires about 350 parts of water to dissolve \(1 t\); but it is very
common in the springs and rivers of thas conntiy, 11 is alnost
al always found in blue clay, ocecurring in the form ot crystaln. These
crystals are composed of 68 parts dry sulphate of lime and 18 palts crystals are composed of 68 parts dry sulphate of lime, and 18 pats
of water. Sulphate of lime has a great affinty for water. Wull
the lt exists in ereat quantites in the Paris basirs ; helsce this name.
When it ins When it is present in water, the lime may be cletected by means of the oxalate of ammonia, and the sulphuric acid by neans
barsta. Sulphate of lime under cextain crrcumstance is decom-
posed. poser, and some of the oxy gen being a
unites with hydrogen, and sulphuretred
This is said to be the case with the waters of the occan of the
coast of Africe Now it is found that many coast of Africa. Now, it is found that many plants require gule acrid properties to this princuple. The sulphar contained in plants, then, is probably ouing to the decomposition of the salsecondary, and tertiary formations, and is very abundant in the neighbourhood of Paris. The use of sulphate of lime
in Agriculture is very considerable, In the first place it decom. poses organic matter, hut whitst it does this it drues not atrract moisture from the soll. In many plants it is fonm to exist In very constderable quantities, espectally in Clover, but it docs not
exist in Wheat and Peas. Plants that contain it will not grow well unless it exists in the soil. Some naints require chioride
sodium or common salt ; Wheat requres phoshate of 1 ime Before plants can appropiste sulphate of lime it must be ren-
dered soluble. If it already exist in a soil, no good will arise dered soluble. If it already exist in a soil, no good will ansa
from addine more of it. The beneficial effect of peat-ashes ond soil depends on their containing a consuderable quapitity of sulphate of lime. It also exists in the ashes of common coal, and
the value of these ashes as a top-dressing for grasses may be thus explanned. A great question about gypsum has arisen- does \({ }^{1 t}\)
ix ammonia? Carbonate of ammonia, which is salt of ammonia, when it comes in contact with sulphate of lime in solntion, will decompose it, and the consequence will be
carbonate of carbonate of lime and a sulphate of ammona, by wh ch mend
the ammonia exists as a less volatife salt; but we must not infer the ammonia exists as a less volatife salt; but
from this that if we sprinkle dunghils or the with sulphate of lime that it will fix the ammonia that is con-
stantly escaping from these places. This action may be seen in the following diagram :

The next salt is the phosphate of lime. It is obtained chiefly from the bones of animals, but in order for it to exist there \({ }^{\text {If }}\) must have come from the Vegetable Kingdom, and vegetables salt are phosphorus, oxygen, and calcium. The phosphorus phur to form an acid, and when burned in as carbon and sul same phenomenon. (Here phorphoric acid was turmed by burning phosphorus in oxygen gas.) 42 parts of lime ard 36 of soil ghoric acid constitute 78 parts of phosphate of lime. the bones of animals. Bones consist of two parts, and earthy
part part and an anmai part. The earthy part marts be dissolsed
away from the animal by a dilute acid, and the alimal
be drit may away from the anmal by a dilute acid, and the nalimal part may
be driven from the earthy by fire. The earthy part is cumposed
almost entirely or almost entirely of phosphate of lime. Tiven in tossil hornes the animal matter remains, as Dr. Buckland proved by making soap of some Hyena's bones he had found fossilised. When bones are exposed to the air they gradually lose their animal matter.
had been found that the fossitised excrement of animals, whic geologists call coprolites, contained phosphate of lime, and these would be probably to a certain extent available for the purpose of Agriculture; but the lecturer could not go the length of Prof that might be found in this country would equal in then coproitice our beds of coal. Guanois a substance that contains phosphate \({ }^{\circ}\) lime, and it is probably that ingredient which renters it so import found in Devere. It exists, to a certain extent, in mincrals, and diso been found in Bohemia, and existed ine considerable. It had alties in Estremadura, in Spain. It is perhaps a questron as to whether it would not be worth working in Spain. As was stated in the phosphate of alumina in clay slate, and is present in exists with Liebig states that phosphate of lime is of more mportance \({ }^{11}\) Weneat crops than any other. Bone manure is a ways found hereficial for Wheat. It has been proposed to add sulphuric acid, them it is commenly called, oil of vitriol, to bones, before using
the advantage of this is that the onl of vitriol, not only decomposes the animal matier of the bones, but dissolves the phosphate of lime, and thus enables the plants to take it up more rapidly
ime in hay and Oats, and this will account for its existence in stance calied clay is composed of various matcrials, but all t.e
varieties varieties of this substance contain argil or alumina as their basis.
If potass is added to a solnton pitate falls added to a sointion of common alum, a white prectalamina which gives to clay dts plasticity and those. It is the perties which it possesses. Alumina has a great aftimy for water, and also for organic matter. It fixes, as it were, organic clay, the If a vegetal le infusion or dirty water be pashed through clay, the alumna arrc sts the impurites, and clin water passes throug
tion to

The following were stated to be the exact members of the So \(6115 \mathrm{Members}, 13\) Hon. Members: total, 6863 . a suggestion to make to the meeting, of anterest. he intumated, that those who had gone throught the varsous showyards of the Socicty must have been pleased with the mechanical
skull therein observed. The Socrety liad given great support to Agriculture in general, yet he (Mr. Cottam, was firmly consments, the Socrety would obtain great benefits. He More to Mmple- Cottam) considered that the machine-makerg were not exactly repse-
sented at the Councll. At Derby several little difirulies the subject been better Was required was, that the machine-makers be heard "at the bar"t of the Council, by some one being called upon to represent
them. He hoped lle was not asking tou much. Doctor Buckland pressed forward the necessity of mechanical science in Agriculture, but the machme-makers had never had a powerful organ to make known their plans. It was evident that more attention
shonld be paid to Mechanics; of their vaiue he regurred only to
and Eal Due (apulise) Ie (Mr Cottam, was coufisut that a lecture on Mechanics would be attended with beneficial results. Mr. Pusey then said a few words, and thanks having been voted
to the chairman, the meeting concluded.

LUTON HORTICLITURAL SOCIETY supporters to close the second year of its existence with a perform a their past proccedmgs; and in doing so they have to career of the Society has been, up to this time, one of uninterrupted prosperity. They have not to leave on record the failure of their attempts, nor the fact that their Institution has led on a
languishing existence; on the contrary, the most sanguine
wishes of its

Committee deliver up their trust in a healthful and flourishing
conciution. Since the establishment of the Society in the comconcision. Since the establishment of the Society in the com Which have attracted considerable money received for admission to these exhbitions is \(50 l .12 s, 10 d\) which, includ ng the free admissions by members' t, ckets, pre-
sents the large number of 2200 visitors. The great interest thus excited has heen owing, in part, to the Shows having been held in the gardens of gentlemen, ohen to the Society. This is a feature whey the Committee trust the 'Suciety will ald and They have much pleanure in knowing that other gentlemen, afoy set by those just alluded the shows will not speedily he exhausted. The present opportunity is embraced of thanking
F. and C. Burr, Esqus., for the use of their gardens, and R. Vse, Asq., for the use ot his warelnouse for the purposes general interests of Horticulture, and to encourage he culture of their gardens, it whl be propron state to what the exhibitions for pront that energies have been called into play tural taste fas been eltcited; as much, indeed, has been accom pliched as could reasonably be expected in the narrow comnta-
of two seasons. With regard to cottagers, the same observations may he justly made. Eaclh successive Show has engraged mor
attention on the part of labourers in handicraft and hubbandry and in some cases prizes to a considerable amount have been has recelved \(17 .\), Joseph Fletrher \(23 s\), , Joseph Hunt 17, , and
Thomas Arnold \(12 s\)., besides many smalier prizes. At first, the purposcs contemplated by the Society with regard to cottager were hitle understond by them, and even now they are but smto guve every facility for the practice of Horticulture to this
interestung class of suclety, and they voted early in the year 100 copies of "Paxton's Gardener's Calendar" for their use. That raparinting, arid will he put in circulation as early as possibie. It may thus be farrly presumed that the inton aris formation, an has silently improved the practice of gardening. One result of a collateral character has undoubtedly been ontained, that 1s, the
promotion of kndy feelings among all parties in the town and neighbourhood; who, forgetting amning the gentioleasure not soon to be forgotten; a pleasure procured without the sacrifice
of principle and followed by no regret. The Comnittee therefore feel they are justified in asking for this Institution the continued
support of its patrons; and they conclude by enforcing their appe at by the followning elegant tribute to the valne of the par
suits they are anxuns to nconrage:- "The cuitivation of fower", 1s, of all the amusements of mankind, the one to be selected and
approved as the most innment inntself, and mont jerfect. y devoid of mbury or annoyance to others; the employ ment is not only
conducive to hialth and peace of mind, but probably nure gnord
 from any other whatsoever. The pleasuren of the Hortrinfas his

 varnety, affords an

HENRY Burgess, secter competition. The competition for the premums offered oy the the countle
Agricultural Society for the curing of butter within the of Inverness, Ross, amas louken for from a contest of thas inh tire, nectations of those who tock an interest in the exhibition
Twenty-eight competiturs entered the hists. After the most careful innpection of the
st prize, 6 , to W. Sim, Esq. tacksman of Drummond, Ross-shire 3d ", \({ }^{4 l, \text {, to C. Macpherson, Cluny Castle, Inverness-shire. }}\) th \(2 l,\), to Mr. A. Macewen, tacksman of Woodlands,
The judges eonsidered the exhibition as highly creditable to the The judges considered the exhibition as highly creditable to the
disirict, and the butter to be generaliy of good quality. It may dis useful to those possessed of dairy-farms to know that the Highland Socrety, although it is not made a condition by them in awardng their premiums, recommed either in firkins containing 56 ibs . each, as affording fact packed either in inkins contaning for sale, or in earthen vessels which liave not been glazed with preprarations of lead, and of such size as may be suitable to sale. Of this recommendation the judges, at ther compe avition of earthen Jais in preference to vesselter better than the latter It would be a further improvement were these jars of such a shape, and with mouths of such a capaction of intendiac pur butter belng turned out morli to the convenience of both se.ler and buyer, be had to contain each the same quantity of butter We consider ourselves fortunate in having st in our power to give the following statements of the moccessful competitors. A tised \(1 m\) the the butter is made every second day, and during the process, which must be carried on slowly, there are about two Scotch punts of cold water put into separated from the muk, and has been carelully and thormaghy separe pretty strong brine ol salt and water, it is cured by working into it with a wooden clapper,
one ounce of the following mixture to each 16 nunces of butter: - 3 parts of the best sutter sat, 1 part made in a patent char twice-a-week; mue pints of cream at each churmng prodnce immediately after being made in syring water-then salted at the rate of 1 oz. of fine salt to the pound of butter: when packed in
the jar it is covered with a clean imen cloth and a little fine salt shaken over the cloth.-Inerness Courer

MISCELLANEOLS
Black Indigo.-We can confirm the statements that have ben made in the daily papers concerning the discovery in India of a natural black dye. Samples have
rrived in this country, and prove to be very similar to Indigo in all respects, except that the colour is intensely black. According to the Morning Post, the discovery has been made by a Scotch traveller in the Sband country, an independent state adjoining the Burmese Empire. This entleman is stated to have observed the natives dyeing cloth of a most beautiful black colour, and upon inquiring where they got it from, was shown a plant and the process of making the liquid. Upon applying to it the process of Indigo-making-steeping, fermenting, and allowing the fecula to settle-he drained it, and dried it into cakes and alls. On his return to Calcutta he presented the ApriHorticultural Society of Calcutta with one of his cakes her it was pronounced a most valuable production-an original and genuine "black vegetable dye."
Dahlia coccinea. -We learn from the French papers that M. Pépin has succeeded in obtaining a double variety of this species. It was formerly in our gardens in a single tate, and was lost. Prof. Schlechtendahl lately recovered t from Mexico, in 1840 ; and this year its seedlings in the Garden of Plants have borne flowers that are double and semidouble, scarlet and bright orange. This doubling has New Bolanical Books.-Bentham's Plantæ Hartwe gianx, a new Part.-Schauer de Regelia, Beaufortia et Calothamno Dissertatio.-Siebold, Flora Japonica, vol. ii., fasc. 1.-Plantarum quas in Japonia collegit de Siebola Genera nova fasc. primus,-Systema Materiæ Medicæ vegetabilis Brasiliensis, composuat C. F.P. de Martius, -Iconographia Familiarum Naturalium Regni Vegetabilis, by Dr. Schnitzlein, Part I.

GARDEN MHMOKANDA
Edington, Berwick-upon-Tweed.--1 the gardens of A. Dickson, Esq., here, is a number of Apple-trees entirely covered with
blossom and green foliage: they appear as if it were the month of May or June.-A. S., Nov. 28 . A new span-roofed house has lately been erected here. A partition running along the middle
of this divides it into two compartments, one of which is filled with soung Palms and other plants that retulie a \(c, 1\) sith Tal le
degree of warmth. It is heated on the tank system, which is found to answer exceedingly well. A tank, or rather a large
slate cistem, a little more than 2 feet deep and \(4 \frac{1}{2}\) wide, runs slate cistern, a little more than 2 feet deep and \(\frac{12}{2}\) wide, rons
nearly the whole length of the house, which is about 45 feet long nearly the whole length of the house, which
by 10 feet in breadth, and forms the bed for the plants. This
rests on brick supports, five bricks bigh. which run across the rests on orick supports, five bricks jings of the slates, and is
bottom of the tank, under the joinings
divided as follows:-In the bottom there is about nine inches divided as follows:-In the boftom there is ane the and theo
depth of water covering the whole bottom of the bece. This is what pro
there is a vacancy of nearly the same space.
 supported on bricks laid inside the tank at the sides and in "he
middle on a It inch slate partution, which runs longitudinall y in
the middle of the tank, and divides the flow and return gut ers; the middle of the tank, and divides the finw and return gut ers,
the remaining space is filled with silver sand, for plur ging

Lectures on the Comparative Anatomy and Physiology of the Invertebrate Animals. By Richard Owen, Hunterian Professor at the College of Surgeons London Longman, 8vo. pp. 392.
What a kaow the structure and physiology of plants is to systematic Botany, is the anatomy and physiology of animals to Zoology. As long as artificial systems either in the assume the place of natural arrangemenals and plants negstructure and functions of both aniwals in reforming the lected. Botany certainly took the lead in reforming the errors into which artinctomy and physiology of anımals could be presented in anything like a connected form for the use of the student, numerous works existed on the
tructure and functions of plants, as the basis of classifi-

Professor Owen's Lectures on Comparative Anatomy, delivered at the College of Surgeons in London ; and to all who know the importance of his labours in the vast
field of comparative anatomy, this work will be bailed field of comparative anatony, this work will be bailed with delight. The present work treats only of the ana-
tomy of those animals which are called invertebrate, and which are characterised, with many other impoltant structural features, by the absence of a back. bone. To this
division of the animal kingdom belong the sponges, polypes, star-fishes, snails, worms, insects, spiders, and crabs.
These lectures, although delivered to medical men, contain a vast amount of matter interesting to all who would govern the structure and functions of animated being We can also recommend them as being admirable exansples of the application of the principles of inductive science to the study of organised matter. In the introductory lecture are many just emarks on the classification of animals which apply with equal force to that of plants. is the use of animalcules?" are, we think, new and worthy attention.
- Consider their incredible numbers, their universal distribution, their insatiable voracity; and that it is the particles of decaying vegetable and animal bodies whicl Surely we must in some degree be indeb
ever active invisible scavengers for the salubrit those atmosphere. Nor is this all: they perform a still more mportant office, in preventing the gradual diminution of For when this matter is organised matter upon the earth. in that state of comminution and decay which immerta precedes its final decomposition into the elementary gases and its consequent return from the organic to the inorganic world, these wakeful niembers of nature's invisible police are evers nhere ready to arrest the fugitive organstream of animal life. Having converted the ascending decomposing particles into their orn livin tisteal and themselves become the food of larger Infusoria, as the Rotifera, and of numerous other small animals, which in \(t\) heir turn are devoured by larger animals, as fishes ; and tivu a pabuium, fit for the nourishment of the highest organised beings, is brought back by a short route, from
"There is no elementary and self-subsistent" organic mattcr, as Buffon taught ; the inorganic elements into Which the particles of organic matter pass by their final decomposition are organically recomposed, and fitted for vegetable kingdom. No animal can subsist on inorganic vegetable kiogdom. No animal can subsist on inorganic
matter. The vegetable kingdom thus stande, f) between animal matter and its ultimate destruction; but in this great office plants must derive most jmportant animalcules may polygastric Infusoria. These invisible animalcules may be compared, in the great organic world,
to the minute capillaries in the microcosm of the animal body, receiving organic matter in its state of minutest aubdivision, and when in full career to escape from the organic system, and turning it back by a new route towards the central and highest point of that system.", The lectures on insects are full of interesting matter especially that part of them which treats of the structure By the following figures our readers will at once see the practical importance of destroying these insects as soon practical importance of destroy
as they make their appearance.
The Aphis lanigera produces each year ten viviparous broods, and one which is oviparous, and each generation

the larve of the flest the order Diptera, the importance of the larve of the flesh-fly as a consumer of putrid animal matter is alluded to. "Insignificant, indeed," says Prof. Owen, "do these larvæ seem to be in the scale of Nature, yet Linnæus used no exaggeration when be averred that quickly as would a lion. The assimilative power is as quickly as would a lion. The assimilative power is so
great in the meat-maggot that it will increase its own weight two hundred times in twenty-four hours."
wasps, the silk-worm, and the various kinds of spiders, We interesting, and many of them new.
We cannot conclude this brief notice without referring to the last lecture, containing a discussion on the law of unity of organisation, as well as other general expres-
sions as applied to the animal kingdom, in which the great knowledge of the lecturer is brought to bear in the analysis of those great facts by which our knowledge of the structure and functions of both the vegetable and animal king-
dom is so rapidly increasing. The work is coniously illustrated with neat wood-cuts from the diagrams used at the lectures, and the whole has undergone the revision of Professor Owen himself.

\section*{Strachan's Agricultural T'ables. Simpkin, Marshall,} We have received and neatly-got-up little volume, by Mr
new set of tables for computing the wrigses to be, "A measurement; the quantity of hay in ricks of different forms; the value of land, \&cc.; the measurement of drains ules, cxamnles, and directions for practical tables; with To all farmers who are quantitative memoranda of their proceedings, but espe cially to those who adopt the sensible plan of paying by will prove a valuable assistant.

\section*{THE NATURALIST'S CORNER}
69. Ravages of Wild Boars in Vinevards.-The Rev J. Hartley, in his "Researches in Greece and the Levant," the Psalms respecting the illustration of the passage in yards. He says, "The propriety of the image in the 12 th verse of the lxxxth Psalm must be familiar to all who have visited Grape countries ; but the force and beauty of the history of from a practice connected with the natural served. My friend, the Rev. Mr. Leeves, was proceedin in the dusk of the evening from Constantinople to The rapia; passing a vineyard, he observed an animal of Greek syro rushing forth from among the Vines. The Greek syrogee, who was riding first, exclaimed, 'Wild
boar, wild boar!' and really it proved a wild boar, who was retreating from the vineyards to the woods. 'What Mr. the wild boar to do with the vineyards ?' exclaimed of the wild boars to said the syrogee, 'tis the custom the Grapes.? And it is astone vineyards, and to devour boar is capable of havec a wild eating, and of effecting in a single night. What with an immense quantity of Grapes. Winderfoot, he will destroy an immense quantity of Grapes. With what fatal propriety does this affecting inage retain its force, up to the
present moment! Still is the Vine of Israel broken down ravaged, cut down, burnt with fire." Israel broken down,

\section*{CALENDAR OF OPERATIONS for the ensuing week.} IT was about this time three years ago that Ifirst proved the water with which I commenced, I lave had no reason to make any alteration in them smece, and, judging fiom puescut appear-
ances, I sec no reason why they should wit endure as longe as ances, I sec no reason why they should Lut endure as longe as
bricks and cemert uscd any other way would. I may also
state, as I am writine in answ I am not aware of any improvement having been effected in the construclion of gutters, with the exception of one arrange-
ment, adopted at the garden of the Horticultural Society, men
tioned in a late tioned in a late Number. "A piece of sti,ne piercci whth two
holes, to which union-screws are securd," has becu buit "in
the end of the water-giters met screws the fiow and recturn-pipes are afterwards To thested union.
improvement does away with the only dificulty in makis
 making a sound joint where, the flow and return-p pes pass into
the gutters. If had to fix these gutlers for a greenhous
any house to be kelt any house to be kept at a low temperature, I would prefer thin
slate covers, say half-inch thick, with slate covers, say half-inch thick, with holes over the return
division, to let ont vapour when wanted, and the holes to be
covered with pieces of the neeessary; heat will pass through slate, when dry heat was
nhrough tiles, and they are slate covers faster than iron pipes, but for Pineries, ar impervious to moisture as cast-
ture, or where a flue acts in the ture, or where a flue acts in the same house, tile covers are better
as there is some moisture constantly as there is some moisture constantly passing through tleern,
counteracting the effects of of early Grapes exhbited at the fast May show at Chaswick was produced by gutters uith tile covers along the front, and with
flue at the back of the house. These Grap, wes wipe in April for reasons I need not mention they were not entered for compe.
tition. The gardener who produced them las obtained
 introduccd. Since the power of erecting tanks and gutters are
been placed in the hands of the gardener, I iave adised fricnds in private to retain flues along with gutters, but owing to
the just prejudice- ff that be a the just prejudice- H that be a proper phrase-against flucs, I
saud noth ng about them in public untuly facts could be produced
to warrant me to do so and to warrant me to do so, and I am in possession of many such
facts. I have two letters complaimen that "nothing con be grcat dampenss they criaters." Whently put up, "ow where the the the
gutters are made late in the autumn there is always more or less annoyance expe-
rienced from them during the finst winter, owing to this der rienced from them during the first winter, owing to thise dampe-
ness, untol the work becomes hardened ness, until the work becomes hardened. A friend lost a crop of
forced Roses last winter with recently. built gutters, but this
winter he says, "nothing answers belter" this season recommended parties to make use of a repeatedly along the front of pits, heated from helow by armall flue
tanks, to afford top-heat; the top of the flue Mendle's tanks, to afford top-heat; the top of the flue may be level
with the top of the tank or with the top of the soil in the
bert The flues might be covered with siabs of Caithness flue. Which may be had frem stone-cutters in all our great towns
nearly as cheap as the old earthen tiles foumery in This stone is thus spoken of by an Edinburgh amehitect in the
1st vol. of the "Architectural Magazme," page 7!. "I have
heated a portion (of the water a porthon (of this stone) red hot, and quenched it in
tenacity. It and is so strong at 2 inches thick that no accident whinches, even 3 feet." These are the right covers for flues. inches, or Paxton uses stone covers for his flues, but I forgot to ask hrm
where he procured them.

\section*{I.-KITCHEN-GARDEN AND ORCHARD:}

Pinery.-The greatest weight of fruit from a given space of
of enserom is the most profitable, and therefore the best mode of growing Pines, after all. Although Mr. Knughe best mode together that he olways had a great weight of fruit in a close London for a longebted to one of the best Pine frowers near plants with bottom-heat from leaves, and suys, "I ame prows anded
there are more Pines injured by too much bottom hcat than lat too little of it. In shall never fruit another blant in heat than by turn them put of pots into becls of as halforey show frut as long shall
thed leaves, sup plying their after-wants "ith stimulating lisuids. Last sup-
between 50 and 60 young plants started unfortunately; I turned
them them ont in a two-jeargoplants started unfortunately; I turned and by the time the suckers were ready to take off they were
much larger than the mother plants." This is always the best way for young begmners, if only to get into a stock of large
healthy suckers, which is "half the battle" in Pine VinERY.-Fnrly forced "half the battle" in Pine-growing. season, as regayds heat, than when they are begun early in
spring. Our carliest honse here was shut up three weeks since,
witle a few witly a few barrowfuls of horscdung introduced to create a moist atmosphere; the heat from the dung is not strong, ana we liave
had no reason to give air since, tle thermometer not passing
above \(6 v^{\circ}\). We shall go cn very slowly with it until the ejes are abll broken, and shan go cn very slowly with it until the eyes are middle of May is abbut the time we shall want the first ripe
Grapes. I have seen Grapes ripe caryy in May from houses slut
up on the 1st of January, and cveri iater, but the plan is pot to up on the 1st of January, and cverilater, but the plan is not to
be recommended. Peacilitiouse.-The Peach and Cherry, and probably all the
stone fiut, are more susceptible of it,jury from sudden variations
of temperature than wtlier stone temperature than ustier kinds of it juryt-trees. If the change
of hould hapuen to be wariations should happen to be to a higher of frupt-trees. If the change so much the worse.
Rather let the thermometer fall below \(35^{\circ}\) at this time than see Rather let the thermometer fall below \(85^{\circ}\) at this time than see
it alove \(55^{\circ}\), even with sum heat. A few degrees on either side house, or rather the atmos, for ane, be kept morst, but avoid
syringing the trees much if they lowe bee syinging the trees much if they have been pamined over to clean
thicm from insects. Cucumbers. - Tice plants which are to produce prize fruit a rald her now ist atmosphere, and all flow hereat, plenty of air, and
rubbed off until the end of this month fruit should be rubbed off until the end of this month. I believe that the judges
ut \(I\), swicl are to be ver at Ifswich are to be very particular this season about having the
frut in a fresh state. It must be cut only a few days before the
exhibition, which will take exhibition, which will take place ont only a few days before the
see by the circular of this Society that Mr Millebrary. I and some other first. rate growers, are to have a "sweepstakes";
on that day, besides the regular competation, on that day, besides the regular competition, and I suppose any
grower may join them, but I know hittle about this kind of com-
petition.
In continuation, I shtall this wetk ofter
borders. When a border is finished in the best remarks on Vineproper soil and drainage, with a bottom so hard mat no roots can preceding one, may be vianted, the shoots whll grow to the top of
the honse the first seqson, and the roots will strike townwords almust perpendicularly until they are stopped strike downwards
hard bottom; afterwards they winage or Lard boltom; afterwards they will push horizontally alonge the
botom to the extremity of the border, and in time these first
routs become roots become the great reservoirs for the sap, scnding out secondary roots all ovex the border to collect nourishment. Now how
much better would it be, if, instead of lying along the bottom of
the border, these large rin and sending down feeders which is washed down by successive rains. other fruit-trees
remain some time in the nurseries, and when transplanted in the remain some time in the nurseries, and when transplanted in the
garden their roots are spread near the surface, and if they get garden their roots are spread near the surface, and if they get
too luxuriant afterwards they are root-pruncd or taken up
again, to bring their routs again, to bring thir roots ney are root-pruned or the surface. Not so, however,
with the Vinc, and hence the many complants, There are some solls, alded by situation, mants s ou hear about it
grow and produce finc fiunt for sation or scarcely any frain for mony sears without much prepa-
did not reccive knew an Esperione which did not receive the silightest cultivation at the rcots, or mannere

Srove, -It is now fuliy acknowledged on all hands that a high
temperature in winter is temperature in winter is injurious to stove plants; and it in no
less injurious to have the almosphere too moist with a
perat perature at night-hence the practice of watcring early in the
day. If you have any stove climber ar shrub plat next yar wheh y ou wish to mover or another situation to tor the change. Dig round one side, and to prepare such plane thalf of the
roots; place them ner sand, place them near the surface, and fill in about them with and in six weeks they will have made new goots to feed the
plant, hen you may take up the ond them in the same way, up the other half of the roots and treat your plant may be wotted or transrlanted anywhere else without sustaming any injury. nished growanched in all directions in this way without 50 fec the experiment the following season; and I am now repeating Echites, \&e.
GREENHOUSE, -The best way I pot climbers for exhibition in the show for getting up a stock of to grow as much as possible, for a year or two, encourage them as in the above paragraph
ing memorandum respecting the "t best earliest and follow-
early" Azaleas for new expensive for forcing for the Conservatory, not including pontica mutabilis, and Taylorest: coccinea, glauca, colorata,
alba, sulphurea, radiata, aurantiaca cuprea, radiata, monstrosa variabilis, aurantia nora,
force better than American incana, and plumosa. No plants

> Pits and Frames.-Girafting the luculia in the propagating-
pit has given rise to a curious ane one of the first l.ondon nurserics. This a skilimi propagaior in these letters in a consecutive arrangement bettate - If a plant, of them by gratin in ouralphabet, ahd refuse to unte with cither and S. This is a very obscuarequestion, Ithink it is, and also D shall make known what the stock for grafting the Luculia on
is in good time. that I am as far behind with Mr. Peter McKenzie's account gardens as I was with budthing thomporary evergreen winter ground. Formerly, I used to mix Wallilowers whe open these
branches from the reserve garden, too much, aha will flowerve warden, but they exhaust the pround are spring-dressed. All the best specimen thrubs or trecs planted taken out round the extremities of their roots, have a circle rich compost. Where thes is not convenient some stimuiating
liquid manure will do some good.-D. Beaton, Shrubland Purk

\section*{REPORT UN OVENTGALDEN MARKET,
Fur the Week ending Dec. 16, 1843 .}

Owing to the continuance of fine weather, there has been a Fruit has been yalher short. Pine-apples, although not very plentiful, are sufficient to meet the demand. Among these we
noticed some good Queens and a few of the Black Jamaica.
Little alteration has taken place in the Little alteration has taken place in the price of these since our last leport. Hothouse Grapes have still continued to advance
in price cliting the week; Porturals are selling at from \(9 d\). to \(2 s\), per Jb . The supply of Apples has been short, more especially
good Nitchen ones; some fire specimens of Ribstone Pippin and
Blenhein O \(6 s\). to \(10 s\). per bushel. Pears are sufficicurt to meet the demand a few Winter Nelis, Crassane, Glont Morceau, and Chenmontel, lave appeared in the market during the week. Meulars are selling at from \(4 s\). to \(8 \delta\). per half-sieve. Oranges are beconming very
plentiful. Among Vegetables were some fine Brocenti, Cabbages, and Brussels Sprouts; these are selling at nearly the same
prices as last weck. Lecks are good and abmondant Savors have prices as last weck. Jecks are grend and abundant. Savoyshave
been plentifully supplied during the week; Seakale and French been plentifully supplied during the week; Seakale and French
Beans are ofered at nearly the same prices as in our last report.
New Pato New Potatocs continue to be brought to the Market and are
selling at the selling at the same price as last week. Endive aardother Salad-
 Pelarta, Itnman Narcissus, Lechenaultia formosa, Verbenas,
and and Roses.

\section*{NEWS OF THE WEEK}

THE affairs of Spain cuntinue to be the leading topic our Foreign news, and the reccntafair between \(Q\) ween Isabella and leer Prime Mnister excites the deepest interest in all parts of Europe. On the lst the new Minister presented to the Cortes a solemn deciaration from the Queen, announcing that M. Olozaga, after bolting the door of her study, had seized her hund and compelied her to sign the decree for the dissolution of the cortes On the 3 rd the debate was opened on this stabject, and after much opposition M. Olozaga entered upon his defence. He cenounced the whole affair as the plot of a Camarilla, and eloquently depicted the intrigues and actions which have so long preyed upon the country As approached the interview with the Queen, he was almost overcome by his emotions. He rrotested his innocence and his devotion to Royalty, and repelled the atrines heaped upon lim as the efforts of a Court atrigue, whose designs he had detected and endearoured to baffle for the sake of Spain. He proceeded at great ength and with singular eloquence to vindicate his conduct, and concluded an oration of two days recommending his mn impeachment for the offence with which he was harged. This speech is said to have produced an extraordinary sensation, and people had begun to suspect that the young Queen had been made the tool of a prarty, and that M . Olozaga was really innocent. It has been proposed however in the Cortes to bring the matter to an immediale trial, but it is doubted nhether the present Minisris will adopt this course, and risk the chances of a defeat. In Fance the movements of the Dac de Bordeaux are still regarded with great ansicty, and it is stated as certain that the London demonstration will be made the subject of a motion in the Chambers. -The return of the Duke of Pa!mella to Portugal without effecting the settlement of the tariff negotiation with Eıgland has given rise much complaint, and the popular feeling is said o be strong that the Duhe has felt it necessary to retire to his country residence. - From the United States we learn that the annexation of Texas and the Oregon territory are stall the leading questions of the day, and are to be the prominent topics of discussion in the next Congress. In Canada considerable uncertainty exists in consequence of a misunderstanding between the Governor and his Execu tive Council. It is announced that his Excellency is about to retire from the Governorship, and that all th members of the Council except the Secretary have retired in a body, in consequence of some dispute respecting their right to be consulted on all appointments to office.- From New Zealand we have accounts of a fatal collision between the native Chiefs and a large party of our countrymen, in which the latter were massacred. The details of this unCoward aftair will be found in another column.
At home, there is little news of any interest to record except the further prorogation of Parlaament to the lst of patchary, on which

of France."-Considerable surprise was excited in Paris of France."-Considerable surprise was excited in Paris
last week by the announcement that M. Janin the manager of the Italian Opera and his wife had committed suicide. It appears that a young man in the theatre had been apprehended on the charge of fraudulently issuing tickets, and that he had confessed to some of the parties
who suffered by the fraud, that M. Janin had instigated who suffered by the fraud, that Mat although from various him to make false returns, and made by the injured parties
considerations an attempt was mater to prevent exposore, the effect of the discovery upon the mind of M. Janin, who was much respected and held a situation of \(12,000 \mathrm{f}\). a year in the theatre, was 80 great as to deprive him of fortitude to bear up against the dibgrace that had fallen upon him. It is said that he committed the act with so much deliberation, that in order to prevent the possibility of setting the room on fire he had removed a marble slab from its place, and put it on the floor to bear the brazier.
Spain-A telegraphic despatch from Bayonne an nounces that the new Administration was constituted on the 5th inst. M. Gonzales Bravo, First Secretary of neral' Mazaredo Miniter of War ; the Marquess Pena Florida Minister of the Interior; M. Mayans Minister of Justice; M. Portello Minister of the Marine. The Minister of Finances had not then been appointed. The promotion of M.M. Bravo and Mazaredo created vacan cies in the Vice-Presidency of both Chambers, which have been filled up by the election of M. Madoz and M. Garnica, both of whom belong to the party of the late Gover
ment. The recent affair between M. Olozygs and Queen Isabella continued to excite the deepest interest. On the lst the new Minister Gonzales Bravo presented to the Cortes the following solemn declaration of the Queen:-
"On the evening of the 28th of last month Olozga "On the evening of the 28th of last month Olozzga presented himself to me, and proposed my signing the decree for the dissolution of the Cortes. I answerse those Cortes had declared me of age. Olozaga insisted. I again refused to sign the said decree. I rose and moved
towards the door which is at the left of my study ; Olozaga towards the door which is at the lert bolt (at this passage the public who thronged the galleries of the Chambers seemed indignant). I then moved to that in front, bat door. He seized me by my dress, and compelled me to (Here the indignation with extreme warmth.) Olozaga then went away, and I retired to my room. Having read over the above declaration, her Majesty added-' Before he left, Olozaga asked whether I gave him my word that I would utter nothing of what had passed to anybody, when I replied that I did not romise it. Her Majesty, (said M. Gonzales Examine the place where the aforesaid scene had passed; they did so, all entering the closet. I then put the declaration into the bands on Queen, her Majesty claration it in presence of the above-named witnesses, after 1 had asked the persons present whether they had well understod its contents, and after their affirmative reply. After this act was terminated, her Majesty ordered the persons present to retire, and "Foreign Office" "Gen deposit" added the new Minister, "after reading this themen, adad the solemn aforesaid persons, my mission was befitting, the Royal word, 81 , matic Deputies were present, and large numbers of persons had gathered around the Oriente Theatre, where the Congress meets. After a discussion of no moment, whiche and Luzur-
its being decided that M M. Olozaga, Cantero and haga shoula une to a the Chamber that the debate was opened upon the verbat by the Minister of Foreign affairs. The ntmost curiosity and interest were excited by this no in obtaining a learing opposition M. Olozaga succeeded in obtaining a hearing on the motion that an adaress be presented to the exclud ing him from the Cortes baving been postponed. N. Olozaga declared that he did not rise to oppose an adares to the Queen, but that he must and could not avoid speated ing when he could do so uselully, and in a way chamber. to (throw light on the question before the chan the
\(H\) is intention was to say as little as possible on grounds of the question, reseng to himsulf the liberty of dwelling at greater length on all that had preceded tho facts stated in the verbal process. After reminding
Chamber in detall of the various circumstances which preChamber in detail of the various circumstances which puen, ceded his elevation to the station of guardian to the with her
he declared that during the whole time he was with Majesty he had never ceased to tell her that, to goveri constitutionally Sovereigns must in political affairs listen This doctrine rouscd against hum the antip, thy of the individuals on duty at the Palace, and that antiputhy dand increased. Their aversion and pretensions became bo the
less when her Majesty's guardian was summoned to direction of public affairs. Thence had arisen the hidder and open resistance he bad experienced in all his edme to establish a homogeneous Cabinet, Mad found himself
to such a point that the Prime Minister had form under the necessity of declaring that he would expel from the Palace all persons whatsoever who meddled him political affairs, and this threat which had yielded have followh hatred and resentment, he would was nob Queen but the persons about her that manifested most hostile dispositions. The very day after his to hear the Queen tell him that he must immediately form his Cabinet otherwise somebody else would do so his stead. That person whom the Queen named was General Narvaez, who, in order to raise an
tion, awaited not even the composition of the Cabinet, strong were the prejudices entertained at the Pala against the Administration he was organising. As M. Olozaga detailed what passed between him and the Queen on the 28th November and approached the denonew was his poice betrayed the utmost emotion and his speecd upon repeatedly interrupted by his sobs. He protesting that he was devoted to Royalty, and repelling the calumnies heaped upon his head by his enemies and a camaril had whose malignity he denounced and whose designs he detected and wished to baffle for the welfare of spa those calumnies the President adjourned the Chamber, declaring that the hour fixed for putting an end to the debate had struck. M. Olozaga speech is stiteden to made a deep impression, and the Chambers
with more composure than had been anticipated, seeing that on entering the hall the ex-Minister had been receivin with mingled applause, hisses, and M. Olozaga resumed and concluded the vindication of his conduct. He stated
that in the evening of the 28th he repaired from the
Ministry of Foreign Affairs to the Palace, bringing number of decrees which he submitted to the approbation of the Queen and which Her Majesty actually approved marks of kindness that a candid and grateful heart could marks of kindness that a candid and grateful heart could
express, and when he took leave of her she followed him and in presence of bystanders saluted him most graciously, and even gave him a present for his daughter.
He then returned direct to the Ministry. Had he been gully of the attempt imputed to him, his guilt would have left the Palace without having been arrested. Maill foreign agents. In the morning of the 29 hh , however, persons attached to the Royal household announced signed, and that violence had been offered to the Queen to obtain her signature to the decree. The
President of the Chamber, he' said, was the first apprized of the circumstance, and those who should have Oen informed of it first were the last to know it. M. little the Quens mouth, and contended that it resembled little the language used by her Majesty, and that it was
not accordingly her own. The means besides employed not accordingly her own. The means besides employed
to draw up the Royal act were illegal. He nest directed the attention of the Assembly to a conspiracy existing both in Spain and throughout Europe against constitutional governments. He had proofs of its existence and knew bring about the marriage of the son of Don Carlos with the Queen. This statement was received with cries of appeased with much difficulty sisted in his declaration, and after attacking the actors in present at the Palace who refused to allow him to be terms and justify himself, and branding in energetic throne, he concluded by recommending the adoption of the address to the Queen and his own impeachment for M. Pidal then which he was charged.-TThe President insisting on the veracity of the Queen's declaration, reflecting with great severity on his late conduct, and detailing what share he (M. Pidal) had had in the drawing eyes when being aration; and the tears that fell from his beheld the candour, innocence, and Queen's presence be stated the outrage she had been subjected to. The sitting was at a late hour adjourned to the following who expressed his conviction that the failure of the late attempt to effect a coalition was the chief cause referred to events which they all deplored. He then occurrences; of the evening of the 28 th valt, which her Majesty concluded by a wish that it should be deposited obeyed the order of Gonzales Bravo, he said, had disment to Congress, which unconstitutional proceeding har compromised both the throne and the lepisiotiveng had and thereby incurred the most severe reproaches. That act, in his opinion, was constitutionally much more cultify an impeachment claration was divested of all constitutional authenticity, that it was the testimony of Isabel 1I. respecting a perevidence of a witness depould be held in the light of the declaration of a person denouncing some horrible attempt. the accusation proceeding to describe the legal course examination of the consequences that might accrue therefrom, when he was called to order and informed that he tions of Congress, than the time allowed by the regula--At its next meeting it was resolved, by a majority of 81 to 66 , to take into consideration a proposal for bringing mi. Olozaga to trial, and it was referred to the comIn the evening of Sunday the 3d, there were commotions in different parts of the capital. That there was a regular plot is evident, for attempts were not only made in difheard, including even "Death seditious cries were troops were fired upon with guns and pistols, and several of them were killed and wounded. There have been no and Cuences since. In the provinces, at Burgos, Avila cited universal indignation, but the subsequentation exings of the Chambers and the defence of M. Olozaga were not then known.
Portugal.-We have advices from Lisbon to the 6th inst. The most bitter disappointment was excited by the Palmella, who arrived by the last packet in Lisho Duke of at once retreated to the privacy of domestic retirement to escape the prevalent indignation, as the conviction was universal that his want of candour had again bafled the expectations of both countries. The greatest excitement
prevailed prevailed in the wine-districts in consequence of his return Itat accomplishing the object of his mission.
antonio Borghesers from Rome state that Prince MarcThérèse de la Rorghe was married a few days ago to Mdlle. tissac. The marriage benediction was bestowed by the Archbishop of Nicea, Apostolic Nuncio in Paris, in the
were printed in Italy 3,042 books (the number printed in fifths were published in the Lombardo-Venetian kingdom of the remainder, 508 appeared in Piedmont; 235 in the Grand Duchy of Turcany; 216 in the Papal States; 174
in the Kingdom of the Two Sicilies; 19 in the Duchy of Modena, and 11 in the state of Lucca. Of these works a considerable portion were translations.
Greece.-We have this week the particulars of the opening of the National Assembly on the 20th ult, by King Otho, whose speech on the occasion was given in
our last. A Royal salute fired at day-break ushered in the day. The hour appointed by the King for opening the Assembly was two o'clock, some time previous to which
the building was densely crowded by the Deputies and the the building was densely crowded by the Deputies and the
public. Shortly before two the English and French Ministers attended by the Officers of their missions, as also by the Officers of the naval forces of each nation at
the Pireus, arrived and occupied the seats allotted to them. The reresentatives of Austria, Prussia, Spain Bavaria and Turkey, arrived about the same time ; but the Minister of Russia was absent. The Queen next entered accompanied by her ladies in waiting. Her Majesty was dressed in a Greek costume, composed chiefly of crimson and gold, and on her entry the whole assembly stood up and bowed. At the'time appointed his Majesty arrived, and was received in the most enthusiastic was surrounded by the Ministers, the Council of State and the highest dignitaries of the Church. His Majesty wore his Greek dress, and having bowed to the Assembly sat down, placing his red cap on his head, and motioning to the Deputies to be seated. The King appeared rather nervous, but was apparently in good health and spirits, and proceeded to read the Royal speech as given in our King rose and quitted the delivery of ast spechasiastic cries of "Long live the King!" Everyone then turned towards the Queen and greeted her with "Long live the Queen!" which completely overcame her Majesty and caused her to shed tears abundantly. Everything passed off in the most satisfactory manner, and the whole country continues in the same state of remarkable tranquillity.
Russia.-Letters from St. Petersburgh announce the arrival of his Imperial Highness the Grand Duke Michael in that capital on his return from England. The Augsburgh Gaselte of the 7th says that accounts have been received from the Caucasus of a great battle which was fought in the beginving of September between the Avaziz and the Russian troops, in which a vast number were killed on both sides. The Avaziz inhabit the southern part of Lesghistan. The Frankfort Gazelte adds Russians. Colonel Weselack anage friendy to the thereupon went out to oppose the Russin commander, enemy consisted of an army of 8,000 or 10,000 men. The Russians were inferior in number and lost 1,000 men, heluding the Colonel, who is supposed to have fallen on Turkey.-Advices from Constantinople of the 22d announce the receipt of intelligence from Mossoul of another slaughter by the Turks of the Nestorian Christians. Upwards of 200 of the latter were believed to have fallen, Reschid Pasha, the newly-appointed Ambassador of the Porte in France, was to leave Constantinople for Paris on mission 24 th. He has been provided with two autograph letters from the Sultan, addressed to the Khans of Khiva and Bokbara, one from the Grand Vizier, and three from the "the British Government being the friend and ally of the Padischa, its subjects were entitled to the protection and avour of his Majesty wherever his influence might The chiefs of Bokhara and Khiva are exhorted there in captivity, and to receive with kindness and dis. thetion the venerable pastor who should come to claim them." These letters of the Sultan, the descendant of the Caliphs, who is held in great respect by all the followers of the Sunnee sect, are expected to create a very EgYpt.-Private letters from Egrypt Bention Pasha was seriousl Pasha was seriousiy contemplating hexecution of some to future ages. Three projects, it is stated, were under his consideration-first, a ship canal between the Red Sea and the Nile; second, a canal to join the Red Sea with the Nile; third, a railway across the Desert between Cairo and Suez. Which of the three he might determine on was not known.- The latest accounts from Abyasinia state that Dr. Schimper, the well-known traveller, has obtained possession of a tract of land in that country, over which he exercises sovereign sway. He, however, only intends to remain so long as will be necessary to complete his colle
Cape of Good Hope--Cape papers to the 15th Oct. have been received which state that several unusually large swarms of locusts had recently made their appearance in the neighbourhood of Bathurst committing great ravages among the standing crops of corn. In the Kat River settlement several swarms had also been discovered in the larva state, and hence fears were entertained for the crops in that locality, which at the date of these advices preColonel Hare the Lieute than drift with the view of expelling the Chief Tola from the "neatral territory," and having summoned the Chiefs of the Gaika clans had taken their, agreement for his good
behaviour in future, giving them however to understand that if either Tola or themselves gave the Government posser trouble they would one and all be not only debarred the Ki. of the "neutral territory," but have to cross me Kei. The Cape Government Gazette publishes at Ngth the terms upon whice trade is to be carried on at Natal. All vessels whether British or foreign excepting those of her Majesty are to pay a port-charge of \(3 s\). per
British ton upon their registered burden. In all respect it appears the duties levied are to be the sam all respects present in force at the Cape.-The Bentinck steam-ship arrived in Table Bay on the 7th Oet., all well, after a run of 4000 miles from St. Jago without calling at any intermediate port or station for fuel.
West Indies. - The papers received by the Thames steamer give satisfactory accounts of the progress of the
several leading jslands. The most important feature however is the speech of the Earl of Elginat the opening of the Legislature at Jamaica. Although it does not give an overcharged account of the capabilities of the tion will the immense advantages which future cultivaIndies, it to be effected by better mang prospect or what is ikely planters, and conciliated feeling on the part of the labouring population. The Governor alludes apparently with satisfaction to the decrease of native fanaticism, as also to the attention of late paid by the agricultural societies to the introduction of implements of husbandry, with the vies labour. The failure of the scheme of emigration as surg gested by the Legislature is the only discouraging topic in the speech; but jt appears notwithstanding that encouragement will yet be given to promote the import of labour from the coast of Africa as a means of supplying Bishop Spencer had arrived from Halifax The quarters. continued tolerably favourable, although as is usnally the case there were complaints from some of the districts of insufficiency of rain. Trade with the South American States had rather fallen off. The news from Demerara, TriDidad and Barbadoes is not very interesting. At the latter island the weather for the crops is described as having been "glorious"-rain one day, sunny and fine the next. Mr. Thomas, the chief clerk of the branch of the Colonial Bank, had been committed for trial on a charge of robbery, to the amount of 41,920 dollars. The supply of labour from the coast of Africa to Demerara had failed. The Superior had only brought over 16 persons from Sierra Leone. At Trinidad prospects were steadily improving, and increased cultivation was attended with success, It is stated that Waddell, who absconded from Demerara after robbing the British Guiana Bank of a considerable sum, had been arrested with almost all the money in his possession. This is probably a mistake, the statement being founded on some vague account said to btained from Scotland.
Roscius, which sailed from New York -The packet-ship arrived in 16 das and a taking possession of Oreron will be the leading topics of discussion in the next Congress. President Tyler it is will will introduce the question of Texas, and Mr. Bentin will bring forward that oregon. These questions are expected to gitate and excite, but it is doubted whether they will form parties or divide the Union. The Rer. Syduey suin heren repuation had been received ad had drawn forthmuch comment. An English lady, Miss Isabel R. Keats, and niece of the late English poet of that name, had died at Cincinnati from the accidental discharge of a gun which she held in her hands. The United States Customs have decided not to allow the drawback on coals in future to the steamer Great Western : this will make a serious difference to the company. Mr. Macready cleared 8,000 dollars by his first engagement at the Park Theatre, New York; he was also very successful In Philadelphia. Accounts had been received of Sir W. D. Stewart's party on their way across the Rocky Mountains. A few of the party have returned, but a Mr. L. D. Walker of St. Louis had been killed in a quarrel. The packet ship Westminster, which trades between New York and London, has been struck by lightning in a storm. Her commander was knocked down and became for a time insensible, but speedily recovered. The ship did not sustain any considerable damage. The packet ship Sheffield, which was wrecked a short distance rom New York, has been towed into port. It was found that the damage which she had sustained was not so great as had been anticipated. The intelligence from Canada is of great importance. It was reported in Kingston on the 17 th ult. that Sir Charles Mercalfe had resigned the government of the Cabadas and would immediately return home Severe indispos tion aizsing from an abscess in the face is assigned as one cause for this step. also reported that the Government had solicited and obtained the services of several members of the Legislative Council who had thought it their duty to retire. We learn however by the subsequent arrival of the Caledonia from Halifax, that Sir Charles Metcalfe has not resigned although his health is by no means good. Another resson for bis resiguation, if true, may be found in the fact that schism has occurred between his Excellency and the Exe cutive Council, which has in to such an extere all the Members of the Council resigned in a body (with the exception of Mr. Daly, the Provincial Secretary) on the exception of Mr. Daly, the Provincial Secretary) on the Goyn, General. This the following day, but it being Sunday the public curionity
as to the cause would not be gratified till the house met on Monday. The latest letters from Kingston state, as desire of the late Council to be cousulted upon all appoint ments to office, a claim which it would appear Sir C. Metcalfe is not inclined to submit to. The names of the retiring Members of the Council are-the Hon. Messrs. Sulivan, Lafontaine, Baldwin, Hincks, Dunn, Small, Morin, Aylwin, and Killaly--From Texas we learn that an entertainment had been given to General Houston at the piace called after himseif, where in returning thanks
for the compliment, he denied the charges recently brought against him, of being an abolitionist, of conniving at the supremacy of England in Texas, and of vassalage to Mexico. The New Orleans Bee states that the British Government through Captain Elliot had presented claims of its subjects to land in Texas amounting to from ten to tweaty millions of acres, with a threat that the necessary
steps would be taken to enforce the settlement of the claims if they were not speedily conceded. The cotton crop in Texas had been seriously injured by the worm. At crop in Texas had been seriously injured by the worm. At of Texas at a discount of 20 per cent.

Brazils.-The Swift packet, with mails from the Brazils, arrived on Monday direct from Rio de Janeiro, having sailed on the 20th of October. She brings 80000 .
on freight in gold. The rumoured illness of the Emperor was incorrect, but the Princess Januaria, heir presumptive to the throne, has been extremely ill; her life was for some days considered in great danger, but the bulletin of the 19th of October, the day previous to
departure, announces her being convalescent.
New Zealand.-We regret to state that a disastrous occurrence has taken piace in this colony which has led to
the murder of Capts. Wakefield and England, Mr. Thomson the magistrate, and several other English settlers. The leading facts were communicated to the New Zealand Company by Mr. Kelhara in letters dated the 19th and 21st June, but since their arrival the New Zealand papers of a later date have been received, which contain more to prove an exaggerated statement is unfortunately too true. The Auckland Chronicle of the 15th July gives the annexed account of the origin and progress of the affair:"The public are aware that the claims of the New Zealand Company to land in the colony amount to some millions of acres, partly in this island and parly in the northern part of the southern island; it is also generally known
that in many instances these claims have beea denied and that in many instances these claims have been denied and
in some cases openly resisted by the natives, on the ground that the land was never in fact sold by them to the agents of the company. In order to carry out the plan on which the Nelson settlement was founded it became necessary, after putting the settlers into the possession of their town and suburban sections, to resort to the Wairau valley,
fine district in Cloudy Bay about 70 miles from Nelson, for the purpose of finding land to supply the original purchasers with their 150 -acre sections of country land. In the month of April last several surveying-parties were despatched on the part of the company to survey the district. Almost immediately on their commencing their work the natives, who it seems dispute the sale of that district, ordered off the surveyors, pulled up their
ranging-rods and stakes, and did everything in their power ranging-rods and stakes, and did everything in their power done by some of their people. Rauparaha and Rangiaiata, two of the miost powerful and least civilized chiefs of that part of New Zealand, who are the original native owners of the district, were at Porirua, on the other side of
Cook's Straits, urging the Land Claios' Commissioner, Mr. Spain, to hasten over to settle the land claims Wairau, as they wished the surveyors to be withdrawn. The Commissioner agreed to hear the claims there towards the end of June. In the meantime both the chiefs crossed the Straits to Cloudy Bay-went up the Wairau with their party-found the surveyors still there-collected a told them that they intended to send them all off the land together. Previous to this they bad set fire to Mr. Cotterells (one of the surveyors) hut, having first carefuly removed all property of value to prevent its destruction. Captain Wakefield of what had taken place. Mr. Tucket the Company's chief surveyor attempted, but in yain, during Mr. Cotlerell's absence to obtain the permission of the chiefs for the survey to proceed. On arriving at
Nelson Mr. Cotterell (on the 12th of June) Said an information before the police magistrate Mr. Thompson, who it would seem issued a warrant against Rauparaha and
Rangiaiata for burning Mr. Cotterell's hut. At that time Rangiaiata for burning Mr. Cotterelfs hut. At that time the colonial brig Victoria was on the point of sailing for on no account to deviate from her course. Captain Richards it seems however was induced to remain until Tuesday the 13 th , and to take on board Mr. Thompson the police magistrate; Captain Wakefield the New Zea-
land Company's Agent at Nelson ; Mr. Richardson the recently-appointed Crown prosecutor; Captain England late of Her Majesty's 12th Foot; Mr. Howard the company's storekeeper; Mr. Patchett, merchant; Mr. Cotterell, surveyor, of Nelson, three constables, and about 25 other persons, most of them engaged in the company's 25 other persons, most of them engaged in the company's
survey. Before reaching the Wairau they were joined by one of the company's boats, having on board Mr. Tucket and 10 or 12 men who went on board and joined the party.
On Thursday evening the brig anchored at the mouth of On Thursday evening the brig anchored at the mouth of
the Wairau and remained there. At a path at the entrance the Wairau and remained there. At a path at the entrance
of the river Mr. Howard the company's storekeeper, served out arms to the men (about 35 in number), con-
sisting of muskets, bayonets, pistols, swords, and cutlasses, also armed rounds of ball cartridge. The constables were of the men were sworn in special constables, some were told they were going to take Rauparaha and Rangiaiata on a warrant, few it is thought knew that they were upon a hostile service. Many of the party are said to have excourse of their progress they were joined by Mr. Barnicoat the surveyor and his man. Early on Saturday morning the party who had left their boats when the river became shallow and marched up the banks, came up to the place and their party, they were encamped on the opposite band of a narrow creek. By the directions of Mr. Thompson and Captain Wakefield the European party was now formed into two bodies under Captain England and Mr. Howard, who gave orders to their men not to interfere until directed. As a means of communication with the other side of the creek where the chiefs were encamped a canoe was placed across the water to serve as a bridge Mr. Thompson, Captain Wakefield, the chief-constable, Brooke, and some others then crossed over. Mr. Thompson, Captain Wakefield, and Mr. Cotterell walked backwards apparently in a friendly manner. Mr. Thompson then apparently in a friendly manner. Mr. Thompson then it on Rauparaha, and instructed Brooke to explain the meaning of it. Mr. Thompson also stated that he was 'the Queen's representative,' that that (pointing to the Warrant) was the Queen's book,--that Rauparaha must go on board the brig with the constable; that it was for
burning Mr. Cotterell's house, and had nothing to do with the land question. Rauparaia told them down and talk, and not make a fight, and to wait till Mr. Spain and Mr. Clarke came, and hear what they would say. Mr. Thompson then inquired of Rauparaha, whether
he would come or not ; to which be replied he would not; but that if Mr. Clarke or Mr. Spain was there he not ; but that if Mr. Clarke or Mr. Spain was there he
would. Mr. Thompson then said if he would not go he would. Mr. Thompson then said if he would not go he
would make him. Rauparaha still refusing, Mr. Thompson, pointing to the Europeans, said, 'There is the armed force, and they shall fire upon you all (or upon you) if you won't go,' Mr. Thompson it appears then became
'exasperated,' and the discussion violent. Rangiaiata exasperated,' and the discussion violento Rangiaiata
called on him not to fire. 'For God's sake, Thompson, mind what you are about,' shouted Mr. Richardson from the other side. Mr. Thompson then called to the armed
party to fix bayonets and advance; Captain Wakefield party to fix bayonets and advance; Captain Wakefield
placing the canoe across the stream for a bridge gave the word, ' Englishmen, forward.' A few of them had entered the canoe, when a shot was fired, whether by accident or design is not clear, neither is it certain on which side; Europeans. Upon this the firing immediately becama general on both sides, and several fell. Three of their party baving fallen, the Maories hesitated whether they Should run away ; but Rauparaha urged them to pursue. When the firing commenced, Mr. Thompson, Captain Wakefield, and the rest of the party who had been in communication with the chiefs, re-crossed the creek to pursued by the natives. At each step in the ascent, Captain Wakefield again and again attempted to rally the men, and entreated them to make stand, to fix bayonets and charge. An irregular firing was still kept up, but sake, come back, men,' cried Mr. Thompson, 'the Maories are coming upon us;' but the greater number made good their retreat. There was running in all directions. then ordered those and surrender. Brooke, the interpreter, called to the Maories-' Leave off, enough ;' but after this some shots the hill and were too far distant to know what was going on below. When signals of surrender had been made, vanced with Maories also threw down their arms and adciliation. It seems that while the surrender was taking place by the gentlemen below and the firing by the stragvered that his wife had been shot-' Rauparaha,' said he 'remember your daughter.' He then with his own hand it is said destroyed them all. 'Puha, Puha,' cried out the wife of a chief from a distance, save some of the chiefs (gentlemen) that you may have it to say you saved some.' But it was then too late. On the European side the num40 were engaged-their loss was 4 killed and 5 wourded. On the Wednesday following, Mr. Ironsides the Wesleyan missionary having heard of the fatal conflict hastened to the spot, where he found 19 European bodies. On the Thursday they were buried, Mr. Ironsides reading at the grave the funeral service of the Church of England. On his way to the place, Mr. Ironsides met Rauparaha and Rangiaiata, and obtained permission from them to go and bury the dead. They told him that thes had no intention to fight; fight; that the Europeans had fired upon them, and one or two of their number had fallen before they began to fight ; and "hat it was not until the wife of Ranyiaiata was shot that 'they began to seek for payment'-(revenge.)"
The New Zealand Colonist of the 30th June gives the following as the complete list of the persons who have fallen :- "Captains Wakefield and England; Messrs.
Thompson, Richardson, Patchett, Howard, Cotterell, Thompson, Richardson, Patchett, Howard, Cotterell,
John Erooke (interpreter), William Clanzay, Thomas John Rrooke (interpreter), William Clanzay, Jomas \(M^{\prime}\) 'Gregor, William Gardner, Ely Cropper, Henry Burn-
forth, Thomas Tyrrell, and Isaac Smith." The missing Hannam, and John Burton.

\section*{Metropotitan Destitution. - Several meetings have been} beld at London-house the town residence of the Bishop pose of maturing some comprehensive plan for relieving the destitute poor of the metropolis and at the same time improving their moral and social condition. Those meetings have been attended by several noblemen and gentlemen and incumbents of metropolitan parishes, and after much deliberation it has been resolved to form an "Association for the relief of destitution and the improvement of the condition of the poor in the metropolis by means of parochial and district visiting." The Bishop of London will be President of the association, and it is settled that the whole of the finds shall be directly appiied to the relief of the indigent after all proper inquiry has been
made by gratuitous visitors. The rules and regulations made by gratuitous visitors. The rules and regulations
will shortly be announced to the public. -The committee appointed at the meeting held in Leicester-square on the 20th ult., to consider the best method of providing for the relief of the houseless and destitute poor, have decided that the immediate object then proposed, so far as relates to one or more houses of refuge in the western portion of the metropolis, can be most efficiently obtained by a
junction with the institution already existing in the City junction with the institution already existing in the City
for affording nightly shelter to the houseless, and temporary reiief to the destitute. In lieu therefore of establishing a new institution it has been thought advisable by the committee to accept the offer of co-operation made to them
by the City Society, who are desirous of extending their perations to the western portion of the metropolis, and who have at the same time the advantage of being assisted by those who have had a successful experience of the working of such au institution for the last 20 years.
Christmas Cattle Show.-Simultaneously with the usual exhibition of prize cattle, the annual general meeting of the members of the Smithfield Cattle Club took place last week at the Horse Bazaar. Earl Spencer,
the President of the Club, presided on the occasion. The meeting was very fully attended by noblemen and men, among whom were the Duke of Richmond, Lord Camden, Lord Western, Sir E. Mostyn, the Hon. Mr. Clifford,' \&c. The award of the judges was unanimously approved of, and the meeting then proceeded to the election of officers. Earl Spencer was re-elected President, and the Duke of Rich mond, the Earl of Scarborough, Cripus, Ess Lord Aboyne, Sir J. Seabright, who has held the office of honorary secretary for seven years, then resigned on account of ill health, and that gentleman's brother, Mr. B. T. B. Gibbs, was elected in his place. Dean of was appointed steward of the beasts, and three years. The Cattle Show was opened as early as 7 in the morning, and from that time throughout the week the whole neighbourhood presented the appearance of a
fair. The implements of agriculture exhibited in the galleries appeared to excite much admiration. It is computed that upwards of 10,000 persons visited the Bazaar during the frrst day, and upwards of 20,000 on Thursday. Albert, Gen. Espartero, Commission of Lunacy.-A commission was sitting during the greater part of last week to inquire into the state of mind of Mrs. Hartley, a lady of fortune residiug in Park-street, Grosvenor-square, who imagined hersel believed that a conspiracy, existed to poison her. The jury found a verdict of Insanity, aud were then called upon to enter upon a similar inquiry respecting Mr. W. H. Hartley, the son of the unfortunate lady. The same witnesses as in the former case proved that though the delusions of the son were not altogether the same as those of tho the son, yet the case was ore urgent, as the insanimmediate control. The jury returned a verdict that he had been insane since the 13 th Sept. last.
The Tower. - The Duke of Wellington as Constable of ground devastated by the fire on the 30 th 0 ot 1841 , with a view of appropriating the site to new barracks for the soldiers. It will be recollected that the Brick Tomer at the eastern end of the Armoury was destroyed in the general conflagration. The outer walls however escap supposed of preservation, but this will not now be the case, as such a pile would interfere with the new arrangement. The same space will be occupied by the new barracks that that that the style is to be the military Gothic. It would now appear that the fire only anticipated the destruction ort time previousiy shown themselves throughout the whole of the previousiy showa themselves throughout the whole of ened
eastern portion, and great apprehensions were entertained eastern portion, and great apprehensions were enter in the
by the Ordnance for its safety. The lower barracks Old Mint, on the completion of the proposed erection, Old Mint, on the completion of the proposed erection, ing the Tower has been filled only half its depth; but as ing the Tower has been filled only half its dnepth; the drainage is inefficient and its depth is unfavoura
the preservation of trees and plants which it is intended to plant in the course of the ensuing summer, some thouto a sufficient height above the level of high water, and thus insure sufficient ventilation.
The New Royal Exchange,-The works of the New Exchange continue to progress very rapidly. On Saturday the Grasshopper, the crest of the founder, Sir Thomas Gresham, formerly so conspicuous an object orer the
clock-tower of the old building, was placed upon the summit of the tower which forms the principal feature of summit of the tower which forms the principal feature of
the east end of the new structure. Several members of the Gresham Committee attended the ceremony, and the ompletion of the masonry of the building was celebrated by a dinner among the workmen given by the contractors,
who have completed their contract within the specified Who have completed their contract within the specified
time. The foundation-stone was laid on the 17th Jan., 1842, and the works have been executed to their present state in about 20 months. The building is now slated, all the divisions of rooms are formed, and the greater part of the fire-proof arches over the shops are turned.
Lincoln's-Inn,-The appointment of preacher to the
Society of Lincoln's-inn baving become vacant by the Society of Lincoln's-inn having become vacant by the
late preaclier being appointed ishop of Lichfield, nineteen clergymen have sent in their applications to the benchers. The following are anong the number : The Rev. Thomas Robinson, late Archdeacon of Madras; Archdeacon Manning; Rev. Mr. Anderson, of Brighton; of Ozford; Rev. Mr. Claughton ; Rev. Mr. Randall, rector of Binfield, Berks; Rev. Shergold Boone, incumbent of a district church of Marylebone; Rev. Mr.
Jelf; Rev. Mr. Vaughan of Brixton; Rev. Dr. Hussey of Hayes: Hon. and Rev. Mr. Best ; 'Hon. and Rer. Mr. Erskine; Rev. Mr. Harness of St. Pancras. The appointment of deputy preacher at Lincoln's-inn is also the benchers of Lincolly in the gift of the preacher, but ment into their own hands.
Melropolitan Improvements.-A numerous meeting of the parishioners of St. Paul's Covent-garden was held into comsideration the propriety of petitioning Parliament from the act to authorise the formation of a new street west corner of King-street, and Long-acre a the most advisable course to be adopted to secure so desirable a carriage entrance into the parish. Resolutions were Bedferd to to request his comme should wait on the Duke of various holders of premises in the line to solicit their support ; and that a committee should be formed to carry out the object who should report to a future vestry. It presented to Parliament on the subject.-With the exception of a few houses at the Whitechapel terminus and some emaller tenements near Spitalfields Church, nearly all the nd of the down on the site of the new street at the East iababited by the poorest classes, and a dhe rict previously houses has been of great benefit to the neighbourhood, as the want of drainage and ventilation and the crowded source of disease it was covered rendered it a frequent on the completion of this line of road to carry another oblique street from it to the railways at Shoreditch, by he northernunication will be opened and and river-side. The Eastern Counties Railway docks taken down many houses in Bethnal-green and having ditch, advantage has been taken of their removal to improve the neighbourhood by the erection of new streets houses.
Lieutenant Munro.-The daily papers state that it is She Royal Horse to be Lieut. Munro's intention to leave with the view of permanently residing abroad. His household furniture, \&c. has been sold this week, which appears to confirm the rumiour that he does not now intend to rev lake his trial.
chapel at Camberwell -This popular preacher, whose numerons congregations not only from the inh attracted the neighbourhood but from different parts of the metropolis, has been appointed Principal of the East India
College at Haileybury, and will the chege aith which, and wil consequently retire from is not known whether he will vacate his preferment as Chaplain of the Tower.
Freemasonry. - A grand lodge was held at the Freemasons Hall on Wednesday week, for the nomination of of England, rendered vacant by the decease of H. R. H. the Duke of Sussex. The Earl of Zetland, pro. erand Master, and the Marquis of Salisbury, Deputy Grand Mroposed by Brother Peter Thompson, and seconded by Grother Janies Gibbins; and the latter by the junior The barden, and seconded by one of the past masters. The ballot for the election will take place at the next grand lodge in March next.
of Willias \(s_{3}\).- On Tuesday an inquest was held on the body Park: Johin Jood, a gardener and gate-keeper of St. James's tere both employed in the enclosure of St. James's Park as gardeners and gate-keepers. On Saturday morning sharpen someceased went over to the Horse Guards to sharpen some gardening-tools. Deceased was in the act of stone, when bill-hook and witness was turning the grindstone, when deceased fell backwards on the ground appa-
rently quite lifeless. Witness raised deceased from the ground and carried him to the Westminster Hospital. He was evidently quite dead. He had never complained of being unwell, and appeared up to the instant of his death to be quite dead when brought to the Hospital, and there was no doubt that he had died a natural death. The jury returned a verdict in accordance with this evidence.-An inquest was held on the 8th at the Model Prison at Pentonville on the body of John Bremner, aged 24 years, who was removed into the prison on the 30 th May, 1843, from Aberdeen, where he was sentenced on the 27 th April previous to 7 years' transportation. The Coroner instituted a minute inquiry into the management of the prison
and went with the jury to the cell the deceased had and went with the jury to the cell the deceased had
inhabited, and having carefully examined it expressed themseives pleased with its size and appearance, and with the bed and everything else that it
contained. Among the witnesses examined were five prisoners, and in order that they should not be selected persons, the men numbered \(1,2,3,4\), and 5 , were produced. Their examination was conducted in the absence of all the officers of the gaol. One of the prisoners was
the second who had entered it. The prisoners then, in answer to a variety of questions from the Coroner as to their treatment, all concurred (though examined separately) bearing testimony to the uniform kindness of the Governor, physician, warders, teachers, and other officers of the prison. They also spoke of the sufficiency of food and of their comfortable lucation in the cells ; but two complained that the cells were too close; one of the two however had a difficulty of breathing. They all appeared very grateful for having been taught trades by which they could support themselves when set at liberty. Some complained of the solitude and silent system, and one added that his annoyance in this respect arose chiefly "from his inability to tell people how grateful he was for the kindness shown to him." From the statement of another prisoner it appeared that they were allowed to see their wives only once in three months. At the close of the examination the coroner requested the attendance of the first prisoner lio Rees, and a witness had complained that his cell "was sadly too close." That might have seemed so only from his difficulty of breathing, but the last prisoner effect ofound his cell too warm. He also mentioned the that complaint was not common in the prison but the man should be a basket-maker. The Coroner then a passion for reading the Bible. The man, he said, had spoken with tears of gratituce of his treatment, but said he felt fagged and weakened, and it was evident from his description and appearance that his brain threatened to become soft, probably by constantly dwelling on what he could not understand. He would advise the Governor to stop that tendency, or the portals of Bethlehem would soon be open to the man. The Governor and Dr. Rees promised to give attention to these suggestions, and the jury having returned a verdict that "John Bremner died a natural death from pulmonary consumption," the court was dissolved, with many expressions of gratification on the part of the jury at the facts elicited as to the kindness and attention bestowed on the prisoners.-An inquest has also been held on the body of Charles Shipley, formerly a clerk to Messrs. Williams and Deacon,
bankers, Birchin-lane, who was under sentence of portation fur seven years on a charge of embezzling 4022. \(7 s .6 d\). It was proved that deceased died of an affection of the brain, and that he came out of the infirmary of Newgate straight to the prison. The coroner remarked that such a practice is very unfair to the medical officers of the prison, and was calculated to 8 well the fatal cases regretted," he said," that no statement that the man had just come out of the infirmary at Newgate was sent here, so as to put you on your guard respecting him. The extremely satisfactory respecting the prisoners; but I believe that if an indication had been made to Dr. Rees on the subject, and he had understood the extent of his power in refusing admission to a sick person, we should the death was produced by a natural cause, and there our inquiry ends. With regard to the surgeon's certificate from Newgate, his reply to us, if we had him here, would only be that in giving it he fulfilled the condition of the law, and that his official duty as surgeon of the gaol ter-
minated there, as he is only required to certify that the prisoners are not affected by any putrid or contagious disease and are fit to be removed." The jury, without hesitation, returned a veraict that deceased bad died A natural death, caused by an effusion of water on the brain." A relative of the deceased then came forward, and said he
should retire from the court to tell the family that the treatment of the deceased in that prison had been per fectly satisfactory, but that he could not say the same with regard to his being sent there from the infirmary at Newgate.-An inquest was held on Saturday on the body of Lieut.-Gen. Sir John Taylor, whose death was announced thar obituary last week, and after a long inquiry Mortality of the Metropolis.-The number of deaths registered in the week ending Saturday, Dec. 2, was as
follows:-West Districts, 154; North Districts, 198 . Central Districts, 211; East Districts, 257 ; South Districts, 267 ; Total, 1,087 (males, 572 ; females, 515 ). 442 females) ; and for the last fire autumns, 908.

\section*{租robimcial Nebos.}

Incendiary Fires.--During the last fortnight the county of Bedford although generally tranquil has been disturbed by repeated nightly fires, and there is evidence to show
that they have been the work possible to distinct to assign to the commission of such mischief any appear or probable motives as the agricultural labourers districts be generally more contented than in other rural in the barn of Alderman Higgins of Bedford, on the Kimo bolton-road, by which an old soldier lost his life. Two persons were apprehended on suspicion, but were discharged for defect of evidence.-A large barn and outhouses on the farm of Mr. Eames at Hownes near Ampthill were destroyed on Saturday morning, the incendiary has been apprehended and committed for trial on his own confession.-On Sunday night a fire took place at the village of Stockton, Norfolk, on a farm in the occupation of Mr. Grimmer, and in a short space of time large barn filled with the produce of 20 acres of barley was entirely consumed-The barn of Mr. Matthews farmer at Stockeross, Berks, containing a quantity of corn was fired a few evenings since, and with the whole of its contents totally consumed. A poor man vamed John little barn and all it contained burnt to the had his There is little doubt that both these fires were caused by incendiaries.-On Thursday night the 6th inst a fire by discovered in the formbuildings of Mr . Kirby of was worth, Cambridgeshire. The flames broke out at halfpast 11, and notwithstanding every exertion the barns, poultry, and the produce of 500 acres of 17 pigs, the pouitry, and the produce of 00 acres ond, with a cotstanding. There is no doubt that it was the act of ans incendiary, as it orisinated in a barn where no ofe an incendiary, as it originated in a baru where no one had o'clock a fire ccored in a larmord about ive Fyson of Fen Ditton, shont two miles and ang to Mr . Cambridge Fen Ditton, sbout two miles and a half from Cambridge. The yard contained 17 stacks of every description of grain, two large barns, a granary, pigeonhouse, cart-hovels, piggeries, and other outbuildings. The minutes frome out in a stack o minutes from the commencement the whole of the stacks were in a blaze. The labourers manifested little desire
to aid in extinguishing the fire. The engines were chielly worked by members of the University who actively employed themselves in attempting to save the property. There appears to be no doubt that it was the work of an incendiary. Two men have been apprehended, one of
whom still remains in custody. The loss cannot be less than \(5,0001 .-\) On Monday evening a barn containing unthreshed wheat was fired on the premises of John Hindley, being part of Hurst Hale farm near Chat Moss and on the line of the Liverpool Railway. There seems ittie doubt that hie object of the incendiary was to rob the bouse, the fire being kindled just opposite the door, and a man called Hayes has been apprehended on
suspicion.-On the night of the 5 th iost, a farm called suspicion.-On the night of the 5 th iost. a farm called Noouses in the parish of Sawbridgeworth, in the occupatogether with the outbuildings and their contents. Government have offered a reward of 1001 . With a pardon to the accomplices, and a further reward of \({ }_{2}\) 1001. has been offered by the Phoenix Fire Office for the apprehension of the incendiaries. The following raras have also been issned:-ror the destruction of barns belonging to Mr. Hindley, of Hurst-ball, Culcheth, and a barn the property of Mr. Blackburn, of Hay Astley, near Manchester. For barns and outbuildings of Mrs. and \(50 l\), by the Suffolk Insurance-office. For a stack of barley belonging to Mr. G. Gayford, of Rymer-house, Suffolk, 50l, by Government, 50l. by the Duke of Grafton, and 50l. each by the Norwich Union and Blackburne Association. For the barns and outhouses of Mr. S. Buck, of Hawstead i.odge Farm, Suffolk, 100\%. by Government, Sussex Equitable. For a stack of barley belonging to Mr. Kersey, of Fakenham, Suffolk, 50l. by the Duke of Grafton, 500 . by the Suffilk-office, and \(50 l\). by the Brack-
burne Association. For the bean-hovel of Mr. French, of Whitfield, two carts and hayrick damaged. For the beain-rick of Mrs. Brown, of Rothwell, Northampton, with wheat-riek barley-rick, and range of beast- hovels, Nead of Easton, \(52 \%\). 10 s. by the Norwich Union. For. the barley-stack of Mr. Gooch, of Honingham, 105l. by the Norwich Union, and \(105 l\). by Mr. Gooch.

Ashlon.-The turn-out at this place and Staleybridge has sucidenly terminated much sooner than was expected from its estensive ramifications. All the hands resumed their employment on Thursday week and at the old rate of wages. This timely cessation of hostilities has given great comfort to many innocent individuals and families. Brighton.--Since the late fatal accident by the falling the cliff at Rottingdean other portions have given Way, and on completely undermining the carriage-road and threaten. ing move the palings into the middle of the road, leaving only sufficient room for one carriage to pass at a tone.
bers of visitors are daily attracted to the spot to see the destruction made to one of the best roads out of Brighton. Measures are in progress for cutting a new road from Kemp-town to Rottingdean more inland, as means can e annulal dinner of the District Constrvative Association took place at Brill on Thursday. Mr. J. Stone
of Crendon in the cbair. After the usual loyal and local toasts the Duke of Buckingham said the chairman had asked him to give the toast which stood next on the list, a toast which it was at all times grateful to him to propose,
and which on the present occasion was doubly gratifying, and which on the present occasion was doubly gratifying, -ud in the countr of Bucking \(d\) frequent opand in the county of Buckingham they had frequent op-
portunities of drinking that toast and of hearing speeches portunities of drinking that toast and of hearing speeches
upon that most important topic-the state of the agriupon that most important topic-the state of the agri-
culture of the country; but if ever there was a time which culture of the country; but if ever there was a thme whis Who had been returned to Parliament by the agriculturists for the express purpose of supporting British agriculture and the British farmer it was the present. And he could heartily say that he wished the speeches which he had
heard made by many for whom he had great respect had heard made by many for whom he bad great thespectentle-
been carried out to their full eatent and that those gent men had not detracted from the value of their speeches by contrary votes. To the British farmer this country owed a vast debt of gratitude for the manner in which for many years past he had laboured hard in cultivating the soil of this
country and for the indomitable spirit which he had evinced country and for the indomitable spirit which he had evituced in him to say more on this subject, inasmuch as he had so often and so repeatedly stated the opinions and feelings which he entertained, and which had never undergone the slightest change. He could but again express his convic tion, that if the agricalture of this country was not supported the farmer could not compete with the foreigner and whenever that occurred they might depend upon it Unchanged in those opinions, which he had recorded alike in that country in lis former place in the House of Commons, and in his place in the House of Peers, he stood there now only to repeat them word for word, and to call on the members for that county steadily to perform the duty to which they devoted themselves on the hustings. He solemnyy caled on the representatives United Kingdom to come forward now and steadily to maintain the opinions which they had broached at the hustings, and by their votes record their firm adherence to the cause of satisfaction which it gave him to propose "The health of the British farmer," whose value and the sterling honesty of whose heart he most fully appreciated. He called on them to rise and drink with hearty cheers "The health of the British Farmer, and may he overcome the difficulties which now threaten him." Mr. Stone, a farmer, returned thanks with mueh spirit ; and several other toasts of local thanks with much spirit; interest were proposed before the close of the meeting.
Bristol. -The local papers state in reference to the death of Mr. Mountjoy of this town, whose body was exhumed last week as stated in our last, that on the post morlem examation a corsed, and in the absence of poisou the canse of death is attributed to the swallowing of this pin.
Carmarthen.-The Special Commissioners have recently obtained the opinion of the law officers of the Crown on a practice affecting the administration of the
turnpike laws which has prevailed to a considerable extent turnpike laws which has prevailed to a considerable extent in Carcoarthenshire, and has been the subject of much complaint on the part of the poorer classes of farmers. It
frequently occurs that the farmer, having carried his profrequently occurs that the farmer, having carried his pro-
duce to a town or market, and paid toll at the gates, returns on the same day, carrying home in his cart some articles or goods for a friend or neighbour, which be conveys either gratuitously or in consideration of some
small payment for his trouble. It has been a common practice with certain toll-collectors to charge carts thus repassing on the same day with a second toll, applying to such cases a elause contained in most local acts, which renders stage carriages and vehicles carrying passengers or goods for pay, hire, or reward, liable to toll for every
time of repassing. The Commissioners, considering that the practice in question proceeded upon a misapplication of this clause, and that the additional toll was legally chargeable only on vebicles of the nature of stage-coaches, carriers' carts, and such as regularly ply for hire between certain places, referred the point to the Altorney and Solicitor-General, who have given their opinion that in these cases a second toll cannot be legaliy demanded.
Derbir,-We copy the following paragraph from the Derby Reporter :- "There is no part of the princely and munificent generosity of the Duke of Devonshire that will give more general pleasure than his Grace's direction to gratify the public to the utmost extent consistent with the comfort and enjoyment of the Royal party, We have great pleasure in stating that this liberty was not abused, except in one instance. A mmall brown crystal is bissing
from the conservatory. We understand it is a rare specimen, and cannot be long concealed if exposed for sale. We trust for the honour of the county that this crystal will be forthwith restored to the place from whence it was taken, and that it may not be said the Noble Duke's munificence is shamefully abused. a thoughtless act of some person, who as soon as he
knows the value attached to it will restore it immediately." knows the value attached to it will restore it immediately.:
Footscray. - On Wednesday the coroner and jury impanelled to investigate the death of Maria Plummer, re-assembled for the fourth time at Sidcup to prosecute the inquiry. Our readers will remember that the dethe inquiry. Our readers will remember that the de-
ceased, who was separated from her husband, a gardener ceased, who was separated from her husband, a gardener in the service of Lord Bexley, and who agreed to allow to do so been rendered houseless and destitute. In this to do so been rendered houseless and desitute. In this death applied to Mr. Pritchard, surgeon, of Sidcup, for a letter to Mr. Banks, relieving overseer of the Bromley union,
which he gave her. She saw Mr. Banks on the following norning ; but instead of his relieving her he went to and her husband, and subsequently left but before that time arrived she died. The inquiry was adjourned to trace if deceased delivered to the relieving officer the letter given her by Mr. Pritclard, in which the acts of inhumanity were deposed to on the part of the busband, and it having been proved that her death was accelerated by neglect and exposure to cold consequent whether the responsibility lay with the officer who had not relieved her or the husband who had neglected her There being no distinct evidence that the relieving officer eceived the letter alluded to, the responsibility fell upon protracted investigation the to maintain her. After a protracted investigationhter" jury ainst George Plummer verdict of and ansand the coroner made out his committal to Maidstone gaol.
G Geors . An inquest has been held here on the body of George Grey, a young man who was killed in a pugilistio to be regretted that the evidence was not sufficient to throw light on the names of the whole of the parties connected with this disgraceful transaction. The medical testimony lence and injuries he had received, and it was also as clearly proved by the witness Davies, who had been admitted as evidence, that such injuries were inflicted a short time previously in a conflict with Henry Ball. The actual
origin of the fight was left in mystery, but it was shown that the seconds were fighting men, who although they had escaperl for the present could not, inasmuch as they
were well known to the police, long evade the law. The Jury returned a verdict against Henry Ball as principal of "Manslaughter", in the first degree, and a veraict of "Manslaughter" in the second degree against Joh Grady, Tucker Smith, James Krowlton, and other per sons to the Jurors unknown, acting as seconds, time keeper and bottle-holder at the fight. The Coroner the committed Henry Ball to Maidstone Gaol to take his trial. The other parties have not yet been apprehended,
Huddersfield.-The first meeting in Yorkshire, in connexion with the eflorts of the Anti-Corn Law League was held at the Philosophical Hall on Thursday week. Mr. Cobden, Mr. Bright, and Mr. Moore addressed the meeting, and resolutions in favour of free trade wer unanimously passed. At the close the chairman announced the total amly double the sum realised last year Ilford.-At a meeting of the parishioners last week to consider the correspondence between the Bishop of London adopted unar, the following resolution was proposed and in the opposition which has been raised to the introduction of the weekly offertory and the other changesinh to request the churchwardens to represent to the Vicar our will ments on the subject, and our ears the weekly offertory, and returning to our former simple mode of worship.
irkdale. - Five poachers have been committed for trial the Earl of Derby's gamekeeper at Knowsley on the 10th ult. They have been committed on the evidence of an which the the gave a detaisoulf, and four others who have not yet been arrested, journeyed to Knowsley on the night of the fatal occurrence, and of the way in which the murder was committed.
Lancaster.-On Thursday week a gang of poachers, nearly twenty in number, entered the preserves of Thos. Aspinall, Esq., in Little Mitton Wood, in this county, and were in pursuit of game when they were surprised by fhe keepers. At John Schofield, one of the gamekeepers, and wounded him dangerously. Whilst the gamekeeper lay upon the ground, shot and disabled, he was beaten with
bludgeons until he ceased to show signs of life. The poachers afterwards escaped. Mr. Aspinall has offered a reward of \(100 \%\). for the conviction of the offenders,
Leeds-A meeting the favour of League was held in this town on Wednesday, Mr. H. Stansfield in the chair. About 800 persons were present.
The meeting was addressed by Messrs. Cobden, Bright, The meeting was addressed by Messrs. Cobden, Bright, Moore, Fox, and Ashworth, and
collected for the League Fund.

Leicester.-A meeting was held in this city on the 30th college in the Midland Counties for the instruction of young men designed both for spiritual and secular purposes, against whom the universities of this country are closed. Another feature is the founding of a class especially designed for the service of Christian missions, to the members of which it is proposed to communicate such a knowledge of medicine and simple surgery as may qualify them to attend to the physical interest of those among whom they may labour, and at the same time to afford such a knowledge of science in general as may enable them to promote the secular and commercial as well as the spiritual interests of the people they may visit. LeiLiverposen named as the seat of the project the League Fund is making rapid progress in this town. The total subscriptions up to Saturday night amounted to \(5,095 l .12 \mathrm{~s}\). A meeting was held a few days since in the Amphi-
theatre, Mr. Thorneley, M.P., in the chair, for the purpose of raising subscriptions on behalf of the Fund, and of hearing Messrs. Cobden and Bright on the subjions of free-trade. At the close of the meeting subscriptions were collected, and no less than 4,1001 . were raised in the course of the evening, being nearly double the whole mount of last year's subscription, which extended month or six weeks. Before the close of the subscription,
it is beliesed that not less than \(7,000 \%\). will be raised in his
Newport.-The last accounts from the penal colonies state that Geacla the solicitor and step-son of John Frost, or forgery, has been after working 20 months upon the oads allowed a " ticket of leave," and hired as a free servant to his wife, who followed him out. Frost, who is eleased from the penal gang and is in a situation as clerk has sent a letter to Mrs. Frost and his daughters desiring them to go out also, in the hope that Mrs. Frost. will be allowed to hire hrost, Williams, and Jones, that the Home Office has finally determined never to allow them o return to their native land, they have resigned them selves to their fate, with a determination to secure to chemselves kind treatment by their future good conduct. -The letter which Mrs. Frost has received from he back from the penal settlement whither they had been ent for having attempted to make their escape. Frost the lon his leg, and Jones continues to hold the situa tion be ofained shortly after his arrival in the colony
Oxford.-The Rev. G. W. Hall, D.D., Master of Pem broke College and Prebendary of Gloucester, died at his lodgings at the colege on the loth inst. He had 1809 head or his -The members of the aniversity wo the validity of the degree concerred upon wi. Everett the American Minister in June last have submited legalits Relly, Q. C. Mr James R. Hope and Mr. Edward Badeley on perusing this case have given the following opinion:-.. We are clearly of opinion that, wnder the ciren the grant of the Vegre in question was invalid. It was the duty of the Vice-Chancellor as the presiding officer the coted with such regularity and order, as would have afforded those pechregularity and oritl to wo portunity of expressing their opinions and giving their votes in the usual manner. 'The scrutiny which was de manded ought to have been allowed, and if the noise was so great as to prevent the demand from being heard, wo think that the Vice-Chancellor should have adjourned the meeting, or have adopted such other measures as were whassary to stop the confusion and eable hese proceed wat was passing. As the irregularity of these prowich are applicable to the meetings of all corporate bodies, and with the statutes and customs of the University which regulate the meetings of Convocation, we are of opinion that the decree is a nullity and that Mr. Everett cannot University of Oxford.
Portsmouth.-On Monday the 44th Regiment, which is now doing garrison duty at Gosport, was presented with General commanding the district. The ceremony of consecrating the colours was performed by Archdeacon Wilberforce, who made an impressive address to the regiment and concluded with an appropriate prayer. lome diately after the consecration of the colours, Lady Pakenham presented them to the Ensigns who had been selected to receive them, addressing the regiment on their then addressed the troops stating that the attention of the whole army is fixed upon them; that the Commander-in. Chief expects that by the combined action of all ranks they will ctablish a hish regimental character, be distinguished for unanimity in promoting the welfare of the gurshed for acuracy in the performance of all daties, and for the enal regularity of conduct that reflects credit on and omparts 0 forl well-organised regiments, ond the par the service of the country arin the 44th to the field he was satisfied the Gallaut Fours will be found second to none in the career of glory. Salford.-A young man named Joseph Taylor, 23 years of age, whose mother resides at prestw, wis mother of \(20 l\). ; but the theft could not be clearly brought home to him. The prosecutor however, his eldest brother, stated that he had a much more serious charge against him, namely, that of having poisoned his father, a farmer at Prestwich, ia April 1840; and hilh laving about six weeks after that time attempted to poison the whole family. Evidence was adduced to prove that the prisoner attempted on several occasions to accomplish this purpose by mixing acetare of lead with the food ake by the family, and he was uitimately committod to tak his trial on the capital charge.
Slockport.-A man named George Fox a bailiff attached to the Stockport Court of Requests has been apprehended and committed to take his trial on a charge of having murdered his wife on Friday week in this town. He had absconded immediately after the death of wife, but was arrested by the police at Maple Bridge.

Windsor.-One of the severest runs ever known with the Royal Stag Hounds took place on Monday, the fisture having been appointed at Winkfield-row abou thed four miles from the kennel at Ascot. The field consisted
of about one hundred．The deer Sulky，who had afforded turned ont near Winhfield Church，and went away through Miss Farrand＇s Park for Faruborough and Elve－ tham，near Hartford bridge，in Hampshire，into Dogmers－ field Park，the seat of Lady Mildmay，where，after going a tremendons pare，hand was literally dead beat，and died before the pack and the few whose horses managed to con－ tinue the chase，had got up．Only fifteers（including Mr． Davis the huntsman，and the whips）were up at the finish． distance from point a little more than three hours；the but from the doublings and divergings the distance miles， over could not have been less than forty miles．The back from Dogmersfiel to the meet during the run and over upwards of sixty miles of country，a great portion of Which was of an extremely heavy character．

hold alt this as her separate property. The Master found that
the testator at the time of his deceasc was not possessed of any stock in the Monte di Milano, but he made a schedule of the
pr pr perty which he concelved passed. He included in it certain
Fre:ch certficates, ant also certffeates of the vienna loan, and other Bordereaux relating to the Neapolitan state nbligatinns
and he certified that they passed by delvery, and that the coumess de Zichy was entitled to them.
dale and the ad been given to him (Lord Langdale), and they appeared to be obligations of the several Governments by which the bearer
became personally entitled; and though the Master had found that they passed by delivery, the question was whether they
passed by the bequest. His Lordship then referred to several cases, and observed that they would not be considered as property, but only evidence of property existing elsewhere. Bank
notes were also evidence of title, but there was a difference as to them, and it arose from the common habit of men who har reated them as cash; but in the present case the Court was oniy extended to those things in Milan and Lombardy. The exceptions to the report must therefore be allinwed.
Central Criminal Court. - The Sessions commenced on
Monday, but few cases of public interest have occurred. The nly case which calls for notice is the following:-George Davis stealing in the month of October last an mmense quantity of
furniture and cettain deeds, papers, and writinga, firmerly the property of Captain Livingston, deceased, but stated to be the property, first of Samuel Cooke, Esq.; secondly of his Grace the Archoishop of Canterbury; and in the third count the property It appeared that as soen as the gentleman died, his servant, emale prisoner converted it into money. The yury immediately George Davis. The Common Sergeant called them up for judg ment and said this was a most important prosecution, and it wa the bounden duty or the court to throw the mantle of protection over let servants and persons in trust know that they were no to usurp authority and then attempt to shield themselves by Wilful and corrupt perjury. The sentence of the Court was, that hey be trans ond
King was charged with havine on the fth Oetriber last murdered her infant, a fomale, child by drowning her. Mr. Macaulay con ducted the prosecution, and Mr. Meline (on the request ands wero ew and simple. On the 7 th Octover the phe \(n\) state the own dwelling with a child in her arms. She was in a station, and had just been discharged from the workhouse. She applied for food to give her child, which one of without her baby, and being asked what had become of it adof the locks of the canal on the 15 th October. There was no question that the priscner had thrown the child in to the capal, The Jury acquitted the prisoner on the ground of insanity.-The Grand Jury have made a presentment to the Judge which will
be forwarded to the Secretary of State, in which they state that the holding the half-year's Assizes and Quarter Sessions at Coventry has produced great dissatisfaction, and that in thei opinion the county town or Warwick is the natural, true, an whole county, exclusive of Birmingham.
Western Clrcuit, Exetsr.-This Winter Assize seems to
have given great dissatisfaction to all parties in this Circuit. Very few magistrates have attended-so few that the Judge has complained of it, saying he should like to have seen a little more
respect paid to her Majeaty's Commission. None but very junio members of the bar have been present, with the exception of the loss of tume and expensc. The prisoners have alfor it is mitted with refurcuce to the commission for this cuy, which after all that has been sadd about it, has been so prepared as no
to incluce willun its operation the city of Excter, which of all to aces pertays needed it the most
("haite; Stiphens was indicted for a highway robbery on the person of Thomas Boon at Devonrort on the 30 ha July, and steal-
ing from him six sovereigns. This was a remarkable case from the prisoncr beulg both deaf and dumb. He had been bowever such unfortunate persons, and could not only read but write ncsses gave their evidence which was taken down by one n
the officers of the Court, and then inspetedi by the Learne Jindge. It was then handed to the prisomer and read ouer
by li:m, and the gentleman at the head of the Dcaf and Dumb in titulund was present, and by his side, to see that he prowas asked to put any questions he wished, and did so on one or
two occasons. The lapd signs hy which their comunas catwo occasions. The facts proved on the part of the prosechion were these:--The
grosfcutor was fist called, and statcd that he was a woikman at the dochyard at Devonfort. On the 30th of July he had been
from home for the plarose of makng shme purchases, and had takril six soverelgns with ham. He returned some hat ate aind
a litte in liquer. As he was pasing along the roail having his hroat and 1 m mediately feit the assalant's hand in his pocket. the same time the party made a "roar" in lis face whach
thought could only have been made by a dumb person. A scufle ensued during which by the light of the gas, which was at no great distance, he saw one of the sovereigns in the road. Thinking the rowber had to pick it un and and stopped to pick this assilant ran oft. He stayed at the spot for a
he did
minoute or two looking for his money, but could find nothing but the sovereign he had first seen. He then weat to the policestation and gave such infermas proved that the prisoner was apprenension.
near the spot of the robbery about the time the offence must
have been committed, and that immediately after he purchased several axticles of uresz for all tof which lie paid in told himithe offence with which be was chappehcr.d him, oner inquired whether he should be taken to the Townitall ronstatie then urfured what 1 e had done with the munej, and in ain these ca cs was a slate, wheh the prisoner carricd about with him for the phrpusc.) The prisoner when za.ied upon for
 turned, and secing it was the prisoner laid hohl of has anm 'hut
that not lihang a drunken companon the shou, him off. The pronce w ir then made signs to hin \(t\), go and bave something to
drink, and oh the money nut of his ocket and slis wed it to Cresswell having summed up the case, the Jury alnost immedately found the prisoner Guilty. A previous conviction was then proved against him, and it appeared from the gaoler's evi-
dence that he had been twice convicted and twice suffered imprisonment. The Judge desired the interpreter to tell him that,
as he had been (wice convicted before, he felt it his duty to
sentence him to ten years' transportation. The young man was Hone Circuit, Chelmsford.-Elizabeth Hammond, a marchild, three weeks old, by nearly severing its head from the body with a razor. The Jary returned a verdict of Not Guilty, on the ground of insanity. The Court gave directions that the prisoner
should be kept in safe custody until her Majesty's pleasure should be made known respecting her, dictment with having feloriously shot at and wounded his wife, with intent to murder her. The Jury found the prisoner guilty bodily harm ; and Mr. Justice Erskine sentenced him to be transported for life.
Oxporn Crrcuir, Gloucester.-The Calendar at these Assizes contained the names of 36 prisoners, all of whom with the next sessions, as the offences with which they are clarged are mostly of an unimportant character, consisting principally of trivial charges of larceny, The Grand Jury ignored the bill agains William Jones and James Bick for Manslaugliter, whose ex-
pected trial excited some interest in the county, and for whose prosecution Mr. Keating had been retained on the part of the John Peters was indicted for stealing on the 5th inst., at Charl gold pin, the property of Henry Bulkeley, Esq. For the defence t wa.s pretended that the prisoner was ignorant of the owner of the property, and that the only reason for his having been sent to take his trial was a desire on the prosecutor's part to save the prof ered reward. His Lordship in summing up observed that it was understood and gexierally known. Nothing was more common o more crroncous than the opmion that a party had aigitt to appro-
prate to has own use any article which he nught clance to find Now no donbt, in pont of low, such an act was untanf felonious whiess the radercd it qupossible were met nwner to be ascertained, o was of such trivial value as to leaif to the incerence that the jate
 the only argament which had been urged with any force apon the prisoner's behalf was that which, in his mind, tended found a verdict of Guilty. A previnus conviction for felony
was proved, and the Court sentenced him to imprisonment with hard labour for siz months.

\section*{\(\mathfrak{C y e}\) Gativnets \(\mathbb{C y t a n t i c t}+\)}

\author{
SATURDAY, DECEMBER 23, 1843.
}

We are to blame for not taking an earlier opportunity of resuming the question of Timber-pruning; and if some of our recent correspondents haveregarded our silence as an acquiescence in the sentiments of
others, we cannot say that we have just cause for complaint. We should have taken our side sooner.
Not, indeed, that we have not done so formerly ; but it is long ago, and many have probably forgotten
by this time what the views fare that we actually entertain upon the subject. PRUNE NOT AT ALL having been taken as our motto-if ue were to assume
a sylvan coat of arms-all the reasoning that was cona sylvan coat of arms-all the reasoning that was con-
nected with those words has been forgotten, and the qualifying terms, 1F YOU CAN HELP IT, have been entirely left out of view. Nevertheless, if those who Interest themselves in such considerations will do us the favour to turn to our previous articles, and especially to pages 364 and 523 of our volume for 1842 , they will find that what is now sometimes called "the very little difference between us and some of those who are now with justice regarded as great practical
authorities in Foresting. Mr. Billington, indeed, in one place, claimed our views as his own; but, as we then stated, they belong to neither him nor us, but Physiology.

The methods employed by Dr. Thackeray and Mr. Gavin Cree in the management of woods, being those
which have been most prominently introduced into which have been most prominently introducex into our pages lately, we will now proceed to examine
them, and see how far our views are in opposition to those experienced planters.
Dr. Thackeray's system
Dr. Thackeray's system is explained at pages 644 and 677 of this volume. From the statements there
made we collect the following that are its principal made we collect the following that are its principal
features. Instead of attempting to cure injurious growth by the axe and saw, he takes means to prevent its occurrence. Instead of sending a crowd of ignorant he provides a sensible tractable woodman, teaches he provides a sensible tractable woodman, lesson, and keeps kim constantly employed all the year round. This woodman has a pruning-knife and chisel for his only tools. Large branches are not
permitted to grow for years, only to be lopped eventually for the fire-heap or the charcoal-burner, and to ruin timber by the huge scars they leave. But action every day all the year round. Finally, the woods are "unmercifully thinned, and heallh, light, and air, pervade them. By in mintshire are covered with trees whose vigour is attested by their growth. In 26 years Oaks, Larch, and Ash are to be found 20 feet high. The cost of this operation is not stated; but supposing that the Welsh woodman is paid \(50 l\). a year, we have this result attained at the cost of calculate how far this outlay can be paid by the thinnings of the plantations.

Now it is impossible for any man who understands foresting to doubt that a system like this is precisely what should be adopted in all cases whatsoever. It
is this beginning at the beginning in the right way, and an incessant perseverance in doing so, that has produced the results which those who have seen Dr. Thackeray's woods have so much admired. But ing differs from what we have, in ignorance of the existence of the plantations at Nerquis, constantly advocated?
"Prune not at all should be the maxim of a forester. Plant thinly, thin constantly, stop carefully, and leave the rest to Nature." These words are to be found at p. 363, and seem to us to state briefly the whole system observed at Nerquis, with an exception, to
which we shall presently return. But there are some minor points connected with Dr. Thackeray's management, as we learn from the account given by Mr. Humphreys at p. 644 . Acorns are dibbled where they are to remain; the advantage of this is
most particularly insisted upon at p. 523 of our volume for 1842, in the case of both Oaks and Spanish

Chesnuts. All wounds by the pruning-knife are made close to the main stem, and when the branches are young; this is insisted upon at p. 115 of 1841, and
the reasons for it are there shown to be, that, if young the reasons for it are there shown to be, that, if young
shoots are not removed close to the stem, the remainshoots are not removed close to the stem, the remaining part dies, and the lips of the w
till the snag has fallen off, \&c. \&c.
We have alluded to one point in which we do not appear to agree with Dr. Thackeray. He is represented to be continually trimming his trees up by removing the side branches. We, on the contrary,
have advised that the side branches should be merely stopped, and the rest be left to Nature. Who is right? We refer to the magniticent timber of Nature-Dr. T. to his own trees. The question is one which can hardly be answered conclusively in the absence of pose of deciding the point. Possibly Dr. Thackeray may have made such experiments ; in which case, we trust, if this should meet his eye, that he will
favour us with them. Our opinion has been founded, favour us with them. Our opinion has been founded,
in part, upon the well-known method observed in the in part, upon the well-known method observed in the
nurseries, of forming standard fruit-trees. When this is to be done a single vigorous shoot is selected for the stem of the tree, and all the others are removed. The stem that is left grows rapidly, and produces an abundance of laterals, a portion of which form the completed at the end of the season. Now all the laterals are carefully preserved during the growing season, until a few weeks after midsummer, when
they are stopped or shortened back a little way, so as to prevent their going on growing any longer. In the autumn, when the leaves have fallen, these laterals are cut off close to the stem, in order to make it look clean ; and not till then. Experience shows that a stout standard stem cannot be obtained if the laterals are not allowed to grow. This proves that more timber is obtained in one year by leaving the lateral shoots on an upright vigorous stem than by cutting them off; and if such is the case during one year, we submit that the same thing will go on for any number of years. In other words, if the stem of a tree deprived of laterals produces in one year 10 cubic inches of wood, while the same stem, furnished with laterals, produces 12 , it seems to follow that the time which will furnish 100 cubic inches by close pruning will furnish 120 by mere stopping. We admit, however, that this is a doubtful point, upon which evidence is wanted; and the following observations of a correspondent, "A.," are well worth consideration in the absence of such evidence :-
"Although I am strongly opposed to the removal of limbs or branches of trees of advanced growth,
am disposed to think that a needless prejudice exists against pruning or training of trees at an early age. I conceive that the forest-tree, like other branches of the vegetable kingdom, is by nature given to man, with the
view that he should by his skill and industry direct and modify its growth to suit the various purposes for which he may design it-whether as a stately ornament of the pleasure-ground with branches extended to the turf, or
for the purpose of supplying the dock-vard with a trunk for the purpose of supplying the dock-yard with a trunk
of great length and girth. We are doubtless indebted to of great length and girth. We are doubtless indebted to
nature, unassisted by artificial pruning, for many of the finest timber-trees that have been supplied to our navybut these trees are pruned by nature, being produced in
woods, so close, that for want of sufficient air the lower woods, so close, that for want of sufficient air the lower
branches die and gradually disappear. From this circumstance the stems grow to a great height and produce good timber. Young as these branches may be when they
die, they must necessarily remain some years in a decayed die, they must necessarily remain some years in a decayed
state before they fall off close to the bole ; and during this time, as the trunk advances in thickness, so must they be inclosed in the living stem, and even form dead knots until the bark becomes united and a continuous layer of young wood is formed under it. But if by artificial means the young branches were cut off at once close to the stem,
the bark would unite without delay, the wound would heal, the bark would unite without delay, the wound would heal, and in a short time it would require close investigation to detect the trifling blemish that might remain. If we take a small fruit-tree we are enabled to produce, at our will, either a standard with an erect stem, or a wall-tree with pliant branches, capable of being trained as our fancy may direct. So, likewise, I am persuaded, may we winh equal facility and advantage regulate the growth of young foresttrees. If left to nature, under favourable circumstances, due attention to pruningat an early period, taking care to remove those shoots that are prejudicial, and to encourage those that are useful, will hasten the growth of the tree; and attention should be directed towards forming a permanent head as early as possible, at 'such height as may be most advantageous. In this way a beautiful set of will in due time become fine timber trees. As to the objection frequently raised against pruning-that by reducing the quantity of leaves on a young tree we deprive it, as it were, of its lungs, and thereby check its growth-experience teaches that this is not true. The young plant is endowed with vigorous vitan power, and
moval of its branches tends to promote even more luxuriant growth, and the trifing deprivation it has sustained is quickly more than compensated by an increased energy.
In concluding these remarks, we take the oppor-
tunity of setting ourselves right with a correspondent, letter signed "Quercus" at p. 677 . Our words "We quite agree" applied merely to the assertion that "we cannot walk or ride in any direction without being annoyed at seeing crowded or mangled plantations"a fact about which there surely cannot be two opinions. At the same time we are bound to add that there was no reason why we should have disagreed with the sentiments expressed in the remainder of the letter of "Quercus," written at a time when the management of the Nerquis plantations had only been described by Mr. Mumphreys, and not in the later and much clearer statement of
On another occasion we shall examine the principles upon which Mr. Gavin Cree's system of foresting is founded.
On several occasions we have endeavoured to show that the principal, if not the only, cause of the disease in Grapes called "shanking" is to be traced to the border in which the Vines are growing. A better proof of the correctness of this view than is afforded by the following letter could hardly be desired. It relates to a case where Vines, which, prior to the hard winter of 1837-8, bad been quite healthy, began to produce shanked Grapes after that season. We conjectured that all the surface-roots had been killed, and that the others had found their way into a cold wet subsoil Our advice, therefore, was to take up the Vines care fully, drain the border, and replant them with the roots near the surface. The account which Mr. Watson here gives of the result of this experiment is highly interesting

The Vines that were replanted here in 1841 have been a complete triumpl--so exident is the necessity of placing the roots near the surface. The froit produced by those Vines on the new border were quite clear from any symp-
toms of shanking ; the Hamburghs were of a jet black, with a blue violet bloom on them ; the White Frontignans were of a fine amber colour; the White Sweetwater was also very fine-while those Vines in the old border, under precisely the same treatment, had, as usual, the bunches shanked. As we only renewed rather more than one half of the border, with an intention of renewing the other when the first was in full bearing; the whole of the Yines were in the same bouse, and subject to the same treatment. The Grapes from the replanted Vines were perfect, no doubt from the roots being placed within the influence of solar heat, and in a border thoroughly drained. Grapes may shank from various causes, yet no doubt evil-as is me that the coldness of the soil is the great a well-preproved in a Vinery in this neighbourhood, with whole of the Grapes shanked. The surface of the border Was most injudiciously planted with Salvias, Fuchsias, Verbenas, \&c., and thus a complete shade was produced; the soil was unable to absorb as much heat from of rain all otherwise would have done; a great quantity colour, which would still further lower the amount changing in the which would still further lower the amount of warmth readered inactive, and were in a much colder medium than the leaves and branches. What proves this to be true is, that no plants were ever on the border before, nor were the Grapes ever before this year shanked.
We most particularly recommend these facts to the consideration of those who would refer "shanking" to other causes than can be found in the border.

EARLY RIPENING OF GRAPES ON OPEN
In this the northern part of Worcestershire, where the ripening of Agricultural and Horticultural produce is from a week to a fortnight later than in some of the warmer parts of the same country, Grapes are frequently destroyed by early autumnal frosts before they arrive at maturity. To remedy disappointment from such cause, some cultivators of the vine, years ago, inclosed the bunches of fruit singly in glass-tubes; others trained their Vines horizontally near the earth, and placed hand-glasses over them. Some persons have also entirely inclosed their Vines on the walls with glazed frames. Of these several practices we have had no experience ; but, doubtless, each one will aflord some advantage in respect to the more early maturation of the fruit.
As I prefer the long-rod system of training, so ably advocated by Mr. Hoare, by which the crop of fruit is conto small that if the fruiting branches only wer assistance of stimulated foliage, whilst those parts of the tree which were being trained preparatory to their bearing next year' crop would not be interfered with. Having a Vine five years old, which was prepared for bearing fruit the first time, and that on three short perpendicular branches I inclosed the centre one in a small glazed frame, only two feet nine inches long, by thirteen inches wide, with single panes of cluss seren inches wide on each side, meeting a common The fruiting-bunches being developed the laterals bearing them were shortened above the bunches and the frame fixed over the whole brach against the wall. This was done on the 22d of May. Of against the wall. course the inequalities of a brick-wall did not admit of the frame fitting very closely to it; nor did I think it desirable that it should do so. I would here mention that I think it would have been advantageous to the experi-
ment, had the glazed case been applied three weeks, or even a month earlier. I hare at all imes kept a thermometer within the case, and another near to it out of the case, and registered their differences at various periods of the day and night, in order to draw some general conclasions from the effects of the glazed frame. The results rather surprised me. It would, however, be useless to detail every particular ; to show the effects of the experiment in a practical rather than a philosophical view, it will be sufficient to state the main points.
The temperature within the case was at all times higher than the open atmosphere, but their difference varied greatly according to circumstances. When the sun's rays were powerful, and fell directly on the glass, the thermometer within the case ranged from twenty to twenty-five degrees above the one which was exposed. In the night, when calm, they fell to within one or two degrees of the same point. These form the extremes of variation; and of course the approximation of the two was always in favour of the protected branch of the Vine; inasmuch as the at,mosphere within the case, when warm,
cooled more slowly-and when cool, heated more rapidly, than the open air. When I have named one orher circumstance, the principal influences of the glazed frame will be clearly appreciated. When suddenickly lowered blew for a few minutes in a warm day, and quicks the air in the temperature of the open air several Ten to fifteen degrees in warm weather was a very common difference degrees in warm weather was a very
of the thermometer during the day.
I will now mention the progress of the Grapes to matuI will now mention the progress of the Grapes to maturity. The case was put over the branch on the in the case; those without the case, on the 5th of July. On the 20 th of July, the berries in the case were well set, and as large as peppercorns: without the case, the flowers had mostly fallen, and the young fruit also was rapidly falling off from cold nights. At this time the adyautare of the protection was most evident-the most perfect exposed bunch was left with only eight berries on it, and some with only one. On the 5 th of September, the first change of cold not take protected with that out of the case till three weeks afterwards
-the 26 th of Scntember, at which time the fruit within the case was tolerably well ripened. Had the glass case been applied three or four weeks earlier in the spring, it is reasonable to believe that its use would have forwarded the ripening a month at the least. In the present instance it seems to decide not only whether Grapes shand, but also whether any or none shall be produced; for, in this instance, nearly all the herries fell from the exposed bunches whilst flowering. As I am anxious that the method of securing this advantage should be clearly understood, I send the case, with the branch of the Vine and its fruit as it grew, and specimens of the fruit from the exposed wall. I exhibit it only to show the advantare of the protection I have adopted, and which may, I believe, enable the inhabitants of the north of England and Scotland to raise for themselves fine Grapes without artificiul heat, - B, Maund, Bromsorove. [This was exhibited to the Horticultural Society on the 3 d of October, and was described in our report of the proccedings of that day.]
above the cross bricks. In the back flue and under the centre of each light, an opening about a foot long is left, centre of each ight, box, is formed by the back wall and two pieces of slate, box, is in such a manner as to discharge the warm air placed in such a manner as to discharge the waw the towards the plants, at the distance of six meches below sunk glass. Below each rafer a nine-inch duct (a a) is sum the in the floor, wher cavity both in the front and back flues, so that a of air from the ducts supplies the place of the warm air which makes its escape to the surface amongst the plants This pir, which is simple in constuctor, and sale and convenient in the application of top and bottom heat, an the same time, and from the same materials, still comtinues to give great satisfaction in the culture of Cucumbers, Melons, and young Pine plan
Horticultural Sociely, No. XX.
of three feet-the depth of the pit below the ground level In carrying up this flue, a cross brick is occasionally laid in to give stability to the wall. The back and end flues are covered in with a course of brick on bed laid across. which projects one inch beyond the other brickwork on the outside; this projection not only gives a neat finish as a surface line, but serves as a rest for the boarding which conceals the lining. The front fine is covered by one brick laid across and also lengthwise alternately, on the outside course; thus, an opening is less between each cross brick for the cavity of the flue. In order that the air may take an inward direction, and also to prevent rubbish from falling into the flue, narrow pieces of slate are fixed in the joint

AMATEUR'S GARDEN.-No. LI.
In a note on the "One Shift System" of potting plants, in the "Gardeners' Magazine" for November, Mr Barnes, of Bicton, the writer of it, has offered some remarks on an article of mine at p. 135 , and also on those persons who have exhsited plants grown on that system, which if left unnoticed might lead to some misapprehension respecting its merits. Mr. B. says, "This system was no sooner made known than plants were exhibited and said to be grown unon it, although to any experienced man the plants were well known to have been growing for years previously on the old system." This is a bold assertion, and one which, as far I am, or those with whom I am connected, are concerned, is altogether a mistake. Plants grown on this system were exhibited before the Horticultural Society long before my article was written; but it was not until after it had appeared that any were exhibited as the result of that system of managemeh.t. If Mr. B. imagines this system to be only a wild theory, he is mistaken, for there have been many fine specimens grown upon it for years past; and if he has still any doubts respecting it, he may liave them in a great measure removed by calling upon Mr. Glendinning, at the Chiswick Nursery, who will show him some excellent specimens, principally hard-wooded plants, that have been produced since February last. In this there can be no deception, as plants that were bought in at from 17 s , to 18 s , per as plants that were bought in at from 17 s . to 18 s , per
dozen are now worth that money per plant. Similar results have been achieved in other nurseries, where the system has been properly understood and carried out.

Mr. B., however, thinks that but "little merit is due to the system," as he hears " on good authority that many valuable plants have been lost through going to the extreme, with the one-shift." Did Mr. B. never hear of valuable plants being ruined and lost under the old system of management? I anticipated that many plants would
be lost ; but delicate plants have been and will be lost be lost ; but delicate plants have under all systems of management.
Again, Mr. B. says, "notwithstanding it is said to he a more natural treatment for plants, \(I\) am at present of a different opinion." Will Mr. B. favour us with his reasons for so thinking ; be will have some difficulty in doing this without contradicting a considerable part of what he has written in the "Gardener's Magazine." 1 myself cannot agree with the principle inculcated at p. 693 by Mr. Wood, that "plants the most difficult to rear should be removed at once from the cutting or seed-pot to the largest-sized pot in which they are to be exhibited as specimens;" because on the very same priaciple that 1 would put a plant in poor sandy soil to induce a profuse development of roots, so would I have a plant thoroughly established in a small pot before I removed it to a large one. So far as my esperience enables me to judge, 1 should lay this down as a first principle, more especially with very delicate plants ; indeed, the principal secrelwell rooted any secret in the matter-is to have the just at the time the young roots are breaking away in the early part of the year.
Whatever injury the one-shift system may have done
where it has not been properly carried out, there can be no doubt that it has effected considerahle good, for there never was plant sur a plant growing as there has becn during for an amateur I potted a number of plants in the hentleman, and on inquiring a shot like the system, but had progressed, he said he did not like the system, bis ohjection was a novel one, viz., "that the plants gilate so very rapidly that they required more time to rem an and keep them in order, and also mon."-W. P. Amateur could con
Ayres, Brooklands.

\section*{HOME CORRESPONDENCE}

Peat, or Heath-Mould.-In a late Number of the Gardeners' Chronicle, at p. 839, in answer to a correspondent, Mr. Wood states that the peat used for fuel "is not in any respect the kind of peat to whice he the occasionally adverted; "namely, the to observe that 1 cultivation of Heaths, \&c. I beg leave to observe that entertain the same opinion respecting it. But Mr. Wh afterwards says that the latter kind "is the same as the first-named after a much higher staie of fermentation and decomposition," and goes on to show that the only dir ference between them in point of quality lies in the on being more decomposed than the other, and accounts for this difference by saying that one has been exposed to heat, air, and moisture, while the other has been excluded from the decomposing power of such agencies. Now,
appears that Mr. W. imagines that one soil is not of the posed; and I think that the one is not decomposed, only because it is not of the same quality as that whicil 1 . If Mr. Wood was to examine an alluvial stratum of the peat fit for burning in this country, he would find that ing impregnated with tannin; then let him, by exposing a part of it to atmospheric and solar influences, reduce it to a mechanical texture fit for the purposes of potting plants, and I have no doubt that, instead of in quality like heath-mould, he would find it very nearly, if not exactly, like rotten tanners' bark ; whereas, if a portion of the peat from wimbledon-common is subultimate products of various and distinct tribes of plants, all of which are there, as the result or that transcencen wisdom, exemplified in the progressive economy of nature. the lifeless structures of other plants, and thereby secured a mass of matter containing the primary elements of other and higher tribes which would follow, the Fern has gone far and deep into the substratum and extracted alkalies of its leaves, and thus the potash becomes incorporated with the vegetable fibre. This potash is not only essential to the very existence of succeeding tribes as a componen part of their structure, but it is the agent by which the dead matter is enabled to absorb oxygen from the atmo sphere, to decompose the nutritious properties \(1 t\) cons. When we reflect composition has been poing on during the thousands of years that have elapsed since a little Moss began to fil up the interstices of a stratum of loose sandy gravel, lying upon the sterile bed of London clay, untilye find in the same spot a large mass of earth so fertice that there is scarcely a known shrub that would not luxuriate in it with such facts as these before our eyes-to say nothing pleading guilty to the charge of scepticism, when we are told that this soil, which probably contains a greate variety of organic and inorganic substances than
found in any other, is in quality the same as that which is composed almost entirely of Moss, only not in form. And I hope Mr. Wood will pardon me for saying that I think, until our conceptions are clearer in relation to the manner in which a plant is enabled to educe its aliment from the reciprocal action of those elements around its absorbing organs, the application of his mixture of woody fibre, heaf mould, will bal, and night-soil, as a subsent, to say the best of it.-W Wherwood, Stamford-hill.
Coverings for thams.-The remarks in the leading covering frames, \&s., have induced me to direct attention to a note on the subject at page 301 , from a corresponden who signs himself "Devoniensis." At the time when that communication appeared I was fitting up a light movable covering for show what sort of composition should apply to it, besides a coating of linseed-oil, that would exclude as little light as possible, and at the same sooner had I read the directions given by "Devoniensis," in the note above referred to, tor making a waterproo composition, than I determined on giving them a trial. 1 accordingly procured the maturar of lead and white resin and prepared such a quantity as I thought would be sufficient for my purpose,-using the same proportions of each as specified by "Devoniensis," viz., three pints of or pate of white resir. The sugar of lead was ground with a small quantity of the oil, and added to the remainder. The resin was then put in, and the whole mixed up together. Afterwards it was poured into a large iron po pappeared to be thoroughly incorporated. The coveringcheap thin calico was now streterosition, whit carefully laid over it with a large brush, such as is generally used for tarring with. On the following day it was attached to a roller and fitted in its place, and has ever since given me the greatest satisaction.
transparent, it admits an abundance of clear mellow light, effectually excludes the scorching rays of the sun, and affords an agreeable shade to the plants. next summer. Perhaps the composition may be inferior to that of Mr. Whitney, with which I am perfectly unacquainted; but as it answers the same purpose, and is prepared with very little trouble or expense, \(f\) am inAmateur and others who have a desire to prepare such coverings,
M. E. H.
M. E. H.
Diging Shrubberies.-We have received three more letters on the subject of Digging Shrubberies, and we now state that we cannot insera subject unless they contain something nencations probable we may advert to it ourselves on a future occasion. "J. H." states that he entirely agrees
with what Mr. Ayres lias advanced in the Amateur's Garden, No. 46, and calls attention to the state of shrubberies at Elm-grove, Roehampton, which have not been says, are in a flourishing condition, and, extending over the turf, their long branches covered with dark green
turved, he says farther, that the shrubs do not require watering in dry summer weather. This is an advantage, as it saves labour at a busy time of the year, bestais place, he says, are Portugal Laurels, 16 feet high and 90 feet in circumference, that have never had their roots interfered with since they were planted. A second correspondent, "J. C.," is of a different opinion, and says hat, although be does not altogether condemn the remare made by Mr. Ayres, yet they are not applicable, a shrubbery sirts the lawn near the house ; and in such a situation what can be more desirable than to have a border planted with a collection of spring flowers, in order that they may display their gay colours at an early season, when few blossoms appear? This should be bounded by an edging, not less than 18 inches or 2 feet wide and hal an inch deep, on both sides. Such an arrangement he considers in unison with the flower-garden and law. Filar system of shllow digging has been performed for years, ystran, beneficial, especiall in heasy soils, and considers the arboretum or park in to practice Mr . Ayres' ideas, where turving would be in conformity with the situation.-A A third correspondent, "M. K.." writes as follows:-It appears to me that some of Mr. Ayres' remarks apply with more propriety to an arborefor than to a shicibery a should be planted so that in arnament for foriage of the shrubs a a horl the the brit of the would hue the grear perime a beautiful form, is not the rearig of sing sher and but the production a pird hars arboretums are the pingle plants are a production of a "smooth places to produce them. Whe proly impossible, as vervety turr in thows that grass growing under and near every gardener knows shrubs is always scanty, and that more time and labour is required for mowing and sweeping such a place than would suffice for three times the extent of a lawn. The shrubs are also very liable to accidents from the scythes, de. Every load of leaves or grass taken consequenty diminishes the fertility of the soil, and, consequenty as the surface is frequently trodden over, the soil becomes hard and tencious, the free circulation of moisture and atmospheric air througl it is impeded, and the power of the roots to penetrate it is also lessened. Shrubberies in a natural state are manured by their own decaying leaves and branches; and as kept porous and friable by the roots ramifying always kept porous and through it: in fact, a state of nature is decidedly preferable to the mode of turving the surface, if we regard only the health of the shrubs. The practice of planting Herbacoous and annual plants in the fronts of shrubberies is a paltry and very objectionable one, and can only be tolerated in places of very limited which would appear far more tasteful and approshrubs which would appear of digging is a cheaper way of managing a shrubbery than that recommended by Mr Ayres; and plants will grow more luxuriantly when
 drained of its fertility in the way I bave mentioned.
Colours of Carnations.- In some varieties the colours are much firmer than in others. Can any reason be assigned for it? Two scarlet Bizarres, Hepworths leader and Hoyles' Duke of Leeds, standing fost ; the first had becom a duked ren whas uninjured. I am inclined to think that Duke of Leeds has the finest scarlet, combining brilliance with depth, of any Carnation. Twitchett's Don John, as we see it here, looks heavy in the scarlet, and wants that orange shade which gives life. Walmsley's William IV. Vas a fine when examined separately, it does not possess, being somewhat weak. In Gameboy the white appears very good; the scarlet is not so strong as it seems at first Flakes, but not so much as to the Scarlet Flakes and Bizarres, which it perhaps heightens in colour.- \(O\).
Chy ysanthemums.-Amateurs are not generally aware of the beauty which may be displayed, even at this late season of the year, by a liberal introduction of good here lhave been brilliant for the last five weeks by thei aid alone ; and some late sorts, which are at the same time of the best, are still in great beauty and perfection free bloomer-is the best, and as handsome (with a delicate aromatic smell) as any flower which the Garden pro duces. I will mention a few more purchased last year, which have bloomed both in pots and in the open ground in perfection :-Campestroni, a good form and crimson, cate lavender, still in bloom; Marshal Augereau, a flat full flower of peculiar growth, a good straw colour; Achmet Bey, a fine maroon, tipped with white; Celestial Lotus, an old and very handsome yellow; Pulcherrimum, Lotus, an old and very handsome \&c. The red flowers are in general dull, such as Theresa, Sanguineum, Duc de Colignacs 0 - Subcriber, Exeler.
Prince Albert Pea - It would appear that in some situations this Pea is no earlier than some of the older
varieties. Here the Prince Albert and the New Early May were sown on the 28 th of January, side by side a south border, so as their merits might be equally tested ;

18th of June, while the Early May until the 25 th of the same month : ence of seven days in favcur of the former.-G. G. IW atson Cucumbers. - In the report of the Horticultural Society's Meeting at Regent-street, on the 5th Dec., there is a notice of a brace of Cucumbers exhibited by Mr . Stewart, of Stradsett Park, and it is stated that, though both the same variety, they liad a very different appear-ance-one being pricky, and the otwer bearly smooth and the inference drawn is that the manure used was the cause of the difference. Now, if I recollect right, it was the plant taat had been manured wili nutrate of soca that produced the smooth fruit, and if so, surely there must have been some mistake, and the smoothness attributed to a wrong cause. On March the 7 th , as will be be Society \(l\) ens of fruit of the ame (Ringleader) which had been watered with a solution of nutrate of soda -in the proportion of 10 ounces to 3 gallons of water nat perfectly recollect the fruit on that occasion were pined. From those lacts, I conclude Mr, \({ }^{\text {m }}\), is labouring under a mistake; and I suspect the real cause of the difference in the appearance of the fruit was the sporting of the variety, and not the manure used; at any rate, there is a contradiction in the statements which requires cause of the great difference in the appearance of the fruit. Let Nir. S. take a cutting from the smooth kind, and reat it as he does his prickly ones, and then if the fruit it produces becomes prickly, I mill believe that manure caused

Orange Trees.-In the Calendar lately Mr . Beaton asked for an article on the management of Orange trees, I trust some of your correspondents will offer a few emarks on this subject.-A Subscriber, Southampton. Preserving Strawberry Plants for Forcing,-Mr. Beaton asks, in a late Number of the Chronicle, for an during winter. The plan I practise is very simple. Ilay a row of pots down on their sides on the border of a north and also over the whole of the pot as far of the pots, when this is done I put another row of pots on the torl these, and cover again in the same manner, and so on for four or five rows. Then I beat he mould on the bottom of the pots, and also that on the top of the last row, firmels with the spade, in order that rain may run off. In this way I proceed until the lot is finished: in frosty weather way, in whole with ern or straw. This is a better and severe frosts. If acceptable to you exposed to rain period let you know my plan of forcing them. Th Knave of Spades. [We shall be glad to receive this.] ecting mod which theme prod to geous in planting slrubs under or near ornamental and Forest trees. Instead of digging holes, as is the common practice, I take as much soil as may be required to the pot I intend to plant; I then place the shrubs on the surface of the grouna shrubs to succeed well, and it obviates the labour of digging holes or pits among the roots of trees. The principal advantage gained by his, however, is, that newly phated shrubs estabe fresh soil of the no the roots of the sue require ; and when once they are established there is no great danger of their success. I have found he above method preferable to trenching near large growing trees.-C. H.
Dutch Clover.-As "R." has appealed pointedly to me respecting the causes which have produced the con-
siderable accession of Dutch Clover which has been bbserye accession of Dutch Clover which has been that I can. I am inclined to think that the increased produce of this valuable pasturage has rather been coincident than correlative to the introduction of Honey-bees to the colony, and that it has arisen from some iaprovement in the culture of the land, as a change of culture is very well kuown to be capable of producing such an effect. Dress a pasture-field with sosp-maker's waste, or with ompost well imbued with lime, or with lime alone, and never appeared, or but scantily appeared, before. Some physiologists attribute this consequence to your placins the land in a favourable state for the growthi of Clover, the seeds of which had lain dormant in the ground, and only awaited the revivifying influence referred to to cause parallel instance to that which bas been afforded by the celebrated Mr . Cross, who by means of electricity las caused the birth of insects previously unknown, and both hese phenomena have been riewed by the fatter physio ova." It is a knotty point which I shall not presume to decide ; but I hope the remarks I have made will call -E. Bevan2 Esgair Evan, Newtoum Mont correspondents. Pine-Apples. - I planted out several pits of Pines with out pots in June last, and it is astonishing the progress they have since made. I am so satisfied with the exerllence of the plan, that I intend planting out all our Pines Pineapples, -1 do not consider that it requires three years to bring a Queen or Montserrat Pine to 5 or 61 bs . weight, which, according to Mr. Pope's calculation at p.
861 , is the case with the large ones lately mentioned in

THE GARDENERS' CHRONICLE.
[DEC. 23,
the Chronicle, nor do I think that many of the plants
producing these were six feet in height, as I have seen producing these were six feet in height, as I have seen of Montserrats within the last two months, and many of them exceeded \(61 \mathrm{bs} . ;\) two exceeded 611 lbs ., and the majority of them weighed from 5 to 6lbs. I have, at the these will fall short of 4 libs., but this is not to be found fault with at Christmas ; the whole of the plants producing fruit since October are from 18 to 22 months from the suckers; of course the suckers were good strong ones, which ought always to be the case; all undersized ones high, the longest leaf of these did not exceed four feet; but averaged about three and a-half feet, and were shor bear testimony to the correctness of these statements. I do not !ind the Montserrat to be a particularly slow grower; it certainly is no longer in perfecting its fruit out any check will grow quite as rapidly as it.-S. Barnes Apley Park, Bridgenorth
Pine-apples.-In reply to a "Practical Gardener" Who requests that the collective weights of fruits each writer has cut within a given period of not less than hree years shoul be gill the refer to p. 861, he whe last ether with the dimensions of the retaining wall of the bark-beds in the fruiting-pits; and I beg further to inform him that succession and nursing plants are all grown in one house under the Vines. The bark-bed in thi house is 23 feet long and but 7 broad; and moreover no importation of plants has taken place here for ten years back ; on the contrary, I have parted with 60 fruiting
plants within the last sixteen months. I have entirely plants within the last sixteen months, culture of Pines, and my plants promise to do as well as ever they hav done. With regard to expenses: about 12 tons of coal are consumed for fire-heat; this costs about \(5 l\), and one cart-load of bark is used for plunging the plants in ; this costs about \(8 s_{a}\), making in all \(5 l_{\text {. }} 8 s\). ; hot water is used for obtaining bottom-heat, of which a full description will be given in my forthcoming Treatise, with suggestions and improvements. I may state that my Cucumbers are also grown in the same pits.-Joseph Hamilton, Thorn field, Stockport
Holly Stealing.-A Correspondent telis us that thi offence increases annually with the size of the metropolis Cart-loads of beautiful evergreens are to be seen ente ing the principal thoroughfares in the middle of the night and yet no notice is taken of the stolen property by the police. If a churchwarden or overseer loses his duck or punished; but if a gentleman's grounds are damaged by his evergreens being mutilated and carried away, the thief is encouraged by the persons holding these ropolitan parishes purchasing the stole ing away the money which ought to be applied the relief of the poor. Our correspondent tells that even to the extent of 30 miles from London gen bushes of berries, besides the annoyance of lessening heir beauty for the remainder of the season. All this might be obviated by a better understanding between the rural and metropolitan police.
Pruning Forest Trees.-In a late Number, there is no ewer than three Correspondents taking me to task abou pruning Forest Trees. In reply to "E.A.C." the firs deserve the name, have all hinged on the mutual action and reaction (or if you please reciprocity) between root quality in the shortest the production of timber of best quality in the shortest time is the object in view. I beg "wood" and "timber" \({ }^{\text {" }}\) is more fanciful than real ; a tree will never make "timber" if it do not make "wood," but will make both faster without pruning than with it and as to the instance he adduces of Pollards, what he takes for granted is just tbe reverse of fact. There is now with a mireds of Pollard O ks an extensive common with hundreds of Pollard Oaks that have been beheaded great many times-the last time upwards of 40 year ince, as the practice has so long been prohibited. These have fine bushy, and many of them large heads, but yet there is scarcely one among them more than sufficien in size to square into a gatenpost. Next comes, Who wishes to balance the account between me an "Pro Bono Publico" in regard to Dr. Thackeray' plantations at Nerquis. Nopr I have said before, I quite mell the ind of Dr 's Dr. 8 forester as described by a former corre pondent in the Chronicle, but I opine that results are atributed to "pruning" in this case which more properly go to Nerquis and see the result; this I would gladly do were it convenient--indeed nothing would please me more. I beg to tell all the eulogists of the Nerquis, and all other systems of pruning, that in my younger days I had the management of plantations, which were pruned à la "Pontey," and yet these plantations grew with great vigour. The soil was a strong marly red loam, and was treached two spades deep, yet to attribute the vigour of these same plantations to the pruning, and place it in favour of "Pontey's" system would be at once an injustice and an absurdity. If any who may be induced to
selves of the true principles that accelerate the growth
timber in trees, I should have little fear of their counte acting it by continuing an injurious system of mutiation, vulgarly called pruning, beyond the period of youth. Much as I disapprove of Ponteys recomsad hatos, many of his pout in a mistaken manner, an practices which Dr. Thackeray himself would condem might happen to ensue in attempting to imitate his system. Next comes Mr. Billington, and 1 am glad more about words than things. he says he find "cQuercus' still adheres to reciprocity between roots Billington that trees still adhere to this, whethe "Quercus" do or not; and Mr. B. himself adheres to it ing foreat-trees that I have found out and practise increases the number of branches on a tree, consequentl the increase of timber in the stem, and, I presume, the reciprocity between roots and branches. Now quite wn informed on Mr, B as need be. Alhog I have a shrew guess it is near akin to that described and practised b to make a wrong shoot, or removing a rival in a young state, or shortening in likely to overshoot his proportion \&c. To all such operations I am decidedly friendly, herefore it is uir to therere 1 disapprove of systems of pruning by which their growth is retarded and their quality deteriorated. I beg to assure all my planents that I wish every care to be taken of woods an plantations, to promote their growth and beauty; assured and permanent interest to the public." Mr. Billington justly observes there is still a chaos of opinions on this subject, the very terms we use in writing about it ma produce different ideas in different men's minds, an therefore the is little discretionary latitude to b allowed in the use of words and phrases-as there may b in the management of a young tree, according to the cir comitant relationships. Consequently, every man who has the manase ledge enough to act discreetly with varying subjects unde ever-varying circumstances, but never B.'s interrogatory"how young?" Finally, let me recommend all my critics and opponents to procure and study a pamphlet recentl published on Arboriculture, read before a scientific society in the West Riding of Yorkshire, and noticed in the
Chronicle, p. 696, by J. Hamerton, Esq., of Hellifield Pee Chronicle, p. 696, by J. Hamerton, Esq., of Hellifield Peel near Skipton. Mr. H. shows, among other things, what quacks some witers- who would be reckoned authorite (and are with some) on Arboriculture are. All thes has been and more efficient guides !-Quercus.
Forest Trees.-The cause of annual rings being unequa in different parts of the circumference of trees I shal endeavour to explain. A great deal has been written on bium), and that the sap flows more freely on one side of ree than on another-on the south side, for instance. But as I am of a different opinion, I beg to state that, when rees are sawn across, it is frequently found that the part which was the original centre of the tree, when young, out from the centre, from a quarter to three fur the outside on one side than on another. Why is this aspects from consolidation of the sap, outh; but from th descending filaments or woody tissue from the annual lea or leaf-buds. This has been fully confirmed from observ and admeasurement of trees felled on purpos the branches are nearly of an equal size, and pretty regula on all sides of the stem, the concentric layers will be of an equal breadth, or nearly so, all round the circumference but when trees have been crowded on one, two, or thre sides, and have lost their branches on those sides, the con centric layers will be broadest on the sides that the branches are on. On the sides where there are no branches the annual layer will be very narrow indeed; and this is the real cause of the inequality in the breadth of the annual layers on different sides of the tree. The same thing occur when trees are much exposed to strong prevailing winds and when the branches, in consequence, are forced to on side: from whatever quarter those winds may come without any reard the wincline If the branches are atrong numerous, and incinea. If the lill lill healty, the all, but the grain of the timber will be fine scanty and small, bue gan the and in propartion to tbese, and an follo will ber the vigorous trees. The followiag two Larch trees, and messured, will prove what 1 have stated:-Tin was from the south side of a plantation, and the north sid of the tree was clad with branches; from the centre to south side of the same tree, ith few branches on that side, measured \(3 \frac{1}{2}\) in. ; making a difference of 43 in. The second, from the north side of a plantation, having branches on the north and north cetnre to the circumference, \(4 \frac{1}{2}\) inches; the south and south west sides, with few branches, measured, from the centr to the circumference, 2 inches; this, subtracted from th ormer, leaves a difference of 2 inches. \(-W\). Billington
acre of young Oaks, from three to six feet high, in a very neglected state as regards pruning, superfluous branches existing in every part. I proceeded to prune the said trees upon what I term scientific principles, viz. :-In the firs place, to prune all branches that appear likely to conten more than the trunk of the tree; and secondy, to prevent from pruning too hard in any one year or succession of years, as in that case I find the trees invariably produce an infinite number of small spray from different parts o its body; caused, I suppose, from the superabundance of sap arising in consequence of a heedless deprivation of it branches. Working this rule I was visited by my employer, who, to my great surprise, told me he had lately been to his estate in Sussex, when his agent then gave it as his opinion that I was decidedly wrong in my application of the pruning-knife-that the young tre stand unmolested, and take its chance as to whether it eventually became a tree worthy of being called the Monarch of the Forest, or to grow like Gooseberry This is the opinion of a readers will favour me with their opinions on this subject t will oblige Quercus II. [We have given our own opi bjection to pruning skilfully performed; under som circumstances it is desirable, but it is too often abused.] Fuchsia Exoniensis.-Without any desire to deprecial stated respecting it. I spoke of it from the plant exhibite at Chiswick, which I have a right to suppose was a fa specimen of cultivation; and in that the branches wer meagre. The flowers in colour are everything that can be desired, but like many long-sepalled varieties, they do not expand freely, and are not liberally produced. Like parents it will occasionally parents, it will occasionally be caught in fine condition Horticultural Society's Rooms in the summer, "it, lik t. Clare, will require good management to have it always in a starg Fuchsia that ix inches to a fis come up to my standard of what a prize specimen ougb to be. However, I bave no prejudice in the matter. will give it a frir trial, and in the Exhibition time - W. \(P\) to a ride to Chiswick about tie Exhion the following observations. F. exoniensis has the fines the following observaton. exol It is not ain to judge of it from the specimen shown Chissio th jucge cidenty been forced in order chiswick, wha it reach no importance to is calle the habit of a Fuchsia-a clever gardener can always regulate that. If a variety grows too compactly, force it on ; if too loosely, stop it. Adapt the management to the habit, and do not expect the habit to adapt itself to yo once the finest of its class, though now undervalued by those who cannot grow it.] Mildness of the Season.-As a proof of the mildness the season in this district (county Northumberland, I send you the following list of flowers, gathered from 1843:-China Stenactis, GEnotheras, various kinds; Wallfower Stocks, German, \&c. ; Pansies, Phloxes, different sorts Ericas, Violets, Potentilla nepalensis, Escholtzia, Mary golds, Sweet Peas, Gilia capitata, G. bicolor, Malva sorts; Malope trifida, Chinese Chrysanthemums, Py Japonica, Convolvulus minor, Spanish Nigella, Carn tions, Pinks, Iberis odorata, Aster, sorts ; Mignonette Branching Larkspur, Pentstemon coccineum, Verb
Bleeding of Grape Vines.-It has occurred to me the the bleeding of the Vine, to which a corresponden adverts, might be prevented by twisting severely the en of the Vine at the point to be separated, in the sam marsior as surgeons act with arteries Sy what is call b answer. is the not worth the triar with out the fear of bleeding.-W. Rayner, Uxbridge.
Scale on Pines.-Many applications have been reco mended for the destruction of scale on Pine plants. appears astonishing, when we consider what was know to Mr. Knight and written by him upwards of 20 year since, that fermenting horse-dung, a most destructive all easily-applied agent, is only just beginning to be generalin whether a substitute less troublesome and equally efficien could not be found, and to what extent it could be apple without injury to veretable growth, about two years since subjected some seedling Orange trees much infected wit scale to the fumes arising from ammoniacal liquor, tained from the gas-works. The trees were kept close a common-sized Cucumber-frame with glazed top this was introduced a pan containing half-a-gallon of the and in three days the insects were destroyed, the foliage of the plants presented a scorched and shrive appearance. It is probable that the same result have been obtained in much less time by pouring worth the inciry will be indursue the experime the inquiry will be induced to purn

Four Crops in a Year.-On the Cottagers' tables a the late exhibition of the Normich Horticultural Societ.
the late exhibition Pere four plates of Potatoes, being samples of four cropi
grown by John Digby, of Buxton, on one piece of ground, grown by John Digby, of Buxton, on one piece of ground,
between March 11 and Oct. 20 , this year. Digby himself gives the following account of his crops :-". have ground, from March 11 to Oct. 20. The first crop ripe for seed in May; the ground cleared before the next crop was put on. The second crop taken up the fore part of July ; the ground was spaded. The third crop was taken up in August; the ground cleared. The fourth crop was have witnessed what I have now stated. Four crops of Potatoes were never known to be grown in the memory of man before." This year John Digby has grown three other crops off another piece of ground; the first was penny each, at the latter end of March. He then planted Onny each, at the latter end of March. He for which he obtained a prize at Norwich, for being the largest on the Cottagers' table. He exhibited a peck at Aylsham, grown upon the same ground, which there, although the others exhibited were not grown after another crop, as Digby's were. He had then another crop of fine Cabbages, some of them beautiful white middles. Digby says, "I have the method of growing new Potatoes in the winter :-Commence digging at Christmas till April, at the rate of two bushels a rod, natural grown; no more trouble than those that are grown in spring, and are superior in quality to those which are grown in spring." The above is cut out of the Bury Post. I saw the Potatoes and read the same account at the late Norwich Exhi-
bition. A certificate of the man's respeclability was apbition. A certificate of the man's respeclability was ap-
pended by the Rev. Mr. Jarvis, the clergyman at Buxton. pended by
- Rambler.

Leycesteria formosa. - In reply to "M. B.,"p. 809, I beg to state that I find the berries of Leycesteria formosa are readily eaten by pheasants and peafowls, and I know of no plant more desirable for shrubberies and plantations,
as it seeds freely and is very ornamental.-N. S. \(H\),, Botanic Garden, Bury St. Edmund's.
Bees.-" "J. B." relates at p. 758 something curious there was a communication between the "old and new hive," the circumstance of the Bees taking possession of the latter would be similar to Bees at work in an end box in a collateral hive ; but if the bustling colonists entered both hives at their common entrances, the case would be different. The like, however, does happen, though rarely. Yet I never knew an instance of a Queen-bee being the head of two separate hives at one time; consequently, there Was little chance of " securing a fresh colony by removing the new hive to a distance from the old one," for the Bees would soon return to the one containing the Queen,
Supposing that "J. B.'s" friend's two lives were at a Supposing that "J. B.'s" friend's two hives were at a
distance from each other during the time the Bees were at work in both, the thing would not only have been curious, but have supported what some apiarians advance, viz, When Bees are short of room they search for a place elseWhere to store up their treasure until there is space for it Gelien's; but it cannot be correct Whoever found Bees in such temporary abodes? indeed it is against their habits hives, which celle and work without a Queen, except old hives, which are Queenless for a few days after the old
To Bloom Carnations in Winter.-All that is necessary is to take them into a greenhouse, giving as much light as seen a large collection blooming from Christmas to avil Where piping is practised, they are frequently coming into bloom as strong plants from layers are going out. The season. A angle of a south wall, will preserve the bloom sots in the stopping the opening below and covering at night.-O.

The following Medals have been awarded during the season:2d Small Silver, \(26 ; 3 \mathrm{~d}\) Small Silver, 10 . In addition to which four Silver Cups have been presented:-By H. M. the Queen Dickson, for Auriculas; by Mr. Chapman, for Auriculan ; James Messrs. Barnard, Denyer, Eidmonds, Ilffe, Prockter, and J. by Young. The present number of Members is \(247 ; 37\) having been Several changes were proposed in the
spirited contest, the following were elected Amateurs,- Messrs. Baroard, Burnard, Buirrup, Chapman, Edmonds, Fox, Jeffs, Schroeder, Seldon, Sangster. Gentlemen's Gardeners-Messrs. Atlee, Bruce, Coutts, Hamp, Payne. Nur-
serymen.-Messrs. James Dickson, R. Chandier, Catleugh, Groom,
Denyer.
From the active part taken in the proceedings by many of the
members present, it is quite clear thatno supinenees or partiality
must exist on the part of those in office. Neither, we verily
believe, have hitherto existed; and we are happy in having the believe, have hitherto existed, and we are happy in having the
opportunity of bearing testimony to the high respectabllty of plaints have no doubt been made, and, in some respects, improvements might perhaps be effected, but we believe that any
imputation of unfairness would be totally destitute of foundation. imputatior of unfairness would be totally destitute of foundation.
An ocurrence took place in the course of the meeting which will well serve to show the independence and proper feeling of those present. It may be recoliected that for the last year or best 12 Picotees exhibited by an Amateur. It having been understood that, in offering the cap for the coming season,
Mr. George Glenny and Mr. Neville were appointed by Mr. John Dickson to be censors on the occasion, a question was asked ds to whether this report was true; which having been
ascertained, and upon Mr. John Dickson declining to withdraw a condition so offensive to the Society, it was resolved unania condition so offiensive to the society, it was resolved unani-
mously "that the cup rejected." MI. Norman, of Woolwich,
immediately immediately offered a Cup of equal value, for the same purpose,
unconditionally, which was accepted, and the thanks of the unconditionally, which was accepted and the thanks
meeting were voted to Mr. Norman with acclamation.
Dec. 19.-Edward Forster, Esq.i, in the chair. Dr. Barrett, Dr. Allamy, Dr. Hillier, and S. Hanley, Esq., were elected Fellows.
Mr. Hemry Denny was elected an Associate. A communication was read irom Mr. . Tradescant Lay, British Consul at Amoy,
giving some account of a vegetable prodnction called Keih Seen-me, which is used in china as an article of diet. It appears to be a species of Alga, belonging to the genus Nostoc. A box
full of the dried plant was exhibited. Its chief use in China is foll of the dried plant was exhibited. Its chief use in China is
in making ragouts, and is is much request at Nankin. Messrs. hitley and Osborn exhibited specimens of Shepherdia argentea in this climate. Tt produces a red fruit, about the size of a large Currant, and having an agreeable flavour, perfectly innocuous, and used for making jellies, preserves, \&c. A paper was read from
Dr. Boott, on a new species of Carex, a native of Scotiand, which had been found in Clova by Dr.Graham, and had been hitherto confounded with the Carex saxatilis of Linneus. It was, however, a
dist.nct species, and Dr. 13 montl gave it the name nf Carex Grahami. dist.1nct species, and Dr. Bontt kave 1 t the name of Carex Grabami.
A paper was read from Maj. Harris, giving an account of the trees protucing myrrh and frank rincense, and indund in those parts of
the coast of the Red Sea and Indlan Ocean, whence the gums Were outaned, in the early listory of the world. The myrrh is
the production of more than one plant, the best the production of more than one plant; the best 14 undoubter
the production of the shrub bearing the name of Balsamodendron myrrha, which is a small shrub. The worst and more liquid kinds of mi rrin are the produce of a , 1hant considerally larger than the
hatter, and of probably a different species. The plants from Which the frank merense 1s oitalined, grow from the sides of the The gum may be obtained by bruising the tree during its growth. It is collected by the natives of Abyssinia, and exchanged by them
for tobacco, cloth, \&c. It has a remarkable bark. The outer layer or epidermis is very thin. The second layer is somewhat thicker, and may be used for the purposes of writing. The third
layer of the bark is at least an inch thick. Specimens of the bark were exhibited. A microscope, lately purchased by some of the Fellows and presented to the Society, was exhibited.
Dec. 20.-A paper was read from Mr. Tulke on the discovery of
a new parasile, the Demodex folliculorum of Owen, on a dog which was. suffering from the mange. This animal, which is
placed by zoologists in the order Arachnida, was first described placed by zoologists in the order Arachnida, was irst described
by Dr. Simon as an Acrus, and arterwards by Mr. Wilson an
Ent Enturinu.n. It was first discovered in the human skin, where it
exists sometimes in considerable numbers in the mucous licles. In the instance of its being found in the mangy dog it did not appear to be the cause of the disease. Mr. Tulke was not able to diseover sufficient difference of structure between the
present and the human species towarrant hum in giving it a new
name. Mr. F.. Quekett exhibited specimens of Cycada septem. name. Mr. F. Quekett exhbited specimens of Cycada septem-
decem, which was renarhable for the ravages it pooduced in
 rare species of intusorial numalcules, which were found 12
great numbers 114 a specimen of clay fiom the tertary formation nation he had made of Daguerreotyped portraits, and which pre
 from the Revs.J. B. Reade, recommending an infusion of nut-galls as one or the best ruass. Mr. Busk exliubited an achromatic lens, betwee glasses of which were evident indications of the growth of a Con-
farva of a simple kind. Mr. R. H. Solly observed that such ferva of a simple kind. Mr. R. H. Solly observed that such markings on telesope goase decomposition of the glass. Mr.
supposed to arise from some Ross said he had orten seen this same kind of markng, ana dad
not think it could be of a vegetale nature, as the glasses required grinding to get it off. Dr. Lankester thought this inquiry im-
portant. Microscopists were often misled, and crystalline nariking portanit. Microscopists were often misied, and crystalline nark ings
of a dendritic form in agates, rocks, or
vegetables. Hee was inclined, from the circumstance of these
Hes glasses not having been exposed to damp, the branched character.
of the marking, and the necessity there was of grinding the glap, to remove it, to consider it as of crystalline, and not of vegetar to rem.
origin.

Inner Temple, Dec. 13, 1843. J. J.
Dublin.-We understand that \(\mathrm{Dr}^{.}\). Allman is likely to be re-elected Professor of Botany in this University; and that Mr. W. H. Harity, he weth-known zeaiaus and Curatorship of the Herbarium, vacant by the death of Dr. Coulter
New Natural History Society. - Papers bave been circulated inviting naturalists to co-operate in the formation of a new society, to be called The Ray Club, the
 bers, of original works in Zoology and Botany; of new editions of works of established merit ; of rare Tracts and MSS. which throw light on the history of tlaese branches of science; and of translations of such foraign works as tend more directly to illustrate the Zoology and Botany
of the British Islands. We confess it apprass to us much
better to support the Linnean and Zoological Societies than to form a new one, for which there does not appear
to be the smallest necessity.
Pruning Fruit-Trees.- In a garden at Ville d'Avray, near Paris, there is a piece of excellent open ground where fruit-trees, particularly Pears, grow with much mode which suggested to M. Mirange, the gardener, a are all single the strong shoots and the fruit-buds, so that the branches pruned according to their vigour, and at a suitable distance in the height of the trees, allow the sun and air free action upon the fruit to ripen and colour it.- Rapport aे le Société Royale d"Horticulture, par MM. Godefroy, Janin, Pépin.
Fruiterers" Shops at Christmas.-" Fruiterers were radiant in their glory. There were great, round, pot-
bellied baskets of Chesnuts, shaped like the waistcoats of jolly old gentlemen, lolling at the doors, and tumbling out into the street in their apoplectic opulence. There were ruddy, brown-faced, broad-git hike Spanish Fions, and winking fratness of their grow wanton slyness at the girls as they went by, and glanced demurely at the hungup Mistletoe. There were Pears and Apples, clustered Grapes, made, in the shopkeepers' benevolence bunches of from conspicuous hooks, that people's mouths might water gratis as they passed; there were piles of Filberts, mossy and brown, recalling, in their fragrance, ancient deep through withered leaves ; there were Norfolk Biffins, squab and swarthy, setting off the yellow of the Oranges and Lemons, and, in the. great compactness of their juicy persons, urgently entreating and beseeching to be carried home in paper bags and eaten after dinner." -Dickens' Christmas Carol.
Portable Hot-bed.-We find in a French periodical the following account of a contrivance which may suit the taste of arateurs, who have a small number of cuttings ing experiments. The apparatus consists of three pieces of earthenware (zinc or copper would be better); viz. :-

\(a\), the foot, ow which stands \(b\), the basin, which is itself surmounted by the plate, \(c\). In the foot, \(a\), is placed a tin or wick in are la short fron cistern, e, carried by th which rest upon the bottom of the basin. deep, 7 inches in diameter, and is fed by a pipe and funnel, orin of the fungel, which shows that the cistern is full. The plate \(e\), formed of common red earthenware, consists of deep filled with sand, in which are placed, in two as much the trench, \(g 6\) little thumbpots, and in the trench \(h, 40\), Which makes room for 120 or 130 cutting8, or more; aceording to the size of the thumbpots. In the foot, \(a\), is a earthenware furnaces ; it is removed when the lamp is introduced, and is afterwards replaced. This lamp gets air by eight holes, \(i\), bored in the foot, \(a\), by eight others still smaller at \(k\), and eight or ten at \(l\), in the plate. It is easy to late the heat, which primcipally passes through the water or, when it rises between the cistern and the lower part of lates, charged with water, in the spaces, \(n n\). The roost intense part of the heat strikes \(m\), through a plate of metal pierced with holes. From this arrangement it results that the centre of the apparatus, that is, the ditch, \(h\), is hotter than the others by some degrees, so that the one will do for stove plants, and the other for greennouse apparatus is also adapted for bringing up seeds, or trying their germinating powers. The cost of oil for the lamp said to be at Paris four francs per month
Seientific Bequests.-The late Mr. Thomas Botfield, of Hopton Court, near Bewdley, has lately bequeathed to the Horticultural, Royal, and Geological Societies, the Royal Institution, and the Society of Arts, the amount of
a life subscription to each of those bodies.

GARDEN MEMORANDA.
Bodorgan Hall, Anglesea, - At this place bas lately \({ }^{5}\) An erectea
a large ornamentai stove which is heated by a fue with open gutters, thus taking advantage of fire - hc ast in connection
Round the stove a large fine is constructed 20 inches broad, and instead of the common \({ }^{f}\).orm of diue the and is covered with tiles made of the sanc mat or al, but having two circulation of hot water from a boiler hr sow and return for the the the same fire
The amoke enters the fue near
are introduced into the gutters, and after travelining all round
the house under the gutters it passes under the back path and
escanes by a chimney- place hehind the back wall near the boiler escapes by a chimney-place behind the back wall near the boiler.
Both for economy and utility this pian of hating promises to
be all that could be desired. Moisture can either be obtaincd

 aiso a mipe with a tap attached, inserted near the same for
suppling it with water. The house is a semicircle with
eight sides, and has the principal entrance in front. The above arrangement has been in operation for some time, and I find it to
answer the purpose very well. Many gardeness have also seen
it sand all bear testimony to the excellence of the plant
C. Ewing.

\section*{Rebícus.}

Experimental Researches, Chemical and Agricullurral,
showing Carbon to be a Componnd Body, made by showing Carbon to
plants, Rc. By Robert Rigg, F.R.S. Smith and A sook with this startling title has recently been published, purporting to be the result of many years' study
and careful experiment, and containing statements which and careful experiment, and containing statements which
if borne out by satisfactory evidence would effect a complete revolution in Chemistry generally, more especially in that branch of it which relates to organic matter.
The Author commences by a series of calculations,
respecting the amount of carbon in the soil, and shows that the quantity removed from it in the form of crops, amounts in a few years to much more than the soil itself
originally contained, or has received in the form of manure. The principal conclusion which he draws from this calculation is doubtless true, viz., that plants cannot derive the whole of their carbon from the soil; but the calculation itself is erroneous, and based on false principles. It is useless to make calculations respecting the
composition of a field, in the manner that a chemist composition of a field, in the manner that a chemist speaks of the contents of a bottle, or crucible. In the
latter case a known weight of certain substances is heated, or mised, or acted on in some way, and a definite result is obtained; but in the case of a field there are many circumstances that cannot possibly be taken into account. manure, and what he removes in the form of crops of various kinds, but this will not enable us to form conclusions, or to make accurate calculations respecting the changes
Mr. Rigg gives several tables, showing the quantity of carbon existing in a given soil, that added in the form of manure, and the amonnt abstracted by the crops, and mention of the roots of the crops each year left in the soil, to add to the store of organic matter which it contains; yet they in some cases amount to very nearly as
much as the crop itself. We have taken the pains to ascertain the quantity of organic matter left by a crop
of Wheat, and find that, on an average, it is not much less than two tons of dry organic matter per acre. It is quite impossible, in the existing state of knowledge, to form accurate calculations of this kind, and if they are not
accurate they are worse than useless. Our Author next accurate they are worse than useless. Our Author next
inquires into the other sources of carbon, particuinquires into the other sources of carbon, particu-
larly the atmosphere, endeavouring to show hy the experiments of others as well as his own, that the car-
bonic acid of the air is not the chief source of the carbon bonic acid of the air is not the chief source of the carbon
of plants. In the outset, he states that plants impart carbonic acid to the air; but the experiments by whitich
he endeavours to prove this are by no means satisfactory ; he endeavours to prove this are by no means satisfactory;
at the same time he appears to admit that they have thie power of decomposing that gas, although he thinks it questionable whether they abstract more of it than they
impart to the air. The statement that plants evolve carimpart to the air. The statement that plants evolve car-
bonic acid is in direct opposition to the careful experiments of Mr. Pepys, who never found it given off by healthy plants.
Mr. Rigg nest proceeds to examine De Saussure's experiments on the quantity of carbonic acid in the air, carbonic acid exists in the air during summer than in winter, to be opposed to the theory that plants reality prove anything, and cannot be used as arguments against the decomposition of carbonic acid, fluence the absorption or decomposition of that gas at other times. There are other experiments which show that the quantity of carbonic acid is greater in the night than in the day; these prove that some agent is at work operate during the night; whilst the fact that there is more of it in the summer than in the winter, is no proof that plants do not remove when. During spring and sumthere should be a greater supply of carbonic acid to the air ladn during the autumn, when they have ceased to various meteorological causes come into play, which may tend to dinoinish the carbonic acid of the air and keep up the uniformity of its composition. But
this, in fact, is adere speculation, and however injuthis, in fact, is or plausible such theories may appear, they throw little light on the questions immediately before us. Mr. Rigg in, as a clemist ought to be, sceptical and cautious based on factis, or are not supported by sufficient evidence; based on facts, nre his caution ceases, for having thrown aside the theories of others, ie advances a new one of his own, and, theories of others, ie advances a new one of his own, and,
*s it appears to us, cne far less supported by facts than
the old theorie3 which he discards. Mr. Rigg's experiments are very numerous, and appear to have been carefully performed; but in several instances they want that to experiments and minute attentionure. For example, When he causes plants to. grow in water, in confined portions of air under bell-glasses, the edges of which dip into
water, it is open to question whether carbonic acid may not pass, through the medium of the water, into the bellglass.
Mr.

Rigg observes, that it appears doubtful whether plants can derive their carbon from the air, and thence seems to pass to the conclusion that therefore they must experiments to prove that plants growing in circumstances where they cannot obtain carbon from any known source, carbon. that all necessary precautions were taken to keep out carbonic acid ; and secondly, if, as he supposes, the plants the quis experiments had made so many grains of could not create matter, and therefore must have formed the carbon out of some matter already existing. He should have proved the disappearance of some substance, as well as the appearance of the carbon. We are believers in the fore predisposed not to adopt Mr. Rigg's theory; but at the same time that we object to his conclusions and doubt his results, we do not altogether deny them.

The opinions of a zealous experimenter are always entitled to respect; and though they may not carry conviction, or may even prove to be erroneous, should be uous manner applied by a be ridiculed in che content lately uous manner applied by a great German chemist lately
towards a Scotch observer, Such criticisms are unworthy towards a scotch observer. Such criticisms are unworthy
of men of science. We do not pretend to pass judgment on Dr. Brown's experiments, which are purely chemical, but we regret to see a philosopher like Liebig forgetting
the dignity of science, and descending to the littleness of personal abuse.
We cannot follow Mr. Rigg through his long series of experiments, which would oblige us to write a commentary After carefully reading it through, the impression it leaves s, that he does not establish the theory he has propounded; his experiments are not varied enough, and frequently stop short there where further information would be most desirable. - At the same time, it is imposconclusion that he is one of the most laborious and indus. trious chemists in the country For our own parts, we are disposed to give his experiments the best consisince, when Mr. Rigg announced the fact that nitrogen was always present in all parts of plants, his experiments of his questioned and disbelieved; nevertheless, the cruth credit of the discovery is most unfairly given to others.

Table of the Elementary Constiluents of Crops. By James Haywood. A Sheet. Simpkin and Co. volume into a page. It shows of what chemical constituents the more important crops consist, how much nitrogen and fixed ingredients are extracted from land by an average crop, according to the evidence of Boussingault stituents per ton of all the more valuable manures; so that by comparing the one with the other, it may be seen how to restore to a field the materials of which a crop has robbed it. This Table should hang in every farmer's

On the Respiration of the Leaves of Plants. By W. H Pepys, Esq., F.R.S. From the Philosophical TransacT is a universal opinion
that ang Vegetable Physiologists that plants not only decompose carbonic acid, but exhale when plents remain in obscurity; Burnett observed it to be a constant phenomenon; and Liebig roundly asserts that it must be given off with the water of perspiration in
which it is dissolved. It certainly does appear to us that when certain plants, such as the Orange Lily, in a state o health, are plunged in lime-water, carbonate of lime is slowly formed on their surface, which can only be owing to the extrication of carbonic acid. All these supposed facts are, however, found in direct opposition to some very careful?experiments by Mr. Hasledine Pepys on the
Vine and the Fig, from which it appears that, in those Vine and the Fig, from which it appears that, in those with, but that the whole respiratory action of plants is confined to decomposing carbonic acid and liberating oxygen. In no one instance was he able to detect a single trace of carbonic acid in the air surrounding the leaves on which he experimented, although the apparatus was so quantity if it had been present This is a most unexpected result, will direct their attention.

CALENDAR OF OPERATIONS for the ensuing week. the Calendar, I beg to admit in detail a few remarks that have
reached me, as I find I could not well condense and divide them under the different heads with other private correspondence and now that I amp within one week of the end of my series, any remarks or fair criticism on what I have advanced in thi any remarks or fair criticism on what in have advanced in this
spondent, "that you advocate planting out Pines over tanks
I have some so planted, have some so planted, sud they are doing exceedmgly well,
but there are many ohjections to the plan. 1 trst, I am afrail there will be some dificiculty in starting them without startung retarding them when in the last there will be no means of
retarding the whole in one pit; and thirdy, we shaling be without
onired retarding the whole in one pit; and thirdly, we shall be obliged
to cut the fruit when they are ripe, being without convenuence for removing the plants with the fruit on to a conl place, in the
event of having too many fruit ripe at once. Weighing these things against the facility of management by the platitit out
system, I am disposed to take my plants up in Febrnary oud system, I am disposed to take my plants up in Februar, and
subject them to the one.shift system. This, with the advantages of planting out, offers the preference of managing the fruit as
circumstances may render it necessary. As for command of temperature and moisture, the tank system offers every advantage," Here it will be seen that the "advantages of plantung out "are adiecated having the plants portable in large pots, for the fruttrig
nience of
process, is also shown I clearly see the eorce of this argument. Again, the same writer says, "when you have seen our
boiler, \&c.. yon will probally feel disposed to change your the waste heat." Although I have pulled down all flues here for the last 15 years, to make way for iron pipes, I am not unfriendily
to flues. Mr. Paxton grows better crops of fruit with flues only to fues. Mr. Paxton grows better crops of fruit with flues only than many gardeners can grow with hot-water pipes. I only
recommend them in connexion with gutters and tanks, except for detached greenhouses. I have some accounts of unsuccessful
attempts to get early Grapes in the way 1 lately suggested; but as the first crop, in 1841, "was the offsprrag of accident," pro bably the economy of the Vines might be deranged for some
years. Sometimes useful conclusions may be drawn from the result of accident, but they are dangerous guides at best. 1 have
many letters on Horticultural societies and the Gardeners many letters on Horticultural societies and the Gardeners'
Benevolent Institution, but cannot make use of them here. I prizes are offered and given for now plints and specimen plants vidual alluded to was expelled from the Gardeners' Benevolen Institution early in 1839, for defrauding the funds, and there is England, and are administered by highlyorespectable officers. Every gardener who can afford to do so should join this institu-
tion. The members and their friends meet, dine, and transact tlon. The members and their friends meet, dine, and transact
business as usual on the 11 th January, but thereis not a farthing of the funds of the Society spent at these useful meetings.

\section*{-KITCHEN-GARDEN AND ORCHARD.}

Pinery.-A good Pine-grower, who favoured me with some
letters last autumn, will now see there is plenty of room for treating them in the French manner, \&c. I cannot say whether me he preferred leaving the strongest sucker on the old plant und he potted this old stool with the sucker, and sometimes with up from time to time, as deep, upright pots, and earthed then not, I think, originate with Mr. Knight; it was published in the "Transactions of the Horticultural Society" in 1818 or 1819; may safely adopt, even with the tank. system ; and if you wish strongest one, leaving the old leaves of the stool as long as they do not inferfere with those of the young plant, or, in other wordss
treat the Pine like the Peach-- etam as much of the old wood as is necessary, and k
bottom for bearing.
Vinery. -This mild season has been more unfavourable to the very late-kept Grapes than when we experience some sharp
frosts, as, in a general way, with frosts we have more sun in winter and addier atmosphere. If the borders outside of the early inery are well covered, and the stems, also, if outside, with
moist atmosphere inside of from \(50^{\circ}\) to \(60^{\circ}\), and the plants in
good condition, I see nothing more to be wished. If every plant good condition, I see nothing more to be wished. If every plant
was as easy to manage as the Vine, gardening would, indeed, bc was as easy to mande process.
PRACH-House.-The Peach, on the other hand, is like a PaAch-Rouse.-The Peach, on the other hand, is like a
spoiled chidd the least thing will put it out of its way ; and you
must not only watch it narrowly, but anticipate its wants. must not only watch it narrowly, but anticipate its wants when they are forced very early.
CuCumbers.-Few persons who grow winter Cucumbers need assistance from Calendars, but I find many wish to learn how
this branch is going on in this neighbourhood. It would be very difficult for me, however, to convey an idea of the enthusiasm of his mode of growing them.

\section*{growers employ strong heat, and like Mr. Mills, allow large} competition some growers keep their wlants "very hot, and give
cittle air," and no more moisture in the atmosphere than will "keep the blossoms from shrivelling."
In the first Number of the Chronicle, (page 6,) will be seen how Mr. Pontey, of Plymouth, managed to renew, Vines which grew his old Vines and planting young ones upon his renovated border,
he cut back his old ones and spread their roots all over the border, "and covered them about six inches," Although Mr by him, he preferred his old plants, well knowing that young new borders and run along them, if not into worse soil, as
said last week. These old Vines having formed all their main said last week. These old Vines having formed
roots, will afterwards only form secondary ones to col
ment, and after this nourishment is digested by the enves it is Mrosited in these large roots within six inches of the surface. Mr. Pontey is a thorough good gardener, and has the best climate m England for his Vines. If he therefore considers it necessary more ought this to be attended to at Inverness, where first sal the Vine? This way of treating old Vines has been adopted by gardeners for years. Indeed many good gardeners say Grap \({ }^{5}\) never come to their true fiavour until after the plants are toung
transplanted; and few gardeners in these days will plant yours

\section*{NEWS OF THE WEEK}

The accounts from Spain are of the most melancholy character, and another crisis in the fate of that unhappy country is hourly expected. The debates in the Chambers on the events of the 2oth ult. have assumed a cone of personal insult towardg the young Queen, which shows that the moral power of the Monarchy lias disappeared, and that the throne is shaken to its foundations. The veracity of the Queen is openly discussed as if it were an ordinary incident of the day, and even the late Prime Minister has not hesitated to throw upon her Majesty the imputation of falsebood and intrigue. The Republicans hail the event as a certain blow to the principle of the Monarchy, while the Carlists believe that before the lapse of another year Queen Isabella will have ceased to reign, and the son of Don Carlos will occupy the throne. The position of Señor Olozaga also is hourly becoming more perilous. No
decision has yet been taken in regard to his impeach ment, but the Court party are adopting such extensive military preparations that his life is in imminent danger. According to the last accounts it is the general impression in Madrid that another outbreak is inevitable, and that a military dictatorship will be the next scene in moking for the opening of the Chambers. The King and Royal Family have arrived at the Tuileries for the com. mencement of the new Session, and a large number of Deputies are already assembled in Paris. The movements of the Duc de Bordeaux and his followers in London are still the subject of much comment, and are expected to
form a leading topic of discussion in the Chambers. from a leading topic of discussion in the Chambers. King, the Count of Nassau, who died suddenly at Berlin on the 12 th inst. The career of his Majesty was intimately comnected with the great events which followed the
French Revolution, and he personally bore his share in French Revolution, and he personally bore his share
many of the battles between Napoleon and the Allies.
At home, with the exception of the death of another veteran of the late war, Lord Lynedoch, there is nothing which calls for special notice, except the formal announcement that Parliament, will meet on the Ist of February for the despatch of business.

Court. - On Sunday her Majesty and Prince Albert and the whole Court attended Divine service in the priday by the Bishop of Oxford. Prince Albert hunted with his harriers on Monday ; on Wednesday went out rabbitshooting in the preserves in the Great Park, and hunted with the stag-hounds on Thursday. Her Majesty and the Prince dined with the Duchess of Kent on Wednesday evening at Frogmore Lodge. The Queen and Prince
have taken their usual morning exercise during the week have taken their usual morning exercise during the week
in the grounds about the Castle. On Wednesday a party of Ojibbeway Indians arrived at the Castle conducted by Mr. Catim, and were presented to her Majesty and Prince Albert, the Duchess of Kent, and the ladies and gentlemen of the suite. The Chief made a speech in which he
described the loyalty of his tribe, and the great gratification which he and his countrymen felt in beholding her Majesty. The party then performed several of their national dances, after which they partook of refreshment and returned to town. Their costume was the grotesque dress of their country. The party consisted of seven, four
men and three women. The Marchioness of Douro has succeeded Lady Portman as Lady in Waiting on her
Majesty; Lord Rivers has succeeded the Marquess Majesty; Lord Rivers has succeeded the Marquess
of O Ormonde as the Lord in Waiting; and Captain the Honourable Nelson Hood has succeeded Sir Frederick Stovin as the Groom in Waiting on her Majesty. The following personages have been at the Castle this
week on a visit to her Majesty:-Lord Portman, the Bishop of Oxford, Sir Henry Wheatley, the Right Hon. Pemberton Leigh, and the Countess of Orkney. It is stated on good authority that her Majesty and Prince Albert will visit Warwick-castle in about six weeks, and opportunity of visiting Birmingham. It is also stated that it is the intention of the Queen to visit the banks of the Rhine next spring and that she will remain some time in Majesty will take up her residence in the Palace of Brubl, whilst others state that the Palace of Stoltzenfels will be prepared for her reception. It is believed in diplomatic circles that a numerous assemblage of crowned heads will meet on the banks of the Rhine, probably at Coblentz, to
receive her Majesty. The Queen Dova
dent last week, in driving in danger of a serious acciWhen the carriage containing her Majesty was near New-bold-bridge, two of the four horses were thrown upon their knees, and the post-boy was precipitated several yards shoulder by the pole of the carriage, as to be undit to proceed ; and the post-boy's head was cut so severely that the blood flowed from it in large quantities. Earl Howe
was obliged to assist the attendants in their endeavours to wet the carriage going. The Queen Dowager was affected to tears on seeing the injury done to the post-boy and the horse, and did not recover from the shock for some hours afterwards.
The Duchess of Gloucester.-Her Royal Highness is so far recovered from her recent indisposition, that no
more bulletins of her Royal Highness's health will be ssued, her Royal Highness being considered convalescent The Duc de Bordeaux.-On Monday his Royal High ness arrived in Birmingham, and was received by Bishop Wiseman and other Catholic priests, who conducted the Prince to Oscott College, where he passed the night. On the College, and afterwards visited Birmingham, His Royal Highness was first conducted to the cathedral, which he minutely inspected. On leaving the cathedral,
his Royal Highness and suite proceeded to visit the manuhis Royal Highness and suite proceeded to visit the manu-
factories in the town, and was first conducted to the extensive button-manufactory of Messrs. Hardman and Ilife, Paradise-street, where he viewed the process from the metal in the raw state to the finished article. He also inspected the pressing of the medals manufactured in the establishment. His Royal Highness then proceeded to the Town Hall, after whieh he proceeded to inspect the manufactories of Mesarm, Phiprom and Son, pin-manufac
turers ; Mr. Windfield's brass bedstead manufactory, Mr. Co.'s electro-plating establishment in Marshall-strend and Messrs. Serjeant and Co.'s sword manufactory. His Royal Highness then repaired to Dee's Royal Hotel, where his Royal Highness party of gentlemen. On Wednesday Muntz, Messrs. Jenners and Bettridge's manufactory, and the proof-house; after which he proceeded to Redditch to returned and went to Dudley, where extensive preparations were made to enable him to visit the iron works and visited Oxford and returned yesterday to Belgrave-square to pass the Christmas in town, after which his Royal Houghness will continue his excursions in the west and Death of
Death of Lord Lynedoch.--The venerable Lord Lyneo'clock, at his town residence in Stratton-street, after several days of severe suffering. This distinguished veteDukes of Montrose. He was the son of Thomas Grahame Esq, by Christian, fourth daughter of the first Earl of Hopetoun; was born in 1750 , and had consequently menced his rnilitary career somewhat His Lordship comattained his 45 th year when somewhat late in life, having Toulon as a volunteer in 1794. His future career fully justified the promotion to which through successive grades he rapidy attained, and which he earned by that rare combination of valour and discretion by which he was
through life distinguished. During the Peninsular wa he was constantly engaged, and having the Peined the ran of General, was not merely actively employed in, but of Barossa, gained on the 5th of celebrated victory achieved under his command. He was second in command under Lord Wellington at the siege of Ciudad Rodfought field of Vittoria, led the left wing at the hardSt. Sebastian, crossed the Bidassoa, and conducted the British army within the French territory. The failure of his health, impaired by incessantly severe service, comexhausted return to England; but having recruited his pointed to the command of the British army in Holland, Thomas Graham's gallant achievements were in The thanks of both Houses of Parliament were on several occasions voted to him, in connexion with his companions in arms. In 1814 he was created a peer, as Baron \(2,000 \mathrm{l}\). to himself and his heirs. In 1821 he was made a General in the army, in 1826 obtained the colonelcy o barton castle, a post rather honorary than Iucrative. In 1774 his Lordship married the Hon. Mary Catheart, her death, in 1792 , left a widower without issue. The title, and the pension which was conferred with the The high estimation for private worth and generous spirit in which Lord Lynedoch was held by all who were his associates in the field or his companions at were his been attested in various gratifying testimonials. Sheridan, speaking of the various excellencies, personal and proknown bim in private life; and never was there seated a loftier spirit in a braver heart." Alluding to his services Sir John Moore, the General in command, was killed-he continued, "In the hour of peril, Graham was their best adviser ; in the hour of disaster, Graham was their surest consolation." Sir Walter Scott has also made him the
subject of eulogium in his "Vision of Don subject of eulogium in his "Vision of Don Roderick," Lordship's fame.
Parlianentary Movements.-On Tuesday the Lord Chancellor, Lord Haddington, and Lord Aberdeen, as her Majesty's Commissioners, attended in the House of Lords, and prorogued Parliament to Thursday the lst commission, the Lord Chancellor said: In the Royal her Majesty we declare this present Parliament to stand progued until Thursday, the lst day of February next, ant affains for the despatch of divers urgent and import ingly until the 1 st day of February nex prorogued accord that Sir John Rae Reid intends to resign his ported Dover, and that bis acceptance of the Chiltern Hundreds will be announced immediately after the opening of Par-

The Church.-It is rumoured that the Rev. Dr. Moore vicar of St. Pancras, intends resigning his benefice, and that the Rev. Sydney Smith, canon of St. Paul's is likely be his successor.
church of Scotland.--The Queen has been plessed to present the Rev. J. MacIver to the parish of Sleate, isle MacIv, vacant by the transportation of the Rev. Alex. Frazer to the parish of Nigg, Ross, and the Rev. Simon siozer to the parish of Nigg, Ross, vacant by the seces-
sion of the J. Macalister The Army.-The Colonele
acant by the death of General the 13 th Light Infantry, sented to Brevet-Colonel Sir Morrison, has been pre-mander-in-Chief as a mark of Robert Sale by the ComGrace entertains of the services high sense which his Grace entertains of the services rendered by that distinAffghanistan. With the exception of his Royal Highness

Prince George of Cambridge, this is said to be the only instance of a regiment being bestowed upon any officer under the rank of Major-General. -The Queen has been pleased, on the recommendation of the Commander-inand Captain oint John Blakiston, Esq., late Erevet-Major her Majesty's Honourable Corps of Gentlemen to one of vice Shakeshaft, deceased. The Queen has also been pleased, on the nomination of Lord Forester, to appoint John Gregory, Esq., to be one of her Majesty's Honourable Corps of Gentemen-at-Arms, vice Gray, who retires The Navy.-It is understood that the East India Company are about to pay "donation batta" to the officers and men employed in the first expedition to Canton, when Captain Elliot agreed to accept ransom for the city. The allowance to the army has been long since paid. The officers and men employed in the following ships of the Royal navy will be entitled to share-the Algerine, Blenheim, Blonde, Calliope, Columbine, Conway, Cruiser, Druid, Herald, Hyaciath, Larne, Melville, Modeste, Nimrod, Pylades, Samarang, Volare, Wellesley. The shares to the officers, wh, Volage, and served 12 months on the coast of China, will be- they have about 900 l . ; Commanders, 550 l ; and Lieutenants, 200 l. Law Appointments.-It is reported that Mr. Sergeant Herbert Jones, formerly Solicitor-General of Van Diemen's Land, will be appointed the new Indian Judge.

Post Office.-The following alteration in the Metro"Letters to pass by the inland mails can be posted at the receiving houses till 5 h .30 m ., P.M. (being one half-hour ater than at present) ; by the letter-carriers, zinging bells on payment of one penny with each), from 4 h .30 m . to cross, Old Cavendish-street and post-offices at CharingBorough, till 6 p,w must be till 45 m . at the branch 6 P.M., and till 7 p.M. post-office in lombard-street till stamp affixed to the letter; at the General Postooffice St Martin's-le-Grand until 6 P.M., and until 7 p.m. upon payment of a fee of one perny (or an affixed stamp) in addition to the postage which must then be paid in adrance, and from 7 till half-past 7 upon payment of a fee of sixpence each.

\section*{foreín.}

France.-The Paris Opposition Papers announced a few days since that the English Government had given a private order to the Duc de Bordeaux to quit England
immediately, and some of them even stated that this step was taken at the express request of the French Ministry, The Due The Duc de Levis, however, one of the noblemen in the suite of the Prince, has been authorised to contradict this statement, which he declares to be quite an invention. It
was reported in Paris that the Government had some was reported in Paris that the Government had some
strong measures in contemplation arainst the Royalists. One of the rumours was that the Gainst the Royalists. One of the rumours was that the Cazelle de France was to be brought before the Chamber of Peers, and another that a motion would be made for the expulsion of M. Berryer and the other deputies who visited the Duc de
Bordeaux. The National also mentions that M. Deffontaines, one of the Judges of the Tribunals at Lille, was immediately to be summoned before the Supreme Court to account for a journey which he lately made to London, de Bordeaux. - The Deputies were arriving in great numbers in Paris preparatory to the opening of the session. Upwards of 300 had already "reported themselves" at the Chamber of Deputies. The usual precautionary measures for the opening of the Chambers by the King had commenced. - The King and Royal Family The French mission to Chinasday for the "winter.the Syrene frigate, which had been specially fitted the purpose. Several Royal ordonnances have been issued, the object of which had been for some time talked of. The first appoints M. Dumon Minister of Public Works, instead of M. Teste, whom another ordonnance raises to the dignity of Peer of France and a Cbamber in the Supreme Court of Cassation \(M\). Dumon is a Councillor of State on the Chamber of Deputies and considered an er friend of M. Guizot M. Hippolyte Passy a intimate the Chamber of D. M. Hippolyte Passy, a men of the many Cabinets forme since 1830 , is also rais to the dignity of a Peer . The various modifit ine last ordonance introduces decree of 11 th davigation navig and can possessin. As the late minister M. Teste is con Dudered a confidential friend of Marshal Soult, and M Dumon a confidential friend of M. Guizot, the Opposition pil and Min have long supposed the President of the Coun cil and Minister of Foreign Affairs to differ on various political points, generally infer that the Marshal's influence in the Cabinet hasdecined.-The dispute between the Church and the University has brought forth another champion or the unversity in the person of the celebrated advo cate M. Ledru-Rollin, who publishes in the National of Sunday a long letter in answer to M. de Lamartine. A funeral service was celebrated in the Chapel of the Invalids on Friday in commemoration of the Emperor Napoleon, that day being the anniversary of the translation of his remains to Paris Marshal Oudinot, the Governor ; General Petit, the Deputy-Governor; General Gourgaud, all the inmates of the Hotel of the Invalids, and a number of military men of the Empire were present, dressed in the uniforms o
the corps in which they served.-M. Casimir Delavigne, the
poet and dramatic author, died at Lyons in the night of poet and dramatic author, died at Lyons in the presence of his son, who is only in his tenth year. He was on his way traviling by short stages. On arriving at Lyons on the 9th he became too weak to proceed. M. Delavigne was
born at Havre in 1794. As a private man he was universally esteemed. He was a member of the Académie Francaise, and librarian at the Palace of Fowd was so great on Saturday evening in the Café de la Régence to witness
the game of chess then in progress between the English the game of chess then in progress between the Ampant, that six persons became so them their homes. A municipal guard was ordered to be stationed at the door of the café, whose duty was to admit oniy the number of accounts of the game state that Mr. Staunton on Wed nesday had gained 11 games, and Mr. St. Amant six;
and that four had been drawn: Mr. Staunton was consequently the victor. The papers add that he won his llth (the conquering) game in "fine style, . France. The papers announce that the Minister of Commerce has
suppressed the Royal breeding stud at Rosieres, and considerably reduced the others by the sale of several horses. Spains.--The sittings of the Congress continue to attract
general attention in Madrid, but the debate upon the occurrence of the 28 th November advances but slowly. On the 9th sundry incidental motions and counter-motions were supported by the Progresistas and Moderados, the confusion created by which renders an abstract of the discussion a difficult task. At length after many interruptions M. Lopez, the late Prime Minister, moved with either M. Murillo's proposal to address the throne or the Queen's message. M. Lopez defended the Progress party and violently attacked their opponents. He was nounced a mere intrigue, when the Chamber adjourned. In the sitting of the 10 th M . Lopez resumed his speech and addressed the Chamber with as much vehemence as the day before, deriding the superior veracity ascribed to the alleged occurrence at the Palace, and quoting the line of a Spanish poet, which says, "Do you believe I am silly enough, when appearance of truth?" The ex-Premier urged as eridence of the Palace affair having been but an intrigue evidence of the Palace affair having \(\begin{aligned} & \text { of the Moderados that he had not been sent for by the }\end{aligned}\) Queen, although she had assured him on his retirement from the Cabinet that she would demand his advice whenever any event of magnitude occurred. He conch hed had in his quiver, and which would inflict severer wounds than was supposed. His proposal was nevertheless rejected by a majority of 77 to 62 . M. Martinez de la rosa was the
next to speak in favour of a proposal that all incidental motions be set aside and the address to the Queen defending the Moderados and repelling the attucks of their opponents with gentleness; the Chamber adjourned as he was telling the Progress party that they must
either believe the Queen's statement, doubt it, or consider it false, and that in the two first cases they must Vote the address, and in the last impeach M. Olozaga.
On the Ilth M. Martinez de la Rosa resumed the arguments in support of his motion for permitting no incidental proposals to be discussed and for hastening the vote on the address in reply to the Queen's message. His oration elicited a violent answer from Mo. to extremes, but in repeating what he had already said of the circumstances which had preceded his accession to office, and in assailing the Moderados he threw no additional light on the scene at the Palace on the 28th Nov. And insisted that his word was as good as that of the Queen,
 tions of the Court." At the close of his speech M. Martinez de la Rosa's proposal was taken into consideration by a majority of 126 to 2. On the 12 th M. Olozaga again addressed the Chamber. He replied principally to those who had imputed to him irreverent conduct at a Royal banquet and to the allegation of his having picked up and pocketed on the evening of the 28th some sugar-plums wracious Queen had dropped, and represented them as a The ex-Minister of War Serrano next extered into details of what had occurred since the 29 th, when he was first informed of the occurrences at the Palace the evening before. His narrative of the affair put it beyond a doubt
that the ordinances for the dismissal of Olozaga were drawn up without the knowledge or sanction of any single member of the Cabinet, and that it was entirely the work
of the Camarilla. He stated that on his arrival he found no less than four ordinances drawn up-one dismissing Olozaga, one annulling the decree for the dissolution of public employment and the fourth reciting that in future the Queen should transact business with the whole Cabinet only. He refused to sign any of these decrees, because he had a difference with Olozaga; and it was signed them, was sent for. General Serrano concluded signed speech by a severe attack upon the Government for his speech by a severe attack upon the Government for the military demonstrations they were making on the
subject of the Olozaga affiair, and also for the diamissals
from the army and civil service. On the 13th the Members, M.M. Mateo and Lorenzo Calvo, who are charged with a participation in the late attempt on the life of the Captain-General Narvaez, resumed the debat sitting was taken up with another speech of M. Cortina waich he declared that the laws of Spain formally impose upon the Sovereigns of that country the obligation
of telling the truth. On the 14 th the debate was resumed and M. Cortina again spoke at considerable length, inveighing against the Camarilla, and reminding the Moderados of what had tories recovering office, Sir R. Peel required the dismissal of certain members of the Royal household. He concluded by affirming, that what was passing was but a reaction, the consequences of wowed, and next the President of the Council, M. Gonzales Bravo, who, in upholding the Queen's veracity, gave rise to a serious alter Cation and great uproar. General Serrano, confidentially state respecting the occurrence at the Palace, the latter cried, "I 1 is not true." when Serrano said, "Out of doors it would be the same thing." Another scene of confusion was produced by M. Cortina interrupting the Premier with "'Tis false!" Serrano spoke afterwards, and M. Gonzales Bravo replie what he now said did not prevent their subsequent meeting and their seeing whether they could not come to some understanding. The Chamber then adjourned in muct agitation, as a hostile encounter was expected to sull Generals Narvaez and Concha, and MM. Eugenio Moreno and Lors that throu, hair An imperdin dissolution of the Cortes was still talked of and it weng disomoured that M. Olozaga would shortly be arrested. His absence from the two last sittings of the Chamber of Deputies had been remarked, and it had somewhat corroborated a report of a serious nature three attempts had been ada to assassinate him, an other been compelled affairs. Among others it was said that four armies were abours. Among thers it was said consly, under the com mand of Ce med to act simulto st lazara General Concha, and to Galicia. A decree is publish in the levy of 25 , Gazetle whereby the Qust. With th above report may be connected the Espectador's allegation that the Government were preparing to disarm the whol National Guard on the same day. In regard to the Queen herself, who seems to be lost sight of amidst these melancholy discussions, it was rumoured that insurmoutable difficulties have arisen to prevent the wamage of th Count d'Aquila with the young Queen of Spin, and that the Count of Trapani has started as a compeitor for the prize. The Gazette of the 12 concaims arster Finance. By another decree, signed by the new Minister, M. Manuel Gonzales Bravo, father to the Premier, wa nominated Under-Secretary of the State of the Finance De partment. The same official journal pubishes a number of other appointments, and amongst them that of Baron de Meer as Captain-General of Catalonia in the room of General Sanz, who was transferred in the same capacity to the seventh military district. The French ambassador, M. de Bresson, bas had frequent conferences with the Mrince for Foreign Affairs since his arhad been present at this last interview, and it had been decided that he should immediately present his credentials to the Queen. Messrs, Donoso Cortes and Ros de Olano left on the IIth for Paris, on a mission to Queen Christina to invite ber to return to Madrid. The invitation, however, contained a proviso that she must bring with her \(10,000,000\). of the \(150,000,000\) f. still remaining in her cofters,- a condition which is expected to induce her Majesty to decline the some disturbances anagsa jo there on the night of the 12 th, and that more were apprehended. The authorities were taking steps to preserve order. All singing in the public streets was forbidden, the laws regarding prohibited arms were put in full force, and the military were kept on the alert. The people in all part in consequence of the ecent atents adrid, and a general outbreak seems inevitable
Portugal.-We have accounts from Lisbon to the 12th. The Costa Cabral Ministry is surrounded by financial difficulties, which have forced it to the unpopular measure of imposing fresh taxes on the irst necessaris In addition to this the Government has formidable opponents in the municinal bodies, hich bold and almost seditious addresses. The municipalities are dissolved, re-elected, and prosecutions institute against their members. The unpopularity and doubtfu Justice Minister as painful as that of the head of finance is rendered by the new imposts ; and both are said to meditate resigning.
Holland.-By despatches from Berlin we learn tha the ex. King of Holland, his Majesty William Frederick Nothiny had given reason to expect so speedy an end of the life of the venerable Prince. He had been engaged in
business that very morning, and was found by his aide-de-camp sitting in his own chair, struck by a fit of apoplexy, and apparently dead. All the attempts which were imaceliately made to recover his Majesty proved fruitless. The deceased Prince was born in the year 1772, and was therefore at the time of his death in the 1st year of his age. He married a Princess of Prussia, daughter of Frederick William II. The eldest child of this marriage is the present King of Holland, who was born on the 6th December, 1792. When the French republic in 1793 declared war against the Low Countries, his Majesty received the command of the army of Holland, and greatly distinguished himself during the hostilities which ensued. He commanded a division at the battle of Jena, and was at the battle of Wagram, after Ench event he proceeded to Berlin, and finally visited England, which he did not quit till the year 1813. He was proclaimed King of the Netherlands on the 16th o March, 1815, and as a Sovereign entered Brussels on the 5th of April following. On the return of Bonaparte from Elba, foreseeing that his territories were likely to become the scene of great operations, he lost no time in lahouring to put their military positions fence that circumstances would permit and to organize his troops with as much expedition as possible. The command of these forces was confided to the present King their head in the battle of Waterloo. The late King is said to have been a person of great simplicity of life, very attentive to business and of most economical habits. The Paris papers state that the fortune possessed by the ( \(12,000,000 \mathrm{l}\).) The greater part of this immense fortume is vested in the funds of the Belgian General Society The rupture which separated Holland from Belgium and gave the title of King of Holland merely to the deceased monarch his obdication in 1840 in farour of his ase his second marvine to Countess d'Oultremont his life of retirement as the Count of Nassau-are circumstances of course famoiliar to every reader
Germany.-From Vienna we learn that there is now no longer any doubt that the Archduke Stephen will be placed at the head of the government of Bohemia, but with what title is not known. The best results for the kingdom of Bohemis are expected from this measure. The Grand Duke Alexander of Russia and his consort, with the Prince Alexander of Hesse, arrived on the 9th at Darmstadt from St. Petersburg at the Grand Duke's Palace, where they intend to make a long stay. The city gave them a very briliant reception
English Engisi papers have been excluded from Rome in consequence of the attacks they have lately contained on the The excitement in Naples is still very great and Much astonishment has been created by a singury steps. Much astonishment has been created by a singular event which has recently occurred at Rome, and is the topic of general conversation. Prince Gallitzin, who has resided In that city for many years deriving his income from his estates in Russia, has had his remittances stopped by order of the Russian Government. The cause of this measure has not yet transpired. In consequence of this circumstance the erecting of a splendid palace which Prince Gallitzin was constructing on the Piazza Clementina, after the model of the palace Giraud, the masterpiece of the celebrated architect Bramante, is now discontinued. It is said that the Duke Alessandro Torlonia will become the purchaser of it as now stands, and have the bullding finished on the same plan as originally intended by Prince Gallitzin. The Papal Government have been straitened in pecuniary matters owing to the extra expenses occasioned for suppressing the late disturbances; and although they had resolved a short time back not to have recourse to a loan, one for a million of scudi with an eminent London house is said to be nearly concluded.-A letter from Palerno of Nov. 27 states, We have received at last advices from Catanea referring to the eruption of Etna. The fire which had been observed on the top of the mount for some time was not a real stream of lava, but only the reflection of the lava slowly rising within the crater. However, on the 17th November, the mass of north side below the crater of 1842 and forming out of the nem crater with great force a fresh stream, which in northerly direction and with great rapidity flowed owards the village of Bronte. The inhabitants of this place very much frightened by the fiery mass fast running towards them, packed up ail their movables in order to leave their homes the next day; but on the 18th the lava tream divided itself into two branches, and spared the larmed inhabitante who a few hours before thought their flarmed lolings would be buried under a stream of fire The eruption did not however pass over without damake; the lava reached many vineyards and fields, which have been changed into barren black heaps of stone. On the 23d the lava was flowing quite slowly."
Greecr.-Accounts from Athens state that the election of President and Vice-Presidents of the National Assembly has taken place with the general approbation of the people, and that it affords an additional proof of the happy unanimity which prevails in the Assembly. Notaros, a man of no party, revered from age, being upwards of 100 years old, and from having presided over several assemblies, is President. The Vice-Presidents are Mavro cordato, Coletti, Metaxos, and Londos, all four ministers -the three first considered to be representatives of the three parties, English, French, and Russian. The rules of the Belgian Chambers have been followed in those laid down for the Assembly
Gribralrazo-H.M.'s meamer Locust sailed from

Gibraltar in all haste on the 8th inst. for the coast of Malaga in search of a piratical vessel, of the presence of which certain intelligence bas just been received. That a pirate is cruising near Gibraltar in the very tract of vessels
bound up and down the Spanish coast within the Straits there is not the slightest doubt; the only difference of opinion is as to the balance of probability in her being slaver doing a little business as a Corsair, in consequence of being driven off the slaving coast by British cruizers, or the probability of her being the Santa Trinita under Greek colours, which a month since made several captures in the Levant, and whose Captain Theodoraki Spano
then murdered six men two women and a girl, among ther atrocities.
West Indies.-The Royal mail steamer Teviot has arrived at Soutbampton with dates from St. Vincent's
Nov, 17th; Barbadoes and Demerara 19th; Jamaica 4th ; and St. Thomas Dec. 1st. Great duIness prevailed in Jamaica, Barbadoes, and other islands, which is partly ascribed to the slowness with which money returned from he interior into circulation in the commercial towns. The Agricultural Society, by offering two prizes of \(100 l\). each, one for the best essay on the manufacture of sugar, the other for a like dissertation on the mode of establishing and conducting industrial schools adapted to the want and circumstances of the agricultural population. The In Demerara four fires more or less destructive had oc curred, and are placed to the account of incendiaries. The want of an efficient detective police is complained of. Some interest had been excited at Jamaica by the dis covery of a new manure, the excrement of the West Indian as the real guano of Peru.
Brazies.-The ship Ville de Rouen, which arrived at Havre the 16 th inst., brings accounts from Rio to October 26th. The Legislative Chamhers closed their sittings on the 24th October. It appears that the Princess Januari Amathen in a state of progressive convalescence. The Americans had been buying up coffee in large quantities. were expected to give way in some degree consequen thereupon. The slave-trade was carried on with surprising activar from confirming the hope which had been held out and which was still entertained at Monte Video of the interposition of the Brazilian Government in the struggle between Buenos Ayres and Monte Video. The Govern ment of Brszil had declared that it would not depart from from the commencement of the existing differences between the two republics.

Money Market, Friday.-Consols have advanced to \(6 \frac{1}{8}\) to \(\frac{1}{4}\) for the opening, closing finally at \(96 \frac{1}{3}\), sellers Three per Cents. Red., \(96 \frac{8}{6}\) to \(\frac{3}{3}\); Three-and-Half per prem.

\section*{Betropolis amd its Vócimín}

Destitution of the Metropolis.-The following are the esolutions adopted by the Association for the relief of the Metropolitan poor at the late meeting at London
House:-l. The objects of this Association shall be to House :-1. The objects of this Association shall be to
relieve destitution, and to improve the condition of the poor in the metropolis, by means of parochial and district visiting under the superintendence and direction of the bishop and clergy. 2. The Association shall consist of the general body of contributors to the fund, the Bishop
of London being President. Association shall be conducted by a Committee of Members belonging to the Church of England: one-third to go out annually, but to be re-eligible. The vacancies to
be filled up by election at the annual meeting. 4. The Committee shall have power to defray from the funds the Association such expenses as they shall deem essential for the efficient management of its concerns, but no part of its funds shall be applied to the payment of Members of the Committee shall be necessary for the transaction of business. 5. An annual meeting of the receive the saall be held-the President in the to appoint auditors for the ensuing year, and to fill up the vacancies be to form and maintain a fund for the purposes herein after specified, by occasional appeals to the public, to the following regulations:-1 chial clergy, and to afford to them information concerning district visiting ; for this purpose to enter into immediate communication with the clergy of each metropolitan parish. 2. In such parish where a Visiting Society is in and results, and the géeeral condition of the poor. 3 . and results, and the general condition of the poor. 3 . operations by want of funds, to render assistance. 4. Where there ss no Nociely, to submit a plan with the offer of effective co-operation. 5. Where no provision for
district visiting exists or seems likely to be made, the case to be submitted to the Bishop. The funds shall be administered to objects deserving of relief, without distinction of religious persuasion:-1. Upon application from any incumbent, or from the curate of any nonresident incumbent, a grant of money may be made, to be employed in the relief of the destitute poor by means of gratuitous district visiting. 2. Such incumbent or curate

District Visiting Society by which he proposes to dispense general objects to which it will be applied.
shall render periodically to the Committee an account of the actual expenditure of the grant. 4. All grants shal be made for one year only, but shall be renewable upon In distributing the funds of the Association care shall be In distributing the funds of he Association care shall be relief to the poor."-The Instifution formed on the plan of Lord Ranelagh is to be called the "Philanthropic Union for Refuge for the Destitute." The address pa forth by its supporters states that "the Committee
appointed by the public meeting held in Leicester-square last month have concluded their labours by a portion of the said Committee joining the City Association, which provides shelter and relief for only four months in the during the course of their labours, they have ascertaine that the destitution among the poorer classes is so general and so widely extended, that they feel that a more enlarged scheme for its alleviation is desirable. The main object of the present Committee is to carry out the above suggestion, by providing permanent houses of refuge. shelter for thed to efected To co-operate and advis with other charitable establishments; and, bereafter, to extend the benefits of the Institution as far as funds and increased knowledge

Court of Common Council.-On Monday a Court was held for the purpose of proceeding in the adjourned debate upon the report from the committee on the Election Act of the 11th George I., delivered on the 7 th November, for the introduction of a toil into Parliament for amenaing the ment by Aldermen and Commoners, and the greates interest was excited. Alderman Brown's ameadment proposed on the last day of meeting, was then read (the original motion being "t that this Court do agree with the committee in their report"):-" That it is the bounden duty of this Court to protect the freemen of the City of as secured to them by law, and that to sanction any measure having for its object the admission of non freemen to a participation in the franchise without becomin free pild be dereliction of such dut sund an act of great and manifest injustice to our constituents and fellow-citizens : and that in the opinion of this Court it is highly inexpedient to appeal to Parliament for cipal institutions of this city, unless it shall hereafter appear that the powers of the corporation are insufficien to effect such reforms as are essentially necessary." In read the following amendment, which it was his intention to submit, should Alderman Brown's stand as the original inquire into the power of this corporation to enforce upon all persons whether carrying on business wholesale retail within this city the obligation of taking up the freedom of this city, and the propriety of enforcing the sam apon all traders whonsoever, and particulary upon whole sale dealers, wha hibery to the sald comnte to repor any information, matter, or other suggestions to this Court which they may thimk find be conider tion of the report of the Election Act Committee be adjourned until the said committee now to be appointed shall have reported to this Court. After a very long discussion a division took place, when there appeared for majority, 59. Subsequently Mr. Ashurst's motion, drop ping the words after "think fit," was carried by a lars majority. The effect of the division was to throw out the report and the bill.
The City Solicitor.-Mr. C. Pearson the City Solicitor has been prominentiy before the pubic auring the past week, in refutation of an attack made upon the Corporation and himself, in a recent number of the "Westminster Review." Mr. Pearson's speech at the London Tavern, in explanation of these charges, occupied three days in its lowing resolutions :-1. That, in the opinion of this tegrity , tions cast upon him by an article in the "Westminster Review" of May last. 2. That they are, moreover, of opinion that the amount and sources of Mr. Pearsone plained by him, at variance with the real facts, and, so far as they are able to judge, do not exceed that fair and proper remuneration which is necessary to maintain the character and position of a gentleman, and a high public officer. 3. That this meeting are indebted to Mr long large amount of information, which, in detailing his communicated ; and that his statements have corrected many prevailing errors, as well as proved the great advantages that may be derived from a good system of local government based upon a representative principle
St. Stephen's, Walbrook,-On Friday, this Church was the scent of another tumult in connexion with Alderman Gibbs's accounts. It appears that, in pursuance of a notice, issued officially by the Alderman, and stating his the poor and other paupers, a large crowd of parishioners assembled round the church door, anch ously wail g g be admitted, At one oclock the church door still remaining closed against them, the parishioners became clamorous and
impatient. At this moment Mr. Alvin, one of the select ves
ceive him, when Mr. Rock, Mr. Howett, and others of the parishioners endeavoured to follow him into the church, but were arst repulsed by hean Gibbs to
 were disorel, parioners meshed through church and peseld pele be to man Gibbs commanded Mr. Howett who was amongst the foremost to retire from the vestry as a trespssser, and old him that he should have to answer for his conduct before the Ecclesiastical Court Mr. Howett refused to retire unless removed in custody, and a scene of inde ecrivable confusion ensued, in the midst of which Alder pack up their papers and retired amidst loud manifesta tions of tumult and displeasure. Mr. Rock was then called to the chair, and proceeded at considerable length to comment upon the conduct of Alderman Gibbs and o the select vestry, selterating the Adewan position wit reference not only to the parish of Walbrook but in con-
nexion with the Margate Sea-bathing Infirmary, the Sheriffs' Fund, the Cannon-street Sherehog, and St. George the Martyr. Mr. R. Cunliffe the banker followed, and deprecated the conduct of Alderman Gibbs in having sent a letter to Dr. Croly tang that wilh the approbation of the Archdeacon proper the n entrance of any persons other than Dr. Croly, members of the select vestry and the vestry clerk. Cume believed that the latter part of this letter con tion consisting of Mr. Cunliffe, Mr. Flight, and Mr. Rock do wait on Archdeacon Hale and ascertain if he directe or approved of any particular and wat mode of proceed ing to effect the exclusion of the parishioners of St Stephen Walbrook from the Church or the vestry-room on the 15th inst. After some desultory discussion the vesti was arjourned to receive the report of the deputation on the result of the interview with Archdeacon Hale.
East India Company. -The quarterly general court of proprietors was held on Wednesday, Mr. Cotton in the respecting Scinde, the chairman said that application that been made to the Board of Control, and the Earl of Ripon had replied that " additional peners relating to Scinde will be laid before the Court of Directors at the earlies period at whin the judgment of the Board such step can be taken without the risk of prejudice to the public interest." The chairman stated the papers already ordered to be printed upon this subject would be ready for delivery to the proprietors on Tuesday, the 26 ih inst. Mr Poynder obtained leave to postpone his motion respecting the illegality of the annual payment of 6,0001 . to the temple of Juggernaut to the March court. A resolution was then passed admitting Cat John Paterson to an annuity of 200l, a year as compensation for maritime services. The chairman said that the death of Sir F. Chantrey had caused some delay in regard to the statue of Lord Wellesley, but measures were in progress to complete the statue forthwith.
Fire in Guildhall.-On Tuesday shortly before midnight an alarm was raised that the Guildhall was on fire. The flames were discovered by one the watchmen bursting through the ceiling of the Town-clerk's offices, immediately underneath the gallery leading to the ordnance chamber. All hands upon the building were at being well supplied tue powerful engine kept in the han being well supplied with water the gre was extinguisie nated from the stone slab beneath a patent stove having become wan sa fire the joists of the floor. At the time it w, and sored it rapidly progressing towards the centure the buiding, which but for that cir cumstance would probably have been destroyed. Many
of the valuable papers in the town-clerk's offices are of the valuable papers in

National Art Union.-The annual meeting for the distribution of prizes by this lottery was held on Monday at the Freemasons Tavern. The report stated that the Union consisted of about 2804 members ; that the value of the prizes drawn would be upwards of 1430l., and the expenditure had exceeded the receipts by a very considerThe sum, the former being 5000., the lat a Norris Best, Bilston 150 the highest prizes. Rowe and Norman, 100 guineas ; Mr. Pugh, Parkfield, Wolverhampton, 50 guineas; Mr. D. Yonge, Exeter College, Oxford, 50 guineas. In addition to these there were two guineas, twenty-one of 15 guineas, nineteen 10 vineas, and one of 6 guineas, besides a print given to each person at the time of subscribing

King's College.-The Rev. Dr. Jelf, Canon of Christ Chureh, has been appointed Principal of this Coliege, and students on Monday presented their late Princinal, Bishop Lonsdale, with three elaborate silver salvers os a testimonial of their esteem on his retiring from the college. Cacy was of Lunacy.-On Tuesday a commission of Barlow and sixteen freeholders of the county of Sarrey, of whom Mr. Puckle, chairman of the Surrey sessions, was the foreman. The subject of the inquiry was Mr. Ar negent Pearce, for herly a surgou Hital davig her Majest insanity November, 1840, when he was tried for having disclarged a loaded pistol with felonious intent at his wife, and grievously wounding her. Mr. Pearce was a man of high attainments, eminent in his profession, and the author o
ployed his time in teaching French to Oxford who was confined for shooting at the Queen. It appeared from insane and not responsible for his own acts, and the consequence was that be was consigned to prison during her Majesty's pleasure or so long as insanity was found to remain upon him. After his acquittal he was placed ander
the care of the Messrs. Stillwell, of Moorcroft-louse near Hillingdon, and in the course of some months was re moved by a warrant from the Home Secretary Lord Nor manby to Bethlehem, in which hospital he was received
and had since remained as a criminal inmate. IHe remained the particular object of the care and remarks of the officers of that establisliment, whose evidence for period of two years was called to establish the state of his ral witnesses had been examined who deposed to various delusions under which he laboured, Mr . Pearce answered several questions put by the Commissioner and Jury, evidence. He persisted in declaring that his bed, sheets blankets, and shirts had been watered or poisoned through the machinations of Mrs. Pearce and Mr. Pints her father and be produced a small packet containing some portions of his shirts which he handed to the commissioner and nuff-box in which he endeavoured to show to the Jury that there were some crystallisations among the snuff o a deleterious character. Mr. Pearce evidently a man of that he was not insane and imploring them not to con fine him for life. Mr. Petersdorff briefly addressed the Jury for Mr. Pearce, and the Commissioner having summed up the Jury returned a soundness of mind from the 16 h October 1841.
Metropolitan Hospitals.-Much excitement has pre. vailed for some days past among the professional gentlemen and others connected with St. George's and the spirited canvassing which has been going on. The vacancy at St. George's was in the office of Assist.-Surgeon, and the candidates were Mr. C. J. Jobnson and Mr. H. Hawkins, the latter supported by the medical ohad been the horp themselves most strenuously and on Saturday, the day of election, the large board-room in the hospital and passages leading thereto were thronged with noblemen and gentlemen, amongst whom were his Royal Highness the Duke of Cambridge who presided, the Archbishop of Canterbury, the Duke of Sutherland, the Duke of Devonshire, Lord Dudley Stuart, Lord Granvile Nombers were Arundel, Mr. Johnson 169 , for Mr. Hawkins 152. Majority - For Mr. Johnson 169, for Mr. Hawkins 152. Mave is now going on for the office of Assistant-Physician at the ond Dr. Seth Thompson, the latter supported by the and Dr. Seth
medical officers.

Preachership at Lincoln's Inn.-The following aames have been announced as additions to the list of candidates for the appointment of preacher to the Society of Lin-
coln's-inn :- The Rev. Mr. Pase, Principal of the College coln's-inn:--The Rev. Mr. Page, Principal of the College Fellow of St. Jobn's College, Cambridge; the Rev. Frank Mewson, incumbent of Southall ; the Rev. Mr. Coxe, and the Rev. C. E. Wylde. Three gentlemen have declared themselves candidates for the office of assistant-preacher ant-preacher will take place on the 12 th of January next. The Westminster Play.-According to annual custom the Christmas holidays at this school were ushered in by the performance of a classical drama. Terence's comedy representation went off with credit to the performers and satisfaction to the audience. The cast was as follows:Phormio, F. Cooper ; Demipho, F. G. A. Williams; Antipho, Chremes, J. Rich; Phedria, L. A. Cramer; Davus, W. L. Smith; Sophono, G. D. Bowles; Nausistrata, G. W. Randolph; Hegio, G. O. Edwards; Cratinus, F . A. Giooden had evidently been carefully studied and the effect produced by the scenic representation had a much more striking effect than the drama would have been thought capable of producing from a closet perusal. The plot, ciated by the audience, and the acting was marked by great care and discrimination
Consecration of a New Church.-On Monday the new church in Broadway Westminster was consecrated by the Bishop of London, assisted by the Archdeacon of Middlesex, the Rev. H. H. Milman, and a large number of the Metropolitan clergy. The building is capable of accommodating 1,500 persons, 1,280 of the seats being free and unappropriated, owing to a grant on the part of the Incorporated Society. No organhas yet been erected, and the church is at present without a steeple, The Rev. Cyril to the incumbency
State of the Streets.-The City Police Commissioner, in consequence of the filthy state of the streets, has issued to summon every occupier of a house or other tenement within the City who shall not keep sufficiently swept and cleansed all footways and water-courses adjoining to the premises occupied by them. That there may be no excuse directed to intimate to the person so offending that he is tiable to a penalty of \(40 s\). for every such offence, and that for the continuance or repetition there of he will assuredly
be summoned. The constables will obser
is to be enforced every day in the week
Opering of the Metropolitan Welch Church.-On Sunday the chapel of St. Etheldreda, in Ely-place, Holborn, was opened for the performance of divine service in the Welch language. At the morning service the church was Princinality attending. The Rev. J. R. Williams, late Principaiity attending. The Rev. J. R. Wimiant,
National Education.-The large subscriptions which members of the Church have entered into for carrying on ational education upon Church principles have binule some corresporiding activity on the part ongregationa
bodies. On Tuesday the Conference of the Con bodies. On Tuesday Dissenters on the subject of general education commenced its stiting at the Congregational Library. There was a very numerous attendance of gentlemen from differen parts of the manufacturing districts. Mr. Hindley, M, was in the chair. A cong to upwards of \(12,000 l\). Siz gen-
contributions amounting contributions amounting tlemen set down other \(6,000 \mathrm{l}\). Was contributed in sums varying from 100 l. to 500 l . \(100,000 l\). will be raised by the congregational body in sup100,000 \%. will be raised
The Italian Boys in London.-On Tuesday a meeting wa held at the residence of the Rev. Dr. di Menna in furtherance of a plan for establishing an institution for the car and protection of destitute Rtalian boys. was numerously attended by Italian and Eaglish gentle men, and several statements were made diang tase acts of crueity alleged to have been commitced upon thed poor boys by their masters. A comminee was and a resolution was adopted that a deputation should wait on Lords Ashiey antion and their presence at a pro posed public meeting.
The late Duel.-We announced last week the intended sale of Lieut. Munro's furniture and effects. On Satur day, shortly before the commencement of the auction, Mr Wakley, the coroner, made his appearance and served the following notice on Mr. Kirke, the auctioneer:-" Wherea by an inquisition taken before me, Thomas Wakley, one of her Majesty's coroners for the county of Middlesex, on the 3 d day of July in the for year of the reign of her pre sent Majesty, Alexander Thompson Munro stands charge with the wilful murder of David Lynar Fawcett-this to give you notice, on bebalf of her Majesty, that you wil sell any goods or property belonging to the said Alexande Thompson Munro at your peril. The sale of course di not take place and the company dispersed. The circumstances however have been submitted to counsel, who hav given it as their opinion that whatever power the corone might once have had over the property, that power he ha lost by not acting upon it immediately after the termina tion of the inquest on the late Colonel Fawcelt
Acceleration of the India Mazls.-On the 19th September it will be recollected a public meeting was held to take into consideration the expediency of accelerating the communication with in December to receive their report. The meeting for this purpose was held on Tuesday at the Hall of Commerce, and by the report it appeared that a deputation had waited on the Earl of Ripon, and having esplained the great necessity of enabling the merchants not only in London but in the provinces to answer heir letters by the outgoing mail, had received the answer of so desirat that measur The cated by the chairman Mr. J. A. Smith, and received by the meeting with every demonstration of satisfaction. Accidents and Inquests.-The Hon. Capt. Rous, M.P. for Westminster, met with a serions accident whilst shooting on Lord Rendlesham's preserves, in company with Woodbridge on Friday last, off accidentally by which he sustained such severe injury that he has been obliged to have one finger amputated, and is likely to lose the sight of one eye.- On Friday sir Gore Ouscley was returning to nils sear Stution at Slough when the horses suddenly shyed and the carriage was turned wher on its side. The coachman having fortunately sufficient command of the horses to prevent them from moving after the carriage was overturned, the Right Hon. Bart. was extricated from his perilous situation having sustained some slight bruises in his neck occasioned by his head striking gainst the top of carriage, and compressing his nect against he his shoulders.-On Saturday Lord Inverary, eldest son of the Earl of Kintore, met with a melancholy accident, which terminated fatally in a few hours. His Lordship was on a visit to his Grace the Duke of Montrose at Salby-lodge, Northamptonshire. On Saturday last he accompanied the Duke to a meet of the Pytchley at a very hazardous leap, when its rider was thrown unlingering Sund Hos Lordship lingering tio Shan 23 rears of are. An inquest was held was not more on Tuesday at Winwick Warren. The suron on deposed that the internal hemorrhage was very great and sufficient to acome the brain cansed by diate cause was from pressure upon the brain, caused by extravasation of blood, proceedich rupture in the opinion of witness, was caused by Loot of the horse, but it might proceed from a violent fail,
Deceased was also labouring under concussion of hie brain, but the tould not pro way. After a short consultation, the Jury returned a
verdict of "Accidental death, with a deodand of one shil ling on the horse." - A strious carriage accident hap pened on wednesday evening to the Hon. Mr. Douglas, son of Lord Douglas. The Hon. gentleman, who is on a visit to Mrs. Irvine, near Egham, was returning from a drive in a small barouche, accompanied by one servant. On reaching the top of Parry's-hill, Egham, the horse took fright and dashed at a furious pace down the hill, which is very steep. When half-way down, he commenced plunging, and on reaching Egham Park-gate the reins broke, and the carriage was drawn upon the raise footway and overturned. Mr. Douglas was thrown into the road with great violence. His servant having previously leaped from the vehicle escaped with some slight bruises. Mr. Douglas was immediately removed in a state of insensibility to Colonel Salway s garden lodge, and prompty rcceived the aid of four medical gentlemen. When he recovered a little, it was deemed advisable to remove him to Mr. Irvines, and two of the surgeons accompanied him thither. Mr. Douglas's face and head were severely contused, and his medical attendants considered he had received concussion of the brain, but it has been since ascertained that the injury to the head is not o great as was at first supposed.
Mortality of the Metropolis.-The number of deaths registered in the week ending Saturday, Dec. 9, was as follows:-West Districts, 153; North Districts, 165 ; tricts, 271 ; Total, 987 (males, 512 ; females, 475 ). Weekly average for the last five years, 903 (461 males, 442 females) ; and for the last five autumns, 908.

\section*{挨robimial Trebs.}

Incendiary Fires.-A destructive fire broke out on Sunday evening at Naze Wick Farm, in Foulness Island, Essex, in the occupation of Mr. Charles Harvey, and destroyed a sheep-yard (he walls 100 iche whe in of mustard and carraway straw), 10 ewe sheep in lamb, and a large bean-stack, the produce of 40 acres, adjoining. On the same night a man named J. Rampling was apprehended on suspicion of having caused the conflagration, and after a preliminary examination was committed for trial. The value of the property destroyed is estimated at about \(500 l\).-A fire broke out on Thursday week about Sir Heck in the stackyard of Mr. Rawson, a tenant of Sir Henry Dymoke, at Scrivelsby, near Horncastle, without doubt the work of an incendiary. There were about seven stacks in the yard; the middle one, containing about 40 quarters of wheat, was set on fire and consumed, with a barley-stack about the same size. The fire was stayed in its progress, and extinguished without further destruc. tion of property. -On saturday morning a fire broke out in the stack-yard of Mr. J. Hall, farmer and corn-dealer, and the whole, consisting of nine large stacks and bovels, two of which were very large, containing upwards of 100 tions each, were destroyed.- incendiary fires are also menthe in the local papers at St. Mary's Cray, Kent, where stroyed it of Mr. Snelling, miller and farmer, , the commencement of winter; at various places in the neighbourhood of Norwich; at some farms in Devonshire ; and at Pollicott near Brill, Bucks, where a great quantity of property on the farm of Mr. Malin has been destroyed. Birmingham.-A public meeting of the inhabitants of this town was held on Monday " for the purpose of considering what steps ought to be taken by the friends of civil, religious, and commercial freedom, during the nest session of Parliament, to secure the redress by the Legislature of the people's grievances." The Mayor presided. Mr. J. Sturge moved a series of resolutions in favour of universal suffrage and of a full consideration of the people's grievances. These resolutions which were carried unanimously terminated with the following:-"That in the deliberate opinion of this meeting, the representatives of the people in Parliament ought to be called on by their constituents to unite together for the purpose of forcing on the attention of Parliament the grievances of the people before voting the supplies ; and that this plan of peoplion be specially recommended to them, because it is perfectly practical, consistent with the functions of the House of Commons, simple in its operation, legal, just, and necessary; has been successfully used in former periods of our history to resist the encroachments of the are remping a and deal no distant period the only security to be found against misgovernment, and that full, fair, and free representation in the Commons' House of Parliament to which they are entitled alike by the principles of equity and the British constitution." Resolutions were then passed adopting addresses from the electors to their representatives and to the different constituencies throughout the country in favour of Mr. sharman Crawford's plan of popular reprethe two members for the borough, expressed their doubts whether the plan of Mr. Crawfora was good in principle or could be carried out to the extent proposed.

Bridgenorth.-A correspondent informs us that the return of Thos. Whitmore, Esq., and family on Thursday week, after an absence of above four months, to Apley in the neighbourhood. In passing through the near his estensive property, the carriage was met by numbers of the inhabitants, carrying torches, laurels, \& At the north entrance near Stockton Church an arch of evergreens was erected, and along the whole distance from it to the mansion (two miles) large torches were planted and the ing torches, and the night although exceedingly dark was
thus rendered as light as dyy. Several pretty arches of laurel, \&c. Were erected through the park and the two
entrance-gates to the drive were tastefully decorated with entrance-gates to the drive were tastefully decorated with
shrubs; cannon were fired from the beautiful eminence west of the gardens and from the Castle-hill of Bridge north, and bonfires were lighted on the hills. The re flection of the torches and bonfires on the windirgs of the Severn added not a little to the beauty of the scene.
Bristol.-On Friday morning Mr. William Prichard secretary to the Bristol Union Fire-office committed
suicide by taking prussic acid. An inquest was held when suicide by taking prussic acid. An inquest was held when
evidence was given that deceased had for some days been subject to great depression of spirits and mental alienation. The Jury returned a verdict "That the deceased committed the act whilst labouring under temporary insanity." Mr. Prichard was
Carmarthen.-Her Majesty's Special Commissioners have employed the concluding week of their stay in South Wales in investigating the state of the trusts and taking Friday in last week at Swansea ; on Saturday at Bridgend on Monday and Tuesday at Cardiff; and on Wednesday at Merthyr Tydvil, where their proceedings finally closed
It is understood that the subject to which their attention has been mainly called by complainants is the adminis tration of the turnpike laws.
Chatsworth.-We copy the following article from the Derbyshire Courier respecting the missing crystal noticed in our last :-" We are truly happy to learn that the worth during the fête of Saturday evening week has been returned along with a letter bearing the London post-
mark, of which the following is a copy:-1843.-To Mr. Paston.-Having observed in a late Derbyshire paper that a small brown crystal was missing from the conservatory at Chatsworth, the same having come you as directed without wishing for the offered reward.' The return of the article so foolishly abstracted is a highly gratifying circumstance. It must be very pleasing to Mr gratified had induced him to pledge himself to the Duke framonire for the rood behaviour of the parties ad of Devonshire for the good behaviour of the parties ad mitted, to mand that the onyy unpleasantresultor his Grace and doubtless to all the inhabitants of the district it is not less pleasing to find that the abstraction was not the act of any one residing in the county waich has bee honoured by the visit of her Majesty. We have the best
authority for affirming that the behaviour of the visitors on the occasion to which we refer was in the highest degree creditable and satisfactory. Not a plant nor even eaf was removed or destroyed, notwithstanding the great concou
garden
Chatham.-A court-martial was held in the Roya Marine barracks on the 1lth, for the trial of Capt. W
Clindon, on charges preferred by the Admiralty, fo irregularities whilst on the recruiting service. The Judge Advocate read the following charges against the prisoner a recruit, rejected at the head-quarters of the Portsmout division of Royal Marines on the 9 th May, 1842, a sum of penses attending the rejection of the said John Gilby, he, the said Captain William Clindon, well knowing that h was himself alone liable to the payment of such expenses, in accordance with the tenth article of the Recruiting 1843, received from the said John Gilby, by Post-office order, the sum of 19s. 9d. in discharge of the above-named demand, he Captain William Clindon not being lawfully entied to the same; such conduct being in both instances and tending to bring the corps to which he belongs into disrepute. The prisoner pleaded not guilty to both charges. After the evidence for the prosecution had been heard, the defendant read his statement, in which \(h\) alleged that he had erred through misconception, and had derived no personal advantage from the transaction. The finding of the court will not be known until after it shall have been laid before the Admiralty
Harwich.-It is rumoured that the Board of Ordnance ontemplate the removal of their establishment at this pace to the opposite shore of Languard Fort; and tha me magazine is also to be removed thither, as from its proximity to the town, in the event of a railway being and on the Harwich side belonging to the Board of Ord nance has been for many years totally abandoned to the ravages of the sea, by which many acres of valuable land have been lost to the Crown.
Liverpool.-Several scenes discreditable to a court of ustice have recently taken place in the District Court of Skirrow, Last week a dispute'arose between the Com missioner and an attorney, which ended in the latter bein given into custody by the Commissioner, though engaged in the literal performance of his professional duties. In consequence of these scenes the profession have to a considerable extent come to a determination to settle every case by compromise or by arbitration, in preference to issuing fiats, under the present composition of the Cour At the same time the principal firms in Liverpool have presented Mr. Charles Phillips with an address, expressing in \#lattering terms their approbation of his conduct in every espect since he had received the appointment.
Manchester. - Another of the meetings for which Man-

Hall on Thursday night, for the purpose of receiving the report of the Great League Fund Committee on the pro gress of the subscriptions, and to hear addresses from Mr. Bright and Mr. Fox. Both these gentlemen spoke at great length, as did also Mr. Wilson, who presided on the occasion. A list of subscriptions entered into at th
meeting was read, which amounted to \(20,419 l\). \(6 s .4 d\). Monmouth.-A remarkable proof of mistaken identity has just occurred in this county. A man named William Morgan at the last assize was convicted by a jury and sentenced to two years' imprisonment and hard labour for an assault at Dixton on the 24th of April last. He blished beyond the possibility of doubt that Morgan was in Usk the whole of the day on which he was said to hav committed the offence-that persons who could have -and from not having the means to employ a lawyer h knew not how to compel them. On the case being laid before Sir J. Graham the poor man was set at liberty. Neroport, Isle of Wight.-The old Banking Compan sett, Roe and Blach ford has declared its inability to mee the demands of its creditors. The event has surprised Kirkpatricks. The firm had for some time ceased to issu promissory notes. When the last bank failed public conMessrs. Roe and banks was so com ingle note afloat, and declined business, tock company was formed on the premises, and they wer appointed directors, so that the losses will be limited to nvestments and deposits only. The amount of the latter papers that the high style of living of the surviving part ners was calculated to lull suspicion, although it is believed Bassett Oxford. -The very Rev. Dr. Jeune, Dean of Jersey, was yesterday elected Master of Pembroke College, by the casting vote of the Vicegerent, the votes Cor Dr. Jeun equal.-The local papers state that at the recent audit of M. P. W. Boulton, Esq. of Great Tew, the amount damage sustained by his tenants by the calamitous hail. 30,000 the 9th August last, which destroyed nearl to the a frount of nearly county, was returned to the M.P., acted in the same liberl maner his tenants, whose losses were little less than 2000 .
Sheffield.-On Wednesday week Messrs. Parker, Shor Brewin, and Rogers, of the late shew Old Bank, bank certificates under the fiat issued against them in Januar ast. The solicitor for the bankrupts produced a letter rupts had afforded every facility to the winding up of their affairs, and had given a faithtul account of the whole of their property which they bad gielded up for the benen of several of the Sheffeld creditors opposed the granting the certificates on the ground principally that the bank rupts had manifested great carelessness in the way in
which they had carried on their business, and had continued to do so for some years after they knew that the bank
was in an insolvent state. Mr. Blackburn of Leeds, solicitor, also opposed the granting of certificates to the
bankrupts on behalf of a creditor for 500 . The solicitor mitted errors of judgment in some of their business ransactions, they bad fallen a sacrifice to the pressure of the times, especialiy from the losses in the American trade, by the manufacturers of Sheffield, the contraction of the trade itself, and by the establishment of joint-stock banks ; but they had made all the reparation in their power by yielding up every shilling's worth of property
they possessed. Mr. Parker sacrificed 70,0002. besides not getting one sispence profit from the bank during the last twelve years. The other partners had also made large sacrifices. After a good deal of argument on both sides the Court said it might be considered that the bankrupt decision on the granting of certificates. From some servations however which fell from the Commissioner was understood that the adjournment was only formal, and that the certificates were virtually granted.
Windsor.-The ceremony of consecrating the Queen's new private chapel at the Castle by the Bishop of Oxfor took place on Tuesday in the presence of her Majesty, of the household. The arartment which has now been appropriated for the permanent private chapel of the in ereign was used occasionally for a devotional purpos during the reigns of those monarchs and indeed up to a late period it was likewise used as the music-room for her Majesty's private band. Her Majesty's warrant having been read by the registrar, Dr. Phillimore, the ceremony of consecrating and dedicating the chapel was then per formed by the Bishop, assisted during the service by Arch The ceremony occupied upwards of an bour
Railways.-The following are the returns for the pas week :-London and Birmingham, 14,388l. ; Great Western, 11,7846. ; South Western, 4800l.; South Eastern, 2835l. Worth Midnd, 29481. ' Yort land, 1359\%. : Greenwich, \(688 l_{\text {. }}\); Croydon, 216l. : Brigh ton, 3254l.; Blackwall, 5922.; Hull and Selby, 908\%.

Midland Counties, 2494l. ; Grand Junction, 6431l. - The works of the South Eastern Railway between Folkestone and Dover are progressing rapidly towards completion and the contractors are under heavy penalties for the per manent station at Dover being shortly ready. The traffic and d action. It is intended to put on some steamers of efficiency o maintain the communication with the French ports. By a communication from Coventry in the Times it appears that the manufacturers and traders of that city mingham Railway Company towards them. By this rail way there are two kinds of trains by which goods may be 9. . 4 ded -the passengers' train by which the charge is charge is \(2 s, 6 d\). the cwt. In addition to the morning trains there are now night luggage trains which arrive at London in the morning. These would be of great service themselves of them. The weavers bring in their ar towards the end of the week, and it is chiefly sold on Saturday, and must be in London on Monday morning Nevertheless the directors of the company will not allow the night luggage trains to stop at Coventry, and the manufacturers of that city being obliged to send up their goods some way or another are forced to make use of the passengers' train, and consequently pay the company at nesday a special general meeting of the Croydon Company was held to consider the propriety of extending the line to Epsom. There was an unusually large attendance as is was supposed some opposition would be shown to the prothat the propol wa directors. The chairman stated been sugrested by the projectors of the railway in 1836 thad been rued phe 1836 rant the Croydon Compang in extending their line to Epsom. At the present mome the tofio would yeld
 goods. Then \(26,000 \mathrm{l}\). might fairly be reckoned upon from passencers. The expense would be \(170,000 \mathrm{l}\), say \(200,000 \mathrm{l}\). ; even then an annual profit of \(18,500 \%\), would be realised after taking the most reasonable view of affairs The directors of the South Western Railway were about to petition for powers to extend their line to Epsom, so there would doubtless be a severe parliamentary contest It was very true that the extension of the Croydon line would cost \(170,000 \%\), and that of the South Western onls 50,0006 ., but that was no evidence that it could be worke cleaper when completed. The great question for Parhament consider woul be the accommadan of public. The Croydon Railway proposed carrying pass
sengers to Epsom for two shislings and it would be imsengers to Epsom for two sbisings and it would be ies possible for the South Western to carry them for less. opivion of this meeting that it would be of great advantage generally that a railway shall be formed from the London station to the town of Epsom." Mr. Fitcly seconded the resolution which, after some discussion, was carried. Another resolution empowering the directors to make application to Parliament and to take what
might appear desirable was also agreed to.

\section*{IRELAND.}

Dublin.--On Thursday the Landlord and Tenant Commission adjourned for the Christmas holidays, to resume the inquiry on the 3d January. Arrangements commissioness calculated to render the labours of the of the whole land-tenure system in Irelan full disclosittee including Sir Colman O'Loghlen, Mr. John O'Connell, M.P., Mx. Moriarty, and other members of the bar have undertaken the task of receiving communications on the subject of land-tenure, in order to analyse and prepare evidence to be submitted to the commissioners. The preiminary intervention of those gentlemen, totally unconnected as they are with the commission, will greatly abridge the labours of the commissioners. Lord Devon during the short Christmas recess will proceed to Newcastle, his seat in the county of Limerick.-A meeting was held at the Mansion-house last week, to consider the best method of effecting a safe and expeditious communithe between London and Dublin. The Duke of Leinster the leading gentry expressin the con stated in and of Mr Whlver in Bart the ports of Dubin and Hold be be arrival and departure for thead should be the portwo countrise d untimely evening departures of unimely evening departures of the two mail-packeard
 the Council of the Chmall passengers, and to urge in of the in both these departures the Repeal he repeal A.sedion was held on Mond. A letw read from Mr. O Connell, suggesting that he sum 250 be given by the Association to the butler Larkia who courageously defended his master's family in the outrage at Finnoe, and complaining bitterly of the mem bers of the Lamalord and Penal Commission. nection with the latter subject, Mr. O'Connell suggester that the Association should appoint a working Commile to advertise for information, put themselves in commur cation with as many of the Clergy as possible, and tender
as much evidence as they can collect to the commissioners． Mr．J．O Connell mentioned that the committee Larkin， 25\％．towaras the fund at present in collecthis devotion to who imperile master，Mr．Waller．It was the opinion of many persons that the Association should offer a reward for the conviction of the criminals who made that horrible out－ rage at Finnoe；butit should be recollected that and Association as a body would be illegal．How－ act of the Association as a body would be illega．How－ Repealers of the district where that outrage took place， calling upon them to give the utmost assistance to He then tection of the cruel and infamous murderers．He then dwelt at considerable length on the crimes and miseries arising from the tyranny of landlords over their tenants， He said they had the evidence of Swift，Arthur Young， and Lord Clare，to show that the Trish peasants were the unhappy victims of landord cruelty．It had been said that a brazen wall ought to be built around it，and the people left to slaughter each other．＂Be it so，＂was his response，＂but let the landlords be left inside also．＂ After some further remarks，Mr．J．O＇Connell conctuded by moving resolutions calling on the people to give evidence in the pending inquiry．Mr．Steele addressed the meeting， the pending was followed by Mr．O＇Neill Daunt．The rent for the week was upwards of \(500 \%\) ．

Cork．－The Conservatives of this city recently forwarded a memorial to the Castle remonstrating against the appoint－ ment of Alderman Fagan，a merchant of that city，as mayor，on Vincent an attorney should be nominated in his stead．The Government have refused to interfere，on the ground that the new rule， 25 th Charles II．，relating to解 the person elected to the office of chief magistrate．

\section*{SCOTLAND．}

Edinburgh．－It is announced in the Scotch papers，that deputation of the Council of the Anti Corn－Law League is to be in Scotland on the loth of January，and to will permit，with the view of diffusing information re－ garding the objects of the League and promoting sub－ is to consist of Mr．Cobden，Mr．Bright，Colonel Thompson，and Mr．Moore．Meetings are fixed for Glas－ gow on the 10th，and Edinburgh on the llth of January， block of stone，already sculptured，and forming part of the statue of her Majesty，now erecting in this city，arrived a the Royal Institution，at the foot of the Mound，for the ons．－The late trial and conviction of Patterson for blas phemy does not appear as yet to have produced a
sufficient example；the Scotsman states that Miss Roalf， a young woman who some weeks ago opened a shop in Nicholson－street for the sale of irreligious publications，
was apprehended on Monday last，and lodged in gaol pre－ paratory to her trial for blasphemy．－It is said，that though the Circuit Court sit in Glasgow this month for trial of Mrs．Gilmour will not come on before that Court， Justiciary at Edinburgh，about the middle of next month． Aberdeen．－On Saturday the Senate of Marischal Col－ lege and University，Aberdeen，by a majority of seven to
four，adopted resolutions condematory of the exaction of four，adopted resolutions condemna

portion of their time on the night in question．The Judgerable ing summed up，the Jury found them wll Guilty of the burglary，
but Aequiticd them of that purt of the indic＇ment charging them to be transported for lif
assistant，aged 23，WORCESTRR，－George Baker，a surgeon＇s voured to discharge wastol doaded with powder and ball at Jolnn tember．The facts were contained in a very marrow compass．it and that on themoght in question he heard the prisoner knoceking and kicking violently against the door of a house on his beat；on
approaching within a few yards，finding him greatly excited，he inquired the purport of his conduct；prisoner replied that he had
been insulted and abused by some one in the house，that he had betched his pistol，and would be revenged．The prosecutor approached him，when he threatened if he attempted to touch nearer，when the prisoner brought the pistol suddenly within a was burnt，and on examination the barrel was fourd to containg a considerable quantity of powder and a ball．Mr．Huddlestone
offerci some observations to the Jiry on bel alf of the prisiper， at the close of wheth the learned Baron shbthed up with great
carc and minuteness，and the Jury，to the surprise of every one wasthern Chrcuir，York．－Iosep father，on the 4th July last．The indictment was found at the last Summer Assizes for this county ；but the prisoner not being
in custorty his trial was of course postponed．A bench warrant in custorty his trial was of course postponed．A bench warrant
was at that time granted，and on the 20th October the prisoner was at that time granted，and on the 2ow stood to take his trial． The facts of the case were given in this Paper at the time，and our readers will recollect that the offence was committed at
Mount Tabor not far from Halifax．The prisoner was seen to fire the guo twice on the afternoon of the day of the fatal occur－ rence and then went to his father＇s cottage where he loaded it the circumstance and asked him why he put in so many shots，to old man mase rome answer．He wentinto the house where the mean to do as you said If you do，I will have the first chance．＂ turately the gun missed fire，and this gave the prisoner an oppor－
tunity of abandoning his attempt．He then pat another cap on the lock of the gun，and presenting the gats in the old man＇s bod a little below the left breast．He fell and almost instantly died． There was a person present when the prisoner first pulled the
trigger，and had he but had the courage to have rushed upou the prisoner the fatal catastrophe might have been prevented；
but he turned sick as he said and ran away．On hearing the report of the gun several people rushed to the place，but the pri－
soner escaped and was not taken till the 20th of October at Hud－ the prisoner said＂Will you do as you said？＂that he referred to serter．For the tiefence it was argued that the prisoner had sus－
tained a continued sertes of provocations from his father，who
had driven him by cruelty to enlist，and then induced him desert；notwithstanding which he was always threatening to
denounce him as a deserter，weth a view to extort money．Mr．
Justice Maule summed up the case to the Jury and pointed out
 funty of Whtul Murder．Ihe phisoner desmed to speak．He was h．n？He aht that inc was gut，of the shonning，Lut the not
think he was guity of the crime of murder．For years he had
 knhed by hom mofe than tent tmes．La－t of all the old man short
 murder the cap was pat on the gun when the first missed nre，of itself showed such self－possession as excluded the milder alter－

 lindize strect，sobetor，was brourht beforc the Lord Mayco in
the cuntody of Danmel Forrester，the d fheer，upon the of arge in－ The prosecution was instituted by the Crown，－In 1829 a sum of Anne Slack，then described as of Smith－street，Chelsea，spinster．
倍 the father of the lady，with part of her share in her father＇s
ctatc．From an extract of a letter from Mr．Hulme to the brother of 11.55 shach，it ahseared that the former had purchased lie tianmer of the stock muto her name，Mins slack grazted two buth lunds，and tuder these powers that gentleman recenved the dividends up to the sth of January， 1832 ．He did not pay the
diviaends over regularly，but suppled her with suel：sums of
 of the principal sum of \(3,500 l\) ．Was lost sight of entirely by her，
as she had never attempted to manage her own pecuniary affars． In that state of things，on the 6 th of July， 1842 ，the dividends
having been unreceived for a period of ten years，the stock was having been uorecelved for a period of ten years，the stock was
on that day by virtue of the Act of Parliament transferred to the commissioners for the reduction of the national debt．Abont
that time，from what cause could not be ascertained，Mr．Barber the prisoner appeared to have got some information concerning the stock which had been transferred to the commissioners，art
wrote to Captain Fozkett a letter, requesting to be informed who
was the legal personal representative of Anne Slack, formerly of Chiclsea, spincter. To that letter Capt. Foskett replied, that Miss Ann slack was his wife's sister and resident with them. surb-

 the paty henucathing it or in whose right it was recepvable had power to put the legate in possession for the property. After all
these circumstances had been ascertained from Capt. Foskett, Mr . Barber wrote as follows:- "We beg to return Miss slack's
letter, and to state that we find the signatures do not correspond, and consequently we have arrived at the conclusion that the
identity cannot be supported. We trust you will be good enough to considere this negotiation condendtial: and shouldour exertions
to discover the right party prove successfal we shall not fail to lady and her friends." The matter rested thus till the thoung March last: the Bank having been wholly ignorant of the corre-
spondence until wrthin the last few days. On the 8th of tliat month an advertisement appeared to the following effect :-"wc of Miss Anne Slack, formerly of Chelsce, spinster, and snall be
 16 th of the same month a will was produced at Doct abs'
 niece. Emma Slack, the sum of 3,5000 , stock, in the Three per
Cent. Consolidated Annuities:" and constituting the sole executrix. The will was signed Anne slack, dated the 3 d
diay of June; and the names as witnesses to the instrument were Taye Perkins and William Williams, but there was no address to as Anne Slack, Smith-street, Chelsea, spinster ; and the property bequeathed was expressly described as 3,5002 . Consols, standing
in her name at the Bank. That will must have been in the proctor's hands. vefore the \(i\) ith of March, and probate of it was that the property was sworn wider 5,0002 ; the sttck \(1 n\) question
with nrrars of dividends, being worth 4,5002 . The result of ail thic was that the probate being apparently regular, tlie stock in
quection was on the d of April last transferred from the account the person representing herself as Emma Slack; and on the 7 th of the same month the dividends due on the stock were paid to
the said Emma Siack who aitended to receive them in person, and transferred the whole, which she had previously sold. In wick-terrace, , Walworth, was examined at the request of the pri-
soner, who said he was the person who had introduced the reputed Miss Slack to him. The evidence of this witness, how-
ever, was so contradietory and inconsistent, that the the prosecuti., charged him, on his own depositions, with being wrere nade to get them aumited to bail, but without success, the were far too serious to allow him to accept bail. The frand was discor ered, it applears, in consequence of the lady, the real Miss
Slack Lavinc calch, nitu tion the broker who made investments
for licr, but upon a diferent at the stock Exchange, to request that he would sell for her a portion of her Three per Cent. Reduced Stock, of which the susimatined that 3 ,500l. Consols only stood in her niame on the Bank books. It is rumoured that the suspected party efficcted a a ale of
12, oool. stock some time agn, but whether under a process sinilar to that described in the report or not is unknow. A reward of
1000. is offered for the apprehension of tile weman who represented herself
the dividendd.

\(T_{\text {日E }}\) conclusion of another year of uninterrupted uceess leaves the Editor of the Garreneners chronincte ittle to do, except to express his gratefur sense Tluable contributions which the frietad of United auture continue to supply from dipatas the those
Kingdom. It seems, howerer, ,ue to greatly interest themselves in the prosperity of this Paper to mention what preparations have been made lor maintaining an abundant variety of information for
the year to come. The in intion of adding 24 weekly columns or
 announced. Av tent same
size of the parer iself will be made, so as to give a somewhat wider margin, and this will render the Gardeners Chronicle and Agrioultural Guzette as
Ularre ass the utmost limits permitted by Act of Parliament. \(1 t\) has, indeed, become necessary to construct a new printing-machine, of the lafrest size known in London, on purposese for the delivery of the paper. Connected with theses changes will be some -aterations in the arrangement of the materer so than heretofore.
Among the new matter provided for the year is a Completes set of instructions for the Rose Gardener,
illustrated by numerous woodcuts ; \(a\) series of leading articles on Heating, with referencese to the new methods of applying hot water ; special articies on Florists for apprs, ; a lengthened inguiry into the Diseases of
of Hlowers; a lengthened inquiry into the Diseases of plants ; an account of the weeds of Farms and Gart
dens ; and a new disertation on Beemanagement.
 French method of growing Pine-apples without pots, It is, moreover, boped that it may be possible to procure some eood matter relating to landsapee-garcieninterrupted, will be renewed wih some sort of regalarity, and materially extended; ; that 2 still larger supply of Entomomological articles will be received from Mranturras will he taken into more special consideration. In the Calendar of Operations, 00 a, a great change is

 duty to six or seven of the most eminent cultivators that can be found, each of whom will take his own department. in shis way fructions wil be secured ror every ard Forcing-houses
 aillotments of 3 Cotager.
Of course, in addition to these important subjects, there will be the usual supply of miscellaneous matter upon all possible branehes of Gardening. But for these and ofher matters we. would refer our readers to acts rather than to intentions.

A fortnight ago we called attention to the increasng evidence as to the value of Charcoal, as an agent of cultivation, and we alluded to the employment of it in the Pine-growing at Bicton. We have since received a letter from Mr. Barnes, in which he entirely conm firms the statement we then made. "Charcoal," he fays, "is the most astonishing article to moses of cultivation, and especially for plants under artificial treatment. I judge from many 'ears' experience in its use. What you say respecting my employing it largely among my Pine-soil is true. It particle of manure of any sort. Every plant under my care has some charcoal used about it. I never yet saw the plant that did not delight in it, and to Heaths 1 is most especially acceptable." It seems to us that Gardeners in the country, must carry conviction to the most sceptical. However, we may as well mention a few other facts before we leave the question to the experimental proof to which
subjected all over the country

The other day Mr. Stewart, Gardener at Stradsett Hall, exhibited to the Horticultural Society, some
Cucumbers grown in equal parts of loam and charcoal,
without any manure. No stimulant could have given
better fruit, so far as health was concerned.
The author of the " Rural Economy of the Midland Counties"states, that the fragments of charcoal left by the charcoal-burners have been found of great benefit to land. He reports them to be, in his time, in esteem

\section*{grass-land.}

The well-known operation of paring and burning has been supposed to prove so beneficial in consequence of its removing insects and destroying the cohesiveness of stiff clays. The latter is, no doubt, its effect in part ; but we entertain no doubt that the charcoal formed from the roots of grass and other plants, is also of much importance in the operation. Try, for example, brick-dust-which is burnt clay without charcoal-and the burnt clods of the fields, containing charcoal, against each other, a monical alteration of soon be seen; yet, so far as mechanical are not in a
the texture of the soil is of value, they are the texture of the sol
very different state.
Then listen to what is stated by Mr. Rivers, in the ast edition of his "Rose Amateurs' Guide." "I have used," he says, "with much success (for Roses in pots) turf roasted on a sheet of iron placed in temporary brickwork, under which a moderate fire has been kept; about one hour's roasting is sufficient. This chars the under side, and acts must beneficially" (p. 192). We have reason to know that this is a most important fact in the management of Roses in pots; and let the we have said on the subject.
When we last mentioned this matter we quoted the experiments of Mr . Rigg, against the assertions of other chemists, to prove that charcoal will form carbonic acid with the oxygen of the atmosphere under ordinary circumstances. We have since me with a passage in De Candolle's "Physiology, which shows that we do not stand alo charcoal does, even in the air, form gaseous combi nations of some sort or other, and so furnishes food to planits, independently of the matters it may be able to condense within its pores. "Count Rumford," says \(\mathbf{M}\). De Candolle, "has proved by direct experiment that charcoal, so long regarded as one of the most fixed of known substances, is capable of com bining with oxygen, and forming with it carbonic acid, whing below that at which acid, at a temperatur perceptibly. This slow combination of charcoal with oxygen explains why those places in the woods where the charcoal-burners have been at work, although at first sterile, become fertile, in proportion as the charcoal combines with the oxygen of the atmosphere to form carbonic acid, which dissolves in the surrounding water."
We may add that the quality of charcoal is much mproved by steeping it in liquid manure ; and that the lighter and more spo
purposes of the cultivator
ENTOMOLOGY-No. LII.

Calandra granaria (the Grain or corn Weevil). -Farmers and gardeners not only suffer from the inroads of insects in the field, but after their Corn and seeds are safely stored they not unfrequently fall a sacrice to rooms excluded from light and air. We have already described two of these pests, \({ }^{1}\) and will now treat of others, which are often complained of and are equally formidable. One of these, called the Grain Weevil, does as much mischie of these Tinea sarcitella; it feeds alike upon Wheat and Barley, committing tremendous ravages in many malting Barley, committing tremenotimes two-thirds of the grain are reduced to the outward shells. This small beetle is an imported species, which attacks the Maize in warmer latitudes; and in such climates as Madeira, where the beetles breed in the open fiel, thengst the blossoms of the the female depor incipient and tender germ; in all proCorn, or upon bability they are soon. hatcos, aver them, and they thus grain, the skin or whion in such security feed and undergo their transformathe pupa has actually that it has been remarked, whea the pupa has accuans been inclosed within a grain of Ind on inmate could be minute puncture or any ot
discovered upon the skin.
Mr. Mills, who prosecuted these remarks, found that the Corn Weevils were hatched by a heat amounting to \(110^{\circ}\) Fahrenheit. \({ }^{2}\) England not being hot enough, fortunately, to naturalize them in the open air, they can only gain a settlement and multiply under shelter, and conse quently they are found in our granaries, whither they bave been imported from abroad with foreign Corn, and eventually they become, if not regular inhabitants of our land, at least the tenants of our buildings. In storehouses they deposit their eggs at one end of a grain, which the hittle maggot enters to feed upon ibe Hour it contans. There can be no doubt that the pertect insects also subsist npon the same substance, for which purpose they are furnshed with strong, although minute, jaws, at the tip of the rostrum. On opening the husks, which are frequently perforated on the side (fig. 4) one generally finds a Weevil concealed there, sometimes dead; in other instances they appear to have escaped at the open extremities, the skin being imperforated, but entirely cleared out
\[
\text { Gard. Chromo, v. iii. pp. 156, 188. } \text { 2 Trans. Ent, Soc., vo. . p. } 241 \text {. }
\]

Abundant as these insects are, and frequently as I have met with them, I have never been successful in finding either the maggots or the purce ; they are, I doubt not, very similar to those of the Nut Weevil \({ }^{3}\), but of course much snaaller; I must therefore confine myself to 8 description of the perfect insect, which was named by Linnæus, Curculio granarius, but it has been separated from that immense group by Clairville, who called it Calan dra granaria (fig. 1): some are chesnut-coloured, other are tawny; they are depressed and shining : the proboscis is stoutish, slightly curved, not so long as the thoraz, and the antenna are inserted on each side near the base; the thorax is large, oval, and truncated behind, coarsely punctured with long excavations, leaving a ridge down the back: elytra, not much longer and scarcely broade than the thorax, beautifully and firmly striated, the jatertham tices punctured: wings, none: legs, short and stout, the tibiæ terminated by a curved claw: the tarsi 4-jointed, the penitimate joint bilobed, the fourth furnished with minute claws: fig. 3 represents the head and thoras in profile.

The other beetle figured (3) which assists in the destruc tion of the grain, and generally accompanies the Cori Weevil, is the Silvanus Surinamensis, Linn.e called also by Fabricius Anobium frumentarium: it is narrow, flat, rusty brown, and thickly punctured: the head is large and subtrigona three elevarow, with four slightly elevated lines on each long and punctures between them : wings ample: leg and rows of porth joint exceedingly minute, short: tarsi joby The natural sizes of the fifth terminated by tho claws. A third species which beetles are sho Pinus ovatus, a little accompanies the above how brown beetle, with a neariy globose and probably may not attack the stored grain.

The seasons suited to the propagation of the Corninsects appear to be uninterrupted, for I have seen them and July flour-mills in Norfolk in the spring; house in Norwich; in Sentember and the three following months in granaries, and in the winter they attacked and ate up some pearl Barley in the possession of a scientific friend. There are many remedies which might be employed to destroy the eggs, and likewise the larvæ and pupz, as sudden transitions of temperature, friction, \&c, but such mild applications could have little effect upon the hard beetles, which, secure in their horny coats of the defy both heat and cold to an extraordinary degree and as there sem to be no periods of the year when the and actived in infected localities, we must have arecourse in bad o to the most efficient means, such heating the Conaticiall. this mode has been sdopted heating the Corn Mored by a gentlemes in Hader wo sufered exy from succes. He ba rom capable of containing 800 bag of Corn He has ber through, which corn is through pipes ; the Con the whe wher freed from the insects, and after being sifted, is said freed from the living insects, and after being sifed, is said West Indies good and sound bea as at inst the West Indies, Rice in store is kept free from the inroads sun, and by frequently winnowing it.-Ruricola. 1

AMATEUR'S GARDEN.-No. LII.
NEXT to the skill requisite for the production of large and perfect specimens of fine-foliaged hard-wooded plants, comes the difficulty of keeping lacm in a perfect and healthy state after they have arrived at their maximum growth. It is no difficult matter at the present time to meet with large plants (of Heaths, for example); but it is a rare thing to.meet with a plant loat is perfect in every respect, and which carries its foliage down to the base of its oldest branches-and why is this? In nature we generally find healthy plants clothed with branches and foliage to their very base; but our large specimens of potculture too frequently either cast their foliage, or allow it to become diseased after they have attained such a size as to render it inconvenient to remove them to a larger-sized pot. Now, the diference between the plants is ;-in natural state the roots are always in an equable state as to moisture, while under pot-culture they are so frequently fluctuating between drought and moisture that though they may not be, to appearance, actually sufferies for the want of water, yet at times have not 40 moch of as is necessary to the healthy circulation of the jumes of the plant; and the consequence is, the leaven becow dill eased, and after a time either fall off or are remopal ly hand as unsightly objects.
a In the management of our Heaths. I am not quite sure
that our best cultisators are not in error in admitung such strong currents of air at all times, without payigg guff
cient attention to the sfate of that air ; and I strongly subjected to this treatment during the past season, have suspect that some diseases-mildew, for illustration- made very rapid growth. A pair of them will be exhi-
which have been hitherto placed to the account of a moist bited before the Horticultural Society atmosphere, ought rather to be attributed to an arid one, at least, this much I do know for certain, that, in a collection of young plants, the only one which was affected by mildew was standing in the driest part of the pit, and was, and probabiy had been for some time previously, sufIn for the want of water.
chis and trade-winds which mfuence vegetation at the Cape of Good Hope, we for get that the current is from the sea \(t\) o the land during the d lye nimht, and is the currefore loaded with moisture; but, in consequently of rather a dry nature. Now although I am aware that, in the absence of the powerful light conse quent upon the nearer proximity of the Cape to the Cquator, it would be wrong in this country to copy its climate as to drought and moisture, yet experience has
proved that a strong moist heat, of from 60 deg , to 90 dec. in the daytime growing season ; and that in it they will grow with a luxuriance and vigour which is never seen under other cir-
cumstances. Some plants of Epacris which have been

 magnificent work on the, Orchidaceæ of Mexico and Guatemala they are taken.

HOME CORRESPONDENCE.
Pine Apples.-Having had extensive practice in the culture of the Pine for these 20 years, I venture to offer that it does not take three years to bring Queens to perfection ; they are usually produced with me in about 15 or 18 months, and sometimes in even less time.
imagine that the Monserrats of Mr. Barnes are the Black Jamaica with us in the North: and if \(I\) am right, I beg to state that when gardener to Sir W. Brisco, I obtained fruit of these two kinds equal in weight in an equal space my acquaintance cut 20 Queens 35 years ago which weighed altogether 118 lbs ; and I cut a Providence about 18 years ago, produced under the shade of Vines, which ductions do not surpass those grown 20 years ago ia weight ; the only improvement in the culture of Pines is to maturity. The Monserrats with us in the North have fruit tun-shaped or cylindrical, flat pips with a very large Jamaicas have pyramidal fruit with a small crown, and some of the pips are apt to get black in winter. The
colour of this is generally darker than that of the former. - R. H. Pope, Heaton Nursery.

Mildness of the Season.-We have received several Ietthat, from the unusual mildness of the season, he has not only Pelargoniums in bloom out of doors, but that he also found a fine lively specimen of the Thistle, or Painted
Lady, Butterfly, and several other insects, commonly known by the name of Lady-birds. Another correspondent, ing, Mitchell, jun.," informs us that there is now growEsq, Stokefleming, near Dartmouth, two fine plants of Brugmansia sanguinea, three feet high, five feet in dia-
meter, and covered with beautiful trumpet-flowers. He also says that the following plants are quite healthy, and in full bloom, viz. :-Pentstemon gentianoides coccinea, wise Fuchsia microphylla, cilindrana, Thomsonii, and globosa; with Ageratum mexicanum, Heliotropium peruvianum, Siphocampylus bicolor, Lophospermum atrosanguineum, Polygala cordifolia, Anagalhs Monelli grandi-
fora, Magnolia ferruginea, and Chrysanthemums. A Knutsfordcorrespondent finds his Asparagus with buds two inches long, and an lpomæa Horsfallia, whose shoots had escaped from a hothouse, in flower in the open air. Plant Guards.-In glarding from hares and rabbits place a few small uprights round the phants at a short ais
tance from them, and let them stand about twelve inches above the ground, then tie round them two pieces of strong white yarn or cord, made either of cotton or wool; this bits from the plants, as they take it for a trap. This plan I have seen fairly proved; where it was adopted, the pants were not eaten ; but where nets were used forts destroyed, both in the same gardell and the same sort of plants.-Facile.
Heating with Brick-Flues.-In answer to "C.," (p. oe no doubt but that what "C." asserts regarding the property of expanded air possessing a greater capacity for to explain a fallacy into which he has fallen on the application of that principle. The rule for air, as well as all other gases is, that its capacity for heat enlarges in nearly an inverse ratio to its density; that is, at hale the density
it has nearly double the capacity, or, in other words, in tbe former that it will take nearly double the quantity of heab that it would in the latter, to raise it to the same degree \(u\) different altitudes under the same parallel of latitude. The mistake into which "C." has fallen is this: he imagines, because hot air moves along a flue gradually enlarging also the fre end, that this air must gradually expand for heat increased, absorb it, and that it does not give it off to the walls of the flue. But the very reverse of this is the fact; the air in the flue, instead of expanding and comes denser ; and it does this because it gets colder is its passage along the flue. Air doubles its bulk for every along increased temperature ; and hence, in its progress tracts \(x^{\frac{1}{80}}\) in volume, or gets by that fraction more dense, and, of course, in proportion diminishes its capacity for around. The plain effects of a Brick-flue gradually enlarging from the fire are these: *-lst. A current of hotair diminishes in velocity as it recedes from the fire, 80
that where the air is hottest, it has least time to give off its heat, and where coldest most time for this purpose. ture gets lowest, and compensates as much as possible for that deficiency. Although not an advocate for Brickcommend the flue noticed as one of the best of its kind.J. L. Newburgh.

Oak Timber Excrescences. -In the picturesque Park at Porkington, near Owestry, the seat of W. Ormsby Gore, Esq., are two masses or clumps of aged Oak-trees,
some, but not all, of the species Quercus sessiliflora, which are, for the most part, infested with excrescences * A simple illustration of the motion of air in a flue of this proach and the channel gets narrow, the currext is rapid; but when the banks recede, and the bed enlarges, the water moves more slowly.
of great thickness, one of which I measured. The lower part below the excrescence is about two-thirds less in circumference than the part above, which is all of a piece
round the stem of the tree; in the others the excrescences are in detached parts. Now, it appears that the timber in all such trees is shaky, or begimning to decay, and consequently of little value. From all the information I can
obtain from those who have worked up such timber, the obtain from those whin have wore the excrescences begin to form is straight in the usual way, but after that it is curled ; owing, I believe, to the young shoots growing apparenty on the de be produced by the matter from the annual buds of the young shoots being obstructed in its descent. A specimen of the excrescence with the annual shoots on, showing the cause
of the curliness in the after-formed wood, I send with this paper. It appears that these excrescences seldom, if ever, appear, until the heart begins to decay, or till decay ros injuprosuced previously received. I never observed so many infested trees together as in Porkington Park. The disease is, however, frequent in old Pollards, or decapitated trees, hedgerows and fields. Dean; query, can it be the soil? nicle throw more light on this subject?-W. Billington. nicle throw more inght may state, in addion, that many of the above-mentioned trees are almost covered with excrescences, both on the stem and the larger branches; they appear of great age, are from two to three feet in diameter, and are growing on two mounds in the centre of the park. There are name signifies "Scabby Coppice." Many of them have no external appeaxance of being hollow. Mr. Ormsby most beautiful. I should attribute the appearance to something connected with the soin--B. B. Aillington.
[These excrescences are produced by the growth of myriads of what are called embryo buds, which are generated in the inside of the bark. The cause of their formation
is unknown. The knobs on Cedars of Lebanon, Elms, is unknown. The knobs on Cedars of Lebanon, Elms,
Beech-trees, \&c., have a similar origin. Birdseye Maple Beech-trees, \&c., have a similar origin. Birdseye
is said to be the timber cut from Maple-trees thus a fected. The Bruscum of the Romans, so much prized by their cabinet-makers, was the wood of the common Maple,
twisted into singular forms in consequence of the appearance of such excrescences. 1
Bees.

Bees, - I beg to thank Mr. Buckland for noticing my believe that Mr. B. is quite right in his remarks, both on the ventilation and on the position of the brood. attribute the empty state of my comb to the fact, that the season did not allow the Bees to fill the combs they had made with hotey. plan will answer, and that it is well suited for cpttagers, on account of its cheapness and simplicity; the great object being to enable a greater number of persons to manage their Bees proit the last 150 years, it is remarkable that all the great improvements were confind the requisite patience and leisure. They are not practised by cottagers. Writers on the subject of Bees have refined too much.
servation of the Bees is admitted (which may be practised by any one) the shapes and positions of hives and cannot be reduced to a system, at least, not in this country; the seasons will control us. In my humble opinion, try; the seasons wintenfered with the better, when proper space has been allowed to them. It should be borne in space has been that no purely agricultural country is suited for Bees, for the Clover, \&c, are cut before they blossom fully; in one word, this is the worst country in europe,
always excepting the north, for the production of honey. always ex
Bees.- \(\mathbf{I}\), in answer to "R.'s" inquiries, in a late Chronicle, whether in Sydney the Bees are British, beg
to inform him that in the autuma of the year 1830 , Dr. to inform him that in the autumn of the year 1830 , Dr.
T. B. Wilson, M.D., who was about to leave England in T. B. Wison, M.D., who was of a convict-ship to Sydney, wished to take out a hive of Bees, and consulted me where he could procure them, and as to the most efficient manner of effecting the same, as several persons had tried hives swarming, the gardener, not cular piece out of the centre of the top of the hive, and placed an old one over it, into warticularly well furnished. I and in the autumn it was particularly well farnished with the Bees, and directed a circular hive-covering to be made, which encircled the two hives, leaving about five or six inches in all parts for the Bees to take the air, with
conveniences for feeding and removing the dead, and I saw them safely fixed on board the ship at Woolwich. I had the pleasure of learning they arrived safe and in a healthy state, and were placed in the Government gardens, at Sydney, where, for a season, they constituted the general attraction, and were the lion I should not be credited if was so great that I am arrald iswarmed the first year.Robert Gunter, Old Brompton.
Robert Gunter, Old Brompton.
Bees.-Althongh "Este" adopted the plan of letting Bees.-Although "Este" adopted the plan of letting bis Bees descend (nto empty batt,) still, he was not so successful as that gentliman, whose Bees were prosperous even in a bad season. That might be owing to erste' " I
stocks being weakened by swarming. He observes, "I had seven swarms from three old stocks, because I did
not ventilate as I ought to do." When convenient, will
"Este" have the goodness to let us know in what way he neglected ventilation, also the quantity the age of bis stocks? Mr. Jeston seems to prefer old stocks; he says, "the older the hives, the less chance there will be of swarming, but the greater chance ormment on that strange statement, bnt merely observe, that the plan of putting similar to the upon way of eking, or nadir hiving. Honey may be obtained by boring a hole in the floor of a hive, and placing an inverted bell-glass close to it, coNorfolt, an emply 1 Norfolk, who is not only a good apiarian, me a glass of honey he obtained in that way. The Bees descended into the glass rather late in the season, I mean after the a brood were slaughtered, and strange oquainted with the natural history of the Honey Bee will explain this strange phenomenon. I believe there is something connected with unfavourable to Mr. Newport's opinion, (Humble-Bee), has bags of fat, or nutriment, stored up within its own systems, which alone enables it to pass some portion
of the winter in a state of repose." This, of course, is founded on the fact, that some kinds of quadrupeds are enabled to do so ; bears, for instance, sre said to live on their own fat while in a torpid state. How far the analogy is correct I cannot determine, but I doubt Mr. Newport's opinion in this respect regarding the Humble-Bee and the Honey-Bee, for the latter was not origin
Wasps and Rats.-Several correspondents have told you of the absence of wasps-in some places total, in others com-parative-in their respective localities during the last Ipswich or three hundred acres, I scarcely saw five wasps last season, and not one nest was found. Last year I was pestered, and caused upwards of thirty nests to be detroyed. On my farm a rat was seldom seen have been destroyed, old and young, \&c. The neighbouring farmers have likewise been much annoyed hy these vermin. I do not presume to say, nor do I think that there is any direct connexion between wasps and rats in any way, but it may still be curious if in future years the rarity of wasps should be found by observers to be the precursor of an may lead to useful precautions.- \(-A . B\).
Rats.-Having seen in the Chronicle correspondence Ras.-H \(H\), mend a very simple plan, which, though it may sound absurd, I have tried with much success. It is this:Fasten a red-herring firmly by a string to any place where dislike to the smell, or from some cause I do not profess dishike undand they will soon disappear. This may sound moble but it worth trying. The herring must be fastened very strongly, or the Rats will run away with it, and the experiment will fail - 0
Gardeners' Associations.-It is gratifying to learn that Gardeners around the metropolis are instituting Mutual Instruction Societies, in order to promote their own improvement and the progress of Horticulture ; and it is surprising that those around Edinburgh are doing so litte towards anproving the on the subject may have a bene Perhaps ficial effect. There is one evil which head-gardeners on ficial effect. There therth side of Tweed ought seriously to consider. I aliude to apprenticeships. Numbers of apprentices that have only half acquired the elements of their profession are every year ushered into the gardening world. Some of them are sent out as journeymen, even before they can perform the ordinary operacions of che garcen fill any sort of neatness; aud these would-be gardeners in situations to the exclusion of those that have been regularly trained to the business ; b but gardeners have themselves, themselves into societies, (and I am sure they would get the support of their employers, for ultimately they alone would receive the benefit, and see that none should pass but those that had served a proper time to the trade, and paid a proper premium, 1 have no doubt a conplete alteration for the better would speedily follow, - Peter. culty of getting the flesh of a Cocoa-nut out of its shell makes me suspect that you are ignorant of a simple method of cracking one. Perhaps the subject is hardly worth a notice, but as I have enlightened at least a dozen dealers, besides other persons on the matter, some of your readers may not object to see this account in your pages. Instead of the common laborious and clu nalm of your le hand, and then with a hammer or a puker, hit it smartly in any direction in which you wish it to open. Continue turn ing the nut round in the hand, and striking with the hammer along the line you have chosen, and when it has been completely round two or three times, it with crack along ne is aware that the milk may be drawn off by tapping one of the three eye-like scars at the large end; but comparatively few are acquainted with the fact, that the pierced; and if a penknife is used carefully to scoop out the flesh, by passing it round the scar as close to the shell as possible, this body will be found in the centre of the plug thus extracted. If the shell should be split on-
gitudinally, by hammering along a line which crosses the
soft scar, the embryo will then be displayed nestling in a iittle cavity in the flesh. It is an interesting object, and its detection well worth the price of a cocoa-nut ; which, moreover, eats none the worse for having, previously administered to our amusement, by this little Botanical ex--J. S. Henslow.
Eranthemum pulchellum.-For the encouragement of those who are desirous of having this beautiful stove.plant n bloom in their sitting-rooms at this season, but who re deceived by the idea that it requires the heat common to other stove-plants, I can assure them that it requires bould bloom. Throughout the summer before last \(l\) kept a plant of it in my greenhouse, where it grew vigorously, and it was treated precisely the same as my greenhouse plants when they were housed for the winter, the temperaand that but nold occasion. In the last week of December following it was removed to the window of my sittingroom where it developed its flowers in abundance for several weeks. I have no doubt that a common frame and light, with external coverings, would afford all the protection required. In an early Number of this year's Chronicle, Mr. Beaton mentioned a few other plants equaily beautiful, that would bloom freely in a temperature of \(45^{\circ}\) viz. Aphelandra cristata, Ardisia crenulata, Euphorbia jacquiniffora and splendens, Justicia speciosa and coccinea, Poinciana pulcherrima, \&c. It is not improbable that these, if subjected to similar treatment, would repay the trouble of the experiment.-A Subscriber, Southampton
The Clover Dodder. - When in London last week, I examined the specimens of Cuscuta sulcata in Wallich's Herbarium, a he Linnean Society (No. 1320.2.3 of his Catalogne, ) and found that they al have capitate stigmas and from Essex, Suffolk, and Devon, and find that they al have filiform stigmas. Is not this snfficient to show that the pest in our fields is not the C. sulcata of Roxburgh . I suppose that the plant which you last received is different from that of the Eastern Counties, where, (near Bungay) I have the authority of a competent botanist, Mr. D. Stock, for saying that it has occurred for at least 36 years.-Charles C. Bubington, st. John's College Cambridge. [Khelat Lucern was introduced for the first time about the year 1824.]
Large Potato.-A Potato weighing seven pounds was dug up lately in ground belonging to S. L. Behrens, Esq., of Catterall, near Garstang.-Facile.
Hydrangeas.-In an early Number of "Harrison's Cabinet" was a paper on altering the colour of Hydrangeas by sulphuric acid. Two plants were turned out of pots, and an ounce of oil of vitriol procured, in which a feather was dipped, and the balls of the root touched over with
; afterwards the remainder of the acid was mixed in the proper quantity of soil for repotting, -this caused them to bloom blue. The writer held a respectable situation. If this be correct, could it apply to the China Rose, or to the Carnation?-O. [We sloould think not.]
Late-flowering Carnalions.-Can any reason be given why some sorts fower so murin later thas ond and lasten therr bloom? If bloomed in a cool greerhiouse, night seed be expected ?--O., Lecds. [Pusithly.]
List of Carnutions in which the pollen has been pretty abundant in 1842 and \(1013:-\) Scarlct Bizarre- MerDuke of Leeds. Rose Flake - Cbadwick's Hoyle's Dobbing's Mountaineer, Plant's Lady Hood. Purple Flake - Hudson's Miss Thornton, Brabbin's Squire Meynell, Leighton's Bellerophon. Seedlings from Walmsley's William IV. seem generally to resemble the parent, as out of seven plants five were Scarlet Bizarre but two of them single. Four of five seedlings from ake of Leeds were run Bizarres.-O., Leeds.
Batemon mentions as being in the collection of Mr. Horsfall, of Liverpool, is, I regret to say, defunct. It is said to have had much of the appearance of a Jones, Knowsley.
Extraordinary Cabbage.-Under this head in a late Chronicle is the following statement taken from the Exeter Flying Posi, viz. : that John Lee, a mason, at Pound, near Moretonhampstead, had grown a Cabbage to the great weight of 42 lbs . I should like to know what sort of a Cabbage it was ; if an early one it was very good, but if a late Cabbage I think it nothing extraordinary, as I have repeatedy grown the common Drumbead Cabbage to the weight of 80 lbs. , when cut off level with the ground, including all the leaves; and in October, 1842, I cut one weighing 47 lbs ., when
Gourds.-As the Courge courcelle was recommended I grew it from seeds obtained from Paris; but although the plants were raised in a hotbed, and were planted out in a small bed of dung and mould, it grew so vigorously that proved excellent ; the flavour very delicate, and somewhat your Jerusalem Artichoke. What is the experience of your Correspondents as to the growing this plant? Those will grow a good stock of the true Potiron jaune. How is it that in the northern parts of France they grow this to such a large size and so much better ripened than those grown in England?. Is there a sufficient difference in the climate to account for this? [Yes.] At Versailles, in the kitclien-garden, I found that the Potiron gris d'Hollande was grown in preference to the Potiron jaune for
the Royal table, as being much the best.- Totty.

Mr. Loudon.-As an amateur gardener, I have Iong
been an enthusiastic admirer of the late Mr. Loudon, and deeply regret, in common with later Mr. Loudon, and widow should be left in a destitute state. It appears that there are 350 "copies of the "Arboretum et Fruti. cetum Britannicum" on hand, and that a sale amounting lishers for the benefit of the widow. This is a large number to dispose of, particularly of an expensive work that has already had a great sale. I therefore take the liberty of suggesting to you the following plan, subject to any improvement you may think desirable, and at the same ame offering my services gratuitously for carrying it out Ahe "Arboretum," \&c. to be the prizes. This would realise 3,500 e, less the sum paid for advertisements, leaving few hundreds surplus for the widow. Without any uncharitable feeling for my fellow-creatures, I believe there are hundreds who would pay five shillings for a chance of
gain, however remote, who would not give the same sum gain, however remote, who would not give the same sum
out of pure charity. The low price of the tickets would enable many to take them who could not afford a larger sum.-Amicus.-In a Iate Number of the Chronicle is an announcement of the death of John Claudius Loudon, Esq. ; and in the last Number of his Magazine is a modest, but painful and distressing, statement of the
position of his affairs. The debtowing to the late lamented position of his affairs. The debt owing to the late lamented author by every Gardener I am sure will be willingly paid. Among the friends in and about London, the matter can about Edinburgh, for Scotland; and as to Ireland, I can safely vouch that many are ready, and will be willing, in and about Dublin, to unite in organising a subscription on this side the Channel. As an individual, I shall be glad to afford all the aid in my power for the furtherance of this object; and I hope that what I have thus explicitly suggested will meet with approbation and powerful assistance. In the meantime, I shall be making every exertion amongst those who are interested here; and will be happy to have any suggestions that may be likely to promote the object in view.-N. Niven, Richmond-hill,
Dublin. [We insert these two a newspaper are not the proper place for discussing such questions. No one wishes better to the discussing such Loudon than ourselves, but the task of organizing such measures as may be considered desirable must rest with persons of leisure. When any public demonstration takes place we shall be ready to report it.]
Heating,-A good deal having been written in your Jake the liberty regarding different modes of heating, I take the liberty of sending you my plan of heating my greenhouse,which, although published elsewhere some time ago, has probably not been seen by some of your readers, Who may improve on my plan. I should be most happy
to receive any suggestions on the subject. Its superiority according to my idea consists in its being perfectly free from brickwork; the whole heat is given out in the house;

A, ash-pan

anderature, and ripens Grapes well ; the chimney takes off at E, through which some straw and a few sticks are put down, and on them some coals. B opens like the cover of a saucepan, through which you can arrange your fire. At A, a lighted candle is introduced, and the fuel burns quickly. After it
burns up I feed it with what in Wales they call balls, which are thus made:-Take 3 barrows of dust-coal, barrow of clay, mix them well to the consistence of mortar, make them into round lumps about the size of cricketballs, put them in at the damper, F, say three or four, and you will find that they will burn many hours. My green nouse has been heated by them these three years, and it of steam ; shut it, and none escapes; the whole is made of copper, excepting the chinney from \(E\) to \(F\), and the legs. I went expensively to work, as I had no pattern, the Whole being an idea of my own; it was made by a brazier in this town, and cost me altogether about lol A castDavies, Pershore.
Guano.-I have much pleasure in telling you that I tried Guano upon part of a field sown with Turnips, the The produce of the been already manured with ashes. The produce of the part on which Guano, mixed with
half ashes, was added to the former dressing is nearly half ashes, was added to the former dressing is nearly the field; the colour of the plant is a much darker green, and the size of the Turnips immense.-G. \(O\). \(O\).
Effects of Gas-tar on Stems of Fruit-trees.-Some time since one of your Subscribers recommended the use of ges or coal-tar for dressing the stems of Fruit-trees; I beg
used. About 12 years ago the person who had the orchard now possess, being afraid that sheep and pigs would or four feet up from the ground with gas-tar, which answered in every respect the intentionrom cattle; but they suffered in a way equally bad. The Apple-trees, from effects of the gas-tar, gradually began
to fail, and some died altogether in about five years after its application. The bark of others close to the ground became rotten, and even up to this time its deleterious Plum and Pear-trees are perceptible. Its application to liam and Pear-trees caused the stem to overgrow immediately above where the tar had been put on; several of
these trees became loose in the ground, and did not thrive for a long time afterwards. The gas-tar might, however, be tried in a diluted state for the sake of experiment, and then only on trees that are cankered and of little consequence, in the proportion of one part gas-tar to three of
train-oil, well mixed together, with the addition of fifteen parts of cowndung and two of water. If the stems of parts of cowrdung and two of water. If the stems of touch them, and the diluted tar might act in some respects as a manure.-Caution.
Forf Covering a New Wall with Ivy.-This has been mortar ; also by the insertion of suitable slips of the throughout the wall whisertion of suilding. These take root in the fresh mortar, and the wall is green almost as soon as completed. Lord Devon's agent in the North of Ireland is authority for the perfect success of both these experi-meats.-M. A. M. \(^{\text {M. [We fear the Ivy will soon throw }}\) break all the joints of the brickwork if it continus to grow. \(]\)
keteors.-There is and has been a singular Iuminous appearance visible in the heavens at this place, commencing north and cock in the evening, about half-way betwixt assumes various shapes every moment ing in a body. It is like a light cloud, not the dozalin brightness of the northern lights. For any information concerning this phenomenon I shall feel greatly obliged.J. Rogers, Woolwich, Dec. 22.
attention to this subject on account of \(m\) in the to this subject on account of what has been said and 590. A Wren's nest, usually termed the "cock's nest," was built this year just above my bedroom Window, so that I had an opportunity of seeing it built. Arter it was inished I observed that only one of the birds mave use of it until after the other one had brought forth her young, and then 1 found the other bird and the young I supposed it to be intended for part of the young to sit in, as I fancied one nest wasficient for the whole family, but I soon found this not to be the case, as the only appeared about this nest for ten days, as I imagine for the purpose of being fed by the old birds; the young were not allowed to enter the nest, but were driven away
from the place to find for themselves. I observed that th object of phe the have examined it at different hours of the night and have found the bird in; I have also seen him go in and out during the day, When stormy and wet, down to the present time where the other bird sits I have not been able to find out but frequently see
ther.-M. Saul.
Cape Bulbs.-In the Gardeners' Chronicle of Sept 24,1842 , at p. 638 , you did me the favour to insert some remarks I had made respecting Cape Bulbs. I now beg that worm you that early in September last I took up al in the open ground : the four at eighteen inches, and one of those at twelve inches were perfectly sound and throwing out roots, though they had never appeared above ground since I first planted them three years before. bad state. I planted it in a pot, inches, but it was in Of state. I planted it in a pot, but it shortly perished. not have taken them up at that early period of the year ut that I thought at the moment I had a good opportu ity of disposing of my property bere, and I did not wish certainly repeat the experiment whenever I have another opportunity, and have no doubt of its succeeding in a dry sandy soil, especially if forced by a handglass in the sum mer.- \(R\).

Swans and Weeds in Ponds.-Some Correspondents dispute my statement respecting swans clearing ponds state what weeds the ponds at this place were chored with, as they were all exterminated before I came to reside here; but certain it is the ponds at the present time are as clear as could be desired. Whether our rot so well fed, I. will not pretend to say, but most assuredly they destroy everything in the form of aquatic vegetation that comes in their way. Even the Water Lily, (Nymphra alba, and the common Flag, (Iris pseudacorus, do not escape their ravages ; and where these plants Lave been planted for ornament, we are obliged to watch them pretty closely in the spring, to prevent the swans from destroying them; but after the plants get well estathe following season.-W. P. Ayres.
Pruning Forest Trees. - In Number 45 of the Chronicle, "Quercus" advises foresters to abstain from Had he calls the "dangerous plaything" of pruning. he might have led us along with him, as much mischief
has undoubtedly been incurred by the mismanagement of anskilful pruners. But this is not the case; he aims a nothing less than the complete suppression of every method of pruning, all being, in his opinion, hurtful to the growth
of trees. He and I differ widely in our opinions on this point. I have often given reasons for disagreeing with point. I have often given reasons for disagreeing wit those who regret any interference with the branches of
trees, but have not always been successful in bringing them to my way of thinking. "Quercus," on quoting a sentence of mine, places after it some remarks of Pro fessor Lindley, as if they were opposed to it. My observ ation is, "When the lateral branches are shortened, the sap has less surface to cover than when they are allowed to extend to an improper length and thickness." This解 to the surface. tree ? answer in the affirmative. It is even mor abundant, which I account for quite consistently with the remarks of Dr. Lindley. He says, "the supply of fluid by the roots should be continued and uninterrupted. The smallest leaf at the extremity of a branch of a lofty tree must assist in setting in action the absorbing power of the If th, at whatever distance from the organ these roots act ruptis reciprocal action is not main period, an of interruption." To this I subscribe most cordially; and one especial benefit derived from shortening branches leaves and roots more ample and beneficial. The smallness of the branches, and the closeness and breadth of the leaves, give a plentiful supply of sap, and render the circulation rapid. Much of the misunderstanding on the subject proceeds, I think, from the idea that there is an irreparable loss of leaves sustained by the application of the pruning-knife. In the act of cutting, we, of course, take may be a deficiency in the supply till the young shoot grow on the cut branches, but no longer. On the con trary, there is a greater supply of nourishment from the leaves on the young shoots; hey, being broader and fresher draw more nutriment from the atmosphere than is imbibed by the leaves of uncut branches. All gardeners know tha fruit-trees and many kinds of shrubs must be cut anpually, in order to make them blossom and bear will full vigour. In like manner forest-trees by shortening acquire a vigour and luxuriance from the concen
tration of the sap that does not belong to uncut trees. It is rosy f the sap that does not belong to uncut trees. much method, and as it is the desire of planters generally to have rapid growth in the trunk, 1 doubt not that the system will be more extensively applied than it has been may trunk has gained the desired height, and the branches will spread out and be more elegant and luxuriant from the previous have re I had from him he stated "that he annually pursued my system in his plantations in the counties of Denbigh, Flint, and Merioneth, amounting to 850 acres, since the Dr min of 1804. Such decided ase the sceptical.-Gavin Cree, Biggar.

PROCEEDINGS OF SOCIETIES Dec.7.-This was the Winter General Meeting of this Society, Hon. Lord Murray, V.P., in the chair. On the centre table were displayed the Chinese Chrysanthemums, and the various parcels of Grapes, Pears, and Apples, which had been sent for competi-
tion, those which had gained prizes being distinguished by cards. tion, those which had gained prizes being distinguished by cards.
At one end of the Hall was exhibited, in large pots single specimens of the rich collection of Coniferas belonging to the society; Prizes were awarded as follows :-For excellent retarded Grapes,
the Silver Medal to Mr. P. Crocket the Silver Medal to Mr. P. Crocket, gr. to Colonel Fergusom, of
Raith, the kind being White Muscat of Alexandria; 2, Mr \(J\). Raith, the kind being White Muscat of Alexandria; 2 , Mr J. J;
Young, gro to Mrs. Hamilton Nisbett Ferguson, of Archerfiel,
3, Mr.J. Robertson, gr, to Lord Gray, Kinfauns. No fewer than eleven competitors came forward with Desserl Pcurs, each producing six sorts, and the fruit being in general of good quality.
The Slver Medal was voted to Mr. Young, Archerfied, for Marie

\section*{MISCELLANEOUS}

New Hardy Oak.-This Oak, the Quercus glabra, was sent to Pais from Leyden, in 1836, and has perfectly succeeded there; for it is now \(4 \frac{1}{2}\) feet high. It is little known, in consequence of its resemblance to a Laurel more than to an Oak. It takes very well from cuttings, placed in bottom-heat under a bell-glass; a plant propagated in this manner four years ago, and in the open ground for three years, is doing very well. It was pro-
greud to hand-glass in the winter for the two first tected by a hand-glass in the winter for the two first years; the third yeater, if there had been any. I should think that under a hand-glass it has sustained at least eight centigrade degrees; this makes me believe that we could cultivater that of Anger, where acclimating becomes every day more easy, and where the soil suits so well the
trees and plants of Japan. From what M. Siebold says in his Work, it appears that this tree has all that is desirable as an object of propagation. This Oak, he says, is a large upright tree, branching out at the top, its leaves are tough, of a bright green underneath, perfectly entire, and remain three years upon the tree. Since I have had leaves. The catkins are very numerous and upright; the acorns ripen the following year, like those of other evergreen Oaks. In Japan they eat the ruit, which tastes
like Chesnuts. There are some varieties of this. The wood is hard and heavy, and is used in making agriculposes. It is propagated by seeds and by grafting. This beautiful Oak was introduced to Leyden in 1830, by Holland. I tried to graft it on a common Oak, but did not succeed. I should think that if it were grafted upon our evergreen species, we should have better success.Neumann, in Rev. Hort
inc Labels, to write on with a common Pencil.Slightly rub wilh pumice-stone the part of the label upommon lead pencil, and when the letters have been exposed to the air for two or three days, they are indelible. If you wish to efface the writing, you must rub with the pumice-stow, covered over with oarth they will reappear. Old zinc is wetted, over them, and the purpose. M. Paul Manoury gardemer in the Garden of Plants, of Caen, made this discovery several years ago.-Rev. Hort
Action of Roots on Glass.-Dr. Jackson stated that bulbs nol ber for noticed the same effects on bottle glass, which had lain in garden mould. He supposed that the plants had the power of decomposing glass as well as the felspar of granite, and of appropriating to their use the potash contained in it,
and that this was the source of the potash coutained in the ashes of plants.-Proceedings of Boston Society. Application of Dr. Boucherie's Method for Improving the Appearance and Qualily of Wood, by the Injection of various Fluids.-We learn from the Revue Horticole tha Dr. Boucherie has obtained permission to make trial of Two modes of effecting the penetration of the wood are adopted. When the trees are in leaf, the natural suction is sufficient to cause the ascent of the foreign fluid from the bottom of the tree to the extremity of the leaves. But when the leaves have fallen, the trees require to be cut and laid in a horizontal position; and by pressure the but little resistance, being at the same time expelled, The
rapidity with which the foreign fluid is substituted for the natural sap of the tree surpasses conception. As an instance, the trunk of a Beech, \(52 \frac{1}{2}\) feet in length, and 2 feet \(9 \frac{86}{100}\) inches of mean diameter, and consequently contain-
ing 328 cubic feet, had 186,743 cubic inches, or \(673 \frac{1}{2}\) ing 328 cubic feet, had 186,743 cubic inches, or \(673 \frac{1}{2}\) gallons of sap expelled in 25 hours; and in the same period 195,897 cubic inches, or \(706 \frac{1}{2}\) gallons of pyroligneous acid were injected. From this experiment, which was very carefully conducted, it may be inferred, in the first place, that the wood of the Beech is solid to the extent of about two-thirds of its volume; hence one-third remains as space destined for the circulation of sap. Secondly, that in its natural state a tree of advanced age contains vacuities into which the sap no longer penetrates, since as above pelled ; this may be attributed to the diseased state of certain portions of tissue not permeable to the sap by natural propulsion, but which are capable of being filled with the acid when the latter is injected with sufficient force. M. Boucherie has thus been able to introduce preservative acids into the pores of trees, expelling at the same time the sap, an active agent of corruption; thereby insuring for wood work an incalculable duration. By the same procedure, calcareous substances in solution are introduced; these render the wood much harder, stronger, and almost incombustible; qualities valuable for constructions generally, and particularly for ship-building. wool is als low, and violet, are communicated-not a dull uniformo tinge, but beautiful variegations according to the windings of the cellular tissue. 1
New Botanical and Horticultural Books.-Endlicher's "Genera Plantarum," 3d Supplement ; Schleiden's "Grundzüge der Botanik," vols. i. and ii. : De Can dolle's "Théorie Elémentaire de la Botanique," -3d Edition; Lindley's "Théorie der Gartenkunde

Vegetable Irritability.-Gentiana sedifolia, a native of the Cordilleras of Guayaquil, at the height of 9000 feet, the Cordileras Guayaquil, at the height or 900 feet possessen, in a striking eane, the property of instantly finger. and so cometely is this effected that one the finger, and so completely wes erna in was expanding its deep azare flo sun's rays. It is a curious circumstance, that cold, or probably some should, in thi instance, excite vereple irritability should, in this instance, excite vegetable irrtability. The rense happens with resect to Main, many of Which are natives of the temperate mountain.region;-yet while other species of the same family, abundantly distributed on the sultry savannah that borders the coast, manifest that property in a very remarkable degree. Jameson, in Hooker's Journal of Botany.
Climate of Quito; its Orchidacea.-The western side Pichincha, fronting the Pacific, is frequently obscured by dense fogs, sweeping across the face of the paramo, moisture, intermingling with the cool mountain atmo sphere; while that of the table land of Quito, unless when disturbed by the transient effect of a thunderstorm, is remarkably dry and transparent. This may be one reason why no trees are found on the plain of Quito, excepting such as have been planted round the " haciendas." At Pichàn, 12,986 feet, where the western descent commences, we cipice to the height inste large forest-trees clothing the prefew Alpine forms, as Lychnis (No. 115), Cerastium (No. 108), a gigantic Draba (No. 7\%), and a stinging Loasa, with a flower of the colour and size of an Orange From this point down to the level of about 8,000 feet From this point down to the level of about 8,000 feet, the forests af ares Eaglish park scenery. Nothing can exceed the riohness and variety of the flora of this recion. The gorges, and variety of the fora of this region. and Alstromerias, and Begonias, enwing nor can 1 conceive anything finer than the curious genus Loranthus, regetag on the lar blossome plaving alof a profusion of splenaid blossoms. One pecies, in paricuar, proat 10 inches in length and Femers, each the ferest xesembling the finest coral. Nrom their pecular mode of growth, none of these shrubs have beea iderto ins aced a a living state, and consequally no idea can be formed of their extreme beauty from the mere inspection of a dried specimen. Amid the multitude of the forests, those of the Orchidacea deserve particular notice. Perhaps no class of plants displays so much diversity in the construction of the corolla, while the whole an extremely natural assemblage The resemblance which some of the flowers bear to certain animals has not escaped the observation of these people, little inclined as they are to investigate the natural productions of their magnificent country. The fine genus Anguloa, a native of the province of Loxa, produces a flower which, from some ancied resemblance to a bull's head, has received the name
el Torito." Cyrtochilum pardinum is a native of the alpine forests of Cuenca and Loxa. The cattle farm of the cucho, verging on the paramo, over wher number of the more minute species than any other lacality with which I am acquainted. We have a description of these from the able pen of Professor Lindley ; and though important for the advancement of botanical science, I doubt'much Whether they will be ever seen in a living state. The genus Stelis, of which there is a vast number of species, genus Stelis, of which there is a vast number of species,
elonging to this tribe; some of them vegetating on the perpendicular cliffs of Pichincha, as high as 12,000 feet. forest-trees to a more considerable elevation. Two zones seem particularly well suited for the production of Orchidaceæ. The first, and most extensive, is that just
described, from 10,000 to 8,000 fect. The other is the described, from 10,000 to 8,000 feet. The other is the
forest land skirting the coast, and extending upwards to nearly 1,000 feet. In the alluvial country of Guayaquil nearly 1,000 feet. In the alluvial country of Guayaquil From the elevation of 6000 feet downwards to within a from leagues of the coast, the country is a vast unbroken forest, forming overhead a dense leafy canopy, through forest, forming overhead a dense leafy canopy, through whil, perpetually deluged with rain, is streened with leave and timberinally deluged with rain, is strewed with leaves dour, and, as in Choco, infested with venomous reptiles Rare and beautiful Cryptogamia (Trichomanes and Hy menophyllum, Mosses, and Jingermanniæ) clothe with a mantle of lively green the trunks of these gigantic trees forming a strange contrast with the naked soil underneath There is, ia fact, no space for the growth of herbaceou plants. The excessive moisture, with a perpetual diurna development; they would be suffocated by the lusurian regetation of the forest. A few plants only of Vija (Heliconia Bijai) spring from the humid surface, and to he benighted traveller are of the most essential service as forming a useful material to cover his temporary rancho, the construction of which would be otherwise matter of difficulty. Nothing can be more impressive han the silence that reigns throughout these vast.pri maval forests. I have, on several occasions, traversed a space of 30 miles, in four successive days, without meeting with a single animated being-not even a bird. The traveller's progress is indeed remarkably slow; not 80 much owing to the miry state of the ground as to the rast number of fallen trees he is compelled to climb over path, the slightest deviation from which might be attended with serious consequences, in a country where it is hardly possible to procure a glimpse of the sun' or stars. At posight he is frequently startled by the crash of falling trees, which may, perhaps, have existed for centuries, but are finally prostrated by the hand of time.-Jameson, in Hooker's Jourral of Botany.

\section*{3Rebíplos.}

Theoris der Gärtneret, von John Lindley. (Lindley'
Theory of Horticullure.) 8vo. Vienna. 1842.
Page 147.-From the observations in the text it would appear that the surface of the glass in the plant-houses of England is not usually covered in winter; and hence we may see how great a difference there is between the climate there and with us, as well as an explanation of the our own.
Page 148.-We cannot let pass this opportunity of remarking on the injury to which plants are exposed by the practice of heating houses to a high temperature during the night. There is not a more unnatural practice in all Horticulture than this. To maintain a temperature during perfect madness, and shows the greatest ignorance of the perfect madness, and shows the greatest ignorance of the
life of vegetables. During a great degree of cold, it is much better to increase the temperature of the house during the day, whilst the light is upon it, than to increase it at night.

Page 15l.-Plants also during growth require carbonic acid as well as moisture, and it is through the medium of damp atmosphere that they are enabled, by means of their leaves and green parts, to appropriate this gas.
Page 152.-Every gardener will find it of the greatest use accurately to study the peculiarities of the locality in which he cultivates his plants. Every glass-house possesses some important differences in relation to moisture,
dryness, and heat. These differences should be studied in drynes, and heat. These differences should be studied in are cultivated.
Page 153.--It seems that there is something like the mania for ventilating plants in England, to which gardeners in this country attach so much importance. Although these good people very often meet with accidents from sach a practice, yet they still continue to repeat their error; they seek an explanation of the injurious results, not in the draught of alr carrying away the moisture, not in the meeting of two currents of air of very different temperature, but they ascribe it to the locality, to the say is neces'sary for the plants; and many of them do not know at all that a current of air is in the highest degree injurious for many plants.
Page 156 .-A small quantfty of "ammoniacal vapour in the atmosphere does not act injuriously on plants. Page 156.-"We can beay testimony to the injurious ness of the presence of centain kinds of gas upon plants off in consequence of the gases given off from hot-air pipes. We cannot insist too strongly on these pipes being kept perfectly clean, they sbould be washed
over at least once a year with white-wash, and this is more especially needed in houses where Camellias are rown.
Page 158,-"-" It is very true that Fungi will live best in e damp atmosphere with a low temperature. But they are only produced when portions of decomposing organic
matter, either animal or vegetable, or even inorganic submatter, either animal or vegetable, or even inorganic substances, are allowed to accumulate upon the leaves and
other parts of the plants. When plants are kept quite
free from such matters, and no dead or dying parts ar free from remain upon them, they will always remain have taught us this, and we are of opinion that it is much better to seek the cause from whence an evil springs than to seek to attempt to remove the evil when it has occurre But when plants are affected with mould, the thick leather ones should be washed and dried between folds of linen and the soft and hairy ones should be strewed with pow-
dered chalk (Kreide), and in this way its progress will be dered ch
- Page 164.-There are seeds among the Cerealia which require only the \(\frac{\bar{x} \delta 06}{}\) of their weight of water to cause
Fage 166. -In a great number of seeds, we may see by their weight that when sown under natural circumstances, they can only have a small covering of earth over them. In other seeds again their form prevents them when they drop naturally from their parent plant, from sinking deep with the leaves whichs are very often covered naturally ime germination takes place are formed into humus, thus affording the young plant an abundant, supply of carbonic acid, and the peculiar salts which it requires for its growth. We believe that seeds require to be buried less deep in the ground, in proportion to the near approach of the time \(t\) which they begin to germinate
Page 170.-If any one casts a glance at the elements of the seeds of leguminous plants, it will be at once evident heat, whilst other seeds wear so high a degree of moist destroyed by a temperature like that of boiling water. Page 170.-The seeds of the Phytolacca decandra, well us those of the Raspberry, have been known to ger minate after being exposed to the heat of boiling syrup. Page 171.-Seeds which possess resinous and viscous coverings prevent the access of the air and water to their interior, and as it is by these agents that oxygen is intro unced to the carbon of which seeds are principally com posed, such seeds do not so easily permit of the formation Page 17 acid
Page 174.-It is well known that the seeds of Roses have the peculiarity of laying a long time in the soil before they germinate, and in Botanical works they are described as the last to germinate. It is a curious fact
that, if these seeds be allowed to remain on the tree till they have experienced a temperature below the freezing point, they will produce twice and three times the quantity of young plants they would have done, had they been gathered betore the frost.
Page 176.-The failure of the seeds of cultivated plants may also be ascribed to other causes besides that here mentioned. In a state of nature a plant ceases to exist when all the circumstances are not present which are essential to its existence and reproduction. Cultivated plants suffer generally from the attention of the cultivator,
and they are only supplied with the kind of soil which enables them to put forth green parts and leaves, which is looked upon as the normal condition of the plant, and from this cause seeds are not unfrequently imperfectly only placed Again, cuttings of plants are cultivated and although they grow up and produce no seeds, inquiry is not made as to the reason. The fact is, plants require particular kinds of ingredients in the soil with which to perfect their seeds ; and unless these matters are present the seeds are not matured, and this is undoubtedly the reason why cultivated plants do not oftener bear fertil
Page 206.-Cuttings of the roots of Berberis aquifolium all Pelargoniums, and the Monsonia, will propagate the plant with great certainty, provided those portions are se Pu which contain upon them adventitious buds
whose branches We have seen a Cerasus Lauro-cerasus forth roots in the air. This also frequently occurs in all the shrubby Calceolarias, and many other plants, where they are grown in a damp atmosphere, but only on thos 221 . - The earth in which we to the day-light. 221.- he earth whioh we usually plant cuttings inorganic elements, but also of elements arising from the inorganic elements, but ale
Page 222,-We have grafted the flower-buds and often the branches with half ripe fruits of the Rose, with perfect success. Herr Foordy, of Mähran, cultivates small Rhododendrons, not more than six inches high, by Pages 2.- it too true that the common crown grafting is still in use on the Contineat. Yet there are many other good methods adopted, some of which sur pass the whip.grafting; and there is now generally a neatness in these operations in German gardens, that was formerly entirely unknown
Page 234.-In the year 1841, an experiment was per formed under the direction of the Royal Horticultural Society of Berlin, in which a branch of the Cosmea bipinnata was grafted upon the root of a Dahlia, and it not
only grew well, but it also brought forth blossoms and only grew
Page 246.-One of the cheapest kinds of grafting clay consists of three parts of common clay, two parts of cow. dung, and one of barley beards (Gerstenkranen), which must be thoroughly well kneeded together
Page 251.-In the case of the Camellia branch placed in water, the water is only a means of maintaining the existence of the plant, and not a means of nourishing the plant in the same manner as it would be if the roots were placed in natural circumstances. How long plants would need hardiy be brought to any oдe's recollection.

Page 269.-The planting trees against a wall is an operation requiring great care, and the circumstannes of
climate, \&c. should be taken into consideration. There is frequently a very barbarous practice adopted in our gardens; the trees are planted so close to the walls that the roots can obtain only half the nutriment they ought. Such a position can only be remedied by planting the trees further from the wall, and not allowing the roots to penetrute the earth parallel with the stem.

\section*{Stete of the Weather at Chiswick during che laat \(177-18\) years, for the ensuing}

REPORT ON COVENT-GARDEN MAREET,
Trans the unusual mildness of the weather at this season the
market hae been well supplied durng the week with vegetables market has heen well supplied durng, the week with vegetables
oralmost every kind. lemand, and ls, tenerally ypeaking, of good quality. Pme applez, althourt small, rere good in quallty, and pientiful. Grapes are
offered at neariy the same prices as last week. Among Apples offercd at neariy the same prices as last week. Among Apples
we noticed a few good specinens of Nonpareils, Court of Wick, Golden Pippin, and the American Nertown pppin. Pears are good and sufficient to meet the demand; they consist of the same
kinds as were lately mentioned in our report, with the addition of a few good specimens of Ne plics Menris, which have been Lemons are selling at from 1s. to 2.s. per dizen. Among vegetait is offered at from 9d. to 4 s. per bundle. Cabbages aree good and
plentiful, and Brussel Sprouts are sufficient to meet the demand,
but are rather small. Seakate is ofirered at from 1 s. to 3s. per pun-
net, and is good and plentifal. Caulifiowers have advanced a
litt hittie in price during the week. Rhubarb is selling at from 18 . to
\(1 s\). \(6 d\). per bundie. Asparagus is offered at from \(2 s\), to \(8 s\), per \({ }^{100}\). Parsitey and Endive have been on demend during the week, Rnd liave advanced a little in price. Shallots are sufficient for
the demand, and are selling at nearly the same prices as last the demand, and are selling at nearly the same prices as last
week. Cut Flowers chiefl consist of Erica hyemalis and pracilis Lechenauultia fornosa, Poinciana pulcherrima, Bignonia yennsta,
Cypripedium insigne, Euphorbia jacquin:fora, Pelargoniums, Verbenas, Fuchsias. Chrysanthemums, Cameliins, and Roses.

Br an intermediate Overland Mail we have news from Calcutta to the 19 th ult. and. from China to the 12 th Oct. The revolution in the Punjaub does not appear to have been quite so sanguinary as was at first reported two of the Chiefs who were said to have been murdered are still alive and wield joint sway at Lahore; but no settled form of government has yet been attempted, and
the prospect of collecting a revenue for the payment of the troops is extremely uncertain. The Governor-Genera provinces, but his future policy in regard to the disturbed states is altogether unknown. It was rumoured that Dost Mahommed had been murdered at Cabul by order of the Khan of Bokhara, but there are no means at present of ascertaining the truth of the report. In China the trade has been regularly opened with the four new
ports, and with great success. Sickness still prevails to an alarming extent at Hong Kong, and the official resi dents, as well as the troops, have suffered severel
From France we have accounts of the opening of the Chambers on Wednesday last by the King in person. His Majesty and the Royal family were received with every demonstration of loyalty by the Chambers, but the carriages by the enormous number of troops which lined the streets that they had no opportunity of evincing their feelings. The Speech adverted with satisfaction to the financial condition of the country, and to its pacific and friendly relations with foreign Powers. It dwel with marked emphasis on the sincere friendship which unites his Majesty to the Queen of Great Britain, and to the cordial understanding existing between the two Goveraments on the affairs of Spain and Greece. The commercial relations of France with various countries, the marriage of the Prince de Joinville, the progress of the National Arms in Algeria, and the extension of railways and other public works are nest adverted to, and the speech concludes with an expression of gratitude for the state of honourable peace and of increasing prosperity which the country enjoys.-From Spain we learn that the Chambers have adopted the proposed address to the Queen on the events of the 28 th ult, and that S. Olozaga has thought it necessary to consult his safety by flight.-From the United States we have the President's Message on the opening of Congress. In this document, which may be regarded as the last official exposition of Mr. Tyler's principles prior to his retiring from the Presidency, he advises the occupation of the Oregon territory by military posts, and the annexation of Texas to the Union. For the terms in which he discusses these important points we must refer our readers to the speech itself, premising however that the views of the Presidentare condemned by many of the New York papers which have hitherto supported his own party, while those of opposite principles attach but little importance to his opinions, and regard him as the least influential personage whom the United States have yet elevated to the position of Chief Magistrate.

\section*{}

Court.-On Sunday her Majesty and Prince Albert attended divine service in the private chapel of the Palace. On Caristmas-day her Majesty and suite also attended Prince Albert enjoyed their usual early walk in the precincts of the Castle: In the afternoon her Majesty and his Royal Highness took an airing in a pony-phaeton, the Prince driving. On Tuesday, in consequence of the unfavourable state of the weather, neither her Majesty nor the morning to enjoy the sport of shooting in the Royal preserves. On Wednesday morning the harriers belonging to his Royal Highness met at Mr. Nash's, of Langleygreen. Her Majesty, attended by the Marchioness of panied by the Duke of Wellington, was also present. After good runs, the sport finished in the neighbourhood of Horton. On Thursday the Queen and Prince took their usual early walk, after which the Prince shot over
the Royal preserves. In the afternoon her Majesty took an airing in a pony-phaeton. The Prince of Wales and the Princesses are quite well, and have been taking their usual airings during the week. It is expected that her
Majesty and Prince Albert will visit Claremont shortly Majesty and Prince Albert will visit Claremont shortly
after New Year's-Day, where the Court will probably remain for four or five days for the purpose of enabling the Prince to enjoy the sport of shooting over the wellstocked preserves of the King of the Belgians. The
rumour of her Majesty's intended visit to Warwick Castle rumour of her Majesty's intended visit to Warwick Castle week have been Baron Brunow, the Russian Minister, Count Nesselrode, the Duke of Wellington, Lord Bloomfield, Lord Aberdeen, and the Bishop of London. The Court went into mourning on Sunday for the ex-King of Holland, to change the mourning to-morrow the 3la and go out of mourning on Thursday the 4th January.
The Duc de Bordeaux.-His Royal Highness quitted Birmingham on the 22d inst., highly delighted with all that be had seen of the interesting and instructive works the Birmingham railway to Tring and then travelled post to Hartwell, which was once the abode of Louis XVIII On the evening of the 22 d His Royal Highness continued his tour by a visit to Oxford where he passed the night On the 23d His Royal Highness inspected the colleges and public establishments, the museums, library, and col lections of art at that seat of learning. The Prince reached Belgrave-square for dinner that evening. On his to render him homage. Upwards of 100 persons were presented, among whom wery Neteral manufacturerg,
traders, and operative deputations. His Royal Highness entertained the Earl and Countess of Shrewsbury at dinner on Sunday, and attended mass at the Catholic chape
on Christmas-day. On Tuesday he visited the Earl of Shrewsbury at the Clarendon, and on Wednesday left town by the Great-Western railway for the West of Eng
land. His Royal Highness arrived at Bath in the even ing and visited the residence of Mr . Beckford and the Lansdowne Tower. His Royal Highness subsequently went to the New Park and then went over the different public buildings. On Thursday morning the Prince departed for Bristol and Clifton. From thence he will proceed to Exeter and Cill afterwards visit Plymouth an probably Wales. His Royal Highness is expected to return to town in about a fortnight.
Parliamentary Movements.--The local papers announce that Mr. Ward and Mr. Parker the members for Sheffield who were expected to resign at the opening of Parliament is rumoured that Mr. Metcalf intends to resign the repre sentation of and Roxburgh at the next vacancy in the Conservative interest -It is also announced that Col. Thompson will be a can didate for Sunderland on the Liberal interest, and tha Mr. J.J. Wright will be a candidate for the sam

The Church.-The Rev. Charles Kemble, Assistan Minister of Stockwell, is spoken of as the probable suc cessor of the Rev. Henry Melvill at Camden Chapel East India College at Haileybury we announced last week.

The Army.-It is rumoured in military circles that the Colonelcy of the 1st Royals, vacant by the death of Lord Lynedoch, wild be given to General Sir George Murray Master-General of the Ordnance.
Death of Sir Edward Brace.-The daily papers an nounce the death of Sir Edward Brace Commander-in Chief at Sheerness. Sir W. Brace was a vice-admiral of the white and succeeded Sir H. Digby as commander-inhonour of the birth of the Prince of Wales. The appoint 2,555l. per annum with an official residence.

The National Society.-At a recent meeting of this Society, it was resolved to accede to a proposal made by
Mr. Kay Shuttleworth and Mr. Tuffell, to transfer the Training Establishment at Battersea to the care of the National Society, so that henceforth the charge of that establishment will devolve upon that Society, to be conducted according to its principles, and for the advance ment of its end and designs. The Training Establish patronage of Prince Albert, who will continue patron of the institution.

\section*{fforetan.}

France.-On Wednesday the French Chambers were opened by the King in person. No less than 20,000 troops were under arms. The whole way to the ChamNational Guards, and the ground was kept clear by the Municipal Guard, who mustered in considerable numbers. The public were kept even at a greater distance han on previous occasions. Her Majesty, attended by the King. During the whole line his Majesty w ceived with warm demonstrations loyaly from the possibility of evincing their feelings from the great dis tance at which they were kept. On the arrival of the Royal family being announced in the Chamber a dee
silence took place, which was only broken by loud crie silence took place, which was only broken by loud crie
of "Vive la Reine!" "Vive la Duchesse d'Orleans! Vive le Comte de Paris !" as they severally took the seats. The Queen looked uncommonly well and gratifie at the warmoth of her reception. She led the Comte de Paris forward to the front of the tribune, when a fresh burst of acclamation arose. The Duchess of Orleans was in mourning. His Majesty ascended the steps leading to the royal seat with a firm tread. He was dressed in the uniform of a colonel of the National Guards, and it was more robust healt the estrade, loud and prolonged cries of "Vive le Roi!" arose. Hebowed repeatedly to the Chamber in acknowledgment of his reception, and on proceeding to take his seat, fresh bursts of acclamation were raised. The Duc de Nemours in a general's uniform took his seat on the right of the King, the Duc de Montpensier being next his a naval uniform. The King after a moment's pause signified to the Chamber to be seated, and then read the Ollowing speech in a firm voice:-"Gentlemen of the between the powers of the state gand the loyal support you have afforded to my Government have yielded their fruit. Amidst the order maintained without effort and under the sway of the laws France displays with confidence her improving and advancing. The effects of this prosperity ill enabie us to restore between the expenses and the evenue of the state, in the law of finance which will We We can enjoy with security these blessings of peace, for it
never was better secured. Our relations with all Powers never was better secured. Our relations with all Powers
are pacific and friendly. Serious events have occurred in are pacific and friendly. Serious events have occurred in
Spain and in Greece. Queen Isabella II. summoned so young to the cares of state, in at thin moment the objec
of all my solicitude and of my most affectionate interest. I hope that the issme of these events will be most favour-
able to two nations friendly to France, and that in Greece as well as In Spain monarchy will strengthen itself by the mutual respect for the rights of the throne and the public liberties. The sincere friendship which unites me to the Queen of Great Britain, and the cordial under standing existing between my Government and hers, confrm me in that confidence. I have concluded with the King of Sardinia and the Republics of the Equator and Venezuela treaties of commerce, and I am pursuing with other States in several parts of the world negotiations which whilst maintaining our national labour in the security which tis entitled to, will open new paths to its intelligence and activity. I have the satisfaction of seeing the circle o my family enlarged by the marriage of my son the Prince de Joinville with the Princess Francesca, the sister of the Emperor of Brazils and of the Queen of Portugal. This union, by ensuring the happiness of my son, adds one Our domination in Algeria will soon be universal and tranquil. Under the command of experienced leaders among whom I am proud to reckon one of my sons, our of war and the labours of peace. The necessary measure for the the of the peace. The of for various enterprises of national utility will be ab mitted to liberations bill relative will instruction will satisfy the wish of the chater for freedom of instruction by maintaining the authority and action of the state over public education. I behold, Gentlemen, with deep oratitude to Providence the state of honourable peace and of increasing prosperity which and our fidelity to France, I and mine have eved any other ambition than that of serving her well. I is the assurance of accomplishing that duty which has given me strength through the trials of my life, and which port." The interruptions on particular passages were exceedingly slight. A murnur arose at the phrase "justly desired equilibrium." A louder sign of approval greeted the passage aluding to the state of Spain, and the desir that the monarchy of that country should gain strength The most marked approbation of the day was given to the phrase relative to the fiendship existing between his Ma jesty and the Queen of England ; but still nothing like the warrath of enthusiasm could be observed. When speaking of the marriage of the Prince de Joinville, the King turned round towards his son and inclined slightly arose conclusion loud cheers and cries of "Vive le Roi" mediately, and repeatedly acknowledged the manner in which the Chambers greeted him. When the acclamations which followed the reading of the royal speech had sub sided, M. Martin (du Nord) by the King's directions administered the oath to the Prince de Joinville, as Peer of France. His Royal Highness rose when the Minister had concluded the words, and signified his assent by stretching forth his hand towards the King who bowed in return. M. Duchatel then swore in about half a dozen mem bers who had been elected or reelected since the session. M. Martin (du Nord), Minister of Justice then announced in the usual form, that the session Princes year 1843 was opened. The King and the le Roil" The Government ened campaiga against the Legıtimists by dismissing several mayors of pravial to brave the authorities by going to London to pay their re spects to A Royal ordinance has been published in the official papers relieving eight of them of their functions. The Courrier Francais announces tha the friends of Messrs. Guizot and Duchatel are deter fin the Chambers against the the Duc de Bor went to ar Bordeaux. General Jacqueminot had claimed of conn commander of the National Guard the honour fommencing the attack. M. Pasquier the President of of Pers intended likewise to adaress a same offence. The Lyons papers state that the Legiti mist party had succeeded in exciting such a feeling in favour of the Duc de Bordeaux among the population of several districts in the South of France, that between Avignon and Orange, the inscription of "Henry V., or villages situate along the road.-A circumstance has occurred at Paris which has excited great surprise. The Prince of Moskowa, the son of Marshal Ney and the son-in-law of M. Lafitte, has resigued his commion the French army. The Prince has been for the last six years a field-officer. Marshal Soult appointed him a lieutenantcolonel, and presented the commission to the King for his Majesty's signature, but the King positively refused, and stated as his reason that the Prince being in the Opposition had no right to expect favour, and the Prince imme diately resigned his commission in the army. The Prince belongs to the party of M . Thiers, with whom he is on the most intimate terms of private friendship. This circumstance has created an immonse sensation among that party many of them had intimated their intention of supporting many of them had intimated the
Spain.-Accounts from Madrid of the 17 th inst. an nounce that the Congress on that day adopted the proposed message to the Queen, The discussion on the message was resumed by Count de las Navas, General Serrano, M. Roca de Togores, Cortina, and Churruea M. Roca de Togores having appealed to General Serrano for some explanations respecting the events of the evening
of the 28th ult., the General replied to the first question, that " the Queen had related to him the fact with ingenuousness and candour, but in, terms different from those used in her declaration."
Majesty had told him that Majesty had told him that previous to her sitting down to transact business with M. Olozaga she had dropped a bonbon, but that her Majesty could not recollect whether
she gave it to him or whether Olozaga had asked it from her Majesty." To the third question, that "he (General Serrano) accompanied that evening her Majesty to the
theatre, and that neither that night nor the next morning had he perceived anything in her Majesty's manner to warrant the belief that she had suffered any outrage at the
hands of M. Olozaga." The discussion having closed, hands of M. Olozaga. Sanchez de la Fuente moved the omission in the address of a paragraph tending to criminate M. Olozaga, but this proposition was rejected by 88 against 63 , and the address was afterwards voted by
48. The Chamber next appointed a deputation which waited on her Majesty with the address on the 20th,
headed by M. Martinez de la Rosa. M. Olozaga had not appeared in Congress since the, 12 th. It was reported escorted by a party of smugglers, but others affirmed that he was concealed in that capital. The Moderados were course, as lit would enable them to forego a prosecution course, as it would enable them to forego a prosecution, dalous debates than those which had already taken place.
There was a chance besides that M. Olozaga would not There was a chance besides that M . Olozvicted, and his acquittal might have serious conseqe convicted, and his acquittal which Royalty is still surhis possession a letter in the hand-writing of the Marchioness de Santa Cruz addressed to General Narvaez, in which the whole scheme for overthrowing his power at
Court and in the country was described. Accounts from Perpignan of the 18 th inst. state that hostilities still continued on the frontiers of Catalonia, and that Baron de lona, was shortly expected to take the command of Gen. Prim's troops engaged in the blockade of Figueras. Germany.-Letters from Berlin of the 23d state that on the previous evening at seven o'clock divine service
was performed in the Royal Palace on the mortal remains of the late King of Holland, Count of Nassau, in the pre sence of the King and Queen, of the Prince and Princess of the Netherlands and their daughters, of the Royal Family,
the officers of the Household, and principal civil and the officers of the Household, and principal civil and Ditary authorities. Ehenberg, delivered an appropriate discourse on the melancholy occasion, in which he gave a sketch of the life of the King. Speaking of the deceased Monarch's deep Mankind, he mentioned that on the table at which he had been sitting when the fatal stroke seized him, the celebrated work on the " Imitation of Christ" was found open at the chapter on the Contemplation of Death. After \(100^{\prime}\) clock of respect usina such occasions being declined by Prince Frederick of the Netherlands. The military escort was commanded by Prince Augustus of Wurtemburg. The diately behind which was the King of Prussia, Prince Frederick of the Netherlands, and Prince Albert as chief mourners; and then the other princes of the Royal family hearse all the troops paid military honours. The procession proceeded the the be conveyed to Hamburgh and thence to Holland.-Another fatal duel has been fought at Mayence. It took place between M. de Haber and M. Gacharaga, the seconds ind M. de Verefkin, and it has terminated in the death of M. Sacharaga. The challenge was sent by the latter to M. de Haber when in prison for his share in the former duel. The meeting took place in Rhenish Bavaria. M. Sacharaga fired twice, and missed his adversary. M.
de Haber did not advance though he was entitled to do de Haber did not advance though he was entitled to do killed him instantaneously. The Frankfurter Journal in allusion to this matter states that the Bavarian authorities ordered the body to be buried privately at Manheim, where it had been taken after the duel. They were afraid of disturbance, should any attempt be made to lay the
body by the side of his friend M . de Goeler. This order body by the side of his friend M. de Goeler. This order
was complied with on the 17 th, in the presence of a few was complied with on the 17 th, in the presence of a few
officers of the garrison and a friend of the deceased, who came on purpose from Carlsruhe. Several other officers, friends of the deceased, were prevented from attending by
being ordered to keep their barracks. M. de Haber has being ordered to keep their barracks. M. de Haber has report that PrinceGustavus, son of the late King of Sweden, of Baden, after thirteen years of marriage.
Iraly, - A rupture has taken place between Sardinia and Tunis which is hikely to lead to hostilities, the SarTunis. Letters from Constantinople of the 29 th ult. state that the Sardinian Minister had presented to the Divan a that had arisen with the Bey of Tunis, who, in violation of treaties, had impeded the trade of the sardinian merchandise which they had purchased in the Regency, and on which duties had been levied by the Junisian
Government. The. Envoy added that an ultimatum had been forwarded to the Bey, and that if he did not accede to it the King of Sardinia would be under the necessity of
sending a fleet to blockade the harbour of Tunis. The

Porte replied that it had no knowledge of the treaty o commerce concluded between the King of Sardinia and
the Bey of Tunis, that the Bey had acted of his own accord in the affair, and that the Ottoman Government could not decide who was right or who was wrong.-
Letters from Naples are filled with accounts of the success of a musical prodigy called Favante who has lately made her appearance there under extraordinary circumstances
of enthusiasm. She is said to be extremely beautiful, and it is reported that she possesses a voice one of the most extensive ever known, enabling her to sing the parts
of the contralto, the mezzo-soprano and soprano with of the contralto, the mezzo-soprano and soprano with equal ease. Her vaice thicen brection under the guidance of Lablache. It is said that nothing can exceed the excitement prevailing respecting her; she fills the theatre nightly with an overflowing audience at raised prices, Madame Catalani who for twenty-two years held with so much eclat the sceptre of song has just died, after a short illness at the age of fifty-nine, at her villa near Sinigaglia made her debût on the stage at Venice when 1784. She and retired in 1831. She married a Frenchman, M. de Valabrigue, a native of Burgundy, who died in 1828, and by whom she had three children. Madame Catalani has eft a fortune estimated atabout \(£ 332,000\). -The naturalis Gemmellari has published a letter in the Naples Journal descriptive of some of the effects of the eruption of Etna: "Of the hundred known eruptions of Vesuvius," he says, 13th Etna, 400 yards long and 40 wide. I could only get within a mile of it. A stream of lava about six miles long yan at my feet, with a rapiaty
yard in a second. The stream was \(2 \frac{1}{\theta}\) miles wide when it yard in a second. The stream was 2 \(\frac{1}{2}\) miles wide when it
reached Monte Egitto. It followed the lava stream of 1832, and in four days menaced the village of Bronte; but it turned off towards Aderno, and threatened to turn into the river Simeto. A crowd of curious gathered to
watch the effect of the lava stream running into a little watch the effect of the lava stream running into a little
lake of water. Fatal curiosity! It produced an explosion like a powder mine. Out of 30 of them 25 were severely wounded. The lava stream stopped short of the
river Simeto, having run about fourteen miles in all, ten of them in four days." A curious circumstance took place at Catania the night before the eruption. A fine rain ell which changed the colour of the silk in the umbrellas, and burnt it. A professor of chemistry having analysed this rain, found that it contained a large quantity of muriatic acid.
Greece.-It is stated by the Ministerial papers that Count Nesselrode, who arrived at Windsor a few days Nicholas to all the proposals which were suggested by Prince Wallerstein during his mission here, respecting the final settlement of the affairs of Greece. It is said that the Emperor not only consents but is anxious that a constitution upon th
to the Greeks.
Turkey, \&c.-Accounts from Constancinople of the 7 th state that intelligence had reached that city of the the arrival of Dr. Woiff at Trebizona, where he had been vens and other English ratlemgish whans handsome subscription to facilitate the objects of the ery pedition. Sir S . Canning who has been unremitting in his exertions on behalf of the persecuted Nestorians, has to Mosul with or on the Porte to send a commissioner savage warfare of the Kurds. The individual appointed is Kemal Effendi, a Kiatib of the Porte, a man of respectable character, who it is hoped will do his duty im-
partially. The Pacha of Mosul strongly denies having instigated the Kurds to attack the Nestorians; but the affair is involved in much mystery, and there is reason to believe not only that the Pacha but the Porte also was accessory to the massacre. The disputes of rival missionaries who mutually accused each other of promoting polifears and the sumicions of the Par hod to imagine that the independence of the Nestorians might become a very dangerous element of foreign encroach Goven the Danube we learn that the Servian of Post-office roads, of which Belgrade is of course the starting point. The first is the easterly line which runs and Passarom the Danube by Semendria and Parmarowitz, where the fanious treaty was concluded, Widdin. The second is the south few hours journey of follows the high road to Constantinople as far as Alexinitza, which is 126 miles from Belgrade. This is the most nexion with Sophia, Philippopoli, and Adrianople. The first spare funds that the Government can dispose of are to be applied to the construction of a comathrough the rich valley of the Morana, it will infallibly develope the resources of the best agricultural Jine, which after passing by Kragojewatz, the official capital of Servia, in the time of Milosch, goes to Uschitza and the Mocragora, and thus communicates with Montenegro and Herzegowina. Uschitza has, next to Belplace in the interior where they are allowed to reside. The fourth is the westerly line, and goes up the right bank of the Save to Shafatz and Louvitza, on the frontier of Bosmia, and thus establishes the connexion with this exten
sive province. The English plan of uniformity of post age has been adopted for all distances, great and smail. Letters of 3 drachms and under to pay a piastre, or 2 d . that the Pacha is ssill in Upper Eerpt. One of is High ness's last extraordinary feats is the carrying up the first cataract of the Nile a small steamer by the sheer manual force of some 2,000 men, which was successfully accomplished, and this vessel has thus been enabled to navigate as far as the second cataract. It is intended to keep her in that division of the Nile for the present; thus materially facilitating the communication with Dongola and Sennaar. It is considered probable that the real motive of the Viceroy's always proceeding to Cairo and Upper Egypt in the winter is to enjoy its beautiful climate at this season, while on the sea-coast, including Alexandria, a disagreeable damp and cold atmosphere prevails through out the winter. On the 28th ult. a destructive conflagraKhanze place at Cairo. The fire broke out in the the loss is estimated at two milliens of was burnt, and India and China.-An extra India mail, direct from Calcutta to Suez, has brought dates from India and China considerably later than those of the last regular Bombay mail. Those from Calcutta come down to the 19th ult., extreine abundance of the indiso crop the Punjoub is Heera Singh's murder. Lena Singh also survives ; and both these chiefs, though previously opposed to each other, are reconciled for the moment, and wield joint sway, aver the 10000 moment, and wield joint Lahore. To keep these men in ected in the vicinity of ever, require a certain revenue from the provinces and their chiefs, of which there seemed little prospect. Goo lab Singh preserved his hostile attitude. The forces left in guard of Peshawur had deserted it. Except the distribution of ammunition to the army of observation and the announced purpose of the Governor-General to visit the north-western provinces, there are no tidings of the intentions of the Indian Government. At Gwalior, the Khasgee has been seized by the troops without
bloodshed, and his reign is at an end. It is posed that this event will render the advance of an army \({ }^{\text {unnecessary. The accounts from Sukkur are }}\) more distressing than ever. It appears that of the troops there 1,371 are in hospital, and only 153 well. Every officer but one in each corps is inefficient from illness It was.currently reported that Dost Mahommed had been shot dead at Cabul by order of the Khan of Bokhara. It is said that the Khan sent several papers, with his own would Cabul, stating that whoever shour will probably lead to suspension of any effort on the part of the Affghans to occupy Peshawur.-The Madras Examiner contains the report of a temperance meeting which had been held by a society called "Father Mathew's Society," at Secundera150 . duction of those habits of sobriety enjined by the rules of the ffraternity.-The journals of Victoria, Hong Kong, are to the 12th October. The sickness in that island had been such as to induce the officers of the Government to Mr. Merer a time to Macao. Mr. Secretary Morrison, Mr. Mercer and Mrott have died of the fever, and Health has been appointed whether the cavse of the be remored by of Wictori be by he low than others, and most of the cases of sickness have occurred at bor at bot The trade hath them. The till Amoy, Ningpo, and Shanghoe,-Messrs. Gribble, Thom and The three latte trade to the military stations previous confinement of the trade to the mintay salion, it had been carried on to a great extent since the signature of the treaty. More than a milion and a half or aollars worth of India and Straits produce, exclusive of opium, were disposed of at Chusan and Amoy, and other lowns of the east coast. The raw cottou imported from India to China amounts alone to more than the previous annual export of British manufactures to China, whilst the opium trade surpasses calculation. Some inconvenience was felt at Canton at first in consequence of there being no responsible persons like the Hong merchants to deal with. Sir H. Pottinger declares the answer of the Chinese commissioners when applied to on the subject as most satisfactory.
Untted States.-The New York packet-ship Independence, so well known for making quick passages and Message on the opening of Congress, on Wednesday, with papers to the 8th inst hiverpoo sailing. Congress opened on the 4 th and the Message was delivered on the 5th. The following is the passare reating to this country in connection with the Oregon executive has relaxed no effort to render ind Congress the relations of amity which so happily exist between the United States and other countries. The treaty lately concluded with Great Britain has tended greatly to incerest is calculated to encourage which a reciprocity of interest is calculated to encourage, and it is most ardently to be hoped that nothing may transpire to interxupt the
relations of amity which it is so obviously the policy of both nations to cultivate. A question of much importance still remains to be adjusted between thens. The territorial limits of the two countrien in relation to what is
commonly known as the Oregon territory still remain in dispute. The United States would be at all times indis posed to aggrandise themselvesat the expense of any other
nation; but while they would be restrained by principles nation; but while they would be restrained by principles
of honour, which should govern the conduct of nations as of honour, which should govern that of individuals, from setting up a demand for well as that of individuals, from seting up a demen would territory' \({ }^{\text {'mich }}\) as unwillingly consent to a surrender of their rights. as unwillingly consent to a surres practicable unbiassed examination of the subject, the United States have always contended that their rights appertain to the
entire region of country lying on the Pacific, and embraced entire region of country lying on the Pacific, and embraced
within the forty-second and fifty-fourth degrees 40 m . of within the forty-second and fifty-fourth degreed by Great
north latitude. This claim being controverted by north latitude. This claim being the present Executive, actuated, no doubt, by an earnest desire to adjust the matter upon terms mutually satisfactory to both countries,
have caused to be submitted to the British Government have caused to be submitted to the British Government propositions for settlement and final adjustment, which however have not proved heretofore acceptable to
Our Minister at London has under instructions again brought the subject to the consideration of that Government, and while nothing will be done to compromise the rights or honour of the United States, every proper expe-
dient will be resorted to in order to bring the negotiation dient will be resorted to in order to bring the negotiation now in the progress of resumption to a speedy and happy termination. In the meantime, ir ar propestablished in the territory or are on their way thither for the purpose of forming permanent settlements, while others are preparing to follow-and in view on in previous messages for the establishment of military posts, at such places on the line of travel as will furnish security and protection to our hardy adventurers against hostile tribes of Indians inhabiting those extensive regions. Our laws should also follow them, so modified as the circumstances of the case may seem to require. Under the influence of our free system of government new republics are destined to spring up at no distant day on the shores of the Pacific, similar in policy and in feeling to those existing on this side of the Rocky Mountains, and giving a wider and more extensive spread to the principles of civil and religious liberty." With respect to the detention of American cases of vessels detained as slavers by British cruisers off cases or vessel ofrica reparation has been promised, in a few that full satisfaction has been allowed. The President takes threatening tone in adverting to the continued war between Mexico and her insurgent province of Texas. He goes so far as to intimate that sometow or oc cortinent demand its cessation. He counsels a revision of the tariff, to be conducted on the principles of moderation in scale and permanency and stability in legislation, but disappoints those who had hoped to hear him speak form a very near approach to free trace. He expresses waun congratula. tions on the general prosperity of the country and on the peaceful aspect of the intercourse with most foreign nations. He also expresses high hopes from the negotiation of a commercial treaty with the States included in the German Customs Union, which seems to offer terms most advantageous to American trade. "These, with a
budget of local, fiscal and political matter, and the information that if an increase of revenue do not flow in from some quarter a deficit of \(4,000,000\) dollars may be expected at the close of 1845 , form the chief points of in terest in the message.

\section*{CITY.}

The Christmas Holidays.-Tuesday being the general holiday in consequence of Christmas-day falling on Monday, all the exhibitions were crowded with visitors. At the British Museum the number of visitors was 18,377 . They exlibited the utmost decorum notwithstanding the
crowded state of the rooms; there was no single case of robbery, no damage committed, and no person was refused admission on the ground of intoxication. The number of year, when they exceeded 28,000 . The National Gallery was visited by about 10,000 persons. As a striking contrast to these returns of free public exhibitions, the visitors to Westminster Abbey on Tuesday were only 300 , while
at St. Paul's they only amounted to 25 . The Cbinese Collection on Tuesday was visited by upwards of 4000 persons; the United Service Institution by upwards of
100 ; and the Tunnel by many thousands who crowded to the spot by every available conveyance until evening. The visited by large numbers, and showed that both exhibitions still retain their popularity.
New Royal Exchange.-On the 20th inst. Mr. Tite sent to the Gresbam Committee his report on the state of very little now remains to be done in the decorative portion, the roof is nearly completed, and the tower is completed to the cleaning down of the stone work, which will
be done whilst the scaffold is removing. With regard to be done whilst the scaffold is removing. Wigure has been
the sculpture Mr. Tite reports that every figure the sculpture Mr. Tite reports that every
transferred from the model to the stone, and that a month's transferred from the model to the stone, and that a month's
labour will complete the work, so that it will be ready for
hoisting within that period. When the sculpture shall have reached its position the finisliing touches will be given to it by Mr. Westmacott. Judging from its present advanced state the architect entertains no hesitation in assuring the committee that if necessary it wo months from this date. The dials and hands of the clock have been prepared, and will be placed as soon as the stafla them with safety. The machinery of the clock is very nearly completed and the only thing remaining unsettled chimes. Upon that subject Mr. Tite had consulted Pro fessor Taylor, the Gresham lecturer on music, and hoped that before the next meeting of the committee he should be prepared to report the result. The moulds for some month several of them will he cast. Mr. Tite concludes with congratulating the committee at the close of the third year of the work, on the favourable state of the seasons throughout the whole period. The mildness of last winter and the unusually fine spring which followed were greatly in favour of building operations, and though the early
part of the summer was wet, Yet since August up to the present time scarcely a day had been lost by interruption from the weather. He states that he can see nothing at present, unless some unusually severe weather should
occur after Christmas to prevent the realisation of his hopes that the contra
originally agreed upon
Duke of Wellington, to be pe equestrian statue of the to the new Royal Exchange, is proceeding rapidly towards completion under the direction of Mr. Weeks. The statue of William IV., from the design of Mr. Nixon, to
be placed at the junction of Gracechurch-street and King be placed at the junction of Gracechurch-street and King
William-street, will be shortly raised upon its pedestal. William-street, will be shortly raised upon its pedestal. The figure is colossal, being upwards of fourteen feet in
height. It is executed in Devonshire granite, and will cost when complete 2,2007 ., which sum was voted by the corporation for that purpose. His Majesty is represented in the costume of a high admiral. Upon the round pedestal is sculptured a wreath of laurel, in the centre of which an appropriate inscription will be engraved. It is worthy of
remark that the spot upon which this statue will be remark that the spot upon which this statue wead of
erected, is the exact site of the famous Boar's Heal Eastcheap; a sign rendered so memorable by Shakspeare. A statue by Mr. Nixon is likewise in a forward state, of John Carpenter, the town clerk in the reign of Henry to , founder of the City of London Schools, and executor high, and will be executed in Rock Abbey stone, similar to that used for the friezes and pediments in front of Buckingham Palace. It is to be placed upon the first landing of the staircase of the City of London schools, opposite the principal entrance. Mr. Nixon has also in preparation, a statue of Sir John Crosby, to be placed in Crosby Hall, Bishopsgate-street. The model exhibits the knight in the "winged" armour of the period, exat the tomb of the knight himself in St. Helen's church.

Stephens, a a olect vestry in this parish which on Friday to convene a select vestry in this parish, which exclude the ratepayers. Roe and Forester, the MansionHouse officers, were stationed at the entrance of the church, and prevented any persons but the members of
the select vestry from entering the building. Mr. Rock, one of the parishioners, determined to try the right of the officers to exclude him, and pushed the door as if to force it open, whereupon the officers immediately laid their hands upon Mr. Rock, who immediately went to the Mansion-House and stated the whole matter to the Lord Mayor. After hearing the circumstances, the Lord Mayor
assured the parishioners that he had not sent the officers assured the parishioners that hen stated that they had been
to exclude them. It was then sent by Alderman Humphrey, but this has since been denied by the Alderman himself. Upon returning to Walbrook more knocks were given at St . Benet's Sthere-
and amongst them the church wardens of and amongst them the churchwardens of St. Benet's shere-
hog demanded admittance, but without effect. A great crowd remained in the street opposite to the entrance of the church until some time past three o clock, when-at apparently a signal from witara- It was then given out
their post at the church-doors. that the members of the select vestry had left the church by some back entrance; and upon hearing this the popu-
lace quietly dispersed. It is understood that at the vestry Alderman Gibbs submitted Which the vestry resolved that they be printed and pubpound be levied for the relief of the poor for the year ensuing.
The Gas Companies.-A meeting of the inhabitants of st. Martin' \(s\)-in-the-Fields, convened by the churchwardens, was held at the vestry-room last week, to take public with gas, and to devise some means of establishing a standard of purity and of measure for the same. Mr. of the present pubar in the presence of the gas-metre makers themselves, proved that the metres in general use panies, register from 3, 4, and even 5 per cent. at the level line to 32 per cent. against the consumer. A metre made by one of the best makers in London was tested could not by any contrivance be made to work against the of 22 per cent to the prejudice of the consumer. With
respect to the quality of the gas at present supplied, it was stated that if the gas companies paid proper attention to the illuminating power of their gas and not to the greatest amount of coke they could produce, they woul be able to increase the light twofold. This was proved by the fact that the gas in Edinburgh produced from Cannel coal, where there was no desire to obtain a large amoun of coke, had double the illuminating power of the gas supplied by the London gas or rather the London coke companies. To show how exorbitant the charges of the gas companies were, Mr. Jones mentioned that one of them charged the proprietors of Vauxhall Gardens upwards of 9006. for inflating the Nassau balloon fourteen times and a lesser one four times, whereas afterwards the proballoon the same number of times at a saving of more than 7002. He thought these facts made it imperative on
the meeting to appeal to the Legislature for interference with the gas monopolies, in order to secure to the public fair standard of measure and quality in the matter of gas. Several gentlemen bore testimony to the above statements, and it was ultimately determined to adjourn be appointed to wait upon Sir J. Graham and on the directors of the different metropolitan gas companies.
Lincoln's Inn.--Mr. C. P. Cooper, Queen's Counse, Inn his valuable collection of works on foreign and civil aw. The Renchers in acknowledging the gift have expressed and of having it catalogued under a title commemorative of the munificence of the donor. The collection, in addition to civil law, consists of the work of the most eminent jurists of France, Spain, Portugal,
Italy, Russia, Austria, Bavaria, Poland, Prussia, Holland, Denmark, Sweden, Norway, and America. opened in Leicester-square, representing the landing of her Majesty at Tréport, and her reception by the King of the French, and the members of the French Royal Family present on that occasion. The town, the coast, and the entrance to the harbour have been faithfully depicted by the artist, who had the advantage of being an eye-witness of what he has painted, and of havis. \({ }^{2}\) to The principal group is the Royal Family, who just landed from the state barge of the King's yacht the Reine Amelie. The Royal party are moving towards the Pavilion; they consist ou Quee of the French, Madame Adelaide, the Queen of the Belgians, the Princess of Saxe Cobourg, the Princess de Joinville, and the Duchess of Orleans, the King of the French Prince Albert, the Prince of Saxe Cobourg, the Prince de Joinville, the Dukes de Montpensier and Aumale, Lord Aberdeen, and Lord Liverpool, \&cc. This part of the picture is perfect, and those who were not present at event wil obtain by seeing it a persect cuotion of tho the panorama, and together with the boats and marine objects help to make a very effective scene.
St. Leonard's, Shoreditch. -A meeting of the ratepayers of this parish was held on Tuesday for the purpose discussig a rate for the relief of the poor, and a stormy discussion took place. A rate of 11d. in the pound was penny rate only would be demanded, and a resolution condemnatory of the former rate, and of the trustees of the poor for proposing it was directed by the senior churchwarden to be entered on the minute-book, but he refused to put it to the vote. A. long discussion then took place on the practice adopted in the burial of paupers, the undertaker's bill showing that the parish paid only \(7 \frac{1}{2} d\). \(5 d\). was the highest price paid for the adult poor. It was stated that these coffins were not fit to put a dog in, but the object was that the bodies should decompose quickly, perfect nuisance The Churchwarden admitted' that there was too much reason to complain of the interment of paupers. It was ultimately resolved that the subject e brought forward at the next vestry, and that the curate e requested to attend. The proceedings were at length losed by the adoption of a rate of \(8 d\). . held on the body of a female pauper who died in this workhouse named Ann Humphreys, at which statements ere made by the witnesses as to the employment of the female paupers in making shirts for one farthing each, that they stewed upeach other's tea-leaves and were compelled to sleep four in one bed. In consequence of the publication of these statements in the papers, the foor Guardians for an explanation. At thellast weekly meeting of the board the answer of the Guardins was read, Act 59 G . YII. the poor in St. Pancras Workhouse are Allowed a portion of their earnings not exceeding oneixth by way of encouragement, to expend it as they think proper, provided they do not violate the rulesiof the house. is \(2 s\) a dozen for the coarsest slop-shirts, no alteration in price a duzen for the coarsest slop-shits, ho ain re taken at \(3 s\), 6 d , per dozen, and at intermediate rates With respect to the statements as to the number of persons sleeping in one bed, the directors inform the Poor Law Commissioners that those statements are not correct, adding that they have reasou to believe that no such there made, extra arge beds in the women's wards, a few of which are occu-
pied by three persons when such accommodation is re-
quired, but generally only two sleep together ; and never four in a bed or any person sleeping on the floor.

Mudalesex Hospital.-On Thursday a general court of the governors of this hospital was held in the board-room pose of electing an assistant-physician to the hospital, vacant by the resignation of Dr. Watson. The candidates
for the vacant office were Dr. Seth Thompson and Dr. for the vacant office were Or. Seth Thompson and Dr.
Woodfall. After a spirited contest, which lasted during the day, the numbers at the close of the poll were announced as follows :-For Dr. Thompson, 369 votes
for Dr. Woodfall, 242 ; majority for Dr. Thompson, 127 for Dr. Woodfall, 242 ; majority for Dr. Thompson, 127,
Amongst the governors present were H.R.H. the Duke of Cord Teignmouth, Lord Calthorpe, Sir Robert Inglis, Si Lord Teignmouth, L
George Duckett, \&c.

Westminster Bridge.-On Saturday the carriage-road of Westminster-bridge was thrown open to the public. The improvement is considerable, the height of the centre
having been materially reduced and rendering the acclihaving been materially reduced and rendering the acclileft the foot-way considerably above, but in order to pro-
tect the foot-passengers a number of strong posts have tect the foot-passengers a number of strong posts have
been erected, intersected by an iron bar. A thick coating of broken granite has been laid on the road-way.
Mortality of the Metropolis. - The number Mortality of the Metropolis.- The number of deaths registered in the week ending Saturday, Dec. 16, was as
follows:-West Districts, 126 . Contral Districts, 205 ; East Districts, 235 ; South Dis
Centrals 126 ; North Districts, 165 ; tricts, 236 ; Total, 967 (males, 491 ; females, 476 ) Weekly average for the last five years, 903 ( 461 males 442 females); and for the last five autumns, 908 .

\section*{}

Incendiary Fires.-The following are a few of the more important fires reported in the local papers this week:-
At Navenly on Friday on the farm of Mr. Clark Hales, At Navenly on Friday on the farm of Mr. Clark Hales,
wheatstacks containing 10 quarters and a stack containing 30 quarters of barley destroyed. - At Eakring on the 12 th in the stackyard of Mr. R. Storey, two stacks destroyed,
- At Binhrook on the 16th on the farm of Mr. Johnson, a large barleystack destroyed,-At Corfe Caste on the
farm of Mr. Waters of Roolington on Saturday a wheat rick containing 12 or 13 loads of sheares destroyed. At Speen, Berks, on the farm of Mr. Price on Tuesday night
a peazrick and on the following morning a hay-rick de-stroyed.-At Campion's Farm, near Harlow, on Monday nigbt an outbuilding and farming implements destroyed.-
At Eaton Socon on the farm of Mr. Hall on the 16 th nine large stacks and hovels, containing about 100 loads eacb, destroyed. - At Necton, Norfolk, on the 15 th on
the premises of a small occupier of but a few acres of land, the produce of three acres of wheat, two of barley same county, on the farm of Mr. Moore, on Friday week, the premises fired and partially consumed. - At Wattisford, Sn the farm of Mr. Nunn, destroyed, and on Friday at Thurston, in the same county, the farm-buildings and stackyard belonging to Mr. Jennings destroyed.- Near High Ruothing Eissex, on Friday last the outhouses on the farm of Mr. Speller, consisting of two bays of wheat, two farming implements on the premises, the brewhouse, wash-house and their contents, a sow and nine pigs, and
100 head of poultry destroyed.-At Little Waltham on the farm of Mr. Bird, on Sunday afternoon, a barn containing only loose straw and sawn timber, a barleystack the produce of 12 acres, a wheatstack the produce of eight acres, a haystack containing 10 loads, about 12 loads of tare hay and a waggon consumed.-At Morton's-field, in Great Moor-lane, Stockport, on the 20th a haystack the property of Mr . Oldham destroyed. At Pollicott, Bucks, on the 18th, on the farm of Mr. Malins, a hay-rick de14th on the farm of Mr. Gutteridge, every barn, shed, Bable and stye on the premises and some cattle destroyed. Bath.-Mr. Roebuck, M.P. for this city, has published been appointed to an Indian judgeship. Mr. Roebuck says :- "It may possibly save the expectants of a vacancy in the representation of Bath some trouble for me to or any preceding administration, solicited for myself any place; and that no place, either in or out of England, will now in power.

Birmingham.--On Thursday week Mr. Commissioner Balguy delivered his judgment, on the application of Mr . Phillips, one of the partners in the Leicester Bank, for
his certificate. His Honour said, that when the bankhis certificate. His Honour said, that when the bankMessrs. Mitchell and Clarke, he held the opinion which he still entertained, that he was not entitled to his certifi-
cate; but for his own sake, and that of the individual cate ; but for his own sake, and that of the individual
now before him, he felt it right, before he delivered his judgment, to consider most fully, maturely, and deliberately all the facts of the case. The Chief Commissioner went over, at considerable length and with great minute-
ness the facts connected with the bankrupt's share in the history of the bank, and the circumstances under which he had seceded from Manstield and Co.'s bank and established the Leicestershire Company. On reviewing these proceedings, he found that, with a nominal capital of speculators and adventurers many of them-to get into debt to the concern to the amount of 300,0001 o, or there-
abouts. His Honour then referred to the manner in which the accounts of the bank were kept, from
which it was impossible for any person of ordinary acquaintance with business to ascertain its actual state and said it was clear to him that Mr. Phillips must have partnershin was formed, and when Mr. Miten the new duced to embark his money in the concern. Under all these circumstances, painful as it was to him to perform he duty-for he could perfectly well estimate the feelings of Mr. Phllips, who from the sphere of life in which he moved must be keenly aive to the impression made on the determination of refusing his certificate.
Bristol. - The underwriters at Lloyd's through the directors of the Great Western Steam Ship Company have presented Captain Hosken, of the Great Western, with the sum of 1002 ., in testimony of their high opinion of his nautical skill in having successfully accomplished 64 passages to and from America.
Bury.-" We mentioned," says the Bury Post, "a few weeks ago the extraordinary visitation of rats in this neighbourhood. On the farm of Mr. Harlock, of this city, no fewer than 4,736 were destroyed by two men,
with six ferrets and three dogs, between the 4 th Novem with six ferrets and three dogs, between the 4 th Novem-
ber and the 8th December. Mr. Harlock estimates his oss this ye fromber. Mr. Harlock estimat alone (abont three hundred acres) at upwards of 200 l Other farmers are sufferers to a proportionate extent; in deed, the increase of these vermin this year is universall
observed, the land in many places being completely under mined by them.
Cambridge.-At Earl Hardwicke's annual rent audit held last wreek in this town, his Lordship is reported to have made the following declaration:-After alluding to the late incendiary fres, he urged upon the farmers the advantages of adopting an improved system of culcivation, by which they might grow a double quantity of corn. He then observed that there had lately been a great deal of agitation on the subject of the corn-laws. For himself, he in common with Sir R. Peel and the Duke of Buckingham was opposed to free trade, but he thought that ultimately free-trade principles must prevail. But he een anticipated.
Carmarthen.-Considerable excitement has been caused in this county by the discovery of the body of Mr. Tho mas of Pantycerrig, in the river Brechfaedd near Brechfa. It appears that some time since Mr. Thonas gave inform and assault upon him while under the guise of Rebeccaites On that occasion he attended Carmarthen in order to give his evidence, and on his return home he found it in a blaze. On Tuesday week Mr. Thomas's corpse was found
in the Brechfaedd, which is a small stream having a rocky bed. From the previous occurrences that had taken place suspicion was excited that foul play had been used, and that he came to his death by unfair means. It was proved homever that near the spot where he was found the trunk of an Ash-tree is thrown across the stream at a height o about seven feet from its bed. Across this Mr. Thomas must have passed, and he might have fallen from it as he had been walking over a muddy soil, and the tree was a Jury under these circumstances returned a verdict of Found Dead.-The Rev. Mr. James, a magistrate who has taken an active part in the committal of the Rebecca ing-room preparing to Monday week while in his dressat him, one a ball penetrated his right arm and passed through the muscular part between the elbow and shoulder and was found in the room. The other charge was small shot which took effect upon the shatters only, and at the same instant a third charge of small shot was fired into the front bedroom where Mrs. James, was, providentially without doing any other injury than smashing the glass. the Court-Martial on the charges brought a ainst Captain Clendon of unlawflly ctationed at Chelmsford. "The Court Mter while deliberating on the evidence against Captain clend are of opinion that he is not against captain clendon, unofficer-like conduct, tending to bring the corps to which he belongs into disrepute, or of receiving the money with wilful intent, but having received it from an error in judg ment and without due consideration, sentence him to b eprimanded.'
Farnborough.-On Friday an inquest was held at Keston, near this town, on the body of Miss Charlotte Chapman, the daughter of Mr. Chapman, schoolmaster of source of the Ravensbourne, on Keston-common. The father of the young lady said, that he believed it had been purely her own act duriag a fit of temporary derangement brought on by witchcraft. He could not account for her
state of mind. Had often spoken to her, but she was state of mind. Had often spoken to her, but she was family that about 15 months ago she went with a party to Greenwich, and was induced against her will to have her fortune told, and that the witch told her "she would not deceased committed suicide during a fit of temporar

Huddersfield.-After the close of the distribution the prizes to the successful students of the Huddersfield College last week, a banquet was given to Lord Morpeth In acknowledging the toast of his up for the occasion.解 the period when we last met togother
distance, not only from the riding, but from my native country; but go where I would I still found myself within reach of Yorkshiremen. I remember I had scarcely nearest way to the house which I wish ascertain the asked the first person I met with to show me the path when pointing in a particular direction, he said "You will find that the gainest way." I said, "I am sure that is not an American word,' and a good konest Yorkshireman he turned out to be. Again when I wae travelling that region of the country that is called tlre Prairies, which re claimed state, but fitted from their matural fertility for the production of crops of every description, I came to town round which all the farms seemed to me to be in a particularly promising and favourable condition. I inquired about the circumstances of the neighbourhood and I was told that about that place- the town of Jack sonville-a colony almost entirely of Yorkshiremen had planted themselves; and hence I was glad enounh assure you, to infer the flourishing state of the crops a farming it the neighbourhood. I bad the plequre paying a visit to one of the most eminent staterme America at his country resideat mean and he praised to me the fidelity and long af Clay, services of his female servant, who turned out able Yorkshireman. Yorkshirewoman I men The be remind you that I have been in Ireland as will America. The only lesson I wish she had inculeated as her master, who is a supporter of the American tan on that she had made him a better friend to free trade is, over the world. (The meeting here rose and ale al most enthusiastically for some time.) I will only cheered you with one more of my Yorkshire-A merican asso trouble which is this,-I found several old Yorkshiremen in the great city of New York, who from old recollections the kind enough to entertain we at a public dinner, and I there was told that the state of New York goes by the name of the Empire State of the Union; and all the agreed who assembled at that dinner were perfectly county of York the Empire County of Oistening the old Launceston.-The fullowine County of OId England.
Fulnouth Packet: -Last week, a poor woman in the parish of North Tamerton, supposed not to be in a sound state of mind, deliberately walked into the Tamer and was drowned; the circumstante was soon discovered, and the river dragged without her being found. A consultaremembered a great many an elderly person sad he loaves into the grater on years ago they threw jenny loaves stopped the bon where the adopted, after riding three wiles found. This plan was loaves, which were thrown into the water, suld penny down the stream for some distance, until by a floated eddy they were gathered to one until by a circling mained. It was then concluded the body wase they reat the bottom; the spot was dragged, and it was found. St. Nicholas's Chur on Sundays initiated members speak in the "s Church, when the After one has thus spoken, in the "unknown tongnes." mysterious language. Upwards of one hundred pets the re said to have alreadly joined the "latter day saints", They "take the sacroy join" the "atter day saints. baptize, lay on hands, and believe the Book other sects, to be equal in importance to the Mosaic Writings, or the New Testamen
Liverpool. - A most destructive fire broke out Wednesday morning on the premises of Messrs. Brancker and Co., in Matthew-street, which comprise one of th most extensive sugar-refining establishments in the king dom. The fire broke out in the warehouse department and rapidly extended, so that in a few hours the whole was enveloped in flames. In the falling of one of the warehouses, a number of workmen who were employed in trying to save the property were buried in the rains and seriously injured. It is impossible at present to esti mate the amount of damsge, but it is said that there wo not less than \(50,000 \%\). or \(60,000 l\). worth of sugar on the premises..-On Wednesday afternoon a large East India man, called the Meg of Meldon, which only arrived from Calcutta a few \&c., took fire in the Waterloo-dock, and was scuttled in order to prevent further mischief. The damage is esti mated at 10,000 .
Manchester.-It is stated that Lord Francis Egerton ing canchased the Oid Quay Company's extensive carry ing concern between Manchester and Runcorn and Liver property in those places, for 400,0007 . The Old other Company's property was her 400,00 . The Oid Quay about 500 shares, so that his Lordship, if the gross sum above named be a correct one, has paid \(800 l\). per share or more than double the sum quoted of late in the best authenticated Share Lists. Lord F. Egerton will thas Manchester and Liverpool, and even in the most popu lous parts of the West Riding of Yorkshire.

Newcastle. The local papers state that an ingenious Dlan has been suggested of crossing the Tyne by passing centrifugal railway. The carriages would descend by their own gravity into the tunnel from one side, and rise up on the other by the momentum acquired in the descent, It is proposed to construct the tunsel of metallic tubing,
and lay it, just withia the bed of the river, so as not to
form an obstacle to the navigation ；the tunnel to be con－
structed of such a bore as to obviate the possibility of the carriages getting misplaced in their passage．Railway carriages and vehicles of all kinds，as well as passengers， would thus be safely and rapidly transferred from one side to the other．It is considered that with the present low all starting from the station of the Brandling Junctions Railway，one proceeding in the direction of Neville－street the other in that of the Castle－garth，and the third goirg owards the station of the Newcastle and North Shields Railway
Torwich－A competition is at present going on among rtists for the commission to perpetuate the memory of the late Larl of Leicester，and to commemorate the im－ provements in agriculture which were costered under The patronage during the greater portion of his life．The nemorial is to be a column of about 20 feet high，with emblematical devices．The subscription consists of \(4,000 l\) ． hich tae erection of the column is to cost，exchsive of the tone，which has been presented by Lord Hastings from bis quarries at Seaton Delavel．The monument is like fingland．It will be erected at Holkham，near the sea f the late Earl

 iste that the ame should be inserted
need not transpire in Court，and upon

shortly afterwards，and thea applied to the court of as an
Bench to strike Mr．Vallance off the rolls of the court as inserted
after the affidavit had been sworn, and that the initials of the
Learned Judge appearmg in the affidavit had been fotked. There
was not the slightest ground for this imaputation, and it was a charge calculated so to injure Mr. Vallance, that he had thought
it right to have recuurse to the present proceeding-- o indict the
defendant for perjurg defendant for perjury, Witnesses were examined at length on
both sides, and Mr. Erle adtressed the Jury for defendant, at
Sirst onsecting that the Judge's chambers were not in Middlesex, Wrst obsecting that the Judge's chambers were not in Middlesex
which was over-ruled, and next endeavouring to prove that the
faitials were in the handwriting of the defendant himself. The Rnitials were in the handwriting of the defendant himself. The
clerk of Mr. Justree Patteson; Mr. Arthur Parsey, a writer in perspective, who is a friend of Mr. Barnard Gregory, and had
been his bail at Southend when he was arrested, and other
friends of defendant were examined to support this argument. friends of defendant were examined to support this argument.
Jord Dexman, in summing up, observed that in his opinion the an indictment. It was for the Jury to say whether they considered the chambers of Mr. Justice Williams were in the county
of Mddesex ; because, if they were not, the deiendant was en-
 Mr. Valance was a most serious one, as he was an officer of this
c.unt. The whole case was for their consideration, gnd they
would say whether the defendant was guilty or not. Durng the latter part of the summing up the defendant, who had been in out of Court. The Jury returned a verdict of Guitty. The de-
fendant was then called, but did not answer. Mr. Sergeant Tal-
fourd then prayed for nudgent. Mr. Erle said there were objections to the indictment. Limal Dermato T inall pass judgment
 no doubt ought to be left upon the public mind as to tl c inj rem
sion which the case bas created on the mind of the Judge. There
sis not the singtes shate is not the slightest shaciow or pretence for any material defence; been actuated. I think the offence of wTheh the ncfendart hac been found guilty is one of the highest character against the ad-
ministration of justice. In the absence of the defendant I abstain cutor, further than to say that it does not afford any motive Whatever to thas off, in she the least degree, the amount of the pun-
istrment. z in of the very worst description; one cannot hear it Without feeling extreme indignation and sorrow. The sentence of the Courtis, that he be transported for seven years,
Cours or Coman
Curturan.-This case, whens.-Lord has excited Pungett interest in of the mintre c.rcles, was fixed for Friday morning, and a few minutes
after 9 oclock Sir T. Wilde, with Mr. Serjeant Talfourd and Mr.
Wordswortb, who had been retained for the plaintiff, entered the Court. He was soon followed by the Soltcitor-Geveral, with Mr. Sourt. He was soon followed by the Solicitor-Geveral, with Mr
detence. The learned counsel had, who were engaged for the
taken their seats five minutes, when the officer of the Court announced that the special
jury who had been summoned to try this cause need not wait
allw
 among the remainder of the audience. In reterence to this case, the defendant, upon the authority of the plantiff's attorney, of the way "" the princlpal witness in Lord W. Paget's belailf, who
was with his solictor at the opening of the Court. The letter was sent to the daily papers, which considered the terms in whitter so offensive that they refused to publish it. Lord ia the strongest possible language that the charge is utterly
unfounded, and that legal measures will be taken forthwith ledging this communcation, expresses his satisfaction that the real facts of the case will thus become tharoughly investigated.
Winter Assizrs, Midind Circuit.-Digery.-John Winfeld Grocock, aged seventeen, was charged with having, on the
25 th August last, assaulted Eliza Ann Allwood, agrirl aged eleven years, with intent to maimng, and a third count, which charged
count for cutting and maim with an intent to do her some grievous bodily harm. The particulars of this case were noticed in this paper at the time.
The prisoner enticed the girl from her home, promising to take mouth, assaulted her, and beat her lread with a hammer until
 deposer to the strangeness of his manner, and that it had been
the cause of much surrow and uneasisess to himself and wife; he also proved that his bruther had bees in confinement at
Leicester, as a lunatic, for elghteen years. The judge summed
up. There were two questions; first, was the act which nad
been committed been committed the act and deed of the prisoner? and if it was,
then was the prisoner in such a state of mind at the time as to burder of proving he was not lay upon the prisoner. To be he, in fact, at the time the act was conmitted, capable of know-
ing he was doung what was wrong. For that purpose they would
look at the evidence in the case, and especially to the subsequent conduct. The Jury returned a verdict of Gulty of
the intent to do some grevous bodily harm and damage, but ac-
tinith! lim purnc. I il e intent to murder. The Judge sen. Tenced him to transportation for dite.
Midhand Curculp, Leicesser.-Our readers wilh recullect the
can of Mr. Messerger, a farmer at Gaddesby, who was apre-
hended un suspicion of having murdered one of has labourers. The man had been at work, but nor returning at breaktast time teen weeks from the time he was last seen alive, when he was
found by some reapers in one of Messenger's fields. Cextain prisoner, who was committed for tral, hur was admitted to bail
on an application being made to Mr. Justice krskine. The Grand
Jury, lowever, have not thought the evidence before them suf. Jury, however, have not thought the evidence before them suf.
ficient to send him upon his trail, and consequently no true boll
was returned. Midland Ciscuit, Notwingram, -William Kettleband, la-
bourer, was charged with the wilful niurder of his son, lsac
Kettleband, a lad about 10 years of age. This case was parely
one of circumstantlal evidence, witnesses. The prisoner is a labourer, and at the time of the
alleged murder was wagyoner to Mr. Hebl, a farmer, at Wysalk.
His son was pioughboy; besides which there were thiee or four
other persons the farm there is a barn, and, near the barn is a pund feuced about
 Winere he had cafled to make inquines for his son, and had also
given accounts of what information bad been given to him, all of
which were proved to be false asked to search the pond, but. alway's evaded doing so on one rake, and his manner of using it excited so many suspicious in rake, and his maoner of using it excited so many suspicions in
the minds of those who witnessed it, that shortly after Kettle-

 hen wife, "It's a pretty job;" to which she repiied, "Ay, At is
I al ways thought it would come to that." He then asked if any
It bruises had been discovered, and added, "If there are any, the
horsses have been otten in the pond so far as he lay ", when a witness said, "Why, how can you know where le lay, as you1
have not been to the pond?" The prisoner was silent for some
som time, and then said he should not wonder he got in hy playing
with a rat. An inquest was held on the body the day it was found , 耳hen a verdict was returned, Found Drowned. The neigh.
bours, However, were not satisfied. A second inquest was hell,

 returned a d verdict of © Gulty of Manysinumhter. The prisoner was
sentenced to be transporteif for life.
 Mansell, on the srd November last. The prisoners it appeared were labourers from Daisley-green, and were out for the purpose
of poaching with two other persons who have not yet been appretiended, on the night of the 2 d November. On the same night Whitmore, Esq., of Apley Park, was out with two of his master's
under -keepers, Mansell and Brian, for the purpose of protecting under keepers, Mansell and Brian, for the purpose of protecting
the gane. The moon was up, but owing to a slight fog the light
was not very strong The thre e field adjonnng one of Mr. Whitmore's preserves called Birch's Coppice, and about hall-past ono o'clock they osserverld four men
accompanied by two dogs coming through the gateway adjoinmir the lighway leading from Wellington to the New Imin, and at wair went to meet them, and when within a short distance
Eelyes observer, "Here they are", to which nue of the poschers replied, "We be in the road." Mansell answered "It is no at the keepers, which struck Eales upon the forehear between
the eyes, dividing the skin and laying bare the skull from the violence of the blow, but rose again directly and ran up towards his antagonists, when he distinctly recognised the pri-
soner Skitt, who stepped back and threw another stnne, which strumk the roof of the mouth driven in ; the unfortunate man was rendered insensible, but distinctly swore to the fellow who inflicted upoun him the above injuries. Brian and Mansell were also much wern :nt able tocalture. A withessof the name of Coopler went
to the spot where the contest occurred soon after, on the same morning, and found there a bag containing a dead hare and rabbit,
both of which had been suared, and also both of which had been suared, and also two round smoth
stones, poislied nearly bright, one of a different nature from any un maclear aud imprat fial manner, and the Jury immediately found them both Guilty. The Court sentenced them to impri-
soument with hard labour for 18 months. This case appeared to soument with hard labour for 18 months. This case appeared to
excite considerable interest, the bench being crowded during the trial with magistrates and county gentlemen.
Froncis Parget, William Dix, Jhomas Lucleock, aǹd Jomes Smith, were arraigned upon a charge of having unlawfully eritered certain inclosed woodlands in the occupation of Juseph
Edmonds, on the 1st inst., for the purpose of destroying game.
From the testimy From the testimony of Oakley, Mr. Gatteker's head-keeper, it onderkeepers, or watchers, for the purpose of protecting his
master's property fron pachers, hove depredations liave becin "his e thus engaged his attention was drawn to a coppice called
"The Bowell's Dingle," formıng one of Mr. Gatteker's principal pheasant preserves, in whicli he heard the report of a gruap ; he mevediately stationed his men silently round the cover, so as to
prevent if possible the escape of those who were at work within. men issue from the dingle; the moment they observed him they
bore down rapidy towards him, evidently concluding that he was alone nod with the intention of attacking and overpowering
lini. Oakley, although a powerful man, was not anxlous to enter singly into a contest with so many at once, stepped back about
20 yards and summoned his assistants to his aid; the five poachers meanwhile closed upon him; the moment however that they per-
ceived Oak ley's renforcement they took to their heels, in different directions. All of them however were secured but the prisoners some remarks were offered by Mr. Phillimore, deprecating the means which had been used to secure them, as
all the facts requisite to establish the charge were too clearly and satistactorily proved to admit of refutation or donbt. Baron
Rolfe summed up, and the Jury without hesitation pronounced all the men Guilty. The Learned Baron in passing sentenc
olscrived, "These noturnal depretatrins are calculated then lead to crimes of greater enormity and of a deeper dye.

\section*{NEW FARMERS' NEWSPAPER.}

Tys time has come when Landiords and Tenants, large Farmers and small, must devote their anxious attention to improved cultivation -when, in the words of Sir Robert Peel, "All must tearn how, in the shortest time, und at the least expense, to produce the greatest quantity of food, vegetable or unimal, without permanent injury to the land." To accomplisl this, no means can be so effectual as that which brings the results of Experience and Science before every man, in a cheap form. For this puryose ThB AGRICULTURAL GAZETTE is to be established.

The Proprietors are aware of the difficulties of dealing with the many details of cultivation without an acquantance with circumstances, often as varying as places. 'They condemn the idea of conducting farming operations upon one invariable plan; and, while they welcome science as the best auxiliary of practice, they regard crude speculations as the most dangerous of delusious. But, they also feel that in Agriculture, as in all other arts, there are general principles upon which successful farming must depend; that there are practical errors which no local circumstances can justify; in short, that there is room for improvement even in those branches which are best understood. No one man car be competent to deal with the multifarious questions affecting husbandry, and the duty of the Editor of such a Paper as The AGRICultural gazette is to make known the knowledge of all. It is to practical Farmers that the Proprietors trust for the means of carrying out their views, and not to the talents of any individual. While, therefore, they state that the Editor of The AGRICULTURAL GAZETTE will be a gentleman well acquainted with the best kind of Farming, in which the is actively engared, they feel it to be of far more importance to announce the promise of assistance received from the landed and farming interest generaily, especially of those wlose names they are permitted to mention:--

\title{
THE GARDENERS' \\ CHRONICLE
} AGRICULTURAL GAZETTE:

\section*{}

\section*{THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY,}

The principle on which the Gardening part of this Paper has been conducted has been to make at a weekly record of everything that bears upon Horticulture, Floriculture, Arboricalture, or Garden Botany, and such Natural History as has xelation to Gardening, with Notices and Criticisms of all works on such subjects. Connected with thispart are WEEKLY CALENDARS OF GARDENING OPERATIONS, given in detail, and adapted to the objects of persons in every station of life; so that the Cottager with a few rods of ground before his door, the Amateur who has only a greenhouse, and the Manager of extensive gardens, are alike informed of the routine of operations which the varying seasons render necessary. It moreover contains reports of Horticultural Exhibitions and Proceedings - Notices of Novelties and Improvements-in short, everything that can tend to advance the profession, benefit the condition of the workman, or conduce to the pleasure of his employer ; accompanied with Woodents, whenever the matter treated of requires that mode of illustration.
To this Farming, as explained above, will now be added.
Lastly, that description of domestic and political News is introduced which is usually found in a Weekly Newspaper. It is unnecessary to dwell on this head further than to say, that the Proprietors do not range themselves under the banners of any party; their earnest endeavours have been to make The Gardiners' Chronicle a full and comprehensive Record of Facts only-a Newspaper in the true sense of the word-leaving the reader to form his own opinions: their object beng clucidation of the laws of Nature, not of man. The reader is thus furnished, in ADDITION To fag prculiar patatuass of the Journat, with such information concerning the events of the day as supersedes the necessity of his providing himself with any other Weekly Paper.

The Proprietors are happy to announce that the following distinguished Botanists, Fiorists, and Practical Gardeners have already enriched the Gardznzas' Chroniche by their communications :-

The Hon. and Very Rev. W. Herbert, Dean of Manchester
The Hon. and Kev. Charles Bathurs
Hon. W. Fox Strangways
Sir W. J. Hooker, Royal Gardens, Kew
Dr. Horner, Hull

[^2]:    The house then proceeded to the adjourned debate on Lord adjurned debate was begun by Mr. EWART. He laid before the
    house a sertes of detalls, from which he inferred the evils of the the purpose of showing the increased competition which our manufactures have now to sustain from those of the Continent, enable onr own manufacturers to prorduce at a cheaper rate, by
    a reduction in the duties on raw materials - namely, the duties of Customs and Excise-and by a dimination in the price of
    food. He pressed, therefore, for the repeal of the Corn-laws;
    and expressed his hope that Sir R. Peel would not long be abla
    to resist that repeal, -Mr, Lindect was nerther more nor less than a question of confidence or $n$ o confidence in the Government. He denied the assertion that
    no part of the existing distress was owing to the Poor Law ; on
    the contrary, that law liad most grievously increased the rates. hield for commerce. No dortbt such an extension was desirable,
    but there was great exaggeration in the calculation of its advocates. He would not now enter upon what was not the proper
    question before the house-the question of the Corn-luws. On
    tuat head he was satisfied with the declarations of Sir It was in vain to assail that right hon. baronet's character either
    by insinuation or by direct attack; the gentlemen of England
    would rally round him, and support him by ther voices and thelr votes-Lord Wonstie y clenied the alleged conficence of
    the Agriculturists in the Minister, and affirmed the existence
    of considerable distress in his own county. But, if the house should go into committee on this distress, would any
    remedy be found there He feared the result would be
    only a Corn-law debate; and he should therefore, though thus differng from those with whom he hisually acted,
    oppose both the motion and the amendment.-Mr. G. KNIGITr
    thought that much of the evil complaine thought that moch of the evil complained of wold be
    neatralised by a judicious systerm of emiration to the colonies. In opposition to Lord Worsley, he maintained that
    the agriculturists were satisfied with the conduct and declaraThe main cause of distress was the unconstitutional agitation of tess of ast autumn. - Mr. Ward supported the motion, but
    thought it too vague in its terms. He entered into varous
    statements descrptive of the distress prevalling in Sisfreld, and
    protested againet the restrictive principle as destructive of thade
     moted by the cultivation of friendly negotiations with Quropean
    and other nations. The consummation of the commerc, al treaty
    of 1810 with France, would do more to prevent distress tian anything which could be looked to from America, and mutual candour and frankness would remave any feeling hostile to the
    treaty that might exist in France. He should not bind himself
    to the present Corn Law, or make adhesion to a fixed dutw or to the present Corn Law, or make adhesion to a fixed duty or a
    aliding scale the test of his political consistency, but would sup.
    port no proposal which, in his belief, would remove from the agricultural interest its preponderance in the country. -Mr .
    Ross reconmended the adoption of afed duty, commencing at eight shillings a quarter, and falling by gradations of a shilling
    yearly. - Mr. B. Hope condemned Lord Howick's motion as
    futiie and unnecessary, and attributed the distress to over popuOn the motion of Dr. Bowring the debate was again adjourned,
    Wedzesday.-In answer to Dr. Bowrina, Sir R. PyEL, stated his fear that there could be no doubt of Col. Stoddart and Capt. and further added, in justice to the Emperor of Russia, that
    whenever British subjects were in danger, he had exercised all
    the influence in his power for the preservation of their lives. the influence in his power for the preservation of their lives.
    The adjourned debate on Lord Howics's motion was then re-
    sumed. Dr, Bowriva described the great distress prevailing in
    Bolton, Dhich were not made, legislation would be too late. He only wished
    that the Premier and the Vice.President of the Board of Trade would give effect to their own words, and put in practice the
    free.trate priaciples which they professed. While the Members
    of that House wers of that Huase were revelling in luxury, would they teil the
    wretched penple that thothing should be done for them? The
    opponents of free-trade were dong as much injury in lir ince as in the country. A relaxation was necessary, to take advantage
    of the terms of the Chinese treaty.-Mr. STr AnT WorThEY con-
    demned the inflammatory language of the preceding speaker, demned the inflammatory language of the preceding speaker,
    and denied that the Corra Lawz were the cause of the dearth and
    destitution that prevailed. If the Corn Laws were cepealed tomorrow, the price of bread would fall, hut greater evils than the
    present ones would accomptny the f.lil. The learned Member
    ought not to rescrve all his sympatliy for those who were not ought not to rescrve all his sympatliy for those who were not Mr. Escort did not see how the noble Lord's motion could lead
    to any result that would relieve the wants of the people. Amongst

[^11]:    Dr. Justus Liebrg in his Relation to Vegelable Physiug. By Dr. Hugo Muhl. (Dr. Justus Liebig's
    erhiltniss zur Pflazzen-Physiulogie.) Tubingen. erhiltniss zur Frues. 1843. This is the pamphet May the 20 hh , and which consists of a critique on the work of Dr. Liebig, so well known in this country under the title of "Chemistry, in its applications to Agriculture and Physiology "" Dr. Mahl says that work was anxiously looked for by botanists both on from a knowledge of the fact that they had much to look for from the aid of Chemistry in their investigation of the phenomena of the nutrition of plants.
    But Dr. Mohl observes that thoughout the whole work there is a want of original experment, which is the more wonderful, since it is written by the greatest experimenter of bis day, and the possessor of one the largest laboratories in Europe. Nevertheless Liebig everywhere insists on the importance of experiments, and is continually appealing to those of Theodore De Saussure. Under these circumstances the work can only be looked upon as an attempt to constract a theory from data alieady known to the world. $\qquad$ The next general remark by Dr. Mohl refers to the tyle in which the book is written. If not always correct, it is energetic and clear; the thoughts are propounded in short determinate propositions, and there is not the slightest indication of doubt or unctrtainty about anything; the author seems to know everything for certan, lead the uninitiated, and frequently leads the author himself into positive contradictions; in fact, a thing is stated purpuse. For instance, in one place $(p, 22)$ we says that leaves do not decompose carbonic acid in the shade, (in which le is wrong) ) carbore says the leaves do decompose carboric acid in the shade, (in which he is right). Sucb contradictions are frequent, and prove that the author is neither well-grounded in the subjects on which he las undertaken to write, nor has fully considered them. The manner in whic Liebig attributes erroneous views, entertained periaps
    vidual botanists, to "vegetaise physiologists" and
    "botanists" in general, is objectionable and liable to mis-
